[it was declared would] . . . almost prohibit the importation of Argentine products, and the enmity of the German element. President Irigoyen received Mr. Colby very cordially, however. . . . Secretary Colby left Buenos Aires on Jan. 3 aboard a Uruguayan cruiser . . . [from which he transferred] to the *Florida* in Uruguayan waters for return to the United States. During his stay he conveyed an invitation from President Wilson for President Irigoyen to visit Washington. During his trip Mr. Colby heard references to mutterings against the United States and doubts of its sincerity. These arose from the fact that he had been preceded in Rio de Janeiro and Montevideo by Dr. Federico Henriquez Carbajal, formerly President of Santo Domingo, and his nephew, Max Henriquez Urena, an author, on a mission of propaganda charging the United States with atrocities in Haiti and Santo Domingo and trying to persuade South America to take up the cause of the islanders."—*New York Times Current History, February, 1921, pp. 346-347.*

1921.—Pan-American Postal Union.—Early in 1921 announcement was made of a Pan-American Postal Union to include all the American states except Canada and the British colonies, and providing that domestic rates should prevail in all countries within the union.

1921.—Tariff policy.—Laws to offset dumping. See TARIFF: 1921: United States; 1904-1922.

1921.—Snell Bill passed. See CONSERVATION OF NATURAL RESOURCES: United States: 1915-1921.

1921.—Control in Guam since 1900. See GUAM: 1900-1921.

1921.—Packers and Stockyards Act passed. See TRUSTS: United States: 1919-1923: Recent significant legislation.

1921.—Attitude toward Philippines used as a party issue. See PHILIPPINE ISLANDS: 1921.

1921.—Court martial law passed. See MILITARY LAW: 1921.

1921.—Employment of children in agricultural pursuits. See CHILD WELFARE LEGISLATION: 1873-1921.

1921.—Clash with Japan over Siberia.—Vanderlip concession. See JAPAN: 1921.

1921.—Housing problem.—"One of the most serious consequences of the World War is the housing situation in many countries. Its magnitude is such that a period of intense application to the subject will be necessary. . . . The effect upon housing in the United States became sharply noticeable after the war. . . . The war swelled the populations of cities and towns. Many rural residents went there to work, attracted by the high wages in the war industries, while numerous relatives of those drafted into the army, not caring to stay alone in the country, sought quarters in the cities. When the soldiers returned from Europe,

many, instead of going back to the country districts, stayed in the cities. Meanwhile the natural increase of resident population was going on, and rents precipitately rose, yet in 1919 only about 70,000 houses were built throughout the United States. . . . It was estimated that the accumulated deficit by the beginning of 1921 amounted to about 147 per cent of the normal annual building program. . . . Many families were forced to 'double up' in a single house or apartment, or to take in lodgers. . . . The housing shortage has caused rents to increase enormously. . . . According to the United States Department of Labor the percentage of increase by June, 1919, was 14.2. In the next six months it rose to 25.3, and to 34.9 by June, 1920. By December, 1920, it was 51.1 per cent. over the 1913 figures, and was still rising. The table shows that while rents made 'deeper and deeper inroads into the average family's budget, the prices of food, clothing and other goods, were going down.'—G. Myers, *World's housing shortage* (*New York Times Current History*, July, 1921, p. 612-613).—See also HOUSING: United States: National housing association.

1921.—Results of 1920 census announced.—Relative numbers of foreign-born.—According to the census of 1920 Germany, Austria, Ireland and Russia, natives of which made up more than 59 per cent of the country's total foreign-born population in 1910, showed losses, which, for the ten years aggregated almost two million, and are believed to have been due largely to the war, with its consequent exodus of belligerent nationals, and the stoppage of immigration. Notwithstanding those losses, the country's total foreign-born population showed an increase of 358,442, or 2.6 per cent, the total number of foreign-born being 13,703,987. The increase is believed to have been the smallest, both in number and percentage, ever recorded for any decade. Germany led as the country of birth of the foreign-born in the United States ten years ago, with a total of more than 2,500,000, and still leads, although the number was reduced to 1,683,298, a decrease of 818,035. Russia had taken third place from Ireland, but showed a decrease of 203,783, compared with an increase of about 1,000,000 in the decade 1900-1910. Natives of Russia in the United States number 1,398,999. Poland had gone into fourth place, which was occupied by Italy, with an increase of 195,797 in the ten years, bringing her total to 1,139,578. Ireland, which had shown decreases in each decade since 1800, had a larger decrease during the decade than in any previous one, the loss having been 316,571, compared with a decrease of 263,208 for 1900-1910. The total number of Irish born in the United States in 1920 was 1,035,680, ranking that country fifth. Canada showed a decrease of 87,501 in the ten years, compared with an increase of 27,000 the previous decade, and dropped from fifth to sixth place. Total Canadians number 1,117,136. French Canadians numbered 307,681 and showed a loss of 77,402, while other Canadians showed a loss of 10,099. Persons born in England numbered 812,414, which was a decrease of 65,305 in the ten years, compared with an increase of 37,000 the previous ten years. England, however, still ranked seventh. Sweden continued to hold eighth place, with a total of 624,759. That was a decrease of 40,448 in the ten years, compared with an increase of 83,000 the previous decade. Austria, with the second largest numerical loss of any country during the ten years, dropped into ninth place from the sixth position. The decrease in the number of

her natives in the United States was 600,014, compared with an increase of 683,000 during the previous decade. Austria's total natives in the United States numbered 574,959. The number of Mexican-born increased more than 100 per cent during the ten years, the number having been 254,761, bringing her total to 476,676. There was an increase of 118,000 in the previous decade. Hungary, with a total of 397,081, showed a decrease of 98,528, compared with an increase of 349,000 from 1900 to 1910. Norway showed a decrease of 40,278, compared with an increase of 67,000 in the previous ten years, bringing her total down to 363,599. Scotland, with a total of 254,482, showed a decrease of 6,594, compared with an increase of 27,000 in 1910. Denmark had an increase of 7,402, compared with an increase of 28,000 in 1910, bringing her total to 185,051. Greece showed a large percentage of increase, but it was not so large numerically as in 1910. Her increase was 74,419, bringing her total to 175,701. France's increase was larger than during the previous ten years. It was 35,374, compared with 13,000 in 1910, bringing her total to 152,051. Finland increased 19,991 to 149,671. Netherlands increased 11,199 to 131,262. Switzerland decreased 6,201 to 124,848. Rumania increased 37,078 to 103,007. Asia increased 80,898 to 191,484. Spain, Portugal, Belgium, Newfoundland and Australia showed increases, while Wales and Bulgaria showed decreases.

1921.—Urban population of the United States according to census of 1920.

POPULATION OF STATES

One fourth of our population dwell in cities of 100,000 and over. Another fourth dwell in cities of from 2500 to 100,000 population. Hence one half (51.9%) of our population dwell in cities.—Based on F. A. Magruder, *American government in 1921*.

1921 (January).—Relations with Cuba.—General Crowder sent to Cuba. See CUBA: 1920-1921 (November-January).

1921 (January-February).—Naval program.—Report by Senate committee against naval holiday.—Defeat of naval appropriation.—“The United States Senate on Jan. 25 unanimously adopted a resolution of Senator Borah of Idaho, which directed the Senate Committee on Naval Affairs to inform the Senate whether or not it was feasible to suspend the present American naval program for six months, so that an investigation might be had to determine what constitutes a ‘modern fighting navy.’ An emphatic negative to this proposal was recommended in the report filed with the Senate Feb. 9 by the Committee on Naval Affairs. The report was practically an endorsement of the position taken by the Naval General Board. All the members of that board defended the capital ship and took issue with those naval experts, for the most part foreign, who contended that the modern battleship was nearly obsolete and that submarines and aircraft would be determining factors in sea battles of the future. The substance of the Senate report was that the United States should maintain a navy equal at least to that of any other nation in the world; that the capital ship still maintains its primacy among naval vessels and that since universal disarmament had not been established it would be a wrong to the American people and no service to the cause of peace for the United States to disarm. If the proposed six months’ suspension of building were adopted, the actual loss that would result would be between \$15,000,000 and \$30,000,000. Large numbers of workmen would be thrown out of employment, rendering difficult or impossible the re-assembling of these forces should work be resumed. Any such result would give an immense advantage to such other powers as should continue uninterruptedly the construction of their fleets or those already supplied with superior naval power. The report read in part: ‘The value and importance of submarines, aircraft and high explosives are admitted and the committee recommends that the scientific study and development of all these means of naval warfare be actively continued. Depth bombs, mines, aerial torpedoes and high explosive shells fired from great guns, whether of the howitzer or other types, are all important agencies of attack and defense at sea, and intensive studies of their potential uses should be continued with a view of utilizing them to the greatest possible

advantage. If we assume, however, a naval power armed with all these devices and with destroyers and swift light cruisers, but with no battleships or battle cruisers—and an enemy power equipped with all these and with battleships and battle cruisers in addition—there can be no doubt that in any conflict the power equipped with capital ships would be victorious over its enemy not so equipped. The rival forces of light craft, whether on or below the surface or in the air, would neutralize each other, leaving the power which possessed the heavy ships armed with great guns in undisputed control of the sea.' The committee recommended that twelve destroyers and six submarines in the present program, for which contracts had not been let, be eliminated and at the same time, and as a substitute therefor, authority be given for the construction of two airplane carriers of the most modern type and equipment and most advantageous size. [The Naval Appropriation Bill, however, was defeated in the Senate, by the opposition led by Senator Borah, and the measure was laid over for the incoming Congress]."—*New York Times Current History*, Mar., 1921, p. 385.—See also AVIATION: Development of airplanes and air service: 1921.

1921 (February).—*Yap controversy*.—A controversy over the island of Yap, formerly a German possession, and important as the landing place of three cables, began at the peace conference, and became acute in February, 1921, when Secretary Colby addressed a note on the subject to the Council of the League of Nations.—See also YAP; WASHINGTON CONFERENCE.

1921 (March).—*Inauguration of President Harding*.—"Described as 'the simplest in modern times,' the inauguration of Warren Gamaliel Harding as President of the United States on March 4, 1921, was characteristic of the modesty of 'the man from Main Street.' The front porch at Marion, Ohio, had become famous in the campaign, and in accordance with the wishes of the President elect a small portico, resembling the front porch, was set up on the east steps of the Capitol; and there he took the oath of office in the presence of a vast gathering. . . . His inaugural speech was not addressed to the peoples of the world; it was rather an intimate talk with the home folks who had elected him Chief Executive. As the Paris *Figaro* said at the time, 'Most of the new President's address was a declaration of faith in God and a hymn to the greatness and wisdom of America.' Harding could do no other. To him America stood for the finest things achieved by mankind, and he would have all mankind emulate. None the less, he sympathized with the plight of Europe, and he believed the Europeans capable of setting their own house in order. It may be said that he had no desire that America should use the 'big stick,' but rather that the standard of fair dealing and love of peace which it had set up, and which had permitted it to remain on terms of the utmost good-fellowship with the neighboring Dominion of Canada for a century, might be an example which would be copied by the nations of Europe."—W. F. Johnson, *Life of Warren G. Harding*, pp. 100-101.—The president's address was, in part, as follows:

"We are ready to associate ourselves with the nations of the world, great and small, for conference, for counsel, to seek the expressed views of world opinion, to recommend a way to approximate disarmament and relieve the crushing burdens of military and naval establishments. We elect to participate in suggesting plans for mediation, con-

ciliation and arbitration, and would gladly join in that expressed conscience of progress which seeks to clarify and write the laws of international relationship, and establish a world court for the disposition of such justiciable questions as nations are agreed to submit thereto. . . . Our supreme task is the resumption of our onward normal way. Reconstruction, readjustment, restoration—all these must follow. I would like to have them. If it will lighten the spirit and add to the resolution with which we take up the task, let me repeat for our nation, we shall give no people just cause to make war upon us. We hold no national prejudices, we entertain no spirit of revenge, we do not hate, we do not covet, we dream of no conquest, nor boast of armed prowess. If, despite this attitude, war is again forced upon us, I earnestly hope a way may be found which will unify our individual and collective strength and consecrate all America, materially and spiritually, body and soul, to national defense. I can vision the ideal republic, where every man and woman is called under the flag for assignment to duty, for whatever service, military or civic, the individual is best fitted, where we may call to universal service every plant, agency or facility, all in the sublime sacrifice for country, and not one penny of war profit shall inure to the benefit of private individual, corporation or combination, but all above the normal shall flow into the defense chest of the nation. There is something inherently wrong, something out of accord with the ideals of representative democracy when one portion of our citizenship turns its activity to private gain amid defensive war while another is fighting, sacrificing or dying for national preservation. Out of such universal service will come a new unity of spirit and purpose, a new confidence and consecration, which would make our defense impregnable, our triumph assured. Then we should have little or no disorganization of our economic, industrial and commercial systems at home, no staggering war debts, no swollen fortunes to flout the sacrifices of our soldiers, no excuse for sedition, no pitiable slackerism, no outrages of treason. Envy and jealousy would have no soil for their menacing development and revolution would be without the passion which engenders it.

"A regret for the mistakes of yesterday must not, however, blind us to the tasks of today. War never left such an aftermath. There has been staggering loss of life and measureless wastage of materials. Nations are still groping for return to stable ways. Discouraging indebtedness confronts us like all the war-torn nations, and these obligations must be provided for. No civilization can survive repudiation. We can reduce the abnormal expenditures and we will. We can strike at war taxation and we must. We must face the grim necessity, with full knowledge that the task is to be solved, and we must proceed with a full realization that no statute enacted by man can repeal the inexorable laws of nature. Our most dangerous tendency is to expect too much of government and at the same time do for it too little. We contemplate the immediate task of putting our public household in order. We need a rigid and yet sane economy combined with fiscal justice, and it must be attended by individual prudence and thrift, which are so essential to this trying hour and reassuring for the future. The business world reflects the disturbance of war's reaction. Herein flows the lifeblood of material existence. The economic mechanism is intricate and its parts interdependent, and has suffered the shocks and jars incident to abnormal de-

mands, credit inflations and price upheavals. The normal balances have been impaired, the channels of distribution have been clogged, the relations of labor and management have been strained. We must seek the readjustment with care and courage. Our people must give and take. Prices must reflect the receding fever of war activities. Perhaps we never shall know the old levels of wage again, because war invariably readjusts compensations and the necessities of life will show their inseparable relationship, but we must strive for normalcy to reach stability. All the penalties will not be light nor evenly distributed. There is no way of making them so. There is no instant step from disorder to order. We must face a condition of grim reality, charge off our losses and start afresh. It is the oldest lesson of civilization. I would like Government to do all it can to mitigate them. In understanding, in mutuality of interest, in concern for the common good our tasks will be solved. No altered system will work a miracle. Any wild experiment will only add to the confusion. Our best assurance lies in efficient administration of our proved system. The forward course of the business cycle is unmistakable. Peoples are turning from destruction to production. Industry has sensed the changed order, and our own people are turning to resume their normal onward way. The call is for productive America to go on. I know that Congress and the Administration will favor every wise Government policy to aid the resumption and encourage continued progress. I speak for administrative efficiency, for lightened tax burdens, for sound commercial practices, for adequate credit facilities, for sympathetic concern for all agricultural problems, for the omission of unnecessary interference of Government with business, for an end to Government's experiment in business, and for more efficient business in Government administration. With all of this must attend a mindfulness of the human side of all activities, so that social, industrial and economic justice will be squared with the purposes of a righteous people.

"With the nation-wide induction of womanhood into our political life we may count upon her intuitions, her refinement, her intelligence and her influence to exalt the social order. We count upon her exercise of the full privileges and the performance of the duties of citizenship to speed the attainment of the highest state. I wish for an America no less alert in guarding against dangers from within than it is watchful against enemies from without. Our fundamental law recognizes no class, no group, no section. There must be none in legislation or administration. The supreme inspiration is the common weal. Humanity hungers for international peace, and we crave it with all mankind. My most reverent prayer for America is for industrial peace, with its rewards, widely and generally distributed amid the inspirations of equal opportunity. . . . We would not have an America living within and for herself alone, but we would have her self-reliant, independent and ever nobler, stronger and richer. Believing in our higher standards, reared through constitutional liberty and maintained opportunity, we invite the world to the same heights. But pride in things wrought is no reflex of a completed task. Common welfare is the goal of our national endeavor. Wealth is not inimical to welfare, it ought to be its friendliest agency. There never can be equality of rewards or possession so long as the human plan contains varied talents and differing degrees of industry and thrift,

but ours ought to be a country free from great blotches of distressed poverty. We ought to find a way to guard against the perils and penalties of unemployment. We want an America of homes, illumined with hope and happiness, where mothers, freed from the necessity for long hours of toil beyond their own doors, may preside as befits the hearthstone of American citizenship. We want the cradle of American childhood rocked under conditions so wholesome and so hopeful that no blight may touch it in its development, and we want to provide that no selfish interest, no material necessity, no lack of opportunity shall prevent the gaining of that education so essential to best citizenship. There is no short cut to the making of ideals into glad realities. The world has witnessed again and again the futility and the mischief of ill-considered remedies for social and economic disorders. But we are mindful today as never before of the friction of modern industrialism, and we must learn its causes and reduce its evil consequences by sober and tested methods. Where genius has made for great possibilities, justice and happiness must be reflected in a greater common welfare. Service is the supreme commitment of life. I would rejoice to acclaim the era of the golden rule, and crown it with the autocracy of service. I pledge an Administration wherein all the agencies of government are called to serve and ever promote an understanding of government purely as an expression of the popular will. One cannot stand in this presence and be unmindful of the tremendous responsibility. The world upheaval has added heavily to our tasks. But with the realization comes the surge of high resolve, and there is reassurance in belief in the God-given destiny of our Republic. If I felt that there is to be sole responsibility in the Executive for the America of tomorrow I should shrink from the burden. But here are a hundred millions, with common concern and shared responsibility, answerable to God and country. The Republic summons them to their duty and I invite co-operation."

1921 (March).—President Harding's cabinet.—"Within an hour after his inauguration President Harding appeared before the executive session of the Senate and announced the selections he had made for his Cabinet. He chose for secretary of state Charles E. Hughes, of New York, associate justice of the United States Supreme Court and Republican nominee for President in 1916. For secretary of commerce he chose Herbert Clark Hoover, of California, United States Food Commissioner from 1917 to 1919, whose exceptional public service had made him known both at home and abroad. For secretary of the treasury he selected Andrew W. Mellon, of Pennsylvania, a banker and developer of coal and iron industries. For postmaster-general he chose Will H. Hays, of Indiana, chairman of the National Republican Committee; for secretary of agriculture, Henry Cantwell Wallace, of Iowa, an agricultural editor; for secretary of the interior, Senator Albert Bacon Fall, of New Mexico; for secretary of labor, James John Davis, of Pennsylvania, director-general of the Loyal Order of Moose; for secretary of war, Senator John Wingate Weeks, of Massachusetts; for secretary of the navy, Edwin Denby, of Michigan, who participated in the service of the navy during the war; and for attorney-general, his personal friend Harry M. Daugherty, of Ohio. Vice-President Coolidge, on the invitation of the President, became an ex-officio member of the Cabinet and took part in its counsels."—W. F. Johnson, *Life of Warren G. Harding*, pp. 110-111.

—This was the first time in the history of the United States that the vice-president was officially called into counsel by the president.

1921 (March).—Note from Soviet government and reply.—In his inaugural address, President Harding touched upon the difficult problems in foreign relations with which the new administration had to deal. Not the least difficult of these problems was the question of the recognition or non-recognition of the Russian soviet republic, which was raised immediately by an appeal, by the soviet government, for the establishment of friendly relations, and the opening of trade. The overture came in the form of a note dated March 20, sent, through the Russian representative to Esthonia at Reval, to Congress and the president, which reads as follows: "From the first days of her existence Soviet Russia had nourished the hope

Soviet Russia hopes that the American Republic will not persist in obdurately following this path and that the new American Government will clearly see the great advantage for the two republics of the re-establishment of business relations and will consider the interests of both peoples which imperatively demand that the wall existing between them should be removed. The Soviet Republic, entirely absorbed in the work of internal reconstruction and of building up its economic life, has not the intention of intervening in the internal affairs of America, and the All Russian Central Executive Committee makes herewith a categorical declaration to this effect. At the present time, after Soviet Russia has concluded treaties and established regular relations with numerous States, the absence of such relations with America seems to Soviet Russia particularly abnormal and harmful to both

of the possibility of a speedy establishment of friendly relations with the great Republic of North America and had firmly expected that intimate and solid ties would be created between the two republics to the greater advantage of both. At the time when the Entente Powers had begun their invasion of Soviet Russia unprovoked and without declaration of war the Soviet Government repeatedly addressed itself to the American Government with the proposal to adopt measures for the cessation of bloodshed. Even when the American troops, together with the others, participated in the attack upon Soviet Russia the Government of the Russian Republic still expressed the hope of a speedy change of America's policy toward her, and demonstrated this by its particularly considerate treatment of the Americans in Russia. But President Wilson, who, without cause and without any declaration of war, had attacked the Russian Republic, showed during his whole administration a growing hostility towards the Russian Republic.

The All Russian Central Executive Committee addresses to you the formal proposal of opening trade relations between Russia and America, and for that purpose the relations between the two republics have to be on the whole regularized. The All Russian Central Executive Committee therefore proposes to send a special delegation to America which will negotiate upon this matter with the American Government in order to solve the question of business relations and of resumption of trade between Russia and America. M. KALENIN, *President of the All Russian Executive Committee*. P. ZALUTSKY, *Secretary*. . . .

"[On Mar. 25, 1921, Secretary Hughes cabled the following reply:]

"The Government of the United States views with deep sympathy and grave concern the plight of the people of Russia and desires to aid by every appropriate means in promoting proper opportunities through which commerce can be estab-

lished upon a sound basis. It is manifest to this Government that in existing circumstances there is no assurance for the development of trade, as the supplies which Russia might now be able to obtain would be wholly inadequate to meet her needs, and no lasting good can result so long as the present causes of progressive impoverishment continue to operate. It is only in the productivity of Russia that there is any hope for the Russian people, and it is idle to expect resumption of trade until the economic bases of production are securely established. Production is conditioned upon the safety of life, the recognition by firm guarantees of private property, the sanctity of contract and the rights of free labor. If fundamental changes are contemplated, involving due regard for the protection of persons and property and the establish-

National Industrial Conference reported as follows: "The proponents of the measure find their cause clearly and concisely stated in the declaration of the Senate committee: In plain, simple English, its purpose is to give to the soldier who offered his life with his service a compensation that will approach that of the laborer who remained at home, secure from danger, and whose compensation increased from 200 to 300 per cent., and, measured by the amount of labor actually performed, a percentage beyond those figures. It is further argued that similar donations were made by our Government in previous wars and have been made by all the allied Governments in the present war. To this the opponents answer: That it is economically impossible; that with the present heavy burden of taxation, the outstanding private and public loans

ment of conditions essential to the maintenance of commerce, this Government will be glad to have convincing evidence of the consummation of such changes, and until this evidence is supplied this Government is unable to perceive that there is any proper basis for considering trade relations."—*New York Times Current History*, May, 1921, pp. 189-190.

1921 (March).—Note of Secretary Hughes to Costa Rica and Panama concerning their boundary disputes. See COSTA RICA: 1921.

1921 (March).—Failure of first Farmers' Emergency Tariff Bill. See TARIFF: 1921 (March).

1921 (March-July).—War Bonus Bill.—Opposed by president.—Discussion on the subject of granting a bonus to all the men and women who served in the war, which had been a burning question during the elections, came to a head in March, 1921. At the first session of Congress a bill was introduced, to provide for the bonus, on which the

to foreign and domestic creditors, the pressing need of new capital, the inevitable Treasury deficit, the general depressed industrial and financial condition of the country, and the necessity within the very period fixed for the beginning of bonus payments to meet maturing Government obligations of \$7,000,000,000, the plan would ultimately injure those it is intended to benefit. It represents the desires and determination of a highly organized and active minority. More than a majority of ex-service men, in the opinion of competent observers and by their own expression, are either indifferent to the bonus proposals or actively opposed to them."—*New York Times*, Apr. 24, 1921.—"President Harding appeared in person before the Senate on July 12 to make a presentation of the reasons why the soldiers' bonus bill, already condemned by Secretary of the Treasury Mellon, ought not to be passed at . . . [that time] lest it contribute to 'the paralysis of the Treasury.' He spoke forcibly of the need of appropriate action

for disabled soldiers and sailors, which he urged was a primary consideration as a matter of national gratitude. The enactment of the adjusted compensation bill in the midst of the struggle for readjustment and restoration, however, he said, would hinder every effort and greatly imperil the financial stability of the country. In addition this menacing effort to expend millions in gratuities would imperil our capacity to discharge our first obligations to those we must not fail to aid."—*New York Times Current History, August, 1921, p. 733.*—The bill was referred back to the finance committee.

1921 (April).—President Harding's first message to Congress.—"The first (special) session of the Sixty-seventh Congress, called by President Harding, convened on April 11. The House re-elected Frederick H. Gillett of Massachusetts as speaker by a vote of 298 as against 122 for Claude Kitchin, the Democratic choice, who thus became 'minority leader.' The old rules were readopted and the Committee on Committees presented the majority list of standing committee appointments. More than 2,000 local and private bills were introduced, 'captured German cannon' measures predominating. The Emergency Tariff Bill was also introduced.—On April 12 the President delivered his message to a joint session of the two houses. He called for economy in expenditures; the adoption of a national budget system; the reform of internal tax laws, and the abolition of the excess profits tax; the protection of agricultural interests; emergency tariff legislation and a thorough study preliminary to permanent tariff revision."—H. J. Carman and E. D. Graper, *Political Science Quarterly, 1921, Supplement, p. 31.*—Following the precedent set in the previous administration, President Harding addressed the members in joint session. His address reads in part as follows:

"I know of no more pressing problem at home than to restrict our national expenditures within the limits of our national income, and at the same time measurably lift the burdens of war taxation from the shoulders of the American people. . . . The staggering load of war debt must be cared for in orderly funding and gradual liquidation. . . . In the fever of war our expenditures were so little questioned, the emergency was so impelling, appropriation was so unimpaired, that we little noted millions and counted the Treasury inexhaustible. It will strengthen our resolution if we ever keep in mind that a continuation of such a course means inevitable disaster. Our current expenditures are running at the rate of approximately \$5,000,000,000 a year, and the burden is unbearable. There are two agencies to be employed in correction: One is rigid resistance in appropriation and the other is the utmost economy in administration. Let us have both. I have already charged department heads with this necessity. I am sure Congress will agree, and both Congress and the Administration may safely count on the support of all right-minded citizens, because the burden is theirs. . . . Unless [he went on to say] there are striking cuts in the important fields of expenditure, receipts from internal taxes cannot safely be permitted to fall below \$4,000,000,000 in the fiscal years 1922 and 1923. This would mean total internal tax collections of about \$1,000,000,000 less than in 1920 and \$500,000,000 less than in 1921. The most substantial relief from the tax burden must come for the present from the readjustment of internal taxes and the revision or repeal of those taxes which have become unproductive and are so

artificial and burdensome as to defeat their own purpose. A prompt and thoroughgoing revision of the internal tax laws, made with due regard to the protection of the revenues, is, in my judgment, a requisite to the revival of business activity in this country. It is earnestly hoped, therefore, that the Congress will be able to enact without delay a revision of the revenue laws and such emergency tariff measures as are necessary to protect American trade and industry. . . .

"The urgency for an instant tariff enactment, emergency in character and understood by our people that it is for the emergency only, cannot be too much emphasized. I believe in the protection of American industry, and it is our purpose to prosper America first. . . . Moreover, imports should pay their fair share of our cost of government. . . . To-day American agriculture is menaced, and its products are down to pre-war normals, yet we are endangering our fundamental industry through the high cost of transportation from farm to market and through the influx of foreign farm products, because we offer, essentially unprotected, the best market in the world. It would be better to err in protecting our basic food industry than paralyze our farm activities in the world struggle for restored exchanges. The maturer revision of our tariff laws should be based on the policy of protection. . . . It is agreed that we cannot sell unless we buy, but ability to sell is based on home development and the fostering of home markets. There is little sentiment in the trade of the world. Trade can and ought to be honorable, but it knows no sympathy. . . .

"A very important matter is the establishment of the government's business on a business basis. There was toleration of the easy-going, unsystematic method of handling our fiscal affairs, when indirect taxation held the public unmindful of the Federal burden. But there is knowledge of the high cost of government to-day, and high cost of living is inseparably linked with high cost of government. There can be no complete correction of the high living cost until government's cost is notably reduced. Let me most heartily commend the enactment of legislation providing for the national budget system. Congress has already recorded its belief in the budget. It will be a very great satisfaction to know of its early enactment, so that it may be employed in establishing the economies and business methods so essential to the minimum of expenditure. I have said to the people we meant to have less of government in business as well as more business in government. It is well to have it understood that business has a right to pursue its normal, legitimate and righteous way unimpeded, and it ought [to] have no call to meet government competition where all risk is borne by the public treasury. There is no challenge to honest and lawful business success. But government approval of fortunate, untrammelled business does not mean toleration of restraint of trade or of maintained prices by unnatural methods. It is well to have legitimate business understand that a just government . . . has a right to expect the cooperation of that legitimate business in stamping out the practices which add to unrest and inspire restrictive legislation. . . . One condition in the business world may well receive your inquiry. Deflation has been in progress but has failed to reach the mark where it can be proclaimed to the great mass of consumers. Reduced cost of basic production has been recorded, but high cost of living has not yielded in like

proportion. For example, the prices on grains and livestock have been deflated, but the cost of bread and meats is not adequately reflected therein. . . . I have asked the Federal Trade Commission for a report of its observations and its attributes, in the main, the failure to adjust consumers' cost to basic production costs to the exchange of information by 'open-price associations,' which operate, evidently, within the law, to the very great advantage of their members and equal disadvantage to the consuming public. Without the spirit of hostility or haste in accusation of profiteering, some suitable inquiry by Congress might speed the price readjustment to normal relationship, with helpfulness to both producer and consumer. . . . The great interest of both the producer and consumer . . . in the problems of transportation will find its reflex in your concern to aid reestablishment, to restore efficiency and bring transportation cost into a helpful relationship rather than continue it as a hindrance to resumed activities. . . . No improvement will be permanent until the railways are operated efficiently at a cost within that which the traffic can bear. If we can have it understood that Congress has no sanction for government ownership, that Congress does not levy taxes upon the people to cover deficits in a service which should be self-sustaining, there will be an avowed foundation on which to rebuild.

"Freight-carrying charges have mounted higher and higher until commerce is halted and production discouraged. Railway rates and costs of operation must be reduced. . . . Transportation over the highways is little less important, but the problems relate to construction and development, and deserve your most earnest attention, because we are laying a foundation for a long time to come. . . . There is begun a new era in highway construction, the outlay for which runs far into hundreds of millions of dollars. Bond issues by road districts, counties and states mount to enormous figures and the country is facing such an outlay that it is vital that every effort shall be directed against wasted effort and unjustifiable expenditure. The Federal government can place no inhibition on the expenditure in the several states, but since Congress has embarked upon a policy of assisting the states in highway improvement, wisely, I believe, it can assert a wholly becoming influence in shaping policy. With the principle of Federal participation acceptably established, probably never to be abandoned, it is important to exert Federal influence in developing comprehensive plans looking to the promotion of commerce, and apply our expenditures in the surest way to guarantee a public return for money expended. . . .

"The laws governing Federal aid should be amended and strengthened. The Federal agency of administration should be elevated to the importance and vested with authority comparable to the work before it. And Congress ought to prescribe conditions to Federal appropriations which will necessitate a consistent program of uniformity which will justify the Federal outlay. . . . Highways, no matter how generous the outlay for construction, cannot be maintained without patrol and constant repairs. Such conditions insisted upon in the grant of Federal aid will safeguard the public which pays and guard the Federal government against political abuses, which tend to defeat the very purposes for which we authorize Federal expenditure.

"Linked with rail and highway is the problem of water transportation—inland, coastwise and

transoceanic. It is not possible on this occasion to suggest to Congress the additional legislation needful to meet the aspirations of our people for a merchant marine. In the emergency of war we have constructed a tonnage equaling our largest expectations. Its war cost must be discounted to the actual values of peace and the large difference charged to the war emergency, and the pressing task is to turn our assets in tonnage to an agency of commerce. It is not necessary to say it to Congress, but I have thought this to be a befitting occasion to give notice that the United States means to establish and maintain a great merchant marine. Our differences of opinion as to a policy of up-building have been removed by the outstanding fact of our having builded. If the intelligent and efficient administration under the existing laws makes established service impossible the Executive will promptly report to you. . . .

"It is proper to invite your attention to the importance of the question of radio communication and cables. To meet strategic commercial and political needs active encouragement should be given to the extension of American-owned and operated cable and radio services. Between the United States and its possessions there should be ample communication facilities providing direct services at reasonable rates. Between the United States and other countries not only should there be adequate facilities, but these should be, so far as practicable, direct and free from foreign intermediation. . . . Government-owned facilities, wherever possible without unduly interfering with private enterprise or government needs, should be made available for general uses. Practical experience demonstrates the need for effective regulation of both domestic and international radio operation. . . . International communication by cable and radio requires coöperation between the powers concerned. Whatever the degree of control deemed advisable within the United States, government licensing of cable landings and of radio stations transmitting and receiving international traffic seems necessary for the protection of American interests and for the securing of satisfactory reciprocal privileges.

"Aviation is inseparable from either the army or the navy, and the government must, in the interests of national defense, encourage its development for military and civil purposes. . . . The air mail service is an important initial step in the direction of commercial aviation. . . . The National Advisory Committee for Aeronautics, in a special report, . . . has recommended the establishment of a bureau of aeronautics in the Department of Commerce for the Federal regulation of air navigation, which recommendation ought to have legislative approval. I recommend the enactment of legislation establishing a bureau of aeronautics in the Navy Department to centralize the control of naval activities in aeronautics, and removing the restrictions on the personnel detailed to aviation in the navy. The army air service should be continued as a coördinate combatant of the army and its existing organization utilized in coöperation with other agencies of the government in the establishment of national transcontinental airways and in coöperation with the states in the establishment of local airdromes and landing fields. . . .

"Conscious of the generous intent of Congress and the public concern for the crippled and dependent, I invited the services of a volunteer committee to inquire into the administration of the

Bureau of War Risk Insurance, the Federal Board for Vocational Training and other agencies of government in caring for the ex-soldiers, sailors and marines of the World War. This committee promptly reported the chief difficulty to be the imperfect organization of governmental effort, the same lack of coordination which hinders government efficiency in many undertakings, less noticed because the need for prompt service is less appealing. This committee has recommended, . . . that all government agencies looking to the welfare of the ex-service men should be placed under one directing head. . . . It may be well to make such an official the director general of service to war veterans, and place under his direction all hospitalization, vocational training, war insurance, rehabilitation and all pensions. . . . During the recent political canvass the proposal was made that a Department of Public Welfare should be created. It was indorsed and commended so strongly that I venture to call it to your attention and to suggest favorable legislative consideration. . . . In the realms of education, public health, sanitation, conditions of workers in industry, child welfare, proper amusement and recreation, the elimination of social vice and many other subjects the government has already undertaken a considerable range of activities. I assume the maternity bill, already strongly approved, will be enacted promptly, thus adding to our manifestation of human interest. But these undertakings have been scattered through many departments and bureaus without coordination and with much overlapping of functions, which fritters energies and magnifies the cost. . . . To bring these various activities together in a single department, where the whole field could be surveyed and where their inter-relationships could be properly appraised, would make for increased effectiveness, economy and intelligence of direction. . . . Congress ought to wipe the stain of barbaric lynching from the banners of a free and orderly representative democracy. . . . One proposal is the creation of a commission embracing representatives of both races, to study and report on the entire subject. . . . It is needless to call your attention to the unfinished business inherited from the preceding Congress. The appropriation bills for army and navy will have your early consideration. . . .

"The government is in accord with the wish to eliminate the burdens of heavy armaments. . . . We are ready to cooperate with other nations to approximate disarmament, but merest prudence forbids that we disarm alone. . . . The War Department is reducing the personnel of the army from the maximum provided by law in June, 1920, to the minimum directed by Congress in a subsequent enactment. . . . Nearly two and a half years ago the World War came to an end, and yet we find ourselves to-day in the technical state of war, though actually at peace, while Europe is at technical peace, far from tranquillity and little progressed toward the hoped-for restoration. . . . In the existing League of Nations, world governing with its super powers, this Republic will have no part. There can be no misinterpretation and there will be no betrayal of the deliberate expression of the American people in the recent election; and, settled in our decision for ourselves, it is only fair to say to the world in general, and to our associates in war in particular, that the league covenant can have no sanction by us. The aim to associate nations to prevent war, preserve peace and promote civilization our people most cordially applaud. We yearned for this new instrument of justice, but

we can have no part in a commital to an agency of force in unknown contingencies; we can recognize no super-authority. Manifestly the highest purpose of the League of Nations was defeated in linking it with the treaty of peace and making it the enforcing agency of the victors of the war. International association for permanent peace must be conceived solely as an instrumentality of justice, . . . and not so constituted as to attempt the dual functions of a political instrument of the conquerors and of an agency of peace. . . . In the plight of policy and performance we told the American people we meant to seek an early establishment of peace. The United States alone among the Allied and associated powers continues in a technical state of war against the Central Powers of Europe. This anomalous condition ought not to be permitted to continue. To establish the state of technical peace without further delay I should approve a declaratory resolution by Congress to the effect, with the qualifications essential to protect all our rights. Such action would be the simplest keeping of faith with ourselves, and could in no sense be construed as a desertion of those with whom we shared our sacrifices in war, for these powers are already at peace. Such a resolution should undertake to do no more than thus to declare the state of peace which all America craves. It must add no difficulty in effecting, with just reparations, the restoration for which all Europe yearns and upon which the world's recovery must be founded. Neither former enemy nor ally can mistake America's position, because our attitude as to responsibility for the war and the necessity for just reparations already has had formal and very earnest expression.

"It would be unwise to undertake to make a statement of future policy with respect to European affairs in such a declaration of a state of peace. In correcting the failure of the Executive, in negotiating the most important treaty in the history of the nation, to recognize the constitutional powers of the Senate we would go to the other extreme, equally objectionable, if Congress or the Senate should assume the function of the Executive. . . . It would be idle to declare for separate treaties of peace with the Central Powers on the assumption that these alone would be adequate, because the situation is so involved that our peace engagements cannot ignore the Old World relationship and the settlements already effected, nor is it desirable to do so in preserving our own rights and contracting our future relationships. The wiser course would seem to be the acceptance of the confirmation of our rights and interests as already provided, and to engage under the existing treaty, assuming, of course, that this can be satisfactorily accomplished by such explicit reservations and modifications as will secure our absolute freedom from advisable commitments and safeguard all our essential interests. . . ."

1921 (April-May).—Comments on President Harding's foreign policy.—German reparations discussions.—"It is clear that, while the Administration does not object to a Congressional declaration that war no longer exists, the actual settlement of the war must be made in cooperation with the Allies under the terms of the Treaty of Versailles, although modifications, including the elimination of the League Covenant, are to be made. The important point, however, is that Harding has committed himself to a settlement under the existing treaty and in cooperation with the Allies. After this he commits himself to an effort to create

some machinery to take the place of the League. The President's message and the informal note to Germany announcing that we agree with the Allies as to Germany's guilt in the war and the necessity of her making reparations to the full extent of her ability are efforts to provide an antidote for the weakening of the Allies' position which our attitude has caused. In the meanwhile the State Department has announced that as long as we are not in the League we do not necessarily accept the League's decisions as binding, and that we intend to negotiate concerning our rights with any nation whose acts affect those rights, whether that nation is acting in accordance with the dictates of the League, the agreements of the Big Three, or on its own initiative. It is, however, fairly clear that the new Administration, while refusing to use the League machinery, does, through the old channels of diplomacy, intend to maintain close and sympathetic relations with Great Britain, France, and Italy, and with these relations to take a more informed interest in world affairs—all of which affect us now more or less directly—than we ever have done heretofore. To do this, Mr. Hughes evidently intends to make a very strenuous effort to reorganize the diplomatic and consular services, not only in personnel, and continuity of service, but also in their relations with the State Department. The reform in the State Department itself, headed by Secretary Hughes with Henry Fletcher and Robert Bliss as assistants, will mean more in giving morale and purpose to the whole service than any other single thing. Mr. Hughes's definiteness of mind and administrative ability are well known. Mr. Fletcher is the only man who ever rose through the grades of the diplomatic service to the rank of ambassador and his experience and that of Mr. Bliss cover many of the capitals of the world. It is an encouraging sign that the new State Department is not on the defensive, merely trying to settle troubles that have arisen, but that it has already taken the initiative and is trying to direct the course of events into channels which shall be safe and beneficial to the United States—the only method by which diplomatic crises can be averted before they arise."—*World's Work*, May, 1921, p. 3.

1921 (April-May).—German appeal for mediation in reparation question.—American reply.—Official paraphrase of German memorandum.—Second German note.—Refusal by president to mediate.—Early in April, Germany appealed to the United States to act as arbiter in the dispute concerning reparations. "The American reply is the important part of the correspondence. Secretary Hughes in his note, for the consideration of Dr. Simons, German Foreign Minister . . . [made] it clear that this Government . . . [expected] Germany to assume moral responsibility for the war and . . . to pay to the full extent of her ability. The refusal to enter into any argument with the German Governmental representative is significant. . . . The American memorandum said: 'The American Government is pleased to note in the informal memorandum of Dr. Simons the unequivocal expression on the part of the German Government of its desire to afford reparation up to the limit of German ability to pay. This Government stands with the governments of the Allies in holding Germany responsible for the war and therefore, morally bound to make reparation, so far as may be possible. The recognition of this obligation, implied in the memorandum of Dr. Simons, seems to the Government of the United States the only

sound basis on which can be built a firm and just peace under which the various nations of Europe can achieve once more economic independence and stability. This Government believes that it recognizes in the memorandum of Dr. Simons a sincere desire on the part of the German Government to reopen negotiations with the Allies on a new basis and hopes that such negotiations, once resumed, may lead to a prompt settlement which will at the same time satisfy the just claims of the Allies and permit Germany hopefully to renew its productive activities.' Following is a paraphrase prepared by the State Department of the memorandum given by Dr. Simons to Mr. Dresel, American Commissioner in Berlin: 'It is the earnest desire of the Government of Germany to reach an accord with the governments of the allied and associated Powers, and it is sincere in its purpose to meet their requirements as far as possible. That an agreement was not reached at the conference of London on the question of reparations is a matter of extreme regret to the Government of Germany. In their efforts to reach an agreement, the delegates from Germany went far beyond the limit considered possible for Germany in the judgment of an overwhelming majority of her economic experts. It has been asserted that Germany is reluctant to recognize her obligations to make reparations. This is not correct. It is entirely clear not only to the Government of Germany but to the German people also that Germany must make reparation to the limit of her ability to pay. This realization on the part of Germany will not be altered in any way by any changes which may take place in the internal politics of the country. Every responsible group, particularly the workmen, of Germany are imbued with the determination to do all that lies in their power to help in reconstructing the regions which have been devastated. Fundamental to this determination is the sober conviction on the part of responsible circles in Germany that an early removal of all traces of the devastation caused in France is to be the best interests of Germany. It is the consensus of opinion also that the proposals made by Germany in regard to reparation must consider fully the financial necessities of the allied and associated governments and particularly of France. In view of the foregoing, two considerations in regard [to] reparations present themselves both of which are of importance. These considerations are, first, the matter of the rehabilitation of the devastated regions, and, second, the immediate establishment by Germany of an actual sum of cash money, in foreign exchange, of important proportions. In addressing ourselves to the first particular, namely, the rehabilitation of the devastated regions, certain facts are at once apparent. For four years ten of the eighty-six departments of France served as the theatre of the war and sustained the severest blows of the conflict. In these ten departments a number of cities, towns and villages were either partly or entirely destroyed, and wide stretches of fertile farming lands were laid waste. Only a little has been accomplished toward the rebuilding of homes, the reoccupation and the recultivation of the land in the two years that have elapsed since the ending of the war. For the immediate rehabilitation of these devastated regions, Germany has repeatedly proffered labor, technical advice and material assistance. These offers have not been accepted, nor have they even reached the point of diplomatic exchange. The reason is not far to seek. Pecuni-

liar though it may seem, there exists in France only a limited degree of concern for the rehabilitation of the devastated regions. Advanced indemnities have been given to the former occupants of the soil, and these occupants have removed to other parts of the country and taken up their abode there. The salvaging of the abandoned war materials and the cleaning up of the war areas has been undertaken by influential groups of promoters, who are making no effort to expedite the performance of their contracts. The fact that influential opinion in France sees in the devastated region a remarkable opportunity for a political agitation which will always make a deep impression in the minds of the people of France and on foreigners has an important bearing on the issue. The German Government does not desire to see hate perpetuated between nations. In accordance with this purpose it intends to submit fresh proposals on this subject to the Government of France, the details of which are now under consideration and the subject of discussion with the laborers of Germany. Should the Government of France entertain objections to the employment of numbers of German laborers in the areas undergoing reconstruction the Government of Germany stands ready to offer to France good offices and resources in whatever form is acceptable. In respect to the second consideration, namely, the immediate establishment by Germany of an actual sum of cash money, in foreign exchange, of important proportions, it is obvious that Germany can fulfil this obligation only through large increases in the volume of her exports. The memorandum prepared by the economic experts of Germany for use at the conference at London demonstrated how huge this increase in Germany's exports necessarily would be if great sums of money were thereby to be obtained, and the menace this great increase would imply to the economic life of their countries. Conceding even this, it further remains that the sums in cash required could not be immediately realized. Other considerations have been advanced at various times, among them the proposal that our former opponents in the great war should participate in the returns from German industry, either through taking shares of the capital stock of German companies or by other forms of the sharing of profits. Such a proposal would produce only proceeds in paper marks, valueless to foreign creditors. Indeed, the allied and associated governments themselves negated these proposals in the Treaty of Versailles by taking for themselves a first mortgage on the total wealth and all sources of income of the German commonwealth and states. In addition to this the allied and associated governments, in their deliberations at Paris, reserved for themselves the decision as to what opportunity, if any, Germany may in any instance be given to obtain credit abroad because England and France are themselves in debt beyond their limit, and the granting of a credit to Germany by a neutral Power is blocked by the general mortgage. An international loan, in favor of which the allied and associated Governments would waive their general mortgage, constitutes the only solution of the problem. The Government of Germany is prepared to offer the necessary securities for the safety of such a loan. It is the opinion of the German Government that if the loan were properly organized and offered and if those who have evaded taxation be granted a general amnesty, the large sums of German capital which have been secretly withdrawn from Ger-

many could again be drawn in for the loan and thereby become available for the reparations. It has been reiterated by the allied and associated Governments that the situation of Germany is better than that of many of the allied and associated countries, due to the fact that Germany has no foreign debts. Germany would not be unwilling to assume the obligation of the interest and the amortization of the foreign debts of the allied and associated Powers, within the limit of her capacity, should this measure be entertained by the allied and associated Governments and their creditors. Germany stands ready to meet any proposal which appears feasible for the solution of the economic and financial problems of Europe, and would invite the examination by unbiased experts of its own ability to make payment. It is the opinion of Germany that the heavy weight of debt now borne by all the states which were participants in the world war and the damages which were wrought in the course of that war cannot be laid upon the shoulders of a single people. Germany believes also that a policy of duress and coercion would not bring about the reconstruction of international economic life, and that only by way of peaceful discussion and understanding can such reconstruction be obtained. The German Government considers it important to give, with solemn emphasis, the assurance that for its part it is honestly willing to follow the path which it has suggested.'—*New York Herald*, Apr. 5, 1921.—On April 21, a new note was received from the German Government, dated April 20, in which the president was asked to mediate the reparation question. President Harding refused, but expressed a desire for the resumption of negotiations between Germany and the Allied Powers. The German note is as follows: "In the name of the German government and the German people, the undersigned, notwithstanding the still existing technical state of war, respectfully petition the President of the United States of America to mediate the reparation question and to fix the sum to be paid by Germany to the Allied Powers and eagerly to urge him to secure the consent of the Allied powers to such mediation. They solemnly declare that the German government are ready and willing to agree without qualification or reservation to pay to the Allied powers as reparation such sums as the President, after examination and investigation, may find just and right. They formally pledge themselves to fulfill in letter and spirit all the provisions of any award that may be made by him. With abiding faith in the righteousness of this request and with undeniable sincerity of purpose, the German people, through their constituted government, submit their appeal to the President of the United States with the confident hope that it be granted, to the end that a final award may be made in accordance with right and justice to meet the heartfelt wishes of all civilized nations, to avoid the immeasurable consequence of imminent coercive measures and to promote the peace of the world. FEHRENBACH (Chancellor), SIMONS, (Foreign Minister). [The president's refusal to mediate, which was forwarded on April 21, was couched by Secretary Hughes in the following terms:] 'This government could not agree to mediate the question of reparations with a view to acting as umpire in its settlement. Impressed, however, with the seriousness of the issues involved as they affect the whole world, the government of the United States feels itself to be deeply concerned with the question of obtaining an early and just

solution. This government strongly desires that there should be an immediate resumption of negotiations, and reiterates its earnest hope that the German government will promptly formulate such proposals as would present a proper basis for discussion. Should the German government take this course, this government will consider bringing the matter to the attention of the Allied governments in a manner acceptable to them in order that negotiations may speedily be resumed.' [The reparation terms proposed by the German government, in response to this note, were unacceptable as a basis of discussion. This information was conveyed to the German government, by Secretary Hughes in another note, in which he said:] 'The government of the United States has received the memorandum left by Dr. Simons with the commissioner of the United States under date of April 24, relating to reparations. In reply, this government states that it finds itself unable to reach the conclusion that the proposals afford a basis for discussion acceptable to the Allied governments, and that these proposals cannot be entertained. This government, therefore, again expressing its earnest desire for a prompt settlement of this vital question, strongly urges the German government at once to make directly to the Allied governments clear, definite and adequate proposals which would in all respects meet its just obligations.'"—*New York Tribune*, May 3, 1921.—On May 11 Germany accepted the terms proposed by the Allies.

1921 (April-July).—Djambi oil question.—"The contest between American and British oil interests [see above: 1920 (November): Note to Great Britain], also became acute in Djambi. This territory, located in the Dutch East Indies, has another extremely valuable oil field. In 1912 the Netherlands received bids of six different companies for this concession, and in 1915 the Government decided to grant it to the Batavian Oil Company, a subsidiary of the Royal Dutch Shell . . . [a combination which had come under British control]. The Dutch Parliament failed to ratify the concession and it hung fire until 1921. When the matter was brought up again, the American State Department asked that the Standard Oil Company be allowed to participate in the fields."—R. L. Buell, *Oil interests in the fight for Mosul* (*New York Times Current History*, March, 1923).—Under instructions from Secretary Hughes, a vigorous note was delivered to the government of the Netherlands by William Phillips, the minister from the United States at The Hague. The note which was dated Apr. 19, 1921, reads as follows: "Excellency: During the last twelve months I have on several occasions presented to Your Excellency the very great interest of my Government in the participation by American capital in the development of the mineral oil deposits of The Netherlands East Indies. With your approval I have also had frequent interviews with the Minister of the colonies on the same subject. . . . I have pointed out that the United States has for years carried the burden of supplying a large part of the petroleum consumed by other countries; that Dutch capital has had free access to American oil deposits, and that the petroleum resources of no other country have been so heavily drawn upon to meet foreign needs as the petroleum resources of the United States. I have pointed out that in the future ample supplies of petroleum have become indispensable to the life and prosperity of my country as a whole, because of the fact that the United States is an industrial na-

tion, in which distance renders transportation difficult, and agriculture depends largely on labor-saving devices using petroleum products. In these circumstances my Government finds no alternative than the adoption of the principle of equally good opportunity, with the proviso that no foreign capital may operate in public lands unless its Government accords similar or like privileges to American citizens: and, furthermore, I have submitted that in the light of the future needs of the United States such very limited and purely defensive provisions as the above might become inadequate should the principle of equality of opportunity not be recognized in foreign countries. During the month of January, 1921, I again had an opportunity to discuss the situation with your Excellency, and on this occasion I advised you that in my interviews with the Minister of the Colonies I had gained the impression that the Colonial Department, at least, was inclined to favor the participation of American capital in the development of the Djambi fields. . . . I have now the honor to inform your Excellency that I have received a telegram from the Secretary of State to the effect that the Government of the United States is still mindful of the assurances that have been given by you and by the Minister of Colonies relating to the favorable attitude of her Majesty's Government toward American participation in the development of the Djambi fields. While I am not acting on behalf of any particular American company, I am glad of this opportune moment to point out that certain definite propositions which have been made during the last twelve months furnish sufficient evidence that responsible and experienced American interests are ready and desirous to cooperate with the Netherlands Government in oil developments in the Netherlands Indies. It is perhaps needless to say that my Government is fully aware of the laws and regulations in the Indies which prohibit foreign companies as such from entering the colonies for the development of mineral oils. On the other hand my Government is very greatly concerned when it becomes apparent that the monopoly of such far-reaching importance in the development of oil is about to be bestowed upon a company in which foreign capital other than American is so largely interested."—*New York Times*, Apr. 30, 1921.—The reply from the government of the Netherlands, received on May 12, stated that the note had been received too late, as the question had been settled. "The First Chamber of the Dutch Parliament, by 27 to 8, passed the Djambi Oil bill on July 1, providing for exploitation of valuable oil fields in Sumatra, Dutch East Indies, for forty years, by a combination of the Dutch Indian Government and the Batavia Oil Company, an offshoot of the Royal Dutch Shell combine, which is controlled in London. . . . [This made the measure law], the Second Chamber having passed it on April 29. Under the bill the combination . . . [was required to have] a capital of 10,000,000 guilders (\$40,200,000 at parity), to be divided equally, but the company is under the control of the Dutch Government, and the Directors must all be Dutchmen. By adoption of the bill American interests . . . were excluded from exploitation in the Djambi fields. This . . . was Holland's answer to Secretary Hughes's notes. . . . In reply to the note of May 27 the Dutch Government denied that its act closing the Djambi fields to American participation was contrary to the principles of reciprocity. Moreover, the Dutch Government objected to the representing of its policy toward

foreign nations as less liberal than that of the United States. The contrary, the note declared, was rather the case."—*New York Times Current History*, Aug., 1921, p. 834.—See also TRUSTS: International: Struggle for oil concessions.

1921 (April-September).—**Mesopotamia oil controversy.—Attitude on mandates.**—The diplomatic exchanges, on account of the Mesopotamian oil concessions, which had been dropped in March by Secretary Colby, were taken up in April, 1921, by Secretary Hughes. "In March, 1921, Lord Curzon . . . [had answered] the Colby note by reiterating that the oil concession in Mesopotamia had been granted before the war, and should therefore be protected—a statement which the United States would not accept, on the ground that the concession had never actually been completed."—R. L. Buell, *Oil interests in the fight for Mosul* (*New York Times Current History*, Mar., 1923).—To take a clear view of this disputed point, and of the attitude of the administration to the question of mandates in general, with which it is more or less complicated, it is necessary to go back into history. "At San Remo, in April, 1920, England and France reviewed their pre-war concessions received from the Rumanian, Austro-Hungarian and Turkish Governments for working oil wells in those countries, and decided upon a readjustment, particularly in the Turkish concessions in Mesopotamia, so that the New Mesopotamian Government and not Turkey might reap some benefit therefrom. [See also SAN REMO CONFERENCE.] Accordingly, the interests in this region were pooled—62 per cent. was to go to Great Britain, 18 per cent. to France and the remainder, 20 per cent., to the new Government of Mesopotamia. The contention of the British Government is that at San Remo a readjustment of concessions received before the war was made by it and France, and that therefore the matter is beyond the jurisdiction of the League of Nations, and hence not open to the criticism made by Washington. In continuing the correspondence dropped by Secretary Colby, Secretary Hughes incorporated with the criticism of the Mesopotamian matter the matter of other arrangements made between the Allies without consultation with the United States. This . . . complicated the matter in the press reports, but in his . . . note to the State Department on April 5 Lord Curzon, the British Foreign Minister, isolated the Mesopotamian question, presented its entire history dating back to 1906, and proved that the San Remo arrangement was not based on the result of the war, except in so far as it benefited Mesopotamia and not Turkey—the rest was merely a readjustment of pre-war concessions made to Great Britain and France."—*New York Times Current History*, May, 1921, p. 354.—As a matter of fact, the question had already been complicated by Secretary Colby, in his notes of May and November, 1920, in which he introduced the questions of mandates in general, and the island of Yap in particular. "After our decision to remain outside the League, American interest in the mandate principle was both general and particular. In general, we were interested in all the codes of international law which were created for the control of mandate territories. In particular, we had special interests to protect in certain of the territories. These interests brought us into early contact with the League of Nations, and this resulted in a short and sharp struggle between the Council of the League and the State

Department. In this struggle the United States came off clearly the victor. . . . It was not easy to ignore the League when the League Council was taking action on matters which were of direct concern to the United States. On May 7, 1919, the Council of Four, of which President Wilson was a member, had allocated the mandate territories to the Great Powers. At the time this action was taken President Wilson had entered a reservation to the assignment of Yap to the Japanese. As this island was an important cable and wireless station lying midway between our shores and Asia, it was his opinion that the island should be internationalized as a communication base and not assigned to any one nation. Yap came to be the chief point in the contentions between the United States and the Great Powers in the matter of mandates. Second only to our interest in the mandate over the island of Yap assumed by the Japanese was our interest in the mandate over Mesopotamia which had been granted to Great Britain. Later our interest developed to cover almost all of the mandate territories. After the withdrawal of the United States from Europe mandate matters moved slowly and under a cloak of silence. In May, 1920, the Secretary of State addressed a note to the British Foreign Office touching upon questions which had arisen in connection with the administration of Mesopotamia. At the same time the Secretary of State pushed further in communications to the Foreign Offices of Great Britain and Japan inquiries regarding the plans for the internationalizing of the communications systems of Yap. An international communication congress was impending which would consider among other things Pacific communications. To American inquiries on these subjects the Great Powers paid no attention. . . . [In his note of Nov. 20, 1920, to the British Foreign Office (see above: 1920 [November]: Foreign policy), on the ground that the United States is undoubtedly one of the powers interested in the terms of the mandates Secretary Colby requested] that the draft mandate forms be communicated to this government for its consideration before their submission to the Council of the League. Communications were made to Japan to the same effect. In spite of these demands the League Council on December 17, 1920, officially ratified the allocation of the C Mandates which covered the assignment of Yap to Japan, without showing the copies of the mandates to the United States or giving official heed to our demand that we be consulted. At the same time it postponed the consideration of A and B Mandates until a later date. The precise questions at issue in the cases of these mandates are for our purposes of minor importance. Of greater importance than the concrete questions involved is the trial of strength that ensued between the United States and the great powers. . . . The United States had refused to ratify the Versailles Treaty. In what position did this refusal leave the United States with reference to matters covered in the Treaty? For the clarification of the points at issue the Great Powers undertook to hold the position that in repudiating the Treaty and the Covenant the United States had put itself out of court in matters covered by these documents. . . . Great Britain informed the United States that 'the terms of the mandate can properly be discussed only in the Council of the League of Nations and by the signatories of the Covenant.' The issue was definitely joined. . . . [But] the end of President Wilson's Administration was approaching. It was desirable that when the Department of

State was turned over to the new Secretary measures should have been taken for the protection of all American interests throughout the world. At the same time, the Administration which had made the repudiated Treaty and was now going out of office had no desire to discuss with foreign powers any of the consequences of the American failure to ratify the Treaty. On its side the Department of State spent no breath in discussing the consequences of our failure to ratify the Treaty. On February 21 Secretary Colby addressed a letter to the Council of the League of Nations in which he outlined in full the demands of the United States and the grounds upon which they were pressed. Secretary Colby held that, aside from the ratification or non-ratification of the Treaty of Versailles, the United States had rights in the victory as one of the leading associated nations which could not be alienated. He called attention to the fact that the assignment of the Mandate to Japan of former German Pacific possessions 'in the name of the Allied and Associated Powers' was not accurate, as the United States had not been consulted in this action. His note declared that consent had never been given for the inclusion of Yap among the territories assigned to Japan, that indeed express reservations had been made against this assignment. He took the position that no mandate draft would be valid without the agreement of the United States, asked that drafts of all proposed mandates be submitted to the United States, and called for publicity in mandate discussions. Holding that 'as one of the principal Allied and Associated Powers, the United States had an equal concern and an inseparable interest with the other principal Allied and Associated Powers in the overseas possessions of Germany and conceded an equal voice in their disposition,' he concluded that the United States could not be bound by the action of December 17, 1920, and requested that the matter be reconsidered. When the Great Powers had forced the United States to address the League, they had won a diplomatic victory. But it was a hollow victory. For the League Council was not qualified to deal with the questions raised by the Department of State. All the Council could do, therefore, was to indicate its willingness to hold the matters in dispute open until they could be treated by the Great Powers to which the Council referred them. In pursuit of their earlier design of forcing conversations between the United States and the League, the Council asked the United States to send a representative to discuss the various matters at issue. The reply of the Council was despatched on March 1, 1921, and arrived immediately before the inauguration of the new President. The matter was thus laid on the doorstep of the new Administration. By Secretary Hughes the request for the appointment of a representative to discuss matters directly with the League was ignored. . . . [and] the mandate questions were taken up direct with the Great Powers concerned as mandatories. . . . On April 5, 1921, Secretary Hughes replied to the League note of March 1 in notes to Great Britain, France, Italy and Japan, taking the broad ground that the Allied Powers had no power to make a 'valid or effective disposition of the overseas possessions of Germany now under consideration without the assent of the United States'; that the right to dispose 'of the overseas possessions of Germany was acquired only through the victory of the Allied and Associated Powers' in which there is no disposition to deny the United States a place; that the Council of the League has been

vested with no authority to bind the United States or to act in its behalf; that the fact that the United States has not ratified the Treaty of Versailles cannot detract from rights already acquired."—T. H. Dickinson, *United States and the League*, pp. 96-104.—On Sept. 6, 1921, "a new note on the subject of mandates . . . [was] sent by the American Government to all the principal allied powers, reiterating the stand taken by Secretary Hughes for American rights and insisting upon the open door and equality of opportunity in all mandated territories. . . . The new note was addressed to all the principal allied powers in practically identical form. . . . The main points . . . [related to] the question of discrimination in the administration of the mandates. For example, the mandate forms in several instances . . . [referred to] certain rights and benefits . . . to accrue to nationality of members of the League of Nations. While . . . [our Government assumed] that these references . . . [were] the result merely of locution employed upon the assumption that the United States was to be a member of the League, the American note . . . [reiterated] its contention that the open door, or principle of equal opportunity for the nationals of all countries, should be recognized. The nationals of the United States, the note insists, must be protected from discrimination. . . . It is understood that the note offers no objection to the existing allocation of the former Turkish possessions or the former German colonies in Africa, but merely insists upon the right of equal opportunity for American nationals in those areas."—*New York Times*, Sept. 7, 1921.—See also TRUSTS: International: Struggle for oil concessions.

1921 (April-December).—Special session of Sixty-seventh Congress.—Influence of agricultural bloc.—"Beginning on March 4, 1921, the Republican party, for the first time in ten years, was in complete control of the executive and both branches of Congress. . . . Campaign pledges had been made that legislation would be speedily passed relieving the country of the ill effects of what President Harding called 'war's involvements'; economy and efficiency were to be secured; more business in government and less government in business were among the promises, and the reorganization of the administration, long talked of, was to be achieved. . . . During the campaign, Mr. Harding said that 'government is a simple thing,' and that, if he was elected President, Congress would be allowed to play its proper part under the Constitution. He pledged the Republicans to inaugurate 'party government, as distinguished from personal government, individual, dictatorial, autocratic, or whatnot.' . . . There were unmistakable signs that President Harding regretted his self-denying ordinance and realized that he should—on occasion he even tried to—lead Congress, and there developed a powerful revolt by members representing the agricultural sections of the country against the more conservative leadership of the party. . . . The Emergency Tariff Act was passed, with some of its provisions changed from the form in which it was vetoed by President Wilson. The Tax Revision Law went through the House in four days and was considered by the Senate for six weeks, and as passed it satisfied no one. Senator Penrose, its chief author, called it 'a temporary or transitional measure.' A permanent tariff bill was passed in the House but failed to receive consideration in the Senate. . . . President Harding's intention, announced in his campaign, was to be a 'constitutional executive.' . . . The President was to announce a party

program and give Congress his advice, but in no case was he to try to impose his on that of the legislature. . . . There were no differences between the executive and legislature that resulted in vetoes, but that, probably, was due to the failure of Congress to do more and the desire of the President to avoid an open break, rather than to any meeting of minds. The President, for example, was beaten decisively on the question of surtaxes. He sent a letter to Representative Fordney asking a compromise of 40 per cent, but the House, even with a Republican majority of two-thirds, ignored his wishes. The House committee refused to accept Secretary Mellon's tax proposals, even though they had President Harding's approval and Secretary Mellon's foreign debt refunding bill was materially modified before it passed the House on October 24. Even with a commission, instead of the uncontrolled authority of the secretary of the treasury which the administration proposed, the House accepted the measure with unfeigned reluctance. The President's attitude on the bonus was courageous, but here Congress was only too ready to shift responsibility to the executive and postpone the evil day of decisive action. [See above: 1921 (March-July).] In one respect, President Harding took a very interesting attitude. . . . He seemed to play the House of Representatives, which he could control, against the Senate which he could not. Thus, the emergency peace resolution was held up in the House in accordance with the President's wishes and was finally passed in the form that he desired. On disarmament, he was not so successful in having his own way. The Borah resolution, authorizing and requesting the President to invite Great Britain and Japan to a naval conference, was added to the naval appropriation bill by a unanimous vote in the Senate. The phraseology seemed to the President to be too definite, to give the Congress the initiative, if a conference was held. . . . [One of the most interesting and important developments of this special session] was the power and activity of the so-called agricultural 'bloc.' This is simply a group of senators and representatives who decided to act together in matters affecting the farmer, to force concessions from the Republican leaders as the price of their support of the party, and to act as a unit in putting on the statute books measures of importance to the agricultural interests which the party leaders desired to delay or hesitated to sponsor. In the Senate 22 members, mostly from western states, can be listed as the minimum of the agricultural 'bloc,' but its proportions have on occasion grown to 55—28 Republicans and 27 Democrats. In the House there are about 100 members. Their most spectacular action was to agree with the Senate surtax amendment over President Harding's objecting letter. The influence of the 'bloc' in the Senate was shown by the Emergency Tariff Act, the law regulating the packers, the provisions of a billion dollars credit for farm exports, the regulation of grain exchanges dealing in futures, the Curtis bill appropriating \$25,000,000 as a revolving fund for farm loan banks, and the Kenyon bill, providing an increased rate of interest for farm loan bank bonds, without an increase of interest rates to the farmers. On the tax revision bill, the agricultural 'bloc' gave the Senate leaders notice that certain changes would have to be made, and they were made. The surtax of 50 per cent on incomes, the repeal of the transportation taxes, and the increase of estate taxes, are schedules on which they forced concessions."—L. Rogers, *American government and politics* (*American Political*

Science Review, Feb., 1922, pp. 41-43, 46-49).—See also BLOC: United States agricultural bloc.—"After years of agitation in behalf of budget reform Congress finally enacted a budget law . . . similar to the bill vetoed in 1920 by President Wilson . . . [but with the clause which limited the power of the executive removed]. The Senate adopted the McCormick Budget Bill on April 26 without a roll-call and after little debate. The House passed the Budget Bill with amendments on May 5 by a vote of 344 to 9. The conference measure was accepted on May 26-27 by the two houses and was signed by the President on June 10. [See below: 1921 (June): Budget law.] . . . The Navy Appropriation Bill which was passed by the House during the previous session but was not voted on in the Senate was again passed by the House on April 28 by a vote of 212 to 15. As passed by the House, the bill carried \$396,000,000 and provided for the execution of the 1916 building program. The bill was reported in the Senate on May 5 and was passed with amendments on June 1 by a vote of 54 to 17. Some of the amendments proposed in the Senate brought forth protracted debates between the advocates and opponents of a larger navy. On May 24 the Senate adopted by a vote of 45 to 23 an amendment to the House bill proposed by the Committee on Naval Affairs increasing the appropriation for 'pay of the navy' from \$72,421,647, the House figures, to \$87,798,447. The most important amendment, however, was that presented by Senator Borah, providing for an international conference on armaments. Although this amendment was at first opposed by the Committee, it was adopted by the Senate on May 25, without a dissenting vote. The amendment read as follows: 'That the President is authorized and requested to invite the governments of Great Britain and Japan to send representatives to a conference, which shall be charged with the duty of promptly entering into an understanding or agreement by which the naval expenditures and building programs of each of said governments, to wit, the United States, Great Britain and Japan, shall be substantially reduced annually during the next five years to such an extent and upon such terms as may be agreed upon, which understanding or agreement is to be reported to the respective governments for approval.' [See below: 1921 (July-August).] The amendment offered by Senator Pomerene, providing for the temporary suspension of the naval ship-building program during the disarmament conference, was rejected by a vote of 29 to 36. The navy bill as passed by the Senate carried appropriations amounting to \$494,000,000, an increase of \$98,000,000 over the House measure. The bill went to conference and was finally approved by both houses on July 11. The President approved it the next day. As finally enacted the Navy Law appropriated \$417,000,000. It carried out the President's recommendation relative to the establishment of a Bureau of Aeronautics in the navy department. The Army Appropriation Bill, passed by the House on May 10 by a vote of 241 to 23, carried appropriations amounting to \$331,000,000 and provided for an army of 150,000 men. The Senate on June 7 by a vote of 35 to 30 refused to reduce the army to that figure but on the following day reversed itself and agreed to the House proposal by a vote of 36 to 32. The bill . . . was signed by the President on June '30."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1921, Supplement, pp. 32, 34-35.—"The special session of the Sixty-seventh Congress . . . continued until November

23. One of the most important measures adopted during the session was the one to regulate interstate and foreign commerce in live-stock and dairy products, generally known as the Packers Bill. For several years the Western farmers had insisted upon curbing the monopolistic tendencies exhibited by the great packing corporations. Bills designed to remedy existing conditions were pending in both houses many months before either house took definite action. Early in June the House adopted the Haugen Bill which Senator Kenyon declared satisfactory to the packers and which Senator La Follette charged had been practically drafted by them. This bill struck a deadly blow at the Federal Trade Commission by depriving it of all regulating authority over the packing industry except when called upon by the Secretary of Agriculture to make particular investigations. Great powers of regulation were vested in the Secretary of Agriculture. In the Senate a strong attempt was made by the members of the 'agricultural bloc,' led by Senator Norris, Kendrick, Kenyon and La Follette, to substitute the Norris Bill for the Haugen Bill. . . . The substitute amendment was lost by a vote of 34 for to 37 against. One important amendment introduced by Senator Kenyon was, however, adopted by the Senate. This provided for uniform accounting and considerable publicity in regard to the packing industry. The bill which was reported by the conference committee, adopted by both houses, and signed by the President on August 15 was practically the Haugen Bill. Administrative control was vested in the Secretary of Agriculture. The Federal Trade Commission was deprived of most of its regulatory power over the packing industry and the uniform accounting amendment of the Senate was rejected. . . . The Good Roads Bill provided for the appropriation of \$75,000,000 to aid state highway construction, and the Sheppard-Towner Bill established machinery and provided funds to the amount of \$1,500,000 for the year to aid the states in the protection of maternity and infancy. A Board of Maternity and Infant Hygiene, consisting of the Chief of the Children's Bureau, the Surgeon-General of the United States Public Health Service, and the United States Commissioner of Education, was established, and the Children's Bureau of the Department of Labor was charged with the administration of the act. The amount allotted to the several states was made to depend on population and was made available only in case the states provided equal sums for the maintenance of the services and facilities provided by the act. . . . The President approved the bill on November 23. . . . The Revenue Act of 1921 was one of the chief accomplishments of the session. . . . The House bill provided for the repeal of the excess-profits tax and the reduction of the maximum surtax on individual incomes from sixty-five per cent to thirty-two per cent. The transportation taxes and the luxury taxes on wearing apparel and soda fountain sales were also abolished. The exemption for heads of families from the normal income tax was raised from \$2000 to \$2500 and the exemption for dependents from \$200 to \$400. The tax of 10 per cent on the net income of corporations was increased to 12½ per cent. The bill was estimated to reduce the national revenues by about \$600,000,000. Early in September, Secretary of the Treasury Mellon appeared before the Senate Finance Committee and made a number of important recommendations relative to tax revision. He urged the repeal of the excess profits and transportation taxes, the reduction of the maximum

income surtaxes to twenty-five per cent, the increase of the corporation income tax to fifteen per cent, and a tax on proprietary medicines and cosmetics, and the elimination of the capital stock tax. . . . Almost seven weeks were spent on the bill . . . [by the Senate] and more than eight hundred amendments were adopted. Senator Penrose reported the bill from the Finance Committee with the House surtax rates of thirty-two per cent. There was such a storm of protest, however, from the 'agricultural bloc' that the leaders were forced to compromise. The bill was recommitted and reported back with the rate increased to fifty per cent. This was finally accepted by the Senate and although attacked in conference was finally written into the law. . . . The bill with many amendments passed the Senate on November 7 . . . [and] was sent to conference on November 10. . . . The House agreed to the conference report on November 21 and the Senate followed suit two days later. The bill was signed by the President on November 23. . . . Although there was much discussion of the proposed bonus or 'adjusted compensation' for veterans no action was taken by Congress on this matter. However, the Sweet Law, approved August 9, provided for the establishment of an independent Veterans' Bureau to take over the work of the Bureau of War Risk Insurance, the Rehabilitation Division of the Federal Board for Vocational Education, and some of the services relating to ex-soldiers performed by the United States Public Health Service.—On August 24 the urgent Deficiency Appropriation Bill for the year 1922 was approved by the President. It carried among other items, \$48,500,000 for the Shipping Board and specifically provided that not more than six officers or employees of the Board should be paid an annual salary in excess of \$11,000.—By a law approved November 18 Congress appropriated \$4,000,000 for completing the Alaskan railroad."—*Ibid.*, pp. 30-33.—"The first regular session of the Sixty-seventh Congress convened on December 5. The following day President Harding delivered in person his annual message before a joint session of the two houses. . . . He was in favor of the funding of foreign debts and expressed the hope that changes would be made in the Merchant Marine Act. . . . On the first day of the session the President submitted to Congress the budget for the fiscal year ending June 30, 1923, prepared by General Dawes as Director of the Budget in accordance with the provisions of the Budget act of 1921. The estimates for 1922 and 1923, as compared with expenditures for 1921, showed substantial decreases. In only two departments were large increases contemplated. . . . Some important changes in congressional procedure were made in carrying out the budget law. In the House a single Committee on Appropriations was substituted for the eight separate committees previously reporting spending proposals. A similar change was made by the Senate."—*Ibid.*, pp. 33-34.

1921 (May).—Dillingham Immigration Bill and its operation. See IMMIGRATION AND EMIGRATION: United States: 1920-1921: Efforts to check immigration; 1921.

1921 (May).—Fordney Tariff Bill passed. See TARIFF: 1921 (May).

1921 (May).—Acceptance of invitation to be represented at Allied conferences, on Ambassadors' Council and on the Reparations Commission.—"For a year or more America's interests in the Council of Ambassadors, the Reparations Commission, and the Rhineland Commission had been watched by unofficial observers. After the election

of 1920 these observers were withdrawn. No representative of the United States was sent to the meeting of the First League Assembly in Geneva."—T. H. Dickinson, *United States and the league*, p. 27.—In May, 1921, however, an invitation to resume attendance at these meetings was extended by the Allies and accepted. The following is the text of the note which was sent by Lloyd George, as president of the London Conference, by the hand of Sir Auckland Geddes, the British ambassador at Washington. "As president of the Allied Conference, which is just completing its sittings in London, I am authorized, with the unanimous concurrence of all the powers here represented, to express to the United States government our feeling that the settlement of the international difficulties in which the world is still involved would be materially assisted by the cooperation of the United States; and I am therefore to inquire whether that government is disposed to be represented in the future, as it was at an earlier date, at Allied conferences, wherever they may meet; at the Ambassadors' Conference, which sits at Paris, and on the Reparations Commission. We are united in feeling that American cognizance of our proceedings and, where possible, American participation in them, will be best facilitated by this." [To this note, Charles Evans Hughes, the secretary of state, replied as follows:] "The government of the United States has received through the British Ambassador the courteous communication in which you state that, with the unanimous concurrence of the powers represented at the Allied conference in London, you are to inquire whether this government is disposed to be represented in the future, as it was in the past, at the Allied conferences, at the conferences of ambassadors in Paris and on the Reparations Commission. The government of the United States, while maintaining the traditional policy of abstention from participation in matters of distinctly European concern, is deeply interested in the proper economic adjustments and in the just settlement of the matters of world wide importance which are under discussion in the conferences and desires helpfully to cooperate in the deliberation upon these questions. Mr. George Harvey, appointed Ambassador to Great Britain, will be instructed on his arrival in England, to take part as the representative of the President of the United States in the deliberations of the Supreme Council. The American Ambassador to France will be instructed to resume his place as unofficial observer on the conference of ambassadors, and Mr. Roland W. Boyden will be instructed to sit again in an unofficial capacity on the Reparations Commission. The government of the United States notes with pleasure your expression of the belief of the representatives of the Allied governments assembled in London that American cooperation in the settlement of the great international questions growing out of the World War will be of material assistance."—*New York Tribune*, May 12, 1921.

1921 (May).—Hughes rejects Polish appeal for support in Upper Silesia.—On May 18, the government published the fact that Poland had asked that the influence of the United States should be used to aid her in obtaining the disputed districts in Upper Silesia. (See POLAND: 1921: Upper Silesian complication.) The following is the text of the note sent to Prince Lubomirski, the Polish Ambassador, by Secretary Hughes in reply: "I have the honor to acknowledge the receipt of your note of May 11, in which you recite the reasons why, in your opinion, certain districts

of Upper Silesia should be assigned to Poland and urge that the representatives of the Government of the United States on the Supreme Council, the Council of Ambassadors and the Reparation Commission be instructed to exert their influence in favor of a settlement of the matter strictly in accord with the Treaty of Versailles and the result of the recent plebiscite. In the reply I have the honor to inform you that, in my opinion, the settlement of such boundary disputes as arise in the case under consideration is a matter of European concern, in which, in accord with the traditional policy of the United States, this Government should not become involved. The attitude of the Government in this matter is clearly understood by its representatives in Europe, who will, therefore, as far as at present may be seen, take no part in the discussion concerning Upper Silesia, and will express no opinion as to the settlement."—*New York Times*, May 19, 1921.

1921 (May).—Unemployment figures.—Agricultural distress.—"Throughout 1919 and the spring of 1920 there was apparent prosperity with continued demand for goods, based on the high wages of the war period and the expenditure by people of small means of their accumulated capital in the form of Liberty bonds and war savings stamps. This demand, however, was not based on income alone; it resulted from the expenditure of capital. Naturally, there came an end to such spending, and it was then seen that the so-called shortage of goods was not real. The freight blockade was lifted about the same time, releasing great quantities of goods, and people soon discovered that the market was flooded and that the buying power had gone out of it. Meanwhile, plants had been expanded and business men had borrowed freely. Now they had to stop. Their notes were falling due; and further extension of credit was impossible. The inevitable result was a collapse in commodity markets and prices, which seriously affected the whole business machinery of the nation and caused acute distress in the agricultural districts. The prices of farm products declined rapidly and farmers generally were unable, without considerable sacrifice, to dispose of the crops and live stock which they had produced at high costs."—E. Meyers, Jr., *Emergency credit for agriculture* (Survey, Graphic number, January, 1922).—There was great resulting distress throughout the winter and spring of 1920-1921. The bold figures in a statement published in the *New York* daily papers in May, 1921, are eloquent. "Unemployment figures compiled by Secretary Frank Morrison of the American Federation of Labor, from reports reaching him show that today in 210 cities there are 1,325,061 persons, both union and non-union, out of employment, as compared with 1,391,396 the last of March. A statement embodying the reports by cities was made public here tonight. Figures for Chicago had not been tabulated, but Greater New York and vicinity, according to the report, have 400,000 unemployed, or the same number as on the last of March. Cleveland has 125,000, against 108,017 in March; Boston 40,000, against 35,000; Milwaukee 34,500, against 40,000; St. Louis 50,000, against 37,500; Pittsburgh 60,000, against 20,000; Indianapolis 25,000, against 20,000; Cincinnati 20,000, against 35,000, and Los Angeles 18,000, against a similar number in March. Other cities included in the report are: Grand Rapids, Mich., with 2,500, against 7,500 in March; Schenectady, N. Y., 15,000, against 5,000; Waterbury, Conn., 22,500, against 18,000; Wilmington, Del., 13,500, against 9,870; Akron,

Ohio, 20,000, against 12,000; Altoona Pa., 15,000, against 2,500; . . . Butte, Mont., 10,000, against 25,000; Flint, Mich., 12,000, against 19,000."—*New York Times* May 21, 1921.—"The debacle of prices in 1920 and 1921 reduced the farmer to a condition worse than he . . . [had] suffered under for 30 years. Prices of farm products are relatively far below the prices of other groups of commodities. . . . [In these years] the products the farmer . . . [had to sell bought] less of the products the farmer had to buy to-day than at any time in the . . . [preceding] two decades. Farm indebtedness . . . [had] doubled in the last 10 years, and the drop in prices . . . [had] the effect of again doubling this indebtedness. Farmers . . . [had great] difficulty in paying the debts incurred in producing the crops of 1920 and in securing credit necessary for new production. . . . In the spring of 1920 evidences that deflation was at hand began to multiply. Exports of farm products, particularly, continued to decline in volume. Domestic consumption in many lines also began to decline; the stream of production flowing from the farmer to the consumer began to back up in the channels of distribution, although higher discount rates and tight money, like dikes erected along the banks of the stream, served as influences to keep goods flowing in the channels of trade, notwithstanding the obstacles of declining prices and slackening demand. As demand fell off the difficulties of disposing of the crop of 1920 increased. Prices fell far below the costs of production, which were higher in 1920 than in any preceding year. The receipts from farm products grew constantly less and less adequate to liquidate the indebtedness against them and to provide for new production. More and still more credit was required to finance new production and to carry goods of 1920 production until they could be moved. The process of forcing these goods upon the market, in the face of lessening demand, served to still further force down prices, and as prices dropped the proceeds of the sales of goods became less and less adequate to pay the accumulated debts made in producing them. Thus customary credit requirements were embarrassed because costs of production could not be liquidated at current selling prices, and the interest costs of carrying the goods until a better market could be obtained had to be added to the losses incident to declining prices. Toward the end of 1919 the demands of the consuming public reached such proportions as to develop on the part of the retailers a kind of buyers' panic. . . . This led to a runaway market, a purely sellers' market, and gave a wholly fictitious impression of the probable demands of the coming year. . . . It was inevitable that this bubble of inflated prices must burst at some time, and the first warnings that it was coming were found in the cancellation of . . . duplicated orders. These cancellations, moderate at first, soon became, as the fall in prices progressed, simply an avalanche, and so far as the most careful investigation discovers, it was this wave of cancellation, and the fright which preceded it, which were the main or precipitating causes which carried prices down in such a headlong fashion. While there were probably many to anticipate a fairly drastic reaction from the unexampled boom of 1919-20, there were few probably, and possibly none, really to anticipate the tremendous decline which actually took place. Records of price changes . . . [ran back] to the beginning of the nineteenth century. In this period of 120 years the debacle of 1920-21 was without parallel."—S. Anderson, *Credit Report of the Joint Commission of Agricultural Inquiry*

1921 (June).—Arbitration with Norway. See NORWAY: 1921-1923.

1921 (June).—The budget law.—Prior to June, 1921, the budget system of the United States was inadequate. "The United States government does not have a finance minister who is responsible for raising and expending its revenues, hence it has not a true budget. However, Congress devotes a large portion of its time to the creation and consideration of a so-called budget. The Ways and Means Committee of the House of Representatives prepares bills for raising all revenue, and nine other distinct committees of the House prepare bills appropriating the revenue. The head of each of the ten administrative departments prepares an estimate of its needs for the succeeding year and transmits it to the Secretary of the Treasury. When the Secretary has collected these ten estimates, he sends them to the Speaker of the House as he received them. The Speaker, in turn, separates these estimates into eight groups, referring one group to each of the eight committees having power to prepare appropriation bills."—F. A. Magruder, *American government in 1921*, p. 97.—To remedy this state of affairs a law to create, in the Treasury Department, a Bureau of the Budget, and a general accounting office was passed by Congress on June 5, and approved by the president on June 10, 1921. The act reads in part as follows: "The President shall transmit to Congress on the first day of each regular session, the Budget, which shall set forth in summary and in detail (a) Estimates of the expenditures and appropriations necessary in his judgment for the support of the Government for the ensuing fiscal year . . . the estimates for the legislative branch and the Supreme Court to be transmitted to the president on or before Oct. 15 in each year, and included by him in the budget without revision. (b) His estimates of the receipts of the Government during the ensuing fiscal year. . . . (c) The expenditures and receipts of the Government during the last completed fiscal year. (d) Estimates of the expenditure and receipts of the Government during the fiscal year in progress. (e) The amount of annual permanent or other appropriations, including balances of appropriations for prior fiscal years, available for expenditure . . . during the fiscal year in progress, as of Nov. 1 of each year. (f) Balanced statements of (1) the condition of the Treasury at the end of the last completed fiscal year, (2) the estimated condition of the Treasury at the end of the fiscal year in progress and (3) the estimated condition of the Treasury at the end of the ensuing fiscal year if the financial proposals contained in the Budget are adopted; (g) All essential facts regarding the bonded and other indebtedness of the Government and (h) such other financial statements and data as in his opinion are necessary, or desirable in order to make known in all practicable detail the financial condition of the Government. . . . If the estimated funds available for any

year are insufficient to meet the requirements of the budget," the president is empowered to make recommendations to Congress for "new taxes, loans, or other appropriate action to meet the estimated deficiency. No estimate or request for an appropriation and no request for an increase in an item of any such estimate or request and no recommendation as to how the revenue needs of the government shall be met, shall be submitted to Congress . . . by any officer . . . of any department or establishment, unless at the request of either House of Congress. . . . The head of each department and establishment shall revise the departmental estimates and submit them to the Bureau on or before September 15 of each year. In case of his failure so to do, the President shall cause to be prepared such estimates and data as are necessary to enable him to include in the Budget estimates and statements in respect to the work of such department or establishment. There is hereby created in the Treasury Department a Bureau to be known as the Bureau of the Budget. There shall be in the Bureau a Director and an assistant Director who shall be appointed by the President. . . . The Bureau under such rules and regulations as the President may prescribe, shall prepare for him the Budget and to this end shall have authority to assemble, correlate, revise, reduce or increase the estimates of the several departments or establishments. There is created an establishment of the Government to be known as the General Accounting Office, which shall be independent of the Executive Departments and under the control and direction of the Comptroller General of the United States. The office of the Comptroller of the Treasury and Assistant Comptroller of the Treasury are abolished to take effect July 1, 1921. . . . There shall be in the General Accounting Office a Comptroller General of the United States and an Assistant Comptroller General of the United States, who shall be appointed by the President with the advice and consent of the Senate. . . . The Comptroller-General and Assistant Comptroller-General shall hold office for fifteen years. . . . The Comptroller General or the Assistant Comptroller-General may be removed at any time by joint resolution of Congress. . . . The balances certified by the Comptroller General shall be final and conclusive upon the Executive branch of the Government. The Administrative examination of the accounts and vouchers of the Postal Service . . . shall be performed . . . by a bureau in the Post Office department to be known as the Bureau of Accounts which is hereby established for the purpose. The Bureau of Accounts shall be under the direction of a Comptroller who shall be appointed by the President on the advice and consent of the Senate." The comptroller general is given wide powers of control over records of accounts and expenditure and is required to "make to the President when requested by him, and to Congress at the beginning of each regular session, a report in writing of the work of the General accounting office." President Harding appointed Charles G. Dawes of Chicago as director of the budget to carry out the provisions of the new law. Mr. Dawes was comptroller of the currency, 1897-1902, and had served on the administrative staff of the commander-in-chief of the American Expeditionary Forces.

1921 (July-August).—Conference for the limitation of armaments.—Preliminary steps.—On July 10, 1921, after some discussion in Congress and in the public press, it was officially announced

that the President, in view of the far-reaching importance of the question of limitation of armament, had approached with informal but definite inquiries the group of powers heretofore known as the principal allied and associated powers, that is, Great Britain, France, Italy and Japan, to ascertain whether it would be agreeable to them to take part in a conference on this subject, to be held in Washington at a time to be mutually agreed upon. If the proposal was found to be acceptable, formal invitations for such a conference would be issued.—See also BRITISH EMPIRE: Colonial and imperial conferences: 1921: Foreign affairs debate.—"The general interest of the Powers, and the special interest of some, centers in the Pacific. Hence, Secretary of State Hughes, speaking for and by the direction of President Harding, added in his first note to the Principal Allied and Associated Powers: 'It is manifest that the question of limitation of armament has a close relation to Pacific and Far Eastern problems, and the President has suggested that the Powers especially interested in these problems should undertake in connection with this conference the consideration of all matters bearing upon their solution with a view to reaching a common understanding with respect to principles and policies in the Far East.' This meant that China was to be invited to the Conference, and it was so stated. The four Powers thus sounded by Secretary Hughes were willing to attend the proposed conference. China was more than willing. They were therefore invited to confer with the United States and one another, on armament, and all with China on the problems of the Pacific. Belgium, the Netherlands and Portugal let it be known that they had interests in the conference which could not be overlooked by themselves, and should not be by the conferees. No one who has not forgotten the exciting month of August, 1914, would deny to Belgium a very present interest in the armament of its neighbors, although some people questioned its right to discuss the limitation of armament of the military nations. And Holland and Portugal are Far Eastern Powers. By common consent these three Powers were invited to take part in the discussion of the Pacific problems. Therefore, on August 11th, Secretary Hughes invited the Principal Allied and Associated Powers to a conference on both subjects, and China on Pacific problems, to which were added, on October 4th, Belgium, the Netherlands and Portugal to send representatives to Washington to confer."—

J. B. Scott, *Conference on the limitation of armament and problems of the Pacific (American Journal of International Law, v. 15, 1921, pp. 503-504)*.

On August 11 the following formal invitation was sent to the four big powers: "The President is deeply gratified at the cordial response to his suggestion that there should be a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions should also be discussed. Productive labor is staggering under an economic burden too heavy to be borne unless the present vast public expenditures are greatly reduced. It is idle to look for stability, or the assurance of social justice, or the security of peace, while wasteful and unproductive outlays deprive effort of its just reward and defeat the reasonable expectation of progress. The enormous disbursements in the rivalries of armaments manifestly constitute the greater part of the encumbrance upon enterprise and national prosperity; and avoidable or extravagant expense of this nature is not only without economic justification, but is a constant menace to the peace of the world rather

than an assurance of its preservation. Yet there would seem to be no ground to expect the halting of these increasing outlays unless the powers most largely concerned find a satisfactory basis for an agreement to effect their limitation. The time is believed to be opportune for these powers to approach this subject directly and in conference; and while, in the discussion of armament, the question of naval armament may naturally have first place, it has been thought best not to exclude questions pertaining to other armament to the end that all practicable measures of relief may have appropriate consideration. It may also be found advisable to formulate proposals by which in the interest of immunity the use of new agencies of warfare may be suitably controlled. It is, however, quite clear that there can be no final assurance of the peace of the world in the absence of the desire for peace, and the prospect of reduced armaments is not a hopeful one unless this desire finds expression in a practical effort to remove cause of misunderstanding and to seek ground for agreement as to the principles and their application. It is the earnest wish of this Government that through an interchange of views with the facilities afforded by a conference, it may be possible to find a solution of Pacific and Far Eastern problems of unquestioned importance at this time, that is, such common misunderstandings with respect to matters which have been and are of international concern as may serve to promote enduring friendship among our peoples. It is not the purpose of this Government to attempt to define the scope of the discussion in relation to the Pacific and Far East, but rather to leave this to be the subject of suggestions to be exchanged before the meeting of the conference in the expectation that the spirit of friendship and a cordial appreciation of the importance of the elimination of sources of controversy will govern the final decision. Accordingly, in pursuance of the proposal which has been made, and in the light of the gracious indication of its acceptance, the President invites the Government of Great Britain to participate in a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions will also be discussed, to be held in Washington on the 11th day of November, 1921."

The invitation to China was as follows: "The President is deeply gratified at the cordial response to his suggestion that there should be a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions should also be discussed. It is quite clear that there can be no final assurance of the peace of the world in the absence of the desire for peace, and the prospect of reduced armaments is not a hopeful one unless this desire finds expression in a practical effort to remove causes of misunderstanding and to seek ground for agreement as to principles and their application. It is the earnest wish of this Government that through an interchange of views, with the facilities afforded by a conference, it may be possible to find a solution of Pacific and Far Eastern problems, of unquestioned importance at the time—that is, such common misunderstandings with respect to matters which have been and are of internal concern as may serve to promote enduring friendship among our peoples. It is not the purpose of this Government to attempt to define the scope of the discussion in relation to the Pacific and Far East, but, rather, to leave this to be the subject of suggestions to be exchanged before the meeting of the conference, in the expectation that the spirit of friendship and a cordial appreciation

of the importance of the elimination of sources of controversy, will govern the final decision. Accordingly, in pursuance of the proposal which has been made and in the light of the gracious indication of its acceptance, the President invites the Government of the Republic of China to participate in the discussion of Pacific and Far Eastern questions, in connection with the conference on the subject of limitation of armament, to be held in Washington on the 11th day of November, 1921."—*New York Times Current History, September, 1921, pp. 917-919.*—See also WASHINGTON CONFERENCE.

1921 (July-August).—Peace with Germany and Austria.—Following the adoption of the peace resolution (see above: 1921 [April-December]) E. L. Dresel and A. H. Frazier were accredited to Germany and Austria, respectively, as commissioners, and negotiations with both countries were entered into and successfully carried out. On August 23 a treaty of peace with Austria was signed in Vienna, and on the following day (August 24) the treaty with Germany was signed in Berlin. (See TREATIES, MAKING AND TERMINATION OF: Treaty making power.) "The treaty of peace between Germany and the United States, negotiated at Berlin between representatives of the two Governments, was made public . . . [on August 25] by Secretary Hughes, after he had been advised that the document had been signed at [Berlin]. . . . The compact assures to the United States all the rights accruing to this country under the Treaty of Versailles, but provides specifically that the United States shall not be bound by the clauses of the Versailles compact relating to the League of Nations, as is shown by the following statement issued by the State Department: 'The treaty . . . was signed on behalf of the President of the United States by Ellis Loring Dresel, Commissioner of the United States, who had received full powers for the purpose; and on behalf of the President of Germany by Dr. Friedrich Rosen, Minister of Foreign Affairs. The treaty with Germany is in accord with the peace resolution adopted by Congress and approved by the President on July 2, 1921. The preamble of the treaty recites Section 1, 2 and 5 of the resolution, which relate to Germany. Article 1 of the treaty provides that the United States shall have all the rights and advantages specified in the resolution, including those stipulated for the benefit of the United States in the Treaty of Versailles. Article 2 of the treaty defines more particularly the obligations of Germany with respect to certain provisions in the Treaty of Versailles. Thus it is provided that the rights and advantages stipulated in the Treaty of Versailles for the benefit of the United States which it is intended the United States shall enjoy are those defined in Section 1 of Part IV. and Parts V., VI., VIII., IX., X., XI., XII., XIV., and XV. Section 1 of Part IV. contains the provisions by which Germany renounced her former overseas possessions in favor of the principal allied and associated powers. This confirms the rights of the United States with respect to Yap and the other former German overseas possessions upon an equality with the other powers. The other parts of the Treaty of Versailles above mentioned embrace the military clauses, the reparation, financial and economic clauses, the parts relating to aerial navigation, ports, waterways and railways, guarantees and miscellaneous provisions. The result is to put the United States on a footing with the other allied and associated powers with respect to all the rights defined in all these clauses. . . . The treaty provides that the United

States shall not be bound by any of the provisions of the treaty which relate to the League of Nations. The United States also assumes no obligations under Parts II., III., Sections 2 to 8, inclusive, of Part IV., and Part XIII. of the Treaty of Versailles. Part II. relates to the boundaries of Germany; Part III. to the political clauses for Europe; Sections 2 to 8, inclusive, of Part IV. embrace certain provisions with respect to China, Siam, Liberia, Morocco, Egypt, Turkey, Bulgaria and Shantung, and Part XIII. relates to the international organization of labor under the League of Nations. The United States is entitled to participate in the Reparations Commission and other commissions set up under the Treaty of Versailles, but is not bound to participate in any such commission unless it elects to do so."—*New York Times*, Aug. 26, 1921.—The text of the treaty with Germany reads as follows:

Considering that the United States, acting in conjunction with its co-belligerents, entered into an armistice with Germany on Nov. 11, 1918, in order that a treaty of peace might be concluded:

Considering that the Treaty of Versailles was signed on June 28, 1919, and came into force according to the terms of its Article 440, but has not been ratified by the United States;

Considering that the Congress of the United States passed a joint resolution approved by the President July 2, 1921, which reads in part as follows:

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war declared to exist between the Imperial German Government and the United States of America by the joint resolution of Congress approved April 6, 1917, is hereby declared at an end. [For text of resolution see above: 1920-1921 (April-July).]

Being desirous of restoring the friendly relations existing between the two nations prior to the outbreak of war, have for that purpose appointed their plenipotentiaries: The President of the United States of America, Ellis Loring Dresel, Commissioner of the United States of America to Germany, and the President of the German Empire, Dr. Friedrich Rosen, Minister for Foreign Affairs, Who, having communicated their full powers, found to be in good and due form, have agreed as follows:

ARTICLE ONE. Germany undertakes to accord to the United States, and the United States shall have and enjoy, all the rights, privileges, indemnities, reparations or advantages specified in the aforesaid joint resolution of the Congress of the United States of July 2, 1921, including all the rights and advantages stipulated for the benefit of the United States in the Treaty of Versailles which the United States shall fully enjoy notwithstanding the fact that such treaty has not been ratified by the United States.

ARTICLE TWO. With a view to defining more particularly the obligations of Germany under the foregoing article with respect to certain provisions in the Treaty of Versailles, it is understood and agreed between the High Contracting Parties: (1) That the rights and advantages stipulated in that treaty for the benefit of the United States, which it is intended the United States shall have and enjoy, are those defined in Section One, Part Four, and Parts Five, Six, Eight, Nine, Ten, Eleven, Twelve, Fourteen and Fifteen. The United States, in availing itself of the rights and advantages stipulated in the provisions of that treaty mentioned in this paragraph will do so in a manner consistent with

the rights accorded to Germany under such provisions. (2) That the United States shall not be bound by the provisions of Part One of that treaty, nor by any provisions of that treaty including those mentioned in Paragraph One of this Article, which relate to the Covenant of the League of Nations, nor shall the United States be bound by any action taken by the League of Nations, or by the Council or by the Assembly thereof, unless the United States shall expressly give its assent to such action. (3) That the United States assumes no obligations under or with respect to the provisions of Part Two, Part Three, Sections Two to Eight inclusive of Part Four, and Part Thirteen of that Treaty. (4) That, while the United States is privileged to participate in the Reparation Commission, according to the terms of Part Eight of that Treaty, and in any other commission established under the Treaty or under any agreement supplemental thereto, the United States is not bound to participate in any such commission unless it shall elect to do so. (5) That the periods of time to which reference is made in Article 440 of the Treaty of Versailles shall run with respect to any act or election on the part of the United States from the date of the coming into force of the present Treaty.

ARTICLE THREE. The present Treaty shall be ratified in accordance with the constitutional forms of the High Contracting Parties and shall take effect immediately on the exchange of ratifications, which shall take place as soon as possible at Berlin.

In witness whereof, the respective plenipotentiaries have signed this Treaty and have hereunto affixed their seals.

Done in duplicate in Berlin, this 25th day of August, 1921.

1921 (July-December).—Merchant marine.—Reorganization of Shipping Board.—Depression in shipping industry.—Cost and tonnage.—“In July [1921] the President approved Chairman Lasker’s Shipping Board reorganization plans. Three operating vice-presidents were selected: J. Barston Smull and William J. Love of New York, and A. J. Frey of San Francisco. The seriousness of the depression in the shipping industry was shown by an announcement of the Shipping Board on October 3 stating that of the 1464 vessels under its control only 240 were in service and that 1019 were scheduled for dead mooring upon discharging their cargoes. The Board’s attempt to dispose of the wooden fleet constructed during the war has been unsuccessful. It was stated on September 29 that the bid of the Ship Construction and Trading Company had been rejected. The company put in a bid of \$2,100 per vessel, as compared with the original cost of from \$300,000 to \$500,000. Last fall the Shipping Board made an inventory of all surplus material and supplies left over from the war period. It was found that the cost value of the materials and supplies was \$389,780,000 and that its present value was approximately \$75,000,000, exclusive of real estate in New York, fuel oil stations in various parts of the world, and ships and drydocks. . . . According to the annual report of the Commissioner of Navigation, issued December 15 [1921], the tonnage of American vessels engaged in foreign trade at the beginning of the fiscal year 1922 was eleven times greater than at the beginning of the Great War. The total number of vessels under American registry was 28,012, with a total gross tonnage of 18,282,136. This was an increase of 12 per cent over the previous fiscal year. The report stated

that there were 5,951 vessels with a tonnage of 11,077,000 engaged in foreign trade; 21,478 vessels with a tonnage of 7,163,000 in the coastal trade; and 583 vessels with a tonnage of 41,600 in the fisheries. There were built during the year 1,361 vessels of 2,265,115 gross tons."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 27.

1921 (August).—Agricultural Credits Act passed. See RURAL CREDIT: United States: Agricultural Credits Act.

1921 (September-December).—Unemployment conference.—Depreciation in value of crops.—Throughout the summer, the large number of unemployed continued to cause great uneasiness. In an effort to meet the situation, and to contrive means to alleviate the distress before the approach of winter, President Harding called an unemployment conference, "which began its sessions in Washington on September 26 [1921]. The proceedings were conducted under the direction of Secretary Hoover. An emergency program was recommended on September 30 for the relief of the unemployed, whose number was estimated at from three to five millions. . . . A few weeks later a program for the permanent recovery from the present depression was issued. . . . In spite of some improvement in industry there was a serious unemployment problem in many cities throughout the year."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 28.—"Measured in terms of purchasing power, the farmer's dollar in 1920 was worth 89 cents. In May, 1921, it was worth 77 cents. During the . . . 12 months [ending September, 1921, it was] . . . worth less than in any preceding 12 months in 30 years. The prices of farm products during the war period were higher than the prices of some groups of commodities and lower than others. On the whole, they about kept pace with the prices of all commodities combined. In the . . . perpendicular decline [which followed], the prices of farm products declined more rapidly and went to a lower level than the prices of other commodities. This fact increased the disadvantage of the farmer during the period of deflation. . . . In the rise and fall of commodity prices during the cycle through which we have just passed the farmers profited but little in a few years and lost heavily in recent months. The profits made by the farmer during the war were only slightly greater than those of 1913 and were swept away by the decline in prices of 1920 and 1921. . . . The costs of production for the 1920 crop were greater than the costs of any preceding crop in the history of the country. During 1919 and the first half of 1920 costs of production of agricultural products rose more rapidly than prices of agricultural products and . . . [after] June, 1920, costs of production . . . declined less rapidly than prices of agricultural products. . . . In the . . . 10 years [prior to October, 1921], the total number of mortgages on farm lands and buildings owned by their operators has more than doubled and has increased proportionately more than the value of lands and buildings."—S. Anderson, *Agricultural crisis and its causes* (Report of Joint Commission of Agricultural Inquiry, 67th Congress, 1st Session, House of Representatives, Report no. 408, pt. 1, Oct. 15, 1921, pp. 13-14, 19-20).—"On December 30 Secretary Wallace of the Department of Agriculture issued at the President's request a call for a national agricultural conference to consider means for alleviating the prevailing agricultural depression. The Department estimated the value of the important farm crops for 1921 at

\$5,675,877,000, almost three and a half billion dollars less than the value of the 1920 crops and eight billion dollars less than that of the 1919 crops."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 28.

1921 (October).—Report of commissioners on condition of Philippines. See PHILIPPINE ISLANDS: 1918-1921.

1921 (October-November).—Ratification and proclamation of peace with Germany, Austria and Hungary.—The treaties of peace which had been negotiated with Germany, Austria and Hungary, and which were all in the same terms, were sent to the Senate on September 21. They came to a vote and were ratified on October 18, and on November 14, peace was proclaimed. "The President's power to recognize the termination of war may be clearly deduced from his power as the representative organ and has been admitted by the Supreme Court in the case of the Civil War. His proclamation or his reception or dispatch of diplomatic representatives from or to a former enemy therefore seems the proper method for recognizing peace in the absence of treaty, though, as in the case of recognizing new states, he is of course free to solicit the advice of Congress, which action would usually be desirable. This was the course actually followed in terminating the wars with Germany, Austria, and Hungary. By his proclamation, issued on November 14, 1921, after exchange of ratifications of the treaty with Germany of August 25 (and similar treaties with other powers) President Harding recognized that the war terminated on July 2, 1921, the date on which Congress had passed a resolution declaring the war 'at an end.' The antedating of the proclamation indicates that the war terminated, not by express treaty, but by tacit agreement, recognized in the United States by the President, when, in his opinion, there was sufficient evidence that Germany had concurred in the opinion expressed by the United States on July 2."—O. Wright, *Control of American foreign relations*, p. 293.

1922.—Economic situation.—Effect of the World War on foreign trade, finance and industry in the United States.—National debt.—For-

eign loans and re-payment.—Exports.—Edge Act.—Finance of export trade.—Collapse of 1920.—War Finance Corporation revived.—Agricultural coöperation societies.—Development of water power.—Steel and iron industry.—Importance of automobile industry.—Industrial research.—Revival of domestic business.—Strikes.—By the year 1922, the effect of the World War on trade and industry in the United States could be fairly well estimated. Even a casual glance shows that it was very great. But, fully to realize the result, it is necessary to look back over a hundred years prior to 1914, the year when the war began. It will be seen that, prior to this time, the balance had begun to turn in favor of the United States, but that the process was greatly accelerated by the war there can be no doubt. "During the years 1898-1914 the *foreign trade* of the United States was in a position of comparatively stable equilibrium. Each year we exported nearly half a billion dollars' worth of goods more than we imported. In addition, our net exports of gold and silver amounted to the inconsiderable average of eight millions a year. During these seventeen years, our total trade experienced a steady expansion, the value of imports more than doubling, and that of exports increasing in somewhat less proportion. The relation of export to import values, however, changed scarcely at all. An export excess, taking both merchandise and metals into account, averaging \$584,000,000 during 1898-1901, was succeeded by an average of \$451,000,000 during the next decennium, only to be followed by an average of \$603,000,000 during the three years preceding the outbreak of the war. The changing character of our trade during these years has been the subject of frequent comment. Foodstuffs and raw materials formed an increasing proportion of imports, while our growing exports contained a constantly rising proportion of manufactured goods. Business was done at steadily rising prices, too, so the increase of trade was less in volume than in value. For the present purpose, however, the important fact is the comparatively fixed difference between export and import values. Excess exports of merchandise, gold and silver averaging half a billion a year were scarcely sufficient to balance the annual charges we had to meet on account of interest and current services, chiefly freight, tourists' expenditures, and the remittances made by immigrants to friends and relatives abroad. . . . While the net flow of capital was inward up to the very eve of the war, American investors had large and growing holdings abroad, chiefly in Canada and Mexico. Paish put our foreign investments in 1909 at a billion and a half, and Charles F. Spears in the same year estimated them at something between a billion and three quarters and two billions, of which he credited a third to Mexico and a quarter to Canada. American capital, he declared, had been flowing into Mexico during the preceding ten years at the rate of from fifty to seventy-five millions a year. The revolutionary disturbances for a time checked this flow of money southward, but our investment in Canadian lands, forests, mines and industrial enterprises rose rapidly during the years just preceding the war. Our Middle Western farmers alone, emigrating to the prairie provinces, took with them large sums for land purchase, while American capitalists invested heavily in farm and timber lands, and American factories opened Canadian branches. At the outbreak of the war American investments in Canada were placed at \$600,-

000,000 or more. These capital exports helped other countries to buy goods from us on credit, and thus swelled the favorable trade balance of the years preceding the war; yet we were not, during this time, actually passing from a debtor to a creditor position. Despite our enormous wealth, our highly developed industry, and our growing financial strength, we were still a financially young country at the outbreak of the war. Investment opportunities here, by comparison with those in other countries, were still so attractive that the net flow of capital was inward. Even by sending out goods and specie to an excess value of half a billion yearly we did not succeed in meeting the annual charges against us on other than merchandise account. The war changed this situation primarily by leading Americans to sell abroad, during the war period, goods to a value of eighteen billion dollars in excess of their foreign purchases during the same time. This was made possible by unprecedented credit operations on both public and private account."—H. R. Mussey, *New normal in foreign trade* (*Political Science Quarterly*, September, 1922).

"Authorities treat of the history of the international trade balance of the United States from 1820 to 1896 in four main periods. During the first period, from 1820 to 1837, foreign capital flowed into the country, causing an annual excess of imports over exports amounting on an average to \$11,000,000. The interest payable on that capital brought about a small excess of exports over imports (annual average \$3,000,000) during the second period from 1838 to 1850. Then followed the period from 1850 to 1874, during which the population of the country was rapidly increasing, the resources of the Middle West were being developed and the country opened up by railway construction, requiring large amounts of foreign capital whose influx, checked for a while by the Civil War, but again stimulated by the process of readjustment succeeding that war and by the sale of United States Government bonds abroad, again created an excess of imports over exports averaging over \$60,000,000 a year. During the ensuing period, from 1874 to 1896, the rate of foreign investment in American enterprise again slackened and, although the physical volume of imports grew largely, the volume of exports underwent still greater increases, which helped the country to meet maturing external loans and to pay interest charges on American industrial and other securities in foreign hands. In the years 1889 and 1890 and again in 1893, when special circumstances existed, there was a small excess of imports over exports, but in each of the remaining years of the period the total value of the exports exceeded that of the imports by an average of more than \$100,000,000. . . . In the period which elapsed between 1896 and the outbreak of the European War—a period of very rapid industrial and commercial expansion—the total annual value of American foreign commerce reached figures twice as great as those of any year in the preceding twenty, and showed a yearly excess of merchandise exports amounting to an average of \$466,000,000, but averaging nearly \$567,000,000 during the four years ended in July, 1914. Thus at the outbreak of the European War in 1914 the United States was still a 'debtor' nation heavily indebted to foreign and especially to European countries for interest on invested capital, for tourist expenditures, for immigrants' remittances and other items, the annual charges on those accounts being liquidated

every year by the shipment abroad of over five hundred million dollars worth of American products and manufactures. . . . The estimates of the invisible items included in the 1914 balance are, of course, only approximations, but they are based on the calculations of the best-known authorities and they probably represent as near an approach to accuracy as can be secured. The statement shows an adverse true balance of \$10,000,000, more or less, against the United States—a margin small enough to permit of easy adjustment without undue disturbance of the exchanges. In other words, the American international account practically balanced itself from year to year up to August, 1914. The European war produced a radical and almost immediate change in this situation. At first imports of merchandise declined in total value, dropping from \$1,894,000,000 in 1914 to \$1,674,000,000 in 1915, but they recovered in the succeeding year and showed a steady increase from that time until the beginning of the year 1921. Exports, on the other hand, which stood at \$2,364,000,000 in 1914, showed from the very beginning of the war a heavy increase in value, continuing almost without intermission until the end of 1920 and resulting in an enormous excess of exports, which culminated at more than \$4,000,000,000 in the calendar year 1919. . . . In the seven and one-half years beginning with the outbreak of the European war and ending at the close of the calendar year 1921, the United States exported merchandise, silver and gold to an aggregate value of over \$20,000,000,000 which were not offset by imports of merchandise, gold and silver, but were left to be liquidated by invisible items normally present in the international balance and by emergency financing of various kinds.”—J. J. Bricker, *Report on the economic, financial and industrial conditions of the United States of America in 1922* (Department of Great Britain Overseas Trade, pamphlet, pp. 7-10).

“Williams points out that the export figures of 1920 are probably two hundred millions too large, owing to the abrupt drop of values during that year, which led to the actual sale of some goods at prices below those stated in the manifests. On the other hand, Thomas W. Lamont calls attention to the fact that ‘during the period of our participation in the war our government exported great quantities of goods not only for its own use but also for sale to its Allies. These government exports are unrecorded.’ It is to be observed, however, that the Treasury on November 15, 1921, held obligations of foreign governments received from the Department of War and the Navy, representing sales of surplus war materials, of an aggregate value of \$574,673,710.21, thus covering the item mentioned by Mr. Lamont. . . . Leaving all corrections aside, our excess exports, taking both merchandise and metals into account, amounted to somewhat more than eighteen billion dollars, during the war period. Turning to invisible items, the account for interest and services during the same period, contrary to the popular idea, ran heavily against us, though not at the pre-war rate.”—H. R. Mussey, *New normal in foreign trade* (*Political Science Quarterly*, Sept., 1922).—See also COMMERCE: Commercial age: 1914-1921.

“Chief amongst the emergency measures were the loans extended by the United States Government to the Governments of the Allied countries; purchases of foreign currencies by the United States Government to meet expenses incurred in obtaining supplies for the American army in Europe; credits extended to European countries on account of sales of surplus war supplies and European relief; and

finally, advances by the War Finance Corporation in aid of American export trade. . . . There were two other expedients of permanent importance, to which some allusion must here be made. The first was the repatriation of American securities, large blocks of which, previously held by private European investors, were sent to the United States during the war period and resold on the American market as part of the means adopted by European Governments to prevent an embarrassing depreciation of the Allied exchanges on New York. No exact figures showing the total volume of this movement of securities appear to exist, but it continued for some time after the Armistice, as the heavy decline in exchange rates, which took place as soon as the Allied Governments ceased to support the exchanges, made it very profitable for private European holders of such securities to ship them across the Atlantic, and they arrived in considerable volume during the year 1919 and 1920. Several American economists agree on an estimate of \$2,350,000,000 as representing the total par value of domestic railroad, industrial and other issues returned to this country between August, 1914, and December, 1920. In addition to this homeward movement of American securities, there has been a notable outflow of American capital through the sale on the United States market of the internal obligations of foreign countries and of foreign municipal, industrial and other issues as well as through the purchase, establishment and extension abroad by American concerns of factories, mills, warehouses, mines and industrial plant of various kinds. Calculations made by the Chamber of Commerce of the United States indicated that the loans floated by foreign Governments through investment banks in the United States and outstanding on December 31, 1920, barely fell short of \$2,000,000,000. Allowing for repayments made in the meantime as well as for the additional foreign loans, both governmental and private, that have since been placed here, it is probable that the net outflow of American capital under this head between 1914 and 1922 exceeds \$2,000,000,000. Professor Williams, who has devoted much expert attention to this matter, is quoted as authority for the statement that the total investment in foreign countries at the beginning of 1921, was approximately \$3,500,000,000, and the total investment of foreign capital in the United States approximately \$1,500,000,000. Assuming the substantial correctness of these figures it will be seen that the net pre-war indebtedness of the United States to foreign countries under the head of interest in the invisible account has now been permanently reversed, and that the balance of interest charges in future will show an annual sum, variously estimated at \$100,000,000 to \$150,000,000, payable to the United States. . . .

“The American investing public has, by this time, become quite familiar with foreign issues, and that the former reluctance of investors to place their money outside of the country has largely disappeared—a very fortunate development for the future of American export trade, since it is quite evident that only by a continuous export of capital can that trade be maintained in anything like the volume required by the great expansion of industrial productivity which the war has witnessed in the United States. The need for new and enlarged export markets for surplus production is evidenced by many developments in this country to which attention cannot now be given. Amongst those developments are the

extraordinary activity of commercial and industrial associations like the Chamber of Commerce of the United States, the National Association of Manufacturers, the Merchants' Association of New York, and similar bodies throughout the country, all of which have special departments devoted entirely to the promotion of the interests of their members in the foreign field. Then there is the National Foreign Trade Council, an association founded shortly before the war broke out to educate the American public generally to an intelligent interest in foreign trade and to instruct manufacturers and exporters in its technique. Most important of all is the excellent commercial intelligence work done by the Bureau of Foreign and Domestic Commerce which, under the able guidance of Mr. Hoover, has secured from Congress greatly increased appropriations and expanded its organization during the last few years by establishing nearly a score of commodity divisions, each superintended by a man who is an expert in his line and who has been practically selected by the trade itself. . . .

"When the great war broke out in 1914 the United States was a debtor on the world's balance sheet to the extent of some \$4,000,000,000, representing amounts due on current accounts and foreign investments in this country. Until the beginning of 1915 the United States had always been a borrowing nation. Enormous sums of money required to develop the resources of the country had not only made the export of capital impossible but European investors had been induced to place their funds here and contributed to a considerable extent to the economic strength of the Republic. . . . The influx of foreign capital not only ceased but Europe made large demands for funds, with the result that the United States is now a creditor nation for a vast amount. Many countries engaged in the war obtained large loans with which to meet the enormously increased calls made upon their respective exchequers. Munitions and supplies had to be furnished by the Allied Powers, and while the very volume of the quantities demanded represented heavy outlays rising market prices added to the financial burden of the borrowers. . . . The public debt of the United States, which on June 30th, 1914, amounted to \$1,388 million rose to \$3,129 millions by June 30th, 1917. During the following two years its augmentation was accelerated and on June 30th, 1919, it stood at \$25,635 millions. By the addition of a further 1,000 millions the peak was reached in August of that year, since which date reductions have been effected, the aggregate of the public debt on June 30th, 1922, having amounted to nearly \$23,000,000,000, classified as follows:

Bonds, Pre-war Loans	\$ 883,840,470
Bonds, Liberty Loans	15,081,612,550
Notes, Victory Liberty Loan	1,991,183,400
Treasury Notes	2,246,596,350
Tax and Loan Certificates	1,828,787,500
Treasury (War) Saving Securities	679,015,317
All Others	285,380,528
Total	\$22,996,416,115

In a statement . . . issued by the United States Treasury it was pointed out that on April 30th, 1921, when the Treasury first announced its refunding programme, the gross public debt amounted to some \$24,000,000,000, of which 7½ millions would mature in about two years. On September 30th, 1922, the total gross debt stood at \$22,800,-

000,000, and of the early maturing debt about \$4,000,000,000 had already been retired or refunded, chiefly into short-term Treasury notes with maturities spread over the next four fiscal years. During the present fiscal year to June 30th, 1923, some 1,100 million dollars worth of Treasury certificates of indebtedness will fall due as well as about 625 millions of War Savings certificates, 1918 series, and about 1,800 million dollars of Victory notes. Of the Treasury certificates about 48 million dollars represent Pittman Act certificates . . . [to be retired in 1922] through the recoinage of silver bullion, while about 1,000 million dollars of loan certificates have been met out of funds in hand. . . . The total of the obligations of foreign governments under the Liberty Bond Acts held by the United States Government amounted, on June 30th, 1922, to \$9,386,422,556, the principal debtor nations being:

Great Britain	\$4,135,818,358
France	2,933,516,448
Italy	1,648,034,051
Belgium	347,251,013
Russia	187,729,750

Other securities held by the United States Treasury, emanating from several foreign governments other than that of Great Britain, represented, on June 30th, 1922, the following amounts:

Foreign obligations received on account of sale of surplus war supplies	\$574,876,885
Foreign obligations received on account of relief afforded by the American Relief Administration, pursuant to Act approved February 25th, 1919	84,093,963

. . . Up to November 15th, 1921, the total repayments of principal derived from credits established under the Liberty Bond Acts were as follows:

British Government	\$110,681,641
French Government	46,714,862
Roumanian Government	1,794,180
Belgian Government	1,522,902
Cuban Government	1,425,000
Serbian Government	605,326
Total	\$162,743,911

. . . [See also DEBTS, PUBLIC: World War and after.]

"During the war the trade of the United States with other countries passed through several stages of evolution, the last being the period when American exports to Europe were financed through credits extended by the United States Government, and the extent to which export trade was financed by the Treasury after the Armistice has been put at \$2,500,000,000. Subsequently it became necessary for American exporters to find other means of financing their transactions, and it was realized that the usual credits of from 60 to 90 days designed to cover the period while goods were in transit were much too short to maintain the continuance of trade. . . . The demands on a vast scale made by Europe for raw materials and foodstuffs made the need of a financing system imperative, and in order to co-ordinate American capital and banking facilities in those transactions, Congress enacted what is commonly known as the Edge Act. . . . By means of corporations organized under the *Edge Act*, long-term credits may

be granted to finance exports not only from the United States, but from other countries as well, and the real purpose of the Act, which, it should be mentioned, was passed in December, 1919, and embodied in the Federal Reserve Act as Section 25 (a), is to provide for the establishment of a Federal system of international banking or financial corporations working under Federal supervision with ample enough powers to enable them to compete effectively with similar foreign institutions and to afford to American exporters and importers a means of financing their foreign business. . . . Two international financial corporations . . . [had, in 1922, been] incorporated under its provisions. . . . The situation has been explained so clearly by the Director of the War Finance Corporation that the following passages from a recent address of his may here be quoted:—'The collapse of 1920 was due, in no small measure, to the pressure upon the agricultural producer and the stockman to liquidate loans in a shorter time than he required to market his output in an orderly manner. The prices received by the farmer for his products under forced liquidation and hasty selling impaired his buying power; and this, in turn, brought about a serious decline in the demand for manufactured products, a falling off in freight movement, and a general demoralization in industry and business. . . . Before the war a considerable part of the money required to finance the harvesting and marketing of our agricultural commodities was furnished by Europe. Let us take cotton as an illustration. In the spring and summer of each year, American banks were accustomed to draw 90-day bills on European bankers in anticipation of the harvest. The proceeds of the drafts were added to the reservoir of banking capital and found their way into the cotton growing districts. As the drafts became due, in the autumn and early winter, they were paid off by exports. This worked smoothly and well, because Europe had liquid capital and a modern banking system, which we then lacked. . . . Since the war only about 50 per cent. of our cotton exports has been going forward in the same six months, leaving 50 per cent. to be exported in the other six. And essentially the same situation has existed with reference to our other staple agricultural commodities.' The situation was complicated by the presence of many other influences besides the mere lack of credits, but the farming community placed most of the emphasis on the latter, and Congress, hoping that increased exports might help the situation to some extent, revived the War Finance Corporation, early in 1921, and restored its power to make advances in aid of the exportation of American produce. It was not until July, 1921, that serious advantage was taken of the Corporation's revived export financing resources and such relief as was then brought by its activities was mostly confined to the cotton growing States, so, in August, 1921, at the instance of its Director, Mr. Eugene Meyer, the War Finance Corporation received from Congress (by the Agricultural Credits Act) power and funds to make loans for agricultural purposes to banks, co-operative marketing associations, etc., for a period not exceeding one year. . . . [See also RURAL CREDIT: United States: Agricultural Credits Act.] Under these extended powers the War Finance Corporation . . . played a most important part in tiding the farmers of the country over the worst of their difficulties. Between November, 1921, and January, 1922, the advances made by the Corporation averaged more than

\$2,000,000 a day and, according to a . . . statement . . . [made by] Mr. Meyer, some 7,000 loans totalling \$183,000,000 . . . [had, in 1922,] been extended to 4,400 banks throughout the country, in addition to advances of \$72,000,000 to livestock loan companies and \$175,000,000 to co-operative marketing associations. In all, the advances made out of the Corporation's resources for agricultural and livestock purposes, including those extended for the financing of cotton and other agricultural exports [had, before the end of 1922, amounted] to \$470,000,000. . . . Particular attention must also be called to the extension amongst American farmers during the last few years of co-operative marketing schemes. *Co-operation* had already been carried to a point of efficiency by the fruit growers of California, whose organizations not only handle the distribution of the product, but also deal with the problems of production and engage in the purchase and, in some cases, the manufacture, of supplies needed by the growers. The California Fruit Growers' Exchange . . . [had in 1922] 10,500 members whose product, to an annual value estimated at nearly \$100,000,000, it distributes to the wholesale trade throughout the country. The members of the Exchange . . . [had] formed about 200 local associations, each owning and operating its own packing house and directing all local activities, the local units being federated into a central agency for the preparation, grading, advertising and sale of the fruit. The economies effected by these methods, as well as the improvement they have brought about in the product itself, are considerable. . . . The establishment of co-operative elevators throughout the grain belt . . . [had] proceeded so rapidly that more than 50 per cent. of all grain now received at Chicago . . . [was] said to come from farmers' elevators. In the southern States, the formation of co-operative organizations amongst the cotton growers was greatly stimulated by the War Finance Corporation activities, since the law provided that the Corporation's advances should not be made directly to the individual farmers but only to banks or associations which had extended credits to the farmers. In this way, co-operative cotton selling associations . . . [had been] set up in 10 States including Texas, Oklahoma, Louisiana, Georgia, North and South Carolina, Alabama, Arkansas, Mississippi and Arizona, the associations in the last two States handling long-staple cotton. The membership of each society is limited to the cotton farmers of the State to which the society belongs and all the societies are federated in a central body known as the American Cotton Growers' Exchange. . . . The general character and functions of the societies may be gathered from a description of one of the largest of them, the Texas Farm Bureau Cotton Association, given . . . by Mr. Sloan Simpson, Treasurer of that body. The basis of the plan, Mr. Simpson explained, is a contract which each individual grower signs obliging himself to hand over to the Association for sale every bale of cotton raised or acquired by him for a period of five years. In former times the farmer's financial necessities compelled him to dispose of this cotton in two months. The Association now takes it and distributes its sale over a period of nine or ten months. . . . A co-operative society, organized along lines almost identical with those of the cotton farmers, was established . . . [in 1921] by the growers of burley tobacco in Kentucky, Southern Indiana, West Virginia, Northern Tennessee and Southern Ohio. It

is known as the Burley Tobacco Growers' Co-operative Association. . . . It was in connection with negotiations for an advance from the War Finance Corporation that this Association also was formed, but its mere establishment and the added financial strength its farmer members derived from co-operative action enabled them . . . to raise the needed funds from the banks and to cancel their application for a loan from the War Finance Corporation. . . . In contrast to the downward trend of food exports, already referred to, the American foreign trade in other important agricultural commodities . . . tended to increase both in quality and value. Raw cotton has, for many years, been by far the most valuable item in the American export list. . . . In 1921, the foreign shipments of raw cotton made up 12.20 per cent. of the total value of American domestic merchandise exports. . . . Next after raw cotton and wheat in the descending list of American export values comes unmanufactured leaf tobacco. The trade in this commodity is carried on chiefly with the United Kingdom, Italy, France, Germany, Holland, Spain, Canada and Australia. [See also COOPERATION: United States.] . . .

"An important feature of the movement for the conservation of natural resources, which may be said to have begun during the presidency of the late Theodore Roosevelt, was the wide attention given to the question of *water-power development*. . . . It was natural that the development of water-power should proceed most rapidly in the regions farthest removed from coal deposits. [See CONSERVATION OF NATURAL RESOURCES: United States: 1902-1919.] Thus, though the installed capacity in the New England States is only 14.94 per cent. of the total for the whole country it exceeds the minimum and represents over 86 per cent. of the maximum development possible on the streams that flow through those States themselves. Water-power in New England is still the chief source of the energy used by the pulp, paper, woollen and cotton mills, and by the public utilities of that area. Similarly, in California, where two-thirds of the energy employed in public utilities, in irrigation, in mining, and in manufacturing industries is hydro-electric. . . . In other sections of the country also, notably in the basin of the Ohio and Tennessee Rivers, where there is a large market for power for industrial uses, considerable development work [took place]. . . . The Aluminium Company of America, in 1921, had completed a programme for the erection of a series of plants on Little Tennessee River, with an aggregate capacity of 400,000 h.p., and work had actually been begun on two of the plants. The most interesting single enterprise in that area, however, was the project for the construction of a power plant at Muscle Shoals on the Tennessee River in the State of Alabama. . . . Congress in the year 1916 had appropriated \$20,000,000 to be used by the United States Government in the development of power for producing nitrogen from the air. The Government decided to use the greater part of the appropriation in building a dam on the Tennessee River at Muscle Shoals. . . . The termination of the war in the autumn of 1918 rendered the completion of the project unnecessary so far as the immediate demand for nitrates was concerned, but work was nevertheless continued until April, 1921, when it was stopped owing to the refusal of Congress to make further appropriations for its prosecution. Over \$15,000,000 had been expended on the undertaking when

this event happened, the dam had been almost half completed and progress had been made towards the completion of the power house and the locks. The additional cost required for completion . . . [was] estimated at about \$11,000,000. . . .

"The advancement of the American *iron and steel industry* during the last half century was an almost continuously progressive one. The industry was heavily affected by the general industrial slump of 1914. . . . The first result of the outbreak of the European war was to increase the depression, and by the end of the year the steel works in this country were running at only about 40 per cent. of their then existing capacity. . . . The year 1915, however, witnessed toward its close, the beginnings of a remarkable recovery occasioned directly by orders from the European belligerents amounting in value to hundreds of millions of dollars for barbed wire, shrapnel bars, machine tools for ordnance work, and all kinds of war supplies. These and other foreign war orders had the effect of enlarging greatly the domestic demand for steel products. . . . By July, 1917, the enormous price advances which had taken place all along the line had brought the average 'weighted' price of iron and steel products to a peak point representing 370 per cent. of the pre-war normal. European war orders were not solely responsible for this advance. The intervention of the United States in the hostilities—foreseen quite early in 1917—the probable requirements of the United States forces for munitions and other war supplies, the American Government's programme of naval and mercantile shipbuilding—all these factors, added to foreign war orders, to the orders for railway equipment then coming in large volume from France, Italy, Russia, and Spain, and to the heavy demand for ship-plates from Japan, operated during the first six or seven months of 1917 to cause the most rapid rise of prices and the most extensive expansion of productive capacity the industry has ever known. . . . Production, which . . . reached its highest point between 1916 and 1918, fell considerably in volume in 1919 as the result of cancellations of Government orders, strikes and the general uncertainties of the period immediately following the Armistice. The post-war boom, however, soon overcame those difficulties; prosperous conditions, accompanied by increased output, revived, and lasted until the autumn of 1920, when the first effects of the general slump in prices and of the depression in the railroad and shipping business and other steel-consuming industries began to make themselves definitely felt. . . . Production of iron ore during the twelve months ended December 31st, 1921, was the lowest recorded for 17 years, while the output of pig iron, ingots and finished products in the same period was even smaller than that of 1914 and comparable only with the output of the year succeeding the panic of 1907. . . .

"The most important and extensive branch of the iron and steel industry . . . is that relating to the manufacture and maintenance of *automobiles*. Starting on a modest scale about 1893 and extending slowly for the first ten years of its existence, the total output of this industry in 1904 amounted to less than 22,000 vehicles of all kinds, valued at about \$25,000,000. After that time, however, the domestic demand for the gasoline car grew steadily each year. In 1909 the total production was almost 130,000 cars of a wholesale value of nearly \$160,000,000. The

following year the number of vehicles manufactured was close on 200,000, and by the year 1914 the industry was well established with a broad and constantly expanding domestic market, which enabled manufacturers to organize on a sound economic basis, and with an increasing foreign demand which helped to stabilize it. The total capital invested in the industry in 1914 exceeded \$300,000,000 and the total output in that year, including bodies and parts, was valued at more than \$650,000,000. . . .

"In view of the importance of *industrial research* for the future of American manufacture and commerce, brief mention should be made in this report of the remarkable extension which research work has undergone in this country. . . . The attention paid by the Federal Government to this matter is no new development and the excellence and wide scope of the work done by the Bureau of Standards under the U. S. Department of Commerce as well as by the Bureau of Mines and other branches of the Department of Interior are well known, but what is perhaps not so generally realized in other countries is the close contacts they maintain with American manufacturers and producers, and the immense amount of assistance they give to private industrial concerns in the solution of their technological problems. They have established, moreover, an excellent liaison not only with universities and other educational institutions but with individual students in colleges and institutes of technology. . . . In 1916 a National Research Council was founded [see NATIONAL RESEARCH COUNCIL] under the Congressional Charter of the National Academy of Sciences, for the purpose of prosecuting and encouraging research in industry. . . . There are Committees on such subjects as the fatigue phenomena of metals, heat treatment of carbon steel, high-speed tool steels, hardness testing of metals, pulverization, welding, etc. The Division of Research Extension carries on widely diversified activities. In 1920 it helped to found an 'Alloys Research Association,' assisted the Tanners' Council in the establishment of a 'School of Tanning,' and initiated investigations in connection with the tobacco plant, macaroni, glass, etc. . . . The Council is supported by funds derived from other than Government sources. In 1920 the Carnegie Corporation donated \$170,000 for current expenses while the Rockefeller Foundation, the Commonwealth Fund and other similar institutions contributed largely to its upkeep and expansion. To support the investigation on the fatigue phenomena of metals, the General Electric Company in 1920 gave \$30,000 while the Du Pont de Nemours and the General Motors Corporation provided \$5,000 and \$2,500 respectively for the special use of the Council's research information service. The most notable feature of the industrial research movement, however, is the great amount of investigation work which is being carried on by various manufacturing firms and trade associations quite independently of official support. In a very interesting publication issued by the National Research Council particulars are given of the work done and the staff employed in the private laboratories of some 526 firms and organizations throughout the country."—J. J. Broderick, *Report on the economic, financial and industrial conditions of the United States of America in 1922* (Department of Great Britain Overseas Trade, pamphlet, pp. 10-15, 26-27, 34-39, 42, 43, 59-61, 64-65, 79, 133-134).

"Prior to the war, the conditions affecting the outflow of American capital were, in many re-

spects, quite different from those that . . . [have prevailed since that period]. Then, the investment of American capital abroad was induced almost entirely by the desire of individual American enterprises to extend the field of operations primarily for the protection of their position in international trade. . . . A cursory study of our pre-war foreign investments indicates that they were made chiefly by our large oil, mining, meat packing, fruit, and timber concerns, and by companies manufacturing special types of machinery. To a very large degree, too, these investments were concentrated in adjacent or near-by countries, such as Canada, Mexico, and Cuba. . . . To meet strong international competition, to be better placed for the distribution of their product, and, in some cases, to secure the benefit of lower labor costs, certain American corporations . . . invested large sums in foreign establishments in other parts of the world. In the pre-war period other considerations determined the investment of American capital abroad in certain cases, but the factors named were the most influential. Other factors of a more potent character . . . [went into operation in the post-war epoch] to induce the outflow of American capital. Among these may be mentioned the following: The United States . . . [became] the world's chief source of floating as well as of fixed capital. The United States has reached the stage in its economic development at which a portion of its capital savings can profitably be exported. The development of many manufacturing industries has reached the point at which, if these industries are to be fully and efficiently operated, a certain proportion of their production must be exported regularly. This exportation must be facilitated in many cases by loans placed in this country. . . . The manufacturing industry of the United States has, moreover, become so extensive and diversified that it must draw increasingly upon foreign countries for a wide range of materials. . . . Other nations are looking to this country for capital for the development of their natural resources and for other purposes."—Address by G. M. Jones, quoted in *Exporting American capital* (Commerce Reports, United States Department of Commerce, no. 21, May 21, 1923, pp. 485-486).

"After passing through a period of severe depression, extending to all branches of enterprise, *domestic business* experienced decisive revival during the year . . . [1922]. . . . Despite failures unprecedented in number, the main economic trend was almost steadily forward, and even protracted strikes in leading industries only partially checked progress. . . . Both from the standpoint of production and value, the results of 1921 were considerably exceeded and the general agricultural situation, although marked by some unsatisfactory phases, reflected a turn for the better. . . . The general movement was unmistakably in the right direction and previous records were surpassed in certain instances. . . . Nearly all of the statistical barometers that measure the rise or fall of business pointed upward. . . . Records of bank clearings, freight car loadings, pig iron production and unfilled steel tonnage, among the principal indices, reflected the increased commercial activities, while the noteworthy expansion of building operations was evidenced by the pronounced gains in permits issued and contracts awarded. . . . The great iron and steel industry not only felt the stimulus of the enlarged demand for structural material but also of the heavy buying of railroad equipment, and output of pig iron during the month of De-

ember reached 3,000,000 tons for the first time in more than two years. . . . The great strikes of 1922, prevailing simultaneously in some of the principal industries, were a serious obstacle to the commercial revival. Labor troubles in the New England textile field were of prolonged duration, while the coal mining and railroad controversies, which attracted more general attention, continued for several months. . . . Not only was the employment of workers appreciably curtailed in the lines directly affected, but output in other channels also was restricted and difficulty was experienced in securing adequate supplies of some raw materials and manufactured products. The causes of the strikes were varied, with questions of wages prominent among the issues involved, and progress in many quarters were impeded at a time when business was beginning to respond actively to forces of a constructive nature. Recovery came quickly, however, when the disputes were settled, and the year ended with the industrial situation and outlook much improved."—*Year 1922 (Dun's Review, v. 31, no. 1529, Jan. 13, 1923, pp. 15-16)*.—See also LABOR STRIKES AND BOYCOTTS: 1922: Nation-wide coal strike.

1922.—Relations between the states and the Federal power.—Coöperation between states.—"Twelve acts providing for national aid to the states in some form or another are today [written in 1922] on the statute books. These acts may be divided into three groups: (1) The laws enacted from 1862 to 1906, giving aid to the states with comparatively few conditions; (2) the recent acts which provide for the return to the state by the national government of a portion of the income from leases, royalties, etc., accruing from natural resources owned by the national government and located within the state; (3) the acts from 1914 to . . . [August, 1922] providing for conditional subsidies and placing a large amount of supervisory power in the national agencies. In the first group belong the following: the Morrill Land Grant Act, July 2, 1862; Additional Aid Act, August 30, 1890; Adams Act, March 16, 1906, supplementing and amending the Hatch Act of March 2, 1887. The following are in the second group: The National Forest Fund Act, March 4, 1907; as amended May 23, 1908, March 1, 1911, and June 30, 1914; the Oil Leasing Act, February 25, 1920; the Federal Water Power Act, June 10, 1920. Acts providing for subsidies with detailed conditions are: the Smith-Lever Act, May 8, 1914; the Federal Aid for Roads Act, July 11, 1916, as amended November 9, 1921; the Smith-Hughes Act, February 23, 1917; the Industrial Rehabilitation Act, June 2, 1920; the Chamberlain-Kahn Act, July 9, 1918; the Sheppard-Towner Act, November 23, 1921. The three acts in the first group were enacted for the purpose of encouraging agriculture and mechanical education. In the Morrill Act, which was the first law to grant national aid to the states, certain lands were set aside for the use of agricultural and mechanical colleges. The additional act passed twenty-eight years later provided for the annual payment of \$25,000 to each state for the purposes set forth in the original act. The annual pay-

ment was later changed to \$50,000. These grants are comparatively free from conditions, and yet there are certain fundamental principles, such as the requirement of military training and the equal treatment of races, which the states are required to follow in order to receive the funds. [See also EDUCATION, AGRICULTURAL: United States: Land grant colleges.] The Adams Act gives \$30,000 to each state for the use of agricultural experiment stations. Here too the conditions imposed are easily met, and the national agency has but little power compared with that enjoyed under the acts of the third type, which will be described presently. . . . The laws of the second type provide for unconditional grants to the states. Under the National Forest Fund Act, 25 per cent. of the proceeds from forest reserves are turned over to the state in which the reserve is located to be spent for schools and roads under the direction of the state legislature. Over a million dollars was turned back to the states under this law during the first year ending June 30, 1921. The Oil Leasing Act returns 37½ per cent. of bonuses and royalties from oil wells on public lands to the states. The director of the budget estimated that the amount returned during the last fiscal year would total one and one-half million dollars. As in the case of the forest funds, the state legislature has charge of the expenditure which must be for roads and education. The Water Power Act returns to the several states 37½ per cent. of the proceeds from licenses for the use of water power on national lands. None of these acts conditions the payments to the state, outside of the proviso that the money received shall be expended for schools and roads. Neither is there any attempt on the part of the national government to supervise the details of expenditure. It is the third type of national aid that is particularly interesting to the student of government. The six acts of this group, while turning national money into the state treasury, impose conditions upon the states, the fulfillment of which is passed upon by national officials. The Smith-Lever Act not only inaugurated the idea of close coördination of national and state agencies but also established the 'fifty-fifty' practice (duplication by state of national funds). Its purpose is to encourage instruction and practical demonstration in agriculture and home economics to persons not attending college. The original act appropriated \$1,080,000 to be allotted to the various states, with the proviso that the appropriation should be increased from year to year. In addition to the continuing appropriations provided for in the law, a special appropriation was made in 1919 which has brought the total appropriation for the fiscal year 1921-22 up to \$5,580,000. This sum is apportioned among the states in the following manner: \$480,000 is divided equally, \$10,000 to each state; while the remainder is allotted to the several states according to rural population. In order to secure its allotment a state must duplicate all moneys received above \$10,000. The duplication need not be from the state treasury, as all contributions from county or local authorities, from colleges, and from private individuals are credited to the state. In 1919-20, 67 per cent. of the duplication came from state treasuries, 28 per cent. from counties and the remaining 5 per cent. from colleges and local governments. But the state cannot fulfill the requirements of the law merely by duplicating the allotment of national money. All work done under the law is subject to the

supervision of the department of agriculture and all plans and methods must be approved by the national government. . . . The land grant colleges are made the state cooperating agencies, the state legislature designating what college is to act in states that have more than one land-grant college. . . . About 50 per cent of the amount spent under the Smith-Lever Act is for county agricultural agents, about 20 per cent. for demonstrations in the field of home economics, and the remainder for agricultural specialists, boys' and girls' clubs, and publications. [See also EDUCATION, AGRICULTURAL: United States: Smith-Lever Act.] . . . [The] Federal Aid for Roads Act . . . followed the Smith-Lever Act by two years and was a further application for the dual principle of extending national control through state agencies, combined with the 'fifty-fifty' scheme of appropriations. As the name indicates, the purpose of this law is to aid the states in the construction (but not the maintenance) of rural highways. . . . This act carries a larger appropriation than all the other acts put together. Seventy-five million dollars was appropriated for the fiscal year 1921-22, and the report of the director of the budget makes provision for \$125,000,000 for the year ending June 30, 1923. . . . The fund is divided into three equal parts. One part is apportioned according to population, one according to area, and one according to mileage of rural and star mail routes. Under this arrangement Texas receives the largest apportionment, with New York second, Pennsylvania third and Illinois fourth. No state is to receive less than one-half of one per cent. of the total, and this stipulation increased the amount available to Delaware, New Hampshire, Rhode Island and Vermont. The state must meet the national appropriation dollar for dollar. . . . [The purpose of the Smith-Hughes Act] is to aid the states in the promotion of vocational education. There are three separate and distinct appropriations under this act. The first is to be used for salaries of educators in agriculture, and varies in amount from \$500,000 in 1918 to \$3,000,000 in 1926 and thereafter. This fund is allotted to the several states on the basis of rural population. The second appropriation is for salaries of educators in the field of trade and industry, including home economics. The amounts under this head coincide with the appropriation under the first head. The moneys under this head are allotted to the states on the basis of urban population, and not more than 20 per cent. of the total can be used for teachers in home economics. . . . The third set of appropriations is for the training of teachers in the field of vocational education, and the amounts vary from \$500,000 in 1918 to \$1,000,000 in 1926 and thereafter. This fund is apportioned to the states on the basis of total population. The state directly, or through local government appropriations, is required to duplicate all national moneys, and both state and national funds must be spent for salaries only, except in connection with teacher training where money may be expended for buildings and grounds and other necessary expenses as well as for salaries. . . . [The Industrial Rehabilitation Act which] aims to cooperate with the states in the rehabilitation of persons disabled in industry, should not be confused with the so-called vocational rehabilitation act which provides for the training of ex-soldiers. [See EDUCATION: Modern developments: 20th century: World war and education: Reeducation.] . . . The purpose of . . . [the Chamberlain-Kahn

Act] is to cooperate with the states in fighting venereal disease. The work under this act . . . [was practically] discontinued during the year 1921-22 because of lack of funds. The director of the budget [however] recommended an appropriation of \$500,000 for the year ending June 30, 1923, and it would be improper to consider the law a dead letter. . . . [The Sheppard-Towner Act], . . . commonly known as the Maternity Bill, aims to cooperate with the states 'in the promotion of the welfare and hygiene of maternity and infants.' . . . Less than a month after its final passage the states began to accept its provisions and to apply for a share in the appropriations. The act appropriates two funds: (1) \$480,000 for the fiscal year 1921-22, to be divided equally among the states. For the following year and for four years thereafter \$240,000 is annually appropriated for equal distribution. The state need not duplicate this fund but its officials must submit to national supervision in order to obtain its equal share. (2) An additional appropriation of \$1,000,000 annually for the next five years is to be apportioned to the states on the basis of population, after each state is allowed \$5,000 regardless of population. The national moneys from this fund must be duplicated by the states by direct appropriation. The children's bureau of the department of labor is charged with administering the law, and the child welfare division of the state board of health is named as the state cooperating agency." —B. A. Arneson, *Federal aid to the states* (*American Political Science Review*, Aug., 1922).—"For many years there had been a growing demand for the suppression of the lottery evil. . . . In 1890 Congress passed an act for the suppression of the lottery traffic, under its power to control foreign and interstate commerce and the postal service. The law not only prohibited any person from bringing into the United States or depositing in the mails any lottery ticket or lottery advertisement, but forbade these things being carried from one State to another. For the first time the power of Congress to regulate commerce under the Federal Constitution was used to infringe upon the police power of the States. Thereby Congress entered a legislative field that had in the whole history of the Constitution been thought to be reserved entirely to the states. In the last three decades this doctrine has been widely extended. . . . In 1799 Congress enacted a law directing Federal customs revenue officers duly to observe the quarantine laws of any State and faithfully aid in their execution, thus recognizing the power of the States in the exercise of their police powers to establish quarantine regulations. In 1808 Congress enacted a law which empowered and authorized State quarantine officers to act as officers of the National quarantine system and provided that they should be clothed with all the powers of United States officers for quarantine purposes. . . . The Quarantine Act went so far as to authorize the Secretary of the Treasury, in the event that the quarantine regulations of any State or municipality were not, in his opinion, sufficient to prevent the introduction of infectious or contagious diseases from foreign countries, to promulgate rules and regulations which would supersede State laws. . . . The law was . . . passed because the people of the country demanded it, there being no other effective method of protecting themselves against the introduction of contagious diseases. From time to time the several States had enacted laws against the adulteration and misbranding of

foods and drugs. These State enactments proved to be ineffective. Again the power of Congress under the Interstate Commerce clause of the Constitution was invoked. In 1902 a law was enacted which authorized the Secretary of Agriculture to establish standards of food and food products and to determine what are regarded as adulterations therein, for the guidance of the officers of the various States and the courts of justice. . . . The system of rebates, discrimination in service, and other similar evils connected with railway transportation built up great trusts and monopolies, which resulted in the enactment of anti-trust laws. These laws have been amended from time to time and the powers of the Federal officers extended in many respects. The Federal Trade Commission was created for the purpose of investigating and accumulating a mass of material as to the manner in which the business of the country is conducted, for the purpose no doubt of furnishing a basis for further legislation. On the ground that controversies between employers and employees were likely to interrupt the operations of interstate commerce carriers, the Board of Mediation and Conciliation was created by act of July 15, 1913. It was practically superseded by the Labor Board, created by the provisions of the Esch-Cummings Act. . . . Activities of the Department of Labor and of the Department of Agriculture, benefits to be secured under rivers and harbors bills, the demand for public buildings and national highways, have all served to emphasize the power of the Federal Government. Great areas of public land have been reserved from entry and are now held by the General Government for water power, mining, and other purposes. The instances enumerated by no means exhaust the list of Federal activities. Mention of the activities of the Government in the World War is not made because we are not yet far enough away from it to determine with any degree of certainty what its ultimate effect upon the extension of Federal power will be. To the constitutional lawyer perhaps the most startling innovation was the enactment of the Mann Act . . . By the passage of the Mann Act, the transportation or obtaining for transportation in interstate or foreign commerce of any woman or girl for the purpose of prostitution or any other immoral purpose was forbidden. Persuading, inducing, enticing or coercing any woman or girl to go from one State to another for acts thus made illegal is prohibited under heavy penalties. . . . The law has been upheld by at least four decisions of the United States Supreme Court. [See also *WHITE SLAVE TRADE*.] . . . The constitutionality of the Migratory Bird Act has been upheld on the ground that the law being enacted in the fulfillment of a treaty obligation is valid. . . . The creation of the Postal Savings Bank, of the Federal Farm Loan Banks, the enactment of the Eight Hour Law, the creation of the Federal Reserve Board by the Federal Reserve Act, all have had a profound influence upon the country as a whole. . . . The Federal Reserve Board was created for the express purpose of . . . expanding the currency of the country so as to meet changing conditions, and to contract it when the necessity for expansion is passed. There is no doubt that this act was passed to meet a pressing demand from the people. The experience of the country, particularly in the panics of 1893 and 1907, demonstrated the necessity for some means of meeting the exigencies of financial crises. [See also *MONEY AND BANKING*:

Modern: 1913-1919.] . . . The enactment of the Federal Income Tax has brought home to the people of the country more sharply than any other single act their relationship to the Federal Government. From 1880 to 1900 a man might have conducted a very large and extensive business in many fields without coming in contact with any representative of the Federal Government save perhaps the postal authorities. That condition is not likely to prevail again in this country. The regulatory measures enacted by Congress (under one pretext or another) touch the life of the people at almost every point. . . . The significant thing is that the States as such and the people as a whole no longer question the rights of the Federal Government or seek to limit its activity. Given an apparent necessity for the enactment of a Federal statute, all other questions seemed to disappear from the mind of the people. Because their interest is not adversely affected by this increasing exercise of Federal power, the rights of the States as such, theoretically or practically, no longer interest the people. . . . The Constitution has from time to time been so extended by construction as to give Congress authority over subjects which theretofore were supposed to be wholly within the jurisdiction of the several States. With the adoption of the Prohibition Amendment, Congress, by express sanction of the people themselves, was given authority in a field theretofore expressly reserved to the States. However widely the power of Congress might be extended under the Interstate Commerce clause, it would not effect prohibition, either in the manufacture, transportation or sale of intoxicating liquors within the States. Because of the fact that State and local regulations were ineffective, the Eighteenth Amendment was sought and procured. The Constitution was thus amended, not by construction or interpretation, but in the manner provided in that instrument, to give Congress powers in a strictly police power field in respect to intoxicating beverages. The enforcement of this constitutional provision, which confers concurrent powers upon the State and Federal Governments, has served to disclose in a most startling manner the changed attitude of the people of the wealthiest and most populous States in the Union in respect to State and Federal activity in the police power field. The State of New York adopted an enforcement act known as the Mullan-Gage law. On May 5, 1923, the Legislature by a decisive vote passed a bill repealing the enforcement act. The Governor withheld executive approval of the bill until all parties in interest could be heard. While the voice of protest against the repeal of the act was loud and insistent both in the Legislature and before the Governor, it was not urged by anyone that, as has been pointed out by the President, the repeal of the law amounted to an abdication by the State of its rights and duties in respect to the enforcement of the Eighteenth Amendment. [See also *NEW YORK: 1923.*] . . . We think more and more as citizens of the United States and less and less as citizens of a particular State. In 1919 the legislature of Wisconsin had before it for consideration more than twenty-five resolutions dealing directly with Federal subjects. This is only one of many things which confirms the student in the belief that the change which is evidenced in so many ways is fundamental and to a large extent will be permanent. There has come into existence during recent years, by accident or design, an extraconstitutional method, by which

the Federal Government has sought to influence and control State Governments. Stated in plain terms, the Federal Government says to the States: Here is an appropriation which is available to you upon certain conditions. As a rule these conditions are that a like amount shall be appropriated by the State Government for the purpose indicated in the bill making the Federal appropriation. There is a further stipulation that certain conditions relating to intra-State affairs are to be complied with as a condition of receiving Federal aid. This scheme, by which the Federal Government in effect exercises legislative power in relation to education, public health, and other kindred subjects strictly within the police power of the States, is an innovation upon our constitutional system. There seems to be no limit to the activities of the Federal Government when the matter is approached from this angle. . . . Since the Civil War our population has been largely increased by foreign immigration. These foreign peoples have been accustomed to strong central governments, and are not attached, as were the early colonists, to the principle of local self-government. The changed attitude of our people as a whole toward the Federal as opposed to the State Government, has been due in part to the altered character of our population. . . . Powers once exercised by the Federal Government are seldom if ever voluntarily surrendered. In the police power field the powers of the Federal and the State Governments are to a certain extent concurrent, but under Article VI of the Constitution of the United States, in case of conflict the Federal law is supreme. Practically speaking, any increase of Federal power, either by way of amendment, interpretation or construction, or by the exercise of powers granted but not heretofore exercised, must result in a like diminution of the powers of the respective States, and so lessen the people's sense of civic responsibility."—M. B. Rosenberry, *Development of the Federal idea* (*North American Review*, Aug., 1923). —"The increasing importance of the states as coöperative administrative agents of the nation has been illustrated during the past two years by the relationship which has developed between the federal power commission and the water power agencies of various states. The federal power commission, which is an independent national agency composed of the secretaries of war, interior, and agriculture, was created by the Federal Water Power Act of June 10, 1920. . . . Many states had administered their water power affairs through commissions and other agencies prior to the creation of the national agency, and since that time several of the state commissions have taken direct steps to coöperate with the federal power commission. The enactment of the Federal Water Power law was immediately followed by coöperative acts on the part of private organizations, state officials, and state legislatures. Particularly active was the short-lived water power league of America which during the preceding January had been chartered under the laws of Delaware 'to assist in the revision and codification of existing laws and passage of new laws and coördinating federal and state jurisdiction over waters and water ways.' In July following the Act of June 10, 1920 the league announced that its aim was 'to establish working harmony between the states, municipalities, and the federal government,' in the matter of water power development. It accordingly called a convention in Washington 'to afford an opportunity to the several states that

are interested in water power development to have their representatives come in contact with the federal power commission with a view that there may be evolved a workable program which will coördinate the activities in those states with that of the federal government.' . . . The Water Power League wrote letters to the governor of each state asking his opinion of the effect of the Federal Water Power Act. Most of the replies expressed a wholesome spirit of state coöperation. For instance, Governor Morrow of Kentucky, replied there were 'no adverse laws in Kentucky upon this subject.' Answering for Governor Shoup of Colorado the state engineer stated that they would be pleased to have suggestions as to water power legislation. . . . In 1921, Oregon and New York, created water power commissions for the specific purpose of co-operating with the federal power commission. Oregon made the governor *ex officio* commissioner of hydroelectric power and directed him to collect data concerning the hydroelectric resources 'and to present same to the federal power commission.' . . . The New York legislature of 1921 created a state water power commission which was not only to coöperate with the federal agency but also to resemble it in organization and legal power."—M. Conover, *Federal and state power commissions* (*American Political Science Review*, November, 1922).—"An agreement was arrived at on November 25, 1922, in a conference at Santa Fé, N. M., under the direction of Herbert Hoover, Secretary of Commerce, between the seven States in which the Colorado River basin lies. . . . [This constitutes,] with one or two minor exceptions, the first instance in more than 140 years of States of the Union being permitted by the Federal Government to enter into a treaty among themselves. The treaty has to do with the allocation of the rights to the waters of the Colorado River. The States involved . . . are Colorado, Nevada, Wyoming, Utah, New Mexico, Arizona and California. . . . Even the privilege of considering the question of the water rights . . . required a special act of Congress. The treaty, as finally signed, [terminated] a full year of debates and public hearings . . . [both in Washington and the West]. It brought to at least a temporary halt an interstate controversy, bitter and partisan, that . . . [had] lasted more than a quarter of a century, while its adoption by Congress and the seven States would eliminate the final obstacle in the path of the Government's . . . huge plan of flood control, reclamation and hydroelectric development on the Colorado River."—E. H. Hampton, *Seven-State Irrigation Treaty* (*New York Times Current History*, March, 1923).

1922 (January).—Represented at Cannes conference by Colonel Harvey as official observer. See CANNES CONFERENCE.

1922 (January-September).—Agricultural conference.—Withdrawal of army of occupation from Germany.—Naval appropriation.—Naval Scrapping Act.—Soldiers' Bonus Bill.—Married Women's Citizenship Act.—Return of alien property.—"The Agricultural Conference met in Washington on January 23 and continued its sessions for five days. It was made up of 325 delegates and included farmers, representatives of agricultural associations, bankers, packers, manufacturers of implements, middlemen and government officials. President Harding in his opening address recommended provision for greater working capital for farmers, the extension of coopera-

tive marketing, wider dissemination of scientific information, the protection of farmers and consumers from violent price fluctuations, and the further development of waterways and reclamation projects. The farmers passed a resolution calling for the limitation of crop acreage until agricultural conditions should improve, and urged the necessity that labor and capital should share in the deflation which had overtaken the farming interests. The Ford Muscle Shoals project and the St. Lawrence-Great Lakes Canal project were approved. Relative to the railway situation, the conference passed a resolution stating: 'We insist that the railroad corporations and railroad labor should share in the deflation in charges now affecting all industry. This is essential to the restoration of normal conditions in agriculture, and it is essential to the welfare of the entire community.'—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 28.—'In February [1922] the War Department ordered a further reduction of 203 officers and 3,000 men in the American forces in Germany, leaving the Coblenz fewer than 200 officers and slightly more than 2,000 men. However, one month later the President issued an order for the recall of all those remaining, the withdrawal to be completed by July 1.—The Army appropriation act for 1923 provided for a total expenditure of \$256,411,169 and an army of 125,000 men.—According to an official statement of the United States Bureau of Budget the government is now paying out over \$1,000,000 in cash every day into the hands of ex-service men and their dependents; is providing hospital care and treatment to 30,000 veterans at an annual cost of \$60,000,000; is giving vocational training to more than 100,000 disabled veterans at an expenditure of \$30,000,000 per annum; is conducting over 50,000 medical examinations every month; and is spending in behalf of disabled ex-service men a total of more than \$500,000,000 annually. The report shows that up to February 1, 1922, the government had spent for ex-service men a total of \$2,702,321,185. On February 13 Secretary of the Navy Denby recommended to the House Naval Affairs Committee a reduction of the enlisted personnel of the Navy from 100,000 to 90,000 exclusive of apprentices. He indicated that his program would effect a saving of about \$70,000,000 in the 1923 budget. A few days before, the President had ordered all work stopped on naval construction without waiting for the ratification of the Five Power agreement to limit navies. . . . The annual Navy bill reported to the House on April 8 proposed to reduce the enlisted personnel to 67,000 men, a force sufficient, according to the committee, to man the eighteen battleships and auxiliary fleet and maintain the 5—5—3 ratio. . . . The proposed reduction was condemned by Admiral Sims. The bill as passed carried appropriations amounting to \$294,336,577, sufficient to provide for a personnel of 86,000 men.'—*Ibid.*, p. 26.—'The Naval Scrapping Act gave legislative effect to the treaty limiting naval armaments by authorizing the President to take the steps necessary to scrap a portion of the ships under construction. . . . By joint resolution, approved April 6, Congress authorized the Secretary of the Treasury to extend, for a period not to exceed twenty-five years, the term of payment of the principal and interest of the debt incurred by Austria for the purchase of flour from the United States Grain Corporation. . . . There was much discussion both in and out of Congress

of the bonus or adjusted compensation question. On March 16 Chairman Fordney of the Ways and Means Committee reported the Bonus Bill to the House. In his report it was estimated that the entire cost of the proposed legislation would be \$4,098,719,350 at the end of twenty years and that almost four and one-half million men would be entitled to select one of the optional plans. The greatest cost in any single year of the adjusted compensation payments was estimated at more than \$3,150,000,000 in the fiscal year 1943, when outstanding certificates would mature. While the committee was considering the bonus question the President, Secretary Mellon and the Controller of the Currency, Crissinger, took a determined stand against the proposed legislation. In a letter to Chairman Fordney, dated February 16, the President said, 'It continues to be my best judgment that any compensation legislation enacted at this time ought to carry with it the provisions for raising the needed revenues, and I find myself unable to suggest any commendable plan other than that of a general sales tax.' In spite of this opposition the House on March 23 passed the Bonus Bill by a vote of 333 to 70, after a four hours' debate.'—*Ibid.*, pp. 35-37.—'The Soldiers' Bonus Bill which had passed the House on March 23, 1922, was reported in an amended form to the Senate on June 8. It was discussed from time to time during the tariff debates and was finally approved by the Senate on August 31 by a vote of 47 for (27 Republicans and 20 Democrats) and 22 against (15 Republicans and 7 Democrats). The House had passed the bill without providing the means for raising the required revenues. The Senate adopted an amendment to the effect that the bonus should be paid from the interest received from foreign governments on the war indebtedness to the United States. Another Senate amendment provided for the reclamation of swamp lands to create homesteads for veterans. This would have involved an additional expenditure estimated at \$350,000,000. On September 11 the conferees agreed to strip the bill of the two features just mentioned and to limit applications for compensation to five years. The report was approved by both houses, but on September 19 the President returned the bill with a veto message stating his accord with the avowed purpose of the bill but disapproving its provisions. He said: 'In legislating for what is called adjusted compensation Congress fails, first of all, to provide the revenue from which the bestowal is to be paid. Moreover, it establishes a very dangerous precedent of creating a Treasury covenant to pay which puts a burden variously estimated between four and five billions upon the American people, not to discharge an obligation which the Government always must pay but to bestow a bonus which the soldiers themselves while serving in the World War did not expect.' On the next day the House passed the bill over the veto by a vote of 258 to 54, but the Senate sustained the veto. . . . On August 18 [1922] President Harding appeared before a joint meeting of the two houses of Congress to urge legislation necessary to meet the crisis caused by the coal strike. . . . In response to this request Congress enacted two laws. One of them provided for the establishment of the United States Coal Commission composed of not more than seven members to be appointed by the President with the consent of the Senate. It was made the duty of the commission to investigate and ascertain fully the facts and conditions of the coal

industry and study the problems relative to it in order to aid Congress in matters of legislation designed to assure a supply of coal to the country and maintain the uninterrupted flow of commerce among the states. The commissioners were provided with salaries of \$7,500 and \$200,000 was appropriated for the carrying out of the act. [See also LABOR STRIKES AND BOYCOTTS: 1922: Nationwide coal strike.] The other act, known as the Government Coal Distribution and Price Control Bill, declared a national emergency in the production and transportation of coal, increased the powers of the Interstate Commerce Commission during the emergency to include authority to issue orders for priorities in car service and for embargoes and to prevent purchases and sales of coal at unjust prices. A Federal Fuel Distributor, appointed by the President, was provided to act under the direction of the President in enforcing the law. For the purposes of the act \$250,000 was appropriated. Both of these measures were approved by the President on September 22.—Another law approved on the last day of the session was that allowing alien married women to become naturalized independently of their husbands' naturalization. The act further provided against the automatic loss of an American woman's citizenship by her marriage to an alien, and for the restoration to citizenship of such women as may have heretofore lost their citizenship by such marriages."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, pp. 34-35.—See also NATURALIZATION: United States: Laws relating to women.—"On July 1 [1922] President Harding ordered the Alien Property Custodian, Colonel Thomas W. Miller, to secure the return of all German dye and drug patents and the proceeds therefrom from the Chemical Foundation of New York, to which concern the previous alien custodian had sold the seized property. The head of the Chemical Foundation was Francis P. Garvin, [Garvan] formerly Alien Property Custodian. In Congress charges had been made to the effect that patents worth from fifteen to twenty millions had been sold for the sum of \$250,000. Mr. Garvin declared that the order followed a conference at Washington between representatives of the German chemical industry and representatives of the Attorney-General, and that it was all the result of a trick on the part of the Germans to regain control of important drug and dye processes. The government instituted a suit for the dissolution of the Chemical Foundation and the reclamation of German patents in the Federal district court at Wilmington, Delaware [which was still pending in December, 1923]. . . . Congress passed and the President signed on March 5 [1923] a bill providing for the return of alien trusts up to \$10,000 in value. There was much criticism of the three per cent. immigration law on the part of large employers of labor, and also considerable sentiment in favor of still further restriction, but the law was not modified. . . . One of the most discussed questions of the year was the prohibition enforcement issue. The particular questions that caused legal difficulties were those relative to the sale of liquor on American ships, on the high seas and the transportation of liquor by foreign ships within the three-mile limit."—*Ibid.*, p. 30.

1922 (February).—Foreign war debts.—Debt Funding Act.—One of the most important measures passed in the first year of the Harding administration was the "Foreign Debt Funding Act, approved on February 9, [1922]. The bill had

passed the House during the previous session and was reported to the Senate by the Finance Committee about the middle of January. The Senate passed it in an amended form on the last of January by a vote of 39 to 26, all those favoring the bill being Republicans. . . . The bill as passed provided for a debt commission of five members with the Secretary of the Treasury as Chairman. Subject to the approval of the President, the commission may refund or convert and extend the time of payment of the principal or the interest or both of 'any obligation of any foreign Government now held by the United States or any obligation of any foreign government hereafter received by the United States (including obligations held by the United States Grain Corporation, the War Department, the Navy Department, or the American Relief Administration), arising out of the World War, into bonds or other obligations of such foreign Government.' It was provided, however, that the time of maturity of any obligation should not be extended beyond 1947, and that the rate of interest should not be less than $4\frac{1}{4}$ per cent. The commission was given no authority to cancel any debt. The efforts to attach to the bill a rider providing for a soldiers' bonus failed."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, p. 36.—The prohibition against cancellation, contained in the act, destroyed all hope that the proposals for cancellation, which had been put forward from time to time, might be complied with. "Any further appeals to the United States for cancellation must . . . be based upon the hope of having the Act of February 9 amended in that respect. A glance at the cost of the American taxpayer involved in such an amendment will show the improbability of the success of any agitation in favor of the amendment. The portion of the war loans raised in the United States which was applied to meet in part America's cost of the war is roughly one-half of the total loans, which aggregated in round numbers \$20,000,000,000, the other half having been loaned to the Allies. For the service of the loans the Victory Liberty Loan Act established a sinking fund on July 1, 1920 and the law permanently appropriates for each fiscal year until the debt is discharged an amount equal to the sum of '2½ per centum of the aggregate amount of such bonds and notes outstanding on July 1, 1920, less an amount equal to the par amount of any obligations of foreign Governments held by the United States on July 1, 1920,' plus 'the interest which would have been payable during the fiscal year for which the appropriation is made on the bonds and notes purchased, redeemed, or paid out of the sinking fund during such year or in previous years.' It will be noted that the indebtedness incurred by the United States to make the foreign loans is not cared for by the sinking fund, as Congress contemplated that foreign repayments would provide for that part of the debt. The Treasury Department calculates that the cumulative sinking fund will retire the funded war debt of the United States, less the amount representing the foreign obligations held by the United States on July 1, 1920, in about twenty-five years. It has been further calculated that the amounts required to meet the sinking fund and interest charges on the half of the debt applied to American war expenses will average an aggregate payment of \$685,000,000 annually for a period of twenty-five years."—G. A. Finch, *Revision of the reparation clauses of the Treaty of Versailles and the cancellation of inter-*

Allied indebtedness (American Journal of International Law, October, 1922).

1922 (March).—Invitation to take part in Genoa conference declined.—“The decision of the United States Government not to participate in the Genoa Economic and Financial Conference was announced by Secretary Hughes on March 8, [1922] following the delivery to Rolando Ricci, the Italian Ambassador to Washington, of a note containing the reply to the invitation tendered by Italy to the United States, asking it to take part in the conference, which . . . [convened] on April 10. The declination had been expected, for it had been known that the Harding Administration was of the opinion that the continental nations of Europe should ‘set their own houses in order’ before seeking to involve the United States in any measures for the promotion of the economic rehabilitation of Europe. . . . ‘This Government cannot be unmindful of the clear conviction of the American people, while desirous, as has been abundantly demonstrated, suitably to assist in the recovery of the economic life of Europe, that they should not unnecessarily become involved in European political questions. It may be added, with respect to Russia, that this government anxious to do all in its power to promote the welfare of the Russian people, views with the most eager and friendly interest every step taken toward the restoration of economic conditions which will permit Russia to regain her productive power; but these conditions in the view of this Government, cannot be secured until adequate action is taken on the part of those chiefly responsible for Russia’s present economic disorder.’”—*New York Times Current History, April, 1922, p. 133.*—See also GENOA CONFERENCE (1922).

1922 (May).—Child labor law declared invalid.—An important decision bearing upon State rights was reached by the Supreme Court in May, 1922, on the appeal against the Federal child labor law which it declared unconstitutional in that it usurps state functions. The decision was handed down on May 15. See CHILD WELFARE LEGISLATION: 1912-1922; SUPREME COURT: 1921-1922.

1922 (May-December).—Fiscal policy.—Re-

duction of national debt.—Tax reduction proposal.—Success of budget system.—Agricultural loans by War Finance Corporation.—“The Treasury Department made considerable progress in the reduction of the war debt. The peak was reached on August 3, 1919, when the total debt was \$26,596,000,000. On July 1, 1922, the debt had been reduced to \$22,903,000,000. The Victory Loan of \$4,250,000,000 matured in May. Secretary Mellon took advantage of the change in interest rates and accounted for \$2,000,000,000 of the Victory Loan partly by redemption and partly by conversion into new obligations due in a few years. In August it was announced that the $4\frac{1}{4}$ per cent 4-year Treasury loan had brought \$475,000,000 in subscriptions. Victory Bonds to the amount of \$130,000,000 were exchanged for these new securities. In October Secretary Mellon called for subscriptions to a loan of \$500,000,000, the first long-term loan floated in the country since the war. The bonds bore $4\frac{1}{4}$ per cent interest and were to run for 25 to 30 years. This was largely oversubscribed. When early in May the Secretary announced an issue of Treasury notes amounting to \$400,000,000 to be used in retiring the outstanding Victory Bonds, he made a report on the year’s debt-refunding operations. His policy had been to pay off and refund short-time notes in a manner that would bring their maturity dates at convenient times before the maturity of the Third Liberty Loan in 1928. A week after the notes were offered the Secretary was able to announce that they had been oversubscribed two and one-half times. Moreover, it was believed that the total debt at the close of the fiscal year would be reduced to \$22,400,000,000, and that instead of a deficit of something like \$500,000,000 that had been generally anticipated, the Treasury would show a substantial surplus at the end of the fiscal year. The results were even better than this, for on June 30, [1922] General Lord, Director of the Budget, was able to announce that the year just closing showed an excess of about \$310,000,000 of receipts over expenditures. The Director said: ‘One year ago the estimated receipts and expenditures indicated a deficit of \$823,000,000 for the fiscal year 1923. The difference of \$1,133,000,000 between this estimated deficit and the present estimated surplus of \$310,000,000 is accounted for by an increase in receipts of \$767,000,000, and a reduction in the total expenditures of \$366,000,000. The difference in receipts was occasioned by an increase of \$213,000,000 in customs receipts, \$423,000,000 in internal revenue receipts, and \$131,000,000 in miscellaneous receipts.’ The Treasury issued a statement on July 1 stating that the public debt had been reduced to \$22,349,707,365.—Secretary of the Treasury Mellon in his annual report to Congress in December [1922] recommended a reduction of the maximum income surtaxes from 50 per cent, the then existing rate, to 25 per cent, on the ground that the higher rates by encouraging large taxpayers to reduce their taxable income rendered them less productive than the lower rates would be.”—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, p. 28.—One of “the most outstanding achievements of the Harding administration was the institution of the Budget System. The President chose Charles G. Dawes to be Budget Director and gave him the full support and authority necessary. That started the system auspiciously. With the resignation of Mr. Dawes after the foundation work was done, the President appointed Gen-

eral Herbert M. Lord to be Budget Director. . . . The result unquestionably was far-reaching improvement in routine fiscal administration and very substantial economies. . . . Characterized as 'the greatest reform in our financial history,' the Budget Bureau was the means of cutting down government expenses in three years from a six-billion-dollar to a three-billion-dollar basis. At the end of 1922 Secretary of the Treasury Mellon was able to announce that it would be possible to balance the budget for the fiscal year 1922 and to close the year with a surplus, amounting to about \$321,000,000."—W. F. Johnson, *Life of Warren G. Harding*, p. 114.—"The War Finance Corporation showed, in the annual report submitted to Congress on December 22, that it was doing business at the rate of several millions of dollars a day. Up to November 30, the date of the report, the corporation said, its advances for agricultural and live stock purposes totaled more than \$82,000,000, of which the principal items were loans on cotton aggregating \$22,000,000; on grain, \$16,000,000; live stock, \$13,000,000, and for general agricultural purposes, \$34,000,000. In addition to the agricultural financing, advances were reported aggregating \$51,500,000 on exports, of which the largest items were \$28,000,000 on cotton and \$11,500,000 on grain."—*New York Times Current History*, February, 1922, p. 857.

1922 (August).—German Claims Commission.—"An agreement between the United States and Germany providing for the determination of the amount of American claims against that State, signed at Berlin August 10, 1922, is not without significance. . . . The arrangement takes its place among the so-called executive agreements of the United States; it does not purport to be a treaty. The compact provides for a mixed commission (comprising a commissioner to be appointed by each party, and an umpire, to decide upon cases where the commissioners may disagree), to determine the amount to be paid by Germany in satisfaction of the financial obligations of that State under the treaty with the United States of August 25, 1921, securing to the United States and its nationals rights specified under the Resolution of the Congress approved July 2, 1921, and embracing rights under the Treaty of Versailles. The right of the Executive, incidental to his management of the foreign relations of the United States, to adjust international controversies involving the ascertaining of the amount of pecuniary claims against a foreign State, and by recourse to arbitral procedure, is not to be questioned. This is believed to be true regardless of the will of the individual claimant (when a private one), and irrespective of the public or private aspect of the particular claim, and for most purposes, without reference to the causes giving rise to complaint. The right of the President is thus not sharply defined according to whether the particular claim arose as an incident of war, or whether the government rather than a national happens to be the

aggrieved party, or whether a national whose cause has been espoused by his government is satisfied with the procedure or result. . . . Despite arguments to the contrary, it may be gravely doubted whether the Trading with the Enemy Act of October 6, 1917, purported to deprive the executive of any right possessed by him to conclude an agreement such as that of August tenth. That Act did declare that after the end of the war, any claim of an enemy or of an ally of an enemy to any money or other property received and held by the Alien Property Custodian or deposited in the United States Treasury, should be settled as Congress might direct. This was far from an assertion of control over American claims against Germany or its nationals, and still less over the mode of ascertaining their extent. It should be observed that it is the determination of the amount, rather than of the basis or mode of satisfaction of those claims, which is made the function of the commission established under the convention. It would be difficult to maintain that any existing contractual arrangement with Germany tied the hands of the President, forbidding an executive agreement such as that which he has concluded. The treaty with Germany of August 25, 1921, conferring upon the United States comprehensive and specified privileges under the Treaty of Versailles of June 28, 1919, made careful provision that the United States was not to be bound to participate in any commission established under that treaty or any agreement supplemental thereto. Moreover, it did not prescribe that should the United States and Germany elect to agree to have recourse to a mixed arbitral tribunal such as that outlined in Article 304 of the Treaty of Versailles, the compact should assume the form of a treaty, or that any mixed commission to be established as a means of ascertaining the amount of American claims against Germany, should be necessarily governed by the terms of the Treaty of Versailles. It should be noted, however, that the Senate in its resolution of October 18, 1921, advised and consented to the ratification of the treaty of August 25, 1921, subject to the understanding made a part of the resolution of ratification, that 'The United States shall not be represented or participate in any body, agency or commission, nor shall any person represent the United States as a member of any body, agency or commission in which the United States is authorized to participate by this treaty, unless and until an Act of the Congress of the United States shall provide for such representation or participation.' The action taken during the last days of the Second Session of the Sixty-seventh Congress, in appropriating funds for American participation in and representation on the Claims Commission, would appear to satisfy the requirement in respect to Congressional authorization. . . . Simultaneously with the signing of the agreement, the German Government expressed a desire to have an American citizen appointed as umpire, and requested the President of the United States to make the designation accordingly. Pursuant to that request, the President named the Honorable William R. Day, Associate Justice of the Supreme Court of the United States, to serve in that capacity."—C. C. Hyde, *Claims agreement with Germany* (*American Journal of International Law*, Oct., 1922).—See also GERMANY: 1922 (July-August).

1922 (November).—Supreme Court decision

against naturalization of Asiatics.—“One of the interesting elements in the big problem of American citizenship . . . is the growing number of American citizens of Asiatic blood, for the most part of Japanese blood. . . . The crux of the problem lies in California, for here we have some 80,000 Japanese, . . . according to the census of 1920. . . . The California State Board of Health reports show that between 1906 and 1921 there were born in that State in the neighborhood of 30,000 Japanese boys and girls, American citizens by the ‘law of the soil.’”—R. Malcolm, *Problem of American-born Japanese* (*New York Times Current History*, April, 1923).—Although native born Americans of Asiatic race are by right of birth citizens of the republic, their parents cannot become naturalized. “In two cases on November 13 [1922], the United States Supreme Court decided that Japanese could not become citizens of the United States. Both opinions were written by Justice Sutherland, a new member of the court, and the first he had handed down since his appointment. Justice Sutherland, after reading the hearings and debate on the act of 1906 to show no alteration in the original law was contemplated, concluded: ‘In all of the naturalization acts from 1790 to 1906 the privilege of naturalization was confined to white persons (with the addition in 1870 of those of African nativity and descent), although the exact wording of the various statutes was not always the same. . . . There is not implied—either in the legislation or in our interpretation of it—any suggestion of individual unworthiness or racial inferiority. These considerations are in no manner involved.’”—*New York Times Current History*, Jan., 1923, p. 685.—See also NATURALIZATION: United States: Naturalization act; SUPREME COURT: 1921-1922.

1922 (November).—Mid-term elections.—“The elections held on November 7 [1922] increased greatly the number of Democrats in both houses of Congress. The Sixty-seventh Congress was overwhelmingly Republican. In the House there were 300 Republicans, 131 Democrats and one Socialist; in the Senate there were 60 Republicans and 36 Democrats. The membership of the Sixty-eighth Congress, on the other hand, comprised in the House 223 Republicans, 206 Democrats, one Independent, one Farmer-Labor, and one Socialist; and in the Senate 53 Republicans, 42 Democrats, and one Farmer-Labor. Democratic Senators were elected to succeed Republicans in Delaware, Indiana, Maryland, Michigan, New Jersey, New York, West Virginia and Washington, while Republicans succeeded Democrats in Nebraska and Ohio.”—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, pp. 35-36.

1922-1923 (April-December).—Lease of naval oil land reserve.—Under President Roosevelt’s administration a movement to preserve certain public oil lands for the use of the navy was set in motion. Two of these were situated in California, and another in Wyoming. This last, known as the Teapot Dome, is “a great natural pocket of oil, the capacity of which is estimated as low as 12,000,000 barrels and as high as 135,000,000. . . . The importance of an adequate oil supply for the navy in time of emergency was so well understood and agreed upon that the issue became a non-partisan

one, Republicans and Democrats alike supporting it. [Under President Taft, and later under President Wilson, the movement came to success and the fields were reserved for the use of the navy.] In 1914 Secretary Daniels said, in a report to President Wilson: ‘Henceforth all the fighting ships which are added to the fleet will use oil. . . . I am of the opinion that the navy should own its own oil lands and ultimately produce, transport, refine and store its own supply of oil, in order that the Navy Department may at all times be assured of an adequate and dependable supply of fuel oil at reasonable cost.’ [At the close of the war, the secretary of the navy again wrote], ‘the war on sea and in the air, as well as on land, has depended so much on transportation that it can be laid down as a basic principle that no nation that does not control an adequate oil supply can successfully maintain its forces. . . . That the navy may be justified in building oil-burning vessels, and to assure an adequate future supply of fuel, the President set aside Reserves 1 and 2 in California, and 3 in Wyoming, the Teapot Dome.’ [Bills which had been introduced into Congress looking to the withdrawal of these fields from public control had been defeated, and on one occasion Secretary Daniels threatened to send a force of marines to the oil fields to safeguard the naval reserve against exploitation of outside wells which threatened to draw oil from it. In 1920 an act to place the reserves under the control of the Navy Department was passed by Congress. (See above: 1920 [June]: Naval oil reserves, etc.) In the Harding administration, however, renewed efforts made by oil companies to obtain control of the lands for exploitation were successful, and in 1922 the reserves were leased. The leases were signed by the secretary of the interior and the secretary of the navy. Prior to this time, the lands had been transferred (in May, 1921) from the Navy Department to the Department of the Interior, in spite of opposition raised by officials of the navy when advised of the move by Edwin Denby, the secretary of the Navy Department.]”—*New York Times*, Jan. 27, 1923, *Sec. 8*, p. 1.—The executive order for the transfer reads as follows:

EXECUTIVE ORDER

Under the provisions of the act of Congress approved February 25, 1920 (41 Stat., 437), authorizing the Secretary of the Interior to lease producing oil wells within any naval Petroleum Reserve; authorizing the President to permit the drilling of additional wells or to lease the remainder or any part of a claim upon which such wells have been drilled, and under authority of the act of Congress approved June 4, 1920 (41 Stat., 912), directing the Secretary of the Navy to conserve, develop, use and operate, directly or by contract, lease, or otherwise, unappropriated lands in Naval Reserves, the administration, and conservation, of all oil and gas bearing lands in Naval Petroleum Reserves Nos. 1 and 2, California, and Naval Petroleum Reserve No. 3 in Wyoming, and Naval Shale Reserves in Colorado and Utah, are hereby committed to the Secretary of the Interior subject to the supervision of the President, but no general policy as to drilling or reserving lands located in a Naval Reserve shall be changed or adopted except upon consultation and in cooperation with the Secretary or Acting Secretary of the Navy. The Secretary of the Interior is authorized and directed to perform any and all acts necessary for the pro-

tection, conservation and administration of the said Reserves subject to the conditions and limitations contained in this order and of the existing laws or such laws as may hereafter be enacted by Congress pertaining thereto.

WARREN G. HARDING.

THE WHITE HOUSE,
MAY 31, 1921.

[No. 3474].—United States President, Warren G. Harding, *Executive Order no. 3474, May 31, 1921.*

The first public announcement or record "of the Teapot Dome lease was on the financial pages of New York papers of April 14, 1922, when, in two short paragraphs, it was stated that the Sinclair interests had closed a contract with the Government for development of the navy Wyoming reserve. Two days later Senator Kendrick of Wyoming offered a resolution calling upon the Secretaries of the Navy and the Interior to inform the Senate whether negotiations were in progress to lease the last of the oil reserves set aside for the navy. [On April 18] . . . the Interior Department announced that a contract had been made with the Mammoth Oil Company, headed by Harry F. Sinclair. The next to move in the matter was Senator La Follette, who . . . charged that advance information of the signing of the oil lease had netted speculators \$30,000,000 on the New York Stock Exchange . . . [and demanded a sweeping enquiry. The demand was supported by public opinion, and the Senate voted] to inquire into the Teapot Dome lease and also into the circumstances connected with the contracts for opening the California naval oil reserves. Secretary Fall sent the committee a long letter describing his side of the controversy, and this communication was accompanied by a letter from President Harding, in which the President said: 'I think it is only fair to say in this connection that the policy which has been adopted by the Secretary of the Navy and the Secretary of the Interior in dealing with these matters was submitted to me prior to the adoption thereof, and the policy decided upon and the subsequent acts have at all times had my entire approval.'—*New York Times, Jan. 27, 1923, Sect. 8, p. 1.*

In the report which was enclosed in the president's message, the secretary of the interior outlined the various steps taken in dealing with the reserves as follows:

"In the latter part of 1909, in fact on September 27, the orders known as the Taft withdrawals were made by the Secretary of the Interior. Those orders covered 3,000,000 acres in California and Wyoming. Subsequent withdrawals were made by the Secretary of the Interior, as follows: October 12, 1909, 124,000 acres in Utah and 88,540 acres in Wyoming; December 20, 1909, 87,474 acres in Colorado; January 18, 1910, 147,887 acres in California; February 2, 1910, 448,000 acres in California; February 11, 1910, 9,109 acres in Wyoming; April 8, 1910, 29,736 acres in Wyoming; April 14, 1910, 407,314 acres in Utah; May 4, 1910, 419,901 acres in New Mexico; January 18, 1910, 3,600 acres in Wyoming. These were designated as temporary petroleum withdrawals Nos. 5 to 17, inclusive. Some restorations were made during the period. These withdrawals were all made under the Executive authority of the President of the United States, without direct legislative authority or confirmation. On June 25, 1910 (36 Stat. 847), Congress enacted a law directly authorizing the President to make withdrawals of lands for classi-

fication and for various purposes, and confirming his authority as to the withdrawals already made. Following this, on July 2, 1910, the President confirmed and ratified the outstanding withdrawals and withdrew lands subject to the conditions and limitations of the act. . . . Many restorations were made from time to time as heretofore noted, but the total area remaining in the petroleum reserves under the different orders so reported by this department on December 1, 1921, was 230,400 acres in Arizona, 1,178,392 acres in California, 469,030 acres in Louisiana, 1,345,151 acres in Montana, 84,894 acres in North Dakota, 1,962,768 acres in Utah, 1,120,526 acres in Wyoming, a total of 6,612,138 acres. (Note.—It is to be kept in mind that the areas given include lands title to which is not in the United States.) There has been no direct ratification by Congress of these petroleum withdrawals. . . . Such large withdrawals of the public domain by Executive order from 1909 aroused great opposition in the public-land States, and Congress considered various bills providing for the disposition of such withdrawn lands, either by directing the restoration thereof or by providing some other method of acquiring title to or the development of the oils supposed to underlie the same, through sale, lease, or otherwise. Proposed legislation reserving the lands to the United States in toto, or providing for the rental or lease thereof, the funds derived therefrom to be placed in the United States Treasury solely for governmental purposes, was strongly opposed in Congress by those who insisted that the States in which the lands were located should be entitled to at least a portion of the proceeds of such rentals or royalties, in lieu of the rights of the States to tax the same under State and municipal laws, as under the old practice said lands became the property of individual owners under the general mining laws. . . . At the request of . . . [Edward Denby] Secretary of the Navy to the Secretary of the Interior, and thereafter directly to the President of the United States, the President, on May 31, 1921, directed the Secretary of the Interior to administer such naval reserves for the Secretary of the Navy. The Secretary of the Interior has proceeded under this order in constant communication and consultation and coöperation with the Secretary of the Navy, and is so continuing at the present time. Prior to the Executive order just referred to, in the discharge of my duties with reference to private claims within the two naval reserves in California, my attention was called to the drainage of oil and the depletion of the naval reserves in the two California reserves particularly. Evidently the attention of the officials of the Navy Department had finally been directed to the same subject, as shortly prior to the signing of this Executive order the latter department had given notice that bids would be received for the drilling of offset wells in naval reserve No. 1, along the entire north boundary of section 1, to offset the drainage, the extent of which was then unknown because of the production of Standard Oil wells on the south boundary of section 36. These latter wells had been drilled and producing for some months or more, and were at the time very large and extensive producers of oil. The bids received by the Navy at that time were, by your direction and that of the Secretary of the Navy, opened in this department, and in consultation with the Navy Department, its experts, and by the assistance of the experts of this department it was finally determined that the bid of the Pan American Oil Co. of 55 per cent royalty for such offset wells was the

highest and best bid, and the contract for the drilling was tentatively awarded to that company. Meantime private claimants insisted upon their equitable rights, and there was transmitted to this department directly from your office a petition which had been in the archives of the Executive Office for Executive adjustment of such private claims. This petition was filed in the office of your predecessor. At your direction I took the matter up and ascertained that the petition had been filed within the statutory limit and must be passed upon. In so doing I ascertained that the parties petitioners had expended very large amounts of money in the attempt to develop private claims, including all of section 1 and portions of other sections in naval reserve No. 1. My predecessors had determined that these claimants were not entitled to patents, nor to outright leases, and the petition in question had been filed requesting Executive action under the terms of the leasing bill of 1920. I presented to the highest bidders, the Pan-American Petroleum Co., this matter, and my desire to obtain a release of all private claims upon school section 1 and other sections and asked the cooperation of the Pan American Co. in arriving at some solution of the difficulty. It was finally agreed between the private claimants and the highest bidders, the Pan American Co., that if the drilling permits were awarded to the latter company they would, with my consent, surrender 10 of the 22 wells to be drilled in favor of the United Midway Oil Co., claimants upon the same terms of royalty; that is to say, 55 per cent, and the same terms of drilling as to time, etc. I agreed to a part of this course provided the United Midway Co. would execute good and sufficient quitclaim deeds to the United States for all claim of right, title, interest, or equity in and to all of section 1 and the other sections covered by their claims, approximating something like 900 acres of land, thus obtaining a clear title to the United States as against such claimants and for the benefit of the Navy. During the course of these negotiations I had reports from the petroleum experts of the Bureau of Mines constantly in the field taking oil production for the Navy, both in reserve No. 2 and reserve No. 1. Shortly thereafter I made a personal visit to California, and there called into consultation Commander Landis, of the United States Navy, representing that department in oil matters, and our oil experts located at San Francisco and in the Bakersfield district. There was no divergence of opinion—in fact, entire unanimity—that the drainage from wells not owned by the United States Government constituted not only a menace but an actual and long-continuing loss to the Navy of its oils in both reserves, and that immediate steps were necessary to save any oils in any amount for the Government, and particularly for the Navy. Naval reserve No. 1, in California, contains a total area of 37,760 acres. . . . Naval reserve No. 2 has a total area of 30,080 acres, of which 20,640 acres are covered by private holdings. . . . Under the administration of your predecessor a lease was made on 120 acres to the Consolidated Mutual Oil Co. in naval reserve No. 2, because, as is shown by the record, the remaining oil deposits were in danger of destruction by water intrusion. Leases were also authorized for similar or other reasons to the Boston Pacific Oil Co. Prior to March 4, 1921, there had been drilled on patented lands within naval reserve No. 2, in the State of California, 408 oil and gas wells; on Government lands within the reserve claimed under the mining law, 141 wells. On patented lands immediately adjacent to the reserve

there had been drilled prior to March 4, 1921, 142 wells; on Government land adjacent to the reserve, 33 wells; and despite wild statements to the contrary, as far as I have been able to ascertain, no marines of the United States Navy had been called out to prevent such drilling for any reason whatsoever, nor had any other force been used to preserve at any cost the oils to the Navy Department. It will be noted that the grand total of wells drilled in this one reserve aggregated 724 prior to the incoming of your administration."—Message from the President of the United States, Warren G. Harding, *Naval reserve oil leases (67th Congress, 2nd Session, Senate Document no. 210, referred to Committee on Public Lands and Surveys, Apr. 20, 1922, pp. 3-7)*.

"One of the objects of the Senate investigating committee was to find out why the Navy Department turned over to Secretary Fall's control these valuable oil reserves. . . . The investigation, instituted as a result of the clamor of public disapproval, took on at first the nature of a controversy among experts over the question whether or not the naval reserve had been in danger of exhaustion from the adjoining oil field. Before many weeks testimony began to creep in that had no bearing on the scientific phase of the subject. The relations between Mr. Fall, former Secretary of the Interior, and . . . [the lessees] came to have paramount importance."—*New York Times, Jan. 27, 1923, sect. 8, p. 1*.—Suspicion was cast on these transactions when in the course of the investigation it was brought out that Albert B. Fall obtained from Edward L. Doheny a loan of \$100,000 in cash in November, 1921, a few weeks before his company obtained control of the lands in California known as Naval Reserve No. 1. This loan, Doheny claimed, was made in consideration of his lifelong friendship with the secretary, and had no relation to the lease.

1922-1923 (June - February).—*Ship Subsidy Bill*.—Effect of Panama canal on West coast shipping.—"During the fiscal year ended June 30, 1922, the world-wide business depression grew more acute, export and import business and ocean freight rates continued to decline, great losses were incurred, and it became necessary to make still further reductions in the [shipping board's] vessels on the seas. The number of these vessels was reduced from 744 on June 30, 1921, to 394 on June 30, 1922. Of the vessels in ocean trade at the beginning of the fiscal year, about 300 were in the so-called tramp service and the remainder in the regular line service. The tramp steamers became so unprofitable that they were all withdrawn and laid up. . . . Despite the continued decline in freight rates the corporation instituted between New York and London another line of combination passenger and freight steamers, with weekly sailings. . . . New freight services were established. Offices were set up of various interior points to acquaint the public with Shipping Board lines in world trade routes, sailing dates, rates, and so forth. The corporation secured an agreement with shippers of Egyptian cotton by which half of the quantity intended for shipment to the United States would be carried in board vessels. British ships had been carrying all the cotton shipments from Egypt to the United States. . . . The 23 combination passenger and cargo vessels constructed by the corporation were delivered during the year and assigned as follows: Seven to operate in the service between New York, Cherbourg, and London; four between New York, Rio de Janeiro,

Montevideo, and Buenos Aires; five between San Francisco, Honolulu, Yokohama, Kobe, Shanghai, Manila, and Hongkong; five between Seattle, Yokohama, Shanghai, Hongkong, and Manila; two were being reconditioned when the fiscal year closed. Five more ex-German ships were put in service during the year. . . . Definite schedules were established in many cargo services, a monthly freight service being operated from the Pacific coast to Australia. For this service there were six board vessels operated as feeders between Shanghai, Hongkong, and Calcutta, and four for the Seattle service between Hongkong and Java ports. . . . The Shipping Board [stated in its] report for the year ending June 30, 1922, that the construction cost of the vessels it owned on that date was \$2,351,505,875.92."—*Senate (Congressional Record, Proceedings and Debates of the 4th Session of the 67th Congress of the United States of America, v. 64, pt. 2, Jan. 3, 1923, pp. 1225-1226, 1232)*.—"It soon became apparent that the law of 1920 would not bring the government-owned fleet promptly into the hands of private owners nor assure to American registry a merchant marine carrying the desired percentage of American foreign trade. Upon the urgent recommendation of the Shipping Board and of President Harding [who called a special session in November, 1920, for this purpose], a supplementary measure was introduced simultaneously in both houses of Congress which is popularly known as the Ship Subsidy Bill of 1922. This is, however, an inadequate designation, since the bill . . . [was] concerned in large part with the strengthening of the indirect-aid features of the merchant marine law. But a distinctive feature was the provision for a general navigation bounty to vessels conforming to certain requirements, securing approval of the Shipping Board, and entering into contracts with that Board for a period not exceeding ten years. To be entitled to such compensation, vessels were to have a specified minimum gross tonnage and the highest classification by the American Bureau of Shipping, must be of American registry and ownership and be manned by crews two thirds of whom are American citizens, and, as a rule, be American built. [It contained provisions whereby fifty per cent of all immigrants coming by sea were to be carried in American ships.] Payment was to be based on a combination of speed, tonnage, and distance covered in our foreign trade or in certain lines of trade with the more distant possessions of the United States. The minimum rate—one half cent per gross ton per hundred miles—was fixed for ships with a speed of less than thirteen knots; the general maximum, two and one tenth cents per gross ton per hundred miles, for those having a speed of twenty-three knots or over. The fund for meeting these payments was to be derived from the following sources: (1) one-tenth of the customs duties on all imports; (2) the total tonnage dues collected in American ports on all vessels American and foreign; and (3) one half the amount by which the net earnings of bounty-receiving vessels should exceed ten per cent per annum of the capital invested."—G. M. Fisk and P. S. Peirce, *International commercial policies*, pp. 284-285.—"The Government continued to lose money on its merchant marine but the losses were greatly reduced. This was indicated by the Shipping Board's announcement on March 1 that the loss during the last four months' operation of its vessels had amounted to \$16,000,000. It was because of this regular deficit and the enormous depreciation of

idle ships that the President favored the subsidy scheme. On September 12 [1922] the Government's fleet of 226 wooden ships built during the war was sold at a private competitive sale by the United States Emergency Fleet Corporation to George D. Perry of San Francisco for \$750,000. The cost of each vessel was about \$700,000. The ships had been idle since the war and had suffered serious depreciation. The degree to which the Government's ships were idle was indicated in a statement made on January 21 by J. B. Smull, President of the Emergency Fleet Corporation. There were then 1,379 vessels under the control of the corporation. Their combined tonnage was 9,846,611. During the previous month 386 ships with a tonnage of 3,297,451 were assigned to trade while among those not in operation were 874 steel steamers with a tonnage of 5,585,160. . . . On November 21 [1922] the President appeared before a joint session of the two houses and delivered a plea for his ship subsidy plan which he had urged from time to time but which had not been acted on by either house. He said: 'We have the unavoidable task of wiping out a \$50,000,000 annual loss in operation, and losses aggregating many hundreds of millions in worn-out, sacrificed, or scrapped shipping.' His plan would, he believed, provide for an American merchant marine, privately owned and privately operated, but serving all the people and always available to the Government in any emergency. He denied that the measure would aid special interests and enrich a few at the expense of the Treasury. The Ship Subsidy Bill was passed by the House on November 29, by a vote of 208 to 184. Sixty-nine Republicans voted against the bill and only four Democrats voted for it. Several far-reaching amendments were made by the House, however. Among them were the following: exclusion from the subsidy provisions of vessels owned by large corporations, such as Standard Oil, United Fruit, and United States Steel, when engaged in transporting their own products solely; elimination of a section giving a rebate from income taxes equal to five per cent of freight money paid American vessels; the increase from two to four and one-half per cent in interest to be charged on loans made under the construction loan fund; prohibition of the sale of ships by the Shipping Board without advertisement and competitive bids; and a provision against expenditures from the Merchant Marine fund except under annual congressional appropriations. . . . On December 9 the Senate committee reported the bill favorably. It was debated frequently in the Senate but it never had a good chance of passage. In spite of the President's repeated pleas for favorable action on this proposal, the Senate on February 28, just a year after the President had first advocated it before Congress, voted by 63 to 7 to displace that measure and to make the Filled Milk Bill the unfinished business. The Subsidy Bill had been laid aside on January 15 to make way for agricultural credits legislation. The opposition to the bill came chiefly from the agricultural regions."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, pp. 28-29, 37, 39.—"The most signal defeat met with by Mr. Harding in his dealings with Congress was the failure of the Ship Subsidy Bill. In his advocacy of this measure he was not upon such safe ground, however. The matter was controversial and had been for many years. The farmers had long been suspicious as to the merits of the idea, and an impression prevailed quite

generally that if such a measure came into effect a few would benefit at the expense of the many. It is also true that there are a great many people in the United States who are opposed in principle to a Government subsidy for an industrial or commercial undertaking."—J. D. Whelpley, *Late President Harding and the succession (Fortnightly Review, Sept., 1923, p. 357)*.—"When the great ditch across the Isthmus was opened to traffic, the distance by water to New York was reduced by more than half, and to the United Kingdom and Europe by nearly half. . . . The distance from Seattle to New York is still approximately twice as far by water as by rail, but because of the cheapness of ocean transportation, intercoastal steamship lines can carry goods at a rate far below the rail rate, even though they must pay Panama Canal tolls of \$1.20 per registered ton. Because of the Interstate Commerce Commission rulings, the railroads cannot meet the steamship price and as a result, most of those commodities which do not require express train speed, are moving from coast to coast by cargo vessel instead of by freight car. It is not surprising, therefore, that there are now ten steamship lines operating from Puget Sound and the Colombia to the United Kingdom and Europe, and eight lines in the intercoastal service to the Gulf ports and New York, Boston, and other Atlantic points. In the European service only two lines are under the American flag, the others being British, French, and Norwegian. In the inter-coastal trade . . . only American vessels are permitted. . . . During the war it was felt that a real restoration of an American Merchant Marine depended upon the return of the American seaman; and with this end in view, the Board established a training service for men, and various navigation and engineering schools for officers. Several such schools were established in the Northwest, and a training ship was operated between Puget Sound and the Hawaiian Islands. More than five hundred officers and several thousand men were prepared for sea service. As many of them came from interior points, a great deal of good was undoubtedly done in interesting our inland population in American shipping. . . . The University of Washington, which is situated at Seattle [continued] the educational work begun by the Shipping Board, and besides courses in navigation and marine engineering, . . . [give] a four year training in the steamship business. . . . On January 13, 1923, for the first time in history a combination passenger and cargo vessel [the *President Hayes*] left Puget Sound ports for Rio de Janeiro, Montevideo, Buenos Aires and other ports of eastern South America, via the Panama Canal. The ship was one of three vessels being operated in the new service."—H. T. Lewis and S. I. Miller, *Economic resources of the Pacific Northwest, p. 523*.

1922-1923 (December-July).—Funding of British war debt.—"In December, 1922, a commission was sent over from Great Britain with instructions to reach an agreement on the funding of the War Debt owed by that country. The agreement arrived at was reported to the president by the World War Foreign Debt Commission, under date, and was transmitted by the president to Congress in a special message delivered at a joint session . . . [on February 7, 1923]. The Report [which tells the full story of the transaction] reads as follows: 'The British Government designated as its representatives the Right Honorable Stanley Baldwin, Chancellor of the Exchequer, and Mr. Montagu Norman, the governor of the Bank of England,

who have conferred with the commission in Washington and presented facts relating to the position of the British Government. The commission has also met frequently in separate sessions and has given the fullest consideration to the problems involved in the funding of the British debt to the United States. It became manifest at the outset that it would not be possible to effect an agreement for funding within the limits of the act approved February 9, 1922, and the commission has, therefore, considered the practicability of a settlement on some other basis, and though it has not been able, in the absence of authority under the law, to conclude negotiations, it unanimously recommends for submission to Congress a settlement with the British Government, as follows:

Principal of notes to be refunded.	\$4,074,818,358.44

Deduct payments made Oct. 16, 1922, and Nov. 15, 1922, with interest at 4½ per cent thereon to Dec. 15, 1922.	100,526,379.69
	<hr/>
	4,604,128,085.74
To be paid in cash.	4,128,085.74
	<hr/>
Total principal of indebtedness as of Dec. 15, 1922, for which British Government bonds are to be issued to the United States Government at par. . . .	\$4,600,000,000.00

The principal of the bonds shall be paid in annual installments on a fixed schedule, subject to the right of the British Government to make these payments in three-year periods. The amount of the first year's installment will be \$23,000,000 and these annual installments will increase with due regularity during the life of the bonds until, in the sixty-second year, the amount of the installment will be \$175,000,000, the aggregate installments being equal to the total principal of the debt. The British Government shall have the right to pay off additional amounts of the principal of the bonds on any interest date upon 90 days' previous notice. Interest is to be payable upon the unpaid balances at the following rates, on December 15 and June 15 of each year: 3 per cent semiannually, June 15, 1923, to December 15, 1932, inclusive; 3½ per cent semiannually, June 15, 1933, until final payment. For the first five years one-half the interest may be deferred and added to the principal, bonds to be issued therefor similar to those of the original issue. And payment of interest or of principal may be made in any United States Government bonds issued since April 6, 1917, such bonds to be taken at par and accrued interest. The commission believes that a settlement of the British debt to the United States on this basis is fair and just to both Governments, and that its prompt adoption will make a most important contribution to international stability. The extension of payment, both of the principal and interest, over a long period will make for stability in exchange and promotion of commerce between the two countries. The payment of principal has been established on a basis of positive installments of increasing volume, firmly establishing the principal of repayment of the entire capital sum. The payment of interest has been

established at the approximately normal rates payable by strong governments over long terms of years. It has not been the thought of the commission that it would be just to demand over a long period the high rate of interest naturally maintained during the war and reconstruction, and that such an attempt would defeat our efforts at settlement. Beyond this the commission has felt that the present difficulties of unemployment and high taxation in the United Kingdom should be met with suitable consideration during the early years, and therefore the commission considers it equitable and desirable that payments during the next few years should be made on such basis and with such flexibility as will encourage economic recuperation not only in the countries immediately concerned but throughout the world. This settlement between the British Government and the United States has the utmost significance. It is a business settlement fully preserving the integrity of the obligations, and it represents the first great step in the readjustment of the inter-governmental obligations growing out of the war. Respectfully submitted, A. W. Mellon, *Chairman*. Charles E. Hughes, Herbert Hoover, Reed Smoot, Theodore E. Burton.' [In his address to the Senate, the president said:] 'In its comments upon the arrangements negotiated the commission itself has said essentially everything necessary to commend the agreement to your sanction. . . . Here is the first clearing of the war-clouded skies in a debt-burdened world, and the sincere commitment of one great nation to validate its financial pledges and discharge its obligations in the highest sense of financial honor. There is no purpose to report that your commission has driven a hard bargain with Great Britain, or to do a less seemly thing in proclaiming a rare generosity in settlement. Amid widespread clamor for the cancellation of World War debts, as a fancied but fallacious contribution toward peace—a clamor not limited to the lands of debtor nations but insistent among many of our own people—the British commission came to make acknowledgement of the debt, to put fresh stamp of approval upon its validity, and agree upon terms for its repayment. It was manifest from the beginning that Great Britain could not undertake any program of payment which would conform to the limitations of time and interest rates which the commission had been authorized to grant. But here was a great nation acknowledging its obligations and seeking terms in which it might repay. So your commission proceeded to negotiate in a business way for a fair and just settlement. Such a settlement had to take into consideration the approximately normal interest rates payable as the commission suggests, "by strong governments over a long term of years," with a temporary interest rate and suitable options adjusted to the tremendous problems of readjustment and recuperation. Your commission went so far as it believed the American sense of fair play would justify. Even then the British debt commission did not feel justified by its instructions to accept the proposal. Only after submission to the British Cabinet was the proposal of your commission accepted [the commission returned to England on Jan. 20, 1923, for the purpose of submitting it], and I bring it to you, with the earnest recommendation that it be given, so far as legislative procedure will admit, a cordial and prompt approval.'—*House of Representatives (Congressional Record, Proceedings and Debates of the 4th Session of the 67th Congress of the United*

States of America, v. 64, pt. 3, Feb. 7, 1923, p. 3213).—The act to ratify the agreement was passed on Feb. 28, 1923, in the form of an amendment to the Refunding Act of February 9, 1922, "for the reason that the latter limited the authority of the commission to extend the time of maturity of the bonds or other obligations to be refunded beyond June 15, 1947, or to fix the rate of interest at less than 4¼ per centum per annum. The settlement approved by Congress extended the maturity of the bonds for sixty-two years and reduced the rate of interest to 3 per cent per annum for the first ten years and 3½ per cent thereafter until final payment. . . . Although there was some criticism in Great Britain of the terms of the settlement before they were formally approved by the British Cabinet, Chancellor of the Exchequer Baldwin, one of the two British representatives who negotiated the settlement in America, is reported by the Associated Press to have made the following statement at a dinner given in his honor in London by the Pilgrims on [February 28, 1923]: The debt funding commission could not have dealt with men more competent, more fair or more desirous of helping to a settlement. . . . I would only say of the debt that we stand in this country as we have always done, and as America stands, for the sanctity of contracts. We have concluded with America the first settlement since peace. We are glad to have done it. We made a fair settlement; we have been fairly met, and we will rejoice that it has been done. As pointed out by President Harding . . . this settlement put an end to the clamor which originated in Paris at the Peace Conference . . . for the cancellation of the inter-Allied indebtedness provided the United States would forego the amount owing to her without any set-off from any other source."—G. A. Finch, *Settlement of the British debt to the United States (Journal of International Law, April, 1923)*.—"The final proceeding incident to the carrying through of the agreement for the funding of Great Britain's war debt to the United States was witnessed on July 5, when the Counsellor of the British Embassy at Washington turned over to the Treasury Department \$4,600,000,000 United Kingdom bonds, the Treasury at the same time surrendering demand obligations of Great Britain held by the Treasury Department since the loans were advanced. Acting Secretary Gilbert in making this known July 5 said: "The Treasury this afternoon received the \$4,600,000,000 aggregate principal amount of bonds of the United Kingdom issued pursuant to the proposal dated June 18, 1923, for funding the debt of Great Britain to the United States, and the acceptance thereof, dated June 19, 1923. The Treasury thereupon cancelled and surrendered to the British Government, through the Counsellor of the British Embassy at Washington, demand obligations of Great Britain in the principal amount of \$4,074,818,358.44, in accordance with the provisions of the proposal and acceptance."—*United Kingdom bonds to amount of \$4,600,000,000 turned over to United States in debt funding settlement—Stanley Baldwin on debt adjustment (Commercial and Financial Chronicle, v. 117, July 7, 1923, p. 210)*.—The British government adopted the plan of purchasing large numbers of Liberty Bonds to be applied in payment of the semi-annual instalments of the debt. The administration in turn adopted the policy of cancelling these bonds as received, thus reducing the amount of the national debt by the amount paid in.

1923 (January).—Foreign relations.—Mandates and oil concessions.—At the beginning of 1923 "after two years of direct negotiations with Great Britain, France, Italy and Japan, the United States . . . obtained everything it demanded, in Yap the right to operate the Guam-Yap cable and to establish a wireless station, in Mesopotamia and in Syria full rights of League members and in addition special concessions to our own particular opinions respecting missionary activities. Not only have we secured all rights belonging to us as co-victors over Germany with which we were at war; we have also claimed and obtained the right to be consulted with respect to the territory of Turkey, with which we were not at war, on the ground . . . that had it not been for America's help the Allies would not have defeated Turkey. . . . There is every reason to respect the validity of our claims regarding the mandate territories. And yet the circumstances under which these claims have been pushed to acceptance and some of the consequences growing out of this acceptance of our claims on the part of the mandate-holding countries, are worthy of some thought. The United States has repudiated the Treaty of Versailles and the Government of the League. It has, therefore, no part in the responsibilities imposed by the one, the duties involved in membership in the other. We have demanded the right of review over the relations between the Great Powers and their mandated dependencies without participating in the general machinery set up to control this relationship. We have demanded that we be shown the reports submitted to the Mandate Commission without ourselves coöperating in that Commission. We . . . [have insisted] on treating mandates as national relationships whereas the justification and ideal of the mandate principle is that it is an international relationship. In refusing to recognize, much less to coöperate with, the Mandate Commission, we have to this extent weakened the prestige of a valuable agency for the improvement of colonial administration."—T. H. Dickinson, *United States and the league*, pp. 104-106.—"After the disarmament conference the oil fog began to clear. The Anglo-Persian and the Standard Oil Companies . . . agreed to form a joint company to explore for oil in Northern Persia, in the districts which had not been included under the Anglo-Persian concession. Opposition to this Anglo-American combination, however, developed largely through the insistence of the Russian Soviet upon the former Russian sphere of influence in Northern Persia. The Persian Government which had virtually repudiated the Anglo-Persian agreement of 1919, wished to strengthen American influence there. But an Anglo-American combination was quite a different thing, and so the Persian Government carried on negotiations with the Sinclair Oil Group. . . . In the Spring of 1920 the

Standard Oil Company of New York had been allowed to proceed with prospecting on concessions which it had previously received from the Turkish Government. . . . Fifty per cent. of the interests of the various Standard Oil Companies now lie in foreign countries—in Mexico, China, Canada, and elsewhere; and one or more of them have sought concessions in Fiume and the Caucasus. . . . The Standard Oil Company of New Jersey bid against the Royal-Dutch Shell for a concession in Czechoslovakia; and in November, 1921, it was given the right to bore. In Central and South Africa this Standard Oil Company was also . . . active. In January, 1922, the Standard Oil Company of California purchased one-quarter of the Vanderlip concession in Siberia. . . . In April, 1922, the Sinclair group secured oil in Portuguese West Africa, and another from the Soviet Government for the fields in Northern Sakhalin. . . . After protracted negotiations, settlement . . . [of the dispute between American and British interests over the oil field of Mosul was reached] in November, 1922, in which the British and French agree to modify the San Remo oil pact so as to give American interests 20 per cent. of the Mesopotamia concessions. (An American corporation, the Barnsdell Corporation, was given a concession in the Baku fields in January, 1923)."—R. L. Buell, *Oil interests in the fight for Mosul* (*New York Times Current History*, Mar., 1923).—See also TRUSTS: International: Struggle for oil concessions.

1923 (January-March).—Agricultural Credits Act.—Bursum Pension Bill.—Civil Service Classification Act.—The Agricultural Credit Act, "passed by Congress on the last day of the session . . . was a compromise measure based on a number of bills that had been discussed for several months. The act as approved provided for government credit to farmers and for the making of loans by private organizations on live-stock and farm products on their way to market. [See also RURAL CREDIT: United States: Agricultural Credits Act.] . . . On January 3, 1923, President Harding vetoed the Bursum Pension Bill, which provided pensions at the rate of \$50 a month to all widows of veterans of the Civil War and increased the pensions of the veterans themselves from \$50 to \$72 a month. The bill if approved would have required an immediate annual expenditure of more than \$100,000,000. The President concluded his veto message with the following statement: 'The compensation paid to the widows of World War veterans, those who shared the shock and sorrows of the conflict, amount to \$24 per month. It would be indefensible to insist on that limitation upon actual war widows if we are to pay \$600 per year to widows who marry veterans sixty years after the Civil War.' . . . The Classification Act of 1923, approved by the President on March 4, was designed to bring about a more satisfactory relation between the work done and the salaries received by civil servants. The act provided for the establishment of an ex-officio board to be known as the Personnel Classification Board and to consist of the Director of the Budget or someone designated by the Director, a member of the Civil Service Commission, designated by the Commission, and the Chief of the United States Bureau of Efficiency, or someone designated by him. The board was to make the necessary rules and regulations and provide such subdivisions of the grades established by the act as it deemed necessary according to the kind and difficulty of the work. Its regulations were to provide for ascertaining and recording the

duties of position and the qualifications required of incumbents. Department heads were required to report the duties and responsibilities of new positions to the board. After consultation with the board, and in accordance with a uniform procedure prescribed by it, the head of each department must allocate all positions in his department to their appropriate grades on the compensation schedules. In determining the rate of compensation to be received by an employee, the principle of equal compensation for equal work irrespective of sex was prescribed."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, p. 38, 40.

1923 (February).—Payment of claims for ships requisitioned from Norway during World War. See NORWAY: 1921-1923.

1923 (March).—Exoneration of A. E. F. by Senate.—In March, 1923, a Senate investigating committee exonerated the American Expeditionary Force from charges which had been rumored against it and which finally had been openly made in the Senate. "The committee of the Senate, appointed on the 4th day of November, 1921, under the provisions of Senate Resolution No. 166, to investigate charges made by the late Senator Thomas E. Watson, of Georgia, that members of the American Expeditionary Forces abroad were executed without trial or court-martial, respectfully reports that it has performed the duty imposed upon it by said resolution and is of opinion that the charges are not sustained by the testimony. . . . The fact that but 11 soldiers were executed in France . . . is evidence not only of considerate and merciful treatment of the military lawbreaker by the military authorities but of the good conduct and discipline of the American soldiers who served abroad in the World War. The charge of 'illegal executions in France' having been solemnly made on the floor of the Senate and seriously investigated, and the evidence before the committee failing to support the charge but indicating as strongly as circumstances permit that the charge is false, it is due to the Army that served in France as well as the people of the United States of which the Army was a part that there be a finding to the effect not only that the charge is not proven but that it is untrue. The importance of such a finding may not be great at present for the reason that the people of the United States do not believe the charge to be true. But if the matter is left undecided coming generations may doubt the falsity of the accusation, for there was some evidence, however, unreliable in support of the charge. For history's sake there should be a determination. W. A. BETHEL, *Colonel, Judge Advocate*."—F. B. Brandegee, *Report of Special Committee on Charges of Alleged Executions without Trial in France (67th Congress, 4th Session, Report no. 1256, pp. 1, 7-8)*.

1923 (March - September).—Ratification of Four Power Treaty.—Opposition to participation in Court of International Justice.—Embargo on sale of surplus war equipment to foreign powers.—"The leading 'bitter-enders' of the League fight, Senators Borah, Johnson, and Reed, directed the fight against the Four Power Treaty, in which they were ably seconded by Senators La Follette and Robinson. Indeed, the latter, an ardent friend of the League, led the Democratic opposition to the new treaty. The day before the treaty was signed by the delegates the attack was opened in the Senate by Senator Borah, who declared that while meeting, as provided for in Article II, to 'discuss fully and frankly' the 'most efficient

measures to be taken' in case of 'aggressive action,' the powers could commit the United States to war just as much as the League of Nations could under Article X, and that the moral obligation, acknowledged by President Wilson under Article X, would be even more binding than the legal obligation. In his opinion we were entering the League of Nations by the back door. Senator La Follette followed with a declaration that Article II was a half brother to Article X and Senator Reed denounced the whole treaty as a 'gold brick.' . . . It does not require us or any power to surrender a worthwhile tradition. . . . The world has been hungering for a better relationship for centuries since it has attained its larger consciousness. The conception of the League of Nations was a response to a manifest world hunger. Whatever its fate, whether it achieves the great things hoped for, or comes to supersedure, or to failure, the American unwillingness to be a part of it has been expressed. That unwillingness has been kept in mind, and the treaties submitted to-day have no semblance or relationship save as the wish to promote peace has been the common inspiration. . . . In the committee on foreign relations Senator Brandegee, who had fought the League of Nations very bitterly, offered a reservation which raised a storm in the committee and caused some consternation at the White House, but finally secured its adoption in a modified form. After two full weeks of discussion the committee reported the treaties for ratification with the Brandegee reservation to the Four Power Treaty. . . . The chief attack was still leveled at Article II, the opponents holding that it was an alliance and would commit us to war, the supporters denying both. Senator Hitchcock, who had led the fight for the League of Nations, accepted the Four Power Treaty, as did Senator Williams. The latter declared that, had the League been proposed and sponsored by a Republican President, it would have been supported by the Republican Senators and that the Four Power Treaty would have been supported by the Democrats, had it been proposed by President Wilson. He then appealed to senators to lay aside their partisanship at the shoreline. But many Democrats, led by Senator Robinson, opposed the treaty to the last. Senator Robinson tried to secure an amendment and a reservation to the effect that the high contracting parties agree not to take any aggressive action and to refer all disputes not settled by diplomacy to a conference of all the nations. In common with Senators Borah, Reed, and others he held that it was an alliance and demanded to know who wrote it, implying that our delegates had been hoodwinked or overreached by the others. In reply to this charge Secretary Hughes admitted that he was mainly responsible for the draft of the treaty and closed by saying that failure to adopt it would be 'nothing short of a national calamity.' Senator Robinson persisted, but his amendment was defeated 30 to 55. By this time public opinion had begun to make itself felt. The country had received the treaty for the reduction of naval armaments with acclaim. On the others there was not much enthusiasm, but the people did not care to see the naval treaty endangered by rejection of the others and began to call for ratification, numerous organizations and many noted individuals calling upon the Senate to act favorably. . . . When the day for the final vote arrived (March 24) the opponents used every possible device to secure amendments or reservations. . . . [Finally the Brandegee reservation was adopted by a vote of

91 to 2.] The vote on the ratification followed and resulted in adoption, 67 to 27, 2 not voting. . . . The other treaties were disposed of in short order, the naval treaty being ratified (March 29) 74 to 1, the submarine and poison gas treaty unanimously, the Nine Power Treaty on the open door policy in China (March 30) 66 to 0, 30 not voting, and the treaty affecting the Chinese tariff 58 to 1, 37 not voting. [See also WASHINGTON CONFERENCE.] The last named treaty would have been defeated, had those not voting cast their votes against it. . . . One significant thing about the debate is that while the opponents of the treaty were trying to make sure that the United States was in no way committed to the aid of Japan when threatened by 'the aggressive action of any other power,' they utterly failed to see that the treaty ties our hands against any joint intervention with Great Britain in the East. If China or Siberia should attack Japan, then the United States must 'communicate . . . fully and frankly' with the other contracting powers 'concerning the most efficient measures to be taken, jointly or separately, to meet the exigencies of the particular situation,' but if Japan should attack China or Siberia, the United States and Great Britain may not intervene jointly. . . . Some doubts having arisen whether the Lansing-Ishii Agreement had been canceled in the Treaty on the Limitation of Armaments, the matter was finally settled in the affirmative [on April 14, 1923], by an exchange of notes between Secretary Hughes and Ambassador Hanihara. . . . Before the Court [of International Justice] was a year old it became clear that unofficial American opinion was . . . in favor of participation by the United States. As Article XIV [of the Versailles Treaty, under which the court was established] had never been attacked by the opponents of the League and the court was open to nations not members of the League, there was no insuperable difficulty to official sanction of the court by the administration elected on the issue of rejection of the Covenant. In his Boston speech (October 30, 1922) Secretary Hughes indicated that the administration was seriously considering the matter, but nothing more was heard of it until near the close of the session. . . . [On February 24] President Harding startled the Senate with a message asking its assent to the ratification of the protocol. In a report accompanying the message Secretary Hughes gave a survey of the historic attitude of the United States toward arbitration and judicial procedure, explained the statute providing for the court, and maintained that participation in the court by the United States would in no way involve her in the League of Nations, but suggested that ratification might be accompanied by a reservation that the United States would not assume any of the obligations of the League; also, he insisted that ratification should be conditioned on representation both in the Council and the Assembly for the selection of Judges; also, that the statute creating the court should not be amended without the assent of the United States. Such conditions President Harding said he believed would be acceptable to the League, but he could not tender them until the Senate approved. This approval he hoped the Senate would now give. . . . Senator King introduced a resolution endorsing the proposal, but the committee on foreign relations sought a delay by asking Secretary Hughes several questions, some of which he had already answered. They related mainly to obligatory jurisdiction and to whether

the United States would have to recognize as binding the provisions of the Treaty of Versailles relating to labor. All of these were answered in the negative. They also wanted to know what reservations, if any, had been made by the states ratifying the protocol. Secretary Hughes knew of none. Some outside pressure—letters from individuals and resolutions of organizations—was brought to bear on the Senate, but it refused to take up the King resolution for ratification by 24 to 49, 23 not voting [and consideration was postponed until the next session]. The next day Congress adjourned, but this did not end the discussion. Indeed, discussion had only begun. Some friends and many foes of the League of Nations objected to President Harding's plan. In the case of the former the objection was based mainly on the idea that we should enter the League and not simply the court. In general the objections raised by the latter were in line with those brought against the League when it was under fire. Senator Johnson and some others warned against the court as the back-door entrance to the League and would have none of it or anything like it. Senator Borah clung to his plan as furnishing a 'real court with obligatory powers,' once it was accepted, while this one did not. He further declared that it was impossible to enter the court and stay out of the League and denounced the attempt to do as a mark of intellectual hypocrisy and of moral bankruptcy for any party backing it. It would be political cowardice to try to gather the fruits of the court created by the League and to continue to fight the League. President Harding and his friends did not remain silent. On several occasions the former spoke in defense of his proposition and indicated that he would appeal to the country for final decision. Secretary Hughes also took up the cudgel in behalf of the court, answering objections point by point and showing that there was great need for a separate court established on a sound basis and declaring that the International Court of Justice met these conditions."—D. Y. Thomas, *One hundred years of the Monroe Doctrine, 1823-1923*, pp. 477-484, 486-488, 539, 541-543.—"In a speech before the Associated Press, . . . New York City, on April 24, President Harding firmly reiterated his advocacy of the United States joining the International Court of Justice. . . . He declared that the issue . . . did not involve foreign political entanglements, and that it was not a step toward entering the League of Nations. He unequivocally stated his opposition to the League, and stated that the United States would not enter it by any indirect method."—*New York Times Current History*, June, 1923, p. 501.—"John Bassett Moore, for twenty years professor of international law and diplomacy at Columbia University, was chosen by the Council and Assembly of the League of Nations in September to be one of the eleven members of the international court of justice."—F. A. Ogg, ed., *News and notes, personal and miscellaneous (American Political Science Review, Nov., 1921, p. 595)*.—See also INTERNATIONAL JUSTICE, PERMANENT COURT OF.

Some months previous "the President directed that no American guns, weapons or other war material be sold to any foreign power. warfare in any part of the world. President Harding was known to regard his decision as one of the most important ones of his administration."—*New York Times Current History*, June, 1923, p. 501.

ALSO IN: J. B. Scott, *United States of America: A study in international organization*, pp. xix, 605.—*Idem*, *Cancellation of Lansing-Ishii Agreement (American Journal of International Law, July, 1923)*.

1923 (May).—Agreement as to payment of costs of American army of occupation.—"There was signed at Paris on May 25, 1923, an agreement between the Governments of Great Britain, France, Italy, and Belgium, of the one part, and the United States of America, of the other part, for the reimbursement of the costs of the American army of occupation maintained on the Rhine from the date of the armistice on November 11, 1918, until January 27, 1923. . . . Article 249 of the Treaty of Versailles provides that 'there shall be paid by the German Government the total cost of all armies of the Allied and Associated Governments in occupied German territory from the date of the signature of the armistice of November 11, 1918,' and by Article 251 of the same treaty 'the costs of the armies of occupation as defined under Article 249 during the armistice and its extensions' and 'after the coming into force of the present treaty' were given priority of payment in the apportionment of reparations and all other costs arising under the treaty, which by Article 248 were made a first charge upon all the assets and revenues of the German Empire and its constituent states. In March, 1922, there was held in Paris a meeting of the Finance Ministers of Belgium, France, Italy, Great Britain and Japan to settle various questions raised in dealing with the distribution of Germany's payments. On the 11th of that month the Finance Ministers signed an agreement apportioning among themselves the payments made by Germany in 1921 and the payments to be made by Germany for the year commencing May 1, 1922. No provision was made in these apportionments for any payments on account of the costs of the American army of occupation and the United States was, so to speak, left to whistle for its share. When the intention of the Finance Ministers to ignore the American costs became known, the American unofficial observer on the Reparation Commission reminded them of America's bill, but the only effect of the reminder was the insertion of an article at the end of the agreement stating that 'the present agreement is made subject to any rights of the United States of America.' . . . When the action of the Finance Ministers at Paris became known to the State Department at Washington, Secretary Hughes promptly addressed identic communications to the Governments of Belgium, Great Britain, France, Italy and Japan, setting forth the right of the United States to be paid, upon an equal footing with them, the actual cost of its army of occupation, which the Secretary stated had been repeatedly set forth. . . . The Government of the United States in the same note expressed the belief that the right to the payment of its army costs on an equal footing with the Allied Powers was in no way affected by the American refusal to ratify the Treaty of Versailles which, it pointed out, went into effect upon ratification by Germany and three of the principal Allied Powers and made specific provision, as above quoted, for the payment of the cost of all armies of occupation. . . . On November

8, 1922, the Governments of Great Britain, France and Italy invited the United States Government to send a representative to meet Allied delegates in Paris in order to arrive at a solution of the question satisfactory to all parties concerned. The invitation was accepted by the Government of the United States and Mr. Eliot Wadsworth, Assistant Secretary of the Treasury, was designated as its representative. The negotiations resulted in the signature of the agreement on May 25, 1923."—G. A. Finch, *Payment of the costs of the American army of occupation on the Rhine (American Journal of International Law, July, 1923, pp. 513-515)*.

1923 (May-August).—Relations with Mexico.—**Recognition of Obregón government.**—"In May [1922] former Ambassador Warren and John Barton Payne, formerly chairman of the United States Shipping Board and Secretary of the Interior in the Wilson administration, were selected to confer with representatives of the Mexican government at Mexico City with a view to the settlement of the outstanding differences between the two governments."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1923, *Supplement*, p. 27.—"On August 31, 1923, the State Department announced that the Government of the United States and the Government of Mexico, in view of the reports and recommendations that their respective Commissions submitted as a result of the American-Mexican Conferences, held at the City of Mexico, from May 14 to August 15, 1923, has resolved to renew diplomatic relations."—*Renewal of diplomatic relations between the United States and Mexico (American Journal of International Law, October, 1923)*.—In the spring of 1923 "through the efforts of one of the American oil operators in Mexico, who during the preceding troublesome period had succeeded in gaining the confidence of the Government, proposals for a conference on recognition were laid simultaneously before both Governments. In this way each was saved the disadvantage of having taken the first step. The proposal was gladly accepted by both Governments. The conference was welcomed by the Harding Administration because of the political situation in the United States. Representing the conservative wing of the Republican Party, it had found itself harassed during the previous eighteen months not only by the Democrats, but by the Republican Radicals, led by Senator Borah. The failure of its Mexican policy was one of the charges brought against it. The United States Commissioners, Charles Beecher Warren and John B. Payne, arrived in Mexico City in May to meet the Mexican representatives, Fernando Gonzalez Roa and Ramon Ross. The American Commissioners came with a program based on the twin questions of oil lands and agrarian lands as dealt with by Article 27. [See MEXICO: 1918.] There was not included, as incorrect press reports asserted, discussion of the Chamilzal question (relating to the Rio Grande border) or of the settling of claims of Americans against Mexico. The decisions granting title to subsoil deposits and to land purchases, where intention to exploit had been registered prior to 1917, had already been handed down. On this point there was no controversy. The instructions of the American Commissioners were to insist that all subsoil mineral deposits should be included in the same category, so that were a farmer to discover oil on his property he might, as in the United States, drill for it without restriction, or sell his land, including such oil deposits, to any purchaser. On the other hand, the

Commissioners were to require guarantees of a more equitable land policy. No obstacles should be put in the way of the Mexican program of restoring the ejidos, but injustice should be avoided, and the value of the lands should be judged by expert appraisers. Proceedings in which local commissions confiscated land outright without question of compensation, on the basis of old, almost forgotten grants of the Spanish kings, which had been superseded by later surveys and grants, were to be completely disallowed. . . . The one point on which there was unalterable difference was the question of subsoil oil and mineral deposits. The American demands relating to agrarian reform were not widely divergent from the views of the Mexican Government. The National Agrarian Commission had long sought to check the radical State action along the very lines laid down by the American Commissioners. The American position on the restoration of the old Spanish grants was allowed by the Mexican negotiators without much controversy. Similarly, the Commissioners were informed that the general partition of estates was not a program of the central administration, and it was pointed out that no enabling act had been passed authorizing such partition. On the other hand, much was conceded to the Mexican Government in its program of restoring lands to the Indian villages. Arable land, up to a maximum of 1,755 hectares (about 4,400 acres), may be confiscated from any one estate and added to the ejido of a village. This land shall be paid for in bonds. When any land in excess of this figure is taken it must be paid for in cash. The American request, that the value of the land be decided by expert appraisal, was granted. The American demands relative to oil lands raised a most delicate question. Were they to be granted, Article 27 would be, in effect, nullified. President Obregon had stated definitely that Mexico would never buy recognition at the cost of sacrificing her Constitution. Consequently, there was no yielding on this point. Eventually a compromise was effected. While not yielding on the principle of Article 27, President Obregon gave assurance that personal permits for drilling would be issued in cases covered by the controversy. The American Commissioners, while accepting this arrangement, reserved all the rights of their position. Practically the whole question is left open for further negotiation. To the agreement of the Commissioners were appended conventions providing for two commissions. One, a Revolutionary Claims Commission, will handle all claims of American citizens against Mexico arising out of the disturbances of the revolutionary period. The other, the Mixed Claims Commission, is to deal with all other claims of nationals of either country against the other. Each commission will be composed of three members, one chosen by each Government, and the third by both Governments jointly. If the two Governments cannot agree, the choice of the third member shall be made by the President of The Hague Court of Arbitration. It must be understood that these agreements were not signed by the Commissioners of either country. Officially the conclusions arrived at had no bearing on the question of recognition. Actually, of course, they are the basis for it, for they settle, temporarily at least, the problems at issue between the two Governments. Before the American Commissioners left Mexico City the State Departments of the two Governments had approved of the agreements."—*New York Times Current History, Dec.*,

1923, pp. 396-398.—See also MEXICO: 1922; 1923 (February).

1923 (June).—Renewal of Arbitration Treaty with Great Britain.—"The United States and Great Britain on June 23 [1923] renewed their Treaty of Arbitration, which expired in June by limitation, for another period of five years. . . . The agreement of renewal was signed by the Secretary of State and the British Ambassador; it simply provides for renewal without change in the terms of the treaty. . . . Notes were exchanged to the effect that in case [the United States should participate] in the Permanent Court of International Justice, the two Governments . . . [would] consider the making of an agreement providing for the submission of disputes, of the nature described in the treaty, to the Permanent Court."—*New York Times Current History, August, 1923, p. 860.*—"The Treaty, executed in 1908, was signed by Elihu Root as Secretary of State and James Bryce as British Ambassador; it provided for practically unqualified arbitration of all issues between the United States and Great Britain. It was renewed for five years in 1913 and again for a similar period in 1918."—*Commercial and Financial Chronicle, July 21, 1923, p. 278.*

1923 (June-August).—Visit to Alaska and death of President Harding.—On June 20, 1923, President Harding set out for a visit to Alaska accompanied by Mrs. Harding, the secretaries of commerce, of the interior and of agriculture, and the speaker of the House of Representatives. On his way across the continent he made a number of speeches, in which he outlined the policy of the administration. He arrived in Alaska in July, and reached a point farther north than that attained by any other president. On his way back he landed at Victoria, British Columbia, and paid the first official visit to Canada ever made by a president of the United States. While on board the *U. S. S. Henderson*, on the return voyage from Seattle to San Francisco the president was taken seriously ill, and on his arrival at San Francisco he was too weak to attempt the journey across the continent. The anxiety felt, however, had gradually abated as the bulletins given out by the physicians described his apparent progress toward recovery. The shock to the country was all the greater therefore when it was announced on the evening of August 2 he had quite suddenly died. The President had been respected, even by his political opponents, because of his high-mindedness, and fine traits of character, and unusual expressions of regret were heard on every side, regret which was made more poignant by the fact that it was generally believed that his end was hastened by fatigue caused by the close attention which he paid to the duties of his office. He was comparatively young, only 57. On the day following his death, the body of the late President was conveyed to the train in which it was to make the long journey from San Francisco to Washington. The state funeral was held in Washington on August 8, and the burial took place with simple ceremonies on August 10, at Marion, Ohio.

1923 (August).—Effect of treaties with Turkey on capitulations and rights of citizens of the United States in Turkish territories.—"The separate treaty of commerce and amity between the United States and Turkey negotiated at Lausanne by Mr. Joseph C. Grew, the American representative, and Ismet Pasha, after the close of the protracted Near East Conference, was signed Saturday, Aug. 4. . . . On behalf of Turkey the treaty

CALVIN COOLIDGE

© Underwood & Underwood

was signed by Ismet Pasha, Riza Nur Bey and Hassan Bey. . . . Two treaties were signed, one comprising a general treaty and the other relating to extradition and containing the usual provisions of such treaties. . . . Negotiating alone from a distance, the United States inevitably acceded to Turkish contentions more or less similar to those conceded by the allies, notably the abolition of capitulations. . . . [This ends the jurisdiction of American consular courts.] Americans may be arrested by Turkish police and tried by Turkish courts; but the Turkish Government voluntarily promises to appoint a few foreign legal advisers, from nations neutral in the World War, who will be informed of such arrests after the incarceration of the victims. Then, if the American Ambassador thinks the arrest unjustified, he can argue the case as he would, for instance, in England or France. . . . Americans are no longer tax-exempt in Turkey, and must hereafter pay the same taxes as are paid by the Turks. . . . American schools, hospitals and charities have the same rights as those of any other foreign power, that is, they have the same rights as Turkish institutions. In winning the point of the open door for commerce and industry, without discrimination, the United States scored a gain; the allied powers were never more than lukewarm toward the subject. The matter of indemnity for damage suffered by American interests through 'arbitrary or illegal acts' . . . [was] left for later discussion. . . . As to the Straits, the United States, without signing the Straits convention, receives all the privileges accorded to the allied powers, on a most-favored nation basis."—*New York Times Current History*, Sept., 1923, pp. 1049-1050.—See also TURKEY: 1923 (July-August).

1923 (August - December).—Succession of President Coolidge.—Cabinet undisturbed.—Foreign policy of the administration.—Tax reduction proposals.—"When the tragic news of President Harding's death reached him at midnight, August 2, 1923, Mr. Coolidge was at his father's home in Plymouth, Vermont, where he had been spending a quiet vacation. From the Attorney-General in Washington word came that the President should take his oath of office as soon as possible, and that any person duly authorized by law to administer oaths could perform this service. The President's father being a notary public, it was at once decided that he should administer the oath of office to his son. Never since the foundation of the Republic had such a situation arisen, and it will always remain one of the most dramatic events in American history."—W. F. Johnson, *Life of Warren G. Harding*, p. 252.—"President Coolidge paid an eloquent tribute to the qualities and character of President Harding on December 10, his address being transmitted to millions of people by radio. The occasion was the opening of a Harding commemorative week set apart under the auspices of a commission appointed to erect a fitting memorial at Marion, President Harding's Ohio home. This was one of three noteworthy public utterances occurring within the same week that resulted in giving President Coolidge a more definite position in the public mind than he had previously held. The first of these three utterances was his regular message to the new Congress, which assembled for its opening session on Monday, December 3. Owing to . . . a protracted dispute over the election of the speaker and delay in organizing the House of Representatives, President Coolidge did not appear before Congress in joint session to deliver his message in person until Thursday [December 6]. The second

utterance was his message accompanying the budgetary estimates; and this was transmitted to Congress on Monday, December 10. . . . Mr. Harding had regarded his colleague, the Vice-President, as an understudy from the very beginning, and had provided a seat for him at the Cabinet table. Mr. Coolidge had been faithful not only to his official duties as President of the Senate, but also to his opportunities as an informal but actual member of the President's group of Cabinet counsellors. What we may now properly call the Harding-Coolidge Administration has lost none of its momentum . . . [by President Harding's death. C. E. Hughes, the secretary of state], presented an outline of American foreign policy in an address at Philadelphia before the American Academy of Political and Social Science in November that was, of course, endorsed in advance by President Coolidge and . . . [later] sustained by the President in his message to Congress. Secretary Mellon, also in November, had drawn up for Chairman Green of the Ways and Means Committee of the House an outline of his views regarding tax reduction and public expenditure; and the Mellon proposals had secured the adherence of business men throughout the country to a very unusual extent. President Coolidge . . . endorsed the Secretary's proposed changes in the tax laws—dealing with the subject briefly in his general address to Congress, and more fully in his message on the budget. . . . It was wholly within the discretion, as it was also within the legal right of President Coolidge to reorganize his Administration and to assert opinions regarding domestic and foreign policies that are known to be held by certain Senators and other public men [in the Republican party]. . . . But the new President . . . chose to identify himself with the recognized Harding policies, and to work in accord with the Cabinet as he found it. The presumptions thus created in the public mind regarding Mr. Coolidge's attitudes were fully confirmed by his official utterances during the opening days of the . . . [first session of the sixty-eighth Congress]."—*Progress of the world (American Review of Reviews, January, 1924, pp. 3-6)*.—The following is a resumé of the address made by C. E. Hughes, in Philadelphia, on November 30: "We are still opposed to alliances. We refuse to commit ourselves in advance with respect to the employment of the power of the United States in unknown contingencies. We reserve our judgment to act upon occasions as our sense of duty permits. We are opposed to discriminations against our nationals. We ask fair and equal opportunities in mandated territories as they were acquired by the Allies through our aid. We desire to cooperate according to our historic policy in the peaceful settlement of international disputes which embraces the policy of judicial settlement of such questions as are justiciable. It is our purpose to cooperate in those varied humanitarian efforts which aim to minimize or prevent those evils which can be met adequately only by community of action. In short, our cooperation as an independent state in the furtherance of the aims of peace and justice has always been and still is a distinctive feature of our policy. There is plainly no inconsistency between these policies and the Monroe Doctrine. Our position as a world power has not affected it. The question is whether that doctrine is still important under changed conditions. The answer must be in the affirmative.' As to the applicability of the Monroe Doctrine to the present situation of the world, Mr. Hughes admits that the spread of democratic ideas and the

resulting change in governments have removed the danger of organized effort to extend to this Continent the European 'political system' of one hundred years ago. But Europe still has a set of primary interests which are not ours. As Washington said: 'She must be engaged in political controversies, the causes of which are essentially foreign to our concern.' Mr. Hughes points out that unity in war did not avail to change the divergent national policies in peace. So far as the Pacific and Far East are concerned, Mr. Hughes said, the United States has developed the 'policies of the Open Door, the maintenance of the integrity of China, coöperation with other powers in the declaration of common principles, coöperation of other powers by conference and consultation in the interests of peace, limitation of naval armament and the limitation of fortifications and naval bases.' All these policies, he declared, were entirely consistent with the policy of Monroe. Since the Monroe Doctrine simply states a principle of opposition to action by non-American powers, Mr. Hughes recognizes our obligation as a nation to formulate affirmative policies as to our conduct in relation to other American states, and not merely our policy with respect to the conduct of non-American powers. Those affirmative policies he maintains, while distinct from the mere principle of exclusion set forth in the Monroe Doctrine, are not inconsistent with that doctrine, but rather constitute its fitting complement. Mr. Hughes . . . [enumerated] nine such policies, as follows: 'First—We recognize the equality of the American Republics and their equal rights under the law of nations. Second—It follows that it is a part of our policy to respect the territorial integrity of the Latin-American republics. We have no policy of aggression; we do not support aggression by others; we are opposed to aggression by any one of the Latin American republics upon any other. Third—States have duties as well as rights. Every state on being received into the family of nations accepts the obligations which are the essential conditions of international intercourse. Among these obligations is the duty of each state to respect the rights of citizens of other states which have been acquired within its jurisdiction in accordance with its laws. A confiscatory policy strikes not only at the interests of particular individuals but at the foundations of international intercourse, for it is only on the basis of the security of property validly possessed under the laws existing at the time of its acquisition that the conduct of activities in helpful coöperation is possible. Each state may have its conception of domestic policy, but rights acquired under its laws by citizens of another state it is under an international obligation appropriately to recognize. It is the policy of the United States to support these fundamental principles. Fourth—It is the policy of this Government to make available its friendly assistance to promote stability in those of our sister republics which are especially afflicted with disturbed conditions involving their own peace and that of their neighbors. Fifth—The United States aims to facilitate the peaceful settlement of difficulties between the governments in this hemisphere. This policy has had notable illustration in our own relation to our neighbor on the north, the Dominion of Canada, which is justly proud of its position in 'the community of nations known as the British Empire.' We have a boundary with Canada, including that of Alaska, of about 5,500 miles unfortified. Through arbitration we have disposed of such serious controversies as those relating to the Behring Sea fisheries rights, the Alaska

boundary and the North Atlantic coast fisheries. With respect to the Latin American republics it is our policy not only to seek to adjust any differences that may arise in our own intercourse but, as I have said, to extend our good offices to the end that any controversy they may have with each other may be amicably composed. We are seeking to establish a Pan-America maintained not by arms but by mutual respect and good will and the tranquilizing processes of reason. We have no desire to arrogate to ourselves any special virtue, but it should constantly be recognized that the most influential and helpful position of the United States in this hemisphere will not be that of the possessor of physical power but that of the exemplar of justice. Sixth—In seeking to promote peace, as well as to aid in the reduction of unproductive expenditures, this Government has sought to encourage the making of agreements for the limitation of armament. Through our treaty with the great naval powers we have limited our capital ships, and we have voluntarily reduced our land forces. Seventh—The policies which have been described are not to secure peace as an end in itself, but to make available the opportunities of peace—that is, to open the way to a mutually helpful coöperation. This is the object of the Pan-American Conferences. Eighth—It should also be observed that in our commercial relations the United States is seeking unconditional, most-favored-nation treatment in customs matters. Not only does the Monroe Doctrine not mean that the United States has a policy of seeking in the Latin American republics economic advantages denied to other countries, but it is not the general policy of the United States to seek preferential rights. Ninth—We have certain special policies of the highest importance to the United States. We have established a waterway between the Atlantic and Pacific oceans—the Panama Canal. Apart from obvious commercial considerations, the adequate protection of this canal—its complete immunity from any adverse control—is essential to our peace and security. We intend in all circumstances to safeguard the Panama Canal. We could not afford to take any different position with respect to any other waterway that may be built between the Atlantic and Pacific oceans. Disturbances in the Caribbean region are therefore of special interest to us, not for the purpose of seeking control over others, but of being assured that our own safety is free from menace. With respect to Cuba, we have the special interests arising from our treaty and our part in the securing of her independence. It is our desire to see her independence not weakened but safeguarded, and her stability and prosperity assured. Our friendly advice and aid are always available to that end.' After sketching these affirmative policies of the United States in this hemisphere, Mr. Hughes concluded his address with a friendly word to the other republics of both North and South America: 'We rejoice in the progress of our sister republics, and at the enhanced prosperity which is at their call. The Monroe Doctrine stands, as it has always, as an essential part of our defensive policy, but we are no less but rather more interested in the use of the opportunity which it created and has conserved. We desire no less than they themselves the independence, the peace and progress of all the American republics, and we seek to enjoy to the fullest extent possible the blessings bestowed by the spirit of confraternity, those mutual benefits which should result from our intimate association and our common political ideals.' "

—Leading articles of the month (*American Review of Reviews*, January, 1924, pp. 85-86).

"Probably no action on the part of our Government officials, unless it be the proposed bonus legislation of [1922], aroused at once greater interest than the publication in November of a plan for a reduction of the taxes by the Secretary of the Treasury, Andrew Mellon. This plan was submitted to the Chairman of the Ways and Means Committee of Congress with an accompanying letter of explanation. A month later, almost to a day, President Coolidge confirmed in a measure the proposals of his cabinet officer by calling for a \$300,000,000 tax cut, and a reduction of \$132,000,000 in the expenditures of the National Government. These were the principal proposals to be found in his annual budget message to Congress. . . . [Later] proposals and counterproposals . . . [were] coupled to a certain extent with the question of the bonus, but the question of tax revision or tax reduction . . . completely overshadowed that of the bonus. Republicans and democrats . . . [made] it their main consideration and bills . . . [were] drafted to be laid before Congress. This move by Secretary Mellon and the administration at Washington . . . [was] accompanied by similar efforts on the part of some of the States to reduce and readjust the tax burden. Governor Alfred Smith . . . proposed to the New York State Legislature a 25 per cent. cut in the State income tax, and just across the border in New Jersey, Governor George S. Silzer in his . . . message . . . [pleaded] for a better equalization of the tax burden. . . . The last two years . . . [had] shown a considerable surplus of revenue over expenditure. The President . . . [therefore] deemed the time ripe for some measure of relief from the demands made upon the taxpayer by the Federal Government. Governor Smith. . . [was] prompted by the high cost of living, which he . . . [attributed] in part to the heavy taxation, and by the success of certain plans for the reorganization of the State Administration to suggest a modification of State burdens. 'The ultimate consumer,' . . . [he said] 'who usually bears the brunt of this taxation is now entitled to the best thought we can give to decreasing the cost of government.' Federal retrenchment . . . [was] made possible in no small measure by the budget system which enables taxpayer and public official not only to see just what is needed but just how his money is spent. In the charts which accompanied the President's . . . budget message it was apparent that a large proportion of his dollar goes for wars, past, present, and future . . . According to the President's estimates 37.32 per cent. . . . [would] go for military activities in 1924, but if to this be added the interest and the principal of the debt piled up by war the amount would approximate, at a conservative estimate 75 per cent. of the whole. One authority places it at 94.2 per cent. Almost 75 per cent. of the money needed to maintain the Government comes from some form of internal taxation. Only 13.35 per cent. comes from customs duties. When to these sums are added the various amounts needed to carry on the State and local governments the receipts from taxation reach enormous figures. It . . . [was] estimated that in 1923 our total government expenditure . . . [was] more than seventeen times as large as it was a half a century [earlier], and our per capita expenditure more than five times as great. 'Taxation,' said Colbert, the great finance minister of Louis XIV, 'is the art of so plucking the goose as to procure the largest amount of

feathers with the least possible squawking.' Although the attitude of government has radically changed since his day, with the advent of democracy, in the popular mind, taxes are still looked upon as an oppressive burden. . . . Like the sword of Damocles . . . [it is] suspended over our heads, and one of the main problems of government in a democracy is to soften or temper the blow when it does fall, for fall it will and must. To quote the old saying, 'Nothing in this life is sure but death and taxes.' The main question raised by any new tax proposal is, 'Who is to pay?' Although this . . . [was] not the only vital issue involved, it . . . [was] more or less the crux of the situation as regards the present proposals. . . . The relief proposed in the Mellon plan . . . [would] affect approximately fourteen million taxpayers, or if we figure five persons to every individual making a return, seventy millions out of our total population of 110,000,000. Thirteen of these fourteen million . . . [had] incomes ranging from \$1,000 to \$6,000. They . . . [would] benefit by the proposed reduction in the rate from 4 to 3 per cent. and from 8 to 6 per cent. with an additional 25 per cent. cut in case the income . . . [represented] a salary or wages as contrasted with the returns from a business or investments. It would mean that a man with a gross income of \$4,000 who was the head of a family and had two children dependent upon him would pay \$15.75 as against \$28.00 under the present law. This would represent a saving of \$12.25. This \$4,000 would have to represent earned income. The small taxpayer also would benefit somewhat by the proposed repeal of the taxes on telegrams and telephones, on admissions to moving-picture houses and other places of amusement and by the repeal of many nuisance taxes as they are called. The 331,000 taxpayers with incomes of \$10,000 or more . . . [would] be relieved of the heavy additional tax or surtax as it is called, which has heretofore been collected. It . . . [was] proposed to scale the rate progressively upward to 25 per cent. at \$100,000. These extra deductions by the Government formerly became effective with incomes of \$6,000. Mr. Mellon . . . [maintained] that the effect was to gradually dry up the revenue available by men of large incomes investing their funds in tax-exempt securities, the number of which . . . [had] greatly multiplied since the close of the war. The simplification of the taxing machinery too, he . . . [maintained] would make it easy to secure from those who are taxable the amounts called for under the new plan. Mr. Mellon finally . . . [laid] great stress upon the larger amounts of capital which . . . [would] be invested in industrial and productive enterprises, thus affording more employment and better wages and possibly a reduction in living costs. If Governor Smith and others like him are right, this is likely to be one of the greatest benefits conferred."—D. C. Knowlton, *Adjusting the tax burden*.

UNITED STATES OF AMERICA, Constitution of: 1781.—Articles of Confederation. See U. S. A.: 1777-1781, 1783-1787.

1787-1789, and 1791-1870.—A sketch of the history of the framing and adoption of the Federal Constitution of the United States will be found under U. S. A.: 1787, and 1787-1789. The following text of the original instrument, with the first fifteen amendments to it, is one prepared by Professor Albert Bushnell Hart, and is the result of a careful comparison with the original manuscripts, preserved in the State Department at Washington. "It is intended to be absolutely exact in word, spelling, capitalization and punctuation." A few headings and paragraph numbers are inserted for convenience of reference. "Those parts of the Constitution which were temporary in their nature, or which have been superseded or altered by later amendments, are included within the signs []." This text, originally printed in the "American History Leaflets," is reproduced with Professor Hart's consent.

"WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice,

insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I.

Section 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives. [See also CONGRESS OF THE UNITED STATES.]

Sect. 2. 1. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.¹

2. No Person shall be a Representative who shall not have attained to the Age of twenty-five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

3. Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, [which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.]² The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; [and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New-York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.]³

4. When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

5. The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Sect. 3. 1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.⁴

2. Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next

¹ Modified by Fourteenth, Fifteenth and Nineteenth Amendments.

² Superseded by Fourteenth Amendment.

³ Temporary clause.

⁴ Modified by the Seventeenth Amendment.

Meeting of the Legislature, which shall then fill such Vacancies.¹

3. No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

4. The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

5. The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States.

6. The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

7. Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Sect. 4. 1. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

2. The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Sect. 5. 1. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

2. Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the Concurrence of two thirds, expel a Member.

3. Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

4. Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Sect. 6. 1. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

¹ Modified by the Seventeenth Amendment.

2. No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Sect. 7. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

2. Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Cases it shall not be a Law.

3. Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Sect. 8. The Congress shall have Power.

1. To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

2. To borrow Money on the credit of the United States;

3. To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

4. To establish a uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

5. To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

6. To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

7. To establish Post Offices and post Roads;

8. To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

9. To constitute Tribunals inferior to the supreme Court;

10. To define and punish Piracies and Felonies

committed on the high Seas, and Offences against the Law of Nations;

11. To declare War [see WAR POWERS OF THE UNITED STATES], grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

12. To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

13. To provide and maintain a Navy;

14. To make Rules for the Government and Regulation of the land and naval Forces;

15. To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

16. To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress;

17. To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States [see DISTRICT OF COLUMBIA: Constitutional status] and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

18. To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Sect. 9. 1. [The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.]¹

2. The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

3. No Bill of Attainder or ex post facto Law shall be passed.² [See ATTAINDER; EX POST FACTO LAW.]

4. No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.³ [See CENSUS: United States.]

5. No Tax or Duty shall be laid on Articles exported from any State.

6. No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

7. No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

8. No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present,

Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.⁴

Sect. 10. 1. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder [see ATTAINDER], ex post facto Law [see EX POST FACTO LAW], or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

2. No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controll of the Congress.

3. No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.⁵

ARTICLE II.

Section 1. 1. The executive Power shall be vested in a President of the United States of America. [See PRESIDENT: United States.] He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows

2. Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector. [The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the

¹ Temporary provision.

² Extended by the first eight Amendments.

³ Extended by Ninth and Tenth Amendments.

⁴ Modified by Sixteenth Amendment.

⁵ Extended by Thirteenth, Fourteenth and Fifteenth Amendments.

greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.]¹

3. The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

4. No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.

5. In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation, or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

6. The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

7. Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, "protect and defend the Constitution of the United States."

Sect. 2. 1. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

2. He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

3. The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Sect. 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagree-

¹ Superseded by Twelfth Amendment.

ment between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Sect. 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE III.

Section 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office.

Sect. 2. 1. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States,—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

2. In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

3. The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Sect. 3. 1. Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

2. The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or forfeiture except during the Life of the Person attained.

ARTICLE IV.

Section 1. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

² Limited by Eleventh Amendment.

Sect. 2. 1. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.¹

2. A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

3. [No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour. but shall be delivered up on Claim of the Party to whom such Services or Labour may be due.]²

Sect. 3. 1. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

2. The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or any particular State.

Sect. 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE V.

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that [no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and]³ that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE VI.

1. All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.⁴

2. This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

¹ Extended by Fourteenth Amendment.

² Superseded by Thirteenth Amendment.

³ Temporary provision.

⁴ Extended by Fourteenth Amendment, Section 4.

3. The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE VII.

The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

DONE in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth In Witness whereof We have hereunto subscribed our names.

ARTICLES IN ADDITION TO AND AMENDMENT OF THE CONSTITUTION OF THE UNITED STATES OF AMERICA, PROPOSED BY CONGRESS, AND RATIFIED BY THE LEGISLATURES OF THE SEVERAL STATES, PURSUANT TO THE FIFTH ARTICLE OF THE ORIGINAL CONSTITUTION.⁶

ARTICLE I. Congress shall make no law respecting an establishment of religion, or prohibiting the

⁵ These signatures have no other legal force than that of attestation.

⁶ This heading appears only in the joint resolution submitting the first ten amendments.

free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II. A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

ARTICLE III. No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI. In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

ARTICLE VII. In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

ARTICLE VIII. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX. The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.¹

ARTICLE XI. The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.²

ARTICLE XII. The Electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall

make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.—The person having the greatest number of votes as vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.” [See also ELECTIONS, PRESIDENTIAL: United States: Electoral college.]

ARTICLE XIII. Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Sec. 2. Congress shall have power to enforce this article by appropriate legislation.⁴

ARTICLE XIV. Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Sec. 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for partici-

¹ Amendments First to Tenth appear to have been in force from Nov. 3, 1791. [See U. S. A.: 1791.]

² Proclaimed to be in force Jan. 8, 1798.

³ Proclaimed to be in force Sept. 25, 1804.

⁴ Proclaimed to be in force Dec. 18, 1865. [See U. S. A.: 1865 (January).]

pation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Sect. 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Sect. 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Sect. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.¹

ARTICLE XV. Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Sect. 2. The Congress shall have power to enforce this article by appropriate legislation.²

ARTICLE XVI. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration.³

ARTICLE XVII. The Senate of the United States shall be composed of two Senators from each state, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislatures. When vacancies happen in the representation of any state in the Senate, the executive authority of such state shall issue writs of election to fill such vacancies: *Provided*, That the legislature of any state may empower the executive thereof to make temporary appointment until the people fill the vacancies by election as the legislature may direct. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.⁴

ARTICLE XVIII. Section 1. After one year from the ratification of this article the manufacture, sale or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Sect. 2. The Congress and the several States

¹ Proclaimed to be in force July 28, 1868. [See U. S. A.: 1865-1866 (December-April); 1866 (June), and 1866-1867 (October-March).]

² Proclaimed to be in force Mar. 30, 1870. [See U. S. A.: 1869-1870.]

³ Proclaimed to be in force Feb. 25, 1913. [See also U. S. A.: 1913 (April-December).]

⁴ Proclaimed to be in force May 31, 1913.

shall have concurrent power to enforce this article by appropriate legislation.

Sect. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years of the date of the submission hereof to the States by Congress.⁵

ARTICLE XIX. Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Sect. 2. Congress shall have power to enforce this article by appropriate legislation.⁶

UNIVERSALISM, **UNIVERSALISTS**.—"Universalism, using the word in its present theological meaning, is the doctrine or belief that it is the purpose of God, through the grace revealed in our Lord Jesus Christ, to save every member of the human race from sin. The word suggests nothing with regard to any human founder, any place where it was first promulgated, any particular form of church polity, any rite or ordinance, any opinion of the equality or the subordination of the Son to the Father. Universalism is not dependent on these. It may be, and to some extent has been, and is still, embraced by those in Christian sects whose denominational titles emphasize these respective peculiarities. . . . The presence of Universalism may be traced to the earliest period of Christian history. The existence of the Universalist denomination reaches but little beyond

a century. . . . Organized Universalism, the creation and establishment of the Universalist Church, had its chief, but not exclusive incitement in the ministry of Rev. John Murray, who, born in Alton, England, December 10 (O.S.), 1741, landed in America in the latter part of September, 1770."—R. Eddy, *History of Universalism*, ch. 1, 4 (*American Church History Series*, v. 10).—"Mr. Murray arrived in America in 1770, and after much going to and fro organized, in 1779, at Gloucester, Mass., the first congregation in America on distinctly Universalist principles. But other men, along other lines of thought, had been working their way to somewhat similar conclusions. In 1785 Elhanan Winchester, a thoroughly Calvinistic Baptist minister in Philadelphia, led forth his excommunicated brethren, one hundred strong, and organized them into a 'Society of Universal Baptists,' holding to the universal restoration of mankind to holiness and happiness. The two differing schools fraternized in a convention of Universalist churches at Philadelphia in 1794, at which articles of belief and a plan of organization were set forth, understood to be from the pen of Dr. Benjamin Rush; and a resolution was adopted declaring the holding of slaves to be 'inconsistent with the union of the human race in a common Saviour, and the obligations to mutual and universal love which flow from that union.'"—L. W. Bacon, *History of American Christianity*, ch. 13 (*American Church History Series*, v. 13).—"Even more influential [than Winchester] was Hosea Ballou (1771-1852), long a pastor in Boston. Murray and Winchester had been Trinitarians. Ballou was an Arian, and in this Unitarian direction American Universalism . . . followed him. . . . By 1790 the Universalists were sufficiently numerous to hold a convention in Philadelphia. Three years later a New England convention was organized which in 1803 met in Winchester, New Hampshire, and adopted a brief creed which, though modified in 1900, is the historic basis of American Universalism."—W. Walker, *History of the Christian church*, pp. 576-577.

UNIVERSITIES AND COLLEGES

In the ancient world.—"The ancient world may fairly be said to have possessed universities, that is, institutions in which all the learning of the time was imparted. Such institutions existed at Alexandria (Museum and Serapeum), Athens, Constantinople, and later at Beirut, Bordeaux, Lyons, Edessa, Nisibis, etc. But the growth of Christian supernaturalism and mysticism, and the inroads of the barbarians from North and South had mostly put an end to these before A. D. 800."—T. Davidson, *History of education*, p. 166.—See also **EDUCATION**: Ancient: B. C. 7th-A. D. 3rd centuries: Greece: University of Athens.

In ancient China. See **EDUCATION**: Ancient: B. C. 22nd-6th centuries: China.

Moslem.—**El-Azhar**.—"After the coming of the Arabs, and more especially in the ninth and tenth centuries of our era, schools and colleges were established in most of the Spanish cities; and at Cordova especially an admirable system of public instruction anticipated much that was excellent in the Christian Universities of modern Europe. . . . In the Universities of Moslem Spain, not only at the capital, but at Seville, at Saragossa, at Toledo, at Granada, arithmetic, algebra, trigo-

nometry, astronomy, the entire circle of the sciences occupied the attention of the students. The professors gave lectures also on philosophy, on natural history, on literature, on rhetoric, and composition. The language which, it was their boast, was the most perfect ever spoken by man, was studied with peculiar care. But others were by no means excluded from the course. Grammars and Lexicons, not only of the Arabic, but of Greek, of Latin, of Hebrew, were prepared and re-edited. . . . [These universities] were the resort of students, from the tenth to the twelfth centuries, from every part of Europe [and the forerunners of the medieval Christian university. In the same period the eastern Moslems established universities at Bagdad, Basra and Cairo]."—U. R. Burke, *History of Spain*, v. 1, pp. 263, 265.—See also **EDUCATION**: Medieval: 9th-15th centuries: Saracen and Moorish learning.—"The oldest and most famous educational institution in Egypt is El-Azhar University, attached to the great mosque at Cairo. This important institution . . . was established in the tenth century. It has [written in 1923] an attendance of between twelve and fourteen thousand students of all ages, drawn from many Moslem

countries. Originally the curriculum consisted of the study of the Koran, with grammar, rhetoric and oriental philosophy as subsidiary studies. Gradually it has been modernized, though the university still lacks laboratories and facilities for individual research. Through the thousands of pupils who have been under their charge the sheiks or teachers have a tremendous influence, not only in Egypt but in the entire Arab world. Around these teachers, who wear thick white bands encircling their tarbooshes, groups of students sit on straw mats in the shadows of many columns, occasionally halting the drone of lessons to pray, eat or stretch out and sleep."—J. B. Wood, *New page in Egyptian history (Asia, July, 1923)*.

Nature of mediæval universities.—Survey of the beginnings.—"The mediæval universities . . . were never, in any strict sense of the word, 'founded' at all. All the ideas which we associate with the beginning of a great higher school, . . . the raising of great sums of money, the securing of a corps of professors in the various lines of study, the building of structures appropriate to the purposes of teaching and investigation, the preparation of a complete course of study, to say nothing of skillful presentation to the public of the advantages of the new foundation, all these ideas are wholly out of place when we try to understand the origin of a mediæval university. To us the term 'university' suggests something complete, a school which offers all possible subjects of learning and which, in so far as it fails in this requirement, falls short of the true definition. It suggests also something very high, and we are apt to say of some one of the many institutions of learning which call themselves universities, 'this is nothing but a college,' meaning that its grade of teaching is largely elementary. Now neither of these ideas fits the mediæval institution. The term *universitas* meant nothing more than 'all of them,' or 'all of us,' or 'all of you.' It did not, at first, have even that notion of corporate unity which we connect with the word 'corporation,' meaning by that a body so far organized that it can act as a unit, and be dealt with by others as a thing having a distinct existence for itself. This word '*universitas*' was used quite as often for the whole body of the citizens of a town, or of the members of a guild, as it was for those who made up the body of scholars at a given seat of learning. These persons were teachers and learners who had come together, each for his own purposes, the one set to teach and the other to learn, without organization and without any regular connection of the body of the teachers with the body of the taught. Each scholar sought the teacher from whom he wished to learn and paid him for his instruction. Remnants of this idea still linger as, for instance, in the primitive custom of the 'Stuhlgeld' in the German universities to-day. The essence of the mediæval university, is, therefore, to be found in this idea of free association. It very soon passed out of its disorganized condition and became regulated by more or less strict customs. Such regulation became, of course, necessary as soon as the number of scholars and teachers became great. Living as they did without buildings of their own, either for teaching or living purposes, they were thrown into the community of the city as a class not subject to the ordinary jurisdiction of the place, nor yet provided with any effective jurisdiction of their own. They were an element of difficulty in any mediæval town, and yet an element which no town would like wholly to lose. The process of organization was different in different

places. Sometimes, as at Bologna, the '*universitas*' included all scholars and all teachers. Elsewhere, as at Paris, it was the teachers who formed the responsible body. Sometimes a large part of the university authority was in the hands of the so-called 'nations,' groups of landsmen, into which the whole body of university members was divided. Sometimes the nations were nothing more than convenient groupings for lesser administrative purposes. At some universities there was a single recognized head,—the 'rector,' usually chosen from among the teachers for a short term. At others the chief executive power was divided among a 'college' of elected persons. From a very early day we can trace distinct differences of purpose in these higher schools. In some, as for instance, Paris and Oxford, the main purpose was what we should call 'general culture.' This included, first, the so-called '*quadrivium*,' the group of scientific studies, arithmetic, geometry, astronomy and music, which rested upon a previous school study of the '*trivium*,' the grammatical studies, grammar, rhetoric and logic. After the regular quadrivium, the one culture study pursued with special zeal during our period was that of dialectics, the art of reasoning about anything. Naturally the things best worth reasoning about were . . . [theological matters and we have] to remind ourselves that reasoning was not for the purpose of finding out whether the church doctrines were true, or even whether they were more or less true, but only to confirm their truth by an intellectual process. The great reputation of Paris and Oxford, in their respective countries, drew to them not only young men, but also mere children, who came for the trivial as well as the higher studies, and this probably accounts for the almost incredible reports of the immense numbers of students. In so far as these two schools had a specialty beyond the culture studies, it was theology. Paris, in fact, became throughout the middle period, and for long after, the recognized authority on all points of theological dispute. At the other great universities more distinct specialization prevailed. At Bologna, for instance, there was a school of law going back, we cannot tell how far, but surely farther than the organization into a university. The law here studied was the ancient Roman code, the only body of law, in fact, which was in shape to be studied. During the whole of the twelfth century we find this study increasing, and drawing to itself much of that youthful energy which until then had been turned to the study of theology. At first this was opposed by the church on the ground that it was a heathenish study, likely to turn men against established institutions, but it was not long before the church recognized its interest here, as it did everywhere else, and made use of this new impulse for its own purposes. The law was also studied elsewhere, as for instance, at Orleans and Montpellier in France, but none of these lesser schools was able to dim the reputation of the Bolognese doctors. What we have just said of law at Bologna is true also of medicine at Salerno. It is quite possible that the claim of Salerno to be the oldest of the European universities is well-founded. At all events no one knows when the study of medicine began there. It is probably connected with the Arab influence in southern Italy; certainly the Arabs were far in advance of Europeans in the knowledge of physical life. The methods of the school at Salerno were in the last degree unscientific and crude. The knowledge of anatomy and physiology was based, not upon actual observation,

but upon the writing of early Greek physicians filtered through Arab tradition. . . . Yet the reputation of the school of Salerno persisted and grew so that when Frederic II in 1224 organized the University of Naples, Salerno was left intact as the medical department of that national institution. [See MEDICAL SCIENCE: Ancient: 10th century.] The forms of administration and of instruction at the universities seem to have grown up by a natural process through the action of the members themselves; but it early became evident that a higher sanction would be useful, and the universities turned to some power outside of themselves to seek it. The municipal governments within which they were living claimed and exercised more or less of the ordinary rights of police, and they could not be thought of as a source of law. There were two other powers, the state and the papacy, from which such sanction might come, and both were appealed to. We have here one of the most curious cases of that mingling of legal with religious ideas which prevailed throughout our period. The university stood in this respect very much like a monastery. It lay within a state and was therefore primarily subject to its laws; but it had also something of the clerical character, and this bound it, more or less as the case might be, to the interest of the papacy. Every such grant by a pope was a renewed declaration of right and a new opportunity for asserting authority. The recognition of the universities by the states was generally earlier than that by the church. Salerno received privileges from Robert Guiscard who died in 1085, and from his son Roger before 1100. King Roger II ordered state examinations in medicine in 1137. Naples, a new creation, was organized by Frederic II in 1224. The first formal recognition of Bologna was by the emperor Frederic I in 1158, though it is certain that there was organized teaching of law there long before. Pope Honorius II in 1216 defended the students against attacks of the city magistrates on the basis of long established usages. The university statutes were confirmed by the pope in 1254. Paris received its first distinctive university privileges from Louis VII, who died in 1180; it was recognized in two bulls of Alexander III (died 1181); it was much favored in 1200 by Philip Augustus; and it was on questions of privilege that the tumults of 1229 broke out, which resulted in a permanent crippling of its resources. In England there was, undoubtedly, a collection of higher teachers at Oxford as early as 1130, and at Cambridge, probably, as early as 1200; how much earlier at both places we cannot say, though the tradition of extreme antiquity, say from the days of Alfred, is now entirely rejected. The English universities profited by the overturn in Paris in 1229, and we may certainly date from this time their active corporate life."—E. Emerton, *Medieval Europe*, pp. 465-470.—See also EDUCATION: Medieval: 11th-12th centuries.

University customs in the Middle Ages.—Wandering scholars.—Methods of instruction.—Curriculum and equipment.—"Besides special protection and autonomy, the medieval students were granted numerous other privileges. They were relieved from taxation of all sorts, and, except in case of an armed invasion of the country, they

were exempt from military service. The universities were also given the right of licensing their graduates to teach anywhere without further examination (*ius ubique docendi*), and the right of 'striking' (*cessatio*) or suspending lectures, whenever they felt that their prerogatives or privileges had been infringed. In the latter case, unless their wrongs were at once redressed, the suspension was followed by migration of the entire university body to some other town and possibly country. And a 'strike' could easily be engineered in medieval days when the universities did not have any buildings of their own and there was no need of expensive libraries, laboratories and other equipment. The students had simply to gather up their professors and go rent some buildings elsewhere. Sometimes the king of another country would issue a special invitation to a 'striking' university, to coax the students to his land. Thus the University of Oxford in 1229 met with its most substantial increase through King Henry III., who promised the striking students of Paris: 'If it shall be your pleasure to transfer yourselves to our kingdom of England and to remain there to study, we will for this purpose assign to you cities, boroughs, towns, whatsoever you may desire to select, and in every fitting way will cause you to rejoice in a state of liberty and tranquillity.' The main motive for these extraordinary privileges granted to the medieval universities seems to have been the same material one that often animates a city or state to-day in undertaking to lure a college or university into its midst. Such an institution proved ground for distinction and a source of considerable revenue to a town or a country. Naturally every effort and inducement were used to build up and encourage a university, and the country was most reluctant to lose the institution when once started. If a strike arose, they hastened to mollify the enraged students and keep them from migrating, although their conduct was often difficult to endure and many complications arose in winning them back, when once they had gone on a strike. Realizing their position of advantage, the students became exceedingly independent and imprudent, and their liberties soon degenerated into recklessness and license. They seem to have become both dissipated and quarrelsome. Clashes with the townspeople, known as 'town and gown riots,' were not uncommon. In these disorders the king, not wishing to lose his university, usually took the side of the students, and often punished severely and unjustly the tradespeople or even the police who had ventured to interfere with the pranks, whims or lawlessness of the students. . . . The freedom and license of the medieval university are best illustrated by the wild life of the so-called *scholare vagantes* ('wandering students'). These groups were able to secure social approval for their migratory habits through the example of the orders of friars, who began their noble work in preaching and teaching during the thirteenth century. With quite a different purpose, these students begged their way, like the friars, as they wandered from university to university. They became rolicking, shiftless, pilfering and even vicious, and many found the life so attractive that they made it permanent and organized a mock 'order' known as *Goliardi*, with Goliath, the Philistine giant, as their professed patron saint. . . . The one compensating feature of this degeneracy was the production of jovial Latin and German songs to voice their frank appreciation of forbidden pleasures, and their protest against restraint. Various collections of these songs have come down to us."—

F. P. Graves, *Evolution of our universities (School and Society, Dec. 14, 1918, pp. 693-696)*.—"The work done in the mediæval universities by the candidates for the bachelorship was . . . the trivial curriculum of monastery and cathedral schools, but somewhat more extensive and better organized. . . . It was in the higher development and specialization of medicine, civil law, and theology (with philosophy) that the university movement broke away from the mediæval and monkish system. At the university seats, the more important parts of the grammars of Donatus and Priscian were, as at the monastery and cathedral schools, dictated, explained, and learned by heart; and this after the boys had left the grammar school and become 'arts' students. . . . The tendency of universities was at first, and for long, away from literature and humanism. Grammar and rhetoric were formal,—a study of rules and inaccurate etymologies. Dialectic was logic in its most barren form. The true intellectual life of universities was to be found in the specialized studies of medicine, theology, including philosophy or the higher dialectic, and law. . . . Humane studies were entirely overshadowed in Paris and the universities which followed that model, by philosophy, which was generally limited to dialectic disputations on definitions, the nature of ideas, and the relative questions of metaphysical theology. . . . In giving instruction, the order of the day was generally as follows: The regent usually met his pupils three times daily—at sunrise, at noon, and towards the evening—and at one of these meetings determining (defining) and disputation occupied the time. There can be no doubt that the want of books gave great opportunities to a regent of high teaching capacity to show what he could do. It also compelled in the pupil an amount of memory-work, and of reflection on the lessons dictated, which must have been highly effectual for the formal discipline of the mind. Robert de Courcon, the papal legate, fixed in the earlier part of the thirteenth century the books to be lectured on in the Paris faculty of arts for the mastership—viz. Aristotle, in so far as he bore on dialectic and ethics; 'Topics' (fourth book); Priscian; . . . and other works, by authors now unknown, on philosophy, rhetoric, mathematics, and grammar. The *Metaphysics* and *Physics* of Aristotle were proscribed, but the interdiction was subsequently removed. The most popular text-book of logic was, for centuries, the 'Summulæ' of Petrus Hispanus. The reforms of the papal legate were carried out before a distinct faculty of theology was formed. But theology was, yet, recognized by him as a separate study (*facultas* in its earlier sense), and none allowed to lecture in it 'publicly' till they were thirty-five years of age. The highest study of the Universities of Paris and England was theology; but let us never forget that theology comprehended philosophy, and indeed frequently touched the whole range of knowledge. . . . Text-books of theology, or 'Sentences,' had come from various hands long before this time; the science had been thoroughly systematized and reduced to a corpus by the famous Peter the Lombard, after many attempts by others. His 'Liber Sententiarum' became, from 1150, the universal text-book of the schools—text-book of philosophy as well as of theology."—S. S. Laurie, *Rise and early constitution of universities*, pp. 268-271.—See also EUROPE: Middle Ages: Scholastic revival.—Throughout the Middle Ages the disputations of scholastic philosophy continued to occupy the place of prominence in the universities (see EDUCATION: Mediæval: 9th-

15th century: Scholasticism), but gradually the humanistic studies introduced by the Renaissance gained a foothold. (See EDUCATION: Modern: Influence of Renaissance and Reformation.) "A prominent source of information on . . . [the curriculum during the Reformation period] is to be found in the statutes of the University of Wittenberg, revised by Melancthon, in the year 1545. The theological faculty appears, by these statutes, to have consisted of four professors, who read lectures on the Old and New Testaments,—chiefly on the Psalms, Genesis, Isaiah, the Gospel of John, and the Epistle to the Romans. They also taught dogmatics, commenting upon the Nicene creed and Augustine's book, 'De spiritu et litera.' The Wittenberg lecture schedule for the year 1561, is to the same effect; only we have here, besides exegesis and dogmatics, catechetics likewise. According to the statutes, the philosophical faculty was composed of ten professors. The first was to read upon logic and rhetoric; the second, upon physics, and the second book of Pliny's natural history; the third, upon arithmetic and the 'Sphere' of John de Sacro Busto; the fourth, upon Euclid, the 'Theoria Planetarum' of Burbach, and Ptolemy's 'Almagest'; the fifth and sixth, upon the Latin poets and Cicero; the seventh, who was the 'Pedagogus,' explained to the younger class, Latin Grammar, Linacer 'de emendata structura Latini sermonis,' Terence, and some of Plautus; the eighth, who was the 'Physicus,' explained Aristotle's 'Physics and Dioscorides'; the ninth gave instruction in Hebrew; and the tenth reviewed the Greek Grammar, read lectures on Greek Classics at intervals, also on one of St. Paul's Epistles, and, at the same time, on ethics. . . . Thus the philosophical faculty appears to have been the most fully represented at Wittenberg, as it included ten professors, while the theological had but four, the medical but three. . . . We have a . . . criterion by which to judge of the limited nature of the studies of that period, as compared with the wide field which they [covered later], . . . in the then almost total lack of academical apparatus and equipments. The only exception was to be found in the case of libraries; but, how meager and insufficient all collections of books must have been at that time, when books were few in number and very costly, will appear from the fund, for example, which was assigned to the Wittenberg library; it yielded annually but one hundred gulden, (about \$63,) with which, 'for the profit of the university and chiefly of the poorer students therein, the library may be adorned and enriched with books in all the faculties and in every art, as well in the Hebrew and Greek tongues.' Of other apparatus, such as collections in natural history, anatomical museums, botanical gardens, and the like, we find no mention; and the less, inasmuch as there was no need of them in elucidation of such lectures as the professors ordinarily gave."—K. von Raumer, *Universities in the sixteenth century (Barnard's American Journal of Education, v. 5, pp. 535-540)*.—See also EDUCATION: Modern: 16th century: Melancthon; EUROPE: Renaissance and Reformation: Melancthon an aid to Luther.

890-1345. — Italy. — REVIVED STUDY OF ROMAN LAW.—"It is known that Justinian established in Rome a school of law, similar to those of Constantinople and Berytus. When Rome ceased to be subject to Byzantine rule, this law-school seems to have been transferred to Ravenna, where it continued to keep alive the knowledge of the Justinian system. That system continued to be known and used, from century to century, in a tradition never

wholly interrupted, especially in the free cities of Northern Italy. . . . [At Pavia there grew up a famous school of Lombard law, which was the forerunner of the University of Pavia. The study of law] was destined to have, at the beginning of the twelfth century, a very extraordinary revival. This revival was part of a general movement of the European mind which makes its appearance at that epoch. The darkness which settled down on the world, at the time of the barbarian invasions, had its midnight in the ninth and tenth centuries. In the eleventh, signs of progress and improvement begin to show themselves, becoming more distinct towards its close, when the period of the Crusades was opening upon Europe. Just at this time we find a famous school of law established in Bologna [about 890], and frequented by multitudes of pupils, not only from all parts of Italy, but from Germany, France, and other countries. The basis of all its instruction was the *Corpus Juris Civilis*. [See *CORPUS JURIS CIVILIS*.] Its teachers, who constitute a series of distinguished jurists extending over a century and a half, devoted themselves to the work of expounding the text and elucidating the principles of the *Corpus Juris*, and especially the Digest. From the form in which they recorded and handed down the results of their studies, they have obtained the name of glossators. On their copies of the *Corpus Juris* they were accustomed to write glosses, i. e., brief marginal explanations and remarks. These glosses came at length to be an immense literature. . . . Here, then, in this school of the glossators, at Bologna, in the twelfth and thirteenth centuries, the awakened mind of Europe was brought to recognize the value of the *Corpus Juris*, the almost inexhaustible treasure of juristic principles, precepts, conceptions, reasonings, stored up in it."—J. Hadley, *Introduction to Roman law*, lecture 2.

BOLOGNA.—"In the twelfth century the law school of the University of Bologna eclipsed all others in Europe. The two great branches of legal study in the middle ages, the Roman law and the canon law, began in the teaching of Irnerius and Gratian at Bologna in the first half of the twelfth century. At the beginning of this century the name of university first replaces that of school; and it is said that the great university degree, that of doctor, was first instituted at Bologna, and that the ceremony for conferring it was devised there. . . . A bull of Pope Honorius, in 1220, says that the study of 'bonæ literæ' had at that time made the city of Bologna famous throughout the world. Twelve thousand students from all parts of Europe are said to have been congregated there at once. The different nations had their colleges, and of colleges at Bologna there were fourteen. These were founded and endowed by the liberality of private persons; the university professors, the source of attraction to this multitude of students, were paid by the municipality, who found their reward in the fame, business, and importance brought to their town by the university."—M. Arnold, *Schools and colleges on the continent*, ch. 9.—"The first formal recognition of the *universitas* of Bologna was by Frederick I., in 1158, when the leading juridical doctors were Bulgarus, Jacob, Martin, and Hugo. This 'privilege,' however, was based on the assumption that the school was already a flourishing one, with recognized usages, and it directed itself mainly to securing protection for travelling students and resident aliens, giving them the right of being judged by their own dominus or magister, or by the bishop. This right extended to criminal as well as civil cases, and long existed. It was only

after this date that Bologna was a formally privileged studium. . . . Irnerius had distinguished pupils, who, as doctors of law, maintained the reputation of the school after his death. It became known as the 'Mother of Laws,' and attracted ever-increasing numbers from all Europe. . . . [The foreign students organized themselves into 'nations,' which finally combined into two bodies—*universitas citramontanorum* and *universitas ultramontanorum*. (See also below: 1231-1339.)] The students had now virtually superseded the doctors in the government. Accordingly, at the instigation of the latter, the magistrates of Bologna endeavoured by a civil enactment to restrict the student organizations. Hence many strifes. . . . The students, being hard pressed by the doctors of civil law and magistrates combined, finally resolved to appeal to the pope, who would be (as may be supposed) very ready to interfere, as he thereby had his own supreme authority over the rising university school acknowledged. The students boldly alleged that their customary rights were being interfered with, and that the magistrates, and not they, were infringing the law. Pope Honorius III. (died 1216), a man reputed learned and pious, took the part of the students, and ordered the magistracy of Bologna to respect their rights. In the pope's epistle, he says that the new municipal statutes were unjust and in the teeth of scholastic liberty, and of ancient freedom up to that time exercised. Rights and privileges, and a certain constitutional organization, had been simply assumed by the rising school; . . . the civic power had either aided and abetted the organizations in their claims, or acquiesced in their acts. It was now too late to interfere."—S. S. Laurie, *Rise and early constitution of universities*, pp. 131, 133-134.—"The Bologna school of jurisprudence was several times threatened with total extinction. In the repeated difficulties with the city the students would march out of the town, bound by a solemn oath not to return; and if a compromise was to be effected, a papal dispensation from that oath must first be obtained. Generally on such occasions, the privileges of the university were reaffirmed and often enlarged. In other cases, a quarrel between the pope and the city, and the ban placed over the latter, obliged the students to leave; and then the city often planned and furthered the removal of the university. King Frederic II., in 1226, during the war against Bologna, dissolved the school of jurisprudence, which seems to have been not at all affected thereby and he formally recalled that ordinance in the following year. Originally the only school in Bologna was the school of jurisprudence, and in connection with it alone a university could be formed. . . . Subsequently eminent teachers of medicine and the liberal arts appeared, and their pupils, too, sought to form a university and to choose their own rector. As late as 1295 this innovation was disputed by the jurists and by the city, so that they had to connect themselves with the university of jurisprudence. But a few years later we find them already in possession again of a few rectors, and in 1316 their right was formally recognized in a compromise between the university of jurisprudence and the city. The students called themselves 'philosophi et medici' or 'physici'; also by the common name of 'artistæ.' Finally a school of theology, founded by pope Innocent VI., was added in the second half of the 14th century; it was placed under the bishop, and organized in imitation of the school at Paris, so that it was a '*universitas magistrorum*,' not '*scholarium*.' As, however, by this arrange-

ment the students of theology in the theological university had no civil privileges of their own, they were considered individually as belonging to the 'artistæ.' From this time Bologna had four universities, two of jurisprudence, the one of medicine and philosophy, and the theological, the first two having no connection with the others, forming a unit, and therefore frequently designated as one university."—F. C. Savigny, *Universities of the Middle Ages* (Barnard's *American Journal of Education*, v. 22, pp. 278-279).—The University of Bologna exercised a far-reaching influence throughout the Middle Ages. Its method of government by students was in marked contrast to the system developed at the University of Paris, where the control was in the hands of the masters alone.

OTHER ITALIAN UNIVERSITIES OF THE MIDDLE AGES.—"In early times . . . [the prosperity of the University of Bologna] depended greatly on the personal conduct of the principal professors, who, when they were not satisfied with their entertainment, were in the habit of seceding with their pupils to other cities. Thus high schools were opened from time to time in Modena, Reggio, and elsewhere by teachers who broke the oaths that bound them to reside in Bologna, and fixed their centre of education in a rival town. To make such temporary changes was not difficult in an age when what we have to call an university, consisted of masters and scholars, without college buildings, without libraries, without endowments, and without scientific apparatus. The technical name for such institutions seems to have been 'studium scholarium,' Italianised into 'studio' or 'studio pubblico.' Among the more permanent results of these secessions may be mentioned the establishment of the high school at Vicenza by translation from Bologna in 1204, and the opening of a school at Arezzo under similar circumstances in 1215; the great University of Padua first saw the light in consequence of political discords forcing the professors to quit Bologna for a season [1222]. The first half of the thirteenth century witnessed the foundation of these 'studi' in considerable numbers. That of Vercelli was opened in 1228, the municipality providing two certified copyists for the convenience of students who might wish to purchase text-books. In 1224 the Emperor Frederick II., to whom the south of Italy owed a precocious eminence in literature, established the University of Naples by an Imperial diploma. With a view to rendering it the chief seat of learning in his dominions, he forbade the subjects of the Regno to frequent other schools, and suppressed the University of Bologna by letters general . . . [but later revoked the edict]. Political and internal vicissitudes, affecting all the Italian universities at this period, interrupted the prosperity of that of Naples. In the middle of the thirteenth century Salerno proved a dangerous rival. . . . [Salerno was placed in the front rank as a specialized medical school by Constantine, the Carthaginian scholar, about 1065. Robert Guiscard and his son Roger conferred privileges on the school before 1100. In 1137 Roger II instituted the first state examinations in medicine there. The degree given at Salerno was a *licencia medendi* instead of the *licencia docendi* of the other medieval universities.] An important group of 'studi publici' owed their origin to Papal or Imperial charters in the first half of the fourteenth century. That of Perugia was founded in 1307 by a Bull of Clement V. That of Rome dated from 1303, in which year Boniface VIII. gave it a constitution by a special edict; but the translation of the Papal Sea to

Avignon caused it to fall into premature decadence. The University of Pisa had already existed for some years, when it received a charter in 1343 from Clement VI. That of Florence was first founded in 1321."—J. A. Symonds, *Renaissance in Italy: The revival of learning*, ch. 3.—"Few of the Italian universities show themselves in their full vigour till the thirteenth and fourteenth centuries, when the increase of wealth rendered a more systematic care for education possible. At first there were generally three sorts of professorships—one for civil law, another for canonical law, the third for medicine; in course of time professorships of rhetoric, of philosophy, and of astronomy were added, the last commonly, though not always, identical with astrology. The salaries varied greatly in different cases. Sometimes a capital sum was paid down. With the spread of culture competition became so active that the different universities tried to entice away distinguished teachers from one another, under which circumstances Bologna is said to have sometimes devoted the half of its public income (20,000 ducats) to the university. The appointments were as a rule made only for a certain time, sometimes for only half a year, so that the teachers were forced to lead a wandering life, like actors. Appointments for life were, however, not unknown. . . . Of the chairs which have been mentioned, that of rhetoric was especially sought by the humanist; yet it depended only on his familiarity with the matter of ancient learning whether or no he could aspire to those of law, medicine, philosophy, or astronomy. The inward conditions of the science of the day were as variable as the outward conditions of the teacher. Certain jurists and physicians received by far the largest salaries of all, the former chiefly as consulting lawyers for the suits and claims of the state which employed them. . . . Personal intercourse between the teachers and the taught, public disputations, the constant use of Latin and often of Greek, the frequent changes of lecturers and the scarcity of books, gave the studies of that time a colour which we cannot represent to ourselves without effort."—J. Burckhardt, *Civilisation of the period of the Renaissance in Italy*, v. 1, pt. 3, ch. 5.

912-1257.—England.—EARLY OXFORD.—"The University of Oxford did not spring into being in any particular year, or at the bidding of any particular founder: it was not established by any formal charter of incorporation. Taking its rise in a small and obscure association of teachers and learners, it developed spontaneously into a large and important body, long before its existence was recognised by prince or by prelate. There were certainly schools at Oxford in the reign of Henry I., but the previous history of the place does not throw much light on their origin, or explain the causes of their popularity. The town seems to have grown up under the shadow of a nunnery, which is said to have been founded by St. Frideswyde as far back as the eighth century. Its authentic annals, however, begin with the year 912, when it was occupied and annexed by Edward the Elder, King of the West Saxons. . . . There can be little doubt . . . that the idea of a university, the systems of degrees and faculties, and the nomenclature of the chief academical officers, were alike imported into England from abroad . . . the University of Oxford is mentioned as such in writs and ordinances of the years 1238, 1240, and 1253. . . . The system of academical degrees dates from the second half of the twelfth century."—H. C. M. Lyte, *History of the University of Oxford*,

ch. 1.—As to the university's origin, "we know absolutely nothing. . . . Master [Robert] Puleyn began to lecture there in 1133 . . . and it is not likely that he would have chosen Oxford if Oxford had possessed no schools. [Master Puleyn came from Paris, where he had attained a high reputation as a lecturer in divinity.] In the early Oxford . . . of the twelfth and most of the thirteenth centuries, colleges with their statutes were unknown. The University was the only corporation of the learned, and she struggled into existence after hard fights with the town, the Jews, the Friars, the Papal courts. The history of the University begins with the thirteenth century. She may be said to have come into being as soon as she possessed common funds and rents, as soon as fines were assigned, or benefactions contributed to the maintenance of scholars. Now the first recorded fine is the payment of fifty-two shillings by the townsmen of Oxford as part of the compensation for the hanging of certain clerks. In the year 1214 the Papal Legate, in a letter to his 'beloved sons in Christ, the burgesses of Oxford,' bade them excuse the 'scholars studying in Oxford' half the rent of their halls, or hospitia, for the space of ten years. The burghers were also to do penance, and to feast the poorer students once a-year; but the important point is, that they had to pay that large yearly fine 'propter suspendium clericorum'—all for the hanging of the clerks. Twenty-six years after this decision of the Legate, Robert Grosseteste, the great Bishop of Lincoln, organized the payment and distribution of the fine, and founded the first of the chests, the chest of St. Frideswyde. These chests were a kind of Mont de Piété, and to found them was at first the favourite form of benefaction. Money was left in this or that chest, from which students and masters would borrow, on the security of pledges, which were generally books, cups, daggers, and so forth. Now, in this affair of 1214 we have a strange passage of history, which happily illustrates the growth of the University. The beginning of the whole affair was the quarrel [of the University] with the town, which in 1209, had hanged the two clerks, 'in contempt of clerical liberty.' [Thousands of students seceded from the university in protest.] The matter was taken up by the Legate—in those bad years of King John, the Pope's viceroy in England—and out of the humiliation of the town the University gained money, privileges, and halls at low rental. These were precisely the things that the University wanted. About these matters there was a constant strife, in which the Kings as a rule, took part with the University. . . . Thus gradually the University got the command of the police, obtained privileges which enslaved the city, and became masters where they had once been despised, starveling scholars."—A. Lang, *Oxford*, ch. 2.—As a result of the disruption of the University of Paris in 1229, Oxford gained many students. In 1238 a quarrel between the university scholars and the papal legate drew English sympathy to the university. University College founded on a bequest made in 1249 by William, Archdeacon of Durham, has some claims to be called the oldest college in Oxford. The first house established on this bequest was founded in 1253. The first statute, however, was not issued until 1280. Merton, which marks the new era of the college system in the University, was opened in 1264 on a benefaction made by Walter de Merton, who "founded a house for scholars at Oxford," and the college was regularly constituted in 1270. "There is no question, that during this Middle

Age the English Universities were distinguished far more than ever afterwards by energy and variety of intellect. Later times cannot produce a concentration of men eminent in all the learning and science of the age, such as Oxford and Cambridge then poured forth, mightily influencing the intellectual development of all Western Christendom. . . . In consequence of this surpassing celebrity, Oxford became the focus of a prodigious congregation of students, to which nothing afterwards bore comparison. . . . A tolerably well authenticated account fixes [the number of] those of Oxford at thirty thousand, in the middle of the thirteenth century. The want indeed of contemporary evidence must make us cautious of yielding absolute belief to this: in fact we have no document on this matter even as old as the Reformation. . . . That the numbers were vast, is implied by the highly respectable evidence which we have, that as many as three thousand migrated from Oxford on the riots of 1209; although the Chronicler expressly states that not all joined in the secession. In the reign of Henry III, the reduced numbers are reckoned at fifteen thousand. After the middle of the fourteenth century, they were still as many as from three to four thousand; and after the Reformation they mount again to five thousand. . . . While in the general, there was a substantial identity between the scholastic learning of Oxford and of Paris, yet Oxford was more eager in following positive science;—and this, although such studies were disparaged by the Church, and therefore by the public. Indeed originally the Church had been on the opposite side; but the speculative tendency of the times had carried her over, so that speculation and theology went hand in hand. In the middle of the thirteenth century we may name Robert Grosseteste and John Basingstock, as cultivating physical science, and (more remarkable still) the Franciscan Roger Bacon . . . [who joined the order in 1257]. A biography of Roger Bacon should surely be written! Unfortunately, we know nothing as to the influence of these men on their times, nor can we even learn whether the University itself was at all interested in their studies. . . . [We have, however], a strange testimony to the interest which in the beginning of the fourteenth century the mass of the students took in the speculation of their elders; for the street rows were carried on under the banners of Nominalists and Realists. . . . The coarse and ferocious manners prevalent in the Universities of the Middle Ages are every where in singular contrast to their intellectual pretensions: but the Universities of the Continent were peaceful, decorous, dignified,—compared with those of England. The storms which were elsewhere occasional, were at Oxford the permanent atmosphere. For nearly two centuries our 'Foster Mother' of Oxford lived in a din of uninterrupted furious warfare; nation against nation, school against school, faculty against faculty. Halls, and finally Colleges, came forward as combatants; and the University, as a whole, against the Town; or against the Bishop of Lincoln; or against the Archbishop of Canterbury."—V. A. Huber, *English universities*, v. 1, ch. 3.—See also OXFORD.

CAMBRIDGE.—"Various facts and circumstances . . . lend probability to the belief that, long before the time when we have certain evidence of the existence of Cambridge as a university, the work of instruction was there going on. The Camboritum of the Roman period, the Grantebrycgr of the Anglo-Saxon Chronicle, the Grentebryge of

Domesday, must always have been a place of some importance. . . . [Shortly after the Norman conquest], the Norman sheriff, Picot by name, founded the Church of St. Giles, and instituted in connection with it a small body of secular canons. . . . [In 1112] the canons of St. Giles, attended by a large concourse of the clergy and laity, crossed the river, and took up their abode in a new and spacious priory at Barnwell . . . [which] seems from the first to have been closely associated with the university." . . . In the year 1133 was founded the nunnery of St. Rhadegund, which, in the reign of Henry VII., was converted into Jesus College; and in 1135 a hospital of Augustinian canons, dedicated to St. John the Evangelist, was founded by Henry Frost, a burgess of the town. . . . [It was] a very important foundation, inasmuch as it not only became by conversion in the sixteenth century the College of St. John the Evangelist, but was also . . . the foundation of which Peterhouse, the earliest Cambridge college, may be said to have been in a certain sense the offshoot. . . . In the year 1229 there broke out at Paris a feud of more than ordinary gravity between the students and the citizens. Large numbers of the former migrated to the English shores; and Cambridge, from its proximity to the eastern coast, and as the centre where Prince Louis, but a few years before, had raised the royal standard, seems to have attracted the great majority. . . . The university of Cambridge, like that of Oxford, was modelled mainly on the university of Paris. Its constitution was consequently oligarchic rather than democratic, the government being entirely in the hands of the teaching body, while the bachelors and undergraduates had no share in the passing of new laws and regulations."—J. B. Mullinger, *History of the University of Cambridge*, ch. 1-2.—"The earliest existing college at Cambridge is St. Peter's, generally called Peterhouse, historically founded A. D. 1257, in the reign of Henry III. . . . [date of formal founding 1284]. All the colleges except one were founded before the reign of James I. . . . The seventeen colleges . . . are distinct corporations. Their foundations, resources, buildings, governing authorities and students, are entirely separate from each other. Nor has any one college the least control in any other. The plan, however, is much the same in all. The presiding authority is in most cases called the Master, or speaking more generally, the Head; while the net proceeds of all the college funds—for the vast wealth supposed to belong to the University really is in the hands of the separate colleges—are distributed among certain of the graduates, called Fellows, who with the Head constitute the corporation."—W. Everett, *On the Cam*, lecture 1.

1201-1679.—France.—UNIVERSITY OF PARIS.—"At Paris the universitas arose *directly out of* the Arts school, and from the first enjoyed such privileges as were possessed by the claustral or cathedral school. . . . In the Paris school, in the beginning of the eleventh century, a learned monk, William of Champeaux, taught theology. . . . Abelard could not have been more than a boy when he came to Paris to pursue his studies there. For, as early as 1102, when he was only twenty-three years of age, we find that, after having questioned the doctrines of his master, and incurred his serious displeasure by his independence of opinion, . . . he opened a school of dialectic of his own at Melun. In 1113 we find him, after many successes and reverses, teaching theology as well as dialectic, as the head of the Paris school. [See EDUCATION: Medieval: 9th-15th centuries: Scholasticism; 11th-

12th centuries: Rise of the universities.] . . . The impulse . . . [Abelard] had given to philosophic disputation remained, and Paris, under his pupils and their rivals, became the centre of a higher *specialized* school of philosophy and theology, to which students continued to flock from all parts of Europe. In this way the University of Paris, as distinguished from the Arts school, began. . . . Peter the Lombard lectured 1145-1159. The marking of the progress of studies by means of degrees seems to have begun during his regency, but this as yet in a somewhat irregular fashion. Nations existed about 1150 in some form more or less lax; but they were certainly not yet organized. . . . The numerous masters of arts, with the addition of the masters of theology and canon law, constituted the starting-point of the university as an organization. . . . And this beginning of the university in a consortium magistrorum influenced the organization of the universitas throughout its whole history. Paris, in fact, was commonly differentiated as a universitas magistrorum, although it called itself in its official documents as universitas magistrorum et scholarium, and the pope so addressed it."—S. S. Laurie, *Rise and early constitution of universities*, pp. 141, 143, 145, 152-153.—"The name of Abelard recalls the European celebrity and immense intellectual ferment of this school [of Paris] in the 12th century. But it was in the first year of the following century, the 13th, that it received a charter from Philip Augustus, and thenceforth the name of University of Paris takes the place of that of School of Paris. . . . Four nations composed the University of Paris,—the nation of France, the nation of Picardy, the nation of Normandy, and . . . the nation of England. The four nations united formed the faculty of arts. The faculty of theology was created in 1257, that of law in 1271, that of medicine in 1274. Theology, law, and medicine had each their Dean; arts had four Procurators, one for each of the four nations composing this faculty. Arts elected the rector of the University, and had possession of the University chest and archives. . . . The importance of the University in the 13th and 14th centuries was extraordinary. Men's minds were possessed with a wonderful zeal for knowledge, or what was then thought knowledge, and the University of Paris was the great fount from which this knowledge issued. The University and those depending on it made at this time, it is said, actually a third of the population of Paris; when the University went on a solemn occasion in procession to St. Denis, the head of the procession, it is said, had reached St. Denis before the end of it had left its starting place in Paris. It had immunities from taxation, it had jurisdiction of its own, and its members claimed to be exempt from that of the provost of Paris; the kings of France strongly favoured the University, and leaned to its side when the municipal and academical authorities were in conflict; if at any time the University thought itself seriously aggrieved, it had recourse to a measure which threw Paris into dismay,—it shut up its schools and suspended its lectures. In a body of this kind the discipline could not be strict, and the colleges were created to supply centres of discipline which the University in itself,—an apparatus merely of teachers and lecture-rooms,—did not provide. The 14th century is the time when, one after another, with wonderful rapidity, the French colleges appeared. Navarre, Montaignu, Harcourt, names so familiar in the school annals of France, date from the first quarter of the 14th century. The College of Navarre was

founded by the queen of Philip the Fair, in 1304; the College of Montaigu, where Erasmus, Rabelais, and Ignatius Loyola were in their time students, was founded in 1314 by two members of the family of Montaigu, one of them Archbishop of Rouen. The majority of these colleges were founded by magnates of the church, and designed to maintain a certain number of bursars, or scholars, during their university course."—M. Arnold, *Schools and universities on the continent*, ch. 1.—The University of Paris acquired the name of "the Sorbonne" "from Robert of Sorbon, aulic chaplain of St. Louis, who established one of the 63 colleges of the University [about 1257]. . . . The name of Sorbonne was first applied to the theological faculty only; but at length the whole University received this designation."—J. Alzog, *Manual of universal church history*, v. 3, p. 24, footnote.—"The above view of the rise of the University of Paris furnishes an explanation of many of its peculiarities. For example; it was because it was the centre of theological learning that it received so many privileges from the pope, and was kept in such close relation to the papal see by a continuous succession of bulls: again, it was because

the provost of the town and his subordinates with great severity, and gave fresh privileges to the university which should protect them from exercises of civic authority in the future. The popes, too, supported this view of university privilege. . . . The next most important events, after the extension of privileges by Philip Augustus in 1200, were unquestionably the disruption of 1229 and the separation of the theological faculty from that of arts; or rather, let us say, the formal institution for the first time, of a specific theological faculty, which took place in 1270. . . . The disruption to which we have above alluded, and which preceded the formal institution of the theological faculty by forty years, was caused by a town-and-gown riot, in which Queen Blanche, under the advice of the bishop and the papal legate, unfortunately opposed the university, and indeed committed herself to the infliction of unmerited castigation on certain students. The provost of Paris, proceeding to punish the students, under her direction, attacked them while at their games outside the city, and slew several who had taken no part in the previous riot. The university authorities were violently excited: they demanded satisfaction, and, this hav-

AT THE SORBONNE IN PARIS

(After painting by Otto Knille)

it remained an arts school that its students were so young. . . . At Paris, above all—the centre of theological thought and ecclesiastical jurisprudence—it was felt to be necessary to protest against . . . [the study of civil law]. Accordingly Pope Honorius III. (1216-1227) prohibited the teaching of it in Paris; and it was authoritatively taught there only after 1679. . . . In evolving itself, the rising studium generale school carried, . . . with it the privileges of the Paris arts school. How else can we explain the reference to 'ancient' privileges by Pope Alexander III. (1159)? But it also carried with it the superintendence of the Chancellor of Notre Dame. In the . . . history of the *universitas*, the question of the respective rights of the *universitas magistrorum et scholarium* and the chancellor were a matter of constant contention, until the latter were restricted to the merely formal conferring of degrees [1229]. Circumstances [rising out of a tavern quarrel and consequent friction between the university and the town authorities] led to a ratification and further extension by Philip Augustus, in 1200, of the privileges already enjoyed by the University of Paris under the edicts of Louis VII. and the Papal Letters, or simply assumed without being questioned. . . . The teachers of the university . . . indignantly sought satisfaction from the king; and he, fearing that the masters and their scholars would leave Paris in disgust, punished

ing been refused, a large number of masters and their pupils left Paris in disgust, and settled at various younger university seats which had begun to arise in France, such as Orleans and Toulouse, and even reopened independent schools at Angers, Poitiers, and Rheims. . . . It is said that not a single master of any eminence remained in Paris. . . . Those who, yielding to royal and papal pressure, ultimately returned to Paris, did so only on receiving the most solemn promises that satisfaction would be given. And as the Bishop and Chancellor of Paris had been among the chief offenders, the pope (Gregory IX.) restricted in all time coming the powers previously exercised by them over the university, but astutely made it, at the same time, more dependent on himself. . . . That Paris should have been regarded throughout the Middle Ages as the mother of universities arose mainly from its cultivation of philosophy. For philosophy was then understood in a wide sense, including the rational interpretation of the phenomena of both mind and matter. . . . [Down to the period of the Great Schism (1378), the popes showed great favor to the University of Paris and discouraged the teaching of theology in other universities. The effect of the schism was an almost complete disruption of the university, and from this time on its status was very low. The papal legate, Cardinal D'Estouteville, in 1452, gave the univer-

sity statutes, by which it continued to be governed for over a hundred years without modification by the influences of the Renaissance. In 1578 new statutes were given by Richter. The civil wars in France during the last thirty years of the sixteenth century had a disintegrating effect, and at the beginning of the seventeenth century the forty colleges of the University were completely deserted. The Edict of Blois, promulgated in 1579, had organized the twenty-one existing universities under one system, but did nothing toward the reorganization of university studies. During the seventeenth century the Jesuits gained control of both higher and lower education throughout France.]—S. S. Laurie, *Rise and early constitution of universities*, pp. 153-154, 157-158, 160-163, 166.

OTHER FRENCH UNIVERSITIES.—Of the French medieval universities aside from Paris, Montpellier was a recognized school of medicine as early as the twelfth century and was raised by Nicholas IV to the rank of *studium generale* in 1280. The University of Toulouse, first founded anywhere by a papal charter, was established in 1233, by Gregory IX, in the effort to suppress the Albigensian heresy. It was a strong center of Dominican teaching. Orleans, known as a school in the thirteenth century, was endowed with new university privileges by Clement V, in 1305, and was famous for the teaching of civil law, which was not taught at Paris. Other French universities founded in the fourteenth century were Angers (1305), Avignon (1303), Cahors (1332), and Grenoble (1339). In the fifteenth century were founded Aix in Provence (reorganized as *studium generale* in 1409), Poitiers (1431), Caen (1437), Bordeaux (1441), Valence (1452), Nantes (1463) and Bourges (1465).

1231-1339.—Nations at Paris, Bologna and other universities.—“The precise date of the organization at Paris of the four Nations which maintained themselves there until the latest days of the university escapes the most minute research. Neither for the Nations nor for the Faculties was there any sudden blossoming, but rather a slow evolution, and insensible preparation for a definite condition. Already at the close of the twelfth century there is mention in contemporary documents of the various provinces of the school of Paris. The Nations are mentioned in the bulls of Gregory IX. (1231) and of Innocent IV. (1245). In 1245, they already elect their attendants, the beadles. In 1249, the existence of the four Nations—France, Picardy, Normandy, and England—is proved by their quarrels over the election of a rector. . . . Until the definitive constitution of the Faculties, that is, until 1270 or 1280, the four Nations included the totality of students and masters. After the formation of the Faculties, the four Nations comprised only the members of the Faculty of Arts and those students of other Faculties who had not yet obtained the grade of Bachelor of Arts. The three superior Faculties, Theology, Medicine, and Law, had nothing in common thenceforward with the Nations. . . . At Bologna, as at Paris, the Nations were constituted in the early years of the thirteenth century, but under a slightly different form. There the students were grouped in two distinct associations, the Ultramontanes and the Citramontanes, the foreigners and the Italians, who formed two universities, the Transalpine and the Cisalpine, each with its chiefs, who were not styled procurators but counsellors; the first was composed of eighteen Nations and the second of seventeen. At Padua twenty-two Na-

tions were enumerated. Montpellier had only three in 1339,—the Catalans, the Burgundians, the Provençals; each sub-divided, however, into numerous groups. Orleans had ten: France, Germany, Lorraine, Burgundy, Champagne, Picardy, Normandy, Touraine, Guyanne, and Scotland; Poitiers had four: France, Aquitaine, Touraine, and Berry; Prague had four also, in imitation of Paris; Lerida had twelve, in imitation of Bologna, etc. But whether more or less numerous, and whatever their special organization, the Nations in all the universities bore witness to that need of association which is one of the characteristics of the Middle Ages. . . . One of the consequences of their organization was to prevent the blending and fusion of races, and to maintain the distinction of provinces and nationalities among the pupils of the same university.”—G. Compayré, *Abelard*, pt. 2, ch. 2.—“The oldest German universities (Prague and Vienna, the former imitated by Leipzig, and Leipzig in turn by Frankfort) adopted the dual organization into ‘faculties’ and ‘nations’ from still older models. . . . But this organization soon became obsolete. It was supplanted by the faculties, who gradually assumed the functions of administration also. The later foundations, even Heidelberg and Erfurt, simply had the division into faculties.”—F. Paulsen, *German universities and university study* (tr. by F. Thilly and W. W. Elwang), p. 17.

1240-1510.—Spain and Portugal.—“Salamanca was founded in the 13th century [about 1240], and received its statutes in the year 1422, out of which was developed the following constitution. The rector, with eight ‘consiliarii,’ all students, who could appoint their successors, administered the university. The doctors render the oath of obedience to the rector. The ‘domscholaster’ is the proper judge of the school; but he swears obedience to the rector. A bachelor of law must have studied six years, and after five years more he could become licentiate. In filling a paid teachership, the doctor was chosen next in age of those holding the diploma, unless a great majority of the scholars objected, in which case the rector and council decided. This liberal constitution for the scholars is in harmony with the code of Alphonzo X., soon after 1250, in which the liberty of instruction was made a general principle of law. This constitution continued in Salamanca into the 17th century, for Retes speaks of a disputation which the rector held at that time under his presidency. Alcala university was established by cardinal Ximenes, in 1510, for the promotion of the study of theology and philosophy, for which reason it contained a faculty of canon, but not of civil law. The center of the university was the college of St. Ildefonso, consisting of thirty-three prebendaries, who could be teachers or scholars, since for admission were required only poverty, the age of twenty, and the completion of the course of the preparatory colleges. These thirty-three members elected annually a rector and three councilors, who controlled the entire university. Salaried teachers were elected, not by the rector and council alone, but by all the students. It had wide reputation. . . . Francis I., while a prisoner of Spain, . . . was welcomed by 11,000 students. The Coimbra university, in Portugal, received statutes in 1309, from king Dionysius, with a constitution similar to those just mentioned.”—F. C. Savigny, *Universities of the Middle Ages* (*Barnard's American Journal of Education*, v. 22, p. 324).—Two centuries before the University of Alcala was officially es-

AERIAL VIEW OF OXFORD UNIVERSITY, ENGLAND

established by Cardinal Ximenes, it had been "founded by a formal charter or ordinance of Sancho the Bravo in 1293. Valladolid was first endowed, if not first established, by Ferdinand IV. in 1304, and the institution was gratified with Papal sanction by a Bull of Clement VI. in 1346. These High Schools, or *Maestrescuelas*—for the word University was not as yet applied to them—are mentioned repeatedly in the Laws of the *Siete Partidas*, which contain the first legal or public provisions for the foundation or government of the new institutions. The earliest and most celebrated of the Universities of Aragon was that established in the territory to the north of the Pyrenees, which still survives at Montpellier. Founded, it would seem, in the first instance, as a School of Medicine, and recognised by Papal authority in 1220 as an institution already respectable, it was not formally constituted a University until 1289, in the reign of Alfonso III., by Bull of Nicholas IV. From this time it continued to enjoy the special protection of the Bishop, as opposed to that of the Crown, until Montpellier ceased to be a Spanish city in 1392. . . . When Ticknor states that 'in the year 1300, although there were five Universities established in Italy, Spain possessed not one, except Salamanca, which was in a very unsettled state,' he might fairly have added that in that year, the foundations at least of no less than four other Universities had already been laid—that is to say, at Alcalá (1293), at Palma (1280), at Seville (1256), and at Valencia (1245); and that the Universities of Montpellier and of Lerida were fully established, making, together with Salamanca, not one but seven in all Spain. . . . The University [of Valencia] does not appear to have been founded until 1411; the status of *nobility* was conferred on the Doctors of Law by Alfonso V. of Aragon in 1426, and confirmed by two Bulls of Alexander VI.—the constant patron of his native Valencia—both dated in 1500, and approved by Ferdinand the Catholic, February 16, 1502. . . . A College or University at Gerona was endowed in 1446 by John II. of Aragon, and the more celebrated institution at Barcelona was recognised rather than founded by a royal grant in 1450, and confirmed by Bull of Nicholas V. in the same year. . . . with all the privileges of the University of Toulouse. The University of Saragossa stands on a somewhat similar footing, having been recognised as existing in 1474 by a Bull of Sixtus IV. . . . All these institutions, as well in Aragon as in Castile, were in their origin rather Royal than Papal, in spite of the Bulls of establishment obtained by the Spanish kings from Rome. . . . Thus the influence of the Court was paramount in the Spanish Universities at the commencement of the fifteenth century, and so remained during the long reign of John II. . . . Yet, as regards the privileges enjoyed by residents in the University towns, Ferdinand asserted the power of the Crown without hesitation or hindrance. By the year 1492 numerous abuses had crept into the Spanish Universities, and notably into the great establishment at Salamanca. . . . Ferdinand the Catholic was not a man to endure such assaults upon the supreme power, and a royal ordinance with the cuphemic name of a *Concordia* was promulgated in 1492, confirmed by Bull of Alexander VI. in 1493, and followed up by still more trenchant rescripts of Ferdinand in 1494 (Medina del Campo) and 1497 (Alcalá de Henares), by which the jurisdiction of the University Courts was grievously curtailed, and the matriculation of any but *bona-fide* stu-

dents condemned and prohibited."—U. R. Burke, *History of Spain*, v. 1, pp. 269-270, 272-275.

1258-1921.—England.—Oxford and Cambridge.—The first royal recognition of Oxford was given the university in 1258 in a charter from Henry III. "The most momentous event in the history of Oxford and Cambridge was the foundation of the Colleges, yet none saw its significance, so quietly and naturally did it come about. The youthful students lodged with the townspeople, or in hostels kept for them by the graduates. Neither plan worked satisfactorily. The students complained of the exactions of the townspeople. The townspeople retorted disagreeably of the disorderly conduct of the students and of the non-payment of their just and lawful debts. Thus began the age-long quarrel between 'town' and 'gown.' The hostels too, so it was alleged, were not always what they should have been, in that they were conducted for the benefit of the Heads rather than for that of the Students. Above all it was necessary to help the poor and struggling members of the University through their long and arduous course. Hence the idea occurred to two pious founders almost simultaneously, to Walter de Merton, at Oxford, in 1270, and to Hugh de Balsham, Bishop of Ely, at Cambridge, in 1284, to found a House for the reception of students. This was the origin of the Collegiate system. . . . [which was to overshadow the university itself]. The College system once started speedily grew in riches and importance. New Colleges were constantly being founded and received endowments from their founders, from their benefactors, and from the Royal Bounty. . . . The instruction passed into the hands of the colleges. . . . This process of the University decreasing and the Colleges increasing was helped on by the course of events."—A. I. Tillyard, *History of university reform from 1800 A.D. to the present time*, pp. 7, 10.—"The importance of . . . [the English universities] in the eyes of Europe was increased during the fourteenth century by two causes, the decline of the University of Paris, and the vigorous protest of Oxford schoolmen against the spiritual despotism of the Papacy. . . . [In the period] a compact was made between Oxford and Cambridge for their mutual protection against competition, and the dual monopoly of the two ancient Universities was henceforth established. . . . The famous riot of St. Scholastica's Day, 1354, may be regarded as the sequel of a similar fray of 1297. Both were simply violent eruptions of a deep-seated feud between the University and city of Oxford, which had been growing for several generations. . . . [In 1354] the Church took up the quarrel of the University as her own. After due inquiry an interdict was laid upon the city by the Bishop of Lincoln, and all the municipal authorities, if not all the lay inhabitants, were visited with 'the major excommunication.' At last [in 1357] the city made a complete and humble submission and accepted a penance. . . . [consisting of] the signature of a compact under which the mayor, bailiffs, and sixty leading citizens were obliged to attend mass every year in St. Mary's Church on St. Scholastica's Day, and to offer at the high altar one penny each, of which sum two-thirds was to be distributed at once by the proctors among poor scholars. . . . In the meantime, however, the mayor and burgesses had formally resigned their ancient franchises into the King's hands, and the University received a new charter or privileges and immunities as a reward for the indignities to which it had been subjected on

St. Scholastica's Day. Under this charter [1354], the Chancellor of the University obtained the sole control over the 'assize' or bread, wine, ale, and beer; over the 'assay' of weights and measures, with jurisdiction in all cases of 'forestalling,' 're-grating,' and selling unwholesome food; over the assessment of rates and taxes, the management of the streets, and like municipal affairs. He was also empowered to expel all disorderly students, and the provision for the forfeiture of their arms shows how generally arms were carried in those turbulent days. Moreover, though he was not as yet permitted to rescue and sit in judgment on

permanent results of the [reform] movement which he initiated. . . . During the reign of Henry VII. . . . [both Oxford and Cambridge were] strongly agitated by the struggle between the old scholastic philosophy and the new learning of the Renaissance. . . . It was from Italy that England caught the new impulse, and that Oxford imported numerous MSS. of classical authors, while printing was still almost a fine art. . . . Writing in 1497, Erasmus, who is sometimes described as the father of classical studies in England, speaks of a 'rich harvest of classical literature' as already flourishing at Oxford on every side, and declares that

AERIAL VIEW OF CAMBRIDGE UNIVERSITY, ENGLAND

scholars accused of treason, murder, or 'mayhem,' this privilege was afterwards conceded by letters patent of 1407; but it was provided that academical prisoners should be tried before a mixed jury of gownsmen and townspeople. . . . [The influence of the two great mendicant orders of friars, which had become prominent at Oxford from the thirteenth century on, was the occasion of much controversy during this period.] In 1365 the Pope entered the lists against the University on behalf of the friars, and directed the Archbishop of Canterbury and bishops to insist upon the Chancellor's procuring the repeal of . . . [certain] obnoxious statutes [directed against them]. . . . One main source of [John] Wyclif's popularity in the University was his unsparing denunciation of the Mendicants, and their decline was among the most

he could well nigh forget Italy in the society of Colet, Crocyn, Lynacre, and More. . . . [Erasmus also spent some time at Cambridge where he did most of the work in his new Latin edition of the New Testament, with the result that Cambridge became a center of Reformation doctrine.] The first endowed lectureship of the Greek language at Oxford was instituted by Richard Fox, Bishop of Winchester, in 1516, as part of his new foundation of Corpus Christi College. . . . That movement had already provoked a strange outbreak of academical barbarism in the University of Oxford. The faction of 'Trojans,' as they called themselves, from their enmity to Greek letters, seems to have been partly animated by a popular aversion to change, and partly by a far-sighted appreciation of the anti-Catholic tendencies in-

herent in the Renaissance. . . . [But] in the early part of Henry VIII's reign, . . . the classics had won powerful friends at Court, and the 'Greeks' were protected by a peremptory Royal order, issued in 1519. . . . [The Royal injunctions of 1535 at Cambridge representing the plans and theories of Thomas Cromwell, mark the end of the old scholastic methods of study at both universities. Trinity College, Cambridge, founded in 1547, was the earliest institution of its kind in England free from Roman Catholic tradition.] At the beginning of Edward VI's reign [1547, the universities were] . . . far less prosperous than [they] had been under Wolsey. The number of degrees continued to fall off, and the number of halls to dwindle, as religious controversy usurped the place of education, and the University was used as an instrument to advance the political or ecclesiastical aims of the Sovereign. . . . The 'Edwardine' code, as it was afterwards called, was of course so framed as to eliminate everything which favoured Popery from the constitution of the University. . . . The amount of destruction wrought . . . [at Oxford by order of the visitors appointed at this time] among the libraries and chapels of colleges cannot now be estimated, but it was certainly enormous, and 'cart-loads' of classical and scientific manuscripts were consigned to the flames, together with many an illuminated masterpiece of scholastic literature. At the same time, while the study of canon law was virtually suppressed, that of civil law, ancient philosophy, Hebrew, mathematics, logic, rhetoric, and medicine was expressly encouraged by the Visitors. . . . The accession of Mary, in 1553, ushered in a short-lived reaction. . . . Oxford became the scene of those Protestant martyrdoms which have left an indelible impression of horror and sympathy in the English mind. Several victims of Catholic intolerance had already perished at the stake, when Crammer, Ridley, and Latimer were brought to Oxford for the purpose of undergoing the solemn force of an academical trial, and thus implicating the University in the guilt of their intended condemnation. . . . The judicial sentence soon followed, and on October 15, 1555, Ridley and Latimer were led out to be burned in Canditch, opposite Balliol College."—G. C. Brodric, *History of the University of Oxford*, pp. 33-35, 40, 43, 46-47, 49-55, 70-73, 80, 81, 83, 84.—See also EDUCATION: Modern: 14th-16th centuries: England.—"After the Reformation . . . Queen Elizabeth and her advisers had come to the conclusion that the University as a single and unified body was more dangerous than the several Colleges in their individual capacity were likely to be. They therefore decided to favour the component parts at the expense of the corporate whole. Elizabeth's second Code [1570] effected what was practically a revolution. . . . Under James the First both the Universities were more effectively closed against all who were not members of the Church of England. . . . It was Laud who, in the reign of Charles I., by his Code, known as the Laudian or Caroline Statutes (which were practically a confirmation of those of Elizabeth), put the final impress of character on Oxford. He attempted the visitation of Cambridge, but the Puritans [who had gained control there] rose in arms against him and he was compelled to retire. At Oxford he worked his will to the full [with extreme decentralization as the result]. . . . Oxford and Cambridge have undergone great vicissitudes of fortune, as they have been affected by pestilence, civil war, and revolution either in Church or State. The Reformation was a temporary disaster. . . . The Restoration

brought peace, but it can hardly be said to have brought prosperity. A period of lethargy set in during which Oxford fell to almost incredible depths. The old examination system had become obsolete, and nothing had been put in its place. . . . Oxford in fact gave its Degrees without any examination to all who had paid their fees and kept the required number of terms. Cambridge was saved from falling quite so low by the influence of Sir Isaac Newton and his successors. It required a certain amount of mathematics before granting a degree. . . . [After the Restoration, Cambridge became the center of what was known as the Cambridge Platonist movement, in which Henry More, Cudworth and Whichcote were the leaders. Later the rise of Methodism was associated with the names of the two Wesleys and Whitefield at Oxford, and Berridge at Cambridge. The eighteenth century was in the main a period of low levels for both universities. In the early part of the nineteenth century Oxford became the center of a movement known as Tractarianism (see OXFORD, OR TRACTARIAN, MOVEMENT).] "In 1800 there was at Cambridge the same number of Colleges, 17, as there is now [written in 1913], the youngest of them, Downing, having been incorporated into the University on September 22nd of the same year. The list of Colleges in order of foundation is St. Peter's or Peterhouse (A. D. 1284), Clare (1326), Pembroke (1347), Gonville and Caius (1348), Trinity Hall (1350), Corpus (1352), King's (1441), Queens' (1448), St. Catherine's (1473), Jesus (1496), Christ's (1505), St. John's (1511), Magdalene (1519), Trinity (1546). These 14 may be accounted pre-Reformation Colleges. The remaining are Emmanuel (1584), Sidney Sussex (1596), and Downing (1800). There was but one examination for a Degree, the Mathematical Tripos, the first list of which is for the year 1737-8. Classics had been encouraged by the institution of the Chancellor's Medals, first given by the Duke of Newcastle in 1751. Until 1871 inclusive, candidates for these medals were required to have passed the Mathematical Tripos and to have gained a place among the Senior Optimes at least. . . . At Oxford in 1800 there were 20 Colleges—Merton (founded A. D. 1270), University (1280), Exeter (1314), Oriel (1326), Balliol (1340), Queen's (1340), New (1386), Lincoln (1417), All Souls (1438), Magdalen (1457), Brasenose (1509), Corpus Christi (1516), Christ Church (1525). These may be counted as the pre-Reformation Colleges. There followed Trinity (1555), St. John's (1555), Jesus (1571), Wadham (1612), Pembroke (1624), Worcester (1714), and Hertford (1740). The last-mentioned College subsequently became extinct, but by an Act of Parliament passed in the year 1874 Magdalen Hall was re-endowed under this name as a close Church of England foundation. Keble College, another close Church of England foundation, was admitted into the University in 1871. It enjoys all the privileges of a College except as regards the status of its Head, who is not eligible for the office of Vice-Chancellor. It is also the only College at Oxford which has no Fellows, while All Souls has Fellows but no undergraduates."—A. I. Tillyard, *History of university reform from 1800 A. D. to the present time*, pp. 11, 13-18.—See also OXFORD.—Regulations passed in 1800 finally "effected a grand reform in the method of examination. Candidates were to offer themselves either for what has since been known as a 'pass,' or for Honours, and the Honour-list was to be divided into two classes, in which the names were to be arranged

in order of merit. . . . Moreover, the examiners were thenceforth to be paid by salary, and chosen by responsible officers to serve for considerable periods. . . . Material changes were introduced into this system by statutes of 1807, modified again in 1809, 1825, 1826, and 1830. The general effect of these changes was to substitute, in the main, written papers for oral questions, to establish two stated times in the year for examination, to subdivide the list of honours into three classes, to relegate mathematics to a 'School' by itself, to abrogate the examination for the M.A. degree, and to make the Greek and Latin languages, philosophy, and history, the staple of examination in what now came to be called the *Literæ Humaniores* School. . . . Such was the Oxford examination-system when it was transformed afresh in 1850, by a statute which has been amended and extended by many supplementary measures. A 'First public Examination,' popularly known as 'Moderations,' was interposed between Responsions and the final examination for the B.A. degree, thenceforth officially designated the 'Second Public Examination.' . . . The Honour School of Mathematics was retained, and two new Schools were established, the one for Natural Science, the other for Law and Modern History. This last School was afterwards divided into two schools, of Jurisprudence and of Modern History, respectively, while a sixth Honour School was added for Theology. . . . The important examination statutes of 1850 were in contemplation, but not yet in operation, when a Royal Commission was issued, on August 31, in that year, 'for the purpose of inquiring into the state, discipline, studies, and revenues' of the University and colleges. . . . This Commission . . . recommended various important reforms, of which some were effected by an Act of Parliament enacted in 1854, and the others through Ordinances framed by executive commissioners, therein appointed, for the several colleges. . . . A profound and most beneficial reform was wrought in the whole spirit and working of the University system by the Act of 1854, and the College Ordinances framed under its provisions. The Hebdomadal Board [of heads of houses] was replaced by an elective Council, on which Heads of colleges, professors, and resident Masters of Arts were equally represented. A new 'Congregation' was created, embracing all resident members of Convocation, and soon became a vigorous deliberate assembly, with the right of speaking in English. The monopoly of colleges was broken down, and an opening made for ulterior extension by the revival of private halls. The professoriate was considerably increased, reorganised, and re-endowed. . . . The number and value of scholarships was largely augmented, and many, though not all, of the restrictions upon them were abolished. . . . The relaxation of the 'classical monopoly' and the opening of scholarships was supplemented, in 1871, by a still more important reform—the complete abolition of [religious] University Tests, already reduced by the Act of 1854. . . . The Conservative Government which came into office in the spring of 1874 . . . introduced a Bill expressly designed to enrich the University at the expense of the colleges. This Bill was passed, with some amendments, in 1877. . . . In the course of the last fifty years [written in 1886], a profound though almost unseen change has gradually passed over the face of the old University. [These changes are typical of Cambridge as well as Oxford.] The introduction of representative government into the academical constitution has not only cleared away

many abuses, but has at once popularized and centralised University administration. The recognition of Unattached Students has broken down the monopoly of colleges; the abolition of close fellowships has infused new blood and new ideas into the more backward collegiate bodies; the spontaneous development of numerous clubs and associations—athletic, literary, or political—has created many new ties among under-graduates, and weakened the old exclusive spirit of college partisanship. The 'Combined Lecture System,' under which the inmates of one college may receive instruction in another, has also favoured a division of labour among tutors which is directly conducive to specialism and teaching."—G. C. Brodrick, *History of the University of Oxford*, pp. 192-194, 196, 198, 200-201, 220-221.—"The Senate of Cambridge University, England, on Dec. 8 [1920], rejected the proposal to admit women to full university membership. The vote was 904 against 712. . . . By this vote, Cambridge, which was the first English university to admit women to its courses, remains [1921], the only one to refuse them full membership. Oxford, with all its conservatism, has already let down the bars. . . . The Cambridge authorities, on Feb. 12 [1921], rejected a proposal to convert the women's institutions—Girton and Newnham Colleges—into a separate university allied with Cambridge. The vote of the university senate stood 146 to 450. A compromise movement has already been started, under which the university would be empowered to confer degrees on women, without the right to sit in the senate, while the university would retain the power of limiting the power of women students."—*New York Times Current History*, Apr., 1921, p. 69.

1348-1826.—Early German and Danish universities.—Reformation.—Effect of the Thirty Years' War.—Later foundations.—University of Copenhagen.—"While the oldest universities of France and Italy, as well as of Spain and England, date back to the thirteenth, and even as far back as the twelfth century, the oldest German institutions do not go beyond the second half of the fourteenth century. . . . Unlike the first French Italian institutions, the German universities did not originate spontaneously, but were the result of a definite scheme in which, as a rule, the civil and ecclesiastical authorities were both interested. The actual founders were the territorial governments, or perhaps the municipalities. The ruler called the school into being, supplied it with buildings and endowments, and, at the same time, granted the *universitas* certain corporate rights, such as autonomy, jurisdiction over its own members, and exemption from duties and taxes. . . . Prague and Vienna were the first foundations. The former was established in 1348 by the house of Luxemburg, the later in 1365 by the house of Hapsburg. Both were located on the eastern border of the German sphere of culture, manifestly because in that region the most extensive independent territorial jurisdictions had been built up, and probably, because Paris, with which the old ecclesiastical

schools along the Rhine, notably Cologne, already sustained intimate relations, was readily accessible to the west. Toward the end of the century the west followed with the universities of Heidelberg (1385) and Cologne (1388), and Middle Germany with Erfurt (1392), the two last named being municipal foundations. The establishment of these three universities was in part due to the disintegration of the university of Paris by the great ecclesiastical schism [1378]. Cologne had long been one of the most important seats of ecclesiastical learning. Here, in the Dominican school, Albertus Magnus and Thomas Aquinas had taught, while Duns Scotus had given instruction in that of the Minorities. Erfurt also had an organized school long before 1392, . . . which soon laid claim to the title of *studium generale*. By way of compensation for the loss of the university

teenth century. . . . During this entire time there was a bitter struggle between the old and the new. The entire traditional university instruction, especially as it prevailed in the faculties of arts and philosophy, and theology, was attacked with extreme violence by the representatives of the new poetic and literary culture. . . . The new culture triumphed all along the line. By 1520 it had taken root in all the larger universities, new curriculums everywhere admitted the new branches at first by the side of the old, into the course as well as into the examinations. . . . Classical Latin superseded the old scholastic Latin of ecclesiastical usage. . . . Greek found a place in the universities. . . . Ancient Roman and Greek authors, particularly the poets and orators, were included in the courses, essentially with a view to tempting the student to literary imitation. . . . Just as the new

HEIDELBERG UNIVERSITY, GERMANY

of Prague—lost to German culture by reason of the Hussite disorders—the dukes of Saxony founded a university in Leipzig (1409) for the numerous masters and scholars who had immigrated to that city. In 1419 the municipality of Rostock, in cooperation with the rulers, established the last university founded during this period. With two exceptions [Cologne and Erfurt] the seven universities of this first period are still in existence [1906]. . . . A second foundation period began with the rise of the humanistic movement. It witnessed the establishment of no less than nine new German universities: Greifswald (1456), Freiburg (1460), Basel (1460), Ingolstadt (1472), Treves (1472), Mainz (1477), Tübingen (1477), Wittenberg (1502) . . . and Frankfurt-on-the-Oder (1506). With the exception of Greifswald and Basel these were all government foundations. . . . The conquest of the German universities by the new culture [of the Renaissance] was accomplished during the first two decades of the six-

poetical-literary culture seemed to have won the victory over the old scholastic system, it was itself in turn overtaken by a movement of an entirely different kind and origin: the Reformation. . . . [For a time] the universities and other schools came almost to a stand-still during the storms of the second decade of this century, so that Erasmus could declare that knowledge perished wherever Lutheranism became dominant. But the final result was different. In a certain sense the alliance between the Reformation and Humanism was restored, even with Luther's assistance. But it was most thoroughly represented in Melancthon. With persistent but quiet efficiency this labor-loving man planted and fostered the humanistic studies at the German universities. . . . With the fourth decade of the century Wittenberg became the most popular of the German universities. Young men flocked to it from all the countries of Germany, yes, of Europe. . . . Long after his death . . . [Melancthon] controlled, through his method and

text-books, the instruction in the Protestant schools and universities. . . . [See also EDUCATION: Modern: 16th century: Melancthon.] [At] the close of the Peasants' War, the second stage [of the religious conflict in Germany] followed with the organization of established churches upon a Protestant basis, and for two hundred years the universities stood in closest relations with these establishments. . . . The first new Protestant foundation was the Hessian university of Marburg (1527). It was followed (1544) by Königsberg, for the secular duchy formed out of the territory of the Teutonic order, and by Jena (1556), for that portion of the old electorate of Saxony which remained in the possession of the Ernestinian line after the Albertians had obtained Wittenberg with the electoral dignity. . . . In 1576 a university with considerable equipment was established at Helmstädt for the duchy of Brunswick. . . . The two foundations of the free-cities of Altdorf and Strassburg must also be numbered among the more important universities of the seventeenth century. . . . The Catholic countries also show a large number of new foundations. The first one was Dillingen, established by the Bishop of Augsburg (1549). It was for quite a while the focus of scientific study for Catholic Germany. Würzburg, established with considerable equipment by the Prince-Bishop Julius, came next. Then, in order, Paderborn (1615), Salzburg (1623), Osnabrück (1630), Bamberg (1648), all episcopal foundations; and in the Hapsburg domains: Olmütz (1581), Graz (1586), Linz (1636), Innsbruck (1672), and Breslau (1702). . . . The chief impetus leading to these numerous foundations was the accentuation of the principle of territorial sovereignty from the ecclesiastical as well as the political point of view. The consequence was that the universities began to be *instrumenta dominationis* of the government as professional schools for its ecclesiastical and secular officials. . . . The universities of this period lacked the universality so noticeable in those of the Middle Ages. The inter-territorial, not to say international freedom of transfer from one institution to another, so characteristic of the old *studium generale* was gone. Territorial boundaries, or at least the boundaries of creed, also marked the limits of a university's field. . . . At the end the seventeenth century the German universities had sunk to the lowest level which they ever reached in the public esteem and in their influence upon the intellectual life of the German people. . . . In fact, university life at this time presents a lamentable aspect. Academic science was no longer in touch with reality and its controlling ideas; it was held fast in an obsolete system of instruction by organization and statutes, and toilsome compilation was the sole result of its activity. Added to this was the prevailing coarseness of the entire life."—F. Paulsen, *German universities and university study* (tr. by F. Thilly and W. W. Elwang), pp. 14-15, 32-36, 42.—"German studentdom took its revenge in a licence which, as of its nature local and temporary, was readily tolerated by authority, and of which in most of the German universities, even after it had been repressed, the traces were not altogether extinguished. . . . It was *pennalism* which brought German universities of the 17th century into a contempt and alienation from the intellectual and moral progress of the nation. . . . *Pennalism* (the derivation of the word is obscure) was the treatment administered to students during their first year by their seniors. . . . [It meant] a year of mingled debauchery and tribulation, under the

organized direction of . . . [the entering student's] seniors, and lucky he if he could pass on to the later stages of his university career without a load of debt, a ruined constitution, and perhaps a half-broken heart. . . . Of the German universities, that which had taken the lead in cherishing the new birth of humanistic learning was Erfurt, whose geographical position, . . . had forced it into the front of the religious conflict, and thus brought about a decay of its academical prosperity which seemed to be completed by the Thirty Years' War. . . . Gustavus Adolphus [during the period of his power in Germany] made an attempt to restore to Erfurt . . . its former academical greatness and promoted a number of reforms which shortly after his death (1634) were formulated in a new code. But the War made it impossible to carry out these attempted changes, nor was it till a generation later—in 1664—that a reorganization, under which Erfurt's prosperity revived could be carried into effect. . . . The ancient Ruperta Carolina of Heidelberg had, after a long period of fidelity to the Papal traditions of her foundation, in which she rivalled even her rather younger sister Cologne, continued to flourish both under the Lutheran Elector Otto Henry, . . . and under the Calvinist Frederick the Pius, the magnanimous prince, under whom . . . Heidelberg became the first German university to which we may ascribe an international character. [During the next few years the University of Heidelberg passed through many vicissitudes and suffered greatly from the violent struggles of Catholics and Protestants who sought to control it.]—A. W. Ward, *Effects of the Thirty Years' War (Institution of Great Britain Proceedings, v. 20, Mar. 8, 1912)*.—"Treves and Mainz, the two archiepiscopal universities, which were never of great importance, succumbed toward the end of the eighteenth century, with the ecclesiastical states to which they belonged. . . . Ingolstadt was removed, first to Landshut (1800), and then to Munich (1826); Wittenberg was combined with Halle (1817), and Frankfort-on-the-Oder with Breslau (1811)."—F. Paulsen, *German universities and university study* (tr. by F. Thilly and W. W. Elwang), p. 15.—Many universities that attained prominence in neighboring countries during this period show the influence of German models. In Denmark "the University of Copenhagen, authorized by Pope Martin V in 1419, actually founded by Christian I in 1478 with three professors only, of law, theology and medicine, first became important under Christian II. He founded a Carmelite House in Copenhagen which was to maintain a graduate in divinity who should lecture daily in the University 'and instituted other progressive measures.'"—W. E. Collins, *Scandinavian north (Cambridge modern history, v. 2, pp. 605-606)*.—See also GERMANY: 1817-1820; EDUCATION, AGRICULTURAL: Denmark.

1348-1922.—Universities in Central Europe.—Baltic states and Scandinavia.—"One of the older educational institutions in Europe is the University of Prague, chartered by Charles IV in 1348. (See above: 1348-1826.) Originally Czech, it became under the Austrian domination German in language and spirit. Constant friction between the Czechs and the Germans led in 1882 to the organization of Czech faculties parallel in rank with the older institution. After the revolution of independence the ancient university was pronounced a national institution and is known at present [written in 1922] as the Charles IV University of Prague. The German division forms a detached university.

. . . The T. G. Masaryk University at Brno [Czech], organized in 1919 after the pattern of the Czech University at Prague, opened with two faculties, law and medicine. To these were added two more faculties in 1920, those of natural science and philosophy. The Komensky University at Bratislava [Slovak] was established at the end of the year 1919 with only one faculty of medicine, to which was added about a year later the faculty of law. In all the higher institutions [in Czecho-Slovakia] there were registered on December 31, 1920, 28,155 students, 25,655 (91.1 per cent) men and 2,500 (8.9 per cent) women."—T. Bach, *Education in Czechoslovakia (United States Department of the Interior, Bureau of Education, Bulletin no. 30, 1922, pp. 25-26)*.—"Poland has a number of higher institutions of learning. These are the older universities of Cracow [founded 1384], Warsaw [1816], and Lemberg (Lwow) [1661], and the newly constituted universities at Lublin [1919], Posen (Poznan) [founded 1612, reestablished 1910], and Wilno [founded 1592, reestablished, 1919]. . . . The universities are State institutions, with the exception of the Lublin University, which is a Catholic institution under the auspices of the Polish Episcopate. . . . In addition to the institutions mentioned in the foregoing, the Free Polish University, founded in 1905, under the name of the Association of Scientific Courses, is worth noting. Its aim is to offer higher education to wider circles of society and to facilitate scientific investigations to persons with proper educational preparation."—T. Bach, *Education in Poland (United States Department of the Interior, Bureau of Education, Bulletin no. 41, 1922, pp. 19-20)*.—See also EDUCATION, AGRICULTURAL: Poland.—Switzerland had in 1922, seven universities organized on the German model—Basel (founded as an academy in 1460), Zurich (1832), Bern (1832), Geneva (1559 as an academy, 1873 as a university), Lausanne (1537, as an academy, 1890 as a university), Fribourg (1889) and Neuchâtel (1866 and 1909). Austria had three universities maintained by the state—Vienna (1364), Graz (1586) and Innsbruck. Hungary had four universities, also state-maintained institutions—the University of Budapest (about 1475), Kolozsvár (1872, for many years the chief Magyar center) and Pozsony and Debreczen (founded in 1912). In the Serb, Croat and Slovene state there are three universities—at Belgrade (1838), at Zagrab or Agram (1776, reopened 1874) and at Ljubliana (1920). Most of these universities are similar to those in Germany.—See also EDUCATION, AGRICULTURAL: Austria; Hungary.—In Greece there are the National University of Athens (1836) and the Capodistria University of Athens; in Bulgaria the University of Sofia (1888); in Rumania the universities of Bucharest (1864), Iasi or Jassy (1860), Cluj in Transylvania (1919) and Cernauti or Czeronowitz (1920). In the newly independent Baltic states, the Riga Polytechnic was in 1919 raised to be the Latvian University; Dorpat University, founded in 1632, was reopened in 1919 by the Estonian government and the University of Kovno was opened in 1922 as the center of higher education in Lithuania. Sweden had in 1922 two universities—at Upsala (1477) and Lund (1668); Norway a single university at Christiania founded (1811); Denmark, the University of Copenhagen (see above: 1348-1826); Finland three universities, at Helsinki (1640 and 1827), at Turku (Swedish, opened 1919) and at Turku (Finish, opened 1922); Iceland, the University of Reykjavik.—See also EDUCATION, AGRICULTURAL: Sweden; Norway.

1361-1921.—Italy after the Middle Ages.—The University of Pavia was founded in 1361 by virtue of a charter granted by the emperor Charles IV. For a time it was moved to Piacenza, but in 1412 it entered upon a brilliant period at Pavia, during which it was especially noted for civil law. The Italian universities in general replaced the study of logic by that of rhetoric and so successfully avoided much of the religious controversy which disturbed the course of other European universities during the Renaissance and Reformation periods. Few important universities were founded in Italy after medieval times, but the older universities, for the most part, existed with few noteworthy changes until the modern period of struggle for the union of Italy. "The educational system of Italy is centralized [written in 1921] under the control of the State. Professors in the Universities are state officials, who are appointed, and supervised by the government under the direction of the Ministry of Public Instruction. . . . The Universities and other institutions of higher learning have for their double purpose to train for official and professional occupations, and to maintain and develop the literary and scientific culture of the nation. . . . The requirements for the degrees, including the prescribed studies, are identical in all Universities. . . . This educational system is based on the so-called Legge Casati, a law approved by the King of Sardinia on Nov. 13, 1859, . . . modified and extended by subsequent enactments; all the provisions relating to higher education were codified in the Testa Unico delle Leggi sull' Istruzione Superiore, approved by Royal Decree on August 9, 1910. . . . The law of 1859 applied only to the Kingdom of Sardinia, which included the island of that name, Piedmont, Lombardy, Genoa, and Savoy. The Universities concerned were those of Turin, the capital of Piedmont; Genoa; Pavia, in Lombardy, joined to Piedmont earlier in the same year; and Cagliari and Sassari on the island of Sardinia. Provision was made for establishing institutions of University grade in Milan and also in Chambéry, the capital of Savoy. Within the next two years, the Kingdom of Italy was formed by the union of Central and Southern Italy, including Sicily but excluding Rome, with the regions named. Savoy, however, was annexed to France. Thus the number of Universities in the kingdom was increased by Bologna and Macerata, as well as the four 'free' Universities of Ferrara, Urbino, Camerino and Perugia, in the former States of the Church; by Parma and Modena in the former Duchies; by Pisa and Siena in Tuscany, as well as the Institute of Higher Studies established in Florence in 1860; and by Naples, Palermo, Messina, and Catania in the former Kingdom of the Two Sicilies. In 1866, Venetia, with the University of Padua, joined Italy; and in 1870, the city of Rome with its University. . . . Thus there are seventeen Royal Universities (Regie Università) in Italy, beside the four 'free' Universities. The latter are supported not by the State, but by local or provincial bodies; and they have a certain autonomy. Their courses and degrees are accepted, however, as equivalent in legal effect to those of the Royal Universities. . . . Theology, once the chief study in many of the Universities, is since 1873, excluded from them all, and is taught in Church Schools, of which the most important are in Rome."—K. McKenzie, *Opportunities for higher education in Italy (Institute of International Education, 2nd series, Bulletin no. 2, Mar. 1, 1921)*.

1411-1917.—Scotland.—"In the three most an-

cient places of study, St. Andrew's, Glasgow, and Aberdeen, the original universities . . . [were later] superseded by colleges. . . . The University of St. Andrew's was founded by Henry Wardlaw, bishop of the diocese, in 1411. The king, James I. of Scotland, the bishop, and the heads of the Augustinian priory at St. Andrew's, requested the papal sanction; and accordingly a bull was issued in 1413, by Benedict XIII. by which it was made a university, and a general study for all the faculties. It received other benefactions from the church, which were ratified by the king in 1432. . . . The bishop of the see was always chancellor of the university. . . . The University of Glasgow was established in 1450, by a bull of Pope Nicholas V. issued at the request of James II. Authority was given for the institution of a general study for all faculties, and the university was empowered to grant degrees which should be valid throughout Christendom. The members of it were endowed with 'all the liberties, immunities, and honours enjoyed by the masters, doctors, and students of the University of Bologna.' . . . In 1453 a royal charter was granted by James II. with an exemption from taxes and all civil burthens; and certain local privileges, of a similar nature, by the bishop of the diocese. The Archbishop of Glasgow was the chancellor of the university, and by his authority all its honours were to be conferred. . . . The University of Old Aberdeen was founded in 1494, according to the models of Paris and Bologna. The example of Paris seems to have been mainly followed. . . . The college was founded in 1505, and new-modelled in 1531. In its constitution it closely resembled the colleges of St. Andrew's and Glasgow, especially St. Mary's college at St. Andrew's. The relation between the college and the university is distinctly marked in the foundation charter, in which it is recommended that the permanent and higher offices of the college should be supplied from the inferior members of it, if they be qualified; if not, from members of the University of Aberdeen; and if none of them be qualified, from members of other universities. The rector and his assessors were empowered to visit the college annually. As elsewhere, however, the university has disappeared, except the incorporated and endowed college. The college is as extensive as the university; or rather, the university is limited to the extent of the college; nor is any distinction preserved, as at Glasgow. The university and college are governed by the *senatus academicus*. Marischal college in New Aberdeen, which claims to be a separate university, was founded in 1593."—H. Malden, *On the origin of universities and academical degrees*, pp. 144, 147-148, 153, 166-167.—"From the beginning the Scotch universities have been preeminently national and in recent times increasingly State institutions. . . . There has been a constant support and supervision of the universities, first by the church and then by the state. . . . The unification of the universities [including Edinburgh (see below: 1583)] with the preservation of their individual autonomy, secured by the parliamentary act of 1889, and the impulse given to modern subjects further developed by the conferences and joint boards of the universities themselves has been stimulated by the Carnegie Trust [founded in 1901]. The Trust, with its \$500,000 a year to distribute, has become an influence second only to the Government. . . . One-half of the net income . . . [was to] be applied toward the improvement and expansion of the universities of Scotland. . . . The other half of

the income was to be devoted to assisting students of Scottish birth or extraction in the payment of university class fees. . . . The Scotch universities, intertwined with the imperial treasury, with the Scottish education department and national school system, with the Trust, and touched by a cosmopolitanism due to an international attendance in medicine and applied science, and the scattering of their alumni through all lands, may well be declared by Maurice Hewlett 'fiercely modern.' [But] paradoxically . . . they are [also] medieval in that colleges never choked the strong central government of the universities, the dominance of the professoriate was never lost, the professorial class lecture was not supplanted by the collegiate tutorial instruction, and the sacred seven subjects of the trivium and quadrivium have retained their prominence almost till to-day [written in 1917]. . . . Since the royal commission (1889) not less than 22 chairs and 146 lectureships in scientific and modern subjects have been added."—G. E. MacLean, *Studies in higher education in England and Scotland (United States Department of the Interior, Bureau of Education, Bulletin, no. 16, 1917, pp. 49-50, 55)*.

ALSO IN: J. M. Bulloch, *History of the University of Aberdeen, 1495-1895*.

1425-1922.—Belgium and Holland.—"Established [in 1425] in the chief town of Brabant, which was situated in the diocese of Liège [the national university at Louvain] (*or studium generale*, as it was then described) was the product of co-operation between ducal power in the person of John IV, ecclesiastical authority, represented by the chapter of the church of Saint-Peter at Louvain, and communal authority, that is, the magistracy of the town. The duke, in conjunction with the chapter and magistracy of Louvain, solicited and secured from Pope Martin V authority to establish his foundation (1425), which at first did not contain a faculty of theology, since the pope was not prepared to deprive the University of Paris of the care of the future theologians of the Belgian provinces. . . . The University of Louvain preserved its triple character down to the time of its suppression at the end of the eighteenth century. Originally intended for the training of clerks (masters of arts), jurists, and doctors, it was authorized by Pope Eugenius IV to add a faculty of theology (1432). Alike from the ecclesiastical and from the political point of view, this institution tended to unify the Belgian provinces."—H. V. Linden, *Belgium, the making of a nation*, pp. 124-126.—After the founding of the University of Leyden in Holland (see below: 1575) came those of Franeker in 1585 and Härderwijk in 1600. These two universities continued to exist until the settlement of 1814-1815 and consequent formation of the United Kingdom of the Netherlands, at which time they were suppressed, the universities of Ghent and Liège were created, and a uniform constitution was given to both Dutch and Belgian universities. These included aside from those already mentioned, Groningen, founded in 1614, and Utrecht in 1634. After fifteen years Holland and Belgium were separated. "On 4th November, 1834, the Catholic hierarchy, led by the Belgian Primate, the Archbishop of Malines, founded in that city a new Catholic University. The three existing Universities left by the Dutch at Louvain, Ghent, and Liège—were non-Catholic, and subject to the State. . . . But this step stirred up the Liberals. . . . If the Catholics established a University at Malines, the Liberals would have one for themselves,

proudly dubbed 'Free,' at Brussels. . . . [But] it was clear . . . that Belgium could not support five Universities. In 1835 the Government therefore brought in its new measure, which became law on 27th September, 1835. It suppressed the University of Louvain, which King William had founded in 1816, and reorganised those at Ghent and Liège. Shortly after the suppression of Louvain the Catholic University was removed from Malines to that city, where it has remained ever since [written in 1909], reviving the famous traditions of Louvain in the Middle Ages as a seat of learning. The two State Universities established by this law and the two non-endowed Universities founded by the private munificence of Belgian citizens of the opposite political parties still constitute the highest form of education in the country."—D. C. Boulger, *History of Belgium*, pt. 2, pp. 277-278.—"The Dutch universities are comparatively modern in point of time, and fully modern in equipment, methods and scientific results. None of them date back to the Middle Ages, but several owe their existence to the struggle for independence in the sixteenth and seventeenth centuries. . . . There are three ordinary state universities, viz., Leiden, Utrecht, and Groningen [and] a municipal and private university . . . at Amsterdam [founded 1877]. . . . The state universities are governed by a board of curators, who propose appointments and appropriations to the government, while internal affairs are regulated by a senate, composed of the staff of professors. They have five faculties,—theology, law, science, medicine and literary, while the University of Amsterdam has besides these a department of commerce."—A. Osterheerdt, *Universities and educational institutions of the Netherlands (Open Court, Dec., 1922)*.

1526-1922.—Spain and Portugal.—The University of Santiago was founded in 1526, that of Granada in 1531 and Ovideo in 1609, and for a time there was a revival of the old scholastic studies in Spanish universities, followed by a period of Jesuit influence. After the beginning of the seventeenth century the universities declined with the political status of the country and were of little importance. Finally by an act passed in 1857 a state system of education similar to the French was established. The entire kingdom was divided into ten university districts with the rector of the university in each district as chief authority. The plan of instruction was still, in 1922, similar in all ten universities, which were located at Madrid, Barcelona, Granada, Ovideo, Salamanca, Santiago, Seville, Valencia, Valladolid and Saragossa. In Portugal, the University of Coimbra was reorganized and received new statutes in 1772, and the University of Lisbon was established in 1858. There is also a university at Oporto.

1551-1912.—Latin America.—"In less than a half century from the date of the first permanent [Spanish] settlement [in America], schools for advanced education . . . [were established] and by the end of the century there existed a chain of colleges or universities extending from Mexico and the West Indies to the southernmost colony of Argentina. . . . As regards their foundation Latin-American universities fall naturally into three groups. The first comprises the colonial establishments. . . . The date of the colonial universities may be stated approximately as follows: Mexico and Lima, 1551; Santo Domingo, 1558; Bogotá, 1572; Cordoba, 1613; Sucre, 1623; Guatemala, about 1675; Cuzco, 1692; Caracas, 1721; Santiago de Chile, 1738; Habana, 1782; Quito, 1787. . . . It is needless to look for individuality in these

stitutions. All owe their origin to the same influence, and their organization was essentially uniform. The church was the prime mover in their establishment, although influential laymen holding high political positions contributed notably to their foundation. The principal object of each university was to promote the cause of religion in the colonies by providing an educated clergy numerous enough to care for the spiritual welfare of the settlers and to further the work of evangelization among the natives. The central department of the institution was the faculty of letters and philosophy, through which all students must pass on their way to the professional schools. The latter were exceedingly limited in the colonial university. There was a department of civil and canon law, but the former was overshadowed in the ecclesiastical organization of the institution, and had to await the era of national independence before coming to its own. The university usually contained a professorship of medicine, but prior to the nineteenth century it was the medicine of the medieval school men, academic and empirical. The one professional school that flourished was the faculty of theology. It was for it that the university was created, and to it led all academic avenues. Clerical in its origin and purpose, the colonial university was also clerical in its government. . . . The professors were almost exclusively members of the priesthood, and as such owed implicit obedience to the bishop, and, in addition, the election of officers and new professors required the confirmation of the prelate. . . . A second group of institutions of higher education sprang into existence in the era of national independence. After several abortive attempts extending over a period of 20 years, the University of Buenos Aires was definitely organized in 1821 by the consolidation of existing academies of law and medicine, and the erection of other faculties. In Peru the University of Trujillo was chartered in 1824, although not opened until 1831, and the University of Arequipa was founded in 1835. [See also PERU; 1901.] An institution was established at Medellin, in Colombia, in 1822. The famous Restrepo had conducted classes in philosophy there as early as 1814. . . . In Brazil the university form of organization did not find favor. Professional schools were established, each independently of the other. Schools of medicine were founded at Rio de Janeiro and Bahia in 1808, and law schools at Sao Paulo and Recife (formerly Pernambuco) in 1827. The failure to establish professional or other schools of higher learning in Brazil during the colonial epoch is perhaps due to closer and easier communication with the mother country than existed between Spain and her continental American possessions. . . . Institutions of higher education . . . founded in recent times in Latin America owe their existence to a variety of circumstances and motives. The University of Montevideo, beginning with a law school in 1849, marks the final crystallization of Uruguayan nationality. . . . A movement looking to the establishment of a university in Uruguay was started as early as 1830, and the institution was almost a fact in 1836, when internal dissensions caused the postponement of the project. The university contained no other faculty than that of law until 1876. In this year a school of medicine was organized, and in the following decade a school of engineering. . . . Educational progress has followed material advance, and groups of professional schools have grown up in Bahia, Bello Horizonte, Sao Paulo, Recife, and Porto Alegre. . . .

The foundation of such universities as that of Santa Fé, in Argentina, in 1890; of Guayaquil and Cuenca, in Ecuador; and of Los Andes, at Mérida, in Venezuela [was] . . . due to local pride and ambition, coupled with difficulties of communication with older university centers. This latter consideration has led to the establishment of many independent faculties in Bolivia, where there are schools of law at La Paz, Cochabamba, and Potosí, and a medical faculty at La Paz, in addition to faculties of law, medicine, and theology at Sucre, the old capital. The latter in colonial times were combined, forming the old historic Universidad Mayor de Francisco Xavier, but are now independent schools. Panama has not as yet [written in 1912] established any school of university grade. . . . [The Instituto Nacional, dedicated in 1911, was not until later classed as a university. However] all the Republics of Central America possess colleges of law (in Nicaragua there are no less than three) and all except Costa Rica maintain medical schools. These institutions are of comparatively recent foundation except those of Guatemala, the old official metropolis of Central America under the colonial régime. They owe their origin to the dissolution of the Central American Confederation about the middle of the nineteenth century and the subsequent development of local nationalities. . . . There is an unmistakable tendency in Latin America to increase the number of higher educational institutions, although conditions economic and otherwise do not always warrant the new foundations. New centers of population are zealous to complete their attractiveness by adding a university to their civic advantages. Regional jealousies and local politics contribute also to strengthen the movement."—E. E. Brandon, *Latin-American universities (United States Department of the Interior, Bureau of Education, Bulletin no. 30, 1912, pp. 11-13, 15-16)*.

1575.—Holland.—Leyden University.—To commemorate the deliverance of Leyden from the Spanish siege in 1574 (see NETHERLANDS: 1573-1574), "and as a reward for the heroism of the citizens, the Prince of Orange, with the consent of the Estates of the province, founded the University of Leyden. Still, the figment of allegiance remained; the people were only fighting for their constitutional rights, and so were doing their duty to the sovereign. Hence the charter of the university ran in the name of Philip, who was credited with its foundation, as a reward to his subjects for their rebellion against his evil counsellors and servants, 'especially in consideration of the differences of religion, and the great burdens and hardships borne by the citizens of our city of Leyden during the war with such faithfulness.' Motley calls this 'ponderous irony,' but the Hollanders were able lawyers and intended to build on a legal basis. This event marks an epoch in the intellectual history of Holland and of the world. . . . The new university was opened in 1575, and from the outset took the highest rank. Speaking, a few years ago, of its famous senate chamber, Niebuhr called it 'the most memorable room of Europe in the history of learning.' The first curator was John Van der Does, who had been military commandant of the city during the siege. He was of a distinguished family, but was still more distinguished for his learning, his poetical genius, and his valor. Endowed with ample funds, the university largely owed its marked pre-eminence to the intelligent foresight and wise munificence of its curators. They sought out and obtained the most distinguished scholars of all nations, and

to this end spared neither pains nor expense. Diplomatic negotiation and even princely mediation were often called in for the acquisition of a professor. Hence it was said that it surpassed all the universities of Europe in the number of its scholars of renown. These scholars were treated with princely honors. . . . But it was not alone in scholarship and in scientific research that the University of Leyden gave an impetus to modern thought. Theological disputes were developed there at times, little tempests which threatened destruction to the institution, but they were of short duration. The right of conscience was always respected, and in the main the right of full and public discussion. . . . When it was settled that dissenters could not be educated in the English universities, they flocked to Leyden in great numbers, making that city, next to Edinburgh, their chief resort. Eleven years after the opening of the University of Leyden, the Estates of democratic Friesland, amid the din of war, founded the University of Franeker, an institution which was to become famous as the home of Arminius. . . . Both of these universities were perpetually endowed with the proceeds of the ecclesiastical property which had been confiscated during the progress of the war."—D. Campbell, *Puritan in Holland, England, and America, ch. 2, 20, 3*.

1583.—Scotland.—Edinburgh University.—"The youngest of the universities [of Scotland], Edinburgh, placed at the royal capital, in contrast to the oldest, St. Andrews, at the ecclesiastical capital, was established as the 'Town's College' in 1583 by the town council of Edinburgh, under powers granted by King James VI. Gradually in acts of the general assembly, of the town council, and of Parliament, 'The College of James VI,' which from the beginning possessed the privilege of conferring degrees, came to be styled the 'University of Edinburgh.' Remaining under the patronage and control of the town council down to 1858, it was not only intensely national but also the forerunner of the great municipal universities in England."—G. E. MacLean, *Studies in higher education in England and Scotland (United States Department of the Interior, Bureau of Education, Bulletin no. 16, 1917, p. 47)*.

ALSO IN: A. Grant, *Story of the University of Edinburgh during its first three hundred years*.

1591-1917.—Ireland.—"In March, 1591-92, Queen Elizabeth granted a charter or letters patent incorporating a college—"the Mother of an University" (unum Collegium Mater Universitatis)—under the style and title of 'The College of the Holy and Undivided Trinity, near Dublin, founded by Queen Elizabeth.' Trinity College is an anomaly in English history of a college that has exercised all the functions of a university. It is plain that the charter, in accordance with the example of Cambridge and Oxford, anticipated that other colleges would be founded, and these incorporated with Trinity College would make her the 'mother of an university.' . . . Trinity college also is a variant from Oxford and Cambridge in that it did not, like them, grow from a gathering of scholars, about masters but was deliberately planted by church and state; and has suffered from the interference of each. The purpose of the founders was not simply to spread learning but to strengthen the Established Irish (Protestant Episcopal) Church to Anglicize the Irish nation. . . . [For two centuries Roman Catholics were barred from the university, but] in 1794 a royal letter in accordance with the Roman Catholic relief act of the preceding year admitted Roman Catholics and dissenters to all privileges

of study and of graduation and to sizarships, but scholars and fellows remained under the old restrictions. . . . Dublin has been a leader in many of the features now characteristic of the new or modern universities. At an early date it enforced matriculation examination and conducted genuine examinations under its own teachers and not by external examiners. The curriculum was widened at a much earlier date than in its sister universities. It was the first university in the Kingdom to establish chairs of modern languages. It was the first in the world probably to give instruction in Irish, and it has been reintroduced into its curriculum. . . . In 1841 the university established the first school of engineering in Ireland. In 1873 the university abolished all religious tests for all offices except for teachers in divinity. . . . Reforms in the constitution of the university, moving in the direction of representative government, began in 1857. . . . A full measure of reform was made possible by letters patent of the present King in 1911. . . . The alumni have been strong enough to defeat every attempt to make Trinity a constituent college in a larger university of Dublin or of Ireland. . . . [In 1854 a short-lived Catholic university was put into operation under a brief from the pope.] The National University of Ireland is the latest organization outside South Africa of a national and federal university [written in 1917]. Retarded by the University of Dublin (Trinity College), indirectly accelerated by the Catholic University, complicated by political changes, it has been not less than 70 years in the making. The genealogy of the university may be traced from the system of national education which resulted in the creation in 1831 of the Board of Commissioners of National Education. From this scheme sprang (1845-1849) the Queen's College of Belfast, Cork, and Galway, which began in 1850 the Queen's University, which began in 1882 the Royal University of Ireland, which began in 1909 the National University of Ireland and the Queen's University of Belfast. . . . In 1850 Queen's University was incorporated to complement the three Queen's colleges. The function of the university was to examine for degrees students who had qualified by attending the colleges. . . . The continued agitations and religious difficulties surrounding Queen's University resulted in its being succeeded by the Royal University of Ireland, chartered in 1880. It was empowered to confer degrees in all faculties except theology upon the passing of its examinations. No residence in any college was required nor attendance upon any lectures except in the case of medical students. . . . The reaction against a university as a mere examining body with non-residential students, which resulted in the reconstruction of the University of London in 1900, swept into Ireland. It combined with other factors and resulted in the setting up of a royal commission (1901-3). . . . Under the Irish universities act of 1908, King Edward VII chartered the National University of Ireland, having its seat in Dublin, and the Queen's University of Belfast. He dissolved the Royal University of Ireland on October 31, 1909, and founded a new college known as the University College, Dublin, into which were received the University College (Catholic), St. Stephen's Green, and the Cecelia Street Medical School. From the same date Queen's College, Cork, and Queen's College, Galway, became University College, Cork, and University College, Galway, and they were made with the new University College, Dublin, constituent colleges of the National University. . . . The transition from the Royal Uni-

versity to the National University of Ireland was gradual. . . . Under the Irish Universities Act of 1908, the Queen's University of Belfast was established simultaneously with the National University of Ireland, but by a separate commission. It is a 'single college' university like the Scotch and new English universities, with the general plan and terminology for its organization taken from the University of London. Its predecessor was the strongest of the three Queen's colleges whose continuity it preserved even in its title."—G. E. MacLean, *Studies in higher education in Ireland and Wales* (United States Department of Interior, Bureau of Education, Bulletin no. 15, 1917, pp. 11-15, 24-25, 28, 31).—See also EDUCATION, AGRICULTURAL: Ireland.

1619-1819.—United States.—Virginia.—College of William and Mary.—"In 1610—one year before the Pilgrim Fathers came to the land named New England by Captain John Smith—Sir Edwin Sandys, president of the Virginia Company in old England, moved the grant of ten thousand acres of land for the establishment of a university at Henrico. The proposed grant, which was duly made, included one thousand acres for an Indian college; the remainder was to be 'the foundation of a seminary of learning for the English.' The very same year the bishops of England, at the suggestion of the King, raised the sum of fifteen hundred pounds for the encouragement of Indian Education. . . . Tenants were sent over to occupy the university lands, and Mr. George Thorpe, a gentleman of His Majesty's Privy Chamber, came over to be the superintendent of the university itself. This first beginning of philanthropy toward the Indians and of educational foundations for the Indians in America was suspended by reason of the Indian massacre, in the spring of 1622, when Mr. Thorpe and three hundred and forty settlers, including tenants of the university, were cut off by an insurrection of savages. . . . But the idea of a university for Virginia was not lost. . . . In 1660, the colonial Assembly of Virginia took into their own hands the project of founding educational institutions within their borders. . . . The Virginians voted 'that for the advance of learning, education of youth, supply of the ministry, and promotion of piety, there be land taken upon purchase for a college and free schoole, and that there be, with as much speede as may be convenient, housing erected thereon for entertainment of students and schollers.' . . . Some writers would have us believe that the college was actually planted as early as 1661, but this is highly improbable. Early educational enactments in Virginia were like many of those early towns—on paper only. . . . In 1691 the colonial Assembly sent the Rev. James Blair, the commissary or representative of the Bishop of London, back to England to secure a charter for the proposed college. Virginia's agent went straight to Queen Mary and explained the educational ambition of her colony in America. The Queen favored the idea of a college, and William wisely concurred. The royal pair agreed to allow two thousand pounds out of the quitrents of Virginia toward building the college. . . . The English Government concluded to give not only £2,000 in money, but also 20,000 acres of land, with a tax of one penny on every pound of tobacco exported from Maryland and Virginia, together with all fees and profits arising from the office of surveyor-general, which were to be controlled by the president and faculty of the college. . . . Even after the Revolution, one-sixth of the fees to all public surveyors continued to be paid

into the college treasury down to the year 1819, when this custom was abolished."—H. B. Adams, *College of William and Mary (United States Circular of Information, Bureau of Education, 1887, no. 1)*.—"As Harvard College represented the English traditions, William and Mary represented the Scotch. The first president, James Blair, was deeply influenced in the making of the course of study by the University of Edinburgh. . . . The charter and method of government of William and Mary were unique. It embodied the English tradition more fully and definitely than any other college. It represented government by the president and faculty; the president and faculty were constituted the Corporation. . . . It is not difficult . . . to trace a certain origin of the elective system back to the year 1779 and to the college of William and Mary. . . . In this year, a certain reorganization of William and Mary was accomplished. Jefferson . . . at the time the Governor of Virginia and a visitor of the College . . . abolished the grammar school. He also abolished the chairs of divinity and of oriental languages. He established

thousand in number, and scattered along the shores of Massachusetts Bay in sixteen hamlets, they were, nevertheless, able to engage in such an enterprise before adequate provision had been made for food, raiment, shelter, a civil government, or divine worship; at a time when soil and climate had disappointed them, and their affairs were in a most critical condition; for, not only were they called to face famine, disease, and death, but the mother country and the surrounding savage tribes were threatening them with war. . . . It was near the close of 1636, a little more than six years after the landing of the Puritans, when this first step was taken by the General Court of the Massachusetts colony. At this assembly, presided over by Sir Henry Vane, governor of the colony, the General Court agreed to give £400 (a munificent sum for the time) towards the founding of a school or college, but left the question of its location and building to be determined by the Court that was to sit in September of the following year. This, it is said, was the first assembly in which the people by their representatives ever gave their

HARVARD COLLEGE IN 1795

At the right, Massachusetts Hall, then seventy-five years old; at the left, Hollis Hall

a chair of law and politics, a chair of anatomy and medicine, a chair of modern languages. To the duties of the professor of moral philosophy he added a requirement of instruction touching the law of nature and of nations and of the fine arts, and to the duties of the professor of mathematics and of natural philosophy he added the requirement of the duty of instruction in natural history. The faculty also voted that a student on certain payment (one thousand pounds of tobacco) might be entitled to attend the instruction of any two of three professors."—C. F. Thwing, *History of higher education in America*, pp. 59, 311.—In 1906 the College of William and Mary became a state institution. Government under a board appointed by the governor of the state was inaugurated at that time.

1622.—Founding of College of the Propaganda. See PAPAcy: 1622.

1636.—United States.—Harvard College.—"The first settlers in New England, recognizing the importance of a higher education than could be given in the common schools, began at once the founding of a university. The avowed object of this university was the training of young men for the ministry. Nothing could show clearer the spirit of these early colonists. Though less than four

own money to found a place of education.' At the next Court it was decided to locate the college at 'Newtown, or 'the New Towne,' and twelve of the principal magistrates and ministers were chosen to carry out his design. A few months later, they changed the name of the town to Cambridge, not only to tell their posterity whence they came, but also, as Quincy aptly says, to indicate 'the high destiny to which they intended the institution should aspire.' Another year, however, passed before the College was organized. The impulse given to it then was due to aid which came from so unexpected a quarter that it must have seemed to the devout men of New England as a clear indication of the divine favor. The Rev. John Harvard, a Non-conformist minister, was graduated, in 1635, from the Puritan college of Emmanuel, at Cambridge, England, and came, two years later, to America and settled in Charlestown, where he immediately took a prominent part in town affairs. . . . When his health failed, he determined to bequeath one-half of his estate, probably about £800, besides his excellent library of three hundred and twenty volumes, towards the endowment of the college [which was then engrossing the thoughts of a number of his friends]. This bequest rendered possible the immediate organiza-

tion of the college, which went into operation 'on the footing of the ancient institutions of Europe,' and, out of gratitude to Harvard, the General Court voted that the new institution should bear his name."—G. G. Bush, *Harvard*, pp. 12-15.—"Six years, to the very day, after the passing of the vote founding the college, in the year of 1642, was passed an act by the General Court at Boston establishing the Overseers of Harvard College. . . . After eight years, therefore, a charter was granted by the General Court which made the college a Corporation. . . . The Corporation has the power of initiative; its field of action covers the entire field of collegiate administration, intellectual and material; but its acts are subject to revision by the Board of Overseers. Thus there was introduced into the organization of the American college the double system of control. . . . [After 1865 the board of overseers was chosen by alumni, who therefore exercise large control over the management of the university.] For almost two hundred years after the foundation of Harvard College its course of study remained, in essential elements, unchanged. . . . But beginning with the first decades of the nineteenth century the course received significant enlargement. From that time to the present the development . . . [has been] constant. [Under the leadership of President C. E. Eliot, who held office from 1869 to 1909, Harvard made many educational experiments and exerted a wide influence on the development of the American university.]"—C. F. Thwing, *History of higher education in America*, pp. 12, 300.—See also LIBRARIES: Modern: United States: University libraries.

1683-1791.—United States.—University of Pennsylvania.—"The first movement to establish an educational institution of a high grade [in Pennsylvania] was in the action of the Executive Council which proposed, November 17, 1683, 'That Care be Taken about the Learning and Instruction of Youth, to wit: A School of Arts and Sciences.' It was not until 1689, however, that the 'Public Grammar School' was set up in Philadelphia. This institution, founded upon the English idea of a 'free school,' was formally chartered in 1697 as the 'William Penn Charter School.' . . . [A half-century later] feeling the importance for some provision to supplement the education then given in the established schools, Benjamin Franklin as early as 1743 drew up a proposal for establishing an academy. . . . The Academy comprised three schools, the Latin, the English, and the mathematical, over each of which was placed a master, one of whom the rector of the institution. . . . The success of the Academy was so gratifying to all interested in it that it was determined to apply for a charter. This was granted to the trustees by Thomas and Richard Penn, the proprietors, on July 13, 1753. Desirous at the same time of enlarging the course of instruction, the trustees elected Mr. William Smith teacher of logic, rhetoric, natural and moral philosophy."—J. L. Stewart, *Historical sketch of the University of Pennsylvania (United States Bureau of Education, Circular of Information, 1892, no. 2: Benjamin Franklin and the university, ch. 4)*.—In 1755 the charter was changed to read "Trustees of the College, Academy and Charitable School" and the following year a liberal curriculum was organized. In 1779 on the grounds that a trustees' declaration of 1764 was "narrowing the foundation" the state legislature confiscated the property of the college

and bestowed it upon a new organization, the "Trustees of the University of the State of Pennsylvania." In 1789 the property was restored to the old organization and in 1791 the two were amalgamated under the present name. The site of the university was moved in 1802 and again in 1872.

1694-1906.—Later German universities.—"Two important new foundations introduced the new period [the eighteenth century]: Halle (1694) and Göttingen (1737), to which Erlangen (1743), the university of the Franconian principalities, must be added. . . . All three of these institutions are still [1906] flourishing. The first two opened the doors of the German university to modern philosophy and science, as well as to modern enlightenment and culture, and made these things a part of the life of the German people. Halle, the university of the rising Brandenburg-Prussian state, received an impress especially from three men: the jurist Christian Thomasius,—who introduced the study of jurisprudence,—the theologian A. H. Francke, and the philosopher Christian Wolff. Thomasius, a pupil of Samuel Pufendorf, the first teacher of the theory of natural rights at a German university (the first chair for the new treatment of law was established at Heidelberg in 1662), was a man of the new culture represented at the French court. He was the editor of the first monthly magazine in the German language (1688), as well as the first to use that language in the lecture room. A despiser of the scholastic philosophy and humanistic eloquence, theological orthodoxy and the old pedantic jurisprudence, he came into violent conflict with his own university of Leipzig, in which he taught as a *private docent*. He was compelled to yield and went to Halle, where he was favorably received. The circle of students which he gathered about him became the nucleus of the university founded there in 1694. The theological faculty received its impress from Francke, the chief representative of pietism, who was also excluded from orthodox Leipzig; his efforts were directed towards the devout study of the Bible and practical Christianity. . . . During the second half of the century Joh. Sal. Semler taught in the theological faculty. He was the founder of the critical-historical treatment of the sacred Scriptures. Of greatest significance, finally, was the philosopher Christian Wolff, who taught in the philosophical faculty at Halle from 1707-1723 and again from 1740-1754, and in the interim at Marburg. His banishment by Frederick William I, and his triumphant restoration by Frederick the Great mark the turn of the times. Wolff's success really indicates the end of the scholastic philosophy; its place was taken by modern philosophy, which, in the form of the Wolffian system, assumed the control of the German universities. . . . Wolff's *Vernünfftige Gedanken*, the general title of his German works, positively denies the dependence of philosophy upon theology. Basing himself upon the modern sciences of mathematics and physics, he declares that philosophy should seek the truth free from all assumptions, regardless of what may happen to the theologians. . . . During the eighteenth century the Wolffian philosophy prevailed at all the Protestant universities. . . . Halle has the honor of being the first modern university: it was the first one founded

on the principle of *libertas philosophandi*, of free research and instruction. . . . During the second half of the eighteenth century the university of Halle was confronted by a rival in Göttingen that ultimately surpassed it. At the close of the century Göttingen was looked upon as the fashionable university; here the German counts and barons of the Holy Roman Empire studied politics and law under Schlözer and Pütter. Here Mosheim taught church history and the elegancies of pulpit diction, and J. D. Michaelis oriental languages. Here labored Albrecht von Haller and his successor Blumenbach, in their day the chief representatives of the science of man, or physical anthropology; as well as the celebrated astronomer Tobias Mayer, the brilliant physicist Lichtenberg, and the able mathematician Kästner. Finally, the newly awakened study of antiquity found its first nursery at this university; the philologists, J. M. Gesner and J. G. Heyne, to whom is due the reintroduction of Greek into the university, found a new point of view for the treatment of the classical authors."—F. Paulsen, *German universities and university study* (tr. by F. Thilly and W. W. Elwang), pp. 44-47.—"Among all the losses which befell Prussia by the Peace of Tilsit [1807] none was felt more bitterly than the loss of the University of Halle, where Wolf himself had made his fame. Immediately after the blow fell, two of the Professors of Halle made their way to Memel and laid before the King a proposal to establish a High School at Berlin. This was on August 22nd, 1807. . . . On September 4th came an Order of Cabinet, in which it was declared to be one of the most important objects to compensate the loss of Halle. It was added that neither of the two Universities which remained to Prussia, those of Königsberg and Frankfurt-on-the-Oder, could be made to supply the place of Halle, Königsberg being too remote from the seat of Government and Frankfurt not sufficiently provided with means. At Berlin a University could best, and at least expense, be established. Accordingly all funds which had hitherto gone to Halle were to go for the future to Berlin, and assurances were to be given to the expelled Professors which might prevent their talents being lost to the country. . . . Humboldt sent in his Report on May 12, 1809, and on August 16th followed the Order of Cabinet assigning to the new University, along with the Academies of Science and Art, an annual donation of 150,000 thalers, and the Palace of Prince Henry as its residence. During the rest of his term of office Humboldt was occupied in negotiations with eminent men of science all over Germany, whose services he hoped to procure. He was certainly not unsuccessful. He secured Fichte for Philosophy; Schleiermacher, De Wette, and Marheineke for Theology; Savigny and Schmalz for Jurisprudence; Friedländer, Kohlrausch, Hufeland, and Reil for Medicine; Wolf, Buttman, Böckh, Heindorf, and Spalding for the Study of Antiquity; Niebuhr and Rühs for History; Tralles for Mathematics (Gauss refused the invitation). The University was opened at Michaelmas of 1810, and as the first result of it the first volume of Niebuhr's Roman History, opening so vast a field of historical speculation, was published in 1811."—J. R. Seeley, *Life and times of Stein*, v. 2, pt. 6, ch. 3.—In this same period "a large number of German universities, some of which had been languishing for a long time, finally went under about the end of the eighteenth and the beginning of the nineteenth centuries during the storms of the French revolution and the subsequent reconstruction of the Ger-

man States. Among them are some celebrated names: Erfurt, Wittenberg, and Helmstädt; and, among the Catholic institutions, Köln, Mainz, and Dillingen. Thus the political fate of states can be traced by the changes suffered by the universities. . . . Almost immediately after [the founding of the University of Berlin] . . . occurred the removal of the old *Viadrina* from Frankfort-on-the-Oder to Breslau, where it was combined with the local institution and transformed into a great new university (1811). After the treaty of peace a new university on a large scale was established for the western provinces at Bonn (1818). The kingdom of Bavaria also provided itself with a great central university at Munich (1826), in which the old territorial university of Ingolstadt, which had been removed to Landshut in 1800, continued to exist. A long line of prominent scholars from Middle and North Germany was called to Munich during the reigns of the first three Bavarian kings and did much to assist in planting the sciences in a field which had been, up to this time, controlled by the ecclesiastical orders. . . . The close of the period was marked by the revival of the old university of Strassburg by the new German Empire (1872). . . . [During this period German universities underwent a rapid development and exerted a far-reaching influence on education throughout the world]. Jena, Weimar's neighbor, was the first center of the new philosophy [of German idealism]; here Fichte, Schelling, and Hegel began their important labors as academic teachers. Then the new university of Berlin took the lead, with Fichte among its intellectual founders and its first rector, and, subsequently, with Hegel, as its foremost teacher for more than a decade. . . . At Giessen, Liebig founded, with modest equipment, his chemical laboratory, the mother-laboratory of all those great laboratories which . . . secured for Germany the leadership in the domain of chemical research and technology. Johann Müller, who taught at Berlin, was the founder of the new school of physiology. . . . The triumph of the principle of the purely scientific explanation of the phenomena of life, as opposed to the natural-philosophical speculative explanation, was the work of Müller and his school; it placed medicine upon a scientific basis. . . . The general trend of development may be summed up in a few words: from the practical-dogmatic to the theoretic-academic. First of all, the conception of the university teacher's function which had begun to obtain during the eighteenth century was consistently carried out: not the mere transmission of a definite body of accepted truths, but rather the independent acquisition and augmentation of knowledge is now the goal. Even the students are to be trained as independent thinkers, and, whenever possible, as coöperating scholars. . . . The course of study at a German university is [1906] based upon the principle of learning (*Lernfreiheit*), which is the correlate of freedom of teaching (*Lehrfreiheit*). Aside from a fixed period of study, almost everything is left to individual choice; there is no prescribed course of study, with intermediate examinations . . . each student selects the branches which he wishes to study in each semester, and attendance upon the lectures depends solely upon his own volition; the freedom of learning is so extensive that it actually includes the freedom not to learn or do anything."—F. Paulsen, *German universities and university study* (tr. by F. Thilly and W. W. Elwang), pp. 50-51, 57, 63.—See also EDUCATION, AGRICULTURAL: Germany.

1701-1717.—United States.—Yale College.—“For sixty years the only school for higher education in New England had been Harvard College, at Cambridge. The people, and especially the clergy, of Connecticut naturally desired the benefit of a similar establishment nearer home. . . . Ten ministers, nine of them being graduates of Harvard College, met at Branford [1701] and made a contribution from their libraries of about forty volumes in folio ‘for the founding of a college.’ Other donations presently came in. An Act of Incorporation was granted by the General Court. It created a body of trustees, not to be more than eleven in number nor fewer than seven, all to be clergymen and at least forty years of age. The Court endowed the College with an annual grant, subject to be discontinued at pleasure, of one hundred and twenty pounds in ‘country pay,’—equivalent to sixty pounds sterling. . . . The first president was Abraham Pierson, minister of Killingworth [and

ALSO IN: F. B. Dexter, *Sketch of the history of Yale University*.—L. S. Welch and W. Camp, *Yale, her campus, class room and athletics*.

1746-1787.—United States.—King’s College, now Columbia University.—“The establishment of a college in the city of New York was many years in agitation before the design was carried into effect. At length, under an act of Assembly passed in December, 1746, and other similar acts which followed, moneys were raised by public lottery ‘for the encouragement of learning and towards the founding a college’ within the colony. These moneys were, in November, 1751, vested in trustees. . . . The trustees, in November, 1753, invited Dr. Samuel Johnson, of Connecticut, to be president of the intended college. Dr. Johnson consequently removed to New York in the month of April following, and in July, 1754, commenced the instruction of a class of students in a room of the school-house belonging to Trinity Church;

OLD KING'S COLLEGE, 1760

the college was situated first at Killingworth, then at Milford and Saybrook and finally at New Haven, where] with money obtained by private gifts, and two hundred and fifty pounds accruing from a sale of land given by the General Assembly, a building was begun [1717], which finally cost a thousand pounds sterling. . . . The chief patronage came from Elihu Yale, a native of New Haven, but long resident in the East Indies, where he had been Governor of Fort St. George. He was . . . [then] a citizen of London, and Governor of the East India Company.”—J. G. Palfrey, *History of New England*, v. 4, bk. 4, ch. 11, bk. 5, ch. 4.—The collegiate school was named Yale College in 1718. The school of medicine was chartered in 1810, instruction was begun in the divinity school in 1822, the law school was affiliated with Yale College in 1824 and graduate courses in philosophy and arts were organized in 1846. The organization of the Yale Scientific School in 1854 and of the Sheffield Scientific School in 1869 marked the growth of scientific influence. In 1867 the name of Yale University was authorized. Yale-in-China, an affiliated Chinese college, was started in 1906.

but he would not absolutely accept the presidency until after the passing of the charter. This took place on the 31st of October in the same year, 1754; from which period the existence of the college is probably to be dated. The governors of the college, named in the charter, are the Archbishop of Canterbury and the first Lord Commissioner for Trade and Plantations, both empowered to act by proxies; the Lieutenant-governor of the province, and several other public officers; together with the rector of Trinity Church, the senior minister of the Reformed Protestant Dutch Church, the ministers of the German Lutheran Church, of the French Church, of the Presbyterian Congregation, and the President of the college, all ex officio, and twenty-four of the principal gentlemen of the city. The college was to be known by the name of King’s College. Previously to the passing of the charter, a parcel of ground to the westward of Broadway, bounded by Barclay, Church, and Murray streets and the Hudson River, had been destined by the vestry of Trinity Church as a site for the college edifice; and, accordingly, after the charter was granted, a grant of the land

was made on the 13th of May, 1755. . . . The part of the land thus granted by Trinity Church, not occupied for college purposes, was leased, and became a very valuable endowment to the college. . . . In May, 1760, the college buildings began to be occupied. In 1763 a grammar school was established. . . . On the breaking out of the Revolutionary War the business of the college was almost entirely broken up, and it was not until after the return of peace that its affairs were again regularly attended to. In May, 1784, the college, upon its own application, was erected into a university; its corporate title was changed from King's College to Columbia College, and it was placed under the control of a board termed Regents of the University . . . [with the intention of creating a state university of which it should be the basis. The plan was not successful.] The college continued under that government until April, 1787, when the Legislature of the State restored it to its original position under the . . . name of Columbia College."—*Columbia College Handbook*, pp. 5-9.—The college was extensively reorganized in 1857 and its scope considerably broadened. In this year it was moved to a site on Madison Avenue between 49th and 50th Streets, where it remained until 1897 when the site on Morningside Heights was chosen. The administration of the college had been centralized from 1890 to 1895 and in 1896 the title of Columbia University was adopted. In 1922 the university included Columbia College, the College of Physicians and Surgeons, founded 1767, the school of law, 1858, the schools of applied science including a school of mines and schools of chemistry and engineering, 1896, the school of architecture, 1881, the graduate schools of political science, 1880, philosophy, 1890, and pure science, 1892, and the school of journalism, 1912. The College of Pharmacy, Teachers College and Barnard are very closely affiliated, and the General Theological Seminary and the Union Theological Seminary have also affiliations with the university.—See also NEW YORK CITY: 1753; LIBRARIES: Modern: United States: University Libraries; EDUCATION: Modern: 19th century: United States: Training teachers; 20th century: General Education: United States: Experimental schools.

ALSO IN: *History of Columbia University by members of the faculty.*

1746-1896.—United States.—Princeton College.—In 1739 a movement . . . [had been] set on foot by the Synod of Philadelphia to establish a college in the Middle Colonies. . . . In 1746 the project . . . was again taken up [by Jonathan Dickinson, John Pierson, Ebenezer Pemberton, Aaron Burr and others who planned to found an institution 'in which ample provision should be made for the intellectual and religious culture of youth desirous to obtain a liberal education and more especially for the thorough training of such as were candidates for the holy ministry']. . . . A charter was granted to the applicants on Oct. 22, 1746. . . . The original charter not being entirely satisfactory, Governor Belcher granted a second, which passed the seal of the Province on Sept. 14, 1748. . . . After the Revolution the Charter of 1748 was confirmed and renewed by the Legislature of the State of New Jersey. . . . The first Commencement was held at Newark Nov. 9, 1748. . . . The College was completed and the students removed from Newark to Princeton in the fall of 1756."—*History of the university (Catalogue of Princeton University, 1922-1923, pp. 23-26)*.—In October, 1896, on the one hundred and fiftieth anniversary of the signing of the first charter, the

title was changed to Princeton University. In 1905, Woodrow Wilson, who had become president in 1902, introduced the preceptorial system, which was modeled somewhat on the college system of Oxford and Cambridge and was unique in American higher education.

1748-1813.—United States.—University of the State of New York.—"Soon after the close of the revolutionary war, new state systems of education began to be established. . . . The earliest and most remarkable of these was the University of the State of New York [not an ordinary university but simply a state system of education], erected in 1748 and remodeled in 1787. This institution is a notable example of the strong and increasing influence which French thought then exercised in American affairs. . . . The New York university embraced the whole provision for secondary and higher education within the state, with the exception of schools of a purely private character. [It had no teaching facilities and offered no courses.] . . . The university was placed under the control of a board of regents, consisting of the governor and the lieutenant-governor of the state, *ex officio*, together with nineteen others, elected by the state legislature. . . . In 1813 the legislature of the state established a permanent fund known as the literature fund, the income of which was to be applied wholly to the support of secondary schools. The distribution of this fund was made subject to the control of the regents of the university."—E. D. Perry, *American university* (N. M. Butler, ed., *Education in the United States*, pp. 150-151).

1754-1769.—United States.—Dartmouth College, and the "Dartmouth College case."—"Dartmouth College . . . was originally a charity school for the instruction of Indians in the Christian religion, founded by the Rev. Eleazer Wheelock, D.D., about the year 1754, at Lebanon, in Connecticut. Its success led Dr. Wheelock to solicit private subscriptions in England, for the purpose of enlarging it, and of extending its benefits to English colonists. Funds having been obtained for this purpose from various contributors, among whom the Earl of Dartmouth, Secretary for the Colonies, was a large donor, Dr. Wheelock constituted that nobleman and other persons trustees, with authority to fix the site of the College. The place selected was on the Connecticut River, at what is now the town of Hanover, in New Hampshire, where large donations of land were made by the neighboring proprietors. A charter for the college was obtained from the crown, in 1769, creating it a perpetual corporation. The charter recognized Dr. Wheelock as founder, appointed him to be the president, and empowered him to name his successor, subject to the approval of the trustees; to whom was also imparted the power of filling vacancies in their own body, and of making laws and ordinances for the government of the college, not repugnant to the laws of Great Britain or of the province, and not excluding any person on account of his religious belief. Under this charter, Dartmouth College had always existed, unquestioned and undisturbed in its rights as a corporation, down to the Revolution and subsequently until the year 1815. Whether from political or personal motives springing up outside of the board of trustees of that period, or from some collisions arising within the body itself, it appears that . . . legislative interference with the chartered rights of this college was threatened. . . . In the following year (1816), the difficulties, which had become mixed with political interests, culminated in a direct interference by the Legis-

ture. In that year an act was passed, changing the corporate name from 'The Trustees of Dartmouth College' to 'The Trustees of Dartmouth University,' enlarging the number of trustees, vesting the appointment of some of them in the political bodies of the State, and otherwise modifying the ancient rights of the corporation as they existed under its charter derived from the crown of England. A majority of the existing trustees refused to accept or to be bound by this act, and brought an action of trover in the Supreme Court of the State, in the name of the old corporation, against a gentleman, Mr. W. H. Woodward, who was in possession of the college seal and other effects, and who claimed to hold them as one of the officers of the newly-created 'university.' The argument in this case was made in the State court, for the college, by Mr. Mason and Mr. Jeremiah Smith, assisted by Mr. Webster. The decision was against the claim of the college. It was then determined to remove the cause, by writ of error, to the Supreme Court of the United States, under the provisions of the Federal Constitution and laws creating in that tribunal an appellate jurisdiction in cases which, although originating in a State court, involved the construction and operation of the Federal Constitution. This was supposed to be such a case because it was claimed by the college that the act of the Legislature, modifying its charter, impaired the obligation of a contract; an exercise of power which the Constitution of the United States prohibits to the Legislature of a State. [Daniel Webster, argued the case for the college in the United States Supreme Court.] . . . On the conclusion of the argument the Chief Justice [John Marshall] intimated that a decision was not to be expected until the next term. It was made in February, 1819, fully confirming the grounds on which Mr. Webster had placed the cause. From this decision, the principle in our constitutional jurisprudence, which regards a charter of a private corporation as a contract, and places it under the protection of the Constitution of the United States, takes its date."—G. T. Curtis, *Life of Daniel Webster*, v. 1, ch. 8.—See also COMMON LAW: 1819.—The Thayer school of engineering was founded in 1867. The Amos Tuck school of administration and finance (founded in 1900) was the first and for a long time the only commercial school in the country whose work was largely postgraduate.

ALSO IN: F. Chase, *History of Dartmouth College and the town of Hanover*.

1755-1920.—Russia.—"In 1755, the government established the University of Moscow, and . . . founded a gymnasium in connection with it. This new University had three faculties, philosophy, law and medicine, all students for the latter two studies being required first to pass through the course in philosophy. The professors were bound to deliver public as well as university lectures, but as Latin, until 1768, was the language used, the public profited little. Strict supervision was exercised by the State over the actual instruction. . . . Every incentive was given to raise the number of students at the universities. Each student, regardless of his social station by birth, was presented with a sword upon entrance to the university and received the proper 'chin', assured a good position upon entrance into the service of the State, and allowed to count the years of his study as years of service. . . . [During the first quarter of the nineteenth century] three more Universities were founded and three others projected, their constitutions being framed on German models. . . . [The University of

Charkov was founded in 1804 for New Russia and that of Kazan the same year, for countries about the Volga. St. Peterburg was founded in 1819, and Kiev in 1832. The influence of German idealism was very strong and] the university students of that period found that Hegel and Schelling formed the basis of the teachings of many of the better professors of science, history and literature. At Moscow University was a small group of men, destined to play an immense part in the intellectual development of Russia,—Belinsky, Aksakov, Bakunin, Granovsky and Herzen. . . . [Moscow University was the center of a brilliant intellectual movement known as "the Renaissance of the Forties." But the government distrusted foreign influence and] the universities . . . [had come] under new regulations, embodied in the Statute of 1835, by Uvarov. The Dekabrist Uprising had resulted in a degeneration of the universities, for many of the professors and other university officials had been implicated in the rebellion, and the temporary measures to relieve the situation, even in the sending of students to study abroad and so meet the requirements for the various chairs in the universities, had not resulted in entire success. To prevent the universities from again becoming centers of revolutionary disturbances, their autonomy was taken away and they were deprived of all control over other parts of the educational system. The most severe expression, however, of autocracy in education came after the events of 1848, when university students were required to wear a special uniform and follow certain regulations when appearing in public, courses in European public law, comparative constitutional law, social statistics, were abolished, and philosophy and psychology might be taught only by orthodox (Greek) professors of theology and strictly in accordance with the creed of the church. Professors were required to submit to the government the actual lectures which they intended to give as well as the lists for further reading on the part of students, and deans were required to report the smallest deviations from the approved copies of lectures. . . . [By the middle of the century] the universities had fallen below even the Russian standard, and in comparison with those of Western Europe they were quite evidently inferior. This condition was due to the lack of sufficient good teachers from Russian sources, the prohibition against inviting foreign instructors, the lowness of salaries, the difficulty of the examinations for the necessary higher degrees, the complexity and consequent superficiality with which the course of study was followed in the universities, the defective preparation afforded by the gymnasia in Latin and modern languages, which were necessary for adequate work in the universities, and finally the poverty of the universities and the indifference of the public of the period preceding the reforms. Vacancies in some chairs, unsatisfactory incumbents of others, disorders on the part of the students were the outward signs of this unsatisfactory condition. The reform of '63 . . . aimed at greater self-government of the universities and consequently placed the authority in the Council of the University; and a University Court, for the trial of students in connection with university order, was established, consisting of three professors. A new class of university lectures, Privat-Doctents, was created, in short to afford a supply of professors [and] salaries were raised. . . . Governing the whole scheme of reform was a new definition of the purpose of the universities, —contrasting greatly with that of the regulations

of 1804 and 1835. Where the former had considered the universities as a branch of the system for preparation for civil service in the interests of the state, the new attitude emphasized 'learning for its own sake' and strove to make the universities centers of research and scholarship. . . . The new university regulations had been in force only three years when [Count Dmitri] Tolstoy became Minister of Education, and began his determined plans once more to subject the universities to centralization and complete control. . . . [New regulations in line with Count Tolstoy's views were ultimately put into operation in 1884.] The universities had now reached the lowest limit of self-control, for at no time, not even in the period of Nicholas I, had the control been so strict, nor university freedom, of both students and officers, so circumscribed. All members of the universities now became state appointed officials, and through examining commissions and examination syllabuses control of the course of study and the right to graduate was insured to the government. Under Bogolepov, some additions to the field of the university work were made,—a new Faculty of Law at Tomsk [1888], a new faculty of Medicine at Odessa, and the establishment of the famous Oriental Institute at Vladivostok. But the serious student disorders in the universities during 1899 put an end to constructive work, and turned the attention of the government to the necessity of suppressing the organizations which had grown up among the students. [See RUSSIA: 1899; 1900-1901.] . . . As a consequence the government summoned the usual conference to consider the matter, but the only measures were additional precautions against the recurrence of the outbreak. The number of inspectors for the universities was increased to three times the former number, making about one inspector to each 50 students, and students were restricted in their choice of universities. Exactly the same outbreaks took place in 1905-06 [see RUSSIA: 1904-1905: Outline, etc.], when some little measure of freedom was obtained, only to be abruptly taken away again in 1910 under Schwarz and by his successor Kasso. [See RUSSIA: 1909-1914.] The year 1911 saw the same strikes and the same police methods. This time the government tried to solve the difficulty by a closer scrutiny of the university professors, more than a hundred of whom the very best, resigned under pressure, and their places were taken by those 'desirable politically' to the government."—D. B. Leary, *Education and autocracy in Russia* (pamphlet), pp. 36-37, 63-66, 74-76, 78-79, 87-88, 106-107.—After the Russian revolution in 1917, the entire system of Russian university education was reorganized by the Bolsheviks. The following universities, in existence before the revolution, were taken over for administration by the Peoples' Commissariat for Education—Moscow, Petrograd, Kazan, Saratov, Tomsk, Perm, Irkutsk. In addition, the universities of Dorpat and Warsaw, evacuated during the war, were reorganized in 1918 as the Voronezh and Don Universities (Dorpat was later reopened as an Esthonian institution) and in the same year another was founded at Nizhni Novgorod. In 1919, universities were set up at Yaroslav, Smolensk, Kostroma, Tambov, Astrakhan, Tashkent, Samara, Simbirsk, Orel; and in 1920 at Ekaterinburg, Ekaterinodar, and Veliki Usting. The soviet universities are said to have four faculties—medicine, law, agriculture and "workers." Sverdlov's University was founded in memory of Sverdlov who died in 1920.

1761-1921.—Modern France.—"The constitution

of the University of Paris, given by Crevier as existing in his own time (1761), had been for so long substantially the same as he gives it, that it may well be inserted here as a help to knowledge of the constitution of universities generally. The University of Paris is composed of seven companies, viz.: The Faculty of Theology, with the oldest of its secular doctors for its chief, under the name of dean. The Faculty of Law, which had been established for canon law only, but which is authorized by the Ordinance of 1679 to teach civil law also. It has its dean, who is chosen annually from its professors, following the order of seniority. The Faculty of Medicine, which has an elected dean whose office lasts two years. The Nation of France. The Nation of Picardy. The Nation of Normandy. The Nation of Germany, formerly of England. These four Nations have each their chief, who is called procurator, and is changed yearly. All these together form the Faculty of Arts; but they no less constitute four distinct communities, each of which has its vote in the general affairs of the university. The rector chosen by the Nations or their representatives, and drawn from the body of the Faculty of Arts, is chief of the whole university and chief of the Faculty of Arts especially. Three principal officers who are perpetual, viz.: The Syndic—the Secretary and Registrar—the Treasurer—all three officers of the university, and all three drawn from the Faculty of Arts."—S. S. Laurie, *Drawn and early constitution of universities*, pp. 170-171.—During the greater part of the eighteenth century the Jesuits controlled higher education in France (see EDUCATION: Modern: 16th-17th centuries: Jesuit teaching, etc.), but in 1762 the Parliament of Paris issued a decree for their banishment from the city and placed their colleges at the disposal of the universities. "The French Monarchy possessed, at the time of the Revolution, twenty-one universities. All of them were feeble, some in a state of almost complete collapse. The vigour which had animated them during the Middle Ages had gradually died away. Shut up in their traditional formalism, they had been unable or unwilling to accept the new learning; and the whole philosophic and scientific spirit of the eighteenth century had grown and borne fruit outside their walls. So it is not surprising that the Revolution, produced by this very spirit, had suppressed them or allowed them to disappear. [On Sept. 15, 1793, a decree of convention abolished the colleges and universities throughout France. In 1808 Napoleon established the University of France as a complete state system of education (see FRANCE: 1801-1809), but higher education remained in a chaotic state until the latter part of the century.] . . . The fifteen Faculties established within the French Republic . . . [were] made into Universities by an Act, dated July 10th, 1896. They are, Paris, Bordeaux, Lille, Lyon, Montpellier, Nancy, Toulouse, Aix-Marseille, Caen, Dijon, Grenoble, Poitiers, Rennes, Basançon and Clermont. Their functions in reference to learning, their relation to schools, their civil and financial organisation . . . [were] settled by six administrative Decrees, dated, three on July 21st, two on July 22nd, and one on July 31st, 1897. This Act and these Decrees mark an epoch in the history of higher education in France."—L. Liard, *French universities* (British Education Department, *Special Reports on Educational Subjects*, v. 2, p. 603).—"Three ministerial decrees (July 31, September 20, and September 21, 1920) have brought . . . [reforms in French universities] to a head. . . . The present reform [written in

1921] falls into three distinct chapters. The first contains a definition of the duties and functions of the *Faculté des Lettres* in modern French society [with a view to reinstating French degrees into their former authority and prestige]. The second prescribes several measures likely to insure the intellectual welfare of French and foreign students. The last deals with the management of French university affairs in the face of new conditions and needs. . . . Every department in a French *Faculté des Lettres*, at Paris or Strasbourg, Lyons or Toulouse, Bordeaux or Montpellier, is standing to-day wide open and freely accessible to French and foreign students alike. . . . The truth is that the French universities have been granted a new charter. They have assumed a life of their own; on July 31, 1920, they ceased to be so many identical pieces of state machinery."—J. J. Champenois, *University reform in France* (*Educational Review*, Sept., 1921, pp. 107, 109-110, 114).

1762-1769.—United States.—Brown University.—"Brown University, the oldest and best endowed institution of learning connected with the Baptist denomination, dates back for its origin to a period anterior to the American Revolution. . . . At the meeting of the Philadelphia Association, held on the 12th of October, 1862 . . . [it was voted] 'practicable and expedient to erect a College in the Colony of Rhode Island, under the chief direction of the Baptists, in which education might be promoted and superior learning obtained, free from any sectarian tests.' . . . The first commencement of the college, was held in the then new Baptist meeting-house of the town of Warren, on the 7th of September, 1769. . . . Five years previous, the General Assembly . . . had granted a charter for a 'College or University in the English Colony of Rhode Island and Providence Plantations, in New England in America.' . . . At the second annual meeting of the corporation, held in Newport, Wednesday, September 3d . . . [1765, James Manning had been] formally elected, in the language of the records, 'President of the College, Professor of Languages and other branches of learning, with full power to act in these capacities at Warren or elsewhere.'"—R. A. Guild, *First commencement of Rhode Island College* (*Rhode Island Historical Society Collections*, v. 7, pp. 269-271).—Six years after the founding of the university it was removed from Warren to Providence, and its name changed from Rhode Island College to Brown University, in honor of John Brown, of Providence, who was its most liberal benefactor.—G. W. Greene, *Short history of Rhode Island*, p. 196.—Although founded by the Baptist Church, the charter of the University "expressly forbids the use of religious tests. The corporation is divided into two Boards—the Trustees, 36 in number, of whom 22 must be Baptists, 5 Quakers, 5 Episcopalians, and 4 Congregationalists, and the Fellows, 12 in number, of whom 8, including the President, must be Baptists, and the remainder of other denominations. Twelve Trustees and 5 Fellows form a quorum. The college estate, the students, and the members of the faculty, with their families, are exempt from taxation and from serving as jurors."—S. G. Arnold, *History of the state of Rhode Island*, v. 2, ch. 18.—See also RHODE ISLAND: 1764.

1769-1884.—United States.—Sectarian institutions of learning.—A large proportion of the very great number of educational institutions in the United States which have a collegiate or a university rank, in some high or low degree, were

created and are maintained and governed by sectarian religious bodies. They are too numerous to be named; but the following may be cited as being, perhaps, the most notable in this class: under Baptist auspices, Brown University, Providence, Rhode Island, founded in 1769; Colby University, at Waterville, Maine, founded in 1820; Colgate University, at Hamilton, New York, founded in 1816; Columbian University, at Washington, founded in 1821; Rochester University, at Rochester, New York, founded in 1851. Under Congregationalist auspices: Bowdoin College, at Brunswick, Maine, founded in 1794; Iowa College, at Grinnell, Iowa, founded in 1843. Under Episcopalian auspices: Hobart College, at Geneva, New York, founded (as a college) in 1822; Kenyon College, at Gambier, Ohio, founded in 1824; Lehigh University, at South Bethlehem, Pennsylvania, founded in 1867; Trinity College, at Hartford, Connecticut, founded in 1823; University of the South, at Sewanee, Tennessee, founded in 1857. Under the Methodist auspices: Allegheny College, at Meadville, Pennsylvania, founded in 1815; Boston University, at Boston, Massachusetts, founded in 1869; De Pauw University, at Greencastle, Indiana, founded in 1837; Dickinson College, at Carlisle, Pennsylvania, founded in 1783; Northwestern University, at Evanston and Chicago, Illinois, founded in 1855; Syracuse University, at Syracuse, New York, founded in 1871; Vanderbilt University, at Nashville, Tennessee, founded in 1873; Wesleyan University, at Middletown, Connecticut, founded in 1831. Under Presbyterian auspices: Beloit College, at Beloit, Wisconsin, founded in 1843; Cumberland College, at Lebanon, Tennessee, founded in 1827; Lafayette College, at Easton, Pennsylvania, founded in 1832; Lake Forest University, at Lake Forest and Chicago, founded in 1857. Under Roman Catholic auspices: The Catholic University of America, at Washington, founded in 1884; the Georgetown University, at Washington, founded in 1815; University of Notre Dame, at Notre Dame, Indiana, founded in 1842. Under Universalist auspices: Tufts College, at Boston, founded in 1857.

1770.—United States.—Rutgers College.—"Rutgers College, located at New Brunswick [New Jersey], was chartered by George III. in 1770, and was called Queen's College, in honour of his consort. The present name was substituted by the legislature of the State, in 1825, at request of the trustees, in honour of Col. Henry Rutgers, of New York, to whom the institution is indebted for liberal pecuniary benefactions. The charter was originally granted to such Protestants as had adopted the constitution of the reformed churches in the Netherlands, as revised by the national synod of Dordrecht, in the years 1618 and 1619. . . . The Theological College of the Reformed Dutch Church [was also] . . . established here and intimately blended with the literary institution."—T. F. Gordon, *Gazetteer of the state of New Jersey* (*bound with "History of New Jersey"*), p. 86.

1790-1920.—Canada.—"The University of Toronto and McGill University, Montreal, are [written in 1911] in the front rank of educational institutions on the American continent. . . . Founded by Royal Charter in 1827 as a Church of England institution the University of Toronto has become undenominational and is substantially supported by the Provincial Legislature. . . . While certain departments of instruction are classed particularly under the University College, it has been found possible by legislative enactment to secure a more

uniform standard of higher education by the union of various denominational universities of Ontario. . . . Federated with the University of Toronto are Victoria University and the University of Trinity College, . . . Knox College (Presbyterian), Wycliffe College (Anglican) and St. Michaels College (Roman Catholic) [while thirteen other colleges, many of them professional, are affiliated with the university]. . . . McGill College and University takes the name from its founder, the Hon. James McGill. . . . A Royal Charter was obtained in 1821, but it was not until an amended charter was secured in 1852 and the Governor-General Sir Edmund Head interested himself in the institution that it started its career of progress and prosperity. . . . The supreme authority of the University . . . is vested in the Crown and is exercised by the Governor-General for the time being, by which means the University possesses a national character and is at the same time removed from any local or party influence. Educational work of the University is carried on in McGill College, the Royal Victoria College for Women and other university buildings in Montreal and in [eight affiliated colleges of which five are located outside Montreal]. . . . Another important and successful center of learning is the University of Queens College at Kingston, Ontario. Founded by Royal Charter in 1841 it has . . . attained an enviable reputation. . . . McMasters University was formed by the incorporation of the Toronto Baptist College and Woodstock College, which were united by an act of the Ontario Legislature passed in 1887. . . . [In 1888 the Baptists decided to develop McMasters University and Woodstock College as separate institutions.] Laval University at Quebec was founded in 1852, but the Seminary of which it was the outcome was established in 1663 by Bishop Laval. This, the most important Roman Catholic seat of learning in Canada has a branch at Montreal [and a number of affiliated colleges in the province of Quebec. The Montreal branch of Laval University was incorporated as the University of Montreal, in 1920. The University of Ottawa founded in 1848 as the College of Bytown and created a university in 1889 is also Roman Catholic]. . . . In the Maritime Provinces are the University of Kings College, Windsor, Nova Scotia, founded in 1790; Dalhousie College and University, Halifax, Nova Scotia [founded 1818, reorganized 1863]; the University of Acadia College, Wolfville, Nova Scotia [founded 1838, incorporated 1840]; the University of New Brunswick, Fredericton, New Brunswick founded as a college 1800, as a university 1859]; and the University of St. Josephs College, St. Josephs, New Brunswick. . . . The University of Bishops College, Lennoxville, province of Quebec, founded in 1843, is an Anglican institution. . . . The University of Manitoba at Winnipeg was incorporated in 1877 by an act of the local legislature [and has a number of affiliated colleges. Other provincial universities in western Canada are the University of Saskatchewan, at Saskatoon, founded 1907, the University of British Columbia, Vancouver, incorporated 1908, and opened in 1915, and the University of Alberta, at Edmonton, created by an act of the provincial legislature in 1906].”—W. L. Griffith, *Dominion of Canada*, pp. 295-300.—See also EDUCATION, AGRICULTURAL: Canada.

Also in: *Universities of Canada, Great Britain and the United States (Ontario Education Department)*.

1793.—United States.—Williams College.—“Williams College, at Williamstown, Berkshire

County, Mass., was chartered in 1793. The town and the college were named in honor of Col. Ephraim Williams, who had command of the forts in the Hoosac Valley, and was killed in a battle with the French and Indians, September 8, 1755. By his will he established a free school in the township which was to bear his name. The most advanced students of this free school became the first college class, numbering 4, and received the regular degree of bachelor of arts in the autumn of 1795. . . . The college was put under the care of 12 trustees, who elected . . . [Reverend Ebenezer] Fitch the first president of the college.”—E. B. Parsons, *History of higher education in Massachusetts (United States Bureau of Education, Circular of Information, 1891, no. 6, ch. 9)*.

1794.—United States.—Bowdoin College.—“An act of the Legislature of the province of Maine, approved in 1794, incorporated [Bowdoin College]. . . . Five townships of land, each six miles square, were granted to the college for its endowment and vested in the trustees, provided that fifteen families be settled in each of the said townships within a period of twelve years, and provided further that three lots containing 320 acres each be reserved, one for the first settled minister, one for the use of the ministry, and one for the support of schools within the township where it is located.”—F. W. Blackmar, *History of federal and state aid to higher education in the United States (Bureau of Education, Circular of Information, 1890, no. 1, pp. 123-124)*.—The college was named in honor of Governor James Bowdoin, of Massachusetts, whose son made valuable gifts to it.

1795.—United States.—Union College.—Union College, founded at Schenectady, in 1795, had a struggle for existence until the Rev. Dr. Eliphalet Nott was called to its presidency, 1804. By the energy and influence of Dr. Nott, state aid was obtained and funds were raised by other means, until a fairly substantial endowment was secured.—Based on C. F. Richardson and H. A. Clark, *College Book, Union College*.

1803-1825.—United States.—University of Virginia.—The establishment of the University of Virginia introduced a new and important trend into higher education in America. It traces its beginning to an act of legislature in January, 1803, for incorporating the “Trustees of Albemarle Academy.” The cornerstone of Central College was laid in 1817, and Thomas Jefferson, who was rector of its board of trustees, drew up plans for its development as the University of Virginia which were adopted by the legislature in 1818 and 1819. In 1825 seven independent schools were opened. “The University of Virginia was based on what is now known as the elective system. Its system of schools was and is an elaborate and distinct application of this system. Jefferson’s conception of the elective principle breathes the spirit of the Declaration of Independence; but this conception was reinforced by his later knowledge of educational conditions obtaining in Germany and France. . . . In an age when colleges were usually founded by and under the control of a church, Jefferson, himself a man of free notions in religion, founded a university absolutely free from sectarian or similar conditions. In a time when what is now known as the required system of studies usually prevailed, he established a university in which the elective system rules. In a new world free from architectural traditions, the buildings of his university embodied varying types of classical architecture. In a country and nation which was seeking to build itself up apart from European

models, he called into the service no less than four professors from England. Scholarly prestige, an advantage which the New England colleges had long enjoyed, he sought to transfer by the election of George Ticknor, of Harvard College, and of Nathaniel Bowditch. . . . At last, in the year 1825, was consummated the long process of the establishing of the University of Virginia. It embodied the life work of one of the greatest of Americans, and also the influence of the French nation over the higher education in America. From the time of its foundation until the present, it has represented a unique and precious influence in all America, and especially in the Southern States."—C. F. Thwing, *History of higher education in America*, pp. 316, 200.

ALSO IN: J. S. Patton, *Jefferson, Cabell and the University of Virginia*.

1804-1837.—United States.—University of Michigan.—"In 1804, when Michigan was organized as a Territory, Congress granted a township of land for a seminary of learning, and the university to be established in 1817 was to be in accordance with this grant. . . . The act establishing a university was framed. A portion of this most curious document of the early history of Michigan will be given. It is entitled 'An act to establish the Catholepistemiad or University Michigania.' 'Be it enacted by the Governor and Judges of the Territory of Michigan, That there shall be in the said Territory a catholepistemiad or university denominated the Catholepistemiad or University Michigania. The Catholepistemiad or University of Michigania shall be composed of thirteen didaxum or professorships; first, a didaxia or professorship catholepistemia, or universal science, the dictator or professor of which shall be president of the institution; second, a didaxia or professorship of anthropoglossica, or literature embracing all of the epistemum or sciences relative to language; third, a didaxia or professorship of mathematica or mathematics; four, a didaxia or professorship of physiognostica or natural history, etc.' The act thus continues through the whole range of the 'thirteen didaxum'; the remaining nine are as follows: Natural philosophy, astronomy, chemistry, medical sciences, economical sciences, ethical sciences, military sciences, historical sciences, and intellectual. The university was to be under the control of the professors and president, who were to be appointed by the Governor, while the institution was to be the center and controlling power of the educational system of the State. . . . This remarkable document was not without its influence in shaping the public school policy of Michigan, but it was many years before the State approximated its learned provisions. Impracticable as this educational plan appears for a handful of people in the woods of Michigan, it served as a foundation upon which to build. The officers and president were duly appointed, and the work of the new university began at once. At first the university appeared as a school board, to establish and maintain primary schools which they held under their charge. Then followed a course of study for classical academies, and finally, in October, 1817, an act was passed establishing a college in the city of Detroit called 'The First College of Michigania.' . . . An act was passed on the 30th of April, 1821, by the Governor and Judges establishing a university in Detroit to take the place of the catholepistemiad and to be called the 'University of Michigan.' In its charter nearly all the powers of the former institution were substantially confirmed. . . . The second corporation, known

as the 'University of Michigan,' carried on the work of education already begun from 1821 to the third organization, in 1837. . . . The boards of education kept up and transmitted the university idea to such an extent that it may be said truly and legally that there was one University of Michigan, which passed through three successive stages of development marked by the dates 1817, 1821, and 1837," at which time it was removed to Ann Arbor.—F. W. Blackmar, *Federal and state aid to higher education* (*United States Bureau of Education, Circular of Information*, 1890, no. 1, pp. 209-241).—The first class graduated in 1845. Under the leadership of the first president, Henry Philip Tappan (1852-1863), the institution adopted the progressive policy which made it the leading western university for many years. The elective system was introduced in 1878 and the seminar method about the same time.—See also MICHIGAN: 1804-1884; EDUCATION: Modern: 19th century: United States: Training teachers.

1812.—United States.—Hamilton College.—"In the constant westward movement of population, Hamilton College . . . [at Clinton, New York], sprang into being. It . . . was the successor of Hamilton-Oneida Academy. In its establishment, as in the establishment of almost every institution, appears a great personality. Samuel Kirkland was, like Wheelock of Lebanon and of Dartmouth, an educational pioneer and hero. Burning with enthusiasm to convert the Indians, he went from Princeton College, at about the age of twenty-four, to bear the gospel to the Six Nations. But this purpose broadened into a work of the higher education of all men. The College, when finally founded in 1812, bore the name not of Kirkland but of Hamilton, but into it had passed the life of the great founder."—C. F. Thwing, *History of higher education in America*, p. 206.

1818-1821.—United States.—Amherst College.—"Amherst College originated in a strong desire on the part of the people of Massachusetts to have a college near the central part of the State, where the students should be free from the temptations of a large city, where the expenses of an education should not be beyond the means of those who had but little money, and where the moral and religious influences should be of a decidedly Christian character. . . . In the year 1818 a constitution was adopted by the trustees of Amherst Academy, for the raising and management of a fund of at least \$50,000, for the classical education of indigent young men of piety and talents for the Christian ministry. . . . This charity fund may be said to be the basis of Amherst College. . . . Although the charity fund of \$50,000 had been received in 1818, it was not till 1820 that the recipient felt justified in going forward to erect buildings for a college in Amherst. . . . This first college edifice was ready for occupation and dedicated on the 18th of September, 1821. In the month of May, 1821, Rev. Zephaniah Swift Moore, D. D., was unanimously elected by the trustees of Amherst Academy president of the new institution."—T. P. Field, *History of higher education in Massachusetts* (*United States Bureau of Education, Circular of Information*, 1891, no. 6, ch. 11).—Barret Hall, erected in 1850, was the first college gymnasium in the country.

ALSO IN: W. S. Tyler, *History of Amherst College*.

1826-1922.—United States.—Western Reserve University.—“The Presbytery of Grand River . . . in 1824 . . . appointed commissioners to establish a literary and theological institution. . . . Hudson seemed to be the best location for a country college. . . . A board of trustees, composed of seven clergymen and seven laymen, was organized in 1825, and a charter secured from the State of Ohio, February 1, 1826. Subscriptions made by churches throughout the Western Reserve provided the additional funds needed to construct the first building, called ‘Middle College,’ which was completed in August, 1827. . . . Western Reserve College opened in Hudson in the autumn of 1827. . . . In 1843 a Medical School was organized in Cleveland. The college charter contained no ecclesiastical limitations, and financial necessities forced the trustees to look for a larger constituency, with the result that the denominational character of the college gradually disappeared. . . . After the Civil war . . . the city of Cleveland was close at hand and was developing into a great industrial centre, while some of its citizens were hoping to possess a university and a technical school. In view of this situation, in March, 1880, Amasa Stone of Cleveland offered the college five hundred thousand dollars upon the following conditions: that it be removed to Cleveland, that it occupy a suitable site to be given by citizens, and that its name be changed to ‘Adelbert College of Western Reserve University.’ . . . The offer was accepted, and in September, 1882, Adelbert College opened its doors on a new campus of twenty-two acres, opposite a park which had been given to the city by Jephtha H. Wade. . . . In 1884, the trustees incorporated the Western Reserve University ‘to organize, establish and maintain in said city of Cleveland a university for the promotion of learning by means of Departments of Medicine, of Philosophy, of Art, of Music, and of such other means as may be deemed advisable by the Board of Trustees of the corporation.’ A College for Women, and the professional schools of Law, Dentistry, Library Science, Pharmacy, and Applied Social Sciences have since been organized [written in 1922] and a University chair of Religious Education established.”—*Western Reserve University in the city of Cleveland, Catalogue, 1921-1922, pp. 31-32.*

1828-1922.—England.—University of London.—“The University of London is sui generis, and still in the making. Despite an attempt in the sixteenth century, London is almost the last of world capitals to found a university, and it is still [written in 1917] in the hands of a departmental committee following the royal commission. During the four-score years of its existence it has been repeatedly reconstituted and has tried manifold experiments, making it prolific of suggestions. It was the first of modern universities in the Empire, and more specifically of the new or civic universities. In its primordial germ, University College, may be traced the Scotch influence of the Universities of Edinburgh and Glasgow. . . . University College, under the title The University of London, was opened in 1828 without a charter. University College was the first to open English university education to students of all religions, races, and nationalities. At that time, naturally, a rival institution was founded in King’s College, ‘as a college in which instruction in the doctrines and duties of Christianity as taught by the Church of England should be forever combined with other branches of useful education.’ . . . The same day on which University College received its charter

[1836], a third body politic by the name of the University of London was sealed with power to examine and confer degrees on certificated students from University and King’s Colleges and other institutions. . . . Thus the university became known as the Examining Body of students from numerous and unequal schools privileged to grant certificates of attendance. The result was the charter of 1853, practically abolishing the exclusive connection of the university with the affiliated institutions and opening its degrees to all males able to pass its examination, excepting that in the case of medical degrees evidence of attendance and clinical practice at some medical institution was still required. . . . An era of expansion immediately followed. Candidates for matriculation rapidly increased. The university, which from the beginning had required English in addition to Latin and Greek for matriculation, now included English philology and literature in the examinations for degrees and honors in arts. It was the first to confer the degrees of doctor of literature. It organized for the first time in England a faculty of science, and in 1860 began to hold examinations for the degrees of bachelor and doctor in that faculty. . . . In 1878, under another supplemental charter, the university became the first academic body in the United Kingdom to admit women as candidates for degrees. Despite these changes, there was constant agitation for further reforms in the university. . . . A new royal commission reported in 1894 that there should be one, not two, universities and that teaching and external examinations could be combined without injury to the students. They decided that the problem was still that stated by the commissioners of 1888, viz., how to coordinate the recognized teaching institutions of London under a central university. After four years of further discussion in 1898 Parliament passed an act for the complete reconstitution of the university in general harmony with the recommendations of the last commission. The act was put into effect in 1900. . . . [The next step was] the incorporation of the colleges into the university. University College led the way and was transferred to the university in 1907 and King’s in 1910. At the same time the Women’s Department of King’s College, founded in 1881, was incorporated into the University as King’s College for Women. [In 1922, over seventy-five distinct bodies were more or less closely connected with the University of London.]”—G. E. MacLean, *Studies in higher education in England and Scotland (United States Department of the Interior, Bureau of Education, Bulletin no. 16, 1917).*

1829-1919.—South Africa.—The South African College, founded at Cape Town in 1829, for many years occupied the leading place in higher education in South Africa. In 1873 “an Act was passed creating a new University [the University of the Cape of Good Hope] which was to supersede the Board of Examiners and to institute various examinations leading to degrees. This University was, to a great extent, modelled after the University of London, and was to be purely an examining University, with no provision for teaching and with no connection with any teaching institution, no distinction being made between the private student and the student from any College. The University . . . continued to exist and to be in many ways the central pivot of higher education in South Africa until this year [1916].”—W. Ritchie, *University development in South Africa (Aberdeen University Review, June, 1917)*.—Legislative measures passed by the Parliament of the Union of South Africa in

1916 and "put in operation April 2, 1918, . . . [reorganized the system of university education] on the following basis: 1. The South African College became the University of Cape Town. 2. The Victoria College at Stellenbosch [founded 1874] was granted a separate charter and became the University of Stellenbosch. The six remaining colleges—those at Grahamstown, Wellington, Bloemfontein, Pretoria, Johannesburg, and Pietermaritzburg—were federated in the University of South Africa, a successor of the University of the Cape of Good Hope, with the administrative seat at Pretoria. . . . Stellenbosch specialized in agriculture, while the University of Cape Town . . . [developed] the faculties of engineering and medicine, . . . law and education."—*Education in parts of the British empire (United States Department of Education, Bulletin no. 49, 1919, p. 61)*.

1832.—United States.—Oberlin College.—"Oberlin is a development from the missionary and reform movements of the early quarter of our century. . . . The founders were themselves home missionaries in the West and among the Indians, and Oberlin . . . [was from the first] vital with the missionary spirit. . . . Oberlin was the first college in the world to admit young women to all its privileges on equal terms with young men. . . . In 1831 John J. Shipherd, under commission from the American Home Missionary Society, entered upon his work as pastor of the church at Elyria, Ohio. . . . In the summer of 1832 he was visited by Philo P. Stewart. . . . [They] concluded that the needs of the new country could best be met by establishing a community of Christian families with a Christian school, . . . the school to be conducted on the manual labor system, and to be open to both young men and young women. It was not proposed to establish a college, but simply an academy for instruction in English and useful languages, and, if Providence should favor it, in 'practical theology.' In accordance with this plan the corporate name 'Oberlin Collegiate Institute' was chosen. Not until 1851 was a new and broader charter obtained, this time under the name of 'Oberlin College.' The name 'Oberlin' was chosen to signify the hope that the members of the new enterprise might be moved by the spirit of the self-sacrificing Swiss colporteur and pastor, John Friederich Oberlin."—J. R. Commons, *Oberlin College (Bureau of Education, Circular of Information, 1891, no. 5, pp. 55-56)*.—The teachings of Charles Grandison Finney, who became professor of theology in 1835 and president, 1851-1866, became widely known under the name of "Oberlin theology." Dr. Finney emphasized perfect freedom of will as opposed to strict Calvinist doctrine.

ALSO IN: J. H. Fairchild, *Oberlin, the college and the colony*.

1832-1917.—England.—Durham.—"Durham . . . was founded in 1832, in its Durham division it is an inchoate Oxford or Cambridge, the third of the ancient universities in England, brought forth after an interval of 700 years as one born out of due time. In its Newcastle division it is an inchoate newer university, anticipating all the other new universities. One of the most interesting things is the blending of the ancient and modern in education and the extension of the principle of the federation of colleges in one city to those in another city. After a half century of experiments in various forms of affiliation, what

appears to be a final solution of the problem was accomplished by the statutes approved by King Edward VII in council in 1909 under the University of Durham parliamentary act of 1908. These statutes created two divisions of the university to be called respectively 'the Durham division' and 'the Newcastle division.' The Durham division comprises the colleges in Durham, and the Newcastle division comprises the college of medicine and Armstrong College. Thus all the colleges became integral parts of the tripartite university, each retaining its local faculties, governing boards, and property, and all under the one chancellor, vice chancellor and other university officers, and represented in and subject to the university's senate as the supreme governing and executive body of the university."—G. E. MacLean, *Studies in higher education in England and Scotland (United States Department of the Interior, Bureau of Education, Bulletin no. 16, 1917)*.

1842.—England.—First college for workingmen founded. See EDUCATION: Modern developments: 20th century: Workers' education: England.

1847.—United States.—Iowa University founded. See IOWA: 1847-1857.

1848.—United States.—University of Wisconsin.—Relations to the state.—Extension work.—"From 1838, when at the solicitation of the legislature the first grant of land for the University of Wisconsin was made by the United States Government, to 1848, when the State was admitted into the Union, pioneer conditions prevented the institution from being anything more than a hope of the future. In 1848 the sale of land began, and in 1850 [1849?] the first instruction was given. . . . In 1866, the higher and more intelligent patriotism engendered by the war caused the University to be recognized as having an important function to fulfill for the State, while a fresh impulse was given by the renewed bounty of the United States. . . . The year 1866 was a year of new birth for the University. Its finances were established on a solid foundation [under the presidency of Dr. Paul A. Chadbourn, 1867-1870]. . . . By the reorganization women were given rights to equal educational opportunities with the men."—H. B. Lathrop, *University of Wisconsin* (pamphlet), pp. 8-9, 11, 13.—The connection between the university and the state government is unusually close. "The State university properly includes all that the State is doing for the higher education of its people, and it is the glory of Wisconsin that it is interpreting this definition in the widest sense. The government of a Western State has four parts—executive, judicial, legislative, and educative. But these are not distinct, and in the development of the system the fourth is as closely connected with the other three as they are with each other. The aim of some State universities is to keep out of politics. The University of Wisconsin is in politics and feels that it belongs there, not in the sense of being a football of opposing parties or attached to the fortunes of a political boss, but as taking an active part in administrative work and in guiding the policies of the State. . . . In beauty of situation Wisconsin's only rivals are California and Cornell. Its campus circles along Lake Mendota for a mile, while from its hills there is a magnificent view of the city and the farms, woods, and lakes round about it. But the campus owed its attractiveness to nature, not to art."—E. E. Slosson, *Great American universities*, pp. 213, 237.—Wisconsin has been a pioneer in the work of university extension. "Beginning in 1907 with a direct

appropriation of \$20,000, university extension was rapidly developed in a manner and on a scale never before tried. The novelty and magnitude of the experiment and its consistency with the other undertakings for which Wisconsin was becoming famous drew increased attention to the university and the state. . . . The Extension Division quickly became one of the largest, and from the nature of its activities—necessarily one of the most elaborately organized departments of the university. It has had, since 1907-8, its separate appropriations and budget, and its annual expenditures now approximate \$300,000. This is in addition to about half that sum annually expended for similar purposes by the College of Agriculture. The association of its staff with the regular instruction of the university is almost negligible. In a certain sense, the Extension Division is not so much a department of the university as a special bureau of the state administered in close association with the university. That there is a definite advantage in this association, however, seems to be indicated by the practice in the College of Agriculture [see EDUCATION, AGRICULTURAL: United States], whose present management insists upon maintaining control of Agricultural Extension instead of permitting it to be absorbed by the general division."—J. F. A. Pyre, *Wisconsin*, pp. 358, 382.—See also EDUCATION: Modern developments: 20th century: Extension work.

Howe, *Wisconsin, an experiment in democracy*.—L. Steffens, *Sending a state to college* (*American Magazine*, Mar., 1909).—J. Corbin, *Which college for the boy?*

1850-1922.—Australia.—"The universities of Australia are British. They are British in their origin, legal; British in their conditions, political and social; British in their primary influence from civilization. The members of the teaching and research staffs bear the degrees of Oxford and Cambridge, of Edinburgh, Glasgow, and of the Midlands universities. The constituency whence students are drawn is also British. In a recent census more than 82 per cent were Australian born, and more than 13 per cent were natives of the United Kingdom. More than 95 per cent therefore represent British extraction. In such a racial and social condition flourish the six universities. Three of the six are the University of Sydney, founded in 1850, a year before the inrush of the gold seekers; the University of Melbourne, founded in 1853, in the midst of the gold excitement; and the University of Adelaide, founded in 1874. These three universities bear the name of as well as are established in the capital of each of their respective States of New South Wales, of Victoria, and of South Australia. The three remaining universities, too, are established in their respective capitals of their States, but they bear the names of the State itself. The University of Tasmania, at Hobart, was founded in 1890. The University of Queensland, situated at Brisbane, and the University of Western Australia, at Perth, were each founded in the year 1911. . . . The higher education of New Zealand is concentrated in the University of New Zealand and in its four affiliated or constituent colleges. Its history begins in the year 1869, with the establishment and endowment of a university by the Province of Otago through its Provincial Council. A year after the General Assembly of the Presbyterian Church took

upon itself to lay the foundation of another university in and for New Zealand. Until 1874, these two foundations remained as separate units. In that year the University of Otago surrendered, or at least put into abeyance, its right to confer degrees, and became affiliated with the University of New Zealand itself. It was, in this consolidation, or absorption, agreed that the university of the State should have for its chief function the conferring of degrees, and that the other institution, or institutions, should give instruction without conferring degrees. Distinct and notable additions were made at this time to the forces of the higher education. Canterbury College at Christchurch—an English ecclesiastical and educational colony—was founded in 1873. Auckland University College at the largest city, was founded in 1882, and Victoria College at the capital city of Wellington, in 1897. Thus the University of Otago, Canterbury College, the University College at Auckland, and Victoria at Wellington came to constitute, as teaching forces, the University of New Zealand. . . . Perhaps the most outstanding element in the interpretation of the history or the present condition of the University of New Zealand relates to the matter of examinations and of degrees. With certain exceptions, the examinations are external, and the degrees are granted upon the basis of such external tests."—C. F. Thwing, *Higher education in Australia and New Zealand* (*United States Department of Interior, Bureau of Education, Bulletin no. 25*, 1922, pp. 5, 15-16, 18).—See also EDUCATION: Modern developments: 20th century: General education: Australia; EDUCATION, AGRICULTURAL: Australasia.

1853.—Endowment of Washington State College. See WASHINGTON: 1880.

1854.—United States.—First university for negroes established. See EDUCATION: Modern developments: 20th century: General education: United States: Negroes.

1857-1920.—India.—"The arrival of Macaulay in India gave a fresh impetus to English education. With his support and assistance Lord William Bentinck passed the famous Resolution of March 7, 1835, by which the English language was established as the language of superior education in India. . . . Lastly came the famous Educational Despatch of 1854, which virtually accepted the system built up by Bentinck and Hardinge, and laid down rules for a system of education in the vernaculars of India, leading up to higher education in English. . . . For the promotion of higher education in English the Despatch approved of the establishment of Universities in India. 'The time had now arrived for the establishment of universities in India, which may encourage a regular and liberal course of education by conferring academical degrees as evidence of attainment in the different branches of art and science, and by adding marks of honour for those who may desire to compete for honorary distinction. The Council of Education, in the proposal to which we have alluded, took the London University as their model; and we agree with them, that the form, government, and functions of that University, (copies of whose Charters and Regulations we enclose for your reference), are the best adopted to the wants of India, and may be followed with advantage, although some variation will be necessary in points of detail.' . . . The Universities of Calcutta, Madras, and Bombay were founded accordingly by Lord Canning [1857] and the system sketched out in this famous Despatch is the system which is pursued in India to the present day

[1917].”—R. Dutt, *Economic history of India in the Victorian age (Trübner's Oriental Series)*, pp. 201-203.—“The new universities of India—those of Calcutta, Bombay, Madras, the Punjab [founded 1882], and Allahabad [1887]—were founded within the first 30 years of British rule, and until five years ago [written in 1919] were considered as meeting all demands for the country. Their constitutions are modeled largely upon those of the English universities: They are governed by a chancellor (the Viceroy or the governor of the Province), a vice chancellor, a senate diversely made up but along the lines laid down at Oxford and Cambridge, faculties and boards of studies, and finally syndicate in whom are vested extraordinary powers of appeal and review. With the enormous increase in secondary education . . . came the awakening of a need for additional universities of various kinds. [In 1902 a commission was appointed by Lord Curzon's government to inquire into conditions in the Indian universities. The result was embodied in the Universities Act of 1904, which left them examining bodies but strengthened the tie between the university and its affiliated colleges by organizing an inspection system and laying down certain definite stipulations.] The Hindu university at Benares and the university at Patna opened their doors in October, 1917; the university of Mysore, under legislative incorporation of the Province [an Indian native state], in July, 1917. The Indian university for women, a private institution, with scattered branches whose administrative center is at Poona, was founded in 1917. The constitution and aims of the first mentioned are significant. It is frankly denominational, admitting persons of all classes, castes, and creeds, but imparting religious instruction in the Hindu tenets. It is sustained by large private and popular contributions, and begins on a more independent plane than any other hitherto known. [The Central Hindu College at Benares which formed the nucleus of the Hindu University was established in 1898. In 1920 the Mahomedan Anglo-Oriental College, which had been founded in 1875, became under the Aigarh Moslem University Act a unitary residential university. It is chiefly Moslem, but is open to all without distinction.]”—*Education in parts of the British empire (United States Department of the Interior, Bureau of Education, Bulletin no. 49, 1919)*.

1857-1922.—**Philippines.**—**Porto Rico.**—The University of Manila was founded by Spanish royal decree in 1857, although it had existed at the College of St. Thomas, founded by the Dominicans since the early years of the seventeenth century. The institution has been developed under American rule and in 1922 was in good university standing. The University of Porto Rico comprises a number of colleges located at Rio Piedras and the colleges of Agriculture and Mechanic Arts at Mayaguez.

1858.—**United States.**—**Minnesota University** established. See MINNESOTA: 1849-1899.

1862-1886.—**United States.**—**Cornell University.**—“On the second of July, 1862 . . . [President Lincoln] signed the act of congress, donating public lands for the establishment of colleges of agriculture and mechanic arts. This act had been introduced into congress by the Hon. Justin S. Morrill. . . . The Morrill act provided for a donation of public land to the several states, each state to receive thirty thousand acres for each senator and representative it sent to congress. States not containing within their own borders public land subject to sale at private entry received land scrip instead. But this land scrip the recipient states were not allowed to

locate within the limits of any other state or of any territory of the United States. The act laconically directed ‘said scrip to be sold by said states.’ The proceeds of the sale, whether of land or scrip, in each state were to form a perpetual fund. . . . In the execution of this trust the State of New York was hampered by great and almost insuperable obstacles. For its distributive share it received land scrip to the amount of nine hundred and ninety thousand acres. The munificence of the endowment awakened the cupidity of a multitude of clamorous and strangely unexpected claimants. . . . But the all-compelling force which prevented the dispersion and dissipation of the bounty of congress was the generous heart of Ezra Cornell. While rival institutions clamored for a division of the ‘spoils,’ and political tricksters played their base and desperate game, this man thought only of the highest good of the State of New York. . . . When the legislature of the State of New York was called upon to make some disposition of the congressional grant, Ezra Cornell sat in the senate. . . . By a gift of half a million dollars (a vast sum in 1865, the last year of the war!) he rescued for the higher education of New York the undivided grant of congress; and with the united endowments he induced the legislature to establish, not merely a college of applied science, but a great modern university—‘an institution,’ according to his own admirable definition, ‘where any person can find instruction in any study.’ . . . To secure . . . [this end] Ezra Cornell added to his original gift new donations of land, of buildings, and of money. . . . But one danger threatened this latest birth of time. The act of congress donating land scrip required the states to sell it. The markets were immediately glutted. Prices fell. New York was selling at an average price of fifty cents an acre. Her princely domain would bring at this rate less than half a million dollars! Was the splendid donation to issue in such disaster? If it could be held till the war was over, till immigration opened up the Northwest, it would be worth five times five hundred thousand dollars! So . . . Ezra Cornell made that wonderful and dramatic contract with the State of New York! He bound himself to purchase at the rate of sixty cents per acre the entire right of the commonwealth to the scrip, still unsold; and with the scrip, thus purchased by him as an individual, he agreed to select and locate the lands it represented, to pay the taxes, to guard against trespasses and defend from fires, to the end that within twenty years, when values had appreciated, he might sell the land and turn into the treasury of the State of New York for the support of Cornell University, the entire net proceeds of the enterprise. Within a few years Ezra Cornell had located over half a million acres of superior pine land in the Northwestern states, principally in Wisconsin. Under bonds to the State of New York to do the state's work, he had spent about \$600,000 of his own cash to carry out the trust committed to him by the state, when, alas, in the crisis of 1874, fortune and credit sank exhausted, and death came to free the martyr-patriot from his bonds. The seven years that followed were the darkest in our history. . . . Ezra Cornell was our founder; Henry W. Sage followed him as wise masterbuilder. The edifices, chairs, and libraries which bear the name of ‘Sage’ witness to [his] later gifts; but though these now aggregate the princely sum of \$1,250,000, [his] management of the university lands has been [his] greatest achievement. From these lands, with which the generosity and foresight of Ezra Cor-

nell endowed the university, there have been netted under [Mr. Sage's] administration, not far short of \$4,000,000, with over 100,000 acres still to sell. Ezra Cornell's contract with the state was for twenty years. It expired August 4, 1886, when a ten years' extension was granted by the state."—J. G. Schurman, *Address at inauguration to the presidency of Cornell University*, Nov. 11, 1892.

1863-1918.—Turkey and the Near East.—In 1863 Robert College on the Bosphorus was opened at Babek under American auspices. It was incorporated the following year and was given official recognition by an *Irade* from the Sultan in 1869. In 1871 it moved to its present site in Constantinople and from that date played a leading rôle in higher education in the Near East. The University of Constantinople, a distinctly Turkish institution, was founded in 1900 in honor of the sultan's succession and reorganized in 1918. There are a number of other mission colleges of high rank in the Near East aside from Robert College, among

their appeal. Especially strong has been the development of the school of business in the evening session. . . . The courses of study have been formulated in consultation with a committee of men, prominent in big business, engineering and public service. The teaching staff is made up of men who are not only skillful as teachers but who are also actual practitioners in the business community."—*Evening class of the College of New York (School and Society)*, Oct. 1, 1921, pp. 246-247).

1867.—United States.—First Jewish college established. See JEWS: United States: 19th century.

1867.—United States.—Johns Hopkins University.—"By the will of Johns Hopkins, a merchant of Baltimore, the sum of \$7,000,000 was devoted to the endowment of a university [chartered in 1867] and a hospital, \$3,500,000 being appropriated to each. . . . To the bequest no burdensome conditions were attached. . . . It was therefore determined that the Johns Hopkins should be

ROBERT COLLEGE, CONSTANTINOPLE

Founded in 1863 by James A. and William B. Dwight, sons of an American missionary to Turkey

which may be mentioned the American college for Girls at Constantinople and the Syrian Protestant College at Beirut.

1865.—United States.—Founding of the University of Maryland. See MARYLAND: 1865-1868.

1865.—United States.—Vermont University enlarged. See VERMONT: 1791-1914.

1866-1921.—United States.—College of the City of New York.—In the year, 1866, a free academy which had been founded in New York in 1848 and empowered to grant degrees in 1854, became the College of the City of New York. It "occupies a position unique in the educational world [written in 1921]. It . . . [was] the first institution of a collegiate character established by a city under a new charter and not built on a private foundation to give educational advantages free to qualified male residents. Also it was the first American college to establish courses in the mechanical arts without detriment to the liberal or cultural course that was insisted upon. . . . Art, biology, chemistry, mechanical engineering, economics, the languages, mathematics, philosophy, public speaking, these and many other courses have

primarily a university, with advanced courses of lectures and fully equipped laboratories; that the courses should be voluntary, and the teaching not limited to class instruction. . . . [The University was formally opened October 3, 1876.] As the studies are elective, it is possible to follow the usual college course if one desires. Seven different courses of study are indicated, any of which leads to the Baccalaureate degree, thus enabling the student to direct and specialize his work. The same standard of matriculation and the same severity of examinations are maintained in all these courses. A student has the privilege of extending his study beyond the regular class work, and he will be credited with all such private and outside study, if his examiners are satisfied of his thoroughness and accuracy."—S. B. Herrick, *Johns Hopkins University (Scribner's Monthly, Dec., 1870)*.—Johns Hopkins University was a pioneer in the use of seminar courses and laboratories and the emphasis placed upon the graduate school. Its influence over university development throughout the country was marked. In 1893 a medical department was established in affiliation with Johns

Hopkins Hospital. In 1902 the University moved to a new site.

ALSO IN: D. C. Gilman, *Launching of a university*.

1868.—United States.—University of California.—The University of California was chartered as a state institution in 1868, and opened at Oakland the following year. It took the place of the College of California, which had been founded in 1855. In 1873 it moved to its present site, at Berkeley, an exceptionally beautiful location. Its growth has been steady, and it ranks as one of the largest and most progressive universities in the country. In the year 1921 to 1922, the total number of students in all departments was 19,234. The University includes the Colleges of Letters and Science, Commerce, Agriculture, Mechanics, Mining, Civil Engineering, and Chemistry; and the Schools of Architecture, Education, Jurisprudence, and Medicine. There are also the University Ex-

of whom can see and hear perfectly. What this means can be appreciated by those universities which have auditoriums of inadequate size or of impossible audition on account of the echo. The Greek theater is built of concrete, at a cost of \$50,000, the gift of William Randolph Hearst.—E. E. Slosson, *Great American universities*, pp. 116, 117, 159.

1871-1913.—Japan.—“There are four Imperial universities in Japan [written in 1913]: The University of Tokio, founded in 1871, had six faculties—Medicine, Law, Agriculture, Engineering, Science and Literature—and an attendance of more than 6,000 students; the University of Kyoto [founded 1897] has four faculties—Literature, Law, Medicine, Science and Engineering being combined; and an attendance of between 2,000 and 3,000

STEPHENS UNION BUILDING, UNIVERSITY OF CALIFORNIA

Recently erected for student organizations and activities

tension Division, and the Lick Astronomical Department, with stations at Mount Hamilton and Santiago, Chile. There is no distinction of sex in the opportunities offered by the University. “In 1898 Mrs. Phoebe Hearst instituted an international competition for new buildings on a scale of unexampled magnificence for the University of California at Berkeley, in which the prize was won by the French architect Bénard.”—A. D. F. Hamlin, *American college architecture* (R. M. La Follette, ed., *Making of America*, v. 1, p. 274).—“The University of California has a long list of humanistic, scientific, and technical publications. It extends its influence throughout the State by means of lecture courses. It is closely connected with the public school systems. Its summer school is large and prosperous. It sends abroad archaeological and scientific expeditions. It has been an important factor in the remarkable agricultural development of California. . . . The building of the Greek theater has done much to promote the musical and dramatic interests of the University of California. It is the largest of its kind in the world, seating seven or eight thousand, every one

students. . . . The two other Imperial universities are not yet fully developed; that in the south at Fukuoka, in the province of Kyushu, has faculties of Medicine and Engineering; while that in the north has a faculty of Agriculture at Sapporo, in the province of Hokkaido, and a faculty of Science in Sendai. [The imperial University of Tokoku dates from 1907. Kyushu was given official university rank in 1910 and Hokkaido, in 1918, making five imperial universities in all.] There are also three privately endowed universities, founded in every case by men of exceptional ability, public spirit and far sighted vision. Waseda University, in the city of Tokio, recently celebrated its thirtieth anniversary; its founder, Count Okuma, one of the most interesting and progressive men in the Far East, was honored as one of the leaders of modern Japan, and messages of friendship were received from many European and American institutions. Keio University, in the same city, is a large and vigorous institution which has, through its graduates, exerted a decided influence on the later political life of the nation. It was founded by Mr. Fukuzawa, one of the makers of modern

Japan. . . . He and Count Okuma, the founder of Waseda, were close friends and will be remembered as kindred spirits in their service to education in Japan. The Doshisha in Kyoto, founded in 1875, by Mr. Neesima, one of the first generation of Japanese students educated in the United States, is the oldest and largest Christian institution of college rank in Japan. Under the presidency of Dr. Harada, it has taken its place as a university, with faculties of Literature, Theology and Politics and Economics. . . . Among institutions of the higher learning for women the Woman's University in Tokio, under the energetic leadership of Dr. Naruse, has large and attractive grounds and an attendance of more than a thousand students. [In 1922, aside from the five imperial universities, Japan had admitted twenty-one other institutions to university rank.]—H. W. Mabie, *Educational exchange with Japan* (Carnegie Endowment for International Peace, Division of Intercourse and Education, no. 3, pp. 2-3).—See also EDUCATION, AGRICULTURAL: Japan.

1877-1917.—English municipal universities.—Manchester.—Leeds.—Liverpool.—Birmingham.—Sheffield.—“The universities that have grown in the twentieth century out of the Victorian era were not manufactured at a single stroke, but, after the British fashion, were a growth from some form of pre-existent local school or college and the amalgamation of several under some external influence. . . . The municipalities induced by the endowments given by citizens came to the support of technical institutions devoted to the training of skill in local industries. This led to the rapid development of a local complete educational system crowned by its university. . . . The university fits itself closely into the [public school] system by evening schools of classes, or by arrangements for part-time students in industrial, commercial, or domestic subjects, and oftentimes with a correlation as far as possible of work with the evening continuation classes. . . . Before the local and general creative forces could bring the new universities to full birth, certain traditional political and legal difficulties had to be overcome. Battles had to be fought for charters. In 1877 after 25 years of successful life, Owens College petitioned the Privy Council to grant a charter converting the college into the University of Manchester. Opposition to the project was raised in various quarters, particularly in Manchester's rival neighboring cities, Leeds and Liverpool. Yorkshire College, Leeds, sent up a memorial praying, if a new university was to be created, that it should be a new corporation with powers to incorporate Owens College and other institutions, and that the university should not bear the name of a town or of any person that would give it a purely local aspect. The result was a charter in 1880 constituting Victoria University at Manchester, with Owens College as a constituent college, and with powers to admit other colleges in different localities. In 1884 the University College, Liverpool, was admitted, and the Yorkshire College, Leeds in 1887. Victoria University was helped to overcome resistance by the vague notion that it was in some sense a federation of colleges, remotely analogous to Oxford and Cambridge, and the university of the north of England. The idea of a ‘single-college university’ had yet to make its way. Victoria as the university of the north of England was suggestive of the thought of a university for the Midlands. The new departure was really made when, in 1900, a charter was granted to the University of Birmingham. . . . Encouraged by this

precedent, University College, Liverpool, the corporation of the city, and other corporations of large and important towns in the district petitioned the King to grant a charter incorporating a University in Liverpool. This involved secession from Victoria University and its probable dissolution. The petition was referred by the crown to a committee of the Privy Council. Counter petitions and memorials were presented by those in favor of continuing Victoria University. Leeds and some advocates of the external examination system strongly opposed the policy of ‘what were nicknamed Lilliputian universities.’ After an extended hearing of experts and deliberations by the committee, on February 10, 1903, an order in council pronounced that a case had been made out for a grant of university charters to Liverpool and Manchester. . . . Victoria University, for certain legal and historical purposes, remains as a name of Manchester. . . . The plan of government for these universities is practically the same and thoroughly representative. Their buildings are, of course, new. They are substantial, compact, with architectural features and modern equipment, and located generally near the heart of the cities. . . . All the six universities have faculties of arts, of science, of medicine, and departments for the training of teachers. With the exception of Birmingham, they have a faculty of applied science or engineering or technology. Manchester, Liverpool, and Sheffield have faculties of law, which is included in the faculty of arts in Leeds. Manchester alone has a faculty of theology and one of music. Birmingham and Manchester have faculties of commerce and Leeds and Liverpool departments. Taking the departments together in all these universities, they cover broadly modern languages and literatures, historical, economic, and social sciences, and the physical and biological sciences and their applications. The enumeration of the degrees, diplomas, and certificates which may be secured in one or more of these universities makes conspicuous the range of subjects taught. . . . These universities have clearly added a fifth type to the previous types of British universities.”—G. E. MacLean, *Studies in higher education in England and Scotland* (United States Department of the Interior, Bureau of Education, Bulletin no. 16, 1917).

1881.—United States.—Massachusetts Metaphysical College organized. See CHRISTIAN SCIENCE: First step towards organization.

1885.—United States.—Leland Stanford Junior University.—Leland Stanford Junior University was established at Palo Alto, California, by Governor and Mrs. Leland Stanford, as a memorial to their only child who died in 1884. Mr. Stanford “had his own university ideal, and taking what counsel he could get, he tried to set the standard at Palo Alto higher than he had seen it elsewhere. A special Act of the Legislature was sought, and in November, 1885, the Act of Endowment, embodying the charter of the institution and the gift of eighty thousand acres of land in the rich valleys of California, was made public. . . . It was 1801 before a President was chosen or buildings sufficiently advanced to warrant the starting of the University. . . . The Charter of the University was drawn with great breadth and liberality. Lowell's playful definition of a university as ‘a place where nothing useful is taught’ had no countenance in Mr. Stanford's plans. In many ways he emphasized the practical nature of the higher education. His idea of a university would have been more nearly stated as ‘a place where nothing that is *not* useful is taught.’ . . . The in-

initial point of departure is in the matter of entrance requirements. . . . It leaves the applicant and the school to determine (among the twenty-two subjects) what shall constitute the preparatory course.

But it aims to exact of the student and the school the same quality of work in each subject chosen."

—O. L. Elliott and O. V. Eaton, *Stanford University and thereabouts*, pp. 27-29, 34, 40.—"Stanford University during its formative period was free from most of the restraints of other institutions. Unlike the State universities it was not subject to the caprices of a legislature or bound by its duty toward all the people of a certain district. It was held by no dead hands of charters, testaments, and traditions. It had no alumni body to dominate it. It was not dependent upon the fees of students, for it gave them all and asked them nothing. It was

they are qualified to enter and to watch their progress and tendencies in the preparatory school."

—E. E. Slosson, *Great American universities*, pp. 112-113, 121-122.

1887. — United States. — Clark University. — "Clark university [at Worcester, Massachusetts] was founded in 1887 by the generous gift of Mr. Jonas G. Clark, and the work of instruction was begun in 1889. From the first the range of the future university was strictly limited; there was to be no college, no technical school, no professional schools pure and simple. Only those who had taken a first degree were to be admitted, and of these only such individuals as should give promise of high attainments in some specialty of

CHAPEL OF LELAND STANFORD JUNIOR UNIVERSITY

The architecture is an adaptation of early mission design

not cramped into a few city blocks; it had an 894-acre campus to grow in. [Notably beautiful and harmonious buildings have been erected.] It had a larger free endowment [estimated at \$30,000,000] than any other university ever had. The ideas of the founders were on the whole liberal and progressive. They selected as president a man of powerful personality, with independent and radical views on education, and gave him an amount of authority unprecedented even among American college presidents. . . . Stanford is distinguished from other universities in that it does not want more students. It has all the women its charter allows it to have, five hundred, and it has nearly all the men it can do justice to. . . . It is therefore in a unique position to dictate what students shall enjoy its advantages. It has a waiting list of women and will soon have a waiting list of men. It will then be able to pick out its students, like colts for the Derby, years before

scientific research. The design and organization of the new institution were intrusted to Mr. Stanley G. Hall, for some years professor of philosophy at Johns Hopkins university in Baltimore. Only a few departments were organized, and these were intended to cover subjects closely and organically connected, viz.: mathematics, physics, chemistry, biology (including anatomy, physiology and paleontology) and psychology (including neurology, anthropology, criminology and history of philosophy). It was strongly emphasized in the scheme of foundation that so far as possible the line of demarcation between professor and student should be wiped out; the professors and other instructors were to feel themselves as merely older students, the students were to be expected to lecture occasionally on topics connected with their chosen specialties."—E. D. Perry, *American university* (N. M. Butler, ed., *Education in the United States: A series of monographs*, pp. 7-8).

1889.—United States.—Founding of Agricultural and Mechanical college at West Raleigh. See NORTH CAROLINA: 1870-1802.

1892.—United States.—University of Chicago.—“In 1855, only eighteen years after the town became the city of Chicago, Senator Stephen A. Douglas gave a tract of ten acres of land as a site for a university. In 1857 the (old) University of Chicago was founded, a result of this gift and of the interest which it created. Inadequately endowed, weakened by disagreements among its friends, hampered by debts, harassed by panics and by the two great fires which consumed the wealth of citizens and changed the social conditions of many thousands of people, the old University was at length obliged to yield to the inevitable, and in 1886 its doors were closed. . . . Meanwhile to Mr. John D. Rockefeller had been presented the needs of Chicago for a new institution of learning. The American Baptist Education Society had been organized in May, 1888. . . . At the annual meeting of the Society held in Boston in May, 1889, it was unanimously voted ‘to take immediate steps toward the founding of a well-equipped college in the City of Chicago.’ Mr. Rockefeller, in order to make possible the founding of this institution of learning, offered to contribute \$600,000 of a proposed \$1,000,000 fund, provided the remaining \$400,000 should be subscribed before June 1, 1890. . . . At the first meeting of the Board after its incorporation in September, 1890, Professor William Rainey Harper, of Yale University, was elected President; and he entered on the duties of his office July 1, 1891. . . . The University opened its doors to students without spectacular exercises on October 1, 1892. . . . During the thirty-two years of history which began with the election of President Harper, Mr. Rockefeller, who would not permit his name to be given to the University, has contributed to establish it upon an enduring financial basis the magnificent total of \$34,873,360.90, including his final gift. . . . The University has, since its doors opened October 1, 1892, furnished ‘opportunities’ to students in many departments of higher education. Including those in attendance during the academic year 1921-22 more than 84,000 students have been in attendance upon its classes for at least one quarter. Degrees to the number of 16,196 have been conferred, inclusive of those conferred at the Summer Convocation, June, 1922, upon 14,531 persons, including 1,396 who have received the degree of Doctor of Philosophy.”—*Historical sketch of the University of Chicago (Annual Register of the University of Chicago, 1921-1922, pp. 3-5, 8-9)*.—Among the unique features inaugurated by the University of Chicago were the division of the academic year into four quarters, the system of junior and senior colleges and the relationship with affiliated colleges outside the university. The university extension movement was a feature from the beginning.

ALSO IN: T. W. Goodspeed, *History of the University of Chicago*.

1893-1920.—Wales.—“The movement for the creation of a University of Wales was continuous and persistent from 1887 until the charter was granted in 1893. . . . Under English influence Wales had been a battle field between the preparation of candidates for degrees given merely upon the passing of the examinations of the University of London and the preparation for admission to the residential colleges of Oxford and Cambridge. The advocates of a teaching university prevailed on the whole in the charter. Those who pleaded for a system of examinations and inspection of schools

by the university, similar to the practice of Oxford and Cambridge, gained only a permissive clause, the legal inspection being reserved to the oncoming central Welsh board. . . . The charter of the university did not set up strictly speaking a federal university. It established a confederation of the three previously incorporated and self-governing colleges: [University College of Wales at Aberystwyth, University College of North Wales, at Bangor and University College of South Wales, at Cardiff.] ‘An association,’ Principal Roberts called it, ‘of the three university colleges for the training of their students.’ . . . Every precaution was taken to preserve the equality of the colleges, and to preclude the misapprehension that the institution entailed ‘a separate place of instruction to be styled par excellence, “The University,” located either in one of the university towns or in some other center. The university, so far as its higher teaching and examining functions are concerned, is the three constituent colleges.’ . . . Like a court it has a circuit. Its examinations are held at each of the three colleges on the same days. Its degrees are conferred annually at that one of the colleges whose principal is vice chancellor at the time. The university court meets once in each year in one of the university college towns taken in rotation. Each of the principals of the three colleges serves in rotation as vice chancellor of the university for a term of two years. The national character of the university appears in the wide representation of the people themselves in the constitution of the university court, in which the entire legislative and executive power of the institution is vested. . . . The formative period of the university, beginning with the first concrete movement for a charter in 1888, may be considered as closed with the appointment of the royal commission in 1916. . . . [As a result of the inquiry of the Royal Commission held in 1916-1918, the university received a supplemental charter in 1920, which effected the reconstruction of the University Court, the institution of a University Council and greater freedom of the constituent colleges, which were increased to four by the addition of Swansea.]—G. E. MacLean, *Studies in higher education in Ireland and Wales (United States Department of the Interior, Bureau of Education, Bulletin no. 15, 1917)*.

1898-1907.—Sudan.—“The educational system of the Sudan . . . centres in the Gordon College at Khartum, an institution which owes its existence to the response of the British public to the appeal made to them at the end of 1898 by Lord Kitchener. . . . [The college] stands on the west bank of the Blue Nile, a little above Khartum. . . . Lord Kitchener’s general idea was, ‘to give the most practical, useful education possible to the boys for their future in the Sudan,’ and he intended Arabic to be the basis of education. . . . The College now [written in 1907] consists of three sections: a Primary School, a Training School for schoolmasters and judges in the Muhammadan Courts, and the instructional Workshops. . . . The curriculum extends over four years, and is intended to fit a boy for some minor Government post. . . . The Military School and the Training College are flourishing.”—E. A. W. Budge, *Egyptian Sudan, its history and monuments, v. 2, p. 492*.

1898-1922.—China.—China had, in 1922, three government universities: the National University at Peking, founded in 1898 and reorganized in 1917, Peiyang University at Tientsen and Shansi University at Taiyinanfu. There were four universities supported by private funds well established, three of these, Chung Kuo, Ming Kuo and Ch’ao

Universities in Peking, and Chung Hua University in Wuchang. In addition Amoy, Southeastern and Southwestern universities were gaining a firm foothold. There was a modern British university at Hong Kong. The old system of Chinese education with its emphasis on rote learning and formal examinations prevented the development of universities until recent years. "In 1905, the old examination system was abolished. . . . The present system [of education] was actually established at the close of 1905 when a Ministry of Education was created by edict. This was approved by the Imperial Throne in 1906. . . . The two most important institutions are [written in 1922] the national University at Peking and the Southeastern University at Nanking. The National University had an attendance in 1920-21 of about 2,000 students. . . . The work of the National University is limited chiefly to the field of philosophy, art, and science; law, medicine, engineering, and agriculture are represented by separate institutions in Peking. There is a movement to amalgamate these into one institution, but

the Boxer Indemnity."—P. Monroe, *Report on education in China (Institute of International Education, 3rd series, Bulletin no. 4, Oct. 20, 1922, pp. 8-15, 17-18)*.—See also HONG KONG: 1911-1912.

19th-20th centuries.—American university development.—Curriculum.—Elective system.—Graduate school.—Degrees.—State universities.—Municipal universities.—"Till the middle of the nineteenth century America did not use the larger word 'university,' and was content with 'college.' Universities practically did not exist, or rather they existed, but were called colleges. . . . Colleges developed into universities along three lines of evolution. While continuing to teach the 'liberal arts,' some advanced further and established special professional schools of theology, law, and medicine. Thus they became training grounds for professional men. Further, there was a considerable development in pure and applied science. The establishment of the degree of B.Sc. corresponded with the building up of schools of engineering and other strictly professional courses. But perhaps the prin-

PEKING UNIVERSITY

Founded in 1898, and reorganized in 1917 by Tsai Yuan-pei, the eminent Chinese educator

since the student bodies are quite large and the plants are far apart, their independent existence is preferred for the present. The faculty and the student body of the University probably exert more influence upon the thought life and the literary activity of the people than do those of any other institution. This is largely due to the personality of the Chancellor, Tsai Yuan Pei who has mastered the old learning to the highest degree and is also sympathetic to western learning and well versed in it. The Southeastern University was organized in 1920 on the basis of the Nanking Teachers College, which had been in existence since 1916 and was the largest of the higher normal schools. Here also had developed a small School of Engineering and a strong College of Agriculture. These three were combined to form the university. . . . In making a survey of the Chinese educational system, particularly of the higher institutions, account must be taken of the fact that a number of such institutions exist outside the control of the Ministry of Education. The most famous of these is Tsing Hua College, under the control of the Minister of Foreign Affairs and supported out of funds released by the American government from

principal change of the last fifty years has been the foundation of numerous post-graduate schools, largely moulded by German influence."—A. E. Shipley, *University education in the United States (Living Age, June 7, 1919)*.—"In the first quarter of the nineteenth century all students of all the colleges [in the United States] were pursuing practically the same course. The common branches were Latin, Greek and Mathematics, including, in some colleges, on the one side Arithmetic, and in some, on the other side Calculus. Of the classical authors a larger part was read than is now usually read except by those who specialize in this department. The two chief ancient languages and mathematics represented the leading pursuits of the first three years. In the Senior year philosophy became dominant. Butler's 'Analogy,' Paley's 'Evidences,' Stewart's or Brown's 'Philosophy,' and Locke's 'Essay on Human Understanding' were the more common books read. In most institutions natural philosophy was required in at least a single year. Logic still held a place, but the place was not so large as in the former time. In a few colleges Hebrew was yet retained, although in most colleges it had been dropped. French,

Spanish, Political Economy, Chemistry, Geology and Botany had begun to appear. The most conspicuous and impressive addition made to the course of study in the first decade of the last century [1800-1810] we find in the field of science. Chemistry was the first to secure a more worthy place. . . . The first teaching of chemistry in American institutions was professional; it formed a part of the instruction in *Materia Medica* in medical schools. . . . At Harvard, a generation later, Josiah P. Cooke, enthusiastic, laborious, having some knowledge of Liebig's methods and meeting the cost of his apparatus from his own purse, taught the subject for seven years before his laboratory course was formally admitted to the regular curriculum. . . . The first laboratory in physics of the United States was built at the Institute of Technology in Boston, through the suggestion of Prof. W. B. Rogers. Slowly the subject found its way into the colleges. . . . The incoming of German [tendencies] into American life and the academic course was due more to personal than to literary influences. . . . The most direct effect of this residence [of American students at German universities] is seen in the changes wrought in the Harvard curriculum through George Ticknor. . . . The vast enlargement of the field of knowledge . . . had one most significant academic consequence. It . . . resulted in the establishment of what is commonly known as the elective system of studies. . . . The institutions most directly and intimately associated with the development of the voluntary system were William and Mary College, the University of Virginia, Harvard, and Brown; and the men most vitally connected with this development were Thomas Jefferson, George Ticknor, Francis Wayland, and Charles W. Eliot. These institutions and personalities represented a powerful quartette. . . . [The spread of German influence and of the elective system led to the development of the graduate school and the introduction of new degrees.] The first important endeavor made to offer instruction to graduates occurred at Yale in the fifth decade of the last century. . . . In the year 1872, when Yale was reorganizing its Department of Graduate Instruction, Harvard was making also a formal beginning. This beginning was the result, in part at least, of the enlargement of the elective system of studies. The elective system necessitated at Harvard, as it always necessitates, an increase in the number of teachers. The system also encouraged, if it did not oblige, students to pursue their work to an extent which had not formerly been possible. The system created a scholastic atmosphere; it gave birth to scholarly aspirations. Out of such conditions arose the movement for graduate instruction. It represented the culmination of the German influence in the higher education of America. The Graduate School stood and stands for the Philosophical Faculty of the German university. . . . The progress of graduate instruction received a great impulse in the establishment of Johns Hopkins University in the year 1876. . . . Clark University at Worcester, established in 1889, continued the tradition established at Baltimore. . . . State universities were able to persuade legislatures that it was the duty of the community to provide facilities for research. . . . Down to the middle of the nineteenth century the two degrees of Bachelor of Arts and of Master of Arts were the only ones conferred as standing for specific intellectual attainments. The degrees of Doctor of Divinity and of Doctor of Laws were also the only honorary degrees. But with the enlargement of the field of

knowledge, and with the increasing specialization in the cultivation of this field, began the creation of new degrees to represent these diverse and special attainments. The first degree of Bachelor of Science was conferred by Harvard in 1851. The growth in the study of modern languages, as well as the enlargement of the field of science, prompted the creation of a literary degree, which has taken the form usually of Bachelor of Literature or of Bachelor of Philosophy. The specialization in degrees has proceeded to a high degree of detail. . . . The most important of all degrees of recent creation is the degree of Doctor of Philosophy. This degree, introduced from the German university, was the first conferred in the United States in the beginning of the seventh decade. It has in twenty-five and more years come to be regarded as almost exclusively a professional degree [written in 1906]. . . . The peculiar contribution which Charles W. Eliot made in and through Harvard University to the higher education was the promotion of the elective system of studies. . . . The elective system has in the last third of the last century become a prevailing condition in all well-equipped colleges. Its basis in Psychology and Sociology, as well as its relationship to the promotion of scholarship, has resulted in its general and free adoption. Under it, as both a condition and a force, have occurred the changes wrought in the curriculum of the colleges in the last generation. These changes have in certain subjects of study been slight but in most profound."—C. F. Thwing, *History of higher education in America*, pp. 300-303, 310-312, 418-420, 428-429, 436, 441.—"The virus of the elective system, as put into practice by Harvard, was making itself felt. . . . [In a few years] it had swept the United States, and the reaction against it in its extreme form had begun to set in. Having been freed through the elective system from the shackles of an antiquated and outworn scheme of studies, institutions now began to grope for some new unifying principle to guard against the dangers of intellectual license which appeared in the general working out of the elective system. The new mechanism is the group system [written in 1919]. Under various manifestations this principle of curriculum formation has been generally adopted in the public and nonsectarian institutions of the country."—S. P. Capen and W. C. John, *Survey of higher education, 1916-1918 (United States Department of Interior, Bureau of Education, Bulletin no. 22, 1919)*.

"The oldest existing American State University is the University of Georgia, founded by the General Assembly of that state the twenty-seventh of January, 1785, and opened to receive students in 1801. The University of Michigan is generally regarded as the pioneer State University of the West for it dates its inception with the year 1817. Indiana University and the Universities of Wisconsin and Missouri all originated with state grants of land in the late thirties of the last century. The University of Illinois came into being by legislative order in the year 1867. All the earlier State Universities of the West began on the basis of public land gifts or small appropriations. These and others of the Trans-Mississippi region which have come into being more recently have been encouraged to grow or become established under the stimulus of the Morrill Land Grant Law passed by the Federal Congress in 1862. These typical State Universities are regarded as the consummation of the Public School System in their several states and are controlled by the state through boards of trustees or regents, chosen by widely

differing methods. . . . Every State University is regarded as a popular institution answerable to the people of the state, either directly or indirectly, for the service rendered and is supported in whole or in part by public funds—federal and state. There are but two institutions of the State University type in New England—the University of Vermont and the University of Maine. . . . The University of Maine, the only other institution of this type in New England, is of much more recent origin than the University of Vermont. It found its inspiration for the beginning of institutional existence in the Morrill law of 1862. The original name of the institution, the State Agricultural College and College of Mechanic Arts, changed by legislative action to the University of Maine in 1897, was made effective on Commencement day, the twenty-third of June in that year. . . . Ohio has three State Universities—Ohio University at Athens, Miami University at Oxford and Ohio State University at Columbus. Since the state recognizes all three of these institutions, each one of them has membership in the National Association of State Universities. . . . Massachusetts, New Hampshire, Rhode Island and Connecticut are without State Universities, but Colleges of Agricultural and Mechanic Arts have been established under the provisions of the Federal Land Grant Law of 1862 [see NEW HAMPSHIRE: 1693-1910] and there has been agitation in at least two of these states for the enlargement of their state colleges to permit their designation as State Universities.”—G. P. Benton, *State university* (*Education*, Jan., 1916). —“Some of our modern municipal universities . . . [have developed] a system introduced a few years ago by Dean Herman Schneider, of the University of Cincinnati. This system is called ‘The co-operative method.’ According to the co-operative method the students attend lectures and recitations in the university and during alternate fortnights, under the supervision of the staff, they work for pay in the city at the application of their special subjects. The students are divided into two sections and relieve one another in the class rooms and the shops, so that the work of the college and of the employers is uninterrupted. . . . All municipal universities aim to meet the increasing need of citizens trained for civic usefulness. They study the special wants of the city in which they are located, and aim to fill them by offering appropriate courses. They aim to co-operate with the various municipal departments and institutions by rendering them expert service, and by receiving corresponding benefit. . . . President Parke R. Kolbe of the Akron municipal university, defines a municipal university as “an institution of higher learning supported in greater part by municipal taxation, requiring graduation from a first-grade high school for entrance, and maintaining a four-year course in arts and letters, around which a greater or less number of other schools or departments may be grouped. Its participation in technical, professional, and graduate work or in civic co-operation will naturally vary with city and institution.’ Under a strict application of this definition according to President Kolbe, there are seven municipal universities or colleges in the United States: the University of Cincinnati, the College of the City of New York, the Municipal University of Akron, Hunter College of the City of New York, Toledo University, the College of Charleston, and the University of Louisville.”—J. L. Patterson, *Municipal universities of the United States* (*National Municipal Review*, Oct., 1916, pp. 553-555).

ALSO IN: C. W. Dabney, *Municipal university*.—F. W. Clark, *Evolution of the American university* (*Forum*, Sept., 1901).—T. Veblen, *Higher learning in America*.—J. H. Baker, *American university progress*.—C. F. Thwing, *Universities of the world*.—Idem, *American colleges and universities in the Great War, 1914-1918*.—E. R. Holme, *American university: An Australian view*.—E. E. Slosson, *Great American universities*.—C. W. Eliot, *University administration*.—A. Flexner, *American college, 19th-20th centuries*.—Higher education for women in the United States.—Independent colleges for the higher education of women began with the founding of Mount Holyoke Seminary (now Mount Holyoke College) at South Hadley, Massachusetts, in 1837, as the result of a campaign by Mary Lyon. But it was not until after the Civil War that the period of the establishment of women's colleges began. Elmira was chartered as a college in 1855. In 1861, Vassar College was founded, followed by Wells, 1868, Smith, 1871, Wellesley, 1875, Bryn Mawr, 1880, Mills, 1885, Goucher, 1888, and Rockford, 1892. “Independent colleges for women of the same grade as those for men are peculiar to the United States. . . . Of the independent colleges for women . . . the so-called ‘four great colleges for women’ Vassar, Smith, Wellesley, Bryn Mawr . . . are included among the fifty-eight colleges of the United States [written in 1906].”—M. C. Thomas, *Education of women* (N. M. Butler, ed., *Education in the United States: A series of monographs*, pp. 18, 19).—“The coeducation of men and women in colleges, . . . and at the same time the college education of women, began in Ohio, the earliest settled of the western states. In 1833 Oberlin Collegiate Institute (not chartered as a college until 1850) was opened, admitting from the first both men and women. Oberlin was at that time . . . hampered by maintaining a secondary school as large as its college department, but it was the first institution for collegiate instruction in the United States where large numbers of men and women were educated together, and the uniformly favorable testimony of its faculty had great influence on the side of coeducation. In 1853 Antioch college, also in Ohio, was opened, and admitted from the beginning men and women on equal terms. Its first president, Horace Mann, was one of the most brilliant and energetic educational leaders in the United States, and his ardent advocacy of coeducation, based on his own practical experience, had great weight with the public. From this time on it became a custom, as state universities were opened in the far west, to admit women. Utah, opened in 1850, Iowa, opened in 1856, Washington, opened in 1862, Kansas, opened in 1866, Minnesota, opened in 1868, and Nebraska, opened in 1871, were coeducational from the outset. Indiana, opened as early as 1820, admitted women in 1868. The state University of Michigan was, at this time, the most important western university, and the only western university well known in the east before the war. When, in 1870, it opened its doors to women, they were for the first time in America admitted to instruction of true college grade. . . . The example of the University of Michigan was quickly followed by all the other state universities of the west. . . . All the state universities of the west, organized since 1871, have admitted women from the first [written in 1900]. In the twenty states which, for convenience, I shall classify as western, there are now twenty state universities open to women, and, in four territories, Arizona, Oklahoma, Indian and New Mexico,

the one university of each territory is open to women. Of the eleven state universities of the southern states the two most western admitted women first, as was to be expected. . . . The greater part of the college education of the United States, however, is carried on in private, not in state universities. In 1897 over 70 per cent of all the college students in the United States were studying in private colleges, so that for women's higher education their admission to private colleges is really a matter of much greater importance. The part taken by Cornell university in New York state in opening private colleges to women was as significant as the part taken by Michigan in opening state universities. . . . The example set by Cornell was followed very slowly by the other private colleges of the New England and middle states. For the next twenty years the colleges in this section of the United States admitting women might be counted on the fingers of one hand. In Massachusetts Boston university opened its department of arts in 1873, and admitted women to it from the first; but no college for men followed the example of Boston until 1883, when the Massachusetts Institute of Technology, the most important technical and scientific school in the state, and one of the most important in the United States, admitted women. . . . In 1892, Tufts College was opened to women. In the west and south the case was different, and the list of private colleges that one after another have become coeducational is too long to be inserted here. Among new coeducational foundations the most important are, on the Pacific coast, the Leland Stanford Junior University, opened in 1891, and, in the middle west, Chicago University, opened in 1892."—M. C. Thomas, *Education of women (Education in the United States: A series of monographs, pp. 6, 9)*.—"In addition to the education of women through coeducation and through separate colleges, the community has, in a few of its older institutions, determined to make use of these institutions for the giving of an education to women. . . . Among the more significant of these institutions are: Radcliffe College, affiliated with Harvard, which was opened in the year 1879; Barnard, affiliated with Columbia; the Woman's College of Brown University, of Providence; the College for Women of Western Reserve University, of Cleveland; and the H. Sophia Newcomb College, affiliated with Tulane University, of New Orleans. In certain of these colleges like Radcliffe, Barnard, and Brown, the larger part of the instruction is given by members of the Faculty of the older college for men. In the College for Women of Western Reserve University, the Faculty is coördinate with the Faculty of the Adelbert College for men in the same University."—C. F. Thwing, *History of higher education in America, p. 350*.—See also EDUCATION: Modern: 19th century: United States: Secondary education; WOMAN'S RIGHTS: 1673-1800; 1861-1910.

1912-1921.—British empire.—Congress of Universities.—Higher institutions in Ceylon, Malta, Singapore and Trinidad.—The fifty-eight recognized universities of the United Kingdom and the Dominions are organized into the Congress of Universities of the British Empire, delegates to which met in England in 1912 and in 1921 to consider university problems of common interest. Other universities in the British empire than those mentioned elsewhere in this article include University College at Colombo, Ceylon [1921]; the University of Malta [1769, reconstituted, 1921]; the King

Edward VIII College of Medicine at Singapore [c. 1916], and the West Indian Agricultural College at St. Augustine, Trinidad (1921).—See also EDUCATION, AGRICULTURAL: England and Wales.

ALSO IN: *Yearbook of the Universities of the Empire, 1922*.

1914-1916.—National organizations in the United States.—Standard for the American university.—"The colleges and universities have maintained a department in the [National Education] Association, but it has never represented the best effort of the higher institutions. . . . The Association of State Universities, . . . the oldest of these organizations [considering the problems of higher education nationally] . . . has passed through the stage of merely traditional views, discussion of minor problems, and promotion of the class of institutions represented, and is taking up broad questions. It has done something to mark the form and function of the university, its relation to the school system and to the state, and is now [1916] considering 'economy of time' as affecting the college and the university. It has consistently promoted the idea of a national university. . . . The Association of American Universities represents the great historic institutions of the country and the older state universities. The formal basis of institutional membership is a well-developed graduate school. . . . In 1914 an Association of Urban Universities was organized in Washington, D. C., to consider problems peculiar to this class of institutions. . . . In January, 1915, the Association of American Colleges was organized in Chicago. . . . The Association of University Professors was formed in New York City, January 1, 1915. . . . Some standardizing of the college has been done by the U. S. Bureau of Education, the Carnegie Foundation, and other agencies. The National Association of State Universities within a few years has defined a standard for the American university [of which the substance is as follows]: . . . An institution having a four-year college course based on a four-year high school—two years in continuation of the high school and two years looking toward the university; a graduate school based on the four-year college; one or more professional schools requiring two years of college for admission. The earlier completion of the college and of entrance to the university was more than suggested. This definition was merely tentative, applying to existing conditions, and is already regarded as antiquated. President Butler's definition, made several years ago, remains essentially right to-day: 'Any institution where students, adequately trained by previous study of the liberal arts and sciences, are led into special fields of learning and research by teachers of high excellence and originality; and where, by the agency of libraries, museums, laboratories, and publications, knowledge is conserved, advanced, and disseminated.'"—J. H. Baker, *American university progress and college reform, pp. 139, 142, 143, 35, 73*.

1914-1922.—Latin-American universities.—Recent foundations.—In 1914 the Professional Institute of Santo Domingo was formed into a university by presidential decree. In 1918 a university of Guatamala to be known as Universidad Nacional was established by government decree. Brazil's single university, the University of Rio de Janeiro, was founded in 1920, with twenty-five faculties which confer degrees. It is a state institution. Argentina established a national university of the Litoral in Rosario in 1920 and a provincial University of Cuyo in 1921 for the provinces of Mendoza, San Juan and San Luis. In 1922 the

Central University of Venezuela at Caracas was reopened after being closed since 1912. In addition to the National University of Mexico at Mexico City, which was reorganized in 1910, Mexico established the National University of the Southeast at Merida (Yucatan) in 1922.

1916.—**Modern tendencies in American universities and colleges.**—In connection with the study, "American University Progress," made by J. H. Baker in 1916, inquiries on modern trends in higher education were submitted to the leading colleges and universities. The results may be summarized as follows: Such few changes as were reported in the graduate schools showed a tendency to develop graduate work slowly on a sound and discriminating basis and to build up a few strong departments rather than many weak ones. Changes in professional schools were indicative of higher standards. Minnesota reported the development of graduate work in medicine with a view to training medical scientists, teachers and specialists, the placing of pharmacy on a full high-school entrance basis, and the organization of a combined six-year course in arts and dentistry. A number of the leading colleges of pharmacy had increased the length of their minimum courses to three full university years and reported increased attendance upon their four-year courses leading to the degree B. S. in pharmacy. Ohio State University had lengthened the dental course from three to four years with a view to advancing the cultural tone of the dental profession. The University of Cincinnati was organizing a scientific school of dentistry and was proposing to develop a school for sanitarians in cooperation with the Board of Health. The College of Medicine of this university had just been opened in the new General Hospital, which had been built with special reference to teaching and research. At Johns Hopkins, full-time clinical professorships in surgery, medicine and pediatrics had been established. Oberlin Theological School had been put on a graduate basis and Teachers College (Columbia University) was on a graduate basis with the exception of the departments for kindergarten and elementary school supervisors. In regard to the efficiency of teaching many institutions reported that they were raising the standards of scholarship and research. Oberlin was making efficiency tests of its college work. The Harvard department of economics had invited the division of education to inspect its work and report upon its methods and efficiency. There was a general movement to place law and medicine on the two-year college basis. The tendency to improve standards, add special schools and increase "extension" service was marked. Technological schools of commerce, agriculture, engineering and household arts were developing facilities of public service. Conservative institutions of the East as well as younger western universities were experimenting with the university extension movement. (See EDUCATION: Modern developments: 20th century; Extension work.) Replies to inquiries regarding student problems showed a general tendency to adopt some form of student government (see ACADEMIC FREEDOM) including the honor system.—Based on J. H. Baker, *American university progress and college reform*, pp. 175-176.—See also EDUCATION: Modern developments: 20th century; Correspondence schools; United States: Junior college; EDUCATION, ART: Modern Period: United States: Universities.

UPANISHADS, philosophical treatises forming the third division of the Vedas. "The earliest Upanishads date back to some six hundred years before our era. On these early Upanishads rests almost all of the philosophic, and much of the religious, thought of India to-day. . . . Respecting the transcendental ideas of God and the Soul the Upanishads teach doctrines which at times appear opposed one to the other. . . . Sometimes God is declared to be a personal God presiding over the world and the soul of man. Sometimes God is held to transcend the world, abiding above and apart from the world of phenomena. Finally God becomes purely spiritual and the world unreal in a spiritual unity of all. The question which Upanishad thought set itself to solve was how, if in the Beginning there was One only, he had resolved himself in a known world of phenomena. What was the material out of which a spiritual Being had created a world of reality? If there existed matter, how had that matter been created by a God who was One only? The answers of the Upanishads are held by orthodox thought in India not to rest solely on abstract metaphysical reasoning, but to be divine revelations. The Upanishads, however, contain many solutions of the universe, idealistic, pantheistic, and theistic. The question, therefore, which Indian thought had to answer was how, if the Upanishads hold a divine revelation, their speculations respecting God and the soul can be reconciled one with the other and be shown to contain only one consistent divine revelation. Whatever the answer may be, orthodox thought in India holds that the nature of God is known and can be explained only through the correct interpretation of texts of Vedas and

Upnishads, or of other works as are of such undisputed authority as to be considered revelation. . . . In India of to-day, to orthodox thought, the Upnishads are held to be as full of spiritual life and philosophic thought as they were through the past ages."—R. W. Frazer, *Indian thought, past and present*, pp. 47-50.—See also HINDU LITERATURE.

URSINI. See **ORSINI.**

URSULINES, religious order. The origin of the order of the Ursulines "is ascribed to Angela di Brescia, about the year 1537, though the Saint from whom it received its name, Ursula Benincasa, a native of Naples, was born ten years afterwards. . . . The duties of those holy sisters were the purest within the circle of human benevolence—to minister to the sick, to relieve the poor, to console the miserable, to pray with the penitent."—G. Waddington, *History of the church*, ch. 19, sect. 6.

URUGUAY, smallest republic in South America. In 1920 the population was 1,494,953. "The official name 'La Republica Oriental del Uruguay', or Republic of the eastern bank of the River Uruguay, very clearly locates the position of this small South American state, lying south of Brazil between the 30th and 35th degrees of south latitude and 52nd and 58th degrees of west longitude. On three sides it is bounded by water, on the east by the Atlantic Ocean, and on the south and west by the rivers Plate and Uruguay which form the division between it and the Argentine Republic."—H. R. Mill, *International geography*, p. 856.—"Uruguay has an area of 72,210 square miles, . . . and is the smallest republic in South America. . . . The most notable feature of Uruguay is its extent of long rolling plains, comprising almost the entire length of the country, occasionally broken by low mountain ranges and copiously

watered by numerous streams. It is naturally suited for both sheep and cattle, the raising of which is the principal industry. Agriculture is also followed to a considerable extent, nearly all of the cereals being grown."—Pan American Union, *Uruguay*, p. 3.—See also LATIN AMERICA: Agriculture; Map of South America; also Map of Communications and commercial languages of America.

Ancient name. See BANDA ORIENTAL.

Aborigines.—"In pre-Columbian times Uruguay was occupied by several distinct ethnical groups, all living in a state of nature, or at least a low stage of culture little removed from sheer savagery. Such were the *Minuanos*, the *Boanes* (*Bohanes*), *Yaros*, and *Chanos* (*Chanases*), some of whom were, no doubt, of Guarani stock, but others, perhaps the majority, were either allied to the Pampean Querandies, or else distinctly connected with the Parana and Gran Chaco natives. All these were confined to the western and northern districts—the banks and islands of Uruguay and the wooded tracts towards the present Brazilian frontier—while the rest of the land was roamed by the numerous and powerful *Charrua* nation. The Guarani tribes, for the most part of a mild and gentle disposition, were soon reduced and absorbed by the Spanish settlers, or else exterminated by the Charruas, who were dominant in the whole region from the Atlantic to the Uruguay."—*Stanford's compendium of geography and travel: Central and South America*, v. 1, p. 429.—See also PAMPAS TRIBES.

1515-1624.—Discovery by Juan Diaz de Solis.—Settlement.—"Juan Diaz de Solis discovered the Rio de la Plata in the year 1515, and it was he who first landed on Uruguayan soil and took possession of the country in the name of the King of Spain. This act cost him his life, for the savage Charruas, who at that time inhabited the country, attacked and killed him and all his party. The country was explored by several other Spaniards and Portuguese, but it was not until the Jesuits arrived in the year 1624 that permanent settlements were established. The territory was then placed under the jurisdiction of the governor of Paraguay."—Pan American Union, *Uruguay*, p. 3.

1714-1777.—Contest between Spain and Portugal.—Relinquishment by the latter.—Inclusion in vicerealty of Buenos Ayres. See ARGENTINA: 1580-1777.

1806-1815.—Montevideo captured by the British.—Declaration of independence from Spain.—"In the year 1806, Great Britain being at war with Spain, a fleet was dispatched to the Rio de la Plata, under Sir Home Popham, who attacked Montevideo, but was repulsed. A second attempt, made in the year following, with a stronger force, was more successful, and on January 23, 1807, the British captured the fort of Montevideo after a siege of eight days. They were obliged, however, to evacuate their position a few months later, when General Whitelocke was defeated at Buenos Aires. The movement for independence in Uruguay began with the declaration of independence at Buenos Aires on May 23, 1810. Uruguay was declared a part of the United Province of Rio de la Plata and on May 18, 1811, the Spanish troops were defeated and utterly routed by the Uruguayan general, José Artigas."—Pan American Union, *Uruguay*.—"The War of Independence (A.D. 1814) released all this part of South America from the Spanish yoke, thanks to the efforts of Admiral Brown, who destroyed the Spanish fleet, and to General Alvear, who took Monte Video by land.

One year afterwards, however,—the same year which saw the battle of Waterloo—Uruguay broke away from the Argentine Federation under José Artigas."—P. E. Martin, *Through five republics*, p. 362.—See also ARGENTINA: 1806-1820.

1821-1905.—Annexation to Brazil.—Independence established.—Internal strife.—War with Paraguay.—Rapid succession of presidents.—Colorados and Blancos.—"In 1821 the country was annexed to Brazil as the Province Cis-Platino [and passed under Portuguese rule], but naturally the new order of things did not prosper. Four years afterwards—viz., 1825, thirty-three patriots, the famous 'treinte-tres,' after whom a whole Province and numerous towns and streets have been named, under the leadership of one Lavalleja, set out from Buenos Aires to raise the standard of revolt, and in the following two years the Argentinos, again under General Alvear, having forgotten the old dispute with their neighbors, helped them to shake off the hated Brazilian yoke, and the Republic of Uruguay, thus aided, emerged triumphant."—P. F. Martin, *Through five republics*, p. 362.—"The war between Argentina and Brazil culminating in the battle of Huzaingo . . . was followed by the Argentine-Brazilian treaty of 1828 that guaranteed the independence of the region upon the east bank of the Uruguay River. A clause of this treaty provided that the proposed constitution of Uruguay should be approved by representatives of both Argentine and Brazil before it should be put into operation. . . . In November 1828 a Constitutional Assembly for Uruguay assembled at San José. It appointed a provisional Governor, who on December 13, 1828 issued a decree announcing that all foreign officials should cease to exercise authority within the territory of Uruguay . . . after some debate the Assembly decided to designate the new state *La Republica Oriental del Uruguay*. A Constitution for this state was approved by the Constituent Assembly on September 10, 1829. . . . The Uruguayan Constitution of 1830 provided for a centralized form of government. It vested executive authority in a President, a cabinet and a permanent Committee of Congress. The President, who was to be elected by Congress for four years, was vested with important powers. . . . The unit of local government was the department. In the chief town of each department a *jefe politico* appointed by the President, should act as the executive magistrate. . . . The Congress of Uruguay elected General Rivera as President of the Republic; and he was installed in office . . . on November 6, 1830. In July 1832 General Lavalleja started a revolt against President Rivera; but two months later the President routed the insurrectionists at Tupambay. Lavalleja was consequently forced to seek a refuge in Brazil. The hero of 1825 started another uprising two years later, only to be routed again. . . . [A general named Rosas, sent soldiers under Lavalleja to aid Oribe against Rivera.] On September 19, 1836 Oribe defeated Rivera at the battle of Carpinteria. This battle—where Oribe's soldiers carried white pennants, while Rivera's soldiers bore red pennants—marked the first appearance in the interneine struggles of Uruguay of the *Blancos* and the *Colorados*—factions or parties which have divided the sympathies of the Uruguayan people from 1836 until the present day [written in 1922]. On March 10, 1839 Rivera, who was assured of support from the French and from Argentine *émigrés*, issued a proclamation declaring war against the tyrant Rosas but not upon the people of Argentine. . . . The years from 1843 to 1851 in

which Montevideo was besieged, are known in Uruguayan history as *la guerra grande*. Upon the eve of the downfall of Rosas on Oct. 8, 1851, in accordance with an agreement between himself and the government at Montevideo, General Urquiza made a treaty with Oribe which provided for the cessation of the war and left the *Colorados* in power. . . . Shortly after the close of the struggle Brazilian diplomacy scored a triumph by the negotiation of a group of treaties with the Uruguayan minister in Rio de Janeiro. By the second article of the treaty signed on October 12, 1851, an agreement was reached . . . in regard to the boundaries between Uruguay and Brazil. . . . General Venancio Flores, a *Colorado* who became president in 1854, asked Brazil to intervene in the distracted republic; hence for three years Brazilian soldiers were stationed upon Uruguayan soil. In 1857 a short-sighted politician named Juan Gomez formed a chimerical plan for the annexation of Uruguay to the province of Buenos Aires and the creation of a republic designated the 'United States of la Plata.' A band of invaders from Argentine that aimed to carry out the plan was eventually defeated and its leaders were ruthlessly shot. During the presidency of Gabriel A. Pereira some administrative reforms were made and the Jesuits were expelled from Uruguay. Bernardo Berro, who became president . . . in 1860, also essayed certain reforms, but during his administration General Flores invaded the republic and war flared up again.—W. S. Robertson, *History of the Latin-American nations*, pp. 257-259.—"General Flores, introduced by the Brazilians, came into office in 1864, and declaring himself 'Provisional President', seems to have organized a fairly liberal kind of government, for under his auspices the country commenced to recover slowly from its painful trials and even to prosper. Shortly afterwards, however, General Flores entered into a war with Paraguay, having as his allies both Brazil and Argentine. In 1866 General Vidal became president, and two years afterwards General Flores was killed in an insurrection at Monte Video. One month after that General Lorenzo Batlle became President, but he was not allowed to remain in peace very long. In 1870 a new civil war broke out, which lasted several years, when a President, *mirabile dictu*, elected by both sides, came into power. Again, however, peace proved of only a transitory nature, for the representatives of the 'Reds' (*Colorados*), under the leadership of Colonel Latorre, broke out into rebellion, and made Pedro Varela President but deposed him the following year. Then Colonel Latorre proclaimed himself Dictator. With a rod of iron he ruled until 1880, when, throwing up the Presidency in disgust, and declaring that 'the Uruguayans were wholly ungovernable,' he relinquished the reins of office to Colonel Santos, who had risen from the ranks to become a creature of Colonel Latorre. He made an excellent deputy-tyrant. Numerous attempts to assassinate Colonel Santos finally resulted in his being seriously wounded, so that he was compelled to relinquish the Presidency, his place being taken by General Tajés. . . . General Tajés . . . did not reign very long, and was succeeded [March, 1890] by Dr. Herrera y Obes, [the first president of Uruguay whose term was undisturbed by armed insurrection]. In due course he gave way to General Idiarte Borda [1894], during whose Presidency the 'Whites' (*Blancos*) rose in rebellion, headed by Colonel Sarivia, the result of which was that Borda was assassinated on his return from the Cathedral on the anniversary of National Independence Day

[1897]. Borda was succeeded by Cuestas, who diplomatically divided the government into two sections, the Whites and the Reds, and, seeking to be 'all things to all men,' continued to keep peace for the time being. . . . Señor Cuestas was President for five and a half years, during which time he worked energetically for the good of his country."—P. F. Martin, *Through five republics*, pp. 362-364.—In 1904 a "Nationalistic" revolt under President Batle of Ordóñez disturbed the country (see below: 1904), but by 1905 peace was established.

1890.—Represented at First International American Conference. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

20th century.—Governmental provisions for education. See EDUCATION: Modern developments: 20th century: General education: Latin America.

1901-1906.—Participation in Second and Third International conferences of American Republics. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902; 1906.

1904.—Rebellion and prolonged civil war.—On January 8, 1904, the American minister at Montevideo reported by telegram to the State Department at Washington "that another crisis is at hand in Uruguay; that encounters have taken place between groups of 'Blanco,' and the Government forces, and that the former, who were neither concentrated nor well organized, have been dispersed. A number were killed and wounded. The Government is making an aggressive campaign and demands obedience to the constituted authority as a condition before peace negotiations will be entered into." This was the beginning of a state of civil war that was prolonged through nine months, with infinite harm to the country. When peace came, at the end of September, it was practically bought from the insurgents, the terms of submission, as officially announced, including the following: "Sixth. Incorporation into the army of all the chiefs and officers included in the amnesty law. Seventh. A mixed committee appointed by agreement by the Government and insurgents will distribute the sum of \$100,000 between the chiefs, officers, and soldiers of the rebel forces."

1907.—Administration of Williman.—"The administration of Claudio Williman, a leader of the *Colorado* party, who was inaugurated on March 1, 1907, was signalized by significant reforms. He soon issued a decree reorganizing the cabinet. A supreme court was established and other reforms carried out. . . . So carefully did President Williman husband the nation's revenues that he left in the treasury an unprecedented surplus of nine million pesos."—W. S. Robertson, *History of the Latin-American nations*, p. 268.

1910.—Agreement with Argentina concerning the River Plate. See ARGENTINA: 1910.

1910.—Represented at Fourth International American conference. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910.

1911.—Batle y Ordóñez, second term as president.—"On March 1, 1911, Batle y Ordóñez became president for the second time. [He had been president from 1905 to 1907.] Notable among plans that were formed for public improvement was a project for a splendid capitol. . . . Political persecutions ceased, freedom of the press was observed, and significant reforms were enacted. The government began a serious study of the social welfare of its citizens."—W. S. Robertson, *History of the Latin-American nations*, p. 268.

1915.—Viera made president.—"After his inauguration in 1915 President [Feliciano] Viera an-

nounced his intention to follow the policies of his predecessor. He sanctioned various bills that aimed to promote the social welfare of the Uruguayans. Among those was an act establishing an eight-hour day, a law containing regulations designed to prevent accidents to workmen, a law providing for industrial education in primary and secondary schools, a law concerning old-age pensions, a law providing for a national inheritance tax, and another law that established government control of telegraph and telephone lines."—W. S. Robertson, *History of the Latin-American nations*, p. 269.

1915.—Pan-American Conference. See U. S. A.: 1915 (August-October).

1916.—Treaty with Peru. See PERU: 1914-1916.

1917.—Election.—Part in World War.—"A general election was held in this republic on January 15. The result was curious. The Ministerialist, or so-called 'Official' Party secured 67 out of 123 seats in the Chamber of Deputies, but they received only a minority of the votes cast by the electors, that is only 63,514 as against 65,171 cast for the opposition. The new legislature was opened on February 15."—*Annual Register*, 1917, p. 334.—"In reply to the announcement of the United States government that war existed between it and the Imperial German Government, Baltasar Brum, the Uruguayan secretary of foreign relations, declared that his government protested against Germany's submarine policy, that while determined to maintain her neutrality, yet his nation expressed her 'sympathy and moral solidarity' with the United States cause. . . . On Oct. 7, 1917 in secret session both houses of the Uruguayan Congress voted by overwhelming majorities that diplomatic relations with Germany should be severed."—W. S. Robertson, *History of the Latin-American nations*, p. 269.

1919.—Presidential election.—New constitution adopted.—Baltasar Brum inaugurated president.—"After considerable discussion about constitutional reform both inside and outside of legislative halls, a Congress assembled at Montevideo for the express purpose of revising the constitution. On October 15, 1917 it adopted a new constitution. This went into effect on March 1, 1919—the very day on which Baltasar Brum was inaugurated president. Uruguay's second constitution preserved many features of the centralized form of government established in 1830. The chief administrative unit remained the department. . . . It provides that the President shall be chosen by direct popular vote. [See ELECTIONS, PRESIDENTIAL: South American republics.] Instead of a permanent committee of Congress it provides for a national council of administration, which is composed of nine members chosen by the people to serve for six years. The council is granted jurisdiction over all administrative matters which are not expressly reserved to the President or other authorities, such as public instruction, public works, labor, agriculture, charities and sanitation. It is to prepare the budget as well as supervise elections. . . . Local government is vested in representative assemblies and in autonomous administrative councils elected in the departments by popular vote. More than a score of articles are concerned with the rights and guaranties of citizens."—W. S. Robertson, *History of the Latin-American nations*, pp. 269-270.

1919.—Represented at Paris conference. See PARIS, CONFERENCE OF: Outline of work; also VERSAILLES, TREATY OF: Conditions of peace.

1919 (November).—Treaty with Paraguay. See PARAGUAY: 1919 (November).

1921.—Secretary Colby's diplomatic mission. See U. S. A.: 1921.

1922.—José Serrato elected president.—Reforms.—José Serrato, leader of the Colorado party was elected president on Nov. 26, 1922, and succeeded President Brum on Mar. 1, 1923. The year 1922 was marked by railway development, educational reform and social welfare legislation.—See also RAILROADS: 1912-1922.

USCOCKS.—"During the reign of Ferdinand [emperor, 1558-1564], several bodies of Christians, quitting the provinces which had been recently conquered by the Turks, obtained from the Austrian sovereigns a refuge at Clissa, in Dalmatia, under the condition of forming themselves into a frontier militia continually in arms against the infidels, and, from their emigration, received the name of Uscocks, which, in the language of the country, signifies wanderers. They fulfilled the purpose of their establishment; and, being at length expelled by the Turks, received a new asylum at Segna, a ruined fortress in Croatia, on the coast of the Ardiatic gulph. Here, their numbers increasing by the accession of Italian banditti and other marauders, they were rendered more formidable than before; for they no longer confined their predatory incursions to the land, but became pirates by sea. . . . Their audacity increasing with success and plunder, they pillaged, without distinction, the vessels of all the nations who traded in the Adriatic." They were attacked by the Turks and the Venetians, and the latter, at length, in the early part of the 17th century, forced the Duke of Styria, who had protected the freebooters, to allow their stronghold at Segna to be demolished. "The Uscocks, being transplanted to Carlstadt, soon lost their name and distinction."—W. Coxe, *History of the House of Austria*, v. 2, ch. 42.

USIPETES AND TENCTHERI.—The Usipetes and Tenctheri, two German tribes, whose home was on the lower course of the Rhine, north and south of the Lippe, being hard pressed by the Suevi, crossed the Rhine, 55 B.C., and began to spread themselves along the Valley of the Meuse. Cæsar marched against them with great promptitude, refused to parley with them, accused them of treacherous attempts to gain time, and was himself charged with wicked treachery, in seizing their chiefs who met him with pacific propositions. It is certain, at all events, that he was able to attack them when they were deprived of leaders, and to slaughter them with so little resistance that not one Roman soldier was killed. Those who escaped the sword were driven into the Rhine (probably at its point of junction with the Moselle) and almost the entire mass of 180,000 are said to have perished. The remnant took refuge with the Sicambri or Sigambri, on the farther shore of the Rhine. Cæsar demanded the surrender of

them, and, when refused, he caused his engineers to bridge the river in ten days, led his army across it and laid waste the country of the Sigambri. This was the first crossing of the Rhine by the Romans. The Suevi offered battle to the Roman invaders, but Cæsar prudently returned, and destroyed the bridge.—Cæsar, *Galic Wars*, bk. 4, ch. 1-19.—See also GERMANY: B. C. 12-9; B. C. 58-51; 3rd century.

USKUB, Uscup, or Skopia, town of Serbia, capital of the department of the same time, 160 miles northwest of Salonika, on the Vardar river. It was taken from the Turks during the Balkan War and was ceded to Serbia in 1912. During the World War it was captured by the Bulgars in 1915 and retaken by the Serbians in 1918. See SERBIA: 1200-1321; TURKEY: 1912-1913; WORLD WAR: 1915; V. Balkans: b, 4; 1918; V. Balkan theater: c, 8, iii.

USURY. See CAPITALISM: 12th-16th centuries; also JEWS: England: 11th century; FRANCE: 12th-15th centuries.

UTAH, southwestern state of the United States. It has an area of 84,090 square miles and a population, in 1920, of 449,446. Its territory is cut up by numerous mountain ranges of which the most important is the Wasatch range ("the backbone of the state"). On the western side of this are the Great Salt Lake and the desert. Although it is primarily an agricultural state, mining and stock-raising are also of considerable importance. (See U. S. A.: Economic Map.) Only about twenty-five per cent of the church membership is non-Mormon.

Origin of name.—"The word Utah originated with the people inhabiting that region. Early in the 17th century, when New Mexico was first much talked of by the Spaniards, the principal nations of frequent mention as inhabiting the several sides of the locality about that time occupied were the Navajos, the Yutas, the Apaches, and the Comanches. Of the Utah nation, which belongs to the Shoshone family, there were many tribes. . . . The early orthography of the word Utah is varied." "Yuta" "was a common spelling by the early Spaniards, and might be called the proper one. Later we have 'Youta,' 'Eutaw,' 'Utaw,' and 'Utah.'"—H. H. Bancroft, *Utah (History of the Pacific states, v. 21, footnote, p. 34)*.—See also INDIANS, AMERICAN: Cultural areas in North America: Southwest area; SHOSHONEAN FAMILY.

1540-1776.—Spanish explorers.—"As Francisco Vasquez de Coronado was journeying from Culiacan to the North and East in 1540 he rested at Cibola, and while waiting for the main army to come forward expeditions were sent out in various directions. One of these consisting of twenty men under Pedro de Tobar . . . proceeded northwestward. . . . Among other matters of interest information was here given of a large river [the Colorado] yet farther north. . . . Whereupon Captain García Lopez de Cárdenas was sent with twelve men to explore it. . . . A more extended and pronounced exploration was that of two Franciscan friars . . . Francisco Atanasio Domingues and Silvestre Velez de Escalante who set out from Santa Fé July 26, 1776 for the purpose of discovering a direct route to Monterey. . . . The party consisted in all of nine persons. . . . [After nearly a month's travel] they proceeded westward following up the Uintah, across Duchesne, and over the mountains with no small difficulty, to a river which they called Purísima and which they followed till on the 23rd they came in sight of the lake which the natives

called Timpanogos but which is known now as Utah Lake. . . . The Spaniards were . . . told by the Yutas of a large and wonderful body of water toward the northwest and this is what Father Escalante reports of it. . . . 'The other lake with which this communicates,' he says, 'occupies as they told us, many leagues, and its waters are injurious and extremely salt; because the Timpanois assure us that he who wets any part of his body with this water immediately feels an itching in the wet part. We are told that in the circuit of this lake there live a numerous and quiet nation called Pauguampe, which means in our language sorcerers; they speak the Comanche language, feed on herbs and drink from the various fountains or springs which are about the lake.'"—H. H. Bancroft, *Utah (History of the Pacific states, v. 21, pp. 8-9, 11, 15)*.

1825-1843.—Fur hunters and trappers.—"Half a century passes and we find U. S. fur hunters standing on the border of the Great Salt Lake, tasting its brackish waters, and wondering if it is an arm of the sea. First among these, confining ourselves to authentic records, was James Bridger, to whom belongs the honor of discovery [1825]. . . . All [trappers] were interested to know if there emptied into this sheet other streams in which they might find beavers, and if there was an outlet; hence in the spring of 1826 four men explored the lake in skin boats. . . . During this memorable year of [1825] . . . William H. Ashley of the Rocky Mountain Fur Co. at the head of one hundred and twenty men and a train of well packed horses came out from St. Louis through South Pass, and down by Great Salt Lake to Lake Utah. There he built a fort [Fort Ashley]. . . . From Great Salt Lake in August 1826 Jedediah S. Smith set out on a trapping and Exploring tour of fifteen men. Proceeding southward he traversed Utah Lake called for a time Ashley Lake [and finally appeared in California]. . . . From southeast to northwest a portion of Utah was traversed in the autumn of 1830 by a trapping party under William Wolfskill. . . . During the winter of 1832 B. L. E. Bonneville made his camp on the Salmon River and in July following was at the Green River rendezvous. Among the several trapping parties sent by him in various directions was one under Joseph Walker who with some thirty six men . . . went to trap on the streams falling into the Great Salt Lake. . . . The early immigrants to Oregon did not touch this territory and those to California via Fort Bridger for the most part merely passed through leaving no mark. . . . In 1843 John C. Fremont followed the emigrant trail through the south pass and on the 6th of September stood upon an elevated peninsula on the east side of the Great Salt Lake. . . . He was in no sense a discoverer and though he says he was the first to embark on that inland sea he is again in error."—H. H. Bancroft, *Utah (History of the Pacific states, v. 21, pp. 18-25, 28)*.

1846.—Mormon plans for moving westward.—"Mormon battalion in the Mexican War.—The first permanent settlement in Utah was made by the Mormons. By 1846 persecutions in Missouri and Illinois had caused their leaders to make serious plans for moving into the far west. (See MORMONISM: 1830-1846.) "President Young . . . wrote to Elder J. C. Little who was presiding over the Saints in the New England States on the 20th of January 1846 as follows: 'If our government should offer facilities for emigrating to the western coast embrace those facilities if possible. . . .' On receipt of this letter Elder Little . . . obtained an interview with President Polk, and also called upon

Hon. Amos Kendall, Ex-Postmaster General, who promised to take an interest in his case and see the President about it. Two days subsequently he was informed by Mr. Kendall that the President designed to take possession of California by the aid of the 'Mormons' who would receive orders to push through, take the country and fortify it in the name of the United States. . . . Before leaving, however, the Elder learned in a subsequent interview that the design of the President had been changed. . . . He also learned that the President had instructed the Secretary of War to make out dispatches to Colonel Kearney, commander of the Army of the West, relative to the contemplated Mormon Battalion. . . . Acting upon orders, Captain Allen proceeded to Mount Pisgah one of the camps of the Saints and explained the object of his visit by issuing the following: 'I have come among you instructed by Colonel S. F. Kearney . . . to visit the Mormon camps and to accept the service for twelve months of four or five companies of Mormon men who may be willing to serve their country for that period in our present war with Mexico; this force to unite with the Army of the West at Santa Fe and be marched thence to California, where they will be discharged. . . .' The Saints were in peculiar circumstances. They were scattered all the way from Nauvoo to Council Bluffs and even west of there for some had crossed the Missouri. . . . They were destitute. They had hostile Indians in advance of them and more hostile Missouri and Illinois mobocrats in their rear. . . . On receiving the call President Young and those associated with him in council decided almost instantly that the Battalion should be raised. . . . On the 11th day of July, 1846, four companies of over four hundred men, all told, and part of the fifth were mustered into the service of the United States, at Council Bluffs, Iowa territory. . . . The fifth company was soon afterwards filled."—D. Tyler, *Concise history of the Mormon battalion in the Mexican War*, pp. 111-112, 114-118.

1847.—Migration of Mormons from Nauvoo and their settlement on the Great Salt Lake. See MORMONISM: 1846-1848.

1847-1849.—Reasons of Mormon settlement.—Foundations for a strong community laid.—Utah was chosen by the Mormons as a refuge "in preference to Oregon or California, because the saints wanted to be left to themselves until they would be so strong they need fear no mobs. It was chosen because it was unoccupied and because it was too uninviting to be soon desired by others. . . . For two years after the advent of the pioneers in the Great Basin, they had no need to consider any problems connected with the establishment of civil government, nor any problem concerning their immediate intercourse with other people except with a few travelers going through the settlements. The organization and institutions of the church met all requirements. For a lawmaking power there was the edict of Brigham Young. For courts they had a complete system—bishops' courts corresponding to justice courts, a high court corresponding to a county court, and the first presidency corresponding to a county court. For a law-executing arm there was the same military organization they had in Nauvoo, and still called the Nauvoo Legion. For revenue they had church tithes and offerings. In these two years the foundations were laid for the future economic prosperity of the saints, and the policy of territorial expansion peculiar to the Mormons was inaugurated. With respect to this policy we need to make some explanation. The Mormons might have expanded

gradually as pressure of population would demand. But that would not serve their purpose as well as a rapid settlement of strategic points within the limits marked out by Brigham Young for his empire. This empire took in what is now Utah, Nevada, most of New Mexico and Arizona, and parts of Colorado, Wyoming, and California; included a seacoast, the harbor of San Diego, and the freedom of the seas for a Mormon fleet. Too many immigrants were coming west to leave the most desirable places within this area unoccupied if the saints wanted to be the first settlers."—*Utah (Annual Report of the American Historical Association, 1917, pp. 335-336)*.

1848.—Acquisition from Mexico. See MEXICO: 1848.

1849-1850.—Hardships of early settlers.—Proposed state of Deseret.—Organization of territory of Utah.—During the winter of 1848-1849 there was such a scarcity of food among the settlers that many lived on roots, thistles and even on rawhides. This famine lasted until the harvest of 1849 which was unusually plentiful. "Until the year 1849 the Mormons were entirely under the control of their ecclesiastical leaders, regarding the presidency not only as their spiritual head, but as the source of law in temporal matters. . . . There was already in their midst a small percentage of gentile citizens, gathered . . . from nearly all the civilized nations of the earth. . . . Not infrequently litigation arose among the gentiles, or between Mormon and gentile; and though strict justice may have been done by the bishops, it was difficult for the latter to believe that such was the case. . . . Thus it became advisable to establish for the benefit of all some judicial authority that could not be questioned by any, whether members of the church or not, and this authority must be one that, being recognized by the government of the United States, would have the support of its laws and the shield of its protection. Further than this, if the Mormons neglected to establish such government, the incoming gentiles would do so ere long. Early in 1849, therefore, a convention was summoned of 'the inhabitants of that portion of Upper California lying east of the Sierra Nevada Mountains,' and the 4th of March assembled at Salt Lake City. A committee was appointed to draught a constitution, under which the people might govern themselves until congress should otherwise provide by law. A few days later the constitution was adopted, and a provisional government organized, under the name of the State of Deseret. An immense tract of country was claimed, extending from latitude 33° to the border of Oregon, and from the Rocky Mountains to the Sierra Nevada, together with a section of the territory now included in southern California, and the strip of coast lying between Lower California and 118° 30' of west longitude. The seat of government was to be at Salt Lake City. [In July Almon W. Babbitt was elected delegate to Congress, and that body was petitioned to admit the provisionally organized state into the Union. The delegate and his petition met with a cool reception at Washington; but in September, 1850, Congress passed an act organizing the territory of Utah, and Brigham Young was appointed Governor.] The act to establish a territorial government for Utah placed the southern boundary at the 37th parallel, the section between that limit and the 33d parallel being included in the Territory of New Mexico [organized at the same time], with the exception of the part transferred to California, by which State Utah was to be bounded on the

west. On the north, Oregon was to remain as the boundary, and on the east the Rocky Mountains."—H. H. Bancroft, *Utah (History of the Pacific states, v. 21, ch. 17)*.—See also U.S.A.: 1850 (April-September).

1849-1855.—Gold fever.—Growth of towns.—Adoption of spiritual marriages.—When the first news of gold in California reached Utah, Brigham Young counselled the Mormons not to go, but when fuller accounts were brought back by the men returning from the Mexican battalion, people prepared to leave. By 1849 a dozen families had departed and the following year many more emigrated to California. Between 1849 and 1851 numerous towns were founded: Centerville (1849), Ogden (1850), Provo (1850), Evansville (1851).

territorial governor [1851-1857] and by 1857, when a Democratic President showed the disposition to apply the usual temporal rule of rotation to the office, Young was rebellious, and the whole Mormon population, refusing allegiance to any one but their consecrated head, began to drill and gird on their armor for resistance. Judges of the territorial courts had to flee for their lives; justice, which had long been tampered with to absolve church members from punishment, was deprived of process. It was charged that the Mormon hierarchy had leagued with Indian tribes to impel them to atrocities against the Gentile inhabitants, while their own Danites, or destroying angels, were secretly set apart and bound by horrid oath to pillage and murder such as made themselves obnoxious to the

MORMON TEMPLE AND TABERNACLE, SALT LAKE CITY, UTAH

The temple, in the foreground, was built 1853-1893. The tabernacle is noted for its unique architecture and acoustics.

In 1850 the population of Utah was 11,380. In that year the *Deseret News* was established at Salt Lake City. (See also MORMONISM: Coöperative polity.) "The Mormons . . . officially adopted the doctrine of 'spiritual marriages' by an ordinance of 1851, which incorporated the Church of Jesus Christ of Latter-Day Saints. The transition into a territory did not affect polygamy, because the church had sufficient strength to control the offices and acts of the territory. In 1855 an act to revise the laws in force, duly passed by the territorial legislature and signed by the governor, Brigham Young, also prophet of the Mormon church, openly permitted polygamy as a legal practice."—E. E. Sparks, *National development, 1877-1885*, p. 259.

1857-1859.—Mormon rebellion.—Mountain Meadow massacre.—"To this would-be 'State of Deseret' President Fillmore had assigned Brigham Young, the spiritual head of the church, as terri-

theocracy. . . . [In 1857] President Buchanan appointed as the new governor of Utah Alfred Cumming, a man combining courage with discretion, and filled the judicial and other vacancies which existed. To protect those new officers and aid them in discharging their functions, he ordered a detachment of regulars to accompany them to the Salt Lake region. The need of this was soon apparent. Early in September, 1857, a part of the troops left Fort Laramie, and on the 15th of the same month Brigham Young, parading audaciously the commission he still held from the United States, forbade all armed forces from entering the territory, and called upon his people to defend themselves against the 'armed mercenary mob' of invaders. His legislature, meeting later, sustained him. . . . A Mormon force had meanwhile advanced to impede the approach of . . . [the] regulars. . . . The dispatches of General Johnston,

who commanded this important post . . . showed the President that unless a large force was quickly sent out, a long conflict would be inevitable. Buchanan and his Secretary of War asked from the present Congress ten new regiments, of which five might be used to bring the Mormons to subjection. But the Lecompton controversy was raging; and the use of Federal troops to put down the free-State movement in Kansas had caused such mistrust and irritation that none but the President's unshaken supporters felt inclined to place more troops at his disposal. The bill for an army increase was lost, though both Houses passed a measure authorizing the President to accept for the Utah disturbances two regiments of volunteers. The volunteers were not called out; but Buchanan mustered a military force out of the regulars strong enough to overawe and overpower Utah's rebellious inhabitants. Two peace commissioners also bore to Utah a proclamation from the President, dated April 6th, which offered free pardon, except to those who persisted still in disloyal resistance. Governor Cumming, upon his arrival, made a like announcement. These conciliatory efforts, backed by an irresistible show of military strength, brought the Mormons to a speedy acknowledgment of allegiance. . . . On the last day of . . . [June], the new governor, accompanied by Brigham Young, came back to Salt Lake city to assume functions which were fully recognized. . . . In military circles it was still generally believed that . . . force must be used. . . . Such views were entertained by General Albert Sidney Johnston, the military commander at Utah, destined to later distinction in the art of war. But Cumming, the governor, who had the temporizing instincts of a civilian, thought differently. The two came into collision when Mormons were brought to trial in the courts for a slaughter of emigrants in 1857, known as the Mountain Meadow massacre. [This was the massacre, by Indians and Mormons, of a party of 136 emigrants, from Arkansas and Missouri, who were passing through Utah, to California. It occurred in September, 1857, in a valley called the Mountain Meadows, about 300 miles south of Salt Lake City. Only 17 young children were saved from the slaughter. The Mormons protested that the massacre was the action of individuals and not sanctioned by the church.] At the request of the Federal judge, Johnston furnished a military detachment to guard the prisoners; and when Cumming, the governor, interposed because of the angry remonstrance of the people, Johnston would not remove them. Buchanan, being appealed to, sustained the governor's authority."—J. Schouler, *History of the United States*, v. 5, ch. 22.

ALSO IN: H. H. Bancroft, *History of the Pacific states*, v. 21, ch. 18-21.—W. P. Johnston, *Life of General Albert Sidney Johnston*, ch. 13.—Mrs. T. B. H. Stenhouse, *Tell it all*, ch. 23.—*Report of United States Secretary of the Interior, 36th Congress, 1st session, Senate Executive Document*, v. 11, no. 42.

1861-1865.—Mines and telegraphs.—Attempt to secure admission as a state.—Attitude toward the Civil War.—In October, 1861, a telegraph line was completed to Salt Lake City and Brigham Young telegraphed to Lincoln "Utah has not seceded." Two years later General P. E. Conner while prospecting in Bingham canyon located the first mine. "At this period another effort was being made to obtain admission as a state, and on the 17th of March, 1862, the legislature being then in session, a proclamation was issued, in

which, styling himself governor-elect, Brigham convened the general assembly and ordered the election of Senators to congress. . . . The choice for Senators fell on William H. Hooper and George Q. Cannon. . . . The two elders labored diligently in their cause, but failed of success. It was claimed, however, on the part of the Mormons, that they won the respect of congress by accepting their defeat and adhering to the union at a time when it was believed throughout Europe that the war would result in favor of the south, and when the sympathies of England and France were strongly in favor of the southern states. . . . Though the saints may have had some few friends in congress at this time, it is certain that they had numerous and bitter enemies, who were constantly working against their interests. In April 1862 a bill was introduced by Justin S. Morrill of Vermont 'to punish and prevent the practice of polygamy in the territories of the United States, and for other purposes, and to disapprove and annul certain acts of the territorial legislature of Utah.' The objectionable acts referred to included all those which tended to establish or support polygamy, and especially an ordinance incorporating the church of Jesus Christ of Latter-day Saints, passed in 1851, and reenacted in 1855, whereby all members of the church were included in the body corporate, trustees being appointed to control the church property, and church empowered to make laws with regard to marriage. . . . Ostensibly for protection against Indians, though in fact because the mail and telegraph line were not considered secure in the hands of the saints, and perhaps also for the purpose of holding the territory under military surveillance, Colonel Connor was ordered to Utah in May 1862, his command consisting of the third California infantry and a part of second California cavalry, afterward joined by a few companies from Nevada, and mustering in all about seven hundred strong."—H. H. Bancroft, *History of Utah*, pp. 605-607, 611.—"In 1862, a constitution for the State of Deseret was adopted, and upon the application for admission being rejected, the machinery for a State government was created and continued in operation for at least 6 years. Once a year 'Governor' Young of the 'State' of Deseret would read his message to the 'State' legislature, which would solemnly re-enact the laws that had been passed by the Territorial legislature, and adjourn."—*Utah (Annual Report of American Historical Association, 1917, p. 341)*.—In spite of the presence of Conner's troops the state continued to sympathize with the Union cause until the end of the war in 1865.

1867-1896.—Organization of the "Liberal party."—Its purpose.—Union Pacific railroad.—Prosecutions against polygamy.—"In 1867 there were comparatively few Gentiles either in Salt Lake City or the Territory. After business hours certain Gentile business men were in the habit of meeting at the office of Abel Gilbert, a merchant. . . . At these meetings the state of affairs in Utah was often discussed. . . . At one of these meetings in 1867 . . . [R. N. Baskin] stated that if . . . [the non-Mormons] intended to stay in the Territory . . . [they] should organize to oppose the political control of the priesthood. . . . [The group nominated Mr. McGroarty as candidate for the office of delegate to Congress.] At the election McGroarty received 105 votes. McGroarty contested Hooper's seat, the main purpose of the contest being to direct the attention of Congress and the nation to existing conditions in Utah. . . . Before the next election for delegate to Congress a convention

of Gentiles convened, . . . organized more formally a political party and christened it the 'Liberal Party.' That party continued to gain strength from its organization until the admission of the Territory as a state, when it was dissolved [the following year, 1896]."—R. N. Baskin, *Reminiscences of early Utah*, p. 23.—Mining really began, with the advent of the railroad in 1869 and 1870. Brigham Young had systematically discouraged mining on the ground that food was more important to a new state, and consequently the people should hold to agricultural pursuits. Furthermore, he wished to avoid the undesirable immigration which attends the opening of mining fields. But the Union Pacific railroad, building from Omaha westward and Sacramento eastward, met on May 10, 1869 at Promontory. The junction was almost immediately moved to Ogden and the Utah Central was built in 1870 connecting them. Brigham Young became a director of the Union Pacific and built nearly a hundred miles of roadbed. "By act of June 23, 1874, Congress reorganized the territorial courts of Utah and retained additional supervision over the acts of the territorial legislature; writs of error were allowed, to bring a person convicted of bigamy from the territorial supreme court to the United States Supreme Court. Under this law, a case appeared in the latter court and a decision in 1879 disposed of the argument that federal interference with polygamy was an infringement on freedom of religious worship. Nevertheless, difficulty was encountered in prosecuting persons accused of bigamy under the law of 1862 because a wife could not be compelled to testify against her husband. Prosecution was also delayed because the federal and territorial courts had not concurrent jurisdiction. Mormon lawyers claimed that the phrase 'every person having a husband or wife living who marries another' did not cover a simultaneous marriage to two or more wives. Only three final convictions were obtained, it was claimed, between 1862, when the first anti-polygamy law was passed, and 1882, when it was amended to correct these deficiencies."—E. E. Sparks, *National development, 1877-1885*, pp. 260-261.

1882-1893.—Edmunds Act and its enforcement.—Abandonment of polygamy by the Mormons.—Proclamation of amnesty for past offenses against the law.—In March, 1882, an act of Congress (known as the Edmunds Act) was passed for the purpose of making efficient the law against polygamy in the territories, which had stood among the statutes of the United States for twenty years, without power on the part of the Federal courts or officials in Utah to enforce it, as against the Mormon juries. Besides repeating the penalties prescribed in the Act of 1862, the Act of 1882 provides, in its eighth section, that "no polygamist, bigamist, or any person cohabiting with more than one woman, and no woman cohabiting with any of the persons described as aforesaid in this section, in any Territory or other place over which the United States have exclusive jurisdiction, shall be entitled to vote at any election held in any such Territory or other place, or be eligible for election or appointment to or be entitled to hold any office or place of public trust, honor, or emolument in, under, or for any such Territory or place, or under the United States." The ninth and last section is as follows: "Sec. 9. That all the registration and election offices of every description in the Territory of Utah are hereby declared vacant, and each and every duty relating to the registration of voters, the conduct of elections, the receiving or rejection

of votes, and the canvassing and returning of the same, and the issuing of certificates or other evidence of election, in said Territory, shall, until other provisions be made by the legislative assembly of said Territory, as is hereinafter by this section provided, be performed, under the existing laws of the United States and said Territory, by proper persons, who shall be appointed to execute such offices and perform such duties by a Board of five persons, to be appointed by the President, by and with the advice and consent of the Senate, not more than three of whom shall be members of one political party, and a majority of whom shall be a quorum. The members of said Board so appointed by the President shall each receive a salary at the rate of three thousand dollars per annum, and shall continue in office until the legislative assembly of said Territory shall make provision for filing said offices as herein authorized. The Secretary of the Territory shall be the secretary of said Board and keep a journal of its proceedings, and attest the action of said Board under this section. The canvass and return of all the votes at elections in said Territory for members of the legislative assembly thereof shall also be returned to said Board, which shall canvass all such returns and issue certificates of election for those persons who, being eligible for such election, shall appear to have been lawfully elected, which certificates shall be the only evidence of the right of such persons to sit in such assembly: Provided, That said Board of five persons shall not exclude any person otherwise eligible to vote from the polls on account of any opinion such person may entertain on the subject of bigamy or polygamy, nor shall they refuse to count any such vote on account of the opinion of the person casting it on the subject of bigamy or polygamy, but each house of such assembly, after its organization, shall have power to decide upon the elections and qualifications of its members. And at or after the first meeting of said legislative assembly whose members shall have been elected and returned according to the provisions of this act, said legislative assembly may make such laws, conformable to the organic act of said Territory, and not inconsistent with other laws of the United States, as it shall deem proper concerning the filling of the offices in said Territory declared vacant by this act." "Under this act the commissioners revised the registration of voters in the territory, appointed election officers, and supervised an election of a territorial delegate to Congress, November 7, 1883. Although they excluded about twelve thousand men and women from voting because they practised polygamy, the Mormon delegate was elected over the Gentile by a vote of 23,000 to 4,000. The Mormons also carried the elections for local officers, although the officials elected were required to be monogamists. In 1884 the commissioners reported that polygamous relations had decreased in the cities of the territory but not in the country. Under supervision of this 'Utah commission' a Gentile jury was formed by putting to every venireman the question, 'Do you believe it right for a man to have more than one living and undivorced wife at the same time?' The Mormons unanimously replied 'Yes' and were excluded for cause. Ruder Clawson was tried for bigamy before this kind of a jury in 1884. . . . The trial caused intense interest throughout the country, and the decision of the supreme court of the territory, followed by that of the United States in 1884 confirming the sentence of Clawson, was a triumph for federal regulation of polygamy in the terri-

torial courts. Another prominent Mormon, Angus M. Cannon, was sentenced under the Edmunds act by the territorial courts for the practice of polygamy; he appealed the case; and in 1885 the Supreme Court of the United States upheld the constitutionality of the act. In 1888 the commission reported over a thousand convictions under the Edmunds act."—E. E. Sparks, *National development, 1877-1885*, pp. 263-264.—"Public opinion did not stop . . . [with prosecution] and the Edmunds-Tucker act of March 3, 1887, authorized the Federal government to seize and administer the property of the corporation of the Church of Jesus Christ of Latter-Day Saints. Harsh as was this measure, which might be used as a precedent for confiscation of other church property, it passed by large majorities. This determined action had its effect, and in July, 1887, the citizens of Utah framed a constitution in which penalties were prescribed for polygamy. In addition, it was provided that the constitution should not be changed by any subsequent act of the state without the consent of Congress. The public at large was slow to be convinced of the sincerity of the Mormons; there was a suspicion that, as soon as Utah was admitted as a separate state, officers would be elected who would ignore the law. As it was plainly unconstitutional for a state to bind itself in advance by a proviso requiring congressional sanction, for all states as sovereign units must stand on a basis of equality, the action of the framers was regarded as hypocrisy. Opponents cited the missionary activity of the Mormon church which, in the very year of the constitutional convention, at its semiannual conference denounced the enforcement of the law against polygamy and termed it persecution. This perverse position, however, was speedily abandoned, and in 1890, Woodruff, the president of the Church of the Latter-Day Saints, declared that, inasmuch as laws had been enacted by Congress forbidding plural marriages, and as these laws had been declared constitutional he intended to submit to them, and to use all his influence with the members of his church to persuade them to follow his example. This statement [known as the Woodruff manifesto] was speedily indorsed at a general conference of the church, October 6. In the same year the Gentiles won in the local elections in Salt Lake City. For two years longer the sincerity of the Mormons was put to the test. Finally convinced that the Mormons would abide by the law, President Harrison on January 4, 1893, issued a proclamation granting amnesty to all persons liable to the penalties of the act of 1882 who, since November 1, 1890, had abstained from unlawful cohabitation. Congress also, in the same year, restored the escheated funds to the church. With polygamy thus put under the ban, Utah had better claims to become a state."—D. R. Dewey, *National problems, 1885-1897*, pp. 159-160.—Following is the proclamation issued by President Harrison: "Whereas Congress, by a statute approved March 22, 1882, and by statutes in furtherance and amendment thereof, defined the crimes of bigamy, polygamy, and unlawful cohabitation in the Territories and other places within the exclusive jurisdiction of the United States and prescribed a penalty for such crimes; and Whereas, on or about the 6th day of October, 1890, the Church of the Latter-Day Saints, commonly known as the Mormon Church, through its president, issued a manifesto proclaiming the purpose of said church no longer to sanction the practice of polygamous marriages and calling upon all members and adherents of said church to obey the laws of the

United States in reference to said subject-matter; and Whereas it is represented that since the date of said declaration the members and adherents of said church have generally obeyed said laws and have abstained from plural marriages and polygamous cohabitation; and Whereas, by a petition dated December 19, 1891, the officials of said church, pledging the membership thereof to a faithful obedience to the laws against plural marriage and unlawful cohabitation, have applied to me to grant amnesty for past offenses against said laws, which request a very large number of influential non-Mormons, residing in the Territories, have also strongly urged; and Whereas, the Utah Commission, in their report bearing date September 15, 1892, recommended that said petition be granted and said amnesty proclaimed, under proper conditions as to the future observance of the law, with a view to the encouragement of those now disposed to become law abiding citizens; and Whereas, during the past two years such amnesty has been granted to individual applicants in a very large number of cases, conditioned upon the faithful observance of the laws of the United States against unlawful cohabitation; and there are now pending many more such applications: Now therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested, do hereby declare and grant a full amnesty and pardon to all persons liable to the penalties of said act by reason of unlawful cohabitation under the color of polygamous or plural marriage, who have since November 1, 1890, abstained from such unlawful cohabitation; but upon the express condition that they shall in the future faithfully obey the laws of the United States hereinbefore named, and not otherwise. Those who shall fail to avail themselves of the clemency hereby offered will be vigorously prosecuted. In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this 4th day of January, in the year of our Lord 1893, and of the Independence of the United States the 117th. Benjamin Harrison."

1894-1895.—Provision for admission to the Union as a state. See U.S.A.: 1894-1895.

1895-1896.—Prohibition of polygamous marriages.—Proclamation of admission to the Union.—On Jan. 4, 1896, a proclamation by the president of the United States, after reciting the provisions of the act of Congress approved July 16, 1894, and the action taken by a convention of the people of Utah, held in accordance with the said act, in March, 1895, which convention "did, by ordinance irrevocable without the consent of the United States and the people of said State, as required by said act, provide that perfect toleration of religious sentiment shall be secured and that no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship, but that polygamous or plural marriages are forever prohibited," thereupon declared and proclaimed the creation of the state of Utah and its admission into the Union to be accomplished. The constitution of the new state had some radical features, providing for an eight-hour labor day, and giving to women equal rights with men in suffrage and in eligibility to public office.—See also SUFFRAGE, WOMAN: United States: 1851-1920.

1896.—Industrial arbitration board created. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1886-1920.

1900.—Initiative adopted. See INITIATIVE AND REFERENDUM: Development in the United States.

1902.—Law limiting hours of adult labor in mines. See LABOR ORGANIZATION: United States: 1902.

1913-1920.—Legislation.—Part in World War.—Irrigation.—In 1913 Utah passed a mothers' pension act and an indeterminate sentence law. In 1917 a budget system was adopted, an industrial commission was created and a workmen's compensation law was passed. The state furnished 17,361 men for service in the World War or .46% of the whole force. The Eighteenth Federal Amendment (Prohibition) was ratified in 1919. A number of educational reforms were carried through in 1919 and by 1920 legal provisions had been made for public schools, including kindergartens, for all children from four to eighteen, and for supervision of the activities of children of school age throughout the entire year. The most important irrigation undertaking in the state, the Strawberry project, which had been begun in 1906 was completed in 1918 and by 1920 a total of 70,000 acres were irrigated from it.

1915.—Eccles case.—“When the present United States Senator, Reed Smoot, was elected from Utah [written in 1916], it was charged that the Mormons were again practising polygamy, and a committee of the Senate investigated the charge and returned a majority report to the Senate that the Mormons were guilty and that Reed Smoot should be refused his seat. Among the witnesses called to testify before the committee was Margaret Geddes Eccles, who was . . . [declared] to be the third wife of a prominent Mormon polygamist named David Eccles. She swore that she was not his wife, and that he was not the father of her son. By so doing she helped to protect the Mormon Church, but she swore away her son's right to his share in the Eccles estate, which was valued at twenty-five million dollars. When Eccles died . . . without leaving a will, the other heirs prepared to divide the inheritance without providing for Margaret Geddes Eccles and her child. She entered the suit [in 1915]. In that suit Margaret Geddes Eccles swore that she had committed perjury at Washington and that she had been married, as a plural wife, to David Eccles by Apostle Merrill of the Mormon Church. There are twelve apostles, and they are the governing body of the church, by whom, and from whose ranks, the president of the church and his two councilors are elected. Senator Reed Smoot . . . [was] one of these twelve apostles. The secretary of the president swore that the marriage of Margaret Geddes Eccles to David Eccles had been recognized by the presidency of the church as authentic.”—*Liberty in Utah (Century, January, 1916)*.

UTAHS, UTES, PIUTES, North American Indian Tribe. See SHOSHONEAN FAMILY.

UTICA, city of ancient Africa, about fifteen miles northwest of Carthage. “The most ancient Phœnician colonies were Utica, nearly on the northernmost point of the coast of Africa, and in the same gulf (now known as the gulf of Tunis) as Carthage, over against Cape Lilybæum in Sicily, —and Gades, or Gadeira, on the south-western coast of Spain; a town which, founded perhaps

near one thousand years before the Christian era, has maintained a continuous prosperity, and a name (Cadiz) substantially unaltered, longer than any town in Europe. How well the site of Utica was suited to the circumstances of Phœnician colonists may be inferred from the fact that Carthage was afterwards established in the same gulf and near to the same spot, and that both the two cities reached a high pitch of prosperity.”—G. Grote, *History of Greece, pt. 2, ch. 18*.

Relations to Carthage. See CARTHAGE: Dominions.

Taken by Agathocles. See SYRACUSE: B. C. 317-289.

Siege in the Second Punic War. See PUNIC WARS: Second.

Curio's defeat.—Curio, the legate or lieutenant sent first by Cæsar to Africa (B. C. 49), to attack the Pompeian forces in that quarter, undertook with two legions to reduce the city of Utica, which had become the capital of the Roman province. Juba, king of Numidia, who was personally hostile to both Curio and Cæsar, came to the assistance of the Pompeians and forced Curio to withdraw from its besieging lines into the neighboring Cornelian camp, which was a famous military entrenchment left by Scipio Africanus. There he might have waited in safety for reinforcements; but the wily Numidian tempted him out by a feigned retreat and then overwhelmed him. Curio and most of his men were slain.—Based on C. Merivale, *History of the Romans, ch. 16*.

Last stand of the opponents of Cæsar. See ROME: B. C. 47-46.

Later history.—Utica was the seat of a bishopric of the African church and was the scene of many martyrdoms in the third century. The Vandals under Genseric captured it in 439, but it was retaken by the Byzantine empire in 534. In 698 the Arabs seized the city and depopulated it.

UTRECHT, capital of the province of the same name in the Netherlands, twenty-two miles south-east of Amsterdam. It is the seat of a famous university. In 1921 the population of the province was 351,279, and that of the city 140,309. See NETHERLANDS: Map.

Episcopal principality.—“At the last ford of the Rhine a hamlet had in Roman times been built, possibly a fort also. Nothing is preserved regarding it but the name, which, in the mutations of language, passed from Ultrajectum into Utrecht. Towards the conclusion of the 7th century, Clement Willebrod, an English priest, who had been educated at the monastery of Ripon, coming as a missionary into those parts, succeeded, with the aid of eleven of his fellow-countrymen, in winning over the Frisian people to the Christian faith. He fixed his abode at Utrecht, of which he was afterwards appointed bishop; and gifts of land, at the time of little worth, were made to his successors by Pepin and Charlemagne. Such was the commencement of the temporal grandeur of the prince-bishops, whose dynasty attained to a power little less than sovereign during the middle ages. . . . With ready access to the sea, and not without an early disposition towards these pursuits which their kinsmen of the Rhineland towns were beginning to follow, the inhabitants of Utrecht soon became

good sailors and good weavers, and their city throve apace. Enriched by successive grants of privileges and lands, the bishops of Utrecht gradually became powerful feudal lords."—W. T. McCullagh, *Industrial history of free nations*, v. 2, ch. 8.

1456.—**Bishopric grasped by the House of Burgundy.**—"Utrecht was still a separate state, governed by its sovereign bishop, who was elected by the votes of the chapter, subject to the approval of the Pope. On the vacancy which occurred towards the end of the year 1455, the choice of the canons fell upon Gisbert van Brederode, who had previously been archdeacon of the cathedral, and was held in general esteem amongst the people as well as the clergy. The Duke of Burgundy coveted so rich a prize, rather for its political importance, however, . . . than for any direct or immediate gain." The Duke appealed to Rome; Gisbert was put back into his archdeaconry, with an annuity for life, and David, a natural son of Duke Philip, was made bishop. "Thus the foundation was laid for the permanent union of Utrecht to the other provinces, although its final accomplishment was destined to be deferred yet many years."—W. T. McCullagh, *Industrial history of free nations*, v. 2, ch. 10.

1712-1714.—**Treaties which ended the War of the Spanish Succession: Peace of Utrecht and the Treaty of Rastadt.**—The long War of the Spanish Succession was brought to a close (except as between Germany and France) by negotiations at Utrecht, which resulted in the concluding of a number of treaties between the several powers concerned, constituting collectively what is known as the Peace of Utrecht. Negotiations to this end were begun by England and France early in 1711, and preliminaries were settled between them and signed in October of that year. This action of the English compelled the other allies to consent to a general conference, which opened at Utrecht, January 29, 1712. The discussion of terms lasted more than a year, while the war went on. Between Germany and France the war still continued and it was at Rastadt (March, 1714), not Utrecht, that the last named powers came to their agreement of peace. The several treaties concluded at Utrecht were most of them signed on the 31st day of March, O. S., or April 11, N. S., in the year 1713, "by the plenipotentiaries of France, England, Portugal, Prussia, Savoy, and the United Provinces; the emperor resolving to continue the war, and the king of Spain refusing to sign the stipulations until a principality should be provided in the Low Countries for the princess Ursini, the favourite of his queen [a demand which he subsequently withdrew]. The chief articles of this memorable pacification were to the following purport: It was stipulated that . . . Philip, now established on the Spanish throne, should renounce all right to the crown of France; that the dukes of Berry and Orléans, the next heirs to the French monarchy after the infant dauphin, should in like manner renounce all right to the crown of Spain, in the event of their accession to the French throne; that, on the death of Philip, and in default of his male issue, the succession of Spain and the Indies should be secured to the duke of Savoy; that the island

of Sicily should be instantly ceded by his Catholic majesty to the same prince, with the title of king; that France should also cede to him the valleys of Pragelas, Oulx, Sezanne, Bardonnache, and Château-Dauphin, with the forts of Exilles, and Fenestrelles, and restore to him the duchy of Savoy and the county of Nice; and that the full property and sovereignty of both banks and the navigation of the Marañon, or river of Amazons, in South America, should belong to the king of Portugal. It was declared that the king of Prussia should receive Spanish Guelderland, with the sovereignty of Neufchâtel and Valengin, in exchange for the principality of Orange and the lordship of Châlons, and that his regal title should be acknowledged; that the Rhine should form the boundary of the German empire on the side of France; and that all fortifications, beyond that river, claimed by France, or in the possession of his most Christian majesty, should either be relinquished to the emperor or destroyed; that the kingdom of Naples, the duchy of Milan, and the Spanish territories on the Tuscan shore, should be ceded to the house of Austria; that the sovereignty of the Spanish Netherlands should likewise be secured to that family; but that the elector of Bavaria (to whom they had been granted by Philip) should retain such places as were still in his possession, until he should be reinstated in all his German dominions, except the Upper Palatinate, and also be put in possession of the island of Sardinia, with the title of king: that Luxemburg, Namur, and Charleroy should be given to the states-general as a barrier, together with Mons, Menin, Tournay, and other places; and that Lisle, Aire, Bethune, and St. Venant, should be restored to France. It was agreed that the French monarch should acknowledge the title of queen Anne, and the eventual succession of the family of Hanover to the British throne; that the fortifications of Dunkirk (the cause of much jealousy to England, and raised at vast expense to France) should be demolished, and the harbour filled up; that the island of St. Christopher (which had long been possessed jointly by the French and English, but from which the French had been expelled in 1702) should be subject to this country [England]; that Hudson's Bay and Straits (where the French had founded a settlement, but without dispossessing the English, and carried on a rival trade during the war), the town of Placentia, and other districts of the island of Newfoundland (where the French had been suffered to establish themselves, through the negligence of government), and the long-disputed province of Nova Scotia (into which the French had early intruded, out of which they had been frequently driven, and which had been finally conquered by an army from New England in 1710), should be considered as the dependencies of the British crown: that Minorca and the fortress of Gibraltar (conquered from Spain) should remain in the possession of Great Britain; and that the Assiento, or contract for furnishing the Spanish colonies in South America with negroes, should belong to the subjects of Great Britain for the term of thirty years. That these conditions, especially on the part of Great Britain, were very inadequate to the success and expense of the war, will be allowed by every intelligent man, whose understanding is not warped by political prejudices. . . . The other confederates had greater cause to be satisfied, and the emperor [Charles VI] as much as any of them; yet was he obstinate in refusing to sign the general pacification, though two months were allowed him to deliberate on the terms. But he had soon reason to repent his rash-

ness in resolving to continue the war alone. . . . The imperial army on the Rhine, commanded by prince Eugene, was not in a condition to face the French under Villars, who successively took Worms, Spire, Keiserlautern, and the important fortress of Landau. He forced the passage of the Rhine . . . and reduced Freyburg, the capital of the Breisgau. Unwilling to prosecute a disastrous war, the emperor began seriously to think of peace; and conferences, which afterward terminated in a pacific treaty, were opened between prince Eugene and Villars, at Rastadt. The terms of this treaty, concluded on the 6th of March (N. S.) 1714 [but ratified at Baden the next September, and sometimes called the Treaty of Baden], were less favourable to the emperor than those which had been offered at Utrecht. The king of France retained Landau, which he had before proposed to cede, with several fortresses behind the Rhine, which he had agreed to demolish [but restored Freiburg]. He procured the full re-establishment of the electors of Bavaria and Cologne in their dominions and dignities; the former prince consenting to relinquish Sardinia to the emperor, in return for the Upper Palatinate. . . . The principal articles in regard to Italy and the Low Countries were the same with those settled at Utrecht. Relaxing in his obstinacy, the king of Spain also acceded to the general pacification."—W. Russell, *History of modern Europe*, v. 3, pt. 2, letter 23.—See also BRITISH EMPIRE: Treaties promoting expansion: 1713; CANADA: 1713; EUROPE: Map of Central Europe: 1715;

VALOIS, Henry of. See HENRY III, OF VALOIS.

VALOIS, House of.—The direct line of the Capetian kings of France, descendants of Hugh Capet, ended in 1328, with the death of Charles IV. The crown then passed to the late king's cousin, Philip of Valois, son of Charles Count of Valois, who was the second son of Philip III. He became Philip VI in the series of French kings, and with him began the royal dynasty or House of Valois, which came to an end in 1589, on the assassination of Henry III, yielding the throne to the Bourbon family. See FRANCE: 1314-1328; 1593-1598: Genealogical table.

VALONA. See AVLONA.

VALORIZATION CASE. See BRAZILIAN COFFEE CASE.

VALOUTINA, Battle of. See RUSSIA: 1812 (June-September).

VALPARAISO, capital of a province of the same name in Chile and the main seaport of the republic. (See LATIN AMERICA: Map of South America.) "The 'Vale of Paradise' sits in a queenly fashion upon the shores of the Pacific. Spread upon a series of mounting slopes, its roofs rise in tiers that start from the edge of the profound blue of the ocean. The hills beyond present a rolling vista to the right and left, while to the back, they sweep in an almost unbroken series to the foothills of the Andes themselves. . . . It is a town of sudden precipices that stand out here and there in places where one would least have expected them. One may walk along a street, for instance, to find, after rounding a sharp curve in the roadway, that further progress is blocked to all appearance by a lofty wall of rock, hung here and there with clumps of verdure and festoons of flowers, that heaves itself upwards as a barricade across the end of the thoroughfare."—W. H. Koebel, *Modern Chile*, p. 27.—In 1920 the population was 182,242.

1536-1906.—History marked by calamities.—Balmaceda revolutionists.—"The city of Valparaiso was founded by Juan de Saavedra in 1536. . . . It was captured and sacked by Drake in 1578; again by Hawkins the Buccaneer in 1596. It was plundered by the Dutch pirate, Van Noort, in 1600. There were severe earthquake shocks in 1730, 1822, 1839, and 1851. It was destroyed by fire in 1858, bombarded by the Spanish Admiral in 1866, and suffered by a severe earthquake in 1873. It suffered horribly in the Balmaceda revolution."—G. F. S. Elliot, *Chile*, pp. 271, 275.—"On the evening of the 28th [August, 1891], Valparaiso was in possession of the revolutionists and the Balmaceda government was overthrown. . . . That night Valparaiso was the scene of a Bacchanalian rabble that would have shamed Rome in the reign of Nero. The city was in possession of a mob, intoxicated with success, drunk upon wine and athirst for blood, that murdered with impunity and sacked the town without restraint. Drunken men and women reeled through the streets, shooting at each other as a matter of sport, and on the following morning four hundred victims of the mob's violence were found dead in the streets."—R. E. Mansfield, *Progressive Chile*, p. 67.—The history of the city was uneventful from the time of the Balmaceda revolution until the earthquake of 1906.

1891.—United States sailors attacked by mob. See CHILE: 1891-1892; U. S. A.: 1891.

1906.—Great earthquake.—"The most terrible crisis in the history of Valparaiso began on Thursday, 16th August, 1906. . . . There was a sudden, unexpected shock immediately followed by another. . . . Then there was a terrible jolt and whole rows of buildings . . . fell with a terrific crash. The gas, electric light and water-mains were at once

snapped, and the whole city was plunged in darkness. . . . Great fires started in the ruined buildings. . . . Between the earthquake and the subsequent fire ninety per cent of the houses are said to have been destroyed. The Arsenal, station, custom-house, hospitals, convents, banks, club-houses, and Grand Hotel were for the most part ruined. . . . The telegraph lines were destroyed; the railways were wrecked for miles—bridges had twisted, and tunnels had caved in—but communication with Santiago seems to have been re-established within a wonderfully short time. . . . Some 60,000 [inhabitants] were encamped on the barren hills above the town without food or clothing; others took refuge on boats or steamers in the bay, for mercifully there was no tidal wave such as commonly accompanies great earth tremors on that coast, and no damage was done to the shipping in harbour. The number of people killed has been variously estimated at from 300 to 10,000 persons; it is probable that from 500 to 1,000 were killed and another 1,000 wounded. The damage done was at least £20,000,000."—G. F. S. Elliot, *Chile*, pp. 275-277.—See also CHILE: 1906: Earthquake at Valparaiso.

1906-1921.—Development of the modern city.—Economic improvements.—There are few traces of the destruction wrought in 1906 today. The modern Valparaiso is the second port of the Pacific, ranking next to San Francisco in wealth and power. English is generally spoken in the streets but during the decade preceding the World War, German influence was noticeably and steadily undermining British industry and commerce in the Chilean coast city. For many years Valparaiso has been one of the most insecure harbors on the west coast of the South American continent due to its lack of a breakwater in its bay and to the prevalence of severe storms. "Modernizing and improving the port of Valparaiso . . . has been considered as the most spectacular task confronting the engineer in any South American harbor. Yet about seven years ago, works were commenced there to provide during all seasons a safe zone covering about 220 acres. The construction of a 1,000 ft. breakwater, a quay wall 2,000 ft. long, an extension of the wharf to 1,000 ft., a jetty 920 ft. long and 328 ft. wide and other works preliminary to the construction of new warehouses, meant an investment of about \$12,000,000."—*Chilean ports (Pan-American Magazine, Jan., 1920, pp. 160-161)*.—Valparaiso was one of the first South American centers of labor disturbances involving problems of radicalism and anarchy with which modern Chile has had to deal and as a result of which Alessandri was elected president.—"A presidential law of April 29, 1919, authorized the expenditure of 25,000,000 pesos, gold, for the electrifying of the first zone of national railways and approved the project for construction and repairs . . . the Valparaiso-Santiago Railroad [being] comprised in the zone."—*Chile (Latin-American Year Book for Investors and Merchants, 1920, pp. 179, 220)*.—The work was begun in 1921 on the line between these two cities, a distance of 117 miles.

1923.—Partial completion of electrified railroad.—The first test of the partially completed electrified railroad was made by President Alessandri, Apr. 16, 1923. The first train ran on July 14.

VANDALIA, capital of Fayette County, Illinois, on the Kaskaskia, sixty-five miles southwest

Springfield. It was the state capital of Illinois from 1820 to 1839. See ILLINOIS: 1809-1839.

VANDALIA, Proposed state of. See WEST VIRGINIA: 1773-1820.

VANDALS: Origin and early movements.—“Gibbon declares that a striking resemblance, in manners, complexion, religion, and language, indicates that the Goths and Vandals were originally one great people; and he cites the testimony of Pliny and Procopius in support of this belief. According to this theory, therefore, the Vandals are of the Teutonic stock. Other learned men have endeavoured to identify them with the Wendes; and the Wendes, as we have seen, according to the authority of Jornandes and others, were members of the Slavic race. The question has been examined, with great learning and ingenuity, by M. L. Marcus, Professor at the College of Dijon, in a work upon Vandal history. His conclusion, drawn from a comparison of what Tacitus, Pliny, Procopius, and Jornandes have left us upon the subject, is favourable to the hypothesis of Gibbon. Between the Wendes and the Vindili of Pliny, who were undoubtedly Vandals, he considers that no nearer point of union can be found than that of the Asiatic origin common to all nations of Slavic and Teutonic blood. He accounts for the fact that some confusion upon the subject subsists in ancient writers, by the supposition that the Slavs, after the great migration of Goths and Vandals to the South, occupied the locality they had abandoned on the coasts of the Baltic, and became inheritors of the name, as well as of the land, of their predecessors. Hence they were commonly, though incorrectly, called Vindili, or Vandals. . . . The earliest locality of the tribe, so far as authentic history can trace them, seems to have been the district between the Vistula and the Elbe. Here they were found by the Langobardi, in their migration towards the South. . . . In the time of Pliny, we have that writer's testimony to the fact that the Vandals were still to be found between the two rivers. But during the next two centuries their unwarlike habits must have tended to diminish their importance among their fierce and active neighbours, of whom the Goths were the most formidable, and probably the most aggressive. Tacitus, at any rate, in his tractate upon the Germans [100], merely notices them by name. . . . Another half-century finds them in a strong position among the mountains which form the northern frontier of Bohemia. It is certain that they took part in the great Marcomannic war [168-180]. . . . In the treaty made by Commodus, the son of Marcus Aurelius, with the Marcomanni [180], the Vandals are one of the tribes secured from the hostility of those persevering enemies of the Roman empire. At this time, Ptolemy informs us that the Vandals occupied the districts lying around the sources of the Elbe; and all other investigation confirms the statement. [A hundred years later, the Vandals appear to have been planted in a district on the Danube, east of the Theiss; from which they were soon afterwards driven by the Goths. They were then permitted by the emperor Constantine to pass the frontiers of the empire and settle in Pannonia, where they accepted Christianity and exhibited “the greatest aptitude for commerce and the arts of peace.” Despite their Christianity, however, and despite their aptitude for the “arts of peace,” the Vandals, after seventy years of friendly neighboring with the Romans, joined the savage pack of Alans, Sueves and Burgundians which, on the last day of the year 406, broke into Gaul and shattered the empire and the civilization of Rome beyond the

Alps.]—J. G. Sheppard, *Fall of Rome, lect. 7.*—See also EUROPE: Introduction to the historic period: Migration; Map showing Barbaric invasions.

406-409.—Final invasion of Gaul. See GAUL: 406-409.

409.—Invasion of Cartagena. See CARTAGENA: 409-713.

409-414.—Settlement in Spain. See SPAIN: 409-414.

428.—Conquests in Spain.—“After the retreat of the Goths [418] the authority of Honorius had obtained a precarious establishment in Spain, except only in the province of Galicia, where the Suevi and the Vandals had fortified their camps in mutual discord and hostile independence. The Vandals prevailed, and their adversaries were besieged in the Nervasian hills, between Leon and Oviedo, till the approach of Count Asterius compelled, or rather provoked, the victorious barbarians to remove the scene of war to the plains of Bætica. The rapid progress of the Vandals soon required a more effectual opposition, and the master-general Castinus marched against them with a numerous army of Romans and Goths. Vanquished in battle by an inferior enemy, Castinus fled with dishonour to Tarragona. . . . Seville and Carthage became the reward, or rather the prey, of the ferocious conquerors.”—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 33.*—Southern Spain, the ancient Bætica, acquired from the Vandals the name Vandalusia, which became Andalusia.—Based on R. G. Latham, *Ethnology of Europe, ch. 2.*

429-439.—Conquests in Africa.—In May, 429, the Vandals passed from Spain into Africa, invited by Count Boniface, the Roman governor of the African province. The latter had been deceived by an intriguing rival, Count Aetius, who persuaded him that the imperial court at Ravenna were planning his disgrace and death. Thus incited to rebellion, as an act of self defense, he called the Vandals to his help. The latter had just fallen under the leadership of a new and terrible king—the bold and ruthless Genseric, who was destined to make the name of his people a proverb through all time for ferocity and barbarism. To the Vandals were united the Alans, and Genseric invaded Africa with some 80,000 men. He was joined, moreover, by great numbers of disaffected native Mauritanians, or Moors, and was welcomed by swarms of the fanatical Donatists, whose “vandalism” could quite equal his own. Count Boniface shrank aghast from the terrible invasion he had summoned, and learning, too late, how foully he had been played upon, returned to his allegiance with penitent energy and zeal. He turned his arms against Genseric; but it was in vain. “The victorious barbarians insulted the open country; and Carthage, Cirta, and Hippo Regius were the only cities that appeared to rise above the general inundation. . . . The seven fruitful provinces, from Tangier to Tripoli, were overwhelmed. . . . The Vandals, where they found resistance, seldom gave quarter; and the deaths of their valiant countrymen were expiated by the ruin of the cities under whose walls they had fallen. Careless of the distinctions of age or sex or rank, they employed every species of indignity and torture to force from the captives a discovery of their hidden wealth.” Defeated in a battle which he ventured, Boniface retired into Hippo Regius and stood a siege of fourteen months. A second battle, won by the Vandals, decided the

fate of the city, but its inhabitants escaped, for the most part, by sea, before the barbarians broke in. The great bishop of Hippo, the venerable St. Augustine, was in the city when the siege began, but died before it ended, in his seventy-sixth year. "When the city, some months after his death, was burned by the Vandals, the library was fortunately saved which contained his voluminous writings. [Hippo fell in the summer of 431. It was not until eight years later that Carthage succumbed,—taken treacherously, by surprise, on the 9th of October, 439; being 585 years after the destruction of the ancient city by the younger Scipio. The provinces of Africa were now fully in the possession of the Vandals, and the loss of their corn supply carried famine to Rome and Italy.]"—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 33.

429-477.—In Sicily. See SICILY: 429-525.

431-533.—Ruin of Africa under their dominion.—"The Vandals were bigoted Arians and their government was peculiarly tyrannical; they always treated the Roman inhabitants of Africa as political enemies, and persecuted them as religious opponents. The Visigoths in Spain had occupied two thirds of the subjugated lands, the Ostrogoths in Italy had been satisfied with one third; and both these people had acknowledged the civil rights of the Romans as citizens and Christians. The Vandals adopted a different policy. Genseric reserved immense domains to himself and to his sons. He divided the densely peopled and rich districts of Africa proper among the Vandal warriors, exempting them from taxation and binding them to military service. . . . They seized all the richest lands, and the most valuable estates, and exterminated the higher class of the Romans. Only the poorer proprietors were permitted to preserve the arid and distant parts of the country. Still, the number of the Romans excited the fears of the Vandals, who destroyed the walls of the provincial towns in order to prevent the people from receiving succours from the Eastern Empire. . . . When Genseric conquered Carthage [see CARTHAGE: 439], his whole army amounted only to 50,000 warriors; yet this small horde devoured all the wealth of Africa in the course of a single century, and, from an army of hardy soldiers, it was converted into a caste of luxurious nobles living in splendid villas round Carthage. In order fully to understand the influence of the Vandals on the state of the country which they occupied, it must be observed that their oppressive government had already so far lowered the condition and reduced the numbers of the Roman provincials, that the native Moors began to reoccupy the country from which Roman industry and Roman capital had excluded them. . . . As the property of the province was destroyed, its Roman inhabitants perished."—G. Finlay, *Greece under the Romans*, ch. 3, sect. 5.—See also AFRICA: Ancient and medieval civilization.

455.—Sack of Rome by Genseric. See ROME: Empire: 455; BARBARIAN INVASIONS: 423-455.

533-534.—End of the kingdom and nation.—The weakened and disordered state of the Vandal kingdom, concurring with the revival of a military spirit in the eastern Roman empire, which the great soldier Belisarius had brought about, encouraged the Emperor Justinian to attempt, 533, a reconquest of the lost Roman provinces in Africa. With a fleet of six hundred ships, bearing 37,000 men, Belisarius set sail from Constantinople in the

month of June and landed early in September on the African coast, about five days journey from Carthage,—having halted at a port in Sicily on the voyage. A few days later, he defeated the Vandal king, Gelimer, in a battle (Ad Decimus) fought at ten miles distance from his capital, and entered Carthage in triumph (Sept. 15, 533), received with joy by its Roman and Catholic inhabitants, long persecuted and humiliated by the Arian Vandals. A second and decisive battle was fought some weeks afterwards at Tricameron, twenty miles away from Carthage, and there and then the Vandal kingdom came to its end. Gelimer fled into the wilds of Numidia, was pursued, and, having surrendered himself in the March following, was sent to Constantinople, and passed the remainder of his days in peace and modest luxury on a comfortable estate in Galatia. "The fall of the Vandal monarchy was an event full of meaning for the future history of Africa. There can be little doubt that in destroying it Justinian was unconsciously removing the most powerful barrier which might in the next century have arrested the progress of Mohammedanism."—T. Hodgkin, *Italy and her invaders*, bk. 4, v. 3, ch. 15.—"The bravest of the Vandal youth were distributed into five squadrons of Cavalry, which adopted the name of their benefactor. . . . But these rare exceptions, the reward of birth or valour, are insufficient to explain the fate of a nation whose numbers, before a short and bloodless war, amounted to more than 600,000 persons. After the exile of their king and nobles, the servile crowd might purchase their safety by abjuring their character, religion, and language; and their degenerate posterity would be insensibly mingled with the common herd of African subjects. Yet even in the present age, and in the heart of the Moorish tribes, a curious traveller has discovered the white complexion and long flaxen hair of a northern race; and it was formerly believed that the boldest of the Vandals fled beyond the power, or even the knowledge, of the Romans, to enjoy their solitary freedom on the shores of the Atlantic ocean."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 41.

VANDAMME, Dominique René, Count (1770-1830), French general. Served at Austerlitz, 1805; in the Eckmühl campaign, 1809; was forced to surrender at Kulm, after the battle of Dresden, 1813. See GERMANY: 1813 (August-October).

VAN DEN HEUVEL, Belgian representative at the Paris peace conference, 1919. See VER-SAILLES, TREATY OF: Conditions of peace.

VAN DER BILT, Cornelius (1794-1877), American financier. Established steamboat lines between New York and New England ports, Hudson river ports, and Havre, France; became chief owner of the Hudson River railroad, 1864; obtained control of the New York Central railroad, 1867; extended control over the Lake Shore, Canada Southern, and Michigan Central roads. VAN DER MERSCH, Jean André (1734-1792), Belgian patriot. See VONCKISTS.

VANDERNOOTISTS, party formed in Brabant in 1788 to combat the oppression of Austria. "While the nobility had formed among themselves a secret society, . . . a more popular body had been drawn together at Breda under the direction of an advocate named Henri Van der Noot, and an ex-penitentiary of Antwerp Cathedral, named

Van Eupen. Van der Noot was a noisy, vulgar, pushing demagogue without any real merit, but he had gained the ear of the people and was popular. On the other hand Van Eupen was a man of education and ability. They were both impregnated with the new French doctrines which, while these events were occurring in Belgium, had been translated into action by the destruction of the Bastille. They regarded the society of the Nobles with suspicion and dislike; when the Count de la Marck wrote offering his co-operation they took no notice of his letter. For the moment Van der Noot was supreme with a grandiloquent self-conferred title of Agent Plenipotentiary of the people of Brabant."—D. C. Boulger, *History of Belgium*, v. 1, pp. 406-407.— See also **VONCKISTS**.

VANDERVELDE, Emile (1866-), Belgian statesman. Member of Parliament, 1894-1914; became leader of the Socialist party; aided Americans in the Belgian Congo, 1909; minister of justice, 1918; representative at the Paris Peace Conference, 1919; chosen to defend the Russian Social Revolutionists at their trial, 1922. VARANGIAN SEA, one of the ancient names of the Baltic.—Based on R. G. Latham, *Native races of Russian empire*, ch. 16.

VARANGIANS, or Warings, **WARING GUARD**.—Varangians "was the name of the Byzantine equivalent to the 'soldiers of a free-company' in the 11th and 12th centuries. The soldiers were almost wholly Scandinavians—to a great extent the Swedes of Russia. The reasons against believing Varangian to be the same word as Frank, are: 1. The mention of Franci along with them, as a separate people. 2. The extent to which the Varangians were Scandinavians, rather than Germans of the Rhine. In favour of it is: The form of the present Oriental name for Europeans—Feringi. This, in my mind, preponderates. Connected by name only with the Franks, the truer ethnological affinities of the Varangians were with the Scandinavians of Russia."—R. G. Latham, *Germany of Tacitus: Epilegomena*, sect. 17.—"Many of the Warings and probably of the English also had taken military service at an early period under the Byzantine emperors. They formed a body-guard for the Emperor, and soon gained for themselves a renown greater than that possessed by the earlier imperial guard of the Immortals. The Byzantine writers usually speak of them as the barbarian guard or as the axe-bearers. Their weapon was the Danish battle-axe, or rather bill, and seems not to have had two blades turning different ways like those of a halberd, but to have had one with a sharp steel spike projecting, so that the weapon could be used either to strike or to thrust. Anna, the daughter of Alexis the First, calls them Warings or Varangians. Nicetas speaks of them as Germans. The Western writers call them usually Danes, or 'English and Danes.' The conquest of England by William the Norman caused many of the English to emigrate to Russia and so to Constantinople, where they joined the Waring guard. . . . Warings and English, while occupants of the

Greek palace, still spoke their own language, had their own laws, and chose, with certain exceptions, their own officers. The one in command was called the acolyth, or follower, because his place was immediately behind the Emperor."—E. VATICAN: Ancient Leonine city.—"The name

Vatican was applied by the writers of the Augustan age to the whole range of hills extending along the western bank of the Tiber, including the Janiculum and the Monte Mario. . . . But the name Vaticanus has now been restricted to the small hill standing behind the Basilica of St. Peter's, upon which the Vatican Museum and the Papal Gardens are situated. This hill is a small projecting portion of the range which includes the Janiculum and Monte Mario, and it is separated from the Janiculum by a depression, along which the street of the Borgo S. Spirito runs. The derivation of the name Vatican is lost. Gellius has preserved a quotation from Varro, in which the word is said to be derived from a deity Vaticanus, the presiding god of the first rudiments of speech ('vagine,' 'vagitonus'). Paulus Diaconus gives a different explanation, founded on the supposed expulsion of the Etruscans in fulfilment of an oracle ('vatum responso expulsis Etruscis'); and from this Niebuhr and Bunsen, following him, have supposed that an Etruscan city existed here in ancient times. There appears to be no sufficient evidence of such a settlement."—R. Burn, *Rome and the Campagna*, ch. 11.—In the ninth century, at the time of the pontificate of Leo IV, "the nations of the West and North who visited the threshold of the apostles had gradually formed the large and populous suburb of the Vatican, and their various habitations were distinguished, in the language of the times, as the 'schools' of the Greeks and Goths, of the Lombards and Saxons. But this venerable spot was still open to sacrilegious insult: the design of enclosing it with walls and towers exhausted all that authority could command or charity would supply: and the pious labour of four years was animated in every season and at every hour by the presence of the indefatigable pontiff. The love of fame, a generous but worldly passion, may be detected in the name of the Leonine City, which he bestowed on the Vatican; yet the pride of the dedication was tempered with Christian penance and humility."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 52.—"It is perfectly correct to say that, since the fifteenth century, the world has been accustomed to associate the term Vatican with the chief residence of the Popes. . . . Over the grave of St. Peter, Constantine the Great erected his glorious basilica. On this hallowed spot assembled crowds of pilgrims from all lands, and here the Popes repeatedly held the most glorious ecclesiastical functions. As most of the great feasts began on the Vigil—that is, on the afternoon preceding—the Pope had on such occasions to spend the night at St. Peter's with his whole retinue. Hence arose the urgent necessity of erecting in the vicinity a larger residence for the Pope. . . . Pope Nicholas III (1277-1280) conceived magnificent plans for covering the Vatican Hill with buildings. He began the erection of a very extensive palace there, and this was brought to approximate completion by his immediate successors. By extensive purchases of land through his Apostolic Chamber (that is, the Papal Ministry of Finance), Nicholas assured to the Popes the undisturbed possession of the Vatican Hill and the surrounding property. The present Vatican Gardens represent a large portion of Nicholas's purchase."—P. M. Baumgarten, *History and description of Vatican palaces* (E. Begni, ed., *Vatican: Its history—its treasures*, p. 6).

15th century.—Building and embellishment of palaces.—Origin of Swiss Guard.—"Nicholas V., the simple scholar of humble birth, who founded the Vatican Library . . . conceived the magnificent

idea of making the Vatican Hill rival the Palatine with its Imperial Palaces and gardens. . . . It is difficult to gather from the documents hitherto available how much Nicholas actually built. None of his buildings remain except the exquisite little chapel frescoed by Fra Angelico with the story of S. Lorenzo, and part of the wing which now bears the name of the Borgias. The buildings of Paul II. (1464-1471), the magnificent Venetian Pope who erected the Palazzo di Venezia, have entirely disappeared. But Sixtus IV. (1471-1484), the first of the two della Rovere Popes, whose conceptions were smaller, immortalized himself by his contributions to the Vatican, for he built the Sistine Chapel, whose walls he had frescoed by the greatest masters of his day, Perugino, Pinturicchio, Ghirlandajo, Botticelli, Cosimo Roselli, and Luca Signorelli. . . . The 'Last Judgment' was not painted till more than half a century after Pope

Swiss Guard extends back to the fifteenth century. Their position was [later] secured by treaty under Julius II (1503-1513), who, at the instigation of the Swiss Cardinal Schinner, entered into an agreement with the Cantons of Zurich and Lucerne, in accordance with which these cantons undertook to supply two hundred and fifty men as a body-guard for the Pope. Since then the Pope has always had around him a corps of Swiss Guards, although in the course of time their number has been reduced and the conditions of their service have changed."—P. M. Baumgarten, *Vatican administration* (E. Begni, ed., *Vatican: Its history—its treasures*, p. 537).

16th century.—Additions and decorations contributed by Bramante, Raphael and Michelangelo.—Commissions of Sixtus V.—"It was [Julius II.] . . . who joined Innocent VIII's Villa Belvedere to the Vatican by the Cortile of the

PAPAL SWISS GUARD

Sixtus's death, and Michel Angelo did not begin the ceiling to which the chapel owes its fame until twenty-four years after the Pope's death. . . . Innocent VIII. (1484-1492) had a beautiful villa constructed for his use in the Vatican Gardens. . . . This, which was called the Villa Belvedere, was constructed for him by Antonio Pollaiuolo about 1490, and decorated with frescoes by Mantegna, which have perished. It was about a quarter of a mile from the Vatican Palace until Julius II. connected them. Gregorovius calls it Innocent's finest work. . . . His successor, the execrated Borgia Pope, Alexander VI. (1492-1503), in the midst of all his ambitions and excesses, found the time and money to embellish the Vatican with one of its greatest glories, the *Appartamenti Borgia*, the suite of rooms embellished by Pinturicchio with frescoes, which, as chamber decorations, have no superiors, except the same artist's glorious frescoes illustrating the career of Pius II. in the library of the Cathedral of Siena."—D. Sladen, *Secrets of the Vatican*, pp. 136-138.—"The origin of the Papal

Belvedere, which, before it was intersected by the Library and the Braccio Nuovo, was twelve hundred feet long. Bramante was the architect. . . . Julius also commissioned, and Bramante built, the Cortile of S. Damaso, one of the most wonderful in the world, for it is of vast size and is surrounded on three sides by the triple arcades of the Loggie, which Gregorovius calls the 'most successful imitation of the antique, . . . an unequalled example of vigour, lightness, and grace.' Some of them were frescoed by Raffaele, and he was the architect who completed them after Bramante's death. Julius II. is hailed as the founder of the Vatican Museum. . . . It was for Julius that Michel Angelo executed his immortal paintings on the roof of the Sistine Chapel, which made it the most celebrated chapel in the world. . . . Leo X., Giovanni de' Medici, had the same magnificent and Mænenatic tastes; it was he who completed the Loggie of S. Damaso under the direction of Raffaele. It was he who had ten of the designs intended for these Loggie not executed in the Loggie, but in the

Vatican tapestries woven at Arras in 1514. They were to hang on the walls of the Sistine Chapel below the frescoes: they are now kept in the Galleria degli Arazzi. . . . Raffaello's Stanze were originally commissioned by Julius II., and completed under Leo X. . . . Paul III. (1534-1549) . . . commissioned Michel Angelo to paint the Last Judgment in the Sistine Chapel, for which three famous frescoes by Perugino were destroyed. This was unveiled in 1547. . . . Julius III. (1550-1555) had a stately flight of steps made for the Belvedere by Michel Angelo. . . . It was Sixtus [V] who built the wing of the Courtyard of S. Damaso, which has been the residence of the Popes ever since. It was Sixtus who built the great hall of the Vatican Library, two hundred and twenty feet long, which, with its brilliant decorations in Pompeian style, is one of the finest chambers in Rome. But it destroyed the finest cortile in the world, the Courtyard of the Belvedere built by Bramante to connect the Villa Belvedere with the Vatican, which it cut clean in half. It is the actual palace of the Popes, built by Sixtus, though finally completed by Clement VIII. . . . (1592-1605)."—D. Sladen, *Secrets of the Vatican*, pp. 139-140, 143, 145.

1585-1921.—Printing press.—Private press.—"Pope Sixtus V (1585-1590), at the beginning of his reign, established at great expense a printing-office that was for that period entirely unique. This press was to print his revised edition of the Latin Bible. Sixtus entrusted its direction to the Venetian Domenico Pasa, and appointed a special commission of Cardinals to supervise the printing. In 1590 his 'Biblia Sacra Vulgatae Editonis' appeared in three sumptuous volumes, which were for various reasons withdrawn immediately after his death. In 1592, 1593, and 1598 appeared three editions of the 'Vulgata Clementina,' which is used even to-day. Since that time an exceedingly large number of works of the most varied character have issued from the Vatican Press. In the course of time the most important Oriental alphabets were manufactured to meet the needs of the pagan missions and for the promotion of linguistic studies. . . . In connection with the Vatican Press, which at first served for purely scientific and literary purposes, there soon developed a Private Press, in which were printed the acts, decrees, instructions, formularies, and so on, used by the Curia in the discharge of its official business. Though there was no well-marked division at first, a special department gradually developed, with strict secrecy and special precautions and a staff selected only from employees who had been found entirely trustworthy."—P. M. Baumgarten, *Vatican administration* (E. Begni, ed., *Vatican: Its history—its treasures*, pp. 557-558).

1586.—Foundation of mosaic factory.—"In 1586 Pope Sixtus V founded the mosaic factory of the Vatican, and set its artists to prepare mosaics for the walls and ceiling of St. Peter's. The original site of the factory was near St. Martha's, beside St. Peter's, where the street is still known as the Via del Mosaico. Exigencies of space necessitated successive changes of location, and the factory was removed first to rooms in the Palace of the Holy Office, and then to the Palazzo Giraud (now the Torlonia) in the Piazza Scossacavalli. Finally, in 1825, worthy quarters were found for it in the Vatican itself by Pope Leo XII. . . . The mosaic factory really forms a part of the building department of St. Peter's, and is thus under the charge of . . . [the] Administrator of the Vatican Basilica."—S. Nobile, *Mosaic factory* (E. Begni,

ed., *Vatican: Its history—its treasures*, pp. 500-501, 503).

17th-20th centuries.—Continued building and beautifying of palaces.—"Bernini under Urban VIII constructed the Royal Staircase. Pius VI commanded the construction of the Greek cross Hall, the Round Hall and the Hall of the Muses. Pius VII in 1821 had the New Wing built by Raphael Sterne, Pius IX had the Scala Pia enclosed, thus closing in the fourth side of the Court of S. Damaso."—G. Govone, *Saint Peter and the Vatican (L'Italia monumentale, Monograph no. 6, p. 10)*.—Leo XIII. . . . (1878-1903), made one supreme contribution to the glories of the Vatican by restoring the Borgia Apartments, whose frescoes are, after those of the Cathedral Library at Siena, the masterpieces of Pinturicchio. . . . Leo XIII. . . . cleared out and entirely reconstituted the apartments under the great hall of the Vatican Library and various adjoining rooms to form the new Leonine Library, which now contains all the printed books. . . . Pope Leo also converted the Hall of Canonizations into a chapel, and spent a great deal of money on beautifying the floors."—D. Sladen, *Secrets of the Vatican*, p. 150.

1744.—Origin of Noble Guard.—Its place in system of papal guards.—"The Noble Guard of to-day trace their origin from the Cavalleggeri, a kind of body-guard which was reorganized by Benedict XIV in 1744, and received new regulations as to service and rank from Leo XIII. With the exception of the quartermaster, the equerry, the four trumpeters, and the master-at-arms, all the members of the Guard must be of noble birth. Their captain, who is always a Roman prince, holds the rank of lieutenant-general, and the other officers rank correspondingly. The privates in this Guard hold the rank of captain. . . . The Noble Guard renders service in the immediate vicinity of the Holy Father, . . . the Swiss Guard is entrusted with the guardianship of the person and dwelling of the Pope, and . . . the Palatine Guard is a guard of honor in the papal service."—P. M. Baumgarten, *Vatican administration* (E. Begni, ed., *Vatican: Its history—its treasures*, pp. 538-540).

1800-1850.—Papal Gendarmes.—"Pope Pius VII (1800-1823) organized a select body of police under the name of Carabinieri Pontifici (Papal Carbiniers). By decree of February 16, 1850, their name was changed to Veliti. After retaining this title for only two years, they were given their present title of Papal Gendarmes. They discharge the duties of both court attendants and police."—*Ibid.*, p. 541.

1871.—Position since Law of Papal Guarantees. See PAPACY: 1870.

1881.—Archives opened to public.—The Vatican secret archives are the accumulation of papers and documents for over seven hundred years. In 1881 "Pope Leo XIII was the first to make these manuscripts and archives fairly accessible to the public and there has always been a steady stream of students making use of the riches they contain. . . . During the middle ages the collection suffered from successive pillagings, and the present mass of archives dates largely from the pontificate of Innocent III. . . . [Even] these have suffered serious spoliation."—*Archives of the Vatican (Living Age, Sept. 17, 1922, p. 741)*.

1893.—Sanitary corps.—"The general sanitary corps of the Apostolic Palaces was reorganized in 1893 and placed on an entirely modern footing. This corps consists of a director, five physicians, and a number of assistant physicians. . . . Both classes of physicians have to appear at all great

functions, when they occupy, with the Sisters of Mercy, a specially erected ambulance station, and are thus on the spot to render medical aid if an accident of any kind should occur among the vast throng of persons assembled. This College of Physicians is assisted by two apothecaries, who must have always in readiness, especially on great festivals, the necessary materials to render relief."—P. M. Baumgarten, *Vatican administration* (E. Begni, ed., *Vatican: Its history—its treasures*, p. 544).

Present day papal administration.—Secretariate of state.—Consistories.—Papal secret chancery.—Distribution of alms.—Sacred Congregations.—Commissions, tribunals and offices.—Diplomatic relations.—Pope's apartments and gardens.—College of cardinals.—Conclave and election of a pope.—The Vatican may be regarded as the administrative center of the Catholic church, since it houses the supreme head of the church, and from it the whole church is governed. From its walls the pope issues a decree or *motu proprio*, advises the prelates or managing cardinals of the congregations, whose duty it is to lay before him the business of the Universal Church or of the diocese of Rome, and in all important matters his personal business activity is a factor. "The most important of all numerous bodies which have their general offices in the palace is the Secretariate of State. All the offices of this department (in so far as it deals with political and ecclesiastico-political matters) are situated on the third floor of those portions of the old Apostolic Palace which . . . surround the Cortile del Papagallo and the Cortile del Maresciallo. . . . Before 1870 the Secretariate of State had its seat in the Quirinal. . . . When recently the Secretariate of Briefs was placed under the direction of the secretary of state the offices of this great department were transferred to the Vatican Palace and established in the unoccupied halls of the old picture gallery. All the bureaus of the Secretariate of State are now on the same floor. The extent of business transacted here is evidenced by the archives. . . . The inventories (called *rubricelle*), which are added to the collections from day to day, render it possible to discover immediately any particular document. . . . A whole series of Roman Congregations hold either regularly or on special occasions their sessions in the Vatican. . . . The secretary of state receives the ambassadors and envoys accredited to the Holy See, so that all diplomatic affairs not transacted by correspondence are conducted in the Vatican. The secret, semi-public, and public consistories are held either in the Sala Concistoriale or in the Sala Regia. . . . A place of great activity is the Secret Chancery of the Holy Father; here are discharged all affairs pertaining to the pope in so far as they do not belong to any of the special departments. . . . The Alms, to be distributed according to certain principles, are entrusted to the Secret Almoner of the pope, who is always a titular archbishop. His offices lie near the quarters of the Swiss guards. All donations accruing in the form of Peterspence are administered separately by the 'Commissione Cardinalizia amministratrice dei Beni della Santa Sede.' . . . [Besides several other commissions] must still be mentioned the numerous offices of the palatine administration which is naturally very extensive."—P. M. Baumgarten, *Vatican* (*Catholic encyclopedia*, v. 15, p. 301).—The Sacred Congregations which carry on the central administration of the church are made up of cardinals assisted by consultants and official representatives. The eleven Sacred Congregations of

today are: Holy Office, Consistorial, Discipline of the Sacraments, Council, Religious, Propaganda Fide, Index, Rites, Ceremonial, Extraordinary Ecclesiastical Affairs, Studies. Permanent commissions of the Congregations provide for such interests as biblical and historical studies, preservation of the faith in Rome and codification of canon law. The tribunals of the Roman Curia are the Apostolic Penitentiary, the Supreme Tribunal of the Apostolic Signature and the Sacred Roman Rota. Offices embraced by the body include the Apostolic Chancery, the Apostolic Datary, the Apostolic Chamber and the Secretariate of State. Nuncios or agents are the means of maintaining diplomatic relations with the following countries: Austria, Bavaria, Belgium, Czecho-Slovakia, France, Germany, Hungary, Jugo-Slavia, Monaco, the Netherlands, Poland, Portugal, Rumania, Prussia, Russia, Spain and the United Kingdom together with most of the American republics, except the United States and Mexico. "The Pope dwells on the second and third stories of the Palace of Sixtus V. and his Secretary of State occupies the first floor. . . . Three large windows light the lofty and broad room, which serves as the private library of the Pope. A number of book-cases line the walls; a mahogany table of gigantic dimensions runs through the middle of the room, and is littered with books, documents, presents of all kinds, a few cases, and other objects. A row of valuable oil paintings, representing wild animals, hangs over the book-cases. Three busts resting on magnificent marble pillars complete the furnishings. On the writing-table ticks a valuable clock, and a number of small presents from all lands fill every space on the table left unoccupied by books and documents. . . . After work is done in the evening, or when meal-time comes, the Pope ascends by . . . [a] stairway to the living-rooms which he occupies with his two private secretaries. On this upper floor are the bedrooms, the dining-room, the sitting-room, rooms for the servants, the kitchen, and the other rooms pertaining to housekeeping. All these rooms are furnished with great simplicity."—P. M. Baumgarten, *History and description of Vatican palace* (E. Begni, ed., *Vatican: Its history—its treasures*, pp. 13, 17-18).—The Vatican Gardens [where the pope takes his exercise] lie to the west of the palace, between it and the walls of the ancient Leonine City. They are irregular in shape and of an extensive area. Important traces of the old Leonine Wall still remain; there is, for instance, at the highest point of the Gardens a battlemented circular tower of the usual medieval character (Torre Leonina).—A. M. De Villard, *Vatican gardens* (E. Begni, ed., *Vatican: Its history—its treasures*, p. 37).—A print published by Falda in his work on Roman gardens depicts them as they existed in 1683 and shows that the changes that have taken place are very slight. "It is a matter of universal knowledge that the chief advisers of the Popes form a special college, and are known by the name of Cardinals. Their office is, first, to assist the Pope in the government of the Universal Church, and, secondly, when the Pope dies, to elect a successor from their number. . . . Canon law prescribes that, on the death of a Pope, the Cardinals shall assemble as soon as possible at the place of his death [obviously the Vatican since the events of the pontificate of Pius IX] for the election of his successor; for it is reasonable to suppose that a large number of Cardinals will be already assembled at this place. At the end of the nine days which are prescribed for the burial ceremonies, and which

are also used for the preparation of the assembly hall, the Cardinals meet to elect the new Pope. This elective assembly is called the Conclave. Strict precepts require that the Conclave be held in rooms which are completely secluded by the stopping up of all entrances and windows that might make possible any communication with the outer world. Each accompanied by one priest (called a Conclavist) and one servant, the Cardinals are here immured until they have elected some one of their body by a two-thirds majority. The votes are cast each forenoon and afternoon by ballot in the Sistine Chapel. If the necessary majority has not been secured, the Master of Ceremonies burns the ballot papers, together with damp hay, in a small stove specially set up for this purpose in the Sistine Chapel. The stove-pipe extends over the gable of the chapel facing towards the Piazza di S.

Each Cardinal first signs his name at the top of the ballot paper (e. g., *Ego Thomas Card. Riarius*); he then inserts in the middle (after the words *Eligo . . . D. Card.*) the name of the candidate for whom he wishes to vote, and finally writes at the bottom of the paper the numeral indicating his order of precedence in the Sacred College and also some motto which has been chosen especially for this occasion and does not in any way suggest his identity. The upper and lower parts of the ballot are then folded and secured with three seals to the left and right of the printed words *Nomen* (name) and *Signa* (motto). Should no candidate secure the prescribed two-thirds majority, the ballots are burned unopened. When a candidate has received the necessary majority, he must reveal his motto, whereupon the bottom folds only of all the ballots are opened until that containing

GARDENS OF THE VATICAN, WITH ST. PETER'S IN THE BACKGROUND

Pietro, where thousands assemble at the appointed hour in the morning and afternoon to obtain the latest news from this little chimney-flue. The thick, bluish-gray smoke, caused by the moist hay, indicates to the populace that the voting has been held without result. When, however, a Cardinal has been chosen by a two-thirds majority of the electors present, the ballot papers alone (without the hay) are burned, the consequence being that only a light and almost invisible smoke issues from the chimney. . . . The elected candidate is clothed with the white papal soutane in the sacristy of the Sistine Chapel where three such soutanes of various sizes are always held in readiness. The Cardinals then pay him solemn homage for the first time, and the oldest of the Cardinal Deacons later announces the result of the election from the Loggia of St. Peter's. With lightning rapidity the news spreads throughout Rome, and every one hurries to St. Peter's to receive the first blessing which the new Pope gives from the above-mentioned Loggia. The method of voting is as follows:

his motto is discovered. The upper fold of this ballot is then opened to ensure that the candidate has not voted for himself. After this formality all the voting ballots are burned as before. To bring to an end a deadlock, or for various other reasons, the Cardinals are always at liberty to transfer their votes. They are then said to 'vote by *accedo*,' since the word *Accedo* (I go over to) occurs in the special ballot paper (No. 2) used in such an instance."—P. M. Baumgarten, *Vatican administration* (E. Begni, ed., *Vatican: Its history—its treasures*, pp. 507-508).—See also PAPACY: 6th-11th centuries; 1050.

VATICAN MUSEUMS.—“The Vatican contains the oldest of existing museums . . . [and] the finest existing collection of marbles, bronzes, frescoes, mosaics, gems, and statues in the world. The most striking rooms open to the general visitor are the Sistine Chapel, built in 1473, and adorned by the genius of Michael Angelo; the Pauline Chapel, dating from 1540; the Loggie and Stanze of Raphael; the Court of the Belvedere; the Library, containing 24,000 MSS. and 50,000 printed volumes; several rich Museums of ancient and modern articles of *virtu* and the mosaic manu-

Gallery of the Statues, and contains a number of colossal busts, the historical portion of which are arranged in chronological order. Two unique representations in marble of the Organs of Respiration are extremely interesting, as showing the knowledge of the ancients in human anatomy. The Belvedere Court, designed by Bramante, is an octagonal room, of unequal sides, surrounded by four open porticos, with four cabinets in the angles, which contain some celebrated examples of ancient sculpture. . . . The [so-called] Museo Pio-Clementino is . . . the most magnificent Museum of ancient sculpture extant. Pius VI. . . . is said to have enriched it with more than 2,000 specimens. . . .

PAPAL COACH

Kept in the Vatican museum since the last appearance of Pius IX outside the papal residence.

factory. . . . [In] the Hall of the Greek Cross . . . are . . . two immense sarcophagi of red Egyptian porphyry . . . [and] a grand basin in porphyry, forty-one feet in circumference, found in the Baths of Diocletian. On each side of the entrance are two colossal Hermes, found in Hadrian's Villa, representing Tragedy and Comedy. Round the hall are statues and colossal busts of Jupiter, a bronze statue of Hercules, one of the largest of the ancient bronze statues existing, being fifteen feet high, and many others. [In] the Hall of the Animals . . . paved with mosaics chiefly found at Palestrina . . . the sculptures of animals constitute the finest collection of the kind ever formed. . . . The Gallery of Statues was collected in the halls belonging to the Casino of Innocent VIII. . . . The Hall of the Busts is a continuation of the

The Museo Chiaramonti was arranged by Canova. It contains upwards of 700 specimens of ancient sculpture, arranged in thirty compartments. . . . Opening to the west from the Museo Chiaramonti, the Gallery of Inscriptions is a long corridor, occupied almost exclusively with ancient sepulchral inscriptions and monuments, arranged in classes by Marini. . . . The Etruscan Museum is a very interesting department, owing its origin to Pope Gregory XVI., whose . . . zeal and liberality . . . added these valuable objects of art to the treasures accumulated in the Vatican by his predecessors. These ancient treasures would doubtless have been dispersed, perhaps irrevocably lost, if Gregory XVI. had not secured them for the Museum. They have been arranged in thirteen rooms. The Egyptian Museum [founded by Pius VII], although

inferior to many similar collections, presents much interest. . . . It occupies ten rooms underneath the Etruscan collection."—T. Greenwood, *Museums and art galleries*, pp. 343-347.—See also **ROME**: Modern city: 1550-1650.

VECTIGAL, **VECTIGALIA**.—"Pascua—Vectigalia—Publicum—are the terms employed to denote generally the Revenues of Rome, from whatever source derived. Pascua, i. e. Pasture lands, signified Revenue; because, in the earliest ages, the public income was derived solely from the rent of pastures belonging to the state. . . . Vectigal is the word used more frequently than any other to denote the Revenue of the state generally. . . . Publicum, in its widest acceptation, comprehended every thing which belonged to the community at large."—W. Ramsay, *Manual of Roman antiquities*, ch. 8.—"Cicero states that there was a difference between Sicily and all the other Roman provinces in the management of the Vectigal, which is the name for the contribution which the provinces made to the Roman State. All the provinces except Sicily paid either a fixed land-tax (vectigal stipendiarium) or tenths [decumæ] or other quotæ of their produce, and these tenths were let at Rome by the censors to the Publicani, who paid the State a certain sum for the

privilege of collecting the tenths and made out of them what profit they could. . . . The tenths of wheat and barley were let in Sicily to the Publicani, but sometimes a community would bid for its tenths and pay them itself."—G. Long, *Decline of the Roman republic*, v. 3, ch. 4.

VECTIS, ancient name of the Isle of Wight.—E. H. Bunbury, *History of ancient geography*, v. 2, ch. 24, sect 2.

VEDANTISM.—"The so-called pantheistic theory of the Vedanta philosophy is . . . attractive to the majority of Hindu thinkers. It is true that both the Sankhyas and Vedanta together underlie Brahmanism; but the Vedanta is, so to speak, the latest revelation of the Veda, teaching the non-duality and non-plurality of Spirit—that is, the real existence of only one Spirit called Atman (nom. Atma) or Brahman (nom. Brahma) instead of many; the separation of human spirits and of all the phenomena of nature from that one Spirit being only effected when it is enveloped in Illusion. In other words, the separate existence of man's spirit and of all natural phenomena is only illusory. . . . Of course these hyper-subtleties are beyond the scope of ordinary philosophic thought; but they show how great is the difference between the Pantheism of India and that of Europe. A Vedantist believes in one impersonal Spirit, who, by association with Illusion, becomes the one Supreme personal God (Paramesvara) of the world (of illusion). And it is this personal God who, when he engages in the creation, preservation, and dissolution of an illusory Universe, is called Sa-guna because believed to be associated with the three Gunas which are held to be substances (dravya) and are the supposed constituents of his casual body, identified, as it is, with Ignorance. . . . Pure Vedantism, then, is not only a belief in one impersonal Spirit made up of three abstract essences. It is a belief that a kind of threefold triad of essences—to wit, three spiritual essences, three corporeal envelopes, and three dominating conditions or qualities—together constitute one personal God, while constituting at the same time every human personality. . . . And yet, after all, when the Vedantist theory, as held at present, is closely examined, it turns out to be virtually as dualistic, in regard to spirit and matter, as the Sankhya; the only difference being that the source of the material world (Prakriti) in the Sankhya is held to have a real existence (though one of its names is still Maya) instead of a merely illusory existence. Brahma and Maya (Illusion) in the Vedanta, Purusha and Prakriti (Maya) in the Sankhya, must be united in the act of creation. The external world is the product of two principles (which some compare to Knowledge and Ignorance, Light and Darkness). The chief difference between the two systems lies in the unity of Spirit taught by the Vedanta, as distinguished from the plurality of spirits taught by the Sankhya. Yet the Vedantist virtually believes in three conditions of being, viz. the real, the practical, and the illusory; for while he affirms that the one Spirit Brahma alone has a real (paramarthika) existence, he allows a practical (vyavaharika) separate existence to human spirits, to the world, and to the personal God or gods, as well as an illusory (pratibhasika) existence. Hence every object is to be dealt with practically as if it were really what it appears to be. A god is practically a god; a man, a man; a beast, a beast; so that when a man feeds a horse he does not feed him as a portion of God, but as an animal kept for riding. The Vedanta theory, like the Sankhya, has taken deep root in the Indian

mind. A mixture of both is the source of the popular religion and mythology of the Hindus. Both permeate their literature and give a colour to every thought and feeling of their daily lives."—M. Monier-Williams, *Brahmanism and Hinduism*, pp. 33, 36-38.—See also BRAHMANISM; RELIGION: B. C. 1000.

ALSO IN: E. W. Hopkins, *Religions of India*.

VEDAS.—"The Rig-Veda forms the great literary memorial of the early Aryan settlements in the Punjab. [See HINDU LITERATURE.] The age of this venerable hymnal is unknown. Orthodox Hindus believe, without evidence, that it existed 'from before all time,' or at least from 3001 years B. C. European scholars have inferred from astronomical data that its composition was going on about 1400 B. C. [See RELIGION: B. C. 1000.] But the evidence might have been calculated backwards, and inserted later in the Veda. We only know that the Vedic religion had been at work long before the rise of Buddhism in the sixth century B. C. The Rig-Veda is a very old collection of 1017 short poems, chiefly addressed to the gods, and containing 10,580 verses. Its hymns show us the Aryans on the banks of the Indus, divided into various tribes, sometimes at war with each other, sometimes united against the 'black-skinned' Aborigines. Caste, in its later sense, is unknown. Each father of a family is the priest of his own household. The chieftain acts as father and priest to the tribe; but at the greater festivals he chooses some one specially learned in holy offerings to conduct the sacrifice in the name of the people. The king himself seems to have been elected; and his title of Vis-pati, literally 'Lord of the Settlers,' survives in the old Persian Vis-paiti, and as the Lithuanian Wiesz-patis in east-central Europe at this day. Women enjoyed a high position; and some of the most beautiful hymns were composed by ladies and queens. Marriage was held sacred. Husband and wife were both 'rulers of the house' (*dampati*); and drew near to the gods together in prayer. The burning of widows on their husbands' funeral pile was unknown; and the verses in the Veda which the Brahmans afterwards distorted into a sanction for the practice, have the very opposite meaning. 'Rise, woman,' says the Vedic text to the mourner; 'come to the world of life. Come to us. Thou has fulfilled thy duties as a wife to thy husband.' The Aryan tribes in the Veda have blacksmiths, coppersmiths, and goldsmiths among them, besides carpenters, barbers, and other artisans. They fight from chariots, and freely use the horse, although not yet the elephant, in war. They have settled down as husbandmen, till their fields with the plough, and live in villages or towns. But they also cling to their old wandering life, with their herds and 'cattle-pens.' Cattle, indeed, still form their chief wealth—the coin in which payment of fines is made—reminding us of the Latin word for money, *pecunia*, from *pecus*, a herd. One of the Vedic words for war literally means 'a desire for cows.' Unlike the modern Hindus, the Aryans of the Veda ate beef; used a fermented liquor or beer, made from the soma plant; and offered the same strong meat and drink to their gods. Thus the stout Aryans spread eastwards through Northern India, pushed on from behind by later arrivals of their own stock, and driving before them, or reducing to bondage, the earlier 'black-skinned' races. They marched in whole communities from one river valley to another; each house-father a warrior, a husbandman, and priest; with his wife, and his little ones, and his cattle. These free-hearted

tribes had a great trust in themselves and their gods. Like other conquering races, they believed that both themselves and their deities were altogether superior to the people of the land, and to their poor, rude objects of worship. . . . Their divinities—*devas*, literally 'the shining ones,' from the Sanskrit root *div*, 'to shine'—were the great powers of nature. They adored the Father-heaven,—*Dyaush-pitar* in Sanskrit, the *Dies-piter* or *Jupiter* of Rome, the *Zeus* of Greece; and the Encompassing Sky—*Varuna* in Sanskrit, *Uranus* in Latin, *Ouranos* in Greek. Indra, or the Aqueous Vapour that brings the precious rain on which plenty or famine still depends . . . became the chief of the Vedic gods. [See MYTHOLOGY: Indian: Unparalleled length of life.] . . . Agni, the God of Fire (Latin *ignis*), ranks perhaps next to Indra in the number of hymns addressed to him. . . . Many other deities are invoked in the Veda—in all, about thirty-three gods, 'who are eleven in heaven, eleven on earth, and eleven dwelling in glory in mid-air. . . . Verses may be quoted declaring each of the greater deities to be the One Supreme: 'Neither gods nor men reach unto thee, O Indra.' Another hymn speaks of Soma as 'king of heaven and earth, the conqueror of all.' To Varuna also it is said, 'Thou art lord of all, of heaven and earth; thou art king of all those who are gods, and of all those who are men.' The more spiritual of the Vedic singers, therefore, may be said to have worshipped One God, though not One alone. . . . While the aboriginal races buried their dead in the earth or under rude stone monuments, the Aryan—alike in India, in Greece, and in Italy—made use of the funeral-pile. Several exquisite Sanskrit hymns bid farewell to the dead:—'Depart thou, depart thou by the ancient paths to the place whither our fathers have departed. Meet with the Ancient Ones; meet with the Lord of Death. Throwing off thine imperfections, go to thy home. Become united with a body; clothe thyself in a shining form.' The doctrine of transmigration was at first unknown. The circle round the funeral-pile sang with a firm assurance that their friend went direct to a state of blessedness and reunion with the loved ones who had gone before."—W. W. Hunter, *Brief history of the Indian peoples*, pp. 54-58.—See also INDIA: Language; B. C. 2000-600; BRAHMANISM: Essential features; PRIESTHOOD: Pagan priesthood; ARYA SAMAJ; UPANISHADS.

VEDDAHS, primitive race of Ceylon, generally supposed by scholars to represent a branch of the pre-Aryan Dravidians of southern India.

VEENHUIZEN, Dutch vagrancy colony in the northern part of Holland, thirty miles east of the Zuyder Zee. See PRISON REFORM: Holland.

VEERE, town in the province of Zealand, Holland, on the island of Walcheren, four miles north-east of Middelburg. It was the first town to proclaim William IV, Prince of Orange, Stadtholder of Holland, 1747. See NETHERLANDS: 1747.

VEHMGERICHTS, VEHMIC COURTS.—"In times when political, social and legal life are in process of fermentation, and struggling towards a new order of things, the ordinary tribunals lose their authority, and from the body of the people men spring up to protect the right in a primitive fashion, and to punish the criminal who has escaped the ordinary penalties of the law. Thus, at the close of the Middle Ages, or more precisely, the first half of the 15th century, the Vehmgerichts (or Vehm Courts, also called Free Courts, Franchise Courts, Secret Courts) rose to an authority which extended all over Germany, which knew no respect of persons, and before which many evil-doers in high places, who had bade defiance to the ordinary tribunals, were made to tremble. The name 'Vehme' is derived from the old German 'vervehmen,' which means to ban, or to curse. The Vehm courts were peculiar to Westphalia, and even there could only be held on the 'Red Land'—that is, the district between the Rhine and the Weser. They were dependent on the German Emperor alone, and their presidents, the Free-counts, received from the Emperor in person, or from his representative, the Elector of Cologne, the power of life and death. They traced their origin to Charlemagne, who, respecting the legal customs of the old heathen Saxons, introduced country courts among them after they had been converted to Christianity. For, even in the most ancient times, the Saxon freemen used to assemble at an appointed season, after they had held their great sacrifice, and hold a 'Thing' under the presidency of one of their oldest members, called the Grave, or Count, where they inflicted punishment and administered justice. The Vehm court consisted of a Free-count and a number of assessors, who were called 'The Initiated,' because they knew the secrets of the holy Vehme. There must be at least fourteen of these assessors, but there were generally twice that number. As it was no secret when a man was an assessor, and as it contributed greatly to the safety of his person, since people took good care not to molest a member of the holy Vehme, it gradually came about that men from every German province obtained admission into the number of assessors. When the Emperor Sigismund was elected into the number of 'The Initiated' at the Franchise Court of Dortmund, the number of assessors is said to have amounted to 100,000, among whom were many princes and nobles. And about a thousand assessors are said to have been present when the ban was issued against Duke Henry of Bavaria in 1420. . . . There was a 'secret court' to which only the initiated had access, and a 'public court' which was held in the morning in the light of day at a known court-house. The president's chairs were always set in the open air under a lime, oak, pear, or hawthorn tree, and often near a town, castle, or village. At Dortmund the president's chair was placed close to the town wall under a limetree, which, though sadly shattered, is still standing between the rails inside the railway station. Round the stone table were ranged three stone benches for the assessors; on the table there was carved in relief the German imperial eagle, and on it was placed the sword of justice. . . . The Vehm court which was originally, and was bound to be, a public one, gradually altered its character, enveloped itself in mysterious darkness,

and under the cloak of secrecy lent itself to all sorts of unrighteous objects. In 1461, accordingly, princes and cities leagued together to suppress the irregularities of these courts, and as soon as the orderly administration of justice came into existence with the rise of the new princely authority, they perished from their own impotence."—A. W. Grube, *Heroes of history and legend*, ch. 13.

VENDES, Slavic tribe. See AVARS: 7th century.

VENDÔME, Louis Joseph, Duc de (1654-1712), marshal of France. Served in the wars in the Netherlands and at the victory of Marsaglia, 1693; commanded in Catalonia and took Tyrol, Piedmont, and Lombardy; was defeated at Oudenarde, 1708; defeated the Austrians in Spain at Villaviciosa, 1710. See NETHERLANDS: 1708-1709.

VENDORS, Athenian magistrates who took charge of financial affairs. See GREECE: B. C. 4th century: Economic conditions.

VENEDI.—"The Venedi extended beyond the Peucini and Bastarnæ [around the mouths of the Danube] as far as the Baltic Sea; where is the Sinus Venedicus, now the Gulf of Dantzig. Their name is also preserved in Wenden, a part of Livonia. When the German nations made their irruption into Italy, France, and Spain, the Venedi, also called Winedi, occupied their vacant settlements between the Vistula and Elbe. Afterward they crossed the Danube, and seized Dalmatia, Illyricum, Istria, Carniola, and the Noric Alps. A part of Carniola still retains the name of Windismarck derived from them. This people were also called Slavi."—Tacitus, *Germans, note to Oxford translation, ch. 46*.—"The Venedi [of Tacitus] . . . are obviously the Wends—the name by which the Germans always designate the neighbouring Slavonian populations; but which is no more a national name than that of Wälsch, which they apply in like manner to the Latin races on their southern frontiers."—E. H. Bunbury, *History of ancient geography, v. 2, ch. 26, sect. 2, footnote*.—See also SLAVS: Origin; VANDALS.

VENEDI OF BOHEMIA. See AVARS: 7th century.

VENEDOTIA, chief of the early states in Wales. See BRITAIN: 6th century.

VENETI OF CISALPINE GAUL.—One of the tribes or nations of Cisalpine Gaul bore the name of the Veneti. The Veneti occupied the country between the rivers Adige and Plavis and seem to have been considerably civilized when they first appear in history. They became allies of the Romans at an early day and were favorably dealt with when Gallia Cisalpina was added to the dominions of Rome. "No ancient writer distinctly states to what race the Veneti belonged. They are said to have resembled the Illyrians in dress and manners; but the very way in which this statement is made shows that its author did not regard them as Illyrians. . . . I have no doubt that the Veneti belonged to the race of the Liburnians, and that accordingly they were a branch of the widespread Tyrrheno-Pelasgians, in consequence of which they also became so easily Latinized." The capital city of the Veneti was Patavium (modern Padua). "Patavium was a very ancient and large town, and it is strange that it appears as such in Roman history all at once. It is mentioned as early as the fifth century [B. C.], during the expe-

dition of the Spartan Cleonymus; it is also spoken of at the time of Caesar and of the triumvirs. But Strabo is the first who describes Patavium as a large town, and in such a manner as to make it evident that it was an ancient place. He says that, next to Rome, it was the wealthiest city of Italy. . . . In the time of Augustus it was a large commercial and manufacturing place."—B. G. Niebuhr, *Lectures on ancient ethnography and geography, v. 2, p. 246*.

VENETI OF WESTERN GAUL: Location and character.—Caesar's campaign against them.—"The Veneti were one of the Armorican states of the Celtae. Their neighbours on the south were the Namnetes or Nannetes (Nantes), on the east the Redones, and on the north the Curiosolitae, and the Osismi in the north-west part of Bretagne, in the department of Finistère. The chief town of the Veneti was Dariorigum, now Vannes, on the bay of Morbihan in the French department of Morbihan, which may correspond nearly to the country of the Veneti. The Veneti were the most powerful of all the maritime peoples who occupied the peninsula of Bretagne. They had many vessels in which they sailed to the island Britannia, to Cornwall and the parts along the south coast of England, as we may assume. They surpassed all their neighbours in skill and experience in naval affairs."—G. Long, *Decline of the Roman republic, v. 4, ch. 6*.—"The Veneti, "together with the Aulerici, Rhedones [or Redones], Carnutes, Andi and Turones, occupied the whole space between the lower Seine and the lower Loire, and were apparently closely united among themselves."

—C. Merivale, *History of the Romans, ch. 7*.—"The Andes [Andi] are the people whom Tacitus names the Andecavi, and the copyists of Ptolemy have named Ondicavae. They were west of the Turones, and their position is defined by the town Juliomagus or Civitas Andecavorum, now Angers on the Mayenne."—G. Long, *Decline of the Roman republic, v. 4, ch. 6*.—"In my opinion these Veneti were the founders of the Veneti in the Adriatic, for almost all the other Celtic nations in Italy have passed over from the country beyond the Alps, as for instance the Boii and Senones. . . . However, I do not maintain my opinion positively; for in these matters probability is quite sufficient."—Strabo, *Geography* (tr. by Hamilton and Falconer), *bk. 4, ch. 4, sect. 1*.—"Caesar's third campaign in Gaul, 56 B. C., was directed against the Veneti and their Armorican neighbors. (See GAUL: B. C. 58-51.) These tribes had submitted themselves in the previous year to Caesar's lieutenant, the younger Crassus; but the heavy exactions of the Romans provoked a general rising, and Caesar was called to the scene in person. The Veneti were so amphibious a race, and their towns were generally placed so much out of the reach of a land army, that he found it necessary to build a fleet at the mouth of the Loire and bring it up against them. But the Veneti were better sailors than the Romans and their ships were more strongly built, so that the advantage would have still remained to them if Roman inventiveness had not turned the scale. Caesar armed his men with hooked knives at the end of long poles, with which they cut the rigging of the Venetian ships and brought down their clumsy sails, which were of leather. By this means he overcame and destroyed them, in a great naval fight. When the survivors submitted, he ruthlessly slew the senatorial elders and sold the remnant of the people into slavery.—Caesar, *Gaulic wars, bk. 3, ch. 7-16*.

VENEZUELA: Geographic description.—“The United States of Venezuela, as this republic is officially called, lie wholly within the tropical zone, between latitude 0° 55' N. and 12° 26' N. and longitude 59° 35' W. and 73° 21' W. (from Greenwich). [See LATIN AMERICA: Map of South America.] The area within these limits is some 1,020,400 square kilometres, or 394,000 square miles.”—L. V. Dalton, *Venezuela*, p. 25.—“The huge republic bulges out into the northernmost nub of the continent, where the terminal ranges of the Andes turn eastward to meet the Great Guiana Highlands and form those high-flung ramparts that protect the fertile, low-lying Amazon plains from the Atlantic. This black, mountainous front runs along the Caribbean coast line some fifteen hundred miles, broken at intervals, however, where the lovely blue of the tropical sea sweeps inland to meet the bright green of some great river basin.”—H. W. Van Dyke, *Through South America*, p. 400.—The population, in 1921, was 2,411,952, about 440,000 less than was estimated in 1918.

Aboriginal inhabitants. See COAJIRO.

1499-1550.—Discovery and naming of the province.—Its first occupation by German adventurers.—“The province contiguous to Santa Martha on the east was first visited by Alonso de Ojeda, in the year 1499 [see AMERICA: 1499-1500]; and the Spaniards, on their landing there, having observed some huts in an Indian village, built upon piles, in order to raise them above the stagnated water which covered the plain, were led to bestow upon it the name of Venezuela, or little Venice. . . . They made some attempts to settle there, but with little success. The final reduction of the province was accomplished by means very different from those to which Spain was indebted for its other acquisitions in the new world. The ambition of Charles V often engaged him in operations of such variety and extent that his revenues were not sufficient to defray the expense of carrying them into execution. Among other expedients for supplying the deficiency of his funds, he had borrowed large sums from the Velsers of Augsburg, the most opulent merchants at that time in Europe. By way of retribution for these, or in hopes, perhaps, of obtaining a new loan, he bestowed up them the province of Venezuela, to be held as an hereditary fief from the crown of Castile, on condition that within a limited time they should render themselves masters of the country, and establish a colony there. . . . Unfortunately they committed the execution of their plan to some of those soldiers of fortune with which Germany abounded in the 16th century. . . . In the course of a few years, their avarice and

exactions, in comparison with which those of the Spaniards were moderate, desolated the province so completely that it could hardly afford them subsistence, and the Velsers relinquished a property from which the inconsiderate conduct of their agents left them no hope of ever deriving any advantage. When the wretched remainder of the Germans deserted Venezuela, the Spaniards again took possession of it.”—W. Robertson, *History of America*, bk. 7.—See also EL DORADO.

1829-1886.—Separation from Colombia.—Summary record of revolutions and civil wars.—Strife of the Yellows and the Blues.—“In all countries, under whatever name they may be known, there are two great political parties; the conservatives and the reformers. . . . Venezuela is no exception to the general rule; there is the ‘Oligarquia,’ which desires to let things alone, and the ‘Liberal’ party, which wishes to remould them in accordance with the spirit of the age. The Spanish misgovernment left a legacy of bitterness and anarchy that has been the cause of much misery. Political passion runs very high in the country, and its history for a generation between these two parties has been a continual struggle, always more or less warlike. The existence of Venezuela in an independent capacity is due, in a large measure, to the personal ambition of Paez, by whose influence the great Liberator [Simón Bolívar] was exiled from his fatherland, and the republic separated [in 1826] from Colombia. Whatever may have been the real wishes of the people, the death of Bolívar put an end to all thoughts of reunion; and Paez became its first constitutional president. The second president was the learned Dr. José María Vargas, whose election in March 1835 was said to have been irregular, and led to the ‘Revolucion de las Reformas.’ He was deposed and expelled in July, but in August recalled to power! General Paez now took the field against the ‘reformistas,’ and a civil war ensued, continuing until March 1836, when they were completely subjugated, and treated with great rigour by order of the Congress, but against the desire of Paez, who entreated to be allowed to deal with them clemently. In 1836, Dr. Vargas resigned the presidency, and after the remainder of his term had been occupied by three vice-presidents, General Paez, in 1839, became again the legitimate head of the nation. Now that the grave had closed over Simon Bolívar, the passions which had prevented the recognition of his greatness died also, and on the 17th of December 1842, the ashes of the immortal Liberator were transferred from Santa Maria with every mark of public respect and honour and received a magnificent national funeral, in the Temple of San Francisco, in Caracas. The fifth president was General Soublette, and the sixth General José Tadeo Monagas, who was elected in 1847. A great part of the Venezuelan people believe that all the evils that have fallen upon the republic since 1846 have had their origin in the falsification of votes, said to

have taken place during the election of Monagas for president. The liberal candidate was Antonio Leocadio Guzman; and it is asserted that he had a majority of votes. . . . Monagas did not have an easy tenure of office, for the opposition of Paez led to two years of civil war. Here it may be noted to the credit of the liberal party that, at the time when many of its opponents were prisoners, it abolished the penalty of death for political offences. To his brother, General José Gregorio Monagas, afterwards president of the republic, was due the emancipation of the slaves. The famous law of March 24th, 1854, conceded liberty and equal rights to all; but by a strange irony of fortune, he who had given the precious boon of freedom to thousands died himself incarcerated in a political prison. . . . At the beginning of 1859 the discontent of the liberals had reached a pitch which led to the outbreak of the War of the Federation. It was in this struggle that the present

GUZMAN BLANCO

leader of the liberal party first displayed his military skill." Antonio Guzman Blanco, born in 1830 and educated for the law, lived some years in the United States, part of the time as secretary of legation at Washington. Driven from Venezuela in 1858, "his expatriation soon after brought him in contact, first in St. Thomas and afterwards in Curazao, with General Falcon, then the head of 'los liberales.' Falcon landed in Venezuela in July 1859, and proclaimed the Federal Republic. Many rose to support him, and in Caracas, on the 1st of August, the president, Monagas, was arrested; the next day the same troops declared against the Federation, and fired upon the people! So commenced the five years' War of the Federation, which has left, even to the present day, its black and ruined tracks across the face of the country. On the 30th of September was fought the battle of Sabana de la Cruz, resulting in the fall of Barquisimeto. In this action, so fortunate for the liberals, Guzman Blanco made his acquaintance with war, and showed so much military talent and energy that he was induced to leave his civil duties and

take a 'commandante's' commission. The victory of Santa Ines, in December of the same year, followed. . . . The attack on San Carlos followed soon after, and was a disaster for the federals, who lost their general, Zamora, and were forced to retreat. Falcon sought aid in Nueva Granada." The next year Guzman Blanco won the victory of Quebrada-seca, Oct. 21, 1862. "Other victories followed, and were crowned by the grand and decisive combat of the 16th, 17th, and 18th of April, which gave the province of Caracas to the Federals, and led to a treaty between the two parties. The peace of Coche was arranged by Señor Pedro José Rojas, secretary to the Dictator, as Paez was sometimes called, and Guzman Blanco, as representative of Falcon, the chief of the revolution. Paez, by this treaty, undertook to abdicate 30 days later, when an assembly of 80 nominated in equal parts by the chiefs of each party, was to decide on a programme for the future. The assembly met in Victoria, and nominated Falcon President and Guzman Blanco provisional vice-president of the Federation. Falcon entered Caracas in triumph on July 24, 1863, and Guzman Blanco became Minister of Finance and of Foreign Relations." Guzman Blanco visited Europe in 1864 and 1867 to negotiate loans. "Meanwhile, in Caracas, the 'oligarquia,' which now assumed the name of the Blue party (El Partido Azul), was not idle, and its activity was increased by dissensions in the opposition. A section of the liberal party [or 'los amarillos'—'Yellows'] had become greatly disaffected to Marshal Falcon, who abdicated in favour of two revolutionary chiefs, Bruzual and Urrutia. This led to the treaty of Antimano, by which the 'partido azul' recognized the new government, but directly afterwards proclaimed the presidency of General José Tadeo Monagas. Three days' sanguinary combat, at the end of July 1868, gave it possession of Caracas." Guzman Blanco, returning at this juncture from Europe, was driven to take refuge in the island of Curazao; but in February, 1870, he reappeared in Venezuela; was supported by a general rising; took Caracas by assault, and defeated the Blues in several battles. "The congress of plenipotentiaries of the states met at Valencia, and nominated Guzman Blanco provisional president, and by the end of the year the enemy was nearly everywhere defeated."—J. M. Spence, *Land of Bolívar*, v. 1, ch. 8.—"At first, those who had risen and driven out the Spaniards divided the land among themselves, but as successive Generals strove for and gained the Presidency they again forfeited the property of the opposing party, and divided their possessions among their own followers. . . . Paez, Vargas, Paez, Zea, Soubllette, Paez, Gil, Monagas, Falcon, Monagas, Polidor, Pulgar, Blanco, Linares, Blanco, Crespo, and again Blanco . . . succeeded each other with marvellous rapidity, the principal occupation of the deposed President being to conspire against his successor. Some of them succeeded to power more than once. . . . In 1886 Don Gusman Blanco . . . [was apparently] supreme."—W. Barry, *Venezuela*, ch. 5.

ALSO IN: F. L. Petre, *Simón Bolívar "el libertador"*.—T. Williams, *Monagas and Paez*.

1869-1892.—Rule of General Blanco.—Revolution of 1889.—"In 1869 opened an era of peace and progress under the political domination of General Guzman Blanco. For 20 years, whether he was the head of a Provisional Government established by force of arms, or the constitutional Executive, or Minister to France, his will was the supreme force in the State. . . . He suppressed Cleri-

calism and established genuine religious liberty. He built railways, improved the public roads, and adorned the cities. . . . He developed the industries and commerce of the country, and promoted its prosperity by a policy at once strong and pacific. It was a system of political absolutism. . . . A reaction against it was inevitable. . . . The signal for a political revolution was raised by university students in October, 1889. They began operations by flinging stones at a statue of Guzman Blanco in Carácas. . . . It was a singularly effective revolution, wrought without bloodshed or excitement. This political movement was successful because Guzman Blanco was in Paris, and his personal representative in the executive office was not disposed to resent public affronts to his patron. The President, Dr. Rojas Paul, was a wise and discreet man. . . . He reorganized his Cabinet so as to exclude several of the devoted partisans of Guzman Blanco, and brought Dr. Anduesa Palacio into the field as a candidate for the Presidency. . . . Anduesa's administration, instead of being an era of reform, reproduced all the vices and corruption of the old order, and none of its progressive virtues. After two years it ended in civil war, usurpation, and the enforced resignation of Anduesa."—I. N. Ford, *Tropical America*, ch. 12.

1892-1893. — Constitutional government restored.—Anduesa Palacio resigned in favor of Vice President Villegas, and the legality of the succession was disputed by the opposition, under ex-President Joaquin Crespo. The civil war continued, and three short-lived dictatorships were set up in succession; but in June, 1893, a new constitution was adopted. Crespo was elected President for a term of four years.

1895 (July).—Question of the boundary of British Guiana taken up by the government of the United States.—Dispatch of Secretary Olney to Ambassador Bayard.—“From the early days of the independence of Venezuela continual protests had been made by the representatives of the republic against the alleged encroachments of residents and officials from British Guiana. Briefly, the contentions raised by the two parties were: on the part of Venezuela, that the Dutch, to whom we [English] were successors, had only claimed jurisdiction on the east side of the Essequibo River; on the part of Great Britain, that the Dutch had in 1759 and 1760 put forward the claim that their territory included, not merely the Essequibo River but the whole of the basin drained by that river and its tributaries. This claim was never rebutted by the authorities in Madrid. So the dispute dragged on, the British Government refusing to consent to arbitration of the boundary unless it was previously agreed by Venezuela that such parts of the Essequibo Valley as had been effectively occupied by British colonists were recognized as their territory. In April, 1895, the arrest by the Venezuelan authorities of two inspectors of the British Guiana Police on the Cuyuni River brought matters to a crisis. The inspectors were soon released, but Crespo appealed to Washington for protection against any claim for indemnity.”—L. V. Dalton, *Venezuela*, pp. 107-108.—The government of the United States had for a number of years been exerting itself to bring about the settlement of the long standing dispute. On July 20, 1895, the American secretary of state, Richard Olney, summarized “the important features of the existing situation” by the following despatch to the American ambassador in London: “1. The title to territory of indefinite but confessedly very large extent is in dispute between Great Britain on the

one hand, and the South American 1. Venezuela on the other. 2. The disparity of strength of the claimants is such that Venezuela can hope to establish her claim only through peaceful methods—through an agreement with her adversary either upon the subject itself or upon an arbitration. 3. The controversy with varying claims on the part of Great Britain has existed for more than half-a-century, during which period many earnest and persistent efforts of Venezuela to establish a boundary by agreement have proved unsuccessful. 4. The futility of the endeavour to obtain a conventional line being recognized, Venezuela, for a quarter of a century, has asked and striven for arbitration. 5. Great Britain, however, has always and continuously refused, and still refuses, to arbitrate except upon the condition of a renunciation of a large part of the Venezuelan claim, and of a concession to herself of a large share of the territory in controversy. 6. By the frequent interposition of its good offices at the instance of Venezuela, by constantly urging and promoting the restoration of diplomatic relations between the two countries, by pressing for arbitration of the disputed boundary, by offering to act as Arbitrator, by expressing its grave concern whenever new alleged instances of British aggression upon Venezuelan territory have been brought to its notice, the Government of the United States has made it clear to Great Britain and to the world that the controversy is one in which both its honor and its interests are involved, and the continuance of which it cannot regard with indifference.” Secretary Olney proceeds next to consider the rights, the interests and the duty of the United States in the matter, and to what extent, if any, it “may and should intervene in a controversy between and primarily concerning only Great Britain and Venezuela,” and his conclusions on these points are founded on the doctrine set forth by President Monroe, of resistance to European intervention in American affairs. Quoting President Monroe's celebrated message on the subject, in 1823, Secretary Olney remarks: “The Message just quoted declared that the American continents were fully occupied, and were not the subjects for future colonization by European Powers. To this spirit and this purpose, also, are to be attributed the passages of the same Message which treat any infringement of the rule against interference in American affairs on the part of the Powers of Europe as an act of unfriendliness to the United States. It was realized that it was futile to lay down such a rule unless its observance could be enforced. It was manifest that the United States was the only Power in this hemisphere capable of enforcing it. It was therefore courageously declared, not merely that Europe ought not to interfere in American affairs, but that any European Power doing so would be regarded as antagonizing the interests and inviting the opposition of the United States. That America is in no part open to colonization, though the proposition was not universally admitted at the time of its first enunciation, has long been universally conceded. We are now concerned, therefore, only with that other practical application of the Monroe doctrine the disregard of which by an European Power is to be deemed an act of unfriendliness towards the United States. The precise scope and limitations of this rule cannot be too clearly apprehended. It does not establish any general Protectorate by the United States over other American States. It does not relieve any American State from its obligations as fixed by international law, nor prevent any Eu-

ropean Power directly interested from enforcing such obligations or from inflicting merited punishment for the breach of them. It does not contemplate any interference in the internal affairs of any American State, or in the relations between it and other American States. It does not justify any attempt on our part to change the established form of Government of any American State, or to prevent the people of such State from altering that form according to their own will and pleasure. The rule in question has but a single purpose and object. It is that no European Power or combination of European Powers shall forcibly deprive an American State of the right and power of self-government, and of shaping for itself its own political fortunes and destinies. That the rule thus defined has been the accepted public law of this country ever since its promulgation cannot fairly be denied. . . . It is certainly no more than the exact truth to say that every Administration since President Monroe's has had occasion, and sometimes more occasions than one, to examine and consider the Monroe doctrine, and has in each instance given it emphatic indorsement. That distance and 3,000 miles of intervening ocean make any permanent political union between an European and an American State unnatural and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe, as Washington observed, has a set of primary interests which are peculiar to herself. America is not interested in them, and ought not to be vexed or complicated with them. . . . It is true, then, that the safety and welfare of the United States are so concerned with the maintenance of the independence of every American State as against any European Power as to justify and require the interposition of the United States whenever that independence is endangered? The question can be candidly answered in but one way. The States of America, South as well as North, by geographical proximity, by natural sympathy, by similarity of Governmental Constitutions, are friends and allies, commercially and politically, of the United States. To allow the subjugation of any of them by an European Power is, of course, to completely reverse that situation, and signifies the loss of all the advantages incident to their natural relations to us. But that is not all. The people of the United States have a vital interest in the cause of popular self-government. . . . To-day the United States is practically Sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition, . . . because, in addition to all other grounds, its infinite resources, combined with its isolated position, render it master of the situation, and practically invulnerable as against any or all other Powers. All the advantages of this superiority are at once imperilled if the principle be admitted that European Powers may convert American States into Colonies or provinces of their own. The principle would be eagerly availed of, and every Power doing so would immediately acquire a base of military operations against us. What one Power was permitted to do could not be denied to another, and it is not inconceivable that the struggle now going on for the acquisition of Africa might be transferred to South America. If it were, the weaker countries would unquestionably be soon absorbed, while the ultimate result might be the partition of all South America between the various European Powers. . . . The people of the United States have learned in the school of experience to what extent the relations of States to each other depend not upon

sentiment nor principle, but upon selfish interest. They will not soon forget that, in their hour of distress, all their anxieties and burdens were aggravated by the possibility of demonstrations against their national life on the part of Powers with whom they had long maintained the most harmonious relations. They have yet in mind that France seized upon the apparent opportunity of our Civil War to set up a Monarchy in the adjoining State of Mexico. They realize that, had France and Great Britain held important South American possessions to work from and to benefit, the temptation to destroy the predominance of the Great Republic in this hemisphere by furthering its dismemberment might have been irresistible. From that grave peril they have been saved in the past, and may be saved again in the future, through the operation of the sure but silent force of the doctrine proclaimed by President Monroe. . . . There is, then, a doctrine of American public law, well founded in principle and abundantly sanctioned by precedent, which entitles and requires the United States to treat as an injury to itself the forcible assumption by an European Power of political control over an American State. The application of the doctrine to the boundary dispute between Great Britain and Venezuela remains to be made, and presents no real difficulty. Though the dispute relates to a boundary-line, yet, as it is between States, it necessarily imports political control to be lost by one party and gained by the other. . . . It has been intimated, indeed, that in respect of these South American possessions, Great Britain is herself an American State like any other, so that a controversy between her and Venezuela is to be settled between themselves as if it were between Venezuela and Brazil, or between Venezuela and Colombia, and does not call for or justify United States' intervention. If this view be tenable at all, the logical sequence is plain. Great Britain as a South American State is to be entirely differentiated from Great Britain generally; and if the boundary question cannot be settled otherwise than by force, British Guiana with her own independent resources, and not those of the British Empire, should be left to settle the matter with Venezuela—an arrangement which very possibly Venezuela might not object to. But the proposition that an European Power with an American dependency is for the purposes of the Monroe doctrine to be classed not as an European but as an American State will not admit of serious discussion. If it were to be adopted, the Monroe doctrine would be too valueless to be worth asserting. . . . The declaration of the Monroe Message—that existing Colonies or dependencies of an European Power would not be interfered with by the United States—means Colonies or dependencies then existing with their limits as then existing. So it has been invariably construed, and so it must continue to be construed, unless it is to be deprived of all vital force. . . . It is not admitted, however, and therefore cannot be assumed, that Great Britain is in fact usurping dominion over Venezuelan territory. While Venezuela charges such usurpation Great Britain denies it, and the United States, until the merits are authoritatively ascertained, can take sides with neither. But while this is so—while the United States may not, under existing circumstances at least, take upon itself to say which of the two parties is right and which wrong—it is certainly within its right to demand that the truth shall be ascertained. . . . It being clear, therefore, that the United States may legitimately insist upon the merits of the boundary question being deter-

mined, it is equally clear that there is but one feasible mode of determining them, viz., peaceful arbitration . . . [Great Britain] admits that there is a controversy, and that arbitration should be resorted to for its adjustment. But, while up to that point her attitude leaves nothing to be desired, its practical effect is completely nullified by her insistence that the submission shall cover but a part of the controversy—that, as a condition of arbitrating her right to a part of the disputed territory, the remainder shall be turned over to her. . . . The territory which Great Britain insists shall be ceded to her as a condition of arbitrating her claim to other territory has never been admitted to belong to her. It has always and consistently been claimed by Venezuela. Upon what principle—except her feebleness as a nation—is she to be denied the right of having the claim heard and passed upon by an impartial Tribunal? No reason or shadow of reason appears in all the voluminous literature of the subject. . . . In these circumstances, the duty of the President appears to him unmistakable and imperative. Great Britain's assertion of title to the disputed territory, combined with her refusal to have that title investigated, being a substantial appropriation of the territory to her own use, not to protest and give warning that the transaction will be regarded as injurious to the interests of the people of the United States, as well as oppressive in itself, would be to ignore an established policy with which the honor and welfare of this country are closely identified. While the measures necessary or proper for the vindication of that policy are to be determined by another branch of the Government, it is clearly for the Executive to leave nothing undone which may tend to render such determination unnecessary. You are instructed, therefore, to present the foregoing views to Lord Salisbury by reading to him this communication (leaving with him a copy should he so desire), and to reinforce them by such pertinent considerations as will doubtless occur to you. They call for a definite decision upon the point whether Great Britain will consent or will decline to submit the Venezuelan boundary question in its entirety to impartial arbitration. It is the earnest hope of the President that the conclusion will be on the side of arbitration, and that Great Britain will add one more to the conspicuous precedents she has already furnished in favor of that wise and just mode of adjusting international disputes. If he is to be disappointed in that hope, however—a result not to be anticipated, and in his judgment calculated to greatly embarrass the future relations between this country and Great Britain—it is his wish to be made acquainted with the fact at such early date as will enable him to lay the whole subject before Congress in his next Annual Message.”

—Great Britain, *Parliamentary Publications (Papers by command: United States no. 1, 1896, pp. 13-21)*.—See also MONROE DOCTRINE: 1870-1895.

1895 (November).—British Guiana boundary question.—Replies of Lord Salisbury to Secretary Olney.—The reply of Lord Salisbury was not written until November 26. It was then given in two dispatches, bearing the same date,—one devoted entirely to a discussion of the Monroe Doctrine and of the argument founded on it by Secretary Olney; the other to a rehearsal of the Venezuela controversy from the standpoint of the British government. In the communication first mentioned he wrote: “During the period that has elapsed since the Message of President Monroe was delivered in 1823, the doctrine has undergone a very notable development, and the aspect which it now

presents in the hands of Mr. Olney differs widely from its character when it first issued from the pen of its author. The two propositions which in effect President Monroe laid down were, first, that America was no longer to be looked upon as a field for European colonization; and, secondly, that Europe must not attempt to extend its political system to America, or to control the political condition of any of the American communities who had recently declared their independence. . . . The system of which he speaks, and of which he so resolutely deprecates the application to the American Continent, was the system then adopted by certain powerful States upon the Continent of Europe of combining to prevent by force of arms the adoption in other countries of political institutions which they disliked, and to uphold by external pressure those which they approved. . . . But the circumstances with which President Monroe was dealing, and those to which the present American Government is addressing itself, have very few features in common. Great Britain is imposing no ‘system’ upon Venezuela, and is not concerning herself in any way with the nature of the political institutions under which the Venezuelans may prefer to live. But the British Empire and the Republic of Venezuela are neighbours, and they have differed for some time past, and continue to differ, as to the line by which their dominions are separated. It is a controversy with which the United States have no apparent practical concern. . . . It is not a question of the colonization by a European Power of any portion of America. It is not a question of the imposition upon the communities of South America of any system of government devised in Europe. It is simply the determination of the frontier of a British possession which belonged to the Throne of England long before the Republic of Venezuela came into existence. . . . The Government of the United States do not say that Great Britain, or that Venezuela, is in the right in the matters that are in issue. But they lay down that the doctrine of President Monroe, when he opposed the imposition of European systems, or the renewal of European colonization, confers upon them the right of demanding that when a European Power has a frontier difference with a South American community, the European Power shall consent to refer that controversy to arbitration; and Mr. Olney states that unless Her Majesty's Government accede to this demand, it will ‘greatly embarrass the future relations between Great Britain and the United States.’ Whatever may be the authority of the doctrine laid down by President Monroe, there is nothing in his language to show that he ever thought of claiming this novel prerogative for the United States. . . . I will not now enter into a discussion of the merits of this method of terminating international differences. It has proved itself valuable in many cases; but it is not free from defects, which often operate as a serious drawback on its value. It is not always easy to find an Arbitrator who is competent, and who, at the same time, is wholly free from bias; and the task of insuring compliance with the Award when it is made is not exempt from difficulty. . . . In the remarks which I have made, I have argued on the theory that the Monroe doctrine in itself is sound. I must not, however, be understood as expressing any acceptance of it on the part of Her Majesty's Government. . . . Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been inscribed by any adequate authority in the

code of international law; and the danger which such admission would involve is sufficiently exhibited both by the strange development which the doctrine has received at Mr. Olney's hands, and the arguments by which it is supported, in the despatch under reply. In defence of it he says: 'That distance and 3,000 miles of intervening ocean make any permanent political union between a European and an America State unnatural and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe had a set of primary interests which are peculiar to herself; America is not interested in them, and ought not to be vexed or complicated with them.' . . . The necessary meaning of these words is that the union between Great Britain and Canada; between Great Britain and Jamaica and Trinidad; between Great Britain and British Honduras or British Guiana are 'inexpedient and unnatural.' President Monroe disclaims any such inference from his doctrine; but in this, as in other respects, Mr. Olney develops it. He lays down that the inexpedient and unnatural character of the union between a European and American State is so obvious that it 'will hardly be denied.' Her Majesty's Government are prepared emphatically to deny it on behalf of both the British and American people who are subject to her Crown."

In his second despatch, Lord Salisbury drew the conclusions of his government from the facts as seen on the English side, and announced its decision, in the following terms: "It will be seen . . . that the Government of Great Britain have from the first held the same view as to the extent of territory which they are entitled to claim as a matter of right. It comprised the coast-line up to the River Amacura, and the whole basin of the Essequibo River and its tributaries. A portion of that claim, however, they have always been willing to waive altogether; in regard to another portion, they have been and continue to be perfectly ready to submit the question of their title to arbitration. As regards the rest, that which lies within the so-called Schomburgk line, they do not consider that the rights of Great Britain are open to question. Even within that line they have, on various occasions, offered to Venezuela considerable concessions as a matter of friendship and conciliation, and for the purpose of securing an amicable settlement of the dispute. If as time has gone on the concessions thus offered diminished in extent, and have now been withdrawn, this has been the necessary consequence of the gradual spread over the country of British settlements, which Her Majesty's Government cannot in justice to the inhabitants offer to surrender to foreign rule, and the justice of such withdrawal is amply borne out by the researches in the national archives of Holland and Spain, which have furnished further and more convincing evidence in support of the British claims. Her Majesty's Government . . . have . . . repeatedly expressed their readiness to submit to arbitration the conflicting claims of Great Britain and Venezuela to large tracts of territory which from their auriferous nature are known to be of almost untold value. But they cannot consent to entertain, or to submit to the arbitration of another Power or of foreign jurists, however eminent, claims based on the extravagant pretensions of Spanish officials in the last century, and involving the transfer of large numbers of British subjects, who have for many years enjoyed the settled rule of a British Colony, to a nation of different race and language, whose political system is subject to

frequent disturbance, and whose institutions as yet too often afford very inadequate protection to life and property. No issue of this description has ever been involved in the questions which Great Britain and the United States have consented to submit to arbitration, and Her Majesty's Government are convinced that in similar circumstances the Government of the United States would be equally firm in declining to entertain proposals of such a nature."—Great Britain, *Parliamentary Publications (Papers by command: United States no. 1, 1896, pp. 23-31)*.

1895 (December).—Message of President Cleveland to the United States Congress on the Venezuela boundary dispute.—As the replies given by Lord Salisbury showed no disposition on the part of the British government to submit its dispute with Venezuela to arbitration, President Cleveland took the subject in hand, and addressed to Congress, on Dec. 17, 1895, a special message which startled the world by the peremptoriness of its tone. "It may not be amiss to suggest that the doctrine upon which we stand is strong and sound, because its enforcement is important to our peace and safety as a nation and is essential to the integrity of our free institutions and the tranquil maintenance of our distinctive form of government. It was intended to apply to every stage of our national life and can not become obsolete while our Republic endures. If the balance of power is justly a cause for jealous anxiety among the Governments of the Old World and a subject for our absolute non-interference, none the less is an observance of the Monroe doctrine of vital concern to our people and their Government. Assuming, therefore, that we may properly insist upon this doctrine without regard to 'the state of things in which we live' or any changed conditions here or elsewhere, it is not apparent why its application may not be invoked in the present controversy. If a European power by an extension of its boundaries takes possession of the territory of one of our neighboring Republics against its will and in derogation of its rights, it is difficult to see why to that extent such European power does not thereby attempt to extend its system of government to that portion of this continent which is thus taken. This is the precise action which President Monroe declared to be 'dangerous to our peace and safety;' and it can make no difference whether the European system is extended by an advance of frontier or otherwise. . . . The Monroe doctrine finds its recognition in those principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced. Of course this government is entirely confident that under the sanction of this doctrine we have clear rights and undoubted claims. Nor is this ignored in the British reply. The prime minister, while not admitting that the Monroe doctrine is applicable to present conditions, states: 'In declaring that the United States would resist any such enterprise if it was contemplated, President Monroe adopted a policy which received the entire sympathy of the English Government of that date.' . . . In the belief that the doctrine for which we contend was clear and definite, that it was founded upon substantial considerations, and involved our safety and welfare, that it was fully applicable to our present conditions and to the state of the world's progress, and that it was directly related to the pending controversy, and without any conviction as to the final merits of the dispute, but anxious to learn in a satisfactory and conclusive manner whether Great Britain sought under a claim

of boundary to extend her possessions on this continent without right; or whether she merely sought possession of territory fairly included within her lines of ownership, this Government proposed to the Government of Great Britain a resort to arbitration as the proper means of settling the question, to the end that a vexatious boundary dispute between the two contestants might be determined and our exact standing and relation in respect to the controversy might be made clear. It will be seen from the correspondence herewith submitted that this proposition has been declined by the British Government upon grounds which in the circumstances seem to me to be far from satisfactory. . . . Having labored faithfully for many years to induce Great Britain to submit this dispute to impartial arbitration, and having been now finally apprised of her refusal to do so, nothing remains but to accept the situation, to recognize its plain requirements, and deal with it accordingly. Great Britain's present proposition has never thus far been regarded as admissible by Venezuela, though any adjustment of the boundary which that country may deem for her advantage and may enter into of her own free will can not of course be objected to by the United States. Assuming, however, that the attitude of Venezuela will remain unchanged, the dispute has reached such a stage as to make it now incumbent upon the United States to take measures to determine with sufficient certainty for its justification what is the true divisional line between the Republic of Venezuela and British Guiana. The inquiry to that end should of course be conducted carefully and judicially, and due weight should be given to all available evidence, records, and facts in support of the claims of both parties. In order that such an examination should be prosecuted in a thorough and satisfactory manner, I suggest that the Congress make an adequate appropriation for the expenses of a commission, to be appointed by the Executive, who shall make the necessary investigation and report upon the matter with the least possible delay. When such report is made and accepted it will, in my opinion, be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which after investigation we have determined of right belongs to Venezuela. In making these recommendations I am fully alive to the responsibility incurred and keenly realize all the consequences that may follow. I am, nevertheless, firm in my conviction that while it is a grievous thing to contemplate the two great English-speaking peoples of the world as being otherwise than friendly competitors in the onward march of civilization and strenuous and worthy rivals in all the arts of peace, there is no calamity which a great nation can invite which equals that which follows a supine submission to wrong and injustice and the consequent loss of national self-respect and honor, beneath which are shielded and defended a people's safety and greatness."—United States, *Message and Documents* (Abridgment, 1895-1896).—The recommendations of the President were acted upon with remarkable unanimity and promptitude in Congress, a bill authorizing the appointment of the proposed commission, and appropriating \$100,000 for the necessary expenditure, being passed by the House on the day following the message (December 7), and by the Senate on the 20th.—See also U. S. A.: 1895 (December).

1895-1896 (December-January).—Feeling in

England and the United States over the boundary dispute. See U. S. A.: 1895-1896 (December-January).

1896-1899.—Appointment of the United States commission to investigate the boundary question.—Reopening of negotiations between the United States and Great Britain.—Solution of the main difficulty found.—Arbitration and its result.—The commission authorized by the Congress of the United States to investigate and report on the true divisional line between British Guiana and Venezuela was named by the president of the United States, on January 1, as follows: David J. Brewer, associate justice of the Supreme Court of the United States; Richard H. Alvey, chief justice of the court of appeals in the District of Columbia; Andrew D. White, ex-president of Cornell University, and ex-minister to Germany and Russia; Daniel C. Gilman, president of Johns Hopkins University; Frederick R. Coudert, of New York. One of the first proceedings of the commission was to address a letter to the secretary of state, suggesting a friendly intimation to the governments of Great Britain and Venezuela that their assistance to it, in procuring unpublished archives and the like evidence, would be highly acceptable, and that "if either should deem it appropriate to designate an agent or attorney, whose duty it would be to see that no such proofs were omitted or overlooked, the Commission would be grateful for such evidence of good will." This overture was well received in England, and had an excellent effect. It was responded to by Lord Salisbury, with an assurance that Her Majesty's government would readily place at the disposal of the President of the United States any information at their command, and would communicate advance copies of documents soon to be published on the subject of the boundary line. Before the close of January the commission had organized its work, with several experts engaged to assist on special lines. Professor Justin Winsor, librarian of Harvard University, had undertaken to report on the early maps of the Guiana-Venezuela country, Professor George L. Burr, of Cornell University, was making ready to examine the Dutch archives in Holland, and Professor J. Franklin Jameson, of Brown University, was enlisted for other investigations. Before these labors had gone far, however, the two governments, of Great Britain and the United States, were induced to reopen a discussion of the possibility of an arbitration. A convention embodying the agreement of the United States and Great Britain was signed at Washington by Secretary Olney and the British Ambassador, Lord Pauncefote. The agreement was carried to its next stage on Feb. 2, 1897, when a treaty between Great Britain and the United States of Venezuela was signed at Washington, which provided for an arbitral tribunal, which was to meet in Paris. (See U. S. A.: 1897, January-May). "The Paris tribunal, in 1899, awarded as follows: From the coast at Punta Playa in a straight line to the junction of the Barima and Mururuma, thence along mid-stream of the latter to its source. From this point to the junction of the Rio Haiowa and the Amacura, and along mid-stream of the latter to its source in the Sierra Imataca. Then south-west along the spur to the main range of the Sierra opposite the source of the Barima; then along the watershed south-east to the source of the Acarabisi, and down it to the Cuyuni, westward along this river to its junction with the Wenamu (Venamo) and up the latter to its most westerly course. Thence in a straight line to the summit of

Mount Roraima."—L. V. Dalton, *Venezuela*, pp. 107-108.—The line thus established by the decision, however, did not fully satisfy Venezuela as it gave to Great Britain more than half of the disputed territory.

1898-1900.—Change in the presidency.—Death of ex-President Crespo.—Revolution.—Rebellion.—General Joaquín Crespo retired from the presidency and was succeeded by General Ignacio Andrade on Mar. 1, 1898. A revolutionary movement was soon started, with General Hernandez at its head, and ex-President Crespo, who led the forces of the government against it, was killed in a charge April 16. Hernandez was surprised and captured a few weeks later, and the rebellion then subsided for a time. In the spring of 1899 Hernandez was set at liberty by Andrade, who, meantime, had crushed a minor revolt, undertaken by one General Guerra. August found the harassed President assailed by a fresh rising, started by General Cipriano Castro, and the restless revolutionist, Hernandez, was soon in league with it. This proved to be a revolution in earnest, and, after hard fighting, President Andrade fled from the capital and the country in October; Puerto Cabello, the last town to hold out for him, was bombarded and stormed the following month, and a new government was established, nominally under the Vice President, Rodriguez, but with Castro for its actual head. Before this had been fully accomplished, however, Hernandez was in arms against Castro, with his accustomed ill-success. Before the year closed he had fled the country; but early in 1900 he was once more in the field, maintaining a troublesome war until May, when he was defeated, and again a prisoner in his opponents' hands.

1901.—Claims of Germany.—Memorandum presented to the government of the United States.—Its reply.—Interpretation of the Monroe Doctrine.—On Dec. 11, 1901, the German embassy at Washington presented to the State Department of the government of the United States a memorandum of the claims and complaints of Germany against the government of Venezuela. The principal claim recited was that of the Berlin Company of Discount, "on account of the non-performance of engagements which the Venezuelan Government has undertaken in connection with the great Venezuelan Railway which has been built by the said Government." After some recital of circumstances in these cases, the memorandum proceeds to announce that "the Imperial Government believes that further negotiations with Venezuela on the present base are hopeless," and that measures of coercion are contemplated. "But we consider it of importance to let first of all the Government of the United States know about our purposes, so that we can prove that we have nothing else in view than to help those of our citizens who have suffered damages. . . . We declare especially that under no circumstances do we consider in our proceedings the acquisition or the permanent occupation of Venezuelan territory." In reply, the Department of State returned a memorandum, in part as follows: "The President in his Message of the 3d of December, 1901, used the following language: 'The Monroe Doctrine is a declaration that there must be no territorial aggrandizement by any non-American Power at the

expense of any American Power on American soil. It is in no wise intended as hostile to any nation in the Old World.' The President further said: 'This doctrine has nothing to do with the commercial relations of any American Power, save that it in truth allows each of them to form such as it desires. . . . We do not guarantee any State against punishment if it misconducts itself, provided that punishment does not take the form of the acquisition of territory by any non-American Power. . . . The President of the United States, appreciating the courtesy of the German Government in making him acquainted with the state of affairs referred to, and not regarding himself as called upon to enter into the consideration of the claims in question, believes that no measures will be taken in this matter by the agents of the German Government which are not in accordance with the well-known purpose, above set forth, of His Majesty the German Emperor.'"—*Papers Relating to the Foreign Relations of the United States (57th Congress, 1st Session, House of Representatives, Documents, v. 1, pp. 192-195)*.

1902-1904.—Castro president.—Concerted action by Great Britain, Germany, and Italy to enforce claims.—Blockade of ports and seizure of warships.—Agreements secured.—Reference to the tribunal at The Hague.—"Cipriano Castro, a Tachiran, had in May declared his intention of avenging a real or intended slight received from the Government, and, after marching through the Andes at the head of the so-called *Ejército Restaurador*, fighting several successful battles on the way, he entered Carácas late in October. The executive power, which he immediately assumed, was only confirmed by an *Asamblea Constituyente* in February, 1901. In March of that year a new Constitution was decreed, whereby the presidential period was extended to six years, and Castro was duly elected to the office. In 1902, the 'Matos' revolution broke out, under the General of that name; this appears to have been a genuine and popular revolt, and almost proved successful when in the autumn of the year a tactical mistake on the part of the revolutionists left Castro master of the country. No attempt was made to compensate foreigners for the damage to property suffered by them during these various revolutions, and in view of their accumulation, the various powers chiefly concerned—Great Britain, Germany, and Italy declared a blockade of the ports of Venezuela in January, 1903, which [reënforced by the intervention of the United States under President Roosevelt] had the desired effect of persuading Castro's Government to agree to the arbitration of the various claims by the third parties. Though the allied powers demanded that these claims should be settled first, the counter-demand of Venezuela, that all the powers, peaceful and otherwise, should be treated alike, was upheld by the Hague Tribunal, and protocols with all the countries were signed within a few months."—L. V. Dalton, *Venezuela*, pp. 102-104.—See also DEBTS, PUBLIC: America; U. S. A.: 1902-1903.—"During the summer of 1903 ten mixed commissions sat at Caracas to adjudicate upon the claims of as many nations against Venezuela. These commissions simply determined the amount of the claims in each case. The awards of these commissions are very instructive, as they show the injustice of resorting to measures of coercion for the collection of pecuniary claims which have not been submitted to arbitration. Belgian claimants demanded 14,921,805 bolivars and were awarded 10,898,643; British claimants demanded 14,743,572 and were awarded 9,401,267; German

claimants demanded 7,376,685 and were awarded 2,091,908; Italian claimants demanded 39,844,258 and were awarded 2,975,906; Spanish claimants demanded 5,307,626 and were awarded 1,974,818; United States claimants demanded 81,410,952 and were awarded 2,313,711. The decision of the Hague Court, which was rendered February 22, 1904, held that the three allied powers were entitled to preferential treatment; that Venezuela had recognized in principle the justice of their claims while she had not recognized in principle the justice of the claims of the pacific powers; that the neutral powers had profited to some extent by the operations of the allies, and that their rights remained for the future absolutely intact. This decision, emanating from a peace court, and indorsing the principle of armed coercion, was received with no small degree of criticism."—L. H. Latané, *United States and Latin America*, pp. 255-256.

ALSO IN: British Foreign Office, *Venezuela*, 1902, no. 1: *Correspondence respecting affairs of Venezuela*.—*Message of President Roosevelt*, Dec. 7, 1903.

1902-1905.—Short period of comparative tranquillity.—"After the blockade instituted in December, 1902, by Germany, Great Britain and Italy, had been raised, and protocols had been signed for the settlement of all duly recognized claims of foreign nations against Venezuela, Venezuela enjoyed a short period of tranquillity; but, by the beginning of 1905, every legation in Caracas had a list of grievances founded on alleged unfair awards of arbitrators, on denials of justice on the part of the Venezuelan courts and on the diminution by President Castro of the percentage he had agreed to pay to the creditor nations from the receipts of his custom-houses. Moreover, Germany and Great Britain began to show signs of restlessness, because President Castro had not provided, as had been agreed in the protocols, for the payment of interest to British and German bondholders. The situation looked even worse than before the blockade, for the principal nation aggrieved was the United States, and it had the moral support of all other nations represented in Caracas by legations. The main issue between the United States and Venezuela was the asphalt case. In July, 1904, President Castro had demanded ten million dollars from the American Company, known as the 'New York and Bermudez Asphalt Company,' and had threatened, if that amount was not paid immediately, that the whole asphalt lake and the property of the company would be seized. He based his demand on the alleged support given by the Asphalt Company to the Matos revolution of 1902; but, as he did not demand anything from the countless other supporters of the revolution, it was clear that his demand on the Asphalt Company was piratical."—H. W. Bowen, *Queer diplomacy with Castro* (*North American Review*, Mar. 15, 1907).

1903-1904.—Orinoco Steamship Company case involving the United States in Venezuelan affairs. See ORINOCO STEAMSHIP COMPANY CASE.

1904.—Adoption of a new constitution.—The constitution, adopted in Venezuela, on Apr. 27, 1904, reduced the number of states to thirteen—Aragua, Bermudez, Bolívar, Carabobo, Falcon, Guarico, Lara, Merida, Miranda, Tachira, Trujillo, Zamora, and Zulia—and provided for five territories—Amazonas Cristobal Colon, Colon, Delta-Amacuero, and Yururari—and the federal district, composed of the departments Libertador, Varagas, Guaicaipuro, and Sucre, and the island of Margarita. The states retained all rights not delegated

to the central government. The territories were administered by the president. The government was divided into three branches—the legislative, the executive, and the judicial. The legislative branch, called the Congress, was composed of two bodies—the Senate and the House of Deputies. One deputy was to be elected by every 40,000 inhabitants, and all deputies, as well as senators (two from every state) and the president were to serve for six years. Deputies must be twenty-one years of age, senators thirty and the president over thirty. No extraordinary powers were given to the Congress, except that fourteen of its members be chosen by itself to elect every sixth year a president, a first and a second vice president, and to elect a successor to the second vice president. The president, besides being charged with the usual executive duties, was authorized to declare war, arrest, imprison, or expel natives or aliens who are opposed to the reestablishment of peace, to issue letters of marque and reprisal, to permit aliens to enter the public service, to prohibit the immigration into the republic of objectionable religious teachers, and to establish rules for the postal, telegraph, and telephone services. The judicial power was vested in the Corte Federal y de Casacion (seven judges elected by the Congress) and the lower courts (appointed by the state governments). All Venezuelans over twenty-one years of age were entitled to vote, and aliens to obtain that right by getting naturalized. No length of time was prescribed for an alien to live in the republic before he can become naturalized. Art. 15 of the constitution denied the right of natives or aliens to present claims to the nation or states for damages caused by revolutionists. Art. 17 abolished the death penalty and art. 120 provided that all of Venezuela's international treaties shall hereafter contain the clause, "All differences between the contracting parties shall be decided by arbitration, without going to war." In conclusion, the constitution provided that the next constitutional term begin May 23, 1905. Up to that date General Castro was to be provisional president. Juan Vicente Gómez was made first vice president and José Antonio Velutini second vice president. As provisional president, General Castro was authorized to name the presidents of the states, to organize the federal territories, to fix the estimates for the public expenses, and, in short, to exercise the fullest powers.

1905-1906.—Troubles with the United States and France.—President Castro's vacation.—Both France and the United States had troubles which became acute in 1905 with the president of Venezuela, growing out of his treatment of French and American business interests and rights in that country. The accusation, that funds had been contributed to the Matos revolt in 1901-1902, made against an American company in the asphalt case (New York and Bermudez Company) was also brought against the French Cable Company, whose franchise was annulled and its property confiscated in like manner. In both cases, the matter was a proper one for arbitration, and this Castro refused, maintaining the finality of the decision of the Venezuela courts. Under instructions from Secretary Hay, the American minister to Venezuela informed the government of that country that if it refused to arbitrate the questions involved in this and other American claims, "the Government of the United States may be regretfully compelled to take such measures as it may find necessary to effect complete redress without resort to arbitration"; and France, about the same time, made a significant movement of armored cruisers to the

French Antilles. Moreover, the Venezuelan president in January, 1906, gave a fresh provocation to France. The French *chargé d'affaires* in Venezuela had gone on board a French steamer without official permit, and was refused permission to return to shore, on the pretence that he might bring yellow fever infection. France at once dismissed the Venezuelan *chargé* from Paris, and added a demand for apologies to her other claims. Having brought his country into this compromising situation, the eccentric Castro announced Apr. 9, 1906, in a proclamation: "Fatigue, produced by constant labor, and which I have been endeavoring to overcome for some time past, makes it imperative for me now, in order to restore my broken health, to retire from the exercise of the office of prime magistrate. In accordance with a provision of the constitution I have called to power Gen. Juan Vicente Gomez, a very meritorious citizen of well-known civic virtues, who in my absence will fulfill strictly the duties of his office. You all know him, and you know perfectly well that in view of his character you must support him without any hesitation whatever, in order that the administration may continue as it has up to now under the surest bases of stability, order and progress, thus making the action of the executive the most expeditious possible. . . . Our present international situation, completely defined and clear, gives us reason to hope that everything will continue harmoniously and on a basis of mutual respect and consideration." The next morning he left quietly for Los Teques, where he had a private estate; his late cabinet resigned, and a new ministry was formed by the acting president, Gomez. Six weeks later, on May 23, the president-on-vacation, from his retirement, issued a second proclamation, announcing his wish to withdraw permanently from public life, and his intention to resign the presidency at the next session of Congress. But differences appear to have arisen soon after this between the retired president and his substitute, General Gomez, over cabinet appointments, and presently there was a delegation sent to request the former to abandon his intended resignation. The delegation succeeded in its mission; Castro returned to Caracas and reburdened himself with the cares of state.

1905-1909.—Trouble with Colombia over the navigation of rivers flowing through both countries. See COLOMBIA: 1905-1909.

1907-1909.—President Castro's provocations to France and the United States.—His quarrel with Holland.—His venture abroad.—Triumph of his enemies in Venezuela.—Foreign governments he quarrelled with take part in preventing his return.—President Castro, practically dictator in Venezuela, continued in his provocative attitude towards both France and the United States, and added Holland to the list of exasperated nations which were studying how to deal with his insolence. His courts, after confiscating the franchises and seizing the property of the French Cable Company and the American asphalt concessionaires, imposed fines of \$5,000,000 on each. Of the five claims for redress or indemnity which the American government pressed upon him he refused to submit any to arbitration, in any form, at The Hague or elsewhere. This situation continued until the American legation was withdrawn from Caracas, in June, 1908. Castro had opened his quarrel with Holland in a characteristic way. The bubonic plague had got a footing at the Venezuelan port of La Guayra, and he refused to allow his own medical officers, who reported the fact, to take measures for preventing the spread of the disease. Then, when his

Dutch neighbors at Curaçao protected themselves by a quarantine against La Guayra he retaliated by an embargo on commerce with Curaçao, exchanged angry letters with the Dutch minister at Caracas, and ordered him finally to quit the country. The Netherland government acted slowly, with deliberation, on the matter, dispatching a battle-ship, at length, to the scene, and otherwise manifesting serious intentions. But now the domestic situation in Venezuela underwent a sudden change; or, rather, a recurrence to the situation in 1906, when Castro had found it easy to lay down the reins of authority and take them up again at his pleasure. He was afflicted with some ailment, for which he went abroad to seek treatment, appointing Vice President Gomez to conduct the government in his absence. Meantime, in Venezuela, his enemies, or the opponents of his rule, had acquired the upper hand, and were prepared to resist his return; a mob at Caracas, crying "down with Castro," wrecked considerable property of his friends. A few days later some of his partisans were arrested on the charge of having plotted the death of Acting President Gomez; and that trusted representative of the absent president became openly antagonistic to him. The Castro cabinet was dismissed, and an anti-Castro ministry was formed. Pacific overtures were made to the foreign governments with which Castro had quarrelled. William I. Buchanan, a diplomat of much experience in Spanish-America, was sent from the United States to reopen negotiations at Caracas, and the late Venezuelan minister of foreign affairs went abroad as an agent of President Gomez to treat with the Netherlands, Great Britain, and France. Buchanan found difficulty in arranging modes of settlement in the case of two American claims, that of the New York and Bermudez Company, and that of the Orinoco Corporation, which claimed very extensive concessions; but the obstacles were overcome and a satisfactory protocol signed, Feb. 13, 1909. Before this time, criminal proceedings had been instituted against Castro, on the charge that he had instigated the assassination of Vice President Gomez, and the High Federal Court had decided that adequate evidence had been adduced to warrant the action. To this accusation Castro made answer of denial from Dresden, February 27. At Bordeaux he was allowed to take passage a month later with the understanding that he must leave the ship before she reached a Venezuelan port, and he accepted tickets to Port-au-Spain, Trinidad. On leaving Paris his parting words had been: "I believe that God and destiny call me back to Venezuela. I intend to accomplish my mission there, even though it involves revolution." The British government, after consultation with the United States and other powers most interested in the avoidance of fresh disturbances in Venezuela, forbade his landing at Trinidad, and he found no port to receive him but that of Fort de France, Martinique. From that French soil, too, he was ordered away the next day, and took passage back to France, ultimately settling himself with his family in Spain. As soon as the out-cast president had been thus eliminated from Venezuelan politics he was cleared, May 21, of the charge of plotting to assassinate General Gomez, by decision of the criminal court. Both Holland and France had settled, by this time, their differences with Venezuela, and restored diplomatic relations.

1910-1911.—Election of General Juan Vicente Gomez.—Celebration of the centennial anniversary of the declaration of independence.—"April

19, 1910, the elections established General Juan Vicente Gomez as Constitutional President for the current term. Since that time the centenary of the independence of the republic has been celebrated in Carácas [June-July, 1911]. . . . The new President has shown himself eager to promote the welfare of the country and to encourage commerce; consuls have been appointed to stations where, since the time of Guzman Blanco, there has been none; the application of foreign capital to the development of the resources of the country has been encouraged, with due regard to the rights of the inhabitants, and more than all, the spirit of the country at large, wearied with the fifty revolutions of the last eighty years, is opposed to further strife, and inclined to maintain that internal peace, the benefits of which are already being enjoyed."—L. V. Dalton, *Venezuela*, p. 105.

1913.—Revolutions quelled.—An anti-Gomez uprising in the state of Trujillo was put down in 1913 but revealed the activity of a strong party of Nationalists under the leadership of General Hernandez working against the continuance of the Gomez administration. In August of the same year ex-President Castro headed a revolution which captured Coro. Gomez declared martial law and, heading the government troops himself, marched against the rebels and recaptured the town, dispersing the insurrectionary forces.

1914.—New constitution.—Bustillos made provisional president.—Campaign of Gomez against rebels.—"The constitution now in force is that of June 3, 1914. The legislative authority is vested in a congress of two houses—the Senate and the Chamber of Deputies—the former consisting of 40 members elected by the Legislative Assemblies of the States for three years, 2 for each State, Venezuelans by birth and over 30 years of age; the latter composed of deputies chosen from each State by a direct vote and for three years, one deputy for each 35,000 inhabitants, and an additional deputy for each additional 15,000. The Executive Power is vested in a President of the Republic, and a cabinet of seven ministers who sit in conjunction with the President. The National Congress elects the President for a term of seven years. He must be a Venezuelan by birth and over 30 years of age, and is eligible for reelection for the constitutional period immediately following that in which he holds office. The Federal Judiciary comprises the Supreme Federal and Cassation Court, the Supreme and Superior Tribunals, courts of first instance, district and municipal, belonging to the States, the Federal District and the Territories."—*Latin-American Year Book*, 1920, p. 629.—"The term of President Juan Vicente Gómez, who endeavored to give the country a good administration, expired April 19. Congress elected Gen. V. Márquez Bustillos Provisional President for one year, pending the regular presidential elections in December, 1914, and January, 1915. Márquez Bustillos organized his Cabinet with César Zumeta as its head and Minister of the Interior. In January, Gomez [as commander-in-chief of the army] returned to the capital after a five months' campaign which resulted in the suppression of the Castro revolt. A new uprising took place in March. Later José María Hernández (El Mocho) joined the rebels and they became active in the State of Falcón. By the end of July Hernández and the rebels had retreated to British Guiana. Opposition to the administration came to an end in October with the issuance of a proclamation appealing for peace by Angel C. Lange, the last of the revolutionary leaders. Measures for the de-

velopment of the country were undertaken including the extension of the system of national highways and the opening of manual training schools. The work of sanitation, undertaken in accordance with the new laws, has extended so far that yellow fever and bubonic plague are practically extirpated."

—*Venezuela (American Year Book, 1914, p. 119)*.

1915.—Presidential election.—Revolution checked.—In May, General Juan Vicente Gomez was unanimously elected president for the term ending April, 1922. He did not assume the office, however, but continued to serve as commander-in-chief of the army while Bustillos remained provisional president. The revolt begun in September, 1914, in the eastern part of Venezuela was completely checked by August, 1915. The Revolutionary leader, General Du Charme, was captured and executed without trial.

1917-1918.—Effect of World War.—Venezuela maintained a neutral attitude during the war. The general economic chaos during and following the war period compelled the government to pass special measures to remedy the disturbed financial machinery of the country.

1919.—New alien law.—"The President . . . published a new alien law on June 24, 1919. The principal provisions of the new act are as follows: Aliens shall enjoy the same civil rights as Venezuelan citizens with exceptions as provided by law. Aliens are divided into two classes, resident and transient. Aliens arriving in Venezuela shall present themselves within 15 days before the highest civil authority in their place of residence, to prove their identity, their intentions of settling in Venezuela, and the business or occupation in which they intend to engage. Aliens shall be subject to the same duties as citizens, but shall be exempt from military service and personal war taxes. Aliens shall observe strict neutrality in regard to Venezuelan national affairs; they shall not be permitted to become members of political associations, edit political publications, write on political subjects, or discourse publicly on this subject, and shall refrain from mixing even indirectly in the internal affairs of Venezuela. The alien who infringes this neutrality shall be considered a dangerous person and may be deported from the territory of the Republic. Aliens shall not hold public office, but the President may permit them to serve in the Charities, Public Health Service, or civil or military instruction. Aliens shall not have the right to take recourse to diplomatic means until all legal means have been exhausted and it is evident that justice has been defeated. Aliens shall have the right, like citizens, to indemnity from the Government for damage caused intentionally in times of war by legally constituted authorities acting in their official capacity. These claims shall be adjudged in accordance with proceedings established by national legislation for the proving and appraising of such claims and damages."—*Latin American Year Book*, 1920, p. 630.

1920-1923.—Joins League of Nations.—New law concerning development of oil.—Political, educational and economic events.—In March, 1920, Venezuela signified its adherence to the League of Nations. In June of that year a law concerning hydrocarbons was promulgated, outlining the status of foreign developers of Venezuela oil. "Much interest has recently surrounded the oil industry in Venezuela and the production of oil promises to be one of the most important sources of wealth, when the industry is developed more extensively. Development-work on a large scale continues, particularly in the region of Lake Maracaibo, and foreign capital is becoming more and

more interested in this industry."—*Venezuela trade* (*Pan American Magazine*, Oct., 1923, p. 158).—In 1922 General Gomez was again elected to the presidency for the period of 1922-1929 by a general vote of Congress. On July 5, 1922, the government's plan of educational reform was forwarded by the issuance of a presidential decree by which the Central University, closed for some years, was reopened. In October, the new custom house of the port of Guanta, opening that port to the importation of goods into the country, was ready for use. Its importance has been strengthened by the new government roads (see RAILROADS: 1912-1922) and the development of rich agricultural country near Maracay. Late in the year the boundary dispute with Colombia was being adjusted

VENICE: Geographic description.—Architecture.—St. Mark's.—Doge's palace.—Venice is one of the chief cities of Italy, and the principal Italian seaport on the Adriatic, with a population in 1921 of 171,665. It was formerly a powerful city republic, with considerable territory on the mainland. The city is built on piles, on a group of low islands off the northeast coast of Italy, between the mouths of the Piave and the Po, and is separated from the

HARBOR OF VENICE

by Swiss arbitration with the coöperation of one Venezuelan and one Colombian commissioner. (See COLOMBIA: 1922: Boundary disputed.) On June 19, 1923, the wireless telegraph service between Venezuela and Colombia was inaugurated. On June 30 President Gomez's brother, General Juan C. Gomez, first vice president of Venezuela and governor of the federal district, was assassinated at Caracas.

mainland by a long low sand bank, the Lido. (See ITALY: Map.) The city is famous for the beauty of its architecture. "The curve of the Grand Canal sweeps between two ranges of palaces, which built each apart and for itself involuntarily combine their diversities for its embellishment. Most of them are of the middle ages; . . . others of the renaissance. Porphyry and serpentine incrust the upper sections of the doors with their polished and precious material. Several facades are rosy, or mottled with delicate lines. . . . The canal turns, and you see rising from the water like a rich marine vegetation, or some strange and magnificent piece of white coral, Santa Maria della Salute, with its domes, its clusters of sculpture and its pediment loaded with statues, and beyond on another island, San Giorgio Maggiore, rotund and bristling like a pompous mother-of-pearl couch. You carry your eye to the left, and there is St. Mark's, the Cam-

panile, the Piazza, and the Ducal Palace. Probably no gem in the world equals it. . . . The admirable piazza [S. Marco], bordered with porticoes and palaces, extends rectangularly its forests of columns, its corinthian capitals, its statues, its noble and varied arrangement of classic forms. At its extremity, half gothic, half byzantine, rises the Basilico. . . . A few paces off, bare and erect like a ship's mast, the gigantic Campanile towers in the air. . . . Like a magnificent diamond in a brilliant setting the Ducal Palace effaces the rest."

—H. A. Taine, *Italy: Florence and Venice*, pp. 219-221.—Owing to the small size of the islands, the great palaces and warehouses are built down to the water's edge, and though the city is threaded by narrow streets and winding lanes, there are no carriage ways. Canals take the place of main streets, and traffic is carried on almost entirely by water. Steamers are now used on the larger canals, and motor boats are seen on the smaller ones that intersect the city; but the famous gondolas, which have been used for centuries are still much in evidence. The islands are united by bridges, which are sharply arched to allow of the passage of boats. There are a few gardens in the city and many small squares, of which the Piazza of St. Mark's is the largest. The campanili, detached from the churches, are among the great attractions of the city. An excellent idea of the beauty of the city may be obtained from the paintings of J. M. Turner, or the etchings of J. McNeil Whistler. The national arsenal of Italy is situated in Venice, and the industrial arts for which the city was formerly famous have been revived of late years. St. Mark's itself is a great treasure house of mosaics, rare marbles and porphyry in the interior and of church plate and jewels. Monuments to the famous men of the city were forbidden by the republic and in consequence, compared with some other Italian cities, outside of its use in the decoration of buildings, there is a dearth of sculpture in the streets and squares. The great exception is the Colleoni statue, near the Scuola di San Martin, which is ranked as one of the very few great equestrian statues of the world. The famous lion of St. Mark surmounts an ancient Egyptian column of grey granite, in the piazzetta of the doge's palace, while opposite to it stands a fellow monolith of red granite, with a figure of St. Theodore on top. The ducal palace, or palace of the doge, was built successively in three styles, Byzantine, Gothic and Renaissance. The Gothic ducal palace was begun by Doge Pietro Gradenigo at the opening of the fourteenth century. "One hundred and twenty-three years afterwards the first Grand Council sat in the finished Gothic building. From that time on Renaissance features began to appear and the portion where that style reigns was finished about the middle of the sixteenth century. . . . A fire partly destroyed the building, and the extensive changes which were then made left the building in its present form. . . . One singularity of the Doges' Palace is, that its front is built of marble of various colors arranged to produce a pattern. . . . Notice the giants' stairway, so-called from the figures at the top. These figures were colossal statues of Neptune and Mars typifying the strength of Venice by sea and in war. . . . On the top of the stairs the doges, or rulers of Venice, were crowned. . . . Connecting the palace with its prison is the well-known Bridge of Sighs, celebrated in Byron's verses. . . . And the dark dungeons to which it leads speak of the inhuman punishments of . . . earlier times."

ALSO IN: W. C. Hazlitt, *Venetian republic*.—

W. R. Thayer, *Short history of Venice*.—J. Ruskin, *Stones of Venice*.—S. A. Brooke, *Sea charm of Venice*.

452.—Origin of the republic.—When Attila the Hun, in the year 452, crossed the Alps and invaded Italy, "the savage destroyer undesignedly laid the foundations of a republic which revived, in the feudal state of Europe, the art and spirit of commercial industry. The celebrated name of Venice, or Venetia, was formerly diffused over a large and fertile province of Italy, from the confines of Pannonia to the river Addua, and from the Po to the Rætian and Julian Alps. Before the irruption of the barbarians, fifty Venetian cities flourished in peace and prosperity. . . . Many families of Aquileia, Padua, and the adjacent towns, who fled from the sword of the Huns, found a safe though obscure refuge in the neighbouring islands. At the extremity of the Gulf, where the Adriatic feebly imitates the tides of the ocean, near a hundred small islands are separated by shallow water from the continent, and protected from the waves by several long slips of land, which admit the entrance of vessels through some secret and narrow channels. Till the middle of the 5th century these remote and sequestered spots remained without cultivation, with few inhabitants, and almost without a name. But the manners of the Venetian fugitives, their arts and their government, were gradually formed by their new situation; and one of the epistles of Cassiodorus, which describes their condition about seventy years afterwards, may be considered as the primitive monument of the republic. . . . Fish was the common, and almost the universal, food of every rank: their only treasure consisted in the plenty of salt which they extracted from the sea."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 35.—"The inhabitants of Aquileia, or at least the feeble remnant that escaped the sword of Attila, took refuge at Grado. Concordia migrated to Capularia (now Caorle). The inhabitants of Altinum, abandoning their ruined villas, founded their new habitations upon seven islands at the mouth of the Piave, which, according to tradition, they named from the seven gates of their old city. . . . From Padua came the largest stream of emigrants. They left the tomb of their mythical ancestor, Antenor, and built their humble dwellings upon the islands of Rivus Altus and Methamaucus, better known to us as Rialto and Malamocco. This Paduan settlement was one day to be known to the world by the name of Venice. But let us not suppose that the future Queen of the Adriatic sprang into existence at a single bound like Constantinople or Alexandria. For 250 years, that is to say for eight generations, the refugees on the islands of the Adriatic prolonged an obscure and squalid existence,—fishing, salt-manufacturing, damming out the waves with wattled vine-branches, driving piles into the sand-banks; and thus gradually extending the area of their villages. Still these were but fishing villages, loosely confederated together, loosely governed, poor and insignificant. . . . This seems to have been their condition, though perhaps gradually growing in commercial importance, until at the beginning of the 8th century the concentration of political authority in the hands of the first doge, and the recognition of the Rialto cluster of islands as the capital of the confederacy, started the republic on a career of success and victory."—T. 697-810.—Early constitution of government.—Origin of doges.—Resistance to Pepin, king of the Lombards.—Removal to the Rialto and founding of the new capital city.—Treaty of Aix-la-Chapelle.—“Each island had at first its own magistrate: the magistrates of the most considerable being called Tribunes Major, the others, Tribunes Minor [twelve tribunes in all], and the whole being equally subject to the council-general of the community; which thus constituted a kind of federal republic. This lasted nearly three hundred years, when it was found that the rising nation had fairly outgrown its institutions. Dangerous rivalries arose among the tribunes. . . . At a meeting of the Council-General in A. D. 697, the Patriarch of Grado proposed the concentration of power in the hands of a single chief, under the title of Doge or Duke. The proposition was eagerly accepted, and they proceeded at once to the election of this chief. ‘It will be seen (remarks Daru) that the Dogeship saved independence and compromised liberty. It was a veritable revolution, but we are ignorant by what circumstances it was brought about. Many historians assert that the change was not effected till the permission of the Pope and the Emperor was obtained.’ The first choice fell on Paolo Luca Anabesto. It was made by twelve electors, the founders of what were thenceforth termed the electoral families. The Doge was appointed for life: he named his own counsellors; took charge of all public business; had the rank of prince, and decided all questions of peace and war. The peculiar title was meant to imply a limited sovereignty, and the Venetians uniformly repudiated, as a disgrace, the bare notion of their having ever submitted to a monarch. But many centuries passed away before any regular or well-defined limits were practically imposed; and the prolonged struggle between the people and the Doges, depending mainly on the personal character of the Doge for the time being, constitutes the most startling and exciting portion of their history.” The third doge, one Urso, alarmed the people by his pretensions to such a degree that they slew him, and suppressed his office for five years, substituting a chief magistrate called “maestro della milizia.” “The Dogeship was then [742] restored in the person of Theodal Urso (son of the last Doge), who quitted Heraclea [then the Venetian capital] for Malamocco, which thus became the capital.” In his turn, Theodal Urso lost the favor of the people and was deposed and blinded. “It thenceforth became the received custom in Venice to put out the eyes of deposed Doges.” Later in the 8th century the dogeship was secured by a family which went far towards making it hereditary, and rendering it boldly tyrannical; but the yoke of the would-be despots—Giovanni and Maurice, father and son—was broken in 804, and they were driven to flight. The head of the conspiracy which expelled them, Obelerio, was then proclaimed doge. “The events of the next five years are involved in obscurity. One thing is clear. Pepin, King of the Lombards [son of Charlemagne], either under the pretence of a request for aid from the new Doge, or to enforce some real or assumed rights of his own, declared war against the Republic, and waged it with such impetuosity that his fleet and army, after carrying all before them, were only separated from Malamocco, the capital, by a canal. In this emergency, Angelo Participazio, one of those men who are produced by great occasions to mark an era, proposed that the entire population should

remove to Rialto, which was separated by a broader arm of the sea from the enemy, and there hold out to the last. No sooner proposed than done. They hastily embarked their all; and when Pepin entered Malamocco, he found it deserted. After losing a large part of his fleet in an ill-advised attack on Rialto, he gave up the enterprise, and Angelo Participazio was elected Doge in recognition of his services, with two tribunes for counsellors. One of his first acts was to make Rialto the capital, instead of Malamocco or Heraclea, which had each been the seat of Government at intervals. ‘There were round Rialto some sixty islets, which the Doge connected by bridges. They were soon covered with houses. They were girt with a fortification; and it was then that this population of fugitives gave to this rising city, which they had just founded in the middle of a morass, the name of Venetia, in memory of the fair countries from which their fathers had been forcibly expatriated. The province has lost its name, and become subject to the new Venice.’ [Daru. v. 1, p. 79.]—*Republic of Venice (Quarterly Review, October, 1874, v. 137, pp. 417-420)*. In 803 Charlemagne concluded a treaty, at Aix-la-Chapelle, with Nicephorus I, the Byzantine or Eastern emperor, establishing boundaries between the two empires which disputed the Roman name. “In this treaty, the supremacy of the Eastern Empire over Venice, Istria, the maritime parts of Dalmatia, and the south of Italy, was acknowledged; while the authority of the Western Empire in Rome, the exarchate of Ravenna, and the Pentapolis, was recognised by Nicephorus. The commerce of Venice with the East was already so important, and the Byzantine administration afforded so many guarantees for the security of property, that the Venetians, in spite of the menaces of Charlemagne, remained firm in their allegiance to Nicephorus. . . . Venice, it is true, found itself in the end compelled to purchase peace with the Frank empire, by the payment of an annual tribute of thirty-six pounds of gold, in order to secure its commercial relations from interruption; and it was not released from this tribute until the time of Otho the Great. It was during the reign of Nicephorus that the site of the present city of Venice became the seat of the Venetian government, Rivalto (Rialto) becoming the residence of the duke and the principal inhabitants, who retired from the continent to escape the attacks of Pepin [king of Italy, under his father, Charlemagne]. Heraclea had previously been the capital of the Venetian municipality. In 810 peace was again concluded between Nicephorus and Charlemagne, without making any change in the frontier of the two empires.”—G. Finlay, *Byzantine empire, 716-1057, bk. 1, ch. 2, sect. 1*.

810-961.—Spread of commerce and naval prowess.—Destruction of Istrian pirates.—Conquests in Dalmatia.—“During the ninth, and the first sixty years of the tenth centuries,—from the government of Angelo Participazio, to the coming into Italy of Otho the Great,—the Venetian affairs, with brief intervals of repose, were wholly occupied with civil commotions and naval wars. The doges of the republic were often murdered; its fleets were sometimes defeated; but, under every adverse circumstance, the commercial activity, the wealth, and the power of the state were still rapidly increasing. In the ninth century the Venetians, in concert with the Greeks, encountered, though with indifferent

success, the navies of the Saracens; but the Narentines, and other pirates of Dalmatia, were their constant enemies, and were frequently chastised by the arms of the republic. The Venetian wealth invited attacks from all the freebooters of the seas, and an enterprise undertaken by some of them who had established themselves on the coast of Istria deserves, from its singularity and the vengeance of the republic, to be recorded in this place. According to an ancient custom, the nuptials of the nobles and principal citizens of Venice were always celebrated on the same day of the year and in the same church. . . . The Istrian pirates, acquainted with the existence of this annual festival, had the boldness [944] to prepare an ambush for the nuptial train in the city itself. They secretly arrived over night at an uninhabited islet near the church of Olivolo, and lay hidden behind it with their barks until the procession had entered the church, when darting from their concealment they rushed into the sacred edifice through all its doors, tore the shrieking brides from the arms of their defenceless lovers, possessed themselves of the jewels which had been displayed in the festal pomp, and immediately put to sea with their fair captives and their booty. But a deadly revenge overtook them. The doge, Pietro Candiano III., had been present at the ceremony: he shared in the fury and indignation of the affianced youths: they flew to arms, and throwing themselves under his conduct into their vessels, came up with the spoilers in the lagunes of Caorlo. A frightful massacre ensued: not a life among the pirates was spared, and the victors returned in triumph with their brides to the church of Olivolo. A procession of the maidens of Venice revived for many centuries the recollection of this deliverance on the eve of the purification. But the doge was not satisfied with the punishment which he had inflicted on the Istriots. He entered vigorously upon the resolution of clearing the Adriatic of all the pirates who infested it: he conquered part of Dalmatia, and he transmitted to his successors, with the ducal crown, the duty of consummating his design."—G. Procter, *History of Italy*, ch. 1, pt. 2.

829.—Translation of the body of St. Mark.—Winged Lion of St. Mark.—"In the second year of the reign of Doge Giustiniano Particiaco there was brought to Venice from Alexandria the body of the holy evangelist St. Mark. For, as Petrus Damianus says, Mark was brought from Alexandria into Venice, that he who had shone in the East like the morning star might shed his rays in the regions of the West. For Egypt is held to be the East and Venice the West. There he had held the rule of the Church of Alexandria, and here, being, as it were, born again, he obtained the sovereignty of Aquileia. Now this is how the thing was done. The king of the Saracens wishing to build himself a palace in Babylon, gave command that stones should be taken from the Christian churches and other public places, that they might build him a splendid house. And at that time there came by chance to the Church of St. Mark, Bon, tribune of Malamocco, and Rustico da Torcello, who had been forced by the wind, contrary to the edicts of Venice, to put in to the harbour of Alexandria with ten ships laden with merchandise, and they observing the sadness of the guardians of the church (two Greeks, by name Stauratio, a monk, and Theodoro, a priest), inquired the cause. And they answered that by reason of the impious edict of the king they feared the ruin of the church. Thereupon they prayed them to give them the holy

body that they might carry it to Venice, promising them that the Doge of Venice would receive it with great honour. But the keepers of the church were filled with fear at their petition, and answered reproaching them and saying: 'Know ye not how the blessed St. Mark, who wrote the Gospel, St. Peter dictating at his request, preached in these parts and baptised into the faith the men of these regions? If the faithful should become aware, we could not escape the peril of death.' But to that they answered: 'As for his preaching, we are his firstborn sons, for he first preached in the parts of Venetia and Aquileia. And in peril of death it is commanded, "If they persecute you in one city, flee ye to another," which the evangelist himself obeyed when in the persecution at Alexandria he fled to Pentapolis.' But the keepers said: 'There is no such persecution now that we should fear for our persons.' But while they spake, came one and broke down the precious stones of the church, and when they would not suffer it they were sorely beaten. Then the keepers seeing the devastation of the church, and their own great danger, listened to the prayer of the Venetians and appointed them a day when they should receive the holy body. Now the body was wrapped in a robe of silk sealed with many seals from the head to the feet. And they brought the body of St. Claudia, and having cut the robe at the back and taken away the body of St. Mark, they placed in its stead the blessed Claudia, leaving the seals unbroken. But a sweet odour quickly spread into the city, and all were filled with astonishment, and not doubting that the body of the evangelist had been moved, they ran together to the church. But when the shrine was opened and they saw the garment with the seals unbroken, they returned quickly to their homes. And when the body should be borne to the boats, they covered it with herbs and spread over it porkflesh for the passers-by to see, and went crying, 'Khanzir, khanzir!' which is the Saracen's abomination. And when they reached the ships they covered it with a sail while they passed through the Saracen ships. And as they sailed to Venice the ship which bore it with many others was saved from peril of shipwreck. For when the ships had been driven in the night by a tempestuous wind and were not far from Monte, the blessed St. Mark appeared to the Monk Dominic and bade him lower the sails of the ships. Which, when they had done, the dawn appearing, they found themselves close to the island which is called Artalia. And ten of them, having asked and obtained pardon for breaking the edicts of the Doge, they came to the port of Olivola. And the Doge, and the clergy, and the people came to meet them, and brought the body, with songs of thanksgiving, to the Doge's chapel."—*Old chronicle* (tr. in "*The City in the Sea*," by the Author of "*Belt and Spur*," ch. 3).—"Our fathers did not welcome the arrival of the captured eagles of France, after the field of Waterloo, with greater exultation than the people of Venice the relics of the blessed Evangelist. They abandoned themselves to processions and prayers, and banquets, and public holidays. . . . The winged 'Lion of St. Mark' was blazoned on the standards, and impressed on the coinage of the Republic. . . . The Lion became the theme of many political symbols. Thus it was represented with wings to show that Venetians could strike with promptitude; sitting, as a sign of their gravity in counsel—for such is the usual attitude of sages; with a book in its paws, to intimate their devotion to commerce; in war time the book was closed, and a naked sword sub-

stituted."—W. H. D. Adams, *Queen of the Adriatic*, pp. 42-43.

1032-1319.—Development of the constitution of the aristocratic republic.—Grand Council.—Council of Ten.—Golden Book.—"It was by slow and artfully disguised encroachments that the nobility of Venice succeeded in substituting itself for the civic power, and investing itself with the sovereignty of the republic. During the earlier period, the doge was an elective prince, the limit of whose power was vested in assemblies of the people. It was not till 1032 that he was obliged to consult only a council, formed from amongst the most illustrious citizens, whom he designated. Thence came the name given them of 'pregadi' (invited). The grand council was not formed till 1172, 140 years later, and was, from that time, the real sovereign of the republic. It was composed of 480 members, named annually on the last day of September, by 12 tribunes, or grand electors, of whom two were chosen by each of the six sections of the republic. No more than four members from one family could be named. The same counsellors might be re-elected each year. As it is in the spirit of a corporation to tend always towards an aristocracy, the same persons were habitually re-elected; and when they died their children took their places. The grand council, neither assuming to itself nor granting to the doge the judicial power, gave the first example of the creation of a body of judges, numerous, independent, and irremovable; such, nearly, as was afterwards the parliament of Paris. In 1179, it created the criminal 'quarantia'; called, also, the 'vecchia quarantia,' to distinguish it from two other bodies of forty judges, created in 1229. The grand council gave a more complete organization to the government formed from among its members. It was composed of a doge; of six counsellors of the red robe, who remained only eight months in office, and who, with the doge, formed the 'signoria'; and of the council of pregadi, composed of 60 members, renewed each year. . . . In 1249, the sovereign council renounced the election of the doge, and intrusted it to a commission drawn by lot from among the whole council; this commission named another: which, reduced by lot to one fourth, named a third; and by these alternate operations of lot and election, at length formed the last commission of 41 members, who could elect the doge only by a majority of 25 suffrages. [See also, LOT, USE OF, IN ELECTION: Venice.] It was not till towards the end of the 13th century that the people began to discover that they were no more than a cipher in the republic, and the doge no more than a servant of the grand council,—surrounded, indeed, with pomp, but without any real power. In 1280, the people attempted themselves to elect the doge; but the grand council obliged him whom the popular suffrages had designated to leave Venice, and substituted in his place Pietro Gradenigo, the chief of the aristocratic party. Gradenigo undertook to exclude the people from any part in the election of the grand council, as they were already debarred from any participation in the election of a doge. . . . The decree which he proposed and carried on the 28th of February, 1297, is famous in the history of Venice, under the name of 'seratta del maggior consiglio' (shutting of the grand council). [See ITALY: 1250-1313.] He legally founded that hereditary aristocracy,—so prudent,

so jealous, so ambitious,—which Europe regarded with astonishment; immovable in principle, unshaken in power; uniting some of the most odious practices of despotism with the name of liberty; suspicious and perfidious in politics; sanguinary in revenge; indulgent to the subject; sumptuous in the public service, economical in the administration of the finances; equitable and impartial in the administration of justice; knowing well how to give prosperity to the arts, agriculture, and commerce; beloved by the people who obeyed it, whilst it made the nobles who partook its power tremble. The Venetian aristocracy completed its constitution, in 1311, by the creation of the Council of Ten, which, notwithstanding its name, was composed of 16 members and the doge. Ten counsellors of the black robe were annually elected by the great council, in the months of August and September; and of the six counsellors of the red robe, composing a part of the signoria, three entered office every four months. The Council of Ten, charged to guard the security of the state with a power higher than the law, had an especial commission to watch over the nobles, and to punish their crimes against the republic. In this they were restrained by no rule: they were, with respect to the nobility, the depositaries of the power of the great council, or rather of a power unlimited, which no people should intrust to any government. Some other decrees completed the system of the 'seratta del maggior consiglio.' It was forbidden to the quarantia to introduce any 'new man' into power. In 1315, a register was opened, called the Golden Book, in which were inscribed the names of all those who had sat in the great council. In 1319, all limitation of number was suppressed; and, from that period, it sufficed to prove that a person was the descendant of a counsellor, and 25 years of age, to be by right a member of the grand council of Venice."—J. C. L. de Sismondi, *History of the Italian republics*, ch. 5.—"When the Republic was hard pressed for money, inscriptions in the Golden Book were sold at the current price of 100,000 ducats. . . . Illustrious foreigners were admitted, as they are made free of a corporation amongst us. . . . The honour was not disdained even by crowned heads. . . . The original 'Libro d' oro' was publicly burned in 1797, but extracts, registers, and other documents are extant from which its contents might be ascertained."—*Republic of Venice (Quarterly Review, Oct., 1874, v. 137, p. 433)*.

1099-1101.—First Crusade.—"The movement of the crusades brings Venice to the very forefront of European history. Her previous development had been slowly preparing the way for her emergence. The Council, held at Clermont in 1095, resolved that the armament should leave Europe early in the following year. The Pope and the leaders of the Crusades were obliged to turn their attention to the question of transport for the vast and amorphous mob, which, without discipline, with no distinction of ranks, with no discrimination between soldier and monk, between merchant and peasant, between master and man, was now bent on reaching the Holy Land, almost as eager to die there as to achieve the object of their mission, the recovery of the Sepulchre. The three maritime states of Italy—Genoa, Pisa, and Venice—were

MARRIAGE OF THE ADRIATIC
(After painting by Francesco Guardi)

each ready to offer their services. Each was jealous of the other, and each determined to prevent the other from reaping any signal commercial advantage from the religious enthusiasm of Europe. Venice was not only the most powerful, but also the most eastern, of the three competitors. It was natural that the choice should fall on her. When the Pope's invitation to assist in the Crusade reached the city, however, it seems that the Government did not at once embrace the cause officially in the name of the whole Republic. There was, at first, a tendency to leave the business of transport to private enterprise. But on receipt of the news that Jerusalem had fallen, the Venetian Government began to take active steps in the matter. . . . The Crusade was accepted with enthusiasm. The whole city engaged in preparing a fleet which should be worthy of the Republic. Then, after a solemn mass in S. Mark's, at which the standard of the Cross and the standard of the Republic were presented to the leaders, the soldiers of the Cross embarked on the fleet which numbered 200 ships, and set sail down the Adriatic, making for Rhodes, where they were to winter. At Rhodes two incidents of great significance in Venetian history took place. The Eastern Emperors have never viewed with favour the incursion of the Crusaders. The creation of the kingdom of Jerusalem was really a usurpation of Imperial territory. Alexius I. now endeavoured to persuade the Venetians to withdraw from the enterprise. In this he failed; Venice remained true to the Cross, and to her commercial interests. It is at this point that we find the beginnings of that divergence between Constantinople and the Republic, which eventually declared itself in open hostility, and led up to the sack of Constantinople in the fourth Crusade. Alexius, finding that the Venetians were not inclined to obey him, resolved to punish them. An instrument was ready to his hand. The Pisans saw with disfavour the advent of their commercial rivals in Eastern waters. They were willing to hoist the Imperial standard as opposed to the crusading cross, and to sail down upon the Venetians at Rhodes. They were defeated. The Venetians released all the prisoners except thirty of the more prominent among them who were detained as hostages. The first fruits of the Crusade, as far as Venice was concerned, were the creation of two powerful enemies, the Emperor and the Pisans."—H. F. Brown, *Venice*, ch. 6.

1116-1141.—Wars for Dalmatia with Hungarians. See HUNGARY: 1116-1301.

1127-1128.—Beginning of quarrels with Byzantine empire.—“Previous to this time [about 1127], the Venetian republic had generally been a firm ally of the Byzantine empire, and, to a certain degree, it was considered as owing homage to the Emperor of Constantinople. That connection was now dissolved, and those disputes commenced which soon occupied a prominent place in the history of Eastern Europe. . . . For a short time, habit kept the Venetians attached to the empire; but they soon found that their interests were more closely connected with the Syrian trade than with that of Constantinople. They joined the kings of Jerusalem in extending their conquests, and obtained considerable establishments in all the maritime cities of the kingdom. From having been the customers and allies of the Greeks, they became their rivals and enemies. The commercial fleets of the age acted too often like pirates; and it is not improbable that the Emperor John had good rea-

son to complain of the aggressions of the Venetians. Hostilities commenced; the Doge Dominico Michiel, one of the heroes of the republic, conducted a numerous fleet into the Archipelago, and plundered the islands of Rhodes and Chios, where he wintered. Next year he continued his depredations in Samos, Mitylene, Paros, and Andros. . . . Peace was re-established by the emperor reinstating the Venetians in the enjoyment of all the commercial privileges they had enjoyed before the war broke out.”—G. Finlay, *History of the Byzantine and Greek empires*, bk. 3, ch. 2, sect. 2.

1171.—Establishment of Bank of Venice. See MONEY AND BANKING: Medieval: 12th-17th centuries.

1177.—Pretended Papal grant of the sovereignty of the Adriatic.—Doubtful story of humiliation of Frederick Barbarossa.—A “notable epoch in early Venetian history is the grant on which she based her claim to the sovereignty of the Adriatic. In the course of the fierce struggle between Alexander III. and Frederick Barbarossa [see ITALY: 1174-1183], the Pope, when his fortunes were at the lowest, took refuge with the Venetians, who, after a vain effort at reconciliation, made common cause with him, and in a naval encounter obtained so signal a victory that the Emperor was compelled to sue for peace and submit to the most humiliating terms. The crowning scene of his degradation has been rendered familiar by the pencil, the chisel, and the pen. . . . The Emperor, as soon as he came into the sacred presence, stripped off his mantle and knelt down before the Pope to kiss his feet. Alexander, intoxicated with his triumph and losing all sense of moderation or generosity, placed his foot on the head or neck of his prostrate enemy, exclaiming, in the words of the Psalmist, ‘Super aspidem et basiliscum ambulabis’ &c. (‘Thou shalt tread upon the asp and the basilisk.’) . . . ‘Non tibi, sed Petro’ (‘Not to thee, but Peter’), cried the outraged and indignant Emperor. ‘Et mihi et Petro’ (‘To both me and Peter’), rejoined the Pope, with a fresh pressure of his heel. . . . Sismondi (following a contemporary chronicler) narrates the interview without any circumstance of insult, and describes it as concluding with the kiss of peace. There are writers who contend that Alexander was never at Venice, and that the Venetians obtained no victory on his behalf. But the weight of evidence adduced by Daru strikes us to be quite conclusive in favour of his version. . . . In return for the good offices of Venice on this occasion . . . Alexander presented the reigning Doge, Ziani, with a ring, saying, ‘Receive this ring, and with it, as my donation, the dominion of the sea, which you, and your successors, shall annually assert on an appointed day, so that all posterity may understand that the possession of the sea was yours by right of victory, and that it is subject to the rule of the Venetian Republic, as wife to husband.’ . . . The well-known ceremony of wedding the Adriatic, religiously observed with all its original pomp and splendour during six centuries, was in itself a proclamation and a challenge to the world. It was regularly attended by the papal nuncio and the whole of the diplomatic corps, who, year after year, witnessed the dropping of a sanctified ring into the sea, and heard without a protest the prescriptive accompaniment: ‘Desponsamus te, mare, in signum veri perpetuique domini’ (we espouse thee, sea, in sign of true and perpetual dominion).” —*Republic of Venice* (*Quarterly Review*, October, 1874, v. 137, pp. 421-423).

1201.—Cause of hostility to Constantinople.—“Of late years the Venetians had had difficulties with the New Rome. . . . These difficulties arose, in great measure, from the fact that the influence of Venice in Constantinople was no longer sufficient to exclude that of the other Italian republics. . . . But the hostility to Constantinople reached its height when the Venetians learned that Alexis had, in May 1201, received an embassy from Genoa, and was negotiating with Ottobono della Croce, its leader, for the concession of privileges for trade in Romania which Venice had hitherto regarded as exclusively her own. From this time the Doge appears to have determined to avenge the wrongs of his state on the ruler who had ventured to favour his rivals.”—E. Pears, *Fall of Constantinople*, ch. 8.

1256-1258.—Battles with the Genoese at Acre.—“At the period of the Crusades, it was usual in those cities or towns where the Christians held sway, to assign to each of the mercantile communities which had borne a part in the conquest or recovery of the particular district, a separate quarter where they might have their own mill, their own oven, their own bath, their own weights and measures, their own church, and where they might be governed by their own laws, and protected by their own magistrates. . . . At Saint Jean d’Acre, however, the Church of Saint Sabbas was frequented by the Venetians and the Genoese in common; and it happened that, in course of time, both nations sought to found a right to the exclusive property of the building. [Collisions ensued, in one of which (1256), the Genoese drove the Venetians from their factory at Acre and burned the church of Saint Sabbas. The Venetians retaliated by sending a squadron to Acre which destroyed all the Genoese shipping in the port, burned their factory, and reduced a castle near the town which was held by a Genoese garrison. Early in 1257 the fleets of the two republics met and fought a battle, between Acre and Tyre, in which the Venetians were the victors. On June 24, 1258, a second battle was fought very nearly on the same spot, and again Venice triumphed, taking 2,600 prisoners and 25 galleys. Through the efforts of the pope, a suspension of hostilities was then brought about; but other causes of war were working in the east, which soon led to fresh encounters in arms between the two jealous commercial rivals].”—W. C. Hazlitt, *History of the Venetian republic*, v. 1, ch. 11.

14th century.—Fleets.—Commerce.—Industries.—“In the 14th century Venice had 3,000 merchantmen manned by 25,000 sailors. A tenth

part of these were ships exceeding 700 tons burden. There were besides 45 war-galleys manned by 11,000 hands; and 10,000 workmen, as well as 36,000 seamen, were employed in the arsenals. The largest of the war-galleys was called the Bucentaur; it was a state vessel of the most gorgeous description. Every year the Doge of Venice, seated upon a magnificent throne surmounted by a regal canopy, dropped from this vessel a ring into the Adriatic, to symbolise the fact that land and sea were united under the Venetian flag. This ceremony commemorated the victory gained over the fleet of the Emperor Frederick Barbarossa in 1177, when the Venetians obliged him to sue for peace. [See above: 1177.] Ascension Day was selected for its celebration, and the Bucentaur, glorious with new scarlet and gold, its deck and seats inlaid with costly woods, and rowed with long banks of burnished oars, for many years bore the Doge to plight his troth with the words, ‘We espouse thee, O Sea! in token of true and eternal sovereignty.’ The merchant fleet of Venice was divided into companies sailing together according to their trade. Their routes, and the days for departure and return, their size, armament, crew, and amount of cargo, were all defined. In those times the seas were as much infested with pirates as the deserts with robbers; each squadron therefore hired a convoy of war-galleys for its protection on the voyage. There were six or seven such squadrons in regular employment. The argosies of Cyprus and Egypt, and the vessels engaged in the Barbary and Syrian commerce, concentrated their traffic chiefly at Alexandria and Cairo. The so-called Armenian fleet proceeded to Constantinople and the Euxine, visiting Kaffa and the Gulf of Alexandretta. A Catalonian fleet traded with Spain and Portugal, and another with France; while the most famous of all, the Flanders galleys, connected the seaports of France, England, and Holland with the great commercial city of Bruges. The internal traffic with Germany and Italy was encouraged with equal care, oriental produce arriving from Constantinople and Egypt, and many other commodities being distributed, at first by way of Carinthia, and afterwards of the Tyrol. Germans, Hungarians, and Bohemians conducted this distribution. In Venice a bonded ware-house (*fondaco dei tedeschi*), or custom-house, was accorded to the Germans, where they were allowed to offer their wares for sale, though only to Venetian dealers. Similar privileges were granted to the Armenians, Moors, and Turks, but not to the Greeks, against whom a strong animosity prevailed. . . . The ancient industries of preparing salt and curing fish were never disregarded. The Adriatic sands supplied material adapted for a glass of rare beauty and value, of which mirrors and other articles of Venetian manufacture were made. [See INVENTIONS: Ancient and mediæval: Early industrial processes.] Venetian goldsmiths’ work was universally famed. Brass and iron foundries prepared the raw material for the armourers, whose weapons, helmets, and bucklers were unsurpassed for strength and beauty. Ship-building, with a people whose principle it was always to have more ships than any other state, was necessarily a very important branch of industry. Not satisfied with penetrating to every part already opened to enterprise, the Venetians travelled into regions before unknown, and gave to the world the record of their daring adventures. Maffeo and Nicolo Polo spent fifteen years visiting Egypt, Persia, India, the Khan of Tartary, and

the Grand Khan or Emperor of China. Marco Polo, son of Nicolo, as well as Barthema and Joseph Barbaro, extended the knowledge obtained by their precursors in northern Europe and Asia."—J. Yeats, *Growth and vicissitudes of commerce*, pp. 98-101.—See also COMMERCE: Medieval: 11th-16th centuries.

1378-1379.—Renewed war with Genoa.—Defeat at Pola.—The treaty of June, 1355, between Venice and Genoa (see CONSTANTINOPLE: 1348-1355), established a peace which lasted only until April, 1378, when, "a dispute having arisen between the rival States in relation to the island of Tenedos, which the Venetians had taken possession of, the Signory formally declared war against Genoa, which it denounced as false to all its oaths and obligations. On the 26th of this month, Vettore Pisani was invested with the supreme command of the naval forces of the republic. . . . The new commander-in-chief was the son of Nicolo Pisani, and had held a commission in the Navy for 25 years. . . . Of the seamen he was the idol. . . . Pisani sailed from Venice early in May, with 14 galleys; and, on the 30th of the month, while cruising off Antium, came across a Genoese squadron of 10 galleys, commanded by Admiral Fieschi. It was blowing a gale at the time, and five of Pisani's vessels, which had parted company with him, and fallen to leeward, were unable to rejoin him, while one of Fieschi's drifted ashore, and was wrecked. Thus the battle which immediately ensued was between equal forces; but the Genoese admiral was no match for Vettore Pisani," and sustained a disastrous defeat, losing four vessels, with all their officers and crew. "During the summer, Pisani captured great numbers of the enemy's merchantmen; but was unable to find their fleet, which, under Luciano Doria, was actively engaged in cutting up Venetian commerce in the East. In November he asked permission to return to Venice to refit his vessels, which were in a very bad condition, but this was denied him; and, being kept constantly cruising through the winter, at its expiration only six of his vessels were found to be seaworthy. Twelve others, however, were fitted out at their own expense and sent to him by his friends, who perceived that his political enemies were making an effort to ruin him. At the end of February, 1379, Michele Steno and Donato Zeno were appointed by the Government, 'proveditori' of the fleet. These officers, like the field deputies of the Dutch republic in later times, were set as spies over the commander-in-chief, whose operations they entirely controlled. On the 1st of May, Pisani left Brindisi, bound to Venice, having a large number of merchantmen in charge, laden with wheat; and, on the 6th instant, as the weather looked squally, put into Pola, with his convoy, for the night. On the following morning, at day-break, it was reported to him that Doria was off the port with 25 vessels; whereupon he determined not to leave his anchorage until Carlo

Zeno, whom he was expecting with a reinforcement of 10 galleys, should be seen approaching. But the *Proveditori*, loudly denouncing such a determination as a reflection upon the valor of his officers and men, ordered him, peremptorily, in the name of the Senate, to engage the enemy without delay." The result was an overwhelming defeat, out of which Pisani brought six galleys, only—"which were all that were saved from this most terrible engagement, wherein 800 Venetians perished and 2,000 were taken prisoners. . . . Pisani was now violently assailed by his enemies; although they well knew that he had fought the battle of Pola against his own judgment, and agreeably to the wishes of the government, as made known to him by its accredited agents, Michele Steno and Donato Zeno. The Great Council decreed his immediate removal from the supreme command, and he was brought to Venice loaded with chains. [Condemned, upon trial before the Senate, he was sentenced to imprisonment for six months.]"—F. A. Parker, *Fleets of the world*, pp. 100-105.

1379-1381.—War of Chioggia.—Dire extremity of the republic and her deliverance.—After the great victory of Pola, which cost the Genoese the life of Luciano D'Oría, they lost no time in pressing their beaten enemy, to make the most of the advantage they had won. "Fresh galleys were forthwith placed under the command of Pietro, another of the noble D'Oría family; and before the eyes of all Genoa, and after the benediction of the archbishop, the fleet sailed from the harbour, and a great cry was raised from roof to roof, and from window to window, and each alley and each street re-echoed it with enthusiasm, 'to Venice! to Venice!' On arriving in the Adriatic, Pietro D'Oría joined the fleet already there, and prepared for his attack on Venice. . . . To possess himself of Chioggia, which was 25 miles distant from Venice, was D'Oría's first plan. It was the key of the capital, commanded the entrance to the harbour, and cut off any assistance which might come from Lombardy. . . . After a few days of gallant defence, and a few days of gallant attack by sea and land, the defenders of Chioggia were reduced to the last extremity. The entrance to the river was broken open, and the bridge, which for some time was a stumbling-block to the besiegers, was destroyed with all the soldiers upon it by the bravery of a Genoese sailor, who took a boat laden with tar and wool and other combustible materials, and set fire to it, escaping by means of swimming. The defenders having thus perished in the flames, and Chioggia being taken [August, 1379], the triumph of the Genoese was at its height." The Venetians, in consternation at the fall of Chioggia, sent a deputation to D'Oría humbly offering to submit to any terms of peace he might dictate; but the insolent victor ordered them home with the message that there could be no peace until he had entered their city to bridle the bronze horses which stand on the Piazza of St. Mark. This roused the indignation and courage of Venice anew, and every nerve was strained in the defense of the port. "Vettor Pisani, who since the defeat at Pola had languished in prison, was brought out by unanimous consent, and before an assembled multitude he quietly and modestly accepted the position of saviour of his country. . . . The one saving point for Venice lay in the arrival of a few ships from Constantinople, which . . . Carlo Zeno had under his command, endeavouring to make a

diversion in the favour of the Venetians at the Eastern capital. Pending the return of this fleet, the Venetians made an attack on Chioggia. And an additional gleam of hope raised the spirits of Pisani's men in the disaffection of the King of Hungary from the Genoese cause; and gradually, as if by the magic hand of a fickle fortune, Pietro D'Oria found himself and his troops besieged in Chioggia, instead of going on his way to Venice as he had himself prophesied. But the Genoese position was still too strong, and Pisani found it hopeless to attempt to dislodge them; his troops became restless: they wished to return to Venice, though they had sworn never to go back thither except as conquerors. It was in this moment of dire distress that the ultimate resort was vaguely whispered from the Venetian Council Hall to the Piazza. A solemn decree was passed, 'that if within four days the succour from Carlo Zeno did not arrive, the fleet should be recalled from Chioggia, and then a general council should be held as to whether their country could be saved, or if another more secure might not be found elsewhere.' Then did the law-givers of Venice determine that on the fifth day the lagunes should be abandoned, and that they should proceed en masse to Crete or Negropont to form for themselves a fresh nucleus of power on a foreign soil. It is indeed hard to realize that the fate of Venice, associated with all that is Italian, the offspring of the hardy few who raised the city from the very waves, once hung in such a balance. But so it was, when towards the evening of the fourth day [Jan. 1, 1380] sails were descried on the horizon, and Carlo Zeno arrived to save his country from so great a sacrifice. . . . Besides reinforcements by sea, assistance by land flocked in towards Venice. Barnabo Visconti; and his company of the Star, a roving company of Germans, and the celebrated Breton band under Sir John Hawkwood, the Englishman, all hurried to assist the fallen banner of St. Mark. Pietro D'Oria did all he could to maintain discipline amongst his troops; but when he fell one day in an engagement, through being struck by a Venetian arrow, a general demoralization set in, and their only thought was how to save themselves and abandon Chioggia. . . . On the 18th of February, 1380, the Venetians made another gallant attack . . . [and] the Genoese . . . were obliged to retire within the walls. . . . Driven to extremities, on the 22nd of June in that year, 4,000 Genoese were taken to the public prisons in Venice. . . . Since both parties were tired of war, and weakened with these extreme efforts, it was no difficult matter to establish a peace [Aug. 8, 1381].—J. T. Bent, *Genoa*, ch. 8.

1494-1503.—Rising power and spreading dominion of the republic.—Fears and jealousies excited.—"The disturbances which had taken place in Italy since Charles VIII's advent there [see ITALY: 1494-1496; 1499-1500; 1501-1504], came very opportunely for their [the Venetians'] plans and policy. On every available occasion the Venetians spread their power all round about them. In the struggle between Charles and Ferrantino [or Ferdinand, of Naples] they acquired five fine cities in Apulia, excellently situated for their requirements, which they peopled by the reception of fugitive Jews from Spain. Moreover, in the kingdom of Naples, one party had declared for them. . . . Tarento raised their standard. During the Florentine disorders they were within an ace of becoming masters of Pisa. In the Milanese feuds they acquired Cremona and Ghiara d'Adda. Their power was all the more terrible, as they had never been known to lose again anything which they had once gotten. No one doubted that their aim was the complete sovereignty over the whole of Italy. Their historians always talked as if Venice was the ancient Rome once more. . . . The Turkish war, which had kept them awhile employed, now at an end, they next tried their fortune in Romagna, and endeavoured, availing themselves of the quarrels between the returning nobles and Cesar [Borgia, son of Pope Alexander VI], to become, if not the sole, at all events the most powerful, vassals of the papal chair. . . . The Venetians prepared to espouse the cause of those whom Cesar had suppressed. The cities reflected how genuine and substantial that peace was that the lion of Venice spread over all its dependencies. Having appeared in this country at the end of October, 1503, and having first promised the Malatesti other possessions in their own country, they took Rimini, with the concurrence of the prince and citizens. Without ado they attacked Faenza. . . . They continued their conquests, and, in the territories of Imola, Cesena, and Forli, took stronghold after stronghold. . . . Then it was that the first minister of France stated his belief that, 'had they only Romagna, they would forthwith attack Florence, on account of a debt of 180,000 guilders owing them.' If they were to make an inroad into Tuscany, Pisa would fall immediately on their arrival. Their object in calling the French into the Milanese territory was, that they considered them more fitted to make a conquest than to keep it; and, in the year 1504, they were negotiating how it were possible to wrest Milan again from them. Could they only succeed in this, nothing in Italy would be able longer to withstand them.

'They wanted,' as Macchiavelli said, 'to make the Pope their chaplain.' But they met with the staunchest resistance in Julius [the pope, Julius II.], as in him they could discover no weak point to attack. As pointedly as he could express himself, he declared to them, on the 9th November, 1503, that 'though hitherto their friend, he would now do his utmost against them, and would besides incite all the princes of Christendom against them.'—L. von Ranke, *History of the Latin and Teutonic nations*, bk. 2, ch. 3.

15th-17th centuries.—Decline of Venetian commerce and its causes.—'Commerce was for a long time free at Venice; and the republic only began to decline when its government had caused the source of its prosperity to be exhausted by monopoly. At first all the young patricians were subjected to the most severe ordeals of a commercial training. They were often sent as novices on board state-vessels to try fortune with a light venture, so much did it enter into the views of the administration to direct all citizens toward industrial occupations! The only reproach that can be brought against the Venetians, is the effort to exclude foreigners from all competition with them. Although commercial jealousy had not yet erected prohibitions into a system, and the ports of the republic were open to all the merchandise of the world, yet the Venetians only permitted its transportation in their own ships; and they reigned as absolute masters over all the Mediterranean. War had given them security from the Pisans, the Sicilians and the Genoese. Spain, long occupied by the Moors, gave them little occasion of offence. France disdained commerce; England had not yet begun to think of it; the republic of Holland was not in existence. Under cover of the right of sovereignty on the gulf, which she had arrogated to herself, Venice reserved the almost exclusive right to navigate. Armed flotillas guarded the mouths of all her rivers, and allowed no barque to enter or depart without being vigorously examined. . . . The Venetians had levelled all obstacles, but for themselves alone, and to the exclusion of other nations. Their legislation was very strict in respect to foreigners, in the matter of commerce. . . . As national manufactures acquired importance, the government departed from the liberal policy it had hitherto pursued, and the manufacturers obtained an absolute prohibition of such foreign merchandise as they produced. In vain, in the 17th century, did declining commerce urge the reëstablishment of former liberties and the freedom of the port: the attempt was made for a brief moment, but the spirit of restriction won the day, and the prohibitory régime early prepared the way for the death of the republic. The people of Italy, however, pardoned the Venetians for their commercial intolerance, because of the moderate price at which they delivered all commodities. The Jews, Armenians, Greeks and Germans flocked to Venice and engaged with safety in speculations, which were always advantageous, because of the security which the credit institutions gave and the recognized probity of the merchants. But soon Venice saw numerous manufactures spring up in Europe rivaling her own, and her commerce encountered most formidable competition in that of the Portuguese, Dutch, Spanish and English. The

discovery of the Cape of Good Hope [see PORTUGAL: 1463-1498] took away from her the monopoly of the spices of the Indies. The taking of Constantinople, by Mahomet II, had already deprived her of the magnificent privileges which her subjects enjoyed in that rich capital of the Orient. But the discovery of America and the vigorous reprisals of Charles V, who, at the commencement of his reign, in 1517, doubled the customs-duties which the Venetians paid in his states, completed the ruin of that fortunate monopoly which had made all Europe tributary. Charles V raised the import and export duties on all Venetian merchandise to twenty per cent; and this tariff, which would to-day appear moderate, sufficed them to prevent the Venetians from entering Spanish ports. Such was the origin of the exclusive system, the fatal invention which the republic of Venice was so cruelly to expiate. So long as she sought fortune only in the free competition of the talent and capital of her own citizens, she increased from age to age and became for a moment the arbiter of Europe; but as soon as she wished to rule the markets by the tyranny of monopoly, she saw a league formed against her commerce, formidable for a very different reason from that of Cambrai."—J. A. Blanqui, *History of political economy in Europe*, ch. 20.—See also COMMERCE: Medieval: 11th-16th centuries.

1501.—Hostile schemes of the emperor and the king of France. See ITALY: 1501-1504.

1508-1509.—League of Cambrai.—Republic despoiled of her continental provinces.—'The craving appetite of Louis XII. . . sharpened by the loss of Naples, sought to indemnify itself by more ample acquisitions in the north. As far back as 1504 [see ITALY: 1504-1506], he had arranged a plan with the emperor for the partition of the continental possessions of Venice. . . . The scheme is said to have been communicated to Ferdinand [of Aragon] in the royal interview at Savona [1507]. No immediate action followed, and it seems probable that the latter monarch, with his usual circumspection, reserved his decision until he should be more clearly satisfied of the advantages to himself. At length the projected partition was definitely settled by the celebrated treaty of Cambrai, December 10th, 1508, between Louis XII. and the emperor Maximilian, in which the Pope, King Ferdinand, and all princes who had any claims for spoiliations by the Venetians, were invited to take part. The share of the spoil assigned to the Catholic monarch [Ferdinand] was the five Neapolitan cities, Trani, Brindisi, Gallipoli, Pulignano, and Otranto, pledged to Venice for considerable sums advanced by her during the late war. The Spanish court, and, not long after, Julius II. ratified the treaty, although it was in direct contravention of the avowed purpose of the pontiff, to chase the 'barbarians' from Italy. It was his bold policy, however, to make use of them first for the aggrandisement of the church, and then to trust to his augmented strength and more favorable opportunities for eradicating them altogether. Never was there a project more destitute of principle or sound policy. There was not one of the contracting parties who was not at that very time in close alliance with the state, the dismemberment of which he was plotting. As a matter of policy, it went to break down the principal barrier on which each of these powers could rely for keeping in check the overweening ambition of its neighbors, and maintaining the balance of Italy. The alarm of Venice was quieted for a time by assur-

ances from the courts of France and Spain that the league was directed solely against the Turks, accompanied by the most hypocritical professions of good will, and amicable offers to the republic. The preamble of the treaty declares that, it being the intention of the allies to support the pope in a crusade against the infidel, they first proposed to recover from Venice the territories of which she had despoiled the church and other powers, to the manifest hindrance of these pious designs. . . . The true reasons for the confederacy are to be found in a speech delivered at the German diet, some time after, by the French minister Hélian. 'We,' he remarks, after enumerating various enormities of the republic, 'wear no fine purple; feast from no sumptuous services of plate; have no coffers overflowing with gold. We are barbarians. Surely,' he continues in another place, 'if it is derogatory to princes to act the part of merchants, it is unbecoming in merchants to assume the state of princes.' This, then, was the true key of conspiracy against Venice; envy of her superior wealth and magnificence, hatred engendered by her too arrogant bearing, and lastly the evil eye with which kings naturally regard the movements of an active, aspiring republic. To secure the co-operation of Florence, the kings of France and Spain agreed to withdraw their protection from Pisa, for a stipulated sum of money. [See PISA: 1494-1509.] There is nothing in the whole history of the merchant princes of Venice so mercenary and base as this bartering away for gold the independence for which this little republic had been so nobly contending for more than 14 years. Early in April, 1509, Louis XII. crossed the Alps at the head of a force which bore down all opposition. City and castle fell before him, and his demeanor to the vanquished, over whom he had no rights beyond the ordinary ones of war, was that of an incensed master taking vengeance on his rebellious vassals. In revenge for his detention before Peschiera, he hung the Venetian governor and his son from the battlements. This was an outrage on the laws of chivalry, which, however hard they bore on the peasant, respected those of high degree. . . . On the 14th of May, 1509, was fought the bloody battle of Agnadel, which broke the power of Venice and at once decided the fate of the war. Ferdinand had contributed nothing to these operations, except by his diversion on the side of Naples, where he possessed himself without difficulty of the cities allotted to his share. They were the cheapest, and, if not the most valuable, were the most permanent acquisitions of the war, being reincorporated in the monarchy of Naples. Then followed the memorable decree by which Venice released her continental provinces from their allegiance, authorizing them to provide in any way they could for their safety; a measure which, whether originating in panic or policy, was perfectly consonant with the latter. The confederates, who had remained united during the chase, soon quarrelled over the division of the spoil. Ancient jealousies revived. The republic, with cool and consummate policy, availed herself of this state of feeling. Pope Julius, who had gained all that he had proposed, and was satisfied with the humiliation of Venice, now felt all his former antipathies and distrust of the French return in full force. The rising flame was diligently fanned by the artful emissaries of the republic, who at length effected a reconciliation on her behalf with the haughty pontiff. The latter . . . planned a new coalition for the expulsion

of the French, calling on the other allies to take part in it."—W. H. Prescott, *History of the reign of Ferdinand and Isabella*, v. 3, pt. 2, ch. 22.

16th century.—Art of the Renaissance.—"It was a fact of the greatest importance for the development of the fine arts in Italy that painting in Venice reached maturity later than in Florence. Owing to this circumstance one chief aspect of the Renaissance, its material magnificence and freedom, received consummate treatment at the hands of Titian, Tintoretto, and Veronese. To idealise the sensualities of the external universe, to achieve for colour what the Florentines had done for form, to invest the worldly grandeur of human life at one of its most gorgeous epochs with the dignity of the highest art, was what these great artists were called on to accomplish. Their task could not have been so worthily performed in the fifteenth century as in the sixteenth, if the development of the æsthetic sense had been more premature among the Venetians. Venice was precisely fitted for the part her painters had to play. Free, isolated, wealthy, powerful; famous throughout Europe for the pomp of her state equipage, and for the immorality of her private manners; ruled by a prudent aristocracy, who spent vast wealth on public shows and on the maintenance of a more than imperial civic majesty: Venice with her pavement of liquid chrysopease, with her palaces of porphyry and marble, her frescoed façades, her quays and squares aglow with the costumes of the Levant, her lagoons afloat with the galleys of all nations, her churches floored with mosaics, her silvery domes and ceilings glittering with sculpture bathed in molten gold: Venice luxurious in the light and colour of a vaporous atmosphere, where sea-mists rose into the mounded summer clouds; arched over by the broad expanse of sky, bounded only by the horizon of waves and plain and distant mountain ranges, and reflected in all its many hues of sunrise and sunset upon the glassy surface of smooth waters: Venice asleep like a miracle of opal or of pearl upon the bosom of an undulating lake:—here and here only on the face of the whole globe was the unique city wherein the pride of life might combine with the lustre of the physical uni-

verse to create and stimulate in the artist a sense of all that was most sumptuous in the pageant of the world of sense. . . . The Venetians had no green fields and trees, no garden borders, no blossoming orchards, to teach them the tender suggestiveness, the quaint poetry of isolated or contrasted tints. Their meadows were the fruitless furrows of the Adriatic, hued like a peacock's neck; they called the pearl-shells of their Lido flowers, *for di mare*. Nothing distracted their attention from the glories of morning and of evening presented to them by their sea and sky. It was in consequence of this that the Venetians conceived colour heroically, not as a matter of missal-margins or of subordinate decoration, but as a motive worthy in itself of sublime treatment. In like manner, hedged in by no liminary hills, contracted by no city walls, stifled by no narrow streets, but open to the liberal airs of heaven and ocean, the Venetians understood space and imagined pictures almost boundless in their immensity. Light, colour, air, space: those are the elemental conditions of Venetian art; of those the painters weaved their ideal world for beautiful and proud humanity. . . . In order to understand the destiny of Venice in art, it is not enough to concentrate attention on the peculiarities of her physical environment. Potent as these were in the creation of her style, the political and social conditions of the Republic require also to be taken into account. Among Italian cities Venice was unique. She alone was tranquil in her empire, unimpeded in her constitutional development, independent of Church interference, undisturbed by the cross purposes and intrigues of the despots, inhabited by merchants who were princes, and by a free-born people who had never seen war at their gates. The serenity of undisturbed security, the luxury of wealth amassed abroad and liberally spent at home, gave a physiognomy of ease and proud self-confidence to all her edifices. The grim and anxious struggles of the Middle Ages left no mark on Venice. How different was this town from Florence, every inch of whose domain could tell of civic warfare. . . . It is not an insignificant, though a slight, detail, that the predominant colour of Florence is brown, while the predominant colour of Venice is that of mother-of-pearl, concealing within its general whiteness every tint that can be placed upon the palette of a painter. The conditions of Florence stimulated mental energy and turned the forces of the soul inwards. Those of Venice inclined the individual to accept life as he found it. Instead of exciting him to think, they disposed him to enjoy, or to acquire by industry the means of manifold enjoyment. To represent an art the intellectual strivings of the Renaissance was the task of Florence and her sons; to create a monument of Renaissance magnificence was the task of Venice."—J. A. Symonds, *Renaissance in Italy: Fine arts, ch. 7*.—See also PAINTING: Italian: High Renaissance; ARCHITECTURE: Renaissance: Italy.

1606-1607.—Republic under the guidance of Fra Paolo Sarpi.—Conflict with the pope.—Interdict which had no terrors.—"In the Constitution of the Republic at this time [1606] there were three permanent officials called Counsellors of Law, or State Counsellors, whose duties were to instruct the Doge and Senate on the legal bearings of any question in dispute in which the Republic was involved. But at the beginning of this year, because of the ecclesiastical element that frequently appeared in these quarrels (for they were mostly between the State and the Pope [Paul V]) the Senate resolved to create a new office,

namely, that of 'Teologo-Consulatore' or Theological Counsellor. In looking about for one to fill this office the choice of the Doge and Senate unanimously fell upon Fra Paolo Sarpi. . . . I have called Fra Paolo Sarpi the greatest of the Venetians. . . . Foreigners who came to Venice sought above all things to see him as 'the greatest genius of his age.' . . . On the 28th of January, 1606, he entered upon his public duties." From that time until his death, seventeen years later, he not only held the office of Theological Counsellor, but the duties of the three Counsellors of Law were gradually transferred to him, as those offices were vacated, in succession, by death. "The history of the Republic during these seventeen years was one unbroken record of great intellectual and moral victories. . . . Never was there in any land, by any Government, a servant more honoured and more beloved. The solicitude of the Doge, of the dreaded Council of Ten, of the Senate, of the whole people, for the safety and well-being of their Consulatore, was like that of a mother for

FRA PAOLO SARPI

her only child. 'Fate largo a Fra Paolo'—'Make room for Fra Paolo,' was often heard as he passed along the crowded Merceria. Fra Paolo loved Venice with an undying devotion, and Venice loved him with a romantic and tender affection. . . . Strained relations . . . [had] existed between Venice and the Vatican during the last years of Clement VIII's Pontificate. His seizure of the Duchy of Ferrara, his conduct in the matter of the Patriarch Zane's appointment, his attempt to cripple the book-trade of Venice by means of the Index Expurgatorius, all led to serious disputes, in every one of which he got the worst of it. Pope Paul V., who was then Cardinal Borghese, chafed at what he considered Clement's pusillanimity. Talking of these matters to the Venetian ambassador at Rome, Leonardo Donato, he once said, 'If I were Pope, I would place Venice under an interdict and excommunication'; 'And if I were Doge,' was the reply, 'I would trample your interdict and excommunication under foot.' Curiously enough, both were called upon to fill these offices, and both proved as good as their words. . . . Paul V. . . . found several excuses for quarrel. The Patriarch, Matteo Zane—he whose appointment had been a

matter of dispute with Clement VIII.—died, and the Senate appointed Francesco Vendramin as his successor. Pope Paul claimed the right of presentation, and demanded that he should be sent to Rome for examination and approval. The Senate replied by ordering his investiture, and forbidding him to leave Venice. Again, money had to be raised in Brescia for the restoration of the ramparts, and the Senate imposed a tax on all the citizens—laymen and ecclesiastics alike. Pope Paul V. claimed exemption for the latter, as being his subjects. The Senate refused to listen to him. . . . Two ecclesiastical property laws were in force throughout the Republic; by one the Church was prohibited from building any new monasteries, convents, or churches without the consent of the Government under penalty of forfeiture; and by the other it was disqualified from retaining property which it might become possessed of by donation or by inheritance, but was bound to turn it into money. . . . Pope Paul V. . . . demanded the repeal of these property laws [as well as the release of certain imprisoned ecclesiastics] in October, 1605. . . . Early in December, the Pope, impatient to bring the quarrel to a head, threatened to place Venice under interdict and excommunication if it did not yield to his demands. . . . On the very day that Fra Paolo accepted . . . [his] office he informed the Senate that two courses of action were open to them. They could argue the case either *de jure* or *de facto*. First, *de jure*, that is, they could appeal against the judgment of the Pope to a Church Council. . . . Secondly, the Republic could adopt the *de facto* course; that is, it could rely on its own authority and strength. . . . The *de facto* course was . . . the one Fra Paolo recommended; adding very significantly, 'He who appeals to a Council admits that the righteousness of his cause may be questioned, whereas that of Venice is indisputable.' The Senate hailed the advice thus given, and instructed him to draw out a reply to the Pope's brief in accordance with it. . . . From the moment this reply was received a bitter controversy was set on foot. Renewed demands came from Rome, and renewed refusals were sent from Venice. . . . Meanwhile the eyes of all the Courts of Europe were directed to the great struggle. . . . On the 17th of April, 1606, the bull of interdict and excommunication was launched; twenty-four days being allowed Venice for repentance, with three more added of the Pope's gracious clemency. . . . The bull was a sweeping one. . . . No more masses were to be said. Baptism, marriage, and burial services were to cease. The churches were to be locked up, and the priests could withdraw from the devoted land. All social relationships were dissolved. Marriages were declared invalid, and all children born were illegitimate. Husbands could desert their wives, and children disobey their parents. Contracts of all kinds were declared null and void. Allegiance to the Government was at an end."—A. Robertson, *Fra Paolo Sarpi, ch. 5, and preface*.—"It was proposed in the college of Venice to enter a solemn protest, as had been done in earlier times; but this proposal was rejected, on the ground that the sentence of the pope was in itself null and void, and had not even a show of justice. In a short proclamation, occupying only a quarto page, Leonardo Donato made known to the clergy, the resolution of the republic to maintain the sovereign authority, 'which acknowledges no other superior in worldly things save God alone.' Her faithful clergy would of themselves perceive the nullity of the 'censures' issued against them, and would continue the dis-

charge of their functions, the cure of souls and the worship of God, without interruption. . . . Commanded by their two superiors—the pope and the republic—to give contradictory proofs of obedience, the Venetian clergy were now called on to decide to which of the two they would render that obedience. They did not hesitate; they obeyed the republic: not a copy of the brief was fixed up. The delay appointed by the pope expired; public worship was everywhere conducted as usual. As the secular clergy had decided, so did also the monastic orders. The only exception to this was presented by the orders newly instituted, and in which the principle of ecclesiastical restoration was more particularly represented; these were the Jesuits, Theatines, and Capuchins. The Jesuits . . . departed from the city, and took shelter in the papal dominions. Their example influenced the other two orders. A middle course was proposed by the Theatines, but the Venetians did not think it advisable; they would suffer no division in their land, and demanded either obedience or departure. The deserted churches were easily provided with other priests, and care was taken that none should perceive a deficiency. . . . It is manifest that the result was a complete schism. . . . Paul V. thought at times of having recourse to arms. . . . Legates were despatched, and troops fitted out; but in effect they dared not venture to attempt force. There would have been cause to apprehend that Venice would call the Protestants to her aid, and thus throw all Italy, nay the Catholic world at large, into the most perilous commotions. They must again betake themselves, as on former occasions, to political measures, for the adjustment of these questions touching the rights of the Church. . . . I have neither inclination nor means for a detailed account of these negotiations through the whole course of the proceedings. . . . The first difficulty was presented by the pope, who insisted, before all things, that the Venetian laws, which had given him so much offence, should be repealed; and he made the suspension of his ecclesiastical censures to depend on their repeal. But the Venetians, also, on their part, with a certain republican self-complacency, were accustomed to declare their laws sacred and inviolable. When the papal demand was brought under discussion in January, 1607, although the college wavered, yet at last it was decidedly rejected in the senate. The French, who had given their word to the pope, succeeded in bringing the question forward once more in March, when of the four opponents in the college, one at least withdrew his objections. After the arguments on both sides had again been fully stated in the senate, there was still, it is true, no formal or express repeal of the laws, but a decision was adopted to the effect that 'the republic would conduct itself with its accustomed piety.' However obscure these words appear, the ambassador and the pope thought they discovered in them the fulfillment of their wishes. The pope then suspended his censures."—L. von Ranke, *History of the popes, v. 2, bk 6, sect. 12*.—"The moral victory remained with Venice. She did not recall her laws as to taxation of the clergy and the foundation of new churches and monasteries [nor permit the Jesuits to return, until many years later]. . . . The hero of the whole episode, Fra Paolo Sarpi, continued to live quietly in his convent of the Servites at S. Fosca. The Government received warning from Rome that danger was threatening. In its turn it cautioned Fra Paolo. But he paid little or no heed." On Oct. 25, 1607, he was attacked by three assassins, who inflicted serious

wounds upon him and left him for dead. By great care, however, Fra Paolo's life was saved, and prolonged until 1623. The would-be assassins escaped into the Papal States, where "they found not only shelter but a welcome."—H. F. Brown, *Venice*, ch. 20.—See also, PAPACY: 1605-1700.

1902.—Fall of Campanile of St. Mark's.—On the morning of July 14, 1902, the Campanile or bell-tower of St. Mark's cathedral collapsed. An attentive architect had been calling attention for several years to signs of danger in its walls, but nothing had been done to avert the destruction of the most interesting monument of antiquity in the city. The building of the tower was begun in the year 888, and underwent a reconstruction in 1320. Its height was 322 feet.

1903-1912.—Rebuilding of campanile of St. Mark's.—Plans for the rebuilding of the old campanile were immediately laid, the new tower to be a replica of the original so far as possible. "On S. Mark's Day (April 25), 1903, the first stone

was laid. On S. Mark's Day, 1912, the new campanile was declared complete in every part and blessed in the presence of representatives of all Italy, while 2479 pigeons, brought hither for the purpose, carried the tidings to every corner of the country."—E. C. Lucas, *Wanderer in Venice*, p. 41.

1914-1922.—Modern city.—Effect of World War.—Economic, artistic and political events.—"Venice today is only 'one of the cities of Italy.' Her political entity is passed, but the outward expression of days of brilliant successes, her sumptuous living, her artistic pomp are still in existence. . . . [During the War] probably the most deplorable ruin was wrought by the bombardment of the Church of Santa Maria Formosa which was reduced to ruins by an Austrian air raid, August, 1916."—C. V. Sargent, *Venice in war time (Overland Monthly, February, 1918)*.—See also WORLD WAR: 1918: VIII. Aviation.—Many works of art were transported to places of safety and after the armistice restored to their original locations. The industrial arts for which the city was formerly famous have been revived of late years. The thirteenth biennial international exhibition of art was held April-October, 1922, and was reported a success commercially as well artistically. On October 8, 1922, a conference took place in Venice between Dr. Benès of Czecho Slovakia and Dr. Carlo Schanzer, the Italian foreign minister on the subject of economic coöperation with Austria.

VENUS, or Aphrodite, Roman and Greek names respectively for the goddess of love and beauty in ancient mythology. See MYTHOLOGY: Grecian.

VERA CRUZ, chief seaport of Mexico and principal city of the state of Vera Cruz. (See MEXICO: Map.) The population in 1921 numbered 48,633. Vera Cruz and its harbor were pillaged by buccaners in 1653 and again in 1712, which led to the strengthening and completion on an island reef, about half a mile from shore, of the famous fort or Castle of San Juan de Ulúa, or Ulloa, begun in 1582. It was from Vera Cruz that Benito Juárez in 1859 promulgated his laws instituting a free church in a free state. Once its unhealthy location, enervating climate, and the prevalence of yellow fever, caused Vera Cruz to be called the city of the dead; but the institution of harbor improvements, water and sewage systems, paving, etc., has long since made Vera Cruz fairly inhabitable.

VERAGUA, region in the western part of Panama, near the Gulf of Chiriqui. It was discovered and named by Columbus who attempted to found a settlement here in 1502. Another attempt at colonization was made by Diego de Nicuesa in 1509, but failed. See AMERICA: 1498-1505; 1509-1511; also TIERRA FIRME.

VERCELLI, city and archiepiscopal see of Pied-

mont, Italy, in the province of Novara, forty-four miles southwest of Milan. It was besieged and captured by the Spaniards in 1638, and restored to Savoy in 1659. See ITALY: 1635-1659; 1701-1713.

VERCINGETORIX (d. about 45 B. C.), leader of Gallic tribes who fought against Cæsar, 52 B. C. Was captured at the fall of Alesia, 52 B. C.; taken to Rome and exhibited at Cæsar's triumph, 46 B. C.; beheaded about 45 B. C. See GAUL: B. C. 58-51.

VERDE ISLANDS. See CAPE VERDE, OR VERDE, ISLANDS.

VERDEN, town in the province of Hanover, Prussia, twenty-one miles southeast of Bremen on the Aller. It became a Swedish duchy at the peace of Westphalia, 1648, and in 1719 was joined with Hanover. See GERMANY: 1648: Peace of Westphalia.

VERDI, Giuseppe (1813-1901), Italian composer. Studied with Provesi, later with Lavigna; produced "Rigoletto" at Venice, 1851, "Il Trovatore" at Rome, 1853; "Traviata" at Venice, 1853, and "Aida" at Cairo, 1871; the "Manzoni Requiem" was produced at St. Mark's, Milan, 1874, "Otello" in 1887, and "Falstaff" in 1893; the last named is considered his finest work and the greatest light opera except Wagner's "Meistersinger."—See also MUSIC: Modern: 1842-1921: Modern Italian school.

VERDUN, garrison town and fortress in eastern France, capital of an arrondissement in the department of Meuse. It is on the main line of the eastern railway between Paris and Metz. Following the Franco-Prussian War of 1870, in which it was bombarded three different times before it finally capitulated, the fortification was redesigned and rebuilt with forts established on all the surrounding heights on which the German besiegers had set their batteries so that it comprised sixteen large forts and twenty smaller ones with additional field works, the circumference of all measuring about thirty miles and the greatest diameter of the ring about nine miles. Verdun (Roman Verodunum) was a town of some importance at the time of the Roman conquest and was included in Belgica Prima. The bishopric dates back to the third century. It was destroyed by the barbarian invaders, recovering only toward the end of the fifth century. In 502 the town was seized by Clovis, and after the time of Charlemagne it belonged to the kingdom of Austrasia. The Treaty of Verdun, signed in 843, by the grandsons of Charlemagne, partitioned the empire. (See VERDUN, TREATY OF.) Verdun at first was situated in the Lotharingian kingdom, extending from the North sea to and including Italy, but was soon incorporated in the kingdom of Louis the German. In the confusion of the feudal anarchy, however, it shared the fate of Upper Lorraine, being sometimes attached to France and again to Germany. It was finally conquered by Germany and came under the rule of bishops. Verdun with Toul and Metz then formed the territory of the Trois Evêchés. In the eleventh century Verdun became a free imperial city and its burghers began a struggle with their bishops for rights that were not finally secured until the following century.

1552-1559.—Possession taken by France. See FRANCE: 1547-1559.

1648.—Ceded to France in the Peace of Westphalia. See GERMANY: 1648: Peace of Westphalia; WESTPHALIA, PEACE OF (1648).

VERDUN, Treaty of (843). The contest and civil war which arose between the three grandsons of Charlemagne resulted in a treaty of partition, lrought about in 843, which forever dissolved the great Frank empire of Clovis, and of the Pepins and Carls who finished what he began. "A commission of 300 members was appointed to distribute itself over the surface of the empire, and by an examination of the wealth of each region, and the wishes of its people, acquire a knowledge of the best means of making an equitable division. The next year the commissioners reported the result of their researches to the three kings, assembled at Verdun, and a treaty of separation was drawn up and executed, which gave Gaul, from the Meuse and Saône as far as the Pyrenees, to Karl; which gave Germany, beyond the Rhine, to Ludwig the Germanic; and which secured to Lothar Italy, with a broad strip on the Rhine, between the dominions of Karl and Ludwig, under the names of Lotharingia or Lorraine. This was the first great treaty of modern Europe; it began a political division which lasted for many centuries; the great empire of Karl was formally dismembered by it, and the pieces of it scattered among his degenerate descendants."—P. Godwin, *History of France: Ancient Gaul*, ch. 18.—"The treaty of Verdun, in 843, abrogated the sovereignty that had been attached to the eldest brother and to the imperial name in former partitions; each held his respective kingdom as an independent right. This is the epoch of a final separation between the French and German members of the empire. Its millenary was celebrated by some of the latter nation in 1843."—H. Hallam, *The Middle Ages*, v. 1, ch. 1, pt. 1.—See also FRANKS: 814-962; FRANCE: 9th century; GERMAN: 814-843; 843-962; ALSACE-LORRAINE: 842-1477; BELGIUM: Ancient and medieval period.

VERLAINE, Paul (1844-1896), French poet. See FRENCH LITERATURE: 1840-1896.

VERMANDOIS, House of.—The noble House of Vermandois which played an important part in French history during the Middle Ages, boasted a descent from Charlemagne, through his best loved son, Pepin, king of Italy. "Peronne and the Abbey of Saint-Quentin composed the nucleus of their Principality; but, quietly and without contradiction, they had extended their sway over the heart of the kingdom of Soissons; and that ancient Soissons, and the rock of Lâon, and Rheims, the prerogative city of the Gauls, were all within the geographical ambit of their territory. In such enclaves as we have named, Vermandois did not possess direct authority. Lâon, for example, had a count and a bishop, and was a royal domain."—F. Palgrave, *History of Normandy and England*, bk. 1, v. 1, ch. 5, sect. 6.—See also CHAMPAGNE: Origin of the country.

VERMANDOVILLERS, village about eight miles southwest of Peronne, northeastern France. In 1916, during the Battle of the Somme, it was taken from the Germans by the French. See WORLD WAR: 1916: II. Western front: c, 3.

VERMIGLI, Pietro Martire (Peter Martyr) (1500-1562), Augustinian abbot at Spoleto and Naples. Invited to England by Cranmer; appointed regius professor of divinity at Oxford, 1548.

VERMONT, known as the "Green Mountain State," is a North Atlantic state of the United States belonging to the New England group. It is bounded on the north by the province of Quebec; on the east by the Connecticut river which separates it from New Hampshire; on the south by Massachusetts; and on the west by New York and Lake Champlain. The state has an area of 9,564 square miles, of which 440 square miles are water; and a population, 1920, of 352,428. When a government was established in 1777, the state took the name of "New Connecticut" which was changed a year later, to Vermont, thus, making the state the only one in the Union with a Latin name. The first governor and forty-five of her governors in all have been natives of Connecticut; twenty-one of her Supreme Court judges and eleven of her United States senators were born on Connecticut soil.—Based on P. E. Sargent, *Handbook of New England*, 1921: *Vermont*.

Resources.—Vermont is largely agricultural. In 1920, the state contained 29,075 farms with a total area of 4,235,811 acres, of which 1,691,595 acres were improved land. The chief crops are hay, cereals, apples and potatoes. The state produces 20,227,495 pounds of creamery butter per year, and makes almost all of the cheese produced in New England. The value of the live-stock, 1920, was about \$28,502,803. "The first record of maple-sugar making by white men in the State was in Bennington in 1763. Since then the making of maple-sugar has become a general industry in Vermont, and the amount produced is greater than that of any other state and is nearly one-third of the whole amount produced in the United States."—E. Conant and M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, p. 56.—The woodland area is estimated to be about 3,900 square miles, and the chief timber product is spruce although other kinds are cut for market. The principal mineral product is its building and monumental stone, including marble, granite, slate, and limestone. The marble quarries produce half of the marble of the United States.—See also U.S.A.: Economic map.

Mountain rule.—"Vermont is divided into two nearly equal parts by a range of hills known as the Green Mountains. These form a ridge running north and south; the length of the state and substantially along its central line. This physical condition has given rise to the political arrangement known as the 'Mountain Rule,' a practice rooted in tradition, unrecognized by law, but as binding in effect as the Constitution itself. By this custom, nominations and appointments to political office are so arranged that an equal opportunity of political patronage is extended to the people on both sides of the grand division. Vermont's most exhaustive historical writer, Hon. E. P. Walton, says, 'This rule has always been accepted from the admission of Vermont to the Union.' . . . This event occurred in 1791, and separates the subsequent history of the state from the preceding, or colonial period, which dates from the settlement of Vermont in 1724. . . . The first General Assembly of the young Republic, was held at Windsor, March 12, 1778, and from that time until March 4, 1791, thirteen years, when Vermont was admitted into the Union, its General Assembly, had met twenty-eight times, fourteen on the east side and fourteen upon the west side of the 'Green Mountains,' usually alternating between the sides of the state. During this time, the Governors were taken from the west side, and the Lieutenant Governors, from the east side. . . . The territory comprising the new Republic was practically a wilderness, a range of high mountains reaching its entire length, covered with heavy forests; its entire territory made up of mountain and valley. . . . A foreign country to the north was at war with the Republic of America; to the west a hostile province endeavoured to deprive them of the homes, they had bought so dearly. Every settler strove to defend not only his own home, but also the home of every other settler, and at all times, whether night or day his neighbor's necessity was his own. . . . Under these circumstances, the 'Mountain Rule' was established, stronger than law, and as long as the descendants of the 'Green Mountain Boys' inhabit Vermont, will prevail. . . . Since Vermont was admitted into the Union, or for the past one hundred and twenty-five years, fifty different men have been elected Governor of Vermont, twenty-eight from the west side, and twenty-two from the east side of the Mountain, and since 1861, or for the past fifty-four years, twenty-seven Governors have resided upon the west side and twenty-seven upon the east side of the Mountain, for the past ninety years, twenty-three of Vermont's Governors, have resided on the west side, and twenty on the east side of the mountains. From 1791 to 1826, thirty-four years, Vermont's Governors were elected from the west side and the Lieutenant Governors from the east side. Since 1826, of the forty-three lieutenant Governors elected, twenty-three have resided on the west, and twenty on the east side. Since biennial elections have been established, the positions of Governor and Lieutenant Governor, have alternated between the sides of the mountains. Since 1791, to the present time [1916], there have been twenty-eight different persons elected to the office of United States Senator, and one has been elected from the west side and the other from the east side, with but two exceptions. The first exception was upon the death of Senator William Upham of Montpelier, when former Senator Samuel S. Phelps of Middlebury was appointed to fill the vacancy. . . . The second exception was in 1853, when Lawrence Brainard of St. Albans, was elected by the people,

to fill Senator Upham's place, and was caused by the mix up of political parties."—F. W. Baldwin, *Vermont's "mountain rule"* (*New England Magazine*, May, 1916).

1609-1724.—Early exploration.—Attempted settlements.—"July 4th, 1609, three Frenchmen, Samuel de Champlain, governor of Quebec, and two associates, entered Lake Champlain from the north. They accompanied a war party of Canadian Indians in an expedition against the Iroquois of New York, and ascended the lake in canoes as far as Ticonderoga, where they met and defeated their foes. . . . He and his two associates were probably the first civilized men who visited any portion of the territory now included within the limits of Vermont. By virtue of this discovery of Vermont, most of the state was claimed for the king of France, and appears on the old maps as a portion of New France. During the early wars between the English and French and Indians, the state was repeatedly traversed by hostile parties, but it was more than a hundred years after its discovery before any permanent settlement was made within its territory. The first temporary settlement on its soil was made by the French, who built in 1665 a fort called St. Anne, at Sandy Point, Isle La Motte, which was a post of great importance in the early Indian wars. The outlines of this fort are still plainly visible. In 1690 an expedition was sent by the governor of New York to the mouth of Otter Creek, and a small stone fort was built at Chimney Point, in the present town of Addison, to aid in the operations against the Indians. This position was afterward abandoned, but a French settlement was made there by a few families from Canada in 1730, who built a blockhouse and windmill. The next year Fort Frederic, afterwards known as Crown Point, was erected on the opposite side of the lake. Though extensive grants were made along the shores of Lake Champlain by the successive governors of Canada, it does not appear that settlements were made by the French for the purpose of cultivating the soil, except in the vicinity of their forts, one at Windmill Point in the present town of Alburg. These were not extensive, and were abandoned on the approach of the English in 1759. . . . The first permanent occupation of any of the territory of Vermont by civilized men was in the present town of Brattleboro in 1724, when a blockhouse, called Fort Dummer, was built, and a settlement begun on the 'Dummer Meadows' near by. This fort was erected by the colony of Massachusetts, and was supposed to be within its territory. . . . Within the next few years settlements were begun at Westminster and other places in this part of the state, but owing to the hostilities of the Indians, they at first grew but slowly, and some were abandoned altogether."—S. W. Landon, *Brief outline of the history and civil government of Vermont*, pp. 5-7.

1749-1774.—New Hampshire grants and conflict with New York.—Ethan Allen and the Green Mountain Boys.—"Among the causes of the controversies which existed between the colonies in early times, and continued down to the revolution, was the uncertainty of boundary lines as described in the old charters. . . . A difficulty of this kind arose between the colony of New York and those of Connecticut, Massachusetts, and New Hampshire. By the grant of King Charles II. to his brother, the Duke of York, the tract of country called New York was bounded on the east by Connecticut River, thus conflicting with the express letter of the Massachusetts and Connecticut charters, which extended those colonies westward

to the South Sea, or Pacific Ocean. After a long controversy, kept up at times with a good deal of heat on both sides, the line of division between these colonies was fixed by mutual agreement at 20 miles east of Hudson's River, running nearly in a north and south direction. . . . The Massachusetts boundary was decided much later to be a continuation of the Connecticut line to the north, making the western limit of Massachusetts also 20 miles from the same river. . . . Meantime New Hampshire had never been brought into the controversy, because the lands to the westward of that province beyond Connecticut River had been neither settled nor surveyed. There was indeed a small settlement at Fort Dummer on the western margin of the River, which was under the protection of Massachusetts. . . . Such was the state of things when Benning Wentworth became governor of New Hampshire, with authority from the King to issue patents for unimproved lands within the limits of

retained till the opening of the revolution, when its present name of Vermont began to be adopted." —J. Sparks, *Life of Ethan Allen* (*Library of American Biography*, v. 1).—"Lieutenant Governor Colden, acting chief magistrate of New York in the absence of General Monckton, perceiving the necessity of asserting the claims of that province to the country westward of the Connecticut river, wrote an energetic letter to Governor Wentworth, protesting against his grants. He also sent a proclamation among the people, declaring the Connecticut river to be the boundary between New York and New Hampshire. But protests and proclamations were alike unheeded by the governor and the people until the year 1764, when the matter was laid before the King and council for adjudication. The decision was in favor of New York. Wentworth immediately bowed to supreme authority, and ceased issuing patents for lands westward of the Connecticut. The settlers, considering all

Site of the first settlement made in 1765

his province. Application was made for grants to the west of Connecticut River, and even beyond the Green Mountains, and in 1740 he gave a patent for a township 6 miles square, near the north west angle of Massachusetts, to be so laid out, that its western limit should be 20 miles from the Hudson, and coincide with the boundary line of Connecticut and Massachusetts continued northward. This township was called Bennington. Although the governor and council of New York remonstrated against this grant, and claimed for that colony the whole territory north of Massachusetts as far eastward as Connecticut River, yet Governor Wentworth was not deterred by this remonstrance from issuing other patents, urging in his justification, that New Hampshire had a right to the same extension westward as Massachusetts and Connecticut." After the British conquest of Canada, 1760, "applications for new patents thronged daily upon Governor Wentworth, and within four years' time the whole number of townships granted by him, to the westward of Connecticut River, was 138. The territory including these townships was known by the name of the New Hampshire Grants, which it

questions in dispute to be thus finally disposed of, were contented, and went on hopefully in the improvement of their lands. Among these settlers in the Bennington township were members of the Allen family, in Connecticut, two of whom, Ethan [sometimes called 'the Robin Hood of Vermont'] and Ira, were conspicuous in public affairs for many years. . . . The authorities of New York, not content with the award of territorial jurisdiction over the domain, proceeded, on the decision of able legal authority, to assert the right of property in the soil of that territory, and declared Wentworth's patents all void. They went further. Orders were issued for the survey and sale of farms in the possession of actual settlers, who had bought and paid for them, and, in many instances, had made great progress in improvements. In this, New York acted not only unjustly, but very unwisely. This oppression, for oppression it was, was a fatal mistake. It was like sowing dragons' teeth to see them produce a crop of full-armed men. The settlers were disposed to be quiet, loyal subjects of New York. They cared not who was their political master, so long as their private rights were re-

spected. But this act of injustice converted them into rebellious foes, determined and defiant. . . . Meanwhile speculators had been purchasing from New York large tracts of these estates in the disputed territory, and were making preparations to take possession. The people of the Grants sent one of their number to England, and laid their cause before the King and council. He came back in August, 1767, armed with an order for the Governor of New York to abstain from issuing any more patents for lands eastward of Lake Champlain. But as the order was not 'ex post facto' in its operations, the New York patentees proceeded to take possession of their purchased lands. This speedily brought on a crisis, and for seven years the New Hampshire Grants formed a theater where all the elements of civil war, except actual carnage, were in active exercise. . . . The hardy yeomanry who first appeared in arms for the defense of their territorial rights, and afterwards as patriots in the common cause when the Revolution broke out, were called Green Mountain Boys.—B. J. Lossing, *Life and times of Philip Schuyler*, v. 1, ch. 12.—The "Green Mountain Boys" were Connecticut Yankees transplanted. Vermont might well be considered the offspring of a single Connecticut county, for Ethan Allen and a good part of "his boys" were natives of Litchfield county.

1777-1778.—State independence declared and constitution framed.—Admission to Union denied.—Sources of first constitution.—"The settlers in the land which this year [1777] took the name of Vermont refused by a great majority to come under the jurisdiction of New York; on the 15th of January 1777, their convention declared the independence of their state. At Windsor, on the 2d of June, they appointed a committee to prepare a constitution; and they hoped to be received into the American union. But, as New York opposed, congress, by an uncertain majority against a determined minority, disclaimed the intention of recognising Vermont as a separate state. . . . On the 2d of July the convention of Vermont reassembled at Windsor. The organic law which they adopted, blending the culture of their age with the traditions of Protestantism, assumed that all men are born free and with inalienable rights; that they may emigrate from one state to another, or form a new state in vacant countries; that 'every sect should observe the Lord's day, and keep up some sort of religious worship'; that every man may choose that form of religious worship 'which shall seem to him most agreeable to the revealed will of God.' They provided for a school in each town, a grammar-school in each county, and a university in the state. All officers, alike executive and legislative, were to be chosen annually and by ballot; the freemen of every town and all one year's residents were electors. Every member of the house of representatives must declare his 'belief in one God; . . . in the divine inspiration of the scriptures; and in the Protestant religion.' The legislative power was vested in one general assembly, subject to no veto. . . . Slavery was forbidden and forever [the first prohibition of slavery made in the United States. (See U.S.A.: 1860: Slavery

concentrated in the South.)]; and there could be no imprisonment for debt. . . . After the loss of Ticonderoga, the introduction of the constitution was postponed [until March, 1778], lest the process of change should interfere with the public defence."—G. Bancroft, *History of the United States* (Author's last revision), v. 5, pp. 157, 161-162.—"The model for the constitution of 1777 was found in the Pennsylvania constitution, adopted in 1776, by a convention of which Benjamin Franklin was the President. This was recommended to the Vermont convention as a groundwork by Dr. Thomas Young of Philadelphia, who was an ardent friend of the new state [and who also suggested the name Vermont in a public letter, April 11, 1777]. Through the Pennsylvania constitution, parts of the constitution of Vermont find their origin in the earlier frames of government of the colony of Pennsylvania granted by William Penn, and even in the charter for Pennsylvania granted by King Charles the Second to William Penn."—S. W. Landon, *Brief outline of the history and civil government of Vermont*, p. 15.—"Among its provisions was that of providing a council of thirteen censors to be elected once in seven years, to determine whether the laws were duly executed, whether they were constitutional, and whether there were need of a revision of the Constitution. This section, Section XLV read as follows: 'In order that the freedom of this commonwealth may be preserved inviolate, forever, there shall be chosen, by ballot, by the Freemen of this State, on the last Wednesday in March, in the year one thousand seven hundred and eighty-five, and on the last Wednesday in March, in every seven years thereafter, thirteen persons, who shall be chosen in the same manner the Council is chosen—except they shall not be out of the Council or General Assembly—to be called the Council of Censors; who shall meet together on the first Wednesday of June next ensuing their election; the majority of whom shall be a quorum in every case, except as to calling a Convention, in which two-thirds of the whole number elected shall agree; and whose duty it shall be to enquire whether the Constitution has been preserved inviolate in every part; and whether the legislative and executive branches of government have performed their duty as guardians of the people; or assumed to themselves, or exercised, other or greater powers, than they are entitled by the Constitution. They are also to enquire whether the public taxes have been justly laid and collected, in all parts of this commonwealth—in what manner the public monies have been duly executed. For these purposes they shall have power to send for persons, papers, and records; they shall have authority to pass public censures—to order impeachments, and to recommend to the legislature the repealing such laws as appear to them to have been enacted contrary to the principles of the Constitution. These powers they shall continue, for and during the space of one year from the day of their election, and no longer. The said Council of Censors shall also have power to call a Convention, to meet within two years after their setting, if there appears to them an absolute necessity of amending any article of this Constitution not clearly expressed, and adding such as are necessary for the preservation of the rights and happiness of the people; but the articles to be amended, and the amendments proposed, and such articles as are proposed to be added or abolished, shall be promulgated at least six months before the day appointed for the election of such convention, for the previous consid-

eration of the people, that they may have an opportunity of instructing their delegates on the subject.'—L. H. Meader, *Council of Censors (Proceedings of Vermont Historical Society, Oct. 18-Nov. 2, 1808, pp. 111-113)*.

1777-1793.—Amendments to the constitution.—“The constitution adopted in 1777 was amended in 1786. In 1793 a convention met at Windsor to make further changes. After striking out the preamble and making various amendments, by the signature of the President and Secretary they certified the whole constitution as ‘adopted’ by them. This certified constitution, now in the Secretary of State’s office, has prefixed a title-page, with the following words: ‘The Constitution of Vermont, as adopted by the Convention, holden at Windsor, July fourth, one thousand seven hundred and ninety-three.’ Thirty-six amendments have since been made. The first twenty-six were adopted by conventions held for that purpose.”—S. W. Landon, *Brief outline of the history and civil government of Vermont, p. 15*.—The revision of 1786 struck out the requirement of Protestantism; the revision in 1793 released the members of Assembly from the necessity of any religious subscription.—Based on R. Hildreth, *History of the United States, v. 4, ch. 3*.

1781.—Negotiations with the British authorities as an independent state.—Vermont had repeatedly applied for admission into the Union; but the opposition of her neighbors, who claimed her territory, and the jealousy of the southern states, who objected to the admission of another northern state, prevented favorable action in Congress. In 1780 a fresh appeal was made with a declaration that if it failed the people of the Green mountains would propose to the other New England states and to New York “an alliance and confederation for mutual defense, independent of Congress and of the other states.” If neither Congress nor the northern states would listen to them, then, said the memorial, “they are, if necessitated to it, at liberty to offer or accept terms of cessation of hostilities with Great Britain without the approbation of any other man or body of men.” “The British generals in America had for some time entertained hopes of turning the disputes in relation to Vermont to their own account, by detaching that district from the American cause and making it a British province. But the first intimation of their views and wishes was communicated in a letter from Colonel Beverly Robinson to Ethan Allen; dated New York, March 30th, 1780. In July, this letter was delivered to Allen in the street in Arlington, by a British soldier in the habit of an American farmer. Allen perused the letter, and then told the bearer that he should consider, it and that he might return. . . . Allen immediately communicated the contents of this letter to Governor Chittenden and some other confidential friends, who agreed in opinion, that no answer should be returned. Robinson, not receiving a reply to his letter and supposing it to have been miscarried, wrote again to Allen on the 2d of February, 1781, enclosing his former letter. In his second letter, after saying he had received new assurances of the inclination of Vermont to join the king’s cause, he said that he could then write with more authority; and assured Allen that he

and the people of Vermont could obtain the most favorable terms, provided they would take a decisive and active part in favor of Great Britain. He requested an answer; and that the way might be pointed out for continuing the correspondence; and desired to be informed in what manner the people of Vermont could be most serviceable to the British cause. Allen returned no answer to either of these letters; but, on the 9th of March, 1781, inclosed them in a letter to Congress, informing them of all the circumstances which had thus far attended the business. He then proceeded to justify the conduct of Vermont in asserting her right to independence, and expressed his determinate resolution to do every thing in his power to establish it. . . . ‘I am confident,’ said he, ‘that Congress will not dispute my sincere attachment to the cause of my country, though I do not hesitate to say, I am fully grounded in opinion, that Vermont has an indubitable right to agree on terms of a cessation of hostilities with Great Britain, provided the United States persist in rejecting her application for an union with them.’ . . . During the spring of 1780, some of the scouting parties belonging to Vermont had been taken by the British and carried prisoners to Canada. On the application of their friends to Governor Chittenden, he, in the month of July, sent a flag with a letter to the commanding officer in Canada, requesting their release or exchange. In the fall, the British came up lake Champlain in great force, and a very favorable answer was returned by General Haldimand to Governor Chittenden’s letter. A flag was at the same time sent to Ethan Allen, then a brigadier general and commanding-officer in Vermont, proposing a cessation of hostilities with Vermont, during negotiations for the exchange of prisoners.”—Z. Thompson, *History of the state of Vermont, ch. 4, sect. 6*.—“The immediate results were a truce, which covered not only Vermont but the frontiers of New York to Hudson river; the disbanding of the militia of Vermont; and the retiring of the British troops to winter quarters in Canada. Until the truce became generally known, the results of it occasioned much surprise in New York. It was further agreed, that the commissioners of both parties should meet on the subject of the cartel, and go together to Canada. This was attempted, but failed on account of the difficulty of getting through the ice on Lake Champlain. After contending several days with the elements, the commissioners separated; but ‘while their men [wrote Ira Allen] were breaking through the ice, much political conversation and exhibits of papers took place.’ William [‘Hist. of Vermont’] is more definite: ‘the British agents availed themselves of this opportunity to explain their views, to make their proposals, and offer as complete an establishment for Vermont, from the royal authority, as should be desired. The commissioners from Vermont treated the proposals with affability and good humor, and though they avoided bringing anything to a decision, the British concluded they were in a fair way to effect their purposes.’ The subsequent negotiations at Isle aux Noix, between Ira Allen and the British commissioners, as to matters beyond settling a cartel, were secret, and even the commander of the post had no knowledge of them, although he was associated with the British commissioners on the question of an exchange of prisoners. These facts show that the public had no knowledge except of a truce for a humane and proper attempt to relieve citizens of Vermont, and its officers and soldiers, who were

then prisoners in Canada; and the conclusion is that all the suspicion that then existed of the patriotism and fidelity of the great body of the people of the state, and all the obloquy since drawn from the negotiation with Haldimand and cast upon the state, were entirely unjust. If any body was really at fault, the number implicated was very small. Williams asserted that 'eight persons only in Vermont, were in the secret of this correspondence;' and Ira Allen that, in May, 1781, 'only eight persons were in the secret, but more were added as the circumstances required.'—*Vermont Historical Society Collections, v. 2, introduction*.—"By the definitive treaty between Great Britain and the United States, Sept. 3, 1783, Vermont was included within the boundaries separating the independent American from British territory, and thus the independence of Vermont was acknowledged first by the mother country. The State had been de facto independent from its organization; and therefore the following record, with the other papers contained in this and the first volume of the Historical Society Collections covers the existence of Vermont as an independent and sovereign state."—*Ibid., p. 397*.

1787-1864.—Suffrage qualifications. See SURFRAGE, MANHOOD: United States: 1787-1800; 1800-1864.

1790-1791.—Renunciation of the claims of New York.—Admission to the Union.—"The rapid increase of the population of Vermont having destroyed all hope on the part of New York of re-establishing her jurisdiction over that rebellious district, the holders of the New York grants, seeing no better prospect before them, were ready to accept such an indemnity as might be obtained by negotiation. Political considerations had also operated. The vote of Vermont might aid to establish the seat of the federal government at New York. At all events, that state would serve as a counterbalance to Kentucky, the speedy admission of which was foreseen. The Assembly of New York [July, 1789] had appointed commissioners with full powers to acknowledge the independence of Vermont, and to arrange a settlement of all matters in controversy. To this appointment Vermont had responded, and terms had been soon arranged. In consideration of the sum of \$30,000, as an indemnity to the New York grantees, New York renounced all claim of jurisdiction [October 7, 1790], consented to the admission of Vermont into the Union, and agreed to the boundary heretofore claimed—the western line of the westernmost townships granted by New Hampshire and the middle channel of Lake Champlain. This arrangement was immediately ratified by the Legislature of Vermont. A Convention, which met at the beginning of the year [1791], had voted unanimously to ratify the Federal Constitution, and to ask admission into the Union. Commissioners were soon after appointed by the Assembly to wait upon Congress and to negotiate the admission. No opposition was made to it, and [Feb. 18, 1791] within fourteen days after passage of the bill for the prospective admission of Kentucky, Vermont was received into the Union, from and after the termination of the present session of Congress."—R. Hildreth, *History of the United States, v. 4, ch. 3*.

1791-1812.—Legislative sessions.—Montpelier

made state capital.—"During the thirteen years [1777-1791] of the separate independence of Vermont, her legislature met twenty-eight times, and in one year, 1781, there were four sessions. From 1788, one session a year was the rule until 1870; since that time one session in two years has been the rule. Previous to 1791 the legislature had met in eight Vermont towns and in Charleston, N. H., and previous to 1808 it had met in fourteen Vermont towns. Fourteen sessions were held in Windsor, eight in Bennington, seven in Rutland. Montpelier, which became the permanent capital of the State in 1808, by act of Legislature of 1805, was the sixteenth town and the fifteenth Vermont town in which the legislature met. . . . In 1792, 1796 and 1800, the legislature chose four presidential electors, in 1804 and 1808 six, and in 1812 eight. In January 1804, an adjourned session of the legislature was held at Windsor to act on the twelfth amendment to the Constitution of the United States, which was adopted on the part of Vermont. In 1805 an act of the legislature provided that on certain conditions Montpelier should become 'the permanent seat of the legislature.' The conditions were complied with and Montpelier became the capital of the State in 1808. In 1806, after refusing to authorize private banks, the legislature enacted a law establishing a State bank with branches at Woodstock and at Middlebury. Later, branches were established at Burlington and at Westminster. The State did not succeed in banking, and in 1811 the process of closing the business had already begun. . . . In 1807 the legislature provided for the erection of a state prison, which was located at Windsor and was in use within two years. In consequence of building the state prison, imprisonment largely took the place of such punishment as cutting off the ears, branding, whipping, putting in the stocks or pillory."—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont, pp. 209-210, 232-233*.

1791-1914.—Lack of systematic plan in development of state administration of schools.—Evolution of the common school system.—Establishment of colleges.—From the first there was an active interest in common school education in Vermont, and as early as 1777 provision was made for the support of common schools by the towns throughout the state. "The statutes of this state have had provisions more or less looking toward secondary school instruction, since 1841, a law being passed that year for the associating together of two or more contiguous school districts to form a union district for the purpose of maintaining a union school to be kept for the benefit of the older children of such districts." This was followed by acts in 1844, 1867, 1898, and 1904 expanding this provision to accord with the development of the idea of high school education. "A study of the chief historical stages in the educational evolution of the state for the past one hundred years furnishes justification for the statement that Vermont has never completely assumed a definite constructive responsibility for the progressive development of the public school system; has never clearly regarded this system as an institution and instrumentality of the commonwealth. This may be accounted for as a natural result of a combination of influences. Among these are the sturdiness and independence of local communities under the characteristic New England scheme of government, the comparative isolation of the several principal geographic sections of the state from one another, and the absence of any dominating city centres of population. This

absence of positive state policy explains in large measure the lack of a proper state machinery for the administration, supervision, and inspection of the common schools and other public educational institutions. The establishment of the first State Board of Commissioners for Common Schools in 1827 and its abolition in 1833; the creation of the office of State Superintendent of Common Schools in 1845; the refusal of the General Assembly to appoint a State Superintendent in 1851, and the resulting absence of any state supervision for the following five years; the creation of a State Board of Education in 1856, which continued till 1874, when the office of Superintendent was re-established; the creation of another State Board of Education in 1908 as the successor to the Board of Normal School Commissioners created in 1898; and the passage by the legislature of 1912-13 of the act creating the present State Board of Education with its partial and ambiguous authority over the several parts of the educational system,—made clear the lack of a well-planned, continuous educational policy.”—*Vermont Educational Commission Report*, 1914, p. 148.—“Until 1864 a portion of the expense of the schools might be, and in many districts was, laid on the pupils attending the schools. Since that time the public schools have been supported wholly on the grand list or from the income of public funds. The graded school for the villages, with a high school for one of its departments, became an essential part of our school system during the period of Mr. Adams’ service, and normal schools were established for the training of teachers. . . . In 1894 free text books were voted by the General Assembly. In 1906 free high school privileges were extended to all pupils qualified to receive such, and a union supervision system by the combination of towns was established. In 1908 manual training was encouraged by State aid, and in 1912 the same encouragement was extended to the teaching of agriculture and to domestic science. In 1910, teacher training courses were established for the purpose of providing teachers for the rural schools. In 1912 a commission was created to investigate the education conditions of the State with Justice J. H. Watson as chairman. This commission committed the investigation to the Carnegie Foundation, whose findings were communicated to the people of the State by newspaper supplements, the first appearing December 27, 1913.”—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, p. 293.—“The University of Vermont was chartered in 1791, Middlebury College in 1800, and Norwich University in 1834. . . . By an act of November 6, 1865, the University of Vermont, as created by an act of November 3, 1791, was, with its consent, merged in a new corporation entitled ‘The University of Vermont and State Agricultural College,’ to which new corporation was transferred all the property of the former University of Vermont, and to which was granted the income accruing from the proceeds of the sale of the land granted to the state of Vermont by the government of the United States under the Act of July 2, 1862. . . . The legal relations of the three colleges to the state of Vermont makes clear the fact that none of them is a state institution in the strict and complete or even the ordinary use of the term. Each is practically governed by its own board, and such measure of state control as has been given by amendments of the original charter or by new acts has looked in the direction of establishing just enough control to justify appropriations.”—*Vermont Educational Commission Report*, 1914, pp. 154-157.

1812-1814.—Part played in the War of 1812.—Legislation.—“The War of 1812 was unpopular in Vermont. . . . In spite of the feeling, however, . . . volunteers sprang to arms and rushed to the front. The government records show that only the more populous states of Massachusetts, New York, Pennsylvania, and Virginia furnished more men for the regular army than this sparsely settled commonwealth.”—S. W. Landon, *Brief outline of the history and civil government of Vermont*, p. 10.—“When the legislature met in October [1812] laws were passed forbidding intercourse with Canada, exempting the persons and property of the militia in actual service from attachment, and laying a tax of one cent an acre on the lands of the State for military purposes. These measures were thought by many to be oppressive; and the Federal party, which opposed the war, gained in strength so that in 1813 and 1814 a Federalist governor, Martin Chittenden, a son of Thomas Chittenden, was chosen by the Legislature, as there had been no election by the people. The obnoxious laws of 1812 were repealed.”—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, p. 246.

1812-1850.—Amendments to the constitution.—Anti-slavery party.—Attitude of state towards fugitive slaves.—First railroad charter.—“Originally the legislative power of the State of Vermont was ‘vested in a house of representatives,’ and the executive power was ‘vested in a governor, or, in his absence, a lieutenant-governor, and council,’ consisting of twelve councilors chosen annually by the freemen of the State. In 1836, the constitution was so amended as to abolish the executive council and to establish a senate consisting of thirty senators, apportioned to the counties according to their population and to be elected annually by the freemen of the counties. This change was effected by the adoption of articles two to thirteen of the Amendments to the Constitution. . . . By the apportionments made in consequence of the censuses of 1820 and 1830, Vermont had five representatives in Congress; and by the apportionment next following the census of 1840, she had four representatives. From 1812 to 1818, inclusive, and in 1822, representatives to Congress were elected on a general ticket as presidential electors now are. Presidential electors were chosen by the legislature until 1828, when the method of election by the freemen on a general ticket was introduced. . . . In 1820, the representatives in Congress from this State opposed the admission of Missouri as a slave State. . . . In 1825, the legislature resolved ‘that slavery is an evil to be deprecated by a free and enlightened people, and that this general assembly will accord in any measures which may be adopted by the general government for its abolition in the United States, that are consistent with the rights of the people and the general harmony of the States.’ In 1835, petitions were presented to the legislature praying for action in favor of the abolition of slavery in the District of Columbia. . . . The next legislature declared by resolution, ‘that neither Congress nor the State governments have any constitutional rights to abridge the free expression of opinions, or the transmission of them through the public mail; and that Congress does possess the power to abolish slavery and the slave trade in the District of Columbia.’ So far the opponents of slavery had not formed a political party in Vermont, but in 1841 the anti-slavery men nominated a governor and secured votes enough to prevent a majority. From this time the anti-slavery party continued, under different

names, until slavery disappeared. . . . In 1843 . . . 'no sheriff, deputy sheriff, high bailiff, constable, jailer or other officer or citizen of this State, shall hereafter seize, arrest or detain, or aid in the seizure, arrest or detention or imprisonment in any jail or other building, belonging to this State, or to any county, town, city or person therein, of any person for the reason that he is, or may be, claimed as a fugitive slave.' . . . In the summer of 1850, after a long and heated discussion in Congress, a new fugitive slave law was passed, providing for the arrest of runaways by United States officers, and denying to the runaways the right to testify when claimed as slaves. The Vermont legislature, in the autumn of the same year, responded with the following enactment: 'It shall be the duty of State's attorneys, within their respective counties, whenever any inhabitant of this State is arrested or claimed as a fugitive slave, on being informed thereof, diligently and faithfully to use all lawful means to protect, defend and procure to be discharged, every such person so arrested or claimed as a fugitive slave.' . . . Before 1840 Boston had become a railroad center, and the Vermont legislature had granted a charter for a railroad from Lake Champlain to the Connecticut River. Under this first charter nothing was accomplished, but another charter was granted in 1843. Ground was first broken for the road at Windsor in 1845; the first rail was laid at White River Junction in 1847; the first passenger train in Vermont ran over this road from White River Junction to Bethel, June 26, 1848. The Vermont Central and the Rutland and Burlington railroads were opened to Burlington in 1849; and within three years from this time railroads were opened from White River Junction to St. Johnsbury, from Essex Junction to Rouses Point, and from Rutland to Bennington, to Whitehall, and Troy, N. Y."—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, pp. 243-244, 259-260, 260.

1814.—Represented at Hartford Convention. See U. S. A.: 1814 (December): Hartford Convention.

1852.—Adoption of prohibition amendment.—Vermont was one of the first states to adopt state prohibition. The amendment forbidding the sale of liquor was added to the constitution in 1852, following the example set by Maine in 1846. Massachusetts and Rhode Island, which passed similar legislation in the same year, later repealed it. But Vermont stood firm, and remained a pioneer example of prohibition when the movement, which had started in New England, shifted to the south and west.

1861-1864.—Part played in the Civil War.—"Vermont's part in the Civil War is one of the proudest chapters in her history. The whole number of men in the state subject to military duty was 60,719. She sent to the war 34,238, over five hundred more than her quota. Of this number, over five thousand lost their lives. A larger proportion of the soldiers from Vermont were killed or mortally wounded in battle than of those from any other northern state. Vermont furnished for the defence of the Union seventeen regiments of infantry, one of cavalry, three light batteries, and three companies of sharpshooters."—S. W. Landon, *Brief outline of the history and civil government of Vermont*, pp. 10-11.

1864.—St. Albans raid. See U. S. A.: 1864 (October): St. ALBANS RAID; MONTREAL: 1860-1901.

1870-1913.—Amendments to the constitution.—"In 1870 the constitution of the State was so

amended as to provide for biennial sessions of the legislature in place of annual sessions, and for biennial instead of annual elections of State and county officers. In 1880-83, a further amendment of the constitution was made, adding the secretary of State and the auditor of accounts to the list of officers to be chosen by the freemen of the State. By legislative enactments of 1880, women are empowered to vote in town meetings for school officers, and to hold school offices and the office of town clerk. The legislative provision (1824) for the choice of presidential electors by the freemen, and the constitutional amendments requiring the election of county officers (1850) by the freemen and increasing the number of State officers (1883) to be chosen by the freemen, are worthy of notice as extensions of the direct power of the people. In accordance with a resolution passed by the general assembly of 1908, a commission consisting of five members was appointed to prepare and present to the general assembly of 1910 proposals of amendments to the constitution. Fifteen proposals were presented, three of which, relating respectively to proposal of amendments at any session of the general assembly, decennial elections and woman suffrage, were rejected. The general assembly of 1912 refused to concur in and to ratify the amendments relating to eligibility of senators and representatives to any office created during, emoluments increased by or election vested in the general assembly; to changing the words 'uses' and 'use' in article I of chapter I, to 'benefits' and 'benefit'; to adding the words or 'benefits' after the words 'public uses' in article 9 of chapter I, and to enabling the senate to propose amendments at every sixth session. The amendments passed by the general assembly of 1910, concurred in by the general assembly of 1912 and ratified by the people March 4, 1913, related to approving, signing and vetoing bills by the governor; to time of biennial elections and sessions; to printing of the legislative journals and the calling of the yeas and nays; to the powers of the general assembly and the governor in regard to commutation, remission or mitigation of sentences; to the granting, extending or amending of charters; to change the words 'judge' and 'judges' when referring to the supreme court, to 'justice' and 'justices'; to power of the general assembly to pass laws compelling compensations for injuries; and to the revision and rewriting of chapter II by the supreme court in order to make it consistent with other sections of the Constitution."—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, pp. 290-291.

1898.—Part played by the state in the Spanish-American War.—"Senator [Redfield] Proctor [of Vermont] . . . went to Cuba and investigated . . . the conditions in that island in the last days of Spanish rule. Upon his return to Washington, . . . in the course of the current business of the senate, he told what he saw. . . . 'Impartial history has recorded the fact,' says Senator Clay, 'that Senator Proctor did more than any other public man to arouse public sentiment against Spanish rule in Cuba and in favor of Cuban independence and self government.' . . . He secured the assignment of Admiral Dewey to the Asiatic Fleet shortly before the Spanish War and thus gave a Vermonter an opportunity to make the splendid record he did at Manila Bay."—F. C. Partridge, *Redfield Proctor*, pp. 90-93.—"Not many Vermonters were engaged in conflict with the Spanish on land. The first regiment of Vermont volunteers, consisting of fifty officers and nine hundred eighty men, was

mustered into the United States service, but was retained in camp at Chickamauga Park, Ga., where, with a large part of the Volunteer Army gathered there, it experienced severe suffering and loss from disease and death."—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, pp. 286-287.—"To Commodore Dewey was due the credit of the victory of Manila Bay; to Captain Clark [of Vermont] of the Oregon was due the credit of taking that wonderful mechanism, a modern war-ship, on a voyage of more than half the circumference of the globe, from the coast of California around Cape Horn, to join the Atlantic squadron, a feat which was accomplished in a little more than two months without a rivet or a bolt of a gearing broken or out of place."—E. D. Collins, *History of Vermont*, p. 270.

1906-1915.—Revised school code.—Huntington fund.—School supervision.—Educational commission created.—"The general assembly of 1915 thoroughly revised the school code and incorporated nearly all the constructive features recommended by the commission. In its revision it provided for the appointment of the commissioner of education, state supervisors and inspectors, and the superintendents of groups of towns by the state board of education, to which were committee extensive powers and duties relating to courses of study, teacher-training courses, transportation, certification of teachers, and high school and vocational education. . . . The Huntington fund, which became available in 1886, was a gift to the State of Vermont by Arunah Huntington, a native of Vermont, who had acquired wealth in Brantford, Canada. The amount of this fund was \$211,131.46, the interest of which was divided equally among the towns in proportion to their population. In 1906 this fund was merged into the permanent school fund of the State. . . . A few facts indicate the tendency of recent educational movements in this State. The most significant are the support of the public schools entirely at the public expense, the multiplication of free high schools, the effort to improve all common schools by the better preparation of teachers, the opening of the colleges to women, the establishment of scientific courses of study in the colleges, the endowment of academies, and the institution of public libraries. . . . In 1906 provision was made for the professional supervision of schools by the combination of towns into unions, and generous financial aid was provided therefor; free advanced instruction was accorded all qualified students; a permanent school fund, consisting of the War Claims Fund, the Huntington Fund and the United States Deposit Money, was established; State aid was granted for the transportation of pupils and in encouragement of the centralization of schools; elementary and high schools were legally defined; and the school code was thoroughly revised. In 1912 means for developing rural communities was granted. But by far the most important educational act in recent years was the creation of an educational commission to investigate school conditions. In accordance with recommendations of this commission the general assembly of 1915 provided a minimum wage for teaching, for increased wages of trained teachers in rural schools, and for vocational education in junior and senior high schools, and made appropriations for the entire maintenance by the State of teacher-training courses, for the payment of transportation for all children living a mile and one-half or more from school, and for the payment of all supervision of schools in groups of two or more towns. By

these acts the rural school and country conditions were greatly benefited."—E. Conant, M. S. Stone, *Text book of the geography, history, constitution and civil government of Vermont*, pp. 293-295, 303-305.

1910-1923.—Legislation.—Part played in World War.—Graham embezzlement.—Governors.—In 1915, a workman's compensation law was enacted; and a bill for the adoption of the direct primary system to take effect in 1916; also a bill providing for the substitution of statewide prohibition for the local option, high-license law passed in 1902. The new law was to take effect, 1917, if the voters in referendum gave a majority vote in its favor, if disapproved it was nevertheless to take effect May 1, 1927, even if subsequent legislatures failed to keep the implied faith. At the town meetings held throughout the state in March, 1916, the majority

MONUMENT COMMEMORATING STARK'S
VICTORY AT BENNINGTON,
AUGUST, 16, 1777

Dedicated, Aug. 19, 1891

vote failed to register its approval. In 1917, an accounting system in the administration of the state business was created. A state Board of Control was established, composed of the governor, State treasurer, auditor of accounts, director of state institutions and a fifth person to be appointed biennially by the governor and senate. During the World War the state furnished 9,338 men or .25 per cent of the Expeditionary Forces. On Aug. 11, 1918 a shortage of \$20,000 in the accounts of Horace F. Graham with the state of Vermont when state auditor was discovered in the books which Graham turned over to his successor Benjamin Gates when the former took the governor's chair (1917). The shortage was discovered by bank examiner Frank C. Williams. The Graham contention was that this money was used for legitimate state work, but as a result of the disclosure about \$9,000 was paid the state treasurer to cover a part of the deficiency. Graham was found guilty in the county court on Feb. 5, 1920, but sentence was not

pronounced at that time, the case going to a higher court on petition for a new trial based on exceptions. He was sentenced in the supreme court, Nov. 4, 1920, for five to eight years imprisonment for embezzlement. In the afternoon of the same day Percival W. Clement (governor) granted a full and unconditional pardon.—Based on *New York Times*, Aug. 12, 1918, p. 4; Jan. 27, 1920, p. 12; Nov. 5, 1920, p. 13.—In 1919 laws were passed to legalize absent voting, and the State Board of Health authorized to divide the state into ten sanitary districts. The recent governors of the state have been John A. Mead, 1910-1912; Allen M. Fletcher, 1912-1915; Charles W. Gates, 1915-1917; Horace F. Graham, 1917-1919; Percival W. Clement, 1919-1921; James A. Hartness, 1921-1923.

493-525.—Residence of Theodoric the Ostrogoth.—"Pavia and Verona [as well as his ordinary capital city, Ravenna (see RAVENNA: 493-525)] were also places honoured with the occasional residence of Theodoric. At both he built a palace and public baths. . . . At Verona, the palace, of which there were still some noble remains incorporated into the castle of the Viscontis, was blown up by the French in 1801, and an absolutely modern building stands upon its site. . . . It seems probable that Theodoric's residence at both these places depended on the state of Transalpine politics. When the tribes of the middle Danube were moving suspiciously to and fro, and the vulnerable point by the Brenner Pass needed to be especially guarded, he fixed his quarters at Verona. When Gaul menaced greater danger, then he removed to Ticinum [Pavia]. It was apparently the fact that Verona was his coign of vantage, from whence he watched the German barbarians, which obtained for him from their minstrels the title of Dietrich of Bern. Thus strangely travestied, he was swept within the wide current of the legends relating to Attila, and hence it is that the really grandest figure in the

history of the migration of the peoples appears in the Nibelungen Lied, not as a great king and conqueror on his own account, but only as a faithful squire of the terrible Hunnish king whose empire had in fact crumbled into dust before the birth of Theodoric."—T. Hodgkin, *Italy and her invaders*, v. 3, bk. 4, ch. 8.

11th-12th centuries.—Acquisition of republican independence. See ITALY: 1056-1152.

1236-1259.—Tyranny of Eccelino di Romano and the crusade against him.—"In the north-eastern corner of Italy the influence of the old Lombard lords, which had been extinguished there as in most other parts of the peninsula, was succeeded by that of a family that had accompanied one of the emperors from Germany. . . . The eye of a traveller passing from Verona to Padua may still be struck by one or two isolated hills, which seem as if they were designed by nature to be meet residences for the tyrants of the surrounding plains. One of these gave birth to a person destined to become the scourge of the neighbouring country. . . . Eccelino di Romano . . . was descended from a German noble brought into Italy by Otho III. The office of Podesta of Verona had become hereditary in his family. In the wars of the second Frederic [1236-1250], he put himself at the head of the Ghibellines in the surrounding principalities, and became a strenuous supporter of the emperor. Under the protection of so powerful an ally, he soon made himself master of Padua, where he established his headquarters, and built the dungeons, where the most revolting cruelties were inflicted on his victims."—W. P. Urquhart, *Life and times of Francesco Sforza*, v. 1, bk. 1, ch. 3.—In 1237, the emperor, Frederick II, "obliged to return to Germany, left under the command of Eccelino a body of German soldiers, and another of Saracens, with which this able captain made himself, the same year, master of Vicenza, which he barbarously pillaged, and the following year of Padua. . . . Eccelino judged it necessary to secure obedience, by taking hostages from the richest and most powerful families; he employed his spies to discover the malcontents, whom he punished with torture, and redoubled his cruelty in proportion to the hatred which he excited." Subsequently, the emperor confided "the exclusive government of the Veronese marches [also called the Trevisan marches] to Eccelino. The hatred which this ferocious man excited by his crimes fell on the emperor. Eccelino imprisoned in the most loathsome dungeons those whom he considered his enemies, and frequently put them to death by torture, or suffered them to perish by hunger. . . . In the single town of Padua there were eight prisons always full, notwithstanding the incessant toil of the executioner to empty them; two of these contained each 300 prisoners. A brother of Eccelino, named Alberic, governed Treviso with less ferocity, but with a power not less absolute." Eccelino maintained the power which he had gathered into his hands for several years after Frederick's death. At length, the pope, "Alexander IV., to destroy the monster that held in terror the Trevisan march, caused a crusade to be preached in that country. He promised those who combated the ferocious Eccelino all the indulgences usually reserved for the deliverers of the Holy Land. The marquis d'Este, the count di San Bonifazio, with the cities of Ferrara, Mantua, and Bologna, assembled their troops under the standard of the church; they were joined by a horde of ignorant fanatics from the lowest class." Headed by the legate Philip, archbishop of Ravenna, the crusaders took Padua, June

18, 1256, and "for seven days the city was inhumanly pillaged by those whom it had received as deliverers. As soon as Eccelino was informed of the loss he had sustained, he hastened to separate and disarm the 11,000 Paduans belonging to his army; he confined them in prisons, where all, with the exception of 200, met a violent or lingering death. During the two following years, the Guelphs experienced nothing but disasters: the legate, whom the pope had placed at their head, proved incompetent to command them; and the crowd of crusaders whom he called to his ranks served only to compromise them, by want of courage and discipline. . . . The following year, this tyrant, unequalled in Italy for bravery and military talent, . . . advanced into the centre of Lombardy, in the hope that the nobles of Milan, with whom he had already opened a correspondence, would surrender this great city." But, by this time, even his old Ghibelline associates had formed alliances with the Guelphs against him, and he was beset on all sides. "On the 16th of September, 1259, whilst he was preparing to retire, he found himself stopped at the bridge of Cassano. . . . Repulsed, pursued as far as Vimercato, and at last wounded in the foot, he was made prisoner and taken to Soncino: there, he refused to speak; rejected all the aid of medicine; tore off all the bandages from his wounds, and finally expired, on the eleventh day of his captivity. His brother with all his family were massacred in the following year."—J. C. L. de Sismondi, *History of the Italian republics*, ch. 3-4.

1260-1338.—Rise of the House of the Scaligeri.—Successes of Can' Grande della Scala.—Wars and reverses of Mastino.—After the death of Eccelino, Verona, by its own choice came under the government of the first Mastino della Scala, who established the power of a house which became famous in Italian history. Mastino's grandson, Cane, or Can' Grande della Scala, "reigned in that city from 1312 to 1329, with a splendor which no other prince in Italy equalled. . . . Among the Lombard princes he was the first protector of literature and the arts. The best poets, painters, and sculptors of Italy, Dante, to whom he offered an asylum, as well as Ugucione da Faggiuola, and many other exiles illustrious in war or politics, were assembled at his court. He aspired to subdue the Veronese and Trevisan marches, or what has since been called the Terra Firma of Venice. He took possession of Vicenza; and afterwards maintained a long war against the republic of Padua, the most powerful in the district, and that which had shown the most attachment to the Guelph party and to liberty." In 1328, Padua submitted to him; and "the year following he attacked and took Treviso, which surrendered on the 6th of July, 1329. He possessed himself of Feltre and Cividale soon after. The whole province seemed subjugated to his power; but the conqueror also was subdued. [He died on the 22nd of the same month in which Treviso was taken.]"—J. C. L. de Sismondi, *History of the Italian republics*, ch. 6.—Can' Grande was succeeded by his nephew, the second Mastino della Scala, who, in the next six years, "extended his states from the northeastern frontiers of Italy to the confines of Tuscany; and the possession of the strong city of Lucca now gave him a secure footing in this province. He shortly made it appear to what purpose he meant to apply this new advantage. Under the plea of re-establishing the Ghibelin interests, but in reality

to forward his own schemes of dominion, he began to fill all Tuscany with his machinations. Florence was neither slow to discover her danger, nor to resent the treachery of her faithless ally,"—which Mastino had recently been. Florence, accordingly, formed an alliance with Venice, which Mastino had rashly offended by restricting the manufacture of salt on the Trevisan coast, and by laying heavy duties on the navigation of the Po. Florence agreed "to resign to Venice the sole possession of such conquests as might be made in that quarter; only reserving for herself the acquisition of Lucca, which she was to obtain by attacking Mastino in Tuscany, entirely with her own resources. Upon these terms an alliance was signed between the two republics, and the lord of Verona had soon abundant reason to repent of the pride and treachery by which he had provoked their formidable union (A. D. 1336). . . . During three campaigns he was unable to oppose the league in the field, and was compelled to witness the successive loss of many of his principal cities (A. D. 1337). His brother Albert was surprised and made prisoner in Padua, by the treachery of the family of Carrara, who acquired the sovereignty of that city; Feltro was captured by the Duke of Carinthia, Brescia revolted, and fell with other places to Azzo Visconti. . . . In this hopeless condition Mastino artfully addressed himself to the Venetians, and, by satisfying all their demands, detached them from the general interests of the coalition (A. D. 1338). By a separate treaty which their republic concluded with him, and which was then only communicated to the Florentines for their acceptance, Mastino ceded to Venice Treviso, with other fortresses and possessions, and the right of free navigation on the Po; he agreed at the same time to yield Bassano and an extension of territory to the new lord of Padua, and to confirm the sovereignty of Brescia to Azzo Visconti; but for the Florentine republic no farther advantage was stipulated than the enjoyment of a few castles which they had already conquered in Tuscany."—G. Procter, *History of Italy*, ch. 4, pt. 3.

VERONA, Congress of (after Troppau and Laibach).—"The rapid spread of revolution in Europe inspired serious misgivings among the great powers, and impelled the Holy Alliance [see HOLY ALLIANCE] to show its true colours. Austria was especially alarmed by the movement in Naples [see ITALY: 1820-1821], which threatened to overthrow its power in Italy, and Metternich convoked a congress at Troppau, in Upper Silesia (Oct., 1820), at which Austria, Russia, Prussia, France and England were represented. Neapolitan affairs were the chief subject of discussion, and it was soon evident that Austria, Russia and Prussia were agreed as to the necessity of armed intervention. England made a formal protest against such high-handed treatment of a peaceful country; but as the protest was not supported by France, and England was not prepared to go to war for Naples, it was dis-

regarded. The three allied powers decided to transfer the congress to Laybach [Laibach] and to invite Ferdinand I. to attend in person. [The result of the conference at Laibach was a movement of 60,000 Austrian troops into Naples and Sicily, in March, 1821, and a restoration of Ferdinand, who made a merciless use of his opportunity for revenge.]—R. Lodge, *History of modern Europe*, ch. 25, sect. 8.—From Laibach, the allied sovereigns issued a circular to their representatives at the various foreign courts, in which portentous document they declared that “useful and necessary changes in legislation and in the administration of states could only emanate from the free will, and from the intelligent and well-weighed convictions, of those whom God has made responsible for power. Penetrated with this eternal truth, the sovereigns have not hesitated to proclaim it with frankness and vigour. They have declared that, in respecting the rights and independence of legitimate power, they regarded as legally null, and disavowed by the principles which constituted the public right of Europe, all pretended reforms operated by revolt and open hostilities.” “These principles, stated nakedly and without shame, were too much even for Lord Castlereagh. In a despatch, written early in the year 1821, while admitting the right of a state to interfere in the internal affairs of another state when its own interests were endangered, he protested against the pretension to put down revolutionary movements apart from their immediate bearing on the security of the state so intervening, and denied that merely possible revolutionary movements can properly be made the basis of a hostile alliance. The principles of the Holy Alliance were not intended to remain a dead letter; they were promptly acted upon. Popular movements were suppressed in Naples and Piedmont; and intervention in Spain, where the Cortes had been summoned and the despotic rule of Ferdinand VII had been overthrown, was in contemplation. Greece imitated the example set in the western peninsulas of Europe. The Congress of Verona was summoned, and Lord Castlereagh (now the Marquis of Londonderry) was preparing to join it, when in an access of despondency, the origin of which is variously explained, he took his own life. [He was succeeded in the British Ministry by George Canning.]—F. H. Hill, *George Canning*, ch. 20.—“The first business which presented itself to Mr. Canning was to devise a system by which the Holy Alliance could be gradually dissolved, and England rescued from the consequences of her undefined relations with its members. The adjourned Congress was on the point of assembling at Verona, and as it was necessary to send a representative in place of Lord Castlereagh, who seems to have been terrified at the prospect that lay before him, the Duke of Wellington was selected.”—R. Bell, *Life of Canning*, ch. 13.—“Canning instructed Wellington to press Metternich for the speedy evacuation of Piedmont by the Austrian troops. He defined the attitude of England towards Italy as one of ‘neutrality but not indifference.’ . . . Besides Italy, the subjects discussed at Verona were four, the question of Spain, and the question of her revolted colonies, the slave trade, and the relations between Greece, Turkey and Russia. But the first of all—the question of Old Spain—became . . . infinitely the most important at Verona. . . . The main object of the Conference had been avowed as the Turkish question. But Wellington . . . heard enough to convince him that France seriously thought of invading Spain, or pressing armed interference on the Congress. He at once wrote off for

additional instructions, to which Canning replied on Sept. 27 as follows: . . . ‘If there should be a determined project of interference by force or by menace in the present struggle in Spain, so convinced are His Majesty’s Government of the uselessness and danger of any such interference, so objectionable does it appear to them in principle, and so utterly impracticable in execution that, should the necessity arise, or (I would rather say) if the opportunity should offer, I am to instruct your Grace at once frankly and peremptorily to declare that to any such interference, come what may, His Majesty will never be a party.’ There was certainly no lack of boldness and vigor in these instructions, which threatened in diplomatic terms that England would rather dissolve the Alliance, formed in 1815 against Jacobinism in France, altogether than consent to interference in Spain. The objects of the different Powers were these, Canning wished to dissolve the system of Government by Congress, to confine within due bounds ‘that predominating areopagitical spirit,’ in which the Holy Alliance took upon themselves the Government of the world. Alexander viewed Spain as the headquarters of Revolution and Jacobinism, and sought to win fame for himself by destroying the Spanish constitution with the aid of his Russian troops, whose attention he wishes to distract. . . . The one desire of France, who had counted for nothing at Troppau and Laybach, was to win renown by her actions at Verona. For that purpose she was prepared for intervention in Spain, but . . . her ideas on the form of that intervention varied at different times during the Conference. Prussia was as always at this time, the humble slave of Metternich. . . . Wellington used all his powers of persuasion to convince Alexander of the difficulty of the task he contemplated. He declared it to be incompatible with the principles England believed should be adopted by all countries, irrespective of their political systems. . . . Metternich feared Alexander would take the opportunity of first conquering Spain and then uniting it in a strict alliance with Russia, and so would upset the balance of power. Louis XVIII and Villele [premier of France] were unwilling that Alexander should lead his army through French territory, but were anxious to secure his assistance in case of their own failure. The French envoy Montmorency therefore asked if the Powers would give France their moral and material support in case of war, and if they would join her in withdrawing their ambassadors. Wellington declared England would consider no conditional hypotheses of this type. Alexander, seeing the difficulties of his own project, declared he accepted the French plan to the full. Metternich now intervened with a proposal to specify the exact cases in which the Powers would interfere. The proposal was embodied in a procès verbale, specifying the cases which would produce joint interference;— first, an open attack by the Spanish Government on France; second, dethronement of the king, his trial or similar attempts on him, and his family; last, a formal act attacking the legitimate succession of the royal family. Also the ambassadors were to present a formal demand for a change in the Constitution of 1812, to be made in notes presented to the Spanish Government. They were to demand their passports in case of refusal. Recollections of Castlereagh, as well as the well-known solicitude of England for the safety of the royal family of Spain, seem to have induced the Holy Alliance to hope for the concurrence of Wellington. Metternich had used every effort to win him over, and

is even said, in the last resort, to have attempted to overcome his resistance, by using diplomatists of the type Augustus of Poland once despatched to Charles the Twelfth of Sweden. But Wellington remained firm and, to the utter consternation of the Continental diplomatists, refused to sign not only the *procès verbale* of the 20th Oct. but that of November 17th. . . . He submitted his reasons in manly and energetic language—"Experience has shown that during revolutions the minds of men are influenced by motives of party and faction, and that which is most repugnant to their feelings is *the formal organized interference of foreign powers*, and that the effect is to weaken and endanger the party in whose favour it is exerted." He remonstrated with the Powers on account of the 'highly objectionable' despatches, which they had agreed with France to address to Spain, and because of their proposed withdrawal of ambassadors. The British ambassador would have no part with them but would remain at Madrid, to endeavour to allay the irritation these hostile measures would cause, and to avoid the evil by friendly counsel and assistance. So ended the Congress of Verona. What was the effect of Wellington's protest, and what was the outcome and importance of the Congress? Montmorency stated in his official note of the 26th December that the measures conceived and proposed at Verona 'would have been completely successful, if England had thought herself at liberty to concur in them.' It was indeed the first serious shock to the Holy Alliance, which had disregarded Castlereagh's protests, since they had found the English attitude of isolation no impediment to their suppressing the Neapolitan revolt. But the opposition of Wellington at Verona had been far more pronounced, vigorous and effectual than that of the English envoys at Troppau or Laybach. Alexander's projects were partly checked by him, though partly also by the unwillingness of Villedieu to give a passage to Russian troops through France. . . . The differences between England and the Holy Alliance were not only revealed but proclaimed to the world. The principles of the Patriarchs had received the most emphatic and open denial, and England was launched boldly upon her separate course. As Canning wrote to Frere Aug. 8, 1823: 'The Allies lament themselves heavily at our separation from them; and cannot for their lives imagine that in disclaiming their principles we should have said what we really mean, and should thereafter continue pertinaciously to act as we have said. A little prudery, a little dust for the eyes of the House of Commons they could understand, and some prepared for it—but this real bonafide disapprobation astounds them; and this sturdy adherence to it when nobody is by—when we might just lift the mask, and show our real countenance to them without the world's seeing it—this is really carrying the jest too far—and they can tell us plainly that they wish we would have done, and 'cease our fuming.' The history of all I could tell them in two words—or rather in the substitution of one word for another—for "Alliance" read "England," and you have the clue of my policy.' The importance of Verona is therefore that it marked not, as was intended by Metternich, the beginning, but as was intended by Canning, the close of an epoch."—H. W. V. Temperley, *Life of Canning*, pp. 154-160.—"The development of this principle [of Canning's] as it applied to nations, was illustrated in the strict but watchful neutrality observed between France and Spain; and, as it applied to principles, in the recognition of the independence of the Spanish-American

colonies. The latter act may be regarded as the most important for which Mr. Canning was officially responsible, as that which exerted the widest and most distinct influence over the policy of other countries, and which most clearly and emphatically revealed the tendency of his own. It showed that England would recognize institutions raised up by the people, as well as those which were created by kings. It gave the death-blow to the Holy Alliance." The logic and meaning of Canning's recognition of the Spanish American republics found expression in one famous passage of a brilliant speech which he made in the House of Commons, Dec. 12, 1826, vindicating his foreign policy. "If France," he said, "occupied Spain, was it necessary, in order to avoid the consequences of that occupation, that we should blockade Cadiz? No, I looked another way—I sought materials of compensation in another hemisphere. Contemplating Spain such as our ancestors had known her, I resolved that if France had Spain, it should not be Spain with the Indies. I called the New World into existence to redress the balance of the Old."—R. Bell, *Life of the Right Honorable George Canning*, ch. 13.

VERSAILLES, town of northern France, capital of the department of Seine-et-Oise, about twelve miles southwest of Paris. Louis XIII built the chateau on the border of the forest of Versailles. It was converted into a magnificent palace by Louis XIV, in whose reign houses were built for the accommodation of the court which was located there from 1682 to the French Revolution. The town which was thus brought into existence increased in size in the reign of Louis XVI. It had, in 1921, a population of about 64,758. The palace and the famous gardens in which the Great and Little Trianons are situated are national property. Louis XIV "preferred Versailles to his other chateaux, because Fontainebleau, Chambord, Saint-Germain, were existences ready created, which François I. and Henri IV. had stamped with the ineffaceable imprint of their glory: at Versailles, everything was to be made, save the modest beginning left by Louis XIII. . . . At Versailles, everything was to be created, we say,—not only the monuments of art, but nature itself. This solitary elevation of ground, although pleasing enough through the woods and hills that surrounded it, was without great views, without sites, without waters, without inhabitants. . . . The sites would be created by creating an immense landscape by the hand of man; the waters would be brought from the whole country by works which appalled the imagination; the inhabitants would be caused, if we may say so, to spring from the earth, by erecting a whole city for the service of the chateau. Louis would thus make a city of his own, a form of his own, of which he alone would be the life. Versailles and the court would be the

body and soul of one and the same being, both created for the same end, the glorification of the terrestrial God to whom they owed existence. . . . The same idea filled the interior of the palace. Painting deified Louis there under every form, in war and in peace, in the arts and in the administration of the empire; it celebrated his amours as his victories, his passions as his labors. All the heroes of antiquity, all the divinities of classic Olympus, rendered him homage or lent him their attributes in turn. He was Augustus, he was Titus, he was Alexander; he was thundering Jupiter, he was Hercules, the conqueror of monsters; oftener, Apollo, the inspirer of the Muses and the king of enlightenment. Mythology was no longer but a great enigma, to which the name of Louis was the only key; he was all the gods in himself alone. . . . Louis, always served in his desires by

waters of heaven gathered from all the slopes of the heights into the windings of immense conduits from Trappes and Palaiseau to Versailles, these waters of the Seine brought from Marly by gigantic machinery through that aqueduct which commands from afar the valley of the river like a superb Roman ruin, and later, an enterprise far more colossal! that river which was turned aside from its bed and which it was undertaken to bring thirty leagues to Versailles over hills and valleys, cost France grievous efforts and inexhaustible sweats, and swallowed up rivers of gold increasing from year to year. . . . Versailles has cost France dearly, very dearly, nevertheless it is important to historic truth to set aside in this respect too long accredited exaggerations. . . . The accounts, or at least the abstracts of the accounts, of the expenditures of Louis XIV. for building, during the

AERIAL VIEW OF THE PALACE OF VERSAILLES, LOOKING WEST.

In the center are seen the Place d'Armes and the Cour Royale which constitute the approaches to the palace. In the background is the royal park.

the fertility of his age, had found a third artist, Lenotre, to complete Lebrun and Mansart. Thanks to Lenotre, Louis, from the windows of his incomparable gallery of mirrors, saw nought that was not of his own creation. The whole horizon was his work, for his garden was the whole horizon. . . . Whole thickets were brought full-grown from the depths of the finest forests of France, and the arts of animating marble and of moving waters filled them with every prodigy of which the imagination could dream. An innumerable nation of statues peopled the thickets and lawns, was mirrored in the waters, or rose from the bosom of the wave. . . . Louis had done what he wished; he had created about him a little universe, in which he was the only necessary and almost the only real being. But terrestrial gods do not create with a word like the true God. These buildings which stretch across a frontage of twelve hundred yards, the unheard-of luxury of these endless apartments, this incredible multitude of objects of art, these forests transplanted, these

greater part of his reign, have been discovered. The costs of the construction, decoration, and furnishing of Versailles, from 1664 to 1690, including the hydraulic works and the gardens, in addition to the appendages,—that is, Clagny, Trianon, Saint-Cyr, and the two churches of the new city of Versailles,—amount to about one hundred and seven millions, to which must be added a million, or a million and a half perhaps, for the expenses of the years 1661-1663, the accounts of which are not known, and three million two hundred and sixty thousand francs for the sumptuous chapel, which was not built until 1699-1710. The proportion of the mark to the franc having varied under Louis XIV., it is difficult to arrive at an exact reduction to the present currency. . . . The expenses of Versailles would represent to-day more than four hundred millions. This amount is enormous; but it is not monstrous like the twelve hundred millions of which Mirabeau speaks, nor, above all, madly fantastic like the four thousand six hundred millions imagined by Volney.”—

CONFERENCE OF PARIS, 1919

Allied peace delegates assembled in the Hall of the Clock, Quai d'Orsay, where the Treaty of Versailles was framed
(After drawing by J. Simon)

The delegates present, indicated by number in the key sketch, are as follows: 1. M. Dutasta, Secretary. 2. M. Bethelot, France. 3. M. Fiehon, France. 4. E. M. House, United States. 5. Lieut. Col. Hanley, Great Britain. 6. President Wilson, United States. 7. Lloyd George, Great Britain. 8. M. Clemenceau, France. 9. A. J. Balfour, Great Britain. 10. H. White, United States. 11. General Tasker Hildreth, United States. 12. Robert Lansing, United States. 13. Viscount Milner, Great Britain. 14. Bonar Law, Great Britain. 15. G. N. Barnes, Great Britain. 16. Lord Robert Cecil, Great Britain. 17. M. Tarbueu, France. 18. Sir B. L. Horden, Canada. 19. France Charon, Samoan States. 20. J. Ward, New Zealand. 21. Phya Bihakh Hoshu, Siam. 22. W. M. Hughes, Australia. 23. L. L. Klotz, France. 24. M. Beres, Czechoslovakia. 25. M. Brodiano, Rumania. 26. General Botha, South Africa. 27. M. Cambon, France. 28. Leon Bourgeois, France. 29. M. Vesnich, Serbia. 30. Roman Dmowski, Poland. 31. M. Paderewski, Poland. 32. General Jan Smuts, South Africa. 33. W. F. Massey, New Zealand. 34. M. Burgon, Panama. 35. Maharajah of Bikaner, India. 36. Lord Sinha, India. 37. Emir Feisal, Arabia. 38. M. Trumbitch, Serbia. 39. N. Pashitch, Serbia. 40. Prince Haidar, Arabia. 41. M. Orlando, Italy. 42. Dr. Moniz, Portugal. 43. Dr. Vilho, Portugal. 44. Baron Mutsu, Japan. 45. Baron Makino, Japan. 46. M. Sonnino, Italy. 47. Marquis Saito, Japan. 48. M. de Alsua, Ecuador. 49. C. D. B. King, Liberia. 50. M. Calderon, Peru. 51. M. Mansour, interpreter. 52. Marquis Ruggi, Italy. 53. M. Guilbaud, Haiti. 54. M. Barzillai, Italy. 55. Marshal Foch, France. 56. M. Politis, Greece. 57. M. Blanco, Uruguay. 58. M. Venizelos, Greece. 59. Lou Tseng Tsing, China. 60. Sao Ke Alfred Sze, China. 61. M. Bustamante, Cuba. 62. M. Montes, Bolivia. 63. M. Mendes, Guatemala. 64. M. Magalhães, Brazil. 65. M. Vanderveide, Belgium. 66. General Weygand, aid to Marshal Foch, France. 67. M. Hymans, Belgium. 68. E. Pessoa, Brazil.

VERSAILLES, Treaty of (1783). See BRITISH EMPIRE: Treaties promoting expansion: 1783; HONDURAS: 1782-1783.

VERSAILLES, Treaty of (1919): Conditions of peace dictated to Germany, signed at Versailles on June 28, 1919.—Historic document which ended the World War.—The original terms of the peace treaty were handed to the head of the German delegation, Count von Brockdorff-Rantzau, on May 7, 1919. There followed weeks of discussion and negotiation, during which several changes were made, including the entire revision of the Polish section. (See PARIS, CONFERENCE OF.) The text of the treaty which follows is reproduced from the revised and reprinted version, copies of which, in French and English, were issued by the peace conference to the delegates at the time of the signing of the treaty. The copy that was actually signed by the delegates was placed, with the maps belonging to it, in the archives of France at Paris. With a few exceptions, the delegates given in the preamble are those who signed the treaty. Those who signed for Italy, owing to the fall of the Orlando ministry, were a new group headed by Tittoni, the new minister of foreign affairs. The Chinese delegates refused to sign, because of the Shantung concessions to Japan. The German delegation of Brockdorff-Rantzau withdrew and were replaced by Dr. Hermann Müller and Dr. Johannes Bell, who actually signed for Germany.

The text of the treaty is as follows:

THE UNITED STATES OF AMERICA, THE BRITISH EMPIRE, FRANCE, ITALY, AND JAPAN,

These Powers being described in the present Treaty as the Principal Allied and Associated Powers;

BELGIUM, BOLIVIA, BRAZIL, CHINA, CUBA, ECUADOR, GREECE, GUATEMALA, HAITI, THE HEDJAZ, HONDURAS, LIBERIA, NICARAGUA, PANAMA, PERU, POLAND, PORTUGAL, RUMANIA, THE SERB-CROAT-SLOVENE STATE; SIAM, CZECHO-SLOVAKIA, AND URUGUAY,

These Powers constituting with the Principal Powers mentioned above the Allied and Associated Powers,

of the one part;

And GERMANY,

of the other part;

Bearing in mind that on the request of the Imperial German Government an Armistice was

granted on November 11, 1918, to Germany by the Principal Allied and Associated Powers in order that a Treaty of Peace might be concluded with her, and

The Allied and Associated Powers being equally desirous that the war in which they were successively involved directly or indirectly, and which originated in the declaration of war by Austria-Hungary on July 28, 1914, against Serbia; the declaration of war by Germany against Russia on August 1, 1914, and against France on August 3, 1914, and in the invasion of Belgium, should be replaced by a firm, just, and durable Peace;

For this purpose the HIGH CONTRACTING PARTIES represented as follows:

THE PRESIDENT OF THE UNITED STATES OF AMERICA, by:

The Honorable Woodrow Wilson, President of the United States, acting in his own name and by his own proper authority;

The Honorable Robert Lansing, Secretary of State;

The Honorable Henry White, formerly Ambassador Extraordinary and Plenipotentiary of the United States at Rome and Paris;

The Honorable Edward M. House;

General Tasker H. Bliss, Military Representative of the United States on the Supreme War Council;

HIS MAJESTY THE KING OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND AND OF THE BRITISH DOMINIONS BEYOND THE SEAS, EMPEROR OF INDIA, by:

The Right Honorable David Lloyd George, M. P., First Lord of His Treasury and Prime Minister;

The Right Honorable Andrew Bonar Law, M. P., His Lord Privy Seal;

The Right Honorable Viscount Milner, G. C. B., G. C. M. G., His Secretary of State for Colonies;

The Right Honorable Arthur James Balfour, O. M., M. P., His Secretary of State for Foreign Affairs;

The Right Honorable George Nicoll Barnes, M. P., Minister without portfolio;

And

for the DOMINION OF CANADA, by:

The Right Honorable Sir George Eulas Foster, G. C. M. G., Minister of Trade and Commerce;

The Honorable Charles Joseph Doherty, Minister of Justice;

for the COMMONWEALTH OF AUSTRALIA, by:

The Right Honorable William Morris Hughes, Attorney General and Prime Minister;

The Right Honorable Sir Joseph Cook, G. C. M. G., Minister for the Navy;

for the UNION OF SOUTH AFRICA, by:

General the Right Honorable Louis Botha, Minister of Native Affairs, and Prime Minister;

Lieutenant-General the Right Honorable Jan Christiaan Smuts; K. C., Minister of Defence;

for the DOMINION OF NEW ZEALAND, by:

The Right Honorable William Ferguson Massey, Minister of Labor and Prime Minister;

for INDIA, by:

The Right Honorable Edwin Samuel Montagu, M. P., His Secretary of State for India;

Major-General His Highness Maharaja Sir Ganga Singh Bahadur, Maharaja of Bikaner, G. C. S. I., G. C. I. E., G. C. V. O., K. C. B., A. D. C.;

- THE PRESIDENT OF THE FRENCH REPUBLIC, by:
 Mr. Georges Clemenceau, President of the Council, Minister of War;
 Mr. Stephen Pichon, Minister for Foreign Affairs;
 Mr. Louis-Lucien Klotz, Minister of Finance;
 Mr. André Tardieu, Commissary General for Franco-American Military Affairs;
 Mr. Jules Cambon, Ambassador of France;
- HIS MAJESTY THE KING OF ITALY, by:
 Mr. V. E. Orlando, President of the Council of Ministers;
 Baron S. Sonnino, Deputy.
 Marquis G. Imperiali, Senator, Ambassador of His Majesty the King of Italy at London;
 Mr. S. Crespi, Deputy.
 Mr. S. Barzilai, Deputy, formerly Minister;
- HIS MAJESTY THE EMPEROR OF JAPAN, by:
 Marquis Sajonji, formerly President of the Council of Ministers;
 Baron Makino, formerly Minister for Foreign Affairs, Member of the Diplomatic Council;
 Viscount Chinda, Ambassador Extraordinary and Plenipotentiary of H. M. the Emperor of Japan at London;
 Mr. K. Matsui, Ambassador Extraordinary and Plenipotentiary of H. M. the Emperor of Japan at Paris;
 Mr. H. Ijuin, Ambassador Extraordinary and Plenipotentiary of H. M. the Emperor of Japan at Rome;
- HIS MAJESTY THE KING OF THE BELGIANS, by:
 Mr. Paul Hymans, Minister for Foreign Affairs, Minister of State;
 Mr. Jules van den Heuvel, Envoy Extraordinary and Minister Plenipotentiary, Minister of State;
 Mr. Emile Vandervelde, Minister of Justice, Minister of State;
- THE PRESIDENT OF THE REPUBLIC OF BOLIVIA, by:
 Mr. Ismael Montes, Envoy Extraordinary and Minister Plenipotentiary of Bolivia at Paris;
- THE PRESIDENT OF THE REPUBLIC OF BRAZIL, by:
 Mr. João Pandiá Calogeras, Deputy, formerly Minister of Finance;
 Mr. Raul Fernandes, Deputy;
 Mr. Rodrigo Octavio de L. Menezes, Professor of International Law of Rio de Janeiro;
- THE PRESIDENT OF THE CHINESE REPUBLIC, by:
 Mr. Lou Tseng-Tsiang, Minister for Foreign Affairs;
 Mr. Chenting Thomas Wang, formerly Minister of Agriculture and Commerce;
- THE PRESIDENT OF THE CUBAN REPUBLIC, by:
 Mr. Antonio Sánchez de Bustamante, Dean of the Faculty of Law in the University of Havana, President of the Cuban Society of International Law;
- THE PRESIDENT OF THE REPUBLIC OF ECUADOR, by:
 Mr. Enrique Dorn y de Alsúa, Envoy Extraordinary and Minister Plenipotentiary of Ecuador at Paris;
- HIS MAJESTY THE KING OF THE HELLENES [GREECE], by:
 Mr. Eleutherios K. Venizelos, President of the Council of Ministers;
 Mr. Nicolas Politis, Minister for Foreign Affairs;
- THE PRESIDENT OF THE REPUBLIC OF GUATEMALA, by:
 Mr. Joaquin Méndez, formerly Minister of State for Public Works and Public Instruction, Envoy Extraordinary and Minister Plenipotentiary of Guatemala at Washington, Envoy Extraordinary and Minister Plenipotentiary on special mission at Paris;
- THE PRESIDENT OF THE REPUBLIC OF HAITI, by:
 Mr. Tertullien Guilbaud, Envoy Extraordinary and Minister Plenipotentiary of Haiti at Paris;
- HIS MAJESTY THE KING OF THE HEDJAZ, by:
 Mr. Rustem Haidar;
 Mr. Abdul Hadi Aouni;
- THE PRESIDENT OF THE REPUBLIC OF HONDURAS, by:
 Dr. Policarpo Bonilla, on special mission to Washington, formerly President of the Republic of Honduras, Envoy Extraordinary and Minister Plenipotentiary;
- THE PRESIDENT OF THE REPUBLIC OF LIBERIA, by:
 The Honourable Charles Dunbar Burgess King, Secretary of State;
- THE PRESIDENT OF THE REPUBLIC OF NICARAGUA, by:
 Mr. Salvador Chamorro, President of the Chamber of Deputies;
- THE PRESIDENT OF THE REPUBLIC OF PANAMA, by:
 Mr. Antonio Burgos, Envoy Extraordinary and Minister Plenipotentiary of Panama at Madrid;
- THE PRESIDENT OF THE REPUBLIC OF PERU, by:
 Mr. Carlos G. Candamo, Envoy Extraordinary and Minister Plenipotentiary of Peru at Paris;
- THE PRESIDENT OF THE POLISH REPUBLIC, by:
 Mr. Ignace J. Paderewski, President of the Council of Ministers, Minister for Foreign Affairs;
 Mr. Roman Dmowski, President of the Polish National Committee;
- THE PRESIDENT OF THE PORTUGUESE REPUBLIC, by:
 Dr. Affonso Augusto Da Costa, formerly President of the Council of Ministers;
 Dr. Augusto Luiz Viera Soares, formerly Minister for Foreign Affairs;
- HIS MAJESTY THE KING OF ROUMANIA, by:
 Mr. Ion I. C. Bratiano, President of the Council of Ministers, Minister for Foreign Affairs;
 General Constantin Coanda, Corps Commander, A. D. C. to the King, formerly President of the Council of Ministers;
- HIS MAJESTY THE KING OF THE SERBS, THE CROATS, AND THE SLOVENES, by:
 Mr. Nicolas P. Pachitch, formerly President of the Council of Ministers;
 Mr. Ante Trumbitch, Minister for Foreign Affairs;
 Mr. Milenko Vesnitch, Envoy Extraordinary and Minister Plenipotentiary of H. M. the King of the Serbs, the Croats, and the Slovenes at Paris;
- HIS MAJESTY THE KING OF SIAM, by:
 His Highness Prince Charoon, Envoy Extraordinary and Minister Plenipotentiary of H. M. the King of Siam at Paris;
 His Serene Highness Prince Traidos Prabandhu, Under Secretary of State for Foreign Affairs;
- THE PRESIDENT OF THE CZECHO-SLOVAK REPUBLIC, by:
 Mr. Karel Krámař, President of the Council of Ministers;
 Mr. Eduard Beneš, Minister for Foreign Affairs;
- THE PRESIDENT OF THE REPUBLIC OF URUGUAY, by:
 Mr. Juan Antonio Buero, Minister for Foreign Affairs, formerly Minister of Industry;

GERMANY, by:

Count Brockdorff-Rantzau, Minister for Foreign Affairs of the Empire;
 Dr. Landsberg, Minister of Justice of the Empire;
 Mr. Giesberts, Minister of Posts of the Empire;
 Oberbürgermeister Leinert, President of the Prussian National Assembly;
 Dr. Schücking;
 Dr. Karl Melchior;

Acting in the name of the German Empire and of each and every component State,

WHO having communicated their full powers found in good and due form HAVE AGREED AS FOLLOWS:

From the coming into force of the present treaty the state of war will terminate. From that moment and subject to the provisions of this treaty official relations with Germany and with any of the German States will be resumed by the Allied and Associated Powers.

Part I.—The Covenant of the League of Nations

[See LEAGUE OF NATIONS.]

Part II.—Boundaries of Germany

Article 27. The boundaries of Germany will be determined as follows:

1. *With Belgium:* From the point common to the three frontiers of Belgium, Holland, and Germany, and in a southerly direction; the northeastern boundary of the former territory of neutral Moresnet, then the eastern boundary of the Kreis of Eupen, then the frontier between Belgium and the Kreis of Montjoie, then the northeastern and eastern boundary of the Kreis of Malmédy to its junction with the frontier of Luxemburg.

2. *With Luxemburg:* The frontier of the 3d August, 1914, to its junction with the frontier of France of the 18th July, 1870.

3. *With France:* The frontier of the 18th July, 1870, from Luxemburg to Switzerland, with the reservations made in Article 48 of Section 4 (Sarre Basin) of Part III.

4. *With Switzerland:* The present frontier.

5. *With Austria:* The frontier of the 3d August, 1914, from Switzerland to Czechoslovakia is hereinafter defined.

6. *With Czecho-Slovakia:* The frontier of the 3d August, 1914, between Germany and Austria from its junction with the old administrative boundary separating Bohemia and the Province of Upper Austria to the point north of the salient of the old Province of Austrian Silesia situated at about eight kilometers east of Neustadt.

7. *With Poland:* [Here follow a large number of place names; several of these have since become the cause of dispute.] . . .

8. *With Denmark:* The frontier as it will be fixed in accordance with Articles 109 and 110 of Part III, Section XII, (Schleswig.)

Art. 28. The boundaries of East Prussia with the reservations made in Section IX (East Prussia) of Part III will be determined . . . [names of places marking the new boundaries].

Art. 29. The boundaries as described above are drawn in red on a one-in-a-million map which is annexed to the present treaty. In the case of any discrepancies between the text of the treaty and this map or any other map which may be annexed, the text will be final.

Art. 30. In the case of boundaries which are defined by a waterway, the terms "course" and "channel" used in the present treaty signify: in the case of non-navigable rivers, the median line of the waterways or of its principal arm, and in the case of navigable rivers the median line of the principal channel of navigation. It will rest with the boundary commissions provided by the present treaty to specify in each case whether the frontier line shall follow any changes of the course or channel which may take place or whether it shall be definitely fixed by the position of the course or channel at the time when the present treaty comes into force.

Part III.—Political Clauses for Europe

SECTION I.—BELGIUM

Art. 31. Germany, recognizing that the treaties of April 19, 1839, which established the status of Belgium before the war, no longer conform to the requirements of the situation, consents to the abrogation of the said treaties and undertakes immediately to recognize and to observe whatever conventions may be entered into by the principal allied and associated powers, or by any of them in concert with the Governments of Belgium and of the Netherlands, to replace the said treaties of 1839. If her formal adhesion should be required to such conventions or to any of their stipulations, Germany undertakes immediately to give it.

Art. 32. Germany recognizes the full sovereignty of Belgium over the whole of the contested territory of Moresnet, (called Moresnet Neutre.)

Art. 33. Germany renounces in favor of Belgium all rights and title over the territory of Prussian Moresnet situated on the west of the road from Liège to Aix-la-Chapelle: the road will belong to Belgium where it bounds this territory.

Art. 34. Germany renounces in favor of Belgium all rights and title over the territory comprising the whole of the Kreise of Eupen and of Malmédy. During the six months after the coming into force of this treaty, registers will be opened by the Belgian authorities at Eupen and Malmédy in which the inhabitants of the above territory will be entitled to record in writing a desire to see the whole or part of it remain under Germany sovereignty. The results of this public expression of opinion will be communicated by the Belgian Government to the League of Nations, and Belgium undertakes to accept the decision of the League.

Art. 35. A commission of seven persons, five of whom will be appointed by the principal allied and associated powers, one by Germany and one by Belgium, will be set up fifteen days after the coming into force of the present treaty to settle on the spot the new frontier line between Belgium and Germany, taking into account the economic factors and the means of communication. Decisions will be taken by a majority and will be binding on the parties concerned.

Art. 36. When the transfer of the sovereignty over the territories referred to above has become definitive, German nationals habitually resident in the territories will definitely acquire Belgian nationality ipso facto, and will lose their German nationality. Nevertheless German nationals who become resident in the territories after the 1st August, 1914, shall not obtain Belgian nationality without a permit from the Belgian Government.

Art. 37. Within the two years following the definitive transfer of the sovereignty over the territories assigned to Belgium under the present treaty, German nationals over 18 years of age habitually

resident in those territories will be entitled to opt for German nationality. Option by a husband will cover his wife, and option by parents will cover their children under 18 years of age. Persons who have exercised the above right to opt must within the ensuing twelve months transfer their place of residence to Germany. They will be entitled to retain their immovable property in the territories acquired by Belgium. They may carry with them their movable property of every description. No export or import duties may be imposed upon them in connection with the removal of such property.

Art. 38. The German Government will hand over without delay to the Belgian Government the archives, registers, plans, title deeds and documents of every kind concerning the civil, military, financial, judicial or other administrations in the territory transferred to Belgian sovereignty. The German Government will likewise restore to the Belgian Government the archives and documents of every kind carried off during the war by the German authorities from the Belgian public administrations, in particular from the Ministry of Foreign Affairs at Brussels.

Art. 39. The proportion and nature of the financial liabilities of Germany and of Prussia which Belgium will have to bear on account of the territories ceded to her shall be fixed in conformity with Articles 254 and 256 of Part IX (financial clauses) of the present treaty.

SECTION II.—LUXEMBURG

Art. 40. With regard to the Grand Duchy of Luxemburg, Germany renounces the benefit of all the provisions inserted in her favor in the treaties of Feb. 8, 1842, April 2, 1847, Oct. 20-25, 1865, Aug. 18, 1866, Feb. 21 and May 11, 1867, May 10, 1871, June 11, 1872, and Nov. 11, 1902, and in all conventions consequent upon such treaties. Germany recognizes that the Grand Duchy of Luxemburg ceased to form part of the German Zollverein as from Jan. 1, 1919; renounces all right to the exploitation of the railways, adheres to the termination of the régime of neutrality of the Grand Duchy, and accepts in advance all international arrangements which may be concluded by the Allied and Associated Powers relating to the Grand Duchy.

Art. 41. Germany undertakes to grant to the Grand Duchy of Luxemburg, when a demand to that effect is made to her by the principal Allied and Associated Powers, the rights and advantages stipulated in favor of such powers or their nationals in the present treaty, with regard to economic questions, to questions relative to transport and to aerial navigation.

SECTION III.—LEFT BANK OF THE RHINE

Art. 42. Germany is forbidden to maintain or construct any fortifications either on the left bank of the Rhine or on the right bank to the west of a line drawn fifty kilometers to the east of the Rhine.

Art. 43. In the area defined above the maintenance and the assembly of armed forces either permanently or temporarily, and military manoeuvres of any kind, as well as the upkeep of all permanent works for mobilization, are in the same way forbidden.

Art. 44. In case Germany violates in any manner the provisions of Articles 42 and 43, she shall be regarded as committing a hostile act against the powers signatory of the present treaty and as calculated to disturb the peace of the world.

SECTION IV.—SARRE BASIN

Art. 45. As compensation for the destruction of the coal mines in the North of France and as part payment toward the total reparation due from Germany for the damage resulting from the war, Germany cedes to France in full and absolute possession, with exclusive rights of exploitation, unencumbered and free from all debts and charges of any kind, the coal mines situated in the Sarre Basin as defined in Article 48.

Art. 46. In order to assure the rights and welfare of the population and to guarantee to France complete freedom in working the mines, Germany agrees to the provisions of Chapters 1 and 2 of the annex hereto.

Art. 47. In order to make in due time permanent provision for the government of the Sarre Basin in accordance with the wishes of the population, France and Germany agree to the provisions of Chapter 3 of the annex hereto.

Art. 48. The boundaries of the territory of the Sarre Basin, as dealt with in the present stipulations, will be fixed. . . . [Here follows delimitation of frontiers.] A commission composed of five members, one appointed by France, one by Germany, and three by the Council of the League of Nations, which will select nationals of other powers, will be constituted within fifteen days from the coming into force of the present treaty, to trace on the spot the frontier line described below. . . . The decisions of this commission will be taken by a majority and will be binding on the parties concerned.

Art. 49. Germany renounces in favor of the League of Nations, in the capacity of trustee, the government of the territory defined above. At the end of fifteen years from the coming into force of the present treaty the inhabitants of the said territory shall be called upon to indicate the sovereignty under which they desire to be placed.

Art. 50. The stipulations under which the cession of the mines in the Sarre Basin shall be carried out, together with the measures intended to guarantee the rights and the well-being of the inhabitants and the government of the territory, as well as the conditions in accordance with which the plebiscite hereinbefore provided for is to be made, are laid down in the annex hereto. This annex shall be considered as an integral part of the present treaty, and Germany declares her adherence to it.

ANNEX

In accordance with the provisions of Articles 45 to 50 of the present treaty, the stipulations under which the cession by Germany to France of the mines of the Sarre Basin will be effected, as well as the measures intended to insure respect for the rights and well-being of the population and the government of the territory, and the conditions in which the inhabitants will be called upon to indicate the sovereignty under which they may wish to be placed, have been laid down as follows:

Chapter I.—Cession and Exploitation of Mining Property

1. From the date of the coming into force of the present treaty, all the deposits of coal situated within the Sarre Basin, as defined in Article 48 of the said treaty, become the complete and absolute property of the French State. The French State will have the right of working or not working the said mines or of transferring to a third party the

right of working them, without having to obtain any previous authorization or to fulfill any formalities. The French State may always require that the German mining laws and regulations referred to below shall be applied in order to insure the determination of its rights.

2. The right of ownership of the French State will apply not only to the deposits which are free, and for which concessions have not yet been granted, but also to the deposits for which concessions have already been granted, whoever may be the present proprietors, irrespective of whether they belong to the Prussian State, to the Bavarian State, to other States or bodies, to companies or to individuals, whether they have been worked or not, or whether a right of exploitation distinct from the right of the owners of the surface of the soil has or has not been recognized.

3. As far as concerns the mines which are being worked, the transfer of the ownership to the French State will apply to all the accessories and subsidiaries of the said mines, in particular to their plant and equipment both on and below the surface . . . and in general everything which those who own or exploit the mines possess or enjoy for the purpose of exploiting the mines and their accessories and subsidiaries. The transfer will apply also to the debts owing for products delivered before the entry into possession by the French State, and after the signature of the present treaty, and to deposits of money made by customers, whose rights will be guaranteed by the French State.

4. The French State will acquire the property free and clear of all debts and charges. Nevertheless the rights acquired, or in course of being acquired, by the employes of the mines and their accessories and subsidiaries at the date of the coming into force of the present treaty, in connection with pensions for old age or disability, will not be affected. In return, Germany must pay over to the French State a sum representing the actuarial amounts to which the said employes are entitled.

5. The value of the property thus ceded to the French State will be determined by the Reparation Commission referred to in Article 233 of Part VIII (Reparations) of the present treaty. This value shall be credited to Germany in part payment of the amount due for reparation. It will be for Germany to indemnify the proprietors or parties concerned, whoever they may be.

6. No tariff shall be established on the German railways and canals which may directly or indirectly discriminate to the prejudice of the transport of the personnel or products of the mines and their accessories or subsidiaries, or of the material necessary to their exploitation. . . .

7. The equipment and personnel necessary to insure the dispatch and transport of the products of the mines and their accessories and subsidiaries, as well as the carriage of workmen and employes, will be provided by the local railway administration of the basin.

8. No obstacle shall be placed in the way of such improvements of railways or waterways as the French State may judge necessary to assure the dispatch and transport of the products of the mines and their accessories and subsidiaries. . . . The distribution of expenses will, in the event of disagreement, be submitted to arbitration. The French State may also establish any new means of communication . . . which it may consider necessary for the exploitation of the mines. It may exploit freely and without any restrictions the means of communication of which it may become the owner, particularly those connecting the mines

and their accessories and subsidiaries with the means of communication situated in French territory.

9. The French State shall always be entitled to demand the application of the German mining laws and regulations in force on the 11th November, 1918, excepting provisions adopted exclusively in view of the state of war, with a view to the acquisition of such land as it may judge necessary for the exploitation of the mines and their accessories and subsidiaries. The payment for damage caused to immovable property by the working of the said mines and their accessories and subsidiaries shall be made in accordance with the German mining laws and regulations above referred to.

10. Every person whom the French State may substitute for itself as regards the whole or part of its rights to the exploitation of the mines and their accessories and subsidiaries shall enjoy the benefit of the privileges provided in this annex.

11. The mines and other immovable property which become the property of the French State may never be made the subject of measures of forfeiture, forced sale, expropriation or requisition, nor of any other measure affecting the right of property. The personnel and the plant connected with the exploitation of these mines or their accessories and subsidiaries, as well as the product extracted from the mines or manufactured in their accessories and subsidiaries, may not at any time be made the subject of any measures of requisition.

12. The exploitation of the mines and their accessories and subsidiaries, which become the property of the French State, will continue, subject to the provisions of Paragraph 23 below, to be subject to the régime established by the German laws and regulations in force on the 11th November, 1918, excepting provisions adopted exclusively in view of the state of war. The rights of the workmen shall be similarly maintained, subject to the provisions of the said Paragraph 23, as established on the 11th November, 1918, by the German laws and regulations above referred to. No impediment shall be placed in the way of the introduction or employment in the mines and their accessories and subsidiaries of workmen from without the basin. The employes and workmen of French nationality shall have the right to belong to French labor unions.

13. The amount contributed by the mines and their accessories and subsidiaries, either to the local budget of the territory of the Sarre Basin or to the communal funds, shall be fixed with due regard to the ratio of the value of the mines to the total taxable wealth of the basin.

14. The French State shall always have the right of establishing and maintaining, as incidental to the mines, primary or technical schools for its employes and their children, and of causing instruction therein to be given in the French language, in accordance with such curriculum and by such teachers as it may select. It shall also have the right to establish and maintain hospitals, dispensaries, workmen's houses and gardens, and other charitable and social institutions.

15. The French State shall enjoy complete liberty with respect to the distribution, dispatch, and sale prices of the products of the mines and their accessories and subsidiaries. Nevertheless, whatever may be the total product of the mines, the French Government undertakes that the requirements of local consumption for industrial and domestic purposes shall always be satisfied in the proportion existing in 1913 between the amount consumed locally and the total output of the Sarre Basin.

Chapter II.—Government of the Territory of the Sarre Basin

16. The government of the territory of the Sarre Basin shall be intrusted to a commission representing the League of Nations. This commission shall sit in the territory of the Sarre Basin.

17. The Governing Commission provided for by Paragraph 16 shall consist of five members chosen by the Council of the League of Nations, and will include one citizen of France, one native inhabitant of the Sarre Basin not a citizen of France, and three members belonging to three countries other than France or Germany. The members of the Governing Commission shall be appointed for one year and may be reappointed. They can be removed by the Council of the League of Nations, which will provide for their replacement. The members of the Governing Commission will be entitled to a salary which will be fixed by the Council of the League of Nations, and charged on the local revenues.

18. The Chairman of the Governing Commission shall be appointed for one year from among the members of the commission by the Council of the League of Nations and may be reappointed. The Chairman will act as the executive of the commission.

19. Within the territory of the Sarre Basin the Governing Commission shall have all the powers of government hitherto belonging to the German Empire, Prussia or Bavaria, including the appointment and dismissal of officials, and the creation of such administrative and representative bodies as it may deem necessary. It shall have full powers to administer and operate the railways, canals, and the different public services. Its decisions shall be taken by a majority.

20. Germany will place at the disposal of the Governing Commission all official documents and archives under the control of Germany, of any German State, or of any local authority, which relate to the territory of the Sarre Basin or to the rights of the inhabitants thereof.

21. It will be the duty of the Governing Commission to insure the protection abroad of the interests of the inhabitants of the territory of the Sarre Basin.

22. The Governing Commission shall have the full right of user of property, other than mines, belonging, both in public and in private domain, to the Imperial German Government, or to the Government of any German State, in the territory of the Sarre Basin. As regards the railways, an equitable apportionment of rolling stock shall be made by a mixed commission on which the government of the territory of the Sarre Basin and the German railways will be represented. Persons, goods, vessels, carriages, wagons, and mails, coming from or going to the Sarre Basin, shall enjoy all the rights and privileges relating to transit and transport which are specified in the provisions of Part XII (ports, waterways, railways) of the present treaty.

23. The laws and regulations in force on Nov. 11, 1918, in the territory of the Sarre Basin, (except those enacted in consequence of the state of war,) shall continue to apply. If . . . it is necessary to introduce modifications, these shall be decided on, and put into effect by the Governing Commission, after consultation with the elected representatives of the inhabitants in such a manner as the commission may determine. No modification may be made in the legal régime for the exploitation of the mines, provided for in Paragraph 12, without the French State being previ-

ously consulted, unless such modification results from a general regulation respecting labor adopted by the League of Nations. In fixing the conditions and hours of labor for men, women, and children, the Governing Commission is to take into consideration the wishes expressed by the local labor organizations, as well as the principles adopted by the League of Nations.

24. Subject to the provisions of Paragraph 4, no rights of the inhabitants of the Sarre Basin acquired or in process of acquisition at the date of the coming into force of this treaty, in respect of any insurance system of Germany, or in respect of any pension of any kind, are affected by any of the provisions of the present treaty. Germany and the Government of the territory of the Sarre Basin will preserve and continue all of the aforesaid rights.

25. The civil and criminal courts existing in the territory of the Sarre Basin shall continue. A civil and criminal court will be established by the Governing Commission to hear appeals from the decisions of the said courts, and to decide matters for which these courts are not competent. The Governing Commission will be responsible for settling the organization and jurisdiction of the said court. Justice will be rendered in the name of the Governing Commission.

26. The Governing Commission will alone have the power of levying taxes and dues in the territory of the Sarre Basin [same to] be exclusively applied to the needs of the territory. The fiscal system existing on Nov. 11, 1918, will be maintained as far as possible, and no new tax except customs duties may be imposed without previously consulting the elected representatives of the inhabitants.

27. The present stipulations will not affect the existing nationality of the inhabitants of the territory of the Sarre Basin. No hindrance shall be placed in the way of those who wish to acquire a different nationality, but in such case the acquisition of the new nationality will involve the loss of any other.

28. Under the control of the Governing Commission the inhabitants will retain their local assemblies, their religious liberties, their schools, and their language. The right of voting will not be exercised for any assemblies other than the local assemblies, and will belong to every inhabitant over the age of 20 years without distinction of sex.

29. Any of the inhabitants of the Sarre Basin who may desire to leave the territory will have full liberty to retain in it their immovable property or to sell it at fair prices and to remove their movable property free of any charges.

30. There will be no military service, whether compulsory or voluntary, in the territory of the Sarre Basin, and the construction of fortifications therein is forbidden. Only a local gendarmerie for the maintenance of order may be established. It will be the duty of the Governing Commission to provide in all cases for the protection of persons and property in the Sarre Basin.

31. The territory of the Sarre Basin as defined by Article 48 of the present treaty shall be subjected to the French customs régime. . . . No export tax shall be imposed upon metallurgical products or coal exported from the said territory to Germany, nor upon German exports for the use of the industries of the territory of the Sarre Basin. Natural or manufactured products originating in the basin in transit over German territory and similarly German products in transit over the territory of the basin shall be free of all customs

duties. Products which both originate in and pass from the basin into Germany shall be free of import duties for a period of five years from the date of the coming into force of the present treaty, and during the same period articles imported from Germany into the territory of the basin for local consumption shall likewise be free of import duties. During these five years the French Government reserves to itself the right of limiting to the annual average of the quantities imported into Alsace-Lorraine and France in the years 1911 to 1913 the quantities which may be sent into France of all articles coming from the basin, which include raw materials and semi-manufactured goods imported duty free from Germany.

32. No prohibition or restriction shall be imposed upon the circulation of French money in the territory of the Sarre Basin. The French State shall have the right to use French money in all purchases, payments, and contracts connected with the exploitation of the mines or their accessories and subsidiaries.

33. The Governing Commission shall have power to decide all questions arising from the interpretation of the preceding provisions, and the decision of a majority of the commission shall be binding on both countries.

Chapter III.—Plebiscite

34. At the termination of a period of fifteen years from the coming into force of the present treaty, the population of the territory of the Sarre Basin will be called upon to indicate their desires in the following manner: A vote will take place, by communes or districts, on the three following alternatives: (a) Maintenance of the régime established by the present treaty and by this annex; (b) union with France; (c) union with Germany. All persons without distinction of sex, more than 20 years old at the date of the voting, resident in the territory at the date of the signature of the present treaty, will have the right to vote. The other conditions, methods, and the date of the voting shall be fixed by the Council of the League of Nations in such a way as to secure the liberty, secrecy, and trustworthiness of the voting.

35. The League of Nations shall decide on the sovereignty under which the territory is to be placed, taking into account the wishes of the inhabitants as expressed by the voting. (a) . . . It will be the duty of the League of Nations to take appropriate steps to adapt the régime definitely adopted to the permanent welfare of the territory and the general interests. (b) If for the whole or part of the territory the League of Nations decides in favor of union with France, Germany hereby agrees to cede to France in accordance with the decision of the League of Nations all rights and title over the territory specified by the League. (c) If for the whole or part of the territory the League of Nations decides in favor of union with Germany, it will be the duty of the League of Nations to cause the German Government to be re-established in the government of the territory specified by the League.

36. If the League of Nations decides in favor of the union of the whole or part of the territory of the Sarre Basin with Germany, France's rights of ownership in the mines situated in such part of the territory will be repurchased by Germany in their entirety at a price payable in gold. The price to be paid will be fixed by three experts, one nominated by Germany, one by France, and one, who shall be neither a Frenchman nor a German,

by the Council of the League of Nations. The decision of the experts will be given by a majority. The obligation of Germany to make such payment shall be taken into account by the Reparation Commission, and for the purpose of this payment Germany may create a prior charge upon her assets or revenues upon such detailed terms as shall be agreed to by the Reparation Commission.

If, nevertheless, Germany after a period of one year from the date on which the payment becomes due shall not have effected the said payment, the Reparation Commission shall do so in accordance with such instructions as may be given by the League of Nations, and, if necessary, by liquidating that part of the mines which is in question.

37. If, in consequence of the repurchase provided for in Paragraph 36, the ownership of the mines or any part of them is transferred to Germany, the French State and French nationals shall have the right to purchase such amount of coal of the Sarre Basin as their industrial and domestic needs are found at that time to require. . . .

38. It is understood that France and Germany may, by special agreements concluded before the time fixed for the payment of the price for the repurchase of the mines, modify the provisions of Paragraphs 36 and 37.

39. The Council of the League of Nations shall make such provisions as may be necessary for the establishment of the régime which is to take effect after the decisions of the League of Nations mentioned in Paragraph 35 have become operative, including an equitable apportionment of any obligations of the Government of the territory of the Sarre Basin arising from loans raised by the commission or from other causes. From the coming into force of the new régime, the powers of the Governing Commission will terminate, except in the case provided for in Paragraph 35 (a).

40. In all matters dealt with in the present annex, the decisions of the Council of the League of Nations will be taken by a majority.

SECTION V.—ALSACE-LORRAINE

The HIGH CONTRACTING PARTIES, recognizing the moral obligation to redress the wrong done by Germany in 1871, both to the rights of France and to the wishes of the population of Alsace and Lorraine, which were separated from their country in spite of solemn protests of their representatives at the Assembly of Bordeaux, agree upon the following articles:

Art. 51. The territories which were ceded to Germany in accordance with the preliminaries of peace signed at Versailles on the 26th of February, 1871, and the treaty of Frankfurt on the 10th May, 1871, are restored to French sovereignty as from the date of the armistice of the 11th November, 1918. The provisions of the treaties establishing the delimitation of the frontiers before 1871 shall be restored.

Art. 52. The German Government shall hand over without delay to the French Government all archives, registers, plans, titles, and documents of every kind concerning the civil, military, financial, judicial, or other administrations of the territories restored to French sovereignty. If any of these documents, archives, registers, titles, or plans have been misplaced, they will be restored by the German Government on the demand of the French Government.

Art. 53. Separate agreements shall be made between France and Germany dealing with the in-

terests of the inhabitants of the territories referred to in Article 51, particularly as regards their civil rights, their business and the exercise of their professions, it being understood that Germany undertakes as from the present date to recognize and accept the regulations laid down in the annex hereto regarding the nationality of the inhabitants or natives of the said territories, not to claim at any time or in any place whatsoever as German nationals those who shall have been declared on any ground to be French, to receive all others in her territory, and to conform, as regards the property of German nationals in the territories indicated in Article 51, with the provisions of Article 297, and the Annex to Section 4 of Part X (economic clauses) of the present treaty. Those German nationals who without acquiring French nationality shall receive permission from the French Government to reside in the said territories shall not be subjected to the provisions of the said article.

Art. 54. Those persons who have regained French nationality in virtue of Paragraph 1 of the annex hereto, will be held to be Alsace-Lorrainers for the purposes of the present section. The persons referred to in Paragraph 2 of the said annex will, from the day on which they have claimed French nationality, be held to be Alsace-Lorrainers with retroactive effect as from the 11th November, 1918. From those whose application is rejected, the privilege will terminate at the date of the refusal. Such juridical persons will also have the status of Alsace-Lorrainers as have been recognized as possessing this quality, whether by the French administrative authorities or by a judicial decision.

Art. 55. The territories referred to in Article 51 shall return to France, free and quit of all public debts under the conditions laid down in Article 255 of Part IX (financial clauses) of the present treaty.

Art. 56. In conformity with the provisions of Article 256 of Part IX (financial clauses) of the present treaty, France shall enter into possession of all property and estate within the territories referred to in Article 51, which belong to the German Empire or German States, without any payment or credit on this account to any of the States ceding the territories. This provision applies to all movable or immovable property of public or private domain, together with all rights whatsoever belonging to the German Empire or the German States or to their administrative areas. Crown property and the property of the former Emperor or other German sovereigns shall be assimilated to property of the public domain.

Art. 57. Germany shall not take any action, either by means of stamping or by any other legal or administrative measures not applying equally to the rest of her territory, which may be to the detriment of the legal value or redeemability of German monetary instruments or moneys which at the date of the signature of the present treaty are legally current, and at that date are in possession of the French Government.

Art. 58. A special convention will determine the conditions for repayment in marks of the exceptional war expenditure advanced during the course of the war by Alsace-Lorraine or by public bodies in Alsace-Lorraine on account of the empire in accordance with German law, such as payment to the families of persons mobilized, requisitions, billeting of troops, and assistance to persons who have been expelled. In fixing the amount of these sums Germany shall be credited with that portion which Alsace-Lorraine would have contributed to

the empire to meet the expenses resulting from these payments, this contribution being calculated according to the proportion of the imperial revenues derived from Alsace-Lorraine in 1913.

Art. 59. The French Government will collect for its own account the imperial taxes, duties, and dues of every kind leviable in the territories referred to in Article 51 and not collected at the time of the armistice of the 11th November, 1918.

Art. 60. The German Government shall without delay restore to Alsace-Lorrainers, (individuals, juridical persons, and public institutions,) all property, rights, and interests belonging to them on the 11th November, 1918, in so far as these are situated in German territory.

Art. 61. The German Government undertakes to continue and complete without delay the execution of the financial clauses regarding Alsace-Lorraine contained in the armistice conventions.

Art. 62. The German Government undertakes to bear the expense of all civil and military pensions which had been earned in Alsace-Lorraine on the date of the 11th November, 1918, and the maintenance of which was a charge on the budget of the German Empire. The German Government shall furnish each year the funds necessary for the payment in francs, at the average rate of exchange for that year, of the sums in marks to which persons resident in Alsace-Lorraine would have been entitled if Alsace-Lorraine had remained under German jurisdiction.

Art. 63. For the purposes of the obligation assumed by Germany in Part VIII (reparations) of the present treaty to give compensation for damages caused to the civil populations of the Allied and Associated countries in the form of fines, the inhabitants of the territories referred to in Article 51 shall be assimilated to the above mentioned populations.

Art. 64. The regulations concerning the control of the Rhine and of the Moselle are laid down in Part XII (ports, waterways, and railways) of the present treaty.

Art. 65. Within a period of three weeks after the coming into force of the present treaty the port of Strasbourg and the port of Kehl shall be constituted, for a period of seven years, a single unit from the point of view of exploitation. The administration of this single unit will be carried on by a manager named by the Central Rhine Commission, which shall also have power to remove him. He shall be of French nationality. He will reside in Strasbourg and will be subject to the supervision of the Central Rhine Commission. There will be established in the two ports free zones in conformity with Part XII (ports, waterways, and railways) of the present treaty. A special convention between France and Germany, which shall be submitted to the approval of the Central Rhine Commission, will fix the details of this organization, particularly as regards finance. . . . All property rights shall be safeguarded. In particular, the administration of the ports shall not prejudice any property rights of the French or Baden railroads. Equality of treatment as respects traffic shall be assured in both ports to the nationals, vessels, and goods of every country.

In case at the end of the sixth year France shall consider that the progress made in the improvement of the Port of Strasbourg still requires a prolongation of this temporary régime, she may ask for such prolongation from the Central Rhine Commission, which may grant an extension for a period not exceeding three years. Throughout the

whole period of any such extension the free zones above provided for shall be maintained.

Pending appointment of the first manager by the Central Rhine Commission, a provisional manager, who shall be of French nationality, may be appointed by the principal Allied and Associated Powers, subject to the foregoing provisions. For all purposes of the present article the Central Rhine Commission will decide by a majority of votes.

Art. 66. The railway and other bridges across the Rhine now existing within the limits of Alsace-Lorraine shall, as to all their parts and their whole length, be the property of the French State, which shall insure their upkeep.

Art. 67. The French Government is substituted in all the rights of the German Empire over all the railways which were administered by the Imperial Railway Administration, and which are actually working or under construction. The same shall apply to the rights of the empire with regard to railway and tramway concessions within the territories referred to in Article 51. This substitution shall not entail any payment on the part of the French State. The frontier railway stations shall be established by a subsequent agreement, it being stipulated in advance that on the Rhine frontier they shall be situated on the right bank.

Art. 68. In accordance with the provisions of Article 268 of Chapter I of Section I of Part X (economic clauses) of the present treaty, for a period of five years from the coming into force of the present treaty, natural or manufactured products originating in and coming from the territories referred to in Article 51 shall, on importation into German customs territory, be exempt from all customs duty. The French Government shall fix each year, by decree communicated to the German Government, the nature and amount of the products which shall enjoy this exemption. The amount of each product which may be thus sent annually into Germany shall not exceed the average of the amounts sent annually in the years 1911-1913. Further, during the period of five years above mentioned, the German Government shall allow the free export from Germany and the free reimportation into Germany, exempt from all customs duties and other charges, (including internal charges,) of yarns, tissues, and other textile materials or textile products of any kind, and in any condition, sent from Germany into the territories referred to in Article 51, to be subjected there to any finishing process. . . .

Art. 69. During a period of ten years from the coming into force of the present treaty, central electric supply works situated in German territory, and formerly furnishing electric power to the territories referred to in Article 51, or to any establishment the working of which passes permanently or temporarily from Germany to France, shall be required to continue such supply up to the amount of consumption corresponding to the undertakings and contracts current on the 11th November, 1918. Such supply shall be furnished according to the contracts in force and at a rate which shall not be higher than that paid to the said works by German nationals.

Art. 70. It is understood that the French Government preserves its right to prohibit in the future in the territories referred to in Article 51 all new German participation. 1. In the management or exploitation of the public domain and of public services, such as railways, navigable waterways, water works, gas works, electric power, &c. 2. In the ownership of mines and quarries of every

kind and in enterprises connected therewith. 3. In metallurgical establishments, even though their working may not be connected with that of any mine.

Art. 71. As regards the territories referred to in Article 51, Germany renounces on behalf of herself and her nationals as from the 11th November, 1918, all rights under the law of the 25th May, 1910, regarding the trade in potash salts and generally under any stipulations for the intervention of German organizations in the working of the potash mines. Similarly she renounces on behalf of herself and her nationals all rights under any agreements, stipulations or laws, which may exist to her benefit with regard to other products of the aforesaid territories.

Art. 72. The settlement of the questions relating to debts contracted before the 11th November, 1918, between the German Empire and the German States or their nationals residing in Germany on the one part, and Alsace-Lorrainers residing in Alsace-Lorraine on the other part, shall be effected in accordance with the provisions of Section III of part X (economic clauses) of the present treaty, the expression "before the war" therein being replaced by the expression "before the 11th November, 1918." The rate of exchange applicable in the case of such settlement shall be the average rate quoted on the Geneva Exchange during the month preceding the 11th November, 1918. There may be established in the territories referred to in Article 51, for the settlement of the aforesaid debts under the conditions laid down in Section III of Part X (economic clauses) of the present treaty, a special clearing office, it being understood that his office shall be regarded as a "central office" under the provisions of Paragraph 1 of the annex to the said section.

Art. 73. The private property rights and interests of Alsace-Lorrainers in Germany will be regulated by the stipulations of Section IV of Part X (economic clauses) of the present treaty.

Art. 74. The French Government reserves the right to retain and liquidate all the property, rights and interests which German nationals or societies controlled by Germany possessed in the territories referred to in Article 51 on Nov. 11, 1918, subject to the conditions laid down in the last paragraph of Article 53 above. Germany will directly compensate its nationals who may have been dispossessed by the aforesaid liquidations. The product of these liquidations shall be applied in accordance with the stipulations of Sections III and IV of Part X (economic clauses) of the present treaty.

Art. 75. Notwithstanding the stipulations of Section V of Part X (economic clauses) of the present treaty, all contracts made before the date of the promulgation in Alsace-Lorraine of the French decree of 30th November, 1918, between Alsace-Lorrainers (whether individuals or juridical persons) or others resident in Alsace-Lorraine on the one part, and the German Empire or German States and their nationals resident in Germany on the other part, the execution of which has been suspended by the armistice or by subsequent French legislation, shall be maintained. Nevertheless, any contract of which the French Government shall notify the cancellation to Germany in the general interest within a period of six months from the date of the coming into force of the present treaty shall be annulled except in respect of any debt or other pecuniary obligation arising out of any act done or money paid thereunder before the 11th November, 1918. If this dissolution would cause one of the parties substantial prejudice, equitable

compensation, calculated solely on the capital employed without taking account of loss of profits, shall be accorded to the prejudiced party.

With regard to prescriptions, limitations, and forfeitures in Alsace-Lorraine, the provisions of Articles 300 and 301 of Section V Part X (economic clauses) shall be applied, with the substitution for the expression "outbreak of war" of the expression "11th November, 1918," and for the expression "duration of the war" of the expression "period from the 11th November, 1918, to date of the coming into force of the present treaty."

Art. 76. Questions concerning rights in industrial, literary, or artistic property of Alsace-Lorrainers shall be regulated in accordance with the general stipulations of Section VII of Part X (economic clauses) of the present treaty, it being understood that Alsace-Lorrainers holding rights of this nature under German legislation will preserve full and entire enjoyment of those rights on German territory.

Art. 77. The German Government undertakes to pay over to the French Government such proportion of all reserves accumulated by the empire or by public or private bodies dependent upon it, for the purposes of disability and old age insurance, as would fall to the disability and old age insurance fund at Strasbourg. The same shall apply in respect of the capital and reserves accumulated in Germany falling legitimately to other serial insurance funds, to miners' superannuation funds, to the fund of the railways of Alsace-Lorraine, to other superannuation organizations established for the benefit of the personnel of public administrations and institutions operating in Alsace-Lorraine, and also in respect of the capital and reserves due by the insurance fund of private employes at Berlin by reason of engagements entered into for the benefit of insured persons of that category resident in Alsace-Lorraine. A special convention shall determine the conditions and procedure of these transfers.

Art. 78. With regard to the execution of judgments, orders, and prosecutions, the following rules shall be applied: 1. All civil and commercial judgments which shall have been given since Aug. 3, 1914, by the courts of Alsace-Lorraine between Alsace-Lorrainers, or between Alsace-Lorrainers and foreigners, or between foreigners, and which shall not have been appealed from before the 11th November, 1918, shall be regarded as final and capable of being fully executed. When the judgment has been given between Alsace-Lorrainers and Germans, or between Alsace-Lorrainers and subjects of the allies of Germany, it shall only be capable of execution after the issue of an *exequatur* by the corresponding new tribunal in the restored territory referred to in Article 51. 2. All judgments given by German courts since the 3d August, 1914, against Alsace-Lorrainers for political crimes or misdemeanors shall be regarded as null and void. 3. All sentences passed since the 11th November, 1918, by the Imperial Court of Leipzig on Appeals against the decisions of the courts of Alsace-Lorraine shall be regarded as null and void and shall be so pronounced. The papers in regard to the cases in which such sentences have been given shall be returned to the courts of Alsace-Lorraine concerned. All appeals to the Imperial Court against decisions of the courts of Alsace-Lorraine shall be suspended. In the cases referred to above, the papers shall be returned under the aforesaid conditions for transfer without delay to the French Cour de Cassation which shall be competent to decide them. 4. All prosecu-

tions of Alsace-Lorraine for offenses committed during the period between the 11th November, 1918, and the coming into force of the present treaty will be conducted under German law except in so far as this has been modified by decrees duly published on the spot by the French authorities. All other questions as to competence, procedure or administration of justice, shall be determined by a special convention between France and Germany.

Art. 79. The stipulations as to nationality contained in the annex hereto shall be considered as of equal force with the provisions of the present section. All other questions concerning Alsace-Lorraine which are not regulated by the present section and the annex thereto, or by the general provisions of the present treaty, will form the subject of further conventions between France and Germany.

ANNEX

1. As from the 11th November, 1918, the following persons are ipso facto reinstated in French nationality. First—Persons who lost French nationality by the application of the Franco-German treaty of the 10th May, 1871, and who have not since that date acquired any nationality other than German; Second—The legitimate or natural descendants of the persons referred to in the immediately preceding paragraph, with the exception of those whose ascendants in the paternal line include a German who migrated into Alsace-Lorraine after the 15th July, 1870; Third—All persons born in Alsace-Lorraine of unknown parents or whose nationality is unknown.

2. Within the period of one year from the coming into force of the present treaty, persons included in any of the following categories may claim French nationality; First—All persons not restored to French nationality under Paragraph 1, above, whose ascendants include a Frenchman or French woman who lost French nationality under the conditions referred to in the said paragraph; Second—All foreigners not nationals of a German State who acquired the status of a citizen of Alsace-Lorraine before the 3d August, 1914; Third—All Germans domiciled in Alsace Lorraine, if they have been so domiciled since a date previous to 15th July, 1870, or if one of their ascendants was at that date domiciled in Alsace-Lorraine; Fourth—All Germans born or domiciled in Alsace-Lorraine who have served in the allied or associated armies during the present war and their descendants; Fifth—All persons born in Alsace-Lorraine before 10th May, 1871, of foreign parents, and the descendants of such persons; Sixth—The husband or wife of any person whose French nationality may have been restored under Paragraph 1 or who may have claimed and obtained French nationality in accordance with the preceding provisions. The legal representatives of a minor may exercise on behalf of that minor the right to claim French nationality; and if that right has not been exercised, the minor may claim French nationality within the year following his majority.

Except in the case provided in No. 6 of the present paragraph, the French authorities reserve to themselves the right in individual cases to reject the claim to French nationality.

3. Subject to the provisions of Paragraph 2, Germans born or domiciled in Alsace-Lorraine shall not acquire French nationality by reason of the restoration of Alsace-Lorraine to France, even though they may have the status of citizens of Alsace-Lorraine. They may acquire French na-

tionality only by naturalization, on condition of having been domiciled in Alsace-Lorraine from a date previous to the 3d August, 1914, and of submitting proof of unbroken residence within the restored territory for a period of three years from the 11th November, 1918. France will be solely responsible for their diplomatic and consular protection from the date of their application for French naturalization.

4. The French Government shall determine the procedure by which reinstatement in French nationality as of right shall be effected, and the conditions under which decisions shall be given upon claims to such nationality and applications for naturalization, as provided by the present annex.

• SECTION VI.—AUSTRIA

Art. 80. Germany acknowledges and will respect strictly the independence of Austria. Within the frontiers which may be fixed by a treaty between that State and the principal Allied and Associated Powers she agrees that this independence shall be inalienable, except with the consent of the Council of the League of Nations.

SECTION VII.—CZECHO-SLOVAK STATE

Art. 81. Germany, in conformity with the action already taken by the Allied and Associated Powers, recognizes the complete independence of the Czecho-Slovak State, which will include the autonomous territory of the Ruthenians to the south of the Carpathians. Germany hereby recognizes the frontier of this State as determined by the principal Allied and Associated Powers and the other interested States.

Art. 82. The old frontier as it existed on Aug. 3, 1914, between Austria-Hungary and the German Empire will constitute the frontier between Germany and the Czecho-Slovak State.

Art. 83. Germany renounces in favor of the Czecho-Slovak State all rights and title over the portion of Silesian territory defined as follows: Starting from a point about 2 kilometers southeast of Katscher, on the boundary between the Circles (Kreise) of Loebischütz and Ratibor; the boundary between the two Kreise; then, the former boundary between Germany and Austria-Hungary up to a point on the Oder immediately to the south of the Ratibor-Oderberg railway; thence, toward the northwest and up to a point about 2 kilometers to the southeast of Katscher: a line to be fixed on the spot passing to the west of Kranowitz. A commission composed of seven members, five nominated by the Principal Allied and Associated Powers, one by Poland, and one by the Czecho-Slovak State, will be appointed fifteen days after the coming into force of the present treaty to trace on the spot the frontier line between Poland and the Czecho-Slovak State. The decisions of this commission will be taken by a majority and shall be binding on the parties concerned. . . .

Art. 84. German nationals habitually resident in any of the territories recognized as forming part of the Czecho-Slovak State will obtain Czecho-Slovak nationality *ipso facto* and lose their German nationality.

Art. 85. Within a period of two years from the coming into force of the present treaty German nationals over 18 years of age habitually resident in any of the territories recognized as forming part of the Czecho-Slovak State will be entitled to opt for German nationality. Czecho-Slovaks who are habitually resident in Germany will have a similar

right to opt for Czecho-Slovak nationality. Option by a husband will cover his wife, and option by parents will cover their children under 18 years of age. Persons who have exercised the above right to opt must within the succeeding twelve months transfer their place of residence to the State for which they have opted. They will be entitled to retain their landed property in the territory of the other State where they had their place of residence before exercising the right to opt. They may carry with them their movable property of every description. No export or import duties may be imposed upon them in connection with the removal of such property. Within the same period Czecho-Slovaks who are German nationals and are in a foreign country will be entitled, in the absence of any provisions to the contrary in the foreign law, and if they have not acquired the foreign nationality, to obtain Czecho-Slovak nationality and lose their German nationality by complying with the requirements laid down by the Czecho-Slovak State.

Art. 86. The Czecho-Slovak State accepts and agrees to embody in a treaty with the principal Allied and Associated Powers such provisions as may be deemed necessary by the said powers to protect the interests of inhabitants of that State who differ from the majority of the population in race, language or religion. The Czecho-Slovak State further accepts and agrees to embody in a treaty with the said powers such provisions as they may deem necessary to protect freedom of transit and equitable treatment of the commerce of other nations. The proportion and nature of the financial obligations of Germany and Prussia which the Czecho-Slovak State will have to assume on account of the Silesian territory placed under its sovereignty will be determined in accordance with Article 254 of Part IX (financial clauses) of the present treaty. Subsequent agreements will decide all questions not decided by the present treaty which may arise in consequence of the cession of the said territory.

SECTION VIII.—POLAND

Art. 87. Germany, in conformity with the action already taken by the Allied and Associated Powers, recognizes the complete independence of Poland and renounces in her favor all rights and title over the territory bounded by the Baltic Sea; the eastern frontier of Germany as laid down in Article 27 of Part II (boundaries of Germany) of the present treaty, up to a point situated about two kilometers to the east of Lorzendorf, then a line to the acute angle which the northern boundary of Upper Silesia makes about three kilometers northwest of Simmenau, then to where the boundary of Upper Silesia has its meeting point with the old frontier between Germany and Russia, then this frontier to the point where it crosses the course of the Niemen, and then the northern frontier of East Prussia, as laid down in Article 28, Part II, aforesaid. The terms of this article do not, however, apply to the territories of East Prussia and the free city of Danzig, as defined in Article 28, of Part II (boundaries of Germany) and in Article 100 of Section XI (Danzig) of this part. The boundaries of Poland not laid down in the present treaty will be subsequently determined by the principal Allied and Associated Powers. A commission consisting of seven members, five of whom shall be nominated by the principal Allied and Associated Powers, one by Germany, and one by Poland, shall be constituted fifteen days after the coming into force of the present treaty to

delimit on the spot the frontier line between Poland and Germany. The decision of the commission will be taken by a majority of votes and shall be binding upon the parties concerned.

Art. 88. In the portion of Upper Silesia included within the boundaries described below the inhabitants will be called upon to indicate by a vote whether they wish to be attached to Germany or to Poland. . . . The régime under which this plebiscite will be taken and given effect to is laid down in the annex hereto. The Polish and German Governments hereby respectively bind themselves to conduct no prosecutions on any part of their territory and to take no exceptional proceedings for any political action performed in Upper Silesia during the period of the régime laid down in the annex hereto, and up to the settlement of the final status of the country. Germany hereby renounces in favor of Poland all rights and title over the portion of Upper Silesia lying beyond the frontier line fixed by the principal Allied and Associated Powers as this result of the plebiscite.

ANNEX

1. Within fifteen days from the coming into force of the present treaty the German troops and such officials as may be designated by the commission set up under the provisions of Paragraph 2 shall evacuate the plebiscite area. Up to the moment of the completion of the evacuation they shall refrain from any form of requisitioning in money or in kind and from all acts likely to prejudice the material interest of the country. Within the same period the workmen's and soldiers' councils which have been constituted in this area shall be dissolved. Members of such councils who are natives of another region and are exercising their functions at the date of the coming into force of the present treaty, or who have gone out of office since the 1st of March, 1919, shall be evacuated. All military and semi-military unions formed in the said area by the inhabitants of the district shall be immediately disbanded. All members of such military organizations who are not domiciled in the said area shall be required to leave it.

2. The plebiscite area shall be immediately placed under the authority of an international commission of four members to be designated by the following powers: The United States of America, France, the British Empire, and Italy. It shall be occupied by troops belonging to the Allied and Associated Powers, and the German Government undertakes to give facilities for the transference of troops to Upper Silesia.

3. The commission shall enjoy all the powers exercised by the German or by the Prussian Government; except those of legislation or taxation. . . . The commission will maintain order with the help of the troops which will be at its disposal and to the extent which it may deem necessary by means of gendarmerie recruited among the inhabitants of the country. The commission shall provide immediately for the replacement of the evacuated German officials, and, if occasion arises, shall itself order the evacuation of such authorities and proceed to the replacement of such local authorities as may be required. It shall take all steps which it thinks proper to insure the freedom, fairness, and secrecy of the vote. In particular, it shall have the right to order the expulsion of any person who may in any way have attempted to distort the result of the plebiscite by methods of corruption or intimidation. . . .

4. The vote shall take place at such date as may

be determined by the principal Allied and Associated Powers, but not sooner than six months or later than eighteen months after the establishment of the commission in the area. The right to vote shall be given to all persons, without distinction of sex. . . .

5. On the conclusion of the voting the number of votes cast in each commune will be communicated by the commission to the principal Allied and Associated Powers with a full report as to the taking of the vote and a recommendation as to the line which ought to be adopted as the frontier of Germany in Upper Silesia. In this recommendation regard will be paid to the wishes of the inhabitants, as shown by the vote, and to the geographical and economic conditions of the locality.

6. As soon as the frontier has been fixed by the principal Allied and Associated Powers the German authorities will be notified by the International Commission that they are free to take over the administration of the territory which it is recognized should be German; the said authorities must proceed to do so within one month of such notification and in the manner prescribed by the commission. Within the same period and in the manner prescribed by the commission, the Polish Government must proceed to take over the administration of the territory which it is recognized should be Polish. When the administration of the territory has been provided for by the German and Polish authorities respectively the powers of the commission will terminate. The cost of the Army of Occupation and expenditure by the commission, whether in discharge of its own functions or in the administration of the territory, will be a charge on the area.

Art. 89. Poland undertakes to accord freedom of transit to persons, goods, vessels, carriages, wagons, and mails in transit between East Prussia and the rest of Germany over Polish territory, including territorial waters, and to treat them at least as favorably as the persons, goods, vessels, carriages, wagons, and mails, respectively, of Polish or of any other most-favored nationality, origin, importation starting point, or ownership, as regards facilities, restrictions, and all other matters. Goods in transit shall be exempt from all customs or other similar duties. Freedom of transit will extend to telegraphic and telephonic services under the conditions laid down by the conventions referred to in Article 98.

Art. 90. Poland undertakes to permit, for a period of fifteen years, the exportation to Germany of the products of the mines in any part of Poland in accordance with the present treaty. Such export shall be subject to duties or other charges or restrictions on exportation. Poland agrees to take such steps as may be necessary to secure that such products shall be available for sale to purchasers in Germany on terms as favorable as are applicable to like products sold under similar conditions to purchasers in Poland or in any other country.

Art. 91. German nationals habitually resident in territories recognized as forming part of Poland will acquire Polish nationality *ipso facto* and will lose their German nationality. German nationals, however, or their descendants who became resident in these territories after Jan. 1, 1908, will not acquire Polish nationality without a special authorization from the Polish State. Within a period of two years after the coming into force of the present treaty, German nationals over 18 years of age, habitually resident in any of the territories recognized as forming part of Poland, will be entitled to opt for German nationality. Poles who are Ger-

man nationals over 18 years of age, and habitually resident in Germany will have a similar right to opt for Polish nationality. . . . Persons who have exercised the above right to opt must within the succeeding twelve months transfer their place of residence to the State for which they have opted. They will be entitled to retain their immovable property in the territory of the other State, where they had their place of residence before exercising the right to opt. They may carry with them their movable property of every description. Within the same period Poles who are German nationals and are in a foreign country will be entitled, in the absence of any provisions to the contrary in the foreign law, and if they have not acquired foreign nationality, to obtain Polish nationality and to lose their German nationality by complying with the requirements laid down by the Polish State. In this portion of Upper Silesia submitted to a plebiscite the provisions of this article should only come into force as from the definite attribution of the territory.

Art. 92. The proportion and the nature of the financial liabilities of Germany and Prussia to be borne by Poland will be determined in accordance with Article 254 of Part IX (financial clauses) of the present treaty. There shall be excluded from the share of such financial liabilities assumed by Poland that portion of the debt which, according to the finding of the Reparation Commission referred to in the above mentioned article, arises from measures adopted by the German and Prussian Governments with a view to German colonization in Poland. In fixing under Article 256 of the present treaty the value of the property and possessions belonging to the German Empire and to the German States which pass to Poland, with the territory transferred above, the Reparation Commission shall exclude from the valuation buildings, forests, and other State property which belonged to the former kingdom of Poland; Poland shall acquire these properties free of all costs and charges. In all the German territory transferred in accordance with the present treaty and recognized as forming definitely a part of Poland, the property rights and interests of German nationals shall not be liquidated under Article 297 by the Polish Government except in accordance with the following provisions: 1. The proceeds of the liquidation shall be paid direct to the owner; 2. If, on his application, the mixed arbitral tribunal provided for by the Section 6 of Part X (Economic Clauses) of the present treaty, or an arbitrator appointed by that tribunal, is satisfied that the conditions of the sale or measures taken by the Polish Government outside of its general legislation were unfairly prejudicial to the price obtained, they shall have discretion to ward to the owner equitable compensation to be paid by the Polish Government. . . .

Art. 93. Poland accepts and agrees to embody in a treaty with the principal Allied and Associated Powers such provisions as may be deemed necessary by the said powers to protect the interests of inhabitants of Poland who differ from the majority of the population in race, language or religion. Poland further accepts and agrees to embody in a treaty with the said powers such provisions as they may deem necessary to protect freedom of transit and equitable treatment of the commerce of other nations.

SECTION IX.—EAST PRUSSIA

Art. 94. In the area between the southern frontier of East Prussia, as described in Article 28 of

Part II (frontiers of Germany) of the present treaty, and the line described below, the inhabitants will be called upon to indicate by a vote the State to which they wish to belong. The western and northern boundary of Regierungsbezirk Allenstein to its junction with the boundary between the Kreise of Oletsko and Angerburg, thence, the northern boundary of the Kreis of Oletsko to its junction with the old frontier of East Prussia.

Art. 95. The German troops and authorities will be withdrawn from the area defined above within a period not exceeding fifteen days after the coming into force of the present treaty. Until the evacuation is completed they will abstain from all requisitions in money or in kind and from all measures injurious to the economic interests of the country. On the expiration of the above-mentioned period the said area will be placed under the authority of an International Commission of five members appointed by the principal Allied and Associated Powers. This commission will have general powers of administration and, in particular, will be charged with the duty of arranging for the vote, and of taking such measures as it may deem necessary to insure its freedom, fairness, and secrecy. . . . Every person, irrespective of sex, will be entitled to vote who: (a) Is 20 years of age at the date of the coming into force of the present treaty, and (b) Was born within the area where the vote will take place, or has been habitually resident there from a date to be fixed by the commission. . . . The result of the vote will be determined by commune, (Gemeinde,) according to the majority of the votes in each commune. On the conclusion of the voting the number of votes cast in each commune will be communicated by the commission to the principal Allied and Associated Powers with a full report as to the taking of the vote and a recommendation as to the line which ought to be adopted as the boundary of East Prussia in this region. In this recommendation, regard will be paid to the wishes of the inhabitants as shown by the vote, and to the geographical and economic conditions of the locality. The principal Allied and Associated Powers will then fix the frontier between East Prussia and Poland in this region. . . . When the administration of the territory by the East Prussian and Polish authorities, respectively, has been provided for, the powers of the commission will terminate. Expenditure by the commission, whether in the discharge of its own functions or in the administration of the territory, will be borne by the local revenues. . . .

Art. 96. In the area comprising the Kreise of Stuhm and Rosenberg, and the portion of the Kreis of Marienburg which is situated east of the Nogat, and that of Marienwerder east of the Vistula, the inhabitants will be called upon to indicate by a vote, to be taken in each commune (Gemeinde,) whether they desire the various communes situated in this territory to belong to Poland or to East Prussia.

Art. 97. The German troops and authorities will be withdrawn from the area defined in Article 96 within a period not exceeding fifteen days after the coming into force of the present treaty. Until the evacuation is completed they will abstain from all requisitions in money or in kind and from all measures injurious to the economic interests of the country. On the expiration of the above mentioned period the said area will be placed under the authority of an International Commission of five members appointed by the principal Allied and

Associated Powers. This commission, supported, if occasion arises, by the necessary forces, will have general powers of administration, and, in particular, will be charged with the duty of arranging for the vote and of taking such measures as it may deem necessary to insure its freedom, fairness, and secrecy. The commission will conform as far as possible to the provisions of the present treaty relating to the plebiscite in the Allenstein area. Its decision will be taken by a majority. . . . On the conclusion of the voting, the number of votes cast in each commune will be communicated by the commission to the principal Allied and Associated Powers, with a full report as to the taking of the vote and a recommendation as to the line which ought to be adopted as the boundary of East Prussia in this region. In this recommendation regard will be paid to the wishes of the inhabitants as shown by the vote and to the geographical and economic conditions of the locality. The principal Allied and Associated Powers will then fix the frontier between East Prussia and Poland in this region, leaving in any case to Poland for the whole of the section bordering on the Vistula full and complete control of the river, including the east bank as far east of the river as may be necessary for its regulation and improvement. Germany agrees that in any portion of the said territory which remains German no fortifications shall at any time be erected. The principal Allied and Associated Powers will at the same time draw up regulations for assuring to the population of East Prussia to the fullest extent, and under equitable conditions, access to the Vistula, and the use of it for themselves, their commerce, and their boats. The determination of the frontier and the foregoing regulations shall be binding upon all the parties concerned. When the administration of the territory has been taken over by the East Prussian and Polish authorities, respectively, the powers of the commission will terminate.

Art. 98. Germany and Poland undertake, within one year of the coming into force of this treaty, to enter into conventions of which the terms, in case of difference, shall be settled by the Council of the League of Nations, with the object of securing on the one hand to Germany full and adequate railroad, telegraphic, and telephonic facilities for communication between the rest of Germany and East Prussia over the intervening Polish territory, and on the other hand to Poland full and adequate railroad, telegraphic, and telephonic facilities for communication between Poland and the free city of Danzig over any German territory that may, on the right bank of the Vistula, intervene between Poland and the free city of Danzig.

SECTION X.—MEMEL

Art. 99. Germany renounces in favor of the principal Allied and Associated Powers all rights and title over the territories included between the Baltic, the northeastern frontier of East Prussia as defined in Article 28 of Part II (frontiers of Germany) of the present treaty and the former frontier between Germany and Russia. Germany undertakes to accept the settlement made by the principal Allied and Associated Powers in regard to these territories, particularly in so far as concerns the nationality of the inhabitants.

SECTION XI.—FREE CITY OF DANZIG

Art. 100. Germany renounces in favor of the principal Allied and Associated Powers all rights

and title over the territory comprised within the following limits: [Geographical details of the new state.] . . .

Art. 101. A commission composed of three members appointed by the principal Allied and Associated Powers, including a High Commissioner as President, one member appointed by Germany, and one member appointed by Poland, shall be constituted within fifteen days of the coming into force of the present treaty for the purpose of delimiting on the spot the frontier of the territory . . . taking into account as far as possible the existing communal boundaries.

Art. 102. The principal Allied and Associated Powers undertake to establish the town of Danzig, together with the rest of the territory described in Article 100, as a free city. It will be placed under the protection of the League of Nations.

Art. 103. A constitution for the free city of Danzig shall be drawn up by the duly appointed representatives of the free city in agreement with a High Commissioner to be appointed by the League of Nations. The constitution shall be placed under the guarantee of the League of Nations. The High Commissioner will also be entrusted with the duty of dealing in the first instance with all differences arising between Poland and the free city of Danzig in regard to this treaty or any arrangements or agreements made thereunder. The High Commissioner shall reside at Danzig.

Art. 104. The principal Allied and Associated Powers undertake to negotiate a treaty between the Polish Government and the free city of Danzig which shall come into force at the same time as the establishment of said free city, with the following objects: 1. To effect the inclusion of the free city of Danzig within the Polish customs frontiers and to establish a free area in the port. 2. To insure to Poland without any restriction the free use and service of all waterways, docks, basins, wharves, and other works within the territory of the free city necessary for Polish imports and exports. 3. To insure to Poland the control and administration of the Vistula and of the whole railway system within the free city; except such street and other railways as serve primarily the needs of the free city and of postal, telegraphic, and telephonic communication between Poland and the Port of Danzig. 4. To insure to Poland the right to develop and improve the waterways, docks, basins, wharves, railways, and other works and means of communication mentioned in this article, as well as to lease or purchase through appropriate processes such land and other property as may be necessary for these purposes. 5. To provide against any discrimination within the free city of Danzig to the detriment of citizens of Poland and other persons of Polish origin or speech. 6. To provide that the Polish Government shall undertake the conduct of the foreign relations of the free city of Danzig as well as the diplomatic protection of citizens of that city when abroad.

Art. 105. On the coming into force of the present treaty German nationals ordinarily resident in the territory described in Article 100 will *ipso facto* lose their German nationality, in order to become nationals of the free city of Danzig.

Art. 106. Within a period of two years from the coming into force of the present treaty German nationals over 18 years of age ordinarily resident in the territory described in Article 100 will have the right to opt for German nationality. All persons who exercise the right of option referred to above must during the ensuing twelve months

transfer their place of residence to Germany. These persons will be entitled to preserve the immovable property possessed by them in the territory of the free city of Danzig.

Art. 107. All property situated within the territory of the free city of Danzig belonging to the German Empire or any German State shall pass to the principal Allied and Associated Powers for transfer to the free city of Danzig or to the Polish State as they may consider equitable.

Art. 108. The proportion and nature of the financial liabilities of Germany and of Prussia to be borne by the free city of Danzig shall be fixed in accordance with Article 254 of Part IX (financial clauses) of the present treaty. . . .

SECTION XII.—SCHLESWIG

Art. 109. The frontier between Germany and Denmark shall be fixed in conformity with the wishes of the population. For this purpose the population inhabiting the territories of the former German empire situated to the north of a line from east to west . . . [and running thence through a number of places which are named] to the North Sea; thence passing south of the islands of Fohr and Amrum and north of the islands of Oland and Langeness shall be called upon to pronounce by a vote which will be taken under the following conditions:

1. Within a period not exceeding ten days from the coming into force of the present treaty, the German troops and authorities . . . shall evacuate the zone lying to the north of the line above fixed. Within the same period the Workmen's and Soldiers' Councils which have been constituted in this zone shall be dissolved. . . . The said zone shall immediately be placed under the authority of an international commission, composed of five members, of whom three will be designated by the principal Allied and Associated Powers; the Norwegian and Swedish Governments will each be requested to designate a member. In the event of their failing to do so, these two members will be chosen by the principal Allied and Associated Powers. The commission, assisted in case of need by the necessary forces, shall have general powers of administration. In particular, it shall at once provide for filling the places of the evacuated German authorities, and, if necessary, shall itself give orders for their evacuation and proceed to fill the places of such local authorities as may be required. It shall take all steps which it thinks proper to insure the freedom, fairness, and secrecy of the vote. It shall be assisted by German and Danish technical advisers chosen by it from among the local population. Its decisions will be taken by a majority.

2. The right to vote shall be given all persons, without distinction of sex, who: (a) Have completed their twentieth year at the date of the coming into force of the present treaty; and (b) Were born in the zone in which the plebiscite is taken, or had been domiciled there since a date before the 1st January, 1900, or had been expelled by the German authorities without having retained their domicile there. Military persons, officers, non-commissioned officers and soldiers of the German Army, who are natives of the zone of Schleswig, in which the plebiscite is taken, shall be given the opportunity to return to their native place in order to take part in the voting there.

3. In . . . [certain specified sections] of the evacuated zone . . . the vote above provided for shall be taken within a period not exceeding three

weeks after the evacuation of the country by the German troops and authorities. The result will be determined by the majority of votes cast in the whole of this section. . . . If the vote results in favor of the reincorporation of this territory in the Kingdom of Denmark, the Danish Government, in agreement with the commission, will be entitled to effect its occupation with their military and administrative authorities immediately after the proclamation.

4. In the section of the evacuation zone situated to the south of the preceding section and to the north of the line which starts from the Baltic Sea thirteen kilometers from Flensburg and ends north of the islands of Oland and Langeness, the vote will be taken within a period not exceeding five weeks after the plebiscite shall have been held in the first section. The result will be determined by communes (Gemeinden) in accordance with the majority of the votes cast in each commune. . . .

Art. 110. Pending a delimitation on the spot, a frontier line will be fixed by the principal Allied and Associated Powers according to a line based on the result of the voting, and proposed by the International Commission, and taking into account the particular geographical and economic conditions of the localities in question. From that time the Danish Government may effect the occupation of these territories which the Danish civil and military authorities, and the German Government may reinstate up to the said frontier line the German civil and military authorities whom it has evacuated. Germany hereby renounced definitely in favor of the principal Allied and Associated Powers all rights of sovereignty over the territories situated to the north of the frontier line fixed in accordance with the above provisions. The principal Allied and Associated Powers will hand over the said territories to Denmark.

Art. 111. A commission, composed of seven members, five of whom shall be nominated by the principal Allied and Associated Powers, one by Denmark, and one by Germany, shall be constituted within fifteen days from the date when the final result of the vote is known, to trace the frontier line on the spot. . . .

Art. 112. All the inhabitants of the territory which is returned to Denmark will acquire Danish nationality *ipso facto*, and will lose their German nationality. Persons, however, who had become habitually resident in this territory after the 1st October, 1918, will not be able to acquire Danish nationality without permission from the Danish Government.

Art. 113. Within two years from the date on which the sovereignty over the whole or part of the territory of Schleswig subjected to the plebiscite is restored to Denmark: Any person over 18 years of age, born in the territory restored to Denmark, not habitually resident in this region and possessing German nationality, will be entitled to opt for Denmark. Any person over 18 years of age habitually resident in the territory restored to Denmark will be entitled to opt for Germany. Persons who have exercised the above right to opt must within the ensuing twelve months transfer their place of residence to the State in favor of which they have opted. They will be entitled to retain the immovable property which they own in the territory of the other State in which they were habitually resident before opting. They may carry with them their movable property of every description.

Art. 114. The proportion and nature of the financial or other obligations of Germany and Prussia

which are to be assumed by Denmark will be fixed in accordance with Article 254 of Part IX (financial clauses) of the present treaty. Further stipulations will determine any other questions arising out of the transfer to Denmark of the whole or part of the territory of which she was deprived by the treaty of Oct. 30, 1864.

SECTION XIII.—HELGOLAND

Art. 115. The fortifications, military establishments, and harbors of the islands of Heligoland and Dune shall be destroyed under the supervision of the Principal Allied Governments by German labor and at the expense of Germany within a period to be determined by the said Governments. . . . These fortifications, military establishments, and harbors shall not be reconstructed, nor shall any similar works be constructed in future.

SECTION XIV.—RUSSIA AND RUSSIAN STATES

Art. 116. Germany acknowledges and agrees to respect as permanent and inalienable the independence of all the territories which were part of the former Russian Empire on Aug. 1, 1914. In accordance with the provisions of Article 259 of Part IX (financial clauses) and Article 292 of Part X (economic clauses) Germany accepts definitely the abrogation of the Brest-Litovsk Treaties and of all treaties, conventions, and agreements entered into by her with the Maximalist [Bolshevik] Government in Russia. The Allied and Associated Powers formally reserve the rights of Russia to obtain from Germany restitution and reparation based on the principles of the present treaty.

Art. 117. Germany undertakes to recognize the full force of all treaties or agreements which may be entered into by the Allied and Associated Powers with States now existing or coming into existence in future in the whole or part of the former Empire of Russia as it existed on Aug. 1, 1914, and to recognize the frontiers of any such States as determined therein.

Part IV.—German Rights and Interests outside Germany

Art. 118. In territory outside her European frontiers as fixed by the present treaty, Germany renounces all rights, titles, and privileges whatever in or over territory which belonged to her or to her allies, and all rights, titles, and privileges, whatever their origin, which she held as against the Allied and Associated Powers. Germany undertakes immediately to recognize and to conform to the measures which may be taken now or in the future by the principal Allied and Associated Powers, in agreement where necessary with third powers, in order to carry the above stipulation into effect. In particular, Germany declares her acceptance of the following articles relating to certain special subjects:

SECTION I.—GERMAN COLONIES

Art. 119. Germany renounces in favor of the Principal Allied and Associated Powers all her rights and titles over her overseas possessions.

Art. 120. All movable and immovable property in such territories belonging to the German Empire or to any German State shall pass to the Government exercising authority over such territories on the terms laid down in Article 257 of Part IX

(financial clauses) of the present treaty. The decision of the local courts in any dispute as to the nature of such property shall be final.

Art. 121. The provisions of Section I (commercial relations) and Section IV (property, rights, and interests) of Part X (economic clauses) of the present treaty shall apply in the case of these territories whatever be the form of government adopted for them.

Art. 122. The Government exercising authority over such territories may make such provisions as it thinks fit with reference to the repatriation from them of German nationals, and to the conditions upon which German subjects of European origin shall, or shall not, be allowed to reside, hold property, trade, or exercise a profession in them.

Art. 123. The provisions of Article 260 of Part IX (financial clauses) of the present treaty shall apply in the case of all agreements concluded with German nationals for the construction or exploitation of public works in the German overseas possessions, as well as any sub-concessions or contracts resulting therefrom which may have been made to or with such nationals.

Art. 124. Germany hereby undertakes to pay in accordance with the estimate to be presented by the French Government, and approved by the Reparation Commission, reparation for damage suffered by French nationals in the Cameroons or the frontier zone by reason of the acts of the German civil and military authorities and of German private individuals during the period from Jan. 1, 1900, to Aug. 1, 1914.

Art. 125. Germany renounces all rights under the conventions and agreements with France of Nov. 4, 1911, and Sept. 28, 1912, relating to equatorial Africa. She undertakes to pay to the French Government, in accordance with the estimate to be presented by the Government and approved by the Reparation Commission, all the deposits, credits, advances, &c., effected by virtue of these instruments in favor of Germany.

Art. 126. Germany undertakes to accept and observe the agreements made or to be made by the Allied and Associated Powers or some of them with any other power with regard to the trade in arms and spirits, and to the matters dealt within the general act of Berlin of Feb. 26, 1885, the general act of Brussels of July 2, 1890, and the conventions completing or modifying the same.

Art. 127. The native inhabitants of the former German overseas possessions shall be entitled to the diplomatic protection of the Governments exercising authority over those territories.

SECTION II.—CHINA

Art. 128. Germany renounces in favor of China all benefits and privileges resulting from the provisions of the final protocol signed at Peking on Sept. 7, 1901, and from all annexes, notes, and documents supplementary thereto. She likewise renounces in favor of China any claim to indemnities accruing thereunder subsequent to March 14, 1917.

Art. 129. From the coming into force of the present treaty the high contracting parties shall apply in so far as concerns them respectively: 1. The arrangement of Aug. 20, 1902, regarding the new Chinese customs tariff. 2. The arrangement of Sept. 27, 1905, regarding Whang-Poo, and the provisional supplementary arrangements of April 4, 1912. China, however, will no longer be bound to grant to Germany the advantages or privileges

which she allowed Germany under these arrangements.

Art. 130. Subject to the provisions of Section VIII of this part, Germany cedes to China all the buildings, wharves and pontoons, barracks, forts, arms and munitions of war, vessels of all kinds, wireless telegraphy installations and other public property belonging to the German Government, which are situated or may be in the German concessions at Tientsin and Hankow or elsewhere in Chinese territory. It is understood, however, that premises used as diplomatic or consular residences or offices are not included in the above cession, and, furthermore, that no steps shall be taken by the Chinese Government to dispose of the German public and private property situated within the so-called legation quarter at Peking without the consent of the diplomatic representatives of the powers which, on the coming into force of the present treaty, remain parties to the final protocol of Sept. 7, 1901.

Art. 131. Germany undertakes to restore to China within twelve months from the coming into force of the present treaty all the astronomical instruments which her troops in 1900-1901 carried away from China, and to defray all expenses which may be incurred in effecting such restoration, including the expenses of dismounting, packing, transporting, insurance, and installation in Peking.

Art. 132. Germany agrees to the abrogation of the leases from the Chinese Government under which the German concessions at Hankow and Tientsin are now held. China, restored to the full exercise of her sovereign rights in the above areas, declares her intention of opening them to international residence and trade. She further declares that the abrogation of the leases under which these concessions are now held shall not affect the property rights of nationals or Allied and Associated Powers who are holders of lots in these concessions.

Art. 133. Germany waives all claims against the Chinese Government or against any Allied or Associated Government arising out of the internment of German nationals in China and their repatriation. She equally renounces all claims arising out of the capture and condemnation of German ships in China or the liquidation, sequestration or control of German properties, rights, and interests in that country since Aug. 14, 1917. This provision, however, shall not affect the rights of the parties interested in the proceeds of any such liquidation, which shall be governed by the provisions of Part X (economic clauses) of the present treaty.

Art. 134. Germany renounces, in favor of the Government of his Britannic Majesty, the German State property in the British concession at Shameen at Canton. She renounces, in favor of the French and Chinese Governments conjointly, the property of the German school situated in the French concession at Shanghai.

SECTION III.—SIAM

Art. 135. Germany recognizes that all treaties, conventions, and agreements between her and Siam, and all rights, titles and privileges derived therefrom, including all rights of extraterritorial jurisdiction, terminated as from July 22, 1917.

Art. 136. All goods and property in Siam belonging to the German Empire or to any German State, with the exception of premises used as diplomatic or consular residences or offices, pass *ipso facto* and without compensation to the Siamese Government. The goods, property, and private

rights of German nationals in Siam shall be dealt with in accordance with the provisions of Part X (economic clauses) of the present treaty.

Art. 137. Germany waives all claims against the Siamese Government on behalf of herself or her nationals arising out of the seizure or condemnation of German ships, the liquidation of German property, or the internment of German nationals in Siam. This provision shall not affect the rights of the parties interested in the proceeds of any such liquidation, which shall be governed by the provisions of Part X (economic clauses) of the present treaty.

SECTION IV.—LIBERIA

Art. 138. Germany renounces all rights and privileges arising from the arrangements of 1911 and 1912 regarding Liberia, and particularly the right to nominate a German receiver of customs in Liberia. She further renounces all claim to participate in any measures whatsoever which may be adopted for the rehabilitation of Liberia.

Art. 139. Germany recognizes that all treaties and arrangements between her and Liberia terminated as from Aug. 4, 1917.

Art. 140. The property, rights, and interests of Germans in Liberia shall be dealt with in accordance with Part X (economic clauses) of the present treaty.

SECTION V.—MOROCCO

Art. 141. Germany renounces all rights, titles, and privileges conferred on her by the general act of Algeciras of April 7, 1906, and by the Franco-German agreements of Feb. 9, 1909, and Nov. 4, 1911. All treaties, agreements, arrangements, and contracts concluded by her with the Sherifian Empire are regarded as abrogated as from Aug. 3, 1914. In no case can Germany take advantage of these instruments, and she undertakes not to intervene in any way in negotiations relating to Morocco which may take place between France and the other powers.

Art. 142. Germany having recognized the French Protectorate in Morocco, hereby accepts all the consequences of its establishment, and she renounces the régime of the capitulations therein. This renunciation shall take effect as from Aug. 3, 1914.

Art. 143. The Sherifian Government shall have complete liberty of action in regulating the status of German nationals in Morocco and the conditions in which they may establish themselves there. German-protected persons, *semsars*, and '*associés agricoles*' shall be considered as having ceased, as from Aug. 3, 1914, to enjoy the privileges attached to their status and shall be subject to the ordinary law.

Art. 144. All property and possessions in the Sherifian Empire of the German Empire and the German States pass to the Maghzen without payment. For the purposes of this clause, the property and possessions of the German Empire and States shall be deemed to include all the property of the crown, the empire, or States, and the private property of the former German Emperor and other royal personages. All movable and immovable property in the Sherifian Empire belonging to German nationals shall be dealt with in accordance with Sections III and IV of Part X (economic clauses) of the present treaty. Mining rights which may be recognized as belonging to German nationals by the Court of Arbitration set up under the Moroccan mining regulations shall form the subject of a valuation, which the arbitrators shall be requested

to make, and these rights shall then be treated in the same way as property in Morocco belonging to German nationals.

Art. 145. The German Government shall insure the transfer to a person nominated by the French Government of the shares representing Germany's portion of the capital of the State Bank of Morocco. The value of these shares, as assessed by the Reparation Commission, shall be paid to the Reparation Commission for the credit of Germany on account of the sums due for reparation. The German Government shall be responsible for indemnifying its nationals so dispossessed. This transfer will take place without prejudice to the repayment of debts which German nationals may have contracted toward the State Bank of Morocco.

Art. 146. Moroccan goods entering Germany shall enjoy the treatment accorded to French goods.

SECTION VI.—EGYPT

Art. 147. Germany declares that she recognizes the protectorate proclaimed over Egypt by Great Britain on Dec. 18, 1914, and that she renounces the régime of the capitulations in Egypt. This renunciation shall take effect as from Aug. 4, 1914.

Art. 148. All treaties, agreements, arrangements, and contracts concluded by Germany with Egypt are regarded as abrogated as from Aug. 4, 1914. In no case can Germany avail herself of these instruments, and she undertakes not to intervene in any way in negotiations relating to Egypt which may take place between Great Britain and the other powers.

Art. 149. Until an Egyptian law of judicial organization establishing courts with universal jurisdiction comes into force, provision shall be made, by means of decrees issued by his Highness the Sultan for the exercise of jurisdiction over German nationals and property by the British consular tribunals.

Art. 150. The Egyptian Government shall have complete liberty of action in regulating the status of German nationals and the conditions under which they may establish themselves in Egypt.

Art. 151. Germany consents to the abrogation of the decree issued by his Highness the Khédive on Nov. 28, 1904, relating to the commission of the Egyptian public debt, or to such changes as the Egyptian Government may think it desirable to make therein.

Art. 152. Germany consents, in so far as she is concerned, to the transfer to his Britannic Majesty's Government of the powers conferred on his Imperial Majesty the Sultan, by the convention signed at Constantinople on Oct. 29, 1888, relating to the free navigation of the Suez Canal. She renounces all participation in the Sanitary, Maritime, and Quarantine Board of Egypt, and consents, in so far as she is concerned, to the transfer to the Egyptian authorities of the powers of that board.

Art. 153. All property and possessions in Egypt of the German Empire and the German States pass to the Egyptian Government without payment. For this purpose the property and possessions of the German Empire and States shall be deemed to include all the property of the crown, the empire or the States, and the private property of the former German Emperor and other royal personages. All movable and immovable property in Egypt belonging to German nationals shall be dealt with in accordance with Sections III and IV of Part X (economic clauses) of the present treaty.

Art. 154. Egyptian goods entering Germany shall enjoy the treatment accorded to British goods.

SECTION VII.—TURKEY AND BULGARIA

Art. 155. Germany undertakes to recognize and accept all arrangements which the Allied and Associated Powers may make with Turkey and Bulgaria, with reference to any rights, interests, and privileges whatever which might be claimed by Germany or her nationals in Turkey and Bulgaria and which are not dealt with in the provisions of the present treaty.

SECTION VIII.—SHANTUNG

Art. 156. Germany renounces, in favor of Japan, all her rights, titles, and privileges—particularly those concerning the territory of Kiao-Chau, railways, mines, and submarine cables, which she acquired in virtue of the treaty concluded by her with China on 6th March, 1898, and of all other arrangements relative to the Province of Shantung. All German rights in the Tsing-tao-Tsinan-Fu railway, including its branch lines, together with its subsidiary property of all kinds . . . are and remain acquired by Japan, together with all rights and privileges attaching thereto. The German State submarine cables from Tsing-tao to Shanghai and from Tsing-tao to Che Foo, with all the rights, privileges, and properties attaching thereto, are similarly acquired by Japan, free and clear of all charges and incumbrances.

Art. 157. The movable and immovable property owned by the German State in the territory of Kiao-Chau, as well as all the rights which Germany might claim in consequence of the works or improvements made or of the expenses incurred by her, directly or indirectly, in connection with this territory, are and remain acquired by Japan, free and clear of all charges and incumbrances.

Art. 158. Germany shall hand over to Japan within three months from the coming into force of the present treaty the archives, registers, plans, title deeds, and documents of every kind, wherever they may be, relating to the administration, whether civil, military, financial, judicial or other, of the territory of Kiao-Chau. Within the same period Germany shall give particulars to Japan of all treaties, arrangements or agreements relating to the rights, title or privileges referred to in the two preceding articles.

Part V.—Military, Naval, and Aerial Clauses

In order to render possible the initiation of a general limitation of the armaments of all nations, Germany undertakes strictly to observe the military, naval, and air clauses which follow:

SECTION I.—MILITARY CLAUSES

Chapter I.—Effectives and Cadres of the German Army

Art. 159. The German military forces shall be demobilized and reduced as prescribed hereinafter.

Art. 160. 1. By a date which must not be later than March 31, 1920, the German Army must not comprise more than seven divisions of infantry and three divisions of cavalry. After that date the total number of effectives in the army of the States constituting Germany must not exceed 100,000 men, including officers and establishments of depots. The army shall be devoted exclusively to the maintenance of order within the territory and to the control of the frontiers. The total effective strength of officers, including the personnel of staffs, whatever their composition, must not exceed 4,000.

2. Divisions and army corps headquarters staffs shall be organized in accordance with Table No. 1 annexed to this section. The number and strength of the units of infantry, artillery, engineers, technical services, and troops laid down in the aforesaid table constitute *maxima* which must not be exceeded. The following units may each have their own depot: An infantry regiment; a cavalry regiment; a regiment of field artillery; a battalion of pioneers.

3. The divisions must not be grouped under more than two army corps headquarters staffs. The maintenance or formation of forces differently grouped or of other organizations for the command of troops or for preparation for war is forbidden. The Great German General Staff and all similar organizations shall be dissolved and may not be reconstituted in any form. The officers, or persons in the position of officers, in the Ministries of War in the different States in Germany and in the administrations attached to them, must not exceed three hundred in number and are included in the maximum strength of four thousand laid down in the third sub-paragraph of the first paragraph of this article.

Art. 161. Army administrative services consisting of civilian personnel not included in the number of effectives prescribed by the present treaty will have such personnel reduced in each class to one-tenth of that laid down in the budget of 1913.

Art. 162. The number of employes or officials of the German States, such as customs officers, forest guards, and coast guards shall not exceed that of the employes or officials functioning in these capacities in 1913. The number of gendarmes and employes or officials of the local or municipal police may only be increased to an extent corresponding to the increase of population since 1913 in the districts or municipalities in which they are employed. These employes and officials may not be assembled for military training.

Art. 163. The reduction of the strength of the German military forces as provided for in Article 160 may be effected gradually in the following manner: Within three months from the coming into force of the present treaty the total number of effectives must be reduced to 200,000 and the number of units must not exceed twice the number of those laid down in Article 160. At the expiration of this period, and at the end of each subsequent period of three months, a conference of military experts of the principal Allied and Associated Powers will fix the reductions to be made in the ensuing three months, so that by the 31st of March, 1920, at the latest, the total number of German effectives does not exceed the maximum number of 100,000 men laid down in Article 160. In these successive reductions the same ratio between the number of officers and of men, and between the various kinds of units shall be maintained as is laid down in that article.

Chapter II.—Armament, Munitions, and Material

Art. 164. Up till the time at which Germany is admitted as a member of the League of Nations the German Army must not possess an armament greater than the amounts fixed in Table No. 2, annexed to this section, with the exception of an optional increase not exceeding one-twenty-fifth part for small arms and one-fiftieth part for guns, which shall be exclusively used to provide for such eventual replacements as may be necessary. Germany agrees that after she has become a member of the League of Nations the armaments fixed in

the said table shall remain in force until they are modified by the Council of the League. Furthermore she hereby agrees strictly to observe the decisions of the Council of the League on this subject.

Art. 165. The maximum number of guns, machine guns, trench mortars, rifles, and the amount of ammunition and equipment which Germany is allowed to maintain during the period between the coming into force of the present treaty and the date of March 31, 1920, referred to in Article 160, shall bear the same proportion to the amount authorized in Table No. 3 annexed to this section as the strength of the German Army as reduced from time to time in accordance with Article 163 bears to the strength permitted under Article 160.

Art. 166. At the date of March 31, 1920, the stock of munitions which the German Army may have at its disposal shall not exceed the amounts fixed in Table No. 3 annexed to this section. Within the same period the German Government will store these stocks at points to be notified to the Governments of the principal Allied and Associated Powers. The German Government is forbidden to establish any other stocks, depots, or reserves of munitions.

Art. 167. The number and calibre of the guns constituting at the date of the coming into force of the present treaty the armament of the fortified works, fortresses, and any land or coast forts which Germany is allowed to retain, must be notified immediately by the German Government to the Governments of the principal Allied and Associated Powers, and will constitute maximum amounts which may not be exceeded. Within two months from the coming into force of the present treaty the maximum stock of ammunition for these guns will be reduced to, and maintained at, the following uniform rates: Fifteen hundred rounds per piece for those the calibre of which is 10.5 cm. and under; 500 rounds per piece for those of higher calibre.

Art. 168. The manufacture of arms, munitions, or any war material shall only be carried out in factories or works the locations of which shall be communicated to and approved by the Governments of the principal Allied and Associated Powers, and the number of which they retain the right to restrict. Within three months from the coming into force of the present treaty all other establishments for the manufacture, preparation, storage, or design of arms, munitions, or any war material whatever shall be closed down. The same applies to all arsenals except those used as depots for the authorized stocks of munitions. Within the same period the personnel of these arsenals will be dismissed.

Art. 169. Within two months from the coming into force of the present treaty, German arms, munitions, and war materials, including anti-aircraft material, existing in Germany in excess of the quantities allowed must be surrendered to the Governments of the principal Allied and Associated Powers, to be destroyed or rendered useless. This will also apply to any special plant intended for the manufacture of military material, except such as may be recognized as necessary for equipping the authorized strength of the German Army. The surrender in question will be effected at such points in German territory as may be selected by the said Governments. Within the same period, arms, munitions, and war material, including anti-aircraft material, of origin other than German, in whatever state they may be, will be delivered to the said Governments, who will decide as to their disposal. Arms and munitions which on account of the suc-

cessive reductions in the strength of the German Army become in excess of the amounts authorized by Tables 2 and 3 of the annex must be handed over in the manner laid down above within such periods as may be decided by the conferences referred to in Article 163.

Art. 170. Importation into Germany of arms, munitions, and war material of every kind shall be strictly prohibited. The same applies to the manufacture for and export to foreign countries of arms, munitions, and war material of every kind.

Art. 171. The use of asphyxiating, poisonous or other gases and all analogous liquids, materials or devices being prohibited, their manufacture and importation are strictly forbidden in Germany. The same applies to materials specially intended for the manufacture, storage, and use of the said products or devices. The manufacture and the importation into Germany of armored cars, tanks, and all similar constructions suitable for use in war are also prohibited.

Art. 172. Within a period of three months from the coming into force of the present treaty the German Government will disclose to the Governments of the principal Allied and Associated Powers the nature and mode of manufacture of all explosives, toxic substances or other like chemical preparations used by them in the war or prepared by them for the purpose of being so used.

Chapter III.—Recruiting and Military Training

Art. 173. Universal compulsory military service shall be abolished in Germany. The German Army may only be constituted and recruited by means of voluntary enlistment.

Art. 174. The period of enlistment for noncommissioned officers and privates must be twelve consecutive years. The number of men discharged for any reason before the expiration of their term of enlistment must not exceed in any year 5 per cent. of the total effectives as fixed by the second sub-paragraph of Paragraph 1 of Article 160 of the present treaty.

Art. 175. The officers who are retained in the army must undertake the obligation to serve in it up to the age of forty-five years, at least. Officers newly appointed must undertake to serve on the active list for twenty-five consecutive years, at least. Officers who have previously belonged to any formation whatever of the army and who are not retained in the units allowed to be maintained must not take part in any military exercise, whether theoretical or practical, and will not be under any military obligations whatever. The number of officers discharged for any reason before the expiration of their term of service must not exceed in any year 5 per cent. of the total effectives of officers provided for in the third sub-paragraph of Paragraph 1 of Article 100 of the present treaty.

Art. 176. On the expiration of two months from the coming into force of the present treaty there must only exist in Germany the number of military schools which is absolutely indispensable for the recruitment of the officers of the units allowed. These schools will be exclusively intended for the recruitment of officers of each arm, in the proportion of one school per arm. The number of students admitted to attend the courses of the said schools will be strictly in proportion to the vacancies to be filled in the cadres of officers. The students and the cadres will be reckoned in the effectives fixed by the second and third sub para-

graphs of Paragraph 1 of Article 160 of the present treaty. Consequently, and during the period fixed above, all military academies or similar institutions in Germany, as well as the different military schools for officers, student officers, (aspiranten,) cadets, noncommissioned officers, or student non-commissioned officers, (aspiranten,) other than the schools above provided for, will be abolished.

Art. 177. Educational establishments, the universities, societies of discharged soldiers, shooting or touring clubs, and, generally speaking, associations of every description, whatever be the age of their members, must not occupy themselves with any military matters. In particular they will be forbidden to instruct or exercise their members, or to allow them to be instructed or exercised, in the profession or use of arms. These societies, associations, educational establishments, and universities must have no connection with the Ministries of War or any other military authority.

Art. 178. All measures of mobilization or appertaining to mobilization are forbidden. In no case must formations, administrative services, or general staffs include supplementary cadres.

Art. 179. Germany agrees, from the coming into force of the present treaty, not to accredit nor to send to any foreign country any military, naval, or air mission, nor to allow any such missions to leave her territory, and Germany further agrees to take appropriate measures to prevent German nationals from leaving her territory to become enrolled in the army, navy, or air service of any foreign power, or to be attached to such army, navy, or air service for the purpose of assisting in the military, naval, or air training thereof, or otherwise for the purpose of giving military, naval, or air instruction in any foreign country. The Allied and Associated Powers agree, so far as they are concerned, from the coming into force of the present treaty, not to enroll in nor to attach to their armies or naval or air forces any German national for the purpose of assisting in the military training of such armies or naval or air forces, or otherwise to employ any such German national as military, naval, or aeronautic instructor. The present provision, however, does not affect the right of France to recruit for the Foreign Legion in accordance with French military laws and regulations.

Chapter IV.—Fortifications

Art. 180. All fortified works, fortresses, and field works situated in German territory to the west of a line drawn fifty kilometers to the east of the Rhine shall be disarmed and dismantled. Within a period of two months from the coming into force of the present treaty such of the above fortified works, fortresses, and field works as are situated in territory not occupied by Allied and Associated troops shall be disarmed, and within a further period of four months they shall be dismantled. Those which are situated in territory occupied by Allied and Associated troops shall be disarmed and dismantled within such periods as may be fixed by the Allied High Command. The construction of any new fortification, whatever its nature and importance, is forbidden in the zone referred to in the first paragraph above. The system of fortified works of the southern and eastern frontiers of Germany shall be maintained in its existing state.

TABLE No. 1. [State and Establishment of Army Corps Headquarters Staffs and of Infantry and Cavalry Divisions.]

TABLE No. 2. [Tabular statement of armament

establishment for a maximum of seven infantry divisions, three cavalry divisions, and two army corps headquarters staffs.]

TABLE No. 3. [Maximum Stocks Authorized:]

SECTION II.—NAVAL CLAUSES

Art. 181. After the expiration of a period of two months from the coming into force of the present treaty the German naval forces in commission must not exceed: Six battleships of the Deutschland or Lothringen type, six light cruisers, twelve destroyers, twelve torpedo boats, or an equal number of ships constructed to replace them as provided in Article 190. No submarines are to be included. All other warships except where there is provision to the contrary in the present treaty, must be placed in reserve or devoted to commercial purposes.

Art. 182. Until the completion of the minesweeping prescribed by Article 193, Germany will keep in commission such number of minesweeping vessels as may be fixed by the Governments of the principal Allied and Associated Powers.

Art. 183. After the expiration of a period of two months from the coming into force of the present treaty the total personnel of the German Navy, including the manning of the fleet, coast defenses, signal stations, administration, and other land services, must not exceed 15,000, including officers and men of all grades and corps. The total strength of officers and warrant officers must not exceed 1,500. Within two months from the coming into force of the present treaty the personnel in excess of the above strength shall be demobilized. No naval or military corps or reserve force in connection with the navy may be organized in Germany without being included in the above strength.

Art. 184. From the date of the coming into force of the present treaty all the German surface warships which are not in German ports cease to belong to Germany, who renounces all rights over them. Vessels which, in compliance with the armistice of Nov. 11, 1918, are now interned in the ports of the Allied and Associated Powers, are declared to be finally surrendered. Vessels which are now interned in neutral ports will be there surrendered to the Governments of the principal Allied and Associated Powers. The German Government must address a notification to that effect to the neutral powers on the coming into force of the present treaty.

Art. 185. Within a period of two months from the coming into force of the present treaty the German surface warships enumerated below will be surrendered to the Governments of the principal Allied and Associated Powers in such allied ports as the said powers may direct. These warships will have been disarmed as provided in Article 23 of the armistice, dated Nov. 11, 1918. Nevertheless, they must have all their guns on board. Battleships—Oldenburg, Thuringen, Ostfriesland, Heligoland, Posen, Westfalen, Rheinland, and Nassau. Light Cruisers—Stettin, Danzig, München, Lübeck, Stralsund, Augsburg, Kolberg, and Stuttgart. And in addition forty-two modern destroyers and fifty modern torpedo boats, as chosen by the Governments of the principal Allied and Associated Powers.

Art. 186. On the coming into force of the present treaty the German Government must undertake, under the supervision of the Governments of the principal Allied and Associated Powers, the breaking up of all the German surface warships now under construction.

Art. 187. The German auxiliary cruisers and

fleet auxiliaries enumerated below will be disarmed and treated as merchant ships. Ships interned in neutral countries: Berlin, Santa Fé, Seydlitz, Yorck. Ships interned in Germany. . . .

Art. 188. On the expiration of one month from the coming into force of the present treaty all German submarines, salvage vessels, and docks for submarines, including the tubular dock, must have been handed over to the Governments of the principal Allied and Associated Powers. Such of these submarines, vessels, and docks as are considered by said Governments to be fit to proceed under their own power or to be towed shall be taken by the German Government into such allied ports as have been indicated. The remainder, and also those in course of construction, shall be broken up entirely by the German Government under the supervision of the said Governments. The breaking up must be completed within three months at the most after the coming into force of the present treaty.

Art. 189. Articles, machinery, and material arising from the breaking up of German warships of all kinds, whether surface vessels or submarines, may not be used except for purely industrial or commercial purposes. They may not be sold or disposed of to foreign countries.

Art. 190. Germany is forbidden to construct or acquire any warships other than those intended to replace the units in commission provided for in Article 181 of the present treaty. The warships intended for replacement purposes as above shall not exceed the following displacement: Armored ships, 10,000 tons; light cruisers, 6,000 tons; destroyers, 800 tons; torpedo boats, 200 tons. Except where a ship has been lost, units of the different classes shall only be replaced at the end of a period of twenty years in the case of battleships and cruisers, and fifteen years in the case of destroyers and torpedo boats, counting from the launching of the ship.

Art. 191. The construction or acquisition of any submarine, even for commercial purposes, shall be forbidden in Germany.

Art. 192. The warships in commission of the German fleet must only have on board or in reserve the allowance of arms, munitions, and war material fixed by the principal Allied and Associated Powers. Within a month from the fixing of the quantities as above, arms, munitions and war material of all kinds, including mines and torpedoes, now in the hands of the German Government and in excess of the said quantities, shall be surrendered to the Governments of the said powers at places to be indicated by them. Such arms, munitions and war material will be destroyed or rendered useless. All other stocks, depots or reserves of arms, munitions or naval war material of all kinds are forbidden. The manufacture of these articles in German territory for, and their export to, foreign countries shall be forbidden.

Art. 193. On the coming into force of the present treaty Germany will forthwith sweep up the mines in the following areas in the North Sea to the eastward of longitude 4 degrees 00 minutes east of Greenwich: (1) Between parallels of latitude 53 degrees 00 minutes N. and 59 degrees 00 minutes N.; (2) to the northward of latitude 60 degrees 30 minutes N. Germany must keep these areas free from mines. Germany must also sweep and keep free from mines such areas in the Baltic as may ultimately be notified by the Governments of the principal Allied and Associated Powers.

Art. 194. The personnel of the German Navy shall be recruited entirely by voluntary engagements entered into for a minimum period of

twenty-five consecutive years for officers and warrant officers, and twelve consecutive years for petty officers and men. The number engaged to replace those discharged for any reason before the expiration of their term of service must not exceed 5 per cent. per annum of the totals laid down in this section. (Article 183.) The personnel discharged from the navy must not receive any kind of naval or military training or undertake any further service in the navy or army. Officers belonging to the German Navy and not demobilized must engage to serve till the age of 45 unless discharged for sufficient reasons. No officer or man of the German mercantile marine shall receive any training in the navy.

Art. 195. In order to insure free passage into the Baltic to all nations, Germany shall not erect any fortifications in the area comprised between latitudes 55.27 north and 54.00 north and longitudes 9.00 east and 16.00 east of the meridian of Greenwich, nor install any guns commanding the maritime routes between the North Sea and the Baltic. The fortifications now existing in this area shall be demolished and the guns removed under the supervision of the allied Governments and in periods to be fixed by them. The German Government shall place at the disposal of the Governments of the principal Allied and Associated Powers all hydrographical information now in its possession concerning the channels and adjoining waters between the Baltic and the North Sea.

Art. 196. All fortified works and fortifications other than those mentioned in Article 195 and in Part III (political clauses for Europe) Section XIII (Heligoland) now established within fifty kilometers of the German coast or on German islands off that coast, shall be considered of a defensive nature and may remain in their existing condition. No new fortifications shall be constructed within these limits. The armament of these defenses shall not exceed, as regards the number and calibre of guns, those in position at the date of the coming into force of the present treaty. The German Government shall communicate forthwith particulars thereof to all the European Governments. On the expiration of a period of two months from the coming into force of the present treaty the stocks of ammunition for these guns shall be reduced to and maintained at a maximum figure of fifteen hundred rounds per piece for calibres of 4.1-inch and under, and five hundred rounds per piece for higher calibres.

Art. 197. During the three months following the coming into force of the present treaty the German high-power wireless telegraphy stations at Nauen, Hanover, and Berlin shall not be used for the transmission of messages concerning naval, military, or political questions of interest to Germany or any State which has been allied to Germany in the war, without the assent of the Governments of the principal Allied and Associated Powers. These stations may be used for commercial purposes, but only under the supervision of the said Governments, who will decide the wave length to be used. During the same period Germany shall not build any more high-power wireless telegraphy stations in her own territory or that of Austria, Hungary, Bulgaria, or Turkey.

SECTION III.—AIR CLAUSES

Art. 198. The armed forces of Germany must not include any military or naval air forces. Germany may, during a period not extending beyond Oct. 1, 1919, maintain a maximum number of 100

seaplanes or flying boats, which shall be exclusively employed in searching for submarine mines, shall be furnished with the necessary equipment for this purpose, and shall in no case carry arms, munitions, or bombs of any nature whatever. In addition to the engines installed in the seaplanes or flying boats above mentioned, one spare engine may be provided for each engine of each of these craft. No dirigible shall be kept.

Within two months from the coming into force of the present treaty the personnel of the air forces on the rolls of the German land and sea forces shall be demobilized. Up to the 1st October, 1919, however, Germany may keep and maintain a total number of 1,000 men, including officers, for the whole of the cadres and personnel, flying and non-flying, of all formations and establishments.

Art. 200. Until the complete evacuation of German territory by the Allied and Associated troops, the aircraft of the Allied and Associated Powers shall enjoy in Germany freedom of passage through the air, freedom of transit and landing.

Art. 201. During the six months following the coming into force of the present treaty the manufacture and importation of aircraft, parts of aircraft, engines for aircraft, and parts of engines for aircraft shall be forbidden in all German territory.

Art. 202. On the coming into force of the present treaty all military and naval aeronautical material, except the machines mentioned in the second and third paragraphs of Article 198, must be delivered to the Governments of the principal Allied and Associated Powers. Delivery must be effected at such places as the said Governments may select, and must be completed within three months. In particular, this material will include all items under the following heads, which are or have been in use or were designed for warlike purposes: Complete airplanes and seaplanes, as well as those being manufactured, repaired, or assembled. Dirigibles able to take the air being manufactured, repaired, or assembled. Plant for the manufacture of hydrogen. Dirigible sheds and shelters of every kind for aircraft. Pending their delivery, dirigibles will, at the expense of Germany, be maintained inflated with hydrogen; the plant for the manufacture of hydrogen, as well as the sheds for dirigibles, may, at the discretion of said powers, be left to Germany until the time when the dirigibles are handed over. Engines for aircraft. Nacelles and fuselages. Armament, (guns, machine guns, light machine guns, bomb-dropping apparatus, torpedo-dropping apparatus, synchronization apparatus, aiming apparatus.) Munitions, (cartridges, shells, bombs, loaded or unloaded, stocks of explosives or of material for their manufacture. Instruments for use on aircraft. Wireless apparatus and photographic or cinematograph apparatus for use on aircraft. Component parts of any of the items under the preceding heads. The material referred to above shall not be removed without special permission from the said Governments.

SECTION IV.—INTERALLIED COMMISSIONS OF CONTROL

Art. 203. All the military, naval, and air clauses contained in the present treaty, for the execution of which a time limit is prescribed, shall be executed by Germany under the control of interallied commissions specially appointed for this purpose by the principal Allied and Associated Powers.

Art. 204. The Interallied Commissions of Control will be specially charged with the duty of seeing to the complete execution of the delivery, destruc-

tion, demolition, and rendering things useless to be carried out at the expense of the German Government in accordance with the present treaty. They will communicate to the German authorities the decisions which the principal Allied and Associated Powers have reserved the right to take, or which the execution of the military, naval, and air clauses may necessitate.

Art. 205. The Interallied Commissions of Control may establish their organizations at the seat of the Central German Government. They shall be entitled as often as they think desirable to proceed to any point whatever in German territory, or to send sub-commissions, or to authorize one or more of their members to go, to any such point.

Art. 206. The German Government must give all necessary facilities for the accomplishment of their missions to the Interallied Commissions of Control and to their members. It shall attach a qualified representative to each Interallied Commission of Control for the purpose of receiving the communications which the commission may have to address to the German Government, and of supplying or procuring for the commission all information or documents which may be required. The German Government must in all cases furnish at its own cost all labor and material required to effect the deliveries and the work of destruction, dismantling, demolition, and of rendering things useless, provided for in the present treaty.

Art. 207. The upkeep and cost of the Commissions of Control and the expenses involved by their work shall be borne by Germany.

Art. 208. The Military Interallied Commission of Control will represent the Governments of the principal Allied and Associated Powers in dealing with the German Government in all matters concerning the execution of the military clauses. . . . The German Government must furnish to the Military Interallied Commission of Control all such information and documents as the latter may deem necessary to insure the complete execution of the military clauses, and in particular all legislative and administrative documents and regulations.

Art. 209. The Naval Interallied Commission of Control will represent the Governments of the principal Allied and Associated Powers in dealing with the German Government in all matters concerning the execution of the naval clauses. . . . The German Government must furnish to the Naval Interallied Commission of Control all such information and documents as the commission may deem necessary to insure the complete execution of the naval clauses. . . .

Art. 210. The Aeronautical Interallied Commission of Control will represent the Governments of the principal Allied and Associated Powers in dealing with the German Government in all matters concerning the execution of the air clauses. . . . The German Government must furnish to the Aeronautical Interallied Commission of Control all such information and legislative, administrative or other documents which the commission may consider necessary to insure the complete execution of the air clauses. . . .

SECTION V.—GENERAL ARTICLES

Art. 211. After the expiration of a period of three months from the coming into force of the present treaty, the German laws must have been modified and shall be maintained in conformity with this part of the present treaty. Within the same period all the administrative or other measures relat-

ing to the execution of this part of the treaty must have been taken.

Art. 212. The following portions of the armistice of Nov. 11, 1918: Article VI, the first two and the sixth and seventh paragraphs of Article VII, Article IX, Clauses I, II, and V of Annex No. 2 and the protocol, dated April 4, 1919, supplementing the armistice of Nov. 11, 1918, remain in force so far as they are not inconsistent with the above stipulations.

Art. 213. So long as the present treaty remains in force, Germany undertakes to give every facility for any investigation which the Council of the League of Nations, acting if need be by a majority vote, may consider necessary.

Part VI.—Prisoners of War and Graves

SECTION I.—PRISONERS OF WAR

Art. 214. The repatriation of prisoners of war and interned civilians shall take place as soon as possible after the coming into force of the present treaty and shall be carried out with the greatest rapidity.

Art. 215. The repatriation of German prisoners of war and interned civilians shall, in accordance with Article 214, be carried out by a commission composed of representatives of the Allied and Associated Powers on the one part, and of the German Government on the other part. For each of the Allied and Associated Powers a subcommission composed exclusively of representatives of the interested powers and of delegates of the German Government shall regulate the details of carrying into effect the repatriation of the prisoners of war.

Art. 216. From the time of their delivery into the hands of the German authorities the prisoners of war and interned civilians are to be returned without delay to their homes by the said authorities. Those among them who before the war were habitually resident in territory occupied by the troops of the Allied and Associated Powers are likewise to be sent to their homes, subject to the consent and control of the military authorities of the Allied and Associated Armies of Occupation.

Art. 217. The whole cost of repatriation from the moment of starting shall be borne by the German Government, who shall also provide the land and sea transport and staff considered necessary by the commission referred to in Article 215.

Art. 218. Prisoners of war and interned civilians awaiting disposal or undergoing sentences for offenses against discipline shall be repatriated irrespective of the completion of their sentence or of the proceedings pending against them. This stipulation shall not apply to prisoners of war and interned civilians punished for offenses committed subsequent to May 1, 1919. During the period pending their repatriation all prisoners of war and interned civilians shall remain subject to the existing regulations, more especially as regards work and discipline.

Art. 219. Prisoners of war and interned civilians who are awaiting disposal or undergoing sentence for offenses other than those against discipline may be detained.

Art. 220. The German Government undertakes to admit to its territory without distinction all persons liable to repatriation. Prisoners of war or other German nationals who do not desire to be repatriated may be excluded from repatriation; but the Allied and Associated Governments reserve to themselves the right either to repatriate them

or to take them to a neutral country or to allow them to reside in their own territories. The German Government undertakes not to institute any exceptional proceedings against these persons or their families nor to take any repressive or vexatious measures of any kind whatsoever against them on this account.

Art. 221. The Allied and Associated Governments reserve the right to make the repatriation of German prisoners of war or German nationals in their hands conditional upon the immediate notification and release by the German Government of any prisoners of war who are nationals of the Allied and Associated Powers and may still be in Germany.

Art. 222. Germany undertakes 1. To give every facility to the commissions to inquire into the cases of those who cannot be traced; to furnish such commissions with all necessary means of transport; to allow them access to camps, prisons, hospitals, and all other places; and to place at their disposal all documents, whether public or private, which would facilitate their inquiries. 2. To impose penalties upon any German officials or private persons who have concealed the presence of any nationals of any of the Allied and Associated Powers, or have neglected to reveal the presence of any such after it had come to their knowledge.

Art. 223. Germany undertakes to restore without delay from the date of the coming into force of the present treaty all articles, money, securities, and documents which have belonged to nationals of the Allied and Associated Powers and which have been retained by the German authorities.

Art. 224. The high contracting parties waive reciprocally all repayment of sums due for the maintenance of prisoners of war in their respective territories.

SECTION II.—GRAVES

Art. 225. The Allied and Associated Governments and the German Government will cause to be respected and maintained the graves of the soldiers and sailors buried in their respective territories. They agree to recognize any commission appointed by an Allied or Associated Government for the purpose of identifying, registering, caring for, or erecting suitable memorials over the said graves and to facilitate the discharge of its duties. Furthermore, they agree to afford, so far as the provisions of their laws and the requirements of public health allow, every facility for giving effect to requests that the bodies of their soldiers and sailors may be transferred to their own countries.

Art. 226. The graves of prisoners of war and interned civilians who are nationals of the different belligerent States and have died in captivity shall be properly maintained in accordance with Article 225 of the present treaty. The Allied and Associated Governments on the one part, and the German Government on the other part, reciprocally undertake also to furnish to each other: 1. A complete list of those who have died, together with all information useful for identification. 2. All information as to the number and position of the graves of all those who have been buried without identification.

Part VII.—Penalties

Art. 227. The Allied and Associated Powers publicly arraign William II. of Hohenzollern, formerly German Emperor, for a supreme offense

against international morality and the sanctity of treaties. A special tribunal will be constituted to try the accused, thereby assuring him the guarantees essential to the right of defense. It will be composed of five judges, one appointed by each of the following powers: The United States of America, Great Britain, France, Italy, and Japan. In its decision, the tribunal will be guided by the highest motives of international policy with a view to vindicating the solemn obligations of international undertakings and the validity of international morality. It will be its duty to fix the punishment which it considers should be imposed. The Allied and Associated Powers will address a request to the Government of the Netherlands for the surrender to them of the ex-Emperor in order that he may be put on trial.

Art. 228. The German Government recognizes the right of the Allied and Associated Powers to bring before military tribunals persons accused of having committed acts in violation of the laws and customs of war. Such persons shall, if found guilty, be sentenced to punishments laid down by law. This provision will apply, notwithstanding any proceedings or prosecution before a tribunal in Germany or in the territory of her allies. The German Government shall hand over to the Allied and Associated Powers or to such one of them as shall so request, all persons accused of having committed an act in violation of the laws and customs of war who are specified either by name or by the rank, office, or employment which they held under the German authorities.

Art. 229. Persons guilty of criminal acts against the nationals of one of the Allied and Associated Powers will be brought before the military tribunals of that power. Persons guilty of criminal acts against the nationals of more than one of the Allied and Associated Powers will be brought before military tribunals composed of members of the military tribunals of the powers concerned. In every case the accused will be entitled to name his own counsel.

Art. 230. The German Government undertakes to furnish all documents and information of every kind, the production of which may be considered necessary to insure the full knowledge of the incriminating acts, the discovery of offenders, and the just appreciation of responsibility.

Part VIII.—Reparation

SECTION I.—GENERAL PROVISIONS

Art. 231. The Allied and Associated Governments affirm, and Germany accepts, the responsibility of Germany and her allies for causing all the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war imposed upon them by the aggression of Germany and her allies.

Art. 232. The Allied and Associated Governments recognize that the resources of Germany are not adequate, after taking into account permanent diminutions of such resources which will result from other provisions of the present treaty, to make complete reparation for all such loss and damage. The Allied and Associated Governments, however, require, and Germany undertakes, that she will make compensation for all damage done to the civilian population of the Allied and Associated Powers and to their property during the period of the belligerency of each as an Allied or

Associated Power against Germany by such aggression by land, by sea, and from the air, and in general all damage as defined in Annex I hereto. In accordance with Germany's pledges, already given as to complete restoration for Belgium, Germany undertakes, in addition to the compensation for damage elsewhere in this chapter provided for, as a consequence of the violation of the treaty of 1839, to make reimbursement of all sums which Belgium has borrowed from the Allied and Associated Governments up to Nov. 11, 1918, together with interest at the rate of 5 per cent. per annum on such sums. This amount shall be determined by the Reparation Commission, and the German Government undertakes thereupon forthwith to make a special issue of bearer bonds to an equivalent amount payable in marks gold, on May 1, 1926, or, at the option of the German Government, on the 1st of May in any year up to 1926. Subject to the foregoing, the form of such bonds shall be determined by the Reparation Commission. Such bonds shall be handed over to the Reparation Commission, which has authority to take and acknowledge receipt thereof on behalf of Belgium.

Art. 233. The amount of the above damage for which compensation is to be made by Germany shall be determined by an interallied commission, to be called the Reparation Commission, and constituted in the form and with the power set forth hereunder and in Annexes II to VII inclusive hereto. This commission shall consider the claims and give to the German Government a just opportunity to be heard. The findings of the commission as to the amount of damage defined as above shall be concluded and notified to the German Government on or before the 1st May, 1921, as representing the extent of that Government's obligations. The commission shall concurrently draw up a schedule of payments prescribing the time and manner for securing and discharging the entire obligation within a period of thirty years from the 1st May, 1921. If, however, within the period mentioned, Germany fails to discharge her obligations, any balance remaining unpaid may, within the discretion of the commission, be postponed for settlement in subsequent years, or may be handled otherwise in such manner as the Allied and Associated Governments, acting in accordance with the procedure laid down in this part of the present treaty, shall determine.

Art. 234. The Reparation Commission shall after the 1st May, 1921, from time to time, consider the resources and capacity of Germany and, after giving her representatives a just opportunity to be heard, shall have discretion to extend the date and to modify the form of payments, such as are to be provided for in accordance with Article 233; but not to cancel any part, except with the specific authority of the several Governments represented upon the commission.

Art. 235. In order to enable the Allied and Associated Powers to proceed at once to the restoration of their industrial and economic life, pending the full determination of their claims, Germany shall pay in such installments and in such manner (whether in gold, commodities, ships, securities, or otherwise) as the Reparation Commission may fix, during 1919, 1920, and the first four months of 1921, the equivalent of 20,000,000,000 gold marks. Out of this sum the expenses of the armies of occupation subsequent to the armistice of the 11th November, 1918, shall first be met, and such supplies of food and raw materials as may be judged by the Governments of the principal Allied and Associated Powers to be essential to enable Germany to meet her obligations for reparation

may also, with the approval of the said Governments, be paid for out of the above sum. The balance shall be reckoned toward liquidation of the amounts due for reparation. Germany shall further deposit bonds as prescribed in Paragraph 12 (c) of Annex II hereto.

Art. 236. Germany further agrees to the direct application of her economic resources to reparation as specified in Annexes III, IV, V, and VI, relating respectively to merchant shipping, to physical restoration, and to coal and derivatives of coal, and to dyestuffs and other chemical products; provided always that the value of the property transferred and any services rendered by her under these annexes, assessed in the manner therein prescribed, shall be credited to her toward liquidation of her obligations under the above articles.

Art. 237. The successive installments, including the above sum, paid over by Germany in satisfaction of the above claims, will be divided by the Allied and Associated Governments in proportions which have been determined upon by them in advance on a basis of general equity and of the rights of each. For the purposes of this division the value of property transferred and services rendered under Article 243 and under Annexes III, IV, V, VI, and VII shall be reckoned in the same manner as cash payments effected in that year.

Art. 238. In Addition to the payments mentioned above, Germany shall effect, in accordance with the procedure laid down by the Reparation Commission, restitution in cash of cash taken away, seized, or sequestered, and also restitution of animals, objects of every nature, and securities taken away, seized, or sequestered, in the cases in which it proves possible to identify them in territory belonging to Germany or her allies. Until this procedure is laid down restitution will continue in accordance with the provisions of the armistice of 11th of November, 1918, and its renewals and the protocols thereto.

Art. 239. Germany undertakes to make forthwith the restitution contemplated by Article 238 and to make the payments and deliveries contemplated by Articles 233, 234, 235, and 236.

Art. 240. Germany recognizes the commission provided for by Article 233 as the same may be constituted by the Allied and Associated Governments in accordance with Annex II and agrees irrevocably to the possession and exercise by such commission of the power and authority given to it under the present treaty. The German Government will supply to the commission all the information which the commission may require relative to the financial situation and operations and to the property, productive capacity, and stocks and current production of raw materials and manufactured articles of Germany and her nationals, and, further, any information relative to military operations which in the judgment of the commission may be necessary for the assessment of Germany's liability for reparation as defined in Annex I. The German Government will accord to the members of the commission and its authorized agents the same rights and immunities as are enjoyed in Germany by duly accredited diplomatic agents of friendly powers. Germany further agrees to provide for the salaries and expenses of the commission, and of such staff as it may employ.

Art. 241. Germany undertakes to pass, issue, and maintain in force any legislation, orders, and decrees that may be necessary to give complete effect to these present.

Art. 242. The provisions of this part of the present treaty do not apply to the property, rights,

and interests referred to in Sections III and IV of Part X (economic clauses) of the present treaty, nor to the product of their liquidation, except so far as concerns any final balance in favor of Germany under Article 243, (a).

Art. 243. The following shall be reckoned as credits to Germany in respect of her reparation obligations: (a) Any final balance in favor of Germany under Sections III and IV of Part X (economic clauses) and Section V (Alsace-Lorraine) of Part III (political clauses for Europe). (b) Amounts due to Germany in respect of transfers under Part IX (financial clauses) Part XII (ports, waterways, and railways) and section IV (Sarre Basin) of Part III (political clauses for Europe). (c) Amounts which in the judgment of the Reparation Commission should be credited to Germany on account of any other transfers under the present treaty of property, rights, concessions, or other interests. In no case, however, shall credit be given for property restored in accordance with Article 238.

Art. 244. The transfer of the German submarine cables which do not form the subject of particular provisions of the present treaty is regulated by Annex VII hereto.

ANNEX I

[Categories of Damages]

Compensation may be claimed from Germany under Article 232 above in respect of the total damage under the following categories: 1. Damage to injured persons and to surviving dependents by personal injury to or death of civilians caused by acts of war. . . . 2. Damage caused by Germany or her allies to civilian victims of acts of cruelty, violence, or maltreatment (including injuries to life or health as a consequence of imprisonment, deportation, internment, or evacuation, of exposure at sea, or of being forced to labor by Germany or her allies.) . . . 3. Damage caused by Germany or her allies in their own territory or in occupied or invaded territory to civilian victims of all acts injurious to health or capacity to work, or to honor, as well as to the surviving dependents of such victims. 4. Damage caused by any kind of maltreatment of prisoners of war. 5. As damage caused to the peoples of the Allied and Associated Powers, all pensions and compensations in the nature of pensions to naval and military victims of war, (including members of the air forces,) whether mutilated, wounded, sick, or invalided, and to the dependents of such victims. . . . 6. The cost of assistance by the Governments of the Allied and Associated Powers to prisoners of war and to their families and dependents. 7. Allowances by the Governments of the Allied and Associated Powers to the families and dependents of mobilized persons or persons serving with the forces, the amount due to them for each calendar year in which hostilities occurred being calculated for each Government on the basis of the average scale for such payments in force in France during that year. 8. Damage caused to civilians by being forced by Germany or her allies to labor without just remuneration. 9. Damage in respect of all property, wherever situated, belonging to any of the Allied or Associated States or their nationals, with the exception of naval and military works or materials, which have been carried off, seized, injured, or destroyed by the acts of Germany or her allies on land, on sea, or from the air. . . . 10. Damage in the form of levies, fines and other similar exac-

tions imposed by Germany or her allies upon the civilian population.

ANNEX II

[Reparation Commission]

1. The commission referred to in Article 233 shall be called "The Reparation Commission," and is hereinafter referred to as 'the commission.'

2. Delegates to the commission shall be nominated by the United States of America, Great Britain, France, Italy, Japan, Belgium, and the Serb-Croat-Slovene State. Each of these powers will appoint one delegate and also one assistant delegate, who will take his place in case of illness or necessary absence, but at other times will only have the right to be present at proceedings without taking any part therein. On no occasion shall the delegates of more than five of the above powers have the right to take part in the proceedings of the commission and to record their votes. The delegates of the United States, Great Britain, France, and Italy shall have this right on all occasions. The delegate of Belgium shall have this right on all occasions other than those referred to below. The delegate of Japan shall have this right on occasions when questions relating to damage at sea and questions arising under Article 260 of Part IX (financial clauses) in which Japanese interests are concerned are under consideration. The delegate of the Serb-Croat-Slovene State shall have this right when questions relating to Austria, Hungary, or Bulgaria are under consideration. Each Government represented on the commission shall have the right to withdraw therefrom upon twelve months' notice, filed with the commission and confirmed in the course of the sixth month after the date of the original notice.

3. Such of the other Allied and Associated Powers as may be interested shall have the right to appoint a delegate to be present and act as assessor only while their respective claims and interests are under examination or discussion, but without the right to vote.

4. In case of the death, resignation or recall of any delegate, assistant delegate, or assessor, a successor to him shall be nominated as soon as possible.

5. The commission will have its principal permanent bureau in Paris and will hold its first meeting in Paris as soon as practicable after the coming into force of the present treaty, and thereafter will meet in such place or places and at such time as it may deem convenient and as may be necessary for the most expeditious discharge of its duties.

6. At its first meeting the commission shall elect from among the delegates referred to above a Chairman and a Vice-Chairman, who shall hold office for one year and shall be eligible for reelection. . . .

7. The commission is authorized to appoint all necessary officers, agents, and employees who may be required for the execution of its functions, and to fix their remuneration; to constitute committees, whose members need not necessarily be members of the commission. . . .

8. All proceedings of the commission shall be private unless, on particular occasions, the commission shall otherwise determine for special reasons.

9. The commission shall be required, if the German Government so desire, to hear, within a period which it will fix from time to time, evidence and arguments on the part of Germany on any question connected with her capacity to pay.

10. The commission shall consider the claims and give to the German Government a just opportunity to be heard, but not to take any part whatever in the decisions of the commission. The commission shall afford a similar opportunity to the allies of Germany when it shall consider that their interests are in question.

11. The commission shall not be bound by any particular code or rules of law or by any particular rule of evidence or of procedure, but shall be guided by justice, equity, and good faith. Its decisions must follow the same principles and rules in all cases where they are applicable. . . .

12. The commission shall have all the powers conferred upon it, and shall exercise all the functions assigned to it by the present treaty. The commission shall in general have wide latitude as to its control and handling of the whole reparation problem as dealt within this part of the present treaty, and shall have authority to interpret its provisions. Subject to the provisions of the present treaty, the commission is constituted by the several Allied and Associated Governments referred to in Paragraphs 2 and 3 above as the exclusive agency of the said Governments respectively for receiving, selling, holding, and distributing the reparation payments to be made by Germany under this part of the present treaty. The commission must comply with the following conditions and provisions: (a) Whatever part of the full amount of the proved claims is not paid in gold, or in ships, securities, and commodities or otherwise, Germany shall be required, under such conditions as the commission may determine, to cover by way of guarantee by an equivalent issue of bonds, obligations, or otherwise, in order to constitute an acknowledgment of the said part of the debt: (b) In periodically estimating Germany's capacity to pay, the commission shall examine the German system of taxation, first to the end that the sums for reparation which Germany is required to pay shall become a charge upon all her revenues prior to that for the service or discharge of any domestic loan, and, secondly, so as to satisfy itself that, in general, the German scheme of taxation is fully as heavy proportionately as that of any of the powers represented on the commission. (c) In order to facilitate and continue the immediate restoration of the economic life of the Allied and Associated countries, the commission will, as provided in Article 235, take from Germany by way of security for and acknowledgment of her debt a first installment of gold bearer bonds free of all taxes or charges of every description established or to be established by the Government of the German Empire or of the German States, or by any authority subject to them; these bonds will be delivered on account and in three portions, the marks gold being payable in conformity with Article 262 of Part IX (financial clauses) of the present treaty, as follows: *First*. To be issued forthwith, 20,000,000,000 marks gold bearer bonds, payable not later than May 1, 1921, without interest. There shall be specially applied toward the amortization of these bonds the payments which Germany is pledged to make in conformity with Article 235, after deduction of the sums used for the reimbursement of expenses of the armies of occupation and for payment of foodstuffs and raw materials. Such bonds as have not been redeemed by May 1, 1921, shall then be exchanged for new bonds of the same type as those provided for below, (Paragraph 12, c. second.) *Second*. To be issued forthwith, further 40,000,000,000 marks gold bearer bonds, bearing interest at $2\frac{1}{2}$ per cent. per annum between 1921 and 1926, and thereafter at 5 per cent. per annum,

with an additional 1 per cent. for amortization beginning in 1926 on the whole amount of the issue. *Third*. To be delivered forthwith a covering undertaking in writing, to issue when, but not until, the commission is satisfied that Germany can meet such interest and sinking fund obligations, a further installment of 40,000,000,000 marks gold 5 per cent. bearer bonds, the time and mode of payment of principal and interest to be determined by the commission.

The dates for payment of interest, the manner of applying the amortization fund, and all other questions relating to the issue, management, and regulation of the bond issue shall be determined by the commission from time to time. Further issues by way of acknowledgment and security may be required as the commission subsequently determines from time to time. (d) In the event of bonds, obligations, or other evidence of indebtedness issued by Germany by way of security for or acknowledgment of her reparation debt being disposed of outright, not by way of pledge, to persons other than the several Governments in whose favor Germany's original reparation indebtedness was created, an amount of such reparation indebtedness shall be deemed to be extinguished corresponding to the nominal value of the bonds, &c., so disposed of outright, and the obligation of Germany in respect of such bonds shall be confined to her liabilities to the holders of the bonds, as expressed upon their face. (e) The damage for repairing, reconstructing, and rebuilding property in the invaded and devastated districts, including reinstallation of furniture, machinery and other equipment, will be calculated according to the cost at the dates when the work is done. (f) Decisions of the commission relating to the total or partial cancellation of the capital or interest of any verified debt of Germany must be accompanied by a statement of its reasons.

13. As to voting, the commission will observe the following rules: When a decision of the commission is taken, the votes of all the delegates entitled to vote, or in the absence of any of them, of their assistant delegates, shall be recorded. Abstention from voting is to be treated as a vote against the proposal under discussion. Assessors have no vote.

On the following questions unanimity is necessary: (a) Questions involving the sovereignty of any of the Allied and Associated Powers, or the cancellation of the whole or any part of the debt or obligations of Germany. (b) Questions of determining the amount and conditions of bonds or other obligations to be issued by the German Government and of fixing the time and manner for selling, negotiating, or distributing such bonds. (c) Any postponement, total or partial, beyond the end of 1930, of the payment of installments falling due between the 1st May, 1921, and the end of 1926 inclusive. (d) Any postponement, total or partial, of any installment falling due after 1926 for a period exceeding three years. (e) Questions of applying in any particular case a method of measuring damages different from that which has been previously applied in a similar case. (f) Questions of the interpretation of the provisions of this part of the present treaty.

All other questions shall be decided by the vote of a majority. In case of any difference of opinion among the delegates, which cannot be solved by reference to their Governments, upon the question whether a given case is one which requires a unanimous vote for its decision or not, such difference shall be referred to the immediate arbitration

of some impartial person to be agreed upon by the Governments, whose award the Allied and Associated Governments agree to accept.

14. Decisions of the commission, in accordance with the powers conferred upon it, shall forthwith become binding and may be put into immediate execution without further proceedings.

15. The commission will issue to each of the interested powers, in such form as the commission shall fix: *First*. A certificate stating that it holds for the account of the said power bonds of the issues mentioned above, the said certificate, on the demand of the power concerned, being divisible in a number of parts not exceeding five; *Second*. From time to time certificates stating the goods delivered by Germany on account of her reparation debt which it holds for the account of the said power. The said certificates shall be registered, and, upon notice to the commission, may be transferred by indorsement. When bonds are issued for sale or negotiation, and when goods are delivered by the commission, certificates to an equivalent value must be withdrawn.

16. Interest shall be debited to Germany as from 1st May, 1921, in respect of her debt as determined by the commission, after allowing for sums already covered by cash payments or their equivalent, or by bonds issued to the commission, or under Article 243. The rate of interest shall be 5 per cent., unless the commission shall determine at some future time that circumstances justify a variation of this rate. The commission, in fixing on 1st May, 1921, the total amount of the debt of Germany, may take account of interest due on sums arising out of the reparation of material damage as from 11th November, 1918, up to 1st May, 1921.

17. In case of default by Germany in the performance of any obligation under this part of the present treaty, the commission will forthwith give notice of such default to each of the interested powers and may make such recommendations as to the action to be taken in consequence of such default as it may think necessary.

18. The measures which the Allied and Associated Powers shall have the right to take, in case of voluntary default by Germany, and which Germany agrees not to regard as acts of war, may include economic and financial prohibitions and reprisals and in general such other measures as the respective Governments may determine to be necessary in the circumstances.

19. Payments required to be made in gold or its equivalent on account of the proved claims of the Allied and Associated Powers may at any time be accepted by the commission in the form of chattels, properties, commodities, businesses, rights, concessions, within or without German territory, ships, bonds, shares, or securities of any kind, or currencies of Germany or other States, the value of such substitutes for gold being fixed at a fair and just amount by the commission itself.

20. The commission, in fixing or accepting payment in specified properties or rights, shall have due regard for any legal or equitable interests of the Allied and Associated Powers or of neutral powers or of their nationals therein.

21. No member of the commission shall be responsible, except to the Government appointing him, for any action or omission as such member. No one of the Allied or Associated Governments assumes any responsibility in respect of any other Government.

22. Subject to the provisions of the present treaty this annex may be amended by the unanimous decision of the Governments represented from time to time upon the commission.

23. When all the amounts due from Germany and her allies under the present treaty or the decisions of the commission have been discharged and all sums received, or their equivalents, shall have been distributed to the powers interested, the commission shall be dissolved.

ANNEX III

[Shipping]

1. Germany recognizes the right of the Allied and Associated Powers to the replacement, ton for ton (gross tonnage) and class for class, of all merchant ships and fishing boats lost or damaged owing to the war. Nevertheless, and in spite of the fact that the tonnage of German shipping at present in existence is much less than that lost by the Allied and Associated Powers in consequence of the German aggression, the right thus recognized will be enforced on German ships and boats under the following conditions: The German Government on behalf of themselves and so as to bind all other persons interested, cede to the Allied and Associated Governments the property in all the German merchant ships which are of 1,600 tons gross and upward; in one-half, reckoned in tonnage, of the ships which are between 1,000 tons and 1,600 tons gross; in one-quarter, reckoned in tonnage, of the steam trawlers, and in one-quarter, reckoned in tonnage, of the other fishing boats.

2. The German Government will, within two months of the coming into force of the present treaty, deliver to the Reparation Commission all the ships and boats mentioned in Paragraph 1.

3. The ships and boats mentioned in Paragraph 1 include all ships and boats which (a) fly, or may be entitled to fly, the German merchant flag; or (b) are owned by any German national, company, or corporation or by any company or corporation belonging to a country other than an Allied or Associated country and under the control or direction of German nationals; or (c) which are now under construction (1) in Germany, (2) in other than Allied or Associated countries for the account of any German national, company, or corporation.

4. For the purpose of providing documents of title for the ships and boats to be handed over as above mentioned the German Government will: (a) Deliver to the Reparation Commission in respect of each vessel a bill of sale or other document of title evidencing the transfer to the commission of the entire property in the vessel free from all incumbrances, charges, and liens of all kinds, as the commission may require; (b) Take all measures that may be indicated by the Reparation Commission for insuring that the ships themselves shall be placed at its disposal.

5. As an additional part of reparation, Germany agrees to cause merchant ships to be built in German yards for the account of the Allied and Associated Governments as follows: (a) Within three months of the coming into force of the present treaty, the Reparation Commission will notify to the German Government the amount of tonnage to be laid down in German shipyards in each of the two years next succeeding the three months mentioned above; (b) Within twenty-four months of the coming into force of the present treaty, the Reparation Commission will notify to the German Government the amount of tonnage to be laid down in each of the three years following the two years mentioned above; (c) The amount of tonnage to be laid down in each year shall not exceed 200,000 tons, gross tonnage; (d) The specifications of the ships to be built, the conditions

under which they are to be built and delivered, the price per ton at which, they are to be accounted for by the Reparation Commission, and all other questions relating to the accounting, ordering, building and delivery of the ships, shall be determined by the commission.

6. Germany undertakes to restore in kind and in normal condition of upkeep to the Allied and Associated Powers, within two months of the coming into force of the present treaty, in accordance with procedure to be laid down by the Reparation Commission, any boats and other movable appliances belonging to inland navigation which since the 1st August, 1914, have by any means whatever come into her possession or into the possession of her nationals, and which can be identified. With a view to make good the loss in inland navigation tonnage, from whatever cause arising, which has been incurred during the war by the Allied and Associated Powers, and which cannot be made good by means of the restitution prescribed above, Germany agrees to cede to the Reparation Commission a portion of the German river fleet up to the amount of the loss mentioned above, provided that such cession shall not exceed 20 per cent. of the river fleet as it existed on the 11th November, 1918. The condition of this session shall be settled by the arbitrators referred to in Article 339 of Part XII (ports, waterways and railways) of the present treaty, who are charged with the settlement of difficulties relating to the apportionment of river tonnage resulting from the new international régime applicable to certain river systems or from the territorial changes affecting those systems.

7. Germany agrees to take any measures that may be indicated to her by the Reparation Commission for obtaining the full title to the property in all ships which have been during the war transferred, or are in process of transfer, to neutral flags, without the consent of the Allied and Associated Governments.

8. Germany waives all claims of any description against the Allied and Associated Governments and their nationals in respect of the detention, employment, loss or damage of any German ships or boats, except when being made of payments due in respect of the employment of ships in conformity with the armistice agreement of the 13th January, 1919, and subsequent agreements. The handing over of the ships of the German mercantile marine must be continued without interruption in accordance with the said agreement.

9. Germany waives all claims to vessels or cargoes sunk by or in consequence of naval action and subsequently salvaged, in which any of the Allied or Associated Governments or their nationals may have any interest, either as owners, charterers, insurers or otherwise, notwithstanding any decree of condemnation which may have been made by a prize court of Germany or of her allies.

ANNEX IV

[Devastated Areas]

1. The Allied and Associated Powers require, and Germany undertakes, that, in part satisfaction of her obligations expressed in this part of the present treaty, she will, as hereinafter provided, devote her economic resources directly to the physical restoration of the invaded areas of the Allied and Associated Powers, to the extent that these powers may determine.

2. The Allied and Associated Governments may

file with the Reparation Commission lists showing: (a) Animals, machinery, equipment, tools, and like articles of commercial character, which have been seized, consumed, or destroyed by Germany or destroyed in direct consequence of military operations, and which such Governments, for the purpose of meeting immediate and urgent needs, desire to have replaced by animals and articles of the same nature which are in being in German territory at the date of the coming into force of the present treaty: (b) Reconstruction materials, (stones, bricks, refractory bricks, tiles, wood, window glass, steel, lime, cement, &c.,) machinery, heating apparatus, furniture, and like articles of a commercial character which the said Governments desire to have produced and manufactured in Germany and delivered to them to permit of the restoration of the invaded areas.

3. The lists relating to the articles mentioned in 2 (a), above, shall be filed within sixty days after the date of the coming into force of the present treaty. The lists relating to the articles in 2 (b), above, shall be filed on or before Dec. 31, 1919. The lists shall contain all such details as are customary in commercial contracts dealing with the subject matter, including specifications, dates of delivery, (but not extending over more than four years,) and places of delivery, but not price or value, which shall be fixed as hereinafter provided by the commission.

4. Immediately upon the filing of such lists with the commission, the commission shall consider the amount and number of the materials and animals mentioned in the lists provided for above which are to be required of Germany. . . . Machinery, equipment, tools, and like articles of a commercial character in actual industrial use are not, however, to be demanded of Germany unless there is no free stock of such articles respectively which is not in use and is available, and then not in excess of 30 per cent. of the quantity of such articles in use in any one establishment or undertaking. The commission shall give representatives of the German Government an opportunity and a time to be heard as to their capacity to furnish the said materials, articles, and animals. . . . The German Government undertakes to deliver the materials, articles, and animals as specified in the said communication, and the interested Allied and Associated Governments severally agree to accept the same, provided they conform to the specification given. . . .

5. The commission shall determine the value to be attributed to the materials, articles, and animals to be delivered in accordance with the foregoing, and the Allied or Associated Power receiving the same agrees to be charged with such value, and the amount thereof shall be treated as a payment by Germany to be divided in accordance with Article 237 of this part of the present treaty. In cases where the right to require physical restoration as above provided is exercised the commission shall insure that the amount to be credited against the reparation obligation of Germany shall be the fair value of work done or materials supplied by Germany and that the claim made by the interested power in respect of the damage so repaired by physical restoration shall be discharged to the extent of the proportion which the damage thus repaired bears to the whole of the damage thus claimed for.

6. As an immediate advance on account of the animals referred to in Paragraph 2 (a) above, Germany undertakes to deliver in equal monthly installments in the three months following the com-

ing into force of the present treaty the following quantities of live stock: *First.* To the French Government, 500 stallions, (3 to 7 years,) 30,000 fillies and mares, (18 months to 7 years,) type: Ardennais, Boulonnais, or Belgian; 2,000 bulls, (18 months to 3 years,) 90,000 milch cows, (2 to 6 years,) 1,000 rams, 100,000 sheep, 10,000 goats. *Second.* To the Belgian Government, 200 stallions (3 to 7 years,) large Belgian type; 5,000 mares, (3 to 7 years,) large Belgian type; 5,000 fillies, (18 months to 3 years,) large Belgium type; 2,000 bulls, (18 months to 3 years,) 50,000 milch cows, (2 to 6 years,) 40,000 heifers, 200 rams, 20,000 sheep, 15,000 sows. The animals delivered shall be of average health and condition. To the extent that animals so delivered cannot be identified as animals taken away or seized, the value of such animals shall be credited against the reparation obligations of Germany in accordance with Paragraph 5 of this annex.

7. Without waiting for the decisions of the commission, referred to in Paragraph 4 of this annex, to be taken, Germany must continue the delivery to France of the agricultural material referred to in Article 3 of the renewal of the armistice of 16th January, 1919.

ANNEX V

[Coal and Coal Tar Products]

1. Germany accords the following options for the delivery of coal and derivatives of coal to the under-mentioned signatories of the present treaty.

2. Germany undertakes to deliver to France 7,000,000 tons of coal per year for ten years. In addition, Germany undertakes to deliver to France annually for a period not exceeding ten years an amount of coal equal to the difference between the annual production before the war of the coal mines of the Nord and Pas de Calais, destroyed as a result of the war, and the production of the mines of the same area during the years in question; such delivery not to exceed 20,000,000 tons in any one year of the first five years, and 8,000,000 tons in any one year of the succeeding five years. It is understood due diligence will be exercised in the restoration of the destroyed mines in the Nord and Pas de Calais.

3. Germany undertakes to deliver to Belgium 8,000,000 tons of coal annually for ten years.

4. Germany undertakes to deliver to Italy up to the following quantities of coal: July, 1919, to June, 1920, 4,500,000 tons. July, 1920, to June, 1921, 6,000,000 tons. July, 1921, to June, 1922, 7,500,000 tons. July, 1922, to June, 1923, 8,000,000 tons. July, 1923, to June, 1924, 8,500,000 tons. And each of the following five years, 8,500,000 tons. At least two-thirds of the actual deliveries to be land borne.

5. Germany further undertakes to deliver annually to Luxemburg, if directed by the Reparation Commission, a quantity of coal equal to the pre-war annual consumption of German coal in Luxemburg.

6. [Stipulation for prices to be paid for coal delivered under these options.] . . .

7. The Allied and Associated Governments interested may demand the delivery in place of coal of metallurgical coke in the proportion of three tons of coke to four tons of coal.

8. Germany undertakes to deliver to France and to transport to the French frontier by rail or by water the following products during each of the three years following the coming into force of this treaty: Benzol—35,000 tons. Coal tar—50,000

tons. Sulphate of ammonia—30,000 tons. All or part of the coal tar may, at the option of the French Government, be replaced by corresponding quantities of products of distillation, such as light oils, heavy oils, anthracene, naphthaline, or pitch.

9. The price paid for coke and for the articles referred to in the preceding paragraphs shall be the same as the price paid by German nationals under the same conditions of shipment to the French frontier or to the German ports, and shall be subject to any advantages which may be accorded similar products furnished to German nationals.

10. The foregoing options shall be exercised through the intervention of the Reparation Commission, which, subject to the specific provisions hereof, shall have power to determine all questions relative to procedure and the qualities and quantities of products, the quantity of coke which may be substituted for coal, and the times and modes of delivery and payment. In giving notice to the German Government of the foregoing options the commission shall give at least 120 days' notice of deliveries to be made after the 1st January, 1920, and at least thirty days' notice of deliveries to be made between the coming into force of this treaty and the 1st January, 1920. . . . If the commission shall determine that the full exercise of the foregoing options would interfere unduly with the industrial requirements of Germany, the commission is authorized to postpone or to cancel deliveries, and in so doing to settle all questions of priority, but the coal to replace coal from destroyed mines shall receive priority over other deliveries.

ANNEX VI

[Dyestuffs and Chemical Drugs]

1. Germany accords to the Reparation Commission an option to require as part of reparation the delivery by Germany of such quantities and kinds of dyestuffs and chemical drugs as the commission may designate, not exceeding 50 per cent. of the total stock of each and every kind of dyestuff and chemical drug in Germany or under German control at the date of the coming into force of the present treaty. This option shall be exercised within sixty days of the receipt by the commission of such particulars as to stocks as may be considered necessary by the commission.

2. Germany further accords to the Reparation Commission an option to require delivery during the period from the date of the coming into force of the present treaty until Jan. 1, 1920, and during each period of six months thereafter until Jan. 1, 1925, of any specified kind of dyestuff and chemical drug up to an amount not exceeding 25 per cent. of the German production of such dyestuffs and chemical drugs during the previous six months' period. . . .

3. For dyestuffs and chemical drugs delivered . . . the price shall be fixed by the commission, having regard to pre-war net export prices and subsequent variations of cost or the lowest net selling price of similar dyestuffs and chemical drugs to any other purchaser.

4. All details, including mode and times of exercising the options and making delivery, and all other questions arising under this arrangement shall be determined by the Reparation Commission.

5. The above expression "dyestuffs and chemical drugs" includes all synthetic dyes and drugs and intermediate or other products used in connection with dyeing, so far as they are manufactured for sale.

ANNEX VII

[Submarine Cables]

Germany renounces on her own behalf and on behalf of her nationals in favor of the principal Allied and Associated Powers all rights, titles or privileges of whatever nature in the submarine cables set out below, or in any portions thereof:

Emden-Vigo: from the Straits of Dover to off Vigo;

Emden-Brest: from off Cherbourg to Brest;

Emden-Teneriffe: from off Dunkirk to off Teneriffe;

Emden-Azores (1): from the Straits of Dover to Fayal;

Emden-Azores (2): from the Straits of Dover to Fayal;

Azores-New York (1): from Fayal to New York;

Azores-New York (2): from Fayal to the longitude of Halifax;

Teneriffe-Monrovia: from off Teneriffe to off Monrovia;

Monrovia-Lome: from about latitude 2 degrees 30 minutes north, and longitude 7 degrees 40 minutes west of Greenwich,

to about latitude 2 degrees 20 minutes north, and longitude 5 degrees 30 minutes west of Greenwich,

and from about latitude 3 degrees 48 minutes north, and longitude 0 degrees 0 minutes to Lome;

Lome-Duala: from Lome to Duala;

Monrovia-Pernambuco: from off Monrovia to off Pernambuco;

Constantinople-Constanza: from Constantinople to Constanza;

Yap-Shanghai, Yap-Guam, and Yap-Menado (Celebes): from Yap Island to Shanghai, from Yap Island to Guam Island, and from Yap Island to Menado.

The value of the above-mentioned cables or portions thereof in so far as they are privately owned, calculated on the basis of the original cost less a suitable allowance for depreciation, shall be credited to Germany in the reparation account.

SECTION II.—SPECIAL PROVISIONS

[*Restoration of Trophies, Objets d'Art, &c.*]

Art. 245. Within six months after coming into force of the present treaty the German Government must restore to the French Government the trophies, archives, historical souvenirs, or works of art carried away from France by the German authorities in the course of the war of 1870-1871 and during this last war, in accordance with a list which will be communicated to it by the French Government; particularly the French flags taken in the course of the war of 1870-1871, and all the political papers taken by the German authorities on Oct. 10, 1870, at the Château of Cercay, near Brunoy, (Seine-et-Oise,) belonging at the time to M. Rouher, formerly Minister of State.

Art. 246. Within six months of the coming into force of the present treaty Germany will restore to his Majesty the King of the Hedjaz the original Koran of the Caliph Othman, which was removed from Medina by the Turkish authorities and is stated to have been presented to the ex-Emperor William II. Within the same period Germany will

hand over to his Britannic Majesty's Government the skull of the Sultan Mkwawa, which was removed from the protectorate of German East Africa and taken to Germany. . . .

Art. 247. Germany undertakes to furnish to the University of Louvain, within three months after a request made by it and transmitted through the intervention of the Reparation Commission, manuscripts, incunabula, printed books, maps, and objects of collection corresponding in number and value to those destroyed in the burning by Germany of the library of Louvain. . . . Germany undertakes to deliver to Belgium, through the Reparation Commission, within six months of the coming into force of the present treaty, in order to enable Belgium to reconstitute her two great artistic works: (a) The leaves of the triptych of the Mystic Lamb painted by the Van Eyck Brothers, formerly in the Church of St. Bavon at Ghent, now in the Berlin Museum. (b) The leaves of the triptych of the Last Supper, painted by Dierick Bouts, formerly in the Church of St. Peter at Louvain, two of which are now in the Berlin Museum and two in the old Pinakothek at Munich.

Part IX.—Financial Clauses

Art. 248. Subject to such exceptions as the Reparation Commission may approve, a first charge upon all the assets and revenues of the German Empire and its constituent States shall be the cost of reparation and all other costs arising under the present treaty or any treaties or agreements supplementary thereto or under arrangements concluded between Germany and the Allied and Associated Powers during the armistice or its extensions. Up to May 1, 1921, the German Government shall not export or dispose of, and shall forbid the export or disposal of, gold without the previous approval of the Allied and Associated Powers acting through the Reparation Commission.

Art. 249. There shall be paid by the German Government the total cost of all armies of the Allied and Associated Governments in occupied German territory from the date of the signature of the armistice of the 11th November, 1918. . . . The cost of such liabilities under the above heads, so far as they relate to purchases or requisitions by the Allied and Associated Governments in the occupied territories, shall be paid by the German Government to the Allied and Associated Governments in marks at the current or agreed rate of exchange. All other of the above costs shall be paid in gold marks.

Art. 250. Germany confirms the surrender of all material handed over to the Allied and Associated Powers in accordance with the armistice agreement . . . and recognizes the title of the Allied and Associated Powers to such material. There shall be credited to the German Government against the sums due from it to the Allied and Associated Powers for reparation, the value, as assessed by the Reparation Commission . . . of the material handed over in accordance with . . . the armistice agreements, as well as of any other material handed over for which, as having non-military value, credit should, in the judgment of the Reparation Commission, be allowed to the German Government. Property belonging to the Allied and Associated Governments or their nationals restored or surrendered under the armistice agreements in specie shall not be credited to the German Government.

Art. 251. The priority of the charges established

by Article 248 shall, subject to the qualifications made below, be as follows: (a) The cost of the armies of occupation as defined under Article 249 during the armistice and its extensions; (b) The cost of any armies of occupation as defined under Article 249 after the coming into force of the present treaty; (c) The cost of reparation arising out of the present treaty or any treaties or conventions supplementary thereto; (d) The cost of all other obligations incumbent on Germany under the armistice conventions or under this treaty or any treaties or conventions supplementary thereto. The payment for such supplies of food and raw material for Germany and such other payments as may be judged by the Allied and Associated Powers to be essential to enable Germany to meet her obligations in respect of reparation will have priority to the extent and upon the conditions which have been or may be determined by the Governments of the said powers.

Art. 252. The right of each of the Allied and Associated Powers to dispose of enemy assets and property within its jurisdiction at the date of the coming into force of the present treaty is not affected by the foregoing provisions.

Art. 253. Nothing in the foregoing provisions shall prejudice in any manner charges or mortgages lawfully effected in favor of the Allied and Associated Powers or their nationals respectively, before the date at which a state of war existed between Germany and the Allied and Associated Powers concerned, by the German Empire or its constituent States, or by German nationals on assets in their ownership at that date.

Art. 254. The powers to which German territory is ceded shall, subject to the qualifications made in Article 255, undertake to pay: 1. A portion of the debt of the German Empire as it stood on the 1st August, 1914, calculated on the basis of the ratio between the average for the three financial years 1911, 1912, 1913, of such revenues of the ceded territory and the average for the same years of such revenues of the whole German Empire as in the judgment of the Reparation Commission are best calculated to represent the relative ability of the respective territories to make payments. 2. A portion of the debt as it stood on the 1st August, 1914, of the German State to which the ceded territory belonged, to be determined in accordance with the principle stated above. Such portions shall be determined by the Reparation Commission. The method of discharging the obligation both in respect of capital and of interest, so assumed, shall be fixed by the Reparation Commission. Such method may take the form, *inter alia*, of the assumption by the power to which the territory is ceded of Germany's liability for the German debt held by her nationals. But in the event of the method adopted involving any payments to the German Government, such payments shall be transferred to the Reparation Commission on account of the sums due for reparation so long as any balance in respect of such sums remains unpaid.

Art. 255. 1. As an exception to the above provision and inasmuch as in 1871 Germany refused to undertake any portion of the burden of the French debt, France shall be, in respect of Alsace-Lorraine, exempt from any payment under Article 254.

2. In the case of Poland that portion of the debt which, in the opinion of the Reparation Commission is attributable to the measures taken by the German and Prussian Governments for the German colonization of Poland shall be excluded from the apportionment to be made under Article 254.

3. In the case of all ceded territories other than

Alsace-Lorraine that portion of the debt of the German Empire or German States which in the opinion of the Reparation Commission represents expenditure by the Governments of the German Empire or States upon the Government properties referred to in Article 256 shall be excluded from the apportionment to be made under Article 254.

Art. 256. Powers to which German territory is ceded shall acquire all property and possessions situated therein belonging to the German Empire or to the German States, and the value of such acquisitions shall be fixed by the Reparation Commission, and paid by the State acquiring the territory to the Reparation Commission for the credit of the German Government on account of the sums due for reparation. For the purposes of this article the property and possessions of the German Empire and States shall be deemed to include all the property of the Crown, the Empire or the States, and the private property of the former German Emperor and other royal personages. In view of the terms on which Alsace-Lorraine was ceded to Germany in 1871 France shall be exempt in respect thereof from making any payment or credit under this article for any property or possessions of the German Empire or States situated therein. Belgium also shall be exempt from making any payment or any credit under this article for any property or possessions of the German Empire or States situated in German territory ceded to Belgium under the present treaty.

Art. 257. In the case of the former German territories, including colonies, protectorates, or dependencies, administered by a mandatory under Article 22 of Part I (League of Nations) of the present treaty, neither the territory nor the mandatory power shall be charged with any portion of the debt of the German Empire or States. All property and possessions belonging to the German Empire or to the German States situated in such territory shall be transferred with the territories to the Mandatory Power in its capacity as such, and no payment shall be made nor any credit given to those Governments in consideration of this transfer. For the purpose of this article the property and possessions of the German Empire and of the German States shall be deemed to include all the property of the crown, the empire or the States and the private property of the former German Emperor and other royal personages.

Art. 258. Germany renounces all rights accorded to her or her nationals by treaties, conventions or agreements, of whatsoever kind, to representation upon or participation in the control or administration of commissions, state banks, agencies or other financial or economic organizations of an international character, exercising powers of control or administration, and operating in any of the Allied or Associated States, or in Austria, Hungary, Bulgaria or Turkey, or in the dependencies of these States, or in the former Russian Empire.

Art. 259. 1. Germany agrees to deliver within one month from the date of the coming into force of the present treaty, to such authority as the principal Allied and Associated Powers may designate, the sum in gold which was to be deposited in the Reichsbank in the name of the Council of the Administration of the Ottoman Public Debt as security for the first issue of Turkish Government currency notes.

2. Germany recognizes her obligation to make annually for the period of twelve years the payments in gold for which provision is made in the German Treasury bonds deposited by her from time to time in the name of the Council of the

Administration of the Ottoman Public Debt as security for the second and subsequent issues of Turkish Government currency notes.

3. Germany undertakes to deliver, within one month from the coming into force of the present treaty, to such authority as the principal Allied and Associated Powers may designate, the deposit gold constituted in the Reichsbank or elsewhere, representing the residue of the advance in gold agreed to on the 5th of May, 1915, by the Council of the Administration of the Ottoman Public Debt to the Imperial Ottoman Government.

4. Germany agrees to transfer to the principal Allied and Associated Powers any title that she may have to the sum in gold and silver transmitted by her to the Turkish Ministry of Finance in November, 1918, in anticipation of the payment to be made in May, 1919, for the service of the Turkish internal loan.

5. Germany undertakes to transfer to the principal Allied and Associated Powers within a period of one month from the coming into force of the present treaty, any sums in gold transferred as pledge or as collateral security to the German Government or its nationals in connection with loans made by them to the Austro-Hungarian Government.

6. Without prejudice to Article 292 of Part X (economic clauses) of the present treaty, Germany confirms the renunciation provided for in Article XV of the armistice convention of the 11th November, 1918, of any benefit disclosed by the treaties of Bucharest and of Brest-Litovsk, and by the treaties supplementary thereto.

Germany undertakes to transfer, either to Rumania or to the principal Allied and Associated Powers, as the case may be, all monetary instruments, specie, securities and negotiable instruments or goods which she has received under the aforesaid treaties.

7. The sums of money and all securities, instruments and goods of whatever nature, to be delivered, paid and transferred under the provisions of this article, shall be disposed of by the principal Allied and Associated Powers in a manner hereafter to be determined by these powers.

Art. 260. Without prejudice to the renunciation of any rights by Germany on behalf of herself or of her nationals in the other provisions of the present treaty, the Reparation Commission may, within one year from the coming into force of the present treaty, demand that the German Government become possessed of any rights and interests of the German nationals in any public utility undertaking or in any concession operating in Russia, China, Turkey, Austria, Hungary, and Bulgaria, or in the possessions or dependencies of these States or in any territory formerly belonging to Germany or her allies, to be ceded by Germany or her allies to any power, or to be administered by a mandatory under the present treaty, and may require that the German Government transfer, within six months of the date of demand, all such rights and interests and any similar rights and interests the German Government may itself possess, to the Reparation Commission. Germany shall be responsible for indemnifying her nationals so dispossessed and the Reparation Commission shall credit Germany on account of sums due for reparation with such sums in respect of the value of the transferred rights and interests as may be assessed by the Reparation Commission, and the German Government shall, within six months from the coming into force of the present treaty, communicate to the Reparation Commission all such rights

and interests, whether already granted, contingent, or not yet exercised, and shall renounce on behalf of itself and its nationals in favor of the Allied and Associated Powers all such rights and interests which have not been so communicated.

Art. 261. Germany undertakes to transfer to the Allied and Associated Powers any claims she may have to payment or repayment by the Governments of Austria, Hungary, Bulgaria, Turkey, and, in particular any claims which may arise, now or hereafter, from the fulfillment of undertakings made by Germany during the war to those Governments.

Art. 262. Any monetary obligation due by Germany arising out of the present treaty and expressed in terms of gold marks shall be payable at the option of the creditors in pounds sterling payable in London; gold dollars of the United States of America payable in New York; gold francs payable in Paris, or gold lire payable in Rome. For the purpose of this article, the gold coins mentioned above shall be defined as being of the weight and fineness of gold as enacted by law on the 1st January, 1914.

Art. 263. Germany gives a guarantee to the Brazilian Government that all sums representing the sale of coffee belonging to the State of Sao Paulo in the Ports of Hamburg, Bremen, Antwerp, and Trieste, which were deposited with the bank of Bleichröder at Berlin, shall be reimbursed, together with interest at the rate or rates agreed upon. Germany, having prevented the transfer of the sums in question to the State of Sao Paulo at the proper time, guarantees also that the reimbursements shall be effected at the rate of exchange of the day of the deposit.

Part X.—Economic Clauses

SECTION I.—COMMERCIAL RELATIONS

Chapter I.—Customs Regulations, Duties, and Restrictions

Art. 264. Germany undertakes that goods the produce or manufacture of any one of the Allied or Associated States imported into German territory, from whatsoever place arriving, shall not be subjected to other or higher duties or charges (including internal charges) than those to which the like goods the produce or manufacture of any other such State or of any other foreign country are subject. Germany will not maintain or impose any prohibition or restriction on the importation into German territory of any goods the produce or manufacture of the territories of any one of the Allied or Associated States, from whatsoever place arriving, which shall not equally extend to the importation of the like goods the produce or manufacture of any other such State or of any other foreign country.

Art. 265. Germany further undertakes that, in the matter of the régime applicable on importation, no discrimination against the commerce of any of the Allied and Associated States as compared with any other of the said States or any other foreign country shall be made. . . .

Art. 266. In all that concerns exportation Germany undertakes that goods, natural products or manufactured articles, exported from German territory to the territories of any one of the Allied or Associated States shall not be subjected to other or higher duties or charges (including internal charges) than those paid on the like goods exported to any

other such State or to any other foreign country. Germany will not maintain or impose any prohibition or restriction on the exportation of any goods sent from her territory to any one of the Allied or Associated States which shall not equally extend to the exportation of the like goods, natural products or manufactured articles, sent to any other such State or to any other foreign country.

Art. 267. Every favor, immunity, or privilege in regard to the importation, exportation, or transit of goods granted by Germany to any Allied or Associated State or to any other foreign country whatever shall simultaneously and unconditionally, without request and without compensation, be extended to all the Allied and Associated States.

Art. 268. The provisions of Articles 264 to 267 inclusive of this chapter and of Article 323 of Part XII (ports, waterways, and railways) of the present treaty are subject to the following exceptions. (a) For a period of five years from the coming into force of the present treaty, natural or manufactured products which both originate in and come from the territories of Alsace and Lorraine reunited to France shall, on importation into German customs territory, be exempt from all customs duty. The French Government shall fix each year, by decree communicated to the German Government, the nature and amount of the products which shall enjoy this exemption [which] shall not exceed the average of the amounts sent annually in the years 1911-1913. Further, during the period above mentioned the German Government shall allow the free export from Germany, and the free reimportation into Germany, exempt from all customs duties and other charges, (including internal charges,) of yarns, tissues, and other textile materials or textile products of any kind and in any condition, sent from Germany into the territories of Alsace or Lorraine, to be subjected there to any finishing process. . . . (b) During a period of three years from the coming into force of the present treaty natural or manufactured products which both originate in and come from Polish territories which before the war were part of Germany shall, on importation into German customs territory, be exempt from all customs duty. The Polish Government shall fix each year, by decree communicated to the German Government, the nature and amount of the products which shall enjoy this exemption, [which] shall not exceed the average of the amounts sent annually in the years 1911-1913. (c) The Allied and Associated Powers reserve the right to require Germany to accord freedom from customs duty, on importation into German customs territory, to natural products and manufactured articles which both originate in and come from the Grand Duchy of Luxemburg, for a period of five years from the coming into force of the present treaty. The nature and amount of the products which shall enjoy the benefits of this régime shall be communicated each year to the German Government, [which] shall not exceed the average of the amounts sent annually in the years 1911-1913.

Art. 269. During the first six months after the coming into force of the present treaty, the duties imposed by Germany on imports from Allied and Associated States shall not be higher than the most favorable duties which were applied to imports into Germany on the 31st July, 1914. During a further period of thirty months after the expiration of the first six months, this provision shall continue to be applied exclusively with regard to products which, being comprised in Section A of the First Category of the German Customs Tariff of the 25th December, 1902, enjoyed at the above-

mentioned date (31st July, 1914) rates conventionalized by treaties with the Allied and Associated Powers, with the addition of all kinds of wine and vegetable oils, of artificial silk and of washed or scoured wool, whether or not they were the subject of special conventions before the 31st July, 1914.

Art. 270. The Allied and Associated Powers reserve the right to apply to German territory occupied by their troops a special customs régime as regards imports and exports, in the event of such a measure being necessary in their opinion in order to safeguard the economic interests of the population of these territories.

Chapter II.—Shipping

Art. 271. As regards sea fishing, maritime coasting trade, and maritime towage, vessels of the Allied and Associated Powers shall enjoy, in German territorial waters, the treatment accorded to vessels of the most-favored nation.

Art. 272. Germany agrees that, notwithstanding any stipulation to the contrary contained in the conventions relating to the North Sea fisheries and liquor traffic, all rights of inspection and police shall, in the case of fishing boats of the Allied Powers, be exercised solely by ships belonging to those powers.

Art. 273. In the case of vessels of the Allied or Associated Powers, all classes of certificates or documents relating to the vessel, which were recognized as valid by Germany before the war, or which may hereafter be recognized as valid by the principal maritime States, shall be recognized by Germany as valid and as equivalent to the corresponding certificates issued to German vessels. A similar recognition shall be accorded to the certificates and documents issued to their vessels by the Governments of new States, whether they have a seacoast or not, provided that such certificates and documents shall be issued in conformity with the general practice observed in the principal maritime States. The high contracting parties agree to recognize the flag flown by the vessels of an Allied or Associated Power having no seacoast which are registered at some one specified place situated in its territory; such place shall serve as the port of registry of such vessels.

Chapter III.—Unfair Competition

Art. 274. Germany undertakes to adopt all the necessary legislative and administrative measures to protect goods the produce or manufacture of any one of the Allied and Associated Powers from all forms of unfair competition in commercial transactions. Germany undertakes to prohibit and repress by seizure and by other appropriate remedies the importation, exportation, manufacture, distribution, sale or offering for sale in its territory of all goods bearing upon themselves or their usual get-up or wrappings any marks, names, devices, or descriptions whatsoever which are calculated to convey directly or indirectly a false indication of the origin, type, nature, or special characteristics of such goods.

Art. 275. Germany undertakes on condition that reciprocity is accorded in these matters to respect any law, or any administrative or judicial decision given in conformity with such law, in force in any Allied or Associated State and duly communicated to her by the proper authorities, defining or regulating the right to any regional appellation in respect of wine or spirits produced in the State to

which the region belongs or the conditions under which the use of any such appellation may be permitted; and the importation, exportation, manufacture, distribution, sale or offering for sale of products or articles bearing regional appellations inconsistent with such law or order shall be prohibited by the German Government and repressed by the measures prescribed in the preceding article.

Chapter IV.—Treatment of Nationals of Allied and Associated Powers

Art. 276. Germany undertakes: (a) not to subject the nationals of the Allied and Associated Powers to any prohibition in regard to the exercise of occupations, professions, trade, and industry, which shall not be equally applicable to all aliens without exception; (b) not to subject the nationals of the Allied and Associated Powers in regard to the rights referred to in Paragraph (a) to any regulation or restriction which might contravene directly or indirectly the stipulations of the said paragraph, or which shall be other or more disadvantageous than those which are applicable to nationals of the most-favored nation; (c) not to subject the nationals of the Allied and Associated Powers, their property, rights, or interests, including companies and associations in which they are interested, to any charge, tax, or impost, direct or indirect, other or higher than those which are or may be imposed on her own nationals or their property, rights, or interests; (d) not to subject the nationals of any one of the Allied and Associated Powers to any restriction which was not applicable on July 1, 1914, to the nationals of such powers unless such restriction is likewise imposed on her own nationals.

Art. 277. The nationals of the Allied and Associated Powers shall enjoy in German territory a constant protection for their persons and for their property, rights, and interests, and shall have free access to the courts of law.

Art. 278. Germany undertakes to recognize any new nationality which has been or may be acquired by her nationals under the laws of the Allied and Associated Powers, and in accordance with the decisions of the competent authorities of these powers pursuant to naturalization laws or under treaty stipulations, and to regard such persons as having, in consequence of the acquisition of such new nationality, in all respects severed their allegiance to their country of origin.

Art. 279. The Allied and Associated Powers may appoint Consuls General, Consuls, Vice Consuls, and Consular Agents in German towns and ports . . . and to admit them to the exercise of their functions in conformity with the usual rules and customs.

Chapter V.—General Articles

Art. 280. The obligations imposed on Germany by Chapter I and by Articles 271 and 272 of Chapter II above shall cease to have effect five years from the date of the coming into force of the present treaty, unless otherwise provided in the text, or unless the Council of the League of Nations shall, at least twelve months before the expiration of that period, decide that these obligations shall be maintained for a further period with or without amendment. Article 276 of Chapter IV shall remain in operation, with or without amendment, after the period of five years for such further period, if any, not exceeding five years, as may be determined by a majority of the Council of the League of Nations.

Art. 281. If the German Government engages in international trade, it shall not in respect thereof have or be deemed to have any rights, privileges, or immunities of sovereignty.

SECTION II.—TREATIES

Art. 282. From the coming into force of the present treaty and subject to the provisions thereof the multilateral treaties, conventions and agreements of an economic or technical character enumerated below and in the subsequent articles shall alone be applied as between Germany and those of the Allied and Associated Powers party thereto:

1. Conventions of March 14, 1884; Dec. 1, 1886, and March 23, 1887, and final protocol of July 7, 1887, regarding the protection of submarine cables.

2. Convention of Oct. 11, 1909, regarding the international circulation of motor cars.

3. Agreement of May 15, 1886, regarding the sealing of railway trucks subject to customs inspection, and protocol of May 18, 1907.

4. Agreement of May 15, 1886, regarding the technical standardization of railways.

5. Convention of July 5, 1890, regarding the publication of customs tariffs and the organization of an international union for the publication of customs tariffs.

6. Convention of Dec. 31, 1913, regarding the unification of commercial statistics.

7. Convention of April 25, 1907, regarding the raising of the Turkish customs tariff.

8. Convention of March 14, 1857, for the redemption of toll dues on the sound and belts.

9. Convention of June 22, 1861, for the redemption of the stade toll on the Elbe.

10. Convention of July 16, 1863, for the redemption of toll dues on the Scheldt.

11. Convention of Oct. 29, 1888, regarding the establishment of a definite arrangement guaranteeing the free use of the Suez Canal.

12. Convention of Sept. 23, 1910, respecting the unification of certain regulations regarding collisions and salvage at sea.

13. Convention of Dec. 21, 1904, regarding the exemption of hospital ships from dues and charges in ports.

14. Convention of Feb. 4, 1898, regarding the tonnage measurement of vessels for inland navigation.

15. Convention of Sept. 26, 1906, for the suppression of nightwork for women.

16. Convention of Sept. 26, 1906, for the suppression of the use of white phosphorus in the manufacture of matches.

17. Conventions of May 18, 1904, and May 4, 1910, regarding the suppression of the white slave traffic.

18. Convention of May 4, 1910, regarding the suppression of obscene publications.

19. Sanitary conventions of January, 1892; April 15, 1893; April 3, 1894; April 19, 1897, and Dec. 3, 1903.

20. Convention of May 20, 1875, regarding the unification and improvement of the metric system.

21. Convention of Nov. 29, 1906, regarding the unification of pharmacopoeial formulæ for potent drugs.

22. Convention of Nov. 16 and 19, 1885, regarding the establishment of a concert pitch.

23. Convention of June 7, 1905, regarding the creation of an International Agricultural Institute at Rome.

24. Conventions of Nov. 3, 1881, and April 15,

1880, regarding precautionary measures against phylloxera.

25. Convention of March 19, 1902, regarding the protection of birds useful to agriculture.

26. Convention of June 12, 1902, as to the protection of minors.

Art. 283. From the coming into force of the present treaty the high contracting parties shall apply the conventions and agreements hereinafter mentioned, in so far as concerns them, on condition that the special stipulations contained in this article are fulfilled by Germany.

Postal Conventions

Conventions and agreements of the Universal Postal Union concluded at Vienna, July 4, 1891.

Conventions and agreements of the Postal Union signed at Washington, June 15, 1897.

Conventions and agreements of the Postal Union signed at Rome, May 26, 1906.

Telegraphic Conventions

International Telegraphic Conventions signed at St. Petersburg, July 10, (22,) 1875.

Regulations and tariffs drawn up by the International Telegraphic Conference, Lisbon, June 11, 1908.

Germany undertakes not to refuse her assent to the conclusion by the new States of the special arrangements referred to in the conventions and agreements relating to the Universal Postal Union and to the International Telegraphic Union, to which the said new States have adhered or may adhere.

Art. 284. From the coming into force of the present treaty the high contracting parties shall apply, in so far as concerns them, the International Radio-Telegraphic Convention of July 5, 1912, on condition that Germany fulfills the provisional regulations which will be indicated to her by the Allied and Associated Powers. If within five years after the coming into force of the present treaty a new convention regulating international radio-telegraphic communications should have been concluded to take the place of the convention of July 5, 1912, this new convention shall bind Germany even if Germany should refuse either to take part in drawing up the convention or to subscribe thereto. This new convention will likewise replace the provisional regulations in force.

Art. 285. From the coming into force of the present treaty the high contracting parties shall apply in so far as concerns them and under the conditions stipulated in Article 272 the conventions hereinafter mentioned: 1. The conventions of May 6, 1882, and Feb. 1, 1889, regulating the fisheries in the North Sea outside territorial waters. 2. The conventions and protocols of Nov. 16, 1887, Feb. 14, 1893, and April 11, 1894, regarding the North Sea liquor traffic.

Art. 286. The International Convention of Paris of March 20, 1883, for the protection of industrial property, revised at Washington on June 2, 1911; the International Convention of Berne of Sept. 9, 1886, for the protection of literary and artistic works, revised at Berlin on Nov. 13, 1908, and completed by the additional protocol signed at Berne on March 20, 1914, will again come into effect as from the coming into force of the present treaty, in so far as they are not affected or modified by the exceptions and restrictions resulting therefrom.

Art. 287. From the coming into force of the present treaty the high contracting parties shall apply,

in so far as concerns them, the Convention of the Hague of July 17, 1905, relating to civil procedure. This renewal, however, will not apply to France, Portugal, and Rumania.

Art. 288. The special rights and privileges granted to Germany by Article 3 of the convention of Dec. 2, 1899, relating to Samoa shall be considered to have terminated on Aug. 4, 1914.

Art. 289. Each of the Allied or Associated Powers, being guided by the general principles or special provisions of the present treaty, shall notify to Germany the bilateral treaties or conventions which such Allied or Associated Power wishes to revive with Germany. The notification referred to in the present article shall be made either directly or through the intermediary of another power. Receipt thereof shall be acknowledged in writing by Germany. The date of the revival shall be that of the notification. The Allied and Associated Powers undertake among themselves not to revive with Germany any conventions or treaties which are not in accordance with the terms of the present treaty. The notification shall mention any provisions of the said conventions and treaties which, not being in accordance with the terms of the present treaty, shall not be considered as revived. In case of any difference of opinion, the League of Nations will be called on to decide. A period of six months from the coming into force of the present treaty is allowed to the Allied and Associated Powers within which to make the notification. Only those bilateral treaties and conventions which have been the subject of such a notification shall be revived between the Allied and Associated Powers and Germany; all the others are and shall remain abrogated. The above regulations apply to all bilateral treaties or conventions existing between all the Allied and Associated Powers signatories to the present treaty and Germany, even if the said Allied and Associated Powers have not been in a state of war with Germany.

Art. 290. Germany recognizes that all the treaties, conventions, or agreements which she has concluded with Austria, Hungary, Bulgaria, or Turkey since Aug. 1, 1914, until the coming into force of the present treaty are and remain abrogated by the present treaty.

Art. 291. Germany undertakes to secure to the Allied and Associated Powers, and to the officials and nationals of the said powers, the enjoyment of all the rights and advantages of any kind which she may have granted to Austria, Hungary, Bulgaria, or Turkey, or to the officials and nationals of these States by treaties, conventions, or arrangements concluded before Aug. 1, 1914, so long as those treaties, conventions, or arrangements remain in force. The Allied and Associated Power reserve the right to accept or not the enjoyment of these rights and advantages.

Art. 292. Germany recognizes that all treaties, conventions, or arrangements which she concluded with Russia or with any State or Government of which the territory previously formed a part of Russia, or with Rumania before Aug. 1, 1914, or after that date until the coming into force of the present treaty, are and remain abrogated.

Art. 293. Should an Allied or Associated Power, Russia, or a State or Government of which the territory formerly constituted a part of Russia have been forced since Aug. 1, 1914, by reason of military occupation or by any other means or for any other cause, to grant or to allow to be granted by the act of any public authority, concessions, privileges, and favors of any kind to Germany or to a German national, such concessions, privileges, and

favors are *ipso facto* annulled by the present treaty. No claims or indemnities which may result from this annulment shall be charged against the Allied or Associated Powers or the powers, States, Governments, or public authorities which are released from their engagements by the present article.

Art. 294. From the coming into force of the present treaty Germany undertakes to give the Allied and Associated Powers and their nationals the benefit *ipso facto* of the rights and advantages of any kind which she has granted by treaties, conventions, or arrangements to non-belligerent States or their nationals since Aug. 1, 1914, until the coming into force of the present treaty so long as those treaties, conventions, or arrangements remain in force.

Art. 295. Those of the high contracting parties who have not yet signed, or who have signed but not yet ratified, the Opium Convention signed at The Hague on Jan. 23, 1912, agree to bring the said convention into force, and for this purpose to enact the necessary legislation without delay and in any case within a period of twelve months from the coming into force of the present treaty. Furthermore, they agree that ratification of the present treaty should in the case of powers which have not yet ratified the Opium Convention be deemed in all respects equivalent to the ratification of that convention and to the signature of the special protocol which was opened at The Hague in accordance with the resolutions adopted by the Third Opium Conference in 1914 for bringing the said convention into force. For this purpose the Government of the French Republic will communicate to the Government of the Netherlands a certified copy of the protocol of the deposit of ratifications of the present treaty, and will invite the Government of the Netherlands to accept and deposit the said certified copy as if it were a deposit of ratifications of the Opium Convention and a signature of the additional protocol of 1914.

SECTION III.—DEBTS

Art. 296. There shall be settled through the intervention of clearing offices to be established by each of the high contracting parties within three months of the notification referred to in paragraph (e) hereafter the following classes of pecuniary obligations:

1. Debts payable before the war and due by a national of one of the contracting powers, residing within its territory, to a national of an opposing power, residing within its territory.

2. Debts which became payable during the war to nationals of one contracting power residing within its territory and arose out of transactions or contracts with the nationals of an opposing power, resident within its territory, of which the total or partial execution was suspended on account of the declaration of war.

3. Interest which has accrued due before and during the war to a national of one of the contracting powers in respect of securities issued by an opposing power, provided that the payment of interest on such securities to the nationals of that power or to neutrals has not been suspended during the war.

4. Capital sums which have become payable before and during the war to nationals of one of the contracting powers in respect of securities issued by one of the opposing powers, provided that the payment of such capital sums to nationals of

that power or to neutrals has not been suspended during the war. The proceeds of liquidation of enemy property, rights, and interests mentioned in Section IV and in the annex thereto will be accounted for through the clearing offices, in the currency and at the rate of exchange hereinafter provided in Paragraph (d), and disposed of by them under the conditions provided by the said section and annex. The settlements provided for in this article shall be effected according to the following principles and in accordance with the annex to this section: (a) Each of the high contracting parties shall prohibit, as from the coming into force of the present treaty, both the payment and the acceptance of payment of such debts, and also all communications between the interested parties with regard to the settlement of the said debts otherwise than through the clearing offices.

(b) Each of the high contracting parties shall be respectively responsible for the payment of such debts due by its nationals, except in the cases where before the war the debtor was in a state of bankruptcy or failure, or had given formal indication of insolvency or where the debt was due by a company whose business has been liquidated under emergency legislation during the war. Nevertheless, debts due by the inhabitants of territory invaded or occupied by the enemy before the armistice will not be guaranteed by the States of which those territories form part. (c) The sums due to the nationals of one of the high contracting parties by the nationals of an opposing State will be debited to the clearing office of the country of the debtor, and paid to the creditor by the clearing office of the country of the creditor.

(d) Debts shall be paid or credited in the currency of such one of the Allied and Associated Powers, their colonies or protectorates, or the British Dominions or India, as may be concerned. If the debts are payable in some other currency they shall be paid or credited in the currency of the country concerned, whether an Allied or Associated Power, colony, protectorate, British Dominion, or India, at the pre-war rate of exchange. For the purpose of this provision the pre-war rate of exchange shall be defined as the average cable transfer rate prevailing in the Allied or Associated country concerned during the month immediately preceding the outbreak of war between the said country concerned and Germany. If a contract provides for a fixed rate of exchange governing the conversion of the currency in which the debt is stated into the currency of the Allied or Associated country concerned, then the above provisions concerning the rate of exchange shall not apply. In the case of new States the currency in which and the rate of exchange at which debts shall be paid or credited shall be determined by the Reparation Commission provided for in Part VIII (Reparation).

(e) The provisions of this article and of the annex hereto shall not apply as between Germany on the one hand and any one of the Allied and Associated Powers, their colonies or protectorates, or any one of the British Dominions or India on the other hand, unless within a period of one month from the deposit of the ratifications of the present treaty by the power in question, or of the ratification on behalf of such Dominion or of India, notice to that effect is given to Germany by the Government of such Allied or Associated Power or of such Dominion or of India as the case may be.

(f) The Allied and Associated Powers who have adopted this article and the annex hereto may agree between themselves to apply them to their

respective nationals established in their territory so far as regards matters between their nationals and German nationals. In this case the payments made by application of this provision will be subject to arrangements between the allied and associated clearing offices concerned.

ANNEX

1. Each of the high contracting parties will, within three months from the notification provided for in Article 296, paragraph (e), establish a clearing office for the collection and payment of enemy debts. Local clearing offices may be established for any particular portion of the territories of the high contracting parties. Such local clearing offices may perform all the functions of a central clearing office in their respective districts, except that all transactions with the clearing office in the opposing State must be effected through the central clearing office. . . . [Here follows procedure of clearing offices.]

SECTION IV.—PROPERTY, RIGHTS, AND INTERESTS

Art. 297. The question of private property, rights, and interests in an enemy country, shall be settled according to the principles laid down in this section and to the provisions of the annex hereto:

(a) The exceptional war measures and measures of transfer (defined in paragraph 3 of the annex hereto) taken by Germany with respect to the property, rights, and interests of nationals of Allied or Associated Powers, including companies and associations in which they are interested, when liquidation has not been completed, shall be immediately discontinued or stayed and the property, rights, and interests concerned restored to their owners, who shall enjoy full rights therein in accordance with the provisions of Article 298.

(b) Subject to any contrary stipulations which may be provided for in the present treaty, the Allied and Associated Powers reserve the right to retain and liquidate all property, rights, and interests belonging at the date of the coming into force of the present treaty to German nationals, or companies controlled by them, within their territories, colonies, possessions, and protectorates including territories ceded to them by the present treaty. The liquidation shall be carried out in accordance with the laws of the Allied or Associated State concerned, and the German owner shall not be able to dispose of such property, rights, or interests nor to subject them to any charge without the consent of that State. German nationals who acquire *ipso facto* the nationality of an Allied or Associated Power in accordance with the provisions of the present treaty will not be considered as German nationals within the meaning of this paragraph.

(c) The price or the amount of compensation in respect of the exercise of the right referred to in the preceding paragraph (b) will be fixed in accordance with the methods of sale or valuation adopted by the laws of the country in which the property has been retained or liquidated.

(d) As between the Allied and Associated Powers or their nationals on the one hand and Germany or her nationals on the other hand, all the exceptional war measures, or measures of transfer, or acts done or to be done in execution of such measures as defined in Paragraphs 1 and 3 of the annex hereto shall be considered as final and binding upon all persons except as regards the reservations laid down in the present treaty.

(e) The nationals of Allied and Associated Powers shall be entitled to compensation in respect of damage or injury inflicted upon their property, rights, or interests, including any company or association in which they are interested, in German territory as it existed on Aug. 1, 1914, by the application either of the exceptional war measures or measures of transfer mentioned in Paragraphs 1 and 3 of the annex hereto. The claims made in this respect by such nationals shall be investigated, and the total of the compensation shall be determined by the Mixed Arbitral Tribunal provided for in Section VI or by an arbitrator appointed by that tribunal. This compensation shall be borne by Germany, and may be charged upon the property of German nationals, within the territory or under the control of the claimant's State. This property may be constituted as a pledge for enemy liabilities under the conditions fixed by Paragraph 4 of the annex hereto. The payment of this compensation may be made by the Allied or Associated State, and the amount will be debited to Germany.

(f) Whenever a national of an Allied or Associated Power is entitled to property which has been subjected to a measure of transfer in German territory and expresses a desire for its restitution, his claim for compensation in accordance with Paragraph (e) shall be satisfied by the restitution of the said property if it still exists in specie. In such case Germany shall take all necessary steps to restore the evicted owner to the possession of his property, free from all incumbrances or burdens with which it may have been charged after the liquidation, and to indemnify all third parties injured by the restitution. . . . [Here follows procedure of restitution.]

Art. 298. Germany undertakes, with regard to the property, rights and interests, including companies and associations in which they were interested, restored to nationals of Allied and Associated Powers in accordance with the provisions of Article 297, Paragraph (a) or (f):

(a) To restore and maintain, except as expressly provided in the present treaty, the property, rights, and interests of the nationals of Allied or Associated Powers in the legal position obtaining in respect of the property, rights, and interests of German nationals under the laws in force before the war.

(b) Not to subject the property, rights, or interests of the nationals of the Allied or Associated Powers to any measures in derogation of property rights which are not applied equally to the property, rights, and interests of German nationals, and to pay adequate compensation in the event of the application of these measures.

ANNEX

1. In accordance with the provisions of Article 297, Paragraph (d), the validity of vesting orders and of orders for the winding up of businesses or companies, and of any other orders, directions, decisions, or instructions of any court or any department of the Government of any of the high contracting parties made or given, or purporting to be made or given, in pursuance of war legislation with regard to enemy property, rights, and interests is confirmed. The interests of all persons shall be regarded as having been effectively dealt with by any order, direction, decision, or instruction dealing with property in which they may be interested, whether or not such interests are specifically mentioned in the order, direction, decision, or instruction. No question shall be raised as to

the regularity of a transfer of any property, rights, or interests dealt with in pursuance of any such order, direction, decision, or instruction. Every action taken with regard to any property, business, or company, whether as regards its investigation, sequestration, compulsory administration, use, requisition, supervision, or winding up, the sale or management of property, rights, or interests, the collection or discharge of debts, the payment of costs, charges or expenses, or any other matter whatsoever, in pursuance of orders, directions, decisions, or instructions of any court or of any department of the Government of any of the high contracting parties, made or given, or purporting to be made or given, in pursuance of war legislation with regard to enemy property, rights, or interests, is confirmed. Provided that the provisions of this paragraph shall not be held to prejudice the titles to property heretofore acquired in good faith and for value and in accordance with the laws of the country in which the property is situated by nationals of the Allied and Associated Powers. The provisions of this paragraph do not apply to such of the above-mentioned measures as have been taken by the German authorities in invaded or occupied territory, nor to such of the above-mentioned measures as have been taken by Germany or the German authorities since Nov. 11, 1918, all of which shall be void.

2. No claim or action shall be made or brought against any Allied or Associated Power or against any person acting on behalf of or under the direction of any legal authority or department of the Government of such a power by Germany or by any German national wherever resident in respect of any act or omission with regard to his property, rights, or interests during the war or in preparation for the war. Similarly no claim or action shall be made or brought against any person in respect of any act or omission under or in accordance with the exceptional war measures, laws, or regulations of any Allied or Associated Power.

3. [Definitions of terms employed in Article 297 and this Annex.] . . .

SECTION V.—CONTRACTS, PRESCRIPTIONS, JUDGMENTS

Art. 299. (a) Any contract concluded between enemies shall be regarded as having been dissolved as from the time when any two of the parties become enemies, except in respect of any debt or other pecuniary obligation arising out of any act done or money paid thereunder, and subject to the exceptions and special rules with regard to particular contracts or classes of contracts contained herein or in the annex hereto.

(b) Any contract of which the execution shall be required in the general interest, within six months from the date of the coming into force of the present treaty, by the Allied or Associated Governments of which one of the parties is a national, shall be excepted from dissolution under this article.

When the execution of the contract thus kept alive would, owing to the alteration of trade conditions, cause one of the parties substantial prejudice the mixed arbitral tribunal provided for by Section VI shall be empowered to grant to the prejudiced party equitable compensation.

(c) Having regard to the provisions of the Constitution and law of the United States of America, of Brazil, and of Japan, neither the present Article, nor Article 300, nor the Annex hereto shall apply to contracts made between nationals of these

States and German nationals; nor shall Article 305 apply to the United States of America or its nationals.

(d) The present Article and the Annex hereto shall not apply to contracts the parties to which became enemies by reason of one of them being an inhabitant of territory of which the sovereignty has been transferred, if such party shall acquire under the present Treaty the nationality of an allied or associated power, nor shall they apply to contracts between nationals of the Allied and Associated Powers between whom trading has been prohibited by reason of one of the parties being in allied or associated territory in the occupation of the enemy.

(e) Nothing in the present Article or the Annex hereto shall be deemed to invalidate a transaction lawfully carried out in accordance with a contract between enemies if it has been carried out with the authority of one of the belligerent Powers.

Art. 300. (a) All periods of prescription, or limitation of right of action, whether they began to run before or after the outbreak of war, shall be treated in the territory of the High Contracting Parties, so far as regards relations between enemies, as having been suspended for the duration of the war. They shall begin to run again at earliest three months after the coming into force of the present Treaty. This provision shall apply to the period prescribed for the presentation of interest or dividend coupons or for the presentation for repayment of securities drawn for repayment or repayable on any other ground. . . .

(f) Germany shall compensate any third party who may be prejudiced by any restitution or restoration ordered by the Mixed Arbitral Tribunal under the provisions of the preceding paragraphs of this Article. . . .

Art. 301. As between enemies no negotiable instrument made before the war shall be deemed to have become invalid by reason only of failure within the required time to present the instrument for acceptance or payment or to give notice of non-acceptance or non-payment to drawers or indorsers or to protest the instrument nor by reason of failure to complete any formality during the war. . . .

Art. 302. Judgments given by the courts of an Allied or Associated Power in all cases which, under the present treaty, they are competent to decide, shall be recognized in Germany as final, and shall be enforced without it being necessary to have them declared executory. If a judgment in respect of any dispute which may have arisen has been given during the war by a German court against a national of an Allied or Associated State in a case in which he was not able to make his defense, the allied and associated national who has suffered prejudice thereby shall be entitled to recover compensation, to be fixed by the Mixed Arbitral Tribunal provided for in Section VI. . . .

Art. 303. For the purpose of Sections III, IV, V, and VII, the expression "during the war" means each Allied or Associated Power the period between the commencement of the state of war between that power and Germany and the coming into force of the present treaty.

ANNEX

I. General Provisions

1. Within the meaning of Articles 299, 300 and 301, the parties to a contract shall be regarded as enemies when trading between them shall have been prohibited by or otherwise became unlawful

under laws, orders or regulations to which one of those parties was subject. They shall be deemed to have become enemies from the date when such trading was prohibited or otherwise became unlawful.

2. The following classes of contracts are excepted from dissolution by Article 299 and, without prejudice to the rights contained in article 297 (b) of Section IV remain in force subject to the application of domestic laws, orders or regulations made during the war by the Allied and Associated Powers and subject to the terms of the contracts: (a) Contracts having for their object the transfer of estates or of real or personal property where the property therein had passed or the object had been delivered before the parties became enemies; (b) Leases and agreements for leases of land and houses; (c) Contracts of mortgage, pledge, or lien; (d) Concessions concerning mines, quarries or deposits;

(e) Contracts between individuals or companies and States, provinces, municipalities, or other similar juridical persons charged with administrative functions, and concessions granted by States, provinces, municipalities, or other similar juridical persons charged with administrative functions.

3. If the provisions of a contract are in part dissolved under Article 299, the remaining provisions of that contract shall, subject to the same application of domestic laws as is provided for in Paragraph 2, continue in force if they are severable, but where they are not severable the contract shall be deemed to have been dissolved in its entirety.

II. Provisions Relating to Certain Classes of Contracts

[Stock exchange and commercial contracts; securities, negotiable instruments; contracts of fire, life, marine and other insurances; reinsurance.]

SECTION VI.—MIXED ARBITRAL TRIBUNAL

Art. 304 (a) Within three months from the date of the coming into force of the present treaty, a Mixed Arbitral Tribunal shall be established between each of the Allied and Associated Powers on the one hand and Germany on the other hand. Each such tribunal shall consist of three members. Each of the Governments concerned shall appoint one of these members. The President shall be chosen by agreement between the two Governments concerned. In case of failure to reach agreement, the President of the tribunal and two other persons either of whom may in case of need take his place, shall be chosen by the Council of the League of Nations, or, until this is set up, by M. Gustave Ador [Swiss president], if he is willing. These persons shall be nationals of Powers that have remained neutral during the war. If any Government does not proceed within a period of one month in case there is a vacancy to appoint a member of the tribunal, such member shall be chosen by the other Government from the two persons mentioned above other than the President. The decision of the majority of the members of the tribunal shall be the decision of the tribunal.

(b) The Mixed Arbitral Tribunals established pursuant to paragraph (a) shall decide all questions within their competence under Sections III, IV, VI, and VII. . . .

(c) If the number of cases justifies it, additional members shall be appointed and each Mixed Arbitral Tribunal shall sit in divisions.

(d) Each Mixed Arbitral Tribunal will settle its own procedure except in so far as it is provided in the following Annex, and is empowered to award the sums to be paid by the loser in respect of the costs and expenses of the proceedings.

(e) Each Government will pay the remuneration of the member of the Mixed Arbitral Tribunal appointed by it and of any agent whom it may appoint to represent it before the Tribunal. The remuneration of the President will be determined by special agreement between the Governments concerned, and this remuneration and the joint expenses of each tribunal will be paid by the two Governments in equal moieties.

(f) The high contracting parties agree that their courts and authorities shall render to the Mixed Arbitral Tribunal direct all the assistance in their power, particularly as regards transmitting notices and collecting evidence.

(g) The high contracting parties agree to regard the decisions of the Mixed Arbitral Tribunal as final and conclusive, and to render them binding upon their nationals.

ANNEX

1. Should one of the members of the Tribunal either die, retire, or be unable for any reason whatever to discharge his functions, the same procedure will be followed for filling the vacancy as was followed for appointing him.

2. The tribunal may adopt such rules, of procedure as shall be in accordance with justice and equity and decide the order and time at which each party must conclude its arguments, and may arrange all formalities required for dealing with the evidence.

3. The agent and counsel of the parties on each side are authorized to present orally and in writing to the tribunal arguments in support or in defense of each case.

4. The tribunal shall keep record of the questions and cases submitted and the proceedings thereon, with the dates of such proceedings.

5. Each of the Powers concerned may appoint a secretary. These secretaries shall act together as joint secretaries of the tribunal and shall be subject to its direction.

6. The tribunal shall decide all questions and matters submitted upon such evidence and information as may be furnished by the parties concerned.

7. Germany agrees to give the tribunal all facilities and information required by it for carrying out its investigations.

8. The language in which the proceedings shall be conducted shall, unless otherwise agreed, be English, French, Italian, or Japanese, as may be determined by the Allied or Associated Power concerned.

9. The place and time for the meetings of each tribunal shall be determined by the President of the tribunal.

Art. 305. Whenever a competent court has given or gives a decision in a case covered by Sections III, IV, V, or VII, and such decision is inconsistent with the provisions of such sections, the party who is prejudiced by the decision shall be entitled to obtain redress which shall be fixed by the Mixed Arbitral Tribunal. At the request of the national of an Allied or Associated Power, the redress may, whenever possible, be effected by the Mixed Arbitral Tribunal directing the replacement of the parties in the position occupied by them before the judgment was given by the German Court.

SECTION VII.—INDUSTRIAL PROPERTY

Art. 306. Subject to the stipulations of the present treaty, rights of industrial, literary, and artistic property, as such property is defined by the International Conventions of Paris and of Berne, mentioned in Article 286, shall be re-established or restored, as from the coming into force of the present treaty in the territories of the high contracting parties, in favor of the persons entitled to the benefit of them at the moment when the state of war commenced, or their legal representatives. Equally, rights which, except for the war, would have been acquired during the war in consequence of an application made for the protection of industrial property, or the publication of a literary or artistic work, shall be recognized and established in favor of those persons who would have been entitled thereto, from the coming into force of the present treaty. Nevertheless, all acts done by virtue of the special measures taken during the war under legislative, executive or administrative authority of any Allied or Associated Power in regard to the rights of German nationals in industrial, literary or artistic property shall remain in force and shall continue to maintain their full effect. No claim shall be made or action brought by Germany or German nationals in respect of the use during the war by the Government or any Allied or Associated Power, or by any persons acting on behalf or with the assent of such Government of any rights in industrial, literary or artistic property, nor in respect of the sale, offering for sale, or use of any products, articles, or apparatus whatsoever to which such rights applied. . . . Each of the Allied or Associated Powers reserves the right to treat as void and of no effect any transfer in whole or in part of or other dealing with rights of or in respect of industrial, literary or artistic property properly effected after Aug. 1, 1914, or in the future, which would have the result of defeating the objects of the provisions of this article. The provisions of this article shall not apply to rights in industrial, literary or artistic property which have been dealt with in the liquidation of businesses or companies under war legislation by the Allied or Associated Powers, or which may be so dealt with by virtue of Article 297, paragraph (b).

Art. 307. A minimum of one year after the coming into force of the present treaty shall be accorded to the nationals of the high contracting parties, without extension fees or other penalty, in order to enable such persons to accomplish any act, fulfill any formality, pay any fees, and generally satisfy any obligation prescribed by the laws or regulations of the respective States relating to the obtaining, preserving, or opposing rights to, or in respect of, industrial property either acquired before the 1st of August, 1914, or which, except for the war, might have been acquired since that date as a result of an application made before the war or during its continuance, but nothing in this article shall give any right to reopen interference proceedings in the United States of America where a final hearing has taken place. . . . The period from the 1st of August, 1914, until the coming into force of the present treaty shall be excluded in considering the time within which a patent should be worked or a trade mark or design used, and it is further agreed that no patent, registered trade mark or design in force on the 1st of August, 1914, shall be subject to revocation or cancellation by reason only of the failure to work such patent or use such trade mark or design for two

years after the coming into force of the present treaty.

Art. 308. The rights of priority provided by Article IV of the International Convention for the Protection of Industrial Property of Paris, of the 20th March, 1883, revised at Washington in 1911, or by any other convention or statute, for the filing or registration of applications for patents or models of utility, and for the registration of trade marks, designs, and models which had not expired on the 1st August, 1914, and those which have arisen during the war, or would have arisen but for the war, shall be extended by each of the high contracting parties for a period of six months after the coming into force of the present treaty. Nevertheless, such extension shall in no way affect the right of any of the high contracting parties or of any person who before the coming into force of the present treaty was *bona fide* in possession of any rights of industrial property conflicting with rights applied for by another who claims rights of priority in respect of them, to exercise such rights by itself or himself personally, or by such agents or licensees as derived their rights from it or him before the coming into force of the present treaty; and such persons shall not be amenable to any action or other process of law in respect of infringement.

Art. 309. No action shall be brought and no claim made by persons residing or carrying on business within the territories of Germany on the one part and of the Allied or Associated Powers on the other, or persons who are nationals of such powers, respectively, or by any one deriving title during the war from such persons, by reason of any action which has taken place within the territory of the other party between the date of the declaration of war and that of the coming into force of the present treaty, which might constitute an infringement of the rights of industrial property or rights of literary and artistic property, either existing at any time during the war or revived under the provisions of Articles 307 and 308. . . . This article shall not apply as between the United States of America on the one hand and Germany on the other.

Art. 310. Licenses in respect of industrial, literary, or artistic property concluded before the war between nationals of the Allied or Associated Powers or persons residing in their territory or carrying on business therein, on the one part, and German nationals, on the other part, shall be considered as canceled as from the date of the declaration of war between Germany and the Allied or Associated Powers. But, in any case, the former beneficiary of a contract of this kind shall have the right, within a period of six months after the coming into force of the present treaty, to demand from the proprietor of the rights the grant of a new license, the conditions of which, in default of agreement between the parties, shall be fixed by the duly qualified tribunal in the country under whose legislation the rights had been acquired, except in the case of licenses held in respect of rights acquired under German law. In such cases the conditions shall be fixed by the Mixed Arbitral Tribunal referred to in Section VI of this Part. The tribunal may, if necessary, fix also the amount which it may deem just should be paid by reason of the use of the rights during the war. . . . This Article shall not apply as between the United States of America on the one hand and Germany on the other.

Art. 311. The inhabitants of territories separated from Germany by virtue of the present treaty shall,

notwithstanding this separation and the change of nationality consequent thereon, continue to enjoy in Germany all the rights in industrial, literary, and artistic property to which they were entitled under German legislation at the time of the separation. . . .

SECTION VIII.—SOCIAL AND STATE INSURANCE IN CEDED TERRITORY

Art. 312. Without prejudice to the provisions contained in other articles of the present treaty, the German Government undertakes to transfer to any power to which German territory in Europe is ceded, and to any power administering former German territory as a mandatary under Article 22 of Part I (League of Nations,) such portion of the reserves accumulated by the Government of the German Empire or of German States, or by public or private organizations under their control, as is attributable to the carrying on of social or State insurance in such territory. The powers to which these funds are transferred must apply them to the performance of the obligations arising from such insurances. . . . In case these special conventions are not concluded in accordance with the above paragraph within three months after the coming into force of the present treaty, the conditions of transfer shall in each case be referred to a commission of five members, one of whom shall be appointed by the German Government, one by the other interested Government, and three by the governing body of the International Labor Office from the nationals of other States. This commission shall by majority vote within three months after appointment adopt recommendations for submission to the Council of the League of Nations, and the decisions of the council shall forthwith be accepted as final by Germany and the other Government concerned.

Part XI.—Aerial Navigation

Art. 313. The aircraft of the Allied and Associated Powers shall have full liberty of passage and landing over and in the territory and territorial waters of Germany, and shall enjoy the same privileges as German aircraft, particularly in case of distress by land or sea.

Art. 314. The aircraft of the Allied and Associated Powers shall, while in transit to any foreign country whatever, enjoy the right of flying over the territory and territorial waters of Germany without landing, subject always to any regulations which may be made by Germany, and which shall be applicable equally to the aircraft of Germany and those of the Allied and Associated Countries.

Art. 315. All aerodromes in Germany open to national public traffic shall be open for the aircraft of the Allied and Associated Powers, and in any such aerodrome such aircraft shall be treated on a footing of equality with German aircraft as regards charges of every description, including charges for landing and accommodation.

Art. 316. Subject to the present provisions, the rights of passage, transit and landing, provided for in Articles 313, 314 and 315, are subject to the observance of such regulations as Germany may consider it necessary to enact, but such regulations shall be applied without distinction to German aircraft and to those of Allied and Associated Countries.

Art. 317. Certificates of nationality, airworthi-

ness, or competency, and licenses, issued or recognized as valid by any of the Allied or Associated Powers, shall be recognized in Germany as valid and as equivalent to the certificates and licenses issued by Germany.

Art. 318. As regards internal commercial air traffic, the aircraft of the Allied and Associated Powers shall enjoy in Germany most favored nation treatment.

Art. 319. Germany undertakes to enforce the necessary measures to insure that all German aircraft flying over her territory shall comply with the rules as to lights and signals, rules of the air and rules for air traffic on and in the neighborhood of aerodromes, which have been laid down in the convention relative to aerial navigation concluded between the Allied and Associated Powers.

Art. 320. The obligations imposed by the preceding provisions shall remain in force until the 1st January, 1923, unless before that date Germany shall have been admitted into the League of Nations or shall have been authorized, by consent of the Allied and Associated Powers, to adhere to the convention relative to aerial navigation concluded between those powers.

Part XII.—Ports, Waterways and Railways

SECTION I.—GENERAL PROVISIONS

Art. 321. Germany undertakes to grant freedom of transit through her territories on the routes most convenient for international transit, either by rail, navigable waterway, or canal, to persons, goods, vessels, carriages, wagons, and mails coming from or going to the territories of any of the Allied and Associated Powers, (whether contiguous or not;) for this purpose the crossing of territorial waters shall be allowed. Such persons, goods, vessels, carriages, wagons, and mails shall not be subjected to any transit duty or to any undue delays or restrictions, and shall be entitled in Germany to national treatment as regards charges, facilities, and all other matters. Goods in transit shall be exempt from all customs or other similar duties. All charges imposed on transport in transit shall be reasonable, having regard to the conditions of the traffic. No charge, facility, or restriction shall depend directly or indirectly on the ownership or on the nationality of the ship or other means of transport on which any part of the through journey has been, or is to be, accomplished.

Art. 322. Germany undertakes neither to impose nor to maintain any control over transmigration traffic through her territories beyond measures necessary to insure that passengers are bona fide in transit; nor to allow any shipping company or any other private body, corporation, or person interested in the traffic to take any part whatever in, or to exercise any direct or indirect influence over, any administrative service that may be necessary for this purpose.

Art. 323. Germany undertakes to make no discrimination or preference, direct or indirect, in the duties, charges, and prohibitions relating to importations into or exportations from her territories, or, subject to the special engagements contained in the present treaty, in the charges and conditions of transport of goods or persons entering or leaving her territories, based on the frontier crossed; or on the kind, ownership, or flag of the means of transport (including aircraft) em-

ployed; or on the original or immediate place of departure of the vessel, wagon, or aircraft or other means of transport employed. Germany particularly undertakes not to establish against the ports and vessels of any of the Allied and Associated Powers any surtax or any direct or indirect bounty for export or import by German ports of vessels, or by those of another power, for example by means of combined tariffs. . . .

Art. 324. All necessary administrative and technical measures shall be taken to shorten, as much as possible, the transmission of goods across the German frontiers and to insure their forwarding and transport from such frontiers, irrespective of whether such goods are coming from or going to the territories of the Allied and Associated Powers or are in transit from or to those territories, under the same material conditions in such matters as rapidity of carriage and care en route as are enjoyed by other goods of the same kind carried on German territory under similar conditions of transport. . . .

Art. 325. The seaports of the Allied and Associated Powers are entitled to all favors and to all reduced tariffs granted on German railways or navigable waterways for the benefit of German ports or of any port of another power.

Art. 326. Germany may not refuse to participate in the tariffs or combinations of tariffs intended to secure for ports of any of the Allied and Associated Powers advantages similar to those granted by Germany to her own ports or the ports of any other power.

SECTION II.—NAVIGATION

Chapter I.—Freedom of Navigation

Art. 327. The nationals of any of the Allied and Associated Powers as well as their vessels and property shall enjoy in all German ports and in the inland navigation routes of Germany, the same treatment in all respects as German nationals, vessels and property. In particular the vessels of any one of the Allied or Associated Powers shall be entitled to transport goods of any description, and passengers, to or from any ports or places in German territory to which German vessels may have access, under conditions which shall not be more onerous than those applied in the case of national vessels; they shall be treated on a footing of equality with national vessels as regards port and harbor facilities and charges of every description.

Chapter II.—Free Zones in Ports

Art. 328. The free zones existing in German ports on the 1st August, 1914, shall be maintained. These free zones and any other free zones which may be established in German territory by the present treaty, shall be subject to the régime provided for in the following articles. Goods entering or leaving a free zone shall not be subjected to any import or export duty, other than those provided for in Article 330. Vessels and goods entering a free zone may be subjected to the charges established to cover expenses of administration, upkeep and improvement of the port, as well as to the charges for the use of various installations, provided that these charges shall be reasonable having regard to the expenditure incurred, and shall be levied in the conditions of equality provided for in Article 327. . . .

Art. 329. The facilities granted for the erection of warehouses, for packing and for unpacking

goods, shall be in accordance with trade requirements for the time being. All goods allowed to be consumed in the free zone shall be exempt from duty, whether of excise or of any other description, apart from the statistical duty provided for in Article 328 above. There shall be no discrimination in regard to any of the provisions of the present article between persons belonging to different nationalities or between goods of different origin or destination.

Art. 330. Import duties may be levied on goods leaving the free zone for consumption in the country on the territory of which the port is situated. Conversely, export duties may be levied on goods coming from such country and brought into the free zone. These import and export duties shall be levied on the same basis and at the same rates as similar duties levied at the other customs frontiers of the country concerned. On the other hand, Germany shall not levy, under any denomination, any import, export, or transit duty on goods carried by land or water across her territory to or from the free zone from or to any other State. . . .

Chapter III.—Clauses Relating to the Elbe, the Oder, the Niemen (Russtrom-Memel-Niemen) and the Danube

(1) General Clauses

Art. 331. The following rivers are declared international; The Elbe (Labe) from its confluence with the Vltava (Moldau), and the Vltava (Moldau) from Prague; the Oder (Odra) from its confluence with the Oppa; the Niemen (Russtrom-Memel-Niemen) from Grodno; the Danube from Ulm; and all navigable parts of these river systems which naturally provide more than one State with access to the sea, with or without transshipment from one vessel to another; together with lateral canals and channels constructed either to duplicate or to improve naturally navigable sections of the specified river system, or to connect two naturally navigable sections of the same river. The same shall apply to the Rhine-Danube navigable waterway, should such a waterway be constructed under the conditions laid down in Article 353.

Art. 332. On the waterways declared to be international in the preceding article, the nationals, property and flags of all powers shall be treated on a footing of perfect equality, no distinction being made to the detriment of the nationals, property or flag of any power between them and the nationals, property or flag of the riparian State itself or of the most favored nation. Nevertheless, German vessels shall not be entitled to carry passengers or goods by regular services between the ports of any Allied or Associated Power, without special authority from such power.

Art. 333. Where such charges are not precluded by any existing conventions, charges varying on different sections of a river may be levied on vessels using the navigable channels or their approaches, provided that they are intended solely to cover equitably the cost of maintaining in a navigable condition, or of improving, the river and its approaches, or to meet expenditure incurred in the interests of navigation. . . .

Art. 334. The transit of vessels, passengers, and goods on these waterways shall be effected in accordance with the general conditions prescribed for transit in Section I, above. When the two banks of an international river are within the same

State goods in transit may be placed under seal or in the custody of customs agents. When the river forms a frontier goods and passengers in transit shall be exempt from all customs formalities; the loading and unloading of goods, and the embarkation and disembarkation of passengers, shall only take place in the ports specified by the riparian State.

Art. 335. No dues of any kind other than those provided for in the present part shall be levied along the course or at the mouth of these rivers. This provision shall not prevent the fixing by the riparian States of customs, local octroi, or consumption duties, or the creation of reasonable and uniform charges levied in the ports, in accordance with public tariffs, for the use of cranes, elevators, quays, warehouses, &c.

Art. 336. In default of any special organization for carrying out the works connected with the upkeep and improvement of the international portion of a navigable system, each riparian State shall be bound to take suitable measures to remove any obstacle or danger to navigation and to insure the maintenance of good conditions of navigation. If a State neglects to comply with this obligation any riparian State, or any State represented on the International Commission, if there is one, may appeal to the tribunal instituted for this purpose by the League of Nations.

Art. 337. The same procedure shall be followed in the case of a riparian State undertaking any works of a nature to impede navigation in the international section. The tribunal mentioned in the preceding article shall be entitled to enforce the suspension or suppression of such works, making due allowance in its decisions for all rights in connection with irrigation, water-power, fisheries, and other national interests, which, with the consent of all the riparian States or of all the States represented on the International Commission, if there be one, shall be given priority over the requirements of navigation. Appeal to the tribunal of the League of Nations does not require the suspension of the works.

Art. 338. The régime set out in Article 332 to 337 above shall be superseded by one to be laid down in a General Convention drawn up by the Allied and Associated Powers, and approved by the League of Nations, relating to the waterways recognized in such Convention as having an international character. This Convention shall apply in particular to the whole or part of the above-mentioned river systems of the Elbe, (Labe,) the Oder, (Odra,) the Niemen, (Russtrom-Memel-Niemen,) and the Danube, and such other parts of these river systems as may be covered by a general definition. Germany undertakes, in accordance with the provisions of Article 379, to adhere to the said General Convention as well as to all projects prepared in accordance with Article 343 below for the revision of existing international agreements and regulations.

Art. 339. Germany shall cede to the Allied and Associated Powers concerned, within a maximum period of three months from the date on which notification shall be given her, a proportion of the tugs and vessels remaining registered in the ports of the river systems referred to in Article 331 after the deduction of those surrendered by way of restitution or reparation. Germany shall in the same way cede material of all kinds necessary to the Allied and Associated Powers concerned for the utilization of those river systems.

The number of the tugs and boats and the amount of the material so ceded, and their dis-

tribution, shall be determined by an arbitrator or arbitrators nominated by the United States of America, due regard being had to the legitimate needs of the parties concerned, and particularly to the shipping traffic during the five years preceding the war. . . . The cessions provided for in the present article shall entail a credit of which the total amount, settled in a lump sum by the arbitrator or arbitrators, shall not in any case exceed the value of the capital expended in the initial establishment of the material ceded, and shall be set off against the total sums due from Germany; in consequence, the indemnification of the proprietors shall be a matter for Germany to deal with.

(2) Special Clauses Relating to the Elbe, the Oder, and the Niemen (Russtrom-Memel-Niemen)

Art. 340. The Elbe (Labe) shall be placed under the administration of an International Commission which shall comprise: 4 representatives of the German States bordering on the river; 2 representatives of the Czecho-Slovak State; 1 representative of Great Britain; 1 representative of France; 1 representative of Italy; 1 representative of Belgium. Whatever be the number of members present, each delegation shall have the right to record a number of votes equal to the number of representatives allotted to it. If certain of these representatives cannot be appointed at the time of the coming into force of the present treaty, the decisions of the commission shall nevertheless be valid.

Art. 341. The Oder (Odra) shall be placed under the administration of an International Commission, which shall comprise: 1 representative of Poland; 3 representatives of Prussia; 1 representative of the Czecho-Slovak State; 1 representative of Great Britain; 1 representative of France; 1 representative of Denmark; 1 representative of Sweden. If certain of these representatives cannot be appointed at the time of the coming into force of the present treaty, the decisions of the commission shall nevertheless be valid.

Art. 342. On a request being made to the League of Nations by any riparian State, the Niemen (Russtrom-Memel-Niemen) shall be placed under the administration of an International Commission, which shall comprise one representative of each riparian State, and three representatives of other States specified by the League of Nations.

Art. 343. The International Commissions referred to in Articles 340 and 341 shall meet within three months of the date of the coming into force of the present treaty. The International Commission referred to in Article 342 shall meet within three months from the date of the request made by a riparian State. Each of these commissions shall proceed immediately to prepare a project for the revision of the existing international agreements and regulations, drawn up in conformity with the General Convention referred to in Article 338, should such convention have been already concluded. In the absence of such convention, the project for revision shall be in conformity with the principles of Articles 332 to 337, above.

Art. 344. The projects referred to in the preceding article shall, inter alia:

(a) Designate the headquarters of the International Commission, and prescribe the manner in which its President is to be nominated;

(b) Specify the extent of the commission's powers, particularly in regard to the execution of works of maintenance, control, and improvement on the river system, the financial régime, the fix-

ing and collection of charges, and regulations for navigation;

(c) Define the sections of the river or its tributaries to which the international régime shall be applied.

Art. 345. The international agreements and regulations at present governing the navigation of the Elbe, (Labe,) the Oder (Odra,) and the Niemen (Russtrom-Memel-Niemen) shall be provisionally maintained in force until the ratification of the above-mentioned projects. Nevertheless, in all cases where such agreements and regulations in force are in conflict with the provisions of Articles 332 to 337 above, or of the General Convention to be concluded, the latter provisions shall prevail.

(3) Special Clauses Relating to the Danube

Art. 346. The European Commission of the Danube reassumes the powers it possessed before the war. Nevertheless, as a provisional measure, only representatives of Great Britain, France, Italy, and Rumania shall constitute this commission.

Art. 347. From the point where the competence of the European Commission ceases, the Danube system referred to in Article 331 shall be placed under the administration of an international commission composed as follows: 2 representatives of German riparian States; 1 representative of each other riparian State; 1 representative of each non-riparian State represented in the future on the European Commission of the Danube. If certain of these representatives cannot be appointed at the time of the coming into force of the present treaty, the decisions of the commission shall nevertheless be valid.

Art. 348. The International Commission provided for in the preceding article shall meet as soon as possible after the coming into force of the present treaty, and shall undertake provisionally the administration of the river in conformity with the provisions of Articles 332 to 337, until such time as a definitive statute regarding the Danube is concluded by the powers nominated by the Allied and Associated Powers.

Art. 349. Germany agrees to accept the régime which shall be laid down for the Danube by a conference of the power nominated by the Allied and Associated Powers, which shall meet within one year after the coming into force of the present treaty, and at which German representatives may be present.

Art. 350. The mandate given by Article 57 of the Treaty of Berlin of the 13th July, 1878, to Austria-Hungary, and transferred by her to Hungary, to carry out works at the Iron Gates, is abrogated. The commission intrusted with the administration of this part of the river shall lay down provisions for the settlement of accounts subject to the financial provisions of the present treaty. Charges which may be necessary shall in no case be levied by Hungary.

Art. 351. Should the Czecho-Slovak State, the Serb-Croat-Slovene State, or Rumania, with the authorization of or under mandate from the International Commission, undertake maintenance, improvement, weir, or other works on a part of the river system which forms a frontier, these States shall enjoy on the opposite bank, and also on the part of the bed which is outside their territory, all necessary facilities for the survey, execution, and maintenance of such works.

Art. 352. Germany shall be obliged to make to the European Commission of the Danube all res-

titutions, reparations, and indemnities for damages inflicted on the commission during the war.

Art. 353. Should a deep-draught Rhine-Danube navigable waterway be constructed, Germany undertakes to apply thereto the régime prescribed in Articles 332 to 338.

Chapter IV.—Clauses Relating to the Rhine and the Moselle

Art. 354. As from the coming into force of the present treaty, the Convention of Mannheim of 17th October, 1868, together with the Final Protocol thereof, shall continue to govern navigation on the Rhine, subject to the conditions hereinafter laid down. In the event of any provisions of the said Convention being in conflict with those laid down by the General Convention referred to in Article 338, (which shall apply to the Rhine,) the provisions of the General Convention shall prevail. Within a maximum period of six months from the coming into force of the present treaty, the Central Commission referred to in Article 355 shall meet to draw up a project of revision of the Convention of Mannheim. This project shall be drawn up in harmony with the provisions of the General Convention referred to above, should this have been concluded by that time, and shall be submitted to the powers represented on the Central Commission. Germany hereby agrees to adhere to the project so drawn up. Further, the modifications set out in the following articles shall immediately be made in the Convention of Mannheim. The Allied and Associated Powers reserve to themselves the right to arrive at an understanding in this connection with Holland, and Germany hereby agrees to accede if required to any such understanding.

Art. 355. The Central Commission provided for in the Convention of Mannheim shall consist of nineteen members, viz.: 2 representatives of the Netherlands; 2 representatives of Switzerland; 4 representatives of German riparian States; 4 representatives of France, which in addition shall appoint the President of the Commission; 2 representatives of Great Britain; 2 representatives of Italy; 2 representatives of Belgium. The headquarters of the Central Commission shall be at Strasbourg. Whatever be the number of members present, each delegation shall have the right to record a number of votes equal to the number of representatives allotted to it. If certain of these representatives cannot be appointed at the time of the coming into force of the present treaty, the decisions of the Commission shall nevertheless be valid.

Art. 356. Vessels of all nations, and their cargoes, shall have the same rights and privileges as those which are granted to vessels belonging to the Rhine navigation, and to their cargoes. . . .

Art. 357. Within a maximum period of the three months from the date on which notification shall be given Germany shall cede to France tugs and vessels, from among those remaining registered in German Rhine ports after the deduction of those surrendered by way of restitution or reparation, or shares in German Rhine navigation companies. . . . The cessions provided for in the present article shall entail a credit of which the total amount, settled in a lump sum by the arbitrator or arbitrators mentioned above, shall not in any case exceed the value of the capital expended in the initial establishment of the ceded material and installations, and shall be set off against the total

sums due from Germany; in consequence, the indemnification of the proprietors shall be a matter for Germany to deal with.

Art. 358. Subject to the obligation to comply with the provisions of the Convention of Mannheim or of the convention which may be substituted therefor, and to the stipulations of the present treaty, France shall have on the whole course of the Rhine included between the two extreme points of the French frontiers:

(a) the right to take water from the Rhine to feed navigation and irrigation canals (constructed or to be constructed) or for any other purpose, and to execute on the German bank all works necessary for the exercise of this right;

(b) the exclusive right to the power derived from works of regulation on the river, subject to the payment to Germany of the value of half the power actually produced, this payment, which will take into account the cost of the works necessary for producing the power, being made either in money or in power and in default of agreement being determined by arbitration. For this purpose France alone shall have the right to carry out in this part of the river all works of regulation (weirs or other works) which she may consider necessary for the production of power. Similarly, the right of taking water from the Rhine is accorded to Belgium to feed the Rhine-Meuse navigable waterway provided for below. . . . To insure the proper and faithful execution of the provisions contained in (a) and (b) above, Germany (i) binds herself not to undertake or to allow the construction of any lateral canal or any derivation on the right bank of the river opposite the French frontiers; (ii) recognizes the possession by France of the right of support on and the right of way over all lands situated on the right bank which may be required in order to survey, to build, and to operate weirs which France, with the consent of the Central Commission, may subsequently decide to establish. In accordance with such consent, France shall be entitled to decide upon and fix the limits of the necessary sites, and she shall be permitted to occupy such lands after a period of two months after simple notification, subject to the payment by her to Germany of indemnities of which the total amount shall be fixed by the Central Commission. . . . Should Switzerland so demand, and if the Central Commission approves, the same rights shall be accorded to Switzerland for the part of the river forming her frontier with other riparian States; (iii) shall hand over to the French Government, during the month following the coming into force of the present treaty, all projects, designs, drafts of concessions and of specifications concerning the regulation of the Rhine for any purpose whatever which have been drawn up or received by the Governments of Alsace-Lorraine or of the Grand Duchy of Baden.

Art. 359. Subject to the preceding provisions, no works shall be carried out in the bed or on either bank of the Rhine where it forms the boundary of France and Germany without the previous approval of the Central Commission or of its agents.

Art. 360. France reserves the option of substituting herself as regards the rights and obligations resulting from agreements arrived at between the Government of Alsace-Lorraine and the Grand Duchy of Baden concerning the works to be carried out on the Rhine; she may also denounce such agreements within a term of five years dating from the coming into force of the present treaty.

France shall also have the option of causing works to be carried out which may be recognized as necessary by the Central Commission for the upkeep or improvement of the navigability of the Rhine above Mannheim.

Art. 361. Should Belgium, within a period of 25 years from the coming into force of the present treaty decide to create a deep-draught Rhine-Meuse navigable waterway, in the region of Ruhrort, Germany shall be bound to construct, in accordance with plans to be communicated to her by the Belgian Government, after agreement with the Central Commission, the portion of this navigable waterway situated within her territory. The Belgian Government shall, for this purpose, have the right to carry out on the ground all necessary surveys. Should Germany fail to carry out all or part of these works, the Central Commission shall be entitled to carry them out instead; and, for this purpose, the commission may decide upon and fix the limits of the necessary sites and occupy the ground after a period of two months after simple notification, subject to the payment of indemnities to be fixed by it and paid by Germany. This navigable waterway shall be placed under the same administrative régime as the Rhine itself, and the division of the cost of initial construction, including the above indemnities, among the States crossed thereby shall be made by the Central Commission.

Art. 362. Germany hereby agrees to offer no objection to any proposals of the Central Rhine Commission for extending its jurisdiction:

(1) to the Moselle below the Franco-Luxemburg frontier down to the Rhine, subject to the consent of Luxemburg;

(2) to the Rhine above Basle up to the Lake of Constance, subject to the consent of Switzerland;

(3) to the lateral canals and channels which may be established either to duplicate or to improve naturally navigable sections of the Rhine or the Moselle, or to connect two naturally navigable sections of these rivers, and also any other parts of the Rhine River system which may be covered by the General Convention provided for in Article 338 above.

Chapter V.—Clauses Giving to the Czecho-Slovak State the Use of Northern Ports

Art. 363. In the ports of Hamburg and Stettin Germany shall lease to the Czecho-Slovak State, for a period of ninety-nine years, areas which shall be placed under the general régime of free zones and shall be used for the direct transit of goods coming from or going to that State.

Art. 364. The delimitation of these areas, and their equipment, their exploitation, and in general all conditions for their utilization, including the amount of the rental, shall be decided by a commission consisting of one delegate of Germany, one delegate of the Czecho-Slovak State and one delegate of Great Britain. These conditions shall be susceptible of revision every ten years in the same manner. Germany declares in advance that she will adhere to the decisions so taken.

SECTION III.—RAILWAYS

Chapter I.—Clauses Relating to International Transport

Art. 365. Goods coming from the territories of the Allied and Associated Powers, and going to

Germany, or in transit through Germany from or to the territories of the Allied and Associated Powers, shall enjoy on the German railways as regards charges to be collected (rebates and drawbacks being taken into account) facilities, and all other matters, the most favorable treatment applied to goods of the same kind carried on any German lines, either in internal traffic, or for export, import or in transit, under similar conditions of transport, for example as regards length of route. The same rule shall be applied, on the request of one or more of the Allied and Associated Powers, to goods specially designated by such power or powers coming from Germany and going to their territories. International tariffs established in accordance with the rates referred to in the preceding paragraph and involving through way-bills shall be established when one of the Allied and Associated Powers shall require it from Germany.

Art. 366. From the coming into force of the present treaty the high contracting parties shall renew, in so far as concerns them and under the reserves indicated in the second paragraph of the present Article, the conventions and arrangements signed at Berne on the 14th of October, 1890, the 20th September, 1893, the 16th July, 1895, the 16th June, 1898, and the 19th September, 1906, regarding the transportation of goods by rail. If within five years from the date of the coming into force of the present treaty a new convention for the transportation of passengers, luggage and goods by rail shall have been concluded to replace the Berne convention of the 14th October, 1890 and the subsequent additions referred to above, this new convention and the supplementary provisions for international transport by rail which may be based on it shall bind Germany even if she shall have refused to take part in the preparation of the convention or to subscribe to it. Until a new convention have been concluded, Germany shall conform to the provisions of the Berne Convention and the subsequent additions referred to above, and to the current supplementary provisions.

Art. 367. Germany shall be bound to co-operate in the establishment of through ticket services (for passengers and their luggage) which shall be required by any of the Allied and Associated Powers to insure their communication by rail with each other and with all other countries by transit across the territories of Germany; in particular Germany shall, for this purpose, accept trains and carriages coming from the territories of the Allied and Associated Powers and shall forward them with a speed at least equal to that of her best long-distance trains on the same lines. The rates applicable to such through services shall not in any case be higher than the rates collected on German internal services for the same distance, under the same conditions of speed and comfort. The tariffs applicable under the same conditions of speed and comfort to the transportation of emigrants going to or coming from ports of the Allied and Associated Powers and using the German railways, shall not be at a higher kilometeric rate than the most favorable tariffs (drawbacks and rebates being taken into account) enjoyed on the said railways by emigrants going to or coming from any other ports.

Art. 368. Germany shall not apply specially to such through services or to the transportation of emigrants going to or coming from the ports of the Allied and Associated Powers, any technical, fiscal or administrative measures, such as measures

of customs examination, general police, sanitary police, and control, the result of which would be to impede or delay such services.

Art. 369. In case of transport partly by rail and partly by internal navigation, with or without through way-bill, the preceding Articles shall apply to the part of the journey performed by rail.

Chapter II.—Rolling Stock

Art. 370. Germany undertakes that German wagons shall be fitted with apparatus allowing (1) of their inclusion in goods trains on the lines such of the Allied and Associated Powers as are parties to the Berne Convention of May 15, 1886, as modified on May 18, 1907, without hampering the action of the continuous brake which may be adopted in such countries within ten years of the coming into force of the present treaty, and (2) of the acceptance of wagons of such countries in all goods trains on the German lines. The rolling stock of the Allied and Associated Powers shall enjoy on the German lines the same treatment as German rolling stock as regards movement, upkeep and repairs.

Chapter III.—Cessions of Railway Lines

Art. 371. Subject to any special provisions concerning the cession of ports, waterways and railways situated in the territories over which Germany abandons her sovereignty, and to the financial conditions relating to the concessionaires and the pensioning of the personnel, the cession of railways will take place under the following conditions: 1. The works and installations of all the railroads shall be handed over complete and in good condition. 2. When a railway system possessing its own rolling-stock is handed over in its entirety by Germany to one of the Allied and Associated Powers, such stock shall be handed over complete, in accordance with the last inventory before November 11th, 1918, and in a normal state of upkeep. 3. As regards lines without any special rolling-stock, commissions of experts designated by the Allied and Associated Powers, on which Germany shall be represented, shall fix the proportion of the stock existing on the system to which those lines belong to be handed over. . . . The provisions of paragraphs 3 and 4 above shall be applied to the lines of former Russian Poland converted by Germany to the German gauge, such lines being regarded as detached from the Prussian State System.

Chapter IV.—Provisions Relating to Certain Railway Lines

Art. 372. When as a result of the fixing of new frontiers a railway connection between two parts of the same country crosses another country, or a branch line from one country has its terminus in another, the conditions of working, if not specifically provided for in the present treaty, shall be laid down in a convention between the railway administrations concerned. If the administrations cannot come to an agreement as to the terms of such convention, the points of difference shall be decided by commissions of experts composed as provided in the preceding Article.

Art. 373. Within a period of five years from the coming into force of the present treaty the Czecho-Slovak State may require the construction of a railway line in German territory between the stations of Schlauney and Nachod. The cost of construction shall be borne by the Czecho-Slovak State.

Art. 374. Germany undertakes to accept, within ten years of the coming into force of the present treaty, on request being made by the Swiss Government after agreement with the Italian Government, the denunciation of the International Convention of the 13th October, 1909, relative to the St. Gothard railway. In the absence of agreement as to the conditions of such denunciation, Germany hereby agrees to accept the decision of an arbitrator designated by the United States of America.

Chapter V.—*Transitory Provisions*

Art. 375. Germany shall carry out the instructions given her, in regard to transport, by an authorized body acting on behalf of the Allied and Associated Powers:

1. For the carriage of troops under the provisions of the present treaty, and of material, ammunition and supplies for army use. 2. As a temporary measure, for the transportation of supplies for certain regions, as well as for the restoration, as rapidly as possible, of the normal conditions of transport, and for the organization of postal and telegraphic services.

SECTION IV.—DISPUTES AND REVISION OF PERMANENT CLAUSES

Art. 376. Disputes which may arise between interested powers with regard to the interpretation and application of the preceding articles shall be settled as provided by the League of Nations.

Art. 377. At any time the League of Nations may recommend the revision of such of these Articles as relate to a permanent administrative régime.

Art. 378. The stipulations in Articles 321 to 330, 332, 365, and 367 shall be subject to revision by the Council of the League of Nations at any time after five years from the coming into force of the present treaty. Failing such revision, no Allied or Associated Power can claim after the expiration of the above period of five years the benefit of any of the stipulations in the Articles enumerated above on behalf of any portion of its territories in which reciprocity is not accorded in respect of such stipulations. The period of five years during which reciprocity cannot be demanded may be prolonged by the Council of the League of Nations.

SECTION V.—SPECIAL PROVISION

Art. 379. Without prejudice to the special obligations imposed on her by the present treaty for the benefit of the Allied and Associated Powers, Germany undertakes to adhere to any general conventions regarding the international régime of transit, waterways, ports or railways which may be concluded by the Allied and Associated Powers, with the approval of the League of Nations, within five years of the coming into force of the present treaty.

SECTION VI.—CLAUSES RELATING TO THE KIEL CANAL

Art. 380. The Kiel Canal and its approaches shall be maintained free and open to the vessels of commerce and of war of all nations at peace with Germany on terms of entire equality.

Art. 381. The nationals, property, and vessels of all powers shall, in respect to charges, facilities, and

in all other respects, be treated on a footing of perfect equality in the use of the canal, no distinction being made to the detriment of nationals, property, and vessels of any power between them and the nationals, property, and vessels of Germany or of the most favored nations. No impediment shall be placed on the movement of persons or vessels other than those arising out of police, customs, sanitary, emigration or immigration regulations, and those relating to the import or export of prohibited goods. Such regulations must be reasonable and uniform and must not unnecessarily impede traffic.

Art. 382. Only such charges may be levied on vessels using the canal or its approaches as are intended to cover in an equitable manner the cost of maintaining in a navigable condition, or if improving, the canal or its approaches, or to meet expenses incurred in the interests of navigation. The schedule of such charges shall be calculated on the basis of such expenses, and shall be posted up in the ports. These charges shall be levied in such a manner as to render any detailed examination of cargoes unnecessary, except in the case of suspected fraud or contravention.

Art. 383. Goods in transit may be placed under seal or in the custody of customs agents; the loading and unloading of goods, and the embarkation and disembarkation of passengers, shall only take place in the ports specified by Germany.

Art. 384. No charge of any kind other than those provided for in the present treaty shall be levied along the course or at the approaches of the Kiel Canal.

Art. 385. Germany shall be bound to take suitable measures to remove any obstacle or danger to navigation, and to insure the maintenance of good conditions of navigation. She shall not undertake any works of a nature to impede navigation on the canal or its approaches.

Art. 386. In the event of violation of any of the conditions of Articles 380 to 386, or of disputes as to the interpretation of these articles, any interested power can appeal to the jurisdiction instituted for the purpose by the League of Nations. In order to avoid reference of small questions to the League of Nations, Germany will establish a local authority at Kiel qualified to deal with disputes in the first instance and to give satisfaction so far as possible to complaints which may be presented through the consular representatives of the interested powers.

Part XIII.—Labor

SECTION I.—ORGANIZATION OF LABOR

Whereas the League of Nations has for its object the establishment of universal peace and such a peace can be established only if it is based upon social justice; And whereas conditions of labor exist involving such injustice, hardship, and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled; and an improvement of those conditions is urgently required: as, for example, by the regulations of the hours of work, including the establishment of a maximum working day and week, the regulation of the labor supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease, and injury arising out of his employment, the protection of the children, young persons, and women, provision for old age

and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education, and other measures: Whereas also the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries; The high contracting parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following:

Chapter I.—Organization

Art. 387. A permanent organization is hereby established for the promotion of the objects set forth in the preamble. The original members of the League of Nations shall be the original members of this organization, and hereafter membership of the League of Nations shall carry with it membership of the said organization.

Art. 388. The permanent organization shall consist of: (i) a General Conference of Representatives of the Members, and, (ii) an International Labor Office controlled by the governing body described in Article 393.

Art. 389. The meetings of the General Conference of Representatives of the Members shall be held from time to time as occasion may require, and at least once in every year. It shall be composed of four representatives of each of the members, of whom two shall be Government delegates and the two others shall be delegates representing respectively the employers and the workpeople of each of the members. Each delegate may be accompanied by advisers, who shall not exceed two in number for each item on the agenda of the meeting. When the questions specially affecting women are to be considered by the conference, one at least of the advisers should be a woman. . . .

Art. 390. Every delegate shall be entitled to vote individually on all matters which are taken into consideration by the conference. If one of the members fails to nominate one of the non-Government delegates whom it is entitled to nominate, the other non-Government delegates shall be allowed to sit and speak at the conference, but not to vote. . . .

Art. 391. The meetings of the conference shall be held at the seat of the League of Nations, or at such other place as may be decided by the conference at a previous meeting by two-thirds of the votes cast by the delegates present.

Art. 392. The International Labor Office shall be established at the seat of the League of Nations as part of the organization of the League.

Art. 393. The International Labor Office shall be under the control of a governing body consisting of twenty-four persons, appointed in accordance with the following provisions; The governing body of the International Labor Office shall be constituted as follows:

Twelve persons representing the Governments; Six persons elected by the delegates to the conference representing the employers; Six persons elected by the delegates to the conference representing the workers. Of the twelve persons representing the Governments, eight shall be nominated by the members which are of the chief industrial importance, and four shall be nominated by the members selected for the purpose by the Government delegates to the conference excluding the delegates of the eight members mentioned above. Any question as to which are the members of the chief

industrial importance shall be decided by the council of the League of Nations. The period of office of the members of the governing body will be three years. The method of filling vacancies and other similar questions may be determined by the governing body, subject to the approval of the conference. The governing body shall, from time to time, elect one of its members to act as its Chairman, shall regulate its own procedure, and shall fix its own times of meeting. A special meeting shall be held if a written request to that effect is made by at least ten members of the governing body.

Art. 394. There shall be a Director of the International Labor Office, who shall be appointed by the governing body, and, subject to the instructions of the Governing Body, shall be responsible for the efficient conduct of the International Labor Office and for such other duties as may be assigned to him. The Director or his deputy shall attend all meetings of the governing body.

Art. 395. The staff of the International Labor Office shall be appointed by the Director, who shall, as far as is possible with due regard to the efficiency of the work of the Office, select persons of different nationalities. A certain number of these persons shall be women.

Art. 396. The functions of the International Labor Office shall include the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labor, and particularly the examination of subjects which it is proposed to bring before the conference with a view to the conclusion of international conventions, and the conduct of such special investigations as may be ordered by the conference. It will prepare the agenda for the meetings of the conference. It will carry out the duties required of it by the provisions of this part of the present treaty in connection with international disputes. It will edit and publish in French and English, and in such other languages as the governing body may think desirable, a periodical paper dealing with problems of industry and employment of international interest. . . .

Art. 397. The Government departments of any of the members which deal with questions of industry and employment may communicate directly with the Director through the representative of their Government on the governing body of the International Labor Office, or, failing any such representative, through such other qualified official as the Government may nominate for the purpose.

Art. 398. The International Labor Office shall be entitled to the assistance of the Secretary-General of the League of Nations in any manner in which it can be given.

Art. 399. Each of the members will pay the traveling and subsistence expenses of its delegates and their advisers and of its representatives attending the meetings of the conference or governing body, as the case may be. All the other expenses of the International Labor Office and of the meetings of the conference or governing body shall be paid to the Director by the Secretary-General of the League of Nations out of the general funds of the League. The Director shall be responsible to the Secretary-General of the League for the proper expenditure of all moneys paid to him in pursuance of this Article.

Chapter II.—Procedure

Art. 400. The agenda of all meetings of the conference will be settled by the governing body, who shall consider any suggestion as to the agenda that

may be made by the Government of any of the members or by any representative organization recognized for the purpose of Article 389.

Art. 401. The Director shall act as the Secretary of the Conference, and shall transmit the agenda so as to reach the members four months before the meeting of the conference, and, through them, the non-Government delegates when appointed.

Art. 402. Any of the Governments of the members may formally object to the inclusion of any item or items in the agenda. The grounds for such objection shall be set forth in a reasoned statement addressed to the Director, who shall circulate it to all the members of the permanent organization. Items to which such objection has been made shall not, however, be excluded from the agenda if at the conference a majority of two-thirds of the votes cast by delegates present is in favor of considering them. If the conference decides (otherwise than under the preceding paragraph) by two-thirds of the votes cast by the delegates present that any subject shall be considered by the conference, that subject shall be included in the agenda for the following meeting.

Art. 403. The conference shall regulate its own procedure, shall elect its own President, and may appoint committees to consider and report on any matter. Except as otherwise expressly provided in this part of the present treaty, all matters shall be decided by a simple majority of the votes cast by the delegates present. The voting is void unless the total number of votes cast is equal to half the number of the delegates attending the conference.

Art. 404. The conference may add to any committees which it appoints technical experts, who shall be assessors without power to vote.

Art. 405. When the conference has decided on the adoption of proposals with regard to an item in the agenda, it will rest with the conference to determine whether these proposals should take the form: (a) of a recommendation to be submitted to the members for consideration with a view to effect being given to it by national legislation or otherwise, or (b) of a draft international convention for ratification by the members. In either case a majority of two-thirds of the votes cast by the delegates present shall be necessary on the final vote for the adoption of the recommendation or draft convention, as the case may be, by the conference. . . . A copy of the recommendation or draft convention shall be authenticated by the signature of the President of the conference and of the Director and shall be deposited with the Secretary-General of the League of Nations. The Secretary-General will communicate a certified copy of the recommendation or draft convention to each of the members. Each of the members undertakes that it will, within the period of one year at most from the closing of the session of the conference, or if it is impossible owing to exceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the conference, bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action. . . . If on a recommendation no legislation or other action is taken to make a recommendation effective, or if the draft convention fails to obtain the consent of the authority or authorities within whose competence the matter lies, no further obligation shall rest upon the member. In the case of a federal state, the power of which to enter into conventions on labor matters is subject to limita-

tions, it shall be in the discretion of that Government to treat a draft convention to which such limitations apply as a recommendation only, and the provisions of this article with respect to recommendations shall apply in such case. The above Article shall be interpreted in accordance with the following principle: In no case shall any member be asked or required, as a result of the adoption of any recommendation or draft convention by the conference to lessen the protection afforded by its existing legislation to the workers concerned.

Art. 406. Any convention so ratified shall be registered by the Secretary-General of the League of Nations, but shall only be binding upon the members which ratify it.

Art. 407. If any convention coming before the conference for final consideration fails to secure the support of two-thirds of the votes cast by the delegates present, it shall nevertheless be within the right of any of the members of the permanent organization to agree to such convention among themselves. Any convention so agreed to shall be communicated by the Governments concerned to the Secretary-General of the League of Nations, who shall register it.

Art. 408. Each of the members agrees to make an annual report to the International Labor office on the measures which it has taken to give effect to the provisions of conventions to which it is a party. These reports shall be made in such form and shall contain such particulars as the governing body may request. The Director shall lay a summary of these reports before the next meeting of the conference.

Art. 409. In the event of any representation being made to the International Labor Office by an industrial association of employers or of workers that any of the members has failed to secure in any respect the effective observance within its jurisdiction of any convention to which it is a party, the Governing Body may communicate this representation to the Government against which it is made and may invite that Government to make such statement on the subject as it may think fit.

Art. 410. If no statement is received within a reasonable time from the Government in question, or if the statement when received is not deemed to be satisfactory by the Governing Body, the latter shall have the right to publish the representation and the statement, if any, made in reply to it.

Art. 411. Any of the members shall have the right to file a complaint with the International Labor Office if it is not satisfied that any other member is securing the effective observance of any convention which both have ratified in accordance with the foregoing articles. The Governing Body may, if it thinks fit, before referring such a complaint to a Commission of Inquiry, as hereinafter provided for, communicate with the Government in question in the manner described in Article 409. If the Governing Body does not think it necessary to communicate the complaint to the Government in question, or if, when they have made such communication, no statement in reply has been received within a reasonable time which the Governing Body considers to be satisfactory, the Governing Body may apply for the appointment of a Commission of Inquiry to consider the complaint and to report thereon. The Governing Body may adopt the same procedure either of its own motion or on receipt of a complaint from a Delegate to the Conference. When any matter arising out of Articles 410 or 411 is being considered by the Governing Body, the Government in question shall, if

not already represented thereon, be entitled to send a representative to take part in the proceedings of the Governing Body while the matter is under consideration. Adequate notice of the date on which the matter will be considered shall be given to the Government in question.

Art. 412. The Commission of Inquiry shall be constituted in accordance with the following provisions: Each of the members agrees to nominate within six months of the date on which the present Treaty comes into force three persons of industrial experience, of whom one shall be a representative of employers, one a representative of workers, and one a person of independent standing, who shall together form a panel from which the members of the Commission of Inquiry shall be drawn. The qualifications of the persons so nominated shall be subject to scrutiny by the Governing Body, which may by two-thirds of the votes cast by the representatives present refuse to accept the nomination of any person whose qualifications do not in its opinion comply with the requirements of the present article. Upon the application of the Governing Body, the Secretary-General of the League of Nations shall nominate three persons, one from each section of this panel, to constitute the Commission of Inquiry, and shall designate one of them as the President of the commission. None of these three persons shall be a person nominated to the panel by any member directly concerned in the complaint.

Art. 413. The members agree that, in the event of the reference of a complaint to a commission of inquiry under Article 411, they will each, whether directly concerned in the complaint or not, place at the disposal of the commission all the information in their possession which bears upon the subject-matter of the complaint.

Art. 414. When the Commission of Inquiry has fully considered the complaint, it shall prepare a report embodying its findings on all questions of fact relevant to determining the issue between the parties and containing such recommendations as it may think proper as to the steps which should be taken to meet the complaint and the time within which they should be taken. It shall also indicate in this report the measures, if any, of an economic character against a defaulting Government which it considers to be appropriate, and which it considers other Governments would be justified in adopting.

Art. 415. The Secretary-General of the League of Nations shall communicate the report of the Commission of Inquiry to each of the Governments concerned in the complaint, and shall cause it to be published. Each of these Governments shall within one month inform the Secretary-General of the League of Nations whether or not it accepts the recommendations contained in the report of the Commission; and if not, whether it proposes to refer the complaint to the Permanent Court of International Justice of the League of Nations.

Art. 416. In the event of any member failing to take the action required by Article 405, with regard to a recommendation or draft convention, any other member shall be entitled to refer the matter to the Permanent Court of International Justice.

Art. 417. The decision of the Permanent Court of International Justice in regard to a complaint or matter which has been referred to it in pursuance of Article 415 or Article 416 shall be final.

Art. 418. The Permanent Court of International Justice may affirm, vary or reverse any of the

findings or recommendations of the Commission of Inquiry, if any, and shall in its decision indicate the measures, if any, of an economic character which it considers to be appropriate, and which other Governments would be justified in adopting against a defaulting Government.

Art. 419. In the event of any member failing to carry out within the time specified the recommendations, if any, contained in the report of the Commission of Inquiry, or in the decision of the Permanent Court of International Justice, as the case may be, any other member may take against that member the measures of an economic character indicated in the report of the Commission or in the decision of the Court as appropriate to the case.

Art. 420. The defaulting Government may at any time inform the Governing Body that it has taken the steps necessary to comply with the recommendations of the Commission of Inquiry or with those in the decision of the Permanent Court of International Justice, as the case may be, and may request it to apply to the Secretary-General of the League to constitute a commission of Inquiry to verify its contention. In this case the provisions of Articles 412, 413, 414, 415, 417 and 418 shall apply, and if the report of the Commission of Inquiry or the decision of the Permanent Court of International Justice is in favor of the defaulting Government, the other Governments shall forthwith discontinue the measures of an economic character that they have taken against the defaulting Government.

Chapter III.—General

Art. 421. The members engage to apply conventions which they have ratified in accordance with the provisions of this part of the present treaty to their colonies, protectorates, and possessions which are not fully self-governing: 1. Except where owing to the local conditions the convention is inapplicable, or 2. Subject to such modifications as may be necessary to adapt the convention to local conditions. And each of the members shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates, and possessions which are not fully self-governing.

Art. 422. Amendments to this part of the present treaty which are adopted by the Conference by a majority of two-thirds of the votes cast by the delegates present shall take effect when ratified by the States whose representatives compose the Council of the League of Nations and by three-fourths of the members.

Art. 423. Any question or dispute relating to the interpretation of this part of the present treaty or of any subsequent convention concluded by the members in pursuance of the provisions of this part of the present treaty shall be referred for decision to the Permanent Court of International Justice.

Chapter IV.—Transitory Provisions

Art. 424. The first meeting of the Conference shall take place in October, 1919. The place and agenda for this meeting shall be as specified in the Annex hereto. Arrangements for the convening and the organization of the first meeting of the Conference will be made by the Government designated for the purpose in the said Annex. That Government shall be assisted in the preparation of the documents for submission to the Conference

by an International Committee constituted as provided in the said Annex. The expenses of the first meeting and of all subsequent meetings held before the League of Nations has been able to establish a general fund, other than the expenses of delegates and their advisers, will be borne by the members in accordance with the apportionment of the expenses of the International Bureau of the Universal Postal Union.

Art. 425. Until the League of Nations has been constituted all communications which under the provisions of the foregoing articles should be addressed to the Secretary-General of the League will be preserved by the Director of the International Labor Office, who will transmit them to the Secretary-General of the League.

Art. 426. Pending the creation of a Permanent Court of International Justice, disputes which in accordance with this part of the present treaty would be submitted to it for decision will be referred to a tribunal of three persons appointed by the Council of the League of Nations.

ANNEX

First Meeting of Annual Labor Conference, 1919

The place of meeting will be Washington. The Government of the United States of America is requested to convene the conference. The International Organizing Committee will consist of seven members, appointed by the United States of America, Great Britain, France, Italy, Japan, Belgium, and Switzerland. The committee may, if it thinks necessary, invite other members to appoint representatives.

Agenda:

1. Application of principle of the 8-hours day or of the 48-hours week.
2. Question of preventing or providing against unemployment.
3. Women's employment:
 - (a) Before and after childbirth, including the question of maternity benefit.
 - (b) During the night.
 - (c) In unhealthy processes.
4. Employment of children:
 - (a) Minimum age of employment.
 - (b) During the night.
 - (c) In unhealthy processes.
5. Extension and application of the International Conventions adopted at Berne in 1906 on the prohibition of night work for women employed in industry and the prohibition of the use of white phosphorus in the manufacture of matches.

SECTION II.—GENERAL PRINCIPLES

Art. 427. The High Contracting Parties, recognizing that the well-being, physical, moral, and intellectual, of industrial wage earners is of supreme international importance, have framed, in order to further this great end, the permanent machinery provided for in Section I and associated with that of the League of Nations. They recognize that differences of climate, habits, and customs, of economic opportunity and industrial tradition, make strict uniformity in the conditions of labor difficult of immediate attainment. But, holding as they do, that labor should not be regarded merely as an article of commerce, they think that there are methods and principles for regulating labor conditions which all industrial communities should en-

deavor to apply, so far as their special circumstances will permit. Among these methods and principles, the following seem to the High Contracting Parties to be of special and urgent importance:

First—The guiding principle above enunciated that labor should not be regarded merely as a commodity or article of commerce.

Second—The right of association for all lawful purposes by the employed as well as by the employers.

Third—The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

Fourth—The adoption of an eight hours day or a forty-eight hours week as the standard to be aimed at where it has not already been attained.

Fifth—The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

Sixth—The abolition of child labor and the imposition of such limitations on the labor of young persons as shall permit the continuation of their education and assure their proper physical development.

Seventh—The principle that men and women should receive equal remuneration for work of equal value.

Eighth—The standard set by law in each country with respect to the conditions of labor should have due regard to the equitable economic treatment of all workers lawfully resident therein.

Ninth—Each State should make provision for a system of inspection in which women should take part in order to insure the enforcement of the laws and regulations for the protection of the employed. Without claiming that these methods and principles are either complete or final, the High Contracting Parties are of opinion that they are well fitted to guide the policy of the League of Nations; and that, if adopted by the industrial communities who are members of the League, and safeguarded in practice by an adequate system of such inspection, they will confer lasting benefits upon the wage earners of the world.

Part XIV.—Guarantees

SECTION I.—WESTERN EUROPE

Art. 428. As a guarantee for the execution of the present treaty by Germany, the German territory situated to the west of the Rhine, together with the bridgeheads, will be occupied by Allied and Associated troops for a period of fifteen years from the coming into force of the present treaty.

Art. 429. If the conditions of the present treaty are faithfully carried out by Germany, the occupation referred to in Article 428 will be successively restricted as follows:

(i) At the expiration of five years there will be evacuated:—the bridgehead of Cologne and the territories north of a line running along the Ruhr, then along the railway Jülich, Duren, Euskirchen, Rheinbach, thence along the road Rheinbach to Sinzig, and reaching the Rhine at the confluence with the Ahr; the roads, railways and places mentioned above being excluded from the area evacuated.

(ii) At the expiration of ten years, there will be evacuated:—the bridgehead of Coblenz and the territories north of a line to be drawn from the intersection between the frontiers of Belgium, Ger-

many and Holland, running about 4 kilometers south of Aix-la-Chapelle, then to and following the crest of Forst Gemünd, then east of the railway of the Urft Valley, then along Blankenheim, Valdorf, Dreis, Ulmen to and following the Moselle from Bremm to Nehren, then passing by Kappel and Simmern, then following the ridge of the heights between Simmern and the Rhine and reaching this river at Bacharach; all the places, valleys, roads and railways mentioned above being excluded from the area evacuated.

(iii) At the expiration of fifteen years there will be evacuated:—the bridgehead of Mainz, the bridgehead of Kehl and the remainder of the German territory under occupation. If at that date the guarantees against unprovoked aggression by Germany are not considered sufficient by the Allied and Associated Governments the evacuation of the occupying troops may be delayed to the extent regarded as necessary for the purpose of obtaining the required guarantees.

Art. 430. In case either during the occupation or after the expiration of the fifteen years referred to above, the Reparation Commission finds that Germany refuses to observe the whole or part of her obligations under the present treaty with regard to reparation, the whole or part of the areas specified in Article 429 will be re-occupied immediately by the Allied and Associated forces.

Art. 431. If before the expiration of the period of fifteen years Germany complies with all the undertakings resulting from the present treaty, the occupying forces will be withdrawn immediately.

Art. 432. All matters relating to the occupation and not provided for by the present treaty shall be regulated by subsequent agreements, which Germany hereby undertakes to observe.

SECTION II.—EASTERN EUROPE

Art. 433. As a guarantee for the execution of the provisions of the present treaty, by which Germany accepts definitely the abrogation of the Brest-Litovsk Treaty, and of all treaties, conventions and agreements entered into by her with the Maximalist Government in Russia, and in order to insure the restoration of peace and good government in the Baltic Provinces and Lithuania, all German troops at present in the said territories shall return to within the frontiers of Germany as soon as the Governments of the principal Allied and Associated Powers shall think the moment suitable, having regard to the internal situation of these territories. These troops shall abstain from all requisitions and seizures and from any other coercive measures, with a view to obtaining supplies intended for Germany, and shall in no way interfere with such measures for national defense as may be adopted by the provisional Governments of Esthonia, Let-
via, and Lithuania. No other German troops shall, pending the evacuation or after the evacuation is complete, be admitted to the said territories.

Part XV.—Miscellaneous Provisions

Art. 434. Germany undertakes to recognize the full force of the treaties of peace and additional conventions which may be concluded by the Allied and Associated Powers with the powers who fought on the side of Germany, and to recognize whatever disposition may be made concerning the territories of the former Austro-Hungarian Monarchy, of the Kingdom of Bulgaria, and of the Ottoman Empire,

and to recognize the new States within their frontiers as there laid down.

Art. 435. The high contracting parties, while they recognize the guarantees stipulated by the treaties of 1815, and especially by the Act of 20th November, 1815, in favor of Switzerland, the said guarantees constituting international obligations for the maintenance of peace, declare nevertheless that the provisions of these treaties, conventions, declarations and other supplementary acts concerning the neutralized zone of Savoy, as laid down in paragraph 1 of Article 92 of the Final Act of the Congress of Vienna, and in paragraph 2 of Article 3 of the Treaty of Paris of 20th November, 1815, are no longer consistent with present conditions. For this reason the high contracting parties take note of the agreement reached between the French Government and the Swiss Government for the abrogation of the stipulations relating to this zone which are and remain abrogated. The high contracting parties also agree that the stipulations of the treaties of 1815 and of the other supplementary acts concerning the free zones of Upper Savoy and the Gex district are no longer consistent with present conditions, and that it is for France and Switzerland to come to an agreement together with a view to settling between themselves the status of these territories under such conditions as shall be considered suitable by both countries.

ANNEX

1. The Swiss Federal Council has informed the French Government on the 5th May, 1919, that after examining the provisions of Article 435 in a like spirit of sincere friendship it has happily reached the conclusion that it was possible to acquiesce in it under the following conditions and reservations:

First—The neutralized zone of Haute-Savoie:

(a) It will be understood that as long as the Federal Chambers have not ratified the agreement come to between the two Governments concerning the abrogation of the stipulations in respect of the neutralized zone of Savoy nothing will be definitely settled, on one side or the other, in regard to this subject.

(b) The assent given by the Swiss Government to the abrogation of the above-mentioned stipulations presupposes, in conformity with the text adopted, the recognition of the guarantees formulated in favor of Switzerland by the treaties of 1815 and particularly by the declaration of 20th November, 1815.

(c) The agreement between the Governments of France and Switzerland for the abrogation of the above-mentioned stipulations will only be considered as valid if the treaty of peace contains this article in its present wording. In addition, the parties to the treaty of peace should endeavor to obtain the assent of the signatory powers of the treaties of 1815 and of the declaration of 20th November, 1815, which are not signatories of the present treaty of peace.

Second—Free zone of Haute-Savoie and the district of Gex.

(a) The Federal Council makes the most express reservations to the interpretation to be given to the statement mentioned in the last paragraph of the above article for insertion in the treaty of peace, which provides that "the stipulations of the treaties of 1815 and other supplementary acts concerning the free zones of Haute-Savoie and the Gex district are no longer consistent with the present

conditions." The Federal Council would not wish that its acceptance of the above wording should lead to the conclusion that it would agree to the suppression of a system intended to give neighboring territory the benefit of a special régime which is appropriate to the geographical and economical situation and which has been well tested. In the opinion of the Federal Council the question is not the modification of the customs systems of the zones as set up by the treaties mentioned above, but only the regulation in a manner more appropriate to the economic conditions of the present day of the terms of the exchange of goods between the regions in question. The Federal Council has been led to make the preceding observations by the perusal of the draft convention concerning the future constitution of the zones, which was annexed to the note of April 26 from the French Government. While making the above reservations the Federal Council declares its readiness to examine in the most friendly spirit any proposals which the French Government may deem it convenient to make on the subject.

(b) It is conceded that the stipulations of the treaties of 1815 and other supplementary acts relative to the free zones will remain in force until a new arrangement is come to between France and Switzerland to regulate matters in this territory.

2. The French Government have addressed to the Swiss Government, on May 18, 1919, the following note in reply to the communication set out in the preceding paragraph: In a note dated May 5 the Swiss Legation in Paris was good enough to inform the Government of the French Republic that the Federal Government adhered to the proposed article to be inserted in the Treaty of Peace between the Allied and Associated Governments and Germany. The French Government have taken note with much pleasure of the agreement thus reached, and, at their request, the proposed article, which had been accepted by the Allied and Associated Governments, has been inserted under No. 435 in the peace conditions presented to the German plenipotentiaries. The Swiss Government, in their note of May 5, on this subject, have expressed various views and reservations. Concerning the observations relating to the free zones of Haute-Savoie and the Gex district, the French Government have the honor to observe that the provisions of the last paragraph of Article 435 are so clear that their purport cannot be misapprehended, especially where it implies that no other power but France and Switzerland will in future be interested in that question. The French Government, on their part, are anxious to protect the interests of the French territories concerned, and, with that object, having their special situation in view, they bear in mind the desirability of assuring them a suitable customs régime and determining, in a manner better suited to present conditions, the methods of exchanges between these territories and the adjacent Swiss territories, while taking into account the reciprocal interests of both regions. It is understood that this must in no way prejudice the right of France to adjust her customs line in this region in conformity with her political frontier, as is done on the other portions of her territorial boundaries, and as was done by Switzerland long ago on her own boundaries in this region. The French Government are pleased to note on this subject in what a friendly disposition the Swiss Government take this opportunity of declaring their willingness to consider any French proposal dealing with the system to be substituted for the present

régime of the said free zones, which the French Government intend to formulate in the same friendly spirit. Moreover, the French Government have no doubt that the provisional maintenance of the régime of 1815 as to the free zones referred to in the above-mentioned paragraph of the note from the Swiss Legation of May 5, whose object is to provide for the passage from the present régime to the conventional régime, will cause no delay whatsoever in the establishment of the new situation which has been found necessary by the two Governments. This remark applies also to the ratification by the Federal Chambers, dealt with in Paragraph 1 (a), of the Swiss note of May 5, under the heading "Neutralized Zone of Haute-Savoie."

Art. 436. The high contracting parties declare and place on record that they have taken note of the treaty signed by the Government of the French Republic on July 17th, 1918, with His Serene Highness the Prince of Monaco defining the relations between France and the Principality.

Art. 437. The high contracting parties agree that, in the absence of a subsequent agreement to the contrary, the Chairman of any commission established by the present treaty shall, in the event of an equality of votes, be entitled to a second vote.

Art. 438. The Allied and Associated Powers agree that where Christian religious missions were being maintained by German societies or persons in territory belonging to them, or of which the government is intrusted to them in accordance with the present treaty, the property which these missions or missionary societies possessed, including that of trading societies whose profits were devoted to the support of missions, shall continue to be devoted to missionary purposes. In order to insure the due execution of this undertaking the Allied and Associated Governments will hand over such property to boards of trustees appointed by or approved by the Governments and composed of persons holding the faith of the mission whose property is involved. The Allied and Associated Governments, while continuing to maintain full control as to the individuals by whom the missions are conducted, will safeguard the interests of such missions. Germany, taking note of the above undertaking, agrees to accept all arrangements made or to be made by the Allied or Associated Government concerned for carrying on the work of the said missions or trading societies and waives all claims on their behalf.

Art. 439. Without prejudice to the provisions of the present treaty, Germany undertakes not to put forward directly or indirectly against any Allied or Associated Power, signatory of the present treaty, including those which without having declared war, have broken off diplomatic relations with the German Empire, any pecuniary claim based on events which occurred at any time before the coming into force of the present treaty. The present stipulation will bar completely and finally all claims of this nature, which will be thenceforward extinguished, whoever may be the parties in interest.

Art. 440. Germany accepts and recognizes as valid and binding all decrees and orders concerning German ships and goods and all orders relating to the payment of costs made by any prize court of any of the Allied or Associated Powers, and undertakes not to put forward any claim arising out of such decrees or orders on behalf of any German national. The Allied and Associated Powers reserve the right to examine in such manner as they may determine all decisions and orders of German Prize

Courts, whether affecting the property rights of nationals of those powers or of neutral powers. Germany agrees to furnish copies of all the documents constituting the record of the cases, including the decisions and orders made, and to accept and give effect to the recommendations made after such examination of the cases.

RATIFICATION

The present treaty, of which the French and English texts are both authentic, shall be ratified. The deposit of ratifications shall be made at Paris as soon as possible. Powers of which the seat of Government is outside Europe will be entitled merely to inform the Government of the French Republic through their diplomatic representative at Paris that their ratification has been given; in that case they must transmit the instrument of ratification as soon as possible. A first procès-verbal of the deposit of ratifications will be drawn up as soon as the treaty has been ratified by Germany on the one hand, and by three of the principal Allied and Associated Powers on the other hand. From the date of the first procès-verbal the treaty will come into force between the high contracting parties who have ratified it. For the determination of all periods of time provided for in the present treaty this date will be the date of the coming into force of the treaty. In all other respects the treaty will enter into force for each power at the date of the deposit of its ratification. The French Government will transmit to all the signatory powers a certified copy of the procès-verbaux of the deposit of ratifications.

IN FAITH WHEREOF the above-named plenipotentiaries have signed the present treaty.

DONE AT VERSAILLES, in a single copy which will remain deposited in the archives of the French Republic, and of which authenticated copies will be transmitted to each of the signatory powers.

VESTAL VIRGINS.—“The Vestals (‘virgines Vestales,’ ‘virgines Vestæ’) were closely connected with the college of pontifices. They are said to

have come from Alba soon after the foundation of Rome: at first there were two Vestals for each of the two tribes, Ramnes and Tities; afterwards two others were added for the Luceres, and the number of six was exceeded at no period. The vestal, on being chosen, was not allowed to be younger than six or older than ten years. . . . She was clad in white garments and devoted to the service of Vesta for thirty years. . . . After this period she was at liberty either to remain in the service of the goddess (which was generally done) or to return to her family and get married. Her dress was always white; round her forehead she wore a broad band like a diadem ('infula'), with ribbons ('vittæ') attached to it. During the sacrifice, or at processions, she was covered with a white veil. . . . She was carefully guarded against insult or temptation; an offence offered to her was punished with death; . . . in public every one, even the consul, made way to the lictor preceding the maiden. At public games and pontifical banquets she had the seat of honour; and a convicted criminal accidentally meeting her was released. Amongst her priestly functions was the keeping of the eternal fire in the temple of Vesta, each Vestal taking her turn at watching. . . . Breach of chastity on the part of the Vestal was punished with death."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, sect. 103.

VETTONES, a people who occupied the part of ancient Spain between the Tagus and the Upper Douro at the time of the Roman conquest of that country.—Based on T. Mommsen, *History of Rome*, bk. 4, ch. 1.

VIA SACRA AT ROME.—"The Via Sacra began at the Sacellum Streniæ, which was on the part of the Esquiline nearest to the Colosseum; on reaching the Summa Via Sacra . . . it turned a little to the right, descending the Clivus Sacer; at the foot of the slope it passed under the arch of Fabius, by the side of the Regia; thence it ran in a straight line, passing by the Basilica Æmilia, the arch of Janus, the Curia Hostilia, till it reached the foot of the Capitoline Hill, where, turning to the left, it ascended the Clivus Capitolinus, and

reached its termination at the temple of Jupiter Capitolinus. The Via Sacra, as Ovid tells us, took its name from the sacred rites which were performed on it. Along this road passed the processions of priests with the sacred animals to be sacrificed at the altar of Jupiter Capitolinus. . . . Along this road also passed the triumphal processions of the victorious Roman generals. The procession entered Rome by the Porta Triumphalis, passed through the Circus Maximus, then, turning to the left, proceeded along the road at the foot of the southeast slope of the Palatine, when it joined the Via Sacra, and again turned to the left and ascended the Velia; on reaching the Summa Via Sacra it descended the Clivus Sacer, and then passed along the rest of the Via Sacra till it reached its destination at the temple of Jupiter Capitolinus, where the victorious general lay before the god the spoils of his conquests."—H. M. Westropp, *Early and Imperial Rome*, p. 121.

VICTORIA, Guadalupe (Juan Felix Fernández) (1789-1843), first president of Mexico, 1824-1829. See MEXICO: 1820-1826.

VICTORIA, one of the federated states of the Australian Commonwealth, in the southeastern part of Australia. (See AUSTRALIA: Map; Location and physical features.) It was formerly a part of New South Wales, but in 1851 it was proclaimed a separate colony with a partially elective legislative council, acquiring more complete autonomy in 1855. The state has an area of 87,884 square miles, of which 3,942,000 acres were under cultivation in 1919. The state had in 1921 a population of 1,531,529. Its capital is Melbourne, and its other leading cities are Balarat, Geelong, and Bendigo.

1836-1855.—Discovery and early settlements.—Separation from New South Wales.—Erected into colony of Victoria.—Discovery of gold.—Constitutional organization. See AUSTRALIA: 1787-1840; 1839-1855; ANTARCTIC EXPLORATION: 1839-1845.

1866.—Tariff legislation. See TARIFF: 1862-1892.

1885-1892.—Movement toward Australian federation. See AUSTRALIAN: 1885-1892; 1890.

1891-1896.—Labor legislation. See ARBITRATION AND CONCILIATION, INDUSTRIAL: Australia: 1891-1912.

1893.—Liberal land policy.—Labor colonies.—

Village settlements.—“Victoria has legislated on the ‘back to the land’ lines in recent years. In 1893 ‘The Settlement on Lands Act’ was passed for the promotion of village settlements, Labour colonies, and of homestead associations. These practical measures have not yet borne much fruit in this colony in the way of solving the unemployed problem, but they lead the way thereto. . . . Victoria has much less of an area, and consequently less soil for settlements, than any of the other colonies except Tasmania. She has, therefore, paid more attention in the recent past to furthering manufacturing industries than to the opening up of the land for pushing employment in that way. . . . Under the Act of 1893 land not otherwise appropriated, and not of an auriferous nature or permanently reserved, can be appropriated for purposes of homestead associations, Labour colonies, and village settlements. The amount of land set apart for a homestead association cannot exceed 2000 acres. This area is subdivided into holdings of not more than 50 acres, and the number of persons in a particular association must not be less than one member to 50 acres of the total area set apart for the purposes of such

association. The right of permissive occupancy will be given for a period of three years to any member of a society or association seeking such a holding of land. The fulfilment of certain conditions, . . . gives a member over 18 years of age a state lease. The member agrees in this document to carry out certain improvements, in a given time, to pay the rent to the state and such moneys as the Land Board may advance to him for the development of his holding. He must not sublet, assign, or borrow money on the security of the holding. He must reside on his allotment, or near it, and carry on the industry of agriculture, dairying, gardening, grazing, or similar occupation. Land is set apart for the purposes of a township near every association area, and each member of the association can obtain a ‘lot’ of an acre in extent in such township, on lease, if he applies within one year of the setting apart by the Land Board of the land for such township site. This wise provision prevents the possibility of ground-rent landlordism in connection with such associations. The provisions for the establishment of Labour colonies follow, to some extent, those . . . of the Murray River Labour Settlements. . . . Land, however, is much more scarce in Victoria, and there are one or two conditions imposed of an interesting nature. An area for a Labour colony is to consist of 1500 acres. This land is vested in three trustees named by the government. Provision is made for the election of four more trustees, representing persons or bodies subscribing to the funds of such colonies. The joint committee hears applications for membership of a Labour colony, and undertakes the management of same. . . . The state undertakes to donate £2 towards equipping such Labour colonies for every £1 subscribed by members or supporters. . . . Village settlements are also provided for in the Act of 1893.”—M. Davitt, *Life and progress in Australasia*, ch. 28.

1900.—Enters Australian Commonwealth.—When the Australian states federated in 1900, Victoria entered the Australian Commonwealth as the foremost industrial state. Her progress was attributed to her high tariff policy. Melbourne, her leading city, was chosen as the federal capital until the new federal city at Canberra in New South Wales should be completed.—See also AUSTRALIA, CONSTITUTION OF.

1906-1908.—Important legislation.—An act of 1906 abolished separate representation of state public servants. The government now consists of the executive, comprising the governor and a responsible ministry, and a Parliament of two houses: the Legislative Council of 34 members elected for six years and the Legislative Assembly elected for three years but dissoluble at any time by the ministry. No one is eligible to membership in the Council unless possessed for at least a year before election of an estate worth at least £50 net annually, and the electors must have an educational or caste qualification or must own or occupy freehold rateably worth \$50 (£10) a year or leasehold worth \$75 (£15). The class of voters freed of property qualification comprises graduates of British and Colonial universities, students of Melbourne University, certificated teachers, ministers of religion, (but no clergyman may sit in either house of Parliament), lawyers, medical practitioners, and officers of the army and navy, whether active or retired. Seventeen (half) of the 34 members of the council retire every three years. No property qualification is necessary to membership in the Assembly, which is elected by universal suffrage.

The Adult Suffrage Act of 1908 extended the franchise to women. (See SUFFRAGE, WOMAN: Australia.) Members of the lower house are paid £300 a year; and those of both houses have free passes on all the railways. There are 61 urban and 146 rural municipalities, each with an elective council for local administration.

1908-1912.—Railroad development. See RAILROADS: 1908-1918.

1909-1920.—Legislation.—Education.—The Federal Old Age Pension Act came into operation, July 1, 1909; and in October, 1912, an act was passed by the federal Parliament providing for the payment, on application of five pounds to the mother of every child born in the commonwealth. In 1920, there were 2,333 state schools with 6,637 teachers, and a total enrolment of 247,337 scholars. Melbourne continued to be the political center of Australia, although Victoria has been the most conservative of the Australian states in her political development. Lord Stradbroke was governor in 1921.—See also SOCIAL INSURANCE: Details for various countries: Australia.

1915.—Irrigation and forest development.—Agreement with New South Wales and South Australia regarding the Murray river. See CONSERVATION OF NATURAL RESOURCES: Australia.

VICTORIA AND ALBERT MUSEUM, South Kensington, London, one of the four national museums controlled by the Board of Education. The museum owed its inception to the exhibition of 1851 and was first known as the Department of Practical Art. The Sheepshanks gallery of pictures was presented in 1857; a collection of oriental art belonging to the East India Company was added in 1879; French furniture and decorative art, the patent museum, books, prints and manuscripts, and drawings are among the principal collections added in later years. The museum was originally opened in a temporary structure, but in 1899 Queen Victoria laid the foundation of the new buildings bearing the official name. Numerous gifts and purchases have helped to make the collection one of the most important in Europe.

VICTORIA CROSS. See WORLD WAR: Miscellaneous auxiliary services: VIII. War medals: a.

VIENNA, Congress of.—"The Congress that met in Vienna in the fall of 1814 was composed of the most illustrious personages in Europe, with one significant exception, that of the Man of Elba, who was not invited or expected and yet whose animating personality was the direct cause of this mobilization of the world's celebrities. . . . [The] business was the distribution of the spoils of victory, the rending of Napoleon's mantle, his coat of many colors. The task was the redrawing of the political map of Europe. To be able to understand the mode of operations of the Congress of Vienna we must keep in mind three or four facts of the situation. One was the great prominence of the four allies, the allies of Chaumont, who had constituted the essential body of the Great Coalition before which Napoleon had been forced to strike arms. These were the Four. . . . Russia, Prussia, Austria, and England. . . . Another fact to be remembered is this, that the Congress of Vienna was not a peace congress. Peace had been concluded before ever that Congress met. Peace was the work of the Treaty of Paris of May 30, 1814. That treaty was, however, signed, not by four Powers, but by eight. For in addition to the four already mentioned the peace of Paris was signed by Sweden, Spain, Portugal, and France. That treaty settled some things and merely outlined the settlement of others. Its thirty-second article provided for a future congress to pass upon the many items of unfinished business which the treaty, necessarily concluded in haste, could not determine. Article XXXII reads as follows: 'All the powers engaged on either side in the present war shall, within the space of two months, send plenipotentiaries to Vienna to settle at a general Congress the arrangements which are to complete the pro-

CONGRESS OF VIENNA, 1814-1815

(After a crayon drawing by Jean Baptiste Isabey, engraved by Godefroy)

From left to right: Wellington, England; Count Lobo, Portugal; Saldanha, Portugal; Hardenberg, Prussia (seated); Count Löwenhielm, Sweden; Noailles, France; Metternich, Austria; Dubin, France; Nesserole, Russia; Palmella, Portugal (seated); Castlereagh, England (seated); Dalberg, France; Wessenberg, Austria (seated); Rasumowsky, Russia; Lord Stewart, England; Labrador, Spain (seated); Clancarty, England; Waacken; Gentz, Austria, secretary; Talleyrand, France (seated); Wilhelm von Humboldt, Prussia; Count Stackelberg, Russia (seated); Cathcart, England.

visions of the present treaty.' This was the only official call the Congress of Vienna ever had. . . . No further summons was issued, no more detailed statement was ever sent forth as to the composition of the Congress, as to its organization, or its mode of procedure. A general rendezvous had been given for two months hence at Vienna. That was the sole and the highly insufficient preparation of this momentous meeting. What, therefore, was not settled before the convening of the Congress would have to be determined after it convened. What happened was enlightening, if not generally pleasing."—C. D. Hazen, *Congress of Vienna* (C. D. Hazen, W. R. Thayer and R. H. Lord, *Three peace congresses of the nineteenth century*, pp. 5-6).—"The Congress was little more than a convenient assembly of diplomatists which would make it easier for them to consign to paper the agreements they would ultimately conclude. They had put forward the word 'Congress' imprudently, without reflecting upon all the results that the word implied. It had been an expedient to postpone, and perhaps to solve, their difficulties. But the invitation had been given and accepted by all the States of Europe; and the Great Powers were committed to admit them in some way to their councils. The result was that there came to Vienna an enormous number of plenipotentiaries imbued with vague aspirations and ill-considered designs, only to find no principle which should govern their procedure and no machinery by which they could be made into a coherent body. No appreciable difference would have been made in the final settlement at Vienna if the large majority of the plenipotentiaries had never appeared there at all."—C. K. Webster, *Congress of Vienna, 1814-1815*, p. 55.—"The Czar of Russia, the Kings of Prussia, Denmark, Bavaria, and Württemberg, and nearly all the statesmen of eminence in Europe, gathered round the Emperor Francis and his Minister, Metternich. . . . Lord Castlereagh represented England, and Talleyrand, France. Rasumoffsky and other Russian diplomatists acted under the immediate directions of their master. . . . Hardenberg stood in a somewhat freer relation to King Frederick William: Stein was present, but without official place."—C. A. Fyffe, *History of modern Europe*, v. 2, ch. 1.—"Hanover was represented by Count Münster, who was the trusted confidant, not only of the Prince Regent of England, but also of Castlereagh. . . . Of the three other signatories of the Paris Treaties, Spain was represented by Labrador, who most ineptly tried to imitate Talleyrand; Portugal principally by Palmella, whose Court in Brazil was so distant that he was not able to play much part; and Sweden by Lövenheim, who passively looked on at the struggles in which his master, Bernadotte, now professed to take no interest. Of the minor Powers, only a few of the plenipotentiaries, exercised much influence. . . . Holland was represented by Van Spaen and von Gagen. . . . Field-Marshal Wrede arrogantly defended Bavaria's interests. Both Murat and Ferdinand of Sicily had representatives at the Congress. All the minor States of Italy and Germany, as well as a large number of German princes and counts of the Empire who had been deprived of their sovereign rights during the upheaval in Germany, sent representatives. . . . The Pope was represented by Cardinal Consalvi, who played a singularly narrow rôle, in spite of his undoubted ability; the Sultan by Mavrogeni, his *chargé d'affaires* at Vienna, a Greek by nationality. Added to these were representatives of many spe-

cial interests, some as imposing as the German Catholics or as influential as the German Jews, others of little importance, amongst them the Order of St. John, which still had hopes of compensation for Malta. Even the deposed King of Sweden had Sir Sidney Smith, the defender of Acre, to uphold his cause. When it is remembered that a large number of the sovereigns and diplomatists brought with them their wives and other female relations, the extraordinary spectacle which Vienna presented can be imagined."—C. K. Webster, *Congress of Vienna, 1814-1815*, pp. 7, 59-60.—"Although the Congress had been postponed during the summer until the first of October in order to enable the Tsar to visit Russia, the plenipotentiaries of the four allied nations arrived in Vienna toward the middle of September [1814], and from the sixteenth onward they held meetings with each other. On the twenty-second they decided upon the general method of procedure at the Congress. A commission consisting of the representatives of the Four, and of France and Spain in addition, was to prepare the work on all matters of general European concern; and a commission of five leading German states, Austria, Prussia, Württemberg, Baden, and Hanover, and excluding Saxony, was to prepare the proposed federal constitution for Germany. The Four also signed a protocol to the effect that they intended to settle among themselves the distribution of the Polish, German, and Italian territories, renounced by Napoleon and comprising thirty-two millions of people, the main business in fact of the Congress; that only after having agreed among themselves would they communicate their decisions to France and Spain, and only then would they listen to any suggestions or objections from those two. It is to be noted that thus not only were two of the eight signers of the Treaty of Paris, Portugal and Sweden, eliminated forthwith from participation in the chief work of the Congress which they had joined in calling, that not only were two others of its signatories, France and Spain, assigned to a very humble rôle, but that all the other powers of Europe were to be entirely ignored. Such was the beginning of the organization, such the initial step in procedure of the Congress of Vienna. . . . On October 30, the representatives of the Eight met at Metternich's house. They elected Metternich president and Gentz secretary, and they chose by a lot a committee on credentials, consisting of the representatives of England, Russia, and Prussia. On November 1, a public declaration was made that the Committee on Credentials would meet on November 3, and that after the completion of its work the Committee of the Eight would formulate proposals for the further progress of the Congress. But November came and went, as did six other successive months, and the Congress was not opened. In fact it was never opened. In fact there was no Congress—there was simply a collection of negotiators of every grade, resident for the time being in the city of Vienna. There was never any verification of credentials, never any official and authoritative list of members. The members of this imaginary Congress never met together in the same room. When historians speak of Metternich as president of the Congress of Vienna and Gentz as its secretary, they use language inaccurately. They were president and secretary of the Committee of the Eight Powers which had signed the Treaty of Paris, nothing more. No plenary session was ever held. Yet the work for which these men had come together was

gradually accomplished. They did not assemble day after day and deliberate upon the many problems pressing for solution. Indeed, as has been said, they never once assembled. But during these months from September to June a very large number of treaties were made between the various states, and these were brought together in their essential features in the Final Act of June 9 [1815], which was hurriedly patched together a few days before the battle of Waterloo. Everything was arranged outside, in the intimate interviews of sovereigns and diplomats, and in the special committees that were in one way and another gradually appointed. Of organization, then, according to the modern idea of an international assembly, there was, in the case of the Congress of Vienna, strictly speaking, no trace. There was nothing in its method of discussing and settling questions that differentiated its procedure from ordinary diplomatic negotiations between nations, except the proximity of the negotiators. At one of the sessions of the Eight Powers, Metternich declared that the Congress 'was not a congress; that its opening was not, properly speaking, an opening at all; that the commissions were not commissions; that in the assembly of the powers at Vienna the only advantage they had to note was that of a Europe without distances.' The negotiations carried on at Vienna by this Europe from which distance had been eliminated were long and exceedingly complicated. In the course of them we encounter meetings of the Four, of the Six, of the Eight. But the really dominating group was neither of these but was the Committee of the Five. In other words, the Four who had wished and intended to do everything without France found that they were unable to do anything without her. They were obliged in the end, although most reluctantly, to admit her formally even to their sessions on the Saxon-Polish questions. Even after these were settled the Committee of the Five absorbed all important matters, and was, in the words of Friedrich Gentz, till the last moment 'the real and only Congress.' And the reason was that there were five Great Powers in Europe and no more. The map of Europe was redrawn by them because they had the men and the resources, in other words, force. As for the rest, the minor and secondary powers, they were nowhere, they flitted ineffectually in the dismal, dreary, outer limbo of the neglected."—C. D. Hazen, *Congress of Vienna* (C. D. Hazen, W. R. Thayer and R. H. Lord, *Three peace conferences of the nineteenth century*, pp. 6-7, 15-17).—"In effecting . . . [the] redistribution [of conquered territories] it was necessary to take into account not only the stipulations of the Treaties of Paris but also the treaties made in 1813 by the Three Eastern Powers, both among themselves and with the minor States. . . . Thus by the Treaty of Kalisch of February 28, 1813, . . . Russia had guaranteed by a secret article to restore Prussia to the political and financial position she occupied prior to 1806. The restoration of Polish territory necessary to join Silesia to Old Prussia was specifically mentioned, but apart from this, it was clear that Russia intended to retain all Prussian Poland. The Treaty of Reichenbach, however, concluded between Austria, Russia, and Prussia during the armistice of Pleswitz, and signed on June 27, 1813, immediately after Napoleon had rejected Austria's mediation, had laid down that the fate of the Duchy of Warsaw should be decided by the three Powers in concert, without the concurrence of France. These

two treaties were reinforced by the Treaties of Toeplitz, concluded on September 9, 1813, by which Russia agreed with Austria and Prussia that their States should be reconstructed on the scale of their possessions in 1805, while the Confederation of the Rhine and all Napoleon's other creations beyond the Rhine or the Alps were to be dissolved, Hanover was to be restored, an amicable arrangement was to be made as to the Duchy of Warsaw, and Austria was to recover her provinces on the Adriatic. Thus but little had been definitely settled as to the disposal of Napoleon's Empire, except that Prussia and Austria were to be at least as big as in 1805. Other treaties which were concluded with the minor Powers, such as the Treaty of Ried, between Bavaria and Austria (October 8, 1813), by which the latter Power obtained the promise of Tirol, had not been accepted by all the members of the Alliance, since it was impossible to decide the fate of the conquered territories while the claims of the Great Powers themselves were still unsatisfied. Sweden, who had received the promise of Norway from Russia in 1812 (subsequently confirmed by Great Britain in a subsidy treaty of 1813), was in a sense the only Power which had been granted a specific extension of territory that satisfied its expectations. Nearly all the rest of the reconstruction of Europe was still a matter of dispute. . . . Certain matters had been indicated for settlement in the public and secret articles of the treaties, such as the extension of the Kingdom of the Netherlands, the creation of a German Federation, and a Constitution for Switzerland and the more general topics of the navigation of international rivers and the boundaries of the new Kingdom of Holland had also to be defined. . . . Constitutions had also to be given to Germany and Switzerland. . . . The principal stumbling-block had been the question of Poland. On this depended the fate of Saxony; and on the disposal of Saxony depended all the other arrangements in Germany, so that the frontier of almost every German State was likely to be affected. In Italy the frontier of the Austrian dominions and the incorporation of Genoa in Sardinia were already determined. But the fate of the territory that lay between the Papal dominions and Austria, including the three Legations, was still uncertain, while the Bourbon Powers had determined never to recognize Murat, and the Great Powers were already repenting of the treaty which, with their consent, Austria had signed with him. The fate of the Ionian Isles, then in British occupation, depended ultimately on the problem of Sicily. In the north, while the Norwegians had submitted at last to come under Swedish rule, there were still complicated questions to be settled in which Sweden, Hanover, and Prussia were interested."—C. K. Webster, *Congress of Vienna, 1814-1815*, pp. 8-9, 55-56.—"Two men had come to the Congress with a definite aim: Alexander had resolved to gain the Duchy of Warsaw, and to form it, with or without some part of Russian Poland, into a Polish kingdom, attached to his own crown; Talleyrand had determined, either on the question of Poland, or on the question of Saxony, which arose out of it, to break allied Europe into halves, and to range France by the side of two of the great Powers against the two others."—C. A. Fyffe, *History of modern Europe*, v. 2, ch. 1.—"It was his [Alexander I's] fixed resolve to create from this conquest (to which might possibly be added some parts of the Russian share of the partitions) a united, autonomous, but not

independent, kingdom of Poland, over which the Tsar of Russia was to rule. In this design he was supported by the Polish nobility, whom the defeat of Napoleon had left to the mercy of their former conquerors. . . . His Russian subjects were as much opposed to this plan, at any rate to the political aspect of it, as they had been to the prosecution of the European war. But his Ministers now and throughout the period were nearly all of non-Russian blood."—C. K. Webster, *Congress of Vienna, 1814-1815*, p. 5.—"Among the other Governments, the Ministry of Great Britain would gladly have seen a Polish State established in a really independent form; failing this, it desired that the Duchy of Warsaw should be divided, as formerly, between Austria and Prussia. Metternich was anxious that the fortress of Cracow at any rate should not fall into the hands of the Czar. . . . It was known before the opening of the Congress that the Czar proposed . . . handing over to King Frederick William the whole of Saxony. . . . The Saxon question had . . . already gained the attention of all the European Governments. . . . Talleyrand alone made the defence of the King of Saxony the very centre of his policy, and subordinated all other aims to this. His instructions, like those of Castlereagh, gave priority to the Polish question; but Talleyrand saw that Saxony, not Poland, was the lever by which he could throw half of Europe on to the side of France; and before the four Allied Courts had come to any single conclusion, the French statesman had succeeded, on what at first passed for a subordinate point, in breaking up their concert. . . . Talleyrand wrote to Louis XVIII, asking for his permission to make a definite offer of armed assistance to Austria in case of need. . . . He had isolated Russia and Prussia, and had drawn to his own side not only England and Austria but the whole body of the minor German States . . . On the 3rd of January, 1815, after a rash threat of war uttered by Hardenberg, a secret treaty was signed by the representatives of France, England, and Austria, pledging these Powers to take the field, if necessary, against Russia and Prussia in defence of the principles of the Peace of Paris. . . . The conclusion of the secret treaty of January 3rd marked the definite success of his plans. France was forthwith admitted into the council hitherto known as that of the Four Courts, and from this time its influence visibly affected the action of Russia and Prussia. . . . Alexander had already won a virtual decision in his favour on the Polish question, but he abated something of his claims, and while gaining the lion's share of the Duchy of Warsaw."—C. A. Fyffe, *History of modern Europe*, v. 2, ch. 1.—"The so-called 'Congress Kingdom' of Poland (the small realm which was set up by the Congress of Vienna in 1815), was suppressed by Russia a few years later. By the First Treaty of Paris (30 May, 1814) France was reduced to the limits of 1792, with the addition of Avignon, and other districts within these limits, and of part of Savoy; she received back all her colonies, except the Mauritius, Saint Lucia and Tobago, which were ceded to England. [See also FRANCE: 1814 (April-June).] . . . Eventually it was settled that Prussia should receive Lusatia, being about two-fifths of the Kingdom of Saxony, and Russia the greater part of the Grand Duchy of Warsaw, including the city of Warsaw; Prussia recovered from the Grand Duchy the province of Posen, with Thorn and Dantzic, while Austria recovered the Circle of Tarnopol in Southern Galicia, and

Cracow was made a free state. In order to establish strong powers upon the Rhine to curb France, Holland and Belgium, were united as the Kingdom of the Netherlands and granted to the Prince of Orange, who was also made Grand Duke of Luxembourg; the districts comprising the former electorates of Trèves and Cologne, etc., were granted to Prussia; the districts farther south to Bavaria, in compensation for the loss of Salzburg and the Tyrol, and the fortress of Mayence to Hesse-Darmstadt, to be garrisoned by the Germanic Confederation. . . . Lombardy and Venetia were given to Austria; Genoa was added to the Kingdom of Sardinia, in which the succession was fixed in the Carignano line; Tuscany and Modena were restored to their former rulers, both Austrian princes; Parma, Piacenza and Guastalla were given to the Empress Marie Louise for her life, with succession to the rightful heir, who was for the time made Grand Duke of Lucca; the States of the Church were restored to the Pope, and the question of retaining Murat on the throne of Naples remained unsettled until he defied Austria and endeavored to summon Italy to arms; after the defeat of Murat at Tolentino (3 May, 1815) Naples was restored to Ferdinand IV., who took the title of Ferdinand I., King of Two Sicilies. The districts on the eastern coast of the Adriatic, which Napoleon had governed as the Illyrian Provinces, were annexed by Austria. In the North, Sweden was confirmed in the possession of Norway, ceded to her by Denmark by the Treaty of Kiel, but Denmark lost Swedish Pomerania and received instead the Duchy of Lauenburg. In Germany, Prussia regained her acquisitions of 1803, with Swedish Pomerania, the greater part of the Kingdom of Westphalia, and Rhenish Prussia; Hanover received East Friesland and other districts; and the mediatisation of the petty states of Germany was maintained. England, in addition to the colonial gains made by the Treaty of Amiens, retained the Cape of Good Hope, the Mauritius, Malta, Heligoland, and the Ionian Islands, but restored Martinique to the French and Java to the Dutch; Castlereagh's chief preoccupation at Vienna was, however, to secure the abolition of the negro slave trade. [See SLAVERY: 1815.] Before its work was completed, the Congress of Vienna was startled by the news that Napoleon had left Elba and was again master of France [see FRANCE: 1814-1815]; it, therefore, hurried through the rest of its work by reorganizing Germany and Switzerland. The Germanic Confederation took the place of the Confederation of the Rhine; it consisted of thirty-five states, in addition to Austria, Prussia, Denmark and the Netherlands, namely: the four kingdoms of Bavaria, Hanover, Saxony and Württemberg, the seven grand-duchies of Baden, Hesse-Cassel or Electoral Hesse, Hesse-Darmstadt, Mecklenburg-Schwerin, Mecklenburg-Strelitz, Oldenburg, and Saxe-Weimar, nine duchies, eleven principalities, and the four free cities of Bremen, Frankfurt, Hamburg, and Lübeck; the affairs of the Confederation were entrusted to a Diet (Bundestag) presided over by Austria and consisting of an Ordinary Assembly of seventeen and a General Assembly of sixty-nine members. [See also SUFFRAGE, MANHOOD: Germany: 1800-1840.] The Swiss Confederation was guaranteed neutrality by the powers of Europe; three new cantons, Geneva, Neuchâtel and the Valais were added; entire independence was given to the individual cantons and presidency of the Federal Diet was reserved to Zurich, Berne and Lucerne in turn. By the Second

Treaty of Paris (20 Nov., 1815) France lost the part of Savoy granted to her in 1814 and other rectifications of her frontier; she had to restore to their former owners the works of art accumulated in Paris; she was forced to pay a war contribution of 700,000,000 francs and to maintain an army of 150,000 troops of the Allies in possession of her eastern fortresses for five years.—H. M. Stephens, *Modern European history*, pp. 206-207. "The re-establishment of the previous state of things, so far as church property was concerned, was advocated by cardinal Consalvi and the representatives of the former ecclesiastical princes. Their efforts were, however, in vain owing to the lands being already in the possession of others. Another motion which failed to find approval was that of Dalberg, or rather of his representative, the vicar-general of Constance, baron von Wessenberg that a Concordat should be entered into for the whole of Germany. The only decision of the Congress touching religious matters was contained in Article XVI of the Act of Alliance, by which the civil equality, which had already been secured by several of the German States either through the free-will of their princes, or the pressure of Napoleon, was given to all religious denominations throughout the German confederation. This being so, it only remained for each State to regulate its own church matters."—F. X. Funk, *Manual of church history*, p. 218.—"When on June 9, 1815, the plenipotentiaries of the Eight Powers, signatories of the Treaty of Paris, were convened for the purpose of formally approving the Final Act of the Congress, Labrador, the Spanish representative, refused to sign, giving as his reasons that only a small proportion of the subjects dealt with in the Final Act had ever been reported in the sittings of the Committee of the Eight, and that a fraction of these Powers ought not to be permitted to settle the affairs of all Europe, merely summoning the rest to accord or refused their signatures. This was practically the same idea as that of Hans von Gagern, representing the Netherlands, who, expressing his dissatisfaction with the decision concerning the country, and being informed by Wellington that it had been made by 'the Great Powers,' retorted that 'of this newly invented term, 'the Great Powers,' he knew neither the precise import nor the intention.' . . . The Congress of Vienna, by its conduct and procedure, proved beyond the possibility of doubt or cavil, that the settlement of the affairs of Europe belonged to the Great Powers, and that the other states had only to decide whether they would accept such settlement or not. And if they would not, what of it? was manifestly the thought in the mind of the predominating pentarchy."—C. D. Hazen, *Congress of Vienna* (C. D. Hazen, W. R. Thayer and R. H. Lord, *Three peace congresses of the nineteenth century*, pp. 15-18).—See also BALANCE OF POWER; British foreign policy; INTERNATIONAL LAW: 1792-1885; TURKEY: 1826-1856.

VIRGIN GORDA ISLAND, one of the Virgin islands, British West Indies, in the eastern part of the group. See **VIRGIN ISLANDS**.

VIRGIN ISLANDS, group of some 50 to 100 or even more of small islands of eruptive origin forming part of the northeastern bounds of the Caribbean sea. Most of them are uninhabited, mere barren sand dunes or disintegrating rocks. The inhabited islands were dependencies of various sovereignties, chiefly Spain, Denmark, Great Britain, France, and Holland. Spain ceded Porto Rico and its dependent Virgin islands to the United States in 1898; and Denmark sold the three most important islands in the Virgin group (St. Thomas, St. John, and St. Croix) to the United States in 1917. The total area of these three islands is about 140 square miles, and they are officially designated the Virgin Islands of the United States. The British Virgins number 32 with a total area of only 58 square miles, the principal isles being Tortola, Anegada, Virgin Gorda, Jost van Dyke, Peter's Island, Salt, and Sombrero, which last is the site of a lighthouse maintained by the British government. The population in 1921 was 5,082. From the point of view of the naval officials of the United States, St. Thomas, though only second in size of the three (area about 33 square miles) is the most important of the islands, from the fact

that the harbor on its south side, where the town of Charlotte Amalie is located, is one of the finest in the Caribbean, affording refuge for the thousands of vessels in the West Indian and South and Central American trade and bound through the Panama canal. Under the régime of an open port, where duty-free ships' stores and coal might be had, the shipping world found the harbor of Charlotte Amalie an attractive way station on its Caribbean routes. Resting on the submerged backbone of the great Antilles, elevated 1,000 to 1,500 feet, the navalists say it is well adapted for fortifications to command both its shores. St. John, smallest of the three islands, is only 8 miles long and 4 miles wide at its broadest, its area being only some 21 square miles. Its harbor, Coral bay, is said to be the very best refuge in all the Antilles. St. Croix, the largest and most populous of the three islands, lies about 40 miles south-southeast of St. Thomas, has an area of 84.25 square miles, and a population of approximately 20,000, but no very good harbor.—See also **WEST INDIES**: Location.

Discovery and settlement.—Danish, Dutch and English colonial rivalry.—Destructive hurricanes.—"Historically, the little islands are interesting. They were discovered by Columbus in his second voyage to America and were probably named by him [in honor of St. Ursula and her virgins]. The islands were inhabited by fierce cannibalistic Carib Indians, who lived here until about 1550. It is not quite certain whether the Dutch settled first, but the Dutch and English conjointly settled St. Croix in 1625. In 1694 the Dutch were driven out by the English and abandoned the island, but some French settlers came in. In 1650 the Spaniards from Porto Rico seized St. Croix and expelled the English to the Bermudas. In 1653 the French got control and that same year the island and several others were sold to the Knights of Malta by Louis XIV. This order held St. Croix until 1665, when the French West India Company got it. This company failed in 1674 and the crown took back the territory. It proved a poor investment and by 1695 the French government abandoned the country, moving its one-hundred-and-forty-seven white people and six-hundred-and-twenty-three blacks to San Domingo. The island then remained uninhabited until 1733. It was visited by all nations, but the French still claimed it, and finally in June, 1733, they sold their claim to the King of Denmark for \$375,000. It is not positively known when St. Thomas was first settled, but a Copenhagen trading company got possession of the territory for Denmark about 1666. There had been other settlers on the island, probably English and Dutch, prior to this. The English captured all the Virgin group of islands, but not liking St. Thomas, abandoned it for more fertile places. In 1671 Danish trading companies seized the island as uninhabited territory and after some trouble with the English, proved their rights to it. The Danes also took possession of St. John about 1684, but did little in settling prior to 1716. In 1679 slavery was introduced and the slave trade continued until 1792, when the Danish government declared it illegal, and by 1803 absolutely abolished it. In 1724 St. Thomas was declared an open port to the commerce of the world and it proved a great trading place. The Danish trading companies, in order to monopolize commerce, excluded the Dutch from their harbor in 1736 and this proved ruinous. The condition of the islands became so bad that the Danish crown in 1758 bought them. . . . For a short time in 1801, and from 1807 to 1815, . . .

as a war measure the English seized and held them. [The islands were again returned to Denmark in 1815.] Except for some very severe storms, earthquakes and slave insurrections, the history of the islands is not eventful. In 1819 and 1837 very severe storms, and in 1867 a terrible earthquake did immense damage to life and property. In 1733 occurred the first troublesome slave insurrection in St. John, causing loss of life to whites and had to be put down by help of St. Domingo. In 1847 gradual emancipation was provided for by making all children born after that date free and abolishing all slavery after the end of twelve years. This was not satisfactory, and in 1848, after a dangerous insurrection, all the slaves, numbering twenty-hundred in St. Croix, thirty-five-hundred in St. Thomas, and twenty-five-hundred in St. John, were given full freedom by proclamation of the government."—A. M. Stickles, *Danish West Indies and American ownership* (*Journal of American History*, v. 7, 1913).—"On the 29th of October, 1867, a terrific hurricane passed over the island [St. Thomas], which, in magnitude and destructiveness, surpassed anything ever known or recorded in its history. Over 300 lives were lost and about 77 vessels were stranded or wrecked. Following this, on the 18th of November, came a severe shock of earthquake, and a tidal wave. The earthquake shock lasted about thirty seconds, and a few moments afterward the sea receded, leaving the harbour almost dry, exposing many sunken wrecks, and, upon its return, laying waste the wharves and warehouses built upon its shores. Many of the finest buildings were cracked, a great deal of property was destroyed, and such was the terror and dismay created that the people deserted their homes and camped out upon the hills."—L. K. Zabriskie, *Virgin islands of the United States of America*, pp. 16-17.—"On the evening of Monday, October 9, 1916, the islands of St. Thomas, St. Croix, and St. John were visited by one of the fiercest and most destructive hurricanes that had been witnessed in that section since the memorable one of 1867. The first estimated damage to property was placed at about two million dollars but this figure was pared down considerably after a more careful survey of the situation had been taken. St. Thomas probably suffered greater injury than her two sister islands, owing principally to her costly harbour works. The fatalities in the three places were comparatively few, there being but four deaths, from drowning, reported in St. Thomas and five deaths due to injuries from falling walls or trees, recorded, respectively, in St. Croix and St. John. Many more, however, were wounded, and almost all of the inhabitants suffered seriously as a result of the havoc that was wrought."—*Ibid.*, p. 221.

United States purchase of islands.—Prolonged negotiations.—The first proposal for the transfer of the Danish West Indies to the United States was made by Secretary of State Seward at Washington, in January, 1865. In 1866 he offered Denmark \$5,000,000 for the islands. In 1867 Denmark, bound by treaty not to alienate St. Croix without consulting France, declined to sell for that sum, but expressed willingness to sell St. Thomas and St. John for the \$5,000,000 offered or the three islands for \$10,000,000, provided that arrangement could be made with France. Secretary Seward then advanced his offer to \$7,500,000 for the three islands, and Denmark tendered a new offer of St. Thomas and St. John. When Secretary Seward accepted this proposal, Denmark advanced the plea that the formal consent of the population of the islands must be had before the sale could be consummated.

At first Seward objected, but later he cabled the American minister to accept this condition, and the treaty was signed on Oct. 24, 1867. The election was held Jan. 9, 1868, the result showing 1100 or 1200 votes for and only 22 against the change of sovereignty. Denmark ratified the treaty without delay but Senator Sumner, then chairman of the Committee on Foreign Relations, held it unreported in committee for more than two years; and when it did come the report was adverse. Again, in 1902 under President Roosevelt, the United States approached Denmark in a move to buy the islands; and although that country had seen the previous treaty fail of ratification by the United States, notwithstanding its having been initiated by the same United States and ratified by Denmark, it was ready to treat again; and a new treaty was entered into for the transfer of the islands. This treaty named the sum of \$5,000,000 as the price agreed upon for the transfer of sovereignty. It was accepted by the Lower Danish House, but failed in the Upper by a tie vote. This treaty the United States Senate promptly accepted and ratified; and there was no opposition by France to the transfer of St. Croix. "The reasons for the bungling that took place in 1911-1912 when the scheme was again considered, have not yet fully come to light. . . . And now, more than half a century after negotiations were initiated, and in the progress of a mighty world war, the United States has finally purchased the Danish West Indian islands. The purchase price, \$25,000,000, represents a greater sum than has been paid for any of its acquisitions, not excepting Louisiana and the Philippines. The islands passed under the sovereignty of the United States on January 17, 1917. . . . The United States flag was hoisted on the three 'Virgin Islands of America' on March thirty-first [when Rear Admiral James H. Oliver, naval governor, took formal possession]."—W. Westergaard, *Danish West Indies*, p. 260.—See also DENMARK: 1917; U. S. A.: Historical geography; 1917 (March): Purchase of Danish West Indian islands.—On March 28, 1921, Captain S. E. W. Kittelle was appointed governor but retired in the autumn and was succeeded by Captain H. H. Hough. When trouble arose on account of the colonial council's criticism of certain points in judicial procedure, the government dissolved the council in September. The inhabitants demanded a civil instead of a naval government and prepared an appeal for introduction into the United States Congress granting citizenship to the Virgin islanders.—See also TERRITORIES AND DEPENDENCIES OF THE UNITED STATES: U. S. A.: 1917 (October): Trading with the Enemy Act.

VIRGIN MARY, Doctrine of the Immaculate Conception of the. See PAPACY: 1854.

VIRGINIA, one of the most northern of the South Atlantic states, lying about half way between Maine and Florida. It is bounded on the northwest by Kentucky and West Virginia; on the northeast by Maryland, from which it is separated by the Potomac river; on the south by North Carolina and Tennessee. Virginia has an area of 42,627 square miles including 2,365 square miles of water surface. The population numbered 2,300,187 in 1920. "The surface of Virginia is divided into two unequally inclined planes and a centrally located valley. The eastern plane is subdivided into the Piedmont and the Tidewater; the western into the Alleghany Highlands, the Cumberland Plateau, and the Ohio Valley section. The

area between them is commonly spoken of as the 'Valley.' It is subdivided into numerous smaller sections of which the Chinch, Holston, New, and Shenandoah valleys are the most important. The Tidewater extends from the Atlantic Coast to the 'fall line' on the rivers, i.e., to the line connecting the present cities of Fredericksburg, Richmond, Petersburg, and Weldon. The soil contains gravel, sand, shale, and clay. The Chesapeake and its broad arms are doorways to the sea, the Atlantic rivers being navigable for large vessels to Richmond, Fredericksburg, and Alexandria. The Virginia Piedmont lies in a right triangle. Its base is

Aboriginal inhabitants. See ALGONQUIAN FAMILY; IROQUOIS CONFEDERACY: Tribes of the South; POWHATAN CONFEDERACY.

1606-1607.—Virginia Company of London and its charter.—Colon: planted at Jamestown.—

POMEIOC, INDIAN VILLAGE IN VIRGINIA

(Drawn by John White, head of the "Lost Colony" at Roanoke, in 1587)

the northern boundary of North Carolina; its perpendicular the fall line of the Atlantic rivers; and its hypotenuse the Blue Ridge mountain range. The surface varies from rolling to hilly. The soil is of decomposed rocks of the Archean age and contains gneiss, mica, granite, porphyry, and iron. It is well adapted to wheat, corn, fruits, and tobacco."—C. H. Ambler, *Sectionalism in Virginia from 1776 to 1861*, p. 1.—Virginia contains mineral resources but its output is not proportionally large; neither has it developed manufacturing to a high state, although it contains unusual advantages in transportation facilities, raw materials, and water power. (See also U.S.A.: Economic map.) Its fisheries are second in importance to Massachusetts only. As in other southern states, the problem of education is very difficult and illiteracy is high.

"The colonization of the North American coast had now become part of the avowed policy of the British government. In 1606 a great joint-stock company was formed for the establishment of two colonies in America. The branch which was to take charge of the proposed southern colony had its headquarters in London; the management of the northern branch was at Plymouth in Devonshire. Hence the two branches are commonly spoken of as the London and Plymouth Companies. The former was also called the Virginia Company, and the latter the North Virginia Company, as the name of Virginia was then loosely applied to the entire Atlantic coast north of Florida. [See AMERICA: Map of King James's grant.] The London Company had jurisdiction from 34° to 38° north latitude; the Ply-

mouth Company had jurisdiction from 45° down to 41°; the intervening territory, between 38° and 41° was to go to whichever company should first plant a self-supporting colony."—J. Fiske, *Beginnings of New England*, ch. 2.—"The charter for colonizing the great central territory of the North American continent, which was to be the chosen abode of liberty, gave to the mercantile corporation nothing but a wilderness, with the right of peopling and defending it. By an extension of the prerogative, which was in itself illegal, the monarch assumed absolute legislative as well as executive powers. . . . The general superintendence was confided to a council in England; the local administration of each colony to a resident council. The members of the superior council in England were appointed exclusively by the king, and were to hold office at his good pleasure. The authority extended to both colonies, which jointly took the name of Virginia. Each of the two was to have its own resident council, of which the members were from time to time to be ordained and removed according to the instructions of the king. To the king, moreover, was reserved supreme legislative authority over the several colonies, extending to their general condition and the most minute regulation of their affairs. . . . The summer was spent in preparations for planting the first colony, for which the king found a grateful occupation in framing a code of laws. The superior council in England was permitted to name the colonial council, which was independent of the emigrants, and had power to elect or remove its president, to remove any of its members and to supply its own vacancies. Not an element of popular liberty or control was introduced. Religion was established according to the doctrine and rites of the church within the realm. . . . Then, on the 19th day of December, in the year of our Lord 1606, one hundred and nine years after the discovery of the American continent by Cabot, forty-one years from the settlement of Florida, the squadron of three vessels, the largest not exceeding 100 tons' burden, with the favor of all England, stretched their sails for 'the dear strand of Virginia, earth's only paradise.' . . . The enterprise was ill concerted. Of the 105 on the list of emigrants, there were but 12 laborers and few mechanics. They were going to a wilderness, in which, as yet, not a house was standing; and there were 48 gentlemen to 4 carpenters. Neither were there any men with families. Newport, who commanded the ships, was acquainted with the old passage, and sailed by way of the Canaries and the West India Islands. As he turned to the north, a severe storm, in April, 1607, carried his fleet beyond the settlement of Raleigh, into the magnificent bay of the Chesapeake. The headlands received and retain the names of Cape Henry and Cape Charles, from the sons of King James; the deep water for anchorage, 'putting the emigrants in good Comfort,' gave a name to the northern point; and within the capes a country opened which appeared to 'claim the prerogative over the most pleasant places in the world.' . . . A noble river was soon entered, which was named from the monarch; and, after a search of seventeen days, . . . on the 13th of May they reached a peninsula about 50 miles above the mouth of the stream, where the water near the shore was so very deep that the ships were moored to trees. Here the council, except Smith, who for no reason unless it were jealousy of his superior energy was for nearly a month kept out of his seat, took the oath of office, and the majority elected Edward Maria Wingfield president for the

coming year. Contrary to the earnest and persistent advice of Bartholomew Gosnold, the peninsula was selected for the site of the colony, and took the name of James-town."—G. Bancroft, *History of the United States*, v. 1, pt. 1, ch. 6.

Burk, *History of Virginia*, v. 1, ch. 3.—E. M. Wingfield, *Discourse of Virginia (Archæologia Americana*, v. 4).—H. W. Preston, *Documents illustrative of American history*, p. 1.

1607-1610.—Settlement at Jamestown and services of Captain John Smith.—"Among the leaders of the expedition were Gosnold, the voyager and discoverer, and a prime mover in the affair; Wingfield, one of the first-named patentees, John Smith, Ratcliffe, Martin Kendall, and Percy. Of these men, John Smith has become famous. He has taken place among the founders of states, and a romantic interest has attached itself to his name. For centuries his character and deeds have been applauded, while in late years they have become a theme for censure and detraction. Modern investigation has relentlessly swept away the romance, and torn in pieces many of the long accepted narratives in which Smith recorded his own achievements. Yet it was not wholly by a false and fluent pen that Smith obtained and held his reputation. He was something more than a plausible writer of fiction. He was the strongest and most representative man among the Virginian colonists. . . . With this hopeful company Newport left the Downs on the 1st of January, 1607. The worthy Richard Hakluyt sent them a paper containing much good advice and some ingenious geographical speculations, and Drayton celebrated their departure in clumsy verses filled with high-flown compliments. The advice of the priest and the praise of the poet were alike wasted. By an arrangement ingeniously contrived to promote discord, devised probably by royal sagacity, the box containing the names of the council was not to be opened until the voyagers reached their destination. Dissension broke out almost immediately. Whatever the merits of the differences, this much is certain, that Smith was the object of the concentrated jealousy and hatred of his companions. . . . On the 13th of May, 1607, the settlers landed at James-town, sent out exploring parties, and began fortifications. A fortnight later, under the command of Wingfield, they repulsed an attack by the Indians; and on the 22d of June Newport sailed for England, and left them to their own resources. The prospect must have been a dreary one; nothing answered to their expectations. Instead of valuable mines, the adventurers found only a most fertile soil; instead of timid, trusting South American Indians, they encountered wild tribes of hardy, crafty, and hostile savages; instead of rich, defenceless, and barbarian cities, an easy and splendid spoil, they found a wilderness, and the necessity of hard work. From the miserable character of the settlers, dangerous factions prevailed from the first, until Smith obtained control, and maintained some sort of order—despotically, perhaps, but still effectually. No one would work, and famine and the Indians preyed upon them mercilessly. A small fort and a few wretched huts, built after much quarrelling, represented for many months all that was accomplished. The only relief from this dark picture of incompetent men perishing, without achievement, and by their

own folly, on the threshold of a great undertaking, is to be found in the conduct of Smith. Despite almost insurmountable obstacles, Smith kept the colony together for two years. He drilled the soldiers, compelled labor, repaired the fort, traded with the Indians, outwitted them and kept their friendship, and made long and daring voyages of discovery. He failed to send home a lump of gold, but he did send an excellent map of the Company's territory. He did not discover the passage to the South Sea, but he explored the great bays and rivers of Virginia. He did not find Raleigh's lost colonists, but he managed to keep his own from total destruction. The great result of all Smith's efforts was the character of permanency he gave to the settlement. Because he succeeded in maintaining an English colony for two consecutive years in America, the London Company had courage to proceed; and this is what constitutes Smith's strongest claim to admiration and gratitude of posterity. To suppose

1609-1616.—New charter.—Colony taking root.—Introduction of tobacco culture.—“The prospects of the colony were so discouraging at the beginning of the year 1609, that, in the hope of improving them, the Company applied for a new charter with enlarged privileges. This was granted to them, on the 23d of May, under the corporate name of ‘The Treasurer and Company of Adventurers and Planters of the City of London for the first Colony in Virginia.’ The new Association, which embraced representatives of every rank, trade, and profession, included twenty-one peers, and its list of names presents an imposing array of wealth and influence. By this charter Virginia was greatly enlarged, and made to comprise the coast-line and all islands within 100 miles of it,—200 miles north and 200 south of Point Comfort,—with all the territory within parallel lines thus distant and extending to the Pacific boundary; the Company was empowered to choose the Supreme Council in England, and, under the instructions and regulations of the last, the Governor was invested with absolute civil and military authority.”—R. A. Brock, *Virginia, 1606-1689 (Narrative and critical history of America, v. 3, ch. 5)*.—See also WEST VIRGINIA: 1609-1863.—“Under this charter the Company might have set up liberal institutions at once in Virginia, but conditions were not ripe, either in England or in America, for so radical a change. In 1612 the third charter had been granted. This had still further strengthened the Company and made them more independent of the King. It gave them the important privilege of holding great quarterly meetings or assemblies, where all matters relating to the government of the colony could be openly discussed.”—T. J. Wertenbaker, *Virginia under the Stuarts, 1607-1688*, p. 35.—Thomas West (Lord Delaware), the descendant of a long line of noble ancestry, received the appointment of Governor and Captain-General of Virginia. The first expedition under the second charter, which was on a grander scale than any preceding it, and which consisted of nine vessels, sailed from Plymouth on the 1st of June, 1609. Newport, the commander of the fleet, Sir Thomas Gates, Lieutenant-General, and Sir George Somers, Admiral of Virginia, were severally authorized, whichever of them might first arrive at Jamestown, to supersede the existing administration there until the arrival of Lord Delaware, who was to embark some months later; but not being able to settle the point of precedence among themselves, they embarked together in the same vessel, which carried also the wife and daughters of Gates. . . . On the 23d of July the fleet was caught in a hurricane; a small vessel was lost, others damaged, and the ‘Sea Venture,’ which carried Gates, Somers, and Newport, with about 150 settlers, was cast ashore on the Bermudas. . . . Early in August the ‘Blessing,’ Captain Archer, and three other vessels of the delayed fleet sailed up James River, and soon after the ‘Diamond,’ Captain Ratcliffe, appeared, without her mainmast, and she was followed in a few days by the ‘Swallow,’ in like condition. The Council being all dead save Smith, he, obtaining the sympathy of the sailors, refused to surrender the government of the colony; and

CAPTAIN JOHN SMITH

that he had the qualities of a founder of a state is a mistake, although in some measure he did the work of one. . . . His veracity as a historian in the later years of his life has been well-nigh destroyed. But little faith can be placed in the ‘Generall Historie,’ and modern investigation has conclusively relegated to the region of legend and of fiction the dramatic story of Smith’s rescue by Pocahontas. The shadow of doubt rests upon all his unsupported statements; but nothing can obscure his great services, to which the world owes the foundation of the first English colony in America. Yet, after all his struggles, Smith was severely blamed by the Company, apparently because Virginia was not Peru. In a manly letter he sets forth the defects of the colony, the need of good men with families, industrious tradesmen and farmers, not ‘poor gentlemen and libertines.’ Before, however, the actual orders came to supersede him, Smith resigned, or was forced out of the government, and returned to England. The feeble life of the colony wasted fast after his departure and during the sickness of Percy, who succeeded to the command.”—H. C. Lodge, *Short history of the English colonies in America*, ch. 1.

the newly arrived settlers elected Francis West, the brother of Lord Delaware, as temporary president. The term of Smith expiring soon after, George Percy—one of the original settlers, a brother of the Earl of Northumberland, and a brave and honorable man—was elected president. . . . Smith, about Michaelmas (September 29), departed for England, or, as all contemporary accounts other than his own state, was sent thither 'to answer some misdemeanors.' These were doubtless of a venial character; but the important services of Smith in the sustenance of the colony appear not to have been as highly esteemed by the Company as by Smith himself. He complains that his several petitions for reward were disregarded, and he never returned to Virginia. [See also AMERICA: 1614-1615.] . . . At the time of his departure for England he left at Jamestown three ships, seven boats, a good stock of provisions, nearly 500 settlers, 20 pieces of cannon, 300 guns, with fishing-nets, working-tools, horses, cattle, swine, etc. Jamestown was strongly fortified with palisades, and contained between fifty and sixty houses. . . . No effort by tillage being made to replenish their provisions, the stock was soon consumed, and the horrors of famine were added to other calamities. The intense sufferings of the colonists were long remembered, and this period is referred to as 'the starving time.' In six months their number was reduced to 60, and such was the extremity of these that they must soon have perished but for speedy succor. The passengers of the wrecked 'Sea Venture,' though mourned for as lost, had effected a safe landing at the Bermudas, where, favored by the tropical productions of the islands, they, under the direction of Gates and Somers, constructed for their deliverance two vessels from the materials of the wreck and cedar-wood, the largest of the vessels being of 80 tons burden. . . . Six of the company, including the wife of Sir Thomas Gates, died on the island. The company of 140 men and women embarked on the completed vessels—which were appropriately named the 'Patience' and the 'Deliverance'—on the 10th of May, 1610, and on the 23d they landed at Jamestown. . . . So forlorn was the condition of the settlement that Gates reluctantly resolved to abandon it." The whole colony was accordingly embarked and was under sail down the river, when it met a fleet of three vessels, bringing supplies and new settlers from England, with Lord Delaware, who had resolved to come out in person, as Governor and Captain-General of Virginia. Gates and his disheartened companions turned back with these new comers, and all were set vigorously at work to restore the settlement. "The administration of Delaware, though ludicrously ostentatious for so insignificant a dominion, was yet highly wholesome, and under his judicious discipline the settlement was restored to order and contentment." His health failing, Lord Delaware returned to England the following spring, whither Sir Thomas Gates had gone. Sir Thomas Dale had already been sent out with the appointment of high marshal, bearing a code of extraordinary laws which practically placed the colony under martial rule. Gates returned in June, 1611, with 300 additional settlers and a considerable stock of cows and other cattle. During that year and the next several new settlements were founded, at Dutch Gap, Henrico, and Bermuda Hundred, individual grants of property began to be made, and many signs of prosperity appeared. The year 1612 "was a marked

one, in the inauguration by John Rolfe [who marries Pocahontas two years later, having lost his first wife] of the systematic culture of tobacco,—a staple designed to exert a controlling influence in the future welfare and progress of the colony, and soon, by the paramount profit yielded by its culture, to subordinate all other interests, agricultural as well as manufacturing. [In the spring of 1613, Sir Thomas Gates left the colony, finally, returning to England, and the government fell to the hands of Dale, who remained at the head until 1616]."—R. A. Brock, *Virginia, 1606-1689* (*Narrative and critical history of America*, v. 3, ch. 5).

Preston, *Document illustrative of American history*, p. 14. 1613.—French settlements in Acadia destroyed by Argall.—Dutch at New York forced to promise tribute. See CANADA: 1610-1613; NEW YORK: 1610-1614.

1617-1619.—Evil days of Argall, and the better administration that followed.—Meeting of first provincial assembly.—"A party of greedy and unprincipled adventurers headed by Lord Rich, soon after the Earl of Warwick, acquired sufficient influence in the Company to nominate a creature of their own as Deputy-Governor. Their choice of Argall [Samuel Argall] would in itself have tainted their policy with suspicion. Whether dealing with the Indians, the French, or the Dutch, he had shown himself [see CANADA: 1610-1613; NEW YORK: 1610-1614] able, resolute, and unscrupulous. To do him justice, he seems at least to have understood the principle of Tiberius, that a shepherd should shear his sheep, not flay them. His first measure was to provide a sufficient supply of corn for the maintenance of the colony. With that he appeared to think that his duty to the settlers was at end. . . . An event soon occurred which released Argall from the fear of a superior, and probably emboldened him in his evil courses. Lord Delaware, who had sailed in a large vessel with 200 emigrants," died on the voyage. "Argall now began to show that his care for the well-being of the colony was no better than the charity of the cannibal who feeds up his prisoner before making a meal on him. Trade with the Indians was withheld from individuals, but, instead of being turned to the benefit of the Company, it was appropriated by Argall. The planters were treated as a slave-gang working for the Deputy's own private profit. The Company's cattle were sold, and the proceeds never accounted for. During this time a great change had come over the Company at home. An energetic and public-spirited party had been formed, opposed alike to Sir Thomas Smith and to Lord Rich. Their leader was Sir Edwin Sandys, a member of that country party which was just beginning to take its stand against the corruptions of the court policy. Side by side with him stood one whose name has gained a wider though not a more honourable repute, the follower of Essex, the idol of Shakespeare, the brilliant, versatile Southampton. . . . The . . . year 1619 was remarkable in the annals of the colony. It is hardly an exaggeration to say that it witnessed the creation of Virginia as an independent community. From the beginning of that year we may date the definite ascendancy of Sandys and his party, an ascendancy which was maintained till the dissolution of the Company, and

during which the affairs of Virginia were administered with a degree of energy, unselfishness, and statesmanlike wisdom, perhaps unparalleled in the history of corporations. One of the first measures was to send out Yeardley to supersede Argall."—J. A. Doyle, *English in America: Virginia, ch. 6*.—"George Yeardley was chosen Governor General of Virginia [in November, 1618], and was intrusted with several documents by whose authority he was to establish representative government in the colony. These papers, which became known as the Virginia Magna Charta, were the very corner-stone of liberty in the colony and in all America. Their importance can hardly be exaggerated, for they instituted the first representative assembly of the New World, and established a government which proved a bulwark against royal prerogative for a century and a half. . . . The Magna Charta made provision for the establishment of boroughs, which were to serve both as units for local government and as electoral districts. . . . With regard for the practical which has always been characteristic of Englishmen, the Company seized upon the existing units, such as towns, plantations and hundreds, as the basis of their boroughs. . . . As there were eleven of these districts and as each district chose two Burgesses, the first General Assembly was to contain twenty-two representatives. The Assembly convened at Jamestown, August 9th, 1619. . . . The legislative powers granted the Virginia Assembly in the Magna Charta, and continued with slight alterations after the revocation of the charter of the London Company, were very extensive. The Assembly could pass laws dealing with a vast variety of matters appertaining to the safety and welfare of the colony. Statutes were enacted in the session of 1619 touching upon Indian affairs, the Church, land patents, the relations of servants and landlords, the planting of crops, general morality in Virginia, the price of tobacco, foreign trade, etc. The collected laws of the entire colonial period fill many volumes, and cover a vast variety of subjects. But there were three things which limited strictly the Assembly's field of action. They must pass no statutes contravening first, the laws of England; secondly, the charters; thirdly, the instructions sent them by the London Company. When the colony passed into the hands of the King, all statutes were forbidden that conflicted with the charters, or with the instructions of the Crown. These restrictions lasted during the entire colonial period, but they were not always carefully regarded. The Company, and later the King, retained two ways of nullifying legislation which was unauthorized, or was distasteful to them. First, there was the veto of the Governor. . . . Secondly, the Company, and later the King, could veto laws even though the Governor had consented to them. But the most important power exercised by the Assembly was its control over taxation in Virginia. In the very first session it made use of this privilege by ordering, 'That every man and manservant of above 16 years of age shall pay into the hands and Custody of the Burgesses of every Incorporation and plantation one pound of the best Tobacco.' The funds thus raised were utilized for the payment of the officers of the Assembly. The levy by the poll, here used, was continued for many years, and became the chief support of the government. As the colony grew, however, and the need for greater revenues was felt, customs duties and other forms of taxation were resorted to.

Large sums were raised by an export duty upon tobacco. At times tariffs were placed upon the importation of liquors, slaves and other articles. But these duties had to be used with great care, for the carrying of the colony was done chiefly by English merchants, and Parliament would permit nothing detrimental to their interests. The Assembly claimed the exclusive right to levy general taxes. The Governor and Council time and again tried to wrest this privilege from them, but never with success. The Burgesses, realizing that their hold upon the exchequer was the chief source of their power, were most careful never to relinquish it. . . . The General Assembly was not only a legislative body, it was also a court of justice, and for many years served as the highest tribunal of the colony. . . . During the reign of Charles II, however, the Assembly was deprived of this function by royal proclamation, and the judiciary fell almost entirely into the hands of the Governor and Council. The General Assembly consisted of two chambers—the House of Burgesses and the Council. In the early sessions, the house sat together and probably voted as one body. Later, however, they were divided and voted separately. The Burgesses, as time went on, gradually increased in numbers until they became a large body, but the Council was always small. The Councillors were royal appointees. But since the King could not always know personally the prominent men of the colony, he habitually confirmed without question the nominations of the Governor. The members of the Council were usually persons of wealth, influence and ability. As they were subject to removal by the King and invariably held one or more lucrative governmental offices, it was customary for them to display great servility to the wishes of his Majesty or of the Governor. It was very unusual for them to oppose in the Assembly any measure recommended by the King, or in accord with his expressed wishes. Although the Councillors were, with rare exceptions, natives of Virginia, they were in no sense representative of the people of the colony. As the upper house of the Assembly, the Council exercised a powerful influence upon legislation. After the separation of the chambers their consent became necessary for the passage of all bills, even money bills. Their legislative influence declined during the eighteenth century, however, because of the growing spirit of liberalism in Virginia, and the increasing size of the House of Burgesses. The executive powers entrusted to the Council were also of very great importance. The Governor was compelled by his instructions to secure its assistance and consent in the most important matters. And since the chief executive was always a native of England, and often entirely ignorant of conditions in the colony, he was constantly forced to rely upon the advice of his Council. This tendency was made more pronounced by the frequent changes of Governors that marked the last quarter of the seventeenth century. . . . Great powers were lodged in the hands of this officer by his various instructions and commissions. He was commander of the militia, was the head of the colonial church, he appointed most of the officers, attended to foreign affairs, and put the laws into execution. His influence, however, resulted chiefly from the fact that he was the representative of the King. . . . Such, in outline, was the government originated by Virginia by the liberal leaders of the London Company, and put into operation by Sir George Yeardley. It lasted, with the short in-

termission of the Commonwealth Period, for more than one hundred and fifty years, and under it Virginia became the most populous and wealthy of the English colonies in America."—T. J. Wertenbaker, *Virginia under the Stuarts, 1607-1688*, pp. 35-42.—"In England the [London] Company under its new government set to work with an energy before unknown to it, to improve the condition of the colony. . . . To check the over-production of tobacco a clause was inserted in all fresh patents of land binding the holder to cultivate a certain quantity of other commodities. Everything was done to encourage permanent settlers rather than mere traders. Apprentices, unmarried women, and neat cattle were sent out. New forms of industry, too, were set on foot, such as timber yards, silk manufactures, iron foundries, and vineyards. . . . In the year 1619 alone over 1,200 persons were sent out, half as private settlers or servants, half at the expense of the Company."—J. A. Doyle, *English in America: Virginia*, ch. 6.

1619.—Introduction of negro slavery.—"In the month of August, 1619, five years after the commons of France had petitioned for the emancipation of every serf in every fief, a Dutch man-of-war entered James River and landed 20 negroes for sale. This is the sad epoch of the introduction of negro slavery; but the traffic would have been checked in its infancy had it remained with the Dutch. Thirty years after this first importation of Africans, Virginia to one black contained fifty whites; and, after seventy years of its colonial existence, the number of its negro slaves was proportionably much less than in several of the northern states at the time of the war of independence."—G. Bancroft, *History of the United States* (Author's last revision), v. 1, pt. 1, ch. 8.

ALSO IN: T. J. Wertenbaker, *Planters of Colonial Virginia*.—P. A. Bruce, *Economic history of Virginia*, v. 2, ch. 11.—G. W. Williams, *History of the negro race in America*, v. 1, pt. 2, ch. 12.—G. P. Fisher, *Colonial era*, ch. 4.

1622-1624.—Plot and massacre by Indians.—Arbitrary dissolution of the Virginia Company by King James.—"On the 22nd of March, 1622, a memorable massacre occurred in the Colony. . . . On the evening before, and on that morning, the savages as usual came unarmed into the houses of the planters, with fruits, fish, turkeys and venison to sell. In some places they actually sat down to breakfast with the English. At about the hour of noon, the savages rising suddenly and everywhere at the same time, butchered the colonists with their own implements, sparing neither age, sex, nor condition. Three hundred and forty-seven men, women and children fell in a few hours. . . . The destruction might have been universal but for the disclosure of a converted Indian, named Chanco, who, during the night before the massacre, revealed the plot to one Richard Pace, with whom he lived. Pace . . . repaired before day to Jamestown and gave the alarm to Sir Francis Wyatt, the Governor. His vigilance saved a large part of the Colony. . . . The court of James I, jealous of the growing power of the Virginia Company and of its too republican spirit, seized upon the occasion of the massacre to attribute all the calamities of the Colony to its mismanagement and neglect, and thus to frame a pretext for dissolving the charter." The Company, supported by the colonists, resisted the high-handed proceedings of the King and his officers, but vainly. In November, 1624, "James I. dissolved the Virginia Company by a

writ of Quo Warranto, which was determined only upon a technicality in the pleadings. The company had been obnoxious to the ill will of the King on several grounds. The corporation had become a theatre for rearing leaders of the opposition, many of its members being also members of parliament. . . . Charles I. succeeding [1625] to the crown and principles of his father, took the government of Virginia into his own hands. The company thus extinguished had expended £150,000 in establishing the Colony and transported 9,000 settlers without the aid of government. The number of stockholders, or adventurers, as they were styled, was about 1,000 and the annual value of the exports from Virginia was, at the period of the dissolution of the charter, only £20,000. The company embraced much of the rank, wealth, and talent of the kingdom. . . . As the act provided no compensation for the enormous expenditure incurred, it can be looked upon as little better than confiscation effected by chicanery and tyranny. Nevertheless the result was undoubtedly favorable to the Colony."—C. Campbell, *Introduction to the history of the colony and ancient dominion of Virginia*, ch. 15-16.

ALSO IN: W. Stith, *History of Virginia*, bk. 4-5.—E. D. Neill, *History of the Virginia Company of London*, ch. 14-17.

1628.—Attempted settlement by Lord Baltimore. See MARYLAND: 1632.

1630-1652.—Activities of William Claiborne.—In 1621 William Claiborne came to Virginia an unknown figure and by 1630 he was secretary for the colony. He had gradually established a flourishing trade with the natives, which extended far northward, and his ambitious plans included building up connections with the Massachusetts Bay Colony. His settlement on Kent Island in Chesapeake bay (which was originally included in the Virginia grant) brought him into conflict with Lord Baltimore and the Calverts to whom the territory had later been given by Charles I. In 1635 he was removed from his post as secretary for the colony by Governor Harvey and in 1638 Kent island was definitely assigned to the Calverts. During the confusion of the Civil War in England, Claiborne again seized the island; but "in 1645 Sir William Berkeley returned to Virginia and from him the fugitive Calvert received effective aid and sympathy, so that late in 1646 he was able to invade his own territory with a force of Virginian and fugitive Marylanders. Claiborne and Ingle were soon expelled. . . . Early in 1652 four commissioners were sent to receive the submission of Berkeley and his colony. One of these . . . was the irrepressible Claiborne . . . [who] was restored to his office of secretary of state."—J. Fiske, *Old Virginia and her neighbors*, v. 1, pp. 308, 314.—See also MARYLAND: 1635-1638.

ALSO IN: J. H. Claiborne, *William Claiborne of Virginia*.

1639-1652.—Loyalty to King Charles.—Refuge of Cavaliers.—"Under Charles I. little worthy of notice occurred in the political history of Virginia. . . . Attempts were made to raise a revenue on tobacco, and subsequently to establish a royal monopoly of the tobacco trade. The attempts were averted, and the king contented himself with the pre-emption of the Virginian tobacco, and with enacting that no foreign vessel should be allowed to trade with Virginia, or to carry Virginia goods. In 1630 an attempt was made to re-establish the authority of the [London] com-

pany, but was strenuously and successfully opposed by the assembly. That the royal government sat lightly on Virginia may be inferred from the loyal tone which had thus early become a characteristic of the colony. After the establishment of the commonwealth, 'Virginia was whole for monarchy and the last country belonging to England that submitted to obedience to the commonwealth of England,' and under Berkeley's government the plantation was a safe refuge for the defeated cavaliers. . . . But as soon as two or three parliamentary ships appeared [1652] all thoughts of resistance were laid aside. Yet, whether from lenity or caution, the parliament was satisfied with moderate terms. The submission of the colonists was accepted as free and voluntary."—J. A. Doyle, *American colonies*, ch. 2.

1639-1663.—Attempts to colonize North Carolina. See NORTH CAROLINA: 1639-1663.

1644.—Fresh Indian outbreak and massacre of whites.—"After a peace of five or six years, the Indians, provoked by continued encroachments on their land, and instigated, it is said, by the aged chief Opechancanough, formed a new scheme for the extermination of the colonists. They were encouraged by signs of discord among the English, having seen a fight in James River between a London ship for the Parliament and a Bristol ship for the king. [In 1644.] Five hundred persons perished in the first surprise. . . . For defense the planters were concentrated in a few settlements; . . . forts were built at the points most exposed; and a ship was sent to Boston for powder, which, however, the General Court declined to furnish. The occasion was taken by 'divers godly-disposed persons' of Virginia to remove to New England. . . . The Indians were presently driven from their fastnesses. Opechancanough, decrepit and incapable of moving without assistance, . . . was taken prisoner and carried to Jamestown, where he was shot in the back by a vindictive soldier appointed to guard him. The Indian towns were broken up, and their 'clear lands possessed by the English to sow wheat in.' Opechancanough's successor submitted; and a peace was made by act of the Assembly, the Indians ceding all the lands between James and York Rivers. No Indian was to come south of York River under pain of death. The Powhatan confederacy was dissolved. The Indians of lower Virginia sunk into servile dependence, and dwindled away, or, migrating to the south and west, were mingled and confounded with other tribes."—R. Hildreth, *History of the United States*, v. 1, ch. 11.

ALSO IN: J. E. Cooke, *Virginia*, pt. 2, ch. 5.

1650-1660.—Under the Commonwealth and Cromwell, and the Stuart Restoration.—Two sides of the story.—Origin of the name of "The Old Dominion."—"After this, Sir William Berkeley [governor] made a new peace with the Indians, which continued for a long time unviolated. . . . But he himself did not long enjoy the benefit of this profound peace; for the unhappy troubles of King Charles the first increasing in England, proved a great disturbance to him and to all the people. They, to prevent the infection from reaching that country, made severe laws against the Puritans, though there were as yet none among them. But all correspondence with England was interrupted, supplies lessened, and trade obstructed. . . . At last the king was traitorously beheaded in England, and Oliver installed Protector. However, his authority was not acknowledged in Virginia for several years after, till they were forced to it by the last necessity. For in the year 1651, by Crom-

well's command, Captain Dennis, with a squadron of men of war, arrived there from the Carribee islands, where they had been subduing Bardoes. The country at first held out vigorously against him, and Sir William Berkeley, by the assistance of such Dutch vessels as were then there, made a brave resistance. But at last Dennis contrived a stratagem which betrayed the country. He had got a considerable parcel of goods aboard, which belonged to two of the Council, and found a method of informing them of it. By this means they were reduced to the dilemma, either of submitting or losing their goods. This occasioned factions among them; so that at last, after the surrender of all the other English plantations, Sir William was forced to submit to the usurper on the terms of a general pardon. However, it ought to be remembered, to his praise, and to the immortal honor of that colony, that it was the last of all the king's dominions that submitted to the usurpation; and afterwards the first that cast it off, and he never took any post or office under the usurper. Oliver had no sooner subdued the plantations, but he began to contrive how to keep them under, that so they might never be able for the time to come to give him farther trouble. To this end, he thought it necessary to break off their correspondence with all other nations, thereby to prevent their being furnished with arms, ammunition, and other warlike provisions. According to this design, he contrived a severe act of Parliament [1651], whereby he prohibited the plantations from receiving or exporting any European commodities but what should be carried to them by Englishmen, and in English built ships. [See NAVIGATION LAWS: 1651]. . . . Notwithstanding this act of navigation, the Protector never thought the plantations enough secured, but frequently changed their governors to prevent their intriguing with the people. So that, during the time of the usurpation, they had no less than three governors there, namely, Diggs, Bennet and Mathews. The strange arbitrary curbs he put upon the plantations exceedingly afflicted the people . . . and inspired them with a desire to use the last remedy, to relieve themselves from this lawless usurpation. In a short time afterwards a fair opportunity happened; for Governor Mathews died, and no person was substituted to succeed him in the government. Whereupon the people applied themselves to Sir William Berkeley (who had continued all this time upon his own plantation in a private capacity) and unanimously chose him their governor again [March, 1660]. Sir William . . . told the people . . . that if he accepted the government it should be upon their solemn promise, after his example, to venture their lives and fortunes for the king, who was then in France. This was no great obstacle to them, and therefore with an unanimous voice they told him they were ready to hazard all for the king. . . . Sir William Berkeley embraced their choice, and forthwith proclaimed Charles II. king of England, Scotland, France, Ireland and Virginia, and caused all process to be issued in his name. Thus his majesty was actually king in Virginia before he was so in England. But it pleased God to restore him soon after to the throne of his ancestors."—R. Beverley, *History of Virginia*, bk. 1, ch. 4.—"The government of Virginia, under the Commonwealth of England, was mild and just. While Cromwell's sceptre commanded the respect of the world, he exhibited generous and politic leniency towards the infant and loyal colony. She enjoyed during this interval free trade, legislative independence and internal

peace. The governors were men who by their virtues and moderation won the confidence and affections of the people. No extravagance, rapacity, or extortion, could be alleged against the administration. Intolerance and persecution were unknown, with the single exception of a rigorous act banishing the quakers. But rapine, extravagance, extortion, intolerance and persecution were all soon to be revived under the auspices of the Stuarts. . . . Richard Cromwell resigned the protectorate in March, 1660. Matthews, governor-elect, had died in the January previous. England was without a monarch; Virginia without a governor. Here was a two-fold interregnum. The assembly, convening on the 13th of March, 1660, declared by their first act that, as there was then in England 'noe resident absolute and generall confessed power,' therefore the supreme government of the colony should rest in the assembly. By the second act, Sir William Berkeley was appointed governor, and it was ordered that all writs should issue in the name of the assembly. . . . No fact in our history has been more misunderstood and misrepresented than this reappointment of Sir William Berkeley, before the restoration of Charles II. . . . Sir William was elected, not by a tumultuary assemblage of the people, but by the assembly; the royal standard was not raised upon the occasion, nor was the king proclaimed. Sir William, however, made no secret of his loyalty. . . . Sir William was elected on the 21st of the same month, about two months before the restoration of Charles II. Yet the word king, or majesty, occurs nowhere in the legislative records, from the commencement of the Commonwealth in England until the 11th of October, 1660—more than four months after the restoration. Virginia was indeed loyal, but she was too feeble to express her loyalty.—C. Campbell, *Introduction to the history of the colony and ancient dominion of Virginia*, ch. 21-22.—"There is no doubt whatever that if the Virginians could have restored the King earlier they would have done so; and Berkeley, who is known to have been in close communication and consultation with the leading Cavaliers, had sent word to Charles II. in Holland, toward the end of the Commonwealth, that he would raise his flag in Virginia if there was a prospect of success. This incident has been called in question. It is testified to by William Lee, Sheriff of London, and a cousin of Richard Lee, Berkeley's emissary, as a fact within his knowledge. Charles declined the offer, but was always grateful to the Virginians. The country is said to have derived from the incident the name of the 'Old Dominion,' where the King was King, or might have been, before he was King in England."—J. E. Cooke, *Virginia*, pt. 2, ch. 10.

1660-1677.—Restoration and its rewards to Virginia loyalty.—Oppression, discontent, and Bacon's Rebellion.—At the time of the restoration of the English monarchy, in the person of Charles II, the colony of Virginia "numbered not far from 50,000 souls, a large proportion of whom, especially, we may suppose, those of middle life and most active habits, were natives of the soil, bound to it by the strongest ties of interest and affection, and by their hopes of what it was destined to become in the opening future. Here was a state of things, comprising, in the apprehensions of the people, many of the elements of the highest happiness and prosperity. . . . But all this was

totally and suddenly changed, and universal distress brought upon the land, by the new restrictive clauses added to the original Navigation Act, by the first Parliament of Charles. By the act of the Long Parliament it had been simply provided that foreign vessels should import into England no other products than such as were grown or manufactured in their own country; a shaft aimed principally at the Dutch. . . . By Charles's Commons this first hint was . . . expanded into a voluminous code of monopolizing enactments, by which the trade of the world was regulated on the principle of grasping for England every possible commercial advantage, and inflicting upon all other nations the greatest possible commercial injury. . . . Upon the colonies, one and all, this cruel policy bore with a weight which almost crushed them. . . . From 1660, when this monopolizing policy took its beginning, the discontent of the people increased day by day, as each new prohibition was proclaimed. Commerce lay dead. Tobacco would no longer pay for its cultivation, much less enrich the laborious planter; manufactures, as that of silk, after being attempted, failed to bring the hoped-for relief, and there seemed no prospect but starvation and ruin. What wonder that mischief lay brewing in the hearts of a people who, for their almost slavish loyalty, met only these thankless returns of injury and injustice; for the Virginians of that day were monarchists in the full meaning of the term. . . . Other causes conspired with these purely political ones to bring the public mind of Virginia into such a state of deep exasperation as to find its relief only in insurrection. Of these, one was particularly a source of irritation; namely, the grants of vast tracts of territory, made by the wasteful and profligate King to his needy and profligate favorites, made wholly irrespective of present owners and occupiers, who were transferred, like serfs of the soil, to any great patentee to whom the caprice of Charles chose to consign them." The discontent culminated in 1676, under the influence of an excitement growing out of trouble with the Indians. After more than thirty years of quiet, the natives became hostile and threatening. "Various outrages were first committed by the Indians, on whom the whites, as usual, retaliated; murder answered murder, burning to burning, till, throughout the whole border country, were kindled the flames of an exterminating Indian war, accompanied by all its peculiar horrors. In the excited state of the public mind, these new calamities were laid at the door of the government." Governor Berkeley was accused of having an interest in the profits of trade with the Indians which restrained him from making war on them. Whether the charge was true or false, he gave color to it by his conduct. He took no steps to protect the colony. Nor would he authorize any self-defensive measures on the part of the people themselves. They "went so far as to engage that, if the Governor would only commission a general, whomsoever he would, they would 'follow him at their own charge.' Still they were not heard. Under such circumstances of neglect and excessive irritation, they took the case into their own hands." They chose for their leader Nathaniel Bacon, a young Englishman of education, energy and talent, who had been in the colony about three years, and who had already attained a seat in the Governor's Council. Bacon accepted the responsibility, "commission or no commission," and, in the spring of 1676, put himself at the head of 500 men, with whom he

marched against the Indians. The governor, after formally proclaiming him a rebel, raised another army and marched, not against the Indians, but against Bacon. He was hardly out of Jamestown, however, before the people of that neighborhood rose and took possession of the capital. On learning of this fresh revolt, he turned back, and found himself helpless to do anything but submit. The result was the summoning of a new Assembly,

all that had been granted was revoked; a proclamation was issued, again denouncing Bacon as a rebel, setting a price upon his head, and commanding his followers to disperse." Again, Bacon and his army retraced their steps and took possession of Jamestown, the governor flying to Accomac. A convention of the inhabitants of the colony was then called together, which adopted a declaration, or oath, in which they fully identified themselves

BACON AND BERKELEY
(After painting by J. E. Kelly)

to which Bacon was elected from his county, and the making of some progress, apparently, towards a curing of abuses and the removing of causes of discontent. But something occurred—exactly what has never been made clear—which led to a sudden flight on Bacon's part from Jamestown, and the gathering of his forces once more around him. Re-entering the capital at their head, he extorted from Governor Berkeley a commission which legalized his military office, and armed with this authority he proceeded once more against the Indians. "But as soon as he was sufficiently distant to relieve the Governor and his friends from their fears,

with Bacon in his course, and swore to uphold him. The latter then moved once more against the Indians; Berkeley once more got possession of the seat of government, and, once more, Bacon, (who had fought the Indians meantime at Bloody Run and beaten them) came back and drove him out. "The whole country . . . was with Bacon, and merely a crowd of cowardly adventurers about the Governor. Nothing would seem, at this moment, to have stood between Bacon and the undisputed, absolute control of the colony, had no unforeseen event interposed, as it did, to change the whole aspect of affairs." This unforeseen event

was the sudden death of Bacon, which occurred in January, 1677, at the house of a friend. "Some mystery attaches to the manner of it," and there were, of course, sinister whispers of foul play. "But, however and wherever Bacon died, it could never be discovered where he was buried, nor what disposition had been made of his body. . . . The death of Bacon was, in effect, the restoration of Sir William Berkeley to his lost authority, and the termination of the war; there being not an individual, among either his counsellors or officers, of capacity sufficient to make good his place. . . . Berkeley, gradually subduing all opposition, and making prisoners of many of the prime movers of the revolt, in a short time saw the authority of his government completely reestablished. . . . The historians of the period inform us that no less than 25 persons were executed during the closing period of the rebellion and the few next succeeding months."—W. Ware, *Memoir of Nathaniel Bacon (Library of American Biography, series 2, v. 3)*.—See also BACON'S REBELLION.

1660-1769.—Power of the House of Burgesses.—Resistance to royal governors.—Relations with home government.—"The House of Burgesses . . . for some time after the royalist reaction (1660) especially under Berkeley . . . was not popular but rather a dictatorial oligarchy under the influence of the governor. Under Culpeper and Howard, who followed Berkeley, there was a decided opposition on the part of the burgesses. This resistance to oppressive royal authority increased throughout the remainder of the colonial period, and was very pronounced at certain times in the eighteenth century. . . . The refusal of that body to make appropriations interfered very seriously with the plans of certain governors. . . . The House not only prescribed in detail the purposes for which military supplies were to be used, but also by putting the funds in the hands of committees dictated the course of military operations and exercised much authority over the troops. The power of the House was greatly increased by combining with its control over finance the appointment of the treasurer. . . . The colonists realized that it was only through the House of Burgesses that they could ever hope to restrain a dictatorial governor and to prevent the execution of oppressive British policy. The submission of the governor to the demands of the House from time to time convinced that body of the gradual decline of royal authority in the colony. But there was no organized movement in favor of independence, for up to the very beginning of the Revolution the colonists sincerely maintained their loyalty to the crown. Since the royal governor in the colony and British officials in England who were in a position to know the facts, and who would not be likely to exaggerate the financial condition of the colony, stated about the close of the seventeenth century, and also near the Revolution, that Virginia paid more into the British treasury than any other colony, and since the colonists bore the expenses of the government,

the maintenance of the military system aided neighboring colonies in time of emergency and also rendered assistance to the British government in offensive wars outside the colony, it was but natural that they should demand the common rights of Englishmen. They were denied these rights, and after every available means of securing them was exhausted they were compelled to meet with force the armed opposition of the British government."—P. S. Flippin, *Royal government of Virginia, p. 369*.—See also U. S. A.: 1624-1776.

1634-1699.—Piracy and its effect on the colony.—"So numerous were the pirate vessels hovering in the Chesapeake about 1684 that it was found necessary to adopt regulations for the guidance of the military authorities when aiming to destroy them or drive them out. . . . In this age, there was but a narrow line of division between the pirate and the privateer. Many privateers, after preying upon the enemy's commerce, did not hesitate to rifle any ship, whether belonging to their own or a friendly nationality, which happened to cross their track. Though keeping these latter acts in the dark, the crew of such a vessel were no doubt much inclined to boast of their achievements against an acknowledged enemy. So great was the quantity of plate, coin, precious stones, the rarest silks and costliest cloths, captured by many of these so-called privateers that the accounts of their success reaching the Colony from time to time were thought by some of the Governors to tend to demoralize the population in the pursuit of their usual avocations. It was reported in Virginia, in 1692, that a ship of this kind, which pretended to be from the Red Sea, had not long ago arrived in South Carolina and that its officers and seamen had stated that they had recently divided among themselves two thousand pounds sterling (equal to at least forty thousand dollars in purchasing power) taken from the coffers of a Moorish vessel overhauled in the course of their last cruise. 'I fear,' wrote Nicholson in deprecation of the sensation which this news had caused in the Colony, 'that, if such people be encouraged, it may prejudice his Majesty's service by debauching the inhabitants to make them leave planting and following ye same trade.' And in conclusion, he added: 'I very much fear that these sort of privateers or rather pirates when they have spent lavishly what they have got, then they are ready if not before, to make disturbance in the Government.' There seems to have been some ground for Nicholson's thinking that many of the colonists would be led away by the privateers' rich captures. . . . There is no proof, however, that such marauders found any section of the population of Virginia disposed to enter into practical collusion with them, either by purchasing outright their ill-gotten merchandise, or by furnishing them with victual in exchange for it. In June, 1699, a ship having among its passengers sixty pirates belonging to the band of the notorious Captain Kidd, and loaded down with Eastern merchandise of extraordinary value, arrived in Delaware Bay; after an unbroken voyage from the island of Madagascar. It was under Captain Shelley's command, who admitted that he had obtained his cargo by trading with pirates in those remote waters. Eighteen of the buccaneers brought over remained at Cape May, while nine, having secured a sloop, made their way towards Virginia, possibly with a considerable quantity of goods for sale in that Colony. In the meanwhile, other small vessels were expected from New York,

which were to convey thither the rest of the merchandise. Information of this ship's presence in the Jerseys, and the departure of a part of its crew for Virginia, was promptly sent to Governor Nicholson, so that he might take steps to arrest them so soon as they arrived. Nor were these the only marauders whom that officer was called upon to look out for during the same year; in 1699 also, a large band of pirates landed on Block Island within the limits of Rhode Island. Having removed to shore all their booty, which happened to be in the form of money and plate, they allowed their ship to sink, and then breaking up into separate bands, they dispersed in several directions. One of these bands was reported to have turned its face towards Virginia; and news of this fact having reached Nicholson, he issued a proclamation ordering their capture so soon as they were discovered to be within the bounds of the Colony. . . . Captain Aldred, of the *Essex Prize*, had sighted the private ship [belonging to Captain Kidd] in Lynnhaven Bay, to which waters she had leisurely gone from the coast of Accomac. He described her as being an English built vessel, equipped with about thirty guns, and with the King's colors and a red flag flying at her maintop masthead. He learned that she was known sometimes as the *Alexander*, and sometimes as the *Providence Galley*; that she was under the command of one John James; and that she was manned by a crew of thirty. Aldred promptly bore down on her when she came in sight, but having been received with a sharp volley, and deeming his own force, owing to the absence of seven of his seamen on shore, insufficient, he stood off; and soon returning to the north side of the river, sent a dispatch to the Governor to inform him of the pirate's presence. Finding themselves unmolested, the bucaniers now began to plunder every boat, sloop, and ship that passed within their reach. . . . The commanders-in-chief of the militia of Elizabeth City, Norfolk, Princess Anne, Accomac and Northampton counties were ordered to appoint in their respective districts persons who, without interruption, should patrol the shores until the twenty-ninth day of the following October, an interval of about three and a half months. One man was to be chosen whose duty it should be to pass constantly backwards and forwards along the beach between Cape Henry and Currituck Inlet; another to walk the length of the seaboard in Accomac; another the length of the seaboard in Northampton; and a fourth to be stationed on Smith's Island situated not far from Cape Charles. Should any one of these watches discover a boat making its way to the shore which there was good reason to suspect was occupied by pirates, then he was to hasten to inform the nearest militia officer in order that the whole country might be at once aroused; this was done by this officer in his turn reporting the same fact to all the neighboring commanders-in-chief; and they, in their turn, were required to report it to the Governor and Council at Jamestown; and if possible the same news was to be communicated to the captain of the guard-ship."—P. A. Bruce, *Institutional history of Virginia*, v. 2, pp. 207-211, 214.

1700.—Divergencies in the life and history of Virginia from that of England.—"In summarizing the particulars in which the general system of Virginia diverged from that of England in the Seventeenth century, they are found to be few in number, and not, in every instance, of great importance in their influence. They consisted, first, of the extensive, as opposed to the intensive, methods of cultivation, methods encouraged by the abundance of virgin lands, but productive of an air of neglect in sad contrast with that appearance of neatness, trimness, and thorough tillage which gave the face of the Mother Country the aspect of a beautiful garden on a great scale; secondly, of the presence of the African slave, who, while he fostered in the dominant class a love of liberty and an aristocratic spirit, was nevertheless, in himself and in his permanent bondage, incongruous with the genius of English institutions; thirdly, of the practical absence of the law of primogeniture, owing to the fact that, in these early times, the younger children's only prospect of support lay in inheriting some portion of their father's landed estate, virtually the only form of property then existing in the Colony, and the only means by which a livelihood could be easily secured [system overthrown by Thomas Jefferson in 1766]; fourthly, of the custom of hiring clergymen by the year, and during good behavior, instead of giving them a permanent freehold interest in their livings by the ceremony of induction; fifthly, of the smallness in the number of free grammar schools, in consequence of the comparatively limited accumulation of wealth; sixthly, of the recordation of deeds instead of the preservation of all muniments of title in private receptacles closed to public examination; seventhly, of a less complicated system of courts and a simpler legal procedure in the course of trials; eighthly, of a system of military tactics, adapted to a running fight in thick forests, and with a furtive and treacherous enemy; ninthly, of a suffrage which at first rested upon manhood alone; tenthly, of an Assembly that represented, not only all classes, like the English Parliament, but also every individual person belonging to the several constituencies; and finally, of a legislative body, whose members, unlike those sitting at St. Stephens, received pecuniary remuneration for the special services they performed. These divergencies did not seriously diminish the intensity of the English spirit animating the whole community in every branch of its interests, and every citizen on every side of his character."—P. A. Bruce, *Political history of Virginia in the seventeenth century*, pp. 633-634.

1700.—Contrast between the local institutions of Virginia and those of New England.—"In Virginia the economic circumstances were very different from those of New England, and the effects were seen in a different kind of local institutions. . . . In view of this group of circumstances [see above: 1700: Divergencies] we need not wonder that in Old Virginia there were no town meetings. The distances between plantations coöperated with the distinction between classes to prevent the growth of such an institution. The English parish, with its churchwardens and vestry and clerk, was reproduced in Virginia under the

same name, but with some noteworthy peculiarities. If the whole body of rate-payers had assembled in vestry meeting, to enact by-laws and assess taxes, the course of development would have been like that of the New England town meeting. But instead of this the vestry, which exercised the chief authority in the parish, was composed of twelve chosen men. This was not government by a primary assembly, it was representative government. At first the twelve vestrymen were elected by the people of the parish, and thus resembled the select-men of New England; but in 1662 'they obtained the power of filling vacancies in their own number,' so that they became what is called a 'close corporation,' and the people had nothing to do with choosing them. Strictly speaking, that was not representative government; it was a step on the road that leads towards oligarchical or despotic government. It was . . . one of the steps ineffectually opposed in Bacon's rebellion. It was the vestry, thus constituted, that apportioned the parish taxes, appointed the churchwardens, presented the minister for induction into office, and acted as overseers of the poor. The minister presided in all vestry meetings. His salary was paid in tobacco, and in 1696 it was fixed by law at 16,000 pounds of tobacco yearly. In many parishes the churchwardens were the collectors of the parish taxes. The other officers, such as the sexton and the parish clerk, were appointed either by the minister or by the vestry. With the local government thus administered, we see that the larger part of the people had little directly to do. Nevertheless, in those small neighbourhoods government could be kept in full sight of the people, and so long as its proceedings went on in broad daylight and were sustained by public sentiment, all was well. As Jefferson said, 'The vestrymen are usually the most discreet farmers, so distributed through the parish that every part of it may be under the immediate eye of some one of them. They are well acquainted with the details and economy of private life, and they find sufficient inducements to execute their charge well, in their philanthropy, in the approbation of their neighbours, and the distinction which that gives them.' The difference, however, between the New England township and the Virginia parish, in respect of self-government, was striking enough. We have now to note a further difference. In New England, the township was the unit of representation in the colonial legislature; but in Virginia the parish was not the unit of representation. The county was that unit. In the colonial legislature of Virginia the representatives sat, not for parishes but for counties. The difference is very significant. As the political life of New England was in a manner built up out of the political life of the towns, so the political life of Virginia was built up out of the political life of the counties. This was partly because the vast plantations were not grouped about a compact village nucleus like the small farms of the North, and partly because there was not in Virginia that Puritan theory of the church according to which each congregation is a self-governing democracy. The conditions which made the New England town meeting were absent. The only alternative was some kind of representative government, and for this the county was a small enough area. The county in Virginia was much smaller than in Massachusetts or Connecticut. In a few instances the county consisted of only a single parish; in some cases it was divided into two parishes, but

oftener into three or more. In Virginia, as in England and in New England, the county was an area for the administration of justice. There were usually in each county eight justices of the peace, and their court was the counterpart of the quarter sessions in England. They were appointed by the governor, but it was customary for them to nominate candidates for the governor to appoint, so that practically the court filled its own vacancies and was a close corporation, like the parish vestry. Such an arrangement tended to keep the general supervision and control of things in the hands of a few families. This county court usually met as often as once a month in some convenient spot answering to the shire town of England or New England. More often than not, the place originally consisted of the court-house and very little else, and was named accordingly from the name of the county, as Hanover Court House or Fairfax Court House; and the small shire towns that have grown up in such spots often retain these names to the present day. . . . Their number was diminished from the tendency to omit the phrase 'Court House,' leaving the name of the county for that of the shire town, as for example in Culpeper, Va. In New England the process of naming has been just the reverse; as in Hartford County, Conn., or Worcester County, Mass., which have taken their names from the shire towns. . . . The county court in Virginia had jurisdiction in criminal actions not involving peril of life or limb, and in civil suits where the sum at stake exceeded twenty-five shillings. Smaller suits could be tried by a single justice. The court also had charge of the probate and administration of wills. The court appointed its own clerk, who kept the county records. It superintended the construction and repair of bridges and highways, and for this purpose divided the county into 'precincts,' and appointed annually for each precinct a highway surveyor. The court also seems to have appointed constables, one for each precinct. The justices could themselves act as coroners, but annually two or more coroners for each parish were appointed by the governor. As we have seen that the parish taxes—so much for salaries of minister and clerk, so much for care of church buildings, so much for the relief of the poor, etc.—were computed and assessed by the vestry; so the county taxes, for care of court-house and jail, roads and bridges, coroner's fees, and allowances to the representatives sent to the colonial legislature, were computed and assessed by the county court. The general taxes for the colony were estimated by a committee of the legislature, as well as the county's share of the colony tax. The taxes for the county, and sometimes the taxes for the parish also, were collected by the sheriff. They were usually paid, not in money, but in tobacco; and the sheriff was the custodian of this tobacco, responsible for its proper disposal. The sheriff was thus not only the officer for executing the judgments of the court, but he was also county treasurer and collector, and thus exercised powers almost as great as those of the sheriff in England in the twelfth century. He also presided over elections for representatives to the legislature. It is interesting to observe how this very important officer was chosen. 'Each year the court presented the names of three of its members to the governor, who appointed one, generally the senior justice, to be the sheriff of the county for the ensuing year.' Here again we see this close corporation, the county court, keeping the control of things within its own hands. One other important

county officer needs to be mentioned. In early New England each town had its train-band or company of militia, and the companies in each county united to form the county regiment. In Virginia it was just the other way. Each county raised a certain number of troops, and because it was not convenient for the men to go many miles from home in assembling for purposes of drill, the county was subdivided into military districts, each with its company, according to rules laid down by the governor. The military command in each county was vested in the county lieutenant, an officer answering in many respects to the lord lieutenant of the English shire at that period. Usually he was a member of the governor's council, and as such exercised sundry judicial functions. He bore the honorary title of 'colonel,' and was to some extent regarded as the governor's deputy; but in later times his duties were confined entirely to military matters."—J. Fiske, *Old Virginia and her neighbors*, v. 2, pp. 34-41.

1710.—Colonization of Palatines. See PALATINES.

1710-1716.—Crossing the Blue Ridge.—Possession taken of the Shenandoah valley.—Knights of the Golden Horseshoe.—"Lord Orkney is made Governor, but as usual sends his deputy, and in the year 1710 appears the stalwart soldier and ruler, Sir Alexander Spotswood. Alexander Spotswood, or Spottiswoode, as his family were called in Scotland, rises like a landmark above the first years of the century. When he came to Virginia he was only 34 and in the bloom of his manhood. But he had already fought hard, and his faculties as a soldier and ruler were fully developed. . . . The Virginians received Spotswood with open arms. He was a man after their own heart, and brought with him when he came (June 1710) the great writ of habeas corpus. The Virginia people had long claimed that this right was guaranteed to them by Magna Charta, since they were equally free Englishmen with the people of England. Now it was conceded, and the great writ came,—Spotswood's letter of introduction. It was plain that he was not a new Berkeley looking to the King's good pleasure as his law, or a new Nicholson ready to imprison people or put halters around their necks; but a respecter of human freedom and defender of the right. . . . In . . . 1716, Governor Alexander Spotswood set out on an expedition which much delighted the Virginians. There was a very great longing to visit the country beyond the Blue Ridge. That beautiful unknown land held out arms of welcome, and the Governor, who had in his character much of the spirit of the hunter and adventurer, resolved to go and explore it. Having assembled a party of good companions, he set out in the month of August, and the gay company began their march toward the Blue Ridge Mountains. . . . In due time they reached the Blue Ridge, probably near the present Swift Run Gap, and saw, beyond, the wild valley of the Shenandoah. On the summit of the mountain they drank the health of the King, and named two neighboring peaks 'Mt. George' and 'Mt. Alexander,' after his Majesty and the Governor; after which they descended into the valley and gave the Shenandoah the name of the 'Euphrates.' Here a bottle was buried . . . containing a paper to testify that the valley of the Euphrates was taken possession of in the name of his Majesty, George I. Then the adventurers reascended the mountain, crossed to the lowland, and returned to Williamsburg. This picturesque incident of the time gave rise to

the order of the 'Knights of the Golden Horseshoe.' The horses had been shod with iron, which was unusual, as a protection against the mountain roads; and Spotswood sent to London and had made for his companions small golden horseshoes set with garnets and other jewels, and inscribed 'Sic juvat transcendere montes.'"—J. E. Cooke, *Virginia*, pt. 2, ch. 21-22.—See also U. S. A.: 1681-1750.

1720.—Dispute over southern boundary. See NORTH CAROLINA: 1688-1720.

1744.—Treaty with the Six Nations and purchase of the Shenandoah valley.—"The Six Nations still retained the right to traverse the great valley west of the Blue Ridge. Just at this inopportune moment [1743], some of their parties came into bloody collision with the backwoodsmen of Virginia, who had penetrated into that valley. Hostilities with the Six Nations, now that war was threatened with France, might prove very dangerous, and Clinton [governor of New York] hastened to secure the friendship of these ancient allies by liberal presents; for which purpose, in conjunction with commissioners from New England, he held a treaty at Albany. . . . The difficulties between Virginia and the Six Nations were soon after [1744] settled in a treaty held at Lancaster, to which Pennsylvania and Maryland were also parties, and in which, in consideration of £400, the Six Nations relinquished all their title to the valley between the Blue Ridge and the central chain of the Allegany Mountains."—R. Hildreth, *History of the United States*, v. 2, ch. 25.

1763.—Parsons' Cause and Patrick Henry.—"In Virginia as well as in Pennsylvania, a vigorous opposition to vested rights foreshadowed what was to come. A short crop of tobacco having suddenly enhanced the price of that staple, or, what is quite as likely, the issue of paper money in Virginia, first made that same year [1755], having depreciated the currency, the Assembly had passed a temporary act, authorizing the payment of all tobacco debts in money at twopence per pound—the old rate, long established by usage. Three years after, under pretence of an expected failure of the crop, this tender act was renewed. Francis Fauquier, who had just succeeded Dinwiddie as lieutenant governor, a man of more complying temper than his predecessor, readily consented to it. The salaries of the parish ministers, some sixty-five in number, were payable in tobacco. They were likely to be considerable losers by this tender law; and, not content with attacking it in pamphlets, they sent an agent to England, and by the aid of Sherlock, bishop of London, procured an order in council pronouncing the law void. Suits were presently brought to recover the difference

between twopence per pound in the depreciated currency and the tobacco to which by law the ministers were entitled. In defending one of these suits [1763], the remarkable popular eloquence of Patrick Henry displayed itself for the first time. Henry was a young lawyer, unconnected with the ruling aristocracy of the province, and as yet without reputation or practice. The law was plainly against him, and his case seemed to be hopeless. He had, however, a strong support in the prevailing prejudice in favor of the tender law, and in the dissatisfaction generally felt at the king's veto upon it. Addressing the jury in a torrent of eloquence as brilliant as it was unexpected, he prevailed upon them to give him a verdict. The Assembly voted money to defend all suits which the parsons might bring; and, notwithstanding their clear legal right in the matter, they thought it best to submit without further struggle."—R. Hildreth, *History of the United States*, v. 2, ch. 27.

1775.—End of royal government.—Lord Dunmore's fight.—"History was rapidly made in the spring of 1775. The House of Burgesses, acting again as a convention, without governor or council, met in March, 1775, in the village of Richmond, where it could deliberate with more freedom than in Williamsburg under . . . [Governor Dunmore's] shadow. . . . The strong men of the colony mustered in force. They were flushed with excitement and conscious of great impending events, and they broke out into a violent party disagreement as to the course to pursue. The conservatives, despite the fruitlessness of their commercial policy, still hoped for an understanding with England; the progressives were prepared for immediate war and revolution. The struggle in the convention was precipitated over a pacificatory declaration 'that it is the most ardent wish of this colony (and they are persuaded of the whole continent of North America) to see a speedy return of those halcyon days, when we lived a free and happy people.' Immediately after the adoption of this useless, im-

pious, prayer, Patrick Henry rose to move that the colony be at once put in a state of defense. This bold challenge was accepted by the conservative leaders, Bland, Pendleton, Nicholas, Benjamin Harrison, and Willis Riddick, who feared lest the sympathy of the Whig Party in England and Parliament, upon which the conservatives now hung their hopes, might be alienated by the threat of force. They still dreamed that the manufacturing interests of England would succeed in moving the government and averting war, much as the Confederates fondled the delusion that the stoppage of the cottage supply would force Europe to intervene in the war between North and South. Furthermore, they pointed out that the colony was in no condition to go to war with the first military and naval power in the world. Henry answered them in the most famous of his speeches. Scouting the idea of a peaceful accommodation, the great agitator pleaded for military preparation. . . . [It is in vain, sir, to extenuate the matter. Gentlemen may cry, peace, peace, but there is no peace. The war is actually begun. The next gale that sweeps from the north will bring to our ears the clash of resounding arms. Our brethren are already in the field. Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty, or give me death!'] Dunmore however, mistaking the forbearance of the Virginians for timidity, determined to overawe them by a sudden and audacious stroke. On the night of April 20, 1775, a squad of marines from the king's ship *Magdalen*, lying in the James River near by, carried a quantity of powder from the colony powder-house in Williamsburg on board the ship. The next morning, when the townsfolk learned that their magazine had been rifled, they appeared in the streets in arms, only to quiet down finally under the representation of the town officials that the powder would be restored. The council respectfully requested the governor to return the colony's property and were met with the transparent excuse that it had been removed for fear of a slave rising and would be sent back when needed. Peyton Randolph and Robert Carter Nicholas played a great part in making this evasion palatable to the Williamsburgers, who, respecters of persons and dignitaries as they were, could become riotous on occasions. A wild rumor sent them to arms a second time a day or two later, but their excitement at last subsided and the incident seemed closed. . . . At this juncture, however, the agitator who appeared at every crisis, who had stirred the colony in the 'Parsons' Cause' in 1763 and again in the Stamp Act debate in 1765, seized the Heaven-born opportunity for vigorous action. Rousing the Hanover Committee by his fiery words, Patrick Henry marched on Williamsburg at the head of the county volunteer company. The act was less rash than it seemed: not only could Henry count on a large and devoted following throughout Virginia, but the movement was so well timed that it completely unnerved Dunmore, who had no troops behind him. When the orator, with the ever-growing mob of armed men that hastened to him from all sides, drew near Williamsburg, the governor sent him a message apparently offering payment for the powder. In any event, Henry received from a royal officer a sum of money for the powder and thereupon turned his men homeward. He professed satisfaction with the result, but, in reality, he had been checkmated in the

greatest effort of his career."—H. J. Eckenrode, *Revolution in Virginia*, pp. 45-47, 49-51.

Not long after the excited demonstrations which followed upon Governor Dunmore's secret removal of powder from the public magazine at Williamsburg, the governor received Lord North's "conciliatory proposition," and "he convened the House of Burgesses, on the 1st of June, to take it into consideration. This withdrew Peyton Randolph from Congress, as had been anticipated, and Mr. Jefferson succeeded to the vacancy. But the latter was not permitted to leave the Burgesses before an answer to the ministerial proposition was framed. . . . How much the answer was 'enfeebled' by the doubts and scruples of the moderate members, we cannot say, but it rings true revolutionary metal, and it was a noble lead off for the Assemblies of the other Colonies. . . . In the meantime events had transpired which soon afterwards terminated the official career of the Earl of Dunmore, and with it the royal government in Virginia. On the 5th of June, three men who entered the public magazine were wounded by a spring gun placed there by the orders of the Governor, and on the 7th, a committee of the House appointed to inspect the magazine, found the locks removed from the serviceable muskets, and they also discovered the powder which had been placed in mine. These things highly exasperated the multitude, and on a rumor getting abroad that the same officer who had before carried off the powder was again advancing towards the city with an armed force, they rose in arms. The Governor's assurance that the rumor was unfounded restored tranquillity. He, however, left the city in the night with his family and went on board the Fowey, lying at York, twelve miles distant. He left a message declaring that he had taken this step for his safety, and that thenceforth he should reside and transact business on board the man of war! An interchange of messages, acrid and crimiatory on his part, firm and spirited on the part of the House, was kept up until the 24th of June; when, on his final refusal to receive bills for signature except under the guns of an armed vessel, the House declared it a high breach of privilege, and adjourned to the 12th of October."—H. S. Randall, *Life of Jefferson*, v. 1, ch. 3.—"The convention that met on July 17, 1775, disregarded the fugitive governor, now become an active enemy, and at once proceeded to put the colony on a war-footing. It directed the enlistment of two regiments of troops and attempted to provide an efficient militia system. Furthermore, it filled an imperative need by creating a revolutionary executive, that junta known as the Committee of Safety. In the absence of several of the most noted leaders, sent as delegates to Congress, Peyton Randolph, Harrison, Henry, Jefferson, Wythe, and Richard Henry Lee, the highest vote for committeeman was given Edmund Pendleton, who thereby became chairman. He, with Richard Bland, who declined to go to Congress, Paul Carrington, Dudley Digges, Carter Braxton, John Page, and John Tabb, conservatives, and George Mason, Thomas Ludwell Lee, William Cabell, and James Mercer, progressives, composed the Committee of Safety. The election was a conservative triumph, owing partly to the absence of Richard Henry Lee and Jefferson, both of whom were in Philadelphia, and, even more, to the loss of Patrick Henry, who aspired to military glory as colonel of one of the Virginia regiments. Since Mason, the one strong progressive member of the committee, was absent from most of its meetings, direction of

affairs fell into the hands of the conservatives under the leadership of Edmund Pendleton, the chairman. This transfer of power from progressives to conservatives, with some of the aspects of a *coup d'état*, led to the postponement of hostilities with Dunmore for some months. Indeed, the year might have expired peacefully but for the headiness of the ex-governor, who left the Committee no choice but war. With the progressive leaders out of the way, at the election of the Committee of Safety the conservative faction succeeded in getting the executive power in its own hands and so deferred the final step in the breach with England; they doubtless hoped for some eleventh-hour victory of peace to satisfy colonial demands and yet leave the British Empire intact. The conservatives never realized, as Henry and Jefferson did, that such a dream was the one impossible thing."—H. J. Eckenrode, *Revolution in Virginia*, pp. 51, 56-57.

1775-1776.—Lord Dunmore's warfare.—Norfolk destroyed.—"Having drawn together a considerable force, Dunmore ascended Elizabeth River to the Great Bridge, the only pass by which Norfolk can be approached from the land side; dispersed some North Carolina militia collected there; made several prisoners; and then, descending the river [November, 1775], took possession of Norfolk. The rise of that town had been very rapid. Within a short time past it had become the principal shipping port of Virginia. Its population amounted to several thousands, among whom were many Scotch traders not well disposed to the American cause. Fugitive slaves and others began now to flock to Dunmore's standard. A movement was made in his favor on the east shore of Maryland, which it required a thousand militia to suppress. The Convention of Virginia, not a little alarmed, voted four additional regiments, afterward increased to seven, all of which were presently taken into continental pay. . . . Woodford, with the second Virginia regiment, took possession of the causeway leading to the Great Bridge, which was still held by Dunmore's troops. An attempt to dislodge the Virginians having failed, with loss, Dunmore abandoned the bridge and the town, and again embarked. Norfolk was immediately occupied by Woodford, who was promptly joined by Howe's regiment from North Carolina. After a descent on the eastern shore of Virginia [January, 1776], to whose aid marched two companies of Maryland minute men, being re-enforced by the arrival of a British frigate, Dunmore bombarded Norfolk. A party landed and set it on fire. . . . The part which escaped was presently burned by the provincials, to prevent it from becoming a shelter to the enemy. Thus perished, a prey to civil war, the largest and richest of the rising towns of Virginia. Dunmore continued, during the whole summer, a predatory warfare along the rivers, of which his naval superiority gave him the command, burning houses and plundering plantations, from which he carried off upward of 1,000 slaves. He was constantly changing his place to elude attack; but watched, pursued, and harassed, he finally found it necessary to retire to St. Augustine with his adherents and his plunder."—R. Hildreth, *History of the United States*, v. 3, ch. 32.

1776.—Independence declared and a constitution adopted.—Declaration of Rights.—"There

was a sudden change in public sentiment; and the idea of independence, said to be alarming to Virginians in March [1776] was welcome to them in April. One writes on the 2d: 'Independence is now the talk here. . . . It will be very soon, if not already, a favorite child.' Another, on the 12th, writes: 'I think almost every man, except the treasurer, is willing to declare for independence.'" On the 23rd, the Charlotte County Committee charged its delegates in convention to use their best endeavors "that the delegates which are sent to the General Congress be instructed immediately to cast off the British yoke." On the next day, a majority of the freeholders of James City took similar action. "In May, the avowals for independence were numerous. In this spirit and with such aims, a new convention was chosen, and on the 6th of May met in Williamsburg. It contained illustrious men,—among them, James Madison, in the twenty-fifth year of his age; George Mason, in the maturity of his great powers; Richard Bland, Edmund Pendleton, and Patrick Henry, rich in Revolutionary fame. . . . On the 14th of May the convention went into a committee of the whole on the state of the colony, with Archibald Carey in the chair; when Colonel Nelson submitted a preamble and resolutions on independence, prepared by Pendleton. These were discussed in two sittings of the committee, and then reported to the House. They were opposed chiefly by delegates from the Eastern District, but were advocated by Patrick Henry, and passed unanimously when 112 members were present,—about 20 absenting themselves. This paper enumerated the wrongs done to the colonies . . . and instructed the delegates appointed to represent the colony in the General Congress 'to propose to that respectable body to declare the United Colonies free and independent States,' and to 'give the assent of the colony to measures to form foreign alliances and a confederation,—provided the power of forming government for the internal regulations of each colony be left to the colonial legislatures.' The same paper also provided for a committee to form a plan of government for Virginia. This action was transmitted by the President to the other assemblies, accompanied by a brief circular. . . . It was hailed by the patriots in other colonies with enthusiasm. . . . The convention agreed (June 12) upon the famous Declaration of Rights declaring all men equally free and independent, all power vested in and derived from the people, and that government ought to be for the common benefit; also that all men are equally entitled to the free exercise of religion according to the dictates of conscience. It also complied with the recommendation of Congress, by forming a constitution and electing a governor and other officers."—R. Frothingham, *Rise of the republic*, ch. 11.—The following is the text of the Declaration of Rights:

A Declaration of Rights, made by the Representatives of the good People of Virginia, assembled in full and free Convention, which rights do pertain to them and their posterity as the basis and foundation of government. I. That all men are by nature equally free and independent, and have certain inherent rights, of which, when they enter into a state of society, they cannot by any compact, deprive or divest their posterity; namely, the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety. II. That all power is vested in, and consequently derived from,

the people; that magistrates are their trustees and servants, and at all times amenable to them. III. That government is, or ought to be, instituted for the common benefit, protection and security of the people, nation or community; of all the various modes and forms of government, that is best which is capable of producing the greatest degree of happiness and safety, and is most effectually secured against the danger of maladministration; and that, when a government shall be found inadequate or contrary to these purposes, a majority of the community hath an indubitable, unalienable and indefeasible right to reform, alter or abolish it, in such manner as shall be judged most conducive to the public weal. IV. That no man, or set of men, are entitled to exclusive or separate emoluments or privileges from the community but in consideration of public services, which not being descendible, neither ought the offices of magistrate, legislator or judge to be hereditary. V. That the legislative, executive and judicial powers should be separate and distinct; and that the members thereof may be restrained from oppression, by feeling and participating the burthens of the people, they should, at fixed periods, be reduced to a private station, return into that body from which they were originally taken, and the vacancies be supplied by frequent, certain and regular elections, in which all, or any part of the former members to be again eligible or ineligible, as the laws shall direct. VI. That all elections ought to be free, and that all men having sufficient evidence of permanent common interest with, and attachment to the community, have the right of suffrage, and cannot be taxed, or deprived of their property for public uses, without their own consent, or that of their representatives so elected, nor bound by any law to which they have not in like manner assented, for the public good. VII. That all power of suspending laws, or the execution of laws, by any authority, without consent of the representatives of the people, is injurious to their rights, and ought not to be exercised. VIII. That in all capital or criminal prosecutions, a man hath a right to demand the cause and nature of his accusation, to be confronted with the accusers and witnesses, to call for evidence in his favor, and to a speedy trial by an impartial jury of twelve men of his vicinage, without whose unanimous consent he cannot be found guilty; nor can he be compelled to give evidence against himself; that no man be deprived of his liberty, except by the law of the land or the judgment of his peers. IX. That excessive bail ought not to be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted. X. That general warrants, whereby an officer or messenger may be commanded to search suspected places without evidence of a fact committed, or to seize any person or persons not named, or whose offence is not particularly described and supported by evidence, are grievous and oppressive, and ought not to be granted. XI. That in controversies respecting property, and in suits between man and man, the ancient trial by jury of twelve men is preferable to any other, and ought to be held sacred. XII. That the freedom of the press is one of the great bulwarks of liberty, and can never be restrained but by despotic governments. XIII. That a well regulated militia, composed of the body of the people, trained to arms, is the proper, natural and safe defence of a free State; that standing armies in time of peace, should be avoided as dangerous to liberty; and that in all cases the military should be under strict subordination to, and governed by,

the civil power. XIV. That the people have a right to uniform government; and therefore, that no government separate from or independent of the government of Virginia, ought to be erected or established within the limits thereof. XV. That no free government, or the blessing of liberty, can be preserved to any people, but by a firm adherence to justice, moderation, temperance, frugality and virtue, and by a frequent recurrence to fundamental principles. XVI. That religion, or the duty which we owe to our Creator, and the manner of discharging it, can be directed only by reason and conviction, not by force or violence; and therefore all men are equally entitled to the free exercise of religion, according to the dictates of conscience; and that it is the duty of all to practice Christian forbearance, love and charity towards each other.

1776-1815.—Growth and decline of liberalism.—Attitude towards slavery.—Discontent of the Virginia democrats.—Loss to the state through westward immigration.—“In 1785, the first movement for the abolition of slavery arose in Virginia. It proved abortive, . . . but it is a proof of the progress of radicalism. In the following years democratic social and political ideas continued to grow, although there was still a strong conservative element in the tidewater. The struggle over the adoption by Virginia in 1788 of the United States Constitution is not without its puzzling features. The westerners, the great upholders of individualism, generally opposed it, while the tidewater planters, who imagined they saw a hope for themselves in the centralizing tendencies of the Constitution, favored it. By such an apparent inversion of position as often occurs in politics, Patrick Henry led the anti-Federalists in the interests of States' Rights and democracy, and Madison became the successful leader of the Federalists. Henry made the most brilliant fight of his career on this occasion, but ratification was carried by a small majority and was distinctly a victory of the planter reactionaries. The success of the Federalists was not followed by a conservative ascendancy in Virginia as in Massachusetts. The principles of democracy were too passionately held by the great majority of men in all sections of the State to allow a return to the rule of the planter oligarchy. As soon as it became evident that the new Union was no rights-of-man government, but a highly conservative political and social structure, discontent broke out among the Virginia democrats. Thus, when Jefferson retired from Washington's Cabinet, he found the material existing for a party opposed to Federalist ideas, and he spent the next few years in organization. In this manner the Democratic-Republican Party came into being. The Democratic impulse was immensely quickened by the French Revolution. Virginia, which had experienced a real contest between the

forces of conservatism and liberalism, welcomed with enthusiasm the stimulating Galican propaganda. Indeed, the Old Dominion was transformed thereby. It became the fashion in the North in a later age to sneer at the inconsistency of the Revolutionary generation in preserving the institution of slavery, though subscribing to the Declaration of Independence dogma that all men are created free and equal. This inconsistency is more apparent than real. . . . [The] statement was meant to apply in a political rather than a social sense, . . . but it also had a very practical social application. The Revolution changed the attitude of the mass of Virginia people towards the negro race and the transformation lasted until the end of slavery. In the colonial era slaves were looked on as little better than brutes and were frequently treated with great cruelty. The law was absolutely callous, and a great number of poor blacks suffered execution for trifling thefts such as afterwards came to be good-naturedly looked on as a mere African weakness, or froze to death in jail awaiting trial; others were outlawed and killed on sight like wild animals. The records are full of these cases. But in this treatment of the blacks the Virginia people were in no sense more cruel than the rest of the world; it was the world, we must remember, in which men were hanged, drawn and quartered, broken on wheel and decapitated for comparatively trivial offences, with an iron disregard for human suffering the present age cannot understand—the antediluvian world before the egalitarian deluge. The Revolution changed all this. After 1795 a strong and persistent abolitionist sentiment existed in Virginia, and would probably have predominated but for the almost insuperable practical obstacles to emancipation. Popular feeling forced the government to permit private emancipation, which proceeded on such a scale that the institution of slavery was seriously threatened. The assembly intervened in 1816 to save it by requiring freedmen to leave the State within a year of manumission, and the practice of freeing slaves at the death of masters lessened. Gradually the democratic wave, which began in 1776 and reached high-water mark about 1795, spent its force. It had wrought great changes, but it was not destined to achieve a permanent triumph. Democracy in Europe had received a deathblow by the overthrow of Napoleon in 1815 and America felt the effect of the reaction. In Virginia other reasons contributed to the checking of liberalism. The development of the South and West drew from the Old Dominion its best young manhood and brought on a disastrous economic competition; Virginia lost rank as the greatest of American States and rapidly sank to a secondary position. It was no longer a land of energetic and forward-looking men, but of memories, a place of social amenities and soft dreaming. . . . The old English and aristocratic spirit revived and existed alongside the democratic theories of government which Jefferson had introduced. Jefferson's name was revered while his influence dwindled. Much, indeed, of the humanitarian teaching of the Revolution continued to permeate society and slavery was softened by this influence to the end, but the fact remains that in Virginia the swingback from democracy was steadily increasing in momentum from the fall of Napoleon to the Civil War.”—H. J. Eckenrode, *Revolution in Virginia*, pp. 298-300.

1779-1786.—Settlement of boundaries with Pennsylvania.—The Pan-handle.—“In 1779 commissioners appointed by the two States met at Baltimore to agree upon the common boundaries of Pennsylvania and Virginia. . . . On both sides there was an evident desire to end the dispute. Various lines were proposed and rejected. On August 31

of Lord Shelbourne toward westward expansion.—“There exists some doubt as to whether or not the very slight occupation of the old north-west by the Virginians influenced the final disposition of territory in the treaty which closed the [American Revolutionary War]. . . . It is possible that the American Commissioners may have felt that their position in claiming the west for the new republic was somewhat strengthened by the knowledge of the success of [George Rogers Clark in his conquests in the west in 1778-1779], . . . but it is unbelievable that they would have demanded less, even had he failed, since the first boundaries proposed by Benjamin Franklin included all Canada as well as the West; and his argument in support of his proposal was that such generosity would win the affections of the Americans and separate them from France. . . . Although

MONTICELLO

Thomas Jefferson's residence in Albemarle County, Virginia

the commissioners signed this agreement: 'To extend Mason and Dixon's line due west five degrees of longitude, to be computed from the River Delaware, for the southern boundary of Pennsylvania, and that a meridian line drawn from the western extremity thereof to the northern limit of the said State be the western boundary of Pennsylvania forever.' This contract was duly ratified by the legislatures of the two States. In 1785 Mason and Dixon's line was extended, and the southwestern corner of Pennsylvania established. The 'Pan-handle' is what was left of Virginia east of the Ohio River and north of Mason and Dixon's line, after the boundary was run from this point to Lake Erie in 1786. . . . It received its name in legislative debate from Hon. John McMillan, delegate from Brooke County, to match the Accomac projection, which he dubbed the Spoon-handle."—B. A. Hinsdale, *Old Northwest*, p. 109 and footnote.

1779-1797.—Influence of Clark's conquest on the cession of the Northwest Territory to the United States by Great Britain.—Liberal policy

the demand for the cession of Canada was not persisted in, still the demand of the American commissioners was for the cession of a large extent of western territory, most of which was occupied by British troops, and which could not be claimed from the fact that in one corner of the region there were a few French villages, who, though without American garrisons, acknowledged the sovereignty of the thirteen colonies. . . . When . . . [Lord Shelbourne] was president of the board of trade . . . he had drafted the proclamation of 1763, which was the fundamental law of the west in the years preceding the revolutionary war. . . . During the negotiations of 1782 he gave expression to the same thought [of westward expansion] in a letter to his agent in Paris in the following words: 'For the good of America, whatever the Government may be, new provinces must be erected on those bank lands and down the Mississippi.' To a man holding such a view of the future of the west, whose principles had been completely liberalized by the free trade teachings of Adam Smith, Franklin's

argument that a stable peace could only be made by ceding sufficient territory in the west for the expansion of the restless frontier population was convincing; and there seems never to have entered Lord Shelburne's mind a doubt as to the expediency of granting such extensive boundaries, even though the territory was garrisoned by British troops. He granted what seemed to him necessary for the completion of a permanent peace. The basis then for the success of American diplomacy had been laid not by the victory of the arms of Virginia, not through the boldness of George Rogers Clark in winning the old northwest for the United States, but in the liberal principles held by a British statesman. There is certainly a note of justifiable pride for his act, the noblest of his life, in the following words penned by Lord Shelburne to an American friend in 1797: 'I cannot express to you the satisfaction I have felt in seeing the forts (of the northwest) given up. I may tell you in confidence what may astonish you as it did me, that up to the very last debate in the House of Lords, the Ministry did not appear to comprehend the policy upon which the boundary line was drawn, and persist in still considering it as a measure of necessity, not of choice. However, it is indifferent who understands it. The deed is done: and a strong foundation laid for eternal amity between England and America.'—C. W. Alvord, *Virginia and the West (Mississippi Valley Historical Review, June, 1916, pp. 34, 38)*.

1788.—Debates in the Virginia convention for and against ratification of the Federal constitution.—The newly framed constitution of the United States was submitted to Virginia for ratification in 1788. In the state convention, "John Marshall spoke but little, yet always with signal success, for the new [Federal] government. His was a rare mind. He has been thought to have been without imagination, and deficient in the higher sensibilities, which give power to words. But he reasoned with resistless force; he seized upon the attention, and carrying it captive with him, pressed into the centre of opposing arguments, until they were undermined and destroyed. . . . In the balances of the Constitution, he found appropriate matter for an exercise of his analysis, and he unfolded them with a clearness and skill which made doubt irrational, and faith secure. James Innes was eloquent in behalf of the government proposed. He was Attorney-General of the State, and had been so closely employed in the Court of 'Oyer and Terminer,' that he could not attend the early stages of the debate. He did not utter a word until the very last day of the argument, but he then made a speech of great strength and beauty. Deprecating local prejudices, he asked, 'Had we this political jealousy in 1775? If we had, it would have damped our ardour and intrepidity, and prevented that unanimous resistance which enabled us to triumph over our enemies. It is not a *Virginian, Carolinian, or Pennsylvanian*, but the glorious name of an *American*, that extended from one end of the continent to the other, that was then beloved and confided in.' . . . But beyond all others, James Madison was the successful champion of the Constitution. He knew it in all its parts, from the most expanded to the most minute; he had been the author of many of

its provisions, and had studied its character with the eye of a philosophic patriot. He was ready to meet every objection brought against it, and did in fact, during the debate, defend it first as a whole, and then clause by clause, to the end. He showed the mixed nature of the scheme. Some objected because it was a government of the people: it *consolidated* instead of confederating, and melted the states into one popular mass; yet were there others who thought the states would have too much contact with Congress, and the people too little. Mr. Madison proved that the Government was in some respects popular, in some respects, federal. It was to be ratified by the people in conventions: in this it was popular; but by the people divided into thirteen sovereignties: in this it was federal. The House of Representatives were to be elected by the people: in this it was popular; but the Senate was to be equally filled from the states: in this it was federal. Congress was to have power to lay taxes on individuals: in this the Government was consolidated; but the states might effect amendments: in this it was confederate. The President was to be commander-in-chief of army and navy: this was a feature of consolidation; but the states might arm and train the militia: this preserved the confederacy. So ingenious a system was worthy of so able an advocate. The ranks of the opposers were marshalled and led on by Patrick Henry. We have seen enough of his past displays to know, that now when a subject was before him which enlisted his strongest feelings, he would not sink beneath it. Some of the most powerful speeches he ever delivered, were made during this debate. He felt alarm, apprehension for his country; the new government seemed to him to threaten her liberties; he feared its consolidating tendencies. He asked why Constitution had dared to say, 'We, the people,' instead of 'We, the states.' The powers of the President seemed to him enormous, ruinous. 'This Constitution is said to have beautiful features, but when I come to examine these features, sir, they appear to me horribly frightful. Among other deformities, it has an awful squinting: *it squints towards monarchy!*' The federal judiciary encountered his warm opposition. He could not separate from it the ideas of injustice, of expense, of hazard, to the people. As the time for a final vote approached, Mr. Henry's anxiety increased, and his eloquence grew more impressive. While he was once speaking, and when he had wrought his hearers to a paroxysm of feeling, a furious storm arose; lightnings flashed, thunder pealed, and rain poured down in torrents. At the same time the spirit of the orator had soared to 'etherial mansions,' and invoked celestial witnesses to view the crisis of his country. The effect could not be borne; the members rose in confusion, and the meeting was dissolved. Yet the attentive reader of the 'Debates,' will find in Mr. Henry's speeches, more of declamation than of argument; more appeals to passion, than addresses to reason. It was indeed found by the reporter, impossible to follow him in his loftiest flights, yet it is believed that all of sound logic that he presented, has been preserved, and it bears but a small proportion to his glowing remonstrances and passionate harangues. He entered the body determined to oppose the new government to the last, and this spirit made him indiscriminating. He found nothing to approve in the Constitution. Assuredly it could not have been expected that the wisest men in America should have debated four months, and yet pro-

duced nothing good; but it would be hard to find a single clause in the Constitution, which was received with favour by Patrick Henry. George Mason waged war upon the system. He had opposed it in Philadelphia, and now carried his struggle to the final vote in Virginia. He urged that it was not a federal but a national government; that the power to collect taxes directly from the people proved its character, and that no republic could long endure in a country as extensive as America. He thought the power of the President overwhelming, and strongly inveighed against the extensive jurisdiction of the Supreme Court, which was to cover 'law and fact.' Once he crossed swords violently with Mr. Madison, but before their colloquy was closed, all bitter feeling was removed. James Munroe opposed the government, at the head of which his country was afterwards to place him. He loved the Union, and believed that the states loved the Union; but he thought their government ought to be strictly a union of the states, and not a melting together of the people. He believed democratic independencies might safely confederate. The great leagues of the world passed in review before him: the Amphycyonic, the Achaen, the Germanic, the Swiss Cantons. Polybius furnished him with passages to prove the happy structure of the Achaen League, but the German principedoms were only kept together by danger and the Emperor. He compared the Confederation and the Constitution: add to the first absolute power over commerce, and he would approve it; take away from the last the power of direct taxes, and he would approve it. This right to tax the people was the point he dreaded: how could a few representatives from a country covering nearly a million of square miles, tell what would be most suitable subjects of taxation; what would least oppress, what would best be endured. . . . On the 25th day of June [1788] the final vote was taken on the question of ratification. Eighty-nine members voted in the affirmative, and seventy-nine in the negative. Thus *ten voices* made Virginia a party to the Federal Union under the New Constitution. Immediately after this vote, two committees were appointed, one to prepare and report a proper form for ratifying the system adopted; the other to prepare and report such amendments as, in their opinion, ought to be recommended for the new Government. The first committee soon reported a form, which was adopted without delay. It is cautiously worded, and though, in a spirit of high patriotism, it ratifies the Constitution in full, yet, in behalf of the people of Virginia, it declares the limits of Federal power, and the inviolability of the rights of conscience and of the press. The other committee reported on the 27th of June. They had prepared a Bill of Rights and a list of amendments, which they wished added to the Constitution. These were nearly identical with those previously offered by Patrick Henry, in his effort to obtain a conditional ratification. It will not be necessary to detail them in full; but it will be highly proper to show how far they finally prevailed, in order that we may see to what extent Virginia has been instrumental in securing liberty for America. Immediately after the new Government went into effect, amendments were proposed, and having been duly ratified by the Legislatures of nine states, were made parts of the Constitution. Nearly every material change suggested by Virginia was adopted. For, one article of amendment provided for freedom in religion, and of speech, and

of the press, and for the right of the people peaceably to assemble and petition for redress of grievances. Others declared that the people should have a right to have and bear arms, that soldiers should not be improperly quartered in private houses; that no unreasonable searches and seizures should take place; that excessive bail, and excessive fines, and cruel and unusual punishments should not be. Others secured a fair trial by jury in criminal *and civil* cases, and took away the jurisdiction of the Federal courts in all cases where individuals sought to sue a state. And another said that, 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.'—R. H. Howison, *History of Virginia*, v. 2, pp. 324-329, 331-333.

1815-1833.—Currency demands.—Illegal banks.—Unsuccessful movements for state banks.—State convention.—Abolition of slavery issue.—“During and immediately following the second war with Great Britain, specie and bank-notes had become as scarce in the western counties as martins in the month of December. The iron makers, the salt and wool manufacturers, cattle raisers and small farmers now demanded some kind of money to carry on their legitimate operations and to aid in the completion of their contemplated works of internal improvement. The danger of dependence upon their northern neighbors was not considered sufficiently menacing to warrant granting their demands for relief. Consequently, they resorted to a sort of ‘moonshine’ enterprise to obtain it. They now supplied the demands for a currency by the use of illegal banks which sprang into existence in every small town and flooded the whole western country with worthless currency. Later these banks sought to sustain themselves by an appeal to the Assembly which was asked to accept the *status quo* and to legalize their issues. The refusal of these requests called forth other acts of defiance. The banking monopoly of Richmond was severely attacked; the immediate resumption of specie payment was demanded; grand juries presented the Assembly as an unjust and tyrannical body; and associations, not unlike those which went into the West at an earlier date and set up pioneer governments, were formed to protect the illegal banks. Persistence in their efforts brought about the enactment of a law to compel the banks of Virginia (there were only two each located at Richmond) to resume specie payment on or before November 15, 1816. . . . It was at this juncture that [Thomas Ritchie] . . . called upon Thomas Jefferson to publish his writings upon the subject of banking and classed the illegal bankers of western Virginia with the Tory traitors of New England. . . . The Assembly was called immediately to repeal the law requiring the resumption

of specie payment. But it completed its work by incorporating two new banks in western Virginia, one at Winchester, the other at Wheeling, and the illegal state banks were required to go out of business. . . . The unsuccessful movement for state banks was immediately responsible for a demand on the part of the westerners for a reform in the state constitution. . . . Accordingly a convention, composed mainly of representatives of the illegal banks, assembled at Winchester and issued a call for a larger and more representative convention to be held at Stanton, August 19, 1816. The slogan of the reformers was equal representation for equal numbers of free whites. . . . Had not the election of Adams diverted attention from local to national issues and had not the indiscretion of Giles created discord within the Democratic-Republican party of the state, the reform movement, set in motion by the banking interests of western Virginia in 1816, would doubtless have prevailed before 1828. It came near succeeding in 1825. . . . The westerners in their plans for controlling the organization of the convention [were] actuated by a desire to clinch the main point at issue, they demanded the white basis of representation, which would have given equal numbers of delegates for equal numbers of voters or equal numbers of the white population. On the other hand the easterners desired a mixed basis which would have considered property as well as population as a basis of representation in the proposed convention."—C. H. Ambler, *Thomas Ritchie: A study in Virginia politics*, pp. 66-68, 119.—"Discussions in the constitutional convention of 1829-30 and the abolition agitation caused the question of negro slavery to assume an alarming sectional aspect in this period. . . . The divergence of view between the east and the west on the subject of negro slavery resulted largely from economic causes. . . . The burden of the argument of the abolitionists was that negro slavery was an economic evil. . . . But the Virginia abolitionists, like those elsewhere, failed or refused to consider that negroes freed would still be negroes, and as repellent to white immigration as when slaves. They busied themselves chiefly with a slave problem, while their opponents were concerned with a negro problem. . . . Most of the speakers were of a younger generation and they addressed themselves to reach a more materially minded Virginia than did even the speakers of 1829-30. Another feature of the debates of 1831-32, not so marked a feature of prior discussions but of much subsequent importance, was the disposition of the pro-slavery men to place the western leaders in a place of discredit, to whip them into line, and to dub the most refractory with opprobrious epithets. Goode was especially resourceful in the use of these tactics. He characterized the abolition leaders as the Rufus Kings of the west; they were told that the east could expect nothing of them in the time of her calamity, should it ever come. . . . C. J. Faulkner and W. B. Preston were ridiculed for comparing the abolition movement to 'a great political revolution,' to the 'generous efforts of the Parisian patriots.' W. G. Summers was an object to suspicion because he found delight in the political theories of Thomas Jefferson. He was denominated the 'Byron of the west, walking on the mountain tops and gazing on the desolation which burns in the plains below.' In case abolition had diffused itself through the mountains, Goode was for immediate dismemberment, as the only alternative to the recurrence of the horrors of Saint Bartholomew. Few of the prominent western

leaders ever lived down the part they took in this debate. . . . Preston's amendment to the report of the select committee that, 'It is expedient to adopt some legislative amendment for the abolition of slavery,' was defeated: ayes 58, noes 73. . . . The House next took up a bill for the removal from the state of the free people of color. It provided for their compulsory removal and for an appropriation of \$100,000 to meet the first expenses thereof. The discussion of this bill turned upon whether or not coercion should be used and upon the amount of the appropriation. Delegates from the west opposed forced removals and so large an appropriation. As finally passed by the House the bill made the deportation of those already free voluntary and provided for an appropriation of \$35,000 to be used in 1832 and \$90,000 to be used in 1833."—C. H. Ambler, *Sectionalism in Virginia from 1776 to 1861*, pp. 185-186, 193-194, 196-201.

1829-1850.—Internal improvement schemes.—First appearance of the German "invincibles."—Political readjustments.—Bank legislation.—Sectional division over abolition of slavery.—"Reform convention."—"The internal improvement schemes urged by advocates of the American System and the railways in process of construction westward from Baltimore were the important factors in shaping the internal improvement policies in Virginia during this period [1829]. Her legislators yet believed it possible to make Richmond a commercial rival of Baltimore, Philadelphia, and New York. Accordingly they . . . sought to revive interest in the proposed water communication between the James and the Kanawha rivers. . . . During the first years of this period the chief discussion, especially in the west, was to determine the policy of the Jackson administration on the subject of internal improvements. The constitutional convention of 1829-30 taught the west to expect little of the east in the way of roads and canals. . . . The Assembly of 1829-30 was flooded by the west with petitions asking the incorporation of internal improvement companies and appropriations thereto. . . . During these years the merits of railways and canals were subjects of much discussion. . . . In 1831 Winchester, a very small place, subscribed \$40,000 to be used in constructing a lateral road to the Baltimore and Ohio. About the same time Lynchburg subscribed \$300,000 to be used to construct a railroad between the James and New rivers. . . . The Assembly of 1830-31 incorporated a number of railway companies, but the acts of incorporation were determined largely by sectional interest. . . . By a combination of interests the same Assembly incorporated the Lynchburg and New River Railroad Company. . . . The Assembly of 1830-31 ended its work by rejecting a bill to appropriate two million dollars intended to aid the companies it had incorporated and internal improvements in general. Because of the scarcity of private capital in the west this defeat was a death blow to the Lynchburg and New River and the Staunton and Potomac railway companies."—C. H. Ambler, *Sectionalism in Virginia from 1776 to 1861*, pp. 175, 178-181.—"In the elections of 1835 the Democrats elected a large majority to the Assembly and seventeen of the twenty-one representatives in Congress. This election marked the first appearance of the 'Tenth Legion of the Valley,' the German 'invincibles,' as a

factor in Virginia politics. . . . During the summer of 1835 most of the counties east of the Blue Ridge held one or more mass-meetings to denounce the abolitionists, to memorialize the Assembly regarding them, and to protest against the abolition of negro slavery in the District of Columbia. . . . The political readjustment of 1841 and 1842 enabled the Democrats to regain control of the Assembly and to reverse completely the course pursued by the Whig Assemblies. . . . By 1843 most of the prominent leaders residing east of the Blue Ridge had become Democrats, but the rank and file of that party continued to reside west of the mountains. . . . With the establishment of the Independent Treasury and the failure to re-charter a national bank, the subject of banking ceased to be of importance. The subject of internal improvements was an important one from a sectional standpoint during this period. . . . The most important sectional issue in Virginia during this period, however, was that which arose out of the movement for a united slaveholding South. Although the Virginia congressmen united to oppose the Wilmot Proviso, the abolition of the slave trade, and abolition of slavery in the District of Columbia, leading citizens of western Virginia were at the same time trying to devise means to rid that portion of the state of negro slavery. . . . The movement for an extension of slave territory took quite a different form in eastern Virginia. . . . In 1850 the Assembly, under the control of the east, passed resolutions which recommended that the state send delegates to the proposed Nashville Convention and that the people assemble in district conventions to elect delegates, intrusted with sovereign power, to a general convention of the southern states. [See U. S. A.: 1850 (June).] . . . The patriotic devotion of the west to the Union did much to produce moderation in the east in 1850."—C. H. Ambler, *Sectionalism in Virginia from 1776 to 1861*, pp. 223-225, 232-233, 239, 244-245, 249.—"In March, 1850, the General Assembly finally agreed to submit the question of calling another convention to the people, determining in advance, however, that the convention should be organized on the mixed basis (white population and taxation). This arrangement gave the East seventy-six delegates and the West fifty-nine, an eastern majority of seventeen; whereas, on the white basis, the East would have had sixty-one and the West seventy-four, a western majority of thirteen. In spite of the fact that the East controlled, the convention of 1850-51 is known as the reform convention. The apportionment of representatives for the House was finally fixed on the white basis, giving the West eighty-three delegates by the census of 1850, and the East sixty-nine, while the Senate was still based on an arbitrary apportionment of thirty to the East and twenty to the West. The West now had a majority of four on joint ballot. This convention also extended the suffrage to every male white over twenty-one years of age who had resided two years in the state and one year in the district. These two reforms, together with the popular election of governor and judges, changed Virginia from an aristocratic government into one of the most democratic in the Union."—J. A. C. Chandler, ed., *South in the building of the nation (History of the states, v. 1, History of the southern states, pp. 109)*.

1831.—Nat Turner insurrection of slaves. See SLAVERY: 1828-1832.

1851-1859.—Political record.—Gubernatorial election, 1855.—Anti-abolitionism.—Gubernatorial contest, 1859.—"The years immediately fol-

lowing 1851 marked a brief period of political record. In local politics the constitution of that year produced much the same effect as the compromise of the previous year had produced in national politics. Sectional controversies in the Assembly sank into insignificance; Joseph Johnson, the first governor of Virginia to be elected by a vote of the people was elected from the trans-Alleghany. . . . But forces were at work to terminate this brief period of activity in internal improvement and of political harmony. They first manifested themselves in national politics, when the Democratic state convention of 1852 refused to incorporate into its platform a plank declaring the Compromise of 1850 to be a permanent settlement of the questions therein embraced and adopted instead a plank declaring the doctrines of 1798 to be the fundamental principles of the Democratic party. This action alienated many former Whigs as well as some Democrats. . . . In the gubernatorial election of 1855 Henry A. Wise, of Accomac County, was the Democratic nominee and Thomas S. Flournoy, of Halifax, the Know-Nothing. Flournoy secured his nomination at a conference of party leaders, but Wise was nominated by a state convention. . . . Wise's administration was characterized by a continuous struggle between the conservative and radical wings of the Democratic party. . . . Under the leadership of Wise, of the surviving nullifiers and seceders of 1832, and of a corps of young politicians the radicals set about to make the Democratic party pro-southern and pro-slavery and at the same time to retain Wise's leadership in the west. . . . In the gubernatorial contest of 1859 each wing of the Democratic party had its candidate. Wise and the radicals favored the nomination of John W. Brockenbrough, an eastern man of strong pro-southern sympathy but well and favorably known in the west. . . . On the other hand, the conservatives, led by Hunter, favored the nomination of 'honest John' Letcher, the political idol of the Tenth Legion, the Democratic stronghold of the Valley. . . . Letcher received the Democratic nomination for governor, and William L. Goggin that of the opposition party. . . . Notwithstanding the fact that each candidate stood upon a pro-slavery platform, there can be no doubt that Letcher owed his election to his former utterances in favor of abolition and to the anti-slavery sentiment of the west."—C. H. Ambler, *Sectionalism in Virginia from 1776 to 1861*, pp. 300, 302, 305-307, 319-320, 323-325.

1859.—John Brown's invasion at Harper's Ferry. See U. S. A.: 1859.

1861 (January-June).—Attempted peace-making.—Ordinance of secession passed.—Separation of West Virginia, which adhered to the Union.—"Early in January, 1861, the Virginia Assembly met at Richmond to determine the action of the Commonwealth in the approaching struggle. It was plain that war was coming unless the authorities of the United States and of the seceding States would listen to reason; and the first proceedings of the Assembly looked to peace and the restoration of fraternal union. Virginia recommended to all the States to appoint deputies to a Peace Convention. [See U. S. A.: 1861 (February): Peace Convention.] . . . Thus ended in failure the first attempt of Virginia to preserve the national peace; and the crisis demanded that she should promptly decide upon her course. On February 13 (1861) a Convention assembled at Richmond, and a Committee was appointed on Federal Relations. On March 10 (1861), this Committee reported fourteen resolutions protesting against all

interference with slavery; declaring secession to be a right; and defining the grounds on which the Commonwealth would feel herself to be justified in exercising that right, namely: the failure to obtain guarantees; the adoption of a warlike policy by the government of the United States; or the attempt to exact the payment of duties from the seceded States, or to reinforce or recapture the Southern forts. These resolves clearly define the attitude of Virginia at this critical moment. After prolonged discussion, all but the last had passed the Convention when intelligence came that war had begun. The thunder of cannon from Charleston harbor broke up the political discussion. . . . Mr. Lincoln had expressed himself in his inaugural with perfect plainness. Secession was unlawful, and the Union remained unbroken; it was his duty to execute the laws, and he should perform it. To execute the laws it was necessary to have an army; and (April 15, 1861) President Lincoln issued his proclamation calling for 75,000 troops from the States remaining in the Union. The direct issue was thus presented, and Virginia was called upon to decide the momentous question whether she would fight against the South or against the North. . . . As late as the first week in April the Convention had refused to secede by a vote of 89 to 45. Virginia was conscientiously following her old traditions and would not move. Now the time had come at last. . . . On the 17th of April, two days after the Federal proclamation, the Convention passed an ordinance of secession and adherence to the Southern Confederacy, by a vote of 88 to 55, which was ratified by the people by a majority of 96,750 votes, out of a total of 161,018. West Virginia refused to be bound by the action of the Convention, and became a separate State, but the Virginia of the Tidewater and Valley went with the South."—J. E. Cooke, *Virginia*, pt. 3, ch. 22.—Of the 46 delegates from the territory now comprising West Virginia, 29 voted against the ordinance of secession, 9 for it, 7 were absent and one excused. Those who voted against it hastened to leave the city, and on reaching their homes, became generally the leaders of a movement to separate their section of the state from the Old Dominion. On May 13 a convention of delegates from the counties of northwestern Virginia was held at Wheeling, by the action of which a more general convention was called and held at the same place on June 11. The latter convention assumed the power to reorganize the government of the state of Virginia.—Based on V. A. Lewis, *History of West Virginia*, ch. 21-23.

1861 (June-November).—Loyal state government organized in West Virginia.—Steps taken toward separation from the old state.—A convention held on June 11 in West Virginia declared the state offices of Virginia vacant by reason of the treason of those who had been elected to hold them, and proceeded to form a regular state organization, with Francis H. Pierpont for the executive head. Maintaining that the loyal people were entitled to speak for the whole state they declared that their government was the government of Vir-

ginia. They subsequently admitted delegates from Alexandria and Fairfax counties in Middle Virginia and from Accomac and Northampton counties on the eastern shore. Thus organized, the government was acknowledged by Congress as the government of Virginia and senators and representatives were admitted to seats. The Pierpont Government, as it was called, then adopted an ordinance on Aug. 20, 1861, providing "for the formation of a new State out of a portion of the territory of this State." The ordinance was approved by a vote of the people, and on November 26 the convention assembled in Wheeling to frame a constitution for the new government.—Based on J. G. Blaine, *Twenty years of Congress*, v. 1, ch. 21.—See also WEST VIRGINIA: 1861-1862; 1863; BORDER STATES.

1861 (July).—Richmond made the capital of the Southern Confederacy.—"The Conspiracy had no intention originally of establishing its seat of government at Richmond. That was a part of the price exacted by Virginia for her secession, and it was not paid without reluctance. It is to be remembered that at that time everything seemed to turn on what the Border States would do. . . . By establishing the seat of government at Richmond, it became certain that the most powerful of the Southern armies would always be present in Virginia. If Virginia had been abandoned, all the Border States would have gone with the North. . . . The Confederates having determined on the transfer of their seat of government to Richmond, the necessary preparations were completed and their Congress opened its first session in that city on the 20th of July, 1861."—J. W. Draper, *History of the American Civil War*, v. 2, ch. 39.—See also BORDER STATES.

1867-1876.—Constitutional convention.—Fourteenth Amendment ratified.—Re-admission to the Union.—State credit.—Re-adjusters.—"Reconstruction in Virginia followed the same general course which it took elsewhere in the South. . . . The old Commonwealth became the Military District of Virginia, and Pierpont and the other civil officials exercised their offices merely at the pleasure of the district commander. Fortunately, General John M. Schofield, who was first assigned to the district, and his immediate successor, General Canby, were intelligent, honest, and humane men; but their work was prescribed for them. The electorate of Virginia was completely changed by the acts of Congress. Negroes were permitted to vote on the question of holding a Constitutional Convention and at the election of the delegates, and the white men who had held the higher public offices before the war and then entered the Confederate service, the leaders of their various communities, were not permitted to vote. For the first time since the slave ship landed at Jamestown, African negroes were admitted into the body politic. This, next to emancipation, was doubtless the greatest change in the constitution of Virginian society that had ever come about. Even the separation from Great Britain did not so profoundly affect the internal life of the Commonwealth. Twenty-four negroes sat in the Constitutional Convention of 1867-68. With various Northern men

who had recently come into the State, and a lesser number of native white men who had gone over to the Republicans, they had a majority of the body. The Constitution which it framed granted the suffrage to their race and denied it to those white men who had held important public offices before the war and afterwards served the Confederacy. A test oath was also prescribed which would have excluded from office under the new Constitution the leading men of the State. However, through the zealous labors of a committee of conservative whites, Congress was persuaded to submit the disfranchising and disqualifying clauses separately. They were defeated. The rest of the Constitution was accepted by the people, and when, in January, 1870, Virginia, having chosen a legislature which ratified the Fourteenth Amendment, was readmitted to that Union of which her own illustrious sons had been the master-builders, her white and black citizens were on a footing of equality in politics and before the law. The Freedmen's Bureau, which had been set up to aid and protect the negroes, was disestablished in 1869, and the two races were also left to find for themselves a new industrial and social relation. . . . Such a division among the whites arose before long over the question of the debt. In the old days, whatever else might be said of Virginia's government, it was certainly an honest government. The credit of the State had been guarded so well that at times her bonds sold higher than the bonds of the national government. Most of the debt had been incurred through schemes of internal improvement. In 1861, the aggregate was nearly \$39,000,000. During the war, the interest payments were for the first time suspended. The accumulation of the interest, and the refusal of West Virginia to assume any part of the obligation, left upon the people of Virginia, impoverished as they were, and harassed and distracted by misgovernment, a burden which was for the time too heavy for them. The Pierpont legislature found it necessary to reduce temporarily the rate of interest, but declared that there was no purpose to repudiate the debt. In 1871, when it had risen to \$47,000,000, the Radical legislature refunded it, principal and interest, issuing new obligations to the amount of two-thirds of the whole. It was held that West Virginia must assume the other third. The interest coupons of the new bonds were made receivable for all public dues, and the bond-holders readily accepted the terms. The result, however, was that the taxes were paid so generally in the coupons that not enough money was collected to pay the expenses of the government. Accordingly, the Legislature enacted the very next year that the coupons should no longer be receivable for taxes; but the bondholders brought the matter before the courts, and the repealing act was pronounced unconstitutional. The people began to divide on the question, and a party opposed to the bondholders, and in favor of readjusting the debt,—that is to say, of repudiating it in part or in whole,—promptly arose. William Mahone, a shrewd and ambitious man, commended to popular favor by valiant services in war, became its leader. After some years of agitation, he and his followers got control of the government; and among his followers were the great mass of the negroes. The State courts, as well as the legislature and the executive offices, were filled with Readjusters, and but for the protection of the Federal courts, and to a certain extent of the Federal executive also, extended under that clause of the Federal Constitution which forbids a State to break or impair its contracts, the creditors of Virginia would have lost the bulk, as

indeed they did lose a considerable part, of their claims. This was a great descent from earlier standards. But the lowering of the whole tone of the public service, the putting of unfit men into office, the trickery and jobbery had come to prevail, were even more humiliating to high-minded Virginians. By an extraordinary political uprising, the Readjusters were driven from power, and the white man's party has from that time continued to control, though once again, when the whole country was divided over financial questions, there was some division in its ranks. More and more impressed with the conviction that the right of the negroes to vote and to hold office, even though they did not actually get a share of the power,—even though they in great part failed altogether to exercise their privileges,—was baneful to the political life of the Commonwealth, the white people again and again considered plans to undo that part of Reconstruction."—J. E. Cooke, *Virginia*, pp. 509-513.—See also U. S. A.: 1865 (May-July); 1868-1870: Reconstruction complete; 1868-1876.

1869-1902.—Organization of public school system.—In 1869, the Peabody Fund came to assist in the establishment of public schools in Virginia. "The public free school system went into effect in the fall of 1870. It was modeled upon tried systems; and instead of decentralized district system which had already proved unsatisfactory in New England, a centralized system was, from necessity, at once inaugurated. The administrators were a state board of education, a superintendent of public instruction, division superintendents, and district trustees. The state board of education was composed of the governor, attorney-general, and superintendent of public instruction. . . . From 1870 to 1882 it gradually became less centralized. From 1882 to 1902 no noteworthy changes were made in the system; but the new constitution of 1902 . . . again centralized the administration in the state board of education."—F. A. Magruder, *Recent administration in Virginia*, pp. 17, 20.

ALSO IN: E. W. Knight, *Reconstruction and education in Virginia* (*South Atlantic Quarterly*, January and April, 1916).

1901-1906.—Constitutional convention.—Organization of the State Corporation Commission.—Bureau of Insurance.—"In 1901, after much discussion, a Constitutional Convention was elected to change the suffrage laws. Following the example of other Southern States, it set itself to devise a plan which should deprive the great mass of the negroes of the suffrage and yet permit even illiterate white men to vote. To do this without violating the Fifteenth Amendment to the Constitution of the United States, or incurring that lessening of Virginia's representation at Washington which the Fourteenth Amendment threatened, was no easy task. . . . By requiring various qualifications for registration, particularly literacy and property, and by exempting from these requirements all who had served in warfare and their descendants, the convention accomplished its principal design. Any serious participation of negroes in the political life of the State was apparently made impossible."—J. E. Cooke, *Virginia*, pp. 513-514.—"In the new constitution of 1902 one-third of the long document is devoted to a detailed provision for a unique commission to be known as the 'State Corporation Commission.' . . . The commission is composed of three members, one being appointed by the governor every alternate February for a term of six years, at a salary of \$4000 per annum, with \$500 extra for the chairman. One of the three must have the qualifications prescribed for members of the supreme court of appeals; and

each must take oath that he has no financial interest in any transportation or transmission company. . . . Its functions are legislative, judicial, and executive. It creates, regulates, and supervises all domestic corporations, except municipal corporations and institutions owned by the State; and it regulates and supervises all foreign corporations permitted to do business in the State. The legislative functions of the commission are to prescribe rates and classifications for transportation companies; to prescribe rates for transmission companies; and to prescribe other regulations, such as demurrage charges. The constitution of 1902 provided that a bureau of insurance, a bureau of banking, and other bureaus might be established within the department of the state corporation commission by the General Assembly. In 1906 a bureau of insurance was established under the supervision and control of the corporation commission."—F. A. Magruder, *Recent administration in Virginia*, pp. 513-514, 151, 159.

1907.—Jamestown Tercentennial Exposition. See JAMESTOWN TERCENTENNIAL EXPOSITION.

1908.—Origin of city manager plan of municipal government in Staunton. See CITY MANAGER PLAN OF MUNICIPAL GOVERNMENT: Origin.

1908-1920. — Legislation. — Constitutional amendments.—"In 1908 the General Assembly created a department of public health with an annual appropriation of \$40,000, and a new state board of health superseded the old one. The present board consists of twelve men who must be members of the State Medical Society. The governor appoints three annually to serve for four years, and one must live in each congressional district, with two additional ones from the city of Richmond. . . . In 1910 the General Assembly, upon a recommendation of the State Dental Association, passed an act requiring all future candidates for the profession of dentistry also to pass an examination for the practice of medicine."—F. A. Magruder, *Recent administration in Virginia*, p. 122.—Between 1910 and 1920 ten amendments to the constitution were adopted, covering the reelection of city and town treasurers, and a commission of revenue; classification of cities according to population and providing forms of city and town governments. In 1912, a department of mines was created, and a primary election law passed which did not include presidential elections. In 1914 a state Forestry Commission was established, and a state prohibition amendment was adopted. Four years later, on Jan. 10, 1918, the Federal Prohibition (Eighteenth) Amendment was ratified. In 1915, a permanent Tax Board was created consisting of the governor, an auditor, and the chairman of the State Corporation Commission. In 1916, the State Board of Health was given control over all water supplies which might endanger the public, and a state art commission was constituted. In 1918, the hours of labor for women and children were so amended as to bring them up to the Federal standard. The minimum age for employment was raised to sixteen years, and a workmen's compensation act was passed. An elective law covering both public and private employees was put in operation. The law excluded domestic servants, farm laborers, and casual employees, also railroad employees covered by Federal and state liability laws. An industrial commission was provided to administer the workmen's compensation system. In this year, 1918, a Mothers' Pension law was enacted; and the principle of the uniform Family Desertion Acts was adopted. (See SOCIAL INSURANCE: Details for various countries: United States: 1893-1918.) William

Hodges was governor of the state from 1910 to 1914. He was succeeded in the executive office by Henry Carter Stuart.

1915.—Case against West Virginia settled. See SUPREME COURT: 1914-1916; WEST VIRGINIA: 1906-1915.

1918.—Adoption of budget system.—Its chief features.—"Budget Bill."—Effect on governor's veto.—"After a careful study of ways and means to place the government of Virginia on an efficient 'war' basis by the Virginia Commission on Economy and Efficiency, the conclusion was reached that the one thing that more than anything else would place the state government on a more business-like basis and enable it to function more efficiently in meeting the demands of the war would be the introduction of a modern budget system. The commission accordingly drafted a budget law and embodied it in its report to the general assembly in January. With the approval and support of Governor Westmoreland Davis, who was inaugurated on February 1, [1918], this law was introduced as a bill in both houses of the assembly and promptly adopted. . . . The act was approved by Governor Davis on February 19, 1918, and . . . [took] effect on June 21, 1918. . . . The [new] law places ample safeguards over the treasury, and places definite responsibility on the governor, who is constituted 'chief budget officer of the state,' to frame an intelligent financial policy for the conduct of the state's business. The Virginia budget law requires that every two years all state agencies shall report their financial needs to the governor in itemized form before the first of November preceding the January meeting of the general assembly. These estimates must be filed with the governor in the form prescribed by him. . . . All bills introduced in either house, carrying appropriations, shall be itemized in accordance with the classifications used in the budget.' As will be seen, this provision forces an early consideration of the administration's work program, directs attention to the financial needs of the state and to the condition of the treasury; and checks the flood of local and 'political' appropriation measures until after the general assembly has had an opportunity properly to consider and provide for the constructive and vital business of the state."—L. Hodges, *Virginia war economy and budget system* (*Proceedings of the Academy of Political Science*, July, 1918, pp. 50-53).

1918-1922.—Part in World War.—Legislation.—During the World War, the state furnished 98,566 men to the expeditionary forces of the United States, or 1.96 per cent of the national forces. A national army camp, Camp Lee, was located near Petersburg, a special artillery camp was located at Lee Hall, and an engineer camp at Accotink. Embarkation camps were organized at Newport News, Camp Hill, and Camp Stuart. In 1920 an agricultural experiment station was established; a commission to study the condition of the blind was created; an act was passed for the regulation of fire insurance; a Workmen's Compensation Act was passed (see SOCIAL INSURANCE: Details for various countries: United States: 1920) and the powers of the building and loan association were extended. During this period of legislation (1918-1922) Westmoreland Davis was governor of the state. In 1922 the voters pronounced against the proposed call for a constitutional convention by a majority of more than 51,000 "The Virginia legislature which adjourned on March 11, 1922, passed three important educational bills. The first provides for a new plan of adopting and distributing text books. The second provided for the county

as the unit of school administration, by which the number of school boards of the state is reduced from 643 to 120. The third bill makes education compulsory between the ages of eight and fourteen for public school children during the entire school session, unless the elementary course of study has been completed before fourteen years of age."—*New educational legislation in Virginia (School and Society, Mar. 25, 1922, p. 332)*.

VIRGINIA, University of.—"In 1816 the Legislature of Virginia authorized the president and directors of the Literary Fund to report a plan for a university at the next session of the Assembly. The committee made a full report as requested, but nothing was accomplished beyond bringing the subject of education prominently before the people. At the legislative session of 1817-18 that part of the bill relating to a university and the education of the poor was passed. . . . In the bill authorizing the establishment of the university, it was provided that the sum of \$45,000 per annum should be given for the education of the poor, and \$15,000 to the university. The commissioners having reported in favor of Central College as the most convenient place in Albemarle County, the Legislature decided, after much discussion, to locate the university at Charlottesville, and to assume the property and site of Central College. The commissioners embodied in their report an exhaustive plan for a university chiefly from the pen of Thomas Jefferson."—F. W. Blackmar, *Bureau of Education, circular of information, 1890, no. 1, pp. 174-175*.—See also **UNIVERSITIES AND COLLEGES**: 1803-1825.

VIRGINIA DYNASTY.—"With but slight intermission from the days of Washington to those of Monroe, the tobacco planters under the Virginia dynasty had ruled the nation. . . . Sad indeed was the spectacle of Virginia's ancient aristocracy [in 1830]. It had never been a luxurious society. The very wealthy planters, with vast cultivated estates and pretentious homes, were in the minority. . . . The plantation was a little world in itself. . . . The leading planters served as justices of the peace, but they were not dependent for their selection

upon the popular vote. . . . The county government of Virginia was distinctly aristocratic. . . . Almost no large cities were found in Virginia. The court-house was hardly more than a meeting-place for the rural population. . . . Such were, in the main, the characteristics of that homespun plantation aristocracy which, through the Virginia dynasty, had ruled the nation in the days of Washington, Jefferson, Madison, and Monroe."—F. J. Turner, *Rise of the new west, pp. 50, 59-61*.—One of the constitutional amendments proposed by the Hartford Convention (1814) was due to New England opposition to the "Virginia Dynasty." This proposed amendment provided that the president should never be chosen twice successively from the same state.—See also U.S.A.: 1814 (December).

VISINE, Denis Ivanovitch von (1744-1792), Russian dramatist. See RUSSIAN LITERATURE: 1752-1816.

VISIT AND SEARCH, Right of. See SEARCH, RIGHT OF.

VISITOR-GENERAL.—In Spanish institutional history, the visitor-general "was a direct personal representative of the king, a kind of *legatus a latere*, clothed with extraordinary powers, limited only by the particular instructions which were given him with his commission. He was, in civil and military, what the grand inquisitor was in ecclesiastical affairs, except that the visitor-general was not restricted in his investigations by any vain distinctions between the temporal and spiritual domains. The office of visitor-general had been used in Spanish America back in the days of the earliest viceroys, and the early records are filled with evidences of the conflict between these two high offices. [The most celebrated example of the exercise of this office is to be seen in the career of José de Gálvez who was visitor-general in Spanish America from 1761 to 1774.]—D. E. Smith, *Viceroy of New Spain*, p. 113.

ALSO IN: H. I. Priestly, *José de Gálvez, visitor-general of New Spain*.—C. E. Chapman, *Founding of Spanish California*.

VISTULA, river of Poland, flowing into the Baltic. Part of its lower course is bounded on the east by East Prussia, and on it are situated Cracow, Ivangorod, Warsaw, Plotsk, Thorn and the free city of Danzig at the mouth. In 1914 and 1915 the Germans and Russians disputed possession of its middle course.—See also WORLD WAR: 1915: III. Eastern front: a, 6; g, 8; i, 4.

VIZCAÍNO, Sebastián (c. 1550-1615), Spanish explorer. Conducted an expedition along the California coast, 1602-1603. See CALIFORNIA: 1543-1781.

VIZCAYA, province in Spain. See BASQUE PROVINCES.

VIZIR, or Vizier, originally the chief minister or public representative of the Abassid caliphs. The office of vizier spread from the Arabs to most other Mohammedan peoples. "Like the Sassanian emperors, the Caliph was not only the divinely appointed ruler, but the embodiment of the government itself. His word was literally law, and his caprice might at any moment overturn the most careful calculations of the ministers, or deprive them of life, power, or liberty, during the performance of their most active duties, or at a most critical juncture. It was very seldom, however, that this awful personage condescended to trouble himself about the actual details of the executive government. The Vizier, as the word implies [Vizier, in Arabic *Wazir*, means "one who bears a burden,"—(Footnote)], was the one who bore the real burden of the State, and it was both his interest and that of the people at large to keep the Caliph himself as inactive as possible, and to reduce him, in fact, to the position of a mere puppet."—E. H. Palmer, *Haroun Alraschid, Caliph of Bagdad*, ch. 1.—See also SUBLIME PORTE; NABOB; INDIA: Political divisions.

VLADIMIR, Saint (c. 956-1015), grand duke of Kiev and of all Russia. First Christian sovereign of Russia, 980-1015. See RUSSIA: 10th-11th centuries; CHRISTIANITY: 10th-18th centuries; UKRAINE: Origin of the people.

VLADIMIR, town of Russia, capital of the government of the same name. It was founded in the twelfth century, and was the chief town of the Russian settlements under the rule of the

Mongols, 1242-1328. See RUSSIA: 1054-1237; also Map: Growth of Russia in Europe, 1300-1796; UKRAINE: Origin of the people.

VLADISLAUS. See WLADISLAUS; LADISLAUS.

VLADIVOSTOK, city of Siberia, chief Russian seaport on the Pacific, and terminus of the Trans-Siberian railway. It is located in the southern tip of the Maritime province, with its harbor on the Japan sea. (See PACIFIC OCEAN: Map.) Vladivostok was founded in 1860. As the naval base for the Pacific fleet of the Russian empire, it was the center of military and naval operations in the Russo-Japanese War, 1904-1905. (See JAPAN: 1902-1905.) In the World War it was the objective of the Siberian expedition. Following the revolution in Russia, it was the center of the All-Russian government or Republic of Siberia under Admiral Kolchak. As the reorganization of Russia proceeded under the Bolsheviks, Vladivostok was included in the Far Eastern Republic. Red troops occupied the city in 1923, and the American consulate was closed. The population at that time was 91,464.—See also RUSSIA: 1918-1920; JAPAN: 1921.

VLAKHS, Vlachs, Wallachs, or Arumani, names applied to the people of the Rumanian race, though not adopted by the people themselves. The total number of Vlachs is estimated at about eleven millions. When the Roman emperor Trajan conquered Dacia in 101 A. D., he planted Roman colonists beyond the Danube. These, mingling with the native Dacians, formed a community which still preserves, in language and in sympathy, and even in its name of Rumania, its connection with the Latin peoples of the West. This community was the first to be submerged by the barbarian inroads from the north and east; but the ancestors of the Rumanians withdrew to the mountains, to emerge again after the flood had subsided, and to produce one of the chief factors of the ages old Balkan problem.—See also RUMANIA: B. C. 5th century-A. D. 1241; 13th-18th centuries; ALBANIA: Medieval period; BULGARIA: 12th century.

VOLATERRÆ, Siege of (82-80 B. C.).—Some remnants of the armies defeated by Sulla, in the civil war, took refuge in the Etruscan town of Volaterræ, and only capitulated after a siege of two years.—Based on W. Ihne, *History of Rome*, v. 5, bk. 7, ch. 19.

VOLCÆ.—"When the Romans entered the south of France, two tribes occupied the country west of the Rhone as far at least as Tolosa (Toulouse) on the Garonne. The eastern people, named the Volcae Arecomici, possessed the part between the Cebenna or Cevenna range (Cévennes), the Rhone, and the Mediterranean, and according to Strabo extended to Narbonne. The chief town of these Volcae was Nemausus (Nismes). The Volcae Tectosages had the upper basin of the Garonne: their chief town was Tolosa."—G. Long, *Decline of the Roman republic*, v. 1, ch. 21.

VOLGA, river in Russia, longest river in Europe, having a total length of 2,325 miles. It rises in the Valdai hills about the center of Russia, flows east and south to the government of Kazan, then south and east to Sarepta; where it again turns eastward, and flows into the Caspian sea at Astrakhan. With its tributaries it drains the middle, east and southeast of Russia. The Volga and its tributaries have had an immense influence on the history of Russia. "The tenth century nucleus of the Russian Empire was found about the low nodal watershed formed by the Valdai Hills, whence radiated the rivers later embodied in the Muscovite domain. Here in Novgorod at the head of the Volchov-Ladoga-Neva system, Pskof on the Velikaya, Tver at the head of the navigable Volga, Moscow on the Oka, Smolensk on the Dnieper, and Vitebsk on the Duna, were gathered the Russians destined to displace the primitive Finnish population and appropriate the wide plains of eastern Europe. Everywhere their conquests, colonization, and commercial relations have followed the downstream course of their rivers. . . . The influence of the Volga has been irresistible. Down its current Novgorod traders in the twelfth century sought the commerce of the Caspian and the Orient; and later the Muscovite princes pushed their conquest of the Tartar hordes from Asia."—E. C. Semple, *Influences of geographic environment*, p. 348.—See also RUSSIA: Rivers.

VOLHYNIA, formerly government of a southwestern Russia, east of Poland and Galicia. (See RUSSIA: Map: Growth of Russia in Europe, 1300-1796.) The region, inhabited by Slavs, was divided into twelve districts embracing some important towns: Zhitomir, Dubno, Kovel, Lutsk, Ostrog,

Kremenets, Novograd, Volhynsky, Rovno, Staro-Konstantinov and Saslavl. (See UKRAINE: Origin of the people.) It remained independent until the fourteenth century. The territory then passed under Lithuanian rule and was united with Poland in 1569. With the partition of Poland (1793-1795), Russia annexed the territory. During the World War it was the center of severe fighting. The Russians captured the fortresses of Dubno and Lutsk and occupied an important stretch of territory west of the Styr river. (See WORLD WAR: 1915: III. Eastern front: f, 8; 1916: III. Eastern front: a, 2; DUBNO; LUTSK.) By the treaty signed Mar. 18, 1921, the greater part of the section was ceded to Poland, Russia retaining only a small part. See POLAND: 1921: Peace treaty with Russia.

VOLSTEAD ACT (1919). See LIQUOR PROBLEM: United States: 1919-1920.

VOLSUNGSAGA, one of the groups of Scandinavian mythic-heroic sagas embodying the legends of the Volsungs. In "The Volsunga Saga, the transproser's embellishments are very easily separated from the ancient traditions, since several of the old poems, on which the saga is based, are preserved in the Elder Edda. The whole middle portion of the saga is a transprosing of the poems which relate to the Volsungs, and the opening chapters are also clearly based on very ancient songs, which are now lost, while the last chapters are unmistakably a later addition to the original cycle of poems. The Volsunga Saga is of great importance on account of the connected narration of all the parts of the Volsung story. When we compare the poems that have come down to our time with the Volsunga Saga we find that the relation between song and story, wherever the transproser's method can be detected, is of such a nature that in all probability the leading features of the traditions have as a rule been preserved in their pure and original form. Occasionally, it is true, a romantic chord is struck which cannot be traced back to the songs, and which cannot be made to harmonize with the ancient traditions, but reminds us of the age of chivalry with its tendency to tell supernatural adventures and paint the most grotesque pictures with the most glowing colors. Not unfrequently the original plot has been distorted by the transproser for the reason that he has not correctly understood the poem. But viewed as a whole the transprosing is faithfully done, and the impression we get from those parts of which we possess only the prosaic paraphrase is uniformly the same as that which we get from those passages of which the original poems are preserved. The saga is in fact throughout, by virtue of its natural simplicity, an exceedingly fascinating reproduction substantially of the songs with which we are familiar, and frequently it approaches the form of the verse so closely that we catch glimpses of the latter with its alliterations. The Volsunga Saga is particularly interesting from the fact that it illustrates how the original and ancient nucleus of the saga in the course of time has received various additions, other traditions having become united

with the Volsung legends. A remarkable example of this is the expansion which the Sigurd traditions have received by becoming united with the traditions relating to the viking king Bagnar Lodbrok, the latter's wife Aslaug being represented as a daughter of Sigurd and Brynhild. This is a striking illustration of the tendency quite common among the ancients to connect the most prominent families with kings and heroes of the heroic age. That the organic unity of the story could not but suffer by this blending of one episode with another for the purpose of bringing the Volsung race down to historical times, must be admitted, though there is throughout the later additions a manifest effort to preserve the fundamental thought that characterizes the oldest and original parts of the story."—F. W. Horn, *History of the literature of the Scandinavian North*, pp. 63-65.—"Of all the stories kept in being by the saga-tellers, and left for our delight, there is none that so epitomizes human experience; has within the same space so much of nature and of life; so fully expresses the temper and genius of Northern folk, as that of the Volsungs and Niblungs, which has in varied shapes entered into the literature of many lands. In the beginning, there is no doubt that the story belonged to the common ancestral folk of all the Teutonic and Scandinavian people in the earliest days of their wanderings. . . . In these poems the only historical name is that of Attila, the great Hun leader, who fills so large a part of the imagination of the people whose power he had broken."—H. H. Sparling, *Introduction to translation of the Volsung Saga by E. Magnusson and W. M. Morris*, pp. 21, 22.

VONCKISTS.—The Vonckists were the radical party in Belgium at the time of the Brabacón revolt, when Belgium declared her independence of

Austria. "The victory of the Belgian rebels in 1789 had been followed by internal dissensions, which appeared directly the new Constitution was proclaimed. The first difference was between the Van der Nootists, or Statists, as they termed themselves, and the Vonckists. The latter, inspired by the success of the French Revolution, advocated a thoroughly democratic constitution, and the organisation of a new elective system of local administration, to the great disgust of the Statists, who desired simply the restoration of the older order of things, but with the central government controlled by elected assembly instead of being in the hands of the House of Hapsburg. Curiously enough popular feeling ran in a direction very different from that followed in France. Influenced by the priests, the Belgian people, and more especially the mob of Brussels, were convinced that the Vonckists were atheists; the democrats were attacked in the streets, maltreated and imprisoned; the bourgeois National Guards refused to protect them; they were proscribed by Van der Noot and the party in power; and after many riots and disturbances Vonck fled to France in April, 1790. These events greatly weakened the Belgian Republic, for the democratic party, which had been energetic in the revolution, numbered in its ranks many of the ablest and most enlightened men in the country. But even more serious was the result abroad, for the National Assembly of France and Lafayette were surprised and disgusted at the persecution of the democrats, and the sympathy of the French people was entirely alienated from the Belgian leaders. Still more striking in its effect was the conduct of the Van der Nootists towards the gallant officer, Van der Mersch, who had commanded the patriot troops in the invasion of October, 1789. Not satisfied with superseding him by the Prussian general Schönfeld, the Van der Nootists had him arrested on a charge of disorganizing the Belgian army and imprisoned at Antwerp, to the great wrath of the people of Flanders, of which province Van der Mersch was a native. The conquering party was further divided. The nobility and clergy, headed by the Duc d'Artemberg, were jealous of the ascendancy assumed by Van der Noot, and of the continued omnipotence of the Assembly at Brussels. Under these circumstances it was a significant fact that the Austrian troops in Luxembourg under the command of Marshal Bender were able with the help of the people themselves to occupy the province of Limburg. . . . The experiences of a year of revolution made the Belgian people not unwilling to return under the sway of Austria; the cities surrendered without a blow, and on 2d December, 1790, Brussels capitulated. Van der Noot fled with his chief friends, and Belgium was won back by Leopold as easily as it had been lost by Joseph."—H. M. Stephens, *Revolutionary Europe*, pp. 92-94.

VON WINKELRIED, Arnold. See **WINKELRIED**.

VOODOOISM, term referring to certain magical and secret rites believed to be prevalent among the negroes of the West Indies, more particularly in the republic of Haiti, and in southern United States. "It was from the West Coast (Dahomey) Negroes that Voodoo came to America. . . . Voodoo requires a priest, a priestess, and a snake, or it is no real Voodoo, a word meaning fearful. Red Voodoo requires human victims; while Voodoo is content with a cock or goat."—E. W. Hopkins, *History of religions*, p. 30.

VORARLBERG, most westerly province of Austria, consisting of the districts of Bregenz, Bludenz and Feldkirch, with an area of 1,005 square

miles, and a population, in 1920, of 133,212. It was ceded to Bavaria by the Treaty of Pressburg, 1806. (See **GERMANY**: 1805-1806.) It is included in the Austrian republic which was proclaimed on Nov. 12, 1918.

VULCAN PASS, route through the Carpathians, between Transylvania and Wallachia. This was one of the passes used in 1916 by General Falkenhayn in his attack on Rumania. See **WORLD WAR**: 1916: V. Balkan theater: c, 6, iii.

VULCANAL AT ROME.—"The Vulcanal, or, as it is called by Livy, the Area Vulcani, must have been close to the Senaculum [early meeting place of the Senate], on the slope of the Capitol. It seems to have been originally an open space of some extent, used for public meetings, especially those of the Comitia Tributa, and dedicated to Vulcan. Sacrifices of small fish were offered to Vulcan here, and a temple dedicated to that god stood also here in the earliest times, but it was afterwards, on the enlargement of the pomerium beyond the Palatine, removed for religious reasons to the Circus Flaminius, and the Vulcanal became simply a consecrated area."—R. Burn, *Rome and the Campaigna*, ch. 6, pt. 1.

WAGER OF BATTLE, TRIAL BY COMBAT, JUDICIAL COMBAT.—"Trial by combat does not seem to have established itself completely in France till ordeals went into disuse, which Charlemagne rather encouraged, and which, in his age, the clergy for the most part approved. The former species of decision may, however, be met with under the first Merovingian kings (Greg. Turon, l. vii, c. 10, l. x. c. 10), and seems to have prevailed in Burgundy. It is established by the laws of the Alemanni or Suabians. Baluz t. i. p. 80. It was always popular in Lombardy. . . . Otho II. established it in all disputes concerning real property. . . . God, as they deemed, was the judge. The nobleman fought on horseback, with all his arms of attack and defence; the plebeian on foot, with his club and target. . . . If the combat was intended to ascertain a civil right, the vanquished party, of course, forfeited his claim and paid a fine. If he fought by proxy, the champion was

liable to have his hand struck off; a regulation necessary, perhaps, to obviate the corruption of these hired defenders. In criminal cases the appellant suffered, in the event of defeat, the same punishment which the law awarded to the offence of which he accused his adversary. Even where the cause was more peaceably tried, and brought to a regular adjudication by the court, an appeal for false judgment might indeed be made to the suzerain, but it could only be tried by battle. And in this, the appellant, if he would impeach the concurrent judgment of the court below, was compelled to meet in combat every one of its members; unless he should vanquish them all within the day, his life, if he escaped from so many hazards, was forfeited to the law. If fortune or miracle should make him conqueror in every contest, the judges were equally subject to death, and their court forfeited their jurisdiction for ever. . . . Such was the judicial system of France when St. Louis [1226-1270] enacted that great code which bears the name of his Establishments. The rules of civil and criminal procedure, as well as the principles of legal decisions, are there laid down with much detail. . . . [Trial by combat] was never abolished by any positive law, either in France [at large] or England. But instances of its occurrence are not frequent even in the fourteenth century."—H. Hallam, *Middle Ages*, v. 1, ch. 2, pt. 2.—"Nor was the wager of battle confined to races of Celtic or Teutonic origin. The Slavonic tribes, as they successively emerge into the light of history, show the same tendency to refer doubtful points of civil and criminal law to the arbitration of the sword. The earliest records of Hungary, Bohemia, Poland, Servia, Silesia, Moravia, Pomerania, Lithuania, and Russia, present evidences of the prevalence of the system." The last recorded instance of the wager of battle in France was in 1549. "In England, the resolute conservatism, which resists innovation to the last, prolonged the existence of the wager of battle until a period unknown in other civilized nations. . . . It was not until the time of Elizabeth that it was even abolished in civil cases. . . . Even in the 17th century, instances of the battle ordeal between persons of high station are on record." As late as 1818 the right was claimed and conceded by the judges, in a criminal case which caused much excitement. "The next year the act 59 Geo. III, chap. 46, at length put an end for ever to this last remnant of the age of chivalry."—H. C. Lea, *Superstition and force*, ch. 2.—See also COMMON LAW: 1077; CRIMINAL LAW: 1818.

WAGER OF LAW.—"This was the remarkable custom which was subsequently known as canonical compurgation, and which long remained a part of English jurisprudence, under the name of the Wager of Law. The defendant, when denying the allegation under oath, appeared surrounded by a number of companions—'juratores,' 'conjuratores,' 'sacramentales,' 'collaudantes,' 'compurgatores,' as they were variously termed—who swore, not to their knowledge of the facts, but as sharers and par-

takers in the oath of denial. This curious form of procedure derives importance from the fact that it is an expression of the character, not of an isolated sept, but of nearly all the races that have moulded the destinies of Europe. The Ostrogoths in Italy, and the Wisigoths of the South of France and Spain were the only nations in whose codes it occupies no place, and they, . . . at an early period, yielded themselves completely to the influence of the Roman civilization. . . . The church, with the tact which distinguished her dealings with her new converts, was not long in adopting a system which was admirably suited for her defence in an age of brute force."—H. C. Lea, *Superstition and force*, ch. 1.—See also COMMON LAW: 1833.

WAGNER, Richard (1813-1883), German composer. Studied with Gottlieb Müller and Theodor Weinlig; produced the operas "Rienzi," "Der fliegende Holländer," and "Tannhäuser," at Dresden in 1842, 1843, and 1845, respectively; appointed court-conductor at Dresden, 1843; produced the opera "Lohengrin," at Weimar, 1850; first complete performance of the tetralogy, "Der Ring des Nibelungen," given at Bayreuth, Aug. 13-17, 1876.—See also MUSIC: Modern: 1843-1897.

WAGRAM, Battle of. See GERMANY: 1809 (July-September).

WAHHABIS or **Wahabees**.—"The Wahabees derive their name from Abdul Wahab, the father of Sheikh Muhammad, their founder, who arose about the beginning of the . . . [eighteenth] century, in the province of Najd, in Arabia. The object of the Wahabee movement was to sweep away all later innovations, and to return to the original purity of Islam, as based upon the exact teaching of the Koran and the example of Mahomet. The principles of the sect rapidly spread among the Arab tribes, and were adopted by the sovereign princes of Darayah, in Najd. Impelled by religious zeal and political ambition, and allured by the prospect of plunder, the Wahabees soon acquired nearly the whole of Arabia, and menaced the neighbouring Pashaliks of Turkey and Egypt. Mecca and Medina soon fell into their hands, the shrine was despoiled of its rich ornaments, and the pilgrim route to the Kaaba closed for some years. Early in . . . [the nineteenth] century (1811), Muhammad Ali, the Pasha of Egypt, at the bidding of the Sultan, set himself to check the progress of this aggressive sect; and his son Ibrahim Pasha completed the work (1818). . . . The following . . . [are] particulars of the Wahabee reform. . . . They reject the decisions of the 'four orthodox doctors,' and the intercessions of saints; they condemn the excessive reverence paid to Mahomet, and deny his mediation, until the last day. They also disapprove of the ornamenting of tombs, &c."—J. W. H. Stobart, *Islam and its founder*, ch. 10, with footnote.—"The influence of the Wahabi movement extended beyond Arabia and was greater in its religious than in its political aspect. It was introduced into India by Sayid Ahmad of Oudh, who claimed to be the Mahdi. His propaganda to purge out Hindu superstitions from Islam excited fierce fanaticism. He raised a jihad against the Sikhs, captured Peshavur in 1830, and maintained an insurrection for four years. He declared that India was a Dar-il-Harb, a land of warfare, and that jihad against the British government was obligatory. The influence of Wahabis is still felt in India and the sect continues near the northwest frontier. Another sect,

called the Faraisis, arose in India, animated with the same spirit. In Sumatra a like movement was started about 1837 by a pilgrim returned from Mecca. He began the correction of the errors and abuses of Moslems, especially striving to abolish the use of opium, tobacco, and betel nut. From this propaganda grew up the Padri sect. They proclaimed the jihad against the heathen Bataks, destroyed their villages, outraged their women, sold their children into slavery, and killed every male who would not accept Islam. Wahabism bore fruit in Africa. Osman Danfodio, chief of the Fulahs, learned the doctrine at Mecca, and on his return preached it. He succeeded in arousing the people, founded Sokoto and the Fulah kingdom, subdued several heathen states and forced them to embrace Islam. Wahabism was also the inspiration of the Sanusi.' . . . (Arnold: 'Preaching of Islam,' pp. 230, 265, 299.) Wahabism greatly influenced the whole Islamic body. Just as the Protestant Reformation was followed by a counter-reformation in Roman Catholicism, so Wahabism was the instrument for arousing the Sunni Moslems. [See SUNNITES.] Its influence, true to its own spirit, has been thoroughly reactionary. That return to primitive Islam is the hope of the world's regeneration has been the inspiration of modern conservative movements. Of it T. W. A. Arnold (*Ibid.*, pp. 345-346) says: 'It has given birth to numerous movements which take rank among the most powerful influences in the Islamic world. It is closely connected with many of the modern Moslem missions; the . . . zeal it has stirred up, the new life it has infused into existing religious institutions, the impetus it has given to theological study and to the organization of devotional exercises, have all served to awaken and keep alive the innate proselyting spirit of Islam.' Similarly Canon Sell says (*Missionary Review*, October, 1902, p. 732): 'Its religious teaching, and still more its narrow fanatical spirit, have spread into many lands and influenced many peoples.' Palgrave who lived and travelled in Turkey and Arabia in close contact with Moslems, writes: 'The whole school of Islamic teaching has been modified by it; not only the common people but also many of the highest and best educated classes, even the Sultan (Abdul Aziz) himself, are distinctly inclined to the stricter school, and so are most of the principal Ulema.' . . . This spirit was also a reaction against the introduction of European laws and customs by the reforming Sultans, Mahmud II and Abdul Aziz in his first years. A strong feeling of opposition to these measures existed not only among the Ulema on account of the Western code, but also among the beys and proprietors, because they had been deprived of their lands and feudal privileges by the new regulations. So political conservatism and zeal for Islam went hand in hand. Dissatisfaction with the new codes led to a partial return to the jurisdiction of the Mahkamah or Courts of the Sacred Law. Opposition to the patronage given to the infidels led to the casting out from employ of many Europeans who about 1850 had overrun the Turkish service, and the employment in their places of Moslem doctors, civil engineers, and administrators. Rushdi schools which had been started for the whole population, including Christians, were transformed into strictly Mohammedan schools, with teaching of Islam and Islamic languages. The Sultan Abdul Aziz became sympathetic with the reactionaries. The Grand Vizier, Ali Pasha, said to a British official: 'What we want is an increase of fanaticism rather than a diminution of it.' Notwithstanding these symptoms, the political reformers

retained superior influence in the government till the promulgation of the Constitution of 1876. After its abrogation by Sultan Hamid, he openly became the chief of the reactionaries, and made it his whole aim to strengthen the Moslem element of his empire. This aim soon assumed a wider scope and developed into a movement to which is given the name Pan-Islamism.'—S. G. Wilson, *Modern movements among Moslems*, pp. 55-57.—See also ARABIA: 1919: King of Hejaz.

WALDENSES, or Vaudois.—"Let me at the outset express my conviction that the whole attempt to ascribe to the Waldenses an earlier date than the latter half of the 12th century, to throw back their origin some two hundred years, or sometimes much more than this, even to the times of Claudius of Turin (d. 839), is one which will not stand the test of historical criticism; while the endeavour to vindicate for them this remote antiquity has introduced infinite confusion into their whole history. The date of Waldo, who, as I cannot doubt, is rightly recognized as their founder, we certainly know. When it is sought to get rid of their relation to him as embodied in the very name which they bear, and to change this name into Vallenses, the Men of the Valleys or the Dalesmen, it is a transformation which has no likelihood, philological or historic, to recommend it. . . . Peter Waldo,—for we will not withhold from him this Christian name, although there is no authority for it anterior to the beginning of the 15th century,—was a rich citizen and merchant of Lyons [in the later half of the 12th century]. Not satisfied with those scanty portions of Scripture doled out to the laity in divine services, and yearning above all for a larger knowledge of the Gospels, he obtained from two friends among the priesthood a copy of these last and of some other portions of Scripture translated into the Romance language; a collection also of sayings from the Fathers. The whole movement remained to the end true to this its first motive—the desire namely for a fuller acquaintance with the Word of God. That Word he now resolved to make the rule of his life. . . . He, . . . as a first step, sells all that he has, and bestows it upon the poor. In the name which he adopts for himself and for the companions whom he presently associates with him, the same fact of a voluntary poverty, as that which above all they should embody in their lives, speaks out. On this side of the Alps they are Poor Men of Lyons; on the Italian, Poor Men of Lombardy. . . . And

now he and his began to preach in the streets of Lyons, to find their way into houses, to itinerate the country round. . . . In 1178 the Archbishop of Lyons forbade their preaching or expounding any more. Such as did not submit had no choice but to quit Lyons, and betake themselves elsewhere. And thus it came to pass that not the city, already so illustrious in ecclesiastical story, where Irenæus taught and Blandina suffered, . . . but the Alpine mountains must shelter these outcasts, and in turn be made famous by their presence." In 1209, Pope Innocent III made an attempt to absorb Waldo's society in an "Order of Poor Catholics," which he instituted. "Failing this, he repeated, a few years later, at the Fourth Lateran Council (1215), the Church's sentence against the Waldenses, including them under a common ban with the Cathari and the whole rabble rout of Manichæans and others with whom they have so often since been confounded. . . . Enemies have sought to confound, that so there might be imputed to the Waldenses any evil which had been brought home to the Albigenses. . . . Friends have sought to identify them out of the wish to recruit the scanty number of witnesses for Scriptural and Apostolical truth in the dark ages of the Church; as certainly it would prove no small numerical addition if the Albigenses might be counted among these." It seems to be certain that the Waldenses were not spared by the crusaders who exterminated the Albigenses of southern France between 1209 and 1229. They fled before that storm into the recesses of the Alps. "But they were numerous in North Italy as well; and far more widely scattered over the whole of central Europe than their present dwelling place and numbers would at all suggest. They had congregations in Florence, in Genoa, in Venice, above all in Milan; there were Waldensian communications as far south as Calabria; they were not unknown in Arragon; still less in Switzerland; at a later day they found their way to Bohemia, and joined hands with the Hussites there."—R. C. Trench, *Lectures on mediæval church history, lecture 17*.—"The valleys which the Vaudois have raised into celebrity lie to the west of Piedmont, between the province of Pignerol and Briançon, and adjoining on the other side to the ancient Marquisate of Susa, and that of the Saluces. The capital, La Tour, being about 36 miles from Turin, and 14 from Pignerol. The extent of the valleys is about 12 Italian miles, making a square of about 24 French leagues. The valleys are three in number, Luzern, Perouse, and St. Martin. The former . . . is the most beautiful and extensive."—J. Bresse, *History of the Vaudois, pt. 1, ch. 1*.—See also ALBIGENSES; CATHARI; MANICHEANS.

1526-1561.—Identification with the Calvinists.—Persecuting war of the duke of Savoy.—Tolerant treaty of Cavour. See SAVOY AND PIEDMONT: 1559-1580.

1546.—Massacre of the remnant in Provence and Venaisin. See FRANCE: 1532-1547.

1655.—Second persecution and massacre.—Cromwell's intervention.—"They [the Waldenses] had experienced persecutions through their whole history, and especially after the Reformation; but, on the whole, the two last Dukes of Savoy, and also Christine, daughter of Henry IV. of France, and Duchess-Regent through the minority of her son, the present Duke, had protected them in their privileges, even while extirpating Protestantism in the rest of the Piedmontese dominions. Latterly, however, there had

been a passion at Turin and at Rome for their conversion to the Catholic faith, and priests had been traversing their valleys for the purpose. The murder of one such priest, and some open insults to the Catholic worship, about Christmas 1654, are said to have occasioned what followed. On the 25th of January, 1654-5, an edict was issued, under the authority of the Duke of Savoy, 'commanding and enjoining every head of a family, with its members, of the pretended Reformed Religion, of what rank, degree, or condition soever, none excepted, inhabiting and possessing estates in the places of Luserna . . . &c, within three days, to withdraw and depart, and be, with their families, withdrawn out of the said places, and transported into the places and limits marked out for toleration by his Royal Highness during his good pleasure,' . . . unless they gave evidence within 20 days of having become Catholics. Furthermore it was commanded that in every one even of the tolerated places there should be regular celebration of the Holy Mass, and that there should be no interference therewith, nor any dissuasion of any one from turning a Catholic, also on pain of death. All the places named are in the Valley of Luserna, and the object was a wholesale shifting of the Protestants of that valley out of nine of its communes and their concentration into five higher up. In vain were there remonstrances at Turin from those immediately concerned. On the 17th of April, 1655, the Marquis di Pianezza, entered the doomed region with a body of troops mainly Piedmontese, but with French and Irish among them. There was resistance, fighting, burning, pillaging, flight to the mountains, and chasing and murdering for eight days, Saturday, April 24, being the climax. The names of about 300 of those murdered individually are on record, with the ways of the deaths of many of them. Women were ripped open, or carried about impaled on spikes; men, women, and children, were flung from precipices, hacked, tortured, roasted alive; the heads of some of the dead were boiled and the brains eaten; there are forty printed pages, and twenty-six ghastly engravings, by way of Protestant tradition of the ascertained variety of the devilry. The massacre was chiefly in the Valley of Luserna, but extended also into the other two valleys. The fugitives were huddled in crowds high among the mountains, moaning and starving; and not a few, women and infants especially, perished amid the snows. . . . There was a shudder of abhorrence through Protestant Europe, but no one was so much roused as Cromwell. . . . On Thursday the 17th of May, and for many days more, the business of the Savoy Protestants was the chief occupation of the Council. Letters, all in Milton's Latin, but signed by the Lord Protector in his own name, were despatched (May 25) to the Duke of Savoy himself, to the French King, to the States General of the United Provinces, to the Protestant Swiss Cantons, to the King of Sweden, to the King of Denmark, and to Ragotski, Prince of Transylvania. A day of humiliation was appointed for the Cities of London and Westminster, and another for all England." A collection of money for the sufferers was made, which amounted, in England and Wales, to £38,000—equal to about £137,000 now. Cromwell's personal contribution was £2,000—equivalent to £7,500 in money of the present day. The Protector dispatched a special envoy to the court of Turin, who addressed very plain and bold words to the duke. Meanwhile Blake with his fleet was in the

Mediterranean, and there were inquiries made as to the best place for landing troops to invade the duke's dominions. "All which being known to Mazarin, that wily statesman saw that no time was to be lost. While Mr. Downing [second commissioner sent by Cromwell] was still only on his way to Geneva through France, Mazarin had instructed M. Servien, the French minister at Turin, to insist, in the French King's name, on an immediate settlement of the Vaudois business. The result was a 'Patente di Gratia e Perdono,' or 'Patent of Grace and Pardon,' granted by Charles Emanuel to the Vaudois Protestants, Aug. 19, in terms of a Treaty at Pignerol, in which the French Minister appeared as the real mediating party and certain Envoys from the Swiss Cantons as more or less assenting. As the Patent substantially retracted the Persecuting Edict and restored the Vaudois to all their former privileges, nothing more was to be done." These events in Piedmont drew from Milton his immortal sonnet, beginning: "Avenge, O Lord, thy slaughtered saints."—D. Masson, *Life of John Milton*, v. 5, bk. 1, ch. 1, sect. 2.

1685-1691.—Expatriated by Victor Amadeus.—Return under Henri Arnaud.—"After the great massacre of 1655, the Church of the Valleys . . . rested from persecution for thirty years [but tolerance of Protestants almost ceased in Europe with the revocation of the Edict of Nantes in 1685]. . . . At no previous period of their history, perhaps, had the Waldenses been so entirely devoid of human aid as now [for Louis XIV demanded that the duke of Savoy should exterminate or banish all heretics]. Gianavello, whose stout heart and brave arm had stood them in such stead formerly, was in exile. Cromwell, whose potent voice had stayed the fury of the great massacre, was in his grave. An avowed papist [James II] filled the throne of Great Britain. It was going ill at this hour with Protestantism everywhere. The Covenanters of Scotland were hiding on the moors, or dying in the Grass-market of Edinburgh. France, Piedmont, and Italy were closing in around the valleys; every path guarded, all their succors cut off, an overwhelming force waited the signal to massacre them. So desperate did their situation appear to the Swiss envoys, that they counseled them to 'transport elsewhere the torch of the gospel, and not keep it here to be extinguished in blood.' . . . [The first attack from Victor Amadeus, helped by the French, came in 1686, but the Waldenses were able to repel it.] The issue by arms being deemed uncertain, despite the vast disparity of strength, treachery, on a great scale, was now had recourse to. Wherever, throughout the valleys, the Vaudois were found strongly posted and ready for battle, they were told that their brethren in the neighboring communes had submitted, and that it was vain for them, isolated and alone as they now were, to continue their resistance. . . . This base artifice was successfully practiced at each of the Vaudois posts in succession, till at length the valleys had all capitulated. . . . The instant consequence of the submission was a massacre which extended to all their valleys, and which was similar in its horrors to the great butchery of 1655. In that massacre upwards of three thousand perished. The remainder of the nation, amounting, according to Arnaud, to between twelve thousand and fifteen

thousand souls, were consigned to the various jails and fortresses of Piedmont. [A few escaped to Geneva and to Germany where they remained until 1690 when they decided to return to their valleys.] . . . Meanwhile, the scenes were shifting rapidly around the expatriated Vaudois, and with eyes uplifted they awaited the issue. They saw their protector, William of Orange, mount the throne of England. They saw their powerful enemy Louis XIV attacked at once by the emperor and humiliated by the Dutch. They saw their own Prince Victor Amadeus withdraw his soldiers from Savoy, seeing that he needed them to defend Piedmont. It seemed to them that an invisible hand was opening their path back to their own land. Encouraged by these tokens, they began to arrange a second time for their departure. . . . At this crisis, as on so many previous ones, a distinguished man arose to lead them. Henri Arnaud, who was at the head of the eight hundred fighting men who now set out for their native possessions, had at first discharged the office of pastor, but the troubles of his nation compelling him to leave the valleys, he had served in the armies of the Prince of Orange. . . . Arriving on the southern shore of the lake, these eight hundred Vaudois bent their knees in prayer, and then began their march through a country covered with foes. Before them rose the great snow-clad mountains over which they were to fight their way. Arnaud arranged his little host into three companies—an advanced guard, a center, and a rear guard. Seizing some of the chief men as hostages, they traversed the valley of the Arve to Sallenches, and emerged from its dangerous passes just as the men of the latter place had completed their preparations for resisting them. Occasional skirmishes awaited them, but mostly their march was unopposed, for the terror of God had fallen upon the inhabitants of Savoy. . . . At last they succeeded in reaching the Pra del Tor. To their amazement and joy, on arriving at this celebrated and hallowed spot, they found deputies from their prince, the Duke of Savoy, waiting them with an overture of peace. The Vaudois were as men that dreamed. An overture of peace! How was this? A coalition, including Germany, Great Britain, Holland, and Spain, had been formed to check the ambition of France, and three days had been given to Victor Amadeus [Duke of Savoy] to say to which side he would join himself—the Leaguers or Louis XIV. He resolved to break with Louis and take part with the coalition. In this case, to whom could he so well commit the keys of the Alps as to his trusty Vaudois? Hence the overture that met them in the Pra del Tor."—J. A. Wylie, *History of the Waldenses*, pp. 162, 166-168, 176-177, 195.

1691.—Toleration.—The Protestant nations of Europe financed the returned Waldenses, and, under the leadership of William of Orange, protected them. The shadow of persecution was lifted from the lands of Savoy and Piedmont.

1808-1848.—Efforts towards revival of Waldensianism.—Final religious liberty.—During the eighteenth century the Waldenses were not persecuted, but suffered much from religious intolerance, and gradually their influence and numbers grew feeble. "The visit paid them by the apostolic Felix Neff, in 1808, was the first dawning of their new day. With him a breath from heaven, it was felt, had passed over the dry bones. The next stage in their resurrection was the visit of Dr. William Stephen Gilly, in 1828. He cherished, he tells us, the conviction that 'this is

the spot from which it is likely that the great Sower will again cast his seed, when it shall please him to permit the pure church of Christ to resume her seat in those Italian states from which pontifical intrigues have dislodged her.' The result of Dr. Gilly's visit was the erection of a college at La Torre, for the instruction of youth and the training of ministers, and a hospital for the sick; besides awakening great interest on their behalf in England. After Dr. Gilly, there stood up another to befriend the Waldenses, and prepare them for their coming day of deliverance. The career of General Meckwith is invested with a romance not unlike that which belongs to the life of Ignatius Loyola. . . . But despite the efforts of Gilly and Beckwith, and the growing spirit of toleration, the Waldenses continued to groan under a load of political and social disabilities. They were still a proscribed race. . . . The French Revolution of 1848, with trumpet peal, sounded the overthrow of all these restrictions. They fell in one day."—J. A. Wylie, *History of the Waldenses*, pp. 198-199, 201-202.—From that time on the Waldensian sect has been active in all Protestant countries, where their religious teaching has been carried on by the support of their aid societies.

WALES: Population.—A r e a.—M i n e r a l wealth.—Industries.—Forestry.—Coal trade and shipping.—Wales which lies to the west of England is the smallest of the three countries forming the United Kingdom. Its population in 1921 was 2,206,712, of whom about eight per cent speak Welsh only, thirty-two per cent are bi-lingual and the remainder speak English only. The land area is 4,751,000 square miles. The mineral wealth of South Wales and the slate quarries of North Wales have, during the last century, made the country of vital importance to the commercial world. "The great industrial area of Wales includes Monmouthshire, Glamorganshire, and Carmarthenshire; Monmouthshire being legitimately included in Wales industrially, as it is in matters of education and Sunday closing. The obvious reason for this location of industry is the fact that in these countries lies the best coal in the world. It gives rise to the great industry of its own extraction from the earth, and to the very important undertakings that have established themselves as closely as possible to it in order to reap the advantages of its superlative power producing value as economically as possible. Apart from the presence of coal, the physical features of South Wales have lent themselves well to industrial development. The distance from pit to port is very short, usually from five to twenty miles, and the gradient in favour of the load. The seaway of the Bristol Channel upon which the ports are founded is deep and assured, and although the immediate connexions of the docks

with the channel necessitate in most of the ports a certain amount of dredging through sandy and muddy foreshores, this, in practice, is not much of a detriment."—J. Rees, *Transformation: South-Wales as an industrial unit* (*The Times* [London], *Trade Supplement*, Oct. 29, 1921, p. 1).—The tinplate trade of Wales was the foremost in the world until this position was taken by the United States. "The most serious blow that the tinplate industry of Wales has had to withstand was the determination in 1889 of the United States to become independent of Welsh suppliers by creating a tinplate industry under its own flag by means of the protection of a very high tariff upon all importations of tinplate, and to-day is seen, as at Rosslyn Chapel, the apprentice pillar surpassing the masters' pillar, the present capacity of the American tinplate trade being more than double that of Great Britain."—H. S. Thomas, *Signs of tinplate revival: Recapturing lost trade* (*The Times* [London], *Trade Supplement*, Oct. 29, 1921, p. 10).—"The slate-producing area of Great Britain is confined to the western coast and extends with certain breaks from Cumberland to Cornwall. Of the total output, 90 per cent. comes from the North Wales slate quarries, situated in Carnarvonshire and Merionethshire. The state found in these two counties is also of a totally different character from that quarried in South Wales and England, where it is mainly of volcanic origin. In North Wales it is a sedimentary rock. This necessarily affects and determines all the conditions of the industry in the respective areas—the methods of working, the purposes for which the stone is used, the size, price, and market of the slates. . . . Impermeable, impenetrable by weather, unaffected by acid fumes, unsurpassed cleavage properties combining minimum weight with maximum strength; possessing great compressive, tensile, and transverse strength; uniformity of colour and texture, with permanence of original colour under varying weather conditions; great toughness, hardness and elasticity; that and more is the North Wales slate. . . . That the three qualities last named—toughness, hardness, and elasticity—should be found combined in a material popularly supposed to be brittle is proved by the fact that a piece of slate three feet long, supported at both ends, can be bent about 4 in. in the middle before rupture takes place. As regards durability, it is quite a common occurrence for Welsh slates stripped from roofs 60, 80, and 100 years old to be used again in constructing new roofs."—B. Evans, *Mountain mining: How the world's best slate is won: Methods and men* (*The Times* [London], *Trade Supplement*, Oct. 29, 1921, p. 19).—"The favorable position of Wales in relation to timber demands was amply proved during the war, no woodlands being so keenly searched and so ruthlessly exploited as those of the Principality. The threatened calamity of a stoppage of the mines and the serious hampering of military operations in France were indeed obviated only by those war-time fellings. The result of deforestation is deplorable; go where one may—through parts once famous for the beauty of their woodland scenery, such as the Vale of Llangollen, Bettws-y-coed, Aberystwyth, Dinas Mawddwy, Crickhowel, or Llanidloes—one finds the steep slopes stripped of their forest verdure, only unsightly tree stumps are left protruding from the hillside. Fortunately the position may be retrieved. There is every prospect of a new and better forestry arising out of the ashes of the old. It has taken the

'shake up' of a European war to do it, but at last we have a State forest service at work and a national scheme of forestry in operation. In time we may expect not only to have the depleted areas planted and amenity restored, but a large timber reserve built up to meet any possible future emergency."—F. Story, *Afforestation: 300,000 acres still await planting* (*The Times* [London], *Trade Supplement*, Oct. 29, 1921, p. 22).—The leading coal port of Wales is Cardiff. It "has not only led the world in the coal trade, but has also built up a very large ship-owning connexion. The place that Cardiff took for so many years in the bulk cargo carrying trade, and the fact that in former years it was always possible to get an outward cargo from Cardiff, no doubt led to the establishment there of ship-owning on a very large scale. Many shipowners whose headquarters are at other ports have offices in Cardiff from which they run their fleets, and although the number of steamers registered as Cardiff-owned is not so great it is estimated that at least 3,000,000 tons dead-weight of shipping are regularly controlled and run from Cardiff. One Cardiff firm alone controls 39 modern steamers, several of which burn coal or fuel oil, aggregating 340,000 tons d.w. The port of Cardiff embraces also the ports of Barry and Penarth for customs purposes."—*South-eastern ports: Cardiff, Barry, Penarth, and Newport* (*The Times* [London], *Trade Supplement*, Oct. 29, 1921, p. 24).—See also below: 1535-1921.

Ancient divisions.—Wales was anciently divided into four well-marked geographical units and it is impossible to understand the history of Wales without knowing these divisions. The four kingdoms, Gwynedd, Powys, Deheubarth, and Morgannwg correspond to the modern bishoprics of Anglesey, Flint, St. Davids and Llandaff. "Gwynedd was, as its conformation necessarily made it, the seat of the dominating power in Wales throughout its history, and the theatre in which stirring events again and again took place. It contained the most magnificent, and strategically the most important, of the four great mountain groups of Wales—Snowden, or *Eryri*, 'the home of eagles.' It included the ancient Môn, the island of Anglesey, 'the mother of Wales,' which, as the granary of Snowden, afforded an essential element of strength to that natural fortress. . . . A very little study of Welsh history will show that Snowden with its outworks was the central point of that history in almost every age, and that its natural advantages for defence necessarily made it so. Over and over again invading armies swept along the coast, only to be turned back when they attempted to pass beyond the Conway and enter the mountains of Carnarvonshire, or to meet a worse fate, having entered, and being unable to return. Thus the mountain barrier which rises on the western side of the Conway valley and stretches across from the north coast to Tremadoc Bay is the natural feature which dominates the military history of Wales, and the history of Wales is the history of war from first to last. Further, it is near the river's mouth where the town of Conway stands that nearly all attempts to enter Snowden appear to have been made."—H. Pilkington, *North Wales: Its wild story and scenery*, pp. 6-7.—Powys, occupying most of central Wales and the northeast marches, usually received the first brunt of all invasions. "Central Wales may be regarded as a broad table-land, through which rivers great and small furrow their way in winding courses

to the sea, but which has few clearly marked mountain ranges or stretches of fertile plain. The ancient kingdom of Powys took in most of this region, extending in its widest limits from the neighbourhood of Mold to the river Wye, near Glasbury and Hay. It included some productive districts, such as the lower valley of the Dee and the well-watered meadows of the upper Severn, so that its children were not altogether without warrant in hailing it as 'Powys, the Eden of Wales.' But most of it was pastoral upland, a country well fitted to be the nurse of a race of hardy, independent warriors, lovers of tribal freedom, haters of the sluggish and toilsome life of the lowland tiller of the soil, and tenacious holders of ancient privileges. Such were the men of Powys, inheritors of the old Brythonic traditions, in whom incessant warfare with the Merian English kept alive the ancient tribal characteristics. . . . The original 'dextralis pars Britanniae' or 'Deheubarth Kymry' embraced the whole of South Wales, in which sense the term is used by Asser and by those who drafted the charters in the *Liber Landavensis*. But in later parlance the name Deheubarth came to be restricted to the realm, which included most of the South Welsh area, formed by the accretion of Ceredigion, Ystrad Tywi and Brycheiniog around the ancient kingdom of Dyfed, and in this sense it was exclusive of Gwent and Morgannwg. . . . The well-sunned plains which, from the mouth of the Tawe to that of the Wye, skirt the northern shore of the Bristol Channel enjoy a mild and genial climate and have from the earliest times been the seat of important settlements. Roman civilisation gained a firm foothold in the district, as may be seen from its remains at Cardiff, Caerleon and Caerwent. Monastic centres of the first rank were established here, at Llanilltud, Llanancarfan and Llandaff, during the age of early Christian enthusiasm. Politically, too, the region stood apart from the rest of South Wales, in virtue, it may be, of the strength of the old Silurian traditions, and it maintained, through many vicissitudes, its independence under its own princes until the eve of the Norman Conquest. It had its own bishop, seated at Llandaff, and never acknowledged the supremacy of David, whose sway was so mighty in the rest of Deheubarth."—J. E. Lloyd, *History of Wales from the earliest times to the Edwardian conquest*, v. 1, pp. 242-243, 256, 273.

B. C. 55-A. D. 683.—Early history.—Origin of name.—Family of Cunedda.—Rule of Maelgwyn.—Advance of the Anglo-Saxons.—Cornwall and Strathclyde separated.—Rule of Cadwallawn.—Loss of North Wales.—"The history of Wales, which stretches back as far as that of any nation in Europe, and which presents to the student of peoples some most interesting problems, has been singularly neglected by historians until comparatively recent years. The direct ancestors of the Welsh were offering sacrifices to their gods in Britain thousands of years before our era. The Welsh are, indeed, descended from races which conquered a large part of Western Europe, Albion, and Ireland; their immediate ascendants, the Britons, opposed Caesar's landing and lived long under Rome's government, learning their lessons in Roman schools and pleading before Roman judges; they fought stubbornly and for centuries against the barbarian Saxons, struggling as few people have had to struggle to preserve a great widespread civilization. This people, driven back at last by force of overwhelm-

ing numbers to the mountains of Cymru, still held the flag of liberty aloft, met in succession and successfully Saxon and Angle and Dane, Norseman and Norman, until at last, worn out and embroiled by centuries of warfare, they succumbed to the Norman castle-builders, as more than twelve hundred years before their ancestors had succumbed to the block-houses and forts of Frontinus and Agricola. . . . The title 'Briton' is to-day borne by many peoples in many lands, few of whom, probably, realize that, strictly speaking, it is the Welshman alone who is entitled to that name. When in olden times the Anglo-Saxon chroniclers referred to their enemies the Britons they used to term 'wealas' or 'bret-Wealas.' When in 1870 the German historian von Treitschke spoke of the Frenchmen of Lorraine he used the term 'Wälsch,' inelegantly translated in *Elsass and Lothringen Past and Present* as 'Welsh.' [See WELSH and WALLOONS.] Both terms expressed the same notion of enmity. The Welshman was the Saxon's enemy, but he was a Briton-enemy. . . . Until the fifth century of our era the Welsh people were mainly found in Britain rather than in Cymru."—G. Stone, *Wales*, pp. ix, xi-xii.—"When Rome had become too weak to interfere with the distant mountains of Wales, the family of Cunedda rose [about 400] to greatness as a family of officials, chiefly concerned with the defence of the wall. The Pictish attacks on the valley of the Clyde, and the Angle advance along the Humber, drove them southwards, and Deganwy became the chief seat of their power. Deganwy is now a desolate and insignificant ruin, overlooking the thriving sea-side resort of Llandudno [in North Wales], but still commanding the views of seas and islands over which the heirs of the Romans once held sway. While the invaders were conquering the plains of England, Maelgwn was vigorously restoring the unity of the western province. . . . About 550, when Maelgwn ruled over the mountains and seas of the west, two new barbarian powers were forming in the east. Ida, the Flamebearer, the Angle who had established his power on the rock fortress of Bamborough, threatened the northern part of Maelgwn's realm; the Saxons, though London barred the Thames estuary, were advancing over Salisbury Plain towards the lower valley of the Severn. Popular imagination was deeply affected by the death of Maelgwn of the yellow plague. Soon the western province he had united was to bear the full force of Teutonic attack. The Saxons came first. Ceawlin appeared in the Severn valley in 577. The victory of Deorham extended West Saxon power to the sea, and Cornwall fell away finally from Wales. The great cities of the Severn, from Gloucester to Uriconium, were sacked and devastated; and it was not until he was advancing on the valley of the Dee that the conqueror was hurled back in the battle of Fethanlea in 584. As soon as the Saxon had recoiled from the attack on the western province, the Angle came. About 613 the Angle king Ethelfrith defeated the Britons at the battle of Chester. The Angle dominions now included parts of the vale of Maelor, and reached the western sea, and the great fortress of Chester no longer united the mountains of the west and of the north under one rule. The victory of Chester, an account of which Bede might have got in his childhood from one who had been there, cut Strathclyde and the whole of the north from Wales. The whole that now remained of the Roman province was the mass of mountains between the plains and the

sea—modern Wales. One great attempt was made by Cadwallon [or Cadwallawn, ruler of Gwynedd] to recover the north, and to wear the crown of Britain. For one year alone he succeeded in holding it; when he died fighting for it near the Great Wall in 635, he bequeathed to his son Cadwaladr a vanishing crown, powerful enemies, a distracted and a plague-stricken country. The Cymric attempt at continuing the political unity bequeathed by Rome to the west, found expression in the romances of Arthur, whose dim and majestic presence gradually dominates Welsh political thought. The period which bequeathed Wales the mythical champion of its traditional unity, also gave it a patron saint. St. David represents the final victory of Christ over a host of deities—Lud of the Silver Hand, patron of flocks and ships; Merlin, imprisoned in an enchanted palace; Lear, and old King Cole; Gwydion ap Don, who created the maiden Flower-Aspect from rose and broom and anemomy; Elden, goddess of marching armies, and Ceridwen, goddess of wisdom and knowledge; and a host of others, some mighty and some maimed, some possessed of wonderful power, others known from the good they did. The disappearance of the Motley throng was not final; many of them, especially well deities, reappeared disguised as the saints of the new religion—some have remained in popular superstition to this day. . . . With the death of Cadwaladr [683], the struggle for the recovery of the north was given up for ever. For the next six hundred years the struggle is a different one; it is between a king who regarded himself as the champion of the unity of the Britons, wearing 'the crown of Arthur' [for to the Welsh Arthur is essentially a Welsh hero], and the princes who were descended from the tribal kinglets. The chief sources of information concerning the attempt at uniting Wales is the 'Chronicle of the Princes.' The earliest copy of it we possess was written during the first half of the fourteenth century, probably at the Cistercian abbey of Strata Florida in Ceredigion. It begins, as it ends, with the loss of a crown; it begins with the loss of the 'crown of Britain,' it ends in the midst of the war which caused the loss of the crown of Wales. It is full, picturesque, and generally trustworthy."—O. M. Edwards, *Wales*, pp. 27-31.—See also ARTHURIAN LEGEND; BRITAIN: 6th century; CUMBRIA; MYTHOLOGY: Celtic: Christian era.

8th and 9th centuries.—Invaded by Saxons and Danes.—Rhodri Mawr's defense of his country.—Three divisions of Wales.—For two centuries, the eighth and ninth, Wales was harassed by invaders. Offa, king of the Mercians, conquered Amwythig and Henfordd; the Norse and Danish pirates ravaged the eastern coast, pillaging the flourishing monasteries. In this long era of struggle for her self-preservation there rose a king among the Welsh who was able to defend his country by bringing first to his standard the warring native chieftains. This was Rhodri Mawr, or Rhoderick the Great, whose name became part of the national heroic traditions of the Welsh. In 877, he lost his life in battle, and his power passed to his three sons, among whom Wales was divided—Gwynedd (North Wales), Deheubarth (South Wales), and Powys (Mid Wales). Three courts were maintained.

928.—Laws of Howel Dda.—"With the advent of Hywel Dda to the throne, these separate semi-independent kingdoms were merged into one under the rule of one sovereign. Even more important

than the unification of Wales, as inaugurated in Hywel's [Howel Dda the Good] reign, was the codification of Welsh law which he brought about [928]. He was not long on the throne before he perceived that the laws and customs of the country were being violated with impunity, and, as a result, were losing both their value and necessity for the people. In order to arrest the degeneracy of law by giving it a standard value, and to readjust the social habits of the people to the new conditions created by the great development of trade and the break-up of an antiquated social caste, Hywel summoned representative men from each commot to meet him in council. As many as 170 prelates and 836 deputies assembled and, after prayer and fasting, twelve of the most experienced persons, together with a doctor of laws, were chosen from that assembly, and to them was assigned the task of examining, abrogating and codifying all the various and varying laws in force throughout the land. Their labours resulted in the publication of 'The Ancient Laws and Institutes of Wales.' This work has great historical importance. It affords the clearest insight into the social modes and customs that prevailed among the early Welsh and reflects the readjustments in the habits of the people which a new civilisation was making inevitable. As Mr. O. M. Edwards points out, 'there is one great radical difference between the Wales of the Laws and later Wales—the social system is tribal, not territorial. The political unit is always a group of families, not a district of land. The king is not the owner of the land, he is the patriarch of his people.'—J. H. Edwards, *Life of David Lloyd George, with a short history of the Welsh people*, v. 1, pp. 17-18.

950-1062.—Period of tribal dissensions.—Following the rule of Howel Dda, who died in 950, the country was torn by tribal wars brought on by the rivalries of the princes of Powys, Gwynedd, and Deheubarth, and their feudal followers. Llewelyn ap Seissyllt finally won the overlordship of all Wales and reigned till 1022, giving the country a fairly peaceful rule. His son Griffith carried on a long war against Harold, earl of Wessex, until 1062 when he was treacherously slain. Then Wales was placed under the king's half brothers, by Harold, who was himself, within less than five years, to fall before the invading Normans.

1066-1169.—William the Conqueror, and Welsh resistance.—Bleddyn.—Griffith ap Cynan.—Owain Gwynedd.—"William the Conqueror landed in England in 1066. The conquest of England was accomplished in the next five years, but that of 'gallant little Wales,' to which William immediately turned his attention, was to occupy two hundred. To Hugh the Wolf, the Norman custodian of Chester (whose name will be recognised in that of Hugh Lupus, the late Duke of Westminster), was entrusted the subjugation of North Wales. Robert, known as Robert of Rhuddlan, was his chief lieutenant in the task, and soon established himself at Rhuddlan on the Clwyd, where, on the site of an old Welsh fort, he built the sturdy castle which remains, as improved by Edward I, and but little dilapidated, to this day. Other Norman nobles were at the same time pushing into Wales further south from Shrewsbury and Hereford. Bleddyn [prince of Powys], who in the north bore the brunt of the first Norman attack, was killed in battle (not with the Normans but with a rival prince) in 1075. Then arose Griffith ap Conan [1075], the half Irish prince of Gwynedd, who was to stem the tide of Norman progress. But he had in the first instance to establish himself

in his own dominions. To achieve this he made an alliance with Robert of Rhuddlan, to which neither party intended to adhere. Griffith got the best of the bargain, gaining time to secure the loyalty of Gwynedd, which was all he wanted. His career, however, though ultimately successful, was one of many vicissitudes. Hugh the Wolf and Robert of Rhuddlan soon ravaged Snowdon. Griffith was often defeated, sometimes driven to sea as the only means of escape, often occupied in subduing one or other of his Welsh neighbours, and once for a long period the prisoner of Hugh the Wolf in the dungeons of Chester. While Griffith was a prisoner, Robert of Rhuddlan reared a Norman castle at Deganwy on the site of the Welsh one, realising no doubt the need for a stronghold here if Snowdon was to be held or reconquered. Then was made the first attempt since Roman times at the scientific outflanking of Snowdon. Starting from the Conway, Hugh the Wolf and Robert of Rhuddlan crossed by sea to Anglesey and built the castle of Aberlleiniog, a few miles north of the spot where Beaumaris Castle still stands. Another castle was established on the heights south-east of Bangor on the mainland, but it appears to have been found untenable and was soon abandoned. Meanwhile the other Norman forces had attacked South Wales successfully both by sea and land, and before 1094 had subdued it. Snowdon alone held out in the north, and hopeless though its position seemed, the indomitable Griffith was yet to set it free. He escaped from Chester, successfully stormed Aberlleiniog, drove Robert of Rhuddlan back to Deganwy, and carried the war into what the Normans had regarded as finally conquered territory. He had his revenge on Robert too. The event is thus described by Mr. Owen Edwards: 'One hot day in July, as Robert was enjoying his noontide sleep at Deganwy, Griffith came with a few ships, and they cast anchor under Great Orme's Head. When Robert awoke he saw the ships, full of his cattle, ready to put to sea. Shouting and cursing, he snatched his shield, and ran down the steep, rocky bank to the seashore accompanied by one retainer only. He died like a wild boar, fighting to the last, pierced through and through by the Welshmen's spears. Griffith cut his head off and nailed it to the mast of his ship and then, within sight of the pursuing Normans, threw it into the sea.' . . . Encouraged by the example of Griffith, South Wales now almost shook off the Norman yoke, but the tide soon turned again. William Rufus [1087-1089], now on the throne of England, came west in person and almost recovered the ground which had been lost. Aberlleiniog was quickly rebuilt, and Norman armies again pressed into Snowdon from Anglesey and Deganwy. But now, and again in the reign of Henry I [1087-1100], Griffith defied all attempts to subdue him, and died in 1137 master of the greater part of Wales, leaving an unsurpassed reputation for restless energy and indomitable courage. Owen Gwynedd [1137-1170], elder son of Griffith ap Conan, aided by his brother Cadwaladr, and taking advantage of the distracted state of England in the reign of Stephen, for a time succeeded in extending the dominion established by his father. But Cadwaladr alienated Owen by a crime in 1143, and several years of civil war ensued in Wales. By 1152 Owen had established his supremacy, and when Henry II, who came to the throne of England in 1154, invaded Wales, Owen was to some extent ready to oppose him. Nevertheless, Henry was not seriously checked till his troops had entered Anglesey by sea. A temporary peace was

ROYAL EISTEDDFOD AT CARNARVON, WALES

National bardic congress, meeting annually, for the encouragement of bardism, music and general literature of the Welsh

then agreed upon, and, as usually happened when no foreign war occupied them, the various Welsh princes again fought among themselves. By 1169 Owen had once more established his authority. His growing power induced Henry II to attack him again, this time by a new route up the valley of the Dee. Owen assembled an army at Corwen, and Henry was compelled to retire on Chester. He made one more attempt to organise an expedition into Gwynedd along the coast, but this too was unsuccessful. Owen Gwynedd died later in the same year (1169) and was buried in Bangor Cathedral, where, in the same grave, his brother Cadwaladr, who had returned to his allegiance before the death of Owen, was laid three years afterwards."—H. Pilkington, *North Wales: Its wild story and scenery*, pp. 17-19.

1200-1277.—Llewelyn ab Iorwerth the Great.—Alliances with King John and Henry III.—Great assembly at Aberdovey.—Llewelyn ab Gruffydd, prince of all Wales.—Alliance with Simon de Montfort and French.—Treaty of Montgomery.—War with Edward I.—Treaty of Rhuddlan.—“With the advent of the thirteenth century two great historical personages dominate the Welsh stage in turn, and around their respective personalities the changing scenes revolve. These were the two Llywelyns—Llywelyn ap Iorwerth [1200-1240], famed in Welsh history as Llywelyn the Great, and Llywelyn ap Griffith [1282]. His father—Iorwerth—was the rightful heir to the throne of Gwynedd; but it appears that his claims were disregarded on account of the physical disfigurement of a broken nose. If young Llywelyn ap Iorwerth found no throne to inherit at his father's death, he was in the position of being the rightful heir to a bequeathed claim, and with the powerful aid of his mother's kinsfolk he speedily set himself to make good that claim. . . . One portion after another of the Snowdonian district succumbed to Llywelyn's might, and under the spell of his prowess Gwynedd recovered its past glory and became once more the centre and symbol of the independence of Wales. By the time Llywelyn had attained his majority the whole country had come under his sway, and so great was his prestige that King John, who now occupied the English throne, bestowed upon him in marriage his illegitimate daughter, Joan. Such an event was in itself eloquent in its meaning. If not merely embodied a recognition of the independence of Wales, but it obviously sought, by means of the most sacred of hostages, to perpetuate the policy of conciliation. Unfortunately, the hopes which sprang from such an alliance became dissipated in a personal estrangement between Llywelyn and his father-in-law, and this developed into dimensions of war; but the source of all this tragic result lay in John's notorious shiftiness of character, and not in any breach of trust on the part of the Welsh prince. . . . In that Great Charter, so aptly described as ‘the basis of English liberty,’ there were three clauses which had special reference to the interests of Wales. These clauses pledged the king to the restitution to Welshmen of all lands that had been taken from them, and they further stipulated for all legal disputes in Wales being henceforth decided in strict accordance with the accepted code of Welsh laws and not by the laws and customs prevailing on the English borders. [See MAGNA CARTA.] . . . In the year following the historic date of the Great Charter he [Llewelyn] convened all the native princes to meet in assembly at Aberdovey [1216]. This assembly has been very aptly described ‘as virtually a Welsh parliament,

the first of its kind.’ The purpose of the gathering was equally unique. ‘It was to be a legislative, an executive, and a judicial body. It was to represent the unity of the country under one supreme prince of Wales.’ . . . [In 1233 he had overcome South Wales.] . . . He realised that, in the highest interests of the country, it was better to give away the semblance of independence in order to preserve the reality. He was much more concerned in protecting Welsh territory from the menace of further encroachments and of ensuring the independence of his people in their own internal affairs than in waging a hopeless struggle for the elusive shadow of an illusive sovereignty. Llywelyn had great difficulty in bringing the Welsh princes into line with his declared policy, but the masterfulness of his personality finally triumphed. The attitude of the Welsh chieftains, however, was that of sullen acquiescence rather than of agreement, when ‘in 1237 Llywelyn, Prince of Wales, by special messengers sent word to Henry III. that as his time of life required that he should henceforth abandon all strife and tumult of war and should for the future enjoy peace, he had determined to place himself and his possessions under the authority and protection of him, the English king, and would hold his lands from him in all fealty and friendship, and enter into an indissoluble treaty; and if the king should go on any expedition he would, to the best of his power, as his liege subject, promote it by assisting him with troops, arms, horses, and money.’ As might have been expected, such vassalage on the part of the great Cymric chief was readily accepted by the king, and in return Llywelyn's lordship over the whole territory of Wales received the royal imprimatur. . . . [Llewelyn ab Iorwerth the Great, died in 1240. Wales again became disunited and broke away from the suzerainty of England. Llewelyn ab Gruffydd came into power in 1246 and by 1258 had made all the Welsh chieftains take the oath of fealty to him.] In every direction Llewelyn ap Griffith was victorious, and his sovereignty supreme. Gwynedd had been restored to its ancient supremacy, and the Welsh princes had become not merely the allies of Llywelyn, but also his feudal vassals. The Welsh leader, however, had a genius for turning the latent resources of national sentiment to practical use. He recognised the necessity, no less than the desirability, of symbolising the unity of Wales in the stable form of a recognised sovereignty. He was not long in giving definite shape to his purpose. Early in 1258 he summoned, after the historic example of his illustrious grandfather, all the princes to meet in council, and at that gathering he assumed the title of ‘Prince of Wales.’ The significance of the new title becomes apparent by reason of the fact that Llywelyn the Great, even in the heyday of his triumphs, had been content with mere title of ‘Prince of Aberffraw and Lord of Snowdon.’ The new prince soon proved that his new designation was to be no mere empty title. He infused into the sonorousness of the phrase an authority absolutely unrivalled in its range and unprecedented in the history of Wales. Not only did he enter into a confederacy with the English barons in their great struggle, under the leadership of Simon de Montfort, against the unconstitutional action of the king, but he took a still more momentous step by embarking upon a policy of foreign alliances. He made a compact with Scotland by which it was agreed that neither country should make peace with England without the consent of the other, and should in time of war make common cause. . . . So real had Lly-

welyn's supremacy become, and so widespread was his authority, that the English king had no alternative but to recognise it as an outstanding fact. The royal acknowledgment became embodied in the Treaty of Montgomery in 1267 in terms that were most favourable to the Welsh prince. [In 1274, Llewelyn refused to attend Edward's coronation.] . . . In 1275 Edward, determined to come to grips with the Welsh ruler, appeared with an army at Chester, and under cover of force commanded Llywelyn to render homage. On the unanimous advice of the council of the Welsh princes, declares a Welsh chronicler, 'Llywelyn did not go to the king, and for that reason the king returned in anger to England.' . . . In 1277 four great armies marched into Wales, and the country was attacked at its most vulnerable points. The king himself led a force through Chester on to Rhuddlan in the northern district; another advanced through Shrewsbury; a third penetrated as far as Brecon; while a fourth marched to Carmarthen in the south. In this way the whole of the country became scheduled into military campaigns, and Edward was able to draw his cordon tight. It was not, however, the strength of the mighty hosts of the English king that appalled Llywelyn, but the hideous spectre of famine that hovered around his own camp. The cornfields in Anglesey had been ruthlessly devastated, and he had no means of replenishing his food supplies. Llywelyn, in the circumstances, deemed discretion to be better than a hopeless valour, and accordingly he entered into negotiations with the king. On November 10th, he signed, in Edward's presence, the Treaty of Rhuddlan [or Conway]. By the terms of this treaty, so truly described as 'humiliating,' Llywelyn was permitted to retain the title of 'Prince of Wales,' but the title was to become extinct at his death and the barons of Snowdon were to become the king's men. His territories were reduced to the dimensions of the Snowdonian district, and all the Welsh princes were to transfer their allegiance from Llywelyn to Edward. Further, Llywelyn himself was required to come to England annually to do homage to the English king."—J. H. Edwards, *Life of David Lloyd George, with a short history of the Welsh people*, v. 1, pp. 44, 46, 49, 57-60.—"The Treaty of Conway humbled Llywelyn as signally as that of Montgomery had exalted him. By it he lost all his conquests in South and Mid Wales and even that Middle Country between the Conway and the Dee which no strong ruler of Gwynedd had ever let slip, and which he had held from the beginning of his victorious career. His territory was confined within the comparatively narrow bounds of Gwynedd above Conway."—J. E. Lloyd, *History of Wales from the earliest times to the Edwardian conquest*, v. 2, p. 759.

1282-1284.—Conquest of Wales by Edward I.—Death of Llewelyn.—Statute of Rhuddlan.—"The final breach between Llywelyn and the king came suddenly and there is little in the history of the preceding three years to suggest that it was impending. No doubt, the prince had his grievances, but they were not of the first order, and Edward was taken completely by surprise when news was brought to him at Devizes of the outbreak of March, 1282. The cause of the war was the oppressive rule of the royal officials, now as of old doing their master grave disservice, in the districts which had been taken from Llywelyn, and the prince was drawn into the field, not so much by his own wrongs as by those endured by his former subjects."—J. E. Lloyd, *History of*

Wales from the earliest times to the Edwardian conquest, v. 2, p. 761.—Edward I led his armies into Gwynedd and took Conway castle in 1282. Llewelyn was killed in an obscure skirmish and Gwynedd soon submitted. Edward built several castles, Carnarvon, Criccieth and Harlech, as fortresses to hold his possessions. In 1284 at Carnarvon castle the title of Prince of Wales was given to his new born son, afterwards Edward II. By the statute of Rhuddlan 1284 (or *Statuta Walliæ*) he divided the ancient kingdoms of Gwynedd, Powys, Deheubarth and Morganwg into counties. "The result of this *Statuta Walliæ* was to separate North Wales from the marches. The eastern part of Wales was divided into counties and placed under the English system of local government; sheriffs and other officers were appointed; the English mode of legal procedure was established; the office of coroner was introduced; the king's writs were made to run in Wales; the assize, the jury, essoins, and vouching to warranty in the English manner were also introduced; the English law of dower took the place of the old Welsh law relating to goods in communion and division on separation and *da*. In one important particular, however, the old Welsh system still lived on. The Welsh mode of inheritance of land, not according to the law of primogeniture, but according to a custom similar to that existing in Kent to-day, was preserved. In the future as in the past Welsh land descended, not to the eldest son, but to all heirs equally."—G. Stone, *Wales*, p. 351.

1307-1327.—Policy of Edward II toward Wales.—His system of Welsh juries.—First representation in English Parliament.—"It was a wonder to an English chronicler a hundred years later why Wales clung to Edward II. when Scotland had rebelled against him and when England had cast him away, why its poets had written elegies on him in their own tongue, and why it still remembered him with affection. . . . During the whole of his reign [1307-1327] a struggle was going on in Wales between the new official class and the conquered people. When the king interfered it was in the interest of the Welsh freemen. . . . Welshmen were denied justice in civil matters, because the jury was English and ignorant of the customs of Wales. Edward II. ordained that suits between Welshmen must be decided by a Welsh jury and according to Welsh law; suits between Welshmen and Englishmen by a jury composed of an equal number of Welshmen and Englishmen; and suits between Englishmen as before. . . . Between the conquest and the reign of Henry VIII. Edward is the only king who summoned members from Wales to his Parliaments. In 1322, when he was at the height of his power, twenty-four representatives were summoned from South Wales and twenty-four from North Wales. In his last Parliament in 1326, the three counties of North Wales were represented by eighteen Welshmen, and their boroughs by six Englishmen."—O. M. Edwards, *Wales*, pp. 221-224.—"The evils which sprang from these many jurisdictions had an important bearing on the history of Wales for the next two centuries. With so many masters having rule over them, it is not to be wondered at that the Welsh were discontented and eventually rose in rebellion. It has been suggested comparatively recently that the main cause of the rising under Owen Glendower was the Black Death, with its resulting misery. [See also BLACK DEATH.] That there is much probability in this suggestion is certain, but it should also be remembered that

the Welsh had been groaning for over a century under seigneurial jurisdictions without any native protectors to guard them from real oppression, as had been the case in the earlier years of the struggle between Welsh and Norman and Welsh and English. . . . It is not to be expected, however, that a conquered country will immediately submit to the commands and demands of the conqueror. Throughout the early years of Edward II's reign there are numerous references in the *Calendar of Close Rolls* to Wales, many of them being directed to Roger de Mortuo Mari (Mortimer), Justice of Wales, who is frequently ordered to see that the king's castles in Wales are fortified and well guarded. We also find him (in 1300) ordered not to appoint Welshmen to fill the offices of sheriff and bailiff if he can find Englishmen."—G. Stone, *Wales*, pp. 352, 357.

1402-1413.—Owen Glendower's rebellion.—Alliance with the Percys.—His defeat at Shrewsbury.—England's policy toward conquered Wales.—The usurpation by Henry IV of the English crown played an important part in Welsh history. As lord of Hereford, he represented to the Welsh one of the hated marcher lords and as such could never be popular. A national hero arose in Owen Glendower, a descendant of the last Llewelyn. His lands had been confiscated by Lord Grey of Ruthin. In 1402 Owen had sufficient troops and followers to make a raid on Lord Grey and take him prisoner near Snowdon. He overran Herefordshire (the marcher lands of the king), and took prisoner Sir Edmund Mortimer, uncle to the rightful heir of the English throne. This captive was instrumental in turning Owen's mind towards deposing Henry IV. An alliance took place between Owen and the Percys of Northumberland, who were discontented with their lack of reward in helping Henry to secure the throne. Owen also allied himself with the French, and three times he was able to resist attacks on his country. "The French did not commence to send aid to Owain until 1404. There is reason to believe that about this time there was a well-developed plan in existence for the invasion of England by France. A league with France was signed by Owain's ambassadors, John Hanner and Griffith Yonge, in Paris on June 14, 1404. It was not ratified by Owain, however, until January 1405. About the same time Owain had obtained the support of the Pope, and Trevor, Bishop of St. Asaph, seems to have thought that Owain's bid for power would prove successful, for he is found revolting from Henry and joining the forces of the Welsh leader. . . . Glyndwr was now at the highest point in his career. We find him keeping a regular court in Wales, possessing his own chancery, seal, and courts of law. We even read of his calling a Parliament of the de Montfort type to meet at Machynlleth, and he was also formally crowned Prince of Wales."—G. Stone, *Wales*, pp. 383, 378.—At last he decided that the time was ripe for an invasion of England with the aid of the Percys and Mortimers. The three armies were to meet at Shrewsbury, but for some reason Glendower failed his two allies, who were hopelessly defeated. "The established Saxon view is that the *débâcle* of Shrewsbury was caused to a great extent by Glyndwr's liking for destructive warfare—a trait which kept him ravaging South Wales too long, so that he was unable to form a juncture with Percy's forces at Shrewsbury, and arrived too late to support his ally, being consequently forced to look passively on at the defeat of Hotspur's army and the destruction of his greater ambitions.

Within recent years, however, an extremely instructive addition has been made to the theories relating to this engagement by a learned author who chooses to be known under the pen-name of 'Owen Rhoscomyl.' If we accept the suggestions thrown out by this writer it would seem that the real rendezvous of the allies was fixed in the Mortimer country at Ludlow—which was, of course, the seat of the Mortimers' power. Our authority adds: 'From this place they were to march eastward into England to attack Henry with a view to placing the crown upon the head of the child Earl of March.' It is clear that, for this juncture to be safely effected, it was desirable for Glyndwr to make the country behind as safe as possible. It would have been madness to have withdrawn his troops from Wales in an easterly direction if he had left behind him all the retainers and men-at-arms of his enemies the marcher lords, ready and able to fall upon his now defenceless possessions. He would have had no safe base upon which to fall in the event of a temporary check or defeat. In consequence of such considerations it does seem at least probable that Owain had a definite politic purpose in his harrying of South Wales. While Hotspur was hurrying down to Cheshire, Owain was carrying fire and sword throughout the south. He had not, however, been forgetful of his ally. Many of his Welsh followers had been directed to join Hotspur's forces in Cheshire. As a result of these and other additions to his ranks, Hotspur, who was ever a better man in the battlefield than in the council-chamber, seems to have determined to accomplish the overthrow of Henry single-handed. He certainly struck out east, completely off the line of march he should have taken had it been his purpose to join his allies. It was not, indeed, until he found that the men of the Midlands were not hurrying to his standard like the men of Cheshire that he decided to attempt the juncture originally planned. Now, however, it was too late. . . . Everything seems to have pointed to the necessity for instant action. The scattered armies of the allies might have been combined and flung against the king. But Owain failed to act. It was the great blunder of his life and the turning-point of his career. Hence onward his star was on the decline, until at last it set in gloom as deep as ever enclouded the last days of a brave man's life. . . . The later years of Owain's life are wrapped in obscurity. In 1413 Henry IV had been succeeded by his son Henry of Monmouth. At this time Glyndwr had been reduced to the condition of a wanderer among the mountains of the north. His followers had largely deserted him, won over by the promises of pardon held out to them by Hugh Huls, or Holes, Baron of the Exchequer, and Chief Justice Hankford, who had been sent by Henry V to North Wales to inquire into the conduct and pardon of rebels who were prepared to submit and pay an appropriate fine in lieu of escheat. By the end of that year the country was quiet, and such confidence had Henry in the settled state of Wales that we find a Welshman, Rhys ap Thomas, appointed Steward of Cardigan. Castles were rebuilt and the country returned to a state of peace. As Mr. Wylie has said in his work on Henry V: 'The general pacification of the country is strongly evidenced by the employment of many Welshmen in positions of trust under the English Government, and it is significant to find many Welsh squires as well as 500 archers from South Wales with genuine Welsh names fighting side by side with Englishmen at Agincourt, though there is also evidence that some

Welsh gentlemen fought with the French on the opposite side.'—G. Stone, *Wales*, pp. 379-381, 383, 388.

1485-1603.—Tudor Royal House of Welsh origin.—Henry VII of England.—Act of Union.—Tudor administration of Wales.—“The Tudors traced their descent from Cadwaladr [664-683], the last British king. It is true that they had in them the royal blood of North and of South Wales. They had fought for Llywelyn the Great, they had representatives at Cressy and Agincourt, they had supported their kinsman Glendower, they had married into the French and into the English royal families. It was partly good fortune, and partly their own determination that their fortune should be good, that brought them to the brilliant position they occupied during the sixteenth century, and enabled them to become the creators of modern Britain in all the essential aspects of its history. . . . In Wales they rode rough-shod over all sentiment and tradition; and established, in their methodical pitiless way, a strong system of justice and a real political union with England. They were exceedingly popular, and Mary was not less popular than the others. Henry VII. could always call Rees ap Thomas with an army of archers to his aid [as he did at Bosworth field in 1485, when he defeated Richard III and secured the English throne]. Welshmen flocked to the Court, from the Herberts and the Cecils, who gave the sovereigns counsel in building their absolutism, to the lowly family of brewers from whom came Oliver Cromwell to subvert that absolutism, and then to imitate it. . . . [Under Henry VIII, Wales and England were strongly united by the Act of Union.] The union of 1535 brought two great benefits to Wales—its march lordships became shire ground, and it was given representation in Parliament. . . . Under the Tudors an energetic and a continuous policy succeeded in making the king's law supreme in Wales. Three institutions were used, the Star Chamber, the Court of the Council of Wales and the Marches, and the Great Sessions of Wales. . . . In Wales, as in England, there have been two great periods of the revival of local government—during the second half of the sixteenth century and during the second half of the nineteenth. But the revival meant more in Wales. It was more than the introduction of a better form of government; it realised a dream that had never been forgotten, and cannot be. Welsh independence, in a measure that would have satisfied Llywelyn, is being gradually restored in the form of local government. Under the Tudors the shire became a unit for local government; Wales had an independent system of law courts; and the towns, which had been in theory hostile garrisons, became the centres of national life. . . . But the Tudors had attempted more. To them the customs of Wales were sinister usages, its language a curse, and its national life a dead volcano of treason. They were not content with introducing the law of primogeniture, which completed the destruction of the old social system. They had enacted, in the statute which united Wales with England [1535], that all the sessions of justice were to be held in English, that all oaths were to be administered in English, and that ‘henceforth no person or persons that use the Welsh speech or language shall have or enjoy any manner of office or fees within this realm of England, Wales, or other the king's dominion, upon pain of forfeiting the same office or fees unless he or they used and exercise the English speech or language.’ . . . The upper class obeyed the Tudors, and became English in thought and language. The lower classes remained

sturdily Welsh.”—O. M. Edwards, *Wales*, pp. 311-312, 322, 330, 335-337, 339.

1535-1921.—Wales during Protestant Reformation.—Her part in England's Civil War.—Conservative character of Wales in revolutionary movements of modern history.—Education.—Development of industrial resources.—With “the Tudors came those changes which saw the fall of an aristocracy and the rise of a monarchy wisely tolerating and apparently bending before the people in their Parliament assembled. This era it was which saw the rule of law beginning to be firmly established. For Wales . . . [especially following the Act of Union of 1535] saw the seigneurial jurisdictions crushed; it saw the Council of the Marches developed and strengthened. Under Bishop Lee it saw lawlessness ruthlessly put down; under the firm hand of Thomas Cromwell it saw disorder checked and trade encouraged. Toward the end of the Tudor period, the world saw the eyes of north-western Europe turning toward Rome. The Renaissance, bringing to man the fruits of knowledge, caused him to cast away the husks of creed. Again Wales took her part. For many reasons the waves of this mighty movement had been late in reaching her shore, and Wales remained Catholic for years after England had turned Protestant.”—O. M. Edwards, *Wales*, pp. 391-392.—“Wales had its full share of the unity caused by the patriotism of Tudor times; it had its full share also in the disruption caused by the struggle between political ideals in Stuart times. It was almost entirely Royalist. It was in the English parts only, especially in southern Pembrokeshire [Pembroke is called Little England beyond Wales], that the Parliament had partisans. From the king's march on Edgehill in 1624, with an army largely Welsh, to the capture of the Harlech in 1647, the last castle to hold out for the king in the First Civil War, Wales was enthusiastically Royalist. The feeling of sheer, blind, unreasoning loyalty was strong among Welsh squires like Sir John Owen of Cleaneau. The more thoughtful and moderate men, like Archbishop Williams, though they had been strongly opposed to the absolutism which had found exponents in the favourites of the first two Stuart kings, yet threw themselves entirely to the king's side. The people followed the example of the gentry in everything. The Tudor laws had placed them more than ever in the power of the great landowners. They had no traditional reverence for the privileges of Parliament. To them the Puritan Revolution was but an extreme form of the Protestant Reformation that had been thrust upon them.”—*Ibid.*, pp. 354-355.—“But when the Bible was translated into Welsh by such men as Salesbury and Bishop Morgan [William Morgan's Bible was published 1620] and had been distributed widely by the munificence of Myddleton, the Puritan spirit began to gather in force, and although it developed too late to prevent Wales attaching herself in the main to the Royalist party in the great struggle of the Civil War, it grew in time into that austere Nonconformity which in the eighteenth century did much to cleanse Wales of serious abuses, and certainly was effective in preserving the Welsh language from the fate which has overtaken Old Cornish.”—*Ibid.*, p. 391.—“The history of modern Wales is the history of the rise of a subject class to prosperity and to political power. They were in serfdom during the period of the princes; they prospered, so quietly that the gradual amelioration of their lot was not noticed, while the social system of which they formed part was crumbling; the freemen of old

were hurled ignominiously into their ranks by mediæval lawyer and New Monarchy official; out of the tempest of war in which prince and poet were lost, they emerged free. They had little else from their freedom. Their rights to the land had gone, or were rapidly going. They had no literature; the mediæval ode had become a string of stereotyped alliterations; and when the richer class took to reading English or to reading nothing, Welsh literature died away. They had very little hope, they were thick on the land; their wealth lay in superstition and in the happiness of aimless indolence. Now, after three centuries, they are among the wealthiest and most industrious, and among the best educated and most thoughtful peasantry in the world. It is interesting to trace the history of their development; it is still more interesting to see it mirrored in their literature. They opposed every revolution that helped to make men free. They opposed the Reformation, they opposed the Puritan Revolution, they opposed the French Revolution, and every movement connected with them. But each revolution left among them a thought or a book, the legacy of one of their own number whose message during his lifetime had been like the voice of one crying in the wilderness, which sooner or later profoundly affected their life."—*Ibid.*, pp. 339-340.—"Fairly early in the eighteenth century Griffith Jones of Llanddowror, a clergyman, realised how ignorant the Welsh peasants were, and discovered that they were anxious to learn. The modern system of Welsh education, which found its completion in our own day, has its beginning in a little country school in Carmarthenshire, maintained by the pence offered by the poorest of the poor at the celebration of the Lord's Supper. . . . Almost suddenly the vast mineral wealth of Wales was discovered. It is stated that, at the present day, while England and Scotland produce minerals to the value of about £2 per acre, the produce of Wales is over £4 per acre. The Romans may have found gold in Merioneth, and copper in Anglesey; London obtained its water supply by means of wealth got out of Cardigan silver mines. But it was in the nineteenth century that agriculture became less important in Wales than the mining and manufacturing industries. The slate and greenstone quarries of Arvon and Merioneth, the copper mines of Anglesey, the zinc mines of Denbigh, the lead mines of Flint and Montgomery, the gold mines of Merioneth, and the silver mines of Cardigan, the iron furnaces of Glamorgan and Monmouth, and the great inexhaustible coal mines—their history is crowded into the nineteenth century. . . . From North Wales the human stream flows continuously to the slate quarries of Arvon and Merioneth, to the coal mines of the lower Dee, and to swell the great Welsh population of Liverpool. From every part of Wales the peasant trudges to the valleys among the Glamorgan and Monmouth hills or to the great seaports on the South Wales coast, all teeming with people. Coal and steel and tinplate, of world-wide reputation, have given energy to the labour once bestowed indolently on peat and sheep and homespun. While the population of the central shires is stationary or declining, that of Glamorgan and Monmouth has increased fivefold within sixty years. From Newport to Swansea the Severn sea is covered with ships carrying to all parts of the world the wealth of the inexhaustible mines in the mountains; Cardiff stands second among the ports of the kingdom, and third among the ports of the world. Trained by their self-education in religious and

literary matters, enfranchised when the new wealth gave them political independence, the Welsh people were peculiarly adapted for local government. In no part of the kingdom have the local councils—the County Council established in 1888 and the District Council and Parish Council established by the Local Government Act of 1894—been so welcome and so active. The year 1894, which gave a measure of local government to the Welsh ratepayer, also brought the University of Wales. [See UNIVERSITIES AND COLLEGES: 1893-1920.] However strong the Welsh claim to self-government has been, the desire for becoming capable of self-government has been stronger. The development of education has at least kept pace with the growth of wealth and of political power. . . . The development of Wales has been twofold—in national intensity and in the expansion of imperial sympathy. From Cressy and Agincourt to Albuera and Inkerman, its levies and regiments have done their duty; from David Gam and Roger Williams to Picton and Nott, its sons have been where the surge of the advancing British wave has beaten fiercest. To the cause of capital it has given a Lord Overstone, to the cause of labour a Robert Owen. If its best and strongest thought has been given to Welsh literature, it has given to England thoughts that have not been entirely forgotten, from George Herbert to Henry Vaughan, and from John Dyer to William Morris. In the development of British art it is represented by Richard Wilson, John Gibson, and Burne Jones. [During the period of the World War, Wales contributed two prime ministers to the British empire, David Lloyd George to England and W. M. Hughes to Australia.]"—*Ibid.*, pp. 386, 397, 399-400, 403.—Mar. 31, 1920, to Mar. 31, 1921, marks the first year of the establishment of the church in Wales and its formation into a separate archbishopric. WALES, Church of. See CHURCH OF WALES.

WALES, Prince of.—"When Edward I. subdued Wales, he is said to have promised the people of that country a native prince who could not speak English, and taking advantage of the fact that his queen, Eleanor, was delivered of a child at Carnarvon Castle, in North Wales, he conferred the principality upon his infant son Edward, who was yet unable to speak. By the death of his eldest brother Alphonso, Edward became heir to the throne, to which he afterwards succeeded as Edward II.; but from this time forward, the principality has been appropriated solely to the eldest sons of the kings of England, who previous to this period had only borne the title of 'Lord Prince.' In 1841, for the first time, the dukedom of Saxony was introduced among the reputed titles of the Prince of Wales. This dignity his Royal Highness derives merely in right of his own paternal descent. . . . Without any new creation, and previous to his acquiring the title of Prince of Wales, the heir-apparent of the sovereign is Duke of Cornwall, the most ancient title of its degree in England. Edward the Black Prince . . . was created the first Duke of Cornwall in 1337. . . . The dukedom merges in the Crown when there is no heir apparent, and is immediately inherited by the prince on his birth, or by the accession of his father to the throne, as the case may be. [See CORNWALL, DUCHY OF.] . . . The earldom of Chester is one of the titles conferred by patent, but it was formerly a principality, into which it had been erected by the 21st of Richard II. In the reign of Henry IV., however, the act of parliament by which it had been constituted was repealed, and it has ever since been granted in the same patent which confers the title of Prince of Wales. As the eldest sons of the kings of Scotland have enjoyed the titles of Duke of Rothsay, Earl of Carrick, Baron Renfrew, and Hereditary Great Steward of Scotland, those dignities are also invariably attributed to the Prince of Wales."—C. R. Dodd, *Manual of dignities, pt. 2.*—See also WALES: 1200-1277. In 1917, by the "Proclamation of the House of Windsor," the German title of duke of Saxony was dropped from the dignities of the prince of Wales.

WALFISH BAY, harbor and small enclave of territory of Southwest Africa. It was annexed by Great Britain in 1878, and since 1884 has been administered by the government of Cape Colony. Since 1919 the surrounding territory has been under the mandate of the Union of South Africa. The name (German *Walfish*, whale) is derived from the fact that the bay was formerly frequented by whaling ships.—See also SOUTHWEST AFRICA, PROTECTORATE OF: 1885; AFRICA: Modern: 1914-1920: Lack of railway and industrial development.

WALI, Arabian title, given to certain governors of extensive provinces under the caliphate. It seems to have had a viceregal significance, marking the bearer of it as an immediate representative of the caliph.—Based on T. P. Hughes, *Dictionary of Islam.*

WALID I (d. 714), caliph of Damascus, c. 704-714. See CALIPHATE: 715-750.

Walid II, caliph of Damascus, 743-745.

WALKER, Benjamin (1753-1818), American soldier. See U.S.A.: 1777 (January-December).

WALKER, Sir Howenden (c. 1656-1728), British naval officer. Commanded the unsuccessful expedition against Quebec, 1711. See CANADA: 1711-1713.

WALKER, Robert James (1801-1869), Amer-

ican political leader and financier. United States senator, 1835-1841; secretary of the treasury under President Polk, 1845-1849; identified with the Walker Revenue Tariff of 1846; governor of Kansas Territory, 1857-1858; negotiated a loan in Europe for the United States, 1863. See TARIFF: 1846-1861.

WALKER, William (1824-1860), American adventurer. Conducted a filibustering expedition into Nicaragua and gained control over the country, 1855. See NICARAGUA: 1855-1860; CENTRAL AMERICA: 1821-1871; COSTA RICA: 1856-1860.

WALL OF CHINA, Great. See CHINA: Origin of the people.

WALL OF PROBUS. See GERMANY: 277.

WALL STREET, street in New York City which follows the line of the early wall of the city, now the financial center of the United States. See NEW YORK CITY: 1865-1878; CAPITALISM: 19th century: United States; STOCK EXCHANGE: New York.

Investigation of. See STOCK EXCHANGE: 1909.

WALLACE, Alfred Russel (1823-1913), English scientist and philosopher. Formulated, with Darwin, the theory of natural selection. See EVOLUTION: Historical development of the idea.

WALLACE, Henry Cantwell (1866-), American cabinet member. Secretary of agriculture, 1921. See IOWA: 1920-1921; U.S.A.: 1921 (March): President Harding's cabinet.

WALLACE, John Findley (1852-), American civil engineer. First American chief engineer of the Panama canal, 1904. See PANAMA CANAL: 1904-1905.

WALLACE, Lewis (Lew) (1827-1905), American soldier and novelist. Fought at Shiloh, 1862; prevented the capture of Washington by the Confederate troops, 1864. See U.S.A.: 1864 (July: Virginia-Maryland).

WALLACE, Peter (fl. 18th century), Scottish adventurer. Led expedition to the British Honduras and made a settlement at Belize. See HONDURAS, BRITISH: 1502-1733.

WALLACE, Sir William (c. 1270-1305), Scottish patriot and national hero. Became leader of a party of insurgents in 1297; defeated the English in the battle of Stirling Bridge, 1297; made guardian of Scotland, 1297; defeated by Edward I of England at Falkirk, 1298; betrayed to the English, 1305; tried for treason and condemned to death. See SCOTLAND: 1290-1305.

WALLACH, Otto (1847-), German chemist. See NOBEL PRIZES: Chemistry: 1910.

WALLACHIA, former principality of the Balkan peninsula, now forming the southwestern part of Rumania. It is bounded by the Transylvanian Alps, Moldavia, and the Danube, and is divided by the Aluta, a tributary of the Danube, into Great Wallachia on the east and Little Wallachia on the west. Wallachia was united with Moldavia in 1861 to form the state of Rumania. See BALKAN STATES: Map showing distribution of nationalities.

Ancient inhabitants. See VLAKHS.

12th century.—Part of the second Bulgarian kingdom. See BULGARIA: 12th century.

14th century.—Conquest by Louis the Great. See HUNGARY: 1301-1442.

1393-1460.—Under the sovereignty of Turkey. See RUMANIA: 13th-18th centuries.

1595.—In domains of Transylvania. See HUNGARY: 1567-1604.

1682.—Union with Hungary against Austria. See HUNGARY: 1668-1683.

1829.—Restored to Turkey. See RUMANIA: 1828-1858.

1861.—United with Moldavia. See RUMANIA: 1856-1875.

WALLENBERG, Knut Agathon (1853-), Swedish statesman. Minister for foreign affairs, 1914-1917. See SWEDEN: 1914-1918.

WALLENSTEIN, Albrecht Wenzel Eusebius von, Duke of Friedland, Sagan, and Mecklenburg (1583-1634), German soldier and statesman. Imperialist general in the Thirty Years' War; raised an army for the imperialist service, 1625; invaded Silesia, 1627; besieged Stralsund unsuccessfully, 1628, and was removed from his command, 1630; resumed command, 1632; recovered Bohemia from the Saxons and defeated Gustavus Adolphus before Nuremberg, but was defeated by him at Lützen, 1632; removed from command and outlawed, 1634; later assassinated by his officers. See GERMANY: 1624-1626, to 1630; 1631-1632; 1632-1634; AUSTRIA: 1618-1648; HUNGARY: 1606-1660.

WALLER, Sir William (c. 1597-1668), English soldier. Served in the Thirty Years' War; was second in command of the Parliamentary forces under Essex, 1642; defeated at Cropredy Bridge, 1644; deprived of his command, 1645; expelled from Parliament, 1647; active in negotiating the return of Charles II, 1660. See ENGLAND: 1644 (January-July); 1644-1645.

WALLHOF, Battle of (1626). See SWEDEN: 1611-1620.

WALLINGFORD, Treaty of, concluded, 1153, between King Stephen and Matilda, who claimed the English crown as the heir of her father, Henry I. By the treaty Stephen was recognized as king and Matilda's son Henry (who became Henry II) was made his heir.—See also ENGLAND: 1135-1154.

WALLOONS, a people akin to the French, but representing a separate branch of the Romance peoples, inhabiting the Belgian provinces of Hainaut, Namur, Liège, parts of Luxemburg and southern Brabant. They form the lesser half of the Belgian nation, the more numerous half being Flemish, and, being allied to the French by their tongue and traditions, while the Flemish are allied to the Germans, they always represent a special problem in Belgian statesmanship. Until the fifteenth century Walloon was a literary language, and there have been several attempts in the nineteenth century to revive its use in letters. But, for all practical purposes, the use of the Walloon tongue among cultivated people has been superseded by French, to which it is closely allied. "In Namur, Liege, and Luxembourg, the speech is what is called Walloon, the same word as Welsh, and derived from the German root 'wealth,' a foreigner. [See WELSH.] By this designation the Germans of the Flemish tongue denoted the Romano-Belgic population whose language was akin to the French, and whom a hilly and impracticable country (the forest districts of the Ardennes) had more or less protected from their own arms. Now the Walloon is a form of the Romano-Keltic so peculiar and independent that it must be of great antiquity, i. e., as old as the oldest dialect of the French, and no extension of the dialects of Lorraine, or Champagne, from which it differs materially. It is also a language which must have been formed on a Keltic basis. . . . The Walloons, then, are Romano-Kel-

tic; whereas the Flemings are Germans, in speech and in blood."—R. G. Latham, *Ethnology of Europe*, ch. 3.—See also NETHERLANDS: 1494-1510; BELGIUM: Ancient and medieval history.

Submission of. See NETHERLANDS: 1577-1581.

WAMPUM.—"Wampum, or wompam, according to Trumbull was the name of the white beads made from stems or inner whorls of the *Pyruca Carica* or *Canaliculata* periwinkle shells so common on all the south coast of New England. When strung they were called wampon or wampom—peage

or peake or peg, equivalent to 'strings of white beads,' for peage means 'strung beads.' Color was the basis of the nomenclature, as well as of the difference in value. 'Wompi' was white; 'Sacki' was black; 'Suckauhock' was the black beads made from the dark part of the poquauhock, the common quahog, Venus' mercenaria or round clam shell. The value of the black was generally twice that of the white. . . . The word generally used among the Dutch who led in introducing the bead currency of the Indians, Sewan or Zeewand, was more general in its application than wampum. But whatever the difficult Indian linguistic process may have been, the New England men soon settled on wampum and peage as the working names for this currency. The shell cylinders, black or white, were about one-eighth of an inch in diameter and one-quarter long. There were shorter beads used for ornaments, but there is hardly any trace of them in the currency. . . . The Indians strung the beads on fibres of hemp or tendons taken from the flesh of their forest meat. . . . The strings of peage were embroidered on strips of deer-skin, making the 'Máchequoce,' a girdle or belt 'of five inches thickness,' or more, and to the value of ten pounds sterling or more, which was worn about the waist or thrown over the shoulders like a scarf. More than 10,000 beads were wrought into a single belt four inches wide. These belts were in common use like the gold and jewelry of our day. They also played the same symbolic part which survives in the crown jewels and other regalia of civilized nations. . . . Whenever the Indians made an important statement in their frequent negotiations, they presented a belt to prove it, to give force to their words. . . . It gave to the words the weight of hard physical facts and made the expression an emblem of great force and significance. The philologists call this literary office, this symbolic function of wampum, an elementary mnemonic record. The same was fulfilled by the quippus, knotted strings or quipu of the ancient Peruvians. . . . 'This belt preserves my words' was a common remark of the Iroquois Chief in council. . . . The Iroquois

were a mighty nation, almost an incipient state. Their only records were in these mnemonic beads. . . . Tradition gives to the Narragansetts the honor of inventing these valued articles, valuable both for use and exchange. . . . The Long Island Indians manufactured the beads in large quantities and then were forced to pay them away in tribute to the Mohawks and the fiercer tribes of the interior. Furs were readily exchanged for these trinkets, which carried a permanent value, through the constancy of the Indian desire for them. . . . After the use of wampum was established in colonial life, contracts were made payable at will in wampum, beaver, or silver. . . . The use began in New England in 1627. It was a legal tender until 1661, and for more than three quarters of a century the wampum was current in small transactions."—W. B. WAR, PREPARATION FOR

Mobilization.—Military information in peace time.—Secret service.—"The Army which will take the field at the outbreak of war is the Regular Army, which is organized, kept up, and trained, year by year, in peace. The War Army will be this Peace Army mobilized, or brought up to war strength and completed in every essential, by calling up reserve officers and men to fill its ranks."—H. Foster, *Organization: How armies are formed for war*, p. 152.—"Preparation for war includes not only the physical training of the combatant forces, but the obtaining in time of peace of military information concerning the enemy. This information covers the geography, resources and military strength of the opponent, the character and composition of his forces, their clothing, arms and equipment. It also includes the preparation of military maps of possible theaters of operations, and in recent years the playing of war games on such maps under assumed conditions approximating as closely as possible the conditions that would obtain in war. Information of the enemy's country is obtained in time of peace not only from available books and commercial sources of information, but through local representatives of

the government, such as consuls and military attachés. In addition to these, most governments possess an efficient secret service to obtain special information."—J. F. O'Ryan and W. D. A. Anderson, *Modern army in action*, p. 36.—"Military intelligence is the term applied to all such information as may be of value to the successful prosecution of a war. The Military Intelligence Division is that branch of the General Staff which is organized to secure this information. Its field of inquiry includes the investigation of active and potential enemies, allies, and neutrals; their military, political, and economic condition; their state of mind, their secret activities at home and abroad, and their strategic and tactical plans for present or future campaigns. A well-organized intelligence service provides, moreover, for estimating and safeguarding the resources of its own country; for protecting war industries and means of transportation; for stimulating the morale of its troops and of the civil population; for frustrating enemy agents and preventing the dissemination of enemy propaganda. Thus arises the distinction between the positive and the negative aspects of the service. The former, known as Positive Intelligence, con-

cerns itself with the collection and distribution of information. It publishes estimates of the military, economic, political, and psychological status of various countries; prints maps of enemy districts, with particular reference to fortifications, harbors, and routes of travel; deciphers intercepted messages, and translates foreign documents. The Negative Branch of the service concerns itself with the frustration of all agents, military or civil, who are consciously or unconsciously of value to the enemy. This is known as Counter-Espionage, or Negative Intelligence. It establishes a system of propaganda designed to neutralize the propaganda of the enemy; it detects and causes the arrest of spies among the troops as well as in the civil population; it censors news and information given to the public; it prevents enemy agents from entering or leaving the country, and it investigates the causes of economic disturbances and unrest."—E. A. Powell, *Army behind the army*, pp. 331-332.

Primitive warfare.—Military training in early Greece.—"In the earliest times every male from the age when he could use a weapon until his age rendered him helpless, was a warrior. As his intelligence increased and he developed arts and sciences their products were applied for warlike use as well as for peace time demands. Gradually the warriors accustomed to fight in masses without particular order, were exercised and trained in preparation for war. This was done under the leadership of the more expert and intelligent. Tribes learned to build their huts and villages in places difficult of access and learned to protect them with walls and stockades. From these rude beginnings developed the fortified towns of later days. As tribes expanded into nations, warfare became more complicated and a greater undertaking. . . . In Greece every citizen was a soldier and he was trained as such. Religion, education, and public athletic contests contributed to the preparation of the Greek citizen for war. He was a soldier between the ages of eighteen and sixty and political preferment was based upon military distinction."—J. F. O'Ryan and W. D. A. Anderson, *Modern army in action*, pp. 32-34.

Rome: Military service.—"Rome, like the Greek states, raised her armies on the compulsory principle. Livy tells us that Servius Tullius, about 550 B. C., compelled the citizens to arm themselves with different degrees of elaboration according to their income; and that he imposed no military service at all upon the 'proletariate'—that is, upon the poorest class, the men who had nothing. . . . [There is no doubt, however], that the proletariate were excused only so far as they were not actually needed; and that, in great crisis like the Punic Wars, the Romans armed not only the poorest classes but even slaves. The Roman army, therefore, which drove out the kings and founded the Republic, was essentially a citizen-army. In so far as any citizen legally escaped service, it was only because he did not enjoy full civic rights; and, even so, he might always be commandeered when the state had need of him. . . . But Rome's wars against Carthage, like the French Revolutionary wars, lasted so long that the citizen-soldier became a professional. Let us look a little closer into this. When Hannibal first invaded Italy, Rome put into the field about 3½ per cent. of her total population—that is, the same proportion as Prussia brought against France in 1870. After the disastrous defeat of Cannae (216 B. C.), Rome at once raised such vast levies that (if we are to

believe Delbrück) she had soon 8½ per cent. in arms—indeed, if we count the losses already suffered, she had by this time armed 9½ per cent. of her total population. . . . [At the close of the war the army had become professional.] The State, accepting still wider military responsibilities as time went on drifted more and more in the direction of the professional army, until Marius inaugurated a new epoch by emphasizing and stereotyping a movement which had begun long before his time. . . . [The Roman army changed rapidly from a citizen militia into a long-service professional army composed mainly of the poorest class and officered by the upper class.]"—G. G. Coulton, *Case for compulsory military service*, pp. 14-17.—"In the early days of the Republic the poor soldier stood to lose his farm by his patriotism. Soon the fighters had to be paid; and from the day of Marius onwards Roman commanders perforce provided for their veterans—so often their accomplices in the violation of their country's laws and liberties. The provision was made on the one hand by donations from the loot, on the other by grants of land taken from others, it might be in Italy itself. Sulla so rewarded his swordsmen; the triumvirs took the land of eighteen Italian towns to divide among their legionaries. To the end the emperors had constantly to provide for their time-expired men by confiscations. Thus did empire pay for its instrument."—J. M. Robertson, *Evolution of states*, p. 25.—"The time of service was very long; the minimum was sixteen years, the maximum twenty-five. Hence a man was a soldier all his life, a wretched condition for the poor men who were forcibly enrolled in times of urgent need. The soldiers were citizens, or became so on entering or leaving the service. They were enrolled in the legions of infantry or cavalry. The auxiliaries, who were often bands of barbarians in the pay of the Empire, became more and more numerous. . . . [The general officers in the army, the *magistri militum*, also directed] the movements of the fleets, which had stations throughout the Empire. These were at Misenum, Ravenna, Egypt, Africa, Syria, the Black Sea, Britain, Fréjus, the Rhine, with an arsenal at Mayence, the Danube, the Euphrates, the Rhone, with stations at Vienne and at Arles, the Saone at Chalons, and on Lakes Como and Neufchatel. There were many arsenals for the storage of weapons and ships' stores."—C. Bémont and G. Monod, *Medieval Europe from 395 to 1270*, pp. 12-13.

German tribes: Military service.—"No German," says Tacitus, 'may bear arms until the *civitas* has recognised him as capable of so doing. Then one of the princes, or the young man's father, or one of his relatives, equips him, in the midst of the assembly, with shield and javelin.' Henceforth he became a part of the army."—*Ibid.*, p. 28.

Merovingian period.—In Gaul, in the Merovingian period "all freemen bore their own expenses during their military service. Those who were not rich enough became dependents of more powerful men, who gave them equipments and food and secured them a share in the booty. The great proprietors brought with them, moreover, troops made up of clients and *liti*, who fought with them, and slaves, who, without joining in the combat, bore the master's arms, cared for the wounded, or buried the dead. An army could not be levied except by order of the king. He ordered, through the counts, the convocation, or *heriban*, the violation of which resulted in severe

penalties. The army was commanded by the king, the dukes, or other high officers."—*Ibid.*, pp. 90-91.

France.—Prior to the reign of Charlemagne "there was no standing army. When war broke forth the order to take the field was issued by royal proclamation (*bannum, heribannum*). Military service was not compulsory on all freemen, but on proprietors alone. Towards the end of his reign Charlemagne specified those who were liable for service. Those who possessed a certain number of *manses*, farms,—two, three, four,—according to the year, must enlist. Those who owned fewer joined with others in such a way that one would join the army and the others would pay him an indemnity in money, which took the place of pay. Counts were obliged to keep a list of all who were answerable for service. Those who failed to answer the royal summons, except for cause, were fined. There were few legal exceptions. The palatines, certain agents of the counts, bishops or abbots alone were privileged. Service was required of members of the clergy; the bishop or abbot led his men to war, as a lay noble did. The soldiers equipped and fed themselves at their own expense. The length of service was not stated; but a capitulary of 811, ordering soldiers to provide themselves with food for three months, counting from the day when they should have reached the frontier of the country to be invaded, leads to the inference that it did not exceed three months. Charlemagne's army was made up of horsemen, no infantry, as in the preceding epoch; but the organization of these armies is little known. If a frontier were invaded, a general levying of troops was made in the neighbouring countries: this was the *landwehr*, already so-called in the ninth century."—*Ibid.*, pp. 200-201.—"As late as the sixteenth century the royal army of France was made up of three distinct elements: 1, the knights; 2, the sergeants; 3, the mercenaries. 1. The direct vassals of the crown were required to perform military service, at their own expense, during forty days of each year and furnish a certain quota of men at arms; for instance, the count of Champagne, who had more than two thousand noble vassals, sent only twelve bannerets, which would be about one hundred men. The king could not keep his knights beyond the legal term of service except by paying them; it was thus Saint Louis kept Joinville during the seventh crusade. The summons to arms was made by the bailiffs and seneschals, who assumed command of the troops in their provinces and led them to the field. The knights were always mounted. 2. The sergeants (*servientes*) were the lower class impressed into military service, but their position was not clearly defined, and they fought on foot as well as on horseback. They were drawn from the king's immediate domains, or from churches in the king's domain, or from the communes. Troops from the abbey of Saint Denis took part in the sieges of Puiset under Louis VI. The communal militia appeared later; they are first heard of at Bouvines (1214), where they fought but to run away. 3. The mercenaries were recruited from all sides, but especially from Gascony, Brabant, and Hainault. They were styled *routiers* (stragglers), *cotereaux* (a name probably meaning peasants), and *paillards* (loose fellows), etc. Some among their chiefs became celebrated, as Mercadier in the service of Richard the Lion-Hearted, and Cadoc, with Philip Augustus. They formed regular troops, permanent and capable of dis-

cipline, but despised by the knights. The pay was six sous a day for paid horsemen plus the price of their horse; one sou for the infantry crossbowmen."—*Ibid.*, p. 437.—"Before the end of the thirteenth century, there began 'a transformation of military service into a tax paid to the king. The communes and chartered towns gave money instead of sending their armed men; a fact which gradually brought about a radical change in the military and financial organization of the monarchy.' This system was regularized by an act of 1317, which definitely consecrated vicarious service."—G. G. Coulton, *Case for compulsory military service*, p. 42.

Italy.—Flanders.—England.—"In the city-republics of medieval Italy, there was a law of universal service in the citizen-militia. It was these levies who won liberty for the Lombard communes at Legano, in 1176; the distinction of a city like Milan was that 'artisans, whom the military landholders contemned, acquired and deserved the right of bearing arms for their own and the public defence.' Here, as in ancient Athens, every able-bodied man was called out at once at the time of national crisis. . . . In 1200, the constitutions of these North Italian communes approached more nearly to pure democracy than any other constitutions in Europe, and their military power depended almost entirely on the compulsory citizen-levy. A century later, these cities were ruled, almost without exception, by despots; and there is . . . [probably no exception] to the rule that these despots governed by means of paid standing armies—the usual policy of an absolute government,' as Hallam calls it. In Rome, the least free politically of all the great towns, the militia was never a success: it was reconstituted at the republican revival of 1356, but disappeared soon after the abolition of these free institutions in 1362. In Florence, on the other hand, by the popular reconstitution of 1250, 'the people . . . [were] now organized on a military footing. . . . These towns and country companies combined, formed a united popular militia, ready for action at any moment, either against foreign foes or to curb patrician tyranny at home.' These armed men numbered, according to Giovanni Villani, 100,000 in 1312. By 1351, however, Florence had begun to follow the example of the other Italian cities; Matteo Villani, describing her war with the Archbishop of Milan, boasts of the ordinary citizen's unconcern. He writes (*lib. ii. cap. 20*), 'Though the enemy had so great a host close by at Mugello, the Florentines seemed to care little for all this; within the city, every man went about his merchandize or his handicraft without bearing any sort of arms.' A century later, the Florentine Republic had practically become a despotism under Cosimo de Medici, who laid the foundation of his power by an alliance with the greatest mercenary leader of his time, Francesco Sforza. We find a similar process in the great cities of the Low Countries—Ghent, Bruges, Ypres, etc. It may be traced clearly enough in the first two volumes of Pirenne's admirable *Historie de Belgique*. . . . The civic militias which saved Flanders from French despotism at the beginning of the fourteenth century were, as Pirenne points out, the forerunners of that *levée en masse* which, centuries later, saved the French Revolution. But towards the end of that same century, the Counts of Flanders began to break down the civic liberties by astute diplomacy. The citizen-militias decayed; in 1411 the Count mobilized them, but found that they

gave him little help in his wars, while they refused to disband again until they had wrung from him certain political concessions. He took care not to call out the militia again; and, by 1471, Flanders had a standing professional army of 10,000."—*Ibid.*, pp. 33-36.—The Anglo-Saxon "army was a militia (*fyrd*), aristocratic, and not a standing army. The king's personal military force only, armed like the Danes, the *huscarls*, represented a standing army. [See HOUSECARLS.] There was no real fleet. On land as well as on the seas, England was unprepared to offer a long resistance to an invader."—C. Bémont and G. Monod, *Medieval Europe from 395 to 1270*, p. 449.—Nevertheless, "the English citizen-militia was better organized, and more frequently used, than any similar force in Europe, except the republican militias of the Swiss Cantons and of Lombardy, and the almost equally democratic militias of the Low Countries. The Saxon Fyrd (as the militia was then called) nearly beat William off at Hastings; and its subsequent development cannot be better sketched than in a series of brief extracts from Professor Tout's article in the *Dictionary of English History*, pp. 730-1. "The history of the national militia subsequently to the Conquest strongly illustrates the continuity of English constitutional development. William I. exacted from every freeman the old national oath to join in defending the king, his lands and his honour both at home and beyond sea. In 1073 the fyrd took a prominent share in the conquest of Maine. William II. cheated the fyrd out of the ten shillings apiece which the shires had given them for their maintenance. Yet it was always faithful to the crown in its struggle against the feudalists. The defeat of Robert of Belesme, the repulse of David of Scotland at Northallerton, the suppression of the feudal revolt of 1173, were largely due to its valour and patriotism. . . . Henry II., while relying for foreign service mainly on mercenaries paid for by the scutages of the barons, trusted to the fyrd for home defence. His Assize of Arms (1181) revived and reorganized that ancient body, and devised an excellent machinery for compelling every citizen to possess the arms appropriate to his station in life. . . . Nor did Edward hesitate to make full use of the men thus trained. The London city documents, as the fullest existing, give us the best idea of the extent to which men were levied for the French wars. Between 1337 and 1355, London was called upon for more than 2,500 men; this in terms of modern population, would mean a levy of something like 300,000 from London alone. The town archives of Norwich and Lynn show similar evidence; and the Berkeley papers show how much was required for the county of Gloucester."—G. G. Coulton, *Case for compulsory military service*, pp. 37, 40-41.—See also FYRD.

16th-18th centuries.—Formation of modern armies.—"Modern organization dates from the close of the Feudal Epoch in the fifteenth century, after which wars were waged less for national purposes than for the furtherance of dynastic or State interests, and were no longer carried on by the levy of the nation, but by mercenaries hired by the Monarch or the State. This process originated in Italy. . . . Permanent regular forces are first found in France near the end of the fifteenth century, when the King raised companies of men-at-arms (*gens d'armes*) or armoured horsemen, and foot archers and halberdiers, of whom his Scottish Guards were the finest type. Up to that time the 'Lance'—that is,

the fully armoured knight with his retinue of a squire, a page, and three or four mounted men—formed the principal element of every military force. A number of such independent Lances, jealous of each other, and untrained to act together, could not be organized in the modern sense. Besides these mounted men, there was usually a mass of men on foot, unarmoured and ill-armed, undisciplined and untrained. In feudal times it was only the English archers, the Genoese crossbowmen, and the Swiss halberdiers who had the discipline and training to make them of any account as Infantry. The word company in its military sense denoted originally the gathering of feudal retainers who followed their lords to the wars; it then came to mean the band who obeyed a captain (*caput*, head), some noted leader among the mercenaries from whom regular armies sprang. The word company is derived from the Old French *compainie*, the Latin *companion-em* (companion), from *cum pane* (with bread), implying an intimate association of men in one mess. . . . The first country to possess a formidable Standing Army was Spain, in the sixteenth century, and her example was soon followed by France, the Empire, and the Netherlands, and in the next century by Sweden, England, and Prussia. The most important developments in war organization were due to great military reformers, whose armies became the model of their day to all other countries. These were Maurice of Nassau, who led the Dutch in their terrible struggle with Spain towards the close of the sixteenth century, and Gustavus Adolphus, King of Sweden, who a few years later formed the famous army which carried all before it during the Thirty Years' War."—H. Foster, *Organization: How armies are formed for war*, pp. 163-165, 171-172.—"Although organized according to the requirements of modern warfare, [in the seventeenth century the French] army rested upon the feudal principles. The nobles no longer lead their vassals, and in the last years of Louis XIV's reign the convocation of the *arrière-ban* appeared ridiculous. But instead of vassals, the nobles led soldiers recruited by themselves, and the regiments constituted a property, which was bequeathed to the castle, even to the children in the cradle. The nobility owed military service; in return, it received a monopoly of command. The reforms of Louvois and his successors had compelled the officers to work and to perform their duties, without affecting the privileges inherent to their caste, and of which the officers of the royal navy were equally jealous; they were called officers of the *pavillon blanc*, and were full of contempt for the officers of the *pavillon bleu*, or merchant navy."—J. Verschoyle, *History of modern civilization*, p. 358.—"In all the European states the government, at the close of the feudal régime, ceased to exact military service from the inhabitants; the armies were composed of volunteers, usually engaged for a long term of service. In the eighteenth century certain governments had need of larger armies, and as the enrolled volunteers did not suffice, they began to levy soldiers by force from among their subjects. This was done in France by Louis XIV., in Prussia by Frederick William, in Russia by Peter the Great. (Footnote: The kings of Sweden had set the example from the time of Gustavus Adolphus.) But the system was always applied to the peasants and laborers; the nobles and bourgeoisie were exempt. When France was at war with all Europe, she tried, at first, to recruit

her army with patriots (the volunteers of 1791-1792). But, from the beginning of the year 1793 the Convention was obliged to have recourse to a forced levy. At that time was declared the principle that every Frenchman owed military duty to his country. As all the young men fit for duty were not needed, a system of conscription was adopted. Lots were drawn to decide who should depart and who should remain."—C. Seignobos, *History of contemporary civilization*, p. 420.

1793-1914.—From the French Revolution to the World War.—General survey.—French law of conscription, 1798.—Substitutions.—Prussian army, 1800-1812.—Compulsory service in Europe.—European armies in 1891 and 1900.—Relative state of armament in 1907.—Japan.—United States.—“Navies maintained as a permanent force go back to the eighteenth century, when France, Spain, and England kept small fleets ready for emergencies, but the cost of building and equipping warships was in those days light indeed when compared with our own days. Immense armies came later, and are the creation of the French Revolutionary epoch, which introduced compulsory military service, or, rather, developed it on a far greater scale, for the obligation to serve in war had existed in most countries, as in England, for instance, from primitive times. A very large proportion of the population began to be called to active service, first in France during and after the Revolution, then in the other great countries of the European continent. Last of all came modern science, which provided armies and fleets with artillery of a range and variety theretofore undreamt of, adding new means of attack, first in explosives of immense power and thereafter in airships and aéroplanes and submarines and sea mines, so that war began to be carried on far above the surface of the land as well as below the surface of the sea. . . . The notion of what is called a Nation in Arms, a reversion to those primitive days when a whole tribe of Cherokees or Sioux in North America, or a whole clan of Macdonalds and Campbells in Scotland, went out to fight its neighbors, began with Napoleon, who bled France nearly white by repeatedly calling to the colors a large proportion of his subjects. The habit spread to Austria and Prussia and Italy, but was most fully worked out by Prussia. Only Britain and the United States, protected by their position, escaped the contagion, though the principle had been followed by Britain as regards its navy when in the beginning of the last century sailors had to be secured at all costs. Each nation forced the pace for the others. A new conscription law in Russia, intended to augment largely her army, was one of the causes which made Germany hurry into war in 1914, because she deemed the increase of her neighbor's forces a menace likely to become every year more formidable. Each enlargement of a standing army and navy meant, at least for some nations, an increase of the national bellicose spirit, and for all of them an increase of the military and naval caste called into existence for war purposes. The officers of the army and navy belonged to the wealthier and more educated class, and in some countries, such as Prussia and Austria, and, at least as respects the navy (which held a socially superior rank) in Russia also, to the class socially highest, so they exercised a great influence on public opinion as well as on the government. Here was a huge profession, trained for fighting,

its mind military rather than civic, its constant preoccupation with fighting creating an impatience to fight, while the vigilant eye it kept on the plans of rival countries made it eager to get ahead and be the first to strike. The civil population admired rather than blamed this eagerness, for it indicated an ardor to do what the soldier caste thought to be their duty, and as they were willing to risk their own lives they counted the lives of individual men a small matter in comparison with the national life of which they believed themselves to be the saviors. The idea that the safety of the State was to be found in the constant increase of armaments came to possess the whole people, so that even those who did not desire war repeated the old dictum, *Si vis pacem para bellum*, ‘If you wish for Peace, prepare for War.’ This was why European nations, though some grumbled, continued to bear the rapidly mounting cost of armaments and munitions. These were regarded as an insurance against war as well as against defeat, and probably even against an attack, for each nation lived in dread of its neighbors and wished to frighten them into peace.”—J. Bryce, *International relations: Eight lectures delivered in the United States in Aug, 1921 (Institute of Politics Publications, Williams College, pp. 210-212)*.—“The new dangers which France encountered in 1798 at least furnished the Directory with an opportunity of reorganizing the military forces. The wars of the Revolution had ended by giving France real armies; this had been seen in 1794, 1795, 1796; the amalgamation of battalions of volunteers and of the troops of the line had been made; one uniform only was used for the infantry, the blue coats and the white coats and the regimental names of the old monarchy had disappeared. . . . The staff was organized, but the essential point, that is to say, a regular law of recruitment, was lacking, for until then requisitions, or a levy in mass, had always been resorted to. On the 19th Fructidor an VI. (5th September, 1798) the Councils adopted a law which forced all young men between twenty and twenty-five years of age to enter the military service (with certain exceptions and dispensations); the defensurs conscrits (this was the term used), were divided into five classes or years. The legislative power settled the number of the contingent, and the executive power proceeded to the roll-call, commencing by the youngest. Called or not called, the defensurs conscrits were on the list five years after their inscription, and then received their final dismissal unless the country were at war. This was the starting point of the regular levies which constituted the military power of France. . . . [Napoleon permitted those who drew the lot for active service to pay substitutes. Consequently the rich became practically exempt. This system, which was adopted by all the countries including the United States in her Civil War drafts, remained in force until after the Franco-Prussian War of 1870. During the Napoleonic Wars] Scharnhorst, a Hanoverian officer and Minister of War, secured by the most skilful measures a national army for Prussia. He determined to convert the whole nation into soldiers by making the army a simple training school, imposing the principles of enforced military service, but never raising the whole contingent at a time. He thus made all the citizens pass through the army in succession, replacing the trained soldiers by recruits, without ever exceeding the number allowed

by Napoleon, or by the precarious state of the finances. He thus, between 1808 and 1812, prepared a strong reserve of men drilled and ready at the first signal to enter the line."—J. Verschoyle, *History of modern civilization*, pp. 386-387, 406.—"The kingdom of Prussia, which, in order to fight Napoleon, was forced to enroll all the able-bodied young men, preserved the system of universal military service, even after the war had ended. . . . [Every Prussian was a soldier; he served in the regular army for three years, then passed into the reserve, then into the Landwehr. There was no exemption, no substitution.] When the citizens of Berlin, in 1816, demanded exemption, the king replied by a threat to publish the names of all who had made the demand. But the young men who have completed their studies have the right, by enrolling in advance, to do only one year's active duty and to do it in the town of their choice. They are called one year volunteers. The Prussian system is based rather on the absolute right of the government in regard to its subjects than on a principle of equality; for Prussian society was not then, and is not now, democratic. But the example of Russia accustomed other peoples to the idea that every citizen is obliged to bear arms for his country. After the victories of Prussia over Austria (1866), and over France (1870), nearly all the European states adopted the principle of obligatory military service. Usually they have followed the Prussian method, in the institution of three years and one year terms of service. France, which in 1875 had adopted the volunteer system with a term of five years, has just changed to the three years' term, and abolished the volunteer feature (1889)."—C. Seignobos, *History of contemporary civilization*, pp. 420-421.—"In 1858 Belgium adopted Antwerp as the base of her defensive system, and the pivot of her active army. From that date until 1888 defensive works were undertaken in the neighbourhood of this city. In 1888 attention was attracted to the line of the Meuse, as a protection, it is to be presumed, against the advance of Germany; hence Liège and Namur . . . [were] fortified after the modern system."—C. S. Jerram, *Armies of the world*, p. 28.—The mutual fears engendered by the Prussian wars of conquest during the year 1864 to 1872 led to the augmentation of the several continental armies of Europe. Compulsory service and annual training became the rule and the burden of taxation became very great. Verschoyle, writing in 1891 says: "The German Empire includes more than forty-six millions of men, and its rulers have devoted themselves to perfecting the army, that formidable instrument of aggression. Having provoked the other powers to increase their armaments, it has been forced to augment its own. The Empire now possesses a permanent army of over four hundred thousand men. The twelve years' service exacted from all Germans (seven in active service and the reserve, and five in the landwehr) enables it to place 1,456,677 men, 312,732 horses, and 2,080 cannons upon a war footing without including the Landsturm or the special services. This formidable organization is a source of danger to all the neighbouring powers, and it forces them to augment their military expenses and to impose crushing sacrifices on their peoples. . . . Russia can place the greatest number of men in the field. France has made an immense effort, since the law of 1872, which rendered military service compulsory, and prolonged it until the age of forty. In case of war it can

place 1,500,000 men in the field. Germany can do the same, and has also carried the art of methodical organization of the various arms employed to a rare state of perfection. Since the passing of recent laws the Austria-Hungarian army is equally effective. Italy has extended its military organization to its utmost limit. England itself, in spite of its girdle of fleets, has endeavoured to place the army on the same level and can dispose of about 600,000 men. (Footnote: Russia has 2,151,000 men on a war footing, which could be much more than doubled in time of need. France, 1,567,000 men. Germany, 1,456,677, independent of reserves. Austria-Hungary, 1,039,536 [number augmented by the new organization of reserve]. Italy, 1,080,000 men, besides a territorial militia of 1,021,000 men. Great Britain has a regular army of 199,273 men, besides the yeomanry and militia 151,798, the volunteers 246,180 and lastly, the Indian imperial native army of 127,000 men, and that of the feudatory or independent states, 350,000). Is this then the end of our civilization? Have men laboured so hard only to invent new methods of killing each other, displayed so much intelligence only to return to a scientific barbarism that is more formidable than primitive barbarism itself? We must hope not, but that all these armaments will equalise and neutralise one another. By advancing the science of war, by forcing whole nations to arm themselves, it will be realised at last that such extremities cannot be resorted to for the gratification of vain ambitions, and that these organizations should be used solely for the defence of national territory and national honour. Meanwhile the cost of the armaments themselves is producing calamities only less disastrous than those of actual war."—J. Verschoyle, *History of modern civilization*, pp. 406, 450, 452-453.—In Austria-Hungary, where the army and the common need of presenting a united front in regard to foreign affairs were the most important links between the states, from the nineteenth to the forty-second year, all, even the clergy, were liable to service. Usually the young men were enrolled in their twenty-first year. At the end of the nineteenth century it was estimated that about 144,000 were accepted each year for training. The rest were excused. In Belgium, personal service was not obligatory. Some time during the twentieth year the young Belgians drew lots for service, and out of a total of about 45,000 annually liable, about 13,000 were taken. Substitutes were allowed at the somewhat prohibitive price of about \$300. The total war strength was estimated at 145,000. The peace strength was less than half that number. Bulgaria was actually a nation in arms. All able-bodied men were supposed to serve two years in the active army and eight years in the reserve; but cavalry, artillery, engineers and the medical corps served three years in the active army and six years in its reserve. All arms served seven years in the reserve army, a force distinct from the reserve of the active army, and passed into the militia, which was divided into two bans; the infantry served four years in each. Other arms served an additional year in the second ban. The peace strength of the army in 1900 was 2600 officers and 42,000 men including all arms. The war strength was estimated at 270,000 men and 624 guns. In Denmark, where service was obligatory, able-bodied men from the age of twenty-two, served eight years with the colors, and about six years with the reserves.

About 7,000 recruits were trained annually. The peace strength of the British army, exclusive of India amounted to 165,015 men of all ranks. The Indian army numbered 71,157, making a total of 236,172. Exclusive of 25,000 gendarmerie and republican guard, the peace strength of the French army was estimated at 27,450 officers and 517,000 men, present and absent. In Germany the total peace strength was 545,000; in Italy 222,400. Russia had a peace strength of 860,000 men and 36,000 officers. Moreover in parts of Asiatic Russia mobilization was permanent, and according to Rediger and von Lübell, the probable peace strength of the Russian army was 1,000,000.—Based on C. S. Jerram, *Armies of the world*, pp. 2-3, 26-27, 30-31, 35, 109, 147.—The relative state of armament in Europe in 1907 is indicated by the instructions given by the British Foreign secretary in June to the delegates to the second Hague conference. "After the apparently final declaration of the German Government, that under no circumstances would they take part . . . a discussion was initiated by Sir Edward Fry on August 17th, at the fourth Plenary Meeting of the Conference. He began by quoting Muravieff's Circular of 1898, and pronounced its true and eloquent words to be more opportune than ever. The charges of Europe, the United States and Japan had risen from 251 to 320 millions. Such is the expenditure which might serve better objects; such is the burden under which our peoples groan; such is the Christian peace of the civilised world in the twentieth century. I know you will agree with me that the realisation of the wish expressed in 1899 would be a great blessing for the whole of humanity. . . . The British Government, recognising that several Governments desire to restrict their military expenses, and that this can be realised by the independent action of each Power, would be ready to communicate yearly to the Powers who would do the same the programme of new ships of war and the expenditure this would entail. . . . In conclusion, I propose the following resolution: 'The Conference confirms the resolution adopted in 1899, and, seeing that the charges have considerably increased in almost all countries since that year, the Conference declares that it is highly desirable to see all Governments resume the serious study of this question.'"—A. W. Ward and G. P. Gooch, ed., *Cambridge history of British foreign policy*, v. 3, pp. 352-353.

Prior to the abolition of the feudal system in Japan "all the armed strength of the nation, partitioned into nearly three hundred independent units, was under their direct control, and it was the fief and not the nation that claimed the loyalty and services of the samurai who were the only citizens trained to arms. . . . The Imperial Government had no army at all and no means of raising one: conscription did not come till after the mediatisation of the fiefs. . . . [At the commencement of the Meiji period a beginning was made, under French instructors, in the formation of a national army, recruited by conscription, and, under British instruction, of a navy. In 1804, at the opening of the Chino-Japanese War], European residents in Tokyo were astounded at the evidence that was daily brought before their eyes of the completeness in every detail of the Japanese preparations. She had now a highly-trained army of a strength when fully mobilised of 150,000 men, with capable generals at its head, and the officers included experts in every branch of modern military science. Her mobilisation scheme,

when tested, worked with the ease of a well-oiled engine. She had enough merchant shipping for all oversea transport requirements, and an efficient navy to convoy it. . . . In 1877, when the Satsuma Rebellion took place, Japan had a trained army of, on its war footing, 46,000 men. In 1894, when the war with China occurred, she had an army which, when fully mobilised, in all its details, both for field and fortress services, numbered 220,000 men. Ten years later the war with Russia took place. Japan then had an army of 180,000 men with the colours, a first reserve of 200,000 and a second reserve of 470,000 men, all highly-trained soldiers. During the war 570,000 recruits were called up, and altogether, including camp followers of all grades, nearly one and a half million men were landed on the continent."—J. H. Longford, *Japan*, pp. 170-171, 203, 234.—"By act of February 2, 1901, the maximum authorized strength of the Regular Army of the United States was fixed at 100,619 men. Within this limit the figure was slightly varied by executive action from year to year, and after making deductions for the Philippine scouts and the quartermaster and the hospital corps it stood at 89,573 on June 30, 1913. . . . It thus appears that in 1915 there was approximately one regular soldier in the United States army for every 1150 inhabitants; at the same time it was pointed out that the figures for Great Britain were one for every 205; Germany, one for every 70; France, one for every 50; Russia, one for every 190; Japan, one for every 230. . . . The second source of military strength contemplated by our traditional policy was the organized militia of the States. The subject of the militia of the States was deemed of sufficient importance by the founders of our government to have two clauses of the Federal Constitution devoted to it. . . . The third supply of troops contemplated in our traditional policy was an army of volunteers to be raised by special measures on the actual outbreak of an emergency. The manner in which this policy operated in practice is shown by the example of the Spanish War. In April, 1898, Congress passed an Act empowering the president to call for volunteers. This act began with a declaratory provision that 'all able-bodied male citizens of the United States, and persons of foreign birth who should have declared their intention to become citizens of the United States are hereby declared to constitute the national forces, and with such exceptions and under such conditions as may be prescribed by law shall be liable to perform military duty in the service of the United States.' The act then went on to authorize the President to raise a Voluntary Army to be maintained for the period of the war only, the term of enlistment was fixed at two years unless the war should sooner end; and it was provided that so far as practical, volunteers should be recruited from the various states in proportion to their population. It was under the terms of this act that the 220,000 or more volunteers were raised, who, together with some 60,000 regulars, formed our army in the Spanish War. Two provisions of the act in particular gave rise to trouble and difficulty. The first of these was the provision fixing a definite term of enlistment, and a short term at that. The Spanish War was a short war; but, even so, it was found necessary to retain volunteers in the Philippines beyond the legal term of their service in order that the islands might not be wholly denuded of troops in the interval before the arrival of fresh forces. The error in

policy which stands out in this instance is important because it has characterized almost every similar measure adopted at other like crises in our history."—J. Dickinson, *Building of an army*, pp. 9-10, 15, 22-23.

1872.—Re-organization of French army.—After the defeat of the French in the Franco-Prussian War, "a new military law was passed in 1872 which reorganized the French army on the model of that of Prussia. The principle of universal military service was introduced. . . . This law was readily accepted by the people, and it was the prelude to a military revival which greatly alarmed Bismarck."—J. S. Schapiro, *Modern and contemporary European history*, p. 22.

1898-1913.—Holland.—Army reform and coast defense.—"In recent years [written in 1918] there has been a growing uneasiness among the Dutch lest their great colonial possessions, fine harbors, and rich trade might tempt their powerful neighbors to acts of aggression. It was also feared that, in case of war between England and Germany, Holland's neutrality might be violated by either or by both. As a result army reforms were made in 1898 and in 1912, which introduced compulsory military service on the Swiss model. A coast-defense law, passed in 1913, provided for elaborate fortifications at Flushing and at Amsterdam."—*Ibid.*, p. 488.

1900-1915.—Total naval expenditures by chief naval powers.—The total naval expenditures by the principal naval powers from 1900 to 1915 were:

1902-1909.—Brazil and Argentina in a "Dreadnought" competition.—The controversy between Brazil and Argentina about what is called "equilibrium of armament" was still carried on in 1909 with much animation in the press of both countries. The subject of discord was the Brazilian Government's order for three large battleships of the "Dreadnought" type, which was to be met by an Argentine triplet, for which tenders were urgently called. Taxpayers in both countries were inclined to support the somewhat daring proposal from Buenos Ayres that Brazil should keep the first "Dreadnought" cede the second to Argentina, and cancel the order for the third.

1905.—German emperor's statement of his peace policy based on preparation for war.—In the spring of 1905, speaking at Bremen, on the unveiling of a monument to his father, the German Emperor, William II, made a statement of his motives in striving for the creation in Germany of a great naval and military power. He said: his aim was to "do everything possible to let bayonets and cannon rest, but to keep the bayonets sharp and the cannon ready, so that envy and greed shall not disturb us in tending our garden or building our beautiful house." "I vowed," he said, "never to strike for world-mastery."

1906-1909.—"Dreadnought" era.—Outclassing of all battleships built prior to 1906.—New type and effects of its introduction.—The evolution of battleships received a startling and revolutionizing impulsion in 1906, when a new *Dreadnought* (re-

Appendix to the Congressional Record, 64th Congress, v. 53, pt. 15, p. 1884.

placing an obsolete battleship of that name) was added to the British navy. In size, plan and armament it embodied naval teachings just taken from the Russo-Japanese War, and was supposed to put every other existing battleship into an inferior second class. It brought suddenly a new standard into all comparative measurements of naval power, impairing seriously the worth of the costly monsters then afloat. It signalled, in fact, a start for entirely new racing among the competitors for "sea-power." Admiral Lord Charles Beresford lashed the naval authorities of his country for bringing on the *Dreadnought* craze. In a speech at London he said that "he did not object to Dreadnoughts or improvements in battleships; what he did object to was the advertisement connected with the first Dreadnought." Similar criticism appeared in a pamphlet published by Andrew Carnegie, when his attention was called to the fact that both Japan and Russia had bigger ships than the *Dreadnought* on the stocks before the latter was begun.

1907.—Brazilian military service.—Service in the Brazilian army was made obligatory by legislation in 1907.

1907-1909.—British territorial force.—Reorganization of 1907-1908.—Lord Roberts's criticism.—His bill for compulsory training.—The volunteer or militia forces of the United Kingdom, for home service, underwent an important reorganization in 1907, according to the provisions of an act entitled the "Territorial and Reserve Forces Act."

1907-1909.—British army organization.—Creation of a general staff.—Result of Esher Report.—Defense Committee.—After the Boer War, Great Britain awoke to the fact that, in face of the enormous continental armies then in being, her own army was organized on entirely too small a scale, and in consequence, steps were taken to place it on something like an adequate footing. In April, 1907, speaking at the imperial conference, Richard Haldane, the secretary of war in the British ministry, said: "We realized that we had gone into the war without adequate preparation for war on a great scale, and that we had never fully apprehended the importance of the maxim that all preparation in time of peace must be preparation for war; it is of no use unless it is designed for that; it is the only justification for the maintenance of armies—the preparation for war. In consequence, when the war was over, the then Government set to work—and the present Government has continued to work—to endeavour to put the modern military organization into shape. In 1904 a very important committee sat. It was presided over by a civilian who had given great attention to the study of military organization, Lord Esher, and it contained on it two very distinguished exponents of naval and military views, Sir John Fisher and Sir George Clarke, as its other members. The committee reported, and its report contained a complete scheme for the reorganization of the War office and of the Army. . . . The broad feature which emerged with regard to military preparations was this—Count Moltke was able to organize victory for the Prussian and German armies in 1866, and again in 1870, because he and the General Staff working under him were free to apply their minds wholly to war preparation. That he was able to do this was due to the fact that the organization and business administration of the Army in peace were kept entirely distinct from the service which con-

sisted in the study of war problems and in the higher training of the Staff and of the troops. That was the principle recommended by the Esher Committee, and it culminated in the provision of a brain for the Army in the shape of a General Staff. That General Staff we have been at work on for a long time past in endeavouring to get together. . . . They were got together under the Esher reorganization, and virtually there has been a General Staff in existence for some time. But it was not until last September that it received formal and complete shape in the Army Order of that month." In place of the commander-in-chief, a new post, that of inspector-general, with a term of five years, was proposed, the principal duty of the office being to inspect and report on the efficiency of the military forces. Earl Roberts had just retired from the position of commander-in-chief, and the duke of Connaught became inspector-general under the new regime. The existing Defense Committee, instituted in 1902, was to be enlarged by the addition of a permanent secretary, holding office for five years; two naval officers, selected by the admiralty; two military officers, chosen by the viceroy of India; and, if possible, other colonial representatives, holding office for two years. Of the importance of this Defense Committee, and of its work, Prime Minister Asquith took occasion to speak in Parliament (July 29, 1909): "The functions of the Defense Committee arise out of . . . the necessity of co-ordinating the work of the Navy and Army. It is the primary business of the Defense Committee to study and determine what is the best provision that can from time to time be made for the military and naval requirements of the Empire as a whole, to keep both naval and military requirements, and their due relation to each other, constantly in view. . . . In 1907 a special committee of the Committee of Imperial Defense was appointed to go into the whole matter [of the possibility of invasion]. In arriving at their conclusion the committee conceded to those who were apprehensive of invasion that it would take place when our Regular Forces were absent upon some foreign expedition and that the attack might be a surprise attack. The view unanimously arrived at was, in the first place, that as long as the naval supremacy of the country was adequately assured, invasion on a large scale, involving the transport of 150,000 men, was an absolutely impracticable operation. . . . The belief of the Admiralty was that a force of 70,000 men could not get through; but an ample margin must be allowed for safety, and it therefore became the business of the War Office to see that we had a force capable of dealing effectively with 70,000 men. For this country, then, to be secure against invasion we ought to have an unassailable supremacy at sea and a home Army ready to cope with a force of the dimensions he had named. It was upon these conclusions that both the military and naval policy of the country during his administration would be carried on."

1909.—British Navy War Council.—The following is from an official statement issued by the British Admiralty, Oct. 11, 1909: "In further development of the policy which has actuated the Board of Admiralty for some time past of organizing a Navy War Council, it has been decided to place on an established footing the arrangements made in previous years for the study of strategy and the consideration and working out of war plans. A new department, called the Naval

Mobilization Department, has been formed under the directorship of a flag officer, and there is concentrated in it that part of the business of the Naval Intelligence Department and the Naval War College which related to war plans and mobilization. Under the presidency of the First Sea Lord, the officers directing the Naval Intelligence Department, and the Assistant Secretary of the Admiralty will form the standing Navy War Council."

1909.—British Imperial Defense Conference.—Its agreements for an imperial system.—Compulsory military training contemplated in Australia.—In connection with the doubts that were awakened in Great Britain, and throughout the British empire, in 1909, as to the adequacy of their general preparations for defense, Premier Asquith announced in the House of Commons, on May 3, that steps had "been taken to ascertain whether the Governments of the self-governing Dominions are prepared to favour a conference at an early date for the discussion of imperial co-operation for defence. The Government had suggested, he said, that the conference should be held this summer—if possible, in July." The proposal was approved throughout the empire, and delegates to the conference from each of the self-governing dominions came to London and held sessions with representatives of the home government, beginning on July 28. The delegates in attendance were the following:

COMMONWEALTH OF AUSTRALIA.—Colonel J. F. Foxton, minister without portfolio, assisted by Captain Creswell and Colonel Bridges, naval and military experts.

NEW ZEALAND.—Sir Joseph Ward, prime minister and minister of defense.

CANADA.—Sir Frederick Borden, minister of militia and defense, L. Brodeur, minister of marine and fisheries, these ministers being assisted by Admiral Kingsmill and General Sir Percy Lake, as naval and military advisers.

NEWFOUNDLAND.—Sir E. P. Morris, prime minister.

CAPE COLONY.—J. F. X. Merriman, prime minister.

NATAL.—J. R. Moor, prime minister, assisted by Colonel Greene, minister of railways.

THE TRANSVAAL.—General J. C. Smuts, colonial secretary.

ORANGE RIVER COLONY.—General Hertzog, Colonial secretary.

On August 26, after the adjournment of the conference, the premier, in a statement to the House of Commons, summarized its main conclusions as follows: "First as regards military defence: after the main Conference at the Foreign office, a military Conference took place at the War Office, and resulted in an agreement on the fundamental principles set out in papers which had been prepared by the General Staff for consideration by the delegates. The substances of these papers, which will be included among the papers to be published, was the recommendation that, without impairing the complete control of the Government of each Dominion over the military forces raised within it, those forces should be standardized, the formation of units, the arrangements for transport, the patterns of weapons, and so forth, being as far as possible assimilated to those which have been recently worked out for the British Army. Thus while the Dominion troops would in each case be raised for the defense of the Dominion concerned, it would be made readily practicable in case of need for that Dominion to mobilize

and use them for the defense of the Empire as a whole. . . . The result was a plan for so organizing the forces of the Crown wherever they are that while preserving the complete autonomy of each Dominion, should these Dominions desire to assist in the defence of the Empire, in a real emergency, their forces could be rapidly combined into one homogeneous Imperial Army. Naval defence was discussed at meetings of the Conference held at the Foreign Office on August 3, 5, and 6. In Australia and New Zealand there had been eagerness for some time to take a more effective part in the defense of the empire, their remote position and their contiguity to swarming alien populations giving their people some special anxieties which are reasonable enough. They are lonely communities of Europeans, planted on the edge of the prodigious populations of the Asiatic world. They have learned suddenly that some, at least, of those populations can do things, in war and otherwise, that were supposed to be reserved especially for effective performance by the white variety of the human race. What disposition of mind will move the Eastern folk in the exercise of the powers of action—which are discoveries as new to them as to us—has yet to be learned. It is doubtful if they themselves know what the inclination of their career will be, when they have really digested the new contents of their minds and have fully surveyed their new position in the world. Meantime, Australia has good reason to think anxiously of what Japan certainly and China most probably can do, if they are moved by imperialistic ambitions to an aggressive career."

1909.—Chilian navy building.—It was reported from Santiago de Chile to the English press, Oct. 21, 1909, that "the Government has decided upon a naval expenditure of £4,000,000, which includes a 20,000 ton battleship, two ocean-going destroyers, and several submarines. Instructions for tenders have been sent to the Commission in London." A later message to the American press, November 12, stated that "the naval building programme decided upon by the Chilian government, provides for the construction of one battleship, four torpedo boat destroyers, and two submarines at an expenditure of \$14,000,000."

1909.—Danish fortification and naval defense. See DENMARK: 1902-1909.

1909.—French naval administration.—Alarming discovery of bad conditions.—France was startled and shocked in March, 1909, by rumored scandals in naval administration, uncovered by the investigations of a Parliamentary Commission.

1909.—German side of the navy building question.—When, in March, 1909, debate on the navy estimates in England started excitement over the rapidity with which Germany seemed to have developed the building of Dreadnoughts, Chancellor Bülow, on the 29th of that month, said in the Reichstag: "The Federated Governments entertain no thoughts of entering into competition with British sea-power by means of the construction of the German navy. According to the provisions of the Navy Law, the immovable purpose of German naval policy is founded upon the fact that we desire to create our naval armaments solely for the protection of our coasts and our trade. It is, moreover, an indisputable fact that the programme of our naval construction lies open in absolute publicity." This statement was supplemented by one from Admiral Tirpitz, who said: "We shall have ready for use in 1912 ten Dreadnoughts and three Invincibles—in all 13, and not

17, large modern ships—and that not in the spring, but in the autumn. How far it is right to base comparisons of naval strength upon the number of Dreadnoughts is a question which I shall not here discuss." As to the suggested readiness and desire of Great Britain to join in an international agreement for the limiting of naval armaments, the Germans had an answer, which was phrased forcibly by one of the agrarian organs when it said: "When the weaker promises the stronger to abstain from all means of increasing his strength, the strong man needs to make no further effort to retain his relative preponderance for ever.* If the other naval Powers entered into such an agreement, England, without taking upon herself any further burdens, would retain mastery at sea before which all must bow. Little need as we have to interfere with regard to England's programme, even so little need has England to look askance upon our construction of ships, not to attack England, but only in order to have a naval power with which even the strongest opponent will not light-heartedly engage in battle. This good right of ours we shall not surrender by any agreement."—See also GERMANY: 1890-1914: Growth of the army, etc.

1909.—Italian and Austrian programs of naval construction.—A dispatch from Rome in May, 1909, announced that the minister of marine, Admiral Mirabello, had obtained the approval of the cabinet to a naval program that provides for the construction within three years at a total expense of \$52,800,000 of four dreadnoughts and a number of fast scout cruisers. A local paper stated that the decision to build these vessels was reached after Italy had learned that Austria-Hungary was going to spend \$40,000,000 on increased naval power."

1909.—Italian fighting strength at the end of the year.—The fighting strength of the Italian navy was reckoned by the Rome correspondent of the *London Times*, in November, 1909, as follows: "Counting in all four of the San Giorgio cruisers [only two of which were then finished] as forming part of the available navy at the end of this year, and setting aside some 20 ships of various kinds and 40 or 50 torpedo-boats, which may, however, be of some secondary use, the full fighting force of the Italian navy at the beginning of 1910 should be six first-class battleships, five second class battleships, seven first-class armoured cruisers, three second-class armoured cruisers, 19 destroyers, and 36 first-class torpedo-boats. But it must be borne in mind that eight of the first 21 fighting units—the five battleships and three armoured cruisers described here as of the second class—are not very modern ships. The shipbuilding programme of Admiral Mirabello promises, besides other less important vessels, four battleships of the Dreadnought type."

1909.—Adoption of compulsory military training in New Zealand. See NEW ZEALAND: 1906-1909.

1909-1910.—Canadian share of the undertakings of British imperial defense.—For performance of the share assumed by Canada, of undertakings of British imperial defense agreed to at the imperial conference in London, July, 1909, Sir Wilfrid Laurier brought forward a bill in the Dominion House of Commons, January 12, 1910, a bill entitled, "An act respecting the naval service of Canada." In his speech introducing the bill Sir Wilfrid said: "It provides for the creation of a naval force to be composed of a permanent corps, of a reserve force, and of a volunteer force of

the same pattern absolutely as the present organization of the militia force. . . . Every man who will be enrolled for naval service in Canada will be enrolled by voluntary engagement. There is no compulsion of any kind, no conscription, no balloting. . . . 'Active service' as defined by the act means service or duty during an emergency, and emergency means war, invasion or insurrection, real or apprehended." The bill embodying the naval program of the government, as set forth by the prime minister, was enacted on March 11, 1910, by 119 votes to 78.

1909-1910.—French naval program revised in 1909.—Radical changes in the department of the marine.—A dispatch from Paris, June 8, 1909, announced: "According to the *Temps* this evening, the Navy Council has finally decided to recommend that, in addition to 45 ships of the line, the fleet shall consist of 12 'scout cruisers,' 60 large destroyers, and 64 submarines. The importance attached to an increase in the number of capital ships, which is the chief feature of the new proposals, is illustrated by a comparison with the so-called 'programmes' of 1900 and 1907. In 1900 it was decided on paper that the fleet should consist of 28 battleships, 24 armoured cruisers, 52 destroyers, 263 torpedo-boats, and 38 submarines or submersibles. In 1907 the composition of the fleet was changed to 38 battleships, 20 armoured cruisers, six scouts, 109 destroyers, 170 torpedo-boats, 82 submarines for offensive purposes and 49 defence submarines." The new program showed an increase in the number of capital ships and destroyers, the abolition of armoured cruisers as a separate class and of torpedo boats in favor of destroyers, and a decrease in the number of submarines. On April 1, 1910, it was announced from Paris that the Chamber of Deputies had voted to lay down two battleships in the current year, designed to equal the latest type added to the navies of Great Britain and Germany.

1909-1913.—Anticipation of World War.—European situation as seen by Rosebery and Grey.—Lord Rosebery, in speaking at a banquet given to the delegates attending the British imperial press conference, at London, in June, 1909, said: "I do not know that in some ways I have ever seen a condition of things in Europe so remarkable, so peaceful, and in some respects so ominous as the condition which exists at this moment. There is a hush in Europe, a hush in which you may almost hear a leaf fall to the ground. All forebodes peace; and yet at the same time, combined with this total absence of all questions of friction, there never was in the history of the world so threatening and so overpowering a preparation for war. That is a sign which I confess I regard as most ominous. For 40 years it has been a platitude to say that Europe is an armed camp, and for 40 years it has been true that all the nations have been facing each other armed to the teeth, and that has been in some respects a guarantee of peace. Now, what do we see? Without any tangible reason we see the nations preparing new armaments. They cannot arm any more men on land, so they have to seek new armaments upon the sea, piling up these enormous preparations as if for some great Armageddon—and that in a time of profoundest peace." On Mar. 29, 1909, Sir Edward Grey, the British secretary for foreign affairs, said: "One-half of the national revenue of the great countries in Europe is being spent on what are, after all, preparations to kill each other. Surely the extent to which this expenditure has grown really becomes a satire and a reflection

upon civilization." On the other hand, in a speech made at Karlsruhe, on September 11, 1909, after a military review in Baden, the German emperor commented on the situation as follows: "So long as there are peoples there will be enemies and envious folk; and so long as there are enemies and envious folk it will be necessary to be on one's guard against them. Consequently there will continue to be prospects of war, and even war itself, and we must be ready for everything."

1909-1913.—Belgian conscription law.—"At the beginning of the reign of King Albert [in 1909], the possibility of a general European war arose, and fears were entertained by the Belgians that their neutrality might be violated in spite of the guarantees of the powers. A new army law was therefore passed in 1913 which made military service compulsory for all citizens. Fortifications were built, particularly along the German frontier because of greater fear from that quarter."—J. S. Shapiro, *Modern and contemporary European history*, p. 494.

1909-1913.—Great Britain and Germany.—Dreadnoughts.—Parliamentary debate on navy estimates.—An exciting period of debate in Parliament and of discussion throughout Great Britain was opened on March 17, 1909, when the navy estimates for the coming year were submitted to the House of Commons. In his speech on bringing forward the estimates which contemplated an expenditure of £35,142,700, being nearly £3,000,000 in excess of the expenditures of the current year, the first lord of the admiralty, Reginald McKenna, explained the reasons for the increase at length, saying in part: "We cannot take stock of our Navy, and measure our requirements except in relation to the strength of foreign navies. I am, therefore, obliged to refer to foreign countries in making estimates of our naval requirements. Several of the Powers are rapidly developing their naval strength at this moment; but none at a pace comparable with that of Germany. . . . Two years ago, I believe, there was in Germany, with the possible exception of one or two slips in private yards, no slip capable of carrying a Dreadnought. To-day they have actually no less than 14 such slips and three more under construction. And what is true of the hull of the ships is true also of the guns, armour, and mountings. Two years ago any one familiar with the capacity of Krupp's and other great German firms would have ridiculed the possibility of their undertaking the supply of all the component parts of eight battleships in a single year. To-day this productive power is a realized fact, and it will tax the resources of our own great firms if we are to retain the supremacy in rapidity and volume of construction. Having said so much on foreign naval development, I turn to our own programme of construction. As I have said, we shall have in March, 1911, eight completed Dreadnoughts and four Invincibles. We propose to lay down two more Dreadnoughts in July of this year, and the terms of the contracts will provide that they shall be complete in July 1911. . . . Two more ships will be laid down in November this year, to be completed in 1911, and in that year our total strength in Dreadnoughts and Invincibles will be 12 of the former and four of the latter. The date, however, which we have to bear in mind is that up to which the present programme must provide—April, 1912. I have shown that we shall in the course of 1911 have 16 of these modern ships, as against 13 ships for which Germany is already making provision. The German law provides for four more ships to be

laid down in 1910-11. But if the construction of these ships is accelerated—as I understand was the case of the four ships of the 1909-10 programme—they would be completed by April, 1912. Therefore on that date Germany would have 17 Dreadnoughts and Invincibles. But even if no acceleration takes place before April, 1910, this number would be completed in the autumn of 1912. This is a contingency which his Majesty's Government have to take into account." The estimate of the first lord was challenged by Arthur Balfour, the leader of the opposition, who contended that the four ships which, according to the German programme were to be laid down on April 1, 1909, had been actually laid down in advance of that time. He had information to that effect; whereas McKenna was informed that materials had been collected in advance of that time. Over this difference of information as to the facts of German dreadnought-building, and consequent differences of conclusion, controversy raged throughout the kingdom for weeks. Prime Minister Asquith tried to moderate the impeachment of German good faith in the matter. "It is fair and right to the German Government that I should say," he said, "that we have had a most distinct declaration from them that it is not their intention to accelerate their programme (cheers) and we cannot possibly, as a Government, believing as we do most explicitly in the good faith of those declarations (cheers), we cannot possibly put before the House of Commons and Parliament a programme based on the assumption that a declaration of that kind will not be carried out."

1909-1914.—Japan's armament.—The naval status of Japan, as ascertained and described by the Tokio correspondent of *The London Times*, was as follows: "Ever since the Russo-Japanese War it has been well-nigh impossible for the public to form a clear idea of what steps were in progress with regard to the expansion and maintenance of the Japanese Navy. In the year before the outbreak of the conflict—namely, 1903, a programme of expansion was approved by the Diet. It involved the building of three battleships, three armoured cruisers, and two second-class cruisers; that is to say, eight fighting vessels, displacing 100,000 tons approximately. The cost was set down as ten millions sterling, and the programme was to have been spread over a period of 11 years, ending in 1913. Subsequently, however, owing to financial expediency, the time of completion was extended, first to 1915, and thereafter to 1916, so that seven years still remain. Knowing this and observing carefully what ships were laid down from time to time, there should have been, it will appear, no difficulty in forming a clear perception of the actual conditions at any moment."

1911-1913.—Austrian army increase.—"A proposal in 1911 to increase the [Austrian] army encountered vigorous opposition in the Reichsrat which led to a dissolution of that body. In the elections which followed, the Christian Socialists, who had favored the bill, suffered a crushing defeat; and the German Liberals, who had opposed it, gained many seats. But the international crisis arising out of the Morocco Affair [see FRANCE: 1910-1912; MOROCCO: 1911-1912] and the Balkan Wars [1912-1913], compelled the newly elected Parliament to pass a law increasing the army."—J. S. Shapiro, *Modern and contemporary European history*, p. 436.

1912-1913.—Churchill's proposal to build fewer warships.—"It was not long before the menace of German naval expansion rendered the movement [for increased naval outlay] chronic, and sooner

still the destruction of the Russian navy [in 1904-1905] was to leave Great Britain to face but one hostile fleet in the North Sea. On March 18, 1912, the First Lord of the Admiralty, Mr. Churchill, made to Germany a perfectly frank though irritatingly ingenious proposal for arresting the keen and costly naval rivalry between the two countries. 'If you will slow down in 1913,' he said to Germany, 'we will slow down too; if you decide not to build the three ships now contemplated you will automatically wipe out no fewer than five British potential super-Dreadnoughts!' Germany retorted by passing a Navy Bill increasing the naval force cruising in the North Sea from seventeen fully-manned battleships to twenty-five, with sixteen in reserve. Consequently Mr. Churchill said: 'It will be my duty to come again to Parliament this year for men, money and material.' And the First Lord thereupon expounded the consequences of the policy of the 'concentration of the British fleet in decisive theatres' . . . capable of guarding and patrolling the British Empire. . . . Admiral Tirpitz's alleged declaration on February 7, 1913, that Germany could safely accept the relative proportion (16 to 10) between the British and German Dreadnoughts proposed by Mr. Churchill in March, 1912, was made simultaneously with the proposal for the increase of the German aerial fleet and the announcement of the plan for the augmentation of the German army until it numbered 865,000 men! The reply of the French was immediate,—restoration of the three years' military service system so recklessly abandoned in 1905."—W. M. Fullerton, *Problems of power*, pp. 74-77.

1913.—France.—Extension of military service.—General European preparation.—"Poincaré's election as president [in 1913] was largely due to his vigorous championship of a three-year's military service law. In 1905 service in the army had been reduced from three to two years. . . . Under the new law [of 1913], the French army was increased by about 170,000 men."—*Ibid.*, pp. 271-272.—See also FRANCE: 1913-1914.—"All the nations began to prepare for the coming conflict more assiduously than ever; the Reichstag increased the peace footing of the German army by 136,000 men; shortly afterwards, France followed by increasing military service from two to three years; Russia reorganized her army and increased military service from three to three and one-quarter years; Austria-Hungary increased her peace footing by 97,000 men; Italy introduced important army reforms; Belgium introduced universal military service; England increased her naval appropriations."—J. S. Schapiro, *Modern and contemporary European history*, p. 708.

1914.—Swedish defense laws.—"Fear of possible Russian aggression frequently aroused [Sweden], . . . and a strong sentiment demanded a larger army and navy. In 1914 there took place a remarkable demonstration of peasants, thousands of whom came from all parts of Sweden to petition the King for greater military preparedness. King Gustavus assured them of his warm sympathy, which gave rise to a bitter controversy in the Riksdag. The Liberal Ministry was opposed to an increase in the military and naval establishments, and resigned as a protest against the King's action. A dissolution of Parliament in 1914 resulted in the triumph of the King, as the new Riksdag passed the defense bills which he advocated."—*Ibid.*, p. 477.—See also SWEDEN: 1914-1917.

1914.—European armies on a peace footing.—In 1914, the year when the greatest war broke over the world, European armies on a peace foot-

ing and fortifications were stated to be as follows: "The 'National Army' of France is composed of the Metropolitan Army and the Colonial Army, the former number 753,403 and the latter about 116,000—40,000 being in Morocco and 39,000 in Algeria—a total of 869,403, exclusive of 25,000 in the Gendarmerie or military police. Military service is compulsory and universal from the ages of 20 to 48, the only exemptions being for physical disability. . . . The peace strength of the Russian army is 1,284,000 men, its war strength 5,962,306. Military service is compulsory and universal, beginning at the age of 20 and terminating with the end of the 43d year. Service in the active army is for 3 years in the case of the infantry and artillery, for 4 years in the other arms. . . . Owing to the enormous extent of the Russian empire, its army is divided into three forces, the army of European Russia, the army of the Caucasus, and the Asiatic army. . . . Austria-Hungary's peace establishment is 472,716, the war strength of her regular army 1,360,000. Military service is universal and compulsory, beginning at the age of 19—but more usually at 21—and ending at 43. . . . The Italian army on a peace footing numbers 250,860 officers and men, exclusive of the troops in Africa. Service is compulsory and universal, beginning at the age of twenty. Two years in the permanent army are followed by 6 years in the reserve, 4 years in the mobile militia, and 7 years in the territorial militia. . . . Apart from the Indian Army and the local Forces in the various colonies the military establishment of Great Britain consists of the Regular Army and the Territorial Army, both being recruited by voluntary enlistment between the ages of 18 and 25. The enlistment is for 12 years, with permission under certain circumstances to prolong it to 21 years. Three to nine years is the period with the colors, and the remainder with the Army Reserve, most men electing to serve 7 years with the colors and 5 in the reserve. . . . The Belgian army has a peace footing of 3,542 officers and 44,061 men, with a war strength variously estimated at from 300,000 to 350,000. . . . In 1913 the Netherlands had in its Home Army 1,543 officers and 21,412 men and 152 guns. On a war footing it could probably be raised to about 270,000 men. . . . Serbia has 10 divisions divided into 4 army corps, with a peace footing of 160,000, and a war strength of over 380,000. . . . Bulgaria has a peace establishment of about 3,900 officers and 56,000 men. . . . Roumania's army on a peace footing is about 5,460 officers and 98,000 men, on a war footing 5 army corps and approximately 580,000 men. . . . In 1912 Greece had a peace establishment of 1,952 officers and 23,268 men, but the . . . [Balkan Wars have] caused her to augment them to 3 army corps and her war footing is not far from 250,000 men. . . . Few people realize how strongly the frontiers of the Powers of central Europe are fortified—in fact the whole continent bristles with fortifications."—F. L. Huidekoper, *Armies of Europe (World's Work, Sept., 1914)*.—See also WORLD WAR: Causes: Indirect 1; Preparation for war.

1914.—Naval status at outbreak of the World War. See WORLD WAR: 1914: IX. Naval operations: a.

1914-1916.—United States.—Naval strength.—Regular army.—"On July 1, 1914, the United States Navy was third in rank in regard to total tonnage built and building. France was closely pressing . . . [her] for third place. But the other leading nations had a reserve force in personnel as follows: England, 43 per cent.; Germany, 104 per cent.; France, 149 per cent.; while the U. S.

Naval Reserves were only 12 per cent. of the active personnel. All things considered, it is clearly evident that the United States ranked fourth in naval power. The great war had waged about a year before . . . [the country] awoke to the unpleasant truth of its real condition and its relative standing. The political party in power then began to realize that the nation demanded 'preparedness.' President Wilson then directed the Secretary of the Navy to draw up a shipbuilding program. . . . The Secretary decided that \$500,000,000 expended for new construction in the next five years would meet the demands and needs of the nation, and he directed the General Board to draw up a plan under these conditions. . . . As the months of debate in Congress on the Naval Appropriation bill wore on . . . the President decided that the country needed more preparedness than the Secretary had estimated. This necessity was met by the simple expedient of modifying the time limit of the above programme . . . [so as] to carry out the scheme in three instead of five years. . . . Furthermore, the Secretary . . . [was] authorized to increase the total cost of any vessel not to exceed 20 per cent. as a bonus for speedy construction."—*American Year Book*, 1916, p. 320.—The National Defense Act which became law on June 3, 1916, provided for four classes of troops: first, the Regular Army; secondly, the reorganized National Guard; thirdly, an 'enlisted reserve corps'; and fourthly, a volunteer army to be raised only in time of war. The maximum strength of the Regular Army was raised to approximately 298,000 men; but it was provided that in time of peace it should not exceed 175,000."—J. Dickinson, *Building of an army*, p. 441.

1915-1916.—England: War emergency acts.—Munitions of War Act.—National Registration Act.—Lord Derby's recruiting scheme. See ENGLAND: 1915: Naval legislative and administrative measures; Ministry of munitions; Colliery recruiting courts; 1915 (October); 1916 (December).

1916-1918.—United States: Preparedness campaign.—Selective service system.—War measures.—Mobilizing of material resources. See WORLD WAR: 1917: VIII. United States and the war: g; h; i; i, 2; U.S.A.: 1916-1917: Campaign for preparedness; 1917 (May): Military unpreparedness; 1917-1919: Effect of the war.

1919-1923.—Post-war preparations and expenditures.—"In pre-war times the statesmen of each country could make a parliamentary case for their military budgets by calling attention to the menace of prodigious armies across their frontiers. Germany and Austria built up great armaments because their frontiers were open to the attack of two great military powers who had engaged to pool their resources in the event of war. France and Russia raised huge armies because Germany possessed the most redoubtable army in the world, and could rely in the case of war upon the assistance of the not inconsiderable forces of the Austrian empire. And both Austria and France had always the uncertain factor of Italy, with her army of 3,000,000, to reckon with. But since the war . . . the two great military empires of Central Europe had disappeared. Germany, which before the war had a peace establishment of 800,000 men and reserves running into millions, has to-day a total army of 100,000 men—about one-third the size of the Polish army. The formidable German equipment which for four years pounded the cities and villages of northern France to dust is either destroyed or scattered for display amongst the towns and villages of the victors. The Austrian army, which had in 1913-14 a peace establishment

of 420,000 men and a reserve of two or three millions of trained men . . . [had been reduced in 1923 to] 30,000 men. In spite of these facts France has still an army of 736,000 men . . . under arms, with a trained reserve of two or three millions more. She is strengthening and developing her air force as if she feared—or contemplated—an immediate invasion. In 1914 France had an air force of 400 aëroplanes; to-day she has 1,152. But numbers signify little. The size, the power, and the purpose of the machines signify much. Amongst the 1,152 air machines of to-day will be found bombers of a destructiveness such as was not dreamt of in 1914. Should human folly drift once more into war, these preparations are full of evil omen as to the character of that conflict. A single bomb dropped from one of the new bombers contains more explosive material than one hundred of those carried by the old type. And the size of the machine and of its bombs is growing year by year. Where is it to stop? And what is it all for? Where is the enemy? Where is the menace which demands such gigantic military developments? Not one of the neighbours of France has to-day a force which reaches one-fourth the figures of her formidable army. Germany no longer affords a decent pretext. The population of Germany is equal to the aggregate population of Poland, Rumania, Jugo-Slavia, and Czecho-Slovakia, but her army barely numbers one-seventh of the aggregate peace establishment of these four countries. Rumania alone, with a population of 15,000,000, has an army twice the size of that allowed by the Treaty of Versailles to Germany with her population of 60,000,000. These countries have in addition to their standing armies reserve forces of millions of trained men, whilst the young men of Germany are no longer permitted to train in the use of arms. Her military equipment is destroyed, and her arsenals and workshops are closely inspected by Allied officers lest a fresh equipment should be clandestinely produced. An army of 700,000 is, therefore, not necessary in order to keep Germany within bounds. The only other powerful army in Europe is the Russian army. It is difficult to gather any reliable facts about Russia. The mists that arise from the unhealthy political and economic swamp obscure and distort all vision. The statistics concerning her army vary according to the point of view of the person who cites them. The latest figure given by the Russians themselves is 800,000. On paper that indicates as formidable a force as that possessed by the French. But the events of the past few years show clearly that the Russian army is powerful only for defence, and that it is valueless for purposes of invasion. . . . Every little state bristles with guns to scare off invaders. Meanwhile no country in Europe pays its way, except Britain, with her reduced army and navy. But by means of loans and inflated currencies they all, even the smallest of them, contrive to maintain larger armies than Frederick the Great or the Grand Monarque ever commanded in their most triumphant years."—D. Lloyd George, *Where are we going?* pp. 53-58.—"The strength of the standing armies of Europe in 1913 was 3,747,179 men. In 1922 the strength was 4,354,965, an increase of 607,786, despite the compulsory reduction of 696,135 men in the standing armies of Germany, Hungary, and Bulgaria. This means that in the remaining states of Europe there has been in 1922 an increase of 1,303,921, as compared with 1913. Great Britain's standing army in 1922 was stronger by about 10,000 men than it was in 1913, but she was then maintaining considerable forces in Constantinople, Palestine, Mesopotamia, and on the

Rhine, as the result of obligations which she had incurred after the war, obligations which account for far more than 10,000 men. The standing army of France in 1922 numbered 736,261 men, against 760,439 in 1913, a reduction of 24,178, though France's obligations in North and West Africa were enormously greater than they were before the war, and absorbed more than three times as many troops as they did in 1913. Italy, with a greatly increased land frontier, had reduced her forces in 1922 by 80,390, as compared with 1913. In the days when the territory which is now Czecho-Slovakia was governed from Vienna, it contributed to the standing army of Austria a quota of 73,000. In 1922 Czecho-Slovakia maintained an army of 160,000 men. The incidence of military service upon her people was, therefore, more than twice as heavy. The territory of the new Poland was, before the war, partly under German, partly under Austrian, and partly under Russian rule. It then found 100,000 men for the standing armies of those three great military powers. In 1922 Poland had a standing army of 275,000 men. Finland before the war provided 30,000 men for the army of the tsar. In 1922 she had an army of 120,000. The standing armies of the three great European powers, Great Britain, France, and Italy, in 1922, numbered 1,099,047 men, those of the remaining states of Europe 3,255,918. It was in the states bordering upon the western frontier of Russia that the most striking increases had taken place. These states together were maintaining standing armies numbering 650,000 men.—Based on F. Maurice, *Armies of Europe (Atlantic Monthly, May, 1923)*.—"To-day [1922] Japan's army, according to the very modest totals given in the published statistics, consists of 250,000 men with the colours and a fully-trained reserve of 618,000. But there is no secrecy at all in the fact that recent reforms in organisation are intended to give Japan in the year 1930 a fully-trained army of four and a half millions, recruited entirely from her own sons, without drawing in any way on the splendid raw material which she already has in Korea and may have, in far less than a decade, in Manchuria and Mongolia. The development of her navy proceeded apace with that of her army, and as a world naval power, after making all the reductions provided in the Washington pact, Japan is inferior only to Great Britain and the United States, while in her own seas she is as invincible as she is on land."—J. H. Longford, *Japan*, pp. 234-235.—"The Army Act of 1920, like the National Defense Act, provides that the [United States] army shall consist of a Regular Army, a reserve corps, and the National Guard while in Federal service. Unlike the National Defense Act, the Army Act contains no reference to a volunteer army as part of the army of the United States. The Army Act made provision for a Regular Army of approximately 298,000 men, the figure to which the National Defense Act had provided that the army was to be raised in increments extended over five years; but the Defense Act had contained a proviso that in time of peace the size of the army should not exceed 175,000, and this limit was increased in the Army Act to 280,000."—J. Dickinson, *Building of an army*, pp. 373-374.

WAR DEPARTMENT, United States.—Among the executive departments of the United States, whose secretaries form the president's cabinet, the "third department is that of War, established second in point of time, August 7, 1789. Originally, it had jurisdiction under the direction of the President over both military and naval affairs, over land grants for military services, and over Indian affairs. In 1798 its jurisdiction over naval affairs was transferred to the Navy Department, created in that year. Its jurisdiction over land grants was transferred to the Treasury Department soon after its establishment, and its jurisdiction over Indian affairs was transferred to the Interior Department in 1849. During the Period 1833-1849 it also had jurisdiction in the matter of military pensions, and it still retains the Record and Pension Office. The Secretary of War 'performs such duties as are required of him by law or may be enjoined upon him by the President concerning the military service.' The duties devolved by law upon him are: the supervision of all estimates of appropriations for the expenses of the Department, including the military establishment, of all purchase of army supplies, of all expenditures for the support, transportation and maintenance of the army, and of such expenditures of a civil nature as may be placed by Congress under his direction. He has also supervision of the United States Military Academy at West Point and of military education in the army, of the Board of Ordnance and Fortification, of the various battlefield commissions, and of the publication of the official records of the War of the Rebellion. Furthermore, he has charge of all matters relating to national defence and seacoast fortifications; army ordnance, river and harbor improvements, the prevention of obstruction to navigation, the establishment of harbor lines and all plans and locations of bridges authorized by Congress to be constructed over the navigable waters of the United States require his approval. There is an Assistant Secretary of War, to whom is assigned specifically some of the duties embraced under the general charge of the Secretary of War. He is vested with Authority to decide all cases which do not involve questions of policy, the establishment or reversal of precedents, or matters of special or extraordinary importance. There is in this department what is known as the General Staff Corps, organized under an Act of February 14, 1903, whose principal duties are: to prepare plans for the national defence and for the mobilization of military forces in time of war; to investigate and report upon all questions affecting the efficiency of the army and its state of preparation for military operations; to render professional aid and assistance to the Secretary of War and to general officers and other superior commanders, and to act as their agents in informing and co-ordinating the action of all the different officers who are subject to the supervision of the Chief of Staff, and to perform such other military duties not otherwise assigned by law as may be from time to time presented by the President. The
