THE NEW LARNED HISTORY

FOR READY REFERENCE, READING AND RESEARCH

VOLUME XI

UNITED STATES OF AMERICA (*Continued*)

1865.—Economic effect of the war upon the North.—Immigration.—Women's work time.—Labor-saving devices.—Effect of unoccupied lands on unemployment.—Manufactures.—Profiteering.—As the war came to a close, it was possible to look abroad over the country, and begin to estimate its effects. "Was the commercial management of the North creditable to the Government and an honor to the people? . . . To deal with this subject in its entirety would lead us into the labyrinths of complex economic theory, yet two or three simple facts appear so plain that even the mere historian may venture to set them forth. When we look into the statistics which seem to show a general increase of business during the war, we find that in point of fact this increase was highly specialized. All those industries that dealt with the physical necessities of life and all those that dealt peculiarly with armies flourished amazingly. And yet there is another side to the story, for there were other industries that were set back and some that almost, if not entirely, disappeared. A good instance is the manufacture of cotton cloth. When the war opened, 200,000 hands were employed in this manufacture in New England. With the sealing up of the South and the failure of the cotton supply, their work temporarily ceased. What became of the workmen? Briefly, one of three things happened: some went into other trades, such as munitions, in which the war had created an abnormal demand for labor; a great number of them became soldiers; and many of them went West and became farmers or miners. Furthermore, many whose trades were not injured by the war left their jobs and fled westward to escape conscription. Their places were left open to be filled by operatives from the injured trades. In one or another of these ways the laborer who was thrown out of work was generally able to recover employment. But it is important to remember that the key to the labor situation at that time was the vast area of unoccupied land which could be had for nothing or next to nothing. . . . One of the noteworthy features of Northern life during the war is that there was no abnormal increase in pauperism. A great deal has been written upon the extensive charities of the time, but . . . what is really referred to is the volunteer aid given to the Government in supporting the armies. This was done on a vast scale, by all classes of the population—that is, by all who supported the Union party, for the separation between the two parties was bitter and unforgetting. But of charity in the ordinary sense . . . there was no peculiar need. Here again the fact that the free land could be easily reached is the final explanation. . . . The unemployed workman . . . could take advantage

of the Homestead Act . . . and acquire a farm of 160 acres free; or he could secure at almost nominal cost farm-land which had been given to railroads as an inducement to build. . . . In addition to the reason just mentioned—the search for new occupation by Eastern labor which had been thrown out of employment—three other causes helped to maintain the efficiency of work in the mines, in the forests, and on the farms. These three factors were immigration, the labor of women, and labor-saving machines. Immigration, naturally, fell off to a certain degree but it did not become altogether negligible. It is probable that 110,000 able-bodied men came into the country while war was in progress—a poor offset to the many hundred thousand who became soldiers, but nevertheless a contribution that counted for something. Vastly more important, in the work of the North, was the part taken by women. A pathetic detail with which in our own experience the world has again become familiar was the absence of young men throughout most of the North, and the presence of women new to the work in many occupations, especially farming. . . . Even more important than the change in the personnel of labor were the new machines of the day. During the fifteen years previous to the war American ingenuity had reached a high point. Such inventions as the sewing-machine and the horse-reaper date in their practical forms from that period, and both of these helped the North to fight the war. . . . It was the horse-reaper, the horse-rake, the horse-thresher that enabled women and boys to work the farms while husbands, fathers, and elder brothers were at the front. All these causes maintained Northern farming at a high pitch of productivity. . . . For example, in 1859, the total production of wheat for the whole country was 173 million bushels; in 1862, the North alone produced 177 millions; even in 1864, with over a million men under arms, it still produced 160 million bushels. . . . Who, in the last analysis, provided all these supplies? Who paid the soldiers? Who supplemented their meager pay and supported their families? The people, of course; and they did so both directly and indirectly. In taxes and loans they paid to the Government about three thousand millions of dollars. Their indirect assistance was perhaps as great, though it is impossible today to estimate with any approach to accuracy the amount either in money or service. Among obvious items are the collections made by the Sanitary Commission for the benefit of the hospital service. . . . In a hundred other ways both individuals and localities strained their resources to supplement those of the Government. Immense subscription lists were circulated to raise funds for the families of soldiers. The city of Philadelphia

alone spent in this way in a single year \$600,000. There is also evidence of a vast amount of unrecorded relief of needy families by the neighbors. . . . Furthermore, the whole matter was adjusted voluntarily] without systematic government direction, since there was nothing in the financial policy of the Government to correspond to conscription. Consequently, both in the way of loans and in the way of contributions, as well as in the matter of unpaid service, the entire burden fell upon the war party alone. . . . Those Northerners who did not wish to lend money, or to make financial sacrifice, or to give unpaid service, were free to pursue their own bent. . . . The clue to the story of capital is to be found in this fact, too often forgotten, that there was an economic-political division cutting deep through every stratum of the Northern people. Their economic life as well as their political life was controlled on the one hand by a devotion to the cause of the war, and on the other hand by a hatred of that cause or by cynical indifference. . . . The financial policy, left in the hands of Chase, may truly be described as barren of ideas. Incidentally, it may be mentioned that the 'loyal' North was left at the mercy of its domestic enemies and a prey to parasites by Chase's policy of loans instead of taxes and of voluntary support instead of enforced support. The consequence of this financial policy was an immense opportunity for the 'disloyals' and the parasites to make huge war profits out of the 'loyals' and the Government. Of course, it must not be supposed that everyone who seized the chance to feather his nest was so careless or so impolitic as to let himself be classed as a 'disloyal.' . . . [In 1861 a report of the Quartermaster-General complained that recruiting would stop unless clothing could be supplied; and stated that troops on duty before the enemy lacked winter clothing.] . . . 'Could 150,000 suits of clothing, overcoats, coats, and pantaloons be placed today, in depot, it would scarce supply the calls now before us. They would certainly leave no surplus.' The Government attempted to meet this difficulty in the shortest possible time by purchasing clothing abroad. But such disregard of home industry, the 'patriotism' of the New England manufacturers could not endure. Along with the report just quoted, the Quartermaster-General forwarded to the Secretary of War a long argumentative protest from a committee of the Boston Board of Trade against the purchase of army clothing in Europe. . . . Abroad the agents of North and South were fighting a commercial duel in which each strove to monopolize the munitions market. . . . [The blockade prevented the movement of cotton to Europe.] As a consequence, four-month notes which had been given by Southern agents with their orders fell due, had to be renewed, and began to be held in disfavor. Agents of the North, getting wind of these hitches in negotiations, eagerly sought to take over the unpaid Confederate orders. . . . Two powerful commercial combinations took charge of the policy of the woolen interests—the National Wool-growers' Association and the National Association of Wool Manufacturers, which were soon in control of this immense industry. Woolen mills sprang up so fast that a report of the New York Chamber of Commerce pronounced their increase 'scarcely credible.' . . . Dividends on mill stock rose to 10, 15, 25, and even 40 per cent. And all the while the wool growers and the wool manufacturers were clamoring to Congress for protection of the home industry, exclusion of the wicked foreign competition. . . . Of course, it is not meant that every wool

grower and every woolen manufacturer was . . . 'disloyal.' . . . Numbers of them were to be found in that great host of 'loyals' who put their dividends into government bonds and gave their services unpaid as auxiliaries of the Commissary Department or the Hospital Service of the Army. What is meant is that the abnormal conditions of industry, uncorrected by the Government, afforded a glaring opportunity for unscrupulous men of business who, whatever their professions, cared a hundred times more for themselves than for their country. . . . It is estimated that prices in the main advanced about 100 per cent while wages were not advanced more than sixty per cent. It is not strange that these years of war form a period of bitter antagonism between labor and capital. What went on in the woolen business is to be found more or less in every business. Immense fortunes sprang up over night. They had but two roots: government contracts and excessive profits due to war prices. The gigantic fortunes which characterized the North at the end of the war are thus accounted for."—N. W. Stephenson, *Abraham Lincoln and the Union* (*Chronicles of America Series*, v. 29, pp. 206-223.)

1865 (January).—Congressional adoption of the Thirteenth Amendment.—"A joint resolution proposing an amendment to the Constitution prohibiting slavery throughout the United States had passed the Senate on April 8, 1864, but had failed of the necessary two-thirds vote in the House. The two most vital thoughts which animated the Baltimore convention when it met in June had been the renomination of Mr. Lincoln and the success of this constitutional amendment. The first was recognized as a popular decision needing only the formality of an announcement by the convention; and the full emphasis of speech and resolution had therefore been centered on the latter as the dominant and aggressive reform upon which the party would stake its political fortunes in the presidential campaign. Mr. Lincoln had himself suggested to Mr. Morgan the wisdom of sounding that key-note in his opening speech before the convention, and the great victory gained at the polls in November not only demonstrated his sagacity, but enabled him to take up the question with confidence among his recommendations to Congress in the annual message of December 6, 1864. . . . The joint resolution was called up in the House on January 6, 1865, and general discussion followed from time to time, occupying perhaps half the days of that month. As at the previous session, the Republicans all favored, while the Democrats mainly opposed it; but important exceptions among the latter showed what immense gains the proposition had made in popular opinion and in congressional willingness to recognize and embody it. The logic of events had become more powerful than party creed or strategy. For fifteen years the Democratic party had stood as sentinel and bulwark to slavery, and yet, despite its alliance and championship, the 'peculiar institution' was being consumed in the fire of war. It had withered in popular elections, been paralyzed by confiscation laws, crushed by executive decrees, trampled upon by marching Union armies. More notable than all, the agony of dissolution had come upon it in its final stronghold—the constitutions of the slave States. Local public opinion had throttled it in West Virginia, in Missouri, in Arkansas, in Louisiana, in Maryland, and the same spirit of change was upon Tennessee, and even showing itself in Kentucky. The Democratic party did not and could not, shut its eyes to the

accomplished facts."—J. G. Nicolay, *Short life of Abraham Lincoln*, pp. 471-474.—"On the last day of [January, 1865] . . . one of the grandest events of the century was witnessed in the House of Representatives in the final passage of the Constitutional Amendment [the Thirteenth] forever prohibiting slavery. Numerous propositions on the subject had been submitted, but the honor of drafting the one adopted belongs to Lyman Trumbull, who had introduced it early in the first session of this Congress. It passed the Senate on the 8th of April, 1864, only six members voting against it, . . . but failed in the House on the 15th of June following. It now came up on the motion of Mr. Ashley to reconsider this vote. Congress had abolished slavery in the District of Columbia, and prohibited it in all the Territories. It had repealed the Fugitive Slave law, and declared free all negro soldiers in the Union armies and their families; and the President had played his grand part in the Proclamation of Emancipation. But the question now to be decided completely overshadowed all others. The debate on the subject had been protracted and very spirited. . . . The time for the momentous vote had now come, and no language could describe the solemnity and impressiveness of the spectacle pending the roll-call. The success of the measure had been considered very doubtful, and depended upon certain negotiations, the result of which was not fully assured, and the particulars of which never reached the public. The anxiety and suspense during the balloting produced a deathly stillness, but when it became certainly known that the measure had prevailed the cheering in the densely-packed hall and galleries surpassed all precedent and begged all description. Members joined in the general shouting, which was kept up for several minutes, many embracing each other, and others completely surrendering themselves to their tears of joy. It seemed to me I had been born into a new life."—G. W. Julian, *Political recollections*, ch. 11.—"The Joint Resolution passed [the House of Representatives, on January 31st], 119 to 56, 8 not voting, 10 Democrats voting aye. . . . It was the greatest day the House had ever seen, nor is it likely ever to see a greater."—O. J. Hollister, *Life of Schuyler Colfax*, p. 245.—The Thirteenth Amendment, which was ratified before the close of the year by three-fourths of the states, and its embodiment in the Constitution of the United States proclaimed by the secretary of state on December 18, 1865, is as follows: "Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. Section 2. Congress shall have power to enforce this article by appropriate legislation."

1865 (February).—Hampton Roads peace conference.—"Several informal attempts at opening negotiations for the termination of hostilities were made in the course of this Winter—Hon. Francis P. Blair, of Maryland, visiting Richmond twice on the subject, with the consent, though not by the request, of President Lincoln. At length, upon their direct application, Messrs. Alex. H. Stephens, John A. Campbell, and Robert M. T. Hunter, were permitted to pass General Grant's lines before Petersburg, and proceed to Fortress Monroe; where [on board a steamer in Hampton Roads] they were met by Governor Seward, followed by President Lincoln; and a free, full conference was had."—H. Greeley, *American conflict*, v. 2, ch. 30.—

Secretary Seward first went to meet the three Confederate commissioners, with the following letter of instructions from President Lincoln, dated January 31, 1865: "Hon. William H. Seward, Secretary of State: You will proceed to Fortress Monroe, Virginia, there to meet and informally confer with Messrs. Stephens, Hunter, and Campbell, on the basis of my letter to F. P. Blair, Esq., of January 18, 1865, a copy of which you have. You will make known to them that three things are indispensable, to wit: 1. The restoration of the national authority throughout all the States. 2. No receding by the executive of the United States on the slavery question from the position assumed thereon in the late annual message to Congress, and in preceding documents. 3. No cessation of hostilities short of an end of the war and the disbanding of all forces hostile to the government. You will inform them that all propositions of theirs, not inconsistent with the above, will be considered and passed upon in a spirit of sincere liberality. You will hear all they choose to say, and report to me. You will not assume to definitely consummate anything. Yours, etc., Abraham Lincoln." Two days later, the President followed him, persuaded by a telegram from General Grant to meet the commissioners personally. In a subsequent message to the Senate, Lincoln reported the results of the conference as follows: "On the morning of the 3rd, three gentlemen, Messrs. Stephens, Hunter, and Campbell, came aboard of our steamer, and had an interview with the Secretary of State and myself, of several hours' duration. No question of preliminaries to the meeting was then and there made or mentioned. No other person was present; no papers were exchanged or produced; and it was, in advance, agreed that the conversation was to be informal and verbal merely. On our part the whole substance of the instructions to the Secretary of State, hereinbefore recited, was stated and insisted upon, and nothing was said inconsistent therewith; while, by the other party, it was not said that in any event or on any condition, they ever would consent to reunion; and yet they equally omitted to declare that they never would so consent. They seemed to desire a postponement of that question, and the adoption of some other course first which, as some of them seemed to argue, might or might not lead to reunion; but which course, we thought, would amount to an indefinite postponement. The conference ended without result."—Abraham Lincoln, *Complete works*, v. 2, pp. 644-649.

1865 (February: South Carolina).—Evacuation of Charleston by Confederates.—Federal occupation of the city.—While General Hardee, with 14,000 men, waited at Charleston for the expected coming of General Sherman to attack that city, the latter pursued a movement which made Charleston untenable and shook it like a ripened apple into the hands of General Gillmore, who was waiting at the gates. The Confederates evacuated the city in haste and with reckless disorder, and it was occupied by the Federal troops on the morning of February 18. The following is the report of Colonel A. G. Bennet, who was the first to enter the city: "On the morning of February the 18th I received information that led me to believe the defences and lines guarding the city of Charleston had been deserted by the enemy. I immediately proceeded to Cummings

Point, from when I sent a small boat in the direction of Fort Moultrie, which boat, when 40 yards east from Fort Sumter, was met by a boat from Sullivan's Island, containing a full corps of band musicians abandoned by the enemy. These confirmed my belief of an evacuation. I had no troops that could be available under two hours, as, except in a few pontoon boats, there were no means whatever of landing troops near the enemy's works or into the city. I directed Major Hennessy to proceed to Fort Sumter and there replace our flag. The flag was replaced over the southeast angle of Fort Sumter at 9 o'clock A.M. I now pushed for the city, stopping at Fort Ripley and Castle Pinckney, from which works Rebel flags were hauled down and the American flag substituted. . . . I landed at Mill's wharf, Charleston, at 10 o'clock A. M. where I learned that a part of the enemy's troops yet remained in the city, while mounted patrols were out in every direction applying the torch and driving the inhabitants before them. I at once addressed to the Mayor of the city [a communication demanding its surrender]. . . . My whole force consisted of five officers and the armed crews of two small boats, comprising in all 22 men. Both officers and men volunteered to advance from the wharf into the city; but no reinforcements being in sight, I did not deem it expedient to move on. . . . Observing a small boat sailing toward the bay under a flag of truce, I put off to it, and received from a member of the common council a letter [from the Mayor, announcing the evacuation of the city by the Confederate military authorities]. . . . The deputation sent to convey the above letter represented to me that the city was in the hands of either the Rebel soldiery or the mob. They entreated of me in the name of humanity to interpose my military authority and save the city from utter destruction. . . . Two companies of the 52d Pennsylvania regiment and about 30 men of the 3d Rhode Island volunteer heavy artillery having landed, I proceeded with them to the citadel. I here established my headquarters, and sent small parties in all directions with instructions to impress negroes wherever found, and to make them work the fire apparatus, until all fires were extinguished."—A. G. Bennett, *Report*, Feb. 24, 1865 (quoted in *Tenney's military and naval history of the Rebellion*, ch. 49).—At noon on Apr. 14, 1865, the fourth anniversary of the lowering of the flag of the United States at Fort Sumter, it was formally raised by General Anderson over the ruins of the fort, with impressive ceremonies, in which many visitors from the North took part. An address was delivered on the occasion by the Reverend Henry Ward Beecher.

1865 (February-March: The Carolinas).—Sherman's march from Savannah to Goldsboro.—Burning of Columbia.—Battle of Bentonville.—"By the middle of January, a lodgment had been effected in South Carolina [at Pocatigo, on the railroad between Savannah and Charleston], and Sherman had his whole army once more in hand as a moving column. He had no idea of wasting time on either Charleston or Augusta, but he determined to play upon the fears of the rebels, and compel them to retain a force to protect those places. . . . Accordingly he gave out with some ostentation that he was moving upon either Charleston or Augusta. . . . On the 1st of February, the army designed for the active campaign from Savannah northward was again 60,000 strong; and, as before, was

composed of two wings, the right under Howard and the left under Slocum. . . . Sherman . . . started on his northward march on the 1st of February. On that day his right wing was south of the Salkehatchie river, and his left still struggling in the swamps of the Savannah, at Sister's Ferry. . . . The division generals led their columns through the swamps, the water up to their shoulders, crossed over to the pine land beyond, and then, turning upon the rebels who had opposed the passage, drove them off in utter disorder. All the roads northward had been held for weeks by Wheeler's cavalry, and details of negro laborers had been compelled to fell trees and burn bridges to impede the national march. Sherman's pioneers, however, removed the trees, and the heads of columns rebuilt the bridges before the rear could close up, and the rebels retreated behind the Edisto river at Branchville. . . . Sherman determined to waste no time on Branchville, which the enemy could no longer hold, and turned his columns directly north upon Columbia, where it was supposed the rebels would concentrate. Attempts were made to delay him at the crossings of the rivers; there were numerous bridge-heads with earth or cotton parapets to carry, and cypress swamps to cross; but nothing stayed his course. On the 13th, he learned that there was no enemy in Columbia except Hampton's cavalry. Hardee, at Charleston, took it for granted that Sherman was moving upon that place, and the rebels in Augusta supposed that they were Sherman's object; so Charleston and Augusta were protected, while Columbia was abandoned to the care of the cavalry." With little or no resistance, Sherman entered the capital of South Carolina on February 17. . . . "Beauregard, meanwhile, and the rebel cavalry, had retreated upon Charlotte, in North Carolina, due north from Columbia; and on the 20th and 21st Sherman followed as far as Winnsboro. . . . At Winnsboro, however, Sherman turned his principal columns northeastward towards Goldsboro, still 200 miles away. Heavy rains again impeded his movements . . . and it was not till the 3d of March that the army arrived at Cheraw. At this point large quantities of guns and ammunition were captured, brought from Charleston under the supposition that here, at least, they would be secure. Hardee had moved due north from Charleston by his only remaining railroad, through Florence, but only reached Cheraw in time to escape with his troops across the Pedee river, just before Sherman arrived. . . . Having secured the passage of the Pedee . . . Sherman had but little uneasiness about the future. . . . On the 11th of March, Fayetteville was reached, and Sherman had traversed the entire extent of South Carolina. On the 12th, he sent a dispatch to Grant, the first since leaving the Savannah. . . . On the 15th of March, the command began its march for Goldsboro." The scattered Confederate forces were now getting together and General Johnston had been put in command of them. . . . On the 15th Hardee was encountered at Averysboro, where he attempted to check Sherman's advance while Johnston concentrated in the rear. Some sharp fighting occurred, in which Sherman lost seventy-seven men killed and 477 wounded. Hardee reported his loss at 500. In the morning he had disappeared. "From Averysboro both wings turned eastward by different roads, and on the flight of the 18th of March the army was within 27 miles of Goldsboro, and only five from Bentonville. The columns were

now about ten miles apart." At Bentonsville, on the 19th, Slocum's wing was attacked by Johnston, who had marched his whole command with great rapidity, hoping to "overwhelm Sherman's left flank before it could be relieved by its co-operating column." But Slocum held his ground that day against six distinct assaults, and the next day Sherman brought his whole army into position. He did not push the enemy, however, either on the 20th or on the 21st, being uncertain as to Johnston's strength. During the night of the 21st the latter retreated. "The total national loss was 191 killed, and 1,455 wounded and missing. Johnston states his losses to have been 223 killed, 1,467 wounded, and 653 missing, but Sherman captured 1,621 prisoners. . . . At daybreak on the 22nd . . . the army moved to Goldsboro, where Schofield had already arrived. [See below: 1865 (February-March: North Carolina).] . . . Thus was concluded one of the longest and most important marches ever made by an organized army in civilized war."—A. Badeau, *Military history of Ulysses S. Grant*, v. 3, ch. 31.

1865 (February-March: North Carolina).—Occupation of Wilmington.—Battle of Kinston.—Junction with Sherman at Goldsboro.—On February 9, General Schofield, transferred from the west, arrived at Fort Fisher with Cox's division of the Twenty-third Corps, and took command of the newly created Department of North Carolina. Advancing on Wilmington, the Confederates, under Hoke, retreating before him, he occupied that city on the 22nd. This accomplished, General Cox was sent to Newberne to take command of forces ordered there, and to open communication thence by railroad with Goldsboro, preparatory to the arrival of General Sherman at that point. In the prosecution of this undertaking, he fought the battle of Kinston, March 10, repelling a fierce attack by Bragg with the forces which were being collected against Sherman. "After Bragg's retreat Schofield steadily pressed the work of rebuilding the railway. Kinston was occupied on March 14th." On the 21st Schofield entered Goldsboro, "and there, in a couple of days more, was reassembled the grand army under Sherman, whose march from Savannah had been quite as remarkable as the former one from Atlanta to the sea."—J. D. Cox, *March to the sea (Campaigns of the Civil War*, ch. 9).

1865 (February-March: Virginia).—Sheridan's destroying march through central Virginia.—Battle of Waynesborough.—"The last campaign against Lee may be said to have been inaugurated when General Sheridan started with his cavalry from Winchester, Virginia, on the 27th of February, 1865, with a sort of *carte blanche* of destruction as to the enemy's supply depots and communications. The general's instructions looked to his crossing the James River above Richmond, and his possible junction with the command of General Sherman somewhere in North Carolina; but the swollen condition of the James, and the destruction of the bridges prevented his crossing. . . . General Sheridan's command on this expedition consisted of the first cavalry division, under Brevet Major-General Wesley Merritt, and the third cavalry division, under Brevet Major-General Geo. A. Custer, to whose division was added one brigade of the

cavalry of the old army of West Virginia, under Colonel Caphart. . . . They left Winchester on a damp, disagreeable morning. . . . But the spirits of the bold dragoons were not dampened, and they felt lively enough to push on to Waynesborough to the camp of General Jubal Early, late of the Confederacy, upon whom the brilliant Custer fell with his division, and soon had his guns, and men, and 'matériel,' and would have had him but that he had sufficient presence of mind to absent his person when he found how things were going. This was General Early's last appearance in public life. . . . Early's command at Waynesborough being now dispersed or captured, . . . General Sheridan proceeded to occupy Charlottesville. . . . Then on again toward Lynchburg and the James River. . . . When it was found impossible to cross the James River, attention was for a while directed to the demolition of the James River and Kanawha Canal. . . . When the ingenious destruction corps could devise no further damage here, the command turned off to try its hand upon a railroad or two. All the time the rains had descended—the flood-gates of the clouds were up and the water kept pouring through. . . . Although nothing short of a flotilla seemed likely to ride out the storm, the cavalry rode on hopefully, and came safely to harbor at the White House, on the Pamunkey, where supplies were furnished them, and where the March winds blew them dry again. . . . Immediately upon his arrival at this depot, General Sheridan reported to General Grant, at City Point, for orders."—*With General Sheridan in Lee's last campaign, by a staff officer*, ch. 2.

1865 (March).—Emancipation of families of colored soldiers.—"The President in his annual message, December, 1863, had estimated the colored soldiers in the service at 'nearly 100,000.' They were mostly from the border States, and the slaves of loyal masters. While they were fighting the battles of the country, their masters, who were generally opposed to their enlistment, could sell into perpetual slavery their wives and children. To deter slaves from enlisting, or to punish them when they did enlist, slave-masters made merchandise of the wives and children of colored soldiers, and often sold them into a harsher bondage. To put an end to a practice so cruel, unjust, injurious, and dishonorable to the country, Mr. Wilson introduced into the Senate on the 8th of January [1864], in his bill to promote enlistments, a provision declaring that when any man or boy of African descent, owing service or labor in any State, under its laws, should be mustered into the military or naval service of the United States, he, and his mother, wife, and children, should be forever free." The bill was warmly debated and its supporters did not succeed in bringing it to a vote during that session of Congress. At the next session, on the 13th of December, 1864, Mr. Wilson introduced a joint resolution 'to make free the wives and children of persons who had been, or might be, mustered into the service of the United States. [This passed the Senate a few days later, by a vote of twenty-seven to 10; was passed by the House on February 22, 1865, and signed by the President on March 3.]"—H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 30.

1865 (March).—President Lincoln's second

inaugural address.—“The days of the Confederacy were evidently numbered. Only the last blow remained to be struck. Then Lincoln's second inauguration came [March 4, 1865], and with it his second inaugural address. Lincoln's famous ‘Gettysburg speech’ has been much and justly admired. But far greater, as well as far more characteristic, was that inaugural in which he poured out the whole devotion and tenderness of his great soul. It had all the solemnity of a father's last admonition and blessing to his children before he lay down to die. . . . No American President had ever spoken words like these to the American people. America never had a President who found such words in the depth of his heart.”—C. Schurz, *Abraham Lincoln: An essay*, pp. 103-104.

The following is the text of the inaugural address:

“Fellow-countrymen: At this second appearance to take the oath of the presidential office, there is less occasion for an extended address than there was at the first. Then a statement, somewhat in detail, of a course to be pursued, seemed fitting and proper. Now, at the expiration of four years, during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the nation, little that is new could be presented. The progress of our arms, upon which all else chiefly depends, is as well known to the public as to myself; and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured. On the occasion corresponding to this four years ago, all thoughts were anxiously directed to an impending civil war. All dreaded it—all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to saving the Union without war, insurgent agents were in the city seeking to destroy it without war—seeking to dissolve the Union, and divide effects, by negotiation. Both parties deprecated war; but one of them would make war rather than let the nation survive; and the other would accept war rather than let it perish. And the war came. One-eighth of the whole population were colored slaves, not distributed generally over the Union, but localized in the Southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was, somehow the cause of the war. To strengthen, perpetuate, and extend this interest was the object for which the insurgents would rend the Union, even by war; while the government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has already attained. Neither anticipated that the cause of the conflict might cease with, or even before, the conflict itself should cease. Each looked for an easier triumph, and a result less fundamental and astounding. Both read the same Bible, and pray to the same God; and each invokes his aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered—that of neither has been answered fully. The Almighty has his own purposes. ‘Woe unto the world because of offenses! for it must needs

be that offenses come; but woe to that man by whom the offense cometh.’ If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through his appointed time, he now wills to remove, and that he gives to both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to him? Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondman's 250 years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said 3,000 years ago, so still it must be said. ‘The judgments of the Lord are true and righteous altogether.’ With malice towards none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations.”—Abraham Lincoln, *Complete works*, v. 2, pp. 656-657.

1865 (March-April: Virginia).—Flanking of Lee's lines.—Battle of Five Forks.—Final assault at Petersburg and Confederate retreat.—“Lee after assuming supreme command had quickly decided to save his army he must abandon Richmond. His intention was to withdraw to Danville, unite with Johnston's force in North Carolina, and attack Sherman before Grant could come to his assistance. But the animals of the artillery and transport trains were in so emaciated a condition as to be useless for heavy work, until the roads should have recovered, and Lee feared lest before he could withdraw his army, Grant might extend so far to the left as to make retreat impossible. He therefore determined to make a sortie in force against the Federal lines near the Appomattox. . . . The task was assigned to Gordon, commanding the 2nd Army Corps, whose reputation as a leader of dash and enterprise had been steadily growing. . . . At 4:30 a. m. on March 25th Gordon assaulted. As confederate deserters were allowed to enter the Federal lines with their arms, the piquet posts were easily surprised, and the storming party, rushing forward to the main line, carried Fort Stedman and three adjacent batteries. There, however, the Confederate success ended. Gordon's attack was left almost entirely unsupported. . . . Assaults made from Fort Stedman upon the forts on its right and left were repulsed; and as soon as there was sufficient light to distinguish friend from foe, the Federal artillery in the main works and from the high ground in the rear . . . opened fire upon Fort Stedman. . . . Hartranft's division attacked and recaptured Fort Stedman. Of Gordon's command 1,949 were taken prisoners, and his loss in killed and wounded was also heavy. [Grant states that the Confederate losses in all numbered 4,000 men, and the Federal losses 2,000.] . . . Grant had come to the conclusion that it would be desirable, if possible, to leave the Armies of the Potomac and the James the work of crushing Lee's army. . . . It seemed but just that, as a reward for the years of toil and of dogged perseverance in the face of continued

failure, it should have the honour of forcing its old antagonist to surrender at last. Grant saw that Lee must abandon Richmond within a few days at the latest."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, pp. 506-508.—"One of the most anxious periods of my experience during the rebellion," [wrote General Grant], "was the last few weeks before Petersburg. I felt that the situation of the Confederate army was such that they would try to make an escape at the earliest practicable moment, and I was afraid, every morning, that I would awake from my sleep to hear that Lee had gone, and that nothing was left but a picket line. . . . Sherman was anxious that I should wait where I was until he could come up; . . . but I had determined to move as soon as the roads and weather would admit of my doing so. I had been tied down somewhat in the matter of fixing any time at my pleasure for starting, until Sheridan, who was on his way from the Shenandoah Valley to join me, should arrive, as both his presence and that of his cavalry were necessary to the execution of the plans which I had in mind. However, [Sheridan] having arrived at White House on the 19th of March, I was enabled to make my plans. . . . The day that Gordon was making dispositions for this attack (24th of March) I issued my orders for the movement to commence on the 29th. Ord, with three divisions of infantry and Mackenzie's cavalry, was to move in advance on the night of the 27th, from the north side of the James River, and take his place on our extreme left, 30 miles away. . . . Ord was at his place promptly. Humphreys and Warren were then on our extreme left with the 2d and 5th corps. They were directed on the arrival of Ord, and on his getting into position in their places, to cross Hatcher's Run and extend out west toward Five Forks, the object being to get into a position from which we could strike the South Side Railroad and ultimately the Danville Railroad. There was considerable fighting in taking up these new positions for the 2d and 5th corps, in which the Army of the James had also to participate somewhat, and the losses were quite severe. This was what was known as the battle of White Oak Road. . . . The 29th of March came, and . . . on that day I moved out with all the army available after leaving sufficient force to hold the line about Petersburg. It soon set in raining again, however, and in a very short time the roads became practically impassable for teams, and almost so for cavalry. . . . It became necessary . . . to build corduroy roads every foot of the way as we advanced, to move our artillery upon. The army had become so accustomed to this kind of work, and were so well prepared for it, that it was done very rapidly. The next day, March 30th, we had made sufficient progress to the south-west to warrant me in starting Sheridan with his cavalry over by Dinwiddie with instructions to then come up by the road leading north-west to Five Forks, thus menacing the right of Lee's line. . . . The column moving detached from the army still in the trenches was, excluding the cavalry, very small. The forces in the trenches were themselves extending to the left flank. Warren was on the extreme left when the extension began, but Humphreys was marched around later and thrown into line between him and Five Forks. My hope was that Sheridan would be able to carry Five Forks, get on the enemy's right flank and rear, and force them to weaken their centre

to protect their right, so that an assault in the centre might be successfully made. General Wright's corps had been designated to make this assault, which I intended to order as soon as information reached me of Sheridan's success. . . . Sheridan moved back to Dinwiddie Court-House on the night of the 30th, and then took a road leading northwest to Five Forks. He had only his cavalry with him. Soon encountering the rebel cavalry he met with a very stout resistance. He gradually drove them back however, until in the neighborhood of Five Forks. Here he had to encounter other troops, besides those he had been contending with, and was forced to give way. In this condition of affairs he notified me of what had taken place and stated that he was falling back toward Dinwiddie gradually and slowly, and asked me to send Wright's corps to his assistance. I replied to him . . . that I would send Warren. Accordingly orders were sent to Warren to move at once that night (the 31st) to Dinwiddie Court-House and put himself in communication with Sheridan as soon as possible, and report to him. He was very slow in moving, some of his troops not starting until after 5 o'clock next morning. . . . Warren reported to Sheridan about 11 o'clock on the 1st, but the whole of his troops were not up so as to be much engaged until late in the afternoon. . . . Sheridan succeeded by the middle of the afternoon or a little later in advancing up to the point from which to make his designed assault upon Five Forks itself. He was very impatient to make the assault and have it all over before night, because the ground he occupied would be untenable for him in bivouac during the night. . . . It was at this junction of affairs that Sheridan wanted to get Crawford's division in hand, and he also wanted Warren. He sent staff officer after staff officer in search of Warren, directing that general to report to him, but they were unable to find him. At all events Sheridan was unable to get that officer to him. Finally he went himself. He issued an order relieving Warren and assigning Griffin to the command of the 5th corps. The troops were then brought up and the assault successfully made. . . . It was dusk when our troops under Sheridan went over the parapets of the enemy. The two armies were mingled together there for a time in such manner that it was almost a question which one was going to demand the surrender of the other. Soon, however, the enemy broke and ran in every direction; some 6,000 prisoners, besides artillery and small-arms in large quantities falling into our hands. . . . Pursuit continued until about 9 o'clock at night, when Sheridan halted his troops, and knowing the importance of him of the part of the enemys' line which had been captured, returned. . . . This was the condition which affairs were in on the night of the 1st of April. I then issued orders for an assault by Wright and Parke at 4 o'clock on the morning of the 2d. [The assault was successfully made, and the outer works of Petersburg were soon in the hands of the National troops. Early in the morning of the 3d the enemy evacuated Petersburg and Grant and Meade took possession of the city. The following day they were visited there by President Lincoln, who had been at City Point for a week or more, watching the course of events.]"—U. S. Grant, *Personal memoirs*, v. 2, ch. 63-65.

and the pursuit of Lee (*Battles and leaders*, v. 4).—R. de Trobriand, *Four years with the Army of the Potomac*, ch. 34.

1865 (April: Virginia).—Abandonment of Richmond and retreat of Lee.—Battle of Sailor's Creek.—Surrender at Appomattox Court House.—Grant's generosity.—“The success of the Federal army in breaking the lines of Petersburg had rendered the retreat of the Confederate force imperative. An effort to hold Richmond with every line of communication with the South broken or in imminent danger would have been madness. But by abandoning his works and concentrating his army, which still amounted to about 30,000 men, General Lee might retire to some natural stronghold in the interior, where the defensible features of the country would enable him to oppose Grant's formidable host until he could rally strength to strike an effective blow. This course was at once decided upon, and early on the morning of the 2d of April, Lee sent a despatch to the Government authorities at Richmond informing them of the disastrous situation of affairs and of the necessity of his evacuating Petersburg that night. Orders were also sent to the forces north of the James to move at once and join him, while all the preparations necessary for the evacuation of Richmond, both as the seat of government and as a military post, were expeditiously made. There was, indeed, no time to be lost. . . . By midnight the evacuation was completed. . . . As the troops moved noiselessly onward in the darkness that just precedes the dawn, a bright light like a broad flash of lightning illumined the heavens for an instant; then followed a tremendous explosion. “The magazine at Fort Drewry is blown up,” ran in whispers through the ranks, and again silence reigned. Once more the sky was overspread by a lurid light, but not so fleeting as before. It was now the conflagration of Richmond that lighted the night-march of the soldiers, and many a stout heart was wrung with anguish at the fate of the city and its defenceless inhabitants. The burning of public property of little value had given rise to a destructive fire that laid in ashes nearly one-third of the devoted city. . . . The retreat of Lee's army did not long remain unknown to the Federals. The explosion of the magazine at Fort Drewry and the conflagration of Richmond apprised them of the fact and they lost no time in taking possession of the abandoned works and entering the defenceless cities. On the morning of the 3d of April the mayor of Richmond surrendered the city to the Federal commander in its vicinity, and General Weitzel took immediate possession. He at once proceeded to enforce order and took measures to arrest the conflagration, while with great humanity he endeavored to relieve the distressed citizens. . . . As soon as Grant became aware of Lee's line of retreat he pushed forward his whole available force, numbering 70,000 or 80,000 men, in order to intercept him on the line of the Richmond and Danville Railroad. Sheridan's cavalry formed the van of the pursuing column, and was closely followed by the artillery and infantry. Lee pressed on as rapidly as possible to Amelia Court-house, where he had ordered supplies to be deposited for the use of his troops on their arrival. . . . The hope of finding a supply of food at this point, which had done much to buoy up the spirits of the men, was destined to be cruelly dispelled. Through an unfortunate error or misapprehension of orders the provision-train had been taken on to Richmond without

unloading its stores at Amelia Court-house. . . . It was a terrible blow alike to the men and to their general. . . . The only chance remaining to the Army of Northern Virginia was to reach the hill-country without delay. Yet here it was detained by the error of a railroad official, while the precious minutes and hours moved remorselessly by. . . . Yet no murmur came from the lips of the men to the ear of their commander, and on the evening of that unfortunate day [April 5th] they resumed their weary march in silence and composure. Some small amount of food had been brought in by the foragers, greatly inadequate for the wants of the soldiers, yet aiding them to somewhat alleviate the pangs of hunger. A handful of corn was now a feast to the weary veterans as they trudged onward through the April night. . . . Sheridan's cavalry was already upon the flank of the Confederate army, and the infantry was following with all speed. . . . During the forenoon of [the 6th] the pursuing columns thickened and frequent skirmishes delayed the march. These delays enabled the Federals to accumulate in such force that it became necessary for Lee to halt his advance in order to arrest their attack till his column could close up, and the trains and such artillery as was not needed for action could reach a point of safety. This object was accomplished early in the afternoon. Ewells, the rear-most corps in the army, closed upon those in front at a position on Sailor's Creek, a small tributary of the Appomattox River. . . . His corps was surrounded by the pursuing columns and captured with but little opposition. About the same time the divisions of Anderson, Pickett, and Bushrod Johnson were almost broken up, about 10,000 men in all being captured. The remainder of the army continued its retreat during the night of the 6th, and reached Farmville early on the morning of the 7th, where the troops obtained two days' rations, the first regular supplies they had received during the retreat. At Farmville a short halt was made to allow the men to rest and cook their provisions. The effective portion of the Army of Northern Virginia did not now exceed 10,000 men. This great reduction had been caused by the disaster of the previous day at Sailor's Creek, by desertions on the retreat, and by an exhaustion which obliged many to leave the ranks. Those who still remained by their colors were veterans whose courage never failed, and who were yet ready to face any odds. The heads of the Federal columns beginning to appear about eleven o'clock, the Confederates resumed their retreat.” On the afternoon of the 7th, Lee received a note from Grant calling upon him to surrender, and replied to it, asking what terms would be offered. Further notes were exchanged between the two commanders the following day, while the retreat continued. Lee hoped to reach Appomattox Court House and secure supplies that were there, which might enable him to “push on to the Staunton River and maintain himself behind that stream until a junction could be made with Johnston.” But when, in the afternoon of April 8, he reached the neighborhood of Appomattox Court House, “he was met by the intelligence of the capture of the stores placed for his army at the station two miles beyond. Notwithstanding this overwhelming news, he determined to make one more effort to force himself through the Federal toils that encompassed him.” This attempt was made at three o'clock on the morning of April 9, General Gordon leading the attack, which failed. Lee then yielded to his

fate, and sent a flag of truce, asking for an interview with Grant to arrange terms of surrender. "About 11 o'clock General Lee, accompanied only by Colonel Marshall of his staff, proceeded to the village to meet General Grant, who had now arrived. The meeting between the two renowned generals took place at the house of a Mr. McLean at Appomattox Court-house, to which mansion, after exchanging courteous salutations, they repaired to settle the terms on which the surrender of the Army of Northern Virginia should be concluded. . . . The written instrument of surrender covered the following points: Duplicate rolls of all the officers and men were to be made, and the officers to sign paroles for themselves and their men, all agreeing not to bear arms against the United States unless regularly exchanged. The arms, artillery, and public property were to be turned over to an officer appointed to receive them, the officers retaining their side-arms and private horses and baggage. In addition to this, General Grant permitted every man of the Confederate army who claimed to own a horse or mule to retain it for farming purposes, General Lee remarking that this would have a happy effect. . . . After completion of these measures General Lee remarked that his men were badly in need of food, that they had been living for several days on parched corn exclusively, and requested rations and forage for 25,000 men. These rations were granted out of the car-loads of Confederate provisions which had been stopped by the Federal cavalry. . . . Three days after the surrender the Army of Northern Virginia had dispersed in every direction, and three weeks later the veterans of a hundred battles had changed the musket and the sword for the implements of husbandry. . . . Thousands of soldiers were set adrift on the world without a penny in their pockets to enable them to reach their homes. Yet none of the scenes of riot that often follow the disbanding of armies marked their course."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 21.—"General Grant's behavior at Appomattox was marked by a desire to spare the feelings of his great opponent. There was no theatrical display; his troops were not paraded with bands playing and banners flying, before whose lines the Confederates much march and stack arms. He did not demand Lee's sword, as is customary, but actually apologized to him for not having his own, saying it had been left behind in the wagon; promptly stopped salutes from being fired to mark the event, and the terms granted were liberal and generous. 'No man could have behaved better than General Grant did under the circumstances,' said Lee to a friend in Richmond. 'He did not touch my sword; the usual custom is for the sword to be received when tendered, and then handed back, but he did not touch mine.' Neither did the Union chief enter the Southern lines to show himself or to parade his victory, or go to Richmond or Petersburg to exult over a fallen people, but mounted his horse and with his staff started for Washington. Washington, at Yorktown, was not as considerate and thoughtful of the feelings of Cornwallis or his men. Charges were now withdrawn from the guns, flags furled, and the Army of the Potomac and the Army of Northern Virginia turned their backs upon each other for the first time in four long, bloody years."—F. Lee, *General Lee*, ch. 15.—"With the news that articles of surrender had been signed, which meant that the war was over, the North went into a paroxysm of joy. Stanton

uttered the prevalent sentiment when he telegraphed Grant: 'Thanks be to Almighty God for the great victory with which He has this day crowned you and the gallant armies under your command. The thanks of this Department, and of the government, and of the United States—their reverence and honor have been deserved—will be rendered to you and the brave and gallant officers and soldiers of your army for all time.' A salute of two hundred guns was ordered fired from every arsenal and fort. The nation was mad for joy. In the South there was corresponding depression. The feelings there, indeed, were mingled. With the humiliation naturally consequent on defeat, the sorrow over a lost cause, doubt and fear as to the future, there was a sigh of relief in knowing that the strife was ended. Lee's farewell address to his army is simple and characteristic of this taciturn man; and yet it shows between the lines a world of pathos. He wrote: 'After four years of arduous service, marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources. I need not tell the survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them; but, feeling that valor and devotion could accomplish nothing that could compensate for the loss that would have attended the continuation of the contest, I have determined to avoid the useless sacrifice of those whose past service have endeared them to their countrymen. By the terms of agreement, officers and men can return to their homes and remain there until exchanged. You will take with you the satisfaction that proceeds from the conscientiousness of duty faithfully performed; and I earnestly pray that a merciful God will extend to you his blessing and protection. With an unceasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration of myself, I bid you an affectionate farewell.'"—G. C. Lee, *True history of the Civil War*, pp. 388-389.—From the moment that full military authority was placed in the hands of Grant, victory by the Union armies had been a foregone conclusion. "Grant had the best and broadest military temperament for aggressive warfare this continent has ever seen; he was the supreme and indispensable warrior for whom the Union cause long waited. With his hard sense, grim tenacity, and clearness of military insight, he conducted the most difficult of conquests—that of subduing brethren forcibly by other brethren of the same race and traditions; and in doing so he simplified and adapted modes of warfare to his ends, unhindered by routine or precedent. Grant had splendid subordinates, it is true; but it was his safe discrimination that brought them into place, and he got the best work out of all who served under him. The vigorous Sherman, the fiery and hot-blooded Sheridan, the methodical Meade, he generously allowed to reap each his full glory, in commands the fittest for winning a peculiar lustre; yet he all the while inspired and directed, brought up supports at the right time and place, thought out and worked out details, and quietly and discreetly kept down those quarrels and jealousies which, under most other Union commanders, were a constant obstacle to success. Nor did he, like McClellan, strive against his political masters at Washington; but his relations with the President and War Department, and with Halleck, too, were

harmonious and friendly, and largely because he lodged no complaints, but always did cheerfully the best with what was given him. Grant could take the city, and rule his tongue besides; and his military judgment, surpassingly sound on the whole, betrayed him but rarely into an irritable or harsh exercise of discipline. No commander, North or South, approached him in the wide range of experience gained, from the Missouri River to the James, in contact with high officers or immense operations. Besides Sherman, Sheridan, and Meade, he personally directed McPherson, Thomas, Schofield, Hooker, McClelland, Buell, Logan, Blair, in the West; Burnside, Hancock, Wright, Ord, Humphreys, in the East; and many other generals of distinction. He served early under Halleck, Pope and Frémont; he cooperated with Foote and Porter of the navy. His responsible operations, too, were more varied, as well as on a vaster scale, than any other general of the war, on either side, conducted. Nearly all the historic surrenders of this war were made to him, and he negotiated them with admirable spirit and self-possession. Behind his quiet and impassive demeanor must have bounded a restless and impetuous spirit of activity, in these years, which he repressed by habitual discretion."—J. Schouler, *History of the United States*, pp. 602-603.

1865 (April: Virginia).—President Lincoln at Richmond.—Assembling and dispersing of "the gentlemen who have acted as the Legislature of Virginia."—Virtual proclamation of the end of the war.—"President Lincoln had been at City Point and vicinity for several days before the fall of Richmond, in constant communication with the General-in-Chief, at the front, receiving dispatches from him and transmitting them instantly to the Secretary of War, whence they were diffused over the country, by the telegraph. On the day after Richmond was evacuated, he went up to that city in Admiral Porter's flag-ship, the Malvern. Captain Ralph Chandler, with the Sangamon, several tugs, and 30 small boats, with about 300 men, had already cleared the channel of the river of torpedoes, and made the navigation comparatively safe. When near Rocketts, the President and the Admiral left the Malvern, and proceeded to the city in the commander's gig. With its crew, armed with carbines, they landed and walked to Weitzel's quarters, in the late residence of Davis, cheered on the way by the huzzas and grateful ejaculations of a vast concourse of emancipated slaves, who had been told that the tall man was their Liberator. They crowded around him so thickly in their eagerness to see him, and to grasp his hand, that a file of soldiers were needed to clear the way. After a brief rest at Weitzel's the President rode rapidly through the principal streets of Richmond, in an open carriage, and, at near sunset, departed for City Point. Two days afterward, the President went to Richmond again, accompanied by his wife, the Vice-President, and several Senators, when he was called upon by leading Confederates, several of them members of the rebel Virginia legislature, whose chief business was to endeavor to arrange a compromise whereby the equivalent for

submission should be the security to the Virginia insurgents, as far as possible, of their political power and worldly possessions. The President was assured by Judge Campbell a member of the Confederate 'Government' (who, for two years, had been satisfied, he said, that success was impossible), that the so-called Virginia Legislature, if allowed to reassemble, with the Governor, would work for the reconstruction of the Union, their first step being the withdrawal of the Virginia troops from the field, on condition that the confiscation of property in Virginia should not be allowed. Anxious to end the war without further bloodshed, if possible, and satisfied that the withdrawal of the Virginia troops—in other words, nearly all of Lee's army—would accomplish it, he left with General Weitzel, on his departure from Richmond [April 6], authority to allow 'the gentlemen who have acted as the Legislature of Virginia, in support of the rebellion, to assemble at Richmond and take measures to withdraw the Virginia troops and other support from resistance to the General Government.' A safeguard was given. The fugitives returned, with the Governor, but instead of performing in good faith what had been promised in their name, they began legislating generally, as if they were the legal representatives of the people of Virginia. So soon as notice of this perfidy was given to the President after his return to Washington, he directed Weitzel to revoke the safeguard, and allow 'the gentlemen who had acted as the Legislature of Virginia' to return to private life. The surrender of Lee had, meanwhile, made the contemplated action unnecessary. The President was blamed by the loyal people for allowing these men to assemble with acknowledged powers; and the Confederates abused him for dissolving the assembly. The President returned to Washington City on the day of Lee's surrender, where he was the recipient of a multitude of congratulations because of the dawn of peace. On the 11th he issued proclamations, one declaring the closing, until further notice, of certain ports in the Southern States, whereof the blockade had been raised by their capture, respectively; and the other, demanding, henceforth, for our vessels in foreign ports, on penalty of retaliation, those privileges and immunities which had hitherto been denied them on the plea of according equal belligerent rights to the Republic and its internal enemies. . . . On the following day an order was issued from the War Department, which had been approved by General Grant, putting an end to all drafting and recruiting for the National army, and the purchase of munitions of war and supplies; and declaring that the number of general and staff officers would be speedily reduced, and all military restrictions on trade and commerce be removed forthwith. This virtual proclamation of the end of the war went over the land on the anniversary of the evacuation of Fort Sumter [April 14], while General Anderson was replacing the old flag over the ruins of that fortress."—B. J. Loring, *Field book of the Civil War*, v. 3, ch. 21.

1865 (April 11).—President Lincoln's last public address.—His view of reconstruction in Louisiana.—On the evening of April 11, a great multitude of people gathered about the White House, to convey their congratulations to the President, and to signify their joy at the sure

prospect of peace. Lincoln came out and spoke to them, expressing first his participation in their gladness, and then turning to discuss briefly the criticism which had opened upon his policy of reconstruction, as practically illustrated in Louisiana. He spoke of his message and proclamation of December, 1863; of the approval given to them by every member of his cabinet; of the entire silence at the time of all who had become critics and objectors since action under the plan had been taken in Louisiana. He then went on as follows: "When the message of 1863, with the plan before mentioned, reached New Orleans, General Banks wrote me that he was confident that the people, with his military coöperation, would reconstruct substantially on that plan. I wrote to him and some of them to try it. They tried it, and the result is known. Such has been my only agency in getting up the Louisiana government. As to sustaining it, my promise is out, as before stated. But as bad promises are better broken than kept, I shall treat this as a bad promise, and break it whenever I shall be convinced that keeping it is adverse to the public interest; but I have not yet been so convinced. I have been shown a letter on this subject, supposed to be an able one, in which the writer expresses regret that my mind has not seemed to be definitely fixed on the question whether the seceded States, so called, are in the Union or out of it. It would perhaps add astonishment to his regret were he to learn that since I have found professed Union men endeavoring to make that question, I have purposely forbore any public expression upon it. As appears to me, that question has not been, nor yet is, a practically material one, and that any discussion of it, while it thus remains practically immaterial, could have no effect other than the mischievous one of dividing our friends. As yet, whatever it may hereafter become, that question is bad as the basis of a controversy, and good for nothing at all—a merely pernicious abstraction. We all agree that the seceded States, so called, are out of their proper practical relation with the Union, and the sole object of the government, civil and military, in regard to those States is to again get them into that proper practical relation. I believe that it is not only possible, but in fact easier, to do this without deciding or even considering whether these States have ever been out of the Union, than with it. Finding themselves safely at home, it would be utterly immaterial whether they had ever been abroad. Let us all join in doing the acts necessary to restoring the proper practical relations between these States and the Union, and each forever after innocently indulge his own opinion whether in doing the acts he brought the States from without into the Union, or only gave them proper assistance, they never having been out of it. The amount of the new Louisiana constituency, so to speak, on which the new Louisiana government rests, would be more satisfactory to all if it contained 50,000, or 30,000, or even 20,000, instead of only about 12,000, as it does. It is also unsatisfactory to some that the elective franchise is not given to the colored man. I would myself prefer that it were now conferred on the very intelligent, and on those who serve our cause as soldiers. Still, the question is not whether the Louisiana government, as it stands, is quite all that is desirable. The question is, will it be wiser to take it as it is and help to improve it, or to reject and disperse it? Can Louisiana be brought into proper practical relation with the Union sooner by sus-

taining or by discarding her new State government? Some 12,000 voters in the heretofore slave State of Louisiana have sworn allegiance to the Union, assumed to be the rightful political power of the State, held elections, organized a State Government, adopted a free-State constitution, giving the benefit of public schools equally to black and white, and empowering the legislature to confer the elective franchise upon the colored man. Their legislature has already voted to ratify the constitutional amendment recently passed by Congress, abolishing slavery throughout the nation. These 12,000 persons are thus fully committed to the Union and to perpetual freedom in the State—committed to the very things, and nearly all the things, the nation wants—and they ask the nation's recognition and its assistance to make good their committal. Now, if we reject and spurn them, we do our utmost to disorganize and disperse them. We, in effect, say to the white man: You are worthless or worse; we will neither help you, nor be helped by you. To the blacks we say: This cup of liberty which these, your old masters, hold to your lips we will dash from you, and leave you to the chances of gathering the spilled and scattered contents in some vague and undefined when, where, and how. If this course, discouraging and paralyzing both white and black, has any tendency to bring Louisiana into proper practical relations with the Union, I have so far been unable to perceive it. If, on the contrary, we recognize and sustain the new government of Louisiana, the converse of all this is made true. We encourage the hearts and nerve the arms of the 12,000 to adhere to their work, and argue for it, and proselyte for it, and fight for it, and feed it, and grow it, and ripen it to a complete success. The colored man, too, in seeing all united for him, is inspired with vigilance, and energy, and daring, to the same end. Grant that he desires the elective franchise, will he not attain it sooner by saving the already advanced steps toward it than by running backward over them? Concede that the new government of Louisiana is only to what it should be as the egg is to the fowl, we shall sooner have the fowl by hatching the egg than by smashing it. Again, if we reject Louisiana we also reject one vote in favor of the proposed amendment to the national Constitution. To meet this proposition it has been argued that no more than three-fourths of those States which have not attempted secession are necessary to validly ratify the amendment. I do not commit myself against this further than to say that such a ratification would be questionable, and sure to be persistently questioned, while a ratification by three-fourths of all the States would be unquestioned and unquestionable. I repeat the question: Can Louisiana be brought into proper practical relation with the Union sooner by sustaining or by discarding her new State government? What has been said of Louisiana will apply generally to other States. And yet so great peculiarities pertain to each State, and such important and sudden changes occur in the same State, and withal so new and unprecedented is the whole case that no exclusive and inflexible plan can safely be prescribed as to details and collaterals. Such exclusive and inflexible plan would surely become a new entanglement. Important principles may and must be inflexible. In the present situation, as the phrase goes, it may be my duty to make some new announcement to the people of the South. I am considering, and shall not fail to act when satisfied that action will

be proper."—A. Lincoln, *Complete works*, v. 2, pp. 673-675.

1865 (April 14).—Assassination of President Lincoln.—“From the very beginning of his Presidency, Mr. Lincoln had been constantly subject to the threats of his enemies and the warnings of his friend. . . . Although he freely discussed with the officials about him the possibilities of danger, he always considered them remote, as is the habit of men constitutionally brave, and positively refused to torment himself with precautions for his own safety. He would sum the matter up by saying that both friends and strangers must have daily access to him in all manner of ways and places; his life was therefore in reach of any one, sane or mad, who was ready to murder and be hanged for it; that he could not possibly guard against all danger unless he were to shut himself up in an iron box, in which condition he could scarcely perform the duties of a President; by the hand of a murderer he could die only once; to go continually in fear would be to die over and over. He therefore went in and out before the people, always unarmed, generally unattended. . . . Four years of threats and boastings, of alarms that were unfounded, and of plots that came to nothing thus passed away; but precisely at the time when the triumph of the nation over the long insurrection seemed assured, and a feeling of peace and security was diffused over the country, one of the conspiracies, not seemingly more important than the many abortive ones, ripened in the sudden heat of hatred and despair. A little band of malignant secessionists, consisting of John Wilkes Booth, an actor, of a family of famous players; Lewis Powell, alias Payne, a disbanded rebel soldier from Florida; George Atzerodt, formerly a coachmaker, but more recently a spy and blockade runner of the Potomac; David E. Herold, a young druggist's clerk, Samuel Arnold and Michael O'Laughlin, Maryland secessionists and Confederate soldiers, and John H. Surratt, had their ordinary rendezvous at the house of Mrs. Mary E. Surratt, the widowed mother of the last named, formerly a woman of some property in Maryland, but reduced by reverses to keeping a small boarding-house in Washington. Booth was the leader of the little coterie. He was a young man of twenty-six. . . . He was a fanatical secessionist; had assisted at the capture and execution of John Brown, and had imbibed at Richmond and other Southern cities where he had played, a furious spirit of partisanship against Lincoln and the Union party. After the reflection of Mr. Lincoln, which rang the knell of the insurrection, Booth, like many of the secessionists North and South, was stung to the quick by disappointment. He visited Canada, consorted with the rebel emissaries there, and at last—whether or not at their instigation cannot certainly be said, conceived a scheme to capture the President and take him to Richmond. He spent a great part of the autumn and winter inducing a small number of loose fish of secession sympathies to join him in his fantastic enterprise. . . . There are indications in the evidence given on the trial of the conspirators that they suffered some great disappointment in their schemes in the latter part of March, and a letter from Arnold to Booth, dated March 27, showed that some of them had grown timid of the consequences of their contemplated enterprise and were ready to give it up. He advised Booth, before going further, ‘to go and see how it will be taken in R—d.’ But timid as they might be

by nature, the whole group was so completely under the ascendancy of Booth that they did not dare disobey him when in his presence; and after the surrender of Lee, in an access of malice and rage which was akin to madness, he called them together and assigned each his part in the new crime, the purpose of which had arisen suddenly in his mind out of the ruins of the abandoned abduction scheme. This plan was as brief and simple as it was horrible. Powell, alias Payne, the stalwart, brutal, simple-minded boy from Florida, was to murder Seward; Atzerodt, the comic villain of the drama, was assigned to remove Andrew Johnson; Booth reserved for himself the most difficult and most conspicuous rôle of the tragedy; it was Herold's duty to attend him as a page and aid in his escape. Minor parts were assigned to stage carpenters and other hangers-on, who probably did not understand what it all meant. Herold, Atzerodt, and Surratt had previously deposited at a tavern at Surrattsville, Maryland, owned by Mrs. Surratt, but kept by a man named Lloyd, a quantity of ropes, carbines, ammunition, and whisky, which were to be used in the abduction scheme. On the 11th of April Mrs. Surratt, being at the tavern, told Lloyd to have the shooting irons in readiness, and on Friday, the 14th, again visited the place and told him they would probably be called for that night. The preparations for the final blow were made with feverish haste; it was only about noon of the 14th that Booth learned the President was to go to Ford's Theater that night. It has always been a matter of surprise in Europe that he should have been at a place of amusement on Good Friday; but the day was not kept sacred in America, except by the members of certain churches. It was not, throughout the country, a day of religious observance. The President was fond of the theater; it was one of his few means of recreation. It was natural enough that, on this day of profound national thanksgiving, he should take advantage of a few hours' relaxation to see a comedy. Besides, the town was thronged with soldiers and officers, all eager to see him; it was represented to him that appearing occasionally in public would gratify many people whom he could not otherwise meet. . . . From the moment Booth ascertained the President's intention to attend the theater in the evening his every action was alert and energetic. He and his confederates, Herold, Surratt and Atzerodt were seen on horseback in every part of the city. He had a hurried conference with Mrs. Surratt before she started for Lloyd's tavern. . . . Booth was perfectly at home in Ford's Theater, where he was greatly liked by all the employees, without other reason than the sufficient one of his youth and good looks. Either by himself or with the aid of his friends he arranged his whole plan of attack and escape during the afternoon. He counted upon address and audacity to gain access to the small passage behind the President's box; once there, he guarded against interference by an arrangement of a wooden bar to be fastened by a simple mortice in the angle of the wall and the door by which he entered, so that the door could not be opened from without. He even provided for the contingency of not gaining entrance to the box by boring a hole in its door, through which he might either observe the occupants or take aim and shoot. He hired at a livery stable a small, fleet horse, which he showed with pride during the day to barkeepers and loafers among his friends. The moon rose that night at ten

o'clock. A few minutes before that hour he called one of the underlings of the theater to the back door and left him there holding his horse. He then went to a saloon near by, took a drink of brandy, and entering the theater, passed rapidly through the crowd in rear of the dress circle and made his way to the passage leading to the President's box. He showed a card to a servant in attendance and was allowed to pass in. He entered noiselessly, and, turning, fastened the door with the bar he had previously made ready, without disturbing any of the occupants of the box, between whom and himself there yet remained the slight partition and the door through which he had bored the hole. . . . Holding a pistol in one hand and a knife in the other, he opened the box door, put the pistol to the President's head, and fired; dropping the weapon, he took the knife in his right hand, and when Major Rathbone sprang to seize him he struck savagely at him. Major Rathbone received the blow on his left arm, suffering a wide and deep wound. Booth, rushing forward, then placed his left hand on the railing of the box and vaulted lightly over to the stage. It was a high leap, but nothing to such a trained athlete. . . . He would have got safely away but for his spur catching in the folds of the Union flag with which the front of the box was draped. He fell on the stage, the torn flag trailing on his spur, but instantly rose as if he had received no hurt, though in fact the fall had broken his leg; he turned to the audience, brandishing his dripping knife, and shouting the State motto of Virginia, 'Sic Semper Tyrannis,' and fled rapidly across the stage and out of sight. Major Rathbone had shouted, 'Stop him!' The cry went out, 'He has shot the President.' From the audience, at first stupid with surprise, and afterwards wild with excitement and horror, two or three men jumped upon the stage in pursuit of the flying assassin; but he ran through the familiar passages, leaped upon his horse, which was in waiting in the alley behind, rewarded with a kick and a curse the call-boy who had held him, and rode rapidly away in the light of the just risen moon. The President scarcely moved; his head drooped forward slightly, his eyes closed. . . . It was afterward ascertained that a large derringer bullet had entered the back of the head on the left side, and, passing through the brain, had lodged just behind the left eye. By direction of Rathbone and Crawford, the President was carried to a house across the street and laid upon a bed in a small room at the rear of the hall, on the ground floor. . . . The President had been shot a few minutes past ten. The wound would have brought instant death to most men, but his vital tenacity was extraordinary. . . . At twenty-two minutes after seven he died. Stanton broke the silence by saying, 'Now he belongs to the ages.'" At the same hour in which the president was murdered, an attempt was made by one of Booth's fellow conspirators to kill the secretary of state. Seward had been thrown from his carriage a few days before and was prostrated by the serious injuries received. Pending to bring a prescription from his physician, the assassin, Payne, made his way into the sick-room of the secretary and stabbed him three times, but not fatally, in the neck and cheek. Two sons, Frederick and Augustus Seward, were seriously wounded defending their father, and a soldier-nurse who was present struggled bravely with the assassin, though weaponless, and was stabbed repeatedly. Payne escaped for the time, but was caught a few days later. Booth made his way

to Port Tobacco, and thence across the Potomac, into Virginia, assisted and concealed by numerous sympathizers. He eluded his pursuers until April 25, when he was hunted down by a party of soldiers, while sleeping in a bar, below Fredericksburg, and, refusing to surrender, was shot. "The surviving conspirators, with the exception of John H. Surratt, were tried by a military commission sitting in Washington in the months of May and June. . . . Mrs. Surratt, Payne, Herold, and Atzerodt were hanged on the 7th of July; Mudd, Arnold, and O'Laughlin were imprisoned for life at the Tortugas, though the term was afterwards shortened; and Spangler, the scene shifter at the theater, was sentenced to six years in jail. John H. Surratt escaped to Canada," and thence to England. "He wandered over Europe, enlisted in the Papal Zouaves, deserted and fled to Egypt,

FORD'S THEATER, WASHINGTON

where he was detected and brought back to Washington in 1867. His trial lasted two months and ended in a disagreement of the jury."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 10, ch. 14-15.—"The first and inevitable result of the emotion which swept over the earth at Lincoln's death was to enroll him among martyrs and heroes. Men forgot that they had despised him, jeered at him, doubted him. They forgot his mistakes, forgot his plodding caution, forgot his homely ways. They saw now, with the vision which an awful and sudden disaster so often gives, the simple, noble outlines on which he had worked. They realized how completely he had sunk every partisan and personal consideration, every non-essential, in the tasks which he had set for himself—to prevent the extension of slavery, to save the Union. They realized how, while they had forgotten everything in disputes over this man, this measure, this event, he had seen only the two great objects of the struggle. They saw how slowly, but surely, he had edu-

cated them to feel the vital importance of these objects, had resolved their partisan warfare into a moral struggle. The wisdom of his words, the sincerity of his acts, the steadfastness of his life were clear to them at last. With this realization came a feeling that he was more than a man. He was prophet, they said, a man raised up by God for a special work, and they laid then the foundation of the Lincoln myth which still entralls so many minds. The real Lincoln, the great Lincoln, is not, however, this prophet and martyr. He is the simple, steady, resolute, unselfish man whose supreme ambition was to find out the truth of the questions which confronted him in life, and whose highest satisfaction was in following the truth he discovered. . . . It took four years of dogged struggle, of constant repetitions of the few truths which he believed to be essential, to teach the people of the United States that they could trust him; it took a murderer's bullet to make them realize the surpassing greatness of his simplicity, his common sense, and his resolution. It is this man who never rested until he had found what he believed to be the right, and, who, having found it, could never be turned from it, who is the Real Lincoln."—I. M. Tarbell, *Life of Abraham Lincoln*, v. 2, pp. 261-262.—"A man may be great by intellect or by character or by both. The highest men are great by both; and of these was Abraham Lincoln. . . . Thoughtfulness and intensity, the capacity to reflect steadily and patiently on a problem till it has been solved, is one of the two most distinct impressions which one gets from that strong, rugged face with its furrowed brow and deep-set eyes. The other impression is that of unshaken and unshakable resolution. Slow in reaching a decision, he held fearlessly to it when he had reached it. He had not merely physical courage, and that in ample measure, but the rarer quality of being willing to face misconception and unpopularity. It was his undaunted firmness and his clear thinking that fitted Lincoln to be the pilot who brought your ship through the wildest tempest that ever broke upon her. Three points should never be forgotten which, if they do not add to Lincoln's greatness, make it more winning and attractive. One is the fact that he rose all unaided to the pinnacle of power and responsibility. . . . A second is the gentleness of his heart. He who has to refuse every hour requests from those whom a private person would have been glad to indulge, he who has to punish those whom a private person would pity and pardon, can seldom retain either tenderness or patience. But Lincoln's tenderness and patience were inexhaustible. . . . To preserve truthfulness and conscientiousness appears scarcely possible in the stress of life where immense issues seem to make it necessary, and therefore to make it right, to toss aside the ordinary rules of conduct in order to secure the end desired. To Abraham Lincoln, however, truthfulness and conscientiousness remained the rule of life. He felt and owned his responsibility not only to the people, but to a higher power. Few rulers who have wielded like power amid like temptations have so stainless a record."—J. Bryce, *University and historical addresses*, pp. 201-203.—"Many great deeds had been done in the war. The greatest was the keeping of the North together in an enterprise so arduous, and an enterprise for objects so confusedly related as the Union and freedom. Abraham Lincoln did this; nobody else could have done it; to do it he bore on his sole shoulders such a weight of care and

pain as few other men have borne. When it was over it seemed to the people that he had all along been thinking their real thoughts for them; but they knew that this was because he had fearlessly thought for himself. He had been able to save the nation, partly because he saw that unity was not to be sought by the way of base concession. He had been able to . . . free the slaves, partly because he would not hasten to this object at the sacrifice of what he thought a larger purpose. This most unrelenting enemy to the project of the Confederacy was the one man who had quite purged his heart and mind from hatred or even anger towards his fellow-countrymen of the South. That fact came to be seen in the South too, and generations in America are likely to remember it when all other features of his statecraft have grown indistinct. . . . They will remember it as adding a peculiar lustre to the renovation of their national existence, as no small part of the glory, surpassing that of former wars, which has become the common heritage of North and South. For perhaps not many conquerors, and certainly few successful statesmen, have escaped the tendency of power to harden or at least to narrow their human sympathies; but in this man a natural wealth of tender compassion became richer and more tender while in the stress of deadly conflict he developed an astounding strength."—Lord Charnwood, *Abraham Lincoln (Makers of the nineteenth century)*, pp. 454-455.)

1865 (April 15).—Succession of Vice President Andrew Johnson to the presidency.—"Nearly all the members of the cabinet were at Lincoln's bedside on the Saturday morning when he died, and they at once signed a paper addressed to the Vice-President. 'The emergency of the government,' said they, 'demands that you should immediately qualify according to the requirements of the Constitution and enter upon the duties of President of the United States.' Only Seward's name was missing. First there was Hugh McCulloch, who after Chase's resignation and Fessenden's brief incumbency of the office, had become but lately Mr. Lincoln's Secretary of the Treasury, now in the midst of great financial operations, looking to the payment of the war debt. Then followed the names of Edwin M. Stanton, who almost from the beginning had been Secretary of War. . . . Gideon Welles, Secretary of the Navy; William Dennison, . . . who in 1864 had taken Montgomery Blair's place as Postmaster-General; John P. Usher, of Indiana, since 1862 Secretary of the Interior, soon to give way to James Harlan; and James Speed, of Kentucky, . . . Attorney-General McCulloch and Speed were sent to find Johnson at his lodgings in the Kirkwood House. Chase, whom Lincoln . . . had just appointed Chief Justice of the Supreme Court, was found to administer the oath, and [on April 15] in the parlor of the hotel in the presence of these three men, Francis P. Blair, Sr., his son, Montgomery Blair, Senator Foot, ex-Senator Hale and a few others the ceremony was quickly concluded. Johnson repeated the words of the oath 'very distinctly and impressively,' kissed the 21st verse of the 11th chapter of Eze-

kiel in the Bible which was handed him, whereupon the Chief Justice said: 'You are President. May God support, guide and bless you in your arduous duties.' The other in attendance came forward to tender their sad congratulations' and, determining not to make a speech, the new President availed himself of the Chief Justice's offer to prepare a public address to be printed in the newspapers. Mr. Chase left the room for this purpose, whereupon Mr. Johnson at once uttered some remarks as to his incompetency 'to perform duties so important and responsible,' and his policies, which, he said, would be developed gradually, appealing to his past career 'as a guarantee for the future.' 'Toil and an honest advocacy of the great principles of free government' had been his portion in life. The country had departed from the true way. When its present perils were at an end, he would hope for a return to 'principles consonant with popular rights.' At noon of this day Johnson met the Cabinet in the office of the Secretary of the Treasury, where Welles says that he 'deported himself admirably,' and stated that his policy would be 'in all essentials . . . the same as that of the late President.' The heads of the departments were desired to continue in their places and go forward with their work. . . . On April 18 when a delegation of citizens from Illinois, headed by Governor Oglesby, presented themselves at the new President's office in the Treasury Building, he told them that it was not alone the assassin of Lincoln who was guilty of his murder. Others shared the responsibility for the monstrous outrage. The American people must be taught that treason was 'the blackest of crimes,' and that 'traitors shall suffer its penalty.' This fact must be 'engraven on every heart.' Its President had been assassinated; should the nation be assassinated also? On April 24, to a number of Southern loyalists, he said that the time had come 'when the people should be taught to understand the length and breadth, the depth and height of treason. . . . When 'the conscious and intelligent traitors' were found, 'the penalty and the forfeit should be paid.' 'Treason and traitors must be driven from the land.'—E. P. Oberholzer, *History of the United States since the Civil War*, v. 1, pp. 5-8.

1865 (April 26).—General Johnston's surrender.—"Davis was of the opinion that Johnston, who was in North Carolina closely watched by Sherman, needed not to have surrendered, even after Lee was compelled to do so. But as early as the 23d of February, when Johnston was reinstated in command of the Army of the Tennessee, the cause of the Confederacy appeared to him hopeless, and he saw no good in continuing the fighting except for the sake of obtaining better terms of peace. He was directed by General Lee to drive back Sherman, an order admirable in its comprehensiveness, but sorely lacking in practicability owing to the small number and scattered condition of Johnston's available troops. After much marching and two or three unimportant engagements, the Army of the Tennessee was concentrated near Bentonville on the 18th of March. On the 19th, 20th, and 21st an engagement occurred at this place, in which the Confederates, though they had the advantage, were not able to prevent Sherman from uniting with Schofield. On the 22d Johnston moved towards Raleigh. April 11 he heard of the surrender of Lee, and

immediately decided that further resistance on his part was useless. He met President Davis, by appointment, at Greensboro on the 12th. Mr. Davis argued for the continuance of the war, for he believed that a brave stand would recall the soldiers who had deserted and arouse the spirit of the country. Finding no support, he finally persuaded Johnston to send Sherman a letter asking for an armistice . . . 'the object being to permit the civil authorities to enter into the needful arrangements to terminate the existing war.' General Sherman assented to a meeting, which took place on . . . [April 16] at a house on the Raleigh road. The first thing Sherman did was to show Johnston a telegram announcing the assassination of President Lincoln. This elicited from the Confederate general the declaration that 'the event was the greatest possible calamity to the South.' General Sherman stated that an armistice giving opportunity for the civil powers to negotiate terms of peace was out of the question; for Washington would never consent to the recognition of any civil capacity on the part of the leaders of the Confederacy. Johnston suggested that, as generals had been known to arrange the terms of permanent peace, so they might. After considerable discussion, and much argument as to whether the Confederate President and his Cabinet should be included in the general amnesty, a Basis of Agreement was signed by both generals."—G. C. Lee, *True history of the Civil War*, pp. 390-392.—The memorandum of agreement, signed on April 18 provided for the disbanding of all the Confederate armies, the recognition of the State governments of the several States lately forming the rebel Confederacy, the complete restoration of their old status in the Union, and complete amnesty to all concerned in the rebellion. This was forwarded to Washington, and, of course, it was disapproved, but with an unnecessary publication of sharp censure of General Sherman, and with expressions that seemed to imply distrust of the loyalty of his motives. General Grant was ordered to proceed to General Sherman's headquarters and to direct further operations. He executed this mission with great delicacy, and his presence with Sherman was hardly known. The latter held a second conference with Johnston on the 26th, and there General Johnston made the surrender of his army on the same terms that had been granted to Lee.

1865 (April-May).—End of the war.—Fall of Mobile.—Stoneman's raid.—Wilson's raid.—Capture of Jefferson Davis.—Final surrenders.—After the surrender of Johnston, "there were still a few expeditions out in the South that could not be communicated with, and had to be left to act according to the judgment of their respective commanders. . . . The three expeditions which I had tried so hard to get off from the commands of Thomas and Canby did finally get off: one under Canby himself, against Mobile, late in March; that under Stoneman from East Tennessee on the 20th; and the one under Wilson, starting from Eastport, Mississippi, on the 22d of March. They were all eminently successful, but without any good result. Indeed much valuable property was destroyed and many lives lost at a time when we would have liked to

spare them. . . Stoneman entered North Carolina and then pushed north to strike the Virginia and Tennessee Railroad. He got upon that road, destroyed its bridges at different places and rendered the road useless to the enemy up to within a few miles of Lynchburg. His approach caused the evacuation of that city about the time we were at Appomattox, and was the cause of a commotion we heard of there. He then pushed south, and was operating in the rear of Johnston's army about the time the negotiations were going on between Sherman and Johnston for the latter's surrender. In this raid Stoneman captured and destroyed a large amount of stores, while 14 guns and nearly 2,000 prisoners were the trophies of his success. Canby appeared before Mobile on the 27th of March. The city of Mobile was protected by two forts, besides other intrenchments—Spanish Fort, on the east side of the bay, and Fort Blakely, north of the city. These forts were invested. On the night of the 8th of April, the National troops having carried the enemy's works at one point, Spanish Fort was evacuated; and on the 9th, the very day of Lee's surrender, Blakely was carried by assault, with a considerable loss to us. On the 11th the city was evacuated. . . . Wilson moved out [from Eastport, Mississippi] with full 12,000 men, well equipped and well armed. He was an energetic officer and accomplished his work rapidly. Forrest was in his front, but with neither his old-time army nor his old-time prestige. . . . He had a few thousand regular cavalry left, but not enough to even retard materially the progress of Wilson's cavalry. Selma fell on the 2d of April. . . . Tuscaloosa, Montgomery and West Point fell in quick succession. These were all important points to the enemy by reason of their railroad connections, as depots of supplies, and because of their manufactories of war material. . . . Macon surrendered on the 21st of April. Here news was received of the negotiations for the surrender of Johnston's army. Wilson belonged to the military division commanded by Sherman, and of course was bound by his terms. This stopped all fighting. General Richard Taylor had now become the senior Confederate officer still at liberty east of the Mississippi River, and on the 4th of May he surrendered everything within the limits of this extensive command. General E. Kirby Smith surrendered the trans-Mississippi department on the 26th of May, leaving no other Confederate army at liberty to continue the war. Wilson's raid resulted in the capture of the fugitive president of the defunct confederacy before he got out of the country. This occurred at Irwinsville, Georgia, on the 11th of May. For myself, and I believe Mr. Lincoln shared the feeling, I would have been very glad to have seen Mr. Davis succeed in escaping, but for one reason: I feared that, if not captured, he might get into the trans-Mississippi region and there set up a more contracted confederacy."—U. S. Grant, *Personal memoirs*, v. 2, ch. 69.—"Davis and members of the Richmond Cabinet who had been in touch with Johnston . . . had reached Greensboro in North Carolina [with the Confederate archives] on the day of Lincoln's assassination. On the 18th they were in Charlotte, where they remained eight days. Starting forth again, not knowing with what end in view, the fugitives were soon obliged to separate and go off in different directions. Davis himself was overtaken by a body of cavalry, under the command of General James H. Wilson, in a camp in the pine woods of southern Georgia

on May 10. Mrs. Davis accompanied her husband in his flight. When they were warned of his danger, she put upon him her waterproof coat, which looked like a woman's coarse gown, and threw over his head and shoulders a shawl, which led to the story, soon published everywhere, that he had been taken in his 'wife's clothes.' He was escorted to General Wilson's headquarters and then conveyed by water from Augusta to Fortress Monroe, where he was placed in a stone casemate under a strong guard."—E. P. Oberholtzer, *History of the United States since the Civil War*, v. 1, p. 10.—"His family were returned by water to Savannah and there set at liberty. Secretary Reagan—the only person of consequence captured with Davis—was taken to Boston, and confined, with Vice-President Stephens (captured about this time also in Georgia), in Fort Warren; but each was liberated on parole a few months thereafter."—H. Greeley, *American conflict*, v. 2, ch. 35.—"Davis spent two years, from 1865 to 1867, in prison, a part of the time in chains. This was a fortunate indignity for him. Intensely unpopular in the South when the Confederacy collapsed, he gained sympathy as a post-war sufferer for the cause. The South forgot his faults and his mistakes and only remembered that though he was not primarily responsible for secession he was a martyr for the principle of secession. . . . What shall we say of him now after this long time? The South respects him but it is almost glad that he was not quite great enough to succeed. The South is well satisfied to be a part of the Union. It still differs politically from the North, but this difference is more the result of habit and tradition than of thought. The South maintains, as it should, that secession was justified and that Jefferson Davis was right, but it feels that out of the evil of defeat and political overthrow Providence has brought good. What happened happened for the best."—H. J. Eckenrode, *Jefferson Davis, President of the South*, pp. 357-359.

1865 (May).—Statistics of the Civil War.—Northern navy.—Losses caused by Confederate cruisers.—Numbers of combatants.—Disbandment of Union army.—Army of occupation in the South.—Sale of 7-30 bonds.—Appropriations for quartermaster's department.—Improvement in transportation.—"In the four years of their service the armies of the Union, counting every form of conflict, great and small, had been in 2,265 engagements with the Confederate troops. From the time when active hostilities began until the last gun of the war was fired, a fight of some kind—a raid, a skirmish, or a pitched battle—occurred at some point on our widely extended front nearly eleven times per week upon an average. Counting only those engagements in which the Union loss in killed, wounded, and missing exceeded 100, the total number was 330,—averaging one every four and a half days. From the northernmost point of contact to the southernmost, the distance by any practicable line of communication was more than 2,000 miles. From East to West the extremes were 1,500 miles apart. During the first year of hostilities—one of

preparation on both sides—the battles were . . . 35 in number, of which the most serious was the Union defeat at Bull Run. In 1862 the war had greatly increased in magnitude and intensity, as is shown by the 84 engagements between the armies. The net result of the year's operations was highly favorable to the Rebellion. In 1863 the battles were 110 in number—among them some of the most significant and important victories for the Union. In 1864 there were 73 engagements, and in the winter and early spring of 1865 there were 28. In fact, 1864-65 was one continuous campaign. . . . Not only in life but in treasure the cost of the war was enormous. In addition to the large revenues of the Government which had been currently absorbed, the public debt at the close of the struggle was \$2,808,549,437.55. The incidental losses were innumerable in kind, incalculable in amount. Mention is made here only of the actual expenditure of money—estimated by the standard of gold. The outlay was indeed principally made in paper, but the faith of the United States was given for redemption in coin—a faith which has never been tarnished, and which in this instance has been signally vindicated by the steady determination of the people. . . . For the three years of the rebellion, after the first year, our War Department alone expended \$603,314,411.82, \$690,391,048.66, and \$1,030,690,400 respectively. The Secretary, Mr. Welles, found upon entering his office but a single ship in a Northern port fitted to engage in aggressive operations. . . . By the end of the year 1863 the Government had 600 vessels of war which were increased to 700 before the rebellion was subdued. Of the total number at least 75 were ironclad.”—J. G. Blaine, *Twenty years of Congress*, v. 2, ch. 2; v. 1, ch. 25.—“Eleven Confederate cruisers figured in the ‘Alabama claims’ settlement between the United States and Great Britain. They were the *Alabama*, *Shenandoah*, *Florida*, *Tallahassee*, *Georgia*, *Chickamauga*, *Nashville*, *Retribution*, *Sumter*, *Sallie* and *Boston*. The actual losses inflicted by the *Alabama* (\$6,547,600) were only about \$60,000 greater than those charged to the *Shenandoah*. The sum total of the claims filed against the eleven cruisers for ships and cargoes was \$17,900,633, all but about \$4,000,000 being caused by the *Alabama* and *Shenandoah*. . . . In the ‘case of the United States’ . . . it is stated that while in 1860 two-thirds of the commerce of New York was carried on in American bottoms, in 1863 three-fourths was carried on in foreign bottoms. The transfer of American vessels to the British flag to avoid capture is stated thus: In 1861, vessels 126, tonnage 71,673; in 1862, vessels 135, tonnage 64,578; in 1863, vessels 348, tonnage 252,579; in 1864, vessels 106, tonnage 92,052. . . . The cruisers built or purchased in England for the Confederate navy, were the *Florida*, *Alabama*, *Shenandoah* and *Rappahannock*. The latter never made a cruise, and the others were procured for the government by James D. Bulloch, naval agent. . . . He also had constructed in France, the armored ram *Stonewall*.”—J. T. Scharf, *History of the Confederate States navy*, ch. 26.—See also ALABAMA CLAIMS.—“The enlistments in the Union army during the War of the Rebellion numbered 2,898,304. This number includes about 230,000 militia and ‘emergency men,’ who served for short terms, and some part of whom were not mustered into the United States service. The terms of service (expiring by the terms of enlistment or by the close of the war), under 1,580,00 of these enlist-

ments, was from two weeks to fourteen months. The number of individuals under arms was considerably less than the number of enlistments, because of repeated enlistments by individuals. It is probable that many of the 200,000 men who served for short terms in 1861 and 1862 enlisted again. Over 200,000 men reenlisted in the veteran regiments, the Veteran Reserve Corps and Hancock's Veteran Corps. . . . The total number of men in the Confederate armies has been estimated at 600,000 to 700,000 by General Marcus J. Wright, and at about 600,000 by General Early, Alexander H. Stephens, and Dr. Joseph Jones, surgeon-general of the United Confederate Veterans but, excepting the last-named neither of these writers gives the source of his figures, and . . . the largest of these estimates is too low. It is a part of human nature which persuades the losers in war to believe that the result must have come from a great disparity in numbers. The sustained conflict and terrible loss of four years of war placed the reputation of Southern valor so high that exaggerated statements of numbers cannot further exalt it in the estimation of the world. . . . On the other hand, it would not disparage Northern courage to establish a large disproportion in numbers, in view of the defensive attitude of the South, and the necessity of invading and occupying a constantly enlarging territory which was forced upon the Northern army. This required many more men than mere battles upon equal terms would have required. . . . The fact that the average strength shown on the returns of all the Confederate armies during the four years of the war was 55 per cent. of the average strength of all the Union armies for the same time tends to prove that the Confederate estimates of 600,000 to 700,000 for the total number in the Confederate army, or 20 or 24 per cent. of the total number (2,898,304) in the Union armies, are too small. But it would be an error to assume that the ratio of 55 per cent. between the average strength of the Union armies and the average strength of the Confederate armies shows the absolute ratio between the number of men who were enrolled on each side, because it might not give due effect to the varying terms of service of the various levies on either side.”—T. L. Livermore, *Numbers and losses in the Civil War in America, 1861-1865*, pp. 1-3, 48.—See also PRISONS AND PRISON-PENS, CONFEDERATE.—“The disbandment of the great Northern army had begun on the 29th of April, before Lincoln had yet been put in his grave, or Davis had been captured. By August 7, 641,000 troops had returned to the peaceful walks of life, ready to be absorbed in the ranks of citizenship, and the work was continued rapidly afterward. To pacify the country, if further need arose, and to reestablish the national authority, five military divisions were created: the Atlantic, commanded by General George G. Meade, with headquarters at Philadelphia; the Mississippi, by General William T. Sherman, stationed at St. Louis; the Gulf, by General Philip H. Sheridan, at New Orleans; the Tennessee, by General George H. Thomas, at Nashville; and the Pacific, by General H. W. Halleck, at San Francisco. These five divisions comprised eighteen departments, at the head of which stood such tried commanders as Hancock, Pope, Hooker, Schofield, McDowell, Stoneman, Canby, Terry and Ord. The great purchases on account of the army ceased. The horses and mules, the munitions and supplies of war were offered for sale, and the proceeds covered into the Treasury. The

prisoners who had been gathered into camps and stockades in various parts of the North took the oath of allegiance and were sent to their homes. In the navy, too, retrenchment was instantly begun. Coast squadrons and river flotillas were reduced in size, or wholly dispersed. The vessels and equipment were sold and thousands of seamen were at liberty to return to the merchant service, whence they had been drawn for the national defence. The army had cost the government over \$1,000,000,000 in the fiscal year ending June 30, 1865. Two years later when there was a full return to a peace footing the total expenditures for the same use were less than \$100,000,000. The debt of the United States, when it was finally adjusted, reached a grand aggregate as a result of the war of about \$3,000,000,000. To the task of paying this great sum the country returned cheerfully and even humorously. Jay Cooke, the Philadelphia banker and loan agent for the government, published a pamphlet entitled 'Our National Debt a National Blessing.' This suggestion aroused general laughter. . . . The work of providing the money for the payment of the accumulating warrants upon the Treasury, and of sending the soldiers home with their wages in their pockets was going forward wisely and confidently. When Mr. McCulloch came to the head of the Treasury Department with the beginning of Lincoln's second term, on March 4, 1865, he found that the pecuniary wants of the government were being met by the sale of '7-30's, i. e. three-year Treasury notes bearing interest at the rate of two cents a day, or \$7.30 a year on a note of \$100. The contract had been made by Mr. McCulloch's predecessor in office, William P. Fessenden, with Jay Cooke, the sanguine and energetic man through whom large sales of bonds had been effected by Secretary Chase in the early years of the war. Cooke immediately established the machinery for a nationwide appeal. As the war came to an end hope filled every heart, and in a few months \$830,000,000 worth of the notes were distributed among the people. On the day Lincoln was shot the sales reached a total of about \$4,000,000, and continued at nearly this rate daily after his death. In May a new impulse was given to the movement, and on one day, May 13, more than \$30,000,000 were received in exchange for notes at Cooke's various sales agencies. The payment of the charges of the war, by the sale of paper falling due at the expiration of short terms, would call for much adjustment of the debt at later dates, but the generous subscription of money by the people for government uses in these few weeks following Mr. Johnson's coming to the Presidency was, at once, an expression of their virility at the end of a prolonged and exhausting contest, and of their patriotic faith in the future of the nation."—E. P. Oberholzer, *History of the United States since the Civil War*, v. 1, pp. 25-28.—See also MONEY AND BANKING: Modern: 1861-1864; 1863-1914.—"The amount of appropriations for the quartermaster's department during the war was \$1,184,300,608.95. The concluding paragraph of Meigs's report of 1864 illustrates the principle on which the war was conducted, that human life was more valuable than material. 'That an army is wasteful is certain,' he wrote, 'but it is more wasteful to allow a soldier to sicken and die for want of the blanket or knapsack, which he has thoughtlessly thrown away in the heat of the march or the fight than to again supply him on the first opportunity with these articles indispensable to health and efficiency.' A mass of

evidence warrants the statement that never had an army been so well supplied with food and clothing as was that of the North; never before were the comfort and welfare of the men so well looked after. Private agencies, . . . helped to secure this result but they needed and obtained the heavy co-operation of the government. . . . Until our Civil War the art of transporting troops and their supplies by rail and by river steamboats was in its infancy. Under the conditions of the large expanse of territory and the consequent necessity of moving soldiers and food great distances, it developed through our mechanical ingenuity into an indispensable branch of logistics. Some remarkable exploits for the time were done. Lewis B. Parsons was superintendent of river and railroad transportation for the armies both in the West and East; he received mention from Meigs 'for his just and energetic control,' and a high tribute from General Grant."—J. F. Rhodes, *History of the United States*, v. 5, pp. 225-226.

1865 (May).—Feeling of surrendered Confederate officers.—Attitude in North Carolina.—After the surrender of Johnston, General Jacob D. Cox was put in command of the military district within which the surrender occurred, and had charge of the arrangements made for paroling and disbanding the Confederate forces. General Cox has given an interesting report of conversations which he had in that connection with General Johnston and General Hardee. Talking with General Hardee of the war, the latter was asked "what had been his own experience as to the result, and when had he himself recognized the hopelessness of the contest. 'I confess,' said he, laughing, 'that I was one of the hot Southerners who shared the notion that one man of the South could whip three Yankees; but the first year of the war pretty effectually knocked that nonsense out of us, and, to tell the truth, ever since that time we military men have generally seen that it was only a question how long it would take to wear our army out and destroy it. We have seen that there was no real hope of success, except by some extraordinary accident of fortune, and we have also seen that the politicians would never give up till the army was gone. So we have fought with the knowledge that we were to be sacrificed with the result we see to-day, and none of us could tell who would live to see it. We have continued to do our best, however, and have meant to fight as if we were sure of success.' . . . Johnston was very warm in his recognition of the soldiery qualities and the wonderful energy and persistence of our army and the ability of Sherman. Referring to his own plans, he said he had hoped to have had time enough to have collected a larger force to oppose Sherman, and to give it a more complete and efficient organization. The Confederate government had reckoned upon the almost impassable character of the rivers and swamps to give a respite till spring—at least they hoped for this. 'Indeed,' said he, with a smile, 'Hardee here, 'giving a friendly nod of his head toward his subordinate, 'reported the Salkehatchie Swamps as absolutely impassable; but when I heard that Sherman had not only started, but was marching through those very swamps at the rate of thirteen miles a day, making corduroy road every foot of the way, I made up my mind there had been no such army since the days of Julius Cæsar.' Hardee laughingly admitted his mistaken report

from Charleston, but justified it by saying that all precedent was against such a march, and that he would still have believed it impossible if he had not seen it done. . . . I accepted several invitations to address the people at different points and explain our attitude and purpose during the interregnum, and to give them serious advice as to their conduct in the very trying circumstances in which they were. . . . There was a wistful solicitude noticeable in people of all classes to know what was to become of them. Their leaders had educated them to believe that the success of the National arms would mean the loss of every liberty and subjection to every form of hateful tyranny. Yet they almost universally showed a spirit of complete resignation to what might come, and a wish to conform obediently to everything enjoined by the officers of the occupying armies. It was the rarest thing in the world to meet with anything like sullen resistance or hostile or unfriendly utterances. (Footnote: The same disposition in the people was noticed elsewhere in the South. Halleck said, in a dispatch of April 22d, 'From all I can learn, Richmond is to-day more loyal than Washington or Baltimore.' Sherman sent similar reports from Savannah). . . . The owners of property did not hope for profits; they expressed themselves earnestly as anxious only that such crops might be raised as would save the community, white and black alike, from absolute destitution. I know of prominent examples of well-known men offering the farm hands all that they could raise for that season if they would only go to work and plant something which could still ripen into food. . . . As soldiers, we refrained from meddling in civil affairs, but it was understood that we should preserve the peace and allow no force to be used by others. It was a time when everybody felt the need of being patient and conciliatory, and the natural authority of known character and wisdom asserted itself. Everybody soon went to work to make a living, and the burning problems of political and social importance were postponed. . . . We had opportunity to notice to what great straits the people had been reduced for two years in the matter of manufactured goods of all kinds. . . . Carriages, wagons, and farm implements went to decay, or could only be rudely patched up by the rough mechanics of the plantation. The stringent blockade shut out foreign goods, and the people were generally clothed in homespun. In many houses the floors were bare because the carpets had been cut up to make blankets for the soldiers. . . . I think I cannot be mistaken in the judgment I formed at the time, that to the great body of the Southern people it was a relief that the struggle was really over; that they breathed more freely and felt that a new lease of life came with peace. . . . Why it was that the mellowness of spirit which seemed so prevalent could not have ripened without interruption or check into a quicker and more complete fraternization, belongs to another field of inquiry. The military chronicler stops where he was mustered out."—J. D. Cox, *Military reminiscences of the Civil War*, v. 2, pp. 526, 531-532, 540-541, 545-546, 548.

1865 (May).—Summary of governmental control of railroads during Civil War. See RAILROADS: 1861-1865.

1865 (May-July).—President Johnson's measures of Reconstruction.—Amnesty proclamation.—Growth of antagonism to the president.—Popular feeling.—"It was scarcely to be expected that

a man who had fought his way to the fore in eastern Tennessee during those controversial years would possess the characteristics of a diplomat. Even his friends found . . . [President Johnson] uncommunicative, too often defiant and violent in controversy, irritating in manners, indiscreet, and lacking flexibility in the management of men. The messages which he wrote as President were dignified and judicious, and his addresses were not lacking in power, but he was prone to indulge in unseemly repartee with his hearers when speaking on the stump. . . . Unhappily, too, he was distrustful by nature, giving his confidence reluctantly and with reserve, so that he was almost without friends or spokesmen in either House of Congress. His policies have commended themselves, on the whole, even after the scrutiny of half a century. The extent to which he was able to put them into effect is part of the history of reconstruction. The close of the Civil War found the nation as well as the several sections of the country facing a variety of complicated and pressing social, economic and political problems. . . . Most of these problems, moreover, had to be solved through political agencies, such as party conventions and legislatures, with all the limitations of partisanship that these terms convey. . . . In their attitude toward the South, the people of the North, as well as the politicians, fell into two groups. The smaller or radical party desired a stern reckoning with all 'rebels' and the imprisonment and execution of the leaders. They hoped, also, to effect an immediate extension to the negroes of the right to vote. It was this faction that welcomed the accession of Johnson to the Presidency. The other group was much the larger and was inclined toward gentler measures and toward leaving the question of suffrage largely for the future. Lincoln and his Secretary of State, Seward, were representative of this party. The attitude of the South toward the North was more difficult to determine. . . . Careful observers differed as to whether the South accepted its defeat in good faith and would treat the blacks justly, or whether it was sullen, unrepentant and ready to adopt any measures short of actual slavery to repress the negro. In theory, the union of the states was still intact. The South had attempted to secede and had failed. Practically, however, the southern states were out of connection with the remainder of the nation and some method must be found of reconstructing the broken federation."—C. R. Lingley, *Since the Civil War*, pp. 5-7.—"The first six weeks of Johnson's administration were dominated by the emotions which the assassination of his predecessor excited in all parts of the land. At Washington affairs fell largely under the direction of the secretary of war, whose total loss of self-control in the crisis contributed to intensify the panicky and vindictive feeling that prevailed. . . . When, however, the excitement caused by the assassination of Mr. Lincoln subsided, . . . northern sentiment began to show alarm at the vindictive course to which the President seemed tending. . . . Moreover, . . . the advice which was given to Mr. Johnson by most of his constitutional advisers was of another quality than that which he had been wont to receive from the embittered and revengeful Unionists of Tennessee. He had gladly retained all the members of Mr. Lincoln's cabinet, and in them he found persisting that distaste for proscription which Booth's victim had made no attempt to conceal. Especially was this feeling manifest after the return of Seward to duty in

May; for the secretary of state harbored no resentments in politics, and the weight of his influence could not have failed, under the circumstances, to be very great. Accordingly, though many prominent Confederates were kept in strict confinement, and were treated in some cases with much more rigor and harshness than was necessary, the policy of bringing them to trial and punishment gradually was abandoned. . . . The prisoners of state who were put in rigorous confinement under the influence of the demand for harsh treatment included Jefferson Davis and Alexander H. Stephens, president and vice-president of the defunct Confederacy, Reagan, Seddon, Campbell, and Mallory, of the late Confederate cabinet, half a dozen of the state governors under the Confederacy, and a number of other prominent men."—W. A. Dunning, *Reconstruction*,

ANDREW JOHNSON

political and economic, pp. 20-23.—“The work of the restoration, the reorganization, the reconstruction of the South had begun before Lincoln’s death, and, while the way was not plain, some experiments of an interesting nature already had been undertaken. [See above: 1865 (April 11).] . . . Johnson’s first act, by way of the development of Lincoln’s policies in reference to the South, was a recognition on May 9 of the Virginia government which had its seat at Alexandria, and the governor attempting to act under it, Francis H. Pierpont. The Secretary of the Treasury was directed to appoint revenue officers, the Postmaster-General to establish post-offices, the judges to hold courts, etc. . . . Three weeks after President Johnson’s recognition of the Pierpont government in Virginia, on May 20, he published his Amnesty Proclamation. In this paper he merely developed the policy which had been laid down by Lincoln in similar papers issued on December 8, 1863, and March 26, 1864. The proclamation

was discussed at length in the Cabinet.”—E. P. Oberholtzer, *History of the United States since the Civil War*, v. I, pp. 28-31.—The proclamation of amnesty and pardon, of May 29, 1865, was addressed “to ‘all persons who have directly or indirectly participated in the existing Rebellion,’ upon the condition that such person should take and subscribe an oath—to be registered for permanent preservation—solemnly declaring that henceforth they would ‘faithfully support, protect, and defend, the Constitution of the United States and the union of the States thereunder’; and that they would also ‘abide by and faithfully support all laws and proclamations which have been made during the existing Rebellion, with reference to the emancipation of slaves.’ . . . The general declaration of amnesty was somewhat narrowed in its scope by the enumeration, at the end of the proclamation, of certain classes which were excepted from its benefits.” Of the thirteen classes thus excepted, the first six were nearly identical with those excepted in President Lincoln’s proclamation of Dec. 8, 1863. (See above: 1863 [December].) The classes that he now added were: “Seventh, ‘All persons who have been, or are, absentees from the United States for the purpose of aiding the Rebellion.’ . . . Eighth, ‘All officers in the rebel service who had been educated at the United States Military or Naval Academy.’ . . . Ninth, ‘All men who held the pretended offices of governors of States in insurrection against the United States.’ . . . Tenth, ‘All persons who left their homes within the jurisdiction and protection of the United States, and passed beyond the Federal military lines into the pretended Confederate States for the purpose of aiding the Rebellion.’ . . . Eleventh, ‘All persons who have been engaged in the destruction of the commerce of the United States upon the high seas . . . and upon the lakes and rivers that separate the British Provinces from the United States.’ . . . Twelfth, ‘All persons who, at the time when they seek to obtain amnesty and pardon, are in military, naval, or civil confinement, as prisoners of war, or persons detained for offenses of any kind either before or after conviction.’ . . . Thirteenth, ‘All participants in the Rebellion, the estimated value of whose taxable property is over \$20,000.’ . . . Full pardon was granted, without further act on their part, to all who had taken the oath prescribed in President Lincoln’s proclamation of December 8, 1863, and who had thenceforward kept and maintained the same inviolate. . . . A circular from Mr. Seward accompanied the proclamation, directing that the oath might ‘be taken and subscribed before any commissioned officer, civil, military, or naval, in the service of the United States, or before any civil or military officer of a loyal State or Territory, who, by the laws thereof, may be qualified to administer oaths.’ Every one who took the oath was entitled to a certified copy of it, . . . and a duplicate properly vouched, was forwarded to the State Department. . . . With these details complete, a second step of great moment was taken by the Government on the same day (May 29). A proclamation was issued appointing William W. Holden provisional governor of the State of North Carolina. . . . The proclamation made it the duty of Governor Holden, ‘at the earliest practicable period, to prescribe such rules and regulations as may be necessary and proper for assembling a convention—composed of delegates who are loyal to the United States and no others—for the purpose

of altering or amending the Constitution thereof, and with authority to exercise, within the limit of said State, all the powers necessary and proper to enable the loyal people of the State of North Carolina to restore said State to its constitutional relations to the Federal Government.' . . . It was specially provided in the proclamation that in 'choosing delegates to any State Convention no person shall be qualified as an elector or eligible as a member unless he shall have previously taken the prescribed oath of allegiance, and unless he shall also possess the qualification of a voter as defined under the Constitution and Laws of North Carolina, as they existed on the 20th of May, 1861, immediately prior to the so-called ordinance of secession.' Mr. Lincoln had in mind, as was shown by his letter to Governor Hahn of Louisiana, to try the experiment of negro suffrage, beginning with those who had served in the Union Army, and who could read and write; but President Johnson's plan confined the suffrage to white men, by prescribing the same qualifications as were required in North Carolina before the war. . . . A fortnight later, on the 13th of June, a proclamation was issued for the reconstruction of the civil government of Mississippi, and William L. Sharkey was appointed provisional governor. Four days later, on the 17th of June, a similar proclamation was issued for Georgia with James Johnson for provisional governor, and for Texas with Andrew J. Hamilton for provisional governor. On the 21st of the same month Lewis E. Parsons was appointed provisional governor of Alabama, and on the 30th Benjamin F. Perry was appointed provisional governor of South Carolina. On the 13th of July the list was completed by the appointment of William Marvin as provisional governor of Florida. The precise text of the North Carolina proclamation, 'mutatis mutandis,' was repeated in each one of those relating to these six States. . . . For the reconstruction of the other four States of the Confederacy different provisions were made." In Virginia, the so-called "Pierpont government [see VIRGINIA: 1861 (June-November)] the shell of which had been preserved after West Virginia's separate existence had been recognized by the National Government, with its temporary capital at Alexandria, was accepted by President Johnson's Administration as the legitimate Government of Virginia. . . . A course not dissimilar to that adopted in Virginia was followed in Louisiana, Arkansas, and Tennessee. In all of them the so-called 'ten-per-cent' governments established under Mr. Lincoln's authority were now recognized. . . . The whole scheme of reconstruction, as originated by Mr. Seward and adopted by the President, was in operation by the middle of July, three months after the assassination of Mr. Lincoln."—J. G. Blaine, *Twenty years of Congress*, v. 2, ch. 3-4.—"The exception [in the proclamation] for persons holding property valued at more than \$20,000, known as the '13th exception,' was new, and where in the South dismay was not complete this feature of the plan led to protest. Memorials began to come into the President. A number of Virginians visited him in July and complained of their situation. They were seeking credits in the North and West, which were not procurable while they rested under this ban of the government. The President called upon his own knowledge of the South. 'It was the wealthy men who dragooned the people into secession,' said he. 'I know how the thing was done. You rich men

used the press and bullied your little men into force the state into secession.' He seemed to speak as a 'poor white' for the 'poor whites.' . . . [The question of suffrage for the negroes was already looming on the political horizon.] The negro suffrage leaders had wrought with Lincoln without feeling certain that they had converted him to their views and, at his death, they almost instantly turned their artillery upon Johnson. Some thought that he would prove easier of conquest and they regarded the change of presidents very hopefully. . . . First among them, perhaps, was Charles Sumner, Senator from Massachusetts. . . . It was Sumner and Chase who most concerned themselves about Johnson's principles in the few days following Lincoln's death. A week after that event, on the evening of April 22, they together visited the new President. 'He said,' Sumner wrote to Francis Lieber, 'that colored persons are to have the right of suffrage. . . . I was charmed with his sympathy which was entirely different from his predecessor's.' . . . Chase was less confident. He went to the President with the 'rough draft' of an address, which he hoped might be issued, on the subject of 'the reorganization of the rebel states.' In the paper he had 'incorporated a distinct recognition of the loyal colored men as citizens entitled to the right of suffrage.' . . . At the end Chase 'almost hoped that the President's reluctance was conquered.' . . . While Johnson was leading Sumner to believe that there was 'no difference' between them, and sent him and Chase away 'light hearted,' what treatment did the question receive in meetings of the Cabinet? On May 9, when the case of North Carolina was being discussed, and negro suffrage was under consideration, Stanton, Dennison and Speed were found to favor, and Welles, McCulloch and Usher to oppose the scheme. . . . That there was a possibility of Sumner's having misunderstood the President, or of the President having suffered a certain change of heart, dawned upon the negrophiles before May was yet done. The proclamation recognizing the Pierpont government in Virginia had aroused Thaddeus Stevens. 'Is there no way,' he inquired of Sumner, 'to arrest the insane course of the President in reorganization?' From a hotel in Philadelphia on July 6 he wrote to Johnson, begging him to 'hoid his hand and await the action of Congress,' meantime governing the South by 'military rulers.' He had found not one Union man in the North, he said, who approved of the President's course. . . . The appointment of the provisional governors was declared to be a great usurpation of authority. 'If something is not done,' said Stevens to Sumner, 'the President will be crowned King before Congress meets.' . . . Horace Greeley and the New York *Tribune*, which he sent into Republican homes in all parts of the country, deeply influencing the thought and opinion of the people, had accepted Johnson as a suitable successor of Lincoln in the Presidential office, and refrained for some months from open criticism of his course. But the editor spoke day by day for the negroes. . . . The old Abolitionists who had served so valiantly in bringing on the war, and whose principles on the subjects of philanthropy and peace prevented them from taking any but the smallest part in its active prosecution, now again came forward with their advice. Indeed the tongue of Wendell Phillips scarcely ever had been silent. The sentiments of him and his like were in general such that they must oppose what Gerrit Smith called 'a rigorous and bloody policy'

toward the Southern white people, but they would have the negro empowered to vote against his erstwhile master. . . . The displeasure of the radicals was increased in the summer by the tactless courses of some of Johnson's Southern governors. B. F. Perry of South Carolina had offended more openly than any. In July, in his home in Greenville, he spoke to an assemblage of his friends and neighbors in terms which at once were commented on with great disfavor in all parts of the North. He reminded the people that the Southern states had spent three thousand millions of dollars in the war; they must now give up four million slaves, which meant a pecuniary sacrifice of two thousand million more. Their lands had been desolated; their cities and towns were smouldering ruins. No man in South Carolina had done more than he to avert this fate for his state, but none could feel 'more bitterly the humiliation and degradation of going back into the Union.' In the death of Lincoln they had suffered no great loss; in Johnson, born in the South, of antecedents inclining him to Democratic and state rights' views they could hope to find a friend."—E. P. Oberholtzer, *History of the United States since the Civil War*, v. 1, pp. 32-33, 38-46.

As the President's policy was developed "by the appointment of the provisional governors, his radical leanings became continually less conspicuous; till by midsummer those politicians who had had the brightest hopes were in despair of any settlement that would realize their chief aims. These aims included the proscription of the Confederate leaders, extensive confiscation of plantations in the South, the enfranchisement of the freedmen and the postponement of political reorganization in the States till the continued ascendancy of the Union party could be insured. As the administration's policy was unfolded, it was obviously incompatible with every item of this programme. What hope of proscription was held out by the numerous exceptions from the privilege of amnesty, was extinguished by the liberal issue of special pardons to individuals who applied. Confiscation was stopped short by the attorney-general's opinion that property which had been seized by the Federal authorities under the confiscation acts must be restored to the pardoned owners. Negro suffrage was doomed by the franchise provisions of Johnson's proclamations; and the haste with which reorganization was pressed to completion in state after state filled the radicals, and not a few others as well, with gloomy forebodings of a reunited Democracy sweeping the Union men out of their control of the national government. . . . Each further step in the process of reorganization brought to the front an increasing proportion of those who had been conspicuous in the military or civil service of the Confederacy. Thus the newly chosen governor of South Carolina had been a Confederate senator; the governor of Mississippi had been a brigadier-general in the Confederate army. . . . Such facts had a very disquieting effect in the North. Yet they were to the South normal and inevitable."—W. A. Dunning, *Reconstruction, political and economic, 1865-1877*, pp. 41-42, 44, 45.—"One requirement of a durable reconstruction was that the North must be satisfied. . . . Moreover satisfaction would not be complete unless Congress had a hand in the work and unless the radical Republicans had a chance to be heard. No member of the cabinet however seems to have advised the summoning of Congress and in April

Sumner hoped that it would not be done. In truth the administration of Lincoln had accustomed Congress and the people to arbitrary power which was relished by each party or faction if exercised to further its own particular ends. In April Sumner was content to have reconstruction by executive decree as he then felt sure that it would confer the franchise on the negro, but in August his opinion was: 'Refer the whole question of reconstruction to Congress where it belongs. What right has the President to reorganize States?' The second thought was the rational one. . . . The war was over and the peaceful rule of legislation by Congress with the advice and approval of the executive ought to have been resumed. . . . All agreed that some conditions should be imposed on the States which had been 'in rebellion' before they should be entitled to the privileges of those which had sustained the Union cause. As soon as might be consistent with popular deliberation it was desirable to submit those conditions to the South for acceptance for she was in a temper at the close of the war to consider patiently the terms of the victor. 'The people,' wrote Schofield to Halleck from Raleigh, May 7, 'are now in a mood to accept anything in reason and to do what the government desires. . . . I believe the Administration need have no anxiety about the question of slavery or any other important question in this State.' . . . The North Carolina and subsequent proclamations lifted a heavy load from the Southerner. He felt that he was getting off easy. Under the directions men went to work with alacrity to elect delegates to the constitutional conventions; they showed eagerness to get back into the Union. As soon as his policy was developed the radical Republicans took issue with the President. Wade, . . . went to Washington in June and entreated him to convene Congress. But on July 29 the Ohio senator wrote to Sumner from his home: 'I regret to say that with regard to the policy resolved upon by the President, I have no consolation to impart. . . . The salvation of the country devolves upon Congress and against the Executive.' Thaddeus Stevens asked Sumner by letter, 'Is there no way to arrest the insane course of the President in reorganization?' and later wrote, 'I have twice written him, urging him to stay his hand until Congress meets.' Sumner said that the exclusion of the negroes from voting for delegates to the North Carolina Convention was 'madness'; and his speech as president of the Massachusetts Republican convention in September was called by an opponent a 'Declaration of war against the President.' . . . But for the most part the Northern people approved the policy of the President. . . . Party convention after party convention, Democratic as well as Republican, held during the summer and autumn indorsed the policy of the President and pledged him their cordial support. There were but two discordant notes. The Union convention of Pennsylvania dominated by Stevens and the Republican of Massachusetts by Sumner expressed a certain confidence in Johnson, but condemned virtually his policy. But every one in Massachusetts did not agree with Sumner. . . . Governor Andrews sympathized with the defeated Southerners, . . . and, while thinking Johnson precipitate, urged that New England might give him her friendly co-operation. He had also the support of the great war governor of Indiana. . . . Johnson himself comprehended the radical opposition under the leadership of Sumner and Stevens but felt sure that he had the great mass of Northern

people at his back. . . . The dejected and impoverished South was sensible of the blessings of peace. The raising of the blockade giving her again open ports, the restoration of commercial intercourse with the North, the transmission of the United States mails, the reopening, as far as possible, of the United States courts—these renewals of former bonds of Union were infusing fresh hope into this people, who had just seen the fruitless ending of long years of sacrifice. With the benefits, it is true, came the Treasury establishment with collectors of customs and internal revenue but the significance of being taxed to pay for her own subjugation was not at first duly appreciated by the South. The summer and autumn were characterized by political activity; the first step taken under the new order of things was the election of a convention in each State. The general desire to take part in reconstruction is evidenced by the large number of applications for pardon from men in the excepted classes so that they might vote and be eligible for election as delegates. The President granted pardons freely and wisely.”—J. F. Rhodes, *History of the United States*, v. 5, pp. 529-531, 533-535.

1865 (July-December).—Reports of Carl Schurz and General Grant on condition of the South.—Other investigators.—Confederate attitude.—“Black Codes” enacted.—In the summer of 1865, President Johnson commissioned Carl Schurz and General Grant to visit the southern states and investigate the condition of affairs in them. These reports had been meant for the President’s own information, but, on December 18, were transmitted by him to the Senate on request. General Grant’s report was thereafter frequently appealed to by the supporters of Johnson and the other, Carl Schurz’s, was an “important document for those who opposed the President’s policy. General Grant’s tour in the South had been brief; he had spent one day in Raleigh, two days in Charleston and one each in Savannah and Augusta. On the trains and during his stops he had conversed freely with Southern citizens and officers of the United States army who with their commands were stationed in different places for the preservation of order until civil government should be entirely restored. Conclusions based only on such a journey of observation might not be important; but considering that the magnanimous victor of Appomattox had since the end of the war been in a position to acquire abundant information from all sides, that he was a man who would be likely to recognize the importance of the facts which came to him and that he possessed one of those minds which often attain to correct judgments without knowledge of the how and the why, it is natural that his opinion should then have carried weight and should now be of historic value in helping us to form a due estimate of Southern sentiment and of a judicious policy of reconstruction. ‘I am satisfied,’ he wrote, ‘that the mass of thinking men of the South accept the present situation of affairs in good faith. . . . Slavery and the right of a State to secede, they regard as having been settled forever by the highest tribunal, arms, that man can resort to.’ Leading men not only accept the decision as final but believe it ‘a fortunate one for the whole country.’ . . . [Schurz] spent three months in South Carolina, Georgia, Alabama, Mississippi and Louisiana. He was a careful observer and his report is a model of method and expression. Though it is a radical document some of his words may from the point of view of our day

be well cited as an endorsement of the President’s policy. ‘The generosity and toleration shown by the Government,’ he wrote, . . . ‘has facilitated the re-establishment of the forms of civil government and led many of those who had been active in the rebellion to take part in the act of bringing back the States to their constitutional relations. . . . There is at present no danger of another insurrection against the authority of the United States on a large scale.’ But when Schurz discussed ‘the moral value of these results’ he furnished food for the Republicans who believed that more rigorous conditions than those imposed by the President should be exacted from the late Confederate States. ‘Treason does, under existing circumstances, not appear odious in the South,’ he wrote. ‘The people are not impressed with any sense of its criminality. And there is yet among the southern people an utter absence of national feeling.’ Their submission and loyalty ‘springs from necessity and calculation.’ ‘Although they regret the abolition of slavery they certainly do not intend to re-establish it in its old form. . . . But while accepting the “abolition of slavery” they think that some species of serfdom, peonage, or other form of compulsory labor is not slavery and may be introduced without a violation of their pledge. Although formally admitting negro testimony they think that negro testimony will be taken practically for what they themselves consider it “worth.”’ For their protection Schurz thought ‘the extension of the franchise to the colored people’ necessary; and as the masses at the South were ‘strongly opposed to colored suffrage,’ the only manner in which they could be induced to grant it was to make it ‘a condition precedent to readmission.’—J. F. Rhodes, *History of the United States*, v. 5, pp. 551-553.—“I may sum up [Schurz wrote, in summarizing his report], all I have said in a few words. If nothing were necessary but to restore the machinery of government in the States lately in rebellion in point of form, the movements made to that end by the people of the south might be considered satisfactory. But if it is required that the southern people should also accommodate themselves to the results of the war in point of spirit, those movements fall far short of what must be insisted upon. The loyalty of the masses and most of the leaders of the southern people consists in submission to necessity. There is, except in individual instances, an entire absence of that national spirit which forms the basis of true loyalty and patriotism. The emancipation of the slaves is submitted to only in so far as chattel slavery in the old form could not be kept up. But although the freedman is no longer considered the property of the individual master, he is considered the slave of society, and all independent State legislation will share the tendency to make him such. [Between October, 1865, and April, 1866, there were apprenticeship, vagrancy and contract labor laws enacted in several of the states which had that tendency, and were known as ‘Black Codes.’ (See BLACK CODES.)] Practical attempts on the part of the southern people to deprive the negro of his rights as a freeman may result in bloody collisions, and will certainly plunge southern society into restless fluctuations and anarchical confusion. Such evils can be prevented only by continuing the control of the national government in the States lately in rebellion until free labor is fully developed and firmly established, and the advantages and blessings of the new order of things have disclosed themselves. This desirable result will be hastened by a firm declaration on

the part of the government that national control in the south will not cease until such results are secured. Only in this way can that security be established in the south which will render numerous immigration possible, and such immigration would materially aid a favorable development of things. The solution of the problem would be very much facilitated by enabling all the loyal and free-labor elements in the south to exercise a healthy influence upon legislation. It will hardly be possible to secure the freedman against oppressive class legislation and private persecution, unless he be endowed with a certain measure of political power. As to the future peace and harmony of the Union, it is of the highest importance that the people lately in rebellion be not permitted to build up another 'peculiar institution' whose spirit is in conflict with the fundamental principles of our political system; for as long as they cherish interests peculiar to them in preference to those they have in common with the rest of the American people, their loyalty to the Union will always be uncertain. I desire not to be understood as saying that there are no well-meaning men among those who were compromised in the rebellion. There are many, but neither their number nor their influence is strong enough to control the manifest tendency of the popular spirit. There are great reasons for hope that a determined policy on the part of the national government will produce innumerable and valuable conversions. This consideration counsels lenity as to persons, such as is demanded by the humane and enlightened spirit of our times, and vigor and firmness in the carrying out of principles such as is demanded by the national sense of justice and the exigencies of our situation." With the report of Carl Schurz, the president transmitted to the Senate, at the same time, a letter written by General Grant after making a hurried tour of inspection in some of the Southern states, during the last week of November and early in December. General Grant wrote: "Four years of war, during which law was executed only at the point of the bayonet throughout the States in rebellion, have left the people possibly in a condition not to yield that ready obedience to civil authority the American people have generally been in the habit of yielding. This would render the presence of small garrisons throughout those States necessary until such time as labor returns to its proper channel, and civil authority is fully established. I did not meet any one, either those holding places under the government or citizens of the southern States, who think it practicable to withdraw the military from the south at present. The white and the black mutually require the protection of the general government. There is such universal acquiescence in the authority of the general government throughout the portions of country visited by me, that the mere presence of a military force, without regard to numbers, is sufficient to maintain order. The good of the country, and economy, require that the force kept in the interior, where there are many freedmen, (elsewhere in the southern States than at forts upon the seacoast no force is necessary,) should all be white troops. The reasons for this are obvious without mentioning many of them. The presence of black troops, lately slaves, demoralizes labor, both by their advice and by furnishing in their camps a resort for the freedmen for long distances around. White troops generally excite no opposition, and therefore a small number of them can maintain order in a given district. Colored troops must be kept in bodies

sufficient to defend themselves. It is not the thinking men who would use violence towards any class of troops sent among them by the general government, but the ignorant in some places might; and the late slave seems to be imbued with the idea that the property of his late master should, by right, belong to him, or at least should have no protection from the colored soldier. There is danger of collisions being brought on by such causes. My observations lead me to the conclusion that the citizens of the southern States are anxious to return to self-government, within the Union, as soon as possible; that whilst reconstructing they want and require protection from the government; that they are in earnest in wishing to do what they think is required by the government, not humiliating to them as citizens, and that if such a course were pointed out they would pursue it in good faith. It is to be regretted that there cannot be a greater commingling, at this time, between the citizens of the two sections, and particularly of those intrusted with the law-making power. . . . In some instances, I am sorry to say, the freedman's mind does not seem to be disabused of the idea that a freedman has the right to live without care or provision for the future. The effect of the belief in division of lands is idleness and accumulation in camps, towns, and cities. In such cases I think it will be found that vice and disease will tend to the extermination or great reduction of the colored race. It cannot be expected that the opinions held by men at the south for years can be changed in a day, and therefore the freedmen require, for a few years, not only laws to protect them, but the fostering care of those who will give them good counsel, and on whom they rely."—*30th Congress, 1st Session, Senate Executive Document no. 2, pp. 45-46, 106-107.*—See also LOUISIANA: 1865-1867.—Other investigators who studied conditions in the South were "Harvey M. Watterson, Kentucky Democrat and Unionist; . . . Benjamin C. Truman, New England journalist and soldier, whose long report was perhaps the best of all; [and Chief Justice Chase. . . . In addition, a constant stream of information and misinformation was going northward from treasury agents, officers of the army, the Freedmen's Bureau, teachers, and missionaries. . . . Truman came to the conclusion that 'the rank and file of the disbanded Southern army . . . are the backbone and sinew of the South. . . . To the disbanded regiments of the rebel army, both officers and men, I look with great confidence as the best and altogether the most hopeful element of the South, the real basis of reconstruction and the material of worthy citizenship.' General John Tarbel, before the Joint Committee on Reconstruction, testified that 'there are, no doubt, disloyal and disorderly persons in the South, but it is an entire mistake to apply these terms to a whole people. I would as soon travel alone, unarmed, through the South as through the North. The South I left is not at all the South I hear and read about in the North. From the sentiment I hear in the North, I would scarcely recognize the people I saw, and, except their politics, I like so well. I have entire faith that the better classes are friendly to the negroes.' . . . The point of view of the Confederate military leaders was exhibited by General Wade Hampton in a letter to President Johnson and by General Lee in his advice to General Letcher of Virginia. General Hampton wrote: 'The South unequivocally "accepts the situation" in which she is placed. Everything that she has done has been done in perfect

faith, and in the true and highest sense of the word, she is loyal. By this I mean that she intends to abide by the laws of the land honestly, to fulfill all her obligations faithfully and to keep her word sacredly, and I assert that the North has no right to demand more of her. You have no right to ask, or expect that she will at once profess unbounded love to that Union from which for four years she tried to escape at the cost of her best blood and all her treasures.' General Lee in order to set an example applied through General Grant for a pardon under the amnesty proclamation and soon afterwards he wrote to Governor Letcher: 'All should unite in honest efforts to obliterate the effects of war, and to restore the blessings of peace. They should remain, if possible, in the country; promote harmony and good-feeling; qualify themselves to vote; and elect to the State and general legislatures wise and patriotic men, who will devote their abilities to the interests of the country and the healing of all dissensions.' . . . Southerners of the Confederacy everywhere, then, accepted the destruction of slavery and the renunciation of state sovereignty; they welcomed an early restoration of the Union, without any punishment of leaders of the defeated cause. But they were proud of their Confederate records; . . . they considered the negro as free but inferior, and expected to be permitted to fix his status in the social organization and to solve the problems of free labor in their own way. To embarrass the easy and permanent realization of these views there was a society disrupted, economically prostrate, deprived of its natural leaders, subjected to a control not always wisely conceived nor effectively exercised, and, finally, containing within its own population unassimilated elements which presented problems fraught with difficulty and danger."—W. L. Fleming, *Sequel of Appomattox (Chronicles of America Series, v. 32, pp. 1-33)*.—"The first state legislature to meet under Johnson's plan was that of Mississippi. It assembled in November, 1865, and quickly made a new black code. In this state, feeling was rather extreme, and the legislators, ignorant of the effect in the North, made such regulations as comported with their ideas of the status of freedmen. . . . Other Southern legislatures followed the example of Mississippi, though none of them went quite so far in repression. They were either not so severe in their ideas, or were disposed to be cautious because of the criticism the Mississippi laws aroused in the North. But the new code, taken all together, created the impression outside the South that the states, once the problem was entirely in their hands, would impose a condition of part freedom on the former slaves. The radicals, in congress and out, made such capital of it, and insisted that it showed that presidential reconstruction did not safeguard the fruits of military victory."—J. S. Bassett, *Short history of the United States, pp. 602, 603*.—See also MISSISSIPPI: 1865-1869; 1866.

"To fix the position of four million emancipated blacks in the social order was one of the most important problems that confronted the Southern state governments in 1865, not only because of the inherent difficulties of the problem but because of the suspicious attitude of the victorious North, especially the radical politicians and the former abolitionists, toward the South in all things that concerned the negro. Some kind of legislation for the freedmen was necessary in 1865-1866. The slave codes were obsolete; the few laws for the free negroes were not applicable to the present

conditions; most laws and codes then in force were made expressly for whites. The task of the law makers was to express in the law the transition of the negroes from slavery to citizenship; to regulate family life, morals and conduct; to give the ex-slave the right to hold property, the right to personal protection, and the right to testify in courts; to provide for the aged and helpless and the orphans; to force the blacks to settle down, have homes, engage in some kind of work, and fulfill contracts; to provide for negro education which formerly had been forbidden; to prevent the exploitation of the ignorant blacks by unscrupulous persons, and to protect the whites in person and property from lawless blacks. In general the laws relating to whites were extended to the blacks, sometimes with slight modifications. But one principle was never lost sight of, viz., that the races were unlike . . . and should be kept separate. It was believed that in some matters laws should not be uniform for the two races. The laws making distinction of race are the ones usually called the 'Black Laws' or the 'Black Code.' [See BLACK CODES.] The sources of these laws are found in the ante-bellum laws for free negroes, in the Northern and Southern vagrancy laws, in the freedmen's codes of the West Indies, in the Roman law on freedom, in pure theory to some extent, and to a great degree in the regulations for blacks made by the United States army and Treasury officials in 1862-1865, and in the Freedmen's Bureau rules. Theoretically the control of the blacks by the army, the Treasury Department, and the [Freedmen's] Bureau was almost absolute and if carried out would have transferred the control of the slave from the master to the United States government. The laws passed by the states were much the same but from a different point of view. From the southern point of view these laws in no way limited any rights of the blacks. They were simply an extension of rights not before possessed. The slave codes were superseded by white men's laws. Some of the laws bore more heavily on whites, others on blacks. This was true especially of the laws relating to standing in court—where the black had the advantage of the white. Most of the laws usually called 'Black Laws' made no distinction of races. As a rule the states that acted first in 1865 made the wider distinction between the races. The laws of 1866 bestow more privileges than those of 1865. This legislation was severely criticised by the Northern politicians and served as a convenient issue in the campaign of 1866. The criticisms were generally to the effect that the laws were meant to re-enslave the blacks. It is noteworthy that President Johnson did not at all appreciate the importance of this problem of negro legislation. He seemed to think that the destruction of slavery left nothing else to be done. The legislatures that passed these laws were composed mainly of men of little experience, non-slaveholders, who had been Unionists or luke-warm Confederates. This fact will account for much of the crudeness of the early legislation. The laws would have been more liberal, but the general principles would have been the same had the legislatures been composed of the experienced popular leaders who were then disfranchised. The laws were never in force in any of the states; the Freedmen's Bureau suspended them until 1868, when the reconstructed governments repealed them. Since the downfall of the Reconstruction regime, the essential parts of this legislation have been re-enacted in the Southern states, especially the laws relating to definition of race, to the sepa-

ration of the races in schools and in public conveyances, and to the prohibition of inter-marriage of the races. The labor, contract, and vagrancy laws are about the same, though now applying to both races."—W. L. Fleming, *Documentary history of Reconstruction*, v. 1, pp. 243-245.—From the Northern point of view "the character of the laws and ordinances passed under these circumstances . . . [was] the most concrete and convincing argument against restoring the Southern States by the short and easy road proposed by President Johnson. . . . So those laws deserve careful consideration, as well as the situation which led to them. The Southern people, blacks and whites, were in a position of almost unexampled difficulty. To the ravages of war and invasion, of impoverishment and bereavement—and, as it fell out, to two successive seasons of disastrous weather for crops,—was added at the outset a complete disarrangement of the principal supply of labor. The mental overturning was as great as the material. To the negroes 'freedom' brought a vague promise of life without toil or trouble. The hard facts soon undeceived them. But for the indulgent Providence they at first hoped for, some occasional and partial substitute appeared in the offices of the Freedmen's Bureau. [See below: 1865-1866.] . . . The Bureau accomplished considerable good; but its administration on the whole was not of the highest class. . . . At most, it touched only the circumference of the problem. Three and a half millions of newly enfranchised ignorant men, women and children! What should provide for the helpless among them, especially for the children, whom the master's care had supported? How should order be maintained in the lower mass, half-brutalized, whom slavery had at least restrained from vagabondage, rapine, and crime? And how should the whole body be induced to furnish the dynamic, driving power of industry essential to the community's needs? These questions the South essayed to answer in part by a system of laws, of which we may take as a fair specimen the legislation of Mississippi—the only State which had enacted this class of laws before Congress met,—as they are summarized. . . [by] Professor J. W. Burgess, *Reconstruction and the Constitution*. The law of apprenticeship ran thus: Negro children under eighteen, orphans or receiving no support from their parents, to be apprenticed, by clerk of probate court, to some suitable person,—by preference the former master or mistress; the court to fix the terms, having the interest of the minor particularly in view; males to be apprenticed till end of twenty-first year, females to end of eighteenth. No other punishment to be permitted than the common law permits to a parent or guardian. If the apprenticeship runs away, he is to be apprehended and returned, or, if he refuses to return, to be confined or put under bonds till the next term of the court, which shall then decide as to the cause of his desertion, and if it appears groundless compel his return, or if he has been ill-treated fine the master not more than \$100 for the benefit of his apprentice. This statute seems not oppressive but beneficent. The law of vagrancy provided that all freedmen having no lawful employment or business, or who are found unlawfully assembling, and all white persons so assembling in company with freedmen, or 'usually associating with freedmen, free negroes, or mulattoes, on terms of equality,' are to be deemed vagrants, and fined, a white man not more than \$200, a negro not more than \$50, and imprisoned, a white man not more than six months, a negro not more than ten days. If the negro does not

pay his fine within five days, he is to be hired out by the sheriff to the person who will pay his fine and costs for the shortest term of service. The same treatment is to be applied to any negro who fails to pay his tax. This statute meant legal servitude for any negro not finding employment, and the same penalty for a white man who merely consorted with negroes on equal terms. The law of civil rights provided that all negroes are to have the same rights with whites as to personal property, as to suing and being sued, but they must not rent or lease lands or tenements except in incorporated towns and cities, and under the control of the corporate authorities. Provision is made for the intermarriage of negroes, and the legalization of previous connections; but intermarriage between whites and negroes is to be punished with imprisonment for life. Negroes may be witnesses in all civil cases in which negroes are parties, and in criminal cases where the alleged crime is by a white person against a negro. Every negro shall have a lawful home and employment, and hold either a public license to do job-work or a written contract for labor. If a laborer quits his employment before the time specified in the contract, he is to forfeit his wages for the year up to the time of quitting. Any one enticing a laborer to desert his work, or selling or giving food or raiment or any other thing knowingly to a deserter from contract labor, may be punished by fine or imprisonment. No negro is to carry arms without a public license. Any negro guilty of riot, affray, trespass, seditious speeches, insulting gestures, language or acts, or committing any other misdemeanor, to be fined and imprisoned, or if the fine is not paid in five days to be hired out to whoever will pay fine and costs. All penal and criminal laws against offenses by slaves or free negroes to continue in force except as specially repealed. . . . The establishment of pillory and whipping-post; the imposition of unjust taxes, with heavy license fees for the practice of mechanic arts; requirements of certified employment under some white man; prohibition of preaching or religious meetings without a special license; sale into indefinite servitude for slight occasion; and so on [form] a long, grim chapter. Whatever excuses may be pleaded for these laws, under the circumstances of the South, all have this implication,—that the negro was unfit for freedom. He was to be kept as near to slavery as possible; to be made, 'if no longer the slave of an individual master, the slave of society.'—And further, as to the broad conditions of the time, two things are to be noted. The physical violence was almost wholly practiced by the whites against the negroes. Bands of armed white men, says Mr. Schurz, patrolled the highways (as in the days of slavery) to drive back wanderers; murder and mutilation of colored men and women were common,—'a number of such cases I had occasion to examine myself.' In some districts there was a reign of terror among the freedmen. And finally, the anticipation of failure of voluntary labor speedily proved groundless. A law was at work more efficient than any on the statute-books,—Nature's primal law, 'Work or Starve!' Many, probably a majority of the freedmen, worked on for their old masters, for wages. The others, after some brief experience of idleness and starvation, found work as best they could. No tropical paradise of laziness was open to the Southern negro. The first Christmas holidays, looked forward to with vague hope by the freedmen and vague fear by the whites, passed without any visitation of angels or

insurrection of fiends. In a word, the most apparent justifications for the reactionary legislation,—danger of rapine and outrage from emancipated barbarians, and a failure of the essential supply of labor—proved alike groundless.”—G. S. Merriam, *Negro and the nation*, pp. 288-293.—See also RACE PROBLEMS: 1705-1805.

1865-1866.—Creation of the Freedmen's Bureau.—On the last day of the 38th Congress, March 3, 1865, an act was passed to establish a bureau for the relief of freedmen and refugees. It was among the last acts approved by Abraham Lincoln, and was designed as a protection to the freedmen of the South and to the class of white men known as “refugees,”—driven from their homes on account of their loyalty to the Union. The act provided that the bureau should have “supervision and management of all abandoned lands, and the control of all subjects relating to refugees and freedmen from rebel States, or from any district of country within the territory embraced in the operations of the army, under such rules and regulations as may be prescribed by the head of the bureau and approved by the President. The said bureau shall be under the management and control of a commissioner, to be appointed by the President, by and with the advice and consent of the Senate. . . . The Secretary of War may direct such issues of provisions, clothing, and fuel as he may deem needful for the immediate and temporary shelter and supply of destitute and suffering refugees and freedmen, and their wives and children, under such rules and regulations as he may direct. . . . The President may, by and with the advice and consent of the Senate, appoint an assistant commissioner for each of the States declared to be in insurrection, not exceeding ten. . . . Any military officer may be detailed and assigned to duty under this act. . . . The commissioner, under the direction of the President, shall have authority to set apart for the use of loyal refugees and freedmen such tracts of land, within the insurrectionary States, as shall have been abandoned, or to which the United States shall have acquired title by confiscation, or sale, or otherwise. And to every male citizen, whether refugee or freedman, as aforesaid, there shall be assigned not more than 40 acres of such land, and the person to whom it is so assigned shall be protected in the use and enjoyment of the land for the term of three years, at an annual rent not exceeding 6 per centum upon the value of said land as it was appraised by the State authorities in the year 1860. . . . At the end of said term, or at any time during said term, the occupants of any parcels so assigned may purchase the land and receive such title thereto as the United States can convey. . . . On the 20th of May, 1865, Major-Gen. O. O. Howard was appointed Commissioner of the Freedmen's Bureau. He gave great attention to the subject of education; and after planting schools for the freedmen throughout a great portion of the South, in 1870—five years after the work was begun—he made a report. It was full of interest. In five years there were 4,239 schools established, 9,307 teachers employed, and 247,333 pupils instructed. In 1868 the average attendance was 89,306; but in 1870 it was 91,308, or 79¾ per cent. of the total number enrolled. The emancipated people sustained 1,324 schools themselves, and owned 592 school buildings. The Freedmen's

Bureau furnished 654 buildings for school purposes.”—G. W. Williams, *History of the negro race in America*, v. 2, pt. 8, ch. 21-22.—In addition to a commissioner and assistant commissioner for each state the bureau had “a large number of local agents, most of them Northern men. It had large powers in the settlement of disputes between blacks and whites, and the latter, accustomed to manage their own affairs, considered it an intrusive organization, and a symbol of their humiliation. Most of the bureau officials were practical men, although some were enthusiastic friends of the negro race and had too much confidence in the effect of freedom on it. But they were at the best in a trying situation, and became much disliked in the South. The blacks themselves had little concept of the duties and obligations of their new condition. By most evidence they worked well during the spring and summer of 1865. By autumn they seemed to be more restless. The freedmen's bureau bill provided that the abandoned and confiscated lands of Southerners should be distributed among them at not more than forty acres to each adult male. As it was doubtful if the confiscation act of 1862 would pass the courts, very little land had been acquired by the government, although much was occupied in some districts. The distribution was thus delayed, but the negroes knew it was contemplated, came to look upon it as an act of justice, and in some unexplained way believed that the donation would be made at the end of 1865, as a great Christmas gift from the national government. At this time the South was full of enthusiastic men and women who as missionaries and teachers sought to uplift the dull minds and souls which slavery had enthralled. The situation was complex, but it was an epoch of violent readjustment, and it was not to be expected that it should have passed smoothly. The negro himself leaned hard on the friends from the North, caught at the prospect of ‘forty acres and a mule,’ and, as Christmas approached refused to contract for farm labor during the coming year. The white employers were resentful. They believed that the Northern men in the South were disorganizing conditions there, and the events which followed—the hot debates in Congress and the violent language of the radicals—were not likely to remove the Southerner's suspicions. Thus it happened that the blacks and whites, who even in the darkest days of war lived harmoniously side by side, came to be antagonistic and united in opposition to one another.”—J. S. Bassett, *Short history of the United States*, pp. 603-604.—“The bureau assumed, in short, a general guardianship of the emancipated race, and, backed by the paramount military force of the United States, undertook to play a determining rôle in the process of reorganizing southern society. The orders and instructions issued by General Howard, the head of the bureau, for carrying out . . . [its] comprehensive programme, were characterized almost uniformly by moderation and good judgment. Much the same may be said of the directions that emanated from the assistant commissioners for their respective states, though here in some cases a tendency appeared to lecture the southern whites on the sinfulness of slavery and on their general depravity, and to address to the freedmen pious homilies and moral platitudes obviously above their intelligence. . . . The local agents, whose function it was to apply the general policy of the bureau to concrete cases, displayed, of course, the greatest diversity of spirit and ability. It was from these lower officials that the southern

whites formed their general estimate of the character and value of the institution, while the people of the North were guided more by the just and practical policy outlined in the orders from headquarters. However much tact and practical good sense the local agent was able to bring to the performance of his delicate duties, he in most cases, being a northern man, was wholly unable to take a view of the situation that could make him agreeable to the whites of the neighborhood. He saw in both freedom and former master qualities which the latter could never admit. Hence the working of the bureau, with its intrusion into the fundamental relationships of social life, engendered violent hostility from the outset on the part of the whites. The feeling was enhanced by the conduct of the ignorant, unscrupulous, and deliberately oppressive agents who were not rare. As soon, therefore, as it became established, the bureau took the form, to the southern mind, of a diabolical device for the perpetuation of the national government's control over the South, and for the humiliation of the whites before their former slaves. The bureau, however, was by the terms of the law but a transitional institution, limited in its existence to one year after the end of the war. Its functions were not well correlated by the law with those of the regular military authority, and at first the two species of armed rule caused some confusion in the process of social rehabilitation. Before this situation was cleared up a third species of authority was installed in every state by the president's policy of restoring civil government."—W. A. Dunning, *Reconstruction, political and economic*, pp. 32-34.—See also above: 1865 (July-December).—"During the month of January, 1866, the Republicans in Congress became convinced that the newly organized 'States,' with the exception of Tennessee, were consciously developing freedmen's codes which would not differ greatly from their old slave codes. . . . [This conviction was strengthened by Carl Schurz's report, in which Congress was inclined to place more credence than in the report made by General Grant.] While its Committee on Reconstruction was deliberating, it, therefore, most naturally set itself about doing what it could, under the Thirteenth Amendment, and also under its still existing war powers, in behalf of the civil rights of the freedmen. The first measure it attempted was one to enlarge the powers of the Freedmen's Bureau. This supplementary project originated with the Judiciary Committee of the Senate, and was presented in the Senate on the 12th of January, 1866. The new bill proposed to increase the personnel of the bureau and expand the powers vested in it as provided in the law of March 3d, 1865."—J. W. Burgess, *Reconstruction and the constitution*, pp. 63-64.—"By this bill the bureau which had been organized during the preceding session was enlarged as to both the duration and the territorial extent of its powers. The limit of one year after the end of the war was abolished, and the bureau's operations were to extend to 'refuges and freedom in all parts of the United States.' The powers of the officials were of the vaguest character imaginable, involving practically absolute discretion in the regulation of matters in which the freedmen were interested. Provisions, clothing and fuel were to be furnished to destitute blacks, land was to be set apart for their use, and schools and asylums to be erected for their benefit. But the central point of the bill was in the seventh and eighth sections. Here it was made the duty of the President to extend the military protection of the bureau to

all cases in which the civil rights and immunities of white persons were denied to others on account of race, color or any previous condition of slavery or involuntary servitude. Further, any person who should, under color of any state law, ordinance or custom, subject the negro to the deprivation of equal civil rights with the white man, should be guilty of a misdemeanor, and the jurisdiction of such cases was conferred upon the officials of the bureau. Such jurisdiction was limited, however, to states in which the ordinary course of judicial proceedings had been interrupted by rebellion, and was to cease there when those states should be fully restored to all their constitutional relations to the United States. The grave questions of constitutionality involved in the details of this bill were modified in their bearing by the general basis on which the whole legislation rested. It was, according to Senator Trumbull, who had charge of it in the Senate, a war measure, and inapplicable, by its terms, to any other state of affairs. . . . But the President, in vetoing the bill, protested against 'declaring to the American people and to the world, that the United States are still in a condition of civil war.' He asserted that the rebellion was, in fact, at an end. Mr. Johnson was in rather a difficult position here; for the *habeas corpus* was still suspended in the Southern states, and even while he was writing his veto message a military order had gone forth looking to the suppression of disloyal papers there. . . . The President's real grievance was evidently that which he referred to last in his veto message. He complained that the bill regarded certain states as 'not fully restored in all their constitutional relations to the United States,' and announced that in his judgment most of the states were fully restored, and were entitled to all their constitutional rights as members of the Union. Congress was censured with repressed severity for refusing to accord to those states the right imperatively required by the constitution, of representation in the two houses. The President's veto, made effective by the failure to override it in the Senate, strengthened the extremists in Congress; for many who desired the success of the conservative plan were indignant that it should be thwarted at the outset. A concurrent resolution was passed declaring that no member from any of the insurrectionary states should be admitted to either house till Congress should declare such state entitled to representation. This was the formal declaration of war upon the executive policy. It notified the President that Congress intended to form its own judgment upon the status of the states, irrespective of any extraneous decision. . . . A great silence and mystery hung about the committee whose report was to embody the views of Congress on the condition of the states. No one doubted that the enveloping clouds would continue until a satisfactory solution of the negro question should be discovered."—W. A. Dunning, *Essays on the Civil War and Reconstruction*, pp. 88-91.

1865-1866 (December-April).—Reconstruction question in Congress.—Joint Committee of Fifteen.—Fourteenth Amendment.—"On the second day of the session (December 5 [1865]) the President's message was heard. Written by George Bancroft, Andrew Johnson ought ever afterwards to have made use of that historian's pen and only addressed his countrymen in such carefully prepared letters and messages. . . . It met in a conciliatory way the hostile or critical attitude of a

part of Congress; and to Republican members disposed to work with the President it was a cheering indication that they were separated by no chasm. . . . Recounting the steps which he had taken he asked, 'Is it not a sure promise of harmony and renewed attachment to the Union that, after all that has happened, the return of the General Government is known only as a beneficence?' In a still further discussion his words are those of a statesman: 'Every patriot must wish for a general amnesty at the earliest epoch consistent with public safety. For this great end there is need of a concurrence of all opinions and the spirit of mutual conciliation. All parties in the late terrible conflict must work together in harmony. It is not too much to ask in the name of the whole people that, on the one side, the plan of restoration shall proceed in conformity with a willingness to cast the disorders of the past into oblivion; and that on the other the evidence of sincerity in the future maintenance of the Union shall be put beyond any doubt by the ratification of the proposed amendment to the Constitution which provides for the abolition of slavery forever within the limits of our country.' The adoption of this amendment (the Thirteenth) ought in his opinion to entitle the Southern States to representation in the national legislature but this was for the Senate and House each for itself to judge. He advocated leaving the question of suffrage for the negroes to the States and thought that if the freedmen showed 'patience and manly virtues' they might after a while obtain a participation in the elective franchise. . . . Johnson had almost atoned for his mistake in not convening Congress in the early autumn. While the difficulty of the two working together was somewhat greater than it would have been three months earlier, a harmonious co-operation was entirely feasible. The President's message was in the spirit of Lincoln's second inaugural and of the words of Burke, 'Nobody shall persuade me when a whole people are concerned that acts of lenity are not means of conciliation'; and if his plan had been sanctioned by the Republican majority in Congress it would undoubtedly have worked out pretty well the problem of reconstruction. . . . The President's policy was before Congress. Sumner and Stevens, who were never deficient in frankness lost no opportunity of presenting theirs. That Congress should insist that the late Confederate States accord civil rights and the suffrage to the negroes was the main feature of Sumner's. Stevens proposed: the reduction of those States to territories, no account therefore to be taken of their ratifications of the Thirteenth Amendment, three-fourths of the loyal States being sufficient; a constitutional amendment changing the basis of representation in the House from population to actual voters; measures to confer on negroes homesteads, to 'hedge them around with protective laws,' and to give them the suffrage. . . . Thus the question was fairly before Congress and the country. The main body of Republican senators and representatives may be looked upon as the jury with Johnson the advocate on one side and Stevens and Sumner on the other. Burke had said, 'I do not know the method of drawing up an indictment against a whole people,' but Stevens in his plan of reducing the States to conquered provinces and of confiscation of the land of their inhabitants had discovered it. In his vindictive policy however he had no following of importance and he himself in his speech disclaimed speaking for the Republican party. No attempt

was made to inaugurate his project of confiscation and the quiet assent of Congress to the proclamation of the Secretary of State implying that three-quarters of the whole number of States were required for the ratification of the Thirteenth Amendment disposed of his plan for reducing the late Confederate States to territories. . . . The majority of his party in Congress was against him and the sentiment of the North was well expressed in the autumn elections when Connecticut, Wisconsin and Minnesota declared specifically against extending the franchise to coloured persons. From all the evidence it is impossible to resist the conclusion that from the assembling of Congress in December, 1865 to the veto of the Freedmen's Bureau Bill on February 19, 1866 the majority of Republican senators and representatives were nearer to the President's view than to that of Sumner or of Stevens. But the people of the late Confederacy were rendering the President's task of securing the

THADDEUS STEVENS

acceptance of his policy by the North doubly difficult. Carl Schurz said in his report that the 'generosity and toleration shown by the government' had not been met on the part of the South 'with a corresponding generosity to the government's friends.' The evidence confirming this is various and abundant. Secretary Welles wrote that, 'The extreme men of the South were in some localities as rash, unreasonable and impracticable as the Radicals of the North and for a time gave the administration scarcely less embarrassment. . . . The first feeling of submission to the will of the conqueror had been succeeded by demands for the rights of their States under the Constitution; between the sentiment prevailing in the State legislatures and that which had governed the earlier conventions there was a marked difference. . . . [The 'Black Codes'] were not passed in a spirit of defiance to the North, but many good people believed they were; and this and other misconstructions of them had a powerful effect on Northern sentiment. The difficulties of the problem were not generally comprehended at the North. . . . The five and a half million whites

who were legislating for three and a half million blacks were under the influence of 'the black terror' which was not known and therefore not appreciated at the North. Many of the laws were neither right nor far-sighted but they were natural. The enactments the least liberal as to civil rights and the most rigorous as to punishment of misdemeanors and crimes were those of South Carolina, Mississippi and Louisiana in which States the proportion of negroes to white men was the largest. These States too passed their acts before Christmas. When the 'dreaded holidays' had gone by, and the planters' fear of a general insurrection had subsided, when the hopes of the negroes for a parcelling out of the land had come to naught and they had shown a disposition to buckle to work conditions began to improve. And these new developments had undoubtedly some influence in the improvement of the laws concerning the freedmen, which however, was mainly due to the circumstance that the States enacting their legislation after January 1, 1866, were the most advanced in accepting the situation and were those where the whites largely outnumbered the blacks. . . . What further affected Northern sentiment was the reports of cruelties practised upon the negroes which were due largely if not wholly to the antipathy of the poor whites. In his speech of December 20, 1865, Sumner made a point of this, speaking of 'sickening and heartrending outrages where Human Rights are sacrificed and rebel Barbarism received a new letter of license.' That affairs of the sort occurred as one of the results of the social revolution was undoubted but on the other hand exaggerated accounts of them were readily believed by those who desired to use them as an argument for a severe policy towards the South. . . . It was not difficult to convince many Republicans that the acceptance of a plan of reconstruction by the South was positive proof that it was too liberal. Herein lay a manifest mistake of the President's: he had made an offer and secured its acceptance before the predominant partner had agreed to it. . . . The horrors of Andersonville and other prison pens were exaggerated and used as an argument against mercy and the animosity to Jefferson Davis was exploited to turn men from a policy which seemed to imply that he should not be brought to judgment. To recapitulate: the assertion by Congress of its prerogative, a disposition on the part of the Southern States to claim rights instead of submitting to conditions, harsh laws of the Southern legislatures concerning the freedmen, denial by them of complete civil rights and qualified suffrage to the negroes, outrages upon the coloured people, Southern hatred of Northerners, Southern and Democratic support of the President—all these influences contributed in varying proportions to the decision of Congress not to adopt Johnson's policy but to construct one of their own."—J. F. Rhodes, *History of the United States*, v. 5, pp. 546-548, 550-551, 553-554, 556, 558-559, 563, 565.—"In the opposition on principle to the President's policy three chief elements were distinguishable: first, the extreme negrophiles, who on abstract grounds of human equality and natural rights, demanded full civil and political privileges for the freedmen; second, the partisan politicians who viewed the elevation of the blacks mainly as a means of humbling the Democrats and maintaining the existing supremacy of the Republican Party; and third, the representatives of an exalted statesmanship, who saw in the existing situation an opportunity for decisively fixing in our system a broader and more national

principle of civil rights and political privilege. It was this last element that controlled the proceedings during the earlier months of the thirty-ninth Congress. Later the more radical elements assumed the lead. The President, as we have seen, had prepared to push his theory before Congress at its very opening. Credentials were promptly presented by members elect from the restored states. But Congress declined to be hurried into committing itself to any doctrine on the great subject. Instead of the customary reference of the credentials of the claimants to the committees on elections in the respective houses, a joint committee of fifteen was constituted to inquire into the condition of the rebellious states and their title to representation; and it was agreed that all papers relating to those states should be referred to this committee. Thus was provided a convenient limbo to which might be relegated any question that should threaten to interfere with the placid progress of Congressional deliberation. The next step was to unfold a scheme by which the ends of the conservative Republicans might be attained by simple legislation. . . . Despite the strong opposition to Mr. Johnson's policy among the Republicans in Congress, there was at the same time a disinclination to an open rupture with the President. It was in obedience to this latter feeling that the joint committee on reconstruction was so heartily agreed to. Through this the main issue—the recognition of the Southern state governments—were deferred until it could be ascertained whether a substantial protection for the freedmen might not be obtained without coming to open hostility with the President. In accordance with this plan the aggressive spirit of the radicals was repressed, and a series of measures was devised, of which the Freedmen's Bureau Bill was the first to be presented."—W. A. Dunning, *Essays on the Civil War and Reconstruction*, pp. 86-87.—"Within a few days after the meeting of Congress, in December, 1865, Mr. Stevens, of Pennsylvania, asked leave to introduce a joint resolution which provided that a committee of fifteen members should be appointed—nine of whom were to be members of the House and six to be members of the Senate—for the purpose of inquiring into the condition of the states which had formed the so-called Confederate States of America. This committee was to report whether these state or any of them were entitled to be represented in either house of Congress. Leave was given to report at any time, by bill or otherwise, and until such should be made and finally acted upon by Congress, no member was to be received into either house from any of those states. All papers relating to this representation in Congress were to be referred to this committee without debate. This resolution was adopted in the House by a vote of—yeas 133, nays, 36." [In the Senate it received amendments which made it a concurrent instead of a joint resolution, and which struck out the clause relating to the non-admittance of members from the states in question pending the committee's report, and also that which required a reference of papers to the committee without debate.]—S. S. Cox, *Three decades of Federal legislation*, ch. 18.—The Joint Committee on Reconstruction was constituted by the appointment (December 14), on the part of the House, of Thaddeus Stevens, Elihu B. Washburn, Justin S. Morrill, Henry Grider, John A. Bingham, Roscoe Conkling, George S. Boutwell, Henry T. Blow, and Andrew J. Rogers; and by the appointment (December 21), on the part of the Senate,

of William Pitt Fessenden, James W. Grimes, Ira Harris, Jacob M. Howard, Reverdy Johnson, and George H. Williams. "For the present, all . . . [the Confederate States] were to be denied representation. With Stevens as chairman of the House Committee on Reconstruction and Johnson in the President's chair, a battle was inevitable, in which quarter would be neither asked nor given. Unhappily for themselves, the southern states played unwittingly into the hands of Stevens and his radical colleagues. The outcome of the war had placed upon the freedmen responsibilities which they could not be expected to carry. To many of them emancipation meant merely cessation from work. Vagabondage was common. Rumor was widespread that the government was going to give each negro forty acres of land and a mule, and the blacks loafed about, awaiting the division. . . . 'The race was free, but without status, without leaders, without property, and without education.' Fully alive to the dangers of giving unrestricted freedom to so large a body of ignorant negroes, the southern whites passed the 'black codes.' . . . It is now evident that the South was actuated by what it considered the necessities of its situation and not merely by a spirit of defiance. Yet the fear on the part of the North that slavery was being restored under a disguise was not unnatural. Radical northern newspapers and leading extremists in Congress exaggerated the importance of the codes until they seemed like a systematic attempt to evade the results of the war. As Republican leaders in Congress saw the satisfaction created in the South by the President's policy, and discovered that northern Democrats were rallying to his support, the jealousies of partisanship caused them still further to increase their grip on the processes of reconstruction. A disquieting by-product of the Thirteenth Amendment, abolishing slavery, also began to appear. Hitherto only three-fifths of the negroes had been counted in apportioning representation in the House of Representatives. As soon as the slaves became free, however, they were counted as if they were whites, and thereby the strength of the South in Congress would be increased. It was hardly to be expected that the North would view such a development with satisfaction."—C. R. Lingley, *Since the Civil War*, (*United States*, v. 3, pp. 9-11).—To this question the committee gave attention first. "When all become free, representation for all necessarily follows. . . . As representation is by the Constitution based upon population, your committee [said their report, when made, on June 8, 1866] did not think it advisable to recommend a change of that basis. . . . It appeared to your committee that the rights of these persons by whom the basis of representation had been thus increased should be recognized by the general government. . . . It did not seem just or proper that all the political advantages derived from their becoming free should be confined to their former masters, who had fought against the Union, and withheld from themselves, who had always been loyal. . . . Doubts were entertained whether Congress had power, even under the amended Constitution, to prescribe the qualifications of voters in a State, or could act directly on the subject. It was doubtful, in the opinion of your committee, whether the States would consent to surrender a power they had always exercised, and to which they were attached. As the best if not the only method of surmounting the difficulty, and as

eminently just and proper in itself, your committee came to the conclusion that political power should be possessed in all the States exactly in proportion as the right of suffrage should be granted, without distinction of color or race. This it was thought would leave the whole question with the people of each State, holding out to all the advantage of increased political power as an inducement to allow all to participate in its exercise." To this conclusion the committee arrived as early as January 22, when they made a preliminary report, recommending an amendment to the constitution to the effect that "Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed: Provided, That whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons of such race or color shall be excluded from the basis of representation." Grave objections were found to the proposed exclusion of the colored race as a whole from the basis of representation, in case the suffrage should be denied to any part of it. It was shown, moreover, that disfranchisement might be practically accomplished on other grounds than that of race or color and the intended effect of the constitutional provision evaded. Hence the proposition of the committee failed in the Senate (March 9, 1866), though adopted by the House (January 31). On February 20, the Committee on Reconstruction reported a concurrent resolution, "That in order to close agitation upon a question which seems likely to disturb the action of the Government, as well as to quiet the uncertainty which is agitating the minds of the people of the eleven States which have been declared to be in insurrection, no Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation." The House adopted this important concurrent resolution the same evening. In the Senate it was debated until March 2, when it was passed by a vote of 29 to 18. On April 30 the Reconstruction Committee reported a joint resolution embodying a comprehensive amendment to the Constitution, designed to protect the rights of the freedmen of the South, as citizens of the United States, and to fix the basis of representation in Congress, as well as to settle other questions arising out of the war. (See below: 1866: [June].) "This proposed amendment to the Constitution was accompanied by two bills, one of which provided that when any State lately in insurrection should have ratified the amendment, its Senators and Representatives, if found duly elected and qualified, should be admitted as members to Congress. The other bill declared the high ex-officials of the late Confederacy ineligible to any office under the Government of the United States."—W. H. Barnes, *History of the 39th Congress*, ch. 3, 13-19.

1865-1868.—Social and economic conditions of the South.—Taxation.—Cotton frauds.—"Confiscable" property.—Relief projects.—Church discipline.—Unionists in Southern states.—Confederates in border states.—"When the armies of

the Union and of the Confederacy were disbanded in 1865, two matters had been settled beyond further dispute: the negro was to be free, and the Union was to be perpetuated. But though slavery and state sovereignty were no longer at issue, there were still many problems which pressed for solution. . . . The surviving Confederate soldiers came straggling back to communities which were now far from being satisfactory dwelling places for civilized people. Everywhere they found missing many of the best of their former neighbors. They found property destroyed, the labor system disorganized, and the inhabitants in many places suffering from want. They found the white people demoralized and sometimes divided among themselves, and the negroes free, bewildered, and disorderly, for organized government had lapsed with the surrender of the Confederate armies. Beneath a disorganized society lay a devastated land. The destruction of property affected all classes of the population. The accumulating capital of the South had disappeared in worthless Confederate stocks, bonds, and currency. The banks had failed early in the war. Two billion dollars invested in slaves had been wiped out. Factories which had been running before the war, or were developed after 1861 in order to supply the blockaded country, had been destroyed by Federal raiders or seized and sold or dismantled because they had furnished supplies to the Confederacy. Mining industries were paralyzed. Public buildings which had been used for war purposes were destroyed or confiscated for the uses of the army or for the new freedmen's schools. It was months before courthouses, state capitols, school and college buildings were again made available for normal uses. The military school buildings had been destroyed by the Federal forces. Among the schools which suffered were the Virginia Military Institute, the University of Alabama, the Louisiana State Seminary, and many smaller institutions. Nearly all these had been used in some way for war purposes and were therefore subject to destruction or confiscation. The farmers and planters found themselves 'land poor.' The soil remained, but there was a prevalent lack of labor, of agricultural equipment, of farm stock, of seeds, and of money with which to make good the deficiency. As a result, a man with hundreds of acres might be as poor as a negro refugee. . . . There were few stocks of merchandise in the South when the war ended, and Northern creditors had lost so heavily . . . that they were cautious about extending credit again. Long before 1865 all coin had been sent out in contraband trade through the blockade. . . . Horses, mules, wagons, and carriages were scarce, the country roads were nearly impassable, and bridges were in bad repair or had been burned or washed away. Steamboats had almost disappeared from the rivers. . . . Postal facilities, which had been poor enough during the last year of the Confederacy, were entirely lacking for several months after the surrender. [Except those in Federal hands] the railways were in a state of physical dilapidation little removed from destruction. . . . About two-thirds of all the lines were hopelessly bankrupt. Fortunately the United States War Department took over the control of the railway lines. . . . During the summer and fall of 1865 'loyal' boards of directors were appointed for most of the roads, and the army withdrew its control. But repairs and reconstruction were accomplished with difficulty because of the

demoralization of labor and the lack of funds or credit. . . . Had there been unrestricted commercial freedom in the South in 1865-66, the distress of the people would have been somewhat lessened, for here and there were to be found . . . stores of cotton, tobacco, rice, and other farm products, all of which were bringing high prices in the market. But for several months the operation of wartime laws and regulations hindered the distribution of even these scanty stores. Property upon which the Confederate Government had a claim was of course subject to confiscation, and private property offered for sale, even that of Unionists, was subject to a 25 per cent tax on sales, a shipping tax, and a revenue tax. The revenue tax on cotton, ranging from two to three cents a pound during the three years after the war, brought in over \$68,000,000. This tax, with other Federal revenues, yielded much more than the entire expenses of reconstruction from 1865 to 1868 and of all relief measures for the South, both public and private. After May, 1865, the 25 per cent tax was imposed only upon the produce of slave labor. None of the war taxes, except that on cotton, was levied upon the crops of 1866, but while these taxes lasted they seriously impeded the resumption of trade. Even these restrictions, however, might have been borne if only they had been honestly applied. Unfortunately, some of the most spectacular frauds ever perpetrated were carried through in connection with the attempt of the United States Treasury Department to collect and sell the confiscable property in the South. The property to be sold consisted of what had been captured and seized by the army and the navy, of 'abandoned' property, as such was called whose owner was absent in the Confederate service, and of property subject to seizure under the confiscation acts of Congress. No captures were made after the general surrender, and no further seizures of 'abandoned' property were made after Johnson's amnesty proclamation of May 29, 1865. This left only the 'confiscable' property to be collected and sold. For collection purposes the States of the South were divided into districts, each under the supervision of an agent of the Treasury Department, who received a commission of about 25 per cent. Cotton, regarded as the root of the slavery evil, was singled out as the principal object of confiscation. It was known that the Confederate Government had owned in 1865 about 150,000 bales, but the records were defective and much of it, with no clear indication of ownership, still remained with the producers. Secretary Chase, foreseeing the difficulty of effecting a just settlement, counseled against seizure, but his judgment was overruled. Secretary McCulloch said of his agents: 'I am sure I sent some honest cotton agents South; but it sometimes seems doubtful whether any of them remained honest very long.' Some of the natives, even, became cotton thieves. . . . [The agents turned over to the United States about \$34,000,000. About 40,000 claimants were subsequently indemnified on the ground that the property taken from them did not belong to the Confederate Government, but many thousands of other claimants have been unable to prove that their property was seized by government agents and hence have received nothing. . . . Other property, including horses, mules, wagons, tobacco, rice, and sugar which the natives claimed as their own, was seized. In some places the agents even collected delinquent

Confederate taxes. Much of the confiscable property was not sold but was turned over to the Freedmen's Bureau for its support. The total amount seized cannot be satisfactorily ascertained. The Ku Klux minority report asserted that 3,000,000 bales of cotton were taken, of which the United States received only 114,000. It is certain that, owing to the deliberate destruction of cotton by fire in 1864-65, this estimate was too high, but all the testimony points to the fact that the frauds were stupendous. As a result the United States Government did not succeed in obtaining the Confederate property to which it had a claim, and the country itself was stripped of necessities to a degree that left it not only destitute but outraged and embittered. 'Such practices,' said Trowbridge, 'had a pernicious effect, engendering a contempt for the Government and a murderous ill-will which too commonly vented itself upon soldiers and negroes.' The South faced the work of reconstruction not only with a shortage of material and greatly hampered in the employment even of that but still more with a shortage of men. . . . The greatest weakness of both races was their extreme poverty. The crops of 1865 turned out badly, for most of the soldiers reached home too late for successful planting and the negro labor was not dependable. . . . The poorer whites who had lost all were close to starvation. In the white counties which had sent so large a proportion of men to the army the destitution was most acute. In many families the breadwinner had been killed in war. . . . Where the armies had passed, few of the people, white or black, remained; most of them had been forced as 'refugees' within the Union lines or into the interior of the Confederacy. Now, along with the disbanded Confederate soldiers, they came straggling back to their war-swept homes. It is estimated, in December, 1865, that in the States of Alabama, Mississippi, and Georgia there were five hundred thousand white people who were without the necessaries of life; numbers died from lack of food. Within a few months relief agencies were at work. In the North, especially in the border States and in New York, charitable organizations collected and forwarded great quantities of supplies to the negroes and to the whites in the hill and mountain counties. The reorganized state and local governments sent food from the unravaged portions of the Black Belt to the nearest white counties, and the army commanders gave some aid. As soon as the Freedmen's Bureau was organized, it fed to the limit of its supplies the needy whites as well as the blacks. The extent of the relief afforded by the charity of the North and by the agencies of the United States Government is not now generally remembered, probably on account of the later objectionable activities of the Freedmen's Bureau, but it was at the time properly appreciated. . . . Acute distress continued until 1867; after that year there was no further danger of starvation. Some of the poor whites, especially in the remote districts, never again reached a comfortable standard of living; some were demoralized by too much assistance; others were discouraged and left the South for the West or the North. But the mass of the people accepted the discipline of poverty and made the best of their situation. The difficulties, however, that beset even the courageous and the competent were enormous. The general paralysis of industry, the breaking up of society, and poverty on all sides bore especially

hard on those who had not previously been manual laborers. Physicians could get practice enough but no fees; lawyers who had supported the Confederacy found it difficult to get back into the reorganized courts because of the test oaths and the competitions of 'loyal' attorneys; and for the teachers there were few schools. . . . General Lee's good example influenced many. Commercial enterprise were willing to pay for the use of his name and reputation, but he wished to farm and could get no opportunity. 'They are offering my father everything,' his daughter said, 'except the only thing he will accept, a place to earn honest bread while engaged in some useful work.' This remark led to an offer of the presidency of Washington College, now Washington and Lee University, which he accepted. 'I have a self-imposed task which I must accomplish,' he said, 'I have led the young men of the South in battle; I have seen many of them fall under my standard. I shall devote my life now to training young men to do their duty in life.' The condition of honest folk was still further troubled by a general spirit of lawlessness in many regions. Virginia, Tennessee, Arkansas, and Louisiana recognized the 'Union' state government, but the coming of peace brought legal anarchy to the other States of the Confederacy. . . . For a period of four or six months there was no government except that exercised by the commanders of the military garrisons left behind when the armies marched away. Even before the surrender the local governments were unable to make their authority respected, and soon after the war ended parts of the country became infested with outlaws, pretended treasury agents, horse thieves, cattle thieves, and deserters. Away from the military posts only lynch law could cope with these elements of disorder. With the aid of the army in the more settled regions, and by extra-legal means elsewhere, the outlaws, thieves, cotton burners, and house burners were brought somewhat under control even before the state governments were recognized, though the embers of lawlessness continued to smolder. The relations between the Federal soldiers stationed in the principal towns and the native white population were not, on the whole, so bad as might have been expected. If the commanding officer were well disposed, there was little danger of friction, though sometimes his troops got out of hand. The regulars had a better reputation than the volunteers. . . . These men might get along well together, but the women would have nothing to do with the 'Yankees' and ill feeling arose because of their antipathy. . . . In retaliation the soldiers developed ingenious ways of annoying the whites. . . . The negro troops, even at their best, were everywhere considered offensive by the native whites. . . . The negro soldier, impudent by reason of his new freedom, his new uniform, and his new gun, was more than Southern temper could tranquilly bear, and race conflicts were frequent. . . . The task of the Federal forces was not easy. The garrisons were not large enough nor numerous enough to keep order in the absence of civil government. The commanders in the South asked in vain for cavalry to police the rural districts. Much of the disorder, violence, and incendiarism attributed at the time to lawless soldiers appeared later to be due to discharged soldiers and others pretending to be soldiers in order to carry out schemes of robbery. The whites complained vigorously

of the garrisons, and petitions were sent to Washington from mass meetings and from state legislatures asking for their removal. The high commanders, however, bore themselves well, and in a few fortunate cases Southern whites were on most amicable terms with the garrison commanders. The correspondence of responsible military officers in the South shows how earnestly and considerably each, as a rule, tried to work out his task. . . . The church organizations were as much involved in the war and in the reconstruction as were secular institutions. . . . As the Federal armies occupied Southern territory, the church buildings of each denomination were turned over to the corresponding Northern body, and Southern ministers were permitted to remain only upon agreeing to conduct 'loyal services, pray for the President of the United States and for Federal victories' and to foster 'loyal sentiment.' The Protestant Episcopal churches in Alabama were closed from September to December, 1865, and some congregations were dispersed by the soldiers because Bishop Wilmer had directed his clergy to omit the prayer for President Davis but had substituted no other. . . . The Unionist, or 'Tory,' of the lower and eastern South found himself, in 1865, a man without a country. Few in number in any community, they found themselves upon their return from a harsh exile the victims of ostracism or open hostility. . . . In the border States society was sharply divided and feeling was bitter. In eastern Tennessee, eastern Kentucky, West Virginia, and parts of Arkansas and Missouri returning Confederates met harsher treatment than did the Unionists in the lower South. Trowbridge says of east Tennessee: 'Returning rebels were robbed; and if one had stolen unawares to his home, it was not safe for him to remain there.' . . . Confederates and Confederate sympathizers in Maryland, West Virginia, and Kentucky were disfranchised. In West Virginia, Tennessee, and Missouri 'war trespass' suits were brought against returning Confederates for military acts done in war time. In Missouri and West Virginia strict test oaths excluded Confederates from office, from the polls, and from the professions of teaching, preaching, and law. On the other hand in central and western Kentucky the predominant Unionist population, themselves suffering through the abolition of slavery, and by the objectionable operations of the Freedmen's Bureau and the unwise military administration, showed more sympathy for the Confederates, welcomed them home, and soon relieved them of all restrictions. Still another element of discord was added by the Northerners who came to exploit the South. . . . With the better class, the Southerners, especially the soldiers, associated freely if seldom intimately. But the conduct of a few of their number who considered that the war had opened all doors to them, who very freely expressed their views, gave advice, condemned old customs, and were generally offensive, did much to bring all Northerners into disrepute. Tactlessly critical letters published in Northern papers did not add to their popularity."—W. L. Fleming, *Sequel of Appomattox (Chronicles of America Series, v. 32, pp. 1-3, 6-12, 14-19, 21-26)*.—See also ARKANSAS: 1868; KENTUCKY: 1864-1865; 1865; 1867-1895; LOUISIANA: 1865-1867; MARYLAND: 1864-1867; TENNESSEE: 1865-1866; TEXAS: 1865-1876.

1865-1872.—Wealth of nation.—Filling up of the West.—Growth of railroads.—Iron and coal.—Development of "big business."—Introduction of machinery.—Increase of immigration.—Rise of packing industry.—While quarrels over the status of the South raged in Congress, development of the North and West went steadily on. "The slow, unceasing ages had been accumulating a priceless inheritance for the American people. Nearly all of their natural resources, in 1865, were still lying fallow, and even undiscovered in many instances. Americans had begun, it is true, to exploit their more obvious, external wealth, their forests and their land; the first had made them one of the world's two greatest shipbuilding nations, while the second had furnished a large part of the resources that had enabled the Federal Government to fight what was, up to that time, the greatest war in history. But the extensive prairie plains whose settlement was to follow the railroad extensions of the sixties and the seventies—Kansas, Nebraska, Iowa, Oklahoma, Minnesota, the Dakotas—had been only slightly penetrated. This region, with a rainfall not too abundant and not too scanty, with a cultivable soil extending from eight inches to twenty feet under the ground, with hardly a rock in its whole extent, with scarcely a tree, except where it bordered on the streams, has been pronounced by competent scientists the finest farming country to which man has ever set the plow. Our mineral wealth was likewise lying everywhere ready to the uses of the new generations. The United States now supplies the world with half its copper, but in 1865 it was importing a considerable part of its own supply. It was not till 1859 that the first 'oil gusher' of western Pennsylvania opened up an entirely new source of wealth. Though we had the largest coal deposits known to geologists, we were bringing large supplies of this indispensable necessity from Nova Scotia. It has been said that coal and iron are the two mineral products that have chiefly affected modern civilization. Certainly the nations that have made the greatest progress industrially and commercially—England, Germany, America—are the three that possess these minerals in largest amounts. From sixty to seventy percent. of all the known coal deposits in the world were located in our national domain. Nature had given no other nation anything even remotely comparable to the four hundred and eighty square miles of anthracite in western Pennsylvania and West Virginia. Enormous fields of bituminous lay in those Appalachian ranges extending from Pennsylvania to Alabama, in Michigan, in the Rocky Mountains, and in the Pacific regions. In speaking of our iron it is necessary to use terms that are even more extravagant. From colonial times Americans had worked the iron ore plentifully scattered along the Atlantic coast, but the greatest field of all, that in Minnesota, had not been scratched. From the statement of the country up to 1869, it had mined only 50,000,000 tons of iron ore; while up to 1910 we had produced 685,000,000 tons. . . .

"Industrial America is a product of the decades succeeding the Civil War; yet even in 1865 we were a large manufacturing nation. The leading characteristic of our industries, as compared with present conditions, was that they were individualized. Nearly all had outgrown the household stage, the factory system had gained a foothold in nearly every line, even the corporation had made its appearance, yet small-scale production prevailed in practically every field. In the decade preceding

the War, vans were still making regular trips through New England and the Middle States, leaving at farmhouses bundles of straw plait, which the members of the household fashioned into hats. The farmers' wives and daughters still supplemented the family income by working on goods for city dealers in ready-made clothing. . . . In this period before the Civil War comparatively small single owners, or frequently copartnerships, controlled practically every industrial field. Individual proprietors, not uncommonly powerful families which were almost feudal in character, owned the great cotton and woolen mills of New England. Separate proprietors, likewise, controlled the iron and steel factories of New York State and Pennsylvania. Indeed it was not until the War that corporations entered the iron industry, now regarded as the field above all others adapted to this kind of organization. The manufacture of sewing machines, firearms, and agricultural implements started on a great scale in the Civil War [see INVENTIONS: 19th century: Sewing machine; Reaper]; still, the prevailing unit was the private owner or the partnership. In many manufacturing lines the joint stock company had become the prevailing organization, but even in these fields the element that so characterizes our own age, that of combination, was exerting practically no influence. Competition was the order of the day: the industrial warfare of the sixties was a free-for-all. . . .

"The transformation of the United States from a nation of farmers and small-scale manufacturers to a highly organized industrial state had begun. Probably the most important single influence was the War itself. . . . Spiritually the struggle accomplished much in awakening the nation to a consciousness of its great opportunities. The fact that we could spend more than a million dollars a day . . . and that soon after hostilities ceased we rapidly paid off our large debt, directed the attention of foreign capitalists to our resources, and gave them the utmost confidence in this new investment field. Immigration, too, started after the war at a rate hitherto without parallel in our annals. The Germans who had come in the years preceding the Civil War had been largely political refugees and democratic idealists, but now, in much larger numbers, began the influx of north and south Germans whose dominating motive was economic. These Germans began to find their way to the farms of the Mississippi Valley; the Irish began once more to crowd our cities; the Slavs gravitated towards the mines of Pennsylvania; the Scandinavians settled whole counties of certain northwestern States [see also IMMIGRATION AND EMIGRATION: United States: 1790-1860; 1835-1915]; while the Jews began that conquest of the tailoring industries that was ultimately to make them the clothiers of a hundred million people. For this industrial development America supplied the land, the resources, and the business leaders, while Europe furnished the liquid capital and the laborers. Even more directly did the War stimulate our industrial development. Perhaps the greatest effect was the way in which it changed our transportation system. The mere necessity of constantly transporting hundreds of thousands of troops and war supplies demanded reconstruction and reëquipment on an extensive scale. The American Civil War was the first great conflict in which railroads played a conspicuous military part, and their development during those four years naturally left them in a strong position to meet the new necessities of peace. [See also RAILROADS: 1861-1865; 1869-1910.] One of the

first effects of the War was to close the Mississippi River; consequently the products of the Western farms had to go east by railroad, and this fact led to that preëminence of the great trunk lines which they retain to this day. Almost overnight Chicago became the great Western shipping center, and though the river boats lingered for a time on the Ohio and the Mississippi they grew fewer year by year. Prosperity, greater than the country had ever known, prevailed everywhere in the North throughout the last two years of the War. So, too, feeding and supplying an army of millions of men laid the foundation of many of our greatest industries. The Northern soldiers in the early days of the war were clothed in garments so variegated that they sometimes had trouble in telling friend from foe, and not infrequently they shot at one another; so inadequately were our woolen mills prepared to supply their uniforms! But larger government contracts enabled the proprietors to reconstruct their mills, install modern machines, and build up an organization and a prosperous business that still endures. Making boots and shoes for Northern soldiers laid the foundation of America's great shoe industry. Machinery had already been applied to shoe manufacture, but only to a limited extent; under the pressure of war conditions, however, American inventive skill found ways of performing mechanically almost all the operations that had formerly been done by hand. The McKay sewing machine, one of the greatest of our inventions, which was perfected in the second year of the war, did as much perhaps as any single device to keep our soldiers well shod and comfortable. The necessity of feeding these armies created our great packing plants. Though McCormick had invented his reaper several years before the war, the new agricultural machinery had made no great headway. Without this machinery, however, our Western farmers could never have harvested the gigantic crops which not only fed our soldiers but laid the basis of our economic prosperity. Thus the War directly established one of the greatest, and certainly one of the most romantic, of our industries—that of agricultural machinery. [See also INDUSTRIAL REVOLUTION: United States; AGRICULTURE: Modern: United States: 1860-1888.]

"Above all, however, the victory at Appomattox threw upon the country more than a million unemployed men. Our European critics predicted that their return to civil life would produce dire social and political consequences. But these critics were thinking in terms of their own countries; they failed to consider that the United States had an immense unoccupied domain which was waiting for development. The men who fought the Civil War had demonstrated precisely the adventurous, hardy instincts which were most needed in this great enterprise. Even before the war ended, a great immigration started toward the mines and farms of the trans-Mississippi country. There was probably no important town or district west of the Alleghanies that did not absorb a considerable number. In most instances, too, our ex-soldiers became leaders in these new communities. Perhaps this movement has its most typical and picturesque illustration in the extent to which the Northern soldiers opened up the oil-producing regions of western Pennsylvania. Venango County, where this great development started, boasted that it had more ex-soldiers than any similar section of the United States."—B. J. Hendrick, *Age of big business*, pp. 3-7, 13-18.

1865-1885.—Westward freight trade.—Cattle

ranges.—Pony Express.—Mining camps.—The "Long Trail."—Influence of cattle industry on the West.—Homesteading.—"It was nearly half a century after the journey of Lewis and Clark that the Forty-Niners were crossing the Plains, whither, meanwhile, the Mormons had trekked in search of a country where they might live as they liked. Still the wealth of the Plains remained untouched. California was in the eyes of the world. The great cow-range was overleaped. But, in the early fifties, when the placer fields of California began to be less numerous and less rich, the half savage population of the mines roared on northward, even across our northern line. Soon it was to roll back. Next it worked east and southeast and northeast over the great dry plains of Washington and Oregon, so that, as readily may be seen, the cow-range proper was not settled as most of the West was, by a directly westbound thrust of an eastern population; but, on the contrary, it was approached from several different angles—from the north, from the east, from the west and northwest, and finally from the south. . . . All these new white men who had crowded into the unknown country of the Plains, the Rockies, the Sierras, and the Cascades, had to be fed. They could not employ and remain content with the means by which the red man there had always fed himself. Hence a new industry sprang up in the United States, which of itself made certain history in that land. The business of freighting supplies to the West, whether by bull-train or by pack-train, was an industry *sui generis*, very highly specialized, and pursued by men of great business ability as well as by men of great hardihood and daring. Each of these freight trains which went West carried hanging on its flank more and more of the white men. As the train returned, more and more was learned in the States of the new country which lay between the Missouri and the Rockies, which ran no man knew how far north, and no man could guess how far south. Now appears in history Fort Benton, on the Missouri, the great northern supply post—just as at an earlier date there had appeared Fort Hall, one of the old fur-trading posts beyond the Rockies, Bent's Fort on the Arkansas, and many other outposts of the Saxon civilization in the West. Later came the pony express [see PONY EXPRESS] and the stage coach which made history and romance for a generation. Feverishly, boisterously, a strong, rugged, womanless population crowded westward and formed the wavering, now advancing, now receding line of the great frontier of American story. But for long there was no sign of permanent settlement on the Plains, and no one thought of this region as the frontier. . . . It was after the Civil War that the first great drives of cattle from the south toward the north began, and after men had learned in the State of Texas that cattle moved from the Rio Grande to the upper portions of the State and fed on the mesquite grass would attain greater stature than in the hot coast country. . . . The iron trails, crossing the northern range soon after the Civil War, brought a market to the cattle country. Inevitably the men of the lower range would seek to reach the railroads with what they had to sell—their greatest natural product, cattle on the hoof. This was the primary cause of the great north-bound drives, . . . the greatest pastoral phenomena in the story of the world. The southern herds at that time had no market at their doors. They

had to go to the market, and they had to go on foot. . . . The braiding of a hundred minor pathways, the Long Trail lay like a vast rope connecting the cattle country of the South with that of the North. Lying loose or coiled, it ran for more than two thousand miles along the eastern edge of the Rocky Mountains, sometimes close in at their feet, again hundreds of miles away across the hard tablelands or the well-flowered prairies. It traversed in a fair line the vast land of Texas, curled over the Indian Nations, over Kansas, Colorado, Nebraska, Wyoming, and Montana, and bent in wide overlapping circles as far west as Utah and Nevada; as far east as Missouri, Iowa, even Illinois; and as far north as the British possessions. Even to-day you may trace plainly its former course, from its faint beginnings in the lazy land of Mexico, the Ararat of the cattle-range. It is distinct across Texas, and multifold still in the Indian lands. . . . If the influence of the cattle industry was paramount in the development of the frontier region found by the first railways, it should not be concluded that this upthrust of the southern cattle constituted the only contribution to the West of that day. There were indeed earlier influences, the chief of which was the advent of the wild population of the placer mines. The riches of the gold-fields hastened the building of the first transcontinental railroads and the men of the mines set their mark also indelibly upon the range. . . . We may never know how much history remains forever unwritten. Of the beginnings of the Idaho camps there have trickled back into record only brief, inconsequent, and partial stories. The miners who surged this way and that all through the Sierras, the upper Cascades, north into the Selkirks, and thence back again into the Rockies were a turbulent mob. Having overrun all our mountain ranges, following the earlier trails of the traders and trappers, they now recoiled upon themselves and rolled back eastward to meet the advancing civilization of the westbound rails, caring nothing for history and less for the civilized society in which they formerly had lived. This story of bedlam broken loose, of men gone crazed by the sudden subversion of all known values and all standards of life, was at first something which had no historian and can be recorded only by way of hearsay stories which do not always tally as to the truth. So the flood of gold-seekers—passing north into the Fraser River country, south again into Oregon and Washington, and across the great desert plains into Nevada and Idaho—made new centers of lurid activity. . . . Before these adventurers, now eastbound and no longer facing west, there arose the vast and formidable mountain ranges which in their time had daunted even the calm minds of Meriwether Lewis and William Clark. But the prospectors and the pack-trains alike penetrated the Salmon River Range. . . . Southward of the Idaho camps the same sort of story was repeating itself. Nevada had drawn to herself a portion of the wild men of the stampedes. Carson for its day (1859-60) was a capital not unlike the others. Some of its men had come down from the upper fields, some had arrived from the East over the old Santa Fé Trail, and yet others had drifted in from California. All the camps were very much alike. A straggling row of long cabins or huts of motley construction; a few stores so-called, sometimes of logs . . . a number of saloons, each of which customarily also supported a dance-hall; a series

of cabins or huts where dwelt individual men, each doing his own cooking and washing! and outside these huts the upturn earth. . . . Church and school were unknown. Law there was none. . . .

"Until the closing days of the Civil War the northern range was a wide, open domain, the greatest ever offered for the use of a people. None claimed it then in fee; none wanted it in fee. The grasses and the sweet waters offered accessible and profitable chemistry for all men who had cows to range. The land laws still were vague and inexact in application, and each man could construe them much as he liked. The excellent homestead law of 1862 [see above: 1862 (May): Passage of the Homestead Act] one of the few really good land laws . . . on our national statute books, worked well enough so long as we had good farming lands for homesteading—lands of which a quarter section would support a home and a family. This same homestead law was the only one available for use on the cattle-range. In practice it was violated thousands of times—in fact, of necessity violated by any cattle man who wished to acquire sufficient range to run a considerable herd. Our great timber kings, our great cattle kings, made their fortunes out of their open contempt for the homestead law, which was designed to give all the people an even chance for a home and a farm. . . . Swiftly enough, here and there along all the great waterways of the northern range, ranchers and their men filed claims on the water fronts. The dry land thus lay tributary to them. For the most part the open lands were held practically under squatter rights; the rights respected, at least for a time. These were the days of the open range. Fences had not come, nor had farms been staked out. From the South now appeared that tremendous and elemental force—most revolutionary of all the great changes we have noted in the swiftly changing West—the bringing in of thousands of horned kine along the northbound trails. The trails were hurrying from the Rio Grande to the upper plains of Texas and northward, along the north and south line of the Frontier—that land which now we have been seeking less to define and to mark precisely than fundamentally to understand. The Indian wars had much to do with the cow trade. The Indians were crowded upon the reservations, and they had to be fed, and fed on beef. . . . But every herd which passed north for delivery of one sort or the other advanced the education of the cowman, whether of the northern or the southern ranges. Some of the southern men began to start feeding ranges in the North, retaining their breeding ranges in the South. The demand for the great upper range for cattle seemed for the time insatiable.

"To the vision of the railroad builders a tremendous potential freightage now appeared. The railroad builders began to calculate that one day they would parallel the northbound cow trail with iron trails of their own and compete with nature for the carrying of this beef. The whole swift story of all that development, while the west-bound rails were crossing and criss-crossing the newly won frontier, scarce lasted twenty years. . . . The names of new rivers came upon our maps; and beyond the first railroads we began to hear of the Yellowstone, the Powder, the Musselshell, the Tongue, the Big Horn, the Little Missouri. . . . It was a wild, strange day.

But withal it was the kindest and most generous time, alike the most contented and the boldest time, in all the history of our frontiers. There never was a better life than that of the cowman who had a good range on the Plains and cattle enough to stock his range. There never will be found a better man's country in all the world than that which ran from the Missouri up to the low foothills of the Rockies. . . . The barbed-wire fence, which was at first used extensively by the great operators, came at last to be the greatest friend of the Little Fellow on the range. The Little Fellow, who under the provisions of the homestead act began to push West and to depart farther and farther from the protecting lines of the railways, could locate land and water for himself and fence in both. 'I've got the law back of me,' was what he said; and what he said was true. Around the old cow camps of the trails, and around the young settlements which did not aspire to be called cow camps, the homesteaders fenced in land—so much land that there came to be no place near any of the shipping-points where a big herd from the South could be held. Along the southern range artificial barriers to the long drive began to be raised. It would be hard to say whether fear of Texas competition or of Texas cattle fever was the more powerful motive in the minds of ranchers in Colorado and Kansas. But the cattle quarantine laws of 1885 nearly broke up the long drive of that year. Men began to talk of fencing off the trails, and keeping the northbound herds within the fences—a thing obviously impossible. The railroads soon rendered this discussion needless. Their agents went down to Texas and convinced the shippers that it would be cheaper and safer to put their cows on cattle trains and ship them directly to the ranges where they were to be delivered. And in time the rails running north and south across the Staked Plains into the heart of the lower range began to carry most of the cattle. So ended the old cattle trails."—E. Hough, *Passing of the frontier*, pp. 15-17, 26, 30-32, 57-61, 137-143, 148-150.

1865-1894.—Decay of mercantile marine.—"The Civil War of 1861 took away any chance which remained to American ships of continuing as the great sea-carriers. The American mind had to concentrate on fighting. Meanwhile, much of the tonnage had passed under other flags, while in Great Britain the accessibility of coal deposits, the cheapness of labour, the successful introduction of iron for shipbuilding, the great advances in ship construction, and especially the wonderful progress of the steamship, had been able to give back to Great Britain her supremacy as a Mercantile Marine. And when the Civil War was over, America was too interested internally to pay a maximum amount of attention to ocean trading. For the riches of the country were only beginning to be developed. Mines and manufactures, railroads and so on were now needing all the available capital. The New England shipyards, which for many years had been so valuable owing to the ample supplies of timber ready to hand, became unwanted in proportion as the Clyde, with its adjacent coalfields, was becoming more important for building ships of iron and then steel. It would be untrue to say that America ignored the building of iron ships, and in the early 'seventies she was interested in a mild way. The 'eighties passed without much enthusiasm for the subject, and then in 1894 and following year

the Cramp shipyard launched the two fine transatlantic liners *St. Louis* and *St. Paul*, both being constructed of steel. There were many other steel ships built, and orders were received from abroad, but, broadly speaking, and in strict reference to merchant ships and not warships, America was not even now a shipbuilding country. Those splendid schooners with which the port of Gloucester is for ever associated, and those other sailing craft along the American coast do not alter the statement, nor do the vessels on the American lakes and rivers. We are thinking of ocean-going ships, which are the essential feature of any Mercantile Marine. The trade between the Atlantic and Pacific ports still remained for the old full-rigged clippers, because there were not enough cargoes east-bound to make it worth while for the steamship. And so America went on, content to allow her Merchant Service to be comparatively small and unprogressive."—E. K. Chatterton, *Mercantile marine*, pp. 222-223.

1866 (April).—Passage of the first Civil Rights Bill over the president's veto.—"Immediately on the reassembling of Congress after the holidays, January 5, 1866, Mr. Trumbull [in the Senate], in pursuance of previous notice, introduced a bill 'to protect all persons in the United States in their civil rights, and furnish the means of their vindication.' This bill, having been read twice, was referred to the Committee on the Judiciary." A few days later the bill was reported back from the committee, and it came up for discussion on January 29. On February 1 it passed the Senate and went to the House. In that body it was reported from the Judiciary Committee on March 1, and debate upon the measure began. It passed the House, with some amendments, March 13, by a vote of 111 to 38. The amendments of the House were agreed to by the Senate and it went to the President, who returned it with an elaborate veto message on March 27. In the Senate, on April 6, by 33 ayes to 15 nays, and the House three days later, by 122 affirmative votes to 31 in the negative, the bill was passed notwithstanding the veto, and became law. As enacted, the Civil Rights Bill declared "that all persons born in the United States and not subject to any foreign Power, excluding Indians not taxed, are . . . citizens of the United States; and such citizens of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime, . . . shall have the same right in every State and Territory of the United States to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by

white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulation, or custom of the contrary notwithstanding." Section 2 of the act provided penalties for its violation. The remaining section gave to the district and circuit courts of the United States cognizance of all crimes and offenses committed against the provisions of the act; extended the jurisdiction of those courts and enlarged and defined the powers and duties of the district attorneys, marshals, deputy marshals and commissioners of the United States, to that end; made it lawful for the President "to employ such part of the land or naval forces of the United States, or of the militia, as shall be necessary to prevent the violation and enforce the due execution of this act;" and, finally, provided that "upon all questions of law arising in any cause under the provisions of this act a final appeal may be taken to the Supreme Court of the United States."—W. H. Barnes, *History of the 39th Congress*, ch. 9-11.—"The Freedmen's Bureau Bill had been confessedly in the nature of a temporary expedient. It had aimed to secure the protection of the blacks by military authority for a period that Congress should deem sufficient. By the . . . [Civil Rights Bill] however, the protection was to be incorporated permanently into the law of the land, and to be entrusted to the civil authorities of the nation. As the bill passed, it provided first a broad foundation for rights in the declaration that 'all persons born in the United States, and not subject to any foreign power, excluding Indians not taxed, are . . . citizens of the United States.' It then secured to all such citizens of every race and color the same rights as were enjoyed by white citizens in respect to making and enforcing contracts, appearing in the courts, receiving, holding and transferring property, and enjoying the benefit of all laws for the security of person and property. Section second made it a misdemeanor to subject any inhabitant of any state or territory to the deprivation of any right secured by the act, or to different punishment, by reason of race, color or previous condition of servitude, from that prescribed for white persons. The remainder of the bill was occupied with provisions in great detail for the enforcement of the first two sections. Cognizance of all cases arising under the act was given exclusively to United States courts, and the machinery for its strict execution was borrowed, with grim satisfaction, from the Fugitive Slave Act. At the time the Civil Rights Bill was proposed, it had become a well-grounded conviction that the Southern states would not yield to the negroes any appreciable share of the rights which northern sentiment demanded for them. The legislatures of the reorganized governments, under cover of police regulations and vagrancy laws, had enacted severe discriminations against the freedmen in all the common civil rights. In several states the tendency of these enactments toward a system of peonage had appeared so pronounced as to induce the military commanders to order that they be disregarded. This situation strengthened the resolution, already well defined, to remove the possibility of a system of modified slavery under state sanction. It was feared that Congress would be unable to effect this purpose after the admission of the Southern representatives. The end must be achieved before extending recognition to the new governments, and acquiescence in the

result could then be made a condition of the erring states' return. . . . The proposition that United States courts should assume jurisdiction of disputes relating to property and contracts, and even of criminal actions down to common assault and battery, seemed like a complete revelation of that diabolical spirit of centralization, of which only the cloven hoof had been manifested heretofore. But the supporters of the bill showed a clear appreciation of the change that the great conflict had wrought. They found a constitutional basis for the law in the Thirteenth Amendment. . . . A statute which is not equal to all is an encroachment on the liberty of the deprived persons, and subjects them to a degree of servitude. It is the duty of Congress, therefore, to counteract the effects of any such state laws. Thus the constitutionality of the bill was maintained. . . . The far-reaching consequences of this view of the Thirteenth Amendment filled the friends of the old system with dismay. . . . The idea that the amendment carried with it an enormous centralization of power in the general government had never been heard of during the long discussion of the resolution in Congress. It was a recently devised scheme of the consolidationists to change the whole foundation of the government by interpretation. . . . Whatever may have been the intention of the framers of the Thirteenth Amendment, the construction put upon it by Congress in the Civil Rights Bill was promptly adopted by the judiciary. The bill was vetoed by the President on the same general line of reasoning that was employed with respect to the Freedmen's Bureau Bill, but was immediately passed over the veto. . . . In addition to the definition of 'slavery' and 'involuntary servitude,' the Civil Rights Bill undertook to fix the precise meaning of the phrase 'citizen of the United States.' The matter had been involved, up to this time, in hopeless confusion. . . . During the war, . . . Mr. Lincoln's attorney-general . . . gave it as his official opinion that a free negro, born within the United States, was *ipso facto* a citizen thereof. . . . With that assumption the status of United States citizenship was placed entirely beyond the reach of any state influence whatever, and a purely national conception was attained. This view was the one incorporated into the Civil Rights Bill. . . . The intense opposition which the Civil Rights Bill had excited permitted little hope that its provisions could remain permanently upon the statute book. Hence arose the movement to incorporate the principles of the bill in the Constitution."—W. A. Dunning, *Essays on the Civil War and Reconstruction*, pp. 91-97, 99.—"The President on March 27, in a message remarkable for its moderation and careful reasoning . . . objected to the measure because it conferred citizenship on the negroes when eleven out of thirty-six States were unrepresented and attempted to fix by Federal law 'a perfect equality of the white and black races in every State of the Union.' It was an invasion by Federal authority of the rights of the State; it had no warrant in the Constitution and was contrary to all precedents. It was a 'stride toward centralization and the concentration of all legislative power in the national government.' . . . The passage of this bill over the President's veto was indeed a momentous event, not only because, in view of Johnson's character, it rendered the breach between him and Congress complete but also for the reason that it opened a new chapter

in constitutional practice. Since Washington there had been many vetoes but never until now had Congress passed over the President's veto a measure of importance; and this measure was one over which feeling on Congress and the country had been wrought up to the highest tension. . . . Johnson's fall from December 5, 1865, when he sent his message to Congress to the April day on which the Senate passed the Civil Rights Bill over his veto was great and may be accounted for by the defects of his character and especially by his lack of political sense. On him the whole history of England the United States, of government by discussion and compromise was lost. . . . The moderate senators and representatives (who constituted a majority of the Union party) asked him for only a slight compromise; their action was really an entreaty that he would unite with them to preserve Congress and the country from the policy of the radicals. The two projects which Johnson had most at heart were the speedy admission of the Southern senators and representatives to Congress and the relegation of the question of negro suffrage to the States themselves. Himself shrinking from the imposition on these communities of the franchise for the coloured people, his unyielding disposition in regard to matters involving no vital principle did much to bring it about. His quarrel with Congress prevented the readmission into the Union on generous terms of the members of the late Confederacy; and for the quarrel and its unhappy results Johnson's lack of imagination and his inordinate sensitiveness to political gadflies were largely responsible: it was not a contest in which fundamentals were involved. He sacrificed two important objects to petty considerations. His pride of opinion, his desire to beat, blinded him to the real welfare of the South and of the whole country."—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 5, pp. 583, 586-587, 580.

1866 (June).—Congressional adoption of Fourteenth Amendment.—Report of Reconstruction committee.—State legislatures during period.—"No one in Washington in the spring of 1866 thought that the enactment of the freedmen's bureau and the civil rights bills would satisfy all parties. The House, in the hands of the radicals, with Stevens at the head, would spend all its strength to carry out a policy of severe reconstruction. But the Senate was less united. In fact, it contained four factions. One, a rather large one, was as radical as Stevens; another was radical, but temperately so; another was composed of moderate Republicans who had followed Lincoln, and another of Democrats who were openly for the South. The fourth group was the only one that Johnson could count on. The third was friendly in the beginning of the year, and probably would have continued so if he had accepted the . . . [Freedmen's Bureau and Civil Rights bills]. It was currently said that he promised to approve the civil rights bill, and his subsequent veto of it was considered an act of bad faith which further alienated the men of the third group. With all the Senate Republicans united it was possible to carry a bill over the President's veto. The radicals were conscious of their power and jubilant over the prospect of success. Their first move was an amendment giving constitutional vigor to the main features of the civil rights bill. But in its first form the fourteenth amendment dealt with negro suffrage

alone. It did not seem fair that the South, the old three-fifths apportionment being now absolute, should have full benefit of its colored population while it excluded them from the polls. So it was proposed to exclude negroes from the basis of representation in those states in which they might not vote. As this would be a loss of representation in such states, it was hoped that it would impel them to concede the franchise to the freedmen. In this form the amendment passed the House by a vote of 120 to 32, but it failed in the Senate. Five extreme radicals, Sumner among them, voted against it because it did not authorize negro suffrage outright. This was before the veto of the civil rights bill. Nearly two months later [April 30, 1866] the amendment came before Congress in a new form. The provision regarding suffrage was retained, and three features of the vetoed bill were added: 1. 'All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the states wherein they reside.' 2. No state should abridge the rights of such citizens. 3. No state should 'deprive any person of life, liberty, or property without due process of law' or deny equal protection of the laws. It also excluded from federal or state office until pardoned by Congress persons who, having held high federal or state office, later supported the Confederacy. It guaranteed the payment of the national war debt, and ordered that no state should pay the Confederate debt or pay for the loss of the slaves through emancipation. It was so sweeping a programme of reconstruction that the extreme radicals would not oppose it. Sumner and three of his five colleagues in the Senate who voted against the first form now gave it their votes, and it passed both houses [the House on May 10, and the Senate on June 8] by the necessary two-thirds vote. It only remained to be approved by three-fourths of the states."—J. S. Bassett, *Short history of the United States*, pp. 607-608.—"In June, 1866, about the time of the Fourteenth Amendment was sent to the State legislatures, the joint reconstruction committee presented its report to Congress. The essence of the report was the declaration that the seceding States were disorganized communities *outside* the Union, and that they should be denied representation 'until sufficient guarantees were provided which would tend to secure the civil rights of all citizens, temporary restoration of suffrage to those not guilty of participating in the rebellion, and the disqualification from office of at least a portion of those whose crimes have proved them to be enemies of the Union and unworthy of public confidence.' The 'guarantees' proposed by the committee were substantially the provisions of the Fourteenth Amendment which had just been proposed by Congress and which was before the country for ratification or rejection."—S. E. Forman, *Our republic*, pp. 518-519.—"The standing of the Southern state organizations was in doubt after the refusal of Congress to recognize them. Nevertheless, in spite of this uncertainty they continued to function as States during the year of controversy which followed; the courts were opened and steadily grew in influence; here and there militia and patrols were reorganized; officials who refused to 'accept the situation' were dismissed; elections were held; the legislatures revised the laws to fit new conditions and enacted new laws for the emancipated blacks. To all this progress in reorganization the action of Con-

gress was a severe blow, since it gave notice that none of the problems of reconstruction were yet solved. An increasing spirit of irritation and independence was observed throughout the States in question, and at the elections the former Confederates gained more and more offices. The year was marked in the South by the tendency toward the formation of parties, by the development of the 'Southern outrages' issue by an attempt to frustrate radical action, and finally by a line-up of the great mass of the whites in opposition to the Fourteenth Amendment and other radical plans of Congress."—W. L. Fleming, *Sequel of Appomattox (Chronicles of America Series, v. 32, pp. 81-82)*.

1866 (July).—Restoration of Tennessee to her former, proper, practical relation to the Union." See TENNESSEE: 1865-1866.

1866 (July).—New Orleans riot. See LOUISIANA: 1865-1867.

1866 (August).—Proclamation of peace.—By successive orders for particular localities, the blockade, the prohibition of commercial intercourse, and the suspension of the *habeas corpus* were revoked by Mr. Johnson; but it was not till August 20, 1866, that the final proclamation went forth that the insurrection was ended, 'and that peace, order, tranquillity and civil authority now exist in and through the whole of the United States of America.' Prior to that date, in all the states not declared at peace by special proclamations, the presumptive status of the inhabitants, under the unrevoked orders of Mr. Lincoln, was that of public enemies. The only evidence of a different status was the fact of having taken the amnesty oath, or of having received a special pardon from the President. By the final order of Mr. Johnson, however, the liability of all civilians in the United States to the President's military authority ceased, and no legal effect of the war remained upon the private citizen in the southern states, save that a rapidly diminishing number of unpardoned individuals were still responsible before the civil law for the crimes of treason and rebellion. Such was the condition of affairs that was claimed to have been brought about, by the autumn of 1866, through executive action. As far as the judiciary was concerned, the restoration seemed to be fully accepted. The district courts of the United States resumed their work under the direction of the President as fast as the provisional organizations were effected. Chief Justice Chase declined to sit on the circuit bench while military authority was maintained in the circuit, on the ground that it was not becoming to the dignity of the highest judicial officers of the government to act under even the least shadow of subjection to armed force. He did not object, however, to the holding of a circuit court by the district judge sitting alone. As early as the December term of 1865, the Supreme Court ordered the cases on its docket from the Southern States to be called and disposed of. Upon the proclamations by the President of the end of the insurrection, the regular sessions of all the courts were resumed."—W. A. Dunning, *Essays on Civil War and Reconstruction*, pp. 83-85.

1866-1867 (October-March).—Reconstruction issue before the people.—Congress sustained by the North.—Rejection of Fourteenth Amendment by Southern states.—"The Congressional election that was approaching when [the Re-

construction] report was made gave the voters of the country an opportunity to decide between Johnson's mild plan of reconstruction and the harsh plan foreshadowed by the joint committee. In the campaign both sides made unusual efforts to gain votes. As the canvass proceeded it became plainer and plainer that the congressional party would win. The President's cause was weakened by a number of outrages that were committed against the freedmen in the South. Of special advantage to the Northern radicals was a riot which occurred late in July in New Orleans and resulted in the killing of forty or fifty negroes and the wounding of about one hundred and fifty more. The President himself contributed vastly to his own undoing. He made an electioneering trip—'swinging around the circle,' he called it,—and on the tour his indiscretions of speech were so many and so great that he invited much of the ridicule and scorn which his enemies heaped upon him. At one place his remarks were so offensive to the audience that he was silenced and driven from the platform."—S. E. Forman, *Our republic*, p. 519.—"The returns of the elections, as they came in during September, October, and November, told uniformly the tale of a great defeat in the North for the President. When the record was complete, it revealed that the next House of Representatives would show, like its predecessor, a two-thirds majority that could override any veto; and that from the Senate, as a result of the election of new legislatures, would disappear several of the small band of former Republicans who had sustained Mr. Johnson's policy. There was no room anywhere for doubt that the people of the North would support Congress as against the President in the policy of reconstruction. What, then, was the feeling of the South as to the plan that Congress had proposed? So far as it could be expressed by the attitude assumed towards the proposed Fourteenth Amendment, a series of responses by the legislatures, beginning in October, showed that sentiment was as strongly on one side in the South as the elections showed it to be on the other side in the North. By February, 1867, ratification of the amendment had been voted down in the legislature of every one of the seceding states, except Tennessee; and the best showing in favor of ratification in any of the bodies that voted was 10 votes out of 103 in the lower house in North Carolina. In three States the adverse vote was unanimous in both houses. The reasons assigned for this attitude included all of those conservative doctrines which had been so strongly urged in Congress against any change of the Constitution in respect to citizenship and the basis of representation. But especial stress was in most of the States laid upon the effects of the section imposing political disabilities on leading ex-Confederates, which would, if ratified, depose from office very many of the chief functionaries of the existing State governments, and upon the contention that, if the communities which the legislatures represented were really States of the Union, the presence of their members in Congress was essential to the validity of the amendment; while if those communities were not States, their ratification of the amendment was unnecessary. Whatever the reasons, real or nominal, the fact that the South stood solidly opposed on the great issue of reconstruction to the North was through this attitude put in the strongest and clearest light."—W. A. Dunning, *Reconstruc-*

tion, political and economic, pp. 82-84.—"No one could doubt that the Northern States would ratify; but the Southern States were more than a fourth of the 27 States then in the Union and could defeat the amendment. . . . Most Republicans were ready to forget all if those States, chastened by adversity, approved the amendment. In view of what came later, they would have done well to bow the head to the yoke and submit to necessity. But the fires of controversy had filled them with defiance, and one by one in the autumn of 1866 and in the winter following they repudiated the amendment. Their legislatures under the Johnson plan were full of ex-Confederates, who took it as an indignity to disfranchise their former comrades, repudiate the Confederate debt, and accept a lower rank in Congress. They were in despair, and felt that if they must be humiliated, it might better come through the force of the conqueror than by their own consent. Posterity has some admiration for their spirit, but the Northern people were only inclined to think them stiffnecked, and unreasonable. The situation pleased the extreme radicals, who felt that the North must now come to a policy of severity. The autumn elections seemed to support them, since the Senate was now Republican by 42 to 11 votes and the House by 143 to 49. Stevens and Sumner, who thought that the negro could only be protected by having the ballot, were ready to demand negro suffrage, and believed the country would indorse such a demand. Garfield, in the House, summed up their feeling in a remarkable speech. Congress, he said, had been generous; it might, had it so desired, have hanged 'every rebel traitor in the South for their bloody conspiracy,' or confiscated their property; but through generosity it had withheld its hand. Its offer to receive the Southern States into the Union with no other restriction than the Fourteenth Amendment had been flung back into its face, and 'it is now our turn to act. They would not cooperate with us in rebuilding what they destroyed. We must remove the rubbish and rebuild from the bottom.' By the rubbish, he meant the existing governments under Johnson's plan. The Southerners believed that by holding out courageously they could block the amendment forever, since it could not be adopted without their consent. By rebuilding the government in their States from the bottom, Garfield meant that the negroes themselves must be allowed to vote, that they would thus gain control of the Southern States, and that the amendment could then be ratified. This favorite program of the extreme radicals was now to be carried into effect."—J. S. Bassett, *Short history of the United States*, pp. 608-609.—In a letter addressed November 25, 1866, to General Richard Taylor, lately of the Confederate army, and brother-in-law of Jefferson Davis, General Grant wrote: "I have talked with several members of Congress who are classed with the radicals; Schenck and Bidwell for instance. They express the most generous views as to what would be done if the Constitutional amendments proposed by Congress were adopted by the Southern States. What was done in the case of Tennessee was an earnest of what would be done in all cases. Even the disqualification to hold office imposed on certain classes by one article of the amendment would, no doubt, be removed at once, except it might be in the cases of the very highest offenders, such, for instance, as those who went

abroad to aid in the Rebellion, those who left seats in Congress, etc. All or very nearly all would soon be restored, and so far as security to property and liberty is concerned, all would be restored at once. I would like exceedingly to see one Southern State, excluded State, ratify the amendments to enable us to see the exact course that would be pursued. I believe it would much modify the demands that may be made if there is delay." "But the President's endeavors did not cease. . . . He used all the authority of his office to dissuade the Southerners from accepting the amendment which the entire North had ratified."—A. Badeau, *Grant in peace*, ch. 5.

1866-1867 (December-March).—**Tenure-of-Office Bill.**—"Against the early decision of the founders of the Government, . . . against the repeatedly expressed judgment of ex-President Madison, against the equally emphatic judgment of Chief Justice Marshall, and above all, against the unbroken practice of the Government for 78 years, the Republican leaders now determined to deprive the President of the power of removing Federal officers. Many were induced to join in the movement under the belief that it was important to test the true meaning of the Constitution in the premises, and that this could be most effectively done by directly restraining by law the power which had been so long conceded to the Executive Department. To that end Mr. Williams of Oregon, on the first Monday of December, 1866, introduced a bill 'to regulate the tenure of civil offices.'"—J. G. Blaine, *Twenty years of Congress*, v. 2, p. 270.—"The programme unfolded in the winter of 1866-1867 consisted of two parts which were developed simultaneously. The first part was devoted to the effective assertion of congressional supremacy over the judicial and executive branches of the government; the second part consisted in the effective assertion of congressional supremacy in the conquered South. Little legislation was actually enacted as to the judiciary, but much was initiated and held in suspense till the proper moment for decisive action. In December, 1866, and January, 1867, three highly important opinions were announced by the Supreme Court. In *ex parte* Milligan it was declared that military commissions and the other incidents of martial law were unconstitutional save where flagrant war made the action of the ordinary courts impossible. In *Cummings vs. Missouri* a state test-oath, by which Confederate sympathizers were excluded from various professions, was held to contravene the constitutional prohibition of *ex post facto* laws [see also SUPREME COURT: 1866-1873]; and in *ex parte* Garland the Federal test-oath so far as it operated to prevent attorneys from practising in the United States courts, was for similar reasons found invalid. [See also ARKANSAS: 1865-1866.] These cases all manifested a spirit in the court that boded ill for the radical projects of reconstruction; and the congressional leaders, while obviously reluctant to attack the venerated judicial organ, did not conceal their purpose to do so if the provocation should go further. As to the executive, however, there was neither hesitation nor restraint; by the end of the session, March 4, a number of the most indispensable and fully recognized attributes of the presidential office had been taken from it, and a resolute movement to oust Johnson by impeachment had made substantial headway. Of

the assaults on the constitutional powers of the president, the most important and far-reaching were those directed against his control over his subordinates in the civil service and in the army. By the celebrated tenure of office act, which [was passed over the president's veto, without debate and] became law March 2, 1867, he was prohibited from removing civil officers save with the consent of the Senate, and was made guilty of a misdemeanor punishable by fine and imprisonment if he should violate the act. By a section inserted in the army appropriation act of the same date he was forbidden to issue military orders except through the General of the Army; or to relieve the general of his command or assign him to duty elsewhere than at Washington, save at the general's own request, or with the previous approval of the Senate; and a violation of these provisions also was declared to be a misdemeanor. In the passage of the tenure of office act, both a permanent and a temporary influence were operative. Participation by the Senate in the power of removal had never, since the origin of the Constitution, ceased to be claimed by members of the body whose prestige and power would be enhanced by the recognition of the principle; but no House of Representatives would have been likely to contribute to the exaltation of the rival chamber except under the pressure of such a condition as existed in 1867, when Johnson's removals of radical office-holders were producing the maximum of exasperation. The legislation touching the president's military functions was purely a result of the tension between Johnson and Congress; and in requiring that the commander-in-chief shall consult the Senate before giving certain orders to his subordinate, it is without parallel in our history, either for its encroachment on the constitutional power of the executive or for inherent preposterousness. But its source is even more astonishing than its content; for it was secretly dictated to Boutwell by the president's official adviser, Edwin M. Stanton, secretary of war."—W. A. Dunning, *Reconstruction, political and economic*, pp. 88-91.—See also PRESIDENT: United States: Presidential powers and functions.

ALSO IN: J. H. Forman, *Our republic*, p. 519.—C. W. Burgess, *Reconstruction and the constitution*, pp. 123-128.—W. H. Barnes, *History of the 39th Congress*, p. 560.

1866-1871.—**Ku Klux Klan of the Southern states and its outrages.**—"It would have been contrary to the experience of mankind, and an exception to all the teachings of history, if the social and political revolution which the results of the war had imposed on the states then recently insurgent had gone into operation peacefully, harmoniously, and successfully. It was impossible for such to be the case. The transition was from a state in which the superiority and domination of the white race over the colored race existed unquestioned for centuries. It was too a condition of things in which the most prominent whites were disfranchised and deprived of the right to hold public offices. Their late slaves were enfranchised, and the judicial and other offices were largely filled by dishonest and unfriendly strangers from the North. What was worse still, many of these places were filled by ignorant and brutal negroes. The transition was too sudden and violent. It was hard to submit to it quietly."—S. S. Cox, *Three decades of Federal legislation*, ch. 25.—"Sober men kept their heads; prudent men saw how sad an increase of passion would come out of

hasty counsels of strife, an open grapple between those outlawed and those appointed to govern. Men whom experience had chastened saw that only the slow processes of opinion could mend the unutterable errors of a time like that. But there were men to whom counsels of prudence seemed as ineffectual as they were unpalatable, men who could not sit still and suffer what was now put upon them. It was folly for them to give rein to their impulses; it was impossible for them to do nothing. . . . In May, 1866, a little group of young men in the Tennessee village of Pulaski, finding time hang heavy on their hands after the excitement of the field, so lately abandoned, formed a secret club for the mere pleasure of association, for private amusement,—for anything that might promise to break the monotony of the too quiet place, as their wits might work upon the matter, and one of their number suggested that they call themselves the *Kuklos*, the Circle. . . . Here was a very tempting and dangerous instrument of power for days of disorder and social upheaval, when law seemed set aside by the very government itself, and outsiders, adventurers, were in the seats of authority, the poor negroes, and white men without honor, their only partisans. Year by year the organization spread, from county to county, from State to State. Every country-side wished to have its own Ku Klux, founded in secrecy and mystery like the mother 'Den' at Pulaski, until at last there had sprung into existence a great *Ku Klux Klan*, an 'Invisible Empire of the South,' bound together in loose organization. . . . Similar secret orders grew up alongside the great Klan, or in States where its 'dens' had not been established: Knights of the White Camellia, Pale Faces, Constitutional Union Guards, the White Brotherhood, to serve the same ends by the same means. The Knights of the White Camellia, founded in New Orleans in the winter of 1867-1868, spread their organization abroad more widely even than the Ku Klux Klan. . . . The ranks of those who flocked into the South to take part in the reconstruction of the States and the habilitation of the negro for his life of freedom were strangely mixed of good and bad. The teachers came upon an errand of mercy and humanity, but came too many of them with bitter thoughts and intolerant purpose against the white people of the South, upon whom, as they did not reflect, the fortunes of the negro in any case depended. The politicians came for the most part like a predatory horde; but here and there emerged a man of integrity, of principle, of wise and moderate counsel, who hated with an ineradicable hatred the party and the practice of federal control which he represented. The Ku Klux and those who masqueraded in their guise struck at first only at those who made palpable mischief between the races or set just law aside to make themselves masters; but their work grew under their hands, and their zest for it. Brutal crimes were committed; the innocent suffered with the guilty; a reign of terror was brought on, and society was infinitely more disturbed than defended. Law seemed oftentimes given over. The right to the writ of *habeas corpus* was again and again suspended to check the lawless work. At least one governor of the reconstruction period sent to his adjutant general lists of leading citizens proscribed, with the suggestion that those whose names were specially marked should be tried by court martial and executed at once before the writ should be restored. One lawless force seemed in contest with another."

—W. Wilson, *History of the American people*, v. 5, pp. 59-64.—"Already before the Reconstruction Acts were passed, the political adventurers in the South had begun organizing the negroes into secret bodies, known later as the Union or Loyal League. The members of these bodies were sworn to obey the decisions of the organization and to execute them. The original idea seems to have been a combination for protection against bands of lawless white people, and for mutual aid and assistance in the hard struggle for existence to which the freedmen were now exposed. The League soon took on, however, a political character, and became a sort of Republican party organization in the South. It is difficult to determine whether the Ku-Klux organization preceded that of the Loyal League and provoked it

MEMBERS OF KU KLUX KLAN

Costumes worn in Tennessee and Northern Alabama
(From contemporary print)

or not. So far as we know, both of them were first heard of in the year 1866. It is probable that the Ku-Klux had its origin a little farther north than the Loyal League. . . . After the Reconstruction Acts were passed and put into operation, and especially after the Southern communities were reorganized as 'States' under them, and the military government gave way to the 'State' governments, this organization spread all over the South, and contributed much by its violent and unlawful method toward wringing finally the new 'state' governments of the South from the hands of the negroes and the 'carpet-baggers.' As it extended, its methods became more lawless and violent. Its members whipped, plundered, burned, abducted, imprisoned, tortured and murdered, for the prime purpose of keeping the negroes from exercising suffrage and holding office. They were protected by many respectable people who would not have participated personally

in their nefarious work. And they had confederates everywhere, who, upon the witness stand and in the jury box, would perjure themselves to prevent their conviction and punishment. It was even said that there were many cases where members of these Klans were able to have themselves subpoenaed as witnesses, or summoned as jurors, in the trials of their comrades, and that they were sworn to perjure themselves, if necessary, to clear each other. The respectable people of the South tried to make it appear that these lawless bands were simply freebooters, such as generally infest a country for a time after a period of war, and had no political meaning

direction of these organizations, and to operate the newly established 'State' governments under the same direction. This opened the way for the 'carpet-bag' governments in the Southern 'States.'—J. W. Burgess, *Reconstruction and the constitution*, pp. 250-253.—“Senator Scott, in a speech in the Senate, gave as the result of the investigation that came to his own knowledge, as follows: In North Carolina, in 14 counties, there were 18 murders and 315 whippings. In South Carolina, 9 counties, 35 murders and 276 other flagrant outrages. In Georgia, 29 counties, 72 murders and 126 whippings. In Alabama, 26 counties, 215 murders and

KU KLUX WARNING

Cartoon expressing the extreme Southern view

(From the *Independent Monitor*, Tuscaloosa, Alabama, Sept. 1, 1868)

or purpose whatsoever; and it is probably true that the Klans never went beyond any wider bond than the county organization, or Klan, being rather the moral bond of a common purpose; but it cannot be well questioned now that they had one purpose at least in common, and that was a chief purpose with them all, viz., to terrorize the negro out of the exercise of his newly-granted privileges of suffrage and office-holding, and keep him in his place as a menial. . . . The formation of the Union Leagues in 1867 and 1868 enabled the negroes to vote in these years for delegates to the constitutional conventions required under the Reconstruction Acts, and to vote upon the ratification of the constitutions framed by them, and to participate in the election for the 'State' officers and legislative members under those constitutions, with the help and under the

116 other outrages. In Florida, in one county alone there were 153 cases of homicide. In Mississippi, 20 counties, 23 homicides and 76 other cases of outrage. In 99 counties in different States he found 526 homicides and 2,000 cases of whipping. But the committee state that in Louisiana alone in the year 1868 there were more than 1,000 murders, and most of them were the result of the operations of the Ku Klux.”—H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 45.—See also KU KLUX KLAN. ALSO IN: *Report of Joint Select Committee (42nd Congress, 2nd session, Senate Report no. 41)*.—W. G. Brown, *Lower South in American history*, pp. 191-225.—J. W. Garner, *Reconstruction in Mississippi*, pp. 338-353.—D. L. Wilson, *Ku-Klux Klans (Century Magazine, v. 6, pp. 398-410)*.—M. L. 1866-1872.—Rise and dissolution of the National Labor Union.—The National Labor Union was organized at Baltimore in 1866 and in the next year had its second meeting at Chicago. The growing importance of the effects of European emigration upon American labor was now recognized and in 1869 a delegate from the Philadelphia meeting was sent to Basel to confer with the European labor representatives on that subject. During the next few years both the European and American organizations were shattered on the rock of internal dissensions. The Franco-German War of 1870 had interfered with the meeting of the congress in that year, but the growth of the anarchist movement was the principal cause of the disruption of the European organization. The National Labor Union in America held its congresses from 1866 to 1872, but the growth of Socialism made inroads into its membership until the organization dwindled away to nothing. Nevertheless, despite the melancholy failure of this ambitious attempt to found a national labor organization it must not be forgotten that it was a forerunner of the American Federation of Labor organized ten years later. See AMERICAN FEDERATION OF LABOR.

1866-1876.—Indian Wars: Fetterman massacre.—Indian reservations.—Baker massacre.—“The early turbulent population of miners and adventurers was crude, lawless and aggressive. It cared nothing whatever for the Indian tribes. War, instant and merciless, where it meant murder for the most part, was set on foot as soon as white touched red in that far western region. . . . Red Cloud, Crazy Horse, Roman Nose, American Horse, Black Kettle—these were names of great Indian generals who proved their ability to fight. At times they brought into the open country, which as yet remained unoccupied by the great pastoral movement from the south, as many as five thousand mounted warriors in one body, and they were well armed and well supplied with ammunition. . . . There were fought in the West from 1860 to 1875 more than two hundred pitched actions between the Army and the Indians. In most cases the white men were heavily outnumbered. The account which the Army gave of itself on scores of unremembered minor fields . . . would make one of the best pages of our history, could it be written today. The enlisted men of the frontier Army were riding and shooting men, able to live as the Indians did and able to beat them at their own game. They were led by Army officers whose type has never been improved upon in any later stage of our Army itself, or of any army in the world. There are certain great battles which may at least receive notice. . . . The Fetterman Massacre in 1866, near Fort Phil Kearney, a post located at the edge of the Big Horn Mountains, was a blow which the Army never has forgotten. ‘In a place of fifty feet square lay the bodies of Colonel Fetterman, Captain Brown, and sixty-five enlisted men. Each man was stripped naked and hacked and scalped, the skulls beaten in with war clubs and the bodies gashed with knives almost beyond recognition, with other ghastly mutilations that the civilized pen hesitates to record.’ [See also WYOMING: 1866 (June-December).] This tragedy brought the Indian problem before the country as never before. The hand of the Western rancher and trader was implacably against the tribesmen of the plains; the city-dweller of the East, with hazy notions of the Indian character, was disposed to

urge lenient methods upon those responsible for governmental policy. While the Sioux and Cheyenne wars dragged on, Congress created, by act of July 20, 1867, a peace commission of four civilians and three army officers to deal with the hostile tribes. For more than a year, with scant sympathy for the military members, this commission endeavored to remove the causes of friction by amicable conference with the Indian chiefs. . . . Segregation of the Indian tribes upon reservations seemed to the commission the only solution of the vexing problem. Various treaties were made and others were projected looking toward the removal of the tribesmen from the highways of continental travel. The result was misgiving and increased unrest among the Indians.

“In midsummer of 1868 forays occurred at many points along the border of the Indian Territory. General Sheridan, who now commanded the Department of the Missouri, believed that a general war was imminent. He determined to teach the southern tribesmen a lesson they would not forget. In the dead of winter our troops marched against the Cheyennes, then in their encampments below the Kansas line. The Indians did not believe that white men could march in weather forty below zero, during which they themselves sat in their tepees around their fires; but our cavalymen did march in such weather, and under conditions such as our cavalry perhaps could not endure today. Among these troops was the Seventh Cavalry, Custer’s Regiment, formed after the Civil War, and it was led by Lieutenant-Colonel George A. Custer himself, that gallant officer whose name was to go into further and more melancholy history of the Plains. Custer marched until he got in touch with the trails of the Cheyennes, whom he knew to belong to Black Kettle’s band. He did not at the time know that below them, in the same valley of the Washita, were also the winter encampments of the Kiowas, the Comanches, the Arapahoes, and even a few Apaches. He attacked at dawn of a bleak winter morning, November 27, 1868, after taking the precaution of surrounding the camp and killed Black Kettle, and another chief, Little Rock, and over a hundred of their warriors. Many women and children also were killed in this attack. The result was one which sank deep into the Indian mind. They began to respect the men who could outmarch them and outlive them on the range. Surely, they thought, these were not the same men who had abandoned Forts Phil Kearney, C. F. Smith, and Reno. There had been some mistake about this matter. The Indians began to think it over. The result was a pacifying of all the country south of the Platte. The lower Indians began to come in and give themselves up to the reservation life. One of the hardest of pitched battles ever fought with an Indian tribe occurred in September, 1868, on the Arickaree or South Fork of the Republican River, where General ‘Sandy’ Forsyth, and his scouts, for nine days fought over six hundred Cheyennes and Arapahoes. These savages had been committing atrocities upon the settlers of the Saline, the Solomon, and the Republican valleys, and were known to have killed some sixty-four men and women at the time General Sheridan resolved to punish them. Forsyth had no chance to get a command of troops, but he was allowed to enlist fifty scouts, all ‘first-class, hardened frontiersmen,’ and with this body of fighting men he carried out the most dramatic battle perhaps ever waged

on the Plains. Forsyth ran into the trail of two or three large Indian villages, but none the less he followed on until he came to the valley of the South Fork. Here the Cheyennes, under the redoubtable Roman Nose surrounded him on the 17th of September. The small band of scouts took refuge on a brushy island some sixty yards from shore, and hastily dug themselves in under fire. They stood at bay outnumbered ten to one, with small prospect of escape, for the little island offered no protection of itself, and was in point-blank range from the banks of the river. All their horses soon were shot down, and the men lay in the rifle pits with no hope of escape. Roman Nose, enraged at the resistance put up by Forsyth's men, led a band of some four hundred of his warriors in the most desperate charge that has been recorded in all our Indian fighting annals. It was rarely that the Indian would charge at all; but these tribesmen . . . charged in full view not only once but three times in one day, and got within a hundred feet of the foot of the island where the scouts were lying. . . . But they never reached them and finally the Indians retired chanting dirges for their many dead. Seven of the scouts were killed and seventeen wounded, including Forsyth himself.]

What is known as the Baker Massacre was the turning-point in the half-century of warfare with the Blackfeet. . . . On January 22, 1870, Major E. M. Baker, led by half-breeds, . . . surprised the Piegiens in their winter camp on the Marias River, just below the border. He, like Custer, attacked at dawn, opening the encounter with a general fire into the tepees. He killed a hundred and seventy-three of the Piegiens, including very many women and children, as was unhappily the case so often in their surprise attacks. It was deplorable warfare. But it ended the resistance of the savage Blackfeet. They have been disposed for peace from that day to this. The terrible revenge which the Sioux and Cheyennes took in the battle which annihilated Custer and his men on the Little Big Horn in the summer of 1876; the Homeric running fight made by Chief Joseph of the Nez Percés—a fight which baffled our best generals and their men for a hundred and ten days over more than fourteen hundred miles of wilderness—these are events so well known that it seems needless to do more than to refer to them. The Nez Percés in turn went down forever when Joseph came out and surrendered, saying, 'From where the sun now stands I fight against the white man no more forever.' . . . The Modoc war against the warriors of Captain Jack in 1873 was waged in the lava beds of Oregon, and it had the distinction of being one of the first Indian wars to be well reported in the newspapers. We heard a great deal of the long and trying campaigns waged by the Army in revenge for the murder of General Canby in his council tent. We got small glory out of that war, perhaps, but at last we hanged the ring-leader of the murderers; and the extreme Northwest remained free from that time on.

"Far in the dry Southwest, where home-building man did not as yet essay a general occupation of the soil, the bloody-thirsty Apache long waged a warfare which tried the mettle of our Army as perhaps no other tribes ever have done. The Spaniards had fought these Apaches for nearly three hundred years, and had not beaten them. They offered three hundred dollars each for Apache scalps, and took a certain number of them.

But they left all the remaining braves sworn to an eternal enmity. The Apaches became mountain outlaws, whose blood-mad thirst for revenge never died. No tribe ever fought more bitterly. Hemmed in and surrounded, with no hope of escape, in some instances they perished literally to the last man. General George Crook finished the work of cleaning up the Apache outlaws only by use of the trailers of their own people who sided with the whites for pay. Without the Pima scouts he never could have run down the Apaches as he did. Perhaps these were the hardest of all the Plains Indians to find and to fight. But in 1872 Crook subdued them and concentrated them in reservations in Arizona. Ten years later, under Geronimo, a tribe of the Apaches broke loose and yielded to General Crook only after a prolonged war. Once again they raided New Mexico and Arizona in 1885-6. This was the last raid of Geronimo. He was forced by General Miles to surrender and, together with his chief warriors, was deported to Fort Pickens in Florida. In all these savage pitched battles and bloody skirmishes, the surprises and murderous assaults all over the old range, there were hundreds of settlers killed, hundreds also of our army men, including some splendid officers. In the Custer fight alone, on the little Big Horn, the Army lost Custer himself, thirteen commissioned officers, and two hundred and fifty-six enlisted men killed, with two officers and fifty-one men wounded; a total of three hundred and twenty-three killed, and wounded in one battle. Custer had in his full column about seven hundred men. The number of the Indians has been variously estimated. They had perhaps five thousand men in their villages when they met Custer in this, the most historic and most ghastly battle of the Plain. It would be bootless to revive any of the old discussions regarding Custer and his rash courage. Whether in error or in wisdom, he died, and gallantly."—E. Hough, *Passing of the Frontier* (*Chronicles of America Series*, pp. 26, 123-135).—"Hostilities with a powerful confederation of Sioux or Dakota tribes of Indians, in the northwest, were brought about, in the spring of 1876 by gold discoveries in the Black Hills and the consequent rush of miners into the Indian reservation. To subdue the hostile Indians, three military expeditions were set in motion,—from Fort Fetterman, under General Crook, from Fort Ellis, in Montana, under General Gibbon, and from Bismarck, in Dakota, under General Terry. These were to converge on the upper waters of the Yellowstone, where Sitting Bull, the able chief of the Sioux, had his camp, in the valley of the small stream commonly known as the Little Big Horn. The Sioux warrior used the advantage of his central position like a Napoleon, striking his assailants in turn, as they came near, with far stronger forces than they knew him to possess. Crook was forced back; Gibbon was brought to a halt. Terry came last on the ground. His command included the famous Seventh Cavalry,—the regiment of General Custer. In ignorance of the surprising number of braves which Sitting Bull had collected, Custer was sent to make a detour and attack the Indian camp from the rear. Doing so, on the 25th of June, he rode into a death trap. Five companies of the regiment, with its heroic commander at their head, were surrounded so overwhelmingly that not one man escaped. The remaining seven companies were too far from the others to cooperate in the

attack. They fortified a bluff and held their ground until the 27th, when Terry and Gibbon came to their relief. The Indians retreated toward the mountains. The campaign was soon resumed, and prosecuted through the fall and winter, until Sitting Bull and some of his followers fled into British America and the remaining hostiles surrendered."—F. Whittaker, *Complete life of General George A. Custer*, bk. 8, ch. 4-5.—See also INDIANS, AMERICAN: 1865-1876; OKLAHOMA: 1866-1879; MONTANA: 1876.

1866-1877.—Granger movement.—Opposition to growing monopolies.—Farmers' Alliance.—Rural life.—Social influence of Granges.—The order, composed of farmers, known as Patrons of Husbandry, or Grangers, was founded in 1866. It grew rapidly during the first decade of its existence, and reported a membership, in November, 1875, of 763,263. After that period the numbers declined. The general aims of the order were set forth in a "Declaration of Purposes," as follows: "We shall endeavor to advance our cause by laboring to accomplishing the following objects: To develop a better and higher manhood and womanhood among ourselves. To enhance the comforts and attractions of our homes, and strengthen our attachments to our pursuits. To foster mutual understanding and co-operation. . . . To discountenance the credit system, the mortgage system, the fashion system, and every other system tending to prodigality and bankruptcy. We propose meeting together, talking together, working together, buying together, selling together, and in general acting together for our mutual protection and advancement, as occasion may require. We shall avoid litigation as much as possible by arbitration in the Grange. . . . We are not enemies to capital, but we oppose the tyranny of monopolies. We long to see the antagonism between labor and capital removed by common consent and by an enlightened statesmanship worthy of the nineteenth century. . . . Last, but not least, we proclaim it among our purposes to inculcate a proper appreciation of the abilities and sphere of woman, as is indicated by admitting her to membership and position in our order."—R. T. Ely, *Labor movement in America*, ch. 3.—See also MINNESOTA: 1868.—"In 1867 O. H. Kelly, once a farmer, but at the time a clerk in the Post Office Department at Washington, with six clerks from other bureaus or departments, formed the National Grange of the Patrons of Husbandry. The object of the Grange was to organize the farmers of the country in their own interests. This organization was to be secret and was to consist of local granges bound together in a national association. After several years of struggle, the order began to grow rapidly, and by 1875 there were over twenty thousand local granges with seven hundred and fifty thousand members. After that it began to decline, and by 1880 its membership is estimated to have been not over one hundred and fifty thousand. It has survived in many states to this day, but its early aggressiveness has never returned. One of the main purposes of the Grange was to combat monopolies and discrimination. Although it disclaimed any political motives, nevertheless, between 1870 and 1875 farmers' legislatures were elected in numerous states. In Iowa, Illinois, Wisconsin, and Minnesota they at once

passed laws to regulate railroads and warehouses—the so-called Granger Laws. The main features of these laws were the fixing of passenger and freight rates, and the prohibition of a large per-mile charge for a short than for a long haul. The rates were established either by the law, or by a commission established by the law. Provision was also made for the fixing of rates of storage in elevators and for preventing discriminations in services rendered by them. [See also RAILROADS: 1870-1876]. Most of the Granger legislation did not last long. Some of the laws were so severe that the railroads insisted they could not operate under them. The people soon became frightened at what they had done owing in large measure to a careful campaign of 'education' paid for by the railroads. By this propaganda people's fears were aroused lest railroad building would cease and the states be ruined. For these reasons most of the rate-fixing laws were repealed. Certain results, however, were accomplished. In the first place, railroad commissions were established in many states that had not had them before, and the example was gradually followed by others. Secondly, the doctrine had been introduced that the railroads were public servants instead of private concerns that could tell the public to mind its own business. Moreover, since the inadequacy of state regulation had been proved, the way was cleared for national control."—L. R. Wells, *Industrial history of the United States*, pp. 414-415.—"On all hands there was a manifest growing uneasiness because of the apparent rise of monopolies and the concentration of capital in the hands of comparatively small groups of men who seemed to be in a position to control at their pleasure the productive industries of the country; because of the power of the railways to determine by discriminating rates what sections of the country, what industries, what sorts of products and of manufactures should be accorded the easiest access to the markets; because of the increase in the cost of the necessary tools of industry and of all manufactured goods through the operation of the tariff,—the inequitable clogs which seemed to many to be put by the law itself upon the free and whole some rivalries of commerce and production. The farmers of the West and South, no less than the workingmen of the industrial East, had begun, close upon the heels of the war, to organize themselves for the protection and advancement of their own special interests, to which the programmes of the political parties paid little heed. Between 1872 and 1875 the local 'granges' of a secret order known as the Patrons of Industry had multiplied in a very significant manner, until their membership rose to quite a million and a half and was spread over the entire Union. It was the purpose of the order to promote by every proper means the interests of the farmers of the country, though it was no part of its plan to agitate questions of politics, put candidates for office into the field at elections or use its gathering power to determine the fate of parties. Politicians, nevertheless, found means to use it,—felt obliged to use it because they feared to let it act for itself. Its discussions turned often on questions of transportation, upon the railways and their power to make or ruin; it was but a short step in such a field from an association for mutual protection and advice to a political party organized for the control of legislation. 'Grangers' were not always to be held off, therefore, by their prudent

leaders from using their numbers and their ready concert of action to further or defeat the ambitions of particular groups of politicians; and even while their granges grew other organizations of farmers came into existence whose aims were frankly and openly political. About the time of Mr. Hayes's accession to the presidency independent associations began to make their appearance in the South and in the West, under the name of the 'Farmers' Alliance,' whose common object it was to oppose monopoly and the power of money in public affairs in the interest of those who had neither the use of capital nor the protection of tariffs. The first 'Alliance' made its appearance in Texas, to prevent the wholesale purchase of the public lands of the State by private individuals. The organization spread into other southern States, and with its extension went also an enlargement of its programme of reform. Almost at the same time a 'National Farmers' Alliance' was established in Illinois which quickly extended its organization into Wisconsin, Minnesota, Iowa, Kansas, and Dakota. [See NATIONAL FARMERS' ALLIANCE.] Many sorts of reform commended themselves to the leaders of the movement, north and south: chief among them, government control of the means of transportation, the entire divorce of the government from the banks, and a paper currency issued directly to the people on the security of their land,—some escape from the power of the money lenders and of the great railways, and a war upon monopolies. These were vague purposes, and the means of reform proposed showed the thinking of crude and ignorant minds; but politicians felt with evident concern that new, it might be uncontrollable, forces had begun to play through the matters which they handled, and that it must presently be harder than ever to calculate the fortunes of parties at the polls. They perceived how difficult and delicate a task it must prove to keep the tacit pledges of the protective system to the manufacturers and give the free capital of the country, the proper support of government and yet satisfy the classes now astray in these new associations of laborers and farmers, whose distress was as real as their programmes of reform were visionary. There was a significance in these new movements which did not lie upon the surface. New questions had become national and were being uncomfortably pressed upon the attention of national party leaders because the attitude of the country towards the national government had been subtly changed by the events of war and reconstruction. The war had not merely roused the spirit of nationality, until then but half-conscious, into vivid life and filled every country-side of the North and West with a new ardor for that government which was greater than the government of States, the government upon which the unity and prestige of the nation itself depended. It had also disclosed the real foundations of the Union; had shown them to be laid, not in the constitution, its mere formal structure, but upon deep beds of conviction and sentiment. It was not a theory of lawyers that had won when the southern Confederacy was crushed, but the passionate beliefs of an efficient majority of the nation, to whom the constitution was but a partial expression of the ideals which underlay their common life."—W. Wilson, *History of the American people*, pp. 10-14.

"It is difficult for the present generation to form any conception of the dreariness and dull-

ness of farm life half a century ago. Especially in the West, where farms were large, opportunities for social intercourse were few, and weeks might pass without the farmer seeing his nearest neighbors. For his wife existence was even more drear. She went to the market town less often than he and the routine of her life on the farm kept her close to the farmhouse and prevented visits even to her neighbors' dwellings. The difficulty of getting domestic servants made the work of the farmer's wife extremely laborious; and at that time there were none of the modern conveniences which lighten work such as power churns, cream separators, and washing-machines. Even more than the husband, the wife was likely to degenerate into a drudge without the hope—and eventually without the desire—of anything better. The church formed, to be sure, a means of social intercourse; but according to prevailing religious notions the churchyard was not the place nor the Sabbath the time for that healthy but unrestrained hilarity which is essential to the well-being of man. Into lives thus circumscribed the Grange came as a liberalizing and uplifting influence. Its admission of women into the order on the same terms as men made it a real community servant and gave both women and a man a new sense of the dignity of woman. More important perhaps than any change in theories concerning womankind, it afforded an opportunity for men and women to work and play together, apparently much to the satisfaction and enjoyment of both sexes. Not only in Grange meetings, which came at least once a month and often more frequently, but also in Grange picnics and festivals the farmers and their wives and children came together for joyous human intercourse. Such frequent meetings were bound to work a change of heart. Much of man's self-respect arises from the esteem of others, and the desire to keep that esteem is certainly a powerful agent in social welfare. It was reported that in many communities the advent of the Grange created a marked improvement in the dress and manners of the members. Crabbed men came out of their shells and grew genial; disheartened women became cheerful; repressed children delighted in the chance to play with other boys and girls of their own age. The ritual of the Grange, inculcating lessons of orderliness, industry, thrift, and temperance, expressed the member's ideals in more dignified and pleasing language than they themselves could have invented. The songs of the Grange gave an opportunity for the exercise of the musical sense of people not too critical of literary quality, when with 'spontaneous trills on every tongue,' as one of the songs has it, the members varied the ritual with music. One of the virtues especially enjoined on Grange members was charity. Ceres, Pomona, and Flora, offices of the Grange to be filled only by women, were made to represent Faith, Hope, and Charity, respectively; and in the ceremony of dedicating the Grange hall these three stood always beside the altar while the chaplain read the thirteenth chapter of First Corinthians. Not only in theory but in practice did the order proclaim its devotion to charitable work. It was not uncommon for members of a local Grange to foregather and harvest the crops for a sick brother or help rebuild a house destroyed by fire or tornado. In times of drought or plague both state and national Granges were generous in donations for the sufferers; in 1874, when the Mississippi River overflowed its

banks in its lower reaches, money and supplies were sent to the farmers of Louisiana and Alabama; again in the same year relief was sent to those Patrons who suffered from the grasshopper plague west of the Mississippi; and in 1876 money was sent to South Carolina to aid sufferers from a prolonged drought in that State. These charitable deeds, endearing giver and receiver to each other, resulted in a better understanding and a greater tolerance between people of different parts of the country. The meeting of the local Granges were forums in which the members trained themselves in public speaking and parliamentary practice. Programs were arranged, sometimes with the help of suggestions from officers of the state Grange; and the discussion of a wide variety of topics, mostly economic and usually concerned especially with the interests of the farmer, could not help being stimulating, even if conclusions were sometimes reached which were at variance with orthodox political economy. The Grange was responsible, too, for a great increase in the number and circulation of agricultural journals. Many of these papers were recognized as official organs of the order and, by publishing news of the Granges and discussing the political and economic phases of the farmers movement, they built up an extensive circulation. Rural postmasters everywhere reported a great increase in their mails after the establishment of a Grange in the vicinity. One said that after the advent of the order there were thirty newspapers taken at his office where previously there had been but one. Papers for which members or local Granges subscribed were read, passed from hand to hand, and thoroughly discussed. This is good evidence that farmers were forming the habit of reading. All the Granger laws might have been repealed; all the schemes for coöperation might have come to naught; all the moral and religious teachings of the Grange might have been left to the church; but if the Granger movement had created nothing else than this desire to read, it would have been worth while. For after the farmer began to read, he was no longer like deadwood, floating in the backwaters of the current; he became more like a propelled vessel in midstream—sometimes, to be sure, driven into turbulent waters, sometimes tossed about by conflicting currents, but at least making progress.”—S. J. Buck, *Agrarian Crusade* (*Chronicles of America Series*, v. 45, pp. 72-76).

1867 (January).—Negro suffrage in the District of Columbia.—As early as Jan. 18, 1866, the House of Representatives passed a bill extending the suffrage in the District of Columbia, by striking out the word "white" from all laws and parts of laws prescribing the qualification of electors for any office in the District, and declaring that no person should be disqualified from voting at any election in the District on account of color. As it was known that the president would veto the bill if sent to him, the Senate held it until

the next session. In December, 1866, it was called up in that body by Senator Sumner, and after considerable debate was passed, December 13. On January 7 following it was returned by the president with his veto, but was passed over the veto by the Senate (29 to 10) the same day, and by the House (113 to 38) the day following, thus becoming a law.—Based on W. H. Barnes, *History of the 39th Congress*, ch. 4, 21.

1867 (March).—Military Reconstruction Acts of Congress.—“The first concern of the radicals was to abolish the governments Johnson had set up in the Southern states, and to substitute others which conformed to the radical theory. Stevens had ever advocated such a course and introduced a bill to that effect in the first session of the existing congress. Moderate views, however, had prevailed and his bill was not pressed. He now, January 3, 1867, called it up, and spite of the

CHARLES SUMNER

opposition of the liberals, it was referred to the joint committee on reconstruction, which reported it a month later with some modifications. It abolished existing southern governments and created military rule in the South to continue during the pleasure of congress. The house passed it, but the senate moderates opposed it so strongly that compromise was necessary. The bill as it passed the house provided the military governors be appointed by the general of the army—General Grant. The moderate senators did not like to ignore the president's constitutional power as commander-in-chief, they thought he ought to appoint the military governors, and they wished the bill to specify the time at which the scheme should cease to operate. They had their way, and the measure in its final form passed both houses, was vetoed by Johnson, and passed over his veto, March 2, 1867. Sumner, always the champion of negro suffrage, desired that the bill specify that the state constitutions to be adopted under the proposed scheme should enfranchise the freedmen, and his demand was granted. The act of March 2 was the first of three which together em-

bodied the congressional plan of reconstruction. Its chief features were: 1. The South was to be divided into five military districts as follows: (a) Virginia, (b) the Carolinas, (c) Georgia, Florida, and Alabama, (d) Mississippi and Louisiana, and (e) Texas and Arkansas. Tennessee was not in this arrangement, for in 1866 it accepted the fourteenth amendment and was recognized as in full fellowship. Over each military district there was to be a military governor appointed by the president with the consent of the senate. 3. This governor must preserve order in his district, and he might continue local civil officers there or supplant them by military tribunals as he saw fit. 4. A constitutional convention should be called in each state, the delegates being chosen by all citizens, regardless of race or color, except those disfranchised for rebellion or for felony at common law. 5. When the revised constitution, which must accept the franchise provided in this act, was approved by those who voted for the members of the convention and was accepted by congress, and when the legislature under it had adopted the fourteenth amendment and the said amendment had become a part of the federal constitution, such a state should be readmitted into the union and military government should cease. The day after this act was passed congress adjourned. Its last care was to call an extra session of the succeeding congress, the fortieth, to meet on March 4. It had taken the situation into its own hands so effectually that even this function was taken from the president. The new congress was more opposed to Johnson than its predecessor, and carried on the task of reconstruction with eagerness. The act of March 2 merely enacted a plan; a new law, that of March 23, provided machinery for putting the plan into effect. It provided for a registration of voters and for holding elections of delegates to the conventions. It also provided that a constitution to be accepted must have the approval of a majority of the registered voters. This was done to meet an objection of the other side that the proposed proceedings in the South would be only minority legislation. Johnson vetoed this act and congress overrode the veto."—J. S. Bassett, *Short history of the United States*, pp. 609-610.

1867-1868.—Reconstruction Acts in operation.—Conventions.—Third Reconstruction Act.—Johnson's opposition to reconstruction ceased when the acts were passed over his veto. "He considered it his duty to enforce the law and appointed five military governors provided for, all generals of prominence; and they ordered registrations of voters and called for elections as the laws directed. The radicals thought their work well done, but the Southerners, with the aid of Stanbery, the attorney-general, found a weak point in it. The law allowed all to register who did not voluntarily serve the confederacy. Did the registration officers have authority to determine that an applicant had fought voluntarily or involuntarily? The question was referred to Washington, and Stanbery decided that the officers had no discretion and must register all who offered. Under this interpretation of the law the Southerners would register in large numbers and probably defeat the objects of congressional reconstruction. The radicals were alarmed. Sec-

retary of War Stanton, their chief reliance in the cabinet, was in entire opposition to the president, and wrote a new law which congress passed over Johnson's veto July 19, 1867. It was the third reconstruction act of the radicals. It gave the registration officials the specific authority Stanbery had not found in the first acts, and in other ways made it impossible to evade the will of the congressional majority. In these three laws congressional reconstruction received its legal basis and became inevitable."—J. S. Bassett, *Short history of the United States*, p. 610.—"Despite his dissent from the provisions [of the Reconstruction Acts] the president at once set military reconstruction in operation. When he mitigated its harshness, however, where latitude was allowed him, Congress passed additional acts, over the veto, of course, extending and defining the powers of the commanding generals. Armed with complete authority, the generals proceeded to remove many of the ordinary civil officers and to replace them with their own appointees, to compel order by means of the soldiery, to set aside court decrees and even to close the courts and to enact legislation. In the meanwhile a total of 703,000 black and 627,000 white voters were registered, delegates to constitutional conventions were elected, constitutions were drawn up and adopted which permitted negro suffrage, and state officers and legislators elected. In conformity with the provisions of the act, the newly chosen legislatures ratified the Fourteenth Amendment to the Constitution, sent representatives and senators to Washington, where they were admitted to Congress."—C. R. Lingley, *Since the Civil War*, pp. 14-15.—"In the early winter of 1867 elections were held in all the military districts, and by February, 1868, constitutional conventions were in sessions in all the States affected by the act. The work of framing and ratifying the constitutions was pushed forward with vigor all over the South, and by the end of June, 1868, seven States, Arkansas, North Carolina, South Carolina, Florida, Georgia, Alabama, and Louisiana, had done the things required by the act and had been restored to the Union. Virginia, Mississippi, and Texas failed to secure the proper ratification of their respective constitutions and were therefore compelled to remain outside the Union under the rule of their military governors."—S. 1868 (March-May).—Impeachment and trial of President Johnson.—"Until the spring of 1866, a year after Mr. Johnson became President, there was entire harmony between him and his Cabinet. . . . No objection was raised even to that part of the President's first message which treated of the suffrage question, by any member of the Cabinet. It was in fact, approved by all, and by none more heartily than by Mr. Stanton. A change took place soon after the Civil Rights bill became a law over the President's veto, and bitter

controversy arose between the President and Congress. In this controversy and at its commencement, Mr. Dennison [postmaster-general] and Mr. Harlan [secretary of the interior] sided with Congress and tendered their resignations, which were very reluctantly accepted. They resigned because they could not heartily sustain the President, but there was no breach of the social relations which had existed between them. Mr. Speed [attorney-general] soon after followed the example of Dennison and Harlan. Mr. Stanton [secretary of war] also sided with Congress, but he did not resign. He was advised by prominent political and personal friends to 'stick,' and he did so, contrary to all precedent and in opposition to the judgment of conservative men of his party. . . . He attended the Cabinet meetings, not as an adviser of the President, but as an opponent of the policy to which he had himself been committed, and the President lacked the nerve to dismiss him. . . . In this crisis of his political life, Mr. Johnson exhibited a want of spirit and decision which astonished those who were familiar with his antecedents. He knew when the Tenure-of-Office Bill was before Congress that the object of its leading supporters was to tie his hands, and yet he refrained from using them when they were free."—H. McCulloch, *Men and measures of half a century*, ch. 26.—"Although Johnson kept within the letter of the law and obeyed it when it was clear, he was not trusted and was much disliked. Congress expressed its feeling by fixing the times of its own reassembling, and in allowing many contemptuous utterances on the floors of the two houses. He gave great offense in the summer of 1866 in several speeches in what was known as his 'swinging-around-the-circle' tour in the West. He was said to have been intoxicated when he spoke at Cleveland, where the jibes from the crowd irritated him until he broke into a series of angry and rude retorts. It was probably the most undignified exhibition a president of the United States ever made of himself. It gave an argument to his enemies, who redoubled their abuse and aroused such contempt for him in the country that they felt able to treat him in the most disdainful manner without fear of popular reproof. They pronounced him a traitor, and talked openly of impeaching him. They desired to take out of his hands the execution of their program. They had wished to take from him the appointment of the military governors, but the moderates in the senate blocked them in that. Then they passed over his veto the tenure-of-office act, March 2, 1867 [see above: 1865 (December-March)]. Secretary Stanton, they thought, was necessary to their plans. He was bold, resourceful, and defiant of Johnson. If he should be dismissed from the war department, where he had a wide supervision over the new military districts, and a man of Johnson's way of thinking should take his place, much might be lost in the execution of the reconstruction laws. . . . [The Tenure-of-Office Act] directed that if the president removed a cabinet officer during the recess of congress, he should report the case to the senate within twenty days after it convened, and the senate might order the reinstatement of the officer in question. Such a removal could, therefore, only be a suspension. The constitution is not specific on this point, but in 1867 it had been held for a long time that it gave the president the power to dismiss a cabinet officer, and Jackson and others had exercised the right. Johnson and his advisers, therefore, disputed the con-

stitutionality of the tenure-of-office act and were prepared to test it in the courts when the opportunity came. Not only Johnson but many others opposed to the plans of the radicals turned their eyes to the supreme court, finding in it the last hope of checking the course of the innovators. They saw in all that was done an exaltation of military authority and a dangerous menace to liberty. If the court did not save them, they thought, who would?"—J. S. Bassett, *Short history of the United States*, pp. 611-612.—The president suspended Stanton on August 12, 1867, "after the Tenure-of-Office Bill had become a law, and in accordance with its provisions, [directing General Grant to act as secretary of war ad interim]; and when the Senate refused to approve of the suspension [Jan. 13, 1868], he issued orders for his removal and the appointment of Lorenzo Thomas to be Secretary of War ad interim. If he had tried to give his enemies an advantage over him, to furnish them with weapons for his own discomfiture, he could not have done it more effectually. . . . If he had removed Mr. Stanton instead of suspending him, and justified his action on the ground that his control of the members of his Cabinet was a constitutional right of which he could not be deprived by Congress, he probably would not have been impeached. The gist of the charges against him was that he had violated a law of Congress in removing Mr. Stanton, or issuing an order for his removal, after the Senate had refused to sanction his suspension. In the articles of impeachment there were other charges against the President, the most serious of which were that he had delivered intemperate, inflammatory speeches, which were intended to bring into contempt the Congress of the United States and duly enacted laws. The speeches made by the President in Cleveland, St. Louis, and other places in August and September, 1866—in fact, all his public addresses during his contest with Congress—were in the worst possible taste, derogatory to himself and to his high position; but they . . . did not constitute good ground for his impeachment; and this was the opinion of the House, which in January, 1867, after they were made, refused to impeach him by the decisive vote of 108 to 57. Other causes for his impeachment were subsequently sought for. His bank account was examined. His private conduct in Washington was carefully scrutinized. Men were employed to investigate his public and private character in Tennessee, but nothing was found to his discredit. . . . Nothing was found to justify his impeachment, but the order which he issued for the removal of Mr. Stanton and his appointment of General Thomas to be Secretary of the War Department ad interim after the Senate had refused to sanction Mr. Stanton's suspension." The formal presentment by the House of Representatives of its impeachment against the president, at the bar of the Senate, sitting as a court of impeachment, was made on March, 5, 1868. The answer of the president was presented on the 23rd; the trial opened on Monday, March 30, and closed on May 26 following. "The trial was a very interesting one, not only to the people of the United States, but to the people of other countries. . . . It was the first instance in the history of nations of the trial of the head of a government before one of the branches of the law-making power, sitting as a judicial tribunal, on charges presented by another. The presiding officer was the Chief Justice of the Supreme Court—the senators of the respective States were the jury—the

House of Representatives the prosecutor. The managers to conduct the impeachment for the House were John A. Bingham, George S. Boutwell, James F. Wilson, Benjamin F. Butler, Thomas Williams, Thaddeus Stevens and John A. Logan, all members of the House, all lawyers, and some of them distinguished in the profession. The President entered his appearance by Henry Stanbery, Benjamin K. Curtis, Jeremiah S. Black, William M. Evarts, and Thomas A. K. Nelson. William S. Groesbeck, in the course of the trial, appeared and took part as counsel for the President in place of Mr. Black. [The result of the trial was a failure of the impeachment. The senators who voted "guilty" were thirty-five in number—being less than two-thirds of the whole—against 19. Of those who voted in the negative seven were Republicans who had steadily opposed

quishment of the War Department. . . . The Senate now confirmed the nomination of General Schofield to be Secretary of War. The General at once accepted the appointment and entered upon the duties of his office, and administered these duties to the end of his term, according to his own testimony, in perfect harmony with the President. . . . What we have as certain facts are that the judgment was an acquittal, that it was rendered in accordance with law and evidence, and that it preserved the constitutional balance between the executive and the legislature in the governmental system of the country; and that for this the judgment of history coincides with the judgment of the court."—J. W. Burgess, *Reconstruction and the constitution*, pp. 191-192, 194.

the president's policy; four were Republicans who had adhered to him throughout; eight were Democrats.]—H. McCulloch, *Men and measures of half a century*, ch. 26.—“The truth of the whole matter is that, while Mr. Johnson was an unfit person to be President of the United States . . . he was utterly and entirely guiltless of the commission of any crime or misdemeanor. . . . He was not behind any of his accusers in patriotism and loyalty to the country, and in his willingness to sacrifice every personal advantage for the maintenance of the Union and the preservation of the Government. In fact, most of them were pygmies in these qualities beside him. It is true that he differed with them somewhat in his conception of what measures were for the welfare of the country and what not, but the sequel has shown that he was nearer right than they in this respect. So soon as the Court of Impeachment pronounced its acquittal of the President, Mr. Stanton addressed to the President a letter announcing his relin-

Supplement, 40th Congress, 2nd session.—G. C. Gorham, *Edwin M. Stanton*, v. 2, pp. 393-445.

1868 (November).—Twenty-first presidential election.—General Ulysses S. Grant, nominated by the Republican party, was elected president in November 1868, by 3,012,833 votes of the people against 2,703,249 votes cast for Horatio Seymour, ex-governor of New York, the candidate of the Democratic party. The electoral vote returned and counted was 214 for Grant and 80 for Seymour, who carried the states of New York, New Jersey, Delaware, Maryland, Georgia, Louisiana, Kentucky and Oregon. Schuyler Colfax, of Indiana, was elected vice president, over General Frank P. Blair.—Based on E. Stanwood, *History of presidential elections*, ch. 22.

1868-1870.—Errors of Congress.—Process of reconstruction.—Coercion of states.—Outcome of Fifteenth Amendment.—“The method of recon-

struction resorted to by Congress occasioned dreadful evils. It ignored the natural prejudices of the whites, many of whom were as loyal as any citizens in the land. . . . [In a letter dated 1873] Salmon P. Chase said: 'Congress was wrong in the exclusion from suffrage of certain classes of citizens, and of all unable to take a prescribed retrospective oath, and wrong also in the establishment of arbitrary military governments for the States, and in authorizing military commissions for the trial of civilians in times of peace. There should have been as little military government as possible; no military commissions, no classes excluded from suffrage, and no oath except one of faithful obedience and support to the Constitution and laws, and sincere attachment to the Constitutional Government of the United States.' . . . [John Sherman said:] 'It is a question of grave doubt whether the Fifteenth Amendment, though right in principle, was wise or expedient. The declared object was to secure impartial suffrage to the negro race. The practical result has been that the wise provisions of the Fourteenth Amendment have been modified by the Fifteenth Amendment. The latter amendment has been practically nullified by the action of most of the States where the great body of this race live and will probably always remain. This is done not by an express denial to them of the right of suffrage, but by ingenious provisions, which exclude them on the alleged ground of ignorance, while permitting all of the white race, however ignorant, to vote at all elections. No way is pointed out by which Congress can enforce this amendment. If the principle of the Fourteenth Amendment had remained in full force, Congress could have reduced the representation of any State, in the proportion which the number of the male inhabitants of such State, denied the right of suffrage, might bear to the whole number of male citizens twenty-one years of age, in such State. This simple remedy, easily enforced by Congress, would have secured the right of all persons, without distinction of race or color, to vote at all elections. The reduction of the representation would have deterred every State from excluding the vote of any portion of the male population above twenty-one years of age. As the result of the Fifteenth Amendment [see below: 1869-1870] the political power of the States lately in rebellion has been increased, while the population conferring this increase is practically denied all political power. I see no remedy for this wrong except the growing intelligence of the negro race.' If the South was to become again genuine part and parcel of this Union, it would not, nor would the North consent that it should, remain permanently under military government. Black legislatures abused their power, becoming instruments of carpet-bag leaders and rings in robbing white property-holders. Only doctrinaires or the stupid could have expected that the whites would long submit. So soon as federal bayonets were gone, fair means or foul were certain to remove the sceptre from colored hands."—E. B. Andrews, *United States in our own time*, pp. 36-38.

1868-1870.—Reconstruction complete.—Restoration of all the Southern states to representation in Congress.—"On the 22d of June, 1868, an act was passed, with the following preamble and resolution, for the admission of Arkansas:—'Whereas the people of Arkansas, in pursuance of an act entitled, An act for the more efficient government of the Rebel States, passed March 2, 1867, and the acts supplementary thereto, have framed

and adopted a constitution of State government, which is republican, and the legislature of said State has duly ratified the amendment of the Constitution of the United States proposed by the XXXIXth Congress, and known as Article XIV.; Therefore, Be it enacted, etc., that the State of Arkansas is entitled and admitted to representation in Congress, as one of the States of the Union, upon the following fundamental condition.' The 'fundamental condition,' as finally agreed upon, was, 'That there shall never be in said State any denial or abridgment of the elective franchise, or of any other right, to any person by reason or on account of race or color, except Indians not taxed.' The bill was vetoed by the President on the 20th but passed over the veto on the 22nd in the House by the vote of 111 to 31, and in the Senate by a vote of 30 to 7. On the 25th of June a similar act was passed admitting the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, in pursuance of a similar preamble, with the conditions that they should ratify the Fourteenth Amendment, that they should not deprive 'any citizen, or class of citizens of the State of the right to vote by the constitution thereof'; and that no person prohibited from holding office by said Amendment should be 'deemed eligible to any office in either of said States unless relieved from disability as provided in said amendment'; the State of Georgia being also required to declare 'null and void' certain provisions of its constitution, and 'in addition give the assent of said State to the fundamental condition hereinbefore imposed on the same.' The bill passed the House, May 14,—yeas 110, nays 35; in the Senate, June 9,—yeas 31, nays 5. It was vetoed by the President on the 25th, and passed the same day, by both houses, over the Presidential veto. On the 27th of January, 1870, Virginia was admitted into the Union by a vote, in the House, of 136 to 58; and in the Senate by a vote of 47 to 10. The following were the preamble, oaths, and conditions precedent: 'Whereas the people of Virginia have framed and adopted a constitution of State government which is republican; and whereas the legislature of Virginia, elected under said constitution, has ratified the Fourteenth and Fifteenth Amendments of the Constitution of the United States; and whereas the performance of these several acts in good faith is a condition precedent to a representation of the State in Congress,' said State should be admitted to a representation in Congress; with the additional conditions precedent, however, that the constitution should never be so amended as to deprive any class of citizens of the right 'to vote,' 'to hold office,' on account of race, color or previous condition of servitude; neither should there be 'other qualifications' required for such reason; nor should any be deprived of 'school rights or privileges' on such account. On the 3d of February Mississippi was admitted by a bill resembling the former in every particular, by substantially the same vote. On the 30th of March Texas was readmitted to the Union on a bill very similar, though not identical with the above. . . . By this act of Congress the last of the 'wayward sisters' was brought back and restored to the family of States, and the fractured Union was, outwardly at least, repaired. It was ten years, eight months, and twenty days after South Carolina raised the banner of revolt and led off in 'the dance of death.'"—H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 44.—See also ARKANSAS: 1863; FLORIDA: 1865-1868; GEORGIA: 1865-

1868-1876.—Reconstruction governments.—“Carpet-baggers.”—Legislatures.—Frauds.—Indebtedness of states.—Amnesty Act.—Enforcement Acts in the courts.—Breakdown of “Reconstruction.”—“The conduct of the men who appeared upon the scenes as the creators of the new South was so tyrannic, corrupt, mean and vulgar as to repel the historian. . . . Virginia, Texas and Georgia had been in no great hurry . . . to exchange military government exercised by the white officers of the United States army for ‘State’ government under the electorate proposed in the Reconstruction Acts. In this they were wise. The army officers did not, as a rule, sympathize with the radical movements of the Republicans in Congress, and . . . their rule, though exercised under a repellent title, was in fact far milder than, and far preferable to, the civil government of the adventurer and the negro. . . . The common soldiers from the Northern ‘States’ also fraternized with their race relatives in the South. . . . It is even said . . . that many of them doffed their uniforms on election day, went to the polls, and voted the Democratic ticket. In spite of the threats of Congress, and the ever-increasing conditions imposed by that body upon the permission to resume the ‘State’ status, these three communities held out under military rule until so many of their leading citizens had been amnestied by Congress and made again eligible to office and mandate, and until so much better provisions concerning the enfranchisement of the ex-Confederates had been secured, as to put them in a far better position to resume ‘State’ government than was the case two years before. Moreover, these communities had larger white than black populations. After their full restoration, consequently, Virginia and Georgia escaped largely the suffering experienced by most of the others, and Texas also managed to pull through the years from 1870 to 1874 with only about a four-fold increase of taxation, and the creation of a debt of only about 5,000,000 of dollars, when she reached the period of union of almost all her best citizens in the Democratic party. . . . Mississippi also had held back in 1868 and 1869 . . . in order to secure better terms for the ex-Confederates in the enfranchising and disfranchising provisions of the ‘State’ constitution, and by doing so had accomplished this result. [See also MISSISSIPPI: 1866; 1868-1870.] But Mississippi was one of the three Southern communities in which the negro population far outnumbered the white. Mississippi was not, for this reason chiefly, so fortunate as Virginia, Texas and Georgia. She was obliged, with South Carolina and Louisiana, to pass through the fiery furnace. . . . Of all the ‘States’ included in the Congressional Act of June 25, 1868, only North Carolina had been fortunate enough to rid herself, before 1872, of the rule of the adventurers and their ignorant negro support. This happened because . . . the legislature of 1868 had proceeded promptly to authorize the issue of \$25,000,000 of bonds, when the whole taxable property of the ‘State’ was not over \$125,000,000. From the first moment the people were threatened

with confiscation, and when to this was added the legislative act, known as the Schaffner law . . . the whites came together in the election of 1870, [and] captured the legislature.”—J. W. BURGESS, *Reconstruction and the constitution*, pp. 246-250.—See also NORTH CAROLINA: 1868-1876.—“By 1871 the last Confederate state was reconstructed. . . . Not all the activities of the legislatures were bad. Provisions were made for education, for example, that were in line with the needs of the States. Nevertheless, their conduct in the main was such as to drive the South almost into revolt. In the South Carolina legislature only twenty-two members out of 155 could read and write. The negroes were in the majority and although they paid only \$143 in taxes altogether, they helped add \$20,000,000 to the State debt in four years. In Arkansas the running expenses of the State increased 1500 per cent.; in Louisiana the public debt mounted from \$14,000,000 to \$48,000,000 between 1868 and 1871. Only ignorance and dishonesty could explain such extravagance and waste. Submission, however, was not merely advisable; it presented the only prospect of peace. Open resentment was largely suppressed, but it was inevitable that the whites should become hostile to the blacks, and that they should dislike the Republican party for its ruthless imposition of a system which governed them without their consent and which placed them at the mercy of the incompetent and unscrupulous. A system which made a negro the successor of Jefferson Davis in the United States Senate could scarcely fail to throw the majority of southern whites into the ranks of the enemies of the Republican organization.”—C. R. LINGLEY, *Since the Civil War*, pp. 16-17.—“Reconstruction brought into office a type of man hitherto unknown to the politics of the South. Those who had been organizing the Republican party there, and had established themselves and their friends in the convention were now ready to seize the governorships, the judgeships and the seats in the Senate and House of Representatives at Washington. They would procure themselves places in the legislatures, use the taxing power, lend the public credit and expend the public funds. Counties, cities, all jurisdictions from the greatest to the least fell into the hands of the elements which enjoyed the favor and support of the Radical leaders in Congress, and these were the carpet-baggers, the scalawags and their dupes and tools, the enfranchised ex-slaves. . . . Some of the members of the legislatures never had seen the districts which they had been elected to represent. A number of those who may have visited their constituencies during the campaign to ask for the votes of the people did not return. . . . All the legislatures contained considerable bodies of the negroes. [See also BLACK AND TAN CONVENTIONS.] The debates were more ignorant as to matter and more disgraceful as to form than any ever heard in parliamentary bodies in our Anglo-Saxon world . . . and personal encounters, both inside and outside the meeting halls, were of frequent occurrence. The legislature of Louisiana was ‘a shameful and disgraceful burlesque upon Republican institutions,’ said General Rousseau. . . . Judges, sheriffs, assessors, treasurers, clerks, supervisors, commissioners and other officials in counties and towns, whether white or black, were ignorant and incompetent. School officers were so illiterate that to keep their records in order Democrats must be employed to act as clerks. In many cases not one member

of a board of supervisors, charged with the most important duties could perform the smallest operation in arithmetic. Many justices of the peace could not make out a warrant for an arrest. . . . Negro, carpetbagger or scalawag sheriffs often received \$15,000 or \$20,000 a year in fees. When they were incapable of performing their duties they 'farmed out' their offices. . . . Six states were reorganized in time to seat senators and representatives in the 40th Congress in 1868 and 1869. Ten of the twelve senators were carpetbaggers. Three were natives of New York; the others came from New Jersey, Ohio, Pennsylvania, Connecticut, Massachusetts, New Hampshire and Vermont. One-half of the thirty-two members returned to the House of Representatives were carpetbaggers. The rest were in large part scalawags. . . . No negro was seated [in Congress] until Mississippi was reconstructed, when that State sent to the United States Senate a colored preacher, named Revels, and its late military governor, General Adelbert Ames of Maine. . . . What was begun in the conventions was continued in the legislatures. Bills appeared to make blacks and whites 'equal.' . . . New offices of various kinds were created that there might be the largest possible number of salaried posts. . . . State constabulary systems were established ostensibly to preserve the peace, really to make more jobs. 'Financial agents' were appointed to negotiate loans for which service they were paid large bonuses and commissions. Old public institutions were ruined, new ones which served no purpose were created. The common schools which were organized, often to be directed by negroes, were not adapted to the needs of the people. Superintendents and teachers frequently were 'without respectable antecedents and of a low character.' . . . Beginning with small speculation corruption soon assumed gross forms. Local and State treasuries were pillaged in a thousand ways. Subsidies, exemptions, grants and endorsements of different kinds to the advantage of railroads, canals, levees and other private enterprises, robbery here and fraud there, often forwarded by bribery, filled the air in every Southern State. . . . The public printing cost Louisiana about \$1,500,000 in three years and of this sum a newspaper in New Orleans, controlled by Governor Warmoth, received about \$700,000 in two years. The expense to the State on this account in previous years had been only \$37,000 per annum. [See also LOUISIANA: 1865-1867; 1874-1877.] In one year in South Carolina the amount appropriated on account of printing was \$450,000. . . . 'Hell Hole Swamp,' a tract of land near Charleston, was purchased by a group of men for . . . \$26,100, to be sold in a little while to the State for \$120,000. Six thousand acres of land in North Carolina which the owner was about to give to the negroes to escape . . . taxes were bought . . . [for \$3,600; two thousand acres, at a low price, were added] and the tract was transferred to the State as a penitentiary site for \$100,000. [See also SOUTH CAROLINA: 1865-1872.] . . . The bonds of 37 railroads in Georgia were endorsed for a total sum of \$30,000,000, 32 of them at one time during a single session of the legislature. . . . All but one soon went into the hands of receivers. A man named Littlefield from Maine, a native scalawag named Swepson and a few others induced the legislature of North Carolina to authorize the issue of bonds of a face value of \$25,000,000 on the faith of the State for the construction of a system of railways. They never

put down a mile of iron in the commonwealth. Moving from North Carolina to Florida they gained control of three railroads in that state, free of all old encumbrances, for about \$2,000 a mile. . . . In 1869 the members of the legislature of Louisiana voted themselves \$250,000, and in 1870, \$500,000. The session of 1871 cost the state nearly a million dollars, an average of \$113.50 a day for each member of the body. . . . The corruption in Louisiana was 'utterly astounding.' . . . Lotteries and other evil contrivances received the endorsement of the state. The greatest of these, the so-called Louisiana Lottery, was given a charter for 25 years which enabled it to extend its baneful influence into a period otherwise cleared of the moral wreckage of this unfortunate age. . . . The riot of wrong continued until nothing remained for the corrupt to exploit or for the thief to steal. The states were without credit in the money markets of the world. Loans falling due were converted into new ones on extravagant terms; interest was paid by new bond issues. More than one commonwealth was brought to the verge of bankruptcy. Public securities were for sale for a song and schemes of repudiation were freely discussed. [See also LOUISIANA: 1874-1877.] The indebtedness of South Carolina in less than three years had been increased from \$5,500,000 to \$18,500,000. . . . In Georgia in 1870 Bullock and his 'plundering dynasty' had increased the public debt more than \$20,000,000 and the governor had approved bills which would raise the total to \$30,000,000. . . . In 1872 bonds, scrip and other obligations issued by the state and the counties and towns of Alabama had reached a total sum of more than \$52,000,000. In Arkansas the state debt in a short time was increased four or five fold; many counties were bankrupt. In Florida where the debt in 1866 was about \$600,000 it had been increased in January, 1872, to more than \$5,000,000. The debt of Louisiana as a result of the activities of two legislatures was multiplied by five. In 1872 it was \$48,000,000; if parish and municipal debts were added the total became \$76,000,000. . . . Against the policies which were productive of continued bitter feeling between the sections there was a growing revulsion of sentiment. It had been revealed in the discussions called out by the bills relating to the reconstruction of Mississippi, Virginia, Texas and Georgia. A time had come, enlightened Republican leaders believed, for dealing, if not magnanimously, at least justly with the South. The movement gained special force in Missouri. . . . [where] a constitutional convention which had met . . . in 1865 had prescribed such tests for voters and office-holders that a considerable part of the citizens of the state were barred from participating in the elections. . . . and every political campaign was 'little less than a civil war in itself.' [See MISSOURI: 1865-1874.] . . . By the provisions of the Fourteenth Amendment the disability to hold office in the case of men who had violated their oaths to engage in rebellion against the United States could be removed by a two-thirds vote of each house of Congress. This amendment made President Johnson's amnesty proclamation inoperative except in the remission of penalties. Congress now took complete control of the work of deciding when 'rebels' should be restored to the right of holding office. In the Fortieth Congress, 1,431 persons were amnestied; in the Forty-first Congress, ending March 4, 1871, 3,185. The echoes of the struggle in Missouri were heard over the whole

nation. The need of some action to satisfy the rising opinion on the subject was reflected in Congress and Grant in his message in December, 1871, recommended the passage of a bill granting general amnesty to all but some of the 'great criminals' of the war. A measure of this kind was presented at once and would have been enacted promptly by the necessary two-thirds vote if Sumner had not interposed in behalf of a supplemental civil rights bill for which he had been diligently laboring for the last three sessions. . . . It would guarantee to negroes equal rights in railway stations and trains, and on steamboats. . . . Another general amnesty bill which had passed the house was taken from the calendar and reached consideration in the Senate on May 8 to have Sumner's civil rights bill attached to it, as in the case of the measure which had been defeated in February. It, therefore, likewise failed. Another House bill . . . on May 21 . . . rid of this encumbrance, was passed by a vote of 28 to 2. . . . Political disabilities were now removed from all participants in the rebellion, except senators and representatives of the Thirty-sixth and Thirty-seventh Congresses which covered the period of the secession of the Southern states, cabinet officers of the United States, officers of the judiciary, of the army and navy, and in the diplomatic service of the United States, who had violated their oaths and allied themselves with the Confederacy. From 150,000, to 160,000, so it was supposed, had been excluded from office; now the number who were denied political rights were reduced to '500, or possibly 600.'—E. P. Oberholtzer, *History of the United States since the Civil War*, v. 2, pp. 319-334, 268-272.—"Before the end of 1871 the United States courts in Mississippi, North Carolina, and South Carolina were busily occupied with trials under the enforcement acts. All of the accused were indicted for 'conspiracy,' and the subsequent trials were fought out mainly on conspiracy charges. These spectacular preliminary testings of the legal workability of the force acts became known as 'the Kuklux trials.' . . . Experience soon showed at least three fatal defects in successfully disposing of cases after the indictment stage. The real trouble began in the courts. In the first place, it was difficult to prove 'conspiracy' and 'intent' to deny rights under the constitution. . . . Furthermore, the law could not keep the juries black. . . . White judges were inclined toward leniency in judging the white man prosecuted under the force acts on the testimony of black men. Race prejudice thus checked the rigid application of the law. About 20 per cent of the cases tried resulted in conviction. Fully 70 per cent were dismissed, quashed or nolle prossed. In the second place, there were not enough Federal courts to do the business. . . . Grand juries and marshals, in fact, indicted and arrested ten times as many offenders as the courts could try. . . . In the third place, the enforcement policy broke down because the Supreme Court of the United States . . . deprived the enforcement legislation of much strength when it rendered its decisions in the cases of *United States v. Reese* and *United States v. Cruikshank*, both in 1876. 'The Fifteenth Amendment to the Constitution does not confer the right of suffrage,' the court concluded in the first case. 'The power of Congress to legislate at all upon the subject of voting at state elections rests upon this Amendment and can be exercised by providing a punishment only when the wrongful refusal to receive the vote of a

qualified elector at such election is because of his race, color, or previous condition of servitude. In the *Cruikshank* case the court declared that 'the right of suffrage is not a necessary attribute of national citizenship. The right to vote in the states comes from the states.' . . . [Finally], the laws were regarded by the masses of the Southern white people as odious and oppressive, and they exhausted every means to defeat their operation. . . . By 1874 the disintegration of Republican government in the South was clearly evidenced by the loss of elections through the decrease of black votes cast. If the practical object of the enforcement laws was to maintain the negro in the political position intended for him by Northern radicals, then the logic of events was proving the inadequacy of the laws. 'It is absolutely essential,' declared a great negro convention in Montgomery, December, 1874, 'to our protection in our civil and political rights that the laws of the United States shall be enforced so as to compel respect and obedience for them. Before the state laws and state courts we are utterly helpless.' Republicans throughout the South took up the cry for more enforcement laws from Congress—laws to remedy the defects in the statutes of 1870-1871. It was suggested that all cases involving the negro be transferred to the United States courts, and at least one-half of juries in cases involving the negro be black, that grand and petit juries be purged of whites who 'sympathize with the Kuklux clan.' . . . But Congress did not act upon the various suggestions from the South. In 1875 it passed Sumner's civil rights bill, which never proved workable. It refused to do more. The people of the North were, in fact, becoming disgusted with the Southern question. . . . The breakdown of Reconstruction is to be attributed in considerable extent to a dawning consciousness in the North of the real conditions in the South. . . . The force acts were in fact out of joint with the times. They did not square with public consciousness either North or South. . . . They fitted a condition of war, not of peace; and suggest an autocracy rather than a democracy. From many angles they were attacked and emasculated and then relegated to their proper place as curiosities in our political history.'—W. W. 1869-1870.—Fifteenth Constitutional Amendment.—"The great defect of the Fourteenth Amendment, as freely charged during its discussion, was its at least tacit recognition of the right of States to disfranchise the ex-slaves, should they so elect. True, they could not do it without sacrificing so much in the basis of their representation in Congress; but if they were willing to make that sacrifice, there was nothing in the amendment to prevent such discrimination. To remedy that defect . . . it was resolved to incorporate into the organic law a new provision for their protection, and to

supplement the amendments of the Constitution already adopted by another. There were accordingly introduced into both houses, almost simultaneously, measures for that purpose. . . . In the House, on the 11th of January, 1869, Mr. Boutwell reported from the Committee on the Judiciary a joint resolution proposing an amendment which provided that the right to vote of no citizen should be abridged by the United States or any State by reason of race, color, or previous condition of slavery." The joint resolution was adopted in the House, 150 affirmative to 42 negative votes, on January 30. Adopted in the Senate with amendments, by 39 to 16 votes, it went to a Committee of Conference, on whose report the joint resolution was finally adopted by both Houses on February 25, and submitted for ratification to the legislatures of the states, in the following form: "Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude. Section 2. The Congress shall have power to enforce this article by appropriate legislation." "The amendment received the votes of 29 States, constituting the requisite three fourths, and thus became a part of the organic law. On the 30th of March, 1870, President Grant communicated the fact to Congress in a special message."—H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 47.—"There were thirty-six states in the union in 1865; in five of these—Maine, New Hampshire, Vermont, Massachusetts, and Rhode Island—negroes apparently exercised full suffrage privileges; in one—New York—they could vote, provided they possessed certain qualifications as to residence and property which were not required of white men; in the remaining thirty states they were entirely disfranchised. . . . Negro suffrage was forced upon the District of Columbia by act of January 8, 1867, upon the territories by act of January 10, 1867, and upon the South by the Reconstruction acts of March 2, March 23, and July 19, 1867. . . . Constitutional amendments establishing negro suffrage were rejected in Connecticut, Wisconsin, and Minnesota, 1865; in Kansas, Ohio, and Minnesota, 1867; in Michigan and Missouri, 1868; and in New York, 1869. The question in New York was of course the removal of the special property qualification required of negroes. Only two states, Iowa (1868) and Minnesota (1868) voluntarily granted the franchise to negroes before the ratification of the Fifteenth Amendment."—W. W. Davis, *Federal enforcement acts (Studies in Southern history and politics*, pp. 240).

1869-1872.—Supreme Court decisions on relation of seceded states to the Union.—Chase on Reconstruction measures.—"A large group of Supreme Court cases turned upon the effect of the Civil War on the rights of property. In two cases, *United States v. Anderson* (1869-70), and the *Protector* (1871), the court passed on the important question as to when the war legally began and ended, but the two decisions did not harmonize. In the first case the court held without dissent that the proclamation of August 20, 1866, was 'the first official declaration that we have on the part of the executive that the rebellion was wholly suppressed, and . . . the limitation . . . did not begin to run until the rebellion was suppressed through-

out the whole country.' In the second case it was held without dissent that 'the war did not begin or close at the same time in all the States;' but that it began in the first seven States by the proclamation of blockade, April 19, 1861, and in Virginia and North Carolina by the similar proclamation of April 27, 1861; and that it ceased in twelve States by the proclamation of April 12, 1866, and in Texas by the proclamation of August 25, 1866. In another decision of much importance, *The Grapeshot*, the court upheld provisional courts set up by direction of the President, without any legislative authority, in parts of the seceded States occupied by the federal troops. Three important decisions expounded the vexed relation of seceded States to the Union,—the question which had so perplexed Congress. In *Thorington v. Smith*, the court without dissent recognized as a fact the existence of Confederate paper notes during the war, and their use in contracts then made. Chase, who drew the opinion, took the ground that the Confederacy 'was an actual government of all the insurgent States;' though he refused to recognize it as having been a *de facto* government, obedience to which did not constitute treason to the United States, he did style it a 'government of paramount force; . . . the rights and obligations of a belligerent were conceded to it, in its military character, very soon after the war began, from motives of humanity and expediency by the United States.' This ground was modified a little later in the case of *United States v. Keebler*, in which it was held that 'the whole Confederate power must be regarded by us as a usurpation of unlawful authority, incapable of passing valid laws,' and that 'acts of the Confederate Congress can have no force, as law, in divesting or transferring rights;' and again in *Hickman v. Jones, et al.*, when it was held that the recognition of belligerent rights 'did not extend to the pretended government of the Confederacy. The intercourse was confined to its military authorities; . . . the act of the Confederate Congress creating the tribunal in question was void. It was as if it were not.' Another group of cases in which Chase took particular interest related to the border intercourse, which as Secretary of the Treasury he had alternately prohibited and regulated. In *Padelford's Case* (1869-70), the question was raised as to whether Lincoln's amnesty proclamation of December 8, 1863, restored the property rights of a man who had accepted the provisions of that proclamation. The court held that the amnesty did restore him to his rights; and in this instance and also in the case of *United States v. Anderson*, the court enforced, and thereby gave its adhesion to, the confiscation acts of 1861-62, and to the acts for the collection of abandoned property, under which the Treasury had taken possession of immense quantities of property. In the case of *Miller v. United States*, the court declined to apply the constitutional amendment allowing jury trial and due process of law to those confiscation acts, on the ground that they were not punitive but military acts, exercised under power to declare war and make rules respecting captures. In the case of *Corbett v. Nutt* (1870-71), the court refused to apply the principle of the confiscation acts to commercial transactions within the Confederate lines, and thus 'to taint with invalidity even the commonest transactions of exchange in the daily life of these people.' These decisions taken together show that the action of the court was both sensible and humane. It refused to hold the internal transactions of individuals within the Confederacy, or those of the Confederate and state

governments with individuals, to be simply a mass of futile agreements and restrictions; only so far as acts of individuals or of the Confederacy had been made the means of opposition to the United States were they held illegal and invalid. In this group of decisions there was little dissent, and in no case was Chase among the dissenters. It was inevitable that the Supreme Court should eventually construe and limit the reconstruction acts so far as they related to the domain of the President. The President's contact with the judiciary power came principally through his pardoning power; and in the Padelford, Klein, and Armstrong cases the court affirmed that his pardon removed any responsibility for an offense connected with the rebellion, and that though an act of Congress might carry the pardon into effect, it could not abridge the President's pardoning power. Though the right of the President to set up provisional courts in the seceded States was approved by the court, Chase could not forget the arbitrary tribunals of the Civil War, to which he had given a reluctant consent when they were founded; and therefore in *Tarbell's Case* (1871), when the Supreme Court denied the power of a state court by *habeas corpus* to release men illegally enlisted in the army, Chase felt it his duty to dissent. This was very nearly the point which had been raised in the Garner controversy in 1856, when as governor of Ohio he [Chase] had insisted on the power of state *habeas corpus* against federal officials. He now entered his protest in favor of his old principle that 'a writ of *habeas corpus* may issue from a state court to inquire into the validity of imprisonment or detention without a sentence of any court whatever, by an officer of the United States,' even though the President's proclamation of December, 1863, issued after the adoption of the Fourteenth Amendment, was 'a public act of which all courts of the United States are bound to take notice.' This decision, however, was not construed to traverse the authority to exclude from office certain classes of persons who had engaged in the rebellion, given to Congress under the Fourteenth Amendment. In the famous case of *Texas v. White*, decided in 1869, the court drew nearer to the fundamental question of the status of the Southern States during the war; the opinion was written by the chief justice, who considered it his most important work on the bench. The critical point before the court was whether Texas was a State in the Union in 1862 and 1865. In a splendid phrase Chase laid down his theory of government: 'The Constitution, in all its provisions, looks to an indestructible Union composed of indestructible States. When, therefore, Texas became one of the United States she entered into an indissoluble relation. There was no place for reconstruction, or revocation, except through revolution, or through consent of the States.' Hence, he argued, the acts of the seceding legislature were null, for 'Texas continued to be a State and a State of the Union.' But the chief justice went on to show that although the obligations of Texas were unimpaired, its federal relations were affected, and some of its privileges for the time being forfeited; and that under the power to guarantee to every State a republican form of government Congress had the right to provide for the reconstruction of a State. The decision not only admitted that reconstruction had been constitutionally performed under the acts of Congress, it also recognized, as legitimate and as representing the State, the provisional government which was actually in existence before Texas was readmitted to representation in Congress.

Grier, Swayne, and Miller, in dissenting opinions, denied that under the provisional government, subject as it was to military power and deprived of representation in Congress, Texas could be considered as a State in the Union. The plain effect of this decision was to deny that theory of state suicide to which Chase had earlier given his adhesion; for it asserted that, as soon as the war ended and the people of Texas chose to reconstitute the government, they recovered statehood, though not necessarily complete privileges in the Union, since those involved a question to be decided by the national government. The 'Nation' said of the decision: 'The Supreme Court has thus in this judgment placed the nation and the State upon exactly the same footing: whatever weakens the one weakens the other; whoever denies the historical origin of the one denies the same origin for the other. This theory gives the greatest security both to the State and to the Union.' In the announcement of this decision the court placed itself side by side with Congress and the new President, in affirming that the process of reconstruction had been constitutional, or at least allowable, and could no longer be questioned. Three years later, in the case of *White v. Hart*, (1872), though Chase dissented on one point, he acquiesced in a sweeping approval of the whole system of constitutional reconstruction. 'The action of Congress upon the subject,' said he, 'cannot be inquired into. The case is clearly one in which the judicial is bound to follow the action of the political department of the government, and is concluded by it.' Congress had never been quite certain of the constitutional ground upon which it reconstructed the Southern States, and the Supreme Court eliminated most of the prevailing theories. The theory of state suicide it denied resolutely: 'At no time were the rebellious States out of the pale of the Union. Their rights under the Constitution were suspended but not destroyed. Their constitutional duties and obligations were unaffected and remained the same.' The doctrine of conquered provinces was also denied. 'The Constitution,' said the court, 'assumed that the government and the Union which it created, and the States which it incorporated into the Union, would be indestructible and perpetual.' The decision thus rested squarely upon a modification of the theory of forfeited rights. 'A citizen is still a citizen though guilty of crime and visited with punishment. His political rights may be put in abeyance or forfeited.'—A. B. Hart, *Salmon Portland Chase*, pp. 374-381.

1869-1877.—Administration of Grant.—His first cabinet.—Widespread corruption.—"That the new President lacked the touch of the skilful administrator was seen in the selection of his cabinet advisers. In making his cabinet appointments he refused to consult with party leaders, and in some instances the appointees themselves were not consulted. The composition of his first cabinet seemed in a large measure to be determined by considerations of 'personal friendships or unintelligent caprice.' As a secretary of state he chose Elihu B. Washburne, a close friend to whom he was greatly indebted for his military advancement but a man who had no fitness for the duties of the State Department. This appointment, however, was only a passing compliment. Washburne promptly resigned, and his place in the cabinet was filled by Hamilton Fish, a most competent person. For the Treasury, Grant named A. T. Stewart, one of the richest merchants in America. . . . Stewart, however, was hardly in office before he had to withdraw on account of an existing statute, which provided

that no one appointed secretary of the treasury should 'directly or indirectly be concerned or interested in carrying on the business of trade or commerce.' [He was succeeded by George M. Boutwell, commissioner of inland revenue during the Civil War.] The navy portfolio was given to Adolph E. Borie, whose chief distinction was that of being a rich man of Philadelphia, and a personal friend of Grant's. [He was an invalid and resigned at once, and was succeeded by George M. Robeson of New Jersey.] . . . For secretary of the interior the President named Jacob D. Cox [governor] of Ohio, and for attorney-general E. Rockwood Hoar of Massachusetts. Cox and Hoar were regarded as well fitted for their places. [Schofield, who was requested to continue for a while in office as secretary of war, was soon succeeded by Rawlins. John A. Cresswell was postmaster-general.] Taking it all in all, it was nearly the poorest body of advisers that a President had ever gathered around him."—S. E. Forman, *Our republic*, p. 530.—"For eight years Grant was President. His two administrations were marked by extraordinary achievement both in the domestic and in the foreign field. True, he was the target of abuse and criticism; no President in the long list, with the possible exception of Johnson, has been more bitterly assailed, and he was vulnerable at many points. He was a soldier with a limited experience in dealing with men of affairs and only a superficial acquaintance with politics; with no great knowledge of history, or literature, and innocent of the science of government; yet William Tecumseh Sherman, in one of his flashes of political insight, came very near the mark when he wrote in the summer of 1868: 'My own opinion is that, considering the state of the country, Grant will make the best President we can get. What we want in national politics is quiet, harmony, and stability, and these are more likely with Grant than any politician I know of.' Grant made serious mistakes; but almost without exception they were errors arising from childlike trust and unfortunate associations. They seldom affected adversely measures of broad public policy. When we recall the great accomplishments of his administrations,—the establishment of the principle of international arbitration through the Treaty of Washington and the adjudication of the Alabama claims by the Geneva Tribunal; the upholding of American dignity and the assertion of American rights in the matter of the Virginius and the handling of the Cuban complications; the rehabilitation of the national credit, and the maintenance of the national honor, the inauguration of a consistent and merciful policy toward the Indians; the recognition of the principles of civil service reform; and the restoration of a semblance of order in the South,—we are tempted to subordinate, though we cannot honestly ignore, the personal differences which marred the period of his service and the public scandal attaching to some of those who, in the shelter of his friendship and of offices bestowed upon them through his favor, betrayed his trust. It was a time of universal prodigality and extravagance, when speculation flourished and the nation's moral fiber had been coarsened by the excesses of war. It was not strange that the widespread taint invaded public place. It would have been more strange if it had not."—L. A. Coolidge, *Ulysses S. Grant*, pp. 276-280.—"More perplexing than the diplomatic questions were the financial problems which confronted President Grant at the beginning of his administration. Our financial house was in a state of great disorder. There was a national debt of

more than \$2,500,000,000, but no definite plans had been made for its payment. The holders of the bonds did not know in what kind of money they would be paid. There was in circulation nearly \$350,000,000 of paper money (greenbacks) in the form of United States notes. In the value of these greenbacks there were violent fluctuations. Now a greenback dollar would be worth ninety cents in gold; presently it would be worth only eighty cents. Should the national debt be paid with the paper money or with gold? . . . In the campaign of 1868 the sentiment in favor of paying certain classes of the bonds with greenbacks was strong. But the greenbacks idea had no charms for President Grant. In his inaugural address on March 4, 1869, he said: 'To protect the national honor every dollar of government indebtedness should be paid in gold, unless otherwise expressly stipulated in the contract. In accordance with the wishes of the President, Congress at once undertook to strengthen the public credit, declaring in March, 1869, that it was the purpose of the United States to pay its notes (the greenbacks) and its bonds in coin (that is, in gold or silver), and pledging the faith of the nation to such payment. The pledge as to the bonds was kept, but the redemption of the greenbacks was delayed, with the result that the currency remained in a chaotic condition. Gold was virtually a commodity like wheat or corn, and its value rose and fell as the value of greenbacks fell and rose. In September, 1869, Jay Gould and James Fisk, two daring speculators, set about to 'corner' the gold supply, and actually secured control of nearly \$120,000,000. As the amount of gold outside the National Treasury was limited they were able to advance the price of the yellow metal to a point that meant disaster to those who needed it in the transaction of business. In New York the bidding for gold was attended by frantic excitement and led to a financial convulsion known as Black Friday."—S. E. Forman, *Our republic*, p. 553.—See also MONEY AND BANKING: Modern: 1869.—"The United States had need of any feeling of national pride that might come as the result of the Geneva award, to offset the shame of domestic revelations, for one of the characteristics of the decade after the war was the widespread corruption in political and commercial life. One of the most flagrant examples was the Tweed Ring in New York. [See NEW YORK: 1863-1871.] . . . More important both because of its effect on national politics and because of its influence on railway legislation for many years afterward was the Credit Mobilier scandal. . . . Fear was widespread that political life in Washington was riddled with corruption. Corporations which were large and wealthy for that day were already getting a controlling grip on the legislatures of the states, and if the Credit Mobilier scandal were typical, had begun to reach out to Congress. [See also CREDIT MOBILIER SCANDAL.] Had the charges been made a little earlier they might have influenced the election of 1872, which turned largely on certain omissions and failings of the administration, and especially of General Grant himself. There is something intensely pathetic in General Grant as President of the United States, . . . [a man] who was unacquainted with either the theory or the practice of politics, who consulted nobody in choosing his cabinet or writing his inaugural address, who had scarcely visited a state capital except to capture it and had been elected to the executive chair in times that were to try men's souls. An indolent man, he called himself, but the world knew that he was tireless and irresistible on

the field when necessity demanded, persistent, imperturbable, simple and direct in his language, and upright in his character. The tragedy of President Grant's career was his choice of friends and advisors. In Congress he followed the counsels of second-rate men who gave him second-rate advice; outside he associated too frequently with questionable characters who cleverly used him as a mask for schemes that were an insult to his integrity, but which his lack of experience and his utter inability to judge character kept hidden from his view. Honorable himself and loyal to a fault to his friends, he believed in the honesty of men who betrayed him, long after the rest of the world had discovered what they were. He could accept costly gifts from admirers and appoint these same men to offices, without dreaming that their generosity had sprung from any motive except gratitude for his services during the war. It was inevitable, in view of these facts, that the presidential campaign of 1872 should be essentially an anti-Grant movement, but its particular characteristics had their origin before the General's first election."—C. R. Lingley, *Since the Civil War*, pp. 40-43.

ALSO IN: E. B. Andrews, *History of the last quarter-century in the United States*, v. 1, ch. 2.—H. Garland, *Ulysses S. Grant*, ch. 30-50.

1869-1890.—Recovery of the domination of whites in the South.—Suppression of the colored vote.—“Between 1869 and 1876, the whites had in every Southern State except South Carolina, Florida, and Louisiana, regained control of the government, and in 1876 those three States were also recovered. The circumstances were different, according to the character of the population in each State. In some a union of the moderate white Republicans with the Democrats, brought about by the disgust of all property holders at the scandals they saw and at the increase to their burdens as tax-payers, had secured legitimately chosen majorities, and ejected the corrupt officials. In some the same result was attained by paying or otherwise inducing the negroes not to go to the polls, or by driving them away by threats or actual violence. Once possessed again of a voting majority, the whites, all of whom had by 1872 been relieved of their disabilities, took good care, by a variety of devices, legal and extra-legal, to keep that majority safe; and in no State has their control of the government been since shaken. President Hayes withdrew, 1877, such Federal troops as were still left at the South, and none have ever since been despatched thither. . . . With the disappearance of the carpet-bag and negro governments, the third era in the political history of the South since the war began. The first had been that of exclusively white suffrage; the second, that of predominantly negro suffrage. In the third, universal suffrage and complete legal equality were soon perceived to mean in practice the full supremacy of the whites. To dislodge the coloured man from his rights was impossible, for they were secured by the Federal Constitution which prevails against all State action. The idea of disturbing them was scarcely entertained. Even at the election of 1872 the Southern Democrats no more expected to repeal the Fifteenth Amendment than the English Tories expected at the election of 1874 to repeal the Irish Church Disestablishment Act of 1869. But the more they despaired of getting rid of the amendment, the more resolved were the Southern people to prevent it from taking any effect which could endanger their supremacy. They did not hate the negro, certainly not half so much

as they hated his white leaders by whom they had been robbed. ‘We have got,’ they said, ‘to save civilization,’ and if civilization could be saved only by suppressing the coloured vote, they were ready to suppress it. . . . The modes of suppression have not been the same in all districts and at all times. At first there was a good deal of what is called ‘bulldozing,’ i.e. rough treatment and terrorism, applied to frighten the coloured men from coming to or voting at the polls. Afterwards, the methods were less harsh. Registrations were so managed as to exclude negro voters, arrangements for polling were contrived in such wise as to lead the voter to the wrong place so that his vote might be refused; and, if the necessity arose, the Republican candidates were counted out, or the election returns tampered with. ‘I would stuff a ballot-box,’ said a prominent man, ‘in order to have a good, honest government;’ and he said it in good faith, and with no sense of incongruity. Sometimes the local negro preachers were warned or paid to keep their flocks away. . . . Notwithstanding these impediments, the negro long maintained the struggle, valuing the vote as the symbol of his freedom, and fearing to be reenslaved if the Republican party should be defeated. Leaders and organizers were found in the Federal office-holders, of course all Republicans. . . . After 1884, however, when the presidency of the United States passed to a Democrat, some of these office-holders were replaced by Democrats and the rest became less zealous. . . . Their friends at the North were exasperated, not without reason, for the gift of suffrage to the negroes had resulted in securing to the South a larger representation in Congress and in presidential elections than it enjoyed before the war, or would have enjoyed had the negroes been left unenfranchised. They argued, and truly, that where the law gives a right, the law ought to secure the exercise thereof; and when the Southern men replied that the negroes were ignorant, they rejoined that all over the country there were myriads of ignorant voters, mostly recent immigrants, whom no one thought of excluding. Accordingly in 1890, having a majority in both Houses of Congress and a President of their own party, the Republican leaders introduced a bill subjecting the control of Federal elections to officers to be appointed by the President, in the hope of thus calling out a full negro vote, five sixths of which would doubtless have gone to their party. The measure appeared to dispassionate observers quite constitutional, and the mischief it was designed to remedy was palpable. . . . It passed the House, but was dropped in the Senate under the threat of an obstructive resistance by the (then Democratic) minority.”—J. Bryce, *American commonwealth*, v. 2, ch. 92.—“In several cases involving the enforcement acts, the Court found portions of the laws in conflict with the Constitution and finally, in 1883, the decision in *United States v. Harris* completed their destruction. Here the court met a complaint that a group of white men had taken some negroes away from the officers of the law and ill-treated them. Such conduct seemed to be contrary to that part of the Ku Klux Act which forbade combinations designed to deprive citizens of their legal rights. The Court, however, called attention to the important words, ‘No State shall make or enforce,’ and was of opinion that the constitutional power of Congress extends only to cases where States have acted in such a manner as to deprive citizens of their rights. If individuals, on the contrary, conspire to take away these rights, relief must be sought at the hands of the state

government. As the great purpose of the Ku Klux Act had been to combat precisely such individual combinations, it appeared that the Court had, at a blow, demolished the law. Not long afterwards the Court declared unconstitutional the Civil Rights Act of 1875, which had been designed to insure equal rights to negroes in hotels, conveyances and theatres. Here again the Court was of opinion that the Fourteenth Amendment grants no power to the United States but forbids certain activities by the states. . . . The history of the effects of the war and of reconstruction on the political status of the negro has been concisely summarized as falling into three periods. At the close of the war: (1) the negroes were more powerful in politics than their numbers, intelligence and property seemed to justify; (2) the Republican party was a power in the South; and (3) the negroes enjoyed political rights on a legal and constitutional equality with the whites. By 1877 the first of these generalizations was no longer a fact; by 1890 the Republican party had ceased to be of importance in the South; and by the opening of the twentieth century, the negro as a possible voter was not on a legal and constitutional equality with the white. In the sphere of government the war and reconstruction were of lasting importance. Pre-eminently it was definitely established that the federal government is supreme over the states. Although the Constitution had seemed to many to establish that supremacy in no uncertain terms, it can not be doubted that only as a result of the war and reconstruction did the theory receive a degree of popular assent that approached unanimity. Temporarily, at least, reconstruction added greatly to the prestige and self-confidence of Congress. During the war the powers of the President had necessarily expanded. The reaction, although hastened by the character and disposition of President Johnson, was inevitable. The depression of the executive elevated the legislature and not until the beginning of the twentieth century did the scales swing back again toward their former position."—C. R. Lingley, *Since the Civil War*, pp. 26, 28-29.

1869-1893.—**Liquor problem.**—Rise of Prohibition party. See LIQUOR PROBLEM: United States: 1869-1893.

1869-1913.—**Solid South.**—"The enfranchisement of the mass of negroes and the attempt of the Republican party to enforce negro rule upon the South drove the white people to unite solidly against those whom they regarded as their oppressors. From the close of the Reconstruction period until 1896, the political solidarity of the South in National elections was never broken. In the face of the danger of negro domination, white men who believed in protective tariffs and other national policies advocated by the Republican party surrendered their convictions and voted solidly with their fellow-citizens who held opposite views on these questions. Since that time, there has been but one party of any consequence in the South, and that a white man's party, and but one great issue, namely, the maintenance of white supremacy. The motive back of this policy was the simple instinct of self-preservation rather than that of revenge or hatred. But this political solidarity, once so necessary to the preservation of Southern civilization from the effects of negro domination, resulted in the political effacement of the South and the loss of its leadership in national affairs. From 1861 to 1913, the South furnished the nation with no President or Vice-President. Not even the Democratic party itself dared nominate a Southern

man as its candidate, so certain would have been his defeat. Of the eleven speakers of the national house of representatives elected during this period, only two were Southern men; of one hundred and twenty-five cabinet members, the South furnished only fourteen; of twenty Justices of the Supreme Court, only five were taken from the South; and of one hundred and twelve diplomatic representatives accredited to the courts of England, France, Austria-Hungary, Russia, the German Empire, Italy, and Spain, only ten were Southern men. Thus it came to pass that the South not only lost its leadership, but it ceased to play any part in national affairs. With a few exceptions, it has produced no great leaders since the War. Great political leaders do not develop readily under conditions such as exist where there are no opposition parties, where there is no party rivalry and little or no discussion of national issues, and where everything that bears the image of a single party is accepted as a matter of course. In short, the very atmosphere of the South has been unfavorable to the growth of statesmen."—W. W. Davis, *Federal enforcement acts (Studies in Southern History*, pp. 370-371).—See also GEORGIA: 1876-1890.

1871 (April).—Force Bill.—At the extra session of Congress, which met March 4, 1871 a sweeping act was passed to enforce the Fourteenth Amendment. "This Act allowed suit in Federal courts by the party injured against any person who should in any way deprive another of the rights of a citizen; it made it a penal offence to conspire to take away from any person the rights of a citizen; it provided that inability, neglect, or refusal by any State to suppress such conspiracy, to protect the rights of its citizens, or to call upon the President for aid, should be 'deemed a denial by such State

of the equal protection of the laws' under the XIVth Amendment; it declared such conspiracies, if not suppressed by the authorities, 'a rebellion against the Government of the United States'; it authorized the President, 'when in his judgment the public safety shall require it,' to suspend the privilege of the writ of habeas corpus in any district, and suppress the insurrection by means of the army and navy; and it excluded from the jury-box any person 'who shall, in the judgment of the court, be in complicity with any such combination or conspiracy.' The authority to suspend the privilege of the writ of habeas corpus was to cease after the end of the next regular Session of Congress."

1872.—Decision of the San Juan water boundary question by emperor of Germany. See SAN JUAN OR NORTHWESTERN WATER-BOUNDARY QUESTION.

1872.—Twenty-second presidential election.—The leading candidates for president in 1872 were General Grant, nominated for reelection by the main body of the Republican party, and Horace Greeley, of New York, put forward by a revolted section of that party and accepted and supported by the Democratic party. "In 1870 the Republican party in Missouri had split into two parts. The 'Radical' wing wished to maintain for the present the disqualifications imposed on the late rebels by the State Constitution during the war; the 'Liberal' wing, headed by B. Gratz Brown and Carl Schurz, wished to abolish these disqualifications and substitute 'universal amnesty and universal enfranchisement.' Supported by the Democrats, the Liberal Republicans carried the State, though opposed by the Federal office-holders and the influence of the Administration. This success stimulated a reaction in the National Republican party, many of whose members believed that the powers of the Federal Government over the local concerns of the States had already been enforced up to or beyond constitutional limits, that the various enforcement Acts were designed rather for the political advancement of President Grant's personal adherents than for the benefit of the country, the freedmen, or even of the Republican party; and that the efforts to police the Southern States by the force of the Federal Government ought to cease. In the spring of 1871 the Liberal Republicans and Democrats of Ohio began to show symptoms of common feeling on these subjects, and during the summer the 'Liberal' movement continued to develop within the Republican party. January 24th, 1872, the Missouri Liberals issued a call for a National Convention at Cincinnati in the following May." At the meeting in Cincinnati the Liberal Republican convention nominated Horace Greeley for president, and B. Gratz Brown for vice president. The Democratic national convention which met at Baltimore, June 9th, adopted these candidates, with the "platform" on which they were nominated. "A few recalcitrant Democrats met at Louisville, Ky., September 3d, and nominated Charles O'Connor, of New York, and John Quincy Adams, of Massachusetts."—A. Johnston, *History of American politics*, ch. 22.—The Prohibitionists put in nomination James Black, of Pennsylvania, for president, and John Russell, of Michigan, for vice president. The Republican nominee for vice president, on the ticket with General Grant, was Henry Wilson, of Massachusetts. The popular vote cast was 3,585,444, or 3,597,132, for Grant, and 2,843,563, or 2,834,125 for Greeley (according to the return that may be counted from Louisiana, where two rival returning

boards disputed authority with one another); 29,489 for O'Connor and 5,608 for Black. Horace Greeley died on Nov. 29, 1872, before the electoral colleges cast their vote, the consequence being that the Democratic votes in the colleges were scattered. The following is the electoral vote for president as counted by Congress: Grant, 286; Thomas A. Hendricks, 42; B. Gratz Brown, 18; Charles J. Jenkins, 2; David Davis, 1. The votes of Louisiana and Arkansas were rejected, as were three votes cast in Georgia for Horace Greeley, deceased.—Based on E. Stanwood, *History of presidential elections*, ch. 23.

1872-1873.—Credit Mobilier scandal. See CREDIT MOBILIER SCANDAL.

1873.—"Demonetization of silver." See MONEY AND BANKING: Modern: 1848-1893.

1873.—Financial panic.—"The panic of 1873 differed very materially from the other great panics by which this country has been afflicted. Lack of capital was the main difficulty in 1837 and 1857. Population had increased so rapidly that millions of human beings were out of work, and apprehension spread lest there might not be food enough to go around. In 1873, however, men were well employed. Business of all kinds was in excellent condition, and no one doubted for a moment that there would be plenty for every man to eat. The excellent condition of trade, in fact, was the chief factor in the panic of 1873. Every one was busy, and wanted money with which to carry on his trade. For two years before the crash, money had been in great demand. Railroads had recently been built to an extent such in this country had never known before. Whereas, in 1861, railroad construction amounted to only 651 miles, in 1871 it reached the then unprecedented figure of 7,779 miles. This new mileage, moreover, was mainly in the West, where the immediate remuneration was but slight. Railroads were being pushed forward into regions which could not be expected to return an income for twenty years. The cost of railroad construction in this country during the five years preceding September, 1873, was estimated by the Comptroller of the Currency at no less than \$1,700,000,000. The money to pay for this extravagant building was obtained, not from the earnings of the old portions of the road, but from enormous issues of railroad bonds, placed to a large extent among the banks of this country, but still more among the capitalists of Europe. In the Northern Pacific Company occurred the most flagrant abuse of railroad credit the world has ever known. . . . One after another of the Western roads defaulted in paying the interest on its bonds. The result was, that, by the summer of 1873, the market for new issues of railroad bonds had practically disappeared. Meantime the banks and bankers of New York were loaded down with railroad paper. The railroads had borrowed money for short periods in the expectation that before their notes fell due they would have raised the money to make payment by the sale of bonds. A temporary relief was felt, in June, 1873, through the customary midsummer ease in money. But this temporary respite only made the difficulty worse. Deluded by the momentary calm, the New York banks added still further to their loans. . . . The year before, money had grown tight early in September, and the more cautious banks began gradually to call their loans, fearing that the experience of 1872 might

be renewed. But the rates for money did not noticeably increase, and the only cause for excitement early in the month was the failure, on September 8, of the Mercantile Warehouse and Security Company, owing to advances on bonds of the Missouri, Kansas & Texas Railroad. This was followed, on the 13th, by the failure of Kenyon, Cox & Co., of which firm Daniel Drew was a member, caused by loans to the Canada Southern railroad. By this time the sky was heavily overcast. Money was now advancing rapidly, the New York banks were calling loans on every hand, and new loans on railroad paper were scarcely to be had at all. Suddenly, on the 18th of September, the tempest burst. On the morning of that dark day, Jay Cooke, the agent of the U. S. Government, with some four millions of deposits from all parts of the country, and his fifteen millions of Northern Pacific paper, declared his inability to meet his debts. The report flew down 'the street' with the ferocity of a cyclone. Railroad shares were thrown upon the market by the bushel, in utter disregard of their intrinsic value. . . . Stock brokers continued to announce their failures all day long. Nothing seemed able to withstand the shock, and when, on September 19, the great banking house of Fisk & Hatch went under, terror became universal. A run was started on the Union Trust Co., which was believed to have close intimacy with Vanderbilt's railroads, and on the Fourth National Bank, whose dealings were largely with Wall street brokers. The panic was by this time so general that the banks began to refuse one another's certified checks, and on the 20th a considerable number of the New York banks suspended payment. On that day the Union Trust Co., the National Trust Co., and the National Bank of the Commonwealth all closed their doors. At 11 o'clock on the 20th, the New York Stock Exchange, for the first time in its history, closed its doors, and the Governing Committee announced that the board would not be opened till further notice. This high-handed measure caused an outcry for the moment, but on calmer judgment it was generally conceded that the measure was a good one. On the evening of that Saturday, September 20, the Clearing House Association met and adopted a plan similar to that adopted in the panic of 1857, and in substance this: Any bank in the Clearing House Association might deposit with a committee of five persons, to be appointed for that purpose, an amount of its bills receivable, or other securities to be approved by the committee, and the committee were then to issue to that bank certificates of deposit, bearing interest at 5 per cent. per annum, to an amount not exceeding 75 per cent. of the securities or bills receivable so deposited. These certificates could be used in settlement of balances at the Clearing House for a period not to extend beyond the 1st of the following November, and they were to be received by creditor banks during that period daily, in the proportion which they bore to the aggregate amount of the debtor balances paid at the Clearing House. The amount of certificates should not exceed \$10,000,000. The legal tenders belonging to the associated banks were to be considered and treated as a common fund held for mutual aid and protection, and the committee were given power to equalize the same by assessment or otherwise in their discretion. This scheme, simple as it was, proved of the utmost efficacy in mitigating the evils that must always follow a distrust among banks. The lull occasioned by the intervening Sunday was employed by President Grant and Secretary of the Treasury

Richardson in a visit to New York. All day long they gave audience to business men at the Fifth Avenue Hotel. Suggestions of every description were offered as a remedy for the disease. The most feasible proposition, and that which was finally adopted, was the purchase of Government bonds. . . . Shortly after his return from the Fifth Avenue Hotel, Secretary Richardson announced his intention to buy Government bonds, and, in a few days, \$13,000,000 of the U. S. greenbacks were thus absorbed. . . . On Tuesday, September 30, the Stock Exchange was once more opened. It was expected on all hands that this would be the signal for another onslaught. But so general was this expectation that most persons refrained for the moment from offering their stocks. As a result, the market opened a trifle higher than it had closed ten days before. It continued to advance, moreover, till October 7. On that day a new decline set in, and on October 14 came a fearful drop, which carried prices lower than on September 20. From this reaction there was a gradual improvement till October 31, when the failure of Hoyt, Sprague & Co., the great mill owners of Providence and New York, once more shook the market and brought stocks, on October 31 and November 1, to the lowest prices of the year. With those prices it became manifest that the panic had reached its end. Money had already begun to flow to New York both from Europe and from the West, and the public, tempted by the excessive decline in stocks, began to purchase freely. The result was a steady though gradual improvement through the remainder of the year."—*The Panic of 1873* (*Banker's Magazine*, November, 1891).

1873-1874.—Origin of the Interstate Commerce Act.—Demand for cheap transportation.—"The difficulties of freight transportation between the States was discussed at length by Congress, spite of railway attorneys' insistence that the subject was beyond Congressional control. In the House of Representatives, during January, 1874, Hon. G. W. McCrary, Chairman of the Committee on Railroads and Canals, made an exhaustive report affirming the constitutional power of Congress to regulate inter-state commerce. This valuable paper laid bare, in Section 8, Article I, of the Constitution, a depth of meaning which, till then, few had suspected, a discovery that prepared the way for the Inter-state Commerce Act, passed on February 4, 1887. A National Cheap Transportation Association was organized on May 6, 1873, which also demanded lower transportation rates and an increase of avenues for commerce by water and rail. Its manifesto to the public asserted that cheap transportation for persons and property is essential to the public welfare and to the maintenance of a homogeneous and harmonious population. Another Cheap Transportation Convention was held in Richmond, December 1-4, 1874, which petitioned Congress in this interest."—E. B. Andrews, *History of the last quarter-century in the United States*, v. 1, pp. 282-283.

1875.—Whisky Ring. See WHISKY RING.

1875.—Second Civil Rights Bill and its declared unconstitutionality.—"Congress, to give full effect to the fourteenth amendment to the federal Constitution, passed an act in 1875, which provided that all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land and water, theatres and other places of public amusement, subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude. . . . In 1883 the act was held unconstitutional. The Fourteenth Amendment, says Bradley, J., does not 'invest Congress with power to legislate upon subjects which are within the domain of State legislation, but to provide modes of relief against State legislation or State action of the kinds referred to. It does not authorize Congress to create a code of municipal law for the regulation of private rights; but to provide modes of redress against the operation of State laws and the action of State officers, executive and judicial, when these are subversive of the fundamental rights specified in the amendment.' Civil Rights Cases, 109 U. S. 3."—T. M. Cooley, *Constitutional limitations which rest upon the legislative power of the states*, pp. 733-734 and footnote.

1876.—Admission of Colorado into the Union. See COLORADO: 1857-1875.

1876.—Centennial Exhibition at Philadelphia.—In 1871, the Congress of the United States passed an act to provide for the commemoration, in 1876, of the centennial anniversary of the Declaration of Independence, by holding an exhibition, at Philadelphia, "of American and foreign arts, products, and manufactures." The act created a commission, composed of one delegate from each state and territory of the United States, to which commission was committed the "exclusive control" of the contemplated exhibition; though the state of Pennsylvania was required to make provision for the erection of suitable buildings. "To the surprise of those writers who had contended that there would be no exhibits from abroad, there was shown a universal desire on the part of all nations to cooperate liberally in the World's Fair of 1876. The exhibition opened on the 10th of May, 1876, and from that time until Nov. 10, 1876, there were admitted a grand total of 9,910,966 persons, of whom 8,004,274 paid admission fees amounting to \$3,813,724.49."—C. B. Norton, *World's fairs*, ch. 6.—See also below: 1877; CENTENNIAL OF 1876.

1876-1877.—Twenty-third presidential election and its disputed result.—The electoral commission.—"It would be easy to over-estimate the responsibility of General Grant for the political corruption of his administrations. For the most part the wrong-doing of the time began before his first election. Democrats as well as Republicans participated in many of the scandals. Politicians in the cities, the states and the nation seemed to be determined to have a share in the enormous wealth that was being created in America, and they got it by means that varied from the merely unethical and indiscreet, to the openly corrupt. As for the President, his own defence, given in his last message to Congress, may be taken as the best one: 'Failures have been errors of judgment, not of intent.' Under the circumstances, however, it was

natural that the presidential campaign of 1876 should turn upon the failings of the administration. Popular interest in the southern issue was on the wane. Early in the election year, nevertheless, James G. Blaine, Republican leader in the House, made a forceful attack on Jefferson Davis, as the wilful author of the 'gigantic murders and crimes at Andersonville,' the southern prison in which federal captives had been held. Instantly the sectional hatred flared up and Blaine, already a well-known leader, became a prominent candidate for the nomination [but failed to receive it]. Republican reformers generally favored Bristow. A third-term boom for Grant was effectively crushed by an adverse resolution in the House."—C. R. Lingley, *Since the Civil War*, v. 3, pp. 48-49.—Four candidates for the presidency were named and voted for by as many different parties in 1876, although the contest of the election was practically between the Republicans and Democrats, as in previous years. The former, after a prolonged struggle of rival factions, put in nomination Ex-Governor Rutherford B. Hayes, of Ohio, with William A. Wheeler, of New York, for vice president. The candidates of the Democratic party were ex-Governor Samuel J. Tilden, of New York, for President, and Thomas A. Hendricks, of Indiana, for vice president. Before these nominations were made, the Prohibition Reform party and the party calling itself the Independent, but popularly known as the "Greenback party" [see GREENBACK PARTY], had already brought candidates into the field. The first named put Green Clay Smith, of Kentucky and G. T. Stewart, of Ohio, in nomination; the nominees of the last named were Peter Cooper, of New York, and Samuel F. Cary, of Ohio. "Thirty-eight States participated in the election. Colorado had been admitted to the Union in August, 1876, and, in order to save an additional election, the choice of electors for that occasion was conferred upon the legislature. All the other States appointed them by popular vote. The polls had hardly closed on the day of election, the 7th of November, when the Democrats began to claim the presidency. The returns came in so unfavorably for the Republicans that there was hardly a newspaper organ of the other party which did not, on the following morning, concede the election of Mr. Tilden. He was believed to have carried every Southern State, as well as New York, Indiana, New Jersey, and Connecticut. The whole number of electoral votes was 369. If the above estimate were correct, the Democratic candidates would have 203 votes, and the Republican candidates 166 votes. But word was sent out on the same day from Republican headquarters at Washington that Hayes and Wheeler were elected by one majority; that the States of South Carolina, Florida, and Louisiana had chosen Republican electors. Then began the most extraordinary contest that ever took place in the country. The only hope of the Republicans was in the perfect defence of their position. The loss of a single vote would be fatal. An adequate history of the four months between the popular election and the inauguration of Mr. Hayes, would fill volumes. Space can be given here for only a bare reference to some of the most important events. Neither party was over-scrupulous, and no doubt the acts of some members of each party were grossly illegal and corrupt. . . . In four States, South Carolina, Florida, Louisiana, and Oregon, there were double returns. In South Carolina there were loud complaints that detachments of the army stationed near the polls had prevented a fair and free election. Although

the board of State canvassers certified to the choice of the Hayes electors, who were chosen on the face of the returns, the Democratic candidates for electors met on the day fixed for the meeting of electors and cast ballots for Tilden and Hendricks. In Florida there were allegations of fraud on both sides. The canvassing board and the governor certified to the election of the Hayes electors, but, fortified by a court decision in their favor, the Democratic electors also met and voted. In Louisiana there was anarchy. There were two governors, two returning boards, two sets of returns showing different results, and two electoral colleges. In Oregon the Democratic governor adjudged one of the Republican electors ineligible [because as postmaster he was a federal official], and gave a certificate to the highest candidate on the Democratic list. The Republican electors, having no certificate from the governor, met and voted for Hayes and Wheeler. The Democratic elector,

JAMES GILLESPIE BLAINE

whose appointment was certified to by the governor, appointed two others to fill the vacancies, when the two Republican electors would not meet with him, and the three voted for Tilden and Hendricks. All of these cases were very complicated in their incidents, and a brief account which should convey an intelligible idea of what occurred is impossible. . . . [Two sets of electors secured credentials in the four States, and double sets of votes were sent to Washington.] Thus, for the first and only time in the history of the country, the election ended in such a way as to leave the result in actual doubt, and in two States the number of legal votes given for the electors was in dispute. . . . As soon as the electoral votes were cast it became a question of the very first importance how they were to be counted. It was evident that the Senate would refuse to be governed by the 22nd joint rule [under which no electoral vote to which any member of either House objected could be counted unless both Houses agreed to the counting of it]—in fact the Senate voted to rescind the rule,—and it was

further evident that if the count were to take place in accordance with that rule it would result in throwing out electoral votes on both sides on the most frivolous pretexts. It was asserted by the Republicans that, under the Constitution, the President of the Senate alone had the right to count, in spite of the fact that the joint rule, the work of their party, had assumed the power for the two Houses of Congress. On the other hand, the Democrats, who had always denounced that rule as unconstitutional, now maintained that the right to count was conferred upon Congress. A compromise became necessary, and the moderate men on both sides determined to effect the establishment of a tribunal, as evenly divided politically as might be, which should decide all disputed questions so far as the Constitution gave authority to Congress to decide them. The outcome of their efforts was the Electoral Commission law of 1877,"

SAMUEL JONES TILDEN

by which a Commission was created, consisting of fifteen members—the Senate appointing five from its own body, the House five, and four associate justices of the Supreme Court, designated in the bill, appointing a fifth from the same court. The senators selected were Edmunds, Morton, Frelinghuysen (Republicans), and Thurman and Bayard (Democrats). The Representatives were Payne, Hunton, Abbott (Democrats), and Garfield and Hoar (Republicans). The four Supreme Court justices designated by the act were Clifford, Field (Democrats), Strong and Miller (Republicans). They selected for the fifth member of the commission Justice Bradley, who was a Republican. "The natural choice of the justices would have been their associate, David Davis; but he had been elected only five days before as senator from Illinois, and it was regarded by him and by others as improper that he should serve. Thus the commission consisted of eight Republicans and seven Democrats. If Judge Davis had been selected, there would have been only seven Republicans,

and the result of the operation of the law might have been different. . . . The count had begun on the first day of February, and the final vote upon Wisconsin was not reached until the early morning of March 2. As question after question was decided uniformly in favor of the Republicans, it became evident to the Democrats that their case was lost. They charged gross partisanship upon the Republican members of the Electoral Commission, in determining every point involved in the dual returns for their own party, though as a matter of fact there does not seem to have been much room for choice between the two parties on the score of partisanship. Each member of the commission favored by his vote that view which would result in adding to the electoral vote of his own party. But as the result of the count became more and more certainly a Republican triumph, the anger of the Democrats arose. Some of them were for discontinuing the count; and the symptoms of a disposition to filibuster so that there should be no declaration of the result gave reason for public disquietude. But the conservative members of the party were too patriotic to allow the failure of a law which they had been instrumental in passing to lead to anarchy or revolution, and they sternly discountenanced all attempts to defeat the conclusion of the count. The summing up of the votes [Hayes, 185; Tilden, 184], was read by Mr. Allison of Iowa, one of the tellers on the part of the Senate, at a little after four o'clock, on the morning of the 2d of March, amid great excitement. . . . Mr. Ferry thereupon declared Rutherford B. Hayes elected President, and William A. Wheeler Vice-President, of the United States. The decision was acquiesced in peaceably by the whole country, and by men of every party. But the Democrats have never ceased to denounce the whole affair as a fraud. . . . It is to be hoped that the patriotism of the American people and their love of peace may never again be put to such a severe test as was that of 1876 and 1877. [According to the Democratic count, the popular vote stood: Tilden, 4,300,500; Hayes, 4,036,208; Cooper, 81,737; Smith, 9,522. The Republican count gave: Tilden 4,285,992; Hayes, 4,033,768.]—E. Stanwood, *History of presidential elections*, ch. 24.—"The 'eight to seven' decisions became a by-word in politics, and they are generally regarded as proof that even members of the Supreme Court were controlled by partisan bias. But this discreditable result was more than offset by the notable spectacle of half a nation submitting quietly, even in times of intense party feeling, to a decision that had the form of law. Rarely, in any country, has free government been subjected to such strain—or withstood one so triumphantly. After all, the South reaped the fruits of victory. President Hayes at once removed the Federal garrisons. Then the state governments to which his election had been due immediately vanished, and the South was left to work out its salvation for itself as best it could."—W. M. West, *Story of American democracy*, p. 573.

1877.—Change in life of the nation.—Influence of Philadelphia exposition.—“With the coming of Mr. Hayes the whole air of politics seemed to change. . . . Almost at once affairs wore a normal aspect again. The process of reconstruction, at least, had reached its unedifying end, and the hands of political leaders were free to take up the history of the country where it had been broken off in 1861. Instead of the quick, resistless despatch of party measures from session to session by congressional majorities which even the President's veto could not check or defeat, there had come a breathing space in which no party was supreme and the slow and moderate ways of compromise and accommodation were once again vouchsafed the country, at last quite out of breath with the pace to which it had been forced in its affairs. Not for fourteen years, from the elections of 1875 to those of 1889, were either Democrats or Republicans to control both Congress and the Executive. There was leisure from passion; men could look about them deliberately and without excitement and note how the country had changed. It was no longer the country of 1861. Sixteen years, mixed of war which forced industry to a quick, almost abnormal development and of peace that came like a release of energies cramped, pent up, uneasy, had brought something like an industrial revolution with them. The South was of a sudden added as a modern economic force to the national. Her old system of labor, which had shut her in to a virtual isolation, was destroyed; she was open at last to the labor of the world and was to enter with all her resources the industrial life from which she had so long held off. The great Appalachian region which stretched its mighty highlands from Pennsylvania through Maryland, the Virginias, Kentucky, Tennessee, and the Carolinas full seven hundred miles into Alabama and Georgia, and which spread its broad surfaces of mountain, valley, and plateau one hundred and fifty miles by the way upon either hand, geologists knew to be an almost unbroken coal field, it might be thirty-nine thousand square miles in area. Upon its skirts and in the broken country to the east and west of it iron also abounded, and mineral deposits which no man had looked into. The world still needed the southern cotton and tobacco, and before the first crude processes of reconstruction were over the cotton fields were once more producing almost as much as they had yielded in 1860, the year of greatest abundance ere the war came on,—so readily had free labor taken the place of slave. The industrial development of the South had been joined to that of the rest of the country, and for the first time since the modern industrial age set in capitalists turned to her for investment and the enterprises that bring wealth and power. And what was for the South as yet but an exciting prospect and confident hope was for the North already a reality. The war had been a supreme test of economic vitality, and the States of the North and West had emerged from it stronger than they went into it. Almost every industry that yielded the necessities of modern life and action had felt and responded to its quickening compulsion; and when peace came manufacturers but looked about them for wider

markets, better and cheaper processes, a broader scope of operation. Artificial stimulation in the shape of heavy tariff duties had been added to the natural stimulation of the time and of the rapid and healthy growth of the nation. Congress had taxed almost every article of use in the country to support the war, and had added to the innumerable direct taxes which it imposed an enormously expanded system of duties on imports. It had done so in part to offset the direct taxes, to enable the manufacturers, who had to pay large sums to the government on the articles they made, to keep the market nevertheless against the importers; but it had made the duties much higher than that consideration taken alone made necessary. It had raised them to a point that made profit, very great profit, certain to accrue to the manufacturer. No considerable body of manufacturers asked for such ‘protection’ that did not get it, and as much of it as they asked for, though it reduced the revenues of the government to grant it. Hardly a month went by while the war lasted that Congress did not add a new duty or increase an old one, and every industry was nursed to make the most of itself in the home markets, until its undisputed monopoly there as against foreign manufactures gave it wide margins of profit of which to avail itself in underselling competitors in the markets of the world. The country got visible proof of its extraordinary material progress at its Centennial Exhibition in Philadelphia. The last year of General Grant's presidency was the centennial year of the independence of the United States, and the anniversary was celebrated by a great international industrial exposition at the city of Philadelphia, where the Congress had sat which took counsel for the young republic at its birth. All the greater commercial and industrial nations were represented in its exhibits. Foreign governments responded very promptly to the invitation to lend their aid in securing its success, among the rest the government of Great Britain, whose defeat in arms the great fair was meant to celebrate. The presence of her official commissioners made it a festival of reconciliation. America's own bitter war of civil revolution also was over, and a time of healing at hand. The thronging crowds at Philadelphia, the gay and spacious buildings, the peaceable power of the world's workmen exhibited upon every hand spoke of good will and the brotherhood of nations, where there was no rivalry but the rivalry to serve and to enrich mankind. It was significant for America that objects of beauty marked everywhere among those exhibits the refinement and the ennobling art of the world. Throughout all the long hundred years in which they had been building a nation Americans had shown themselves children of utility, not of art. Beauty they had neglected. Everything they used showed only the plain, unstudied lines of practical serviceability. Grace was not in their thought, but efficiency. The very houses they built whether for homes or for use in their business, showed how little thought they gave to the satisfaction of the eye. Their homes were for the most part of wood and the perishable material hardly justified costly ornament or elaborate design; and yet the men of the colonial time, keeping still some of the taste of an older world, had given even their simple frame dwellings a certain grace and dignity of line, and here and there a detail, about some doorway or the columns of a stately porch, which rewarded the eye. Builders of the later time had forgotten the elder canons of taste and built without artistic perception of form even when they

built elaborately and at great cost. The same plainness, the same hard lines of mere serviceability were to be seen in almost everything the country made. The things to be seen at Philadelphia, gathered from all the world, awakened it to a new sense of form and beauty. Foreign governments had generously sent priceless works of painting and sculpture over sea to give distinction to the galleries of the Exhibition. Private citizens and local museums also had freely loaned their chief art treasures. Everywhere there was some touch of beauty, some suggested grace of form. Visitors poured by the million across the grounds and through the buildings of the Exhibition, out of every State and region of the country, and the impressions they received were never wholly obliterated. Men and women of all sorts, common and gentle alike, had from that day a keener sense of what was fitted to please the eye. The pride of life and of great success that came with the vision of national wealth and boundless resources to be got from the countless exhibits of farm and factory had in it also some touch of corrected taste, some impulse of suitable adornment. Men knew afterwards that that had been the dawn of an artistic renaissance in America which was to put her architects and artists alongside the modern masters of beauty and redeem the life of her people from its ugly severity."—W. Wilson, *History of the American peoples*, pp. 1-2, 4, 6-8.

1878.—Acquisition of Pago Pago recognized. See PAGO PAGO; SAMOA: 1830-1878.

1878.—Bland Bill.—Allison Silver Act.—"With a Democratic House throwing obstacles in his way, and with politicians of his own party unfriendly to him, Hayes could hardly hope for a brilliant administration. The only important law enacted by Congress during his Presidency was a measure to which he was opposed. This was the Bland-Allison Silver Bill, which was brought forward in 1878 with the purpose of undoing the work done by the demonetization of silver five years before. It was the wish of the silver men led by Richard P. Bland, a representative from Missouri, to repeal the law of 1873 and restore the free and unlimited coinage of silver, so that the white metal might again have 'its ancient legal equality with gold as a debt-paying money.' Bland carried his bill through the House, but in the Senate Allison of Iowa secured an amendment restricting the amount to be coined. The bill was amended provided that the secretary of the treasury should buy not less than \$2,000,000 nor more than \$4,000,000 worth of silver bullion each month and coin it into silver dollars [of 412½ grains of standard silver, or 371¼ grains of fine silver to the dollar]. When the bill went to the President it was vetoed, but the veto was not sustained. The bill came out of the West, and the debate on it and the voting showed that in the Western country there was a sentiment for the free coinage of silver that could not be comfortably ignored. The interests of the creditor classes and of Eastern business men called for the gold standard, but the owners of silver-mines and the debtor farmer of the West were insistent in their demands for the restoration of bimetalism."—S. E. Forman, *Our republic*, p. 570.—"As every Secretary of the Treasury, throughout the period in which the act was in force kept to the minimum amount, the practical result was a monthly purchase of two million dollars' worth of silver bullion. . . . The amount of silver obtainable with two million dollars obviously varies according to the price of the metal in terms of the dollars with which the pur-

chases are made. In February, 1878, when the first purchases were made, those dollars were the inconvertible United States notes, or greenbacks, worth something less than their face in gold. . . . When specie payments were resumed, on the first of January, 1879, and the greenbacks became redeemable in gold, the measure of value in the United States became gold, and the extent of the coinage of silver dollars under the act of 1878 became simply a question of how much silver bullion could be bought with two million dollars of gold. The price of silver in 1878 was, in terms of gold, not far from a dollar or an ounce of standard silver. After 1878 it went down almost steadily. The silver dollar of 412½ grains contains less than an ounce (480 grains) of standard silver. The monthly purchase of two million dollars' worth of silver therefore yielded more than two million silver dollars, the amount being obviously greater as the price of silver went lower. On the average, the monthly yield was not far from two and a half millions of silver dollars. So much each month, therefore, or thirty millions of silver dollars a year, was roughly the addition to the currency of the community from the act of 1878. An important provision of the act of 1878 was that authorizing the issue of silver certificates against the deposit of silver dollars. . . . The dollars and certificates between them constitute what we may call the silver currency of the act of 1878. The passage of that act was due to causes easily described. It was part of the opposition to the contraction of the currency and the resumption of specie payments, which forms the most important episode of our financial history between 1867 and 1879. . . . No doubt some additional force was given to the movement in favor of the use of silver from the desire of the silver-mining States and their representatives, that the price of the metal should be kept up through a larger use of it for coinage. But this element, while sometimes prominent in the agitation, was not then, as it has not been in more recent years, of any great importance by itself. The real strength of the agitation for the wider use of silver as money comes from the conviction of large masses of the people that the community has not enough money."—F. W. Taussig, *Silver situation in the United States*, pt. 1.—See also MONEY AND BANKING: Modern: 1848-1893; 1874-1890.

1880.—Twenty-fourth presidential election.—"Toward the end of his term President Hayes could write in his diary: 'I think I have the confidence of the country.' To a large extent this was doubtless true. One of his successors, Woodrow Wilson, says of him: 'He was upright, public spirited, inclined to serve the country unselfishly and in the interest of sound policy.' Carl Schurz said of him: 'Public station in this country has seldom, if ever, been graced by a man of finer

character or higher and more conscientious conception of duty and more patriotic motives.' But the leaders who controlled the machinery of the Republican party did not share in this confidence and esteem. In the minds of practical politicians Hayes was simply an 'old granny,' a 'goody goody' unfit for the sinful world in which he lived."—S. E. Forman, *Our republic*, pp. 570-571.—For the twenty-fourth presidential election, in 1880, the Republicans, meeting at Chicago, June 2, named General James A. Garfield, of Ohio, as its candidate for president and Chester A. Arthur, of New York, for vice president. The so-called Greenback party (which had appeared four years before, in the election of 1876), meeting at Chicago on June 9, put in nomination, for president, James B. Weaver of Iowa, and, for vice president, B. J. Chambers, of Texas. The main object and principle of the Greenback party was set forth in the following declarations of its platform: "That the right to make and issue money is a sovereign power to be maintained by the people for the common benefit. The delegation of this right to corporations is a surrender of the central attribute of sovereignty. . . . All money, whether metallic or paper, should be issued and its volume controlled by the government, and not by or through banking corporations, and when so issued, should be a full legal tender for all debts, public and private. . . . Legal tender currency [the greenback notes of the Civil War period] should be substituted for the notes of the national banks, the national banking system abolished, and the unlimited coinage of silver, as well as gold, established by law." The Prohibitionists (Temperance) in convention at Cleveland, June 17, nominated Neal Dow, of Maine, for president, and A. M. Thompson, of Ohio, for vice president. On June 22, at Cincinnati, the Democratic party held its convention and nominated General Winfield S. Hancock, of Pennsylvania, for president, and William H. English, of Indiana, for vice president. At the election, in November, the popular vote cast was 4,454,416 for Garfield, 4,444,952 for Hancock, 308,578 for Weaver, and 10,305 for Dow. The electoral votes were divided between Garfield and Hancock, being 214 for the former and 155 for the latter. Every former slave state was carried by the Democratic party, together with New Jersey, California and Nevada.—E. McPherson, *Handbook of politics for 1880 and 1882*.

Grand total..... 43,402,970 6,580,793

In addition the census shows 105,465 Chinese, 148 Japanese, and 66,407 civilized Indians, making a total of 50,155,783, as stated above. The immigrants arriving in the country during the preceding ten years numbered 2,944,695, of whom 989,163 were from the British Islands and 1,357,801 from other parts of Europe.—See also CENSUS: United States.

1880-1882.—Railroad building.—Abuses. See RAILROADS: 1880-1882.

1880-1906.—Anti-Chinese agitation.—Treaty suppressing immigration of coolies.—Protest against Chinese boycott of American goods. See RACE PROBLEMS: 1880-1906.

1881.—Brief administration of President Garfield.—Need for civil service reform.—Clamor for office.—Assassination of President Garfield.—“Garfield’s administration began under the most favorable conditions and with every manifestation of popular good-will. But soon there was trouble. When choosing his cabinet he selected Blaine as his secretary of state. . . . This appointment excited the wrath of [Roscoe] Conkling, who was now a member of the Senate. But the President, supported by the powerful Blaine, ventured to brave the New Yorker’s fury. Without consulting Conkling or his colleague, Thomas C. Platt, he appointed W. H. Robertson for the coveted position of collector of the port of New York. The gauntlet was now thrown down and the battle was on. Disregarding considerations of party harmony, Conkling attacked the President at every point where his armor was weak, but in vain; the onslaught did not bring the rejection of Robertson’s name. Smarting under failure . . . Conkling resigned his seat in the Senate, his fellow-senator Thomas C. Platt . . . joining him in taking leave. In order to secure a vindication for the stand they had taken, the two senators now appealed to the New York legislature for reelection; but to their surprise and mortification the legislature elected two other men. Conkling never again held public office.”—S. E. Forman, *Our republic*, p. 573.—“With Conkling defeated and out of the way, with Blaine entering upon his active foreign policy, and with the national spirit aroused by the preparations for the Centennial celebration of the British surrender at Yorktown, Garfield’s good-fortune seemed secure; but he had yet to reckon with an evil spirit which he himself had helped conjure up to aid in his campaign. The inauguration of Garfield was attended by no reversal of political parties which would warrant a general proscription of office-holders. No charge of hostility could be made against the Hayes holdovers, since Hayes was not a candidate for reelection. Yet the thirst for office carried the expectations and demands for reward quite beyond the criterion of party; every active worker for Garfield in the campaign seemed to think himself entitled to an office. It was estimated that one-third the working time of the president was absorbed by applicants for office and that six-sevenths of his callers came upon the same errand. Candidates waylaid him when he ventured from the shelter of his official residence, and followed him even to the doors of the church where he worshipped. Contributors to the campaign fund, who sought a return, crowded his waiting-room and dogged his footsteps. His service in the army and in Congress had made him a wide acquaintance which now became a misfortune. If he had erred in adopting machine methods in the campaign, he must pay the penalty. During his four months’ term of office he made 300 appointments, of which 89, or nearly a fourth, were to replace removals; Hayes, in his entire first year, made only 74 removals, or less than a tenth of his appointments. Additional evidence of the conditions existing in Washington and the need of reform was furnished by Thomas W. Brady, second assistant postmaster-general, who actually threatened President Garfield with exposure of his campaign methods if he did not call off a pending investigation into Brady’s conduct in office. Brady was a hold-over from Grant’s administration, in charge of the ‘star’ routes, or those on which the mails were carried by private contract. . . . It was found that . . . [he], with various treasury and other clerks essential to the plan, had conspired

with Senator Dorsey, of Arkansas, and other contractors, to increase the compensation on many of the two thousand star routes, dividing the profits among themselves. In the competitive bidding they secured one hundred and thirty-four routes, for which they were entitled to receive \$143,169; but this sum they raised by supplementary agreements for ‘increase and expenditure’ to \$622,808. To cover their tracks, the conspirators devised hundreds of petitions for the extension of new star routes. . . . True to this threat, Brady published a letter from Garfield to ‘My dear Hubbell,’ who as chairman of the Republican congressional committee in 1880 levied the two per cent. ‘voluntary contribution’ on the government clerks. The letter . . . expressed the hope that Brady would give them all the assistance possible and inquired how the departments generally were doing. It could be interpreted in no other way than as extorting a contribution from the government employes. Sherman had warned Garfield at the beginning of the campaign that the public sentiment in favor of reform in the civil service could not be ignored, although politicians attempted to ridicule and belittle Hayes’s efforts in that direction. The disgust of the people was increased by the events of the Brady and Dorsey ‘trial.’ Political influence was manifest at every turn, every obstacle known to astute political minds was cast in the way of the prosecution, and statements were openly made that no jury could be found in the city of Washington to convict these high and influential men. Partisan newspapers were persistent in minimizing the offence and in applying the party whitewash. On the other side, charges of jury-bribing were investigated and the foreman indicted; and five government employes, including the marshal of the District of Columbia, were dismissed from office for meddling in the case. Making use of technicalities and the law’s delay, all the accused eventually escaped punishment except one small offender who was probably the least guilty. In the midst of these exposures, with the clamor for office filling his ears, and with the party leaders in New York contending for supremacy, President Garfield was assassinated under conditions which pointed directly to the spoils system as the cause. Accompanied by Secretary Blaine, he planned to leave Washington on a visit to his *alma mater*, Williams College, July 2, 1881. As the two entered the Pennsylvania Railroad station in that city, one Charles J. Guiteau fired two bullets into the president’s back. The wounded man slowly succumbed and passed away September 19. The oath of office was taken by Vice-President Arthur at his home in New York, September 20, and repeated a few days later in Washington. . . . Garfield’s murderer in public statements declared that he ‘removed’ the president as a ‘political necessity,’ because party dissensions demanded it. He had been by turns preacher, editor, reformer, and politician, had allied himself with the Republican campaign managers, and had been a persistent office-seeker since the inauguration. . . . Guiteau was arraigned in the courts of the District of Columbia, pleaded not guilty, was pronounced sane by medical experts, found guilty, and was executed in Washington, June 30, 1882, lacking two days of a year from the date on which the crime was committed. . . . Conditions existing at the time of Garfield’s assassination called attention not only to the evils of the demand for office, but also to the necessity of providing a more dependable succession for the presidency. If some assassin had removed Arthur during the first months of his ad-

ministration, the United States would have been without a legal head. The Constitution leaves Congress to arrange a sequence beyond the vice-president; by act of 1792 it was provided that the president *pro tem* of the Senate and the Speaker of the House of Representatives should follow the vice-president in order; and this was deemed sufficient. . . . Although the hazard of the situation at this time was admitted, nothing was done until the 'presidential succession' act of 1886 [see below: 1886], which provided a further succession of members of the cabinet in order, beginning with the secretary of state."—E. E. Sparks, *National development, 1877-1885*, pp. 187-191, 193-194.

1881-1885.—President Arthur's administration.—"The successor of Garfield, President Arthur, . . . was able, and there never was the slightest spot upon his integrity; but [in his early days] he was lively, jocose, easy-going, with little appearance of devotion to work, dashing off whatever he had to do with ease and accuracy. . . . His nomination to the Vice-Presidency, which on the death of Garfield led him to the Presidency, was very curious, and an account of it given . . . [by] a member of the Garfield cabinet, . . . later an ambassador in Europe, was as follows: After the defeat of the 'Stalwarts,' who had fought so desperately for the renomination of General Grant at the Chicago Convention of 1880, the victorious side of the convention determined to concede to them, as an olive-branch, the Vice-Presidency, and with this intent . . . [a number of delegates] who had been especially active in preventing Grant's renomination went to the room of the New York delegation, which had taken the leading part in his support, knocked at the door, and called for Mr. Levi P. Morton . . . [and] said to him, 'We wish to give the Vice-Presidency to New York as a token of good will, and you are the man who should take it; don't fail to accept it.' Mr. Morton answered that he had but a moment before, in this conference of his delegation, declined the nomination. At this the visitors said, 'Go back instantly and tell them that you have reconsidered and will accept; we will see that the convention nominates you.' Mr. Morton started to follow this advice, but was just too late: . . . the place which he had declined had been offered to General Arthur. . . . Up to the time when the Presidency devolved upon him General Arthur had shown no qualities which would have suggested him for that high office. . . . But the change in him on taking the Presidency was amazing. Up to that time he had been known as one of Mr. Conkling's henchmen, though of the better sort. As such he had held the collectorship of the port of New York, and as such, during his occupancy of the Vice-Presidency, he had visited Albany and done his best, though in vain, to secure Mr. Conkling's renomination; but immediately on his elevation to the Presidency all this was changed, and there is excellent authority for the statement that when Mr. Conkling wished him to continue, as President, in the subservient position which he had taken as Vice-President, Mr. Arthur had refused, and when taxed with ingratitude he said: 'No. For the Vice-Presidency I was indebted to Mr. Conkling, but for the Presidency of the United States my debt is to the Almighty.' . . . Rarely has there been a better or more dignified administration; the new Secretary of State, Mr. Frelinghuysen, was in every

respect fitted for his office, and the other men whom Mr. Arthur summoned about him were satisfactory."—A. D. White, *Autobiography*, pp. 192-194.—"Improvements in the coast defences were begun under . . . [President Arthur's] administration, and the building of a steel navy inaugurated. Letter postage was reduced, special delivery of letters commenced, and the star-route frauds were stamped out. Those popular acts, due largely to the suggestion of the president, would seem to warrant him and his party a continuance in power. Unfortunately, the financial depression continued. The crops of 1883, although surpassing the unfortunate yield of 1881, were scarcely up to the average, and the corn crop fell nearly four hundred million bushels behind. Large quantities of stocks and bonds had been watered by extensions and consolidations which could not be expected to yield immediate dividends, and they declined steadily during the year. Northern Pacific threw on the market in October, 1883, an issue of twenty million dollars and created a mild panic. More than ten thousand firms became bankrupt during 1882, a larger number than marked any year since 1873. Causes for the depression were found in over-production, financial troubles abroad, over-railroad building, and capital lying idle because rates of interest were unattractive. For no one of these misfortunes was President Arthur accountable; yet with proverbial short sight the people placed the responsibility on the shoulders of the party in power. Conviction was growing that the tariff enriched the few at the expense of the many; and disappointment over the failure of the Republican party to revise the tariff in 1880-1882, when it was in full command of the government, rapidly changed to a desire for revenge. Discontent in the party ranged from the habitually disgruntled, who felt that the party had been in power long enough, to thoughtful reformers, who accused the party leaders of being professional politicians, guilty of corrupt practices, and negligent of needed reforms. In truth, the germ of reform was in the air. Anti-monopolists held meetings in various states demanding restriction of corporations by the federal government, post-office savings-banks, government ownership of telegraphs, abolition of convict labor, woman suffrage, and legal restraint of combinations intended to advance prices. Some of this animosity was engendered by a combination effected in 1881, whereby the Western Union Telegraph Company absorbed its great rival, the American Union Company."—E. E. Sparks, *National development, 1877-1885*, pp. 328-329.

1882-1889.—New industrial age.—Formation of Standard Oil and other trusts.—"Standard Oil was dominant by the beginning of the '80's, and concentration had begun in sugar, steel and other basic industries. Here was an economic tendency of revolutionary significance—the organization of business in a way that was bound to change the outlook of a whole nation. It had vast potentialities for good and evil—all it wanted was harnessing and directing. But the new thing did not fit into the little outlines and verbiages which served as a philosophy for our political hacks. So they gaped at it and let it run wild, called it names,

and threw stones at it. And by that time the force was too big for them."—W. Lippmann, *Preface to politics*, p. 27.—See also TRUSTS: United States: Standard Oil Company; 1904-1909; 1906-1910; 1907: Chief existing combinations; 1911: Supreme Court decisions; International: Struggle for oil; CAPITALISM: 19th century: United States.

1884.—Financial disasters.—"The month of May, 1884, concludes the prosperous period which

Appearance of the Independents or "Mugwumps."—James G. Blaine, of Maine, and General John A. Logan, of Illinois, nominated at Chicago, June 3, were the Republican candidates for president and vice president, in the election of 1884. The Democratic national convention, held, likewise, at Chicago, July 8, put forward Governor Grover Cleveland, of New York, as its candidate for president, with Thomas A. Hendricks, of Indiana, for vice president. General Benjamin F. Butler, of Massachusetts, and General A. M. West, of Mississippi, received double nominations, from the National or Greenback party and an Anti-Monopoly party (so-called) for president and vice president, respectively; while the Prohibitionists put in nomination John P. St. John, of Kansas, and William Daniel, of Maryland. The election was an exceedingly close one, its result turning upon a plurality of only 1,149 in New York, by which that state was given to Cleveland, with its thirty-six electoral votes, securing his election. The total popular vote counted as follows: Cleveland, 4,874,986; Blaine, 4,851,981; Butler, 175,370; St. John, 150,369. The electoral vote was divided between Cleveland and Blaine, 219 for the former and 182 for the latter.—E. McPherson, *Handbook of politics, 1884 and 1886*.—*Appleton's Annual Cyclopaedia*, 1884.—"At the presidential election of 1884 a section of the Republican party, more important by the intelligence and social position of the men who composed it than by its voting power, 'bolted' (to use the technical term) from their party, and refused to support Mr. Blaine. Some simply abstained, some, obeying the impulse to vote which is strong in good citizens in America, voted for Mr. St. John, the Prohibitionist candidate, though well aware that this was practically the same thing as abstention. The majority, however, voted against their party for Mr. Cleveland, the Democratic candidate; and it seems to have been the transference of their vote which turned the balance in New York State, and thereby determined the issue of the whole election in Mr. Cleveland's favour." This group "goes by the name of Mugwumps. . . . The name is said to be formed from an Indian word denoting a chief or aged wise man, and was applied by the 'straight-out' Republicans to their bolting brethren as a term of ridicule. It was then taken up by the latter as a term of compliment; though the description they used formally in 1884 was that of 'Independent Republicans.' . . . [Their chief doctrine was] the necessity of reforming the civil service by making appointments without reference to party, . . . and a general reform in the methods of politics by selecting men for Federal, State, and municipal offices, with reference rather to personal fitness than to political affiliations."—J. Bryce, *American commonwealth*, v. 2, ch. 56, with footnote.—"Mr. Blaine was an old campaigner. He knew that his record would be violently assailed. He felt, however, that he had drawn all the enemy's fire in 1876 and 1880, and that in consequence their ammunition had been practically exhausted. He had no intention of conducting a defensive battle. With all his natural aggressiveness, therefore, he began to carry the war into the enemy's country. At first he trusted to the old sectional issue which had won so many elections for his party. The memories of the Civil War were again invoked. The perils of the 'Solid South' and of 'the South once more in the saddle' were pictured by a thousand party orators. But somehow or other this issue had, in sporting parlance, gone stale. . . . The tariff question was then taken up and ham-

CARTOON OF BLAINE
BY THOMAS NAST, 1884

followed the crisis of 1873. During this period the most gigantic speculations in railroads occurred; the zenith of the movement was in 1880, and as early as 1881 a retrograde movement began, only to end in the disasters in question. The decline in prices had been steady for three years; they had sunk little by little under the influence of a ruinous competition, caused by the number of new lines and the lowering of rates, but above all through the manipulations by the managers on a scale unexampled until now. In connection with the disasters of May, 1884, the names of certain speculators who misused other people's money, such as Ward, of Grant & Ward; Fish, President of the Marine Bank; and John C. Eno, of the Second National Bank, will long be remembered. General Grant, who was a silent partner in Ward's concern, was an innocent sufferer, both in fortune and reputation."—C. Juglar, *Brief history of panics*, pp. 102-103.

1884.—Twenty-fifth presidential election.—

mered at industriously. This had proved sufficient to pull Mr. Garfield through in 1880, and much was hoped from it by Mr. Blaine. The Democratic platform, however, had been very wisely drawn, and its tariff plank decidedly appealed to the common sense of the American people. . . . In this there was no suggestion of the favourite Republican bogey of Free Trade. It was instead a lucid definition of Protection as Protection had been understood by Lincoln and by the Republican financiers of his administration. Hence the tariff issue was another weapon which bent and broke in the hands of those who tried to wield it. Seeing the futility of their efforts to rekindle the war spirit or to frighten the manufacturing interests, the Republican managers, in their desperation, descended to the lower plane of personal abuse, justifying themselves by citing the attacks which Democrats and Independents were making upon Mr. Blaine. From that moment the contest became shameful and indecent to an almost incredible degree. No such campaign of slander had ever before been waged. . . . Late in October it became evident that the vote of New York would decide the result of the election; and both parties concentrated upon that State their intensest energies. Mr. Cleveland as Governor had, . . . offended the labour vote, the Roman Catholics, and Tammany Hall—three immensely powerful elements. Mr. Blaine, on the other hand, because of his Irish descent, his Catholic mother, and his professed sympathies with the cause of Ireland and the so-called Irish 'patriots,' was strong precisely where Cleveland was known to be most vulnerable. Yet in New York Mr. Blaine had made one venomous and implacable enemy. This was Roscoe Conkling, with whom, so far back as 1866, there had been established something like a personal feud. . . . His [Conkling's] power in New York was great, and the Republican managers could do nothing with him. . . . [Nevertheless when] on the evening of the 18th of November, the official count was made; [it was found] that a plurality of 1149 votes in the State of New York had given the presidency to Mr. Cleveland. . . . [The vote in New York was probably influenced to a certain extent by an address made by the Reverend S. D. Burchard, one of Blaine's supporters, in which he said that he and his friends would not vote for the party of "Rum, Romanism and Rebellion." Blaine took no notice of this thrust and in consequence was accused by the Democratic press of acquiescing in an insult to the Roman Catholic voters.] The election of Mr. Cleveland marks an epoch in our national history, the importance of which can only now be fully understood. It meant that, with the exception of the negro question, the issues springing from the Civil War had been definitely settled. It meant the beginning of a true re-union of all States and sections. It meant that the nation had turned its back upon the past, and was about to move forward with confidence and courage to a future of material prosperity, and to a greatness of which no one at that time could form an adequate conception. And it meant, although none then surmised it, that, as a result of new conditions, there was ultimately to be effected a momentous change in the whole social and political structure of the American republic."—H. T. Peck, *Twenty years of the republic*, pp. 32-34, 40-42, 48.

1885-1891.—Indian problem.—Dawes Bill.—Education Act.—Reservations.—Hostilities between whites and Indians.—"The Indians did not escape from the pressure of the population westward; their frontier was rapidly disappearing, for their reservations stood in the way of great railway systems to the Pacific. Even the Indian Territory, once remote from civilization, was in the path of settlement, and ranchers looked with envious eye upon the vast domains given over to hunting. 'The Indian must make his final stand for existence where he is now,' said Lamar, secretary of the interior, in 1885; no longer could he be pushed back into the wilderness. With the filling up of the country to the west, another removal of the Indian was impracticable; the immediate problem, therefore, was the adjustment of Indian barbarism to Anglo-Saxon civilization. The alert American, busy with the interests of modern life, would not tolerate the uneconomic use of millions of acres over to Indian occupancy; and the humanitarian friends of the Indian slowly came to the conviction that a life of dependence upon government rations from day to day accomplished little in the way of permanent progress. A new solution was therefore proposed, the breaking up of the tribal relation and substitution of individual ownership in place of tribal ownership on the reservation. In 1887 the so-called Dawes bill was enacted, providing for the allotment of lands in severalty; to each head of a family a quarter-section was to be granted, with smaller allotments to others; and in order to protect the grantee against land-sharks and speculators, conveyance of the land thus allotted was prohibited for a period of twenty-five years. Along with these material grants, under the Dawes act the Indian in severalty received the right of citizenship. There was hope that when the Indian became a citizen, with the individual ownership of a farm, the system of rations, annuities, and tribal institutions would disappear. [See also OKLAHOMA: 1885-1887.] In order to satisfy the land-hunger of the whites, efforts were made to buy from the Indians portions of their reservations, wherewith to enlarge the public domain for settlement by homesteaders. The Indian reservations in 1885 amounted to 225,000 square miles, one-eighth of which would suffice to furnish a half-section of land—320 acres—to each man, woman, and child of the 250,000 Indians west of the Mississippi. The government, however, instead of paying the money directly to the Indians, invested the funds for the benefit of the tribes. More liberal appropriations were also made for the education of Indians, until, in 1888, 15,000 Indian youths, or more than a third of the total number considered 'teachable,' were enrolled in schools. In 1891 a compulsory education act was passed by Congress, and all children of a suitable age were brought under its jurisdiction; for some of them, government day-schools were provided; but the majority were taken from their homes and placed in reservation boarding-

schools, or in training-schools outside the reservations, as at Carlisle, Pennsylvania, or at the Haskell Institute in Lawrence, Kansas. The Indian problem seemed at last in a fair way of settlement; certainly there was outward peace, though occasionally there was an outbreak, usually because of disregard of Indian treaty rights by careless or over-aggressive settlers, and particularly by cattle-men, as was shown by an unwarranted attack upon the Utes in Colorado in 1887. In 1885 the turbulent Apaches in New Mexico went on the warpath, murdered a hundred persons, and threw the Southwest into a panic. The Indians also suffered from the bad management of some of the agencies; rations were stolen by dishonest officials, and renewed charges were made that the government was not living up to its

GROVER CLEVELAND

treaty obligations. A long record of such provocations led a portion of the Sioux tribe in Dakota to engage in hostilities in 1890. Medicine-men preached the coming of a messiah who should give the Indians power to destroy their enemies, and ghost dances wrought the tribe up to a religious frenzy. Troops were quickly assembled under General Miles, and there was open warfare, resulting in the killing of five hundred Indians and thirty soldiers in the battle of Wounded Knee, December 29, 1890. The rich district of Oklahoma—the beautiful land—within the limits of the Indian Territory, was especially coveted by the white man. Lawless 'boomers,' as far back as 1880, had sought to occupy this land, but were driven off by Federal troops. In 1885 President Cleveland warned off intruders. The land could not be opened up except by executive proclamation; and President Cleveland continued obdurate in his determination to keep faith with

the tribes. A horde of restless and angry pioneers crowded to the frontier, and frequently molested the Indians within the territory. Finally with the consent of the Indian nations, the land was purchased by the government, and President Harrison issued the desired proclamation permitting entrance at twelve o'clock, noon, April 22, 1889."—D. R. Dewey, *National problems*, pp. 6-10.— See also OKLAHOMA: 1885: Threatened Indian outbreak.

1885-1897. — Political unrest. — Increase and shifting of population. — Growth of cities. — Development of manufactures. — Production of metals. — Influence of Grangers. — "The years from 1885 to 1897 cover a period of unsettlement. Action and reaction followed in quick succession. The period lacks definiteness either of purpose or of progress; there was no unanimity of opinion as to the facts of economic life or as to national policy. Old political platforms were not applicable to the new problems. Party politics became confused, and shrewd political leaders were at a loss which way to turn. The result was uncertainty, vacillation, and inconsistency; independence of judgment aroused dissensions, and was frequently rewarded by defeat and retirement from public life. A Democratic president and House opposed by a Republican Senate mark the first four years; then for two brief years (1889-1891) there was a united Republican executive and Congress; a Democratic House blocked legislation during the next two years. For an equal term the Democrats were in possession of the executive and the legislative branch (1893-1895), and this was again followed by a divided Congress. Meanwhile there were disagreements within the two parties. On monetary questions the West and South did not agree with the East; on taxation the Democratic party was hopelessly split. . . . Futile attempts were made to restrain the increasing power of corporations and organized capital. The addition of new racial stocks to the population and the inefficiency of municipal government also widened the field of agitation. The economic life of the country was unstable; a slow recovery from the depression of 1884 led to imprudent undertakings, while commercial recklessness and legislative error destroyed prosperity. Once more the nation had to climb the long and arduous road leading to confidence and enterprise. At every turn—from recovery to panic, and then to fresh recovery—perplexing problems arose. Some of these were new, such as the control of combinations of wealth, but more were disguised under new forms, such as the relation of public office to party responsibility. Between 1880 and the beginning of the new century twenty-six million people were added to the population, or more than the entire number of inhabitants in 1850. . . . Population quickly followed the construction of railroads through the northern tier of states and territories stretching from Minnesota to Oregon, so that in twenty years the number of people in this vast domain more than trebled. Farmers settled in Dakota so rapidly that single counties with scarcely an inhabitant at the beginning of the summer were well populated by the end of the year. Rich minerals of gold, silver, and copper were discovered in Idaho and Montana; while in Washington Territory timber supplies of great value were open to a market. South of this border growth, violent changes appeared in the current of migration. Between 1880 and 1890 population declined in the agricultural counties of western Illinois and eastern Iowa, because of the opening

up of more promising land to the west. In the next ten years many farmers in Nebraska, Colorado, and South Dakota, discouraged by the deficiency of water and the intense winter cold, abandoned their homes. Oklahoma and the Indian Territory furnished an outlet, and many farmers moved northward into Canada. Taking the entire area west of the Mississippi, the rate of increase of population was not much more than half as great in the last ten years of the century as in the previous decade. . . . The growth of municipalities continued unabated; the number of cities with eight thousand or more inhabitants nearly doubled between 1880 and 1890. In 1880 the urban population constituted less than a quarter (22.6 per cent.) of the total population; by 1890 it had increased to nearly thirty per cent of the total, and by 1900 to a full third. In the North Atlantic division of states, covering New England, New York, New Jersey, and Pennsylvania, the city growth was even more marked, embracing in 1890 more than half of the population. . . . Rural sections in many states lost in population. In New England nearly two-thirds of the townships had a smaller number of inhabitants in 1890 than in 1880. This movement however, was not confined to the East; Ohio and Illinois disclosed nearly as large a percentage of loss, and in Iowa 686 out of 1513 townships fell off. The relative importance of agriculture to the other great branches of industry declined during the period under consideration. . . . The development of manufactures was the great industrial characteristic of this period. The number of the employés and the value of the product was more than doubled. In this growth the steel industry took a leading part, the value of its output increasing eightfold. By 1892 imports and exports of manufactures of iron and steel balanced, and henceforth the United States exported more than she imported. Steel was employed for many new purposes, as, for example, freight-cars. Its use made possible the construction of office-buildings running even to thirty stories in height and requiring as much as a thousand tons of steel. Another marked feature was the establishment of cotton manufacturers in the South, where water-power, low-priced labor of women and children, long hours of labor, and the cheap cost of living gave advantages which quickly attracted capital; in less than twenty years the number of spindles operated in factories in the southern states was increased five times, while the North made but little gain. . . . The application of electricity to industrial arts was pursued with eager activity. Arc-lighting was introduced in 1880, and this was followed by the use of the incandescent filament. . . . [New industries for the production of electric apparatus and supplies of all sorts] quickened the demand for copper, and new mines increased the output from 27,000 tons, in 1880, to 270,000 tons in 1900—half the world's product. The production of pig-iron trebled in the same period, giving to the United States the leadership over every other nation in this staple. Here, again, the South showed a remarkable economic development: a great mineral section stretching from West Virginia to northern Alabama, seven hundred miles long and one hundred and fifty miles wide, was opened up, and through proximity of coking coal and limestone to the iron, gave every assurance of an early and successful development of the manufacture of steel products. Alabama became the centre of the iron industry, and this state, which in 1880 occupied the tenth

place in the output of pig-iron, rose to third in rank ten years later. In 1890 the South produced as much coal, iron-ore, and pig-iron as the whole country did in 1870. Birmingham, Alabama, began indeed to send pig-iron to northern and western markets. Down to the panic year, 1893, large additions were made to railway mileage. The greater part of new construction was devoted to finishing the systems reaching through the West to the Pacific coast, and the filling in of branches and feeders. . . . The telephone, which as a business started in 1880, became a part of the machinery of communication. . . . Its convenience to the home, both for business and social purposes, led to the establishment of exchanges in suburban districts of cities and in small towns, until even the outlying farms were brought within the range of its ameliorating influences. In 1900 there were over forty-two hundred exchanges with nearly two million subscribers, a ratio of a telephone to every forty of the population."—D. R. Dewey, *National problems, 1885-1897*, pp. 3-6, 12-13, 15-20.—"The Granger movement, unsuccessful in itself, started the country upon an era of legislative regulation of industry. State railroad boards were gradually set up, and the first Interstate Commerce Law was passed in 1887. . . . [See below: 1887: Interstate, etc.] Most of the states enacted anti-trust laws, and the Sherman Anti-trust Act was passed in 1890. After this time the agitation for better control of the great combinations went on with vigor, resulting in the establishment of the federal Bureau of Corporations, the Federal Trade Commission, and the passage of the Clayton Act. The events of the period may be considered to constitute another revolution in the turn of economic history,—the combinations being the antitheses of individualism so ardently preached in the early years of the century, and the movement for regulation being likewise a departure from the doctrine of *laissez-faire*."—L. R. Wells, *Industrial history of the United States*, pp. 564, 565.

1886.—Act to provide successions to the presidency in case of death.—The death of President Garfield before the first meeting of the Congress elected in 1880, had shown the possibility of an administrative lacuna, which, it was felt, should be guarded against. "An act of 1791 provided that in case of the death, resignation, or disability of both president and vice-president, the succession should devolve first upon the president pro tempore of the Senate and then upon the speaker of the House of Representatives, until the disability should be removed or a new election be held. But supposing a newly elected president to die and be succeeded by the vice-president before the assembling of the newly elected Congress; then there would be no president pro tempore of the Senate and no speaker of the House of Representatives, and thus the death of one person might cause the presidency to lapse. Moreover the presiding officers of the two houses of Congress might be members of the party defeated in the last presidential election; indeed, this is often the case. Sound policy and fair dealing require that a victorious party shall not be turned out because of the death of the president and vice-president. Accordingly an act of 1886 provided that in such an event the succession should devolve upon the members of the cabinet in the following order:

secretary of state, secretary of the treasury, secretary of war, attorney-general, postmaster-general, secretary of the navy, secretary of the interior. This would seem to be ample provision against a lapse."—J. Fiske, *Civil government in the United States*, ch. 8.

1886-1887.—Repeal of the Tenure-of-Office Act.—The question of the force and validity of the Tenure-of-Office Act (see above: 1866-1867 [December-March]) in its interference with the power of the executive to make removals from office, was brought to a sharp issue with the Senate by President Cleveland. He had suspended from office a district attorney in Alabama, and the Senate, when Congress came together, called on him for the grounds of his action, and for the papers relating to the case. He refused to comply with the demand in an able message, which strenuously asserted that the accountability of the President for such action was to the people alone. "On behalf of the President it was contended that his power of removal was absolute and not in any way subject to the consent of the Senate; that the Senate had no right to call for papers relating to the subject as to which is could take no action, and that the papers relating to suspensions were not official but were private. . . . On behalf of the Senate it was contended that the power of removal was not involved; that the suspensions and the appointments under consideration were made under the Tenure-of-office Act, and were expressly referred, by the President in the nomination messages, to that law; that under that law the removal of an officer was subject to the approval of the Senate; that such officer would resume his office, if the Senate took no action, at the end of the session; that the removal of an officer and the appointment of a successor were connected subjects, to be considered together; that the right of the Houses of Congress to be informed as to the acts of the Executive Department could not be limited as claimed; and, finally, that the particular resolution called for papers relating to the management of his office by the officer suspended, which was a proper subject of inquiry."—B. Harrison, *This country of ours*, ch. 6.—The effect of the discussion raised was to bring about, in March, 1887, the passage of a bill repealing the Tenure-of-office Act.—Based on Grover Cleveland, *Independence of the executive* (*Atlantic Monthly*, June-July, 1900).

1887.—Hatch Act passed, providing for experiment stations. See EDUCATION, AGRICULTURAL: United States: Experiment stations.

1887.—Electoral Count Act.—To avoid the recurrence of any such dangerous question as that which arose in 1876, relative to the counting of electoral votes for president and vice-president (see above: 1876-1877), Congress passed an act, approved February 3, 1887, which provides that any contest regarding the choice of electors must be decided, as provided by the laws of the state, at least six days before the meeting of the electors on the second Monday in January; that a certificate of election must be issued by the state executive in triplicate to the electors and transmitted by them to the president of the Senate with their votes for president and vice-president; that objection to the reception of any return must

be in writing, and signed by one member of each House. In the language of the act: "No electoral vote or votes from any State which shall have been regularly given by electors whose appointment has been lawfully certified to, according to Section 3 of this Act, from which but one return has been received, shall be rejected, but the two Houses concurrently may reject the vote or votes when they agree that such vote, or votes have not been so regularly given by electors whose appointment has been so certified. If more than one return, or paper purporting to be a return, from a State shall have been received by the President of the Senate, those votes, and those only, shall be counted which shall have been regularly given by the electors who are shown by the determination mentioned in Section 2 of this Act to have been appointed, if the determination in said section provided for shall have been made. . . . But in case there shall arise the question which of two or more of such State authorities determining what electors have been appointed, as mentioned in Section 2 of this Act, is the lawful tribunal of such State, the votes regularly given to those electors, and those only, of such State shall be counted whose title as electors the two Houses, acting separately, shall concurrently decide is supported by the decision of such State so authorized by its laws. And in such case of more than one return, or paper purporting to be a return, from a State, if there shall have been no such determination of the question in the State aforesaid, then those votes, and those only, shall be counted which the two Houses shall concurrently decide were cast by lawful electors appointed in accordance with the laws of the State, unless the two Houses, acting separately, shall concurrently decide such votes not to be the lawful votes of the legally appointed electors of such State." If the two Houses disagree, the votes of those electors holding the certificate of the state executive shall be counted.

1887.—Inter-State Commerce Act.—By an act of Congress approved February 4, 1887, the railroads of the country passing through more than one state were placed under the supervision of the general government in certain particulars. The act forbade special rates to special shippers, and the charging for the carriage of passengers or a given class of freight—conditions being the same—any greater compensation for a shorter than for a longer haul over the same line in the same direction.—See also CAPITALISM: 19th century: Regulation; RAILROADS: 1887-1906.

1888.—Twenty-sixth presidential election.—President Cleveland was nominated for re-election by the Democratic national convention, held at St. Louis, June 5, with Allen G. Thurman, of Ohio, for vice president. The Republican convention, at Chicago, June 19, named Benjamin Harrison, of Indiana, for president, and Levi P. Morton, of New York, for vice president. At Indianapolis, May 30, the Prohibition party had already put in nomination General Clinton B. Fisk, of New Jersey, and John A. Brooks, of Missouri, for president and vice president, respectively. The Union Labor party, convening at Cincinnati, May 15, had nominated Alson J.

Streeter, of Illinois, and Charles E. Cunningham, of Arkansas; the United Labor party, a rival organization, had put forward Robert H. Cowdrey, of Illinois, and William H. T. Wakefield, of Kansas; and still another labor ticket had been brought forward in February, at Washington, where an organization calling itself the Industrial Reform party, put Albert E. Redstone, of California, and John Colvin, of Kansas, in nomination. At Des Moines, Iowa, May 15, the National Equal Rights party had named a woman for the presidency, in the person of Mrs. Belva Lockwood, of Washington, with Alfred H. Love, of Philadelphia, named for vice president. Finally, in August, an organization attempting to revive the American party of former days, convening at Washington, presented James L. Curtis, of New York, for president, and James R. Greer of Tennessee (who declined the honor) for vice president. In the ensuing election, the popular vote was distributed as follows: Cleveland 5,540,329; Harrison, 5,439,853; Fisk, 249,506; Streeter, 146,935; Cowdrey, 2,818; Curtis, 1,591. Notwithstanding the greater number of votes cast for Cleveland (his plurality being 100,476), Harrison was chosen president by the electoral votes, receiving 233, while 168 were given for Cleveland.—Based on *Appletons' Annual Cyclopædia*, 1888, pp. 773-782, 799-828.—“An analysis of the vote showed that Mr. Cleveland had been defeated by a very narrow margin. Even in Mr. Harrison's own State he had come within 2,000 votes of a majority, and had obviously lost New York only through the treachery of his own party.”—H. T. Peck, *Twenty years of the republic*, p. 165.—“In the contest of 1888 the personalities of the candidates did not become an issue as in 1884. Consequently there was very little mudslinging. The overshadowing subject was the tariff, and never before in all our history did that subject figure so conspicuously in a Presidential campaign. The contention of the Republicans was that the American system of protection must be maintained, and they labored in almost desperate fashion to convince the voters that if the Democrats won the system would be destroyed. Manufacturing interests were alarmed by the cry of ‘British free trade.’ A spectacular feature of the campaign was the organization of thousands of political clubs. Of these the Republicans had more than 6,000 while the Democrats had about 3,000. Through the clubs a ‘campaign of education’ was conducted; tons of pamphlets were circulated, and voters were given partisan instruction on the question at issue. But the managers of the campaign did not rely upon ‘education’ alone. Regarding money as the ‘sinews of war,’ they provided themselves with the largest campaign funds that up to that time had ever been raised. The Democrats relied chiefly upon assessments on office-holders, while the Republicans ‘put the manufacturers under the fire and fried the fat out of them.’ The contributions which flowed into the campaign treasuries was spent like water. More was spent by the Republicans because they had more.”—S. E. Forman, *Our republic*, p. 612.

1888-1892.—Agriculturists in politics.—Farmers' Alliance.—Growth of Populism.—“The Republican protective policy had its strongest supporters among the industrial communities of the East where the profits of manufacture were distributed. In the West, where the agricultural staples had produced a simplicity of interest somewhat resembling those of the Old South in its

cotton crop, the advantage of protection was questioned even in Republican communities. The Granger States and the Prairie States were normally Republican, but they had experienced falling prices for their corn and wheat, as the South had for its cotton, in the eighties, and had listened encouragingly to the advocates of tariff reform. . . . The Republican leaders felt the discontent, and brought forward the agricultural schedule of the McKinley Bill to appease it, but dissatisfaction increased in 1889 and 1890 through most of the farming sections. The farmer in the South was directly affected by the falling price of cotton, and retained his hereditary aversion to the protective tariff. He could not believe that either party was working in his interests. The dominant issues of the eighties did not touch his problems. . . . The Southern farmer was without interest in the pension system and was prone to criticize it. The Fourteenth Amendment had forced the

BENJAMIN HARRISON

repudiation of the whole Confederate debt, leaving the Southern veterans compelled to pay taxes that were disbursed for the benefit of Union veterans and debarred from enjoying similar rewards. They could not turn Republican, yet in their own party they saw men who failed to represent them. In the North agriculture was depressed and the farmers were discontented. In many regions the farms were worn out. Scientific farming was beginning to be talked about to some extent, but was little practiced. The improvements in transportation had brought the younger and more fertile lands of the West into competition with the East for the city markets. Cattle, raised on the plains and slaughtered at Kansas City or Chicago, were offered for sale in New York and Philadelphia. Western fruits of superior quality were competing with the common varieties of the Eastern orchards. Here, as in the South, the farmers saw the parties quarreling over issues that touched the manufacturing classes, but disregarding those of agriculture. In the West, however, that agricultural discontent was keenest.

In no other region were uniform conditions to be found over so large an area. The Granger States had shown how uniformly in discontent may bring forth political readjustments. . . . The frontier of the eighties presented new obstacles in its doubtful rainfall and its experimental farmers. It contained as well the conditions that had always prevailed along the edge of settlement. Transportation was vital to its life,—as vital as it had been in the Granger States,—yet was nearly as unregulated. The Interstate Commerce Law of 1887 had little noticeable immediate effect. Discrimination, unreasonable rates and overcapitalization were still grievances that affected the West. The new activity of organized labor shown in the Western strikes of 1885 and 1886 added another obstacle to the easy prosperity of farmers who needed uninterrupted train service. . . . An anti-corporation movement, too, might reasonably be expected in this new frontier. Producing only the raw products of agriculture, its inhabitants . . . were impressed with the cost of what they had to buy and the low price of what they sold. They were ready listeners to agitators against the trusts. . . . The crisis which precipitated Western discontent into politics came in 1889 when rainfall declined and crops failed. . . . Since the high day of the Granger movement there had always been associations among the farmers and organizations striving to get their votes. The Grange had itself continued as a social and economic bond after its attack upon the railroads. There had been a Farmers' Union and an Agricultural Wheel. The great success of the Knights of Labor and the American Federation of Labor had had imitators who were less successful because farming had been too profitable to give much room for organized discontent, while in times of prosperity the farmer was an individualist. A new activity among the farmers' papers was now an evidence of a growing desire to get the advantage of coöperation. The greatest farmer organization of the eighties was the Farmers' Alliance, a loose federation of agricultural clubs that reflected local conditions, West and South. In the South, it was noted in 1888 as 'growing rapidly,' but 'only incidentally of political importance.' In Dakota, it had been active since 1885, conducting for its members fire and hail insurance, a purchasing department, and an elevator company. In Texas it was building cotton and woolen mills. The machinery of this organization was used by the farmers in stating their common cause, and as their aims broadened it merged, during 1890, into a People's Party. [See also NATIONAL FARMERS' ALLIANCE.] In Kansas, during the summer of this year, the movement broke over the lines of both old parties and had such success that its promoters thought a new political party had been born. Agricultural discontent, growing with the hard times of 1889, had been noticed, but there had been no means of measuring it until Congress adjourned after the passage of the McKinley Bill and the members came home to conduct the congressional campaign of 1890. They found that the recent law had become the chief issue before them. . . . The tariff and the way it had been passed were used against them by the Democrats and the Farmers' Alliance. . . . Corrupt methods in framing the schedules furnished an influential argument throughout the West. Even in the East the tariff reformers asserted that undue favors had been done for greedy interests; that manufacturers who had bought immunity by their contributions to Quay's

campaign fund had been rewarded with increased protection. The farmers believed these charges, plausible though unprobable, for they were disposed to believe that both the great parties were interested only in selfish exploitation of the Government to the advantage of politicians. In every State Republican candidates had to meet this fire as well as the local issues. . . . The Democrats defeated the Republicans in the East while the Farmers' Alliance undermined them in the West. In Kansas and Nebraska the Alliance controlled the result, sent their own men to Washington, and secured the Kansas Legislature which returned the first Populist Senator. [See also KANSAS: 1880-1890.] In several States fusion tickets were successful with Democratic and Alliance support. In the South, Democrats found it aided them in winning nomination—for the real Southern elections was within this party and not at the polls—to assert that they were and had been farmers. . . . Union between the Knights of Labor and the Farmers' Alliance for political purposes was the aim of the promoters of the People's Party, a party that was to right all the wrongs from which the plain people suffered and restore the Government to their hands. Until the next presidential election they had time to organize for the crusade. . . . The election of 1890 stunned and bewildered both old parties. The Republicans lost their control of the Lower House, while the Democrats paid for their victory the price of a partial alliance with a new movement whose weight they could only estimate. Populism was engendered by local troubles in the West and South, but its name now acquired a national usage and its leaders were encouraged to attempt a national organization. In a series of conventions, held between 1889 and 1892, the People's Party developed into a finished organization with state delegations and a national committee. At St. Louis, in December, 1889, the Farmers' Alliance held a national convention and considered the basis for wider growth. The outcome was an attempt to combine in one party organized labor, organized agriculture, and believers in the single tax. . . . In December, 1890, the farmers met at Ocala, Florida, to rejoice over the congressional victory and to plan for 1892. Since each of the great parties was believed to be indifferent to the people and corrupt, a permanent third party was a matter of conviction, and in May, 1891, this party was formally created in a mass convention at Cincinnati. . . . On July 2, 1892, the party met in . . . [St. Louis] in its first national nominating convention. The platform of the People's Party was based on calamity. 'We meet in the midst of a nation brought to the verge of moral, political, and material ruin,' it declared. 'Corruption dominates the ballot-box, the legislature, the Congress, and touches even the ermine of the bench. The people are demoralized. . . . The newspapers are largely subsidized or muzzled; public opinion silenced; business prostrated; our homes covered with mortgages; labor impoverished; and the land concentrating in the hands of the capitalists.' . . . The greatest of the evils in sight was 'the vast conspiracy against mankind,' which had demoralized silver, added to the purchasing power of gold, and abridged the supply of money 'to fatten usurers.' To correct the financial evils the platform demanded 'the free and unlimited coinage of silver at the present legal ratio of sixteen to one,' and an issue of legal-tender currency until the circulation should reach 'an average of fifty dollars per capita. Postal savings banks,

a graduated income tax, and economy in government were the subsidiary demands. No demand of the Populists attracted so much attention as this for free silver, but its platform touched reform at every angle. In the field of transportation it asked for government ownership of railroads, telegraphs, and telephones. It asked that land monopolies be prevented, that the public lands be in part regained, and that alien ownership be forbidden. It wanted the Australian ballot, liberal pensions, restrictions of immigration, an eight-hour day, a single term for President and vice-president, direct election of United States Senators, abolition of the Pinkerton detectives, and was curious about the initiative and referendum. It was in many respects a prophecy as to the workings of reform for the next twenty years. The People's Party entered the campaign of 1892 with this platform and with the support of advanced reformers, with a considerable following in the West and South, and with James S. Weaver and James G. Field as candidates."—F. L. Paxson, *New nation* (W. R. Dodd, ed., *Riverside history of the United States*, v. 4, pp. 177-187, 208-211).

1888-1893.—"Billion Dollar" Congress.—Pension Act.—Increase in navy.—"In his first annual message Harrison suggested liberal appropriations for pensions, naval construction, and coast defenses, and the hint was not lost on Congress. The economies of the Democrats were thrown aside, and much was heard about expenditures in keeping with the dignity of the nation. When the Congress of 1891-1893 ended it had won the title of 'the billion dollar Congress.' Reed expressed the feeling of his political friends in the retort, 'This is a billion dollar country.' The most notable increase was for pensions. Both parties feared to antagonize the soldier vote, and certain politicians had learned the art of utilizing it by asking for grants in behalf of the soldiers which no one dared refuse. Most of these grants were good. No one desired to be parsimonious with the men who saved the union; but there was danger that the process should run into extravagance. It might even become a means of debasing the elections. At first, relief was given to disabled soldiers and their dependent relatives. Under this plan there were 234,821 pensioners in 1875 receiving \$29,270,407 annually. Garfield declared this was probably the highest point in which pensions would rise; but in 1879 arrears were granted increasing the cost by \$25,000,000 a year; and by 1885 the cost of pensions was \$65,171,937. Besides this, each session of Congress saw the enactment of many private pension bills, granting relief where the laws would not apply. Many such bills were worthy ones; but they were rarely inspected closely, and had come to be granted as favors to members through a 'courtesy' analogous to 'senatorial courtesy.' The presidents formerly signed these bills as a matter of course, but Cleveland investigated them, and vetoed many which he thought involved fraud. At this time the Republicans carried through Congress a bill giving twelve dollars a month to each old soldier dependent on his own or another person's labor, and Cleveland vetoed this also. He was widely criticized as a foe to the veterans, and the republican platform of 1888 demanded 'in the presence of an overflowing treasury' legislation to keep old soldiers from dependence on public or private charity. Thus committed, the party did not hesitate to take up a more liberal pension policy. 'Corporal' Tanner, accepted representative of the soldier vote, became commissioner of pensions, and

was said to have exclaimed, 'God help the surplus revenue.' He passed claims freely, and even looked up persons, some of them rich men, who he thought ought to be pensioned. He was so active that Harrison removed him within a year. The pension act, which Cleveland vetoed, now became law. As a result, the appropriation for this purpose rose from \$89,000,000 in 1889 to \$159,000,000 in 1893. It remained at nearly the latter amount until 1912, when by the Sherwood act, which neither party was willing to oppose, additional gifts were made, bringing up the annual expenditure to \$180,000,000. The act of 1890, like its successor of 1912, was of twofold purpose; it was intended to reduce the surplus and thus save protection, and to have influence on the election. To carry it into operation the government . . . [in 1918 had] paid since its enactment over a billion and a quarter of dollars. The large sums

THOMAS BRACKETT REED

voted for the navy occasioned more satisfaction. By 1880 wooden ships were discarded in European navies, but they continued the role in the United States. Secretary of the Navy Hunt, a Southerner whom Garfield appointed, took up the task of improvement, and in 1883 two steel cruisers were ordered. Secretary Whitney, under Cleveland, continued to urge enlargement, and in 1888 he secured \$17,000,000 for that purpose. These plans were unrealized when Cleveland went out of office, but the liberal gifts under his successor increased the strength of the navy, so that in 1893 it contained 22 steel ships and had risen from twelfth to fifth place among the nations of the world."—J. S. Bassett, *Short history of the United States*, pp. 726-727.

1889-1890.—Opening of Oklahoma.—Johnstown flood.—Pan-American Congress.—Admission of seven new states.—“In the centre of Indian Territory there is a large district called, in the Indian language, Oklahoma, or the ‘Beautiful Land.’ This tract was finally purchased from the Indians by the United States, early in 1889. On the 22d of April, of that year, some 50,000 persons were waiting impatiently on the borders of Oklahoma for President Harrison’s signal, giving them permission to enter and take up lands in the coveted region. At precisely twelve o’clock, noon, of that day, the blast of a bugle announced that Oklahoma was open to settlement. Instantly an avalanche of human beings rushed wildly across the line, each one eager to get the first chance. [See also OKLAHOMA: 1889-1890.] . . . A week after the opening of Oklahoma, the centennial anniversary of the inauguration of Washington, and of the beginning of our government under the Constitution, was celebrated in New York City [April 29-May 1]. . . . In a little less than a month from that occasion, the most terrible disaster of the kind ever known in our history occurred (May 31, 1889) in Western Pennsylvania. By the breaking of a dam, a body of water forty feet high and nearly half a mile in width swept down through a deep and narrow valley. In less than fifteen minutes, the flood had traversed a distance of eighteen miles. In that brief time, it dashed seven towns out of existence, and ended by carrying away the greater part of Johnstown. The whole valley at that place was choked with ruins; at least 5,000 persons lost their lives, and property worth ten million dollars was utterly destroyed. [See also PENNSYLVANIA: 1889.] In the autumn (October 2, 1889), representatives of the leading governments of Central and of South America, together with the Republic of Mexico, met representatives chosen by the United States in a conference or congress held at Washington. The object of the congress was to bring about a closer union of the Americas, for purposes of trade, and of mutual advantages. The delegates spent six weeks in visiting the principal commercial and manufacturing cities of the United States. They then returned to Washington, and devoted the greater part of the remainder of the year and part of 1890 to the discussion of business.”—D. H. Montgomery, *Leading facts of American history*, sect. 390-392.—“An act to provide for the division of Dakota into two States, and to enable the people of North Dakota, South Dakota, Montana, and Washington, to form constitutions and State governments . . . was approved by President Cleveland, February 22, 1889. This act provided that the Territory of Dakota should be divided on the line of the seventh standard parallel. . . . On the 4th of July, 1889, the four conventions assembled—for North Dakota at Bismark, for South Dakota at Sioux Falls, for Montana at Helena, and for Washington at Olympia.”—F. N. Thorpe, *Recent constitution-making in the United States (Annals of the American Academy of Political and Social Science, Sept., 1891)*.—Acceptable constitutions having been framed and adopted in the several proposed new states, North Dakota and South Dakota were ad-

mitted to the Union by proclamation of President Harrison, November 3, 1889, Montana, November 8, and Washington, November 11, in the same year. “Early in the session of the fifty-first Congress Wyoming presented her claims for Statehood, asking for admission to the Union under the Constitution of September, 1889, which was adopted by the people on November 5, following. The bill for admission passed the House of Representatives on March 27, 1890, passed the Senate on June 27, and received the President’s signature on July 10. By its terms Wyoming became a state from and after the date of the President’s approval. [Idaho had previously been admitted, by a bill which received the President’s signature on July 3, 1890.]”—*Appletons’ Annual Cyclopædia*, 1890 and 1889.—See also DAKOTA TERRITORY: 1882-1889; NORTH DAKOTA: 1800-1916; SOUTH DAKOTA: 1883-1890; WASHINGTON: 1889.

1889-1892.—Foreign relations under Harrison.—Bering sea claimed as a *Mare Clausum*.—Capture of Canadian sealing vessels.—Agreement to arbitrate.—Decision of arbitrators.—For several years the department of state had been carrying on a vigorous correspondence on sealing rights in Bering sea. “In 1886 certain Canadian sealers were seized by United States revenue cutters in Bering Sea, at a distance of upwards of sixty miles from the nearest land. The United States Court at Sitka pronounced a sentence of condemnation, but the President subsequently ordered the vessels to be released; and on August 17, 1887, Mr. Bayard, as Secretary of State, instructed the American ministers at London, Paris, and certain other capitals, to invite the governments to which they were accredited to co-operate with the United States in measures for the better protection of the fur-seals. . . . The responses to this overture were generally favorable, and negotiations with Great Britain had practically reached a favorable conclusion, when, on May 16, 1888, nine days after the adverse report of the Committee on Foreign Relations of the United States Senate on the Bayard-Chamberlain treaty, they were arrested on an objection from the Canadian government.”—J. B. Moore, *Principles of American diplomacy*, p. 149.—“At this stage Congress took the matter up, and, in order to remove all doubts as to the position of the United States, declared, by the act of March 2, 1889, that the prohibition of killing of seals within the limits of Alaskan territory should apply ‘to all the dominion of the United States in the waters of Bering sea’; and ordered the President to issue a proclamation that all persons violating such law would be arrested and their vessels seized. This bold announcement that the Bering Sea was practically a *mare clausum*, over which the United States had sole jurisdiction, gave authority for further captures, which were followed by renewed protests of the British government against unlawful interference with a legitimate industry on the high seas. Eight more vessels were taken during the summer of 1880. The correspondence which ensued between Secretary Blaine and Lord Salisbury traversed a wide range of the principles of international law, and at times appeared to give promise of a serious breach between Great Britain and the United States.”—D. R. Dewey, *National problems*, pp. 210-211.—“Mr. Blaine sought to defend the seizures on the ground that the killing of seals in the open sea was *contra bonos mores*,

as well as on the supposition that Russia had asserted and exercised exclusive rights in Bering Sea, and that the treaties of 1824 and 1825 did not apply to that body of water. On February 29, 1892, however, a treaty was signed, by which a tribunal of arbitration, to sit at Paris, was invested with power to decide: (1) what exclusive jurisdiction, or exclusive rights in the seal-fisheries, in Bering Sea, Russia asserted prior to the cession of Alaska to the United States; (2) how far those claims were recognized by Great Britain; (3) whether Bering Sea was included in the phrase 'Pacific Ocean,' as used in the treaties of 1824 and 1825; (4) whether all Russia's rights passed to the United States; and (5) whether the United States had any right of protection or property in the fur-seals in Bering Sea outside the ordinary three-mile limit. If the arbitrators found that the exclusive rights of the United States were insufficient, they were to determine what concurrent regulations the two governments should jointly enforce outside territorial waters. Before the tribunal of arbitration, the representatives of the United States relied much upon a theory of property in fur-seals; but on the various questions of right submitted, the decision of the arbitrators was adverse to the United States. . . . The arbitrators, after deciding against the United States on questions of right, proceeded to prescribe regulations, which were afterwards duly put into operation by the two governments. Under a treaty of arbitration signed at Washington on February 8, 1896, the sum of \$473,151.26 was awarded as compensation to be paid by the United States for interference with the Canadian sealers." —J. Grand total 54,983,890 7,470,040

In addition the census shows 107,475 Chinese, 2,039 Japanese, and 58,806 civilized Indians, making a total of 62,622,250, as stated above. Immigration in the preceding decades rose to 5,246,613 in the total arrivals, 1,462,839 being from the British Islands and 3,258,743 from other European countries. In the single year ending June 30, 1890, the immigrants arriving from Europe numbered 443,225 (273,104 males, 170,121 females), of whom 57,020 were from England; 53,024 from Ireland; 12,041 from Scotland; 92,427 from Germany; 22,062 from Hungary; 11,073 from Poland; 33,147 from Russia; 51,799 from Italy; 29,632 from

Sweden; 11,370 from Norway; 9,366 from Denmark; and 6,585 from France.

1890-1893.—Silver Bill and its effect.—Financial panic.—Extra session of Congress.—Repeal of Sherman Act.—“The act of July 14, 1890 [known as the Sherman Act], repealed the silver act of 1878, and so brought to a close the precise experiment tried under that measure. . . . But the new act . . . is even more remarkable than that of 1878. It is unique in monetary history. It provides that the Secretary of the Treasury shall purchase each month at the market price four and a half million ounces of silver bullion. In payment he shall issue Treasury notes of the United States, in denominations of between one dollar and one thousand dollars. These Treasury notes, unlike the old silver certificates, are a direct legal tender for all debts, public, or private, unless a different medium is expressly stipulated in the contract. They differ from the silver certificates in another respect; they are redeemable either in gold or silver coin, at the discretion of the Secretary of the Treasury. The indirect process of redemption which, as we have seen, was applied to the silver certificates, is replaced for the new notes by direct redemption. The avowed object is to keep the silver money equal to gold, for it is declared to be ‘the established policy of the United States to maintain the two metals at a parity with each other on the present legal ratio, or such ratio as may be provided by law.’ The act of 1878 is repealed; but the coinage of two million ounces of silver into dollars is to be continued for a year (until July 1, 1891). Thereafter it is directed that only so many silver dollars shall be coined as may be needed for redeeming any Treasury notes presented for redemption. Practically, this means that the coinage shall cease; redemption in silver dollars will not be called for. The coinage of silver dollars accordingly was suspended by the Treasury on July 1, 1891; a change which was the occasion of some vociferous abuse and equally vociferous praise, but which in reality was of no consequence whatever. The monthly issues of the new Treasury notes vary, like those of the old silver certificates, with the price of silver. But the new issues vary directly with the price of silver, while, as we have seen, the old issues varied inversely with the price. The volume of Treasury notes issued is equal to the market price of four and one half million ounces of silver. If silver sells at \$1.20 an ounce, the monthly issue of notes will be \$5,400,000; if at \$1.00 an ounce, \$4,500,000. For a month or two after the passage of the act, the price of silver advanced rapidly, and at its highest, in August, 1890, touched \$1.21. But the rise proved to be but temporary. After September a steady decline set in, and continued almost without interruption through the rest of 1890, through 1891, and through 1892. The year 1891 opened with silver at a price of about \$1.00 an ounce; by the close of the year the price had fallen to about 95 cents. In 1892 a still further and more marked

decline set in, and by the close of the year the price had gone as low as 85 cents.”—F. W. Taussig, *Silver situation in the United States*, ch. 6.—“The President’s remedy for the drain upon the Treasury was to repeal the purchasing clause of the Sherman Silver Law of 1890 and thus discontinue the issuance of the treasury notes. Accordingly he called Congress together in special session in August, 1893, and earnestly recommended the immediate repeal of the provisions of the act of 1890 authorizing the purchase of the bullion. In the House the cause of silver found an ardent champion in William Jennings Bryan, a young member from Nebraska. In a speech that attracted the attention of the country Bryan stated the arguments of the free silver party. As for the proposed repeal, he denied that it would bring the endless chain to rest, asserting that it could still be kept in motion by the greenbacks. . . . But opposition was in vain. In the House repeal was promptly agreed to by a vote of 239 to 109. In the Senate, where silver was stronger, the bill was delayed by obstructive tactics. . . . Senator Jones of Nevada made a speech that filled a hundred pages of ‘The Congressional Record’; and Senator Allen of Nebraska spoke for fifteen hours. But the obstructionists were at last compelled to surrender. On October 30 the bill reached a vote and was passed, twenty-two Democrats and twenty-six Republicans voting for it, and twenty-two Democrats, twelve Republicans, and three Populists voting against it. The vote showed that on the silver question the two great parties beyond all doubt were split wide open. With the repeal of the Silver-purchase Act, business men in the East breathed a sigh of relief. They said ‘that the advocates of free silver had had their Waterloo and that they were now going to their St. Helena.’ But talk of this kind was premature. . . . The gold reserve fell lower and lower. By the middle of January, 1894, less than three months after the repeal—the gold reserve was less than \$70,000,000. Here indeed was a crisis.”—S. E. Forman, *Our republic*, pp. 645-646.—See also MONEY AND BANKING: Modern: 1848-1893; 1874-1890.

1891-1914.—Merchant marine.—“For many years following the act of 1891, agitation for further direct aid to American shipping was persistent. The war with Spain, the new insular possessions, the reawakened interest in the Navy, the digging of the Panama Canal, and the grow-

ing interest in foreign markets for American manufactures, gave special impetus to this agitation in the early years of the new century. In successive Congresses measures were introduced providing for subsidies and subventions of various sorts. Typical of these was the Gallinger Bill of 1905, based upon the majority report of the Merchant Marine Commission of 1904, providing for a general bounty to all American shipping which conformed to specified requirements and a special subvention to steamers running to various Latin-American, South African, and Asiatic points. Owing, however, to prejudice against anything which smacked of subsidy, to preference in certain quarters for indirect aid, and to insufficient enthusiasm over American shipping, none of these proposals secured the approval of both houses of Congress. Events proved that the next governmental action in behalf of our merchant marine was to take the form of indirect aid. Despite the tradition of a century, a 'free ship' policy was adopted. The first step was taken in the Panama Canal Act of 1912, which provided that foreign-built vessels, American-owned, and not more than five years old, might be admitted to American registry for trade with foreign countries and with the Philippines, Guam, and Tutuila, and might be granted mail contracts under the act of 1891. On August 18, 1914, the five-year age limit was removed."—G. M. Fisk and P. S. Peirce, *international commercial policies*, p. 280.—See also below: 1914-1920; 1922: Economic situation.

1892.—Chinese Exclusion Act.—A bill "to absolutely prohibit the coming of Chinese persons into the United States," reported by Representative Geary, of California, was passed by the House, April 4, 1892, yeas 179, nays 43, 107 not voting. In the senate, a substitute, going little further than to continue the then existing laws for the regulation of Chinese immigration, was reported from the Committee on Foreign Relations and adopted. The two bills were referred to a Conference Committee, with the result that a compromise measure, slightly modified from the House bill, was passed by both branches of Congress, May 3 and May 4, and signed by the president on May 5. It continues former laws for ten years. It directs "that any Chinese person or person of Chinese descent when convicted and adjudged under any of said laws to be not lawfully entitled to be or remain in the United States," shall be removed to China, or to such other country as he may prove to be a subject or citizen of. It declares that any such person under arrest "shall be adjudged to be unlawfully within the United States, unless such person shall establish, by affirmative proof, . . . his lawful right to remain in the United States"; and that any such person "convicted and adjudged to be not lawfully entitled to be or remain in the United States shall be imprisoned at hard labor for a period of not exceeding one year, and thereafter removed from the United States, as hereinbefore provided." The act denies bail, on an application for a writ of habeas corpus, by a Chinese person seeking to land in the United States. It requires all Chinese laborers who were within the limits of the United States at the time of the passage of the act, and who were entitled to remain, to obtain certificates of residence, from district collectors of internal revenue, and orders the deportation of those who had failed to do so at the expiration of one year. This extraordinary measure of exclusion has been commonly known as the "Geary Act."—Based on E. McPherson, *Handbook of politics*, 1892.

1892.—Settlement of Alaskan boundary.—A

convention between the governments of the United States and Great Britain was entered into and ratifications exchanged in August, 1892, providing for a coincident or joint survey, "as may in practice be found most convenient," to determine the boundary line between Alaska and the Canadian provinces.

1892.—Controversy with Chile.—Warlike presidential message. See CHILE: 1891-1892.

1892.—Twenty-seventh presidential election.—Five parties presented candidates in the presidential election held Nov. 8, 1892—namely: Democratic, Republican, People's or Populist, Prohibitionist, and Socialist Labor. The nominees of the Democratic party were Grover Cleveland, for president, and Adlai E. Stevenson, for vice president; of the Republican party, Benjamin Harrison and Whitelaw Reid, for president and vice president, respectively; of the Populist party, James B. Weaver and James G. Field; of the Prohibition party, John Bidwell and James B. Cranfill; of the Socialist Labor party, Simon Wing and Charles H. Matchett. The dominant issues in the canvass were the tariff question and the silver question. "The Democrats named no electoral tickets in Colorado, Idaho, Kansas, North Dakota, and Wyoming, but voted for the people's party electors with the object of taking those States away from the Republicans. They put out an electoral ticket in Nevada, but still voted mostly for the Populist electors. In North Dakota also there was a partial fusion between the Democrats and the People's party, and in Minnesota a part of the Weaver electoral ticket was accepted by the Democrats. In Louisiana there was a fusion of the Republicans and the People's party, each nominating half of the 8 electors. In Alabama there was a fusion of some of the Republicans with the People's party. In Texas a Republican ticket called the Lily White was set up, which differed from the regular ticket. In Michigan a new electoral law, which was declared constitutional by the United States Supreme Court on Oct. 17, 1892, provided for the separate election of a Presidential elector in each Congressional district, and in consequence the electoral vote of the State was divided. In Oregon the name of one of the four electors on the People's ticket was also placed on the Democratic ticket. . . . The total popular vote cast was reported as 12,154,542," of which Cleveland received 5,556,553; Harrison, 5,175,577; Weaver, 1,122,045; Bidwell 279,191; Wing, 21,191. The electoral votes of the states were cast as follows: Cleveland, 277; Harrison, 145; Weaver, 22; giving Cleveland a clear majority of 110.—*Appletons' Annual Cyclopædia*, 1892.—"The most striking feature of the elections was the great losses of the Republicans in the West. Illinois and Wisconsin went Democratic by large majorities, California and Ohio were very close, and Colorado, Idaho, Kansas and Nevada chose Populist electors. The Democrats carried all the Northern states generally regarded as doubtful, viz., Connecticut, New York and Indiana, but they nearly lost Delaware. An unusual incident of the result was the division of the electoral votes in several states, owing to the closeness of the popular vote. Thus in Ohio one Cleveland elector and in Oregon one Weaver elector was chosen, the others being Republican; and in California and North Dakota Mr. Harrison secured single votes in the same way. From the conditions of fusion between the Democrats and Populists in the last-named state, it resulted that one of her three electoral votes was given to each of the three candidates. In Michigan, under the district

method of choosing electors recently established, Harrison got nine votes and Cleveland five."—*Political Science Quarterly*, June, 1893.

1893.—Panic and unemployment.—“While President Cleveland was struggling to secure the repeal of the Sherman Silver Law and moving heaven and earth to maintain the gold standard, the country was passing through a period of hard times known as the Panic of 1893. In the autumn of 1892 conditions in the financial world were bad. They continued to grow worse, and by the middle of 1893 the country was experiencing the most disastrous panic of its history. In December the comptroller of the currency announced the failure during the year of 158 national banks, 172 State banks, 177 private banks, forty-seven savings banks, thirteen loan and trust companies, and six mortgage companies. Most of the failures were in the South and West where finances were in such a state of collapse that general bankruptcy was threatened. . . . Although the political doctors differed widely about the cause of the panic there could be no difference of opinion as to its effects. Its blighting influence was felt in every section of the country, and in its train there followed a period of hard times that lasted for nearly three years. The rich as well as the poor were reached by the depression. In the cities hundreds of thousands found themselves without employment. Never before in the history of the United States had there been such a large number of men out of work. In the West farmers, unable to sell their crops at any price, were sometimes forced to burn as fuel the grain which they had raised at great expense and with much toil.”—S. E. 1894.—Wilson Tariff Act. See TARIFF: 1894.

1894.—Coxey movement.—“The slow progress of the Wilson Bill, prolonging as it did the feeling of uncertainty in the business world, had depressed all forms of industry. Thousands of men who had been thrown out of work in the summer and autumn of 1893 found themselves at the beginning of winter wholly destitute. Some of them had left their homes in the Eastern States and had gone to the Pacific Coast as railway builders. They now turned their faces homeward, intending to tramp the long distance, and to live upon the charity of the intervening towns and cities. These men were presently joined by others who were out of work, and finally by swarms of professional vagabonds and tramps. Through some curious psychological impulse, the notion of a general crusade of squalor spread all through the country;

and from every quarter of the West and the Southwest, bands of ragged, hungry, homeless men appeared, fierce of aspect, and terrifying to the people of the hamlets and sparsely settled districts through which they passed. . . . [Three men] after a fashion took command of the roving bands. These three—Coxey, Kelly, and Fry—styling themselves ‘generals,’ led the largest groups, which were now known as ‘armies of the unemployed,’ and later as ‘Industrials’ and ‘Commonwealers.’ Coxey was the most conspicuous of the three. He had a definite plan of action. He organized what he styled the ‘Army of the Commonweal of Christ,’ and with it he intended to march on Washington, to enter the Capitol and to overawe Congress into passing a law providing for the unemployed. His demand was that \$500,000,000 in irredeemable paper money should be issued, and that this sum should be spent in improving the public highways throughout the country. Such became at last the declared purpose of all the Commonwealers; and so the three ‘armies’ began their march to Washington from different points,—Coxey setting out from Massillon, Ohio, on March 25th, Frye from Los Angeles, California, early in April, and Kelly from San Francisco on April 26th.”—H. T. Peck, *Twenty years of the republic*, pp. 372-373.—“On May 1 [Coxey’s army, which had reached the number of about 350, arrived at Washington] marched to the capitol, but under an old District law was prevented by the police from entering the grounds. Coxey and another of the leaders, attempting to elude the police and address the assembled crowds, were arrested and afterwards convicted of a misdemeanor. . . . [Frye’s army] numbering from six to eight hundred men, availed themselves of the assistance, more or less involuntary, of freight trains on the Southern Pacific Railway as far as St. Louis, from which place they continued on foot. . . . [Kelly refused to leave Oakland, California, until freight accommodations as far as Omaha, Nebraska, were furnished.] The railroads eastward from Omaha refused absolutely to carry them, and they went into camp near Council Bluffs, in Iowa, . . . and ultimately continued on foot as far as Des Moines, in Iowa. A band coming east on a stolen train on the Northern Pacific, after overpowering a squad of United States marshals, was captured by a detachment of regular troops at Forsyth, Montana, April 26. Two days later the militia were called out to rescue a train from a band at Mount Sterling, Ohio.”—*Political Science Quarterly*, *Record of Political Events*, June, 1894.—There were straggling movements, from different quarters of the country, in imitation of those described, prolonged through most of the summer of 1894; but the public feeling favorable to them was limited, and they commonly came to an ignominious end.

1894.—Strike at Pullman.—“The year 1893 was a year of contrasts. In the midst of the industrial crisis and dark depression the country celebrated the four-hundredth anniversary of its discovery by Columbus, on a scale of grand magnificence and perfection of detail which not only aroused the pride of Americans but excited the respect and admiration of foreigners. . . . Whatever elation was aroused by this unprecedented display of the world’s industry and art was brought low by the industrial embarrassments and suffering of the working-class during the winter of 1893-1894. The business depression of 1893 threw hundreds of thousands of workmen out of employment, causing great distress and taxing the relief agencies in the large manufacturing centres to the utmost.

Never before had the evil of unemployment been so wide-spread in the United States. The spirit of discontent became general. . . . In the general depression of business the car-building industry had not escaped, and the Pullman Company was obliged, for lack of orders, to discharge many employes, and finally, in order to meet competition, to bid for contracts on the basis of actual cost, or even below. Wages were consequently lowered [and in May the men stopped work]. As four thousand of the employes were members of the American Railway Union [which had been formed by Eugene V. Debs], this organization came to the support of the local workmen and demanded that the difference be submitted to arbitration. This the Pullman Company refused, on the ground that the cost of manufacturing was a question of fact, and could not be submitted to arbitration. In retaliation the American Railway Union voted that its members should not handle Pullman cars over railways using such equipment. . . . [The boycott went into effect on June 26, and caused paralyzed traffic and business.] The railroad managers promptly met the issue, and determined that, as the boycott was not on account of any grievance between the railroad companies and their own employes, it was unjustifiable; and that in their resistance they would act unitedly. Employes of all the railroads centring in Chicago, and many of the more distant systems, extending through twenty-seven states and territories from Cincinnati to San Francisco, struck, and placed a boycott upon Pullman cars wherever found. Violent efforts were made in Chicago to prevent the running of trains; mobs composed in large part of lawless men, hoodlums, and professional criminals infesting that city since the Columbian Exposition of the previous year, gathered in the freight-yards and looted and burned hundreds of cars. . . . Upon the demand of the post-office department that obstruction of the mails be removed, and upon representation of the judicial officers of the government of the United States that the processes of the Federal courts could not be executed, and upon the basis that conspiracies existed which interfered with interstate commerce, President Cleveland ordered regular troops to the scenes of disturbance. Rioting and bloodshed continued for some days; but public interest was sustained for weeks over the discussion as to the responsibility for the suppression of the disorder and the rights of labor leaders when injunctions were issued by the courts. . . . Both houses of Congress indorsed the president's action, and the newspapers of the country reflected approval."—D. R. Dewey, *National problems, 1885-1897*, pp. 288-289, 291-293.—The strike was practically ended by July 15.—See also LABOR STRIKES AND BOYCOTTS: 1877-1911.

1894.—Legislation to promote reclamation of arid lands.—The following measure of legislation to promote the reclamation of arid lands was carried through Congress as an amendment to the Appropriation Bill for Sundry Civil Expenditures, and became law Aug. 18, 1894:

"Sec. 4. That to aid the public land States in the reclamation of the desert lands therein, and the settlement, cultivation, and sale thereof in small tracts to actual settlers, the Secretary of the Interior with the approval of the President, be, and hereby is, authorized and empowered, upon

proper application of the State to contract and agree, from time to time, with each of the States in which there may be situated desert lands as defined by the Act entitled 'An Act to provide for the sale of desert land in certain States and Territories,' approved March 3d, 1877, and the Act amendatory thereof, approved March 3d, 1891, binding the United States to donate, grant and patent to the State free of cost for survey or price such desert lands, not exceeding one million acres in each State, as the State may cause to be irrigated, reclaimed, occupied, and not less than twenty acres of each one hundred and sixty-acre tract cultivated by actual settlers, within ten years next after the passage of this Act, as thoroughly as is required of citizens who may enter the said desert land law. Before the application of any State is allowed or any contract or agreement is executed or any segregation of any of the land from the public domain is ordered by the Secretary of the Interior, the State shall file a map of the said land proposed to be irrigated which shall exhibit a plan showing the mode of the contemplated irrigation and which plan shall be sufficient to thoroughly irrigate and reclaim said land and prepare it to raise ordinary agricultural crops and shall also show the source of the water to be used for irrigation and reclamation, and the Secretary of the Interior may make necessary regulations for the reservation of the lands applied for by the States to date from the date of the filing of the map and plan of irrigation, but such reservation shall be of no force whatever if such map and plan of irrigation shall not be approved. That any State contracting under this section is hereby authorized to make all necessary contracts to cause the said lands to be reclaimed, and to induce their settlement and cultivation in accordance with and subject to the provisions of this section; but the State shall not be authorized to lease any of said lands or to use or dispose of the same in any way whatever, except to secure their reclamation, cultivation and settlement. As fast as any State may furnish satisfactory proof according to such rules and regulations as may be prescribed by the Secretary of the Interior, that any of said lands are irrigated, reclaimed and occupied by actual settlers, patents shall be issued to the State or its assigns for said land so reclaimed and settled: Provided, That said States shall not sell or dispose of more than one hundred and sixty acres of said land to any one person, and any surplus of money derived by any State from the sale of said lands in excess of the cost of their reclamation, shall be held as a trust fund for and be applied to the reclamation of other desert lands in such State. That to enable the Secretary of the Interior to examine any of the lands that may be selected under the provisions of this section, there is hereby appropriated out of any moneys in the Treasury, not otherwise appropriated, one thousand dollars."—*Acts, 53rd Congress, 2nd Session, ch. 302*.—See also CONSERVATION OF NATURAL RESOURCES: United States: 1847-1901.

1894-1895.—Provision for admission of Utah as a state.—On July 17, 1894, the president, by

his signature, gave effect to a bill which provided for the admission of Utah to the Union as a state. The bill provided for the holding of a convention in March, 1895, to frame a constitution for the proposed new state, and for submitting such constitution to the people at the election in November, 1895.

1895.—Status of civil service reform.—Commissioner Roosevelt's review.—“In 1883 the civil service law was established at Washington, and in the larger post-offices and custom-houses throughout the country, taking in a total of some 14,000 employes. . . . In 1880 the railway mail service was added, in 1893 all the free delivery post-offices, and in 1894 all the smaller custom-houses and the internal revenue service. Other important but smaller extensions have been made, and the larger offices have grown, so that now about 50,000 employes are under the protection of the law. There are, of course, and there always must be in a body so large, individual cases where the law is evaded, or even violated; and as yet we do not touch the question of promotions and reductions. But, speaking broadly, and with due allowance for such comparatively slight exceptions, these 50,000 places are now taken out of the political arena. They can no longer be scrambled for a struggle as ignoble and brutal as the strife of pirates over plunder; they no longer serve as a vast bribery chest with which to debauch the voters of the country. Those holding them no longer keep their political life by the frail tenure of service to the party boss and the party machine; they stand as American citizens, and are allowed the privilege of earning their own bread without molestation so long as they faithfully serve the public. The classified service, the service in which the merit system is applied, has grown fast. It is true that the outside service where the spoils theories are still applied in all their original nakedness, has grown only less fast. The number of offices under the government has increased very rapidly during the last twenty years; but the growth of the classified service has been even more rapid, so that a constantly increasing percentage of the whole is withdrawn from the degrading grasp of the spoils system. Now, something like a quarter of all the offices under the federal government in point of numbers, representing nearly a half in point of salaries, has been put upon the basis of decency and merit. This has been done by the action of successive Presidents under the law of 1883, without the necessity of action by Congress. There still remain some things that can be done without further legislation. For instance, the labor force in the navy yards was put on a merit basis, and removed from the domain of politics, under Secretary Tracy. This was done merely by order of the secretary of the navy, which order could have been reversed by his successor, Secretary Herbert. Instead of reversing it, however, Secretary Herbert has zealously lived up to its requirements, and has withstood all pressure for the weakening of the system in the interests of the local party machines and bosses. It is unsafe to trust to always having secretaries of the navy like Messrs. Tracy and Herbert. The Civil Service Commission should be given supervision over the laborers who come under the direction of Cabinet officers. Indeed, all the laboring force and all the employes of the District of Columbia employed by the federal government should be put under the Commission. When this has been done, and when a few other

comparatively slight extensions have been made, all that can be accomplished by the unaided action of the executive will have been accomplished. Congress must then itself act by passing some such bill as that of Senator Lodge in reference to fourth-class postmasters; by passing some bill in reference to the consular service on the outlines of that suggested by Senator Morgan (but giving power to the Civil Service Commission itself in the matter); and then by providing that all postmasters and similar officers shall hold office during good behavior, including as well those nominated by the President and confirmed by the Senate, as those appointed by the President alone. Of all the offices under the federal government, not one in a hundred can properly be called political.” —T. Roosevelt, *Present status of civil service reform* (*Atlantic*, February, 1895).—See also CIVIL SERVICE REFORM: United States: 1893-1896.

1895.—President Cleveland's special message on the condition of national finances.—In a special message to Congress, on January 28, 1895, President Cleveland renewed an earnest appeal which he had made at the opening of the session, for legislation to correct the mischievous working of the existing currency system of the country. The condition of the national finances, was set forth clearly in this message, as follows: “The real trouble which confronts us consists in a lack of confidence, widespread and constantly increasing, in the continuing ability or disposition of the Government to pay its obligations in gold. This lack of confidence grows to some extent out of the palpable and apparent embarrassment attending the efforts of the Government under existing laws to procure gold, and to a greater extent out of the impossibility of either keeping it in the Treasury or canceling obligations by its expenditure after it is obtained. The only way left open to the Government for procuring gold is by the issue and sale of its bonds. The only bonds that can be so issued were authorized nearly twenty-five years ago, and are not well calculated to meet our present needs. Among other disadvantages, they are made payable in coin, instead of specifically in gold, which, in existing conditions, detracts largely and in an increasing ratio from their desirability as investments. It is by no means certain that bonds of this description can much longer be disposed of at a price creditable to the financial character of our Government. The most dangerous and irritating feature of the situation, however, remains to be mentioned. It is found in the means by which the Treasury is despoiled of the gold thus obtained without canceling a single Government obligation and solely for the benefit of those who find profit in shipping it abroad or whose fears induce them to hoard it at home. We have outstanding about five hundred millions of currency notes of the Government for which gold may be demanded, and, curiously enough, the law requires that when presented and, in fact, redeemed and paid in gold, they shall be reissued. Thus the same notes may do duty many times in drawing gold from the Treasury; nor can the process be arrested as long as private parties, for profit or otherwise, see an advantage in repeating the operation. More than \$300,000,000 in these notes have already been redeemed in gold, and notwithstanding such redemption they are all still outstanding. Since the 17th day of January, 1894, our bonded interest-bearing debt has been increased \$100,000,000 for the purpose of obtaining gold to replenish our coin reserve. Two issues were made amounting

to fifty millions each—one in January, and the other in November. As a result of the first issue there was realized something more than \$53,000,000 in gold. Between that issue and the succeeding one in November, comprising a period of about ten months, nearly \$103,000,000 in gold were drawn from the Treasury. This made the second issue necessary, and upon that more than fifty-eight millions in gold was again realized. Between the date of this second issue and the present time, covering a period of only about two months, more than \$69,000,000 in gold have been drawn from the Treasury. These large sums of gold were expended without any cancellation of Government obligations or in any permanent way benefiting our people or improving our pecuniary situation. The financial events of the past year suggest facts and conditions which should certainly arrest attention. More than \$172,000,000 in gold have been drawn out of the Treasury during the year for the purpose of shipment abroad or hoarding at home. While nearly one hundred and three millions of this amount was drawn out during the first ten months of the year, a sum aggregating more than two-thirds of that amount, being about sixty-nine millions, was drawn out during the following two months, thus indicating a marked acceleration of the depleting process with the lapse of time. The obligations upon which this gold has been drawn from the Treasury are still outstanding and are available for use in repeating the exhausting operation with shorter intervals as our perplexities accumulate. . . . It will hardly do to say that a simple increase of revenue will cure our troubles. The apprehension now existing and constantly increasing as to our financial ability does not rest upon a calculation of our revenue. The time has passed when the eyes of investors abroad and our people at home were fixed upon the revenues of the Government. Changed conditions have attracted their attention to the gold of the Government. There need be no fear that we cannot pay our current expenses with such money as we have. There is now in the Treasury a comfortable surplus of more than \$63,000,000, but it is not in gold, and therefore does not meet our difficulty. . . . Whatever ideas may be insisted upon as to silver or bimetallism, a proper solution of the question now pressing upon us only requires a recognition of gold as well as silver, and a concession of its importance, rightfully or wrongfully acquired, as a basis of national credit, a necessity in the honorable discharge of our obligations payable in gold, and a badge of solvency. . . . In my opinion the Secretary of the Treasury should be authorized to issue bonds of the Government for the purpose of procuring and maintaining a sufficient gold reserve and redemption and cancellation of the United States legal-tender notes and the Treasury notes issued for the purchase of silver under the law of July 14, 1890. . . . The principal and interest of these bonds should be payable on their face in gold, because they should be sold only for gold or its representative, and because there would now probably be difficulty in favorably disposing of bonds not containing this stipulation. . . . National banks should not be allowed to take out circulating notes of a less denomination than \$10, and when such as are now outstanding reach the Treasury, except for redemption and retirement, they should be canceled and notes of the denomination of \$10 and upward issued in their stead. Silver certificates of the denomination of \$10 and upward should be replaced by certificates of de-

nominations under \$10. As a constant means for the maintenance of a reasonable supply of gold in the Treasury our duties on imports should be paid in gold, allowing all other dues to the Government to be paid in any other form of money. I believe all the provisions I have suggested should be embodied in our laws if we are to enjoy a complete reinstatement of a sound financial condition." The president's recommendations were not acted upon. The silver interest in Congress defeated all measures introduced for the purpose and left the situation unchanged. The government was forced to a new issue of bonds under the old act, for the replenishing of its gold reserve.—See also above: 1890-1893: Silver Bill and its effect.

1895 (January-February).—Monetary situation.—Contract for replenishing the gold reserve in the treasury.—The alarming situation of the treasury of the United States at the beginning of the year 1895 was clearly described by the president in his special message to Congress, January 28. (See above 1895: President Cleveland's special message.) By the operation of what had been aptly called "the endless chain" of the greenback currency issues of the government (paid out with one hand, to be redeemed with the other in gold, which the declining value of silver brought more and more into demand) the gold reserve in the treasury was fast being exhausted, and the hour was approaching when, without some effective relief, the obligations of the nation would have to be paid in depreciated silver coin, and its credit lost. The appeal of the president to Congress had no effect. The Senate was controlled by a majority of men who desired precisely the result which he wished to avert. The state of things in that body was described by Senator Sherman, of the Committee on Finance, in the following words: "The Committee on Finance is utterly helpless to deal with this vast question. We are quite divided upon it. We are not allowed to propose a measure to this Senate which all can approve of, unless there is attached to it a provision for free coinage of silver." The attitude of the House was different, but almost equally hostile to the president's views. Its Republican majority was not favorable to the aims of the free silver parties, but held that the relief needed for the Treasury was to be sought in a return to higher import duties, as a means of obtaining increased revenue. Hence a bill to carry out the recommendations of the president was rejected in the House, on February 7, by a vote of 162 against 135. "The secretary of the treasury [John Griffin Carlisle], using power which he possessed under existing law—for Congress refused to give him any new power for dealing with the situation,—began to sell bonds—that is, to borrow money—in order to secure gold enough to bring the reserve up to the \$100,000,000 mark. . . . There were two sales of bonds but no good results followed; the more gold the Treasury borrowed the lower the reserve fell. By February, 1895, although about \$117,000,000 of gold had been borrowed, the gold reserve was only \$41,000,000. In desperation Cleveland now called J. P. Morgan to the White House and after conferring with that great financier entered into an agreement with the banking houses of Morgan, Belmont, and Rothschild for the purchase of 3,500,000

ounces of gold to be paid for in United States bonds, which were to be delivered at a price considerably lower than the current market price and were to bear interest at 4 per cent. As a part of the arrangement the bankers agreed to use their influence to protect the Treasury from further withdrawals of gold. When the nature of the transaction became known to the public the indignation which arose was nation wide. Even in the East there was a storm of criticism. . . . The Morgan-Belmont arrangements brought relief to the Treasury for about ten months; then the endless chain began to work again, and quickly the Government was in such a bad financial plight that in January, 1896, a loan had to be resorted to. This time the sale of bonds was thrown open to the public with the most gratifying results. A call was made for \$100,000,000 and response came from more than 4,500 subscribers, whose bids covered the sum asked for many times over. . . . In spite of the replenishment the reserve again began to fall, and by July, 1896, it was about \$90,000,000. But it was allowed to fall no further. As a Presidential campaign was now in full swing, financiers were seized with a fear that a new bond issue might have the effect of strengthening the claims of the silver advocates. Accordingly the bankers combined to support the reserve by paying out gold in exchange for notes, instead of presenting notes to the Treasury to be exchanged for gold. The plan succeeded; the reserve fell no further, the endless chain came to rest, and the gold standard was henceforth maintained. The bonds issued to maintain it amounted altogether to \$262,000,000."—S. E. Forman, *Our republic*, pp. 646-648.—"The new gold loan, with its great addition to the public debt, made for the sole purpose of 'insulting silver,' was the last straw upon the back of the far from patient Populists. By this time, men had formed the habit of speaking of gold and silver as though the two metals were possessed of human attributes. They were not only animified, but personified; and both vices and virtues were ascribed to them. . . . In truth, at this period, a large portion of the American people was touched by something very like emotional madness over one of the most prosaic questions of pure economics. The tide of Populism which had begun to rise in 1880, which had swollen to a flood in 1890, and which in 1892 had temporarily been diverted into Democratic channels, was now roaring through the West with a fury that swept everything before it. In all the silver-producing States it seemed to be wrecking the older parties; while in Kansas and Nebraska, men and women and even children turned away from the ordinary vocations of life, and gave themselves up body and soul to the politics of unrestrained emotion."—H. T. Peck, *Twenty years of the republic*, pp. 448-449.—See also MONEY AND BANKING: Modern: 1874-1890.

1895 (April-May).—Decision of the Supreme Court against the constitutionality of income tax.—Cases testing the constitutionality of the income tax which Congress had attached to the Tariff Act of 1894 (see TARIFF: 1894) were brought to a partial decision in the Supreme Court in April, and finally in May, 1895. The cases in question were "Pollock v. Farmers' Loan and Trust Company," and "Hyde v. Continental Trust Company." On the first hearing, the illness and absence of one of the justices, Howell Edmunds Jackson, of

Tennessee, left but eight members in attendance, and they divided equally on several points which were vital to the decision of the question of constitutionality in the tax. The appellants accordingly filed a petition for a re-hearing, submitting among other reasons, the following: "The question involved in these cases was as to the constitutionality of the provisions of the tariff act of August 15, 1894 (sections 27 to 37), purporting to impose a tax on incomes. The Court has held that the same are unconstitutional, so far as they purport to impose a tax upon the rent or income of real estate and income derived from municipal bonds. It has, however, announced that it was equally divided in opinion as to the following questions, and has expressed no opinion in regard to them: (1) Whether the void provisions invalidate the whole act. (2) Whether, as to the income from personal property as such, the act is unconstitutional as laying direct taxes. (3) Whether any part of the tax, if not considered as a direct tax, is invalid for want of uniformity. The court has reversed the decree of the Circuit Court and remanded the case, with directions to enter a decree in favor of complainant in respect only of the voluntary payment of the tax on the rents and income of defendant's real estate, and that which it holds in trust, and on the income from the municipal bonds owned or so held by it. While, therefore, the two points above stated have been decided, there has been no decision of the remaining questions regarding the constitutionality of the act, and no judgment has been announced authoritatively establishing any principle for interpretation of the statute in those respects." The re-hearing asked for was granted by the court on May 6, when Justice Jackson was able to take his seat on the bench, after which, on May 20, by the opinion of five members of the Court against four, the law was pronounced null, so far as concerned the imposition of a tax on incomes. The opinion of the majority was delivered by Chief Justice Fuller, who said, in part: "The Constitution divided Federal taxation into two great classes, the class of direct taxes, and the class of duties, imposts and excises; and prescribed two rules which qualified the grant of power as to each class. The power to lay direct taxes apportioned among the several States in proportion to their representation in the popular branch of Congress, a representation based on population as ascertained by the census, was plenary and absolute; but to lay direct taxes without apportionment was forbidden. The power to lay duties, imposts, and excises was subject to the qualification that the imposition must be uniform throughout the United States. Our previous decision was confined to the consideration of the validity of the tax on the income from real estate and on the income from municipal bonds. . . . We are now permitted to broaden the field of inquiry, and to determine to which of the two great classes a tax upon a person's entire income, . . . belongs; and we are unable to conclude that the enforced subtraction from the yield of all the owner's real or personal property, in the manner prescribed, is so different from a tax upon the property itself, that it is not a direct, but an indirect tax in the meaning of the Constitution. The words of the Constitution are to be taken in their obvious sense, and to have a reasonable construction. In *Gibbons v. Ogden*, Mr. Chief Justice Marshall, with his usual felicity, said: 'The enlightened patriots who framed our Constitution, and the people who adopted it must be under-

stood to have employed words in their natural sense, and to have intended what they have said.' 9 Wheat. 1, 188. And in *Rhode Island v. Massachusetts*, where the question was whether a controversy between two States over the boundary between them was within the grant of judicial power, Mr. Justice Baldwin, speaking for the Court, observed: 'The solution of this question must necessarily depend on the words of the Constitution; the meaning and intention of the convention which framed and proposed it for adoption and ratification to the conventions of the people of and in the several States; together with a reference as to such sources of judicial information as are resorted to by all courts in construing statutes, and to which this court has always resorted in construing the Constitution.' 12 Pet. 657, 721. We know of no reason for holding otherwise than that the words 'direct taxes,' on the one hand, and 'duties, imposts and excises,' on the other, were used in the Constitution in their natural and obvious sense. Nor in arriving at what those terms embrace do we perceive any ground for enlarging them beyond or narrowing them within their natural and obvious import at the time the Constitution was framed and ratified. And passing from the text, we regard the conclusion reached as inevitable, when the circumstances which surrounded the convention and controlled its action and the views of those who framed and those who adopted the Constitution are considered. . . . In the light of the struggle in the convention as to whether or not the new Nation should be empowered to levy taxes directly on the individual until after the States had failed to respond to requisitions . . . —it would seem beyond reasonable question that direct taxation, taking the place as it did of requisitions, was purposely restrained to apportionment according to representation, in order that the former system as to ratio might be retained while the mode of collection was changed. This is forcibly illustrated by a letter of Mr. Madison of January 29, 1789 . . . [written] . . . before the organization of the government and the submission of the proposed amendment to Congress, which, while opposing the amendment as calculated to impair the power only to be exercised in extraordinary emergencies, assigns adequate ground for its rejection as substantially unnecessary, since, he says, 'every State which chooses to collect its own quota may always prevent a Federal collection, by keeping a little beforehand in its finances and making its payment at once into the Federal treasury.' The reasons for the clauses of the Constitution in respect of direct taxation are not far to seek. The States, respectively, possessed plenary powers of taxation. They could tax the property of their citizens in such manner and to such extent as they saw fit; they had unrestricted powers to impose duties or imposts on imports from abroad, and excises on manufactures, consumable commodities, or otherwise. They gave up the great sources of revenue derived from commerce; they retained the concurrent power of levying excises, and duties if covering anything other than excises; but in respect of them the range of taxation was narrowed by the power granted over interstate commerce, and by the danger of being put at disadvantage in dealing with excises on manufactures. They retained the power of direct taxation, and to that they looked as their chief resource; but even in respect of that, they granted the concurrent power, and if the tax were placed by both governments on the same subject, the claim

of the United States had preference. Therefore, they did not grant the power of direct taxation without regard to their own condition and resources as States; but they granted the power of apportioned direct taxation, a power just as efficacious to serve the needs of the general government, but securing to the States the opportunity to pay the amount apportioned, and to recoup from their own citizens in the most feasible way, and in harmony with their systems of local self-government. If, in the changes of wealth and population in particular States, apportionment produced inequality, it was an inequality stipulated for, just as the equal representation of the States, however small, in the Senate, was stipulated for. . . . Moreover, whatever the reasons for the constitutional provisions, there they are, and they appear to us to speak in plain language. It is said that a tax on the whole income of property is not a direct tax in the meaning of the Constitution, but a duty, and, as a duty, leviable without apportionment, whether direct or indirect. We do not think so. Direct taxation was not restricted in one breath and the restriction blown to the winds in another. . . . Our conclusions may therefore be summed up as follows: First. We adhere to the opinion already announced, that, taxes on real estate being indisputably direct taxes, taxes on the rents or income of real estate are equally direct taxes. Second. We are of opinion that taxes on personal property, or on the income of personal property, are likewise direct taxes. Third. The tax imposed by sections twenty-seven to thirty-seven, inclusive, of the act of 1894, so far as it falls on the income of real estate and of personal property, being a direct tax within the meaning of the Constitution, and, therefore, unconstitutional and void because not apportioned according to representation, all those sections, constituting one entire scheme of taxation, are necessarily invalid."

Four dissenting opinions were prepared, by Justices Harlan, Brown, Jackson and White. In that of Justice Harlan, he said: "What are 'direct taxes' within the meaning of the Constitution? In the convention of 1787, Rufus King asked what was the precise meaning of 'direct' taxation, and no one answered. Madison Papers, 5 Elliott's Debates, 451. The debates of that famous body do not show that any delegate attempted to give a clear, succinct definition of what, in his opinion, was a direct tax. Indeed the report of those debates, upon the question now before us, is very meagre and unsatisfactory. An illustration of this is found in the case of *Gouverneur Morris*. It is stated that on the 12th of July, 1787, he moved to add to a clause empowering Congress to vary representation according to the principles of 'wealth and numbers of inhabitants,' a proviso 'that taxation shall be in proportion to representation.' And he is reported to have remarked, on that occasion, that while some objections lay against his motion, he supposed 'they would be removed by restraining the rule to direct taxation.' Elliott's Debates, 302. But, on the 8th of August, 1787, the work of the Committee on Detail being before the convention, Mr. Morris is reported to have remarked, 'let it not be said that direct taxation is to be proportioned to representation.' 5 Elliott's Debates, 393. If the question propounded by Rufus King had been answered in accordance with the interpretation now given, it is not at all certain that the Constitution, in its present form, would have been adopted by the convention, nor, if adopted, that it would have been accepted by the requisite number of States." The

following is from the dissenting opinion of Justice Brown: "In view of the fact that the great burden of taxation among the several States is assessed upon real estate at a valuation, and that a similar tax was apparently an important part of the revenue of such States at the time the Constitution was adopted, it is not unreasonable to suppose that this is the only undefined direct tax the framers of the Constitution had in view when they incorporated this clause into that instrument. The significance of the words 'direct taxes' was not so well understood then as it is now, and it is entirely probable that these words were used with reference to a generally accepted method of raising a revenue by tax upon real estate. . . . But, however this may be, I regard it as very clear that the clause requiring direct taxes to be apportioned to the population has no application to taxes which are not capable of apportionment according to population. It cannot be supposed that the convention could have contemplated a practical inhibition upon the power of Congress to tax in some way all taxable property within the jurisdiction of the Federal government, for the purposes of a national revenue. And if the proposed tax were such that in its nature it could not be apportioned according to population, it naturally follows that it could not have been considered a direct tax, within the meaning of the clause in question." Mr. Justice Jackson concluded his dissenting opinion as follows: "The practical operation of the decision is not only to disregard the great principles of equality in taxation, but the further principle that in the imposition of taxes for the benefit of the government the burdens thereof should be imposed upon those having the most ability to bear them. This decision, in effect, works out a directly opposite result, in relieving the citizens having the greater ability, while the burdens of taxation are made to fall most heavily and oppressive upon those having the least ability. It lightens the burden upon the larger number in some States subject to the tax, and places it most unequally and disproportionately on the smaller number in other States. Considered in all its bearings, this decision is, in my judgment, the most disastrous blow ever struck at the constitutional power of Congress. It strikes down an important portion of the most vital and essential power of the government in practically excluding any recourse to incomes from real and personal estate for the purpose of raising needed revenue to meet the government's wants and necessities under any circumstances. I am therefore compelled to enter my dissent to the judgment of the court." The opinion delivered by the majority of the Court was criticised with severity by Justice White, who said: "The injustice of the conclusion points to the error of adopting it. It takes invested wealth and reads it into the Constitution as a favored and protected class of property, which cannot be taxed without apportionment, whilst it leaves the occupation of the minister, the doctor, the professor, the lawyer, the inventor, the author, the merchant, the mechanic, and all other forms of industry upon which the prosperity of a people must depend, subject to taxation without that condition. A rule which works out this result, which, it seems to me, stultifies the Constitution by making it an instrument of the most grievous wrong, should not be adopted, especially when, in order to do so, the decisions of this court, the opinions of the law writers and publicists, tradition, practice, and the settled policy of the gov-

ernment must be overthrown. To destroy the fixed interpretation of the Constitution, by which the rule of apportionment according to population, is confined to direct taxes on real estate so as to make that rule include indirect taxes on real estate and taxes, whether direct or indirect, on invested personal property, stocks, bonds, etc., reads into the Constitution the most flagrantly unjust, unequal, and wrongful system of taxation known to any civilized government. This strikes me as too clear for argument. I can conceive of no greater injustice than would result from imposing on one million of people in one State, having only ten millions of invested wealth, the same amount of tax as that imposed on the like number of people in another State having fifty times that amount of invested wealth. The application of the rule of apportionment by population to invested personal wealth would not only work out this wrong, but would ultimately prove a self-destructive process, from the facility with which such property changes its situs. If so taxed, all property of this character would soon be transferred to the States where the sum of accumulated wealth was greatest in proportion to population, and where therefore the burden of taxation would be lightest, and thus the mighty wrong resulting from the very nature of the extension of the rule would be aggravated. It is clear then, I think, that the admission of the power of taxation in regard to invested personal property, coupled with the restriction that the tax must be distributed by population and not by wealth, involves a substantial denial of the power itself, because the condition renders its exercise practically impossible. To say a thing can only be done in a way which must necessarily bring about the grossest wrong, is to delusively admit the existence of the power while substantially denying it. . . . It is, I submit, greatly to be deplored that, after more than one hundred years of our national existence, after the government has withstood the strain of foreign wars and the dread ordeal of civil strife, and its people have become united and powerful, this court should consider itself compelled to go back to a long repudiated and rejected theory of the Constitution, by which the government is deprived of an inherent attribute of its being, a necessary power of taxation."—*United States Reports*, v. 158, pp. 601-715.

1895 (July-November).—Correspondence with the government of Great Britain on the Venezuela Boundary Question. See VENEZUELA: 1895 (July).

1895 (September).—Executive order for improvement of consular service.—In his annual message to Congress, Dec. 2, 1895, President Cleveland made the following statement of measures adopted for the improvement of the consular service of the country: "In view of the growth of our interests in foreign countries and the encouraging prospects for a general expansion of our commerce, the question of an improvement in the consular service has increased in importance and urgency. Though there is no doubt that the great body of consular officers are rendering valuable services to the trade and industries of the country, the need of some plan of appointment and control which would tend to secure a higher average of efficiency can not be denied. The importance of the subject has led the Executive to consider what steps might properly be taken without additional legislation to answer the need of a better system of consular appointments. The

matter having been committed to the consideration of the Secretary of State, in pursuance of his recommendations, an Executive order was issued on the 20th of September, 1895, by the terms of which it is provided that after that date any vacancy in a consular or commercial agency with an annual salary or compensation from official fees of not more than \$2,500 or less than \$1,000 should be filled either by transfer or promotion from some other position under the Department of State of a character tending to qualify the incumbent for the position to be filled, or by the appointment of a person not under the Department of State, but having previously served thereunder and shown his capacity and fitness for consular duty, or by the appointment of a person who, having been selected by the President and sent to a board for examination, is found, upon such examination, to be qualified for the position. Posts which pay less than \$1,000 being usually, on account of their small compensation, filled by selection from residents of the locality, it was not deemed practicable to put them under the new system. The compensation of \$2,500 was adopted as the maximum limit in the classification for the reason that consular officers receiving more than that sum are often charged with functions and duties scarcely inferior in dignity and importance to those of diplomatic agents, and it was therefore thought best to continue their selection in the discretion of the Executive without subjecting them to examination before a board. Excluding seventy-one places with compensation at present less than \$1,000, and fifty-three places above the maximum in compensation, the number of positions remaining within the scope of the order is one hundred and ninety-six. . . . In execution of the Executive order referred to, the Secretary of State has designated as a board to conduct the prescribed examinations the Third Assistant Secretary of State, the Solicitor of the Department of State, and the Chief of the Consular Bureau, and has specified the subjects to which such examinations shall relate. . . . The expense attending such a plan would be insignificant compared with its usefulness, and I hope the legislation necessary to set it on foot will be speedily forthcoming. I am thoroughly convinced that in addition to their salaries our ambassadors and ministers at foreign courts should be provided by the Government with official residences. The salaries of these officers are comparatively small and in most cases insufficient to pay, with other necessary expenses, the cost of maintaining household establishments in keeping with their important and delicate functions. The usefulness of a nation's diplomatic representative undeniably depends upon the appropriateness of his surroundings, and a country like ours, while avoiding unnecessary glitter and show, should be certain that it does not suffer in its relations with foreign nations through parsimony and shabbiness in its diplomatic outfit. These considerations and the other advantages of having fixed and somewhat permanent locations for our embassies, would abundantly justify the moderate expenditure necessary to carry out this suggestion."—*Message of the President (54th Congress, 1st session, House Documents, v. 1)*.

1895 (December).—Message of President Cleveland on boundary dispute between Great Britain and Venezuela.—"It had long been known in the United States that there existed a boundary dispute between Great Britain and Venezuela, but in view of the fact that many of the boundary lines in South America were vaguely defined and

had for many years caused more or less irritation between the South American republics, the settlement of this particular one was not considered important to American interest. . . . The dispute between Great Britain and Venezuela originated in conflicting Dutch and Spanish territorial claims in the northeastern part of the South American continent,—England being the successor of the Dutch in Guiana, while Venezuela based her claims upon Spanish title. It became apparent in 1840 that these early territorial claims were in conflict. . . . In 1876, Venezuela called the attention of the United States to the alleged encroachments of British Guiana upon her soil, laying especial emphasis upon English advances in the region lying about the mouth of the Orinoco River. From that time to 1895, Venezuela upon several occasions had urged the United States as the 'oldest of the republics of the new continent,' and therefore the one called upon 'to lend the others its powerful moral support in disputes with European nations,' to intercede in its behalf. Without exception, the replies from Washington expressed sympathy with Venezuela in her controversy. In some instances assurances were given that if Great Britain were wrongfully seeking to extend the lines of her Guiana colony, such action would be regarded by the United States as an unjustifiable encroachment upon the Western Hemisphere, and therefore a subject coming clearly within the scope of the Monroe Doctrine. . . . Mr. Frelinghuysen, in 1882, had offered to propose to Great Britain a submission of the question to the arbitration of a third power, should Venezuela so request. . . . There was a word of caution to Mr. Lowell, the American Minister in London (July 7, 1884), not to commit the United States 'to any determinate political solution' of the question, which at that time indicated clearly the conservative attitude of the government. In this letter Mr. Frelinghuysen stated that 'The moral position of the United States in these matters [alleged foreign encroachments in the Americas] was well known through the enunciation of the Monroe Doctrine, but formal action in the direction of applying that doctrine to a speculative case affecting Venezuela seemed to be inopportune, and I could not advise Venezuela to arouse a discussion of the point.' Venezuela readily accepted the arbitration proposals of the United States, but not without some show of embarrassment. Should the United States use its good offices in an endeavor to incline Great Britain to submit the matter to the arbitration of a third power, the United States, therefore, as mediator in the case, would likely be debarred from acting in the capacity of umpire; and the United States alone was acceptable as an umpire to Venezuela."—J. B. Henderson, Jr., *American diplomatic questions*, pp. 412-414.—"In 1890 . . . [Blaine] instructed Lincoln to proffer our good offices and to suggest an informal conference of the three countries. Meantime the question had become acute, owing to the discovery of gold in the region in dispute and the probability of actual occupation. Cleveland therefore proposed to handle it with vigor. He referred to it in his message of 1894, expressing his hope for arbitration, and Congress recommended such action to both parties. England refused, as she had in the case of Lincoln's suggestion, to submit the whole question, but she would arbitrate within fixed limits. It was at this point that Secretary Gresham died and Olney took office. It was not, however, as a result of Gresham's death that the

United States policy showed that sudden acceleration which became a nine days' wonder for the whole world; the change had already been determined upon by Cleveland. He believed that, in accordance with the non-colonization pronouncement of Monroe, the boundaries of foreign colonies in America had become fixed, that they were determinable by judicial process, and must be so determined lest in a contest between a strong European nation and a weak American one the line might be pushed back and the area of freedom curtailed. To insist upon such a judicial settlement was, he urged, our duty and privilege. June 20, 1895, Olney sent his dispatch setting forth these views. To the more usual phrases of the Monroe Doctrine he added, 'That distance and three thousand miles of intervening ocean make any permanent political union between an European and an American state unnatural and inexpedient will hardly be denied.' Not content with thus proclaiming the ultimate extinction of European colonial possessions, he announced with reference to the present, 'Today the United States is practically sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition.' Great Britain, he declared, could not be considered as a Southern American power, if she advanced her frontier, she would be acting contrary to the Monroe Doctrine. In order that we might know that no such extension was taking place, full arbitration was necessary. The President, he said, must be informed of her policy before the next meeting of Congress; 'if he is disappointed in that hope' the result will be 'calculated to greatly embarrass the future relations between this country and Great Britain.' Lord Salisbury in a long dispatch controverted these statements, and refused to admit the intervention of the United States between Great Britain and Venezuela. [Great Britain had consistently refused, since the middle of the century, to submit to arbitration her title to territory within a line run by a surveyor named Schomburgk.] In a special message of December 17, 1895, Cleveland dealt with the matter in a manner similar to that which Polk had made use of in connection with Oregon, but more vigorously. He recommended that we appoint a commission of our own to investigate the facts. If its report should show that Great Britain was extending her territory, nothing would remain but to accept the situation, to recognize its plain requirements, and to deal with it accordingly. War spirit ran high, but it is only fair to President Cleveland to say that he was throughout probably conscious of irresistible weight of the forces making for peace between Great Britain and the United States. He was not bluffing, for he was prepared to meet the call; but he did not expect to be called. Like Polk, he was 'looking England in the eye.' Venezuela prepared her case for the benefit of our commission, and Great Britain brought out a timely parliamentary Blue Book, which answered the same purpose.—C. R. Fish, *American diplomacy*, pp. 392-393.—'The shock that was propagated through the English-speaking world, and far beyond its bounds, by this message of President Cleveland had no parallel since the seizure of Slidell and Mason a generation in the past. Two facts contributed much to the intensity of the disturbance. The existence of anything like a serious difference between the British and the American Government was absolutely unsuspected outside of a very small circle of public men; and the President was believed by both his

friends and his foes to be so resolutely pacific in his attitude that only the most imperious exigency could change it. The message revealed a disagreement so grave as to have moved even Mr. Cleveland to thought and speech of war. Nor was anything reassuring to be found in the action of Congress; for both houses, without opposition, adopted the measure that the President recommended, and with the new year a commission of distinguished Americans appointed by the President began its laborious task of determining the true divisional line between Venezuela and British Guiana.'—W. A. Dunning, *British empire and the United States*, pp. 310-311.—The House refused to wait for any reference of the matter to its Committee on Foreign Relations, but framed and passed at once (December 18) without debate or division, an act authorizing the suggested commission and appropriating \$100,000 for the expenses of its work. In the Senate there were some voices raised against needless and unseemly haste in the treatment of so grave a proposition. However, the Senate was persuaded to refer the House Bill to its Committee on Foreign Relations, but the Committee reported it on the following day (December 20), and it was passed without division.—See also MONROE DOCTRINE: 1870-1895; VENEZUELA: 1895 (July); (December).

1895-1896 (December-January).—Feeling in England and America over Venezuela boundary dispute.—'It is agreed by persons experienced in earthquakes that this species of phenomenon includes distinct varieties, clearly marked off from one another by physical and psychological effects. The most destructive materially and most disturbing mentally is that known in unscientific parlance as the 'twister.' President Cleveland's message had all the effects of the twister. Materially there was a huge displacement of credits and securities in the financial markets. Psychologically there was manifest on both sides of the Atlantic great bewilderment and obfuscation, with strange distortions and incoherencies in the reasoning processes. American public opinion sustained with extraordinary emphasis and unanimity the President's assertion of the Monroe Doctrine, and his belligerent attitude toward the violation of it by Great Britain. Every latent current of hostility to the British and all the springs of aggressive national consciousness united in an impressive flood of popular feeling. If the administration had had no other purpose than to evoke for the information of the world the visible spirit of the American democracy, that purpose was fully achieved in the first week succeeding the Venezuelan message. Then came the distortions and confusion of the twister. It began to appear on calm reflection that, despite the stirring words at the end of Cleveland's message, war with Great Britain was neither declared nor imminent. Whether or not the Monroe Doctrine applied to the boundary dispute, no allegation was made that the treasured doctrine had in fact been violated. Peril to the honor and interests of the United States was hypothetical, not actual; and the warning of dire results to follow a certain contingency was to be effective only after a body of historians and jurists should have discovered a boundary line which in all probability was humanly undiscoverable. With the due realization of these conditions the spirit of militant Americanism receded into the depths and, stronger and more self-confident for having been revealed in its full proportions, awaited a more propitious season for asserting itself. Among the English

people, meanwhile, Cleveland's message and the manifestations of American feeling that followed it were received chiefly with bewilderment and incredulity. That the two governments should have reached in utter secrecy the verge of war, was incomprehensible; that so grave a situation should be due to an obscure boundary dispute in one of the least important fragments of the empire, seemed grotesquely beyond the limits of belief. Some voices from the lurking-places of ancient Toryism were shrill with resentment and defiance toward the new display of Yankee insolence; but the great volume of opinion sounded the note of amazed regret that tension had arisen, and of eager confidence that its causes could be removed. While responsible politicians were appropriately reticent, men of light and leading in other fields pronounced with emphasis and iteration that war between the two great English-speaking nations was unthinkable. Authors, journalists, ministers of the Gospel, and business men demanded that a peaceful way out of the threatening difficulty should be promptly found. The enormous development in means of communication and thence in personal relationships between the two peoples made powerfully for amity. Where in the days of the *Trent* affair intimacies between Englishmen and Americans were numbered by dozens, thousands and myriads existed in 1896. Across the dividing Atlantic, therefore, sped by mail and by cable great streams of protest against rupture in fact or in feeling. Friendly responses from America came promptly in reassuring volume. Influential groups on both sides of the ocean demanded that, no matter how tight and tangled the knot made by diplomacy, it be opened by the methods of peace, not of war. Arbitration for the settlement of disputes between the kindred peoples became within a few weeks the theme of an extremely energetic and wide-spread agitation, guided by co-operating leaders of the intellectual classes of both nations. While this unofficial sentiment was taking active shape, there was much uneasiness lest the diplomatists should not see their way, after so peremptory a disagreement, to a dignified resumption of intercourse about the Venezuelan question. A counter-irritant to oversensitiveness on this ground in the British Foreign Office was found in the acute conditions that arose in a far distant part of the empire less than a fortnight after Cleveland's disturbing message was published. Jameson's ill-starred raid into the Transvaal met its humiliating end on January 2, 1896, and on the following day the German Emperor's congratulatory despatch to the Boer President was made known. The explosion of British wrath over this incident drove Venezuela and its boundary quite out of the range of popular interest. . . . Yet the attitude of the United States, however unimportant relatively, could not be ignored by a prudent foreign minister in the presence of threatening conditions nearer home. For this reason, perhaps, among others, Lord Salisbury met more than half way the advances of the Cleveland administration toward further negotiation. In the middle of January the American commission applied through Secretary Olney for documentary and other information on which Great Britain based its views as to the true divisional line between Guiana and Venezuela. Lord Salisbury furnished with enthusiasm all that his office possessed. At the opening of Parliament in February both he and Mr. Balfour, leader of the Commons, admitted the interest of the United States in the boundary question, and intimated

the hope that diplomacy would achieve a settlement of the difficulty. At the same time his Lordship indicated a much less intolerant attitude than before as to the efficacy of arbitration in international differences. In accordance with the disposition thus manifested, a suggestion from Mr. Olney that negotiations be undertaken at Washington for the settlement of the difficulty with Venezuela was agreed to by the British Government, with a voluntary expression of willingness to take up the matter either with Venezuela or with the United States acting as her friend. So full a concession to the American view could not fail to insure a pacific agreement. The negotiations were begun forthwith between Great Britain and America. The British abandoned their insistence on a fixed line as the irreducible minimum of their territory, and accepted the submission of the whole claim of each power to arbitration, with the proviso that actual occupation or control of any region for fifty years should give title to either party. . . . In its broad character as a diplomatic episode this whole affair stands as an assertion by the United States and a recognition by Great Britain of a far wider interest and authority beyond her borders than was ever before definitely maintained by the American Republic, whether as Monroe Doctrine or otherwise. The giant democracy took her place among the great powers of the earth, whether for weal or for woe, and the British motherland was the first to accord recognition to the new position. More than this, however, gives importance to the Venezuelan boundary controversy in the history of the relations of English-speaking peoples. Here began a systematic and comprehensive agitation for the definitive supplanting of war by arbitration as the last resort in the disputes among nations. The negotiation of the treaty by which the Venezuelan boundary was settled was accompanied by the framing of a general treaty of arbitration applicable for the future to controversies between Great Britain and the United States. The diplomats who in November and December of 1895 sent thrills of warlike feeling through a hundred million English-speaking people, in the spring of 1896 were meticulously intent on devising the formulas that should render war impossible. So far as this situation was a result of the disturbance caused by the presidential message of December 17, it impressively confirmed and justified the unwavering contention of Mr. Cleveland that that document was in purpose and effect a powerful factor in the maintenance of peace."—W. A. Dunning, *British empire and the United States*, pp. 311-318.

1895-1896 (December-February).—Gold reserve in the treasury again imperiled.—Refusal of any measures of relief by the Senate.—In his annual message to Congress, December 2, 1895, President Cleveland described at length the stress of circumstances under which in the previous February, the secretary of the treasury had contracted with certain bankers and financiers to replenish and protect the reserve of gold in the treasury for redemption of United States notes (see above: 1895: January-February), and added: "The performance of this contract not only restored the reserve, but checked for a time the withdrawals of gold and brought on a period of restored confidence and such peace and quiet in business circles as were of the greatest possible value to every interest that affects our people. I have never had the slightest misgiving concerning the wisdom or propriety of this arrangement, and am quite

willing to answer for my full share of responsibility for its promotion. I believe it averted a disaster the imminence of which was, fortunately, not at the time generally understood by our people. Though the contract mentioned stayed for a time the tide of gold withdrawal, its good results could not be permanent. Recent withdrawals have reduced the reserve from \$107,571,230 on the 8th day of July, 1895, to \$79,333,966. How long it will remain large enough to render its increase unnecessary is only matter of conjecture, though quite large withdrawals for shipment in the immediate future are predicted in well-informed quarters. About \$16,000,000 has been withdrawn during the month of November. The foregoing statement of events and conditions develops the fact that after increasing our interest-bearing bonded indebtedness more than \$162,000,000 to save our gold reserve we are nearly where we started, having now in such reserve \$79,333,966 as against \$65,438,377 in February, 1894, when the first bonds were issued. Though the amount of gold drawn from the Treasury appears to be very large as gathered from the facts and figures herein presented, it actually was much larger, considerable sums having been acquired by the Treasury within the several periods stated without the issue of bonds. On the 28th of January, 1895, it was reported by the Secretary of the Treasury that more than \$172,000,000 of gold had been withdrawn for hoarding or shipment during the year preceding. He now reports that from January 1, 1879, to July 14, 1890, a period of more than eleven years, only a little over \$28,000,000 was withdrawn, and that between July 14, 1890, the date of the passage of the law for an increased purchase of silver, and the 1st day of December, 1895, or within less than five and a half years, there was withdrawn nearly \$375,000,000, making a total of more than \$403,000,000 drawn from the Treasury in gold since January 1, 1879, the date fixed in 1875 for the retirement of the United States notes. "Nearly \$327,000,000 of the gold thus withdrawn has been paid out, on these United States notes, and yet every one of the \$346,000,000 is still uncanceled and ready to do service in future gold depletions. More than \$76,000,000 in gold has since their creation in 1890 been paid out from the Treasury upon the notes given on the purchase of silver by the Government, and yet the whole, amounting to \$153,000,000, except a little more than \$16,000,000 which has been retired by exchanges for silver at the request of the holders, remains outstanding and prepared to join their older and more experienced allies in future raids upon the Treasury's gold reserve. In other words, the Government has paid in gold more than nine-tenths of its United States notes and still owes them all. It has paid in gold about one-half of its notes given for silver purchases without extinguishing by such payment one dollar of these notes. . . . I am convinced the only thorough and practicable remedy for our troubles is found in the retirement and cancellation of our United States notes, commonly called greenbacks, and the outstanding Treasury notes issued by the Government in payment of silver purchases under the act of 1890. I believe this could be quite readily accomplished by the exchange of these notes for United States bonds, of small as well as large denominations, bearing a low rate of interest. They should be long-term bonds, thus increasing their desirability as investments, and because their payment could be well postponed to a period far removed from present finan-

cial burdens and perplexities, when with increased prosperity and resources they would be more easily met. . . . In the present stage of our difficulty it is not easy to understand how the amount of our revenue receipts directly affects it. The important question is not the quantity of money received in revenue payments, but the kind of money we maintain and our ability to continue in sound financial condition. We are considering the Government's holdings of gold as related to the soundness of our money and as affecting our national credit and monetary strength. If our gold reserve had never been impaired; if no bonds had ever been issued to replenish it; if there had been no fear and timidity concerning our ability to continue gold payments; if any part of our revenues were now paid in gold, and if we could look to our gold receipts as a means of maintaining a safe reserve, the amount of our revenues would be an influential factor in the problem. But unfortunately all the circumstances that might lend weight to this consideration are entirely lacking. In our present predicament no gold is received by the Government in payment of revenue charges, nor would there be if the revenues were increased. The receipts of the Treasury, when not in silver certificates, consist of United States notes and Treasury notes issued for silver purchases. These forms of money are only useful to the Government in paying its current ordinary expenses, and its quantity in Government possession does not in the least contribute toward giving us that kind of safe financial standing or condition which is built on gold alone. If it is said that these notes if held by the Government can be used to obtain gold for our reserve, the answer is easy. The people draw gold from the Treasury on demand upon United States notes and Treasury notes, but the proposition that the Treasury can on demand draw gold from the people upon them would be regarded in these days with wonder and amusement; and even if this could be done there is nothing to prevent those thus parting with their gold from regaining it the next day or the next hour by the presentation of the notes they received in exchange for it. The secretary of the treasury might use such notes taken from a surplus revenue to buy gold in the market. Of course he could not do this without paying a premium. Private holders of gold, unlike the Government, having no parity to maintain, would not be restrained from making the best bargain possible when they furnished gold to the Treasury; but the moment the Secretary of the Treasury bought gold on any terms above par he would establish a general and universal premium upon it, thus breaking down the parity between gold and silver, which the Government is pledged to maintain, and opening the way to new and serious complications. In the meantime the premium would not remain stationary, and the absurd spectacle might be presented of a dealer selling gold to the Government and with United States notes or Treasury notes in his hand immediately clamoring for its return and a resale at a higher premium. It may be claimed that a large revenue and redundant receipts might favorably affect the situation under discussion by affording an opportunity of retaining these notes in the Treasury when received, and thus preventing their presentation for gold. Such retention to be useful ought to be at least measurably permanent; and this is precisely what is prohibited, so far as United States notes are concerned, by the law of 1878, forbidding their further retirement. That statute in so many words

provides, that these notes when received into the Treasury and belonging to the United States shall be 'paid out again and kept in circulation.'—*United States, message and documents* (Abridgment), 1895-1896, p. 27.—"The difficulty which had been anticipated in keeping gold in the treasury became acute as a result of the president's Venezuelan message of December 17. [See above: 1895 (December); 1895-1896 (December-January).] The 'war scare' which was caused by that document was attended by a panic on the London Exchange, which communicated itself to the Continental exchanges and produced at once serious consequences in New York. Prices fell heavily, some failures were reported, and the withdrawal of gold from the treasury assumed great proportions. On the 20th the reserve had gone down to \$69,650,000, ten millions less than three weeks earlier, with future large reductions obviously near at hand. The president accordingly on that day sent to Congress a special message, stating the situation, alluding to the effect of his recently announced foreign policy, and declaring that the result conveyed a 'warning that even the patriotic sentiment of our people is not an adequate substitute for a sound financial policy.' He asked Congress to postpone its holiday recess until something had been done to reassure the apprehensive among the people, but declared that in any case he should use every means in the power of the executive to maintain the country's credit. The suggestion was acted upon. . . . On December 26 two bills were introduced in the House of Representatives by Chairman Dingley of the ways and means committee. Adopting the view maintained by the Republicans, that the chief cause of the difficulty in maintaining the gold reserve was the deficiency in the revenue, he proposed first a bill 'to temporarily increase the revenues.' This provided that until August 1, 1898, the customs duties on most varieties of wool and woolen goods and on lumber, should stand at 60 per cent of those imposed by the McKinley Act of 1890, and that the duties in all the other schedules of the tariff, except sugar, should, with slight exceptions, be increased by 15 per cent over those of the existing law. This bill passed the House on the 27th by a party vote of 205 to 81. On the following day the second bill 'to maintain and protect the coin redemption fund,' was passed by 170 to 136,—47 Republicans in the minority. This bill authorized the secretary of the treasury to procure coin for redeeming legal-tenders by the sale of three-per-cent five-year bonds, and to provide for temporary deficiencies by the issue of three-year three-per-cent certificates of indebtedness in small denominations. The administration was as little satisfied with this bill as with that changing the tariff, and proceeded with the bond issue. . . . The failure of the bills in the Senate was foreseen, but the precise form in which it was manifested excited some surprise. On February 1, [1896], the bond bill was transformed by the adoption of a substitute providing for the free coinage of silver, and this was passed by a vote of 42 to 35. On the 14th the House refused, by 215 to 90, to concur in the Senate's amendment, and the whole subject was dropped. Meanwhile the Senate finance committee had reported a free-coinage substitute for the House tariff bill also. But after this further exhibition of their strength the silver senators refused to go further, and on February 25 joined with the Democrats in rejecting, by 33 to 22, a vote to take up the bill for consideration. This vote was recognized as finally disposing of

the measure."—*Political Science Quarterly*, June, 1896.—President Cleveland, in writing of the bond sales nearly ten years later, said: "The sales of United States bonds in the years 1894, 1895, and 1896 for the purpose of replenishing the stock of gold in the public Treasury have been greatly misunderstood by many honest people, and often deliberately misrepresented. . . . Without shame and without repentance, I confess my share of the guilt; and I refuse to shield my accomplices in this crime who, with me, held high places in that administration. And though Mr. Morgan and Mr. Belmont and scores of other bankers and financiers who were accessories in these transactions may be steeped in destructive propensities, and may be constantly busy in sinful schemes, I shall always recall with satisfaction and self-congratulation my association with them at a time when our country solely needed their aid."—Grover Cleveland, *Presidential problems*, pp. 121, 170.

1895-1896 (December-December).—Plans for coast defense.—In his annual report to the president, 1895, the secretary of war wrote as follows of pending plans for coast defense, and of the progress of work upon them: "In your annual message transmitted to Congress in December, 1886, attention was directed to the urgent necessity for seacoast defense in these words: 'The defenseless condition of our sea-coast and lake frontier is perfectly palpable; the examinations made must convince us all that certain of our cities should be fortified and that work on the most important of these fortifications should be commenced at once.' . . . Since that time the condition of these defenses has been under grave consideration by the people and by this Department. Its inadequacy and impotency have been so evident that the intelligence of the country long since ceased to discuss that humiliating phase of the subject, but has addressed itself to the more practical undertaking of urging more rapid progress in the execution of the plan of defense devised by the Endicott Board in 1886, with subsequent slight modifications. That plan contemplated a system of fortifications at 27 ports (to which Puget Sound was subsequently added), requiring 677 guns and 824 mortars of modern construction, at a cost of \$97,782,800, excluding \$28,595,000 for floating batteries. By an immediate appropriation at that time of \$21,500,000 and an annual appropriation of \$9,000,00 thereafter, as then recommended, the system of land defenses could have been completed in 1895. The original plan contemplated an expenditure of \$97,782,800 by the end of the present year. The actual expenditures and appropriations for armament and emplacements have, however, been but \$10,631,000. The first appropriation for guns was made only seven years ago and the first appropriation for emplacements was made only five years ago. The average annual appropriations for these two objects has been less than \$1,500,000. The work has therefore been conducted at about one-seventh the rate proposed. If future appropriations for the manufacture of guns, mortars, and carriages be no larger than the average authorized for the purpose since 1888, it will require twenty-two years more to supply the armament of the eighteen important ports for which complete projects are approved. If the appropriations for the engineer work are to continue at the rate of the annual appropriations since 1890, it will require seventy years to complete the emplacements and platforms for this armament for the ports referred to."—*Report of the Secretary of War*, 1895,

p. 19 (54th Congress, 1st session, House Documents, v. 1).—In his message of the following year (1896), the subject was touched upon by the president, as follows: "During the past year rapid progress has been made toward the completion of the scheme adopted for the erection and armament of fortifications along our seacoast, while equal progress has been made in providing the material for submarine defense in connection with these works. . . . We shall soon have complete about one-fifth of the comprehensive system, the first step in which was noted in my message to the Congress of December 4, 1893. When it is understood that a masonry emplacement not only furnishes a platform for the heavy modern high-power gun, but also in every particular serves the purpose and takes the place of the fort of former days, the importance of the work accomplished is better comprehended. In the hope that the work will be prosecuted with no less vigor in the future, the Secretary of War has submitted an estimate by which, if allowed, there will be provided and either built or building by the end of the next fiscal year such additional guns, mortars, gun carriages, and emplacements, as will represent not far from one-third of the total work to be done under the plan adopted for our coast defenses—thus affording a prospect that the entire work will be substantially completed within six years. In less time than that, however, we shall have attained a marked degree of security. The experience and results of the past year demonstrate that with a continuation of recent careful methods the cost of the remaining work will be much less than the original estimate. We should always keep in mind that of all forms of military preparation coast defense alone is essentially pacific in its nature."—*Message of the President, 1896 (54th Congress, 2nd session, House Documents, v. 1)*.

1895-1898.—Insurrection renewed in Cuba.—General Weyler made governor.—Concentration order.—Attitude of United States toward Spain. See CUBA: 1895-1898.

1896.—Party platforms and nominations.—Republican.—Marcus Alonzo Hanna, the Ohio merchant and politician who was leading the Republican party at this juncture, saw in 1895 strong evidence that the election would be very close. Some time in August or September of that year, he reported to Governor McKinley, of Ohio, in the presence of H. H. Kohlsaat, of Chicago, that he "could obtain the votes of New York and Pennsylvania on condition that McKinley would promise to appoint 'Tom Platt Secretary of the Treasury, and they want it in writing. Platt says he has had an experience with one President (Harrison) born in Ohio, and he wants no more verbal promises.' McKinley . . . paced the little room for a few minutes; finally . . . he said: 'There are some things in this world that come too high. If I cannot be President without promising to make Tom Platt Secretary of the Treasury, I will never be President.' . . . [In June, 1896, Kohlsaat] spent hours with McKinley, urging him to declare definitely for gold. . . . He said Whitelaw Reid, editor of the *New York Tribune*, had been to see him a few days before, on his return from Arizona to New York, and strongly advised against it. Reid said: 'If a gold plank is adopted we will not carry a State west of the Mississippi River.'"—H. H. Kohlsaat, *From McKinley to Harding*, p. 30.—The Republican national conven-

tion was held at St. Louis from the sixteenth to the eighteenth of June. By that time it was generally understood that W. H. McKinley was the chosen candidate. There was therefore no difficulty looked for on this point, but the party platform was a troublesome one to build. "The Committee on Resolutions found it difficult to reach an agreement as to the financial declaration to be made. Senator Teller, who was a member of that Committee, held out for a free silver plank, and his colleagues were slow to antagonise him. Mr. Hanna let them discuss the question for nearly two days, during which time the business of the Convention was at a standstill. . . . The wildest stories were circulated regarding the coming action of the Platform Committee. This delay and the resulting rumours seriously alarmed the advocates of gold. They feared lest in the end some sort of compromise might be made. Finally, several of the most influential of their number . . . went to Mr. Hanna's rooms . . . and . . . demanded that he accept a gold-standard plank for the platform, or else they would carry the fight to the floor of the Convention and thus precipitate an open conflict between themselves and the supporters of Mr. McKinley. They gave Mr. Hanna just one hour in which to accede to their demand. . . . They had quite unconsciously played his game, and victory was now assured. . . . On June 18th the platform was read to the Convention by Senator Foraker. It described the Cleveland administration as responsible for 'a record of unparalleled incapacity, dishonour, and disaster.' [In administrative management, the platform went on, 'it has ruthlessly sacrificed indispensable revenue, entailed an unceasing deficit, eked out ordinary current expenses with borrowed money, piled up the public debt by \$262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to alien syndicates, and reversed all the measures and results of successful Republican rule. In the broad effect of its policy it has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprise, and crippled American production while stimulating foreign production for the American market.' . . .] It renewed Republican allegiance to 'the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity.' [He stated that 'this true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producer; it upholds the American standard of wages for the American workingman; it puts the factory by the side of the farm, and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift, and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial; equally opposed to foreign control and domestic monopoly, to sectional discrimination, and individual favoritism.' It went on:] 'Protection and reciprocity are twin measures of Republican policy and go hand in hand. Democratic rule has recklessly struck down both, and both must be re-established.' It declared for a 'firm, vigorous and dignified' foreign policy; for American control of the Hawaiian Islands; for the purchase of the Danish West Indies; and for the construction, operation and ownership of the Nicaraguan canal by the United States. The Monroe Doctrine was reaffirmed, and American intervention in Cuba

was mentioned with approval. 'We favour the continued enlargement of the navy, and a complete system of harbour and sea-coast defences.' Amid breathless silence, the part of the platform relating to the money question was read out. 'The Republican Party is unreservedly for sound money. . . . We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free coinage of silver, except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote; and until such agreement can be obtained, the existing gold standard must be preserved. All our silver and paper money must be maintained at parity with gold; and we favour all measures designed to maintain inviolably the obligations of the United States, and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.' No sooner had the platform been reported to the Convention, than Senator Teller of Colorado rose and offered a substitute for its gold-standard declaration. Mr. Teller's substitute was one which he had tried in vain to induce the Committee to adopt. It declared that 'the Republican Party favours the use of both gold and silver as equal standard money'; and it pledged the party to secure 'the free, unrestricted and independent coinage of gold and silver' in the mints of the United States 'at a ratio of 16 parts of silver to 1 of gold.' This embodied the extreme demand of the free-silvermen and it was certain to be rejected. Many delegates might have favoured the device of a 'straddle,' as a measure of expediency; but Senator Teller had forced the monetary issue in a way which admitted of no compromise. In support of his substitute he spoke with intense feeling, his voice often faltering, and tears of unaffected emotion in his eyes. For him it was a solemn moment. He had been a Republican all his life, and to part with his old associates was unspeakably bitter. . . . The Convention respected Mr. Teller's emotion and listened to his address in sympathetic silence. But when the roll was called, his substitute was rejected by a vote of 818 to 105, and the platform as reported from the Committee was adopted by a vote of 812 to 110. Those delegates who were in full accord with Mr. Teller then rose and left the convention hall. They were only thirty-four in number, yet among them were four Senators of the United States and two members of the House of Representatives. The Convention then proceeded to the nomination of a candidate for the president."—H. T. Peck, *Twenty years of the republic*, pp. 485-489.—W. H. McKinley was nominated on the first ballot by 166½ votes against 240½ divided among several opposing candidates, and the nomination was then made unanimous. For vice president, Garret H. Hobart, of New Jersey, was nominated, also by the first voting.

1896.—Party platforms and nominations.—**Democratic.**—"If the Republican party was split by the silver question, the Democratic party was shattered by it. But there was no doubt where the party stood: it was for free silver. This was made perfectly plain by the action of the thirty-three State conventions which passed resolutions approving the free coinage of gold and silver at a ratio of sixteen to one, while only ten States declared for the gold standard. When the Democratic convention assembled in Chicago in July, it was dominated completely by the silver wing

of the party. The majority, however, had to face the determined opposition of a powerful minority led by such masterful politicians as Gorman and Whitney and Hill. Moreover, the silver delegates were not well organized and they had no visible leader."—S. E. Forman, *Our republic*, p. 665.—"The convention of one State alone (Florida) had ignored the money issue altogether. It was so plain that the approaching National Convention of the Democratic Party would be controlled by the free-silver men, that many conservative Democrats or 'Cleveland Democrats,' as they were called, were at first inclined to take no part in the Convention's counsels, but to break openly with their party in advance of its assemblage. From this course, however, they were dissuaded by President Cleveland himself, who, on June 16th, caused a letter to be published which may be considered his last official utterance as the head of the Democratic party. [The Democratic national convention was held in Chicago, June 7-11. The delegates who came to it from the Southern states, and from most of the states west of Ohio, were arrayed with a close approach to solid ranks for free silver; while those from New England and the Middle states opposed them in a phalanx almost equally firm. The "Gold Democrats" or "Sound Money Democrats," as the latter were called, ably led by ex-Governor Hill, of New York, fought hard to the end, but without avail.] As soon as the delegates began to arrive, it was plain that only a miracle of management could stem the tide that had set in for free silver. . . . How completely the great majority of the delegates had cast away their old allegiances was made evident when the convention first assembled on July 7th. . . . On the morning of July 8th, it was plain that the silver faction meant to use its power to the full. By a sweeping majority, the representation of each Territory was augmented from two members to six. The delegation from Nebraska, which was pledged to support the gold standard, was unseated, and a contesting delegation of silver men, with Mr. William J. Bryan at its head, was admitted to the Convention. Four gold delegates from Michigan were rejected, and four silver delegates were substituted in their place, thus giving to the silver faction, under the unit rule, the solid vote of Michigan. Having effected these changes, all of which greatly increased the strength of the majority, Senator S. M. White of California was made permanent President of the Convention. On July 9th, the Committee on Resolutions reported a platform devoted almost wholly to the money question, which was declared to be 'paramount to all others at this time.' The platform, after denouncing the demonetisation of silver as being the cause of the prevalent financial distress, went on to say: ['We declare that the act of 1873 demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold and a corresponding fall in the prices of commodities produced by the people; a heavy increase in the burden of taxation and of all debts, public and private; the enrichment of the money-lending class at home and abroad; prostration of industry and impoverishment of the people. We are unalterably opposed to gold monometallism, which has locked fast the prosperity of an industrial people in the paralysis of hard times. Gold monometallism is a British policy, and its adoption has brought other nations into financial servitude to London. It is not only un-American but anti-American, and it can be fastened on the United States only by the stifling

of that spirit and love of liberty which proclaimed our political independence in 1776 and won it in the war of the Revolution. We demand the free and unlimited coinage of both gold and silver at the present legal ratio of sixteen to one, without waiting for the aid or consent of any other nation. We demand that the standard silver dollar shall be a full legal tender, equally with gold, for all debts, public and private, and we favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract.] . . . The resolutions were made to condemn 'the issuing of interest-bearing bonds of the United States in time of peace and . . . the trafficking with banking syndicates'; and to denounce 'arbitrary interference by Federal authorities in local affairs,' and especially 'government by injunction,' which was described as 'a

WILLIAM JENNINGS BRYAN

new and highly dangerous form of oppression, by which Federal judges become at once legislators, judges and executioners.' Life tenure in the public service' was also disapproved in favour of appointments for fixed terms of office. The Monroe Doctrine was reaffirmed; sympathy was expressed for the people of Cuba in their struggle for independence; and an enlargement of the powers of the Interstate Commerce Commission was demanded, together with such 'control of railroads as will protect the people from robbery and oppression.' It will be noted that, contrary to all usage, the platform as reported by the majority contained no word of approbation for President Cleveland. More than that, it condemned every important policy with which he had been identified. It was, indeed, precisely what those who wrote it meant that it should be—a repudiation of him and of his administration. A minority of the committee, however, presented a protest to the Convention signed by sixteen members representing sixteen different States. These gentlemen pronounced some of the declarations in the platform, as reported by the majority of the Committee, to be 'wholly unnecessary.' Others were called 'ill-considered and ambiguously

phrased,' while still others were 'extreme and revolutionary.' The minority, therefore, offered in place of the free silver declaration, a substitute to the effect that any attempt on the part of the United States alone to establish free silver coinage would both imperil the national finances and retard or prevent the success of international bimetalism. 'It would place this country at once upon a silver basis, impair contracts, disturb business, diminish the purchasing power of the wages of labour, and inflict irreparable evil upon our nation's commerce and industry' Finally, the minority offered the following resolution as an amendment to the majority's report: 'We commend the honesty, economy, courage and fidelity of the present Democratic national administration.' . . . [In the course of the debate upon the silver question, a speech of impassioned eloquence was made by William J. Bryan, of Nebraska, who had represented his district in Congress for two terms, 1891-4, and who was rising to prominence among the leaders of the free-silver Democracy of the west.] The scene enacted in the Convention, as Mr. Bryan finished speaking, was indescribable. Throughout the latter part of his address, a crash of applause had followed every sentence; but now the tumult was like that of a great sea thundering against the dykes. Twenty thousand men and women went mad with an irresistible enthusiasm. This orator had met their mood to the very full. He had found magic words for the feeling which they had been unable to express. And so he had played at will upon their very heart-strings, until the full tide of their emotion was let loose in one tempestuous roar of passion, which seemed to have no end. When the order was partially restored, the substitute resolutions offered by Senator Hill were rejected with cries of derision, as were two other amendments afterwards proposed by him; and then the free-silver platform was adopted by a vote of 628 to 301. Having taken this action, the delegates, exhausted by the day's exciting scenes, adjourned until the following afternoon. Over night, the question of the candidate to be nominated was earnestly discussed. It was evident that Mr. Bryan had suddenly leaped into a prominence which made him a formidable competitor for the highest honours. . . . When the roll was called for the fifth time, Mr. Bryan lacked only 12 votes of a nomination, and at once 78 delegates changed their votes from other candidates to him, thereby making him the choice of the Convention. Subsequently, Mr. Arthur Sewall, a wealthy ship-builder of Maine, was nominated for the Vice-Presidency."—H. T. Peck, *Twenty years of the republic*, pp. 491, 494-496, 502-503.

1896.—Party platforms and nominations.—National Silver party.—The considerable body of Republicans who desired an unlimited free coinage of silver, and were prepared to quit their party on that issue, had made efforts to persuade the Democratic convention at Chicago to accept their leader, Senator Teller, of Colorado, for its presidential candidate. Failing in that, they assembled a convention of delegates at St. Louis, July 22-24, and, under the name of the "National Silver Party," took the alternative method of uniting the free-silver Republican vote with that of the free-silver Democracy, by accepting the Democratic

nominations as their own. William J. Bryan and Arthur Sewall were duly nominated for president and vice president, and a "platform" set forth: "First. The paramount issue at this time in the United States is indisputably the money question. It is between the gold standard, gold bonds, and bank currency on the one side and the bimetallic standard, no bonds, and Government currency on the other. On this issue we declare ourselves to be in favor of a distinctively American financial system. We are unalterably opposed to the single gold standard, and demand the immediate return to the constitutional standard of gold and silver by the restoration by this Government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of sixteen to one, and upon terms of exact equality, as they existed prior to 1873; the silver coin to be a full legal tender equally with gold for all debts and dues, private and public, and we favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract. [It held that all currency should be issued and controlled by the general government only, "and should be legal tender." It opposed the issue of "interest-bearing bonds in time of peace," denounced the policy of borrowing gold, and demanded payment of all coin obligations of the United States "in either gold or silver coin, at the option of the government." It stated that] "it stands confessed that the gold standard can only be upheld by so depleting our paper currency as to force the prices of our product below the European and even below the Asiatic level to enable us to sell in foreign markets, thus aggravating the very evils our people so bitterly complain of, degrading American labor, and striking at the foundations of our civilization itself. The advocates of the gold standard persistently claim that the cause of our distress is over-production. . . . We affirm it to be unquestioned that there can be no such economic paradox as over-production, and at the same time tens of thousands of our fellow-citizens remaining half-clothed and half-fed, and who are piteously clamoring for the common necessities of life. Second. That over and above all other questions of policy we are in favor of restoring to the people of the United States the time-honored money of the Constitution—gold and silver, not one, but both—the money of Washington and Hamilton and Jefferson and Monroe and Jackson and Lincoln, to the end that the American people may receive honest pay for an honest product; that the American debtor may pay his just obligations in an honest standard, and not in a standard that has depreciated 100 per cent. above all the great staples of our country, and to the end further that the standard countries may be deprived of the unjust advantage they now enjoy in the difference in exchange between gold and silver—an advantage which tariff legislation alone cannot overcome."

1896.—Party platforms and nominations.—People's or Populist party platform and nominations.—The People's party, more commonly called the Populist party, held its national convention at St. Louis on July 22-25, simultaneously with that of the National Silver party, and with strong influences urging it to act on the same line. One section of the party strove to bring about a complete endorsement of the Democratic nominations made at Chicago. Another section, styled the "Middle-of-the-Road" Populists, opposed any coalition with other parties; while a third wished to nominate Bryan, with a Populist

candidate for vice president, looking to an arrangement with the Democratic organization for a fusion of electoral tickets in various states. The idea of the latter prevailed, and William J. Bryan was nominated for president, with Thomas E. Watson, of Georgia, for vice president. The People's party had little disagreement with the Chicago declarations of the Democratic party, and none at all on financial questions, concerning which its doctrines were set forth as follows: "The influence of European money-changers has been more potent in shaping legislation than the voice of the American people. Executive power and patronage have been used to corrupt our legislatures and defeat the will of the people, and plutocracy has been enthroned upon the ruins of democracy. To restore the government intended by the fathers, and for the welfare and prosperity of this and future generations, we demand the establishment of an economic and financial system which shall make us masters of our own affairs and independent of European control, by the adoption of the following declaration of principles: We demand a National money, safe and sound, issued by the general government only, without the intervention of banks of issue, to be a full legal tender for all debts, public and private, and a just, equitable, and efficient means of distribution direct to the people and through the lawful disbursements of the Government. We demand the free and unrestricted coinage of silver and gold at the present legal ratio of sixteen to one, without waiting for the consent of foreign nations. We demand that the volume of circulating medium be speedily increased to an amount sufficient to meet the demands of the business population of this country and to restore the just level of prices of labor and production. We denounce the sale of bonds and the increase of the public interest-bearing bond debt made by the present administration as unnecessary and without authority of law, and we demand that no more bonds be issued except by specific act of Congress. We demand such legislation as will prevent the demonetization of the lawful money of the United States by private contract. We demand that the Government, in payment of its obligations, shall use its option as to the kind of lawful money in which they are to be paid. . . . We demand a graduated income tax, to the end that aggregated wealth shall bear its just proportion of taxation, and we denounce the recent decision of the Supreme Court relative to the income-tax law as a misinterpretation of the Constitution and an evasion of the rightful powers of Congress over the subject of taxation. We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange. Transportation being a means of exchange and a public necessity, the Government should own and operate the railroads in the interest of the people and on non-partisan basis. . . . The telegraph, like the post-office system, being a necessity for the transmission of news, should be owned and operated by the Government in the interest of the people. . . . All land now held by railroads and other corporations in excess of their actual needs should by lawful means be reclaimed by the Government and held for actual settlers only, and private land monopoly, as well as alien ownership, should be prohibited. . . . We demand that bona fide settlers on all public lands be granted free homes, as provided in the National homestead law, and that no exception be made in the case of Indian reservations when opened for settlement, and that all lands not now patented

come under this demand. We favor a system of direct legislation through the initiative and referendum under proper constitutional safeguards. We demand the election of President, Vice President, and United States Senators by a direct vote of the people."

1896.—Party platforms and nominations.—National Democratic platform and nominations.—An extensive revolt in the Democratic party against the declarations and the action of the party convention at Chicago had been quickly made manifest, and steps were soon taken towards giving it an organized form. These led to the assembling of a convention of delegates at Indianapolis, on September 2-3, which, in the name of the "National Democratic Party," repudiated the platform and the candidates put forward at Chicago, and branded them as false to the historic party name which they assumed. General John M. Palmer, of Illinois was put in nomination for president, and General Simon Bolivar Buckner, of Kentucky, for vice president, of the United States, and a declaration of Democratic principles adopted, the fundamental passages of which are quoted in the following: "The democratic party is pledged to equal and exact justice to all men of every creed and condition; to the largest freedom of the individual consistent with good government; to the preservation of the federal government in its constitutional vigor, and to the support of the states in all their just rights; to economy in the public expenditures; to the maintenance of the public faith and sound money; and it is opposed to paternalism and all class legislation. The declarations of the Chicago convention attack individual freedom, the right of private contract, the independence of the judiciary, and the authority of the president to enforce federal laws. They advocate a reckless attempt to increase the price of silver by legislation, to the debasement of our monetary standard; and threaten unlimited issues of paper money by the government. They abandon for republican allies the democratic cause of tariff reform, to court favor of protectionists to their fiscal heresy. In view of these and other grave departures from democratic principles, we cannot support the candidates of that convention, nor be bound by its acts. The democratic party has survived defeats, but could not survive a victory won in behalf of the doctrine and policy proclaimed in its name at Chicago. The conditions, however, which made possible such utterances from a national convention, are the direct result of class legislation by the republican party. . . . The demand of the republican party for an increase in tariff taxation has its pretext in the deficiency of the revenue, which has its causes in the stagnation of trade and reduced consumption, due entirely to the loss of confidence that has followed the populist threat of free coinage and depreciation of our money, and the republican practice of extravagant appropriations beyond the needs of good government. . . . The Democratic party, in the interests of the masses and of equal justice to all, practically established by the legislation of 1834 and 1853 the gold standard of monetary measurement, and likewise entirely divorced the government from banking and currency issues. To this long-established democratic policy we adhere, and insist upon the maintenance of the gold standard, and of the parity therewith of every dollar issued by the government, and are firmly opposed to the free and unlimited coinage of silver and to the compulsory purchase of silver bullion. But we denounce also the fur-

ther maintenance of the present costly patchwork system of national paper currency as a constant source of injury and peril. We assert the necessity of such intelligent currency reform as will confine the government to its legitimate functions, completely separated from the banking business, and afford to all sections of our country uniform, safe, and elastic bank currency under governmental supervision, measured in volume by the needs of business. The fidelity, patriotism, and courage with which President Cleveland has fulfilled his great public trust, the high character of his administration, its wisdom and energy in the maintenance of civil order and the enforcement of the laws, its equal regard for the rights of every class and every section, its firm and dignified conduct of foreign affairs, and its sturdy persistence in upholding the credit and honor of the nation are fully recognized by the democratic party, and will secure to him a place in history beside the fathers of the republic. We also commend the administration for the great progress made in the reform of the public service, and we indorse its effort to extend the merit system still further."

1896.—Party platforms and nominations.—Prohibition platform and nominations.—The Prohibition party had been the first to open the presidential campaign with candidates placed in the field. Its national convention was held at Pittsburgh, on May 27 and 28, and its nominees for president and vice president were Joshua Levering, of Maryland, and Hale Johnson, of Illinois. But a split in the convention occurred on attempts made to graft free-silver and kindred doctrines on the one-issue platform which the majority of the party desired. Except in a single particular, the latter prevailed.

1896.—Party platforms and nominations.—Socialist-Labor party nominations.—Still another party which placed candidates for the presidency and vice presidency in nomination was the Socialist-Labor organization, which held a convention in New York, July 4-10, and named for the two high offices, Charles H. Matchett, of New York, and Mathew Maguire, of New Jersey. Its platform embodied the essential doctrines of socialism, as commonly understood.—See also SOCIALISM: 1874-1901.

1896.—Party platforms and nominations.—Canvass and elections.—"The campaign was probably the most exciting in the history of the country; there were street parades almost daily, and at noon and night the busy corners of the downtown streets were filled by crowds listening to free-silver orators standing on soap boxes. All outward appearances indicated that silver would win, and good political judges predicted Illinois would give 100,000 majority for Bryan, but second sober thought prevailed."—H. H. Kohlsaar, *From McKinley to Harding*, p. 50.—"Mr. McKinley's managers perceived with genuine alarm that the contest was to be one of the fiercest ever fought in American political history. . . . The Democratic nominations were no sooner made than the whole country perceived the supreme issue of the campaign to be the silver question. Even Mr. McKinley ceased to discourse upon the tariff, and addressed his visiting delegations on the subject of the currency. The Republicans took up the cry of 'sound money,' and made that the party slogan. . . . The excitement which marked this whole extraordinary contest increased in its intensity until the very end. An imposing demonstration in New York City signalled the close of the campaign

on the Saturday before election day. More than 150,000 voters marched up Broadway, under a forest of flags and vivid decorations which covered nearly every building on the famous thoroughfare. . . . The demonstrations had no great political significance, for New York was known to be safely Republican; yet the outpouring was one of the most picturesque as well as one of the most impressive incidents in a contest that was full of life and colour. The election was unexpectedly decisive. Before midnight on November 3d, it was known that Mr. Bryan had been defeated and that he would receive in the Electoral College only 176 votes to 271 for Mr. McKinley. . . . But the solid opposition of the East, the Northwest and the Middle West had overcome his loyal following in the more thinly settled mining and agricultural States. Yet Mr. Bryan had given the Republican party a shock of extreme severity."

—H. T. Peck, *Twenty years of the republic, 1885-1905*, pp. 504-505, 514-515.—With all the excitement of anxiety and the heated conflict of beliefs there was little violence of any kind, from first to last. The critical election day (November 3) passed with no serious incidents of disorder. The verdict of the people, pronounced for the preservation of the monetary standard which the world at large has established in general use, was accepted with the equanimity to which self-governing citizens are trained. Nearly fourteen millions of votes were cast, of which the Republican presidential electors received 7,104,244; electors representing the various parties which had nominated Bryan received, in all, 6,506,835; those on the National Democratic ticket received 132,652; those on the Prohibition ticket, 144,606; those on the Socialist-Labor ticket, 36,416. In the Electoral College, there were 271 votes for McKinley, and 176 for Bryan. The states giving their electoral votes for McKinley were California (excepting 1 vote, cast for Bryan), Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky (except 1), Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, Wisconsin. The states which chose electors for Bryan were Alabama, Arkansas, Colorado, Florida, Georgia, Idaho, Kansas, Louisiana, Mississippi, Missouri, Montana, Nebraska, Nevada, North Carolina, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wyoming, besides the single votes won in California and Kentucky. For vice president, Hobart received 271 electoral votes—the same as McKinley; but Sewall received 27 less than Bryan, that number being cast for the Populist candidate, Watson. This was consequent on fusion arrangements between Democrats and Populists in 28 states. In some states, the majority given against silver free coinage was overwhelming, as for example, in New York, 268,000 plurality for McKinley, besides 19,000 votes cast for the "Gold Democratic" candidate; New Jersey, 87,000 Republican plurality and 6,000 votes for General Palmer; Pennsylvania 295,000 and 11,000; Massachusetts, 173,000 and 11,000. On the other hand, Texas gave Bryan a plurality of 202,000, and Colorado 135,000.

1896 (March).—Removal of Confederate disabilities.—In 1896, practically the last of the Confederate disabilities was removed. On March 31, the president approved an act of Congress which may properly be called "An Act of Oblivion," which reads as follows: "That section twelve hundred and eighteen of the Revised Statutes of the United States, as amended by chapter forty-six of the laws of 1884, which section is as follows: 'No person who held a commission in the Army or Navy of the United States at the beginning of the late rebellion, and afterwards served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army or Navy of the United States,' be, and the same is hereby, repealed."—*United States Statutes at Large*, v. 29, p. 84.

1896 (May).—Extension of civil service rules by President Cleveland. See CIVIL SERVICE REFORM: United States: 1893-1896.

1896 (June-November).—Presidential election.—Silver question at issue.—"During the last year of his administration . . . [President Cleveland] seemed to live under a cloud of obloquy, blacker and more nearly unrelieved than that of which any other elected President had ever known. The Republicans were never weary of pointing out what they described as the disastrous failure of his policies. A majority of his own party believed him not only to have wrecked it, but to have betrayed it. The free-silver man held him responsible for the financial depression. The capitalists called him rash and utterly unsafe because of his Venezuela message. The labour element detested him for breaking the great Chicago strike by the use of troops. Only here and there was a voice raised in his defence, and the defence was nearly always worded like a half apology, ascribing to him only what was called 'success in defeat.' . . . He encountered such malignity of hatred as would have terrified and sickened a weaker soul than his. There are signs that within his heart even he often winced at the cruel falsehoods which assailed him. Yet none the less, he stood unmoved and magnificently unafraid—a superbly virile figure, holding fast to what he felt to be the right, and looking all opponents squarely in the eye. In the end, he came to know that it was his, not to achieve what he had hoped, but to save that which had been entrusted to him; and he did it bravely, grimly, powerfully. Opinions may differ as to his conception of his duty; but the memory of his devotion to high principle, his strength of will and his dauntless courage must remain to all Americans a source of patriotic pride and an enduring inspiration."—H. T. Peck, *Twenty years of the republic*, pp. 459-460, 463.—A national conference held at Washington, in March, 1895, may be looked upon as the beginning of a widely and powerfully organized movement to force the demand for a free and unlimited coinage of silver, on equal terms, as legal tender money, with gold, into the

front of the issues of the presidential canvass of 1896. The agitation then projected was carried on with extraordinary ardor and skill and had astonishing success. It was helped by the general depression of business in the country, and especially by the long continued ruling of low prices for the produce of the farms,—for all of which effects the gold standard of values was held to be the one relentless cause. In both political parties the free silver propaganda was pushed with startling effect, and there seemed to be doubt, for a time, whether the controlling politicians in either would take an opposing stand. Southern influences proved decisive of the result in the Democratic party; eastern influences in that of the Republicans. The ranks of the former were swept rapidly into the movement for free silver, and the party chiefs of the latter were driven to a conflict with it, not wholly by convictions or will of their own. During the spring and early summer of 1896, the Democratic party in state after state became committed on the question, by declarations for the unlimited free coinage of silver, at the ratio of 16 to 1; until there was tolerable certainty, some weeks before the meeting of the national convention, that its nominee for president must be one who represented that demand. How positively the Republican party would champion the gold monetary standard was somewhat less assured, though its stand on that side had been taken in a general way. "The Supreme Court was not allowed to have the last word on the income tax. Less than a year after its decision was rendered the question was taken to the people and became a theme for discussion in one of the most bitter and exciting struggles in all our history. Next to the contest of 1860, the campaign of 1896 was the most momentous of all our political battles. Conditions for a big fight could hardly have been more favorable. The country was still suffering from the effects of the Panic of 1893; organized labor was seething with unrest; the champions of free coinage were challenging their adversaries to mortal combat; between the rich and the poor, between the millionaires and the lower and middle working classes, there was a gulf that was growing wider and deeper; between the East and the West there was arising a sectionalism produced by the relation of creditor and debtor; throughout the great West there was a popular ferment that resembled hysteria. At the opening of the campaign the public mind was in such a state of agitation that the politicians despaired of finding their bearings, and the leadership of both parties was torn with dissension. Upon one thing, however, there was great unanimity of opinion: everybody believed that the Democrats would be defeated. The Democratic party was surely in a sad plight. It was divided into a silver faction and a gold faction; it was discredited by the Wilson-Gorman Tariff and the bond sales; it was suffering from the rupture which existed between the President and Congress; it was execrated in labor circles because of the use which Cleveland had made of the injunction in the Pullman strike; worse than all, it was being held responsible for four years of financial and industrial distress. The party was not only demoralized but it was leaderless. At the beginning of the campaign it did not have in sight a single available candidate of commanding ability. As for the man who was its titular leader, no former President, not even John Quincy Adams, had ever been so intensely unpopular as Grover Cleveland was in 1896. The Republicans there-

fore entered the campaign in boastful mood. They could elect, they said, a yellow dog. Their confidence, however, was due to the weakness of their adversaries rather than to their own strength, for there was abundant trouble in the Republican camp. The silver issue, like the slavery issue before it, was splitting everything, and the Republican party did not escape fissure. On the silver question, although it overshadowed all others, the Republican leaders at first were disinclined to take a definite stand and say what they meant. For example, the Ohio Republican State convention, which was the first to meet in 1896, resolved that all our currency be 'sound as the Government and as untarnished as its honor,' and that both metals be used as currency and kept at parity by legislative restrictions. Ordinarily such an utterance would have passed muster, but in 1896 the people were in no mood to be put off with ambiguous nonsense. Advocates of the gold standard wanted a platform, that should say gold, and the silverites wanted one that should say silver. In many instances, therefore, the State Republican conventions were constrained to adopt resolutions that were not evasive. In ten States the declaration was for free silver. In only a few States did conventions declare in explicit terms in favor of a single gold standard. In the early stages of the campaign, therefore, the Republicans, hardly knowing whether they were for free silver or against it, were as much at sea on the paramount issue as were the Democrats. Nor was their position in respect to leadership much better, for after the death of Blaine, in 1893 the Republican party had been without a head. At an opportune moment, however, Marcus A. Hanna, a Republican of Ohio, came forward and assisted his party in resolving its doubts on the money question and in choosing a leader. Hanna was a prosperous business man who for many years had been taking an active part in politics. For a long time his interest in public affairs had been manifested chiefly in helping the political fortunes of other men. His ambition was to make a President, and his first efforts in this direction were made in behalf of John Sherman. Failing with Sherman, he turned to William McKinley, for whom he entertained a devoted and sincere friendship."—S. E. Forman, *Our republic*, pp. 662-664.

1896-1897.—Immigration Bill vetoed by President Cleveland.—On December 17, 1896, a bill to amend the immigration laws, which had passed the House of Representatives during the previous session of Congress, passed the Senate, with amendments which the House refused to accept. By conferences between the two branches of Congress an agreement was finally reached, in which the House concurred on February 9 and the Senate on February 17. But the president disapproved the measure, and returned it to Congress on March 2, with his objections set forth in the following message: "I herewith return without approval House bill No. 7864, entitled 'An act to amend the immigration laws of the United States.' By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1891, relating to immigration by adding to the classes of aliens thereby excluded from admission to the United States the following: 'All persons physically capable and over 16 years of age who can not read and write the English language or some other lan-

guage; but a person not so able to read and write who is over 50 years of age and is the parent or grandparent of a qualified immigrant over 21 years of age and capable of supporting such parent or grandparent may accompany such immigrant, or such a parent or grandparent may be sent for and come to join the family of a child or grandchild over 21 years of age similarly qualified and capable, and a wife or minor child not so able to read and write may accompany or be sent for and come and join the husband or parent similarly qualified and capable.' A radical departure from our national policy relating to immigration is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. . . . A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work. A contemplation of the grand results of this policy can not fail to arouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration. It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land. It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who, with their descendants, are now numbered among our best citizens. It is said that too many immigrants settle in our cities, thus dangerously increasing their idle and vicious population. This is certainly a disadvantage. It can not be shown, however, that it affects all our cities, nor that it is permanent; nor does it appear that this condition where it exists demands as its remedy the reversal of our present immigration policy. The claim is also made that the influx of foreign laborers deprives of the opportunity to work those who are better entitled than they to the privilege of earning their livelihood by daily toil. An unfortunate condition is certainly presented when any who are willing to labor are unemployed, but so far as this condition now exists among our people it must be conceded to be a result of phenomenal business depression and the stagnation of all enterprises in which labor is a factor. With the advent of settled and wholesome financial and economic governmental policies and consequent encouragement to the activity of capital the misfortunes of unemployed labor should, to a great extent at least, be remedied. If it continues, its natural consequences must be to check the further immigration to our cities of foreign laborers and to deplete the ranks of those already there. In the meantime those most willing and best entitled ought to be able to secure the advantages of such work as there is to do. It is proposed by the bill under consideration to meet the alleged difficulties of the situation by establishing an educational test by which the right of a foreigner to make his home with us shall be determined. Its general scheme is to prohibit from admission to our coun-

try all immigrants 'physically capable and over 16 years of age who can not read and write the English language or some other language,' and it is provided that this test shall be applied by requiring immigrants seeking admission to read and afterwards to write not less than twenty nor more than twenty-five words of the Constitution of the United States in some language, and that any immigrant failing in this shall not be admitted, but shall be returned to the country from whence he came at the expense of the steamship or railroad company which brought him. The best reason that could be given for this radical restriction of immigration is the necessity of protecting our population against degeneration and saving our national peace and quiet from imported turbulence and disorder. I can not believe that we would be protected against these evils by limiting immigration to those who can read and write in any language twenty-five words of our Constitution. In my opinion, it is infinitely more safe to admit a hundred thousand immigrants who, though unable to read and write, seek among us only a home and opportunity to work than to admit one of those unruly agitators and enemies of governmental control who can not only read and write, but delights in arousing by inflammatory speech the illiterate and peacefully inclined to discontent and tumult. Violence and disorder do not originate with illiterate laborers. They are, rather, the victims of the educated agitator. The ability to read and write, as required in this bill, in and of itself affords, in my opinion, a misleading test of contented industry and supplies unsatisfactory evidence of desirable citizenship or a proper apprehension of the benefits of our institutions. If any particular element of our illiterate immigration is to be feared for other causes than illiteracy, these causes should be dealt with directly, instead of making illiteracy the pretext for exclusion, to the detriment of other illiterate immigrants against whom the real cause of complaint cannot be alleged. The provisions intended to rid that part of the proposed legislation already referred to from obvious hardship appear to me to be indefinite and inadequate. A parent, grandparent, wife, or minor child of a qualified immigrant, though unable to read and write, may accompany the immigrant or be sent for to join his family, provided the immigrant is capable of supporting such relative. These exceptions to the general rule of exclusion contained in the bill were made to prevent the separation of families, and yet neither brothers nor sisters are provided for. In order that relatives who are provided for may be reunited, those still in foreign lands must be sent for to join the immigrant here. What formality is necessary to constitute this prerequisite, and how are the facts of relationship and that the relative is sent for to be established? Are the illiterate relatives of immigrants who have come here under prior laws entitled to the advantage of these exceptions? . . . The fourth section of this bill provides—'That it shall be unlawful for any male alien who has not in good faith made his declaration before the proper court of his intention to become a citizen of the United States to be employed on any public works of the United States or to come regularly or habitually into the United States by land or water for the purpose of engaging in any mechanical trade or manual labor for wages or salary, returning from time to time to a foreign country.' The fifth section provides—'That it shall be unlawful for any person, partnership, company, or corporation knowingly to em-

ploy any alien coming into the United States in violation of the next preceding section of this act.' The prohibition against the employment of aliens upon any public works of the United States is in line with other legislation of a like character. It is quite a different thing, however, to declare it a crime for an alien to come regularly and habitually into the United States for the purpose of obtaining work from private parties, if such alien returns from time to time to a foreign country, and to constitute any employment of such alien a criminal offense. When we consider these provisions of the bill in connection with our long northern frontier and the boundaries of our States and Territories, often but an imaginary line separating them from the British dominions, and recall the friendly intercourse between the people who are neighbors on either side, the provisions of this bill affecting them must be regarded as illiberal, narrow, and un-American. The residents of these States and Territories have separate and especial interests which in many cases make an interchange of labor between their people and their alien neighbors most important, frequently with the advantage largely in favor of our citizens. This suggests the inexpediency of Federal interference with these conditions when not necessary to the correction of a substantial evil, affecting the general welfare. Such unfriendly legislation as is proposed could hardly fail to provoke retaliatory measures, to the injury of many of our citizens who now find employment on adjoining foreign soil. The uncertainty of construction to which the language of these provisions is subject is a serious objection to a statute which describes a crime. An important element in the offense sought to be created by these sections is the coming 'regularly or habitually into the United States.' These words are impossible of definite and certain construction. The same may be said of the equally important words 'returning from time to time to a foreign country.' A careful examination of this bill has convinced me that for the reasons given and others not specifically stated its provisions are unnecessarily harsh and oppressive, and its defects in construction would cause vexation and its operation would result in harm to our citizens. GROVER CLEVELAND." In the House of Representatives, the bill was passed again, over the veto, by the requisite vote of two-thirds; in the Senate it was referred to the Committee on Immigration, and no further action was taken upon it. Therefore, it did not become a law.

1896-1898.—*Agitation for monetary reforms.*—*Indianapolis Commission.*—*Secretary Gage's plan.*—*Senatorial block in the way.*—On Nov. 18, 1896, the governors of the Indianapolis Board of Trade invited the Boards of Trade of Chicago, St. Louis, Cincinnati, Louisville, Cleveland, Columbus, Toledo, Kansas City, Detroit, Milwaukee, St. Paul, Des Moines, Minneapolis, Grand Rapids, Peoria, and Omaha to a conference on the first of December following, to consider the advisability of calling a larger convention from commercial organizations throughout the country for the purpose of discussing the wisdom of selecting a non-partisan commission to formulate a sound currency system. This preliminary conference issued a call for a non-partisan monetary convention of business men, chosen from boards of trade, chambers of commerce, and commercial clubs, to meet in Indianapolis, on Jan. 12, 1897. At the convention there were assembled, with credentials, 299 delegates, representing business organizations and

cities in nearly every state in the Union. The result of its deliberations was expressed in resolutions which opened as follows: "This convention declares that it has become absolutely necessary that a consistent, straightforward, and deliberately planned monetary system shall be inaugurated, the fundamental basis of which should be: First, that the present gold standard should be maintained. Second, that steps should be taken to insure the ultimate retirement of all classes of United States notes by a gradual and steady process, and so as to avoid the injurious contraction of the currency, or disturbance of the business interests of the country, and that until such retirements provision should be made for a separation of the revenue and note-issue departments of the Treasury. Third, that a banking system be provided, which should furnish credit facilities to every portion of the country and a safe and elastic circulation, and especially with a view of securing such a distribution of the loanable capital of the country as will tend to equalize the rates of interest in all parts thereof." Recognizing the necessity of committing the formulation of such a plan to a body of men trained and experienced in these matters, a commission was proposed. In case no commission should be authorized by Congress in the spring of 1897, the executive committee of the convention was authorized to select a commission of eleven members, "to make thorough investigation of the monetary affairs and needs of this country, in all relations and aspects, and to make appropriate suggestions as to any evils found to exist, and the remedies therefor." Congress did not authorize the appointment of a monetary commission; and the executive committee of the convention selected a commission of eleven members, which began its sittings in Washington, Sept. 22, 1897. Early in January, 1898, the report of the monetary commission was made public, and a second convention of delegates from the boards of trade and other commercial organizations of leading cities in the country was called together at Indianapolis, January 20-26, to consider its recommendations. The measures proposed by the commission were approved by the convention, and were submitted to congress by a committee appointed to urge their enactment in law. Secretary of the Treasury Gage had already, in his first annual report and in the draft of a bill which he laid before the House committee on banking and currency, made recommendations which accorded in principle with those of the commission, differing somewhat in details. Both plans, with some proposals from other sources, were now taken in hand by the House committee on banking and currency, and a bill was prepared, which the committee reported to the House on June 15. But the Senate by a vote of 47 to 32 had resolved on January 28 that "all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the government of the United States, in silver dollars, of the coinage of the United States, containing 412 1-2 grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor." The House, by 182 to 132, had rejected this resolution; but the Senate action had demonstrated the evident uselessness of attempting legislation in the interest of a monetary reform. Accordingly

the House bill, after being reported and made public, for discussion outside, was withdrawn by the committee, and the subject rested in Congress, while agitation in the country went on.

1897.—Consolidation of steel industry.—“In 1865 . . . the United States could certainly excel any European nation in economic competition, and possibly the whole continent combined, if it could utilize its resources. . . . [But a] doubt touched the capacity of the people to organize a system of transportation and industry adequate to attain that end. Failure meant certain bankruptcy. Unappalled by the magnitude of the speculation, the American people took the risk. What that risk was may be imagined when the fact is grasped that in 1865, . . . this people entered on the construction of 160,000 miles . . . [of railway] probably, in excess of \$10,000,000,000. Such figures convey no impression to the mind. . . . It may aid the imagination, perhaps, to say that Mr. Giffen estimated the cost to France of the war of 1870, including the indemnity and Alsace and Lorraine, at less than \$3,500,000,000, or about one-third of this portentous mortgage on the future.”—B. Adams, *New industrial revolution* (*Atlantic Monthly*, Feb., 1901).—“American industrial history presents few groups more brilliant, more resourceful, and more picturesque than that which, in the early seventies, started to turn . . . [the] Minnesota ore fields into steel—and into gold. These men had all the dash, all the venturesomeness, all the speculative and even the gambling instinct, needed for one of the greatest industrial adventures in our annals. . . . But three or four men towered so preëminently above their associates that today when we think of the human agencies that constructed this mighty edifice, the names that insistently come to mind are those of Carnegie, Phipps, Frick, and Schwab.”—B. J. Hendrick, *Age of big business* (*Chronicles of America Series*, v. 39, pp. 65-66).—“In March, 1897, the vast consolidation of mines, foundries, railroads, and steamship companies, centralized at Pittsburg, began producing steel rails at \$18 a ton, and at a bound America bestrode the world. She had won her great wager with fate. . . . The end seems only a question of time. Europe is doomed not only to buy her raw material abroad, but to pay the cost of transport. And Europe knew this instinctively in March, 1897, and nerved herself for resistance. Her best hope, next to a victorious war, lay in imitating America, and in organizing a system of transportation which would open up the East. . . . Carnegie achieved the new industrial revolution in March, 1897. Within a twelvemonth the rival nations had emptied themselves upon the shore of the Yellow Sea. In November Germany seized Kiao-chau, a month later the Russians occupied Port Arthur, and the following April the English appropriated Wei-hai-wei; but the fact to remember is that just 400 miles inland, due west of Kiao-chau, lies Tszzechau, the centre, according to Richthofen, of the richest coal and iron deposits in existence. There with the rude methods used by the Chinese, coal actually sells at 13 cents the ton. Thus it has come to pass that the problem now being attacked by all the statesmen, soldiers, scientific men, and engineers of the two eastern continents is whether Russia, Germany, France, England, and Japan, combined or separately, can ever bring these resources on the market

in competition with the United States.”—B. Adams, *New industrial revolution* (*Atlantic Monthly*, Feb., 1901).

1897.—Review of Cleveland's administration.—His difficulties with Congress.—Loss of leadership.—“Before quitting Cleveland, some general considerations are in order. He proved to possess rare executive ability and during his two terms had widely different matters to deal with. In his first term, he had a surplus in the Treasury; in the second, a deficit; and he proved himself equal to the handling of both. He restored the vanishing gold standard but, by his action for the repeal of the Act of 1890 and by his sale of bonds to maintain gold payments, he alienated his party and lost its leadership. The South and the West were gravitating toward ‘cheap money,’ which now meant the free coinage of silver, while his belief and action were diametrically opposed to this sentiment. They thought that his course in the repeal of the Silver Purchase of the Act of 1890 and in the issuance of bonds to maintain the gold standard was simply carrying out the Wall Street programme. At the close of his last administration he thought that he was the most unpopular of all public men in the South, and he grieved, as any Democrat would, that he had lost his hold upon that section, whose influence was so potent in his party. Entirely consistent as regards a civil service based on merit and a reduction of the tariff, he offended certain leaders of the party by the scolding he gave the Senate pending the tariff bill of 1894; he also gave offence to some prominent senators by official appointments other than they had recommended in their respective districts. . . . Cleveland said to McKinley on vacating the White House, ‘Your great difficulty will be to get on with Congress. You will have to look out for those men at the other end of the avenue.’ Cleveland was a good party man and regretted keenly his loss of leadership. In a moment of depression, he wrote in a private letter, ‘I doubt if I shall advise any one to lose the support of party in the hope of finding support among those who beyond partisanship profess a patriotic desire for good government.’ While the art of facile negotiation might have prevented a certain widening of the party chasm, it is difficult to see how it might wholly have been averted, given the difference between his firmly held ideas and those of the majority of his party on silver. Carlisle in his report for 1894 recommended a scheme for the reform of the currency which was unqualifiedly indorsed by the President, who was in full sympathy with his Secretary of the Treasury. While the Democrats had been repudiated by the people (the autumn elections of 1894 had resulted in the choice of a Republican House by a large majority), this recommendation went to the Democratic Congress that held over until March fourth; but a recommendation by Cleveland was sufficient to line up the Democrats against it. He returned to the subject in December, 1895, but he spoke then to a Republican Congress; nevertheless his recommendations demonstrate his sound ideas. ‘The Government,’ he said, ‘was forced to redeem without redemption and to pay without acquittance.’ His remedy was ‘the retirement and cancellation of our United States notes commonly called greenbacks and the outstanding Treasury notes issued by the Government in payment of silver purchases under the Act of 1890.’ [See also above: 1895; President

Cleveland's special message, etc.] . . . In his first inaugural address Cleveland spoke of his 'supreme and sacred trust' and he consecrated himself to the service of 'a great and free people.' He thoroughly lived up to his promise; and time wrought in his favor. He eventually commanded the admiration and respect of independent thinkers all over the country irrespective of party. The opinions of three of his successors may well fix his place in history. 'As Civil Service Commissioner,' said Theodore Roosevelt while President, 'I was much impressed by Cleveland's high standard of official conduct and his rugged strength of character.' Cleveland 'was a great President,' declared William H. Taft while in the White House, 'because he was a patriot with the highest sense of public duty, a statesman of clear perceptions, of the utmost courage of his convictions and of great plainness of speech' and 'a man of the highest character.' And Woodrow Wilson: Cleveland was 'more man than partisan; hardly a colleague of the Houses so much as an individual servant of the country; exercising his powers like a chief magistrate rather than like a party leader. . . . He called himself a party man but . . . deemed his party better served by manliness and integrity than by chicanery. . . . We need not pretend to know what history shall say of Mr. Cleveland. . . . We know only that he has played a great part. . . . He has made policies and altered parties after the fashion of an earlier age in our history and the men who assess his fame in the future will be no partisans but men who love candor, courage, honesty, strength, unshaken capacity and high purpose such as his.'—J. F. Rhodes, *History of the United States*, v. 8, pp. 457-461.—See also above: 1895: Status of civil service reform.—'If any single attribute was his [President Cleveland's] distinguishing mark, it was a sense of responsibility. And it was no common load, easily borne and felt only on especial occasions. It was a personal sense, keen, burdensome, not to be laid down even for a moment. It was a weight which he could not delegate, even temporarily, to others, because it had been placed upon him by vote of the people. It was a burden which made him lonely and weighted his messages with a heavy weariness. It is, of course, to be expected that the president of a nation will feel his responsibilities, but none whose papers I have ever read impress me quite so insistently. In the first inaugural there is 'responsibility' and 'anxiety' and 'conscience.' Shortly afterward there are 'solemn pledges' and 'plighted faith'; in the first annual message, 'solemn obligations'; in the very last minutes of his first term, 'plain course of official duty.' The second administration is like the first. The inaugural is full of 'gravity of the duties' and 'responsibilities'; the messages to Congress tell of 'exacting obligations and inexorable responsibility'; the close of the administration is burdened with 'official' and 'constitutional' duty. One of his eminent successors in the presidential chair once said of Mr. Cleveland that he had 'a sense of public duty that has been exceeded by no statesman within my knowledge.' . . . From the point of view of the politician interested in the present and the immediate future, with eye focused on the results of an oncoming election, President Cleveland must have been an utterly exasperating candidate. Particularly was this true in the campaign of 1888. The tariff became the chief issue of that memorable battle because of the President's noted message at the opening of Congress on December 6, 1887. As is well known, this document was devoted entirely to advocacy of a lower tariff. 'To some of the

president's own party such unexpected action seemed like political suicide.' Moreover it was not merely unexpected. The Democratic party was far from being a unit in behalf of tariff reform. Its record in Congress for many years previous, the utterances and activities of some of its leaders, had been squarely in the opposite direction; a conservative people, in a conservative period of its history, was not likely to receive with joy a message which, departing from all precedents, concerned itself with a single topic. It is not surprising that outspoken dissatisfaction in the Democratic party had to be stifled. Newspapers and politicians of all shades of belief found in the message ample materials for misunderstanding and dissent, although the Democrats found it necessary to preserve some appearance of unity and renominate the President. But while the campaign was on, the President had another blow for his political supporters. During his term he had aroused bitter hostility by his veto of numerous private pension bills. Now the veto of such measures is sure to be misunderstood, the saving effected is trifling, and out of all proportion to the hostility aroused among the veterans of the war. But in President Cleveland's mind the principle involved bulked big, bigger than any chances of re-election. It must have dismayed his political associates to meet, at the start of the campaign, the veto of July 5, 1888: 'In the discharge of what has seemed to me my duty as related to legislation, and in the interest of all the veterans of the Union Army, I have attempted to stem the tide of improvident pension enactments.' But that was not enough! From July to October of this campaign Mr. Cleveland vetoed no fewer than sixty-seven such measures. To the usual politician, the President must have seemed sadly lacking in even the elements of political prudence. His defeat in the ensuing election has been explained in many ways, and doubtless many slight changes or bits of good fortune would have altered the result. But when it is remembered that Mr. Cleveland received 100,000 more votes than his competitor, it becomes clear that his obstinate adherence to principles did not alienate his following, but rather enlarged it, and also that fundamentally he was defeated by an electoral system which allows the votes of a plurality of the people to be nullified by the more or less accidental location of the strength of the winner."—C. R. Lingley, *Official characteristics of President Cleveland (Political Science Quarterly, June, 1918, pp. 255-260)*.

1897.—Dispute with England over Alaska boundary. See ALASKA BOUNDARY QUESTION: 1867-1903.

1897 (January-May).—Arbitration treaty with Great Britain rejected by Senate.—"The Venezuela commission entered upon its work with tact. . . . It suggested to Secretary Olney January 15, 1896, that the governments of Great Britain and Venezuela be informed of the objects of the commission; and expressed the hope that 'they will see a way entirely consistent with their own sense of international propriety' to aid the commission. Assurance was also given that 'the purposes of the pending investigation are certainly hostile to none.' To the surprise of many people, Great Britain complied with this courteous request, and thus removed apprehensions of an immediate break in the friendly relations between the two countries. Great Britain also showed a willingness to accept,

the earlier request of the United States that the boundary be determined by an international tribunal instead of by the United States acting independently. As the United States willingly assented to this, the investigation by the American Commission was abandoned. Meanwhile, far more important negotiations for the promotion of peace were under way. President Cleveland's demand for arbitration aroused fresh interest in this method of settling disputes. Though still firm in adherence to the position taken by the administration, American citizens viewed with alarm the narrow escape from war, and were more disposed to welcome the establishment of international machinery by which it might be averted. In January, 1897, a treaty was signed by Secretary Olney and Sir Julian Pauncefote, providing for the arbitration of all differences between Great Britain and the United States, which could not be adjusted by the diplomatic negotiation. Although ratification by the Senate could not be secured [the treaty was finally rejected in May], the effort advanced the general principle of arbitration, and in the opinion of many was a happy compensation for the temporary alienation between the two countries."—D. R. Dewey, *National problems, 1885-1897*, pp. 311-313.—The treaty thus framed was as follows:

Article I. The High Contracting Parties agree to submit to Arbitration in accordance with the provisions and subject to the limitations of this Treaty all questions in difference between them which they may fail to adjust by diplomatic negotiation.

Art. II. All pecuniary claims or groups of pecuniary claims which do not in the aggregate exceed £100,000 in amount, and which do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitral Tribunal constituted as provided in the next following Article.

Art. III. Each of the High Contracting Parties shall nominate one arbitrator who shall be a jurist of repute and the two arbitrators so nominated shall within two months of the date of their nomination select an umpire. In case they shall fail to do so within the limit of time above mentioned, the umpire shall be appointed by agreement between the Members for the time being of the Supreme Court of the United States and the Members for the time being of the Judicial Committee of the Privy Council in Great Britain, each nominating body acting by a majority. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so elected shall be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

Art. IV. All pecuniary claims or groups of pecuniary claims which shall exceed £100,000 in amount and all other matters in difference, in respect of which either of the High Contracting Parties shall have rights against the other under Treaty or otherwise, provided that such matters in difference do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitral Tribunal, constituted as provided in the next following Article.

Art. V. Any subject of arbitration described in Article IV shall be submitted to the Tribunal provided for by Article III, the award of which

Tribunal, if unanimous, shall be final. If not unanimous either of the High Contracting Parties may within six months from the date of the award demand a review thereof. In such case the matter in controversy shall be submitted to an Arbitral Tribunal consisting of five jurists of repute, no one of whom shall have been a member of the Tribunal whose award is to be reviewed and who shall be selected as follows, viz:—two by each of the High Contracting Parties, and one, to act as umpire, by the four thus nominated and to be chosen within three months after the date of their nomination. In case they shall fail to choose an umpire within the limit of time above-mentioned, the umpire shall be appointed by agreement between the Nominating Bodies designated in Article III acting in the manner therein provided. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so selected shall be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

Art. VI. Any controversy which shall involve the determination of territorial claims shall be submitted to a Tribunal composed of six members, three of whom (subject to the provisions of Article VIII) shall be Judges of the Supreme Court of the United States or Justices of the Circuit Courts to be nominated by the President of the United States, and the other three of whom (subject to the provisions of Article VIII) shall be Judges of the British Supreme Court of Judicature or Members of the Judicial Committee of the Privy Council to be nominated by Her Britannic Majesty, whose award by a majority of not less than five to one shall be final. In case of an award made by less than the prescribed majority, the award shall also be final unless either Power shall, within three months after the award has been reported, protest that the same is erroneous, in which case the award shall be of no validity. In the event of an award made by less than the prescribed majority and protested as above provided, or if the members of the Arbitral Tribunal shall be equally divided, there shall be no recourse to hostile measures of any description until the mediation of one or more friendly Powers has been invited by one or both of the High Contracting Parties.

Art. VII. Objections to the jurisdiction of an Arbitral Tribunal constituted under this Treaty shall not be taken except as provided in this Article. If before the close of the hearing upon a claim submitted to an Arbitral Tribunal constituted under Article III or Article V either of the High Contracting Parties shall move such Tribunal to decide, and thereupon it shall decide that the determination of such claim necessarily involves the decision of a disputed question of principle of grave general importance affecting the national rights of such party as distinguished from the private rights whereof it is merely the international representative, the jurisdiction of such Arbitral Tribunal over such claim shall cease and the same shall be dealt with by arbitration under Article VI.

Art. VIII. In cases where the question involved is one which concerns a particular State or Territory of the United States, it shall be open to the President of the United States to appoint a judicial officer of such State or Territory to be one of the Arbitrators under Article III or Article V or Article VI. In like manner in cases where the question involved is one which concerns a British Colony or

possession, it shall be open to Her Britannic Majesty to appoint a judicial officer of such Colony or possession to be one of the Arbitrators under Article III or Article V or Article VI.

Art. ix. Territorial claims in this Treaty shall include all claims to territory and all claims involving questions of servitudes, rights of navigation and of access, fisheries and all rights and interests necessary to the control and enjoyment of the territory claimed by either of the High Contracting Parties.

Art. x. If in any case the nominating bodies designated in Articles III and V shall fail to agree upon an Umpire in accordance with the provisions of the said Articles, the Umpire shall be appointed by His Majesty the King of Sweden and Norway. Either of the High Contracting Parties, however, may at any time give notice to the other that, by reason of material changes in conditions as existing at the date of this Treaty, it is of opinion that a substitute for His Majesty should be chosen either for all cases to arise under the Treaty or for a particular specified case already arisen, and thereupon the High Contracting Parties shall at once proceed to agree upon such substitute to act either in all cases to arise under the Treaty or in the particular case specified as may be indicated by said notice; provided, however, that such notice shall have no effect upon an Arbitration already begun by the constitution of an Arbitral Tribunal under Article III. The High Contracting Parties shall also at once proceed to nominate a substitute for His Majesty in the event that His Majesty shall at any time notify them of his desire to be relieved from the functions graciously accepted by him under this Treaty either for all cases to arise thereunder or for any particular specified case already arisen.

Art. xi. In case of the death, absence or incapacity to serve of any Arbitrator or Umpire, or in the event of any Arbitrator or Umpire omitting or declining or ceasing to act as such, another Arbitrator or Umpire shall be forthwith appointed in his place and stead in the manner provided for with regard to the original appointment.

Art. xii. Each Government shall pay its own agent and provide for the proper remuneration of the counsel employed by it and of the Arbitrators appointed by it and for the expense of preparing and submitting its case to the Arbitral Tribunal. All other expenses connected with any Arbitration shall be defrayed by the two Governments in equal moieties. Provided, however, that, if in any case the essential matter of difference submitted to arbitration is the right of one of the High Contracting Parties to receive disavowals of or apologies for acts or defaults of the other not resulting in substantial pecuniary injury, the Arbitral Tribunal finally disposing of the said matter shall direct whether any of the expenses of the successful party shall be borne by the unsuccessful party, and if so to what extent.

Art. xiii. The time and place of meeting of an Arbitral Tribunal and all arrangements for the hearing and all questions of procedure shall be decided by the Tribunal itself. Each Arbitral Tribunal shall keep a correct record of its proceedings and may appoint and employ all necessary officers and agents. The decision of the Tribunal shall, if possible, be made within three months from the close of the arguments on both sides. It shall be made in writing and dated and shall be signed by the Arbitrators who may assent to it. The decision shall be in duplicate, one copy whereof

shall be delivered to each of the High Contracting Parties through their respective agents.

Art. xiv. This Treaty shall remain in force for five years from the date at which it shall come into operation, and further until the expiration of twelve months after either of the High Contracting Parties shall have given notice to the other of its wish to terminate the same.

Art. xv. The present Treaty shall be duly ratified by the President of the United States of America, by and with the advice and consent of the Senate thereof, and by Her Britannic Majesty; and the mutual exchange of ratifications shall take place in Washington or in London within six months of the date hereof or earlier if possible."—54th Congress, 2d Session, United States Senate Document no. 63.

Cleveland, *Presidential problems*, pp. 173-281.

1897 (March).—Inauguration of President McKinley.—President's cabinet.—Leading topics of inaugural address.—"Amid more than usual pomp and display William McKinley was duly inaugurated on March 4, 1897. For secretary of state he named Senator John Sherman of Ohio. Sherman was now an old man, whose once keen mind was beginning to show the ravages of age. It was generally believed that he was 'kicked up stairs' in order to make a place in the Senate for 'Mark' Hanna, McKinley's efficient political mentor and manager. At all events, Hanna was soon appointed by the governor of Ohio to fill the vacancy thus created, and the following year, after an exceedingly close and bitter fight, he was elected by the legislature. Judged in the light of after events, the other important cabinet appointments were those of General Russell A. Alger of Michigan as secretary of war, and of John D. Long of Massachusetts as secretary of the navy. Theodore Roosevelt, who for sometime had been a police commissioner of New York City, became assistant secretary of the navy."—P. L. Haworth, *United States in our own times, 1865-1920*, p. 232.—Other members of the cabinet were secretary of the treasury, Lyman J. Gage of Illinois; attorney-general, Joseph McKenna of California; postmaster-general, James A. Gary of Maryland; secretary of the interior, Charles N. Bliss of New York; secretary of agriculture, James Wilson of Iowa. In his inaugural address, the new president laid somewhat less emphasis than might have been expected on the need of measures for reforming the monetary system of the country, but strongly urged that instant steps be taken to increase the revenues of the government by a return to higher tariff charges. "With adequate revenue secured," he argued, "but not until then, we can enter upon such changes in our fiscal laws as will, while insuring safety and volume to our money, no longer impose upon the government the necessity of maintaining so large a gold reserve, with its attendant and inevitable temptations to speculation. Most of our financial laws are the outgrowth of experience and trial, and should not be amended without investigation and demonstration of the wisdom of the proposed changes. We must be both 'sure we are right' and 'make haste slowly.' . . . Economy is demanded in every branch of the government at all times, but especially in periods like the present of depression in business and distress among the people. The severest economy

must be observed in all public expenditures, and extravagance stopped wherever it is found, and prevented wherever in the future it may be developed. If the revenues are to remain as now, the only relief that can come must be from decreased expenditures. But the present must not become the permanent condition of the government. It has been our uniform practice to retire, not increase, our outstanding obligations; and this policy must again be resumed and vigorously enforced. Our revenues should always be large enough to meet with ease and promptness not only our current needs and the principal and interest of the public debt, but to make proper and liberal provision for that most deserving body of public creditors, the soldiers and sailors and the widows and orphans who are the pensioners of the United States. . . . A deficiency is inevitable so long as the expenditures of the government exceed its receipts. It can only be met by loans or an increased revenue. While a large annual surplus of revenue may invite waste and extravagance, inadequate revenue creates distrust and undermines public and private credit. Neither should be encouraged. Between more loans and more revenue there ought to be but one opinion. We should have more revenue, and that without delay, hindrance, or postponement. A surplus in the treasury created by loans is not a permanent or safe reliance. It will suffice while it lasts, but it cannot last long while the outlays of the government are greater than its receipts, as has been the case during the last two years. . . . The best way for the government to maintain its credit is to pay as it goes—not by resorting to loans, but by keeping out of debt—through an adequate income secured by a system of taxation, external, or internal, or both. It is the settled policy of the government, pursued from the beginning and practiced by all parties and administrations, to raise the bulk of our revenue from taxes upon foreign productions entering the United States for sale and consumption, and avoiding, for the most part, every form of direct taxation except in time of war. . . . The country is clearly opposed to any needless additions to the subjects of internal taxation, and is committed by its latest popular utterance to the system of tariff taxation. There can be no misunderstanding either about the principle upon which this tariff taxation shall be levied. Nothing has ever been made plainer at a general election than that the controlling principle in the raising of revenue from duties on imports is zealous care for American interests and American labor. The people have declared that such legislation should be had as will give ample protection and encouragement to the industries and the development of our country. . . . The paramount duty of congress is to stop deficiencies by the restoration of that protective legislation which has always been the firmest prop of the treasury. The passage of such a law or laws would strengthen the credit of the government both at home and abroad, and go far toward stopping the drain upon the gold reserve held for the redemption of our currency, which has been heavy and well-nigh constant for several years. In the revision of the tariff, especial attention should be given to the re-enactment and extension of the reciprocity principle of the law of 1890, under which so great a stimulus was given to our foreign trade in new and advantageous markets for our surplus agricultural and manufactured products." In concluding his address he announced his intention to convene Congress in extra session, saying: "The condition of the public treasury demands the immediate con-

sideration of congress. It alone has the power to provide revenue for the government. Not to convene it under such circumstances, I can view in no other sense than the neglect of a plain duty."

1897 (November).—Refusal to negotiate with the insurgent republic of the Philippine islands. —On Nov. 3, 1897, Rounseville Wildman, the United States consul at Hong Kong, addressed the following to the State Department: "Since my arrival in Hongkong I have been called upon several times by Mr. F. Agoncilla, foreign agent and high commissioner, etc., of the new republic of the Philippines. Mr. Agoncilla holds a commission, signed by the president, members of cabinet, and general in chief of the republic of Philippines, empowering him absolutely with power to conclude treaties with foreign governments. Mr. Agoncilla

WILLIAM MCKINLEY

offers on behalf of his government alliance offensive and defensive with the United States when the United States declares war on Spain, which, in Mr. Agoncilla's judgment, will be very soon. In the meantime he wishes the United States to send to some port in the Philippines 20,000 stand of arms and 200,000 rounds of ammunition for the use of his government, to be paid for on the recognition of his government by the United States. He pledges as security two provinces and the custom-house at Manila. He is not particular about the price—is willing the United States should make 25 per cent or 30 per cent profit. He is a very earnest and attentive diplomat and a great admirer of the United States. On his last visit he surprised me with the information that he had written his government that he had hopes of inducing the United States to supply the much-needed guns, etc. In case Señor Agoncilla's dispatch should fall into the hands of an unfriendly power and find its way into the newspapers, I have thought it wise to apprise the State Department of the nature of the high commissioner's proposals. Señor Agoncilla informs me by late mail that he will proceed at once to Washington to conclude

the proposed treaty, if I advise. I shall not advise said step until so instructed by the State Department. . . . [The secretary of state returned the following reply, Dec. 15, 1897]: "You may briefly advise Mr. Agoncilla, in case he should call upon you, that the Government of the United States does not negotiate such treaties and that it is not possible to forward the desired arms and ammunition. You should not encourage any advances on the part of Mr. Agoncilla, and should courteously decline to communicate with the Department further regarding his alleged mission."—*Treaty of peace and accompanying papers (55th Congress, 3rd Session, United States Senate Document no. 62, pt. 1, pp. 333, 334)*.

suffering in Cuba, resulting from Spanish methods of dealing with insurrection in that island (see **CUBA: 1868-1895; 1895-1898**), had been gathering intensity for months past, and threatening a rupture of peaceful relations between the United States and Spain. A sudden crisis in the situation was produced, on the morning of Feb. 15, 1898, by news that the United States battleship *Maine* had been totally destroyed. In a subsequent message on the subject to Congress, President McKinley recited the circumstances of the catastrophe, and the proceedings adopted to ascertain its cause, with the conclusions reached, in the following words: "For some time prior to the visit of the 'Maine' to Havana Harbor our consular representatives pointed out the advantages to flow from the visit of national ships to the Cuban waters, in accustoming the people to the presence of our flag

1898 (February-March).—American sympathy with the Cubans and indignation against Spain.—Destruction of the United States battleship *Maine*.—Investigation and findings of American and Spanish courts of inquiry.—Public feeling in the United States, excited by a terrible state of

as the symbol of good will and of our ships in the fulfillment of the mission of protection to American interests, even though no immediate need therefor might exist. Accordingly on the 24th of January last, after conference with the Spanish minister, in which the renewal of visits of our war vessels to Spanish waters was discussed and accepted, the peninsular authorities at Madrid and Havana were advised of the purpose of this Government to resume friendly naval visits at Cuban ports, and that in that view the 'Maine' would forthwith call at the port of Havana. This announcement was received by the Spanish Government with appreciation of the friendly character of the visit of the 'Maine,' and with notification of intention to return the courtesy by sending Spanish ships to the principal ports of the United States."—*Congressional Record, Mar. 28, 1898*.—"Accordingly the *Maine*, commanded by Captain Sigsbee, was dispatched to Cuba and arrived on the 25th

of January in the harbor of Havana. On the night of the 15th of February, an explosion utterly wrecked the vessel and killed 260 of the crew, besides wounding ninety. The responsibility for this calamity has never been positively determined. It may have resulted from an accidental internal explosion, from the official action of the Spanish authorities, from the unofficial zeal of subordinate Spanish officers, or even—as suggested by Speaker Reed who was an opponent of war—by action of the insurgents themselves with the purpose of embroiling the United States and Spain. The careful investigations which were afterwards made brought to light evidence of both internal and external explosions; it therefore seems probable that an external mine was the prime cause of the disaster and that the internal explosion followed as a consequence. No direct evidence has been discovered which would fix the responsibility for the placing of the mine, but it is reasonable to attribute it to the Spanish hotheads of Havana. It is not impossible that the insurgents were responsible; but it is incredible that the Spanish Government planned the explosion. The hasty, though perhaps natural, conclusion to which American public sentiment at once leaped, however, was that the disaster was the work of Spain, without making any discrimination between the Government itself and the disaffected factions. A general sorrow and anger throughout the United States reinforced the popular anxiety for national interests and the humane regard for the Cubans. Press and public oratory demanded official action. 'Remember the Maine!' was an admonition which everywhere met the eye and ear. The venerable and trusted Senator Proctor, who visited Cuba, came back with the report that conditions on the island were intolerable. . . . No doubt remained in the public mind that war would result unless the withdrawal of Spanish authority from Cuba could be arranged peaceably and immediately."—C. R. 1898 (March-April).—Continued discussion of Cuban affairs with Spain.—Message of the president asking Congress for authority to intervene in Cuba.—On April 11, President McKinley addressed another special message to Congress, setting forth the unsatisfactory results with which Cuban affairs had been further discussed with the government of Spain, and formally asking to be authorized and empowered to take measures for securing a "full and final termination of hostilities"

in the oppressed island. In stating the reasons that, in his judgment called for intervention, he said: "In April, 1896, the evils from which our country suffered through the Cuban war became so onerous that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony, on the basis of some effective scheme of self-government for Cuba under the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or, indeed, any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unabated. The resistance of the insurgents was in no wise diminished. The efforts of Spain were increased, both by the dispatch of fresh levies to Cuba and by the addition to the horrors of the strife of a new and inhuman phase happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and concentration, inaugurated by the captain-general's bando on October 21, 1896, in the province of Pinar del Rio, was thence extended to embrace all of the island to which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwelling in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops. The raising and movement of provisions of all kinds were interdicted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and, in short, everything that could desolate the land and render it unfit for human habitation or support was commanded by one or the other of the contending parties and executed by all the powers at their disposal. . . . The overtures of this Government, made through its new envoy, General Woodford, and looking to an immediate and effective amelioration of the condition of the island, although not accepted to the extent of admitted mediation in any shape, were met by assurances that home rule, in an advanced phase, would be forthwith offered to Cuba, without waiting for the war to end, and that more humane methods should thenceforth prevail in the conduct of hostilities. Coincidentally with these declarations, the new Government of Spain continued and completed the policy already begun by its predecessor, of testifying friendly regard for this nation by releasing American citizens held under one charge or another connected with the insurrection, so that by the end of November not a single person entitled in any way to our national protection remained in a Spanish prison. While these negotiations were in progress the increasing destitution of the unfortunate reconcentrados and the alarming mortality among them claimed earnest attention. The success which had attended the limited measure of relief extended to the suffering American citizens among them by the judicious expenditure through the consular agencies of the money appropriated expressly for their succor by the joint resolution approved May 24, 1897, prompted the humane extension of a similar scheme of aid to the great body of sufferers. A suggestion to this end was acquiesced in by the Spanish authorities. On the 24th of December last I caused to be issued an appeal to the American people, inviting contributions in money or in kind for the succor of the starving sufferers in Cuba, following this on the 8th of January by a similar public announcement

of the formation of a central Cuban relief committee, with headquarters in New York City, composed of three members, representing the American National Red Cross and the religious and business elements of the community. The efforts of that committee have been untiring and have accomplished much. Arrangements for free transportation to Cuba have greatly aided the charitable work. The president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and cooperated with the consul-general and the local authorities to make effective distribution of the relief collected through the efforts of the central committee. Nearly \$200,000 in money and supplies has already reached the sufferers, and more is forthcoming. . . . The war in Cuba is of such a nature that short of subjugation or extermination a final military victory for either side seems impracticable. The alternative lies in the physical exhaustion of the one or the other party, or perhaps of both—a condition which in effect ended the ten years' war by the truce of Zanjon. The prospect of such a protraction and conclusion of the present strife is a contingency hardly to be contemplated with equanimity by the civilized world, and least of all by the United States, affected and injured as we are, deeply and intimately, by its very existence. Realizing this, it appeared to be my duty, in a spirit of true friendliness, no less to Spain than to the Cubans who have so much to lose by the prolongation of the struggle, to seek to bring about an immediate termination of the war. In my annual message of December last I said: 'Of the untried measures there remain only: Recognition of the insurgents as belligerents; recognition of the independence of Cuba; neutral intervention to end the war by imposing a rational compromise between the contestants, and intervention in favor of one or the other party. I speak not of forcible annexation, for that can not be thought of. That, by our code of morality, would be criminal aggression.' Thereupon I review these alternatives, in the light of President Grant's measured words, uttered in 1875, when after seven years of sanguinary, destructive, and cruel hostilities in Cuba he reached the conclusion that the recognition of the independence of Cuba was impracticable and indefensible; and that the recognition of belligerence was not warranted by the facts according to the tests of public law. I commented especially upon the latter aspect of the question, pointing out the inconveniences and positive dangers of a recognition of belligerence which, while adding to the already onerous burdens of neutrality within our own jurisdiction, could not in any way extend our influence or effective offices in the territory of hostilities. Nothing has since occurred to change my view in this regard; and I recognize as fully now as then that the issuance of a proclamation of neutrality, by which process the so-called recognition of belligerents is published, could, of itself and unattended by other action, accomplish nothing toward the one end for which we labor—the instant pacification of Cuba and the cessation of the misery that afflicts the island. Turning to the question of recognizing at this time the independence of the present insurgent government in Cuba, we find safe precedents in our history from an early day. They are well summed up in President Jackson's message to Congress, December 21, 1836, on the subject of the recognition of the independence of Texas. He said: 'In all the contests that have arisen out of the revolutions of France, out of the disputes relating to the Crowns of Portugal

and Spain, out of the separation of the American possessions of both from the European Governments, and out of the numerous and constantly occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances, avoided all censure, and encountered no other evil than that produced by a transient estrangement of good will in those against whom we have been by force of evidence compelled to decide. It has thus made known to the world that the uniform policy and practice of the United States is to avoid all interference in disputes which merely relate to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to our particular interests and views or the merits of the original controversy."—*Congressional Record*, Apr. 11, 1898. —The president then "gave the following as just grounds for intervention: 'First. In the cause of humanity and to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is, therefore, none of our business. It is specially our duty, for it is right at our door. Second. We owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection. Third. The right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people, and by the wanton destruction of property and devastation of the island. Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon the government an enormous expense. With such a conflict waged for years in an island so near us and with which our people have such trade and business relations; when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined; where our trading vessels are liable to seizure and are seized at our very door by warships of a foreign nation, the expeditions of filibustering that we are powerless to prevent altogether, and the irritating questions and entanglements thus arising—all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semi-war footing with a nation with which we are at peace.'"

—H. E. Flack, *Spanish-American diplomatic relations preceding the War of 1898* (Johns Hopkins University Studies, Jan.-Feb., 1906, pp. 36-37).

1898 (April).—Action of Congress empowering the president to intervene in Cuba.—War with Spain.—On April 13, two days after receiving the president's message (see above: 1898 [March-April]), "the House passed a resolution, by a vote of 324 to 19, authorizing and directing the president to intervene at once to stop the war in Cuba, with the purpose of 'establishing by the free action of the people thereof a stable and independent government of their own in the island.' On the same day the Senate committee on foreign relations made a report, dwelling at length on the *Maine* disaster, and directing the president to demand the immedi-

ate withdrawal of Spain from the island. The minority report, however, urging in addition the immediate recognition of the Cuban Republic as then organized, was finally embodied in the Senate resolution, April 16, by a vote of 67 to 21. The two Houses were thus brought into conflict over the question of recognition of the Cuban republic so-called. After two days of heated controversy the Senate gave way, and on April 19, the anniversary of the battle of Lexington, and of the first bloodshed of the Civil War on the streets of Baltimore, the fateful resolution was adopted.—J. H. Latané, *America as a world power, 1897-1907*, pp. 25-26.—The resolution follows: "Resolved, etc. First. That the people of the Island of Cuba are and of right ought to be free and independent. Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the Island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters. Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect. Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people."—*Congressional Record*, Apr. 18, 1898, pp. 4421-4422, 4461-4462.—"These resolutions were, of course, equivalent to a declaration of war. As soon as they were approved by the president, April 20, the Spanish minister asked for his passports, thus severing diplomatic relations, and Woodford left Madrid the following day. The American people entered on this war with enthusiasm, eager to test the national strength. Every movement of army and navy was closely watched, and the public was almost hourly informed by the newspapers, through special editions, of what was going on."—*Ibid.*, p. 27.

1898 (April).—Cabinet changes.—Two resignations from the president's cabinet occurred in April, both occasioned by failing health. James A. Gary was succeeded as postmaster-general by Charles Emory Smith, and John Sherman was followed in the secretaryship of state by his first assistant in that office, Judge William R. Day.

1898 (April-May).—War with Spain.—Military preparations.—Regular and volunteer armies.—"Rough Riders."—At the outbreak of the war, the regular army of the United States numbered but 28,000 officers and men. Under authority given by acts of Congress it was rapidly increased, and returns for May, 1898, show 2,191 officers and nearly 42,000 men in the ranks. At the same time, a volunteer army was being speedily raised and equipped. By proclamation of April 23, the president called for 125,000 volunteers, to be apportioned, as far as practicable, among the states and territories, according to population. On May 25 he called for 75,000 more. Before the end of May, 118,580 enlisted volunteers, with 6,224 officers, were reported to have been mustered in. These were assembled in various camps and prepared for service in a more or less hurried way. At the beginning, six army corps were constituted, embracing both the regular and volunteers branches of the army. The First Corps, under Major-General John R.

Brooke, and the Third under Major-General James F. Wade, were organized at Camp Thomas, Georgia. The Second was organized under Major-General William M. Graham, at Camp Alger, near Falls Church, Virginia. The organization of the Fourth Corps, Major-General John J. Coppinger, commanding, was begun at Mobile, Alabama. The Fifth Corp was organized at Tampa, Florida, under Major-General William R. Shafter. A Sixth Corps, which had been provided for, was never organized; but the Seventh was formed, at Tampa, Florida, under Major-General Fitzhugh Lee. Subsequently an Eighth Corps was concentrated at San Francisco, and transported to the Philippine islands. Tampa, Florida, was the port chosen for the shipment of troops to Cuba, and extensive preparations were made for the transport service from that point. The movement waited, first, for the preparation of newly levied troops, and, secondly, for naval operations to make the voyage of transports to Cuba safe from attack.—Based on *Annual report of the adjutant-general to the major-general commanding the army, 1898*.—Among the volunteer regiments organized, one known as that of "the Rough Riders" excited public interest in the greatest degree. "Senator Warren, of Iowa, is responsible for the idea of the Rough Riders. He introduced and carried through Congress, aided by Senators Kyle, Carter, and others, a bill authorizing the enrollment of three regiments, to be made up of expert hunters, riflemen, cow-men, frontiers-men, and such other hardy characters as might care to enlist from the Territories. Captain Leonard Wood, of the Medical Corps, was the President's chief medical adviser, and had had much experience in Indian fighting in the West. Theodore Roosevelt was Assistant Secretary of the Navy, and had had some knowledge of men and things on the frontier, through his life on his own and other ranches. It was the President's intention to offer to Wood the colonelcy of one regiment, to Roosevelt the colonelcy of a second, and to Griggsby, of Montana, the colonelcy of a third."—E. Marshall, *Story of the Rough Riders*, ch. 1.—Roosevelt, however, declined the colonelcy. In his history of the regiment he says: "Fortunately, I was wise enough to tell the Secretary that while I believed I could learn to command the regiment in a month, yet that it was just this very month which I could not afford to spare, and that therefore I would be quite content to go as Lieutenant-Colonel, if he would make Wood Colonel. This was entirely satisfactory to both the President and Secretary, and, accordingly, Wood and I were speedily commissioned as Colonel and Lieutenant-Colonel of the First United States Volunteer Cavalry. This was the official title of the regiment, but for some reason or other the public promptly christened us the 'Rough Riders.' . . . The only organized bodies we were at liberty to accept were those from the four Territories. But owing to the fact that the number of men originally allotted to us, 780, was speedily raised to 1,000, we were given a chance to accept quite a number of eager volunteers who did not come from the Territories. . . . We drew recruits from Harvard, Yale, Princeton, and many another college; from clubs like the Somerset, of Boston, and Knickerbocker, of New York; and from among the men who belonged neither to club nor to college, but in whose veins the blood stirred with the same impulse which once sent the Vikings over sea. Four of the policemen who had served under me, while I was President of the New York Police Board, insisted on coming—two of them to die, the other two to return unhurt

after honorable and dangerous service."—T. Roosevelt, *Rough Riders*, pp. 6-10.—Alexander Brodie, later major of the regiment, was probably the first man systematically to start towards the organization of this particular regiment.

1898 (April-May: Cuba).—War with Spain.—Blockade of Cuban ports.—On April 21 the following instructions were despatched by the secretary of the navy to Rear-Admiral Sampson, appointed that day to the command of the naval force on the Atlantic station: "You will immediately institute a blockade of the north coast of Cuba, extending from Cardenas on the east to Bahia Honda on the west; also, if in your opinion your force warrants, the port of Cienfuegos, on the south side of the island. It is considered doubtful if the present force at your command would warrant a more extensive blockade. It should be borne in mind that wherever the Army is ready to embark for Cuba the Navy will be required to furnish the necessary convoy for its transports. For this

WILLIAM THOMAS SAMPSON

reason it does not seem desirable that you should undertake at present to blockade any more of the island than has been indicated. It is believed that this blockade will cut off Havana almost entirely from receiving supplies from the outside. The Navy Department is considering the question of occupying the port of Matanzas by a military force large enough to hold it and to open communications with the insurgents, and this may be done at an early date, even before the main party of the Army is ready to embark. If this operation is decided upon, you are directed to co-operate with the Army and assist with such vessels as are necessary to cover and protect such a movement."—*Report of the Secretary of Navy*, 1898, v. 2, p. 175.

ALSO IN: J. D. Long, *New American navy*, v. 1, pp. 227-228.

1898 (April-May: Philippines).—Activities of Aguinaldo, head of the insurrectionary movement in the Philippines.—About the time of the declaration of war between the United States and Spain, the revolutionary leader, Emilio Aguinaldo, a native of Cavité province, "about twenty-eight years old, of mediocre education, but possessing

much native shrewdness and no little military ability, who had been living at Saigon, Siam, went to Singapore. Here he secured a conference with the United States Consul-General, Mr. E. Spencer Pratt, on the 24th of April. The insurgent leader [who had left the islands in compliance with the agreement made in December, 1897 with Primo de Rivera the Spanish governor-general (see PHILIPPINE ISLANDS: 1896-1898)] expressed a desire to return to the Philippines for the purpose of assuming absolute control over the revolutionary forces, and promised that, if permitted to go to Luzon, he would conduct his troops in strict compliance with the rules of civilized warfare. He also stated, referring to the President, that he would lead his forces 'as our commander would direct.' Aguinaldo's request was communicated to Admiral Dewey, then at Hong-Kong. Hong-Kong for a long time had been the real centre of the Filipino revolutionary headquarters, and here it was that their Junta sat and transacted its business. Members of this body repeatedly presented themselves, at the American Consulate requesting that Aguinaldo be permitted to return to the Philippines, pledging that the revolutionary troops would 'obey the laws of civilized warfare,' and that Aguinaldo would 'obey unquestioningly the commander of the United States Forces in the Philippines.' Moreover, many officers of the revolutionary party in Luzon and about Manila had visited our consul there, Mr. Williams, and voluntarily gave him assurance that they would 'swear allegiance to and cheerfully follow our flag.' These statements had been repeated to Admiral Dewey before he received the despatch from Consul-General Pratt at Singapore conveying Aguinaldo's request that he might be allowed to return to the Philippines. Dewey granted the request, but Aguinaldo did not reach Hong-Kong until after the American fleet had sailed for Manila. He appeared, however, at the American Consulate and renewed his petition for permission to join the insurrectionary forces which were then confronting the Spanish troops in Luzon. Their strength was estimated at about 8,000. Our Consul-General at Hong-Kong, Mr. Rounseville Wildman, secured from Aguinaldo a confirmation of the promises already made by the Junta, and these pledges were later renewed by Aguinaldo after he had landed near Manila. Aguinaldo and thirteen other Filipinos took passage on the *McCulloch* when that vessel was returning to the fleet after filing at Hong-Kong the news of Dewey's victory of May 1st. They arrived in Manila Bay May 10th."—R. A. Alger, *Spanish-American War*, pp. 345-347.

1898 (April-June).—War with Spain.—Movements of the Spanish squadron under Admiral Cervera, and the blockading of it in the harbor of Santiago de Cuba.—Sinking of the collier *Merrimac* in the channel.—The opening of hostilities found a Spanish squadron of four armored cruisers (the *Cristobal Colon*, the *Almirante Oquendo*, the *Vizcaya*, and the *Infanta Maria Teresa*) with three torpedo-boat destroyers (the *Pluton*, *Fuor* and *Terror*) and some lighter craft, assembled at the Cape Verde islands, under Rear-Admiral Pascual Cervera. They were in Portuguese waters, and Portugal, though friendly to Spain, was forced to issue a proclamation of neutrality, on April 20, which required the Spanish fleet to depart. Some of the vessels then returned to Spain; but the seven named above sailed westward, and their destination became a mystery, very exciting for some time to the American mind. They might attempt to surprise some American coast

city; they might intercept the battle-ship *Oregon*, then making her way from the Pacific coast, by the long circuit around Cape Horn; they might have some plan for breaking the Cuban blockade. Acting on the latter conjecture, and surmising that Porto Rico would be chosen for the Spanish naval base, Admiral Sampson moved in that direction to seek them. He attacked the forts at San Juan (May 12), and satisfied himself that no fleet was in the bay. A week later the Spaniards took refuge in the inner harbor of Santiago, and on May 29, a blockade of Santiago was established by a flying squadron under Commodore W. S. Schley. "Admiral Sampson arrived off Santiago June 1, and assumed direct command of the squadron. The blockade, which lasted for over a month, was eagerly watched by the whole American people. The most thrilling incident was the daring but unsuccessful attempt made by Lieutenant Richmond Pearson Hobson to sink the collier *Merrimac* across the entrance to Santiago harbor, undertaken by direction of Admiral Sampson. Electrical torpedoes were attached to the hull of the ship, sea-valves were cut and anchor chains arranged on deck so that she could be brought to a sudden stop. Early on the morning of June 3, Hobson, assisted by a crew of seven seamen, took the collier into the entrance of the harbor under heavy fire and sunk her. The unfortunate shooting away of her steering-gear and the failure of some of the torpedoes to explode kept the ship from sinking at the place elected, so that the plan miscarried. Hobson and his men escaped death as by a miracle, but fell into the hands of the Spaniards. As soon as Cervera was blockaded in Santiago and the government was satisfied that all his ships were with him, it was decided to send an army to co-operate with the navy. Hitherto the war had been a naval war exclusively, and the two hundred thousand volunteers who had responded to the calls of the president in May had been kept in camp in different parts of the country. Most of the regular infantry and cavalry, together with several volunteer regiments, had been assembled at Tampa and organized as the Fifth Army Corps, in readiness to land in Cuba as soon as the navy had cleared the way."—J. H. Latané, *America as a world power, 1897-1907*, pp. 45-46.

Titherington, *History of the Spanish-American War of 1898*, ch. 10.—W. A. M. Good, *With Sampson through the war*.

1898 (April-July).—War with Spain.—Destruction of the Spanish fleet in Manila bay.—Dewey's relations with Aguinaldo, the insurgent chief.—Arrival of American troops for the occupation of the city.—Commodore George Dewey, commanding the Asiatic squadron, then awaiting orders at Hong Kong, received on April 25 the following despatch by cable from the secretary of the navy: "War has commenced between the United States and Spain. Proceed at once to Philippine Islands. Commence operations at once, particularly against the Spanish fleet. You must capture vessels or destroy. Use utmost endeavors." Dewey afterwards described the southward run, the search for the enemy, and the destruction of the Spanish fleet in the battle of Manila bay as follows:—"As we cruised southward after leaving Mirs Bay [China, April 27], the weather was such that we could continue the preparation of crews

and ships for action by drilling the men again in battle drills and their stations in case of fire, and for repairing injuries to the ships by shell-fire, while we built barricades of canvas and iron to shield the gun crews, protected the sides and ammunition hoists with lengths of heavy sheet chain faked up and down over a buffer of awnings, and threw overboard much extra wood-work which, while essential to comfort in time of peace, might become ignited in an engagement. Had the Spaniards disposed of their wood-work their ships would have burned less fiercely both at Manila and at Santiago. . . . Just as the consul was leaving Manila he had learned of the sailing of the Spanish squadron for Subig Bay. Thus Admiral Montojo at the last moment seemed to have realized the strategic advantage of Subig over Manila, which we had hoped he would fail to do. When we sighted land near Cape Boñinao early on the morning of April 30 . . . the *Boston* and *Concord* were signalled to proceed at full speed to reconnoitre

ADMIRAL GEORGE DEWEY

Subig Bay. . . . The distance from Subig Bay to Corregidor was only thirty miles. As we had decided to run past the batteries at the entrance to Manila Bay under cover of darkness, we slowed down and finally stopped. All the commanding officers were signalled to come on board the flag-ship. When they were in my cabin, and Wildes, of the *Boston*, and Walker, of the *Concord*, had corroborated in person the import of their signals that there were no Spanish vessels in the vicinity, I said: "We shall enter Manila Bay to-night and you will follow the motions and movements of the flag-ship, which will lead." . . . When my captains, after receiving their final orders on board the flag-ship, had returned to their own ships, the squadron resumed its course to Corregidor. . . . When we were ten miles from Boca Grande we judged, as we saw signal lights flash, that we had already been sighted either by small vessels acting as scouts or by land lookouts. . . . As we watched the walls of darkness for the first gun-flash, every moment of our progress brought its relief, and now we began to hope that we should get by without being fired on at all. But about ten minutes after midnight, when all except our rear ships had

cleared it, the El Fraile battery opened with a shot that passed between the *Petrel* and the *Raleigh*. The *Boston*, *Concord*, *Raleigh*, and *McCulloch* returned the fire with a few shots. . . . We were safely within the bay. . . . With the coming of broad daylight we finally sighted the Spanish vessels formed in an irregular crescent in front of Cavité. The *Olympia* headed toward them, and in answer to her signal to close up, the distance between our ships was reduced to two hundred yards. The western flank of the Spanish squadron was protected by Cavité Peninsula and the Sangley Point battery, while its eastern flank rested in the shoal water off Las Pinas. The Spanish line of battle was formed by the *Reina Cristina* (flag),

warc that the premature explosions were due to a desire to clear a space in which their ships might manœuvre. At one time a torpedo-launch made an attempt to reach the *Olympia*, but she was sunk by the guns of the secondary battery and went down bow first, and another yellow-colored launch flying the Spanish colors ran out, heading for the *Olympia*, but after being disabled she was beached to prevent her sinking. . . . Though in the early part of the action our firing was not what I should have liked it to be, it soon steadied down, and by the time the *Reina Cristina* steamed toward us it was satisfactorily accurate. The *Castilla* fared little better than the *Reina Cristina*. All except one of her guns was disabled, she was set on fire by

BATTLE OF MANILA

Admiral Dewey's squadron swinging around the ellipse

(Drawn by W. A. Rogers after a sketch made on the despatch-boat *McCulloch* by John T. McCutcheon)

Castilla, *Don Juan de Austria*, *Don Antonio de Ulloa*, *Isla de Luzón*, *Isla de Cuba*, and *Marqués del Duero*. . . . The misty haze of the tropical dawn had hardly risen when at 5.15, at long range, the Cavité forts and Spanish squadron opened fire. Our course was not one leading directly toward the enemy, but a converging one, keeping him on our starboard bow. Our speed was eight knots and our converging course and ever-varying position must have confused the Spanish gunners. . . . At 5.40, when we were within a distance of 5,000 yards (two and one-half miles), I turned to Captain Gridley and said: 'You may fire when you are ready, Gridley.' . . . At about the time that the Spanish ships were first sighted, 5.06 [A.M.], two submarine mines were exploded between our squadron and Cavité, some two miles ahead of our column. On account of the distance, I remarked to Lamberton: 'Evidently the Spaniards are already rattled.' However, they explained after-

our shells, and finally abandoned by her crew after they had sustained a loss of twenty-three killed and eighty wounded. The *Don Juan de Austria* was badly damaged and on fire, the *Isla de Luzón* had three guns dismounted, and the *Marqués del Duero* was also in a bad way. Admiral Montojo, finding his flag-ship no longer manageable, half her people dead or wounded, her guns useless and the ships on fire, gave the order to abandon and sink her, and transferred his flag to the *Isla de Cuba* after seven o'clock [A.M.]. Victory was already ours, though we did not know it. Owing to the smoke over the Spanish squadron there were no visible signs of the execution wrought by our guns when we started upon our fifth run past the enemy. We were keeping up our rapid fire, and the flag-ship was opposite the centre of the Spanish line, when, at 7.35, the captain of the *Olympia* made a report to me which was as startling as it

was unexpected. This was to the effect that on board the *Olympia* there remained only fifteen rounds per gun for the 5-inch battery. . . . In detail the injuries which we had received from the Spanish fire were as follows: The *Olympia* was hulled five times and her rigging was cut in several places. One six-pound projectile struck immediately under the position where I was standing. The *Baltimore* was hit five times. The projectile which wounded two officers and six men pursued a most erratic course. It entered the ship's side forward of the starboard gangway, and just above the line of the main deck, passed through the hammock-netting, down through the deck planks and steel deck, bending the deck beam in a ward-room-stateroom, thence upward through the after engine-room coaming, over against the cylinder of a 6-inch gun, disabling the gun, struck and exploded a box of three-pounder ammunition, hit an iron ladder and finally, spent, dropped on deck. The *Boston* had four unimportant hits, one causing a fire which was soon extinguished, and the *Petrel* was struck once. . . . It was not until May 4, however, when all the aftermath of the details of the victory had been cared for, that I found it convenient to send the *McCulloch* to Hong Kong to transmit to Washington the complete news of what the squadron had accomplished, where already many misleading reports had been received from Spanish sources. . . . But the newspapers of May 2 had had a brief announcement of the victory, one of which had been sent by the operator at the Manila cable station before the cable was cut. . . . Not until many weeks later, when the mails began to arrive, did I fully realize how the victory had electrified the whole United States."—*Autobiography of George Dewey*, pp. 204-207, 209-210, 212-215, 217-218, 220-221, 227-229.—"On the 20th of June, General Anderson, with the first detachment of the army, arrived in Manila Bay. Aguinaldo was requested to evacuate Cavité, which request he unwillingly complied with, although his arsenal had been captured by Dewey. Here our troops encamped, as it was the most suitable place for the purpose. General Anderson says, in an official report, that the Tagalog general 'did not seem pleased at the incoming of our land forces, hoping, as I believe, that he could take the city with his own army, with the co-operation of the American fleet.' The change in Aguinaldo's demeanor now became apparent. His patriotism had been but a veneer to hide his ambition. He moved his 'government' to a neighboring town in the same province—Bacoor—and secretly threw every obstacle he could in General Anderson's way. The latter found it exceedingly difficult to get the necessary horses, buffaloes, and carts for army-transportation purposes. Even when he offered pay for these things, the natives replied that under General Aguinaldo's orders they were not permitted to dispose of their wagons, etc. Aguinaldo himself did not offer to assist our troops when attempting to land under the most difficult circumstances. On the other hand, he assumed such an arrogant and hostile attitude towards the Americans that Admiral Dewey reported to Washington, 'Merritt's most difficult problem will be how to deal with the insurgents under Aguinaldo, who has become aggressive and even threatening towards our army.' The landing, July 17th, of the second detachment of United States troops, under General Greene, was followed by a letter from Aguinaldo to General Anderson, in which the latter was warned not to disembark on Filipino soil any additional troops of the United States without his knowledge and consent. Of

course, no attention was paid to this ridiculous demand."—R. A. Alger, *Spanish-American War*, pp. 347-349.—"Aguinaldo was allowed to establish himself in the arsenal, where he opened negotiations with his compatriots. Soon, however, the marine officer in charge of the guard of the naval station was complaining about the constant traversing of his lines by scores of natives, who, of course, might be friends, but might equally well be enemies. As a result, I [George Dewey] sent for Aguinaldo and informed him that he must leave the arsenal, but I would allow him to take up his quarters in Cavité town. From my observation of Aguinaldo and his advisers I decided that it would be unwise to co-operate with him or his adherents in an official manner. Aside from permitting him to establish himself ashore, the only aid rendered him was a gift of some Mauser rifles and an old smooth-bore gun that had been abandoned by the Spanish. He mounted the gun on a float, but I declined to grant his request that our launches tow it across the bay. In short, my policy was to avoid any entangling alliance with the insurgents, while I appreciated that, pending the arrival of our troops, they might be of service in clearing the long neck of land that stretches out from Cavité Peninsula to the environs of Manila. Their numbers increasing by daily additions, the Filipinos slowly but surely drove the Spaniards back toward the city."—*Autobiography of George Dewey*, pp. 245-247.

1898 (May-August).—Conduct of English and German naval officers at Manila.—"Foreign concern in regard to the fate of the Philippines was shown by the action of Great Britain, Germany, France, and Japan in assigning ships to duty in Manila Bay after the destruction of the Spanish fleet. Germany, the interests of which nation in the islands were comparatively of not much value, mobilized at Manila a force stronger than that under the command of Admiral Dewey. Her officers and men displayed sympathy for the Spaniards, committed breaches of international and naval etiquette, and showed disregard and contempt for the blockade established by Dewey, all of which gave rise to serious friction and might have led to an open rupture. The American commander-in-chief, however, compelled respect for his blockade, and gave it to be plainly understood that he would permit no interference with his rights. Mr. Joseph L. Stickney, a newspaper correspondent, who acted as one of Dewey's aides during the battle of Manila Bay, thus described Dewey's action when informed of the landing of provisions in Manila by a German cruiser. Lieutenant Thomas M. Brumby, Dewey's flag lieutenant, was ordered to present the admiral's compliments to Rear-Admiral von Diederich, to inform him of this 'extraordinary disregard of the usual courtesies of naval intercourse,' and to tell him that 'if he wants a fight he can have it right now.' This prompt notification was effective. It was followed by a disavowal of the action of the cruiser, and a declaration that it was done without instructions. Aguinaldo was prevented from completing his conquest of Subig Bay by the German cruiser *Irene*, which took *Isla Grande* under her protection. The *Raleigh* and *Concord* were at once sent to that point. The *Irene* hastily retired and the Spaniards surrendered to the American ships. When the joint army and navy operations against Manila began on August 13, the German and French men-of-war, the latter being also in sympathy with the Spaniards, occupied a position northwest of the city, which enabled them to command the

American station. The English and Japanese vessels lay off Cavité, not far from the American squadron. The feeling existed on board our ships that the Germans might fire upon them during the bombardment of the city, but if anything of the kind were contemplated—and let us presume that no such intention existed—it was perhaps blocked by the action of Captain Chichester, the senior British naval officer, in placing his command during the bombardment between them and Dewey. Captain Chichester . . . [later] described his relations with Admiral von Diederich. 'When the German admiral sent me word that he was coming aboard my ship to get me to join in a protest against Dewey's action,' he said, 'I looked up international law and spread the books out on my cabin table with the pages open and marked—all in a row—and when he came, I said: "What can I do? This American admiral is so deadly right in all that he has done and all he proposes to do that if we protest we will merely show that we do not understand the law." Of course, there was nothing to be done, and I did it.'—J. D. Long, *New American navy*, v. 2, pp. 111-113.

1898 (June).—Act creating United States Industrial Commission.—During this time, the country was much preoccupied with the revival of business, and while great interest was taken in the course of the war, the industrial life of the nation, and the course of legislation through Congress went on without a break. An Act "authorizing the appointment of a non-partisan Commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital," was passed by Congress and approved by the president June 18, 1898. It provided: "That a commission is hereby created, to be called the 'Industrial Commission,' to be composed as follows. Five members of the Senate, to be appointed by the presiding officer thereof; five members of the House of Representatives, to be appointed by the speaker, and nine other persons, who shall fairly represent the different industries and employments, to be appointed by the President, by and with the advice and consent of the Senate." The Commission thus contemplated was duly appointed by the president, and organized by the election of Senator Kyle for its chairman. For the scope and plan of its investigations a committee on procedure made the following recommendations, which were adopted by the commission and which have been followed in what it has done: "The main work of the Commission may . . . be said to be to study and compare existing laws bearing upon industrial conditions, here and elsewhere, to ascertain by competent testimony wherein they are deficient, defective, inoperative, or oppressive, and to recommend such remedial statutes as will tend not only to make the conditions of industry more uniform as between the several States, but to remove such existing sources or causes of discontent, inequality, and injustice as can be reached and regulated through legislation. . . . In order to secure satisfactory results, it appears to your committee imperatively necessary that the work shall be confined strictly to the main purpose, viz, of ascertaining the nature and effects of existing legislation, and the nature of remedial legislation which may be necessary or desirable to equalize conditions in industry and to remove any just grounds of complaint on the part of either labor or capital or of the people at large. To

facilitate the progress of the work we recommend the division of the Commission into four sub-commissions of five members each, to be severally charged with the investigation of present conditions and the formulation of remedial suggestions in the following branches of industry: 1. On agriculture and agricultural labor. 2. On the conditions of labor and capital employed in manufacturing and general business. 3. On the conditions of labor and capital employed in mining. 4. On transportation. In addition, we recommend a fifth sub-commission, to be known as the subcommission on statistics, in the membership of which there shall be one representative of each of the above sub-commissions. . . . The committee also suggests that there are certain subjects of inquiry which appertain equally to all the groups into which it has recommended that the Commission be segregated. The subjects of immigration, of education, of combinations and trusts, and of taxation at once suggest themselves as belonging in this category. It is therefore recommended that these subjects, one or more of them, be examined into by the full Commission pending the organization of the several sub-commissions." The subject to which the commission gave earliest attention was that of "trusts and industrial combinations," on which it submitted a preliminary report on Mar. 1, 1900. The full report of the commission was published in 1901.

1898 (June).—Act providing for the arbitration of disputes between employers and employees in interstate commerce.—The following are the main sections of a very important act of Congress, approved June 1, 1898, which provides for the arbitration of disputes between railway and other employees engaged in interstate commerce and companies or individuals employing them:

That the provisions of this Act shall apply to any common carrier or carriers and their officers, agents, and employees, except masters of vessels and seamen, . . . engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, for a continuous carriage or shipment, from one State or Territory of the United States or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States. . . .

Sect. 2. That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise between a carrier subject to this Act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of said carrier, the chairman of the Interstate Commerce Commission and the Commissioner of Labor shall, upon the request of either party to the controversy, with all practicable expedition, put themselves in communication with the parties to such controversy, and shall use their best efforts, by mediation and conciliation, to amicably settle the same; and if such efforts shall be unsuccessful, shall at once endeavor to bring about an arbitration of said controversy in accordance with the provisions of this Act.

Sect. 3. That whenever a controversy shall arise between a carrier subject to this Act and the employees of such carrier which can not be settled by mediation and conciliation in the manner provided in the preceding section, said controversy may be submitted to the arbitration of a board of three persons, who shall be chosen in the manner

following: One shall be named by the carrier or employer directly interested: the other shall be named by the labor organization to which the employees directly interested belong, or, if they belong to more than one, by that one of them which specially represents employees of the same grade and class and engaged in services of the same nature as said employees so directly interested: Provided, however, That when a controversy involves and affects the interests of two or more classes and grades of employees belonging to different labor organizations, such arbitrator shall be agreed upon and designated by the concurrent action of all such labor organizations; and in cases where the majority of such employees are not members of any labor organization, said employees may by a majority vote select a committee of their own number, which committee shall have the right to select the arbitrator on behalf of said employees. The two thus chosen shall select the third commissioner of arbitration; but, in the event of their failure to name such arbitrator within five days after their first meeting, the third arbitrator shall be named by the commissioners named in the preceding section. A majority of said arbitrators shall be competent to make a valid and binding award under the provisions hereof. The submission shall be in writing, shall be signed by the employer and by the labor organization representing the employees, shall specify the time and place of meeting of said board of arbitration, shall state the questions to be decided, and shall contain appropriate provisions by which the respective parties shall stipulate, as follows: First. That the board of arbitration shall commence their hearings within ten days from the date of the appointment of the third arbitrator, and shall find and file their award, as provided in this section, within thirty days from the date of the appointment of the third arbitrator; and that pending the arbitration the status existing immediately prior to the dispute shall not be changed: Provided, That no employee shall be compelled to render personal service without his consent. Second. That the award and the papers and proceedings, including the testimony relating thereto certified under the hands of the arbitrators and which shall have the force and effect of a bill of exceptions, shall be filed in the clerk's office of the circuit court of the United States for the district wherein the controversy arises or the arbitration is entered into, and shall be final and conclusive upon both parties, unless set aside for error of law apparent on the record. Third. That the respective parties to the award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of equity permit: Provided, That no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service. Fourth. That employees dissatisfied with the award shall not by reason of such dissatisfaction quit the service of the employer before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of their intention so to quit. Nor shall the employer dissatisfied with such award dismiss any employee or employees on account of such dissatisfaction before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of his intention so to discharge. Fifth. That said award shall continue in force as between the parties thereto for the period of one year after the same shall go into practical operation, and no new arbitration upon

the same subject between the same employer and the same class of employees shall be had until the expiration of said one year if the award is not set aside as provided in section four. That as to individual employees not belonging to the labor organization or organizations which shall enter into the arbitration, the said arbitration and the award made therein shall not be binding, unless the said individual employees shall give assent in writing to become parties to said arbitration. . . .

Sect. 7. That during the pendency of arbitration under this Act it shall not be lawful for the employer, party to such arbitration, to discharge the employees, parties thereto, except for inefficiency, violation of law, or neglect of duty; nor for the organization representing such employees to order, nor for the employees to unite in, aid, or abet, strikes against said employer; nor, during a period of three months after an award under such an arbitration, for such an employer to discharge any such employees, except for the causes aforesaid, without giving thirty days' written notice of an intent so to discharge; nor for any of such employees, during a like period, to quit the service of said employer without just cause, without giving to said employer thirty days' written notice of an intent so to do; nor for such organization representing such employees to order, counsel, or advise otherwise. Any violation of this section shall subject the offending party to liability for damages; Provided, that nothing herein contained shall be construed to prevent any employer, party to such arbitration, from reducing the number of its or his employees whenever in its or his judgment business necessities require such reduction. . . .

Sect. 10. That any employer subject to the provisions of this Act and any officer, agent, or receiver of such employer who shall require any employee, or any person seeking employment, as a condition of such employment, to enter into an agreement, either written or verbal, not to become or remain a member of any labor corporation, association, or organization; or shall threaten any employee with loss of employment, or shall unjustly discriminate against any employee because of his membership in such a labor corporation, association, or organization; or who shall require any employee or any person seeking employment, as a condition of such employment, to enter into a contract whereby such employee or applicant for employment shall agree to contribute to any fund for charitable, social, or beneficial purposes; to release such employer from legal liability for any personal injury by reason of any benefit received from such fund beyond the proportion of the benefit arising from the employer's contribution to such fund; or who shall, after having discharged an employee, attempt or conspire to prevent such employee from obtaining employment, or who shall, after the quitting of an employee, attempt or conspire to prevent such employee from obtaining employment, is hereby declared to be guilty of a misdemeanor, and, upon conviction thereof in any court of the United States of competent jurisdiction in the district in which such offense was committed, shall be punished for each offense by a fine of not less than one hundred dollars and not more than one thousand dollars.

1898 (June).—War with Spain.—Seizure of the island of Guam.—The following order, dated May 10, 1898, was addressed by the secretary of the navy to the commander of the *U. S. S. Charles-*

ton: "Upon the receipt of this order, which is forwarded by the steamship 'City of Pekin' to you at Honolulu, you will proceed with the 'Charleston' and 'City of Pekin' in company, to Manila, Philippine Islands. On your way, you are hereby directed to stop at the Spanish Island of Guam. You will use such force as may be necessary to capture the port of Guam, making prisoners of the governor and other officials and any armed force that may be there. You will also destroy any fortifications on said island and any Spanish naval vessels that may be there, or in the immediate vicinity. These operations at the Island of Guam should be very brief, and should not occupy more than one or two days. Should you find any coal at the Island of Guam, you will make such use of it as you consider desirable. It is left to your discretion whether or not you destroy it. From the Island of Guam, proceed to Manila and report to Rear-Admiral George Dewey, U. S. N., for duty in the squadron under his command." In a dispatch dated June 24, Captain Glass, of the *Charleston*, reported the execution of these orders as follows: "I have the honor to report that in obedience to the Department's telegraphic order of May 24, 1898, this ship sailed from Honolulu, Hawaiian Islands, on the 4th instant for Manila. . . . When clear of land, I opened the confidential order of May 10, 1898, and changed course for the Island of Guam. . . . Arriving off the north end of the island at daylight, June 20, I first visited the port of Agaña, the capital of Guam, and of the Mariana group, and finding no vessels there of any kind, proceeded to San Luis D'Apra, where it was expected that a Spanish gunboat and a military force would be found, a rumor to that effect having reached me while at Honolulu. Arriving off the port at 8.30 a. m., it was found that Fort Santiago, on Oroté Point, was abandoned and in ruins, and I steamed directly into the harbor, having ordered the transports to take a safe position outside and await instructions. A few shots were fired from the secondary battery at Fort Santa Cruz to get the range and ascertain if it was occupied. Getting no response, ceased firing and came to anchor in a position to control the harbor, and it was then found that this fort also was abandoned. . . . At 8.30 a. m. on June 21 Lieut. William Brauersreuther was sent ashore, under flag of truce, with a written demand for the immediate surrender of the defenses of the Island of Guam and all officials and persons in the military service of Spain. Mr. Brauersreuther was directed to wait half an hour only for a reply, to bring the governor and other officials on board as prisoners of war in case of surrender, or in case of refusal or delay beyond the time given, to return and take command of the landing force, which he would find in readiness, and proceed to Agaña. At 12.15 p. m. Mr. Brauersreuther returned to the ship, bringing off the governor and three other officers, his staff, and handed me a letter from the governor acceding fully to my demand. Having received the surrender of the Island of Guam, I took formal possession at 2.45 p. m., hoisting the American flag on Fort Santa Cruz and saluting it with 21 guns from the 'Charleston.'"—*Annual Reports of the Navy Department*, 1898, v. 2, pp. 151-153.

1898 (June-July).—War with Spain.—Expedition of the army under General Shafter against Santiago de Cuba.—Battles of El Caney and San Juan Hill.—To cooperate with the navy in operations for the capture of Santiago de Cuba, and of the Spanish fleet blockaded in the harbor of that town, orders were issued from Washington

on May 31 by Major-General Miles, commanding the army, "with the approval of the Secretary of War," which directed General Shafter, commanding the forces assembled at Tampa, Florida, to place them on transports and proceed with them, under convoy of the navy, to Santiago. Owing to an extreme lack of both railway and harbor facilities at Tampa, an entire week was consumed in the embarkation of the troops and supplies. When on shipboard, the expedition was delayed another week by false reports of the appearance of Spanish cruisers on the Cuban coast, which seemed to the Washington authorities to call for a stronger naval convoy to guard the transport fleet. It was not until June 14 that the fleet was permitted to sail, with 16,000 men. It arrived off Guantanamo, near Santiago, on the morning of June 20. Meantime, the blockading fleet had bombarded the forts at Santiago twice, on June 6, and on the 16th, and had silenced them, for the time being, on both occasions, but apparently with no permanent effect. With more success, two vessels from the fleet had entered the harbor of Guantanamo on June 7 and taken possession of the lower bay, where a marine battalion was landed on June 10 and established in camp, to hold ground until the army arrived. Meantime, also, communication with General García, commanding Cuban forces, had been opened, and arrangements made, the results of which were subsequently acknowledged by General Miles, in his annual report, as follows: "General García regarded my requests as his orders, and promptly took steps to execute the plan of operations. He sent 3,000 men to check any movement of the 12,000 Spaniards stationed at Holguín. A portion of this latter force started to the relief of the garrison at Santiago, but was successfully checked and turned back by the Cuban forces under General Feria. General García also sent 2,000 men, under Pérez, to oppose the 6,000 Spaniards at Guantánamo, and they were successful in their object. He also sent 1,000 men, under General Ríos, against the 6,000 men at Manzanillo. Of this garrison, 3,500 started to reinforce the garrison at Santiago, and were engaged in no less than thirty combats with the Cubans on their way before reaching Santiago. . . . With an additional force of 5,000 men General García besieged the garrison of Santiago, taking up a strong position on the west side and in close proximity to the harbor, and he afterwards received General Shafter and Admiral Sampson at his camp near that place. He had troops in the rear, as well as on both sides of the garrison at Santiago before the arrival of our troops."—*Annual Reports of the War Department*, 1898, v. 1, pt. 2, p. 16.—The troops from Tampa, under General Shafter, arriving on June 20, were disembarked on June 22, 23 and 24, at Daiquiri, and advanced to Siboney. The first resistance encountered was at La Guasima, three miles from Siboney, on the Santiago road, where the Spaniards were driven from strong entrenchments by a part of Young's brigade of General Wheeler's cavalry division (dismounted). The brigade thus first in the fighting was composed of the 1st and 10th regiments of regular cavalry and the First United States Volunteer cavalry, commonly called the "Rough Riders." After the engagement at La Guasima, six days were occupied in concentrating the army (including the Cuban auxiliaries of General García), mostly at Sevilla, a short distance beyond La Guasima, on the same road, and in overcoming great difficulties of transportation for supplies. On June 30, General Shafter reconnoitered the country around Santiago and

made his plan of attack. "From a high hill," says his subsequent report, "from which the city was in plain view, I could see the San Juan Hill and the country about El Caney. The roads were very poor, and, indeed, little better than bridle-paths, until the San Juan River and El Caney were reached. The position of El Caney, to the northeast of Santiago, was of great importance to the enemy as holding the Guantanamo road, as well as furnishing shelter for a strong outpost that might be used to assail the right flank and rear of any force operating against San Juan Hill. In view of this I decided to begin the attack next day at El Caney with one division, while sending two divisions on the direct road to Santiago, passing by El Poso House, and, as a diversion, to direct a small force against Aguadores from Siboney along the railroad by the sea, with a view of attracting the attention of the Spaniards in the latter direc-

than had been anticipated, and prevented Lawton from joining the right of the main line during the day, as had been intended. After the battle had continued for some time Bates's brigade of two regiments [3rd and 20th U. S. Infantry] reached my headquarters from Siboney. I directed him to move near El Caney, to give assistance, if necessary. He did so and was put in position between Miles and Chaffee. The battle continued with varying intensity during most of the day and until the place was carried by assault, about 4.30 p. m. As the Spaniards endeavored to retreat along the Santiago road, Ludlow's position enabled him to do very effective work and to practically cut off all retreat in that direction. After the battle at El Caney was well opened and the sound of the small-arms fire caused us to believe that Lawton was driving the enemy before him, I directed Grimes's battery to open fire from the heights of El Poso

CAPTURE OF EL CANEY, JULY 1, 1898

(From drawing by Howard Chandler Christy)

tion and of preventing them from attacking our left flank. During the afternoon I assembled the division commanders and explained to them my general plan of battle. Lawton's division [composed of Chaffee's, Miles' and Ludlow's brigades], assisted by Capron's light battery, was ordered to move out during the afternoon toward El Caney, to begin the attack there early the next morning. . . . Early on the morning of July 1, Lawton was in position around El Caney, Chaffee's brigade [7th, 12th, and 13th U. S. Infantry] on the right, across the Guantanamo road; Miles's brigade [1st, 4th, and 25th U. S. Infantry] in the center, and Ludlow's [8th and 22d U. S. Infantry and 2d Massachusetts Volunteers] on the left. The duty of cutting off the enemy's retreat along the Santiago road was assigned to the latter brigade. The artillery opened on the town at 6.15 A.M. The battle here soon became general and was hotly contested. The enemy's position was naturally strong and was rendered more so by blockhouses, a stone fort, and entrenchments cut in solid rock, and the loopholing of a solidly built stone church. The opposition offered by the enemy was greater

on the San Juan blockhouse, which could be seen situated in the enemy's entrenchments extending along the crest of San Juan Hill. This fire was effective and the enemy could be seen running away from the vicinity of the blockhouse. The artillery fire from El Poso was soon returned by the enemy's artillery. They evidently had the range of this hill, and their first shells killed and wounded several men. As the Spaniards used smokeless powder it was very difficult to locate the positions of their pieces, while, on the contrary, the smoke caused by our black powder plainly indicated the position of our battery. At this time the cavalry division [of General Wheeler] under General Sumner [commanding temporarily in consequence of the illness of General Wheeler, who returned to duty that day], which was lying concealed in the general vicinity of the El Poso House, was ordered forward, with directions to cross the San Juan River and deploy to the right on the Santiago side, while Kent's division was to follow closely in its rear and deploy to the left. These troops moved forward in compliance with orders, but the road was so narrow as to render it impracticable

to retain the column of fours formation at all points, while the undergrowth on either side was so dense as to preclude the possibility of deploying skirmishers. It naturally resulted that the progress made was slow, and the long range rifles of the enemy's infantry killed and wounded a number of our men while marching along this road and before there was any opportunity to return this fire. At this time Generals Kent and Sumner were ordered to push forward with all possible haste and place their troops in position to engage the enemy. General Kent, with this end in view, forced the head of his column alongside of the cavalry column as far as the narrow trail permitted, and thus hurried his arrival at the San Juan and the formation beyond that stream. A few hundred yards before reaching the San Juan the road forks, a fact that was discovered by Lieutenant-Colonel Derby, of my staff, who had approached well to the front in a war balloon. This information he furnished to the troops, resulting in Sumner moving on the right-hand road, while Kent was enabled to utilize the road to the left. . . . After crossing the stream, the cavalry moved to the right with a view of connecting with Lawton's left when he should come up, and with their left resting near the Santiago road. In the meanwhile Kent's division with the exception of two regiments of Hawkins's brigade, being thus uncovered, moved rapidly to the front from the forks previously mentioned in the road, utilizing both trails, but more especially the one to the left, and crossing the creek formed for attack in the front of San Juan Hill."—*Annual Reports of the War Department, 1898, v. 1, pt. 2, p. 147.*—"The particulars of this gallant attack, which won the hill and decided the fate of Santiago, are given with more clearness in the report of General Kent, who commanded the division which had most of the fighting to do, than in that of General Shafter. Wikoff's 'heroic brigade,' writes General Kent, 'consisting of the 13th, 9th, and 24th U. S. Infantry, speedily crossed the stream and were quickly deployed to the left of the lower ford. While personally superintending this movement Colonel Wikoff was killed, the command of the brigade then devolving upon Lieutenant-Colonel Worth, 13th Infantry, who immediately fell severely wounded, and then upon Lieutenant-Colonel Lisicum, 24th Infantry, who, five minutes later, also fell under the withering fire of the enemy. The command of the brigade then devolved upon Lieutenant-Colonel E. P. Ewers, 9th Infantry. Meanwhile I had again sent a staff officer to hurry forward the second brigade [Pearson's] which was bringing up the rear. The 10th and 2d Infantry, soon arriving at the forks, were reflected to the left to follow the Third Brigade [Wikoff's], while the 21st was directed along the main road to support Hawkins [whose brigade was composed of the 6th and 16th U. S. Infantry and the 71st N. Y. Volunteers]. Crossing the lower ford a few minutes later, the 10th and 2d moved forward in column in good order toward the green knoll . . . on the left. Approaching the knoll the regiments deployed, passed over the knoll, and ascended the high ridge beyond, driving back the enemy in the direction of his trenches. I observed this movement from the Fort San Juan Hill. . . . Prior to this advance of the second brigade, the third, connecting with Hawkins's gallant troops on the right, had moved toward Fort San Juan, sweeping through a zone of most destructive fire, scaling a steep and difficult hill, and assisting in capturing the enemy's strong position (Fort San Juan) at 1.30 p. m. This crest was about 125 feet above the general level

and was defended by deep trenches and a loop-holed brick fort surrounded by barbed-wire entanglements. General Hawkins, some time after I reached the crest, reported that the 6th and 16th Infantry had captured the hill, which I now consider incorrect. Credit is almost equally due the 6th, 9th, 13th, 16th, and 24th regiments of infantry. . . . The Thirteenth Infantry captured the enemy's colors waving over the fort, but unfortunately destroyed them. . . . The greatest credit is due to the officers of my command, whether company, battalion, regimental, or brigade commanders, who so admirably directed the formation of their troops, unavoidably intermixed in the dense thicket, and made the desperate rush for the distant and strongly defended crest. . . . The enemy having retired to a second line of rifle pits, I directed my line to hold their positions and intrench. At ten minutes past 3 p. m. I received almost simultaneously two requests—one from Colonel Wood, commanding a cavalry brigade, and one from General Sumner—asking for assistance for the cavalry on my right, 'as they were hard pressed.' I immediately sent to their aid the 13th Infantry, who promptly went on this further mission, despite the heavy losses they had already sustained. Great credit is due to the gallant officer and gentleman, Brig. Gen. H. S. Hawkins, who, placing himself between the two regiments, leading his brigade, the 6th and 16th Infantry, urged and led them by voice and bugle calls to the attack so successfully accomplished."—*Annual Reports of the War Department, 1898, v. 1, pt. 2, p. 164.*—The part borne by the dismounted cavalry division in the capture of the Spanish intrenchments on San Juan Hill is described as follows in the report of General Sumner, temporarily in command: "After crossing the creek with sufficient strength to hold it and protect the crossing, I received verbal orders to move by the right flank to connect with Lawton's left. During the execution of this movement a balloon, under command of Colonel Derby, came up the road, forcing open Wood's Brigade and cutting it in two, thereby delaying the movement. The artillery fire of the enemy opened upon the balloon and continued for more than an hour, thereby subjecting part of my command massed and the rest moving by the flank to long shrapnel fire. Many officers and men were wounded here by exploding shells and small arms' firing of the enemy. After completing the deployment the command was so much committed to battle that it became necessary either to advance or else retreat under fire. Lieutenant Miley, representing General Shafter, authorized an advance, which was ordered, Carroll's brigade taking the advance, reinforced on the right by Roosevelt's regiment and supported by the 1st and 10th Cavalry of Wood's Brigade. The advance was made under heavy infantry fire through open flat ground, cut up by wire fences, to the creek, distant about 600 yards. The advance was made in good order, the enemy's fire being returned only under favorable opportunities. In crossing the flat one officer (Captain O'Neil) and several men were killed and several officers and men wounded. Both sides of the creek are heavily wooded for about 200 yards. The creek was swollen, and the crossing through this space and the creek was made with great difficulty. After passing through the thick woods the ground was entirely open and fenced by wire. From this line it was necessary to storm the hill, upon the top of which is a house loop-holed, etc., for defense. The slope of the hill is very difficult, but the assault was made with great gallantry and with much loss to the enemy. In

this assault Colonel Hamilton, Lieutenants Smith and Shipp were killed; Colonel Carroll, Lieutenant Thayer and Myer were wounded. A number of casualties occurred among the enlisted men. After taking this hill the front line advanced to take the Fort San Juan Hill under fire from strong force of the enemy in trenches and house known as 'Blockhouse.' . . . The assault was successful, the line storming the trenches and blockhouse with conspicuous gallantry and coolness, capturing three prisoners, wounding and killing many of the enemy. . . . Connected with my left, Hawkins's brigade of Kent's division carried everything in front of it and captured the house and hill known as 'Fort San Juan' proper."—*Annual Reports of the War Department*, 1898, v. 1, pt. 2, p. 370.—Lieutenant-Colonel Roosevelt (afterwards president of the United States), who commanded the Rough Riders regiment that day, while Colonel Wood commanded the brigade, tells the story of the fight, and what followed, very tersely, in his report: "After crossing the river at the ford," says the Lieutenant-Colonel, "we were moved along and up its right bank under fire, and were held in reserve at a sunken road. Here we lost a good many men, including Captain O'Neil, killed, and Lieutenant Haskell, wounded. We then received your order to advance and support the regular cavalry in the attack on the intrenchments and blockhouses on the hills to the left. The regiment was deployed on both sides of the road, and moved forward until we came to the rearmost lines of the regulars. We continued to move forward until I ordered a charge, and the men rushed the blockhouse and rifle pits on the hill to the right of our advance. They did the work in fine shape, though suffering severely. The guidons of Troops E and G were first planted on the summit, though the first men up were some A and B troopers who were with me. We then opened fire on the intrenchments on a hill to our left which some of the other regiments were assailing and which they carried a few minutes later. Meanwhile we were under a heavy rifle fire from the intrenchments along the hills to our front, from whence they also shelled us with a piece of field artillery until some of our marksmen silenced it. When the men got their wind we charged again and carried the second line of intrenchments with a rush. Swinging to the left, we then drove the Spaniards over the brow of the chain of hills fronting Santiago. By this time the regiments were much mixed, and we were under a very heavy fire, both of shrapnel and from rifles from the batteries, intrenchments, and forts immediately in front of the city. On the extreme front I now found myself in command with fragments of the six cavalry regiments of the two brigades under me. The Spaniards made one or two efforts to retake the line, but were promptly driven back. Both General Sumner and you sent me word to hold the line at all hazards, and that night we dug a line of intrenchments across our front, using the captured Spaniard's intrenching tools. We had nothing to eat except what we captured from the Spaniards; but their dinners had fortunately been cooked, and we ate them with relish, having been fighting all day. We had no blankets and coats, and lay by the trenches all night. The Spaniards attacked us once in the night, and at dawn they opened a heavy artillery and rifle fire. Very great assistance was rendered us by Lieutenant Parker's Gatling battery at critical moments; he fought his guns at the extreme front of the firing line in a way that repeatedly called forth the cheers of my men. One of the Spanish

batteries which was used against us was directly in front of the hospital so that the red cross flag flew over the battery, saving it from our fire for a considerable period. The Spanish Mauser bullets made clean wounds; but they also used a copper-jacketed or brass-jacketed bullet which exploded, making very bad wounds indeed. Since then we have continued to hold the ground; the food has been short; and until today [July 4] we could not get our blankets, coats, or shelter tents, while the men lay all day under the fire from the Spanish batteries, intrenchments, and guerrillas in trees, and worked all night in the trenches, never even taking off their shoes. But they are in excellent spirits, and ready and anxious to carry out any orders they receive. At the end of the first day the eight troops were commanded, two by captains, three by first lieutenants, two by second lieutenants, and one by the sergeant whom you made acting lieutenant. We went into the fight about 490 strong; 86 were killed or wounded, and there are about half a dozen missing. The great heat prostrated nearly 40 men, some of them among the best in the regiment."—*Annual Reports of the War Department*, 1898, v. 1, pt. 2, p. 684.—The troops which had carried San Juan Hill were intrenched, that night, in the positions they had gained, and those which had taken El Caney were brought into connection with them, Lawton's division on their right and Bates's brigade on the left. The battle was renewed by the Spaniards soon after daylight on the morning of July 2, and raged with more or less fury throughout the day. That evening, about 10 o'clock, a fierce attempt was made to break through the American lines, but without success. Again, on the morning of July 3, the Spaniards reopened battle, but with less vigor than before. General Shafter then sent the following letter to General Toral, the Spanish commander: "I shall be obliged, unless you surrender, to shell Santiago de Cuba. Please inform the citizens of foreign countries, and all women and children, that they should leave the city before 10 o'clock to-morrow morning." In reply, General Toral wrote: "It is my duty to say to you that this city will not surrender, and that I will inform the foreign consuls and inhabitants of the contents of your message." Several of the foreign consuls at Santiago then came into the American lines and persuaded General Shafter to delay the shelling of the town until noon of July 5, provided that the Spanish forces made no demonstration meantime against his own. This established a truce which was renewed, in a series of negotiations until July 10. "I was of the opinion," reported General Shafter, "that the Spaniards would surrender if given a little time, and I thought this result would be hastened if the men of their army could be made to understand they would be well treated as prisoners of war. Acting upon this presumption I determined to offer to return all the wounded Spanish officers at El Caney who were able to bear transportation, and who were willing to give their paroles not to serve against the forces of the United States until regularly exchanged. This offer was made and accepted. These officers, as well as several of the wounded Spanish privates, 27 in all, were sent to their lines under the escort of some of our mounted cavalry. Our troops were received with honors, and I have every reason to believe the return of the Spanish prisoners produced a good impression on their comrades. The cessation of firing about noon on the 3d practically terminated the battle of Santiago." General Shafter goes on to say that when the battle was fiercest, on July 1, he prob-

ably had no more than 12,000 men on the firing line, not counting a few Cubans who assisted in the attack on El Caney, and who fought with valor. They were confronted by about equal numbers of the enemy, in strong and intrenched positions. "Our losses in these battles were 22 officers and 208 men killed, and 81 officers and 1,203 men wounded; missing 79. The missing, with few exceptions, reported later." Up to this time, General Shafter had been unable to complete the investment of the town with his own men, and had depended upon General Garcia with his Cubans, placed on the extreme right of the American lines, to watch for and intercept reinforcements. They failed to do so, and 2,800 Spaniards, under General Escario, entered the city on the night of July 2. The American commander now extended his own lines

WINFIELD SCOTT SCHLEY

as rapidly as possible and completed the investment of the town.—Based on *Annual Reports of the War Department*, 1898, v. 1, pt. 2, p. 155-157.

1898 (July 1).—National bankrupt law.—After years of effort on the part of its advocates, a national bankrupt law was enacted by both Houses of Congress and received the president's signature on July 1, 1898.

1898 (July 3).—Destruction of the Spanish squadron at Santiago.—"Admiral Cervera saw himself bottled up in the harbor [of Santiago] with great dismay. He opposed from the first the expedition to the West Indies and would have got

away at the earliest moment, but coaling was slow and General Blanco feared that his army, already near the point of mutiny, would take it for abandonment by their country and break out in disorders, to subdue which must occasion the spilling of much blood. Thus was allowed to pass the first days of the blockade, when a successful sortie was most possible. The army in Cuba thought a second fleet would be sent to drive off Sampson's ships and then to unite with Cervera to sweep all opposition from the seas; but the higher officers, naval and military, knew how futile was this hope. The arrival of Shafter added to their discouragement, and some of the guns of the squadron were landed to strengthen the land defenses. Marines were also sent to the trenches, and Captain Bustamente leading a detachment of 500, lost his life on July 1 in defending San Juan Hill. June 24 Cervera, by cable, had been placed under command of Blanco, who ordered him to aid in the defense of the city until surrender seemed inevitable and then to go out in the best manner possible. This contingency was believed to have arrived on the evening of July 1, but the admiral hesitated on account of what he believed the useless loss of life. At dawn on the 2d he unwillingly directed his fires to be lighted and called his sailors on board. A few minutes later all his doubts were resolved by peremptory instructions from Havana to make the sortie. Blanco felt it would be a blot on Spanish honor to allow the ships to fall into the hands of the enemy without a blow. All day Saturday, July 2, the steam rose in the gauges. Sunday morning it was at the highest point, and all the preparations were complete. Cervera gave the order of proceeding. Like a brave officer he took the lead in the *Maria Teresa*, with the *Vizcaya*, *Colon*, and *Oquendo* following in order at intervals of 800 yards, all armored cruisers of the modern type. Behind them, at 1,000 yards, came the torpedo-boat destroyers, the *Furor* and *Pluton*. . . . He proposed to turn westward when outside, try to ram the *Brooklyn* on the west end of Sampson's line, draw the other American ships to him, and thus give the ships that came later an opportunity to break through and escape. Such tactics would mean the loss of the *Teresa*, but they might save the rest of the squadron. The start was made from the inner harbor at 9:15 A.M. That morning the American ships were in a crescent, the ends three miles apart and two and a half miles respectively from the shore. Farthest west was the *Brooklyn*, Commodore Schley's flagship, a fast and powerful cruiser. . . . At 9:30 o'clock the *Teresa* was sighted going at full speed. Schley, in actual command; signalled, 'Clear ship for action,' and 'Close up.' Sampson soon saw what was happening, signalled the attack, and made all speed for the fray. Only the *Oregon* had full steam up, and for a few minutes the other ships were outstripped by the enemy. The *Teresa* made straight for the *Brooklyn*, which at 1,400 yards turned eastward, made a great loop, and came back to the west in a course parallel to the flying *Teresa*. By this time the other Spanish ships were outside. Instead of scattering, they followed their admiral along the shore, each engaged with the American ship which, sailing in a parallel course farther out at sea, happened to be nearest to her. Thus the action resolved itself into a series of magnificent duels between powerful ironclads, metal ringing on metal, while the cannon roared, the great engines throbbed, and the air was filled by the clouds of smoke, which rushed from the overcharged boilers. The Spaniards' aim was bad, or their powder poor, for

their shots went wild or fell short, while the American gunnery was excellent. It was more than the enemy could stand, and the explosion of shell after shell in his vessels showed that he was losing the fight. The *Teresa*, in the thickest of the battle, first showed signs of weakening. At 10:15 she ran for the beach six and a half miles from the harbor, a complete wreck. Five minutes later the *Oquendo*, in even worse condition, repeated the maneuver and settled in the sand half a mile west of the *Teresa*. The *Furor* and *Pluton*, last out of the harbor, were raked by the small guns of the American ships and engaged by the *Gloucester* at short range with great courage. They quickly succumbed and sank before they could reach the beach. The other Spanish ships, the *Vizcaya* and *Colon*, passed the first danger zone with a faint hope of escape. They were pursued by the *Brooklyn*, *Oregon*, *Texas*, and *Iowa*, whose rising fires ever increased their speed. At 11 o'clock the *Vizcaya*, shot-ridden and sinking, turned to the shore and ended her course twenty miles from Santiago. The *Iowa* and *Texas* halted to receive her surrender and rescue her drowning crew, while the *Brooklyn*, *Oregon*, and *New York*, which was now coming up, held on after the *Colon*, six miles in the lead. The pursuers held their fire and crowded on all possible steam. At 12:23 the *Brooklyn* and *Oregon* were in range and opened fire. At 1:15 the *Colon* gave up the struggle and ran toward the shore. She was nearly uninjured, but her crew opened her sea valves, and she sank before the victors could prevent it. Thus four hours after Cervera began his dash the last of his ships was destroyed, 323 of his crew were killed, 151 were wounded, and 1782 were prisoners, he himself being among the last-named and on board of the *Iowa*. Sampson lost one man killed and one wounded, and his ships were uninjured. He himself, because of his unlucky position at the beginning, was not in the fight, but pursued it as fast as his swift cruiser, the *New York*, could move, and came up in time to be present at the surrender of the *Colon*.—J. S. Bassett, *Short history of the United States*, pp. 799-801.—“In the evening the Secretary of War received a dispatch from General Shafter transmitting a message from Captain Cotton, of the *Harvard*, announcing that Admiral Sampson had signaled that Cervera had escaped and that the admiral was in pursuit. . . . Spain's power was destroyed. Santiago's fall was certain. Peace was the inevitable and early outcome. The destruction of the Spanish division released our entire battle fleet. By the annihilation of Cervera's fleet, officers and men had performed their duty. It was now for the nation by practical act to show its appreciation of the stupendous victory—a victory remarkable for the loss of but a single life of the immaterial damage done our men-of-war.”—J. D. Long, *New American navy*, v. 2, pp. 42-43.—The following is a translation, from Admiral Cervera's report, as partly published in newspapers at Madrid, giving his description of the destruction of his flagship and his own rescue from death: “The enemy's fire produced terrible damages on board the ‘Infanta Maria Teresa,’ destroying the elements of defence—among others, the net for protection against fire. In this critical moment the captain of the ship, Señor Concas, fell wounded, and it was necessary to withdraw him, I taking command of the vessel, because it was impossible to find the second commandant of the ‘Maria Teresa.’ Immediately afterwards they reported to me that my cabin was burning in consequence of an explosion. The fire soon became very

great and ignited other parts of the ship. I gave orders to my aid to flood the after magazines, but it was impossible. Dense clouds of smoke impeded walking in the passages and practicing any kind of operations. In this situation I could only think of beaching the ship, and did so, running aground on Punta Cabrera. The contest was impossible on our side, and there was nothing more to be done but to save as much as possible. I thought to lower the flag, but that was not possible on account of the fire, which prevented all operations. In these anxious moments two boats came to the aid of the ‘Maria Teresa,’ into which a number of us jumped. Those that were not dying were saved with nothing. The ‘Teresa’ lowered a small boat, which sank before it could be of any service. Subsequently they succeeded in launching a steam launch, but this also sank after making one voyage to the beach. I succeeded in saving myself with nothing, two sailors helping me, one named Andres Sequeros and the officer D. Angel Cervera, all of us arriving on board the American ship ‘Gloucester’ naked. At this time we were all naked.”—*Annual Report of Secretary of the Navy*, 1898, v. 2, pp. 558-559.

After the battle “a controversy arose between the friends of Admiral Sampson and those of Commodore Schley in reference to the conduct of the latter at Santiago. When Sampson steamed up as the *Colon* was sinking, Schley signaled congratulation and received the curt reply, ‘Report your casualties.’ To the public this seemed ungenerous. Sampson's promotion was not generally approved in the first instance, and his conduct after the battle seemed to support the opinion that he was not only a pet of the bureaucracy but a heartless seeker of his own glory. Such a view did Sampson injustice. He was a good officer and had conducted the campaign well, but the public was in no mood to recognize it. When President McKinley, in distributing the rewards for the commanders of ships at Santiago, recommended that Sampson be advanced eight numbers and Schley six, the controversy became acute. The senate reflected the feeling in the country and deferred consideration. By this time feeling ran high on both sides, and so many charges were made against Schley that in 1901 he demanded an investigation. Admiral Dewey presided over the court of inquiry, whose verdict acquitted Schley of cowardice, which had been freely charged by his critics, but it found that he was vacillating and unenterprising before June 1, 1898. Dewey, in a separate opinion, declared that Schley was in command at the battle of Santiago and deserved the credit for the victory. President Roosevelt, reviewing the verdict, supported the finding of the majority of the court and declared that Sampson was technically in command in the battle, but that it was ‘a captain's fight.’ This disposal of the dispute did not satisfy the public, although McKinley's recommendations were finally accepted by the senate, and the controversy died slowly.”—J. S. Bassett, *Short history of the United States*, p. 804.

1898 (July 4-17).—Surrender of Santiago and of all the Spanish forces in eastern Cuba.—The following is a continuation of the report made by General Shafter of his operations at Santiago de Cuba, resulting in the surrender of the entire forces of Spain in eastern Cuba: “The information of our naval victory was transmitted under flag of truce to the Spanish commander in Santiago on

July 4, and the suggestion again made that he surrender to save needless effusion of blood. On the same date I informed Admiral Sampson that if he would force his way into the harbor the city would surrender without any further sacrifice of life. Commodore Watson replied that Admiral Sampson was temporarily absent, but that in his (Watson's) opinion the navy should not enter the harbor. In the meanwhile letters passing between General Toral and myself caused the cessation of hostilities to continue; each army, however, continued to strengthen its intrenchments. I was still of the opinion the Spaniards would surrender without much more fighting, and on July 6 called General Toral's attention to the changed conditions and at his request gave him time to consult his home Government. This he did, asking that the British consul, with the employees of the cable company, be permitted to return from El Caney to the city. This I granted. The strength of the enemy's position was such I did not wish to assault if it could be avoided. An examination of the enemy's works, made after the surrender, fully justified the wisdom of the course adopted. The intrenchments could only have been carried with very great loss of life, probably with not less than 3,000 killed and wounded. On July 8 General Toral offered to march out of the city with arms and baggage, provided he would not be molested before reaching Holguin, and to surrender to the American forces the territory then occupied by him. I replied that while I would submit his proposition to my home Government, I did not think it would be accepted. In the meanwhile arrangements were made with Admiral Sampson that when the army again engaged the enemy the navy would assist by shelling the city from ships stationed off Aguadores, dropping a shell every few minutes. On July 10 the 1st Illinois and the 1st District of Columbia arrived, and were placed on the line to the right of the cavalry division. This enabled me to push Lawton further to the right and to practically command the Cobra road. On the afternoon of the date last mentioned the truce was broken off at 4 p. m., and I determined to open with four batteries of artillery, and went forward in person to the trenches to give the necessary orders; but the enemy anticipated us by opening fire with his artillery a few minutes after the hour stated. His batteries were apparently silenced before night, while ours continued playing upon his trenches until dark. During this firing the navy fired from Aguadores, most of the shells falling in the city. There was also some small-arms firing. On this afternoon and the next morning we lost Capt. Charles W. Rowell, 2d Infantry, and 1 man killed, and Lieutenant Lutz, 2d Infantry, and 10 men wounded. On the morning of July 11 the bombardment by the Navy and my field guns was renewed and continued until nearly noon, and on the same day I reported to the Adjutant-General of the Army that the right of Ludlow's brigade of Lawton's division rested on the bay. Thus our hold upon the enemy was complete. At 2 p. m. on this date, the 11th, the surrender of the city was again demanded. The firing ceased and was not again renewed. By this date the sickness in the army was increasing very rapidly as a result of exposure in the trenches to the intense heat of the sun and the heavy rains. Moreover, the dews in Cuba are almost equal to rains. The weakness of the troops was becoming so apparent I was anxious to bring the siege to an end, but in common with most of the officers of the army I did not think an assault would be justifiable, es-

pecially as the enemy seemed to be acting in good faith in their preliminary propositions to surrender. On July 11 I wrote General Toral as follows: 'With the largely increased forces which have come to me, and the fact that I have your line of retreat securely in my hands, the time seems fitting that I should again demand of your excellency the surrender of Santiago and of your excellency's army. I am authorized to state that should your excellency so desire the Government of the United States will transport the entire command of your excellency to Spain.' General Toral replied that he had communicated my proposition to his general-in-chief, General Blanco. July 12 I informed the Spanish commander that Major-General Miles, commander-in-chief of the American Army, had just arrived in my camp, and requested him to grant us a personal interview on the following day. He replied he would be pleased to meet us. The interview took place on the 13th, and I informed him his surrender only could be considered, and that as he was without hope of escape he had no right to continue the fight. On the 14th another interview took place, during which General Toral agreed to surrender, upon the basis of his army, the Fourth Army Corps, being returned to Spain, the capitulation embracing all of eastern Cuba east of a line passing from Acerraderos on the south to Sagua de Tanamo on the north, via Palma Soriano. It was agreed commissioners should meet during the afternoon to definitely arrange the terms. . . . The terms of surrender finally agreed upon included about 12,000 Spanish troops in the city and as many more in the surrendered district. It was arranged the formal surrender should take place between the lines on the morning of July 17, each army being represented by 100 armed men. At the time appointed, I appeared at the place agreed upon with my general officers, staff, and 100 troopers of the Second Cavalry under Captain Brett. General Toral also arrived with a number of his officers and 100 infantry. We met midway between the representatives of our two armies, and the Spanish commander formally consummated the surrender of the city and the 24,000 troops in Santiago and the surrendered district. After this ceremony I entered the city with my staff and escort, and at 12 o'clock noon the American flag was raised over the governor's palace with appropriate ceremonies."—*Annual Reports of the War Department*, 1898, v. 2, pp. 157-159.

1898 (July-August).—Army administration.—Red-tape and politics.—Their working in the campaign.—"The Cuban campaign had been foreseen by intelligent officers for more than a year, but the department which clothes the army had taken no steps toward providing a suitable uniform for campaigning in the tropics until war was declared. The Fifth Army Corps, a comparatively small body of 17,000 men, was concentrated at Tampa on the railroad within reach of all the appliances for expediting business. Between April 26, when war was declared, and June 6, when the corps embarked for Cuba, sufficient time elapsed to have clothed 1,000,000 men if the matter had been handled in the same manner a wholesale clothing firm would handle similar business. Yet the corps went to Cuba wearing the winter clothing it had brought on its backs from Montana, Wyoming, and Michigan. It endured the heat of the tropics clad in this, and was furnished with light summer clothing by the department to wear for its return to Montauk, where the breezes were so bracing that the teeth chattered even when the

men were clad in winter clothing. The only reason for this absolute failure to properly clothe the army was that the methods of the department are too slow and antiquated for the proper performance of business. There was no lack of money. It was a simple case of red-tape delays. There can be no doubt that the intention was that the summer clothing should be worn in Cuba and that there should be warm clothing issued at Montauk. It was issued after the troops had shivered for days in their light clothes. The delays unavoidably connected with an obsolete method caused great suffering that should not have been inflicted upon men expected to do arduous duty. . . . This is not pointed out in a fault-finding spirit. The men are proud to have been in the Fifth Corps and to have endured these things for the country and the flag; but these unnecessary sufferings impaired the fighting strength of the army, caused much of the sickness that visited the Fifth Corps, and might have caused the failure of the whole expedition. . . . The difficulty here depicted was one which beset the department at every turn in the whole campaign. It is a typical case. Transports, tentage transportation—it was the same in everything. With the most heroic exertions the department was able to meet emergencies only after they had passed. This was caused partly by lack of ready material, but mainly by an inelastic system of doing business which broke down in emergencies. This, in turn, was caused mainly by the illiberal treatment accorded to this, as well as to every other department of the army by Congress. It uniformly cuts mercilessly all estimates of this, as of every other department, and leaves no margin of expenditure or chance of improvement. It dabbles in matters which are purely technical and require the handling of expert executive talent. . . . Plans for war should be prepared in advance. This was especially true of the last war, which had been foreseen for years and considered a probability for several months. All details should have been previously worked out, all contingencies foreseen before hostilities began. Such plans would require some modifications, of course, but would form a working basis. Neither Santiago nor Manila Bay would have been foreseen; but any plans for war would have involved the consideration and solution of the following problems: How to raise, arm, equip, organize, mobilize, clothe, feed, shelter, and transport large bodies of soldiers. The point where the battle might occur would be a mere tactical detail to be worked out at the proper time. The above problems could all be solved in time of peace and should have been solved.”—J. H. Parker, *Our army supply departments and the need of a general staff* (Review of Reviews, December, 1898).

1898 (July-August: Cuba).—War with Spain: Sickness in the American Army at Santiago.—Its alarming state.—Hurried removal of troops to Montauk Point, Long Island.—“After the surrender of General Toral’s army General Shafter urged the War Department from time to time to hasten the shipment of the Spanish prisoners to their homes, in order that the American Army, whose condition was now deplorable, might be transported to the United States. At this time about half the command had been attacked by malarial fever, with a few cases of yellow fever, dysentery, and typhoid. . . . The yellow-fever cases were mainly confined to the troops at Siboney, and the few cases found among the troops at the front were at once transferred to that place. . . . There was great fear, and excellent grounds for it,

that the yellow fever, now sporadic throughout the command, would become epidemic. With the command weakened by malarial fevers, and its general tone and vitality much reduced by all the circumstances incident to the campaign, the effects of such an epidemic would practically mean its annihilation. The first step taken to check the spread of disease was the removal of all the troops to new camping grounds. . . . It was directed that the command be moved in this way every few days, isolating the cases of yellow fever as they arose, and it was expected that in a short time the yellow fever would be stamped out. . . . But the effect produced on the command by the work necessary to set up the tents and in the removal of the camps increased the number on the sick report to an alarming degree. Convalescents from malarial fever were taken again with the fever, and yellow fever, dysentery, and typhoid increased. It was useless now to attempt to confine the yellow-fever cases to Siboney, and isolation hospitals were established around Santiago. It was apparent that to keep moving the command every few days simply weakened the troops and increased the fever cases. Any exertion in this heat caused a return of the fever, and it must be remembered that the convalescents now included about 75 per cent. of the command. The Commanding General was now directed to move the entire command into the mountains to the end of the San Luis railroad, where the troops would be above the yellow fever limit; but this was a physical impossibility. . . . The situation was desperate; the yellow-fever cases were increasing in number, and the month of August, the period in which it is epidemic, was at hand. It was with these conditions staring them in the face, that the officers commanding divisions and brigades and the Chief Surgeon were invited by General Shafter to discuss the situation. As a result of this conference the General sent the following telegram giving his views [and those of the general officers and medical officers. This was popularly known as the “round robin.”] . . . ‘In reply to telegram of this date [August 3], stating that it is deemed best that my command be moved to end of railroad, where yellow fever is impossible, I have to say that under the circumstances this move is practically impossible. The railroad is not yet repaired, although it will be in about a week. Its capacity is not to exceed 1,000 men a day, at the best, and it will take until the end of August to make this move, even if the sick-list should not increase. An officer of my staff, Lieutenant Miley, who has looked over the ground, says it is not a good camping ground. . . . In my opinion there is but one course to take, and that is to immediately transport the Fifth Corps and the detached regiments that came with it, and were sent immediately after it, with the least delay possible, to the United States. If this is not done I believe the death-rate will be appalling. I am sustained in this view by every medical officer present. I called together to-day the General Officers and the senior Medical Officers and telegraph you their views.’ . . . On August 4th instructions were received from the War Department to begin the removal of the command to Montauk Point, Long Island. Some of the immune regiments were on the way to Santiago, and other regiments were at once ordered there to garrison the district as General Shafter’s command was withdrawn. The first of the fleet of vessels to return the Spanish troops arrived in time to be loaded and leave August 9th, and by the end of the month nearly all were transported. After the surrender

the relations between the American and Spanish troops were very cordial. There could be little or no conversation between individuals, but in many ways the respect each had for the other was shown, and there seemed to be no hatred on either side. Most of the Spanish officers remained in their quarters in town, and they shared in the feeling displayed by their men. Salutations were generally exchanged between the officers, and American ways and manners became very popular among the Spaniards. . . . By the 25th of the month General Shafter's entire command, with the exception of a few organizations just ready to embark, had departed, and, turning over the command to General Lawton, he sailed that day with his staff on the 'Mexico,' one of the captured transports, and at noon September 1st went ashore at Montauk Point, Long Island."—J. D. Miley, *In Cuba with Shafter*, ch. 12.

1898 (July–August: Philippines).—Correspondence between the general commanding United States forces at Cavite and Manila, and Aguinaldo, the Filipino leader.—On July 4, General Thomas M. Anderson, then commanding the "U. S. Expeditionary Forces" at Cavite arsenal, addressed the following communication to "Señor Don Emilio Aguinaldo y Famy, Commanding Philippine Forces": "General: I have the honor to inform you that the United States of America, whose land forces I have the honor to command in this vicinity, being at war with the Kingdom of Spain, has entire sympathy and most friendly sentiments for the native people of the Philippine Islands. For these reasons I desire to have the most amicable relations with you, and to have you and your people co-operate with us in military operations against the Spanish forces. In our operations it has become necessary for us to occupy the town of Cavite as a base of operations. In doing this I do not wish to interfere with your residence here and the exercise by yourself and other native citizens of all functions and privileges not inconsistent with military rule. I would be pleased to be informed at once of any misconduct of soldiers under my command, as it is the intention of my Government to maintain order and to treat all citizens with justice, courtesy, and kindness. I have therefore the honor to ask your excellency to instruct your officials not to interfere with my officers in the performance of their duties and not to assume that they can not visit Cavite without permission." On the following day Aguinaldo replied: "General: Interpreting the sentiments of the Philippine people, I have the honor to express to your excellency my most profound gratefulness for the sympathy and amicable sentiments with which the natives of these islands inspire the great North American nation and your excellency. I also thank most profoundly your desire of having friendly relations with us, and of treating us with justice, courtesy, and kindness, which is also our constant wish to prove the same, and special satisfaction whenever occasion represents. I have already ordered my people not to interfere in the least with your officers and men, orders which I shall reiterate to prevent their being unfulfilled; hoping that you will inform me of whatever misconduct that may be done by those in my command, so as to reprimand them and correspond with your wishes." To this communication General Anderson returned the following on July 6: "General: I am encouraged by the friendly sen-

timent expressed by your excellency in your welcome letter received on the 5th instant to endeavor to come to a definite understanding, which I hope will be advantageous to both. Very soon we expect a large addition to our forces, and it must be apparent to you as a military officer that we will require much more room to camp our soldiers, and also storeroom for our supplies. For this I would like to have your excellency's advice and co-operation, as you are best acquainted with the resources of this country. It must be apparent to you that we do not intend to remain here inactive, but to move promptly against our common enemy. But for a short time we must organize and land supplies, and also retain a place for storing them near our fleet and transports. I am solicitous to avoid any conflict of authority which may result from having two sets of military officers exercising command in the same place. I am also anxious to avoid sickness by taking sanitary precaution. Your own medical officers have been making voluntary inspections with mine, and fear epidemic diseases if the vicinity is not made clean. Would it not be well to have prisoners work to this end under the advice of the surgeons?" On July 9 General Anderson reported to the War Department at Washington: "General Aguinaldo tells me he has about 15,000 fighting men, but only 11,000 armed with guns, which mostly were taken from the Spaniards. He claims to have in all 4,000 prisoners. When we first landed he seemed very suspicious, and not at all friendly, but I have now come to a better understanding with him and he is much more friendly and seems willing to co-operate. But he has declared himself dictator and president, and is trying to take Manila without our assistance. This is not probable, but if he can effect his purpose he will, I apprehend, antagonize any attempt on our part to establish a provisional government." On July 17 the American commander caused another communication to be addressed to "General Emilio Aguinaldo" as follows: "Sir: General Anderson wishes me to say that, the second expedition having arrived, he expects to encamp in the vicinity of Paranaque from 5,000 to 7,000 men. To do this, supply this army and shelter, will require certain assistance from the Filipinos in this neighborhood. We will want horses, buffaloes, carts, etc., for transportation, bamboo for shelter, wood to cook with, etc. For all this we are willing to pay a fair price, but no more. We find so far that the native population are not willing to give us this assistance as promptly as required. But we must have it, and if it becomes necessary we will be compelled to send out parties to seize what we may need. We would regret very much to do this, as we are here to befriend the Filipinos. Our nation has spent millions of money to send forces here to expel the Spaniards and to give good government to the whole people, and the return we are asking is comparatively slight. General Anderson wishes you to inform your people that we are here for their good, and that they must supply us with labor and material at the current market prices. We are prepared to purchase 500 horses at a fair price, but cannot undertake to bargain for horses with each individual owner. I regret very much that I am unable to see you personally, as it is of the utmost importance that these arrangements should be made as soon as possible." To this communication there seems to have been no written reply until July 24; and, on July 20, the chief quar-

termaster reported to General Anderson "that it is impossible to procure transportation except upon Señor Aguinaldo's order, in this section, who has an inventory of everything. The natives have removed their wheels and hid them. On July 23 General Anderson repeated his request, as follows: "General: When I came here three weeks ago I requested your excellency to give what assistance you could to procure means of transportation for the American Army, as it was to fight the cause of your people. So far we have received no response. As you represent your people, I now have the honor to make requisition on you for 500 horses and 50 oxen and ox carts. If you cannot secure these, I will have to pass you and make requisition directly on the people. I beg leave to request an answer at your earliest convenience." The next day Aguinaldo replied: "I have the honor to manifest to your excellency that I am surprised beyond measure at that which you say to me in it, lamenting the nonreceipt of any response relative to the needs (or aids) that you have asked of me in the way of horses, buffaloes, and carts, because I replied in a precise manner, through the bearer, that I was disposed to give convenient orders whenever you advised me of the number of these with due anticipation (notice). I have circulated orders in the provinces in the proximity that in the shortest time possible horses be brought for sale, but I cannot assure your excellency that we have the number of 500 that is needed, because horses are not abundant in these vicinities, owing to deaths caused by epizootic diseases in January and March last. Whenever we have them united (or collected), I shall have the pleasure to advise your excellency. I have also ordered to be placed at my disposal 50 carts that I shall place at your disposition whenever necessary, always (promising) that you afford me a previous advice of four days in anticipation." On July 24 General Anderson received from the Philippine leader a very clear and definite statement of his attitude towards the "Expeditionary Forces of the United States," and the intentions with which he and the people whom he represented were acting. "I came," he wrote, "from Hongkong to prevent my countrymen from making common cause with the Spanish against the North Americans, pledging before my word to Admiral Dewey to not give place [to allow] to any internal discord, because, [being] a judge of their desires, I had the strong convictions that I would succeed in both objects, establishing a government according to their desires. Thus it is that in the beginning I proclaimed the dictatorship, and afterwards, when some of the provinces had already liberated themselves from Spanish domination, I established a revolutionary government that to-day exists, giving it a democratic and popular character as far as the abnormal circumstances of war permitted, in order that they [the provinces] might be justly represented, and administered to their satisfaction. It is true that my government has not been acknowledged by any of the foreign powers, but we expected that the great North American nation, which struggled first for its independence, and afterwards for the abolition of slavery, and is now actually struggling for the independence of Cuba, would look upon it with greater benevolence than any other nation. Because of this we have always acknowledged the right of preference to our gratitude. Debtor to the generosity of the North Americans, and to the favors we have received through Admiral Dewey, and [being] more desirous than any

other person of preventing any conflict which would have as a result foreign intervention, which must be extremely prejudicial, not alone to my nation but also to that of your excellency, I consider it my duty to advise you of the undesirability of disembarking North American troops in the places conquered by the Filipinos from the Spanish, without previous notice to this government, because as no formal agreement yet exists between the two nations the Philippine people might consider the occupation of its territories by North American troops as a violation of its rights. I comprehend that without the destruction of the Spanish squadron the Philippine revolution would not have advanced so rapidly. Because of this I take the liberty of indicating to your excellency the necessity that, before disembarking, you should communicate in writing to this government the places that are to be occupied and also the object of the occupation, that the people may be advised in due form and [thus] prevent the commission of any transgression against friendship. I can answer for my people, because they have given me evident proofs of their absolute confidence in my government, but I can not answer for that which another nation whose friendship is not well guaranteed might inspire in it [the people]; and it is certain that I do this not as a menace, but as a further proof of the true and sincere friendship which I have always professed for the North American people, in the complete security that it will find itself completely identified with our cause of liberty." In the same strain, on August 1, Aguinaldo wrote to United States Consul Williams, as to a "distinguished friend": "I have said always, and I now repeat, that we recognize the right of the North Americans to our gratitude, for we do not forget for a moment the favors which we have received and are now receiving; but however great those favors may be, it is not possible for me to remove the distrust of my compatriots. These say that if the object of the United States is to annex these islands, why not recognize the government established in them, in order in that manner to join with it the same as by annexation? Why do not the American generals operate in conjunction with the Filipino generals and, uniting the forces, render the end more decisive? Is it intended, indeed, to carry out annexation against the wish of these people, distorting the legal sense of that word? If the revolutionary government is the genuine representative by right and deed of the Filipino people, as we have proved when necessary, why is it wished to oppress instead of gaining their confidence and friendship? It is useless for me to represent to my compatriots the favors received through Admiral Dewey, for they assert that up to the present the American forces have shown not an active, only a passive, co-operation, from which they suppose that the intentions of these forces are not for the best. They assert, besides that it is possible to suppose that I was brought from Hongkong to assure those forces by my presence that the Filipinos would not make common cause with the Spaniards, and that they have delivered to the Filipinos the arms abandoned by the former in the Cavite Arsenal, in order to save themselves much labor, fatigue, blood, and treasure that a war with Spain would cost. But I do not believe these unworthy suspicions. I have full confidence in the generosity and philanthropy which shine in characters of gold in the history of the privileged people of

the United States, and for that reason, invoking the friendship which you profess for me and the love which you have for my people, I pray you earnestly, as also the distinguished generals who represent your country in these islands, that you entreat the government at Washington to recognize the revolutionary government of the Filipinos, and I, for my part, will labor with all my power with my people that the United States shall not repent their sentiments of humanity in coming to the aid of an oppressed people. Say to the Government at Washington that the Filipino people abominate savagery; that in the midst of their past misfortunes they have learned to love liberty, order, justice, and civil life, and that they are not able to lay aside their own wishes when their future lot and history are under discussion. Say also that I and my leaders know what we owe to our unfortunate country; that we know how to admire and are ready to imitate the disinterestedness, the abnegation, and the patriotism of the grand men of America, among whom stands pre-eminent the immortal General Washington."—*56th Congress, 1st Session, United States Senate Document no. 208.*

1898 (July-August: Porto Rico).—Occupation of Porto Rico.—"With the fall of Santiago the occupation of Porto Rico became the next strategic necessity. Gen. Miles had previously been assigned to organize an expedition for that purpose. Fortunately, he was already at Santiago, where he had arrived on the 11th of July with reinforcements for Gen. Shafter's army. With these troops, consisting of 3,415 infantry and artillery, 2 companies of engineers and 1 company of the signal corps, Gen. Miles left Guantanamo on July 21st, having 9 transports, convoyed by the fleet, under Capt. Higginson, with the 'Massachusetts' (flag-ship), 'Dixie,' 'Gloucester,' 'Columbia' and 'Yale,' the two latter carrying troops. The expedition landed at Guanica on July 25th, which port was entered with little opposition. Here the fleet was joined by the 'Annapolis' and the 'Wasp,' while the 'Puritan' and 'Amphitrite' went to San Juan and joined the 'New Orleans,' which was engaged in blockading that port. The major general commanding was subsequently reinforced by General Schwan's brigade of the Third Army Corps, by Gen. Wilson with a part of his division and also by Gen. Brooke with a part of his corps, numbering in all 16,973 officers and men. On July 27th he entered Ponce, one of the most important ports in the island, from which he thereafter directed operations for the capture of the island. With the exception of encounters with the enemy at Guayama, Hormigueros [the Rio Prieto], Coamo, and Yauco and an attack on a force landed at Cape San Juan, there was no serious resistance. The campaign was prosecuted with great vigor and by the 12th of August much of the island was in our possession and the acquisition of the remainder was only a matter of a short time. At most of the points in the island our troops were enthusiastically welcomed. Protestations of loyalty to the flag and gratitude for delivery from Spanish rule met our commanders at every stage."—*Message of the president of the United States to Congress, Dec. 5, 1898.*—See also PORTO RICO: 1898-1899 (August-July).

1898 (July-September).—War with Spain.—

General Merritt's report of capture of Manila.—Relations with the Filipino insurgents.—Aguinaldo declared president of the Philippine republic.—"Immediately after my arrival [July 25] I visited General Greene's camp and made a reconnaissance of the position held by the Spanish, and also the opposing lines of the insurgent forces, hereafter to be described. I found General Greene's command encamped on a strip of sandy land running parallel to the shore of the bay and not far distant from the beach, but owing to the great difficulties of landing supplies, the greater portion of the force had shelter tents only, and were suffering many discomforts, the camp being situated in a low, flat place, without shelter from the heat of the tropical sun or adequate protection during the terrific downpours of rain so frequent at this season. I was at once struck by the exemplary spirit of patient, even cheerful, endurance shown by the officers and men under such circumstances, and this feeling of admiration for the manner in which the American soldier, volunteer and regular alike, accept the necessary hardships of the work they have undertaken to do, has grown and increased with every phase of the difficult and trying campaign which the troops of the Philippine expedition have brought to such a brilliant and successful conclusion. I discovered during my visit to General Greene that the left or north flank of his brigade camp extended to a point on the 'Calle Real' about 3,200 yards from the outer line of Spanish defenses of the city of Manila. This Spanish line began at the powder magazine, or old Fort San Antonio, within a hundred yards of the beach and just south of the Malate suburb of Manila, and stretched away to the Spanish left in more or less detached works, eastward, through swamps and rice fields, covering all the avenues of approach to the town and encircling the city completely. The Filipinos, or insurgent forces at war with Spain, had, prior to the arrival of the American land forces, been waging a desultory warfare with the Spaniards for several months, and were at the time of my arrival in considerable force, variously estimated and never accurately ascertained, but probably not far from 12,000 men. These troops, well supplied with small arms, with plenty of ammunition and several field guns, had obtained positions of investment opposite to the Spanish line of detached works throughout their entire extent; and on the particular road called the 'Calle Real,' passing along the front of General Greene's brigade camp and running through Malate to Manila, the insurgents had established an earthwork or trench within 800 yards of the powder-magazine fort. They also occupied as well the road to the right, leading from the village of Pasay, and the approach by the beach was also in their possession. This anomalous state of affairs, namely, having a line of quasi-hostile native troops between our forces and the Spanish position, was, of course, very objectionable."—*Report of General Wesley Merritt, Aug. 31, 1898 (Annual Reports of the War Department, 1898, v. 1, pp. 39-45).*—"The arrival of General Merritt, with the forces under General MacArthur, July 25th and 31st, naturally did not tend to make Aguinaldo's attitude towards the Americans any less aggressive. Before General Merritt left the United States he had been enjoined to make no alliance, political or otherwise, with the Tagalog insurgents. Hence his determination to conduct the assault on Manila without the assistance of Aguinaldo or his forces. Moreover, Aguinaldo did not call upon General Merritt when he

reached Manila Bay; he did not offer his services or the support of his troops; and he did not assist any one of the three expeditions in landing, or in providing their necessary transportation, for which they had to depend entirely upon the country. There was no cooperation and no alliance between the American forces and the insurgents. Manila was taken without their assistance or support. Indeed, as has already been related, General Merritt addressed a note to the Tagalog general requesting that the insurrectionary forces be restrained from taking part in our proposed assault on the city the next day, and asked that they be not allowed to follow the American troops into the city. Whether Aguinaldo was unwilling or unable to check the troops in their anxiety to loot is not known, for they did attempt to enter the city in the wake of our victorious army. Immediately after the fall of Manila, Aguinaldo demanded joint occupation of the city. This was refused, and he later admitted that joint occupation was impossible. He had probably made this request to pave the way for his subsequent demands. General Merritt requested Aguinaldo to withdraw his troops from the suburbs of Manila, where they had followed our forces, and where they had taken up a position with every apparent intention of remaining. To this proposition Aguinaldo reluctantly consented, and his men were finally withdrawn from the suburbs of Manila beyond a certain line, where they took up a position which General Merritt had indicated they would be permitted to occupy. Here they at once threw up intrenchments confronting our lines, their excuse being that this proceeding was necessary in order 'to be prepared to meet the soldier of Spain should she return to her late possessions.'—R. A. Alger, *Spanish-American War*, pp. 350-351.—"Aguinaldo . . . retired to Malalao, about 25 miles to the northward, leaving his troops entrenched round Manila, and there with considerable pomp and ceremony on September 20th, 1898, he was declared First President of the Philippine Republic, and the National Congress was opened with Pedro Paterno as President of that assembly."—G. J. Younghusband, *Philippines and round about*, p. 27.

1898 (July-December).—War with Spain.—Suspension of hostilities.—Negotiation of treaty of peace.—Instructions to American commissioners.—Relinquishment of Spanish sovereignty over Cuba and cession of Porto Rico, the island of Guam and the Philippine islands to the United States.—In his message to Congress, Dec. 5, 1898, President McKinley gave the following account of his reception of overtures from Spain, for the termination of the war, and of the negotiations which resulted in a treaty of peace: "The annihilation of Admiral Cervera's fleet, followed by the capitulation of Santiago, having brought to the Spanish Government a realizing sense of the hopelessness of continuing a struggle now become wholly unequal, it made overtures of peace through the French Ambassador, who, with the assent of his Government, had acted as the friendly representative of Spanish interests during the war. On the 26th of July M. Cambon presented a communication signed by the Duke of Almodovar, the Spanish Minister of State, inviting the United States to state the terms upon which it would be willing to make peace. On the 30th of July, by a communication addressed to the Duke of Almodovar and handed to M. Cambon, the terms of this Government were announced, substantially

as in the protocol afterwards signed. On the 10th of August the Spanish reply, dated August 7th, was handed by M. Cambon to the Secretary of State. It accepted unconditionally the terms imposed as to Cuba, Porto Rico and an island of the Ladrones group, but appeared to seek to introduce inadmissible reservations in regard to our demand as to the Philippine Islands. Conceiving that discussion on this point could neither be practical nor profitable, I directed that, in order to avoid misunderstanding, the matter should be forthwith closed by proposing the embodiment in a formal protocol of the terms upon which the negotiations for peace were to be undertaken. The vague and inexplicit suggestion of the Spanish note could not be accepted, the only reply being to present as a virtual ultimatum a draft of protocol embodying the precise terms tendered to Spain in our note of July 30th, with added stipulations of detail as to the appointment of commissioners to arrange for the evacuation of the Spanish Antilles. On August 12th M. Cambon announced his receipt of full powers to sign the protocol submitted. Accordingly, on the afternoon of August 12th M. Cambon, as the plenipotentiary of Spain, and the Secretary of State, as the plenipotentiary of the United States, signed . . . [the] protocol. . . The sixth and last article provided that upon the signature of the protocol hostilities between the two countries should be suspended and that notice to that effect should be given as soon as possible by each government to the commanders of its military and naval forces. Immediately upon the conclusion of the protocol I issued a proclamation of August 12, suspending hostilities on the part of the United States. The necessary orders to that end were at once given by telegraph. The blockade of the ports of Cuba and San Juan de Porto Rico was in like manner raised. On the 18th of August the muster-out of 100,000 Volunteers, or as near that number as was found to be practicable, was ordered."—*Message of the President to Congress*, Dec. 5, 1898.—The instructions given (September 16) by President McKinley to the commissioners appointed to treat for peace with Spain, and the correspondence between the commissioners at Paris and the president and the secretary of state at Washington during the progress of the negotiations, were communicated confidentially to the United States Senate on Jan. 30, 1899, but not published until February, 1901, when the injunction of secrecy was removed and the printing of the papers ordered by the vote of the Senate. The chief interest of these papers lies in their disclosure of what passed between the American executive and the peace commissioners on the subject of the Philippine islands, which led to the demand for their entire surrender by Spain. "In view of what has taken place it is necessary now to determine what shall be our future relations to the Philippines. . . Our aim in the adjustment of peace should be directed to lasting results and to the achievement of the common good under the demands of civilization rather than to ambitious designs. The terms of the protocol were framed upon this consideration. The abandonment of the Western Hemisphere by Spain was an imperative necessity. In presenting that requirement we only fulfilled a duty universally acknowledged. It involves no ungenerous reference to our recent foe, but simply a recognition of the plain teachings of history, to say that it was not compatible with the assurance of permanent peace on and near our own territory that

the Spanish flag should remain on this side of the sea. This lesson of events and of reason left no alternative as to Cuba, Porto Rico, and the other islands belonging to Spain in this hemisphere. The Philippines stand upon a different basis. It is none the less true, however, that, without any original thought of complete or even partial acquisition, the presence and success of our arms at Manila imposes upon us obligations which we can not disregard. The march of events rules and overrules human action. Avowing unreservedly the purpose which has animated all our effort, and still solicitous to adhere to it, we can not be unmindful that without any desire or design on our part the war has brought us new duties and responsibilities which we must meet and discharge as becomes a great nation on whose growth and career from the beginning the Ruler of Nations has plainly written the high command and pledge of civilization. Incidental to our tenure in the Philippines is the commercial opportunity to which American statesmanship can not be indifferent. It is just to use every legitimate means for the enlargement of American trade; but we seek no advantages in the Orient which are not common to all. Asking only the open door for ourselves, we are ready to accord the open door to others. The commercial opportunity which is naturally and inevitably associated with his new opening depends less on large territorial possessions than upon an adequate commercial basis and upon broad and equal privileges. It is believed that in the practical application of these guiding principles and the present interests of our country and the proper measure of its duty, its welfare in the future, and the consideration of its exemption from unknown perils will be found in full accord with the just, moral, and humane purpose which was invoked as our justification in accepting the war. In view of what has been stated, the United States can not accept less than the cession in full right and sovereignty of the island of Luzon. It is desirable, however, that the United States shall acquire the right of entry for vessels and merchandise belonging to citizens of the United States into such ports of the Philippines as are not ceded to the United States upon terms of equal favor with Spanish ships and merchandise, both in relation to port and customs charges and rates of trade and commerce, together with other rights of protection and trade accorded to citizens of one country within the territory of another. You are therefore instructed to demand such concession, agreeing on your part that Spain shall have similar rights as to her subjects and vessels in the ports of any territory in the Philippines ceded to the United States." On October 7, Judge Day, on behalf of the American commissioners, cabled a long communication from Paris to Secretary Hay, his successor in the United States department of state, summarizing testimony given before the commission by General Merritt, lately commanding in the Philippines, and statements brought by General Merritt from Admiral Dewey, General Greene, and others. In part, the cablegram was as follows: "General Anderson, in correspondence with Aguinaldo in June and July, seemed to treat him and his forces as allies and native authorities, but subsequently changed his tone. General Merritt reports that Admiral Dewey did not approve this correspondence and advised against it. Merritt and Dewey both kept clear of any compromising communications. Merritt expresses opinion we are in no way committed to any insur-

gent programme. Answering questions of Judge Day, General Merritt said insurrection practically confined to Luzon. Tribal and religious differences between the inhabitants of various islands. United States has helped rather than injured insurrection. Under no obligation other than moral to help natives. Natives of Luzon would not accept Spanish rule, even with amnesty. Insurgents would be victorious unless Spaniards did better in future than in past. Insurgents would fight among themselves if they had no common enemy. Think it feasible for United States to take Luzon and perhaps some adjacent islands and hold them as England does her colonies. Natives could not resist 5,000 troops. . . . General Merritt thinks that if United States attempted to take possession of Luzon, or all the group as a colony, Aguinaldo and his immediate followers would resist it, but his forces are divided and his opposition would not amount to anything. If the islands were divided, filibustering expeditions might go from one island to another, thus exposing us to constant danger of conflict with Spain. In answer to questions of Senator Frye, Merritt said insurgents would murder Spaniards and priests in Luzon and destroy their property if the United States withdrew. United States under moral obligation to stay there. He did not know whether the effect of setting up a government by the United States in Luzon would be to produce revolutions in other islands. It might cause reforms in their government. . . . Answering questions of Mr. Gray, Merritt said consequences in case of either insurgent or Spanish triumph made it doubtful whether United States would be morally justified in withdrawing. Our acts were ordinary acts of war, as if we had attacked Barcelona, but present conditions in Philippine Islands were partly brought about by us. Insurgents not in worse condition by our coming. Spaniards hardly able to defend themselves. If we restored them to their positions and trenches, they might maintain themselves with the help of a navy when we withdrew. Did not know that he could make out a responsibility by argument, but he felt it. It might be sentimental. He thought it would be an advantage if the United States would change its policy and keep the islands. (He) thought our interests in the East would be helped by the cheap labor in the Philippines, costing only from 20 to 80 cents a day, according to skill. . . . Answering questions of Mr. Reid, Merritt said he considered capture of Manila practically capture of group. Nothing left of Spanish sovereignty that was not at mercy of the United States. Did not think our humanity bounded by geographical lines. After Dewey's victory we armed insurgents to some extent, but Dewey says it was over-estimated. Insurgents bought arms from Hongkong merchants with Dewey's cognizance, but Dewey was not in favor of allowing this to continue. Spaniards would destroy Aguinaldo and his principal followers, if allowed to do so." October 25, Judge Day cabled a message to Washington, saying: "Differences of opinion among commissioners concerning Philippine Islands are set forth in statements transmitted herewith. On these we request early consideration and explicit instructions. Liable now to be confronted with this question in joint commission almost immediately." The different statements then transmitted were three in number, the first of them signed by Messrs. Davis, Frye, and Reid, who said: 'Information gained by commission in Paris leads to conviction that it would

be naval, political, and commercial mistake to divide the archipelago. Nearly all expert testimony taken tends to this effect. As instructions provide for retention at least of Luzon, we do not consider question of remaining in Philippine Islands at all as now properly before us. We therefore ask for extension of instructions. Spain governed and defended these islands from Manila, and with destruction of her fleet and the surrender of her army we became as complete masters of the whole group as she had been, with nothing needed to complete the conquest save to proceed with the ample forces we had at hand to take unopposed possession. The Ladrone and Carolines were also governed from the same capital by the same governor-general. National boundaries ought to follow natural divisions, but there is no natural place for dividing Philippine Islands. . . . If we do not want the islands ourselves, better to control their disposition; that is, to hold the option on them rather than to abandon it. Could then at least try to protect ourselves by ample treaty stipulations with the acquiring powers. Commercially, division of archipelago would not only needlessly establish dangerous rivals at our door, but would impair value of part we kept." But the president had now arrived at a different state of mind, and directed Secretary Hay to make the following reply, on October 26: "The information which has come to the President since your departure convinces him that the acceptance of the cession of Luzon alone, leaving the rest of the islands subject to Spanish rule, or to be the subject of future contention, can not be justified on political, commercial, or humanitarian grounds. The cession must be of the whole archipelago or none. The latter is wholly inadmissible and the former must therefore be required. The President reaches this conclusion after most thorough consideration of the whole subject, and is deeply sensible of the grave responsibilities it will impose, believing that this course will entail less trouble than any other and besides will best subserve the interests of the people involved, for whose welfare we can not escape responsibility." Two days later the moral and political reflections of the president on the subject were expressed still further to the commissioners by Secretary Hay, in the following telegram: "While the Philippines can be justly claimed by conquest, which position must not be yielded, yet their disposition, control, and government the President prefers should be the subject of negotiation as provided in the protocol. It is imperative upon us that as victors we should be governed only by motives which will exalt our nation. Territorial expansion should be our least concern; that we shall not shirk the moral obligations of our victory is of the greatest. It is undisputed that Spain's authority is permanently destroyed in every part of the Philippines. To leave any part in her feeble control now would increase our difficulties and be opposed to the interests of humanity. The sentiment in the United States is almost universal that the people of the Philippines, whatever else is done, must be liberated from Spanish domination. In this sentiment the President fully concurs. Nor can we permit Spain to transfer any of the islands to another power. Nor can we invite another power or powers to join the United States in sovereignty over them. We must either hold them or turn them back to Spain. Consequently, grave as are the responsibilities and unforeseen as are the difficulties which are before us, the President can see but one plain path of duty—the acceptance

of the archipelago. Greater difficulties and more serious complications—administrative and international—would follow any other course. The President has given to the views of the commissioners the fullest consideration, and in reaching the conclusion above announced in the light of information communicated to the commission and to the President since your departure, he has been influenced by the single consideration of duty and humanity. The President is not unmindful of the distressed financial condition of Spain, and whatever consideration the United States may show must come from its sense of generosity and benevolence, rather than from any real or technical obligation. The terms upon which the full cession of the Philippines shall be made must be left largely with the commission." On November 3, Judge Day cabled: "After a careful examination of the authorities, the majority of the commission are clearly of opinion that our demand for the Philippine Islands can not be based on conquest. When the protocol was signed Manila was not captured, siege was in progress and capture made after the execution of the protocol. Captures made after agreement for armistice must be disregarded and status quo restored as far as practicable. We can require cession of Philippine Islands only as indemnity for losses and expenses of the war. Have in view, also, condition of islands, the broken power of Spain, anarchy in which our withdrawal would leave the islands, etc. These are legitimate factors." On November 4, Senator Davis added a personal telegram as follows: "I think we can demand cession of entire archipelago on other and more valid grounds than a perfected territorial conquest of the Philippine Islands, such as indemnity or as conditions of peace imposed by our general military success and in view of our future security and general welfare, commercial and otherwise. I think the protocol admits all these grounds, and that the ground alone of perfected territorial conquest of the Philippine Islands is too narrow and untenable under protocol." Secretary Hay replied, for the president, on November 5: "The President has no purpose to question the commission's judgment as to the grounds upon which the cession of the archipelago is to be claimed. His only wish in that respect is to hold all the ground upon which we can fairly and justly make the claim. He recognizes fully the soundness of putting forward indemnity as the chief ground, but conquest is a consideration which ought not to be ignored. How our demand shall be presented, and the grounds upon which you will rest it, he confidently leaves with the commissioners. His great concern is that a treaty shall be effected in terms which will not only satisfy the present generation, but what is more important, be justified in the judgment of posterity." Discussion followed, in which Judge Day and Senator Gray repeated the views they had formerly expressed, in dissent from the policy determined upon by the president and his cabinet, the latter saying: "Believing that the result of a failure to obtain a treaty would be the forcible seizure of the whole Philippine Islands group, an event greatly to be deprecated as inconsistent with the traditions and civilization of the United States, I would be willing to take the islands by the cession of a treaty of peace, and I would, to that end make such reasonable concessions as would comport with the magnanimity of a great nation dealing with a weak and prostrate foe. I mean that I would prefer the latter alternative to the former, not that I have changed my mind

as to the policy of taking the Philippine Islands at all." So far as concerned the demands of the United States (which Spain was powerless to resist), the question was settled on November 13 by a telegram from Secretary Hay to Judge Day, in which he said: "We are clearly entitled to indemnity for the cost of the war. We can not hope to be fully indemnified. We do not expect to be. It would probably be difficult for Spain to pay money. All she has are the archipelagoes of the Philippines and the Carolines. She surely can not expect us to turn the Philippines back and bear the cost of the war and all claims of our citizens for damages to life and property in Cuba without any indemnity but Porto Rico, which we have and which is wholly inadequate. . . . You are therefore instructed to insist upon the cession of the whole of the Philippines, and, if necessary, pay to Spain ten to twenty millions of dollars, and if you can get cession of a naval and telegraph station in the Carolines, and the several concessions and privileges and guaranties, so far as applicable, enumerated in the views of Commissioners Frye and Reid, you can offer more."—56th Congress, 2d Session, *Senate Document no. 148 (Papers relating to the treaty with Spain)*.—Discussion between the Spanish and American commissioners at Paris was prolonged until December 10, when the former yielded to what they protested against as hard terms, and the following treaty of peace was signed:

TREATY OF PEACE

ARTICLE I. Spain relinquishes all claim of sovereignty over and title to Cuba. And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may under international law result from the fact of its occupation, for the protection of life and property.

ART. II. Spain cedes to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies, and the island of Guam in the Marianas or Ladrões.

ART. III. Spain cedes to the United States the archipelago known as the Philippine Islands, and comprehending the islands lying within the following line: A line running from west to east along or near the twentieth parallel of north latitude, and through the middle of the navigable channel of Bachi, from the one hundred and eighteenth (118th) to the one hundred and twenty seventh (127) degree meridian of longitude east of Greenwich, thence along the one hundred and twenty seventh (127th) degree meridian of longitude east of Greenwich to the parallel of four degrees and forty five minutes ($4^{\circ} 45'$) north latitude, thence along the parallel of four degrees and forty five minutes ($4^{\circ} 45'$) north latitude to its intersection with the meridian of longitude one hundred and nineteen degrees and thirty five minutes ($119^{\circ} 35'$) east of Greenwich, thence along the meridian of longitude one hundred and nineteen degrees and thirty five minutes ($119^{\circ} 35'$) east of Greenwich to the parallel of latitude seven degrees and forty minutes ($7^{\circ} 40'$) north, thence along the parallel of latitude of seven degrees and forty minutes ($7^{\circ} 40'$) north to its intersection with the one hundred and sixteenth (116th) degree meridian of longitude east of Greenwich, thence by a direct line to the intersection of the tenth (10th) degree parallel of north latitude with the one hundred and eighteenth (118th) degree meridian

of longitude east of Greenwich, and thence along the one hundred and eighteenth (118th) degree meridian of longitude east of Greenwich to the point of beginning. The United States will pay to Spain the sum of twenty million dollars (\$20,000,000) within three months after the exchange of the ratifications of the present treaty.

ART. IV. The United States will, for the term of ten years from the date of the exchange of the ratifications of the present treaty, admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States.

ART. V. The United States will, upon the signature of the present treaty, send back to Spain, at its own cost, the Spanish soldiers taken as prisoners of war on the capture of Manila by the American forces. The arms of the soldiers in question shall be restored to them. Spain will, upon the exchange of the ratifications of the present treaty, proceed to evacuate the Philippines, as well as the island of Guam, on terms similar to those agreed upon by the Commissioners appointed to arrange for the evacuation of Porto Rico and other islands in the West Indies, under the Protocol of August 12, 1898, which is to continue in force till its provisions are completely executed. The time within which the evacuation of the Philippine Islands and Guam shall be completed shall be fixed by the two Governments. Stands of colors, uncaptured war vessels, small arms, guns of all calibres, with their carriages and accessories, powder, ammunition, live-stock, and materials and supplies of all kinds, belonging to the land and naval forces of Spain in the Philippines and Guam, remain the property of Spain. Pieces of heavy ordnance, exclusive of field artillery, in the fortifications and coast defences, shall remain in their emplacements for the term of six months, to be reckoned from the exchange of ratifications of the treaty; and the United States may, in the meantime, purchase such material from Spain, if a satisfactory agreement between the two Governments on the subject shall be reached.

ART. VI. Spain will, upon the signature of the present treaty, release all prisoners of war, and all persons detained or imprisoned for political offences, in connection with the insurrections in Cuba and the Philippines and the war with the United States. Reciprocally the United States will release all persons made prisoners of war by the American forces, and will undertake to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba and the Philippines. The Government of the United States will at its own cost return to Spain and the Government of Spain will at its own cost return to the United States, Cuba, Porto Rico, and the Philippines, according to the situation of their respective homes, prisoners released or caused to be released by them, respectively, under this article.

ART. VII. The United States and Spain mutually relinquish all claims for indemnity, national and individual, of every kind, of either Government, or of its citizens or subjects, against the other Government, that may have arisen since the beginning of the late insurrection in Cuba and prior to the exchange of ratifications of the present treaty, including all claims for indemnity for the cost of the war. The United States will adjudicate and settle the claims of its citizens against Spain relinquished in this article.

ART. VIII. In conformity with the provisions of Articles I, II, and III of this treaty, Spain re-

linquishes in Cuba, and cedes in Porto Rico and other islands in the West Indies, in the island of Guam, and in the Philippine Archipelago, all the buildings, wharves, barracks, forts, structures, public highways and other immovable property which, in conformity with law, belong to the public domain, and as such belong to the Crown of Spain. And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, cannot in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civic bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be. The aforesaid relinquishment or cession, as the case may be, includes all documents exclusively referring to the sovereignty relinquished or ceded that may exist in the archives of the Peninsula. Where any document in such archives only in part relates to said sovereignty, a copy of such part will be furnished whenever it shall be requested. Like rules shall be reciprocally observed in favor of Spain in respect of documents in the archives of the islands above referred to. In the aforesaid relinquishment or cession, as the case may be, are also included such rights as the Crown of Spain and its authorities possess in respect of the official archives and records, executive as well as judicial, in the islands above referred to, which relate to said islands or the rights and property of their inhabitants. Such archives and records shall be carefully preserved, and private persons shall without distinction have the right to require, in accordance with law, authenticated copies of the contracts, wills and other instruments forming part of notarial protocols or files, or which may be contained in the executive or judicial archives, be the latter in Spain or in the islands aforesaid.

ART. IX. Spanish subjects, natives of the Peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove therefrom, retaining in either event all their rights of property, including the right to sell or dispose of such property or of its proceeds; and they shall also have the right to carry on their industry, commerce and professions, being subject in respect thereof to such laws as are applicable to other foreigners. In case they remain in the territory they may preserve their allegiance to the crown of Spain by making, before a court of record, within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance; in default of which declaration they shall be held to have renounced it and to have adopted the nationality of the territory in which they may reside. The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress.

ART. X. The inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.

ART. XI. The Spaniards residing in the territories over which Spain by this treaty cedes or relinquishes her sovereignty shall be subject in matters civil as well as criminal to the jurisdiction of the courts of the country wherein they reside,

pursuant to the ordinary laws governing the same; and they shall have the right to appear before such courts, and to pursue the same course as citizens of the country to which the courts belong.

ART. XII. Judicial proceedings pending at the time of the exchange of ratifications of this treaty in the territories over which Spain relinquishes or cedes her sovereignty shall be determined according to the following rules: 1. Judgments rendered either in civil suits between private individuals, or in criminal matters, before the date mentioned, and with respect to which there is no recourse or right of review under the Spanish law, shall be deemed to be final and shall be executed in due form by competent authority in the territory within which such judgments should be carried out. 2. Civil suits between private individuals which may on the date mentioned be undetermined shall be prosecuted to judgment before the court in which they may then be pending or in the court that may be substituted therefor. 3. Criminal actions pending on the date mentioned before the Supreme Court of Spain against citizens of the territory which by this treaty ceases to be Spanish shall continue under its jurisdiction until final judgment; but, such judgment having been rendered, the execution thereof shall be committed to the competent authority of the place in which the case arose.

ART. XIII. The rights of property secured by copyrights and patents acquired by Spaniards in the Island of Cuba and in Porto Rico, the Philippines and other ceded territories, at the time of the exchange of the ratifications of this treaty, shall continue to be respected. Spanish scientific, literary and artistic works, not subversive of public order in the territories in question, shall continue to be admitted free of duty into such territories, for the period of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty.

ART. XIV. Spain will have the power to establish consular officers in the ports and places of the territories, the sovereignty over which has been either relinquished or ceded by the present treaty.

ART. XV. The Government of each country will, for the term of ten years, accord to the merchant vessels of the other country the same treatment in respect of all port charges, including entrance and clearance dues, light dues, and tonnage duties, as it accords to its own merchant vessels, not engaged in the coastwise trade. This article may at any time be terminated on six months notice given by either Government to the other.

ART. XVI. It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will upon the termination of such occupancy, advise any Government established in the island to assume the same obligations.

ART. XVII. The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by Her Majesty the Queen Regent of Spain; and the ratifications shall be exchanged at Washington within six months from the date hereof, or earlier if possible. In faith whereof we, the respective plenipotentiaries, have signed this treaty and have hereunto affixed our seals. Done in duplicate at Paris, the tenth day of December, in the year of Our Lord one thousand eight hundred

SIGNING OF THE TREATY OF PARIS, 1898, AT WASHINGTON, D. C.

From left to right: Lieutenant-Colonel B. F. Montgomery; M. Thibaut, secretary of French legation; M. Jules Cambon, French ambassador and representative of Spain (seated); Brigadier-General H. C. Corbin; William R. Day, secretary of state (seated); John B. Moore, first assistant secretary of state; A. A. Adce, second assistant secretary of state; President William McKinley; George B. Cortelyou, assistant secretary to the President; O. L. Pruden, assistant secretary to the President; Thomas W. Cridler, third assistant secretary of state; Charles M. Loeffler.

and ninety-eight. [Signed] WILLIAM R. DAY, CUSHMAN K. DAVIS, WILLIAM P. FRYE, GEO. GRAY, WHITELAW REID, EUGENIO MONTERO RIOS, B. DE ABARZUA, J. DE GARNICA, W. R. DE VILLA URRUTIA, RAFAEL CERERO.

That the treaty would be ratified by the Senate of the United States was by no means certain when it was signed, and remained questionable for two months (see below: 1899 [January-February]; SPAIN: 1899.) Some time after the conclusion of the treaty, it was discovered that the boundaries defined in it for the cession of the Philippine Islands failed to include the islands of Cagayan, or Kagayan, and Sibutu, in the southern part of the archipelago. Still later, it was found that several small islands (the Bachi or Bashee group and others) belonging to the Spanish possessions in the East were left lying outside of the northern Philippine boundary, as laid down in the treaty of cession. It is said that the Japanese government called attention to this latter error, desiring to have the islands in question, which are near to Formosa, controlled by the United States, rather than by Spain. By a new treaty with Spain, negotiated in 1900, all these outlying islands were acquired by the United States, for the sum of \$100,000.

1898 (August 21).—War with Spain.—Letter from departing Spanish soldiers to the soldiers of the American army.—The following letter, addressed, on the eve of their departure for Spain, by the Spanish soldiers at Santiago, to the soldiers of the American army, "is surely the most remarkable letter ever addressed by vanquished soldiers to their conquerors: 'Soldiers of the American Army: We would not be fulfilling our duty as well-born men in whose breasts there lives gratitude and courtesy, should we embark on our beloved Spain without sending you our most cordial and sincere good wishes and farewell. We fought you with ardor and with all our strength, endeavoring to gain the victory, but without the slightest rancor or hate toward the American nation. We have been vanquished by you, so our generals and chiefs judged in signing the capitulation, but our surrender and the blood-battles preceding it have left in our souls no place for resentment against the men who fought us nobly and valiantly. You fought and acted in compliance with the same call of duty as we, for we all but represent the power of our respective states. You fought us as men, face to face, and with great courage, as before stated—a quality we had not met with during the three years we have carried on this war against a people without a religion, without morals, without conscience, and of doubtful origin, who could not confront the enemy, but shot their noble victims from ambush and then immediately fled. This was the kind of warfare we had to sustain in this unfortunate land. You have complied exactly with all the laws and usages of war as recognized by the armies of the most civilized nations of the world; have given honorable burial to the dead of the vanquished; have cured their wounded with great humanity; have respected and cared for your prisoners and their comfort; and lastly, to us, whose condition was terrible, you have given freely of food and of your stock of medicines, and have honored us with distinction and courtesy, for after the fighting the two armies

mingled with the utmost harmony. With this high sentiment of appreciation from us all, there remains but to express our farewell, and with the greatest sincerity we wish you all happiness and health in this land, which will no longer belong to our dear Spain, but will be yours. You have conquered it by force and watered it with your blood, as your conscience called for under the demands of civilization and humanity; but the descendants of the Congos and Guineas, mingled with the blood of unscrupulous Spaniards and of traitors and adventurers—these people are not able to exercise or enjoy their liberty, for they will find it a burden to comply with the laws which govern civilized humanity. From eleven thousand Spanish soldiers. (Signed) Pedro Lopez De Castillo, Soldier of Infantry. Santiago de Cuba, August 21, 1898.'"—J. D. Miley, *In Cuba with Shafter*.

1898-1899.—Investigation of the conduct of the War Department in the war with Spain.—"The Commission appointed by the President . . . to investigate the conduct of the War Department in the war with Spain, commonly known as the War Investigation or the Dodge Commission, met on the 24th day of September, 1898. Up to the 21st of December, 1898, this Commission had taken testimony in seventeen towns and cities and in many different camps, granting, wherever it went, to the citizens, soldiers, or ex-soldiers, an opportunity to appear for complaint or testimony of any kind regarding the conduct of the war. The Commission visited numerous camps in which there still were many thousands of soldiers, both regulars and volunteers, who were invited to give their evidence without regard to rank or service. On the 21st of December the major-general commanding the army of the United States appeared before the Commission, then sitting in Washington, and made his statements with respect to the canned, fresh and refrigerated beef furnished to the army during the war. General Miles refused to be sworn or affirmed, as every other of the 495 witnesses had been, declaring in substance that he would 'make his statements without being sworn, and was responsible for what he said.'"—R. A. Alger, *Spanish-American War*, pp. 376-377.—The charges against the war department which excited most feeling and drew most public attention related to the quality of the fresh beef supplied to the army, which was in two forms, refrigerated and canned. Major-General Miles, commanding the army, had declared that much of the refrigerated beef furnished to the soldiers should be called "embalmed beef," maintaining that it had been "apparently preserved with secret chemicals, which destroy its natural flavor" and which were believed to be

"detrimental to the health of the troops." He intimated that hundreds of tons of such beef had been contracted for by the commissary-general "under pretense of experiment." In repelling this serious accusation, Commissary-General Charles P. Eagan read a statement before the commission so violent and unmeasured in its vituperation of the commanding general that it was returned to him for correction; many newspapers declined to publish it, and he was subsequently tried by court-martial in consequence. The conclusion of the commission on the subject of the charges relating to refrigerated beef was stated in its report as follows: "The commission is of the opinion that no refrigerated beef furnished by contractors and issued to the troops during the war with Spain was subjected to or treated with any chemicals by the contractors or those in their employ." On the general management of the quartermaster's department, with which much fault had been found, the commission reported: "The conclusions drawn . . . are as follows: 1. The Quartermaster's Department, a month before war was declared, was neither physically nor financially prepared for the tremendous labor of suddenly equipping and transporting an army over ten times the size of the Regular Army of the United States. 2. That the department devoted the ability, zeal, and industry of its officers to accomplish the herculean task before it so soon as funds were made available and war was declared. 3. That it deserves credit for the great work accomplished, for the immense quantity of materials obtained and issued within so short a period, and for its earnest efforts in reference to railroad transportation and in protecting the great interests of the General Government committed to its charge. Its officers, especially those at the headquarters of the department and at its depots, worked earnestly and laboriously day and night sparing themselves in no possible way. 4. There appears to have been a lack of system, whereby, even as late as October, troops in camps and in the field were lacking in some articles of clothing, camp and garrison equipage; and hospitals, at least at two important localities in the South—Fort Monroe, Va., and Huntsville, Ala.—lacked stoves, while at Huntsville fuel was wanting. 5. There appears to have been lack of executive or administrative ability, either on the part of the Quartermaster's Department or the railroad officials, in preventing the great congestion of cars at Tampa and Chickamauga when these camps were first established, which congestion caused delay, annoyance, and discomfort to the large bodies of troops concentrating at those places. . . . Finally. In the opinion of this commission, there should be a division of the labor now devolving upon the Quartermaster's Department" On the conduct of the Medical Department which was another matter of investigation, the commission reported: "To sum up, in brief, the evidence submitted shows: 1. That at the outbreak of the war the Medical Department was, in men and materials, altogether unprepared to meet the necessities of the army called out. 2. That as a result of the action through a generation of contracted and contracting methods of administration, it was impossible for the Department to operate largely, freely, and without undue regard to cost. 3. That in the absence of a special corps of inspectors, and the apparent infrequency of inspections by chief surgeons, and of official reports of the state of things in camps and hospitals, there was not such investigation of the sanitary con-

ditions of the army as is the first duty imposed upon the Department by the regulations. 4. That the nursing force during the months of May, June and July was neither ample nor efficient, reasons for which may be found in the lack of proper volunteer hospital corps, due to the failure of Congress to authorize its establishment, and to the nonrecognition in the beginning of the value of women nurses and the extent to which their services could be secured. 5. That the demand made upon the resources of the Department in the care of sick and wounded was very much greater than had been anticipated, and consequently, in like proportion, these demands were imperfectly met. 6. That powerless as the Department was to have supplies transferred from point to point, except through the intermediation of the Quartermaster's Department, it was seriously crippled in its efforts to fulfil the regulation duty of 'furnishing all medical and hospital supplies.' 7. That the shortcomings in administration and operation may justly be attributed, in large measure, to the hurry and confusion incident to the assembling of an army of untrained officers and men, ten times larger than before, for which no preparations in advance had been or could be made because of existing rules and regulations. 8. That notwithstanding all the manifest errors, of omission rather than of commission, a vast deal of good work was done by medical officers, high and low, regular and volunteer, and there were unusually few deaths among the wounded and sick."—*Report of the Commission, v. 1.*

1898-1914.—Influence in international affairs.—"Before the elimination of Spain from the Caribbean, we had asserted, and could probably have enforced our political predominancy in that region. As to Europe, even before 1893, our commercial relations had imperceptibly created ties which forbade that complete political isolation which was our tradition and which for many years had been demanded by our interests. No less keen sighted a statesman than Richard Olney had declared in 1895 that the American people could not assume an attitude of indifference toward European politics and that the hegemony of a single Continental State would be disastrous to their prosperity, if not to their safety. The moral effect of the victory over Spain, however, was enormous. It aroused an interest in foreign politics hitherto almost completely lacking, and it induced a sense of power quite inconsistent with a policy of isolation. . . . The temptation to utilize . . . suddenly realized power is almost irresistible. The United States was just beginning to feel its political oats, and that precisely at the moment when our industry and finance were compelling us to take our place among the great nations of the world. . . . The change was grad-

ual, and it left the interior of the country largely untouched. But on the Atlantic seaboard and at the capital the political atmosphere underwent a transformation after 1898 which was not so subtle as to escape detection by foreign representatives. . . . Theodore Roosevelt, with a vigor not untouched by discreet restraint expressed the new spirit in his speeches and deeds. . . . In his policy there was little of the chauvinistic, but a clearly expressed determination that the United States should serve and where possible lead, exerting an influence commensurate with its material strength. External evidence of the new place assumed by this country under Roosevelt was to be found in the role which he played as peacemaker between Russia and Japan. . . . [When the delegates from St. Petersburg and Tokio met at Portsmouth, N. H., to end the conflict waged in the plains of Manchuria], the traditional isolation of America became a little more of a theory and a little less of a fact. Roosevelt also sent the United States fleet round the world, a futile parade except upon the assumption that the sinking of the Spanish Navy was by no means an accident, and that henceforth America must count for something everywhere in the world; in which case the cruise might prove, as the event demonstrated, a stabilizing factor making for world peace. . . . More significant still, perhaps, was the role played by Henry White, American Ambassador to France, at the Conference of Algeiras in 1906. . . . Not merely was the American delegate instructed to discuss matters of an essentially European and political nature, but the point of view taken by Mr. White, under Roosevelt's guidance, proved the determining factor in the decisions of the Conference. The change in the official attitude under Roosevelt must not be exaggerated. Our mediation between Russia and Japan might have been suggested by our traditional interest in the Far East. Our representatives had previously participated in numerous European conferences, although these had been less narrowly political than that of Algeiras. . . . European diplomats perceived clearly that a new element had entered their immediate political orbit. They began to watch America more closely. They were somewhat shocked by the easy victory over Spain. In some quarters resentment was not untinged with fear as they appreciated the growing strength of America, industrially and politically. The Kaiser talked of a Continental custom union to meet American competition. British statesmen considered the possibility of an Anglo-Saxon political alliance. Events were ripening for change, if not for cataclysm. . . . Despite the fact that after 1898 the United States had come to be regarded by herself and others as a world power, notwithstanding the increasing community of economic interests which linked us to Europe, few Americans perceived either the danger which lay in the complex European crisis during these years, nor the degree to which we were bound to be interested in a great European war. There was one notable exception—Colonel Edward M. House . . . was convinced that the United States . . . must assume responsibilities commensurate with its strength and advantages. . . . Colonel House went to Europe in the Spring of 1914 hoping to work out a plan which would end the Anglo-German rivalry and bring the two nations into an agreement with the United States providing for disarmament and a mutual promise to abstain from aggressive action. He found the British Foreign Secretary, Sir Edward Grey, re-

ceptive and enthusiastic. But the atmosphere at Berlin was belligerent. . . . Nevertheless informal negotiations were in being and Colonel House was on his way to report to the President when the European crisis came to a head, the militarists at Berlin and Vienna gained control, and the war broke forth."—C. Seymour, *America's duty to Europe to-day* (*New York Times Current History*, Nov., 1923).

1899.—Cost of the Spanish-American War.—“The cost of the war is not easily estimated. The actual expenditure during the four months of hostilities was not large, but the ultimate outlays have made an enormous difference in the nation's budget. During the four preceding years of peace, 1894-1897, the expenditures for the army were \$206,000,000 and for the navy, \$122,000,000, a total of \$328,000,000; while during the succeeding years, 1898-1901, the expenditures for the army reached \$603,000,000 and the navy, \$238,000,000, making a total of \$842,000,000 [?]. A portion of this expense is to be charged to the campaign in China and the restoration of peace in the Philippines, operations which are consequent upon the Spanish War. The permanent result has been a higher level of expenditures for military and naval purposes, as well as a higher per capita tax for all federal purposes. New pensions made an increasing draft on the treasury.”—D. R. Dewey, *Financial history of the United States*, pp. 467-468.

1899 (January-February).—Ratification of treaty of peace with Spain.—“The president transmitted the treaty to the Senate January 4, 1899, together with the protocols and accompanying papers. From that date until February 6 it was the main subject of debate, and attracted the close attention of the entire country. A strong opposition to the treaty developed and the debate took a wide range, involving a discussion of the fundamental principles underlying the American constitutional system. The discussion really began December 6, when Senator Vest, knowing the instructions that had been sent to the commissioners at Paris, introduced a resolution declaring ‘That under the Constitution of the United States no power is given to the federal government to acquire territory to be held and governed permanently as colonies.’ This resolution was the centre of much of the debate during the weeks that followed. Senator Platt, of Connecticut, who spoke in opposition to this resolution, expressed the extreme views on one side of the question when he said: ‘I propose to maintain that the United States is a nation; that as a nation it possesses every sovereign power not reserved in its Constitution to the states or the people; that the right to acquire territory was not reserved, and is therefore an inherent sovereign right.’ This was a rather startling reversal of the fundamental principle of the Constitution that the powers of the federal government are delegated, and the powers of the states are inherent or reserved. [On January 14] Senator Hoar, of Massachusetts, delivered a constitutional argument [in reply] which attracted much attention, declaring that the proposal to acquire and hold the Philippine Islands was in violation of the Declaration of Independence, the Constitution, and the whole spirit of American institutions. The opportunist view,

which ultimately prevailed, was voiced by the junior senator from Massachusetts, Mr. Lodge [January 24], who said: 'Suppose we ratify the treaty! The islands pass from the possession of Spain into our possession without committing us to any policy. I believe we can be trusted as a people to deal honestly and justly with the islands and their inhabitants thus given to our care. What our precise policy shall be I do not know, because I for one am not sufficiently informed as to the conditions there to be able to say what it will be best to do, nor, I may add, do I think any one is.' A great many senators felt as Senator Spooner, when he said: 'This Philippine proposition is one of the fruits of the war. To me it is one of the bitter fruits of the war. I wish with all my heart we were honorably quit of it.' He held, however, that the United States had the absolute right to acquire territory, and while as a matter of expediency he did not think that the best interests of the United States would be subserved by 'permanent dominion over far-distant lands and people,' yet he thought it better to vote for the treaty than to continue the war. Many resolutions were introduced defining the future policy in regard to the Philippines, but they were all voted down. [The senators who introduced these resolutions were Senator Mason of Illinois, January 7; Senator Bacon of Georgia, January 11; Senator McLaurin of South Carolina, January 13; Senator Harris of Kansas, February 3; Senator McEnery of Louisiana.] The treaty could not be ratified without the assistance of Democrats, since the Senate contained 46 Republicans, 34 Democrats, 5 Populists, 2 Silverites, and 3 Independents. While the discussion was at white heat, Mr. Bryan went to Washington and advised his followers to vote for ratification in order to end the war, saying that the status of the Philippines could be determined in the next Presidential campaign. Just at this juncture an event occurred which materially affected the situation—the outbreak of an insurrection on February 4 against the American troops in the Philippines. The Senate had already agreed by unanimous consent that the vote should be taken February 6, and the outbreak of the insurrection against the United States removed the last doubt in the minds of many, who now felt that the national honor was involved and that the country could not withdraw from the islands in the face of an uprising. When the vote was taken it stood 57 for the treaty and 27 against. Of those who voted yea, 40 were Republicans, 10 Democrats, 3 Populists, 2 Silverites, and 2 Independents. Of those who voted nay, 22 were Democrats, 3 Republicans, and 2 Populists. Immediately after its ratification the Senate passed, by a vote of 26 to 22 a resolution introduced by Senator McEnery, of Louisiana, one of the Democrats who had supported the treaty, to the effect that the action on the treaty was not to be deemed a final determination of our attitude towards the islands. This resolution, passed by a mere majority of the Senate, had no validity as an act of the treaty-making power, and did not receive the sanction of the House or the approval of the president."—J. H. Latané, *America as a world power, 1897-1907*, pp. 74-78.

1899-1901.—Reciprocity arrangements under the Dingley Tariff Act, not ratified by the Senate.—The Dingley Tariff Act, which became law on July 24, 1897, authorized the making of tariff concessions to other countries on terms of reciprocity, if negotiated within two years from the above date. At the expiration of two years, such conventions of reciprocity had been arranged with France and Portugal, and with Great Britain for her West Indian colonies of Jamaica, Barbadoes, Trinidad, Bermuda, and British Guiana. With France, a preliminary treaty signed in May, 1898, was superseded in July, 1899, by one of broader scope, which opens the French markets to an extensive list of American commodities at the minimum rates of the French tariff, and cuts the American tariff from five to 20 per cent. on many French products, not inclusive of sparkling wines. In the treaty with Portugal, the reduction of American duties on wines is more general. The reciprocal reduction on American products extends to many agricultural and mineral products. The reciprocal agreement with the British West Indies covers sugar, fruits, garden products, coffee and asphalt, on one side, and flour, meat, cotton goods, agricultural machinery, oils, etc., on the other. None of these treaties was acted upon by the United States Senate during the session of 1899-1900, and it became necessary to extend the time for their ratification, which was done. Some additional

reciprocity agreements were then negotiated, by which the following statement was made by the president in his message to Congress, Dec. 3, 1900: "Since my last communication to the Congress on this subject special commercial agreements under the third section of the tariff act have been proclaimed with Portugal, with Italy and with Germany. Commercial conventions under the general limitations of the fourth section of the same act have been concluded with Nicaragua, with Ecuador, with the Dominican Republic, with Great Britain on behalf of the island of Trinidad and with Denmark on behalf of the island of St. Croix. These will be early communicated to the Senate. Negotiations with other governments are in progress for the improvement and security of our commercial relations."

1900 (March-December).—Passage of Financial Bill.—Settlement of monetary standard question.—Working of act.—Legislation in the direction sought by the advocates of the gold standard and of a reformed monetary system for the country (see above: 1896-1898), was attained in the spring of 1900, by the passage of an important "Financial Bill" which became law on March 14. The provisions and the effect of the act were summarized at the time by the secretary of the treasury, Lyman Judson Gage, in a published statement, as follows: "The financial bill has for its first object what its title indicates, the fixing of the standard of value and the maintaining at a parity with that standard of all forms of money issued or coined by the United States. It reaffirms that the unit of value is the dollar, consisting of 25.8 grains of gold, nine tenths fine, but from that point it goes on to make it the duty of the Secretary of the Treasury to maintain all forms of money issued or coined at a parity with this standard. It puts into the hands of the Secretary ample power to do that. For that purpose, the bill provides in the Treasury bureaus of issue and redemption and transfers from the general fund of the Treasury's cash \$150,000,000 in gold coin and bullion to redemption fund, that gold to be

used for the redemption of United States notes and Treasury notes. That fund is henceforth absolutely cut out of and separated from the cash balance in the Treasury and the available cash balance will hereafter show a reduction of \$150,000,000 from the figures that have heretofore prevailed. This \$150,000,000 redemption fund is to be used for no other purpose than the redemption of United States notes and Treasury notes and those notes so redeemed may be exchanged for the gold in the general fund or with the public, so that the reserve fund is kept full with gold to the \$150,000,000 limit. If redemptions go on so that the gold in this reserve fund is reduced below \$100,000,000, and the Secretary is unable to build it up to the \$150,000,000 mark by exchange for gold in the general fund or otherwise, he is given power to sell bonds and it is made his duty to replenish the gold to the \$150,000,000 mark by such means. The 'endless chain' is broken by a provision which prohibits the use of notes so redeemed to meet deficiencies in the current revenues. The act provides for the ultimate retirement of all the Treasury notes issued in payment for silver bullion under the Sherman act. As fast as that bullion is coined into silver dollars Treasury notes are to be retired and replaced with an equal amount of silver certificates. The measure authorizes the issue of gold certificates in exchange for deposits of gold coin, the same as at present, but suspends that authority whenever and so long as the gold in the redemption fund is below \$100,000,000 and gives to the Secretary the option to suspend the issue of such certificates whenever the silver certificates and United States notes in the general fund of the Treasury exceed \$40,000,000. The bill provides for a larger issue of silver certificates, by declaring that hereafter silver certificates shall be issued only in denominations of \$10 and under except as a 10 per cent. of the total volume. Room is made for this larger use of silver certificates in the way of small bills by another provision which makes it necessary as fast as the present silver certificates of high denominations are broken up into small bills to cancel a similar volume of United States notes of small denominations and replace them with notes of denominations of \$10 and upward. Further room is made for the circulation of small silver certificates by a clause which permits national banks to have only one third of their capital in denomination under \$10. . . . A distinct feature of the bill is in reference to refunding the 3 per cent. Spanish war loan, the 2 per cent. bonds maturing in 1907 and the 5 per cent. bonds maturing in 1904, a total of \$839,000,000, into new 2 per cent. bonds. These new 2 per cent. bonds will not be offered for sale, but will only be issued in exchange for an equal amount, face value, of old bonds. This exchange will save the Government, after deducting the premium paid, nearly \$23,000,000, if all the holders of the old bonds exchange them for the new ones. National banks that take out circulation based on the new bonds are to be taxed only one half of 1 per cent. on the average amount of circulation outstanding, while those who have circulation based on a deposit of old bonds will be taxed, as at present, 1 per cent. There are some other changes in the national banking act. The law permits national banks with \$25,000 capital to be organized in places of 3,000 inhabitants or less, whereas heretofore the minimum capital has been \$50,000. It also permits banks to issue circulation on all classes of bonds deposited up to the par value of the bonds, instead of 90 per cent. of

their face, as heretofore. This ought to make an immediate increase in national bank circulation of something like \$24,000,000, as the amount of bonds now deposited to secure circulation is about \$242,000,000. If the price of the new 2s is not forced so high in the market that there is no profit left to national banks in taking out circulation, we may also look for a material increase in national bank circulation based on additional deposits of bonds. National banks are permitted under the law to issue circulation up to an amount equal to their capital. The total capital of all national banks is \$616,000,000. The total circulation outstanding is \$253,000,000. There is, therefore, a possibility of an increase in circulation of \$363,000,000, although the price of the 2 per cent. bonds, as already foreshadowed by market quotations in advance of their issue, promises to be so high that the profit to the banks in taking out circulation will not be enough to make the increase anything like such a possible total." Upon the working of the act, during the first nine months of its operation, Secretary Gage remarked as follows, in his annual report dated Dec. 14, 1900: "The operation of the act of March 14 last with respect to these two important matters of our finances has well exemplified its wisdom. Confidence in the purpose and power of the Government to maintain the gold standard has been greatly strengthened. The result is that gold flows toward the Treasury instead of away from it. At the date of this report the free gold in the Treasury is larger in amount than at any former period in our history. Including the \$150,000,000 reserve, the gold in the Treasury belonging to the Government amounts to over \$242,000,000, while the Treasury holds, besides, more than \$230,000,000, against which certificates have been issued. That provision of the act which liberalized the conditions of bank-note issue was also wise and timely. Under it, . . . there has been an increase of some \$77,000,000 in bank-note issues. To this fact may be chiefly attributed the freedom from stress for currency to handle the large harvests of cotton, wheat, and corn. In this respect the year has been an exception to the general rule of stringency which for several years has so plainly marked the autumn season. Nevertheless, the measures referred to, prolific as they have been in good results, will yet need re-enforcement in some important particulars. Thus, as to the redemption fund provided for in said act, while the powers conferred upon the Secretary are probably ample to enable a zealous and watchful officer to protect fully the gold reserve, there appears to be lacking sufficient mandatory requirement to furnish complete confidence in the continued parity, under all conditions, between our two forms of metallic money, silver and gold. Upon this point further legislation may become desirable. As to the currency, while the liberalizing of conditions has, as previously noted, found response in a necessary increase of bank-note issues, there is under our present system no assurance whatever that the volume of bank currency will be continuously responsive to the country's needs, either by expanding as such needs require or by contracting when superfluous in amount. The truth is that safe and desirable as is our currency system in many respects, it is not properly related. The supply of currency is but remotely, if at all, influenced by the everchanging requirements of trade and industry. It is related most largely, if not entirely, to the price of Government bonds in the market."—*Annual Report of the Secretary of*

the Treasury, 1900, pp. 72-73.—"The new law with its many excellent features, had improved the machinery for withstanding a pressure on the gold supply, but . . . it had at the same time increased the pressure itself. It must remain for experience to demonstrate how far the dubious provisions of the latter part of the act outweigh the wisdom of its earlier paragraphs."—R. P. Falkner, *Currency law of 1900 (Publications of the American Academy of Political and Social Science, May 29, 1900, p. 49)*.

1900 (April).—Speech of Senator Hoar in denial of the right of the government of the United States, under the constitution, to hold the Philippine islands as a subject state.—On April 17, the following joint resolution was under consideration in the Senate: "Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that the Philippine Islands are territory belonging to the United States; that it is the intention of the United States to retain them as such and to establish and maintain such governmental control throughout the archipelago as the situation may demand." Senator Hoar, of Massachusetts, spoke in opposition to the resolution, and some passages from his speech are quoted here, because they are notably representative of the ground and spirit of an opposition which existed within the party controlling the government to the war of subjugation in the Philippine islands, to which the party and the government were finally committed by the adoption of this Congressional declaration. "The American people, so far as I know, were all agreed that their victory [in the Spanish-American war] brought with it the responsibility of protecting the liberated peoples from the cupidity of any other power until they could establish their own independence in freedom and in honor. I stand here to-day to plead with you not to abandon the principles that have brought these things to pass. I implore you to keep to the policy that has made the country great, that has made the Republican party great, that has made the President great. . . . Especially, if I could, would I persuade the great Republican party to come back again to its old faith, to its old religion, before it is too late. There is yet time. The President has said again and again that his is only an ad interim policy until Congress shall act. It is not yet too late. Congress has rejected, unwisely, as I think, some declarations for freedom. But the two Houses have not as yet committed themselves to despotism. The old, safe path, the path alike of justice and of freedom, is still easy. It is a path familiar, of old, to the Republican party. If we have diverged from it for the first time, everything in our history, everything in our own nature calls us back. . . . I, for one, believed, and still believe that the pathway to prosperity and glory for the country was also the pathway to success and glory for the Republican party. I thought the two things inseparable. If, when we made the treaty of peace, we had adhered to the purpose we declared when we declared war; if we had dealt with the Philippine Islands as we promised to deal, have dealt, and expect to deal with Cuba, the country would have escaped the loss of 6,000 brave soldiers, other thousands of wrecked and shattered lives, the sickness of many more, the expenditure of hundreds of millions, and, what is far worse than all, the trampling under foot of its cherished ideals. There would have been to-day a noble

republic in the East, sitting docile at our feet, receiving from us civilization, laws, manners, and giving in turn everything the gratitude of a free people could give—love, obedience, trade. The Philippine youth would throng our universities; our Constitution, our Declaration, the lives of Washington and Lincoln, the sayings of Jefferson and Franklin would have been the text-books of their schools. How our orators and poets would have delighted to contrast America liberating and raising up the Republic of Asia, with England subduing and trampling under foot the republic of Africa. Nothing at home could have withstood the great party and the great President who had done these things. We should have come from the next election with a solid North and have carried half the South. You would at least have been spared the spectacle of great Republican States rising in revolt against Republican policies. I do not expect to accomplish anything for liberty in the Philippine Island but through the Republican party. Upon it the fate of these Islands for years to come is to depend. If that party can not be persuaded, the case is in my judgment for the present hopeless. . . . The practical question which divided the American people last year, and which divides them to-day, is this: Whether in protecting the people of the Philippine Islands from the ambition and cupidity of other nations we are bound to protect them from our own. . . . In dealing with this question, Mr. President, I do not mean to enter upon any doubtful ground. I shall advance no proposition ever seriously disputed in this country till within twelve months. . . . If to think as I do in regard to the interpretation of the Constitution; in regard to the mandates of the moral law or the law of nations, to which all men and all nations must render obedience; in regard to the policies which are wisest for the conduct of the State, or in regard to those facts of recent history in the light of which we have acted or are to act hereafter, be treason, then Washington was a traitor; then Jefferson was a traitor; then Jackson was a traitor; then Franklin was a traitor; then Sumner was a traitor; then Lincoln was a traitor; then Webster was a traitor; then Clay was a traitor; then Corwin was a traitor; then Kent was a traitor; then Seward was a traitor; then McKinley, within two years, was a traitor; then the Supreme Court of the United States has been in the past a nest and hotbed of treason; then the people of the United States, for more than a century, have been traitors to their own flag and their own Constitution. We are presented with an issue that can be clearly and sharply stated as a question of constitutional power, a question of international law, a question of justice and righteousness, or a question of public expediency. This can be stated clearly and sharply by an illustration growing out of existing facts. The constitutional question is: Has Congress the power, under our Constitution, to hold in subjection unwilling vassal States? The question of international law is: Can any nation rightfully convey to another sovereignty over an unwilling people who have thrown off its dominion, asserted their independence, established a government of their own, over whom it has at the time no practical control, from whose territory it has been disseized and which it is beyond its power to deliver? The question of justice and righteousness is: Have we the right to crush and hold under our feet an unwilling and subject people whom we had treated as allies, whose independence we are bound in good faith to respect, who had established their own free government, and who had trusted us? The question of public expediency is:

Is it for our advantage to promote our trade at the cannon's mouth and at the point of the bayonet? All these questions can be put in a way of practical illustration by inquiring whether we ought to do what we have done, are doing, and mean to do in the case of Cuba; or what we have done, are doing, and some of you mean to do in the case of the Philippine Islands. It does not seem to me to be worth while to state again at length the constitutional argument which I have addressed to the Senate heretofore. It has been encountered with eloquence, with clearness and beauty of statement, and, I have no doubt, with absolute sincerity by Senators who have spoken upon the other side. But the issue between them and me can be summed up in a sentence or two, and if, so stated, it can not be made clear to any man's apprehension, I despair of making it clear by any elaboration or amplification. I admit that the United States may acquire and hold property, and make rules and regulations for its disposition. I admit that, like other property, the United States may acquire and hold land. It may acquire it by purchase. It may acquire it by treaty. It may acquire it by conquest. And it may make rules and regulations for its disposition and government, however it be acquired. When there are inhabitants upon the land so acquired it may make laws for their government. But the question between me and the gentlemen on the other side is this: Is this acquisition of territory, of land or other property, whether gained by purchase, conquest, or treaty, a constitutional end or only a means to a constitutional end? May you acquire, hold, and govern territory or other property as an end for which our Constitution was framed, or is it only a means toward some other and further end? May you acquire, hold, and govern property by conquest, treaty, or purchase for the sole object of so holding and governing it, without the consideration of any further constitutional purpose? Or must you hold it for a constitutional purpose only, such as the making of new States, the national defense and security, the establishment of a seat of government, or the construction of forts, harbors, and like works, which, of course, are themselves for the national defense and security. I hold that this acquisition, holding and governing, can be only a means for a constitutional end—the creation of new States or some other of the constitutional purposes to which I have adverted. And I maintain that you can no more hold and govern territory than you can hold and manage cannon or fleets for any other than a constitutional end; and I maintain that the holding in subjection an alien people, governing them against their will for any fancied advantage to them, is not only not an end provided for by the Constitution, but is an end prohibited therein. . . . It is an end which the generation which framed the Constitution and the Declaration of Independence declared was unrighteous and abhorrent. So, in my opinion, we have no constitutional power to acquire territory for the purpose of holding it in subjugation, in a state of vassalage or serfdom, against the will of its people. . . . There are 1,200 islands in the Philippine group. They extend as far as from Maine to Florida. They have a population variously estimated at from 8,000,000 to 12,000,000. There are wild tribes who never heard of Christ, and islands that never heard of Spain. But among them are the people of the island of Luzon, numbering 3,500,000, and the people of the Visayan Islands, numbering 2,500,000 more. They are a Christian and civilized people. They wrested their independence from

Spain and established a republic. Their rights are no more to be effected by the few wild tribes in their own mountains or by the dwellers in the other islands than the rights of our old thirteen States were affected by the French in Canada, or the Six Nations of New York, or the Cherokees of Georgia, or the Indians west of the Mississippi. Twice our commanding generals, by their own confession, assured these people of their independence. Clearly and beyond all cavil we formed an alliance with them. We expressly asked them to co-operate with us. We handed over our prisoners to their keeping; we sought their help in caring for our sick and wounded. We were told by them again and again and again that they were fighting for independence. Their purpose was as well known to our generals, to the War Department, and to the President, as the fact that they were in arms. We never undeceived them until the time when hostilities were declared in 1899. The President declared again and again that we had no title and claimed no right to anything beyond the town of Manila. Hostilities were begun by us at a place where we had no right to be, and were continued by us in spite of Aguinaldo's disavowal and regret and offer to withdraw to a line we should prescribe. If we crush that Republic, despoil that people of their freedom and independence, and subject them to our rule, it will be a story of shame and dishonor. . . . But we are told if we oppose the policy of our imperialistic and expanding friends we are bound to suggest some policy of our own as a substitute for theirs. We are asked what we would do in this difficult emergency. It is a question not difficult to answer. I for one am ready to answer it. 1. I would declare now that we will not take these islands to govern them against their will. 2. I would reject a cession of sovereignty which implies that sovereignty may be bought and sold and delivered without the consent of the people. Spain had no rightful sovereignty over the Philippine Islands. She could not rightfully sell it to us. We could not rightfully buy it from her. 3. I would require all foreign governments to keep out of these islands. 4. I would offer to the people of the Philippines our help in maintaining order until they have a reasonable opportunity to establish a government of their own. 5. I would aid them by advice, if they desire it, to set up a free and independent government. 6. I would invite all the great powers of Europe to unite in an agreement that that independence shall not be interfered with by us, by themselves, or by any one of them with the consent of the others. As to this I am not so sure. I should like quite as well to tell them it is not to be done whether they consent or not. 7. I would declare that the United States will enforce the same doctrine as applicable to the Philippines that we declared as applicable to Mexico and Haiti and the South American Republics. It is true that the Monroe Doctrine, a doctrine based largely on our regard for our own interests, is not applicable either in terms or in principle to a distant Asiatic territory. But, undoubtedly, having driven out Spain, we are bound, and have the right, to secure to the people we have liberated an opportunity, undisturbed and in peace, to establish a new government for themselves. 8. I would then, in a not distant future, leave them to work out their own salvation, as every nation on earth, from the beginning of time, has wrought out its own salvation. Let them work out their own salvation, as our own ancestors slowly and in long centuries wrought out theirs; as Germany, as Switzerland, as France, in briefer

periods, wrought out theirs; as Mexico and the South American Republics have accomplished theirs, all of them within a century, some of them within the life of a generation. To attempt to confer the gift of freedom from without, or to impose freedom from without, on any people, is to disregard all the lessons of history. It is to attempt 'A gift of that which is not to be given by all the blended powers of earth and heaven.' 9. I would strike out of your legislation the oath of allegiance to us and substitute an oath of allegiance to their own country."

1900 (May).—Civil government organized in Porto Rico.—Governor Allen appointed. See PORTO RICO: 1900 (May).

1900 (May-October).—Twelfth census of the republic.—The twelfth census of the United States was taken between May 1 and Nov. 1, 1900. The accompanying table (see opposite page) gives the population of the United States for each state and organized territory and for Alaska and Hawaii as finally revised, according to the official census report of 1900. The figures purporting to give the number of "persons in the service of the United States stationed abroad" include an estimated population of 14,400 for certain military organizations and naval vessels stationed abroad, principally in the Philippines. No provision was made by the census act for the enumeration of the inhabitants of Porto Rico, but a census for that island, taken as of Oct. 16, 1899, under the direction of the War Department, showed a population of 953,243.

"By the twelfth census the center of population in 1900 was in the following position: Latitude $39^{\circ} 9' 36''$; longitude $85^{\circ} 48' 54''$. In ten years the center of population has moved westward $16' 1''$, or about fourteen miles, and southward $2' 20''$, or about two and one half miles. It rests now in Southern Indiana, at a point about six miles southeast of Columbus, the county seat of Bartholomew county, Indiana. The center of population is the center of gravity of the country, each individual being assumed to have the same weight. . . . The center of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in northern Kansas, in approximate latitude $39^{\circ} 55'$, and approximate longitude $98^{\circ} 50'$. The center of population is therefore about three-fourths of a degree south and more than 13 degrees east of the center of area."—*United States, Twelfth Census, Bulletin no. 62.*

1900 (May-November).—Presidential election.—Party platforms and nominations.—Re-election of President McKinley.—"At one time it seemed that the questions growing out of the war with Spain would be the leading issues of the campaign: the Democratic national convention did, indeed, declare that it regarded imperialism as the 'paramount issue,' but it also adopted a silver plank and again nominated William J. Bryan as its candidate. Many of the thoughtful and conservative men of the country, who were opposed to the military and colonial policies of the Republican party, were even more strongly opposed to the silver tenets of Mr.

Bryan. Instead of a clean-cut campaign on the single issue of imperialism, which was new and of transcendent importance, attention was diverted to a discussion of monetary standards, so that to the conservative men of the country it seemed a choice between free silver and imperialism."—J. H. Latané, *America as a world power, 1897-1907*, p. 123.—"That President McKinley was to go before the country for a second term was a foregone conclusion. When the Republican convention met in Philadelphia [June 19] he was unanimously nominated on the first ballot. Theodore Roosevelt, a member of the convention, was named as the candidate for Vice-President, receiving the votes of all the delegates except his own, which he refrained from casting. . . . The Republican platform asserted that the prosperity which the country was enjoying was due to the McKinley administration."—S. E. Forman, *Our republic*, p. 423.—The platform was in part as follows: "The expectation, in which the American people, turning from the Democratic party, intrusted power four years ago to a Republican Chief Magistrate and a Republican Congress, has been met and satisfied. When the people then assembled at the polls, after a term of Democratic legislation and administration, business was dead, industry paralyzed, and the National credit disastrously impaired. The country's capital was hidden away and its labor distressed and unemployed. The Democrats had no other plan with which to improve the ruinous conditions which they had themselves produced than to coin silver at the ratio of 16 to 1. The Republican Party, denouncing this plan as sure to produce conditions even worse than those from which relief was sought, promised to restore prosperity by means of two legislative measures—a protective tariff and a law making gold the standard of value. . . . The people, by great majorities, issued to the Republican party a commission to enact these laws. This commission has been executed, and the Republican promise is redeemed. Prosperity more general and more abundant than we have ever known has followed these enactments. There is no longer controversy as to the value of any government obligations. Every American dollar is a gold dollar, or its assured equivalent, and American credit stands higher than that of any nation. Capital is fully employed, and labor everywhere is profitably occupied. No single fact can more strikingly tell the story of what Republican government means to the country than this—that while during the whole period of 107 years from 1790 to 1897 there was an excess of exports over imports of only \$383,028,497, there has been in the short, three years of the present Republican Administration an excess of exports over imports in the enormous sum of \$1,483,537,094. . . . We indorse the Administration of William McKinley. Its acts have been established in wisdom and in patriotism, and at home and abroad it has distinctly elevated and extended the influence of the American nation. Walking untried paths and facing unforeseen responsibilities, President McKinley has been in every situation the true American patriot and the upright statesman, clear in vision, strong in judgment, firm in action, always inspiring and deserving the confidence of his countrymen. In asking the American people to indorse this Republican record and to renew their commission to the Republican party, we remind them of the fact that the menace to their prosperity has always resided in Democratic principles, and no less in the general incapacity of the Democratic

party to conduct public affairs. The prime essential of business prosperity is public confidence in the good sense of the Government, and in its ability to deal intelligently with each new problem of administration and legislation. That confidence the Democratic party has never earned. It is hopelessly inadequate, and the country's prosperity when Democratic success at the polls is announced halts and ceases in mere anticipation of Democratic blunders and failures. We renew our allegiance to the principle of the gold standard, and declare our confidence in the wisdom of the legislation of the Fifty-sixth Congress by which the parity of all our money and the stability of our currency upon a gold basis has been secured. We recognize that interest rates are potent factors in production and business activity, and for the purpose of further equalizing and of further lowering the rates of interest, we favor such monetary legislation as will enable the varying needs of the seasons and of all sections to be promptly met in order that trade may be evenly sustained, labor steadily employed, and commerce enlarged. The volume of money in circulation was never so great per capita as it is to-day. We declare our steadfast opposition to the free and unlimited coinage of silver. No measure to that end could be considered which was without the support of the leading commercial countries of the world. However firmly Republican legislation may seem to have secured the country against the peril of base and discredited currency, the election of a Democratic President could not fail to impair the country's credit and to bring once more into question the intention of the American people to maintain upon the gold standard the parity of their money circulation. The Democratic party must be convinced that the American people will never tolerate the Chicago platform. We recognize the necessity and propriety of the honest coöperation of capital to meet new business conditions, and especially to extend our rapidly increasing foreign trade, but we condemn all conspiracies and combinations intended to restrict business, to create monopolies, to limit production, or to control prices, and favor such legislation as will effectively restrain and prevent all such abuses, protect and promote competition, and secure the rights of producers, laborers, and all who are engaged in industry and commerce. We renew our faith in the policy of protection to American labor. In that policy our industries have been established, diversified, and maintained. By protecting the home market competition has been stimulated and production cheapened. Opportunity to the inventive genius of our people has been secured and wages in every department of labor maintained at high rates, higher now than ever before, and always distinguishing our working people in their better conditions of life from those of any competing country. Enjoying the blessings of the American common school, secure in the right of self-government, and protected in the occupancy of their own markets, their constantly increasing knowledge and skill have enabled them finally to enter the markets of the world. We favor the associated policy of reciprocity so directed as to open our markets on favorable terms for what we do not ourselves produce in return for free foreign markets. In the further interest of American workmen we favor a more effective restriction of the immigration of cheap labor from foreign lands, the extension of opportunities of education for working children, the raising of the age limit for child labor, the protection of free labor as

against contract convict labor, and an effective system of labor insurance. . . . President McKinley has conducted the foreign affairs of the United States with distinguished credit to the American people. In releasing us from the vexatious conditions of a European alliance for the government of Samoa his course is especially to be commended. By securing to our undivided control the most important island of the Samoan group and the best harbor in the Southern Pacific, every American interest has been safeguarded. We approve the annexation of the Hawaiian Islands to the United States. We commend the part taken by our Government in the Peace Conference at The Hague. We assert our steadfast adherence to the policy announced in the Monroe Doctrine. The provisions of The Hague Convention were wisely regarded when President McKinley tendered his friendly offices in the interest of peace between Great Britain and the South African republics. While the American Government must continue the policy prescribed by Washington, affirmed by every succeeding President and imposed upon us by The Hague Treaty, of non-intervention in European controversies, the American people earnestly hope that a way may soon be found, honorable alike to both contending parties to terminate the strife between them. In accepting by the Treaty of Paris the just responsibility of our victories in the Spanish war the President and the Senate won the undoubted approval of the American people. No other course was possible than to destroy Spain's sovereignty throughout the West Indies and in the Philippine Islands. That course created our responsibility before the world, and with the unorganized population whom our intervention had freed from Spain, to provide for the maintenance of law and order, and for the establishment of good government and for the performance of international obligations. Our authority could not be less than our responsibility, and wherever sovereign rights were extended it became the high duty of the Government to maintain its authority, to put down armed insurrection and to confer the blessings of liberty and civilization upon all the rescued peoples. The largest measure of self-government consistent with their welfare and our duties shall be secured to them by law. To Cuba independence and self-government were assured in the same voice by which war was declared, and to the letter this pledge will be performed."

"This language of the Republican platform in reference to the trusts was characterized in the Democratic platform 'as dishonest paltering with the trust evil.' The Democratic plank on trusts said: 'Existing laws against trusts must be enforced, and more stringent ones must be enacted providing for the publicity as to the affairs of corporations engaged in interstate commerce and requiring all corporations to show that they have no water in their stock and that they have not attempted to monopolize any branch of business or the production of any articles of merchandise.' In accordance with the wishes of Bryan, but against the wishes of many leaders, coinage of silver in terms as strong as those used in 1896. But free silver was not put to the front as the issue upon which the fight was to be made: the supreme question to be discussed was 'imperialism.'" —S. E. Forman, *Our republic*, p. 696.—The platform was in part as follows: "We, the representatives of the Democratic party of the United States, assembled in national convention on the anniversary of the adoption of the Declaration of Independence, do

reaffirm our faith in that immortal proclamation of the inalienable rights of man, and our allegiance to the constitution framed in harmony therewith by the fathers of the Republic. We hold with the United States Supreme Court that the Declaration of Independence is the spirit of our government, of which the constitution is the form and letter. We declare again that all governments instituted among men derive their just powers from the consent of the governed; that any government not based upon the consent of the governed is a tyranny; and that to impose upon any people a government of force is to substitute the methods of imperialism for those of a republic. We hold that the constitution follows the flag and denounce the doctrine that an executive or congress, deriving their existence and their powers from the constitution, can exercise lawful authority beyond it, or in violation of it. We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home. Believing in these fundamental principles, we denounce the Porto Rico law, enacted by a Republican Congress against the protest and opposition of the Democratic minority, as a bold and open violation of the Nation's organic law and a flagrant breach of National good faith. It imposes upon the people of Porto Rico a government without their consent, and taxation without representation. It dishonors the American people by repudiating a solemn pledge made in their behalf by the commanding general of our Army, which the Porto Ricans welcomed to a peaceful and unresisted occupation of their land. It dooms to poverty and distress a people whose helplessness appeals with peculiar force to our justice and magnanimity. In this, the first act of its imperialistic programme, the Republican party seeks to commit the United States to a colonial policy inconsistent with republican institutions and condemned by the Supreme Court in numerous decisions. We demand the prompt and honest fulfilment of our pledge to the Cuban people and the world, that the United States has no disposition nor intention to exercise sovereignty, jurisdiction, or control over the island of Cuba, except for its pacification. The war ended nearly two years ago, profound peace reigns over all the island, and still the Administration keeps the government of the island from its people, while Republican carpet-bag officials plunder its revenue and exploit the colonial theory to the disgrace of the American people. We condemn and denounce the Philippine policy of the present Administration. It has embroiled the Republic in an unnecessary war, sacrificed the lives of many of its noblest sons, and placed the United States, previously known and applauded throughout the world as the champion of freedom, in the false and un-American position of crushing with military force the efforts of our former allies to achieve liberty and self-government. The Filipinos cannot be citizens without endangering our civilization; they cannot be subjects without imperilling our form of government; and as we are not willing to surrender our civilization, or to convert the Republic into an empire, we favor an immediate declaration of the Nation's purpose to give to the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference such as has been given for nearly a century to the republics of Central and South America. The greedy commercialism which dictated the Philippine policy of the Republican Administration at-

tempts to justify it with the plea that it will pay, but even this sordid and unworthy plea fails when brought to the test of facts. The war of 'criminal aggression' against the Filipinos entailing an annual expense of many millions, has already cost more than any possible profit that could accrue from the entire Philippine trade for years to come. Furthermore, when trade is extended at the expense of liberty the price is always too high. We are not opposed to territorial expansion, when it takes in desirable territory which can be erected into States in the Union, and whose people are willing and fit to become American citizens. We favor trade expansion by every peaceful and legitimate means. But we are unalterably opposed to the seizing or purchasing of distant islands to be governed outside the Constitution and whose people can never become citizens. We are in favor of extending the Republic's influence among the nations, but believe that influence should be extended not by force and violence, but through the persuasive power of a high and honorable example."

"Bryan accordingly went out proclaiming imperialism as the supreme question of the day; but this time he was unable to force the issue. It was Hanna's idea that the supreme question was prosperity and that the slogan of the Republicans should be the 'full dinner-pail.' So far as his party was concerned Hanna could have his way about the matter, for he was in full command. . . . Since the 'prosperity banner' was to be waved in every doubtful precinct in every doubtful State, a great deal of money would have to be collected for propaganda purposes. Here Hanna's services were as useful as they had been in 1896. But his comb in 1900 did not have such fine teeth as the one he used four years before. . . . In 1900 he [Mark Hanna] solicited and obtained support from Wall Street more explicitly and more exclusively than he had in 1896. The result of this large-scale assessment was a campaign fund of \$2,500,000. This was money enough and to spare. The prosperity idea was spread far and wide. McKinley was everywhere heralded as the promoter of good times, and voters had it dinned into their ears, morning, noon, and night, that they had best 'let well enough alone,' and that a vote for the Republican ticket meant a 'full dinner-pail.' The appeal proved to be so effective and powerful that before the campaign closed the voters felt that the only question they had to decide was whether there should be hard times under the Democrats, or good times under the Republicans. Bryan made a brilliant and earnest campaign, but he failed to arouse any great interest or enthusiasm in the subject which he regarded paramount."—S. E. Forman, *Our republic*, pp. 606-607.—"The campaign of 1900 is remarkable in the history of America for the number of parties in the field; at least twelve conventions met and adopted platforms, though not all of them nominated separate candidates. The People's party was the most significant of the third-party movements, but was soon found to be hopelessly divided into two wings. The Middle-of-the-Road, or Antifusion, Populists met at Cincinnati May 10, and nominated Wharton Barker, of Pennsylvania, for president, and Ignatius Donnelly, of Minnesota, for vice-president. The Fusion Populists, those who wished to act in cooperation with the Democrats, met the same day at Sioux Falls, South Dakota, and nominated Bryan for the presidency by acclamation, thus anticipating the action of the Democratic convention; Charles A. Towne, of Minnesota, for several years the recognized head of the Silver Republicans, was

nominated for vice-president, though an effort had been made to keep this place open until the Democratic convention should meet. The most significant plank in the Populist platform, appearing in the platforms of both wings, was the government ownership of railroads as the remedy for trusts. The platform also denounced the gold-standard act, and declared against imperialism. . . . Bryan was also indorsed by the Silver Republicans [sometimes called Lincoln Republicans], who met in Kansas City the same week, and by the Liberty Congress of the American League of Anti-Imperialists, which met in Indianapolis August 16. A number of other parties put candidates in the field such as the Socialist Labor party . . . [which held a convention in New York City on June 2, and nominated Joseph P. Maloney of Massachusetts and Valentine Remmel of Pennsylvania], the social Democratic party . . . [which met in convention in Chicago, on September 29, and placed Eugene V. Debs of Illinois, in nomination for president and Job Harriman of California for vice president]; the Prohibition party [which held its convention in Chicago, on June 27, and chose John G. Woolley of Chicago (already named by the United Christian party for vice president) to be its candidate for president with Henry B. Metcalf of Rhode Island for vice president] and the United Christian party."—J. H. Latané, *America as a world power, 1897-1907*, pp. 124-125, 130.

DEMOCRATIC CANDIDATE ON "IMPERIALISM."—The issue which ought to have been supreme in the presidential election, because fundamental principles of government and lasting consequences of policy were bound up in it, but which was unhappily confused by prevailing anxieties in the sensitive region of commercial and industrial affairs, is more broadly and adequately defined in the declarations of the two leading candidates, on their formal acceptance of nominations by the Democratic and Republican parties, than it is in the party platforms quoted above. The first to speak was William Jennings Bryan. Responding to the committee which notified him of his nomination, at Indianapolis, on August 8, he devoted the greater part of his remarks to the policy of colonial acquisition on which the government had embarked. The following passages are fairly representative of the view taken by those who condemned what they termed "imperialism," in the undertaking of the government of the American republic to impose its sovereignty upon the people of the Philippine islands, and to hold their country as a "possession": "When the president, supported by a practically unanimous vote of the House and Senate, entered upon a war with Spain for the purpose of aiding the struggling patriots of Cuba, the country, without regard to party, applauded. Although the Democrats realized that the administration would necessarily gain a political advantage from the conduct of a war which in the very nature of the case must soon end in a complete victory, they vied with the Republicans in the support which they gave to the President. When the war was over and the Republican leaders began to suggest the propriety of a colonial policy, opposition at once manifested itself. When the President finally laid before the Senate a treaty which recognized the independence of Cuba, but provided for the cession of the Philippine Islands to the United States, the menace of imperialism became so apparent that many preferred to reject the treaty and risk the ills that might follow rather than take the chance of correcting the

errors of the treaty by the independent action of this country. I was among the number of those who believed it better to ratify the treaty and end the war, release the volunteers, remove the excuse for war expenditures, and then give the Filipinos the independence which might be forced from Spain by a new treaty. . . . The title of Spain being extinguished we were at liberty to deal with the Filipinos according to American principles. The Bacon resolution, introduced a month before hostilities broke out at Manila, promised independence to the Filipinos on the same terms that it was promised to the Cubans. I supported this resolution and believe that its adoption prior to the breaking out of hostilities would have prevented bloodshed, and that its adoption at any subsequent time would have ended hostilities. . . . If the Bacon resolution had been adopted by the Senate and carried out by the President, either at the time of the ratification of the treaty or at any time afterwards, it would have taken the question of imperialism out of politics and left the American people free to deal with their domestic problems. But the resolution was defeated by the vote of the Republican Vice-President, and from that time to this a Republican Congress has refused to take any action whatever in the matter. . . . A colonial policy means that we shall send to the Philippine Islands a few traders, a few taskmasters and a few officeholders and an army large enough to support the authority of a small fraction of the people while they rule the natives. If we have an imperial policy we must have a great standing army as its natural and necessary complement. The spirit which will justify the forcible annexation of the Philippine Islands will justify the seizure of other islands and the domination of other people, and with wars of conquest we can expect a certain, if not rapid, growth of our military establishment. . . . Some argue that American rule in the Philippine Islands will result in the better education of the Filipinos. Be not deceived. If we expect to maintain a colonial policy, we shall not find it to our advantage to educate the people. The educated Filipinos are now in revolt against us, and the most ignorant ones have made the least resistance to our domination. If we are to govern them without their consent and give them no voice in determining the taxes which they must pay, we dare not educate them, lest they learn to read the Declaration of Independence and Constitution of the United States and mock us for our inconsistency. . . . Imperialism would be profitable to the army contractors; it would be profitable to the ship-owners, who would carry live soldiers to the Philippines and bring dead soldiers back; it would be profitable to those who would seize upon the franchises, and it would be profitable to the officials whose salaries would be fixed here and paid over there; but to the farmer, to the laboring man and to the vast majority of those engaged in other occupations it would bring expenditure without return and risk without reward. . . . The argument made by some that it was unfortunate for the nation that it had anything to do with the Philippine Islands, but that the naval victory at Manila made the permanent acquisition of those islands necessary, is also unsound. We won a naval victory at Santiago, but that did not compel us to hold Cuba. The shedding of American blood in the Philippine Islands does not make it imperative that we should retain possession for ever. American blood was shed at San Juan Hill and El Caney, and yet the President has promised the Cubans in-

dependence. The fact that the American flag floats over Manila does not compel us to exercise perpetual sovereignty over the islands; the American flag waves over Havana to-day, but the President has promised to haul it down when the flag of the Cuban Republic is ready to rise in its place. Better a thousand times that our flag in the Orient give way to a flag representing the idea of self-government than that the flag of this Republic should become the flag of an empire. There is an easy, honest, honourable solution of the Philippine question. It is set forth in the Democratic platform, and it is submitted with confidence to the American people. This plan I unreservedly indorse. If elected, I will convene congress in extraordinary session as soon as inaugurated and recommend an immediate declaration of the nation's purpose, first, to establish a stable form of government in the Philippine Islands, just as we are now establishing a stable form of government in Cuba; second, to give independence to the Cubans; third, to protect the Filipinos from outside interference while they work out their destiny, just as we have protected the republics of Central and South America, and are, by the Monroe doctrine, pledged to protect Cuba."

REPUBLICAN CANDIDATE ON THE SAME SUBJECT.—The answer of the party controlling the government to the impeachment of its policy of colonial acquisition, and especially of its conduct in the Philippine islands, was given by President McKinley, in a letter of acceptance, addressed, Sept. 8, 1900, to the committee which gave him formal notice of his renomination by the Republican convention. After rehearsing at considerable length the events which preceded, attended and followed the capture of Manila, he continued: "Would not our adversaries have sent Dewey's fleet to Manila to capture and destroy the Spanish sea power there, or, dispatching it there, would they have withdrawn it after the destruction of the Spanish fleet; and, if the latter, whither would they have directed it to sail? Where could it have gone? What port in the Orient was opened to it? Do our adversaries condemn the expedition under the command of Gen. Merritt to strengthen Dewey in the distant ocean and assist in our triumph over Spain, with which nation we were at war? Was it not our highest duty to strike Spain at every vulnerable point, that the war might be successfully concluded at the earliest practicable moment? And was it not our duty to protect the lives and property of those who came within our control by the fortunes of war? Could we have come away at any time between May 1, 1898, and the conclusion of peace without a stain upon our good name? Could we have come away without dishonor at any time after the ratification of the peace treaty by the Senate of the United States? There has been no time since the destruction of the enemy's fleet when we could or should have left the Philippine Archipelago. After the treaty of peace was ratified, no power but Congress could surrender our sovereignty or alienate a foot of the territory thus acquired. The Congress has not seen fit to do the one or the other, and the President had no authority to do either, if he had been so inclined, which he was not. So long as the sovereignty remains in us it is the duty of the Executive, whoever he may be, to uphold that sovereignty, and if it be attacked to suppress its assailants. Would our political adversaries do less? It has been asserted that there would have been no fighting in the Philippines if Con-

gress had declared its purpose to give independence to the Tagal insurgents. The insurgents did not wait for the action of Congress. They assumed the offensive; they opened fire on our Army. Those who assert our responsibility for the beginning of the conflict have forgotten that, before the treaty was ratified in the Senate, and while it was being debated in that body and while the Bacon resolution was under discussion, on February 4, 1899, the insurgents attacked the American Army, after being previously advised that the American forces were under orders not to fire upon them except in defense. The papers found in the recently captured archives of the insurgents demonstrate that this attack had been carefully planned for weeks before it occurred. This unprovoked assault upon our soldiers at a time when the Senate was deliberating upon the treaty shows that no action on our part, except surrender and abandonment, would have prevented the fighting, and leaves no doubt in any fair mind of where the responsibility rests for the shedding of American blood. With all the exaggerated phrase-making of this electoral contest, we are in danger of being diverted from the real contention. We are in agreement with all of those who supported the war with Spain and also with those who counseled the ratification of the treaty of peace. Upon these two great essential steps there can be no issue and out of these came all of our responsibilities. If others would shirk the obligations imposed by the war and the treaty, we must decline to act further with them, and here the issue was made. It is our purpose to establish in the Philippines a government suitable to the wants and conditions of the inhabitants and to prepare them for self-government when they are ready for it and as rapidly as they are ready for it. That I am aiming to do under my Constitutional authority, and will continue to do until Congress shall determine the political status of the inhabitants of the archipelago. Are our opponents against the treaty? If so, they must be reminded that it could not have been ratified in the Senate but for their assistance. The Senate which ratified the treaty and the Congress which added its sanction by a large approbation comprised Senators and Representatives of the people of all parties. Would our opponents surrender to the insurgents, abandon our sovereignty or cede it to them? If that be not their purpose, then it should be promptly disclaimed, for only evil can result from the hopes raised by our opponents in the minds of the Filipinos, that with their success at the polls in November there will be a withdrawal of our Army and of American sovereignty over the archipelago; the complete independence of the Tagalog people recognized and the powers of government over all the other people of the archipelago conferred upon the Tagalog leaders. The effect of a belief in the minds of the insurgents that this will be done has already prolonged the rebellion and increases the necessity for the continuance of a large army. It is now delaying full peace in the archipelago and the establishment of civil governments and has influenced many of the insurgents against accepting the liberal terms of amnesty offered by Gen. MacArthur under my direction. But for these false hopes, a considerable reduction could have been had in our military establishment in the Philippines, and the realization of a stable government would be already at hand. The American people are asked by our opponents to yield the sovereignty of the United States in the Philippines to a small fraction of the population, a single tribe out of 80 or more inhabiting

the archipelago, a fraction which wantonly attacked the American troops in Manila while in rightful possession under the protocol with Spain, awaiting the ratification of the treaty of peace by the Senate, and which has since been in active, open rebellion against the United States. We are asked to transfer our sovereignty to a small minority in the islands, without consulting the majority, and to abandon the largest portion of the population, which has been loyal to us, to the cruelties of the guerrilla insurgent bands. More than this, we are asked to protect this minority in establishing a government, and to this end repress all opposition of the majority. We are required to set up a stable government in the interest of those who have assailed our sovereignty and fired upon our soldiers, and then maintain it at any cost or sacrifice against its enemies within and against those having ambitious designs from without. This would require an army and navy far larger than is now maintained in the Philippines and still more in excess of what will be necessary with the full recognition of our sovereignty. A military support of authority not our own, as thus proposed, is the very essence of militarism, which our opponents in their platform oppose, but which by their policy would of necessity be established in its most offensive form. . . . No government can so certainly preserve the peace, restore public order, establish law, justice and stable conditions as ours. Neither Congress nor the Executive can establish a stable government in these islands except under our right of sovereignty, our authority and our flag. And this we are doing. We could not do it as a protectorate power so completely or so successfully as we are doing it now. As the sovereign power, we can initiate action and shape means to ends and guide the Filipinos to self-development and self-government. As a protectorate power we could not initiate action, but would be compelled to follow and uphold a people with no capacity yet to go alone. In the one case we can protect both ourselves and the Filipinos from being involved in dangerous complications; in the other we could not protect even the Filipinos until after their trouble had come. Besides, if we cannot establish any government of our own without the consent of the governed, as our opponents contend, then we could not establish a stable government for them or make ours a protectorate without the like consent, and neither the majority of the people or a minority of the people have invited us to assume it. We could not maintain a protectorate even with the consent of the governed without giving provocation for conflicts and possibly costly wars. Our rights in the Philippines are now free from outside interference and will continue so in our present relation. They would not be thus free in any other relation. We will not give up our own to guarantee another sovereignty. Our title is good. Our peace commissioners believed they were receiving a good title when they concluded the treaty. The Executive believed it was a good title when he submitted it to the Senate of the United States for its ratification. The Senate believed it was a good title when they gave it their Constitutional assent, and the Congress seems not to have doubted its completeness when they appropriated \$20,000,000 provided by the treaty. If any who favored its ratification believed it gave us a bad title, they were not sincere. Our title is practically identical with that under which we hold our territory acquired since the beginning of the government, and under which we have exercised full sovereignty

and established government for the inhabitants. It is worthy of note that no one outside of the United States disputes the fulness and integrity of the cession. What then is the real issue on this subject? Whether it is paramount to any other or not, it is whether we shall be responsible for the government of the Philippines with the sovereignty and authority which enable us to guide them to regulated liberty, law, safety and progress, or whether we shall be responsible for the forcible and arbitrary government of a minority without sovereignty and authority on our part and with only the embarrassment of a protectorate which draws us into their troubles without the power of preventing them. There were those who two years ago were rushing us on to war with Spain who are unwilling now to accept its clear consequence, as there are those among us who advocated the ratification of the treaty of peace, but now protest against its obligations. Nations which go to war must be prepared to accept its resultant obligations, and when they make treaties must keep them. Those who profess to distrust the liberal and honorable purposes of the Administration in its treatment of the Philippines are not justified. Imperialism has no place in its creed or conduct. Freedom is a rock upon which the Republican party was builded and now rests. Liberty is the great Republican doctrine for which the people went to war and for which 1,000,000 lives were offered and billions of dollars expended to make it a lawful legacy of all without the consent of master or slave. There is a strain of ill-conceived hypocrisy in the anxiety to extend the Constitutional guarantees to the people of the Philippines while their nullification is openly advocated at home. Our opponents may distrust themselves, but they have no right to discredit the good faith and patriotism of the majority of the people, who are opposing them. . . . Empire has been expelled from Porto Rico and the Philippines by American freemen. The flag of the Republic now floats over these islands as an emblem of rightful sovereignty. Will the Republic stay and dispense to their inhabitants the blessings of liberty, education and free institutions, or steal away, leaving them to anarchy or imperialism? The American question is between duty and desertion—the American verdict will be for duty and against desertion, for the Republic against both anarchy and imperialism."

The Republicans reelected McKinley with 292 electoral and 7,207,386 popular votes; "the Democrats got 155 electoral and 6,358,076 popular votes; the Prohibitionists got 207,174 votes; the Social Democrats 94,173; the 'Middle-of-the-Road' party 49,787; the Socialist-Labor 33,319; the Union Reform, 5,968; and the United Christian 1,059 votes. The votes of the People's party and the Silver Republicans are included in the Democratic total."—W. P. Johnson, *History of Republican party: What it has stood for and what it stands for today*, p. 78.

1900 (June).—Immigration for the year ended June 30.—"The Commissioner-General of Immigration, in the annual report of the operations of his Bureau for the fiscal year ended June 30, 1900, submits tabulated statements showing the arrival in this country during that period of 448,572 alien immigrants, 425,372 through ports of the United States and 23,200 through Canada. Of these 304,148 were males and 144,424 females; 54,624 were under 14 years of age, 370,382 were from 14 to 45 years old, and 23,566 were 45 and over. As to the literacy of persons 14 years of age and over, there were 93,576 who could neither read nor write, and 2,097 who could read but were unable

to write; 54,288 brought each \$30 or over, and 271,821 showed sums less than \$30, the total amounts displayed to inspectors aggregating \$6,657,530. There were returned to their own countries within one year after landing 356, and hospital relief was rendered during the year to 2,417. The total debarred, or refused a landing at the ports, were 4,246, as compared with 3,798 last year. Of these, 1 was excluded for idiocy, 32 for insanity, 2,974 as paupers or persons likely to become public charges, 393 on account of disease, 4 as convicts, 2 as assisted immigrants, 833 as contract laborers, and 7 women upon the ground that they had been imported for immoral purposes. In addition to the foregoing, there were excluded at the Mexican and Canadian borders a total of 1,616 aliens. It appears that the Croatian and Slovenian races sent an increase of 99 per cent over those of the same races who came last year; the Hebrew, an increase of 62 per cent; the South Italian (including Sicilian), 28 per cent; the Japanese, 271 per cent; the Finnish, 106 per cent; the Magyar, 181 per cent; the Polish, 64 per cent; the Scandinavian, 41 per cent; the Slovak, 84 per cent. These nine races, of the total of forty-one races represented by immigration, furnished nearly as many immigrants as the total arrivals for the last year, or 310,444, and their aggregate increase represented 85 per cent of the total increase shown for the year. The total immigration reported, 448,572, is in excess of that for the preceding year, 311,715, by 136,857, or 43.9 per cent. As to countries of origin, 424,700 came from European, 17,946 from Asiatic, 30 from African, and 5,896 from all other sources. The Commissioner-General points out that in addition to the 448,572 immigrants there arrived 65,635 other alien passengers, who, he contends, should be included in conformity to law with those classified as immigrants."—*United States, Secretary of the Treasury, Annual Report, 1900, p. 37.*—See also IMMIGRATION AND EMIGRATION: United States: 1870-1910.

1900 (June).—Revenues and expenditures of the government for the fiscal year ended June 30, 1900.—The revenues of the government from all sources (by warrants) for the fiscal year ended June 30, 1900, were:

From internal revenue	\$295,327,926.76
From customs	233,164,871.16
From profits on coinage, bullion deposits, etc.	9,992,374.09
From District of Columbia	4,008,722.77
From fees—consular, letters patent, and land	3,291,716.68
From sales of public lands	2,836,882.98
From tax on national banks	1,998,554.00
From navy pension, navy hospital, clothing, and deposit funds	1,621,558.52
From sales of Indian lands	1,384,663.49
From payment of interest by Pacific railroads	1,173,466.43
From miscellaneous	997,375.68
From sales of Government property	779,522.78
From customs fees, fines, penalties, etc..	675,706.95
From immigrant fund	537,404.81
From deposits for surveying public lands	273,247.19
From sales of ordnance material	257,265.56
From Soldiers' Home, permanent fund..	247,926.62
From tax on seal skins, and rent of seal islands	225,676.47
From license fees, Territory of Alaska..	157,234.94
From trust funds, Department of State.	152,794.56
From depredations on public lands	76,307.58
From Spanish indemnity	57,000.00
From sales of lands and buildings	3,842,737.68
From part payment Central Pacific Railroad indebtedness	3,338,016.49
From dividend received for account of Kansas Pacific Railway	821,897.70
From Postal Service	102,354,579.29
Total receipts	669,595,431.18

The expenditures for the same period were:

For the civil establishment, including foreign intercourse, public buildings, collecting the revenues, District of Columbia, and other miscellaneous expenses	\$98,542,411.37
For the military establishment, including rivers and harbors, forts, arsenals, sea-coast defenses, and expenses of the war with Spain and in the Philippines	134,774,767.78
For the naval establishment, including construction of new vessels, machinery, armament, equipment, improvement at navy-yards, and expenses of the war with Spain and in the Philippines ...	55,953,977.72
For Indian Service	10,175,106.76
For pensions	140,877,316.02
For interest on the public debt	40,160,333.27
For deficiency in postal revenues	7,230,778.79
For Postal Service	102,354,579.29
Total expenditures	590,068,371.00
Showing a surplus of	79,527,060.18

"As compared with the fiscal year 1899, the receipts for 1900 increased \$58,613,426.83. . . . There was a decrease of \$117,358,388.14 in expenditures."—*United States, Secretary of the Treasury, Annual Report on the State of the Finances, 1900, pp. 7-9.*

1900 (June-August).—John Hay, as secretary of state.—Attitude toward Boer War.—"The winter and spring of 1900 crowded new business upon

JOHN HAY

[the secretary of state] John Hay. The situation in China, which had grown more and more angry since the Germans pounced upon Kiao-chau in 1897, now threatened an outburst. The Boer War in South Africa indirectly affected American politics by giving Irish and German-Americans an excuse for heckling England at a time when the McKinley Administration was trying to arrange with the English Government a friendly settlement of long-standing disputes. The insurrection of the Filipinos; the status of Cuba; the excitement of the Central American Republics at the prospect of an Isthmian canal; secret negotiations for the purchase of the Danish West Indies, and the campaign for the nomination of presidential candidates,

were among the business on the Secretary's docket. . . . Uninformed historical writers . . . [have] received an old rumor to the effect that the United States made, in Hay's time, a secret alliance with England. . . . [This he denied in a letter to Senator McMillan dated July 3, 1900, in which he says]: 'The Administration has observed the laws of neutrality strictly. . . . You ask me if there is a secret alliance between Great Britain and the United States. You know, of course, that there can be no secret alliance between this country and any other. The Senate of the United States must be a party to it, if any such exists. None exists. None has been suggested on either side. None has been thought of.' [In an earlier letter, written to J. W. Foster on June 23, 1900, he said]: 'Germany we could probably get on our side by sufficient concessions, and perhaps, with England, Germany, and Japan, we might manage to save our skins. . . . We had great trouble to prevent the convention from declaring in favor of the Boers and of the annexation of Canada. Every morning I receive letters cursing me for doing nothing, and others cursing me for being "the tool of England against our good friend Russia." All I have ever done with England is to have wrung great concessions out of her with no compensation.'—W. R. Thayer, *Life and letters of John Hay*, v. 2, pp. 231-232, 234.

1900 (June-December).—Coöperation with the powers in China in the Boxer revolt.—Relief expedition under General Chaffee.—Operations of troops of the powers. See CHINA: 1900.

1900 (July).—Appeal of citizens of Manila to the Congress of the United States for independence. See PHILIPPINE ISLANDS: 1900.

1900 (September).—Election of constitutional convention in Cuba. See CUBA: 1900 (June-November).

1900 (December).—Amendment and ratification of the Hay-Pauncefote convention. See PANAMA CANAL: 1889-1903.

1900 (December).—Celebration of the 100th anniversary of the removal of the capital to Washington. See WASHINGTON, D. C.: 1900.

1900 (December).—Exports for the calendar year exceeding those of any other nation.—A press dispatch from Washington, dated February 21, 1901, announced the fact that the "complete figures for the calendar year 1900, when compared with those of other nations, show that American exports of domestic products are greater than those of any other country. The total exports of domestic merchandise from the United States in the calendar year 1900 were \$1,453,013,659; those from the United Kingdom, which has heretofore led in the race for this distinction were \$1,418,348,000, and those from Germany \$1,050,611,000. Additional interest is given to the first rank which the United States now holds as an exporting nation by the fact that a quarter of a century ago she stood fourth in that list. In 1875 the domestic exports of the United States were \$497,263,737; those of Germany, \$607,096,000; those of France, \$747,489,000, and those of the United Kingdom, \$1,087,497,000. To-day the United States stands at the head of the list, the United Kingdom second, Germany third and France fourth, with the figures as follows: United States, \$1,453,013,659; United Kingdom, \$1,418,348,000; Germany, \$1,050,611,000; France, \$787,060,000. All of these figures, it should be remembered, relate to the exports of domestic products. Thus in the quarter century the United States has increased her exports from \$497,263,737 to \$1,453,013,659, or 192

per cent; Germany, from \$607,096,000 to \$1,050,611,000, or 73 per cent; the United Kingdom, from \$1,087,497,000 to \$1,418,348,000, or 34 per cent, and France, from \$747,489,000 to \$787,060,000, or 5 per cent."

1900-1901.—Questions relating to the political status of the new possessions of the nation submitted to the Supreme Court.—Decisions.—Questions of surpassing importance, touching the political status of the new possessions which the nation had acquired from Spain, the relations of their inhabitants to the government and laws of the United States, the source and nature of the authority to be exercised over them by the Congress of the United States, whether exercised under the constitution of the United States or independently of it, were taken, in December and January (1900-1901), into the Supreme Court for authoritative decision, by appeals to that tribunal made in several suits which had arisen from disputed exactions of duty on importations from Porto Rico and the Philippine islands. Argument before the Supreme Court was begun on December 17, 1900, on two cases thus stated in the brief submitted for the government: "On June 6, 1899, Goetze imported from Porto Rico into the port of New York a quantity of leaf or filler tobacco, upon which duty was assessed at 35 cents per pound as filler tobacco not specially provided for, in accordance with the provisions of paragraph 213 of the tariff act of 1897, commonly known as the 'Dingley Act.' The importer protested, claiming that the merchandise was not subject to duty, because Porto Rico at the time of the importation was not a foreign country and because, therefore, the imposition of duties on goods brought from a place within the territory of the United States into a port of the United States is not lawful and valid under the Constitution. The Board of General Appraisers sustained the assessment of duty imposed by the collector upon the merchandise in question, and thereupon the importer appealed to the United States circuit court for the southern district of New York, by which court the decision of the Board of General Appraisers was affirmed in an opinion rendered by District Judge Townsend. From the judgment of the circuit court this appeal was taken. Porto Rico was partially occupied by the war forces of the United States during the months of July and August, 1898. By the protocol of August 12, 1898, between the United States and Spain, Spain agreed to cede Porto Rico to the United States and immediately evacuate. The evacuation was effected and full possession of the island assumed by the United States prior to January 1, 1899. From that date until the 1st of May, 1900, Porto Rico was occupied and governed by the military forces of the United States, under the command of the President, as conquered territory, under the law of belligerent right. The treaty of Paris, made in pursuance of the protocol, was signed December 10, 1898, ratified by the Senate February 6, 1899, and ratifications exchanged April 11, 1899. So that the importation in this case was subsequent to the ratification of the treaty, but prior to the establishment of a civil government in the island under act of Congress. It does not appear that the importers are citizens of the United States or of Porto Rico, nor whether or not the imported tobacco was the product of Porto Rico. In the case of Fourteen Diamond Rings, it appears that the claimant, Pepke, is a citizen of the United States and served as a United States soldier in the Island of Luzon; that while there he

purchased or acquired the rings in question and brought them into the United States without paying duty thereon some time in the year 1899, between July 31 and September 25. The rings were seized, on May 18, 1900, at Chicago, by a United States customs officer as merchandise liable to duty which should have been invoiced, and was fraudulently imported and brought into the United States contrary to law. An information for the forfeiture of the rings was filed on behalf of the Government, June 1, 1900, to which the claimant pleaded. Setting up that at the time he acquired said property Luzon was a part of the territory of the United States and that the seizure of said goods was contrary to the claimant's right as a citizen of the United States under the Constitution, and particularly under section 2, Article IV, thereof, and he insisted that under Article I, section 8, Congress is required in laying and collecting taxes to see to it that all taxes and duties shall be uniform throughout the United States. To this plea the United States demurred, and upon hearing of the demurrer, the district court gave judgment of forfeiture for the Government. This judgment the claimant has removed into this court by a writ of error." The contention of the government as set forth in the same brief, and the main contention of the appellants in the case, against which the argument for the government was directed, were partly as follows: "The Tariff Act of 1897 declares that 'there shall be levied, collected and paid upon all articles imported from foreign countries and mentioned in the schedules herein contained, the rates of duty which are by the schedules and paragraphs respectively prescribed.' (30 Stat., 151.) The Government contends, and the circuit court so held, that this act applied to merchandise imported from Porto Rico and the Philippine Islands after their cession to the United States exactly as it did before; that within the meaning of the act these countries are to be regarded as foreign, belonging to but not forming in a domestic sense a part of the United States. That it is within the constitutional province of the treaty-making power to accept the cession of foreign territory upon such terms, conditions, and limitations as to its internal status as may best subserve the interests of the United States, and it is not necessary to invest such territory with the full status of an integral part of the Union. That this is one of the ordinary and necessary sovereign powers of an independent nation, and nothing in the Federal Constitution or in the fundamental principles that underlie our Republic denies to the nation a right to the full exercise of this usual and common sovereign right. That the treaty-making power—the President and the Senate—as evidenced by the language of the treaty of Paris, did not intend to make Porto Rico and the Philippine Islands integral parts of the United States, but intended, in several particulars, to reserve their final status for adjustment by Congress, at the same time making peculiar and special differential provisions for variations and exceptions in customs and port regulations as to Spain and Spanish goods and subjects which are inconsistent with the intention that the ceded countries became upon the ratification of the treaty a part of the United States in all respects and in the fullest sense. The Government contends that the term, 'foreign countries' in the act of 1897 is to be regarded as having been understood by Congress to be subject to the rule of interpretation of the phrase

given by the Supreme Court in the case of *Fleming v. Page*, where it was held that under our revenue laws every port is regarded as a foreign one until expressly established as domestic under the authority and control of the statutes of the United States. That the clause of the Constitution which declares that duties, imposts, and excises shall be uniform throughout the United States does not apply to nor govern these cases, because the term 'United States,' as there used, means only the territory comprised within the several States of the Union, and was intended only for their benefit and protection, and not for the benefit or protection of outside territory belonging to the nation; that in the latter sense duties on imports from these islands are uniform throughout the United States, because they are uniformly imposed at every port in the United States, so that there is no preference given to the ports of one State over those of another, nor is any inequality between the several States created. That the right to bring merchandise into the United States is a right entirely within the regulation of Congress; such right in no wise differs as to either citizens or aliens. Citizenship carries with it no special or peculiar privileges at the custom-house. The American, the Spaniard, the Porto Rican, are treated alike. The basis of the customs laws is not ownership, but (1) the geographical origin of the shipment, and (2) the nature of the goods. The duty is imposed against merchandise, not upon the importer. The Government contends, therefore, that in view of the fact that tariff laws are 'in rem,' there is no principle of justice, much less of constitutional restriction, which forbids Congress from taxing in this way the merchandise of out-lying possessions of the United States when brought into the ports of the Union. That the limitations of the Constitution as to customs, etc., were intended to secure equality between the States in the geographical sense, and not to forbid Congress from exercising the ordinary sovereign power of taxation as to the products of other sections of country not included within the geographical boundaries of the States; for which we rely upon the opinion of this court in *Knowlton v. Moore*, as decisive and conclusive. If the foregoing propositions are sound, then it is established (1) that the tariff act of 1897 was intended by Congress to classify as foreign all countries not a part of or belonging to the United States at the time of its passage, and the subsequent cession of the Spanish islands to the United States did not operate to admit imports from those islands free of duty, under that law; (2) that the tariff act so construed and enforced violates no constitutional rule of uniformity. And the case of the plaintiffs in error would seem on these grounds to have no legal foundation. The Government might well be content to rest its argument upon these propositions. But counsel for the plaintiffs in error, in the court below as well as in this court, have gone far beyond these limits, and have challenged and denied the constitutionality of certain provisions of the treaty of Paris, contending that the cession of Porto Rico and the Philippine Archipelago effected a complete incorporation of those countries with the United States, so that they have become a part of the United States in the fullest and largest sense, not only internationally, but organically, so completely, indeed, that no difference or distinction can be made by law between imports from those countries and imports from one of the States of the Union. They

insist that there can be no limited or qualified acquisition of territory by this nation; that when Porto Rico was ceded to the United States it came at once under the obligations of the Constitution and became entitled to the privileges of the Constitution, its inhabitants citizens of the United States, and its territory a part of the United States. They argue, therefore, that the clause of the treaty which says that 'the civil rights and political status of the inhabitants shall be determined by the Congress,' in so far as it is intended to defer the full enjoyment of the rights and privileges of citizenship under the Constitution until Congress shall bestow them hereafter upon the inhabitants, is 'ultra vires' and void, or at least superfluous and ineffective, because the Constitution 'ex proprio vigore' extends at once, as an automatic operation, to all territory ceded to this Government, and no treaty or treaty-making power can hinder or even suspend it. . . . 'In legislating for the Territories Congress would doubtless be subject to those fundamental limitations in favor of personal rights which are formulated in the Constitution and its amendments, but these limitations would exist rather by inference and the general spirit of the Constitution than by any express and direct application of its provisions.'—*In the Supreme Court of the United States, October term, 1900, John H. Goetze, Appellant, &c.: Brief for the United States.*

On Jan. 8, 1901, four other causes, involving substantially the same questions, came before the Supreme Court, and, by order of the court, were consolidated, to be dealt with virtually as one case. The titles of the cases were respectively as follows: Elias S. A. De Lima et al., plaintiffs in error, agt. George R. Bidwell; Samuel B. Downes, et al., plaintiffs in error, agt. George R. Bidwell; Henry W. Dooley, et al., plaintiffs in error, agt. the United States; Carlos Armstrong, appellant, agt. the United States, and George W. Crossmon et al., appellants, agt. the United States. For the plaintiffs, in the case of Henry W. Dooley et al., the Hon. John G. Carlisle made an oral argument, in which he said: "What is the Constitution? In the first place it is not only the supreme law of the States composing the union, but the supreme law of the land; supreme over every branch and department of the Government; supreme over every one exercising authority under the Government; supreme over every other law or order or regulation, and supreme over all the people, wherever they may be, within its jurisdiction, and what we claim is, that so long as this Constitution exists absolute and arbitrary power over the lives, liberties, or property of the people can be exercised nowhere in this Republic. It is now argued that it is supreme only within the boundaries of the several States, unless Congress extends it to the Territories; that it limits the powers of Congress only when legislating for the geographical area embraced in the States; that the inhabitants of the States are the only people who can, as a matter of right, claim the benefit of its guarantees and prohibitions for the protection even of those personal and property rights which have for ages been secured by the common law of England, and that all other people within the jurisdiction of the United States are dependent for the protection of their civil rights substantially upon the will of Congress. The question whether the Constitution should be declared to be the supreme law of the whole land, or only the supreme law of the respective States and their

inhabitants or citizens, was presented in the Federal Convention of 1787, and was finally disposed of by the adoption of the clause as it now stands in the Constitution, which declares it to be the supreme law of the land. It is true that the Constitution was ordained and established by the people of the States, but it created a National Government for national purposes, not a mere league or compact between the States, and jurisdiction was conferred upon that Government over the whole national domain, whatever its boundaries might be. It is not true that the Government was established only for the States, their inhabitants or citizens, but if it were true, then it could exercise no power outside of the States, and this court would have to put a new construction upon that provision which authorizes Congress to dispose of and make all needful rules and regulations respecting the territory, or other property, belonging to the United States. The necessary construction of that clause would be that it conferred power only to dispose of land or other property, and to make necessary rules and regulations respecting land or other property belonging to the United States; that is, belonging to the several States composing the Union. It would confer no power whatever to govern the people outside of the States."—*Supreme Court of the United States, October term, 1900, Henry W. Dooley [et al.] vs. the United States: Argument of J. G. Carlisle.*—On one point the argument of Charles H. Aldrich, attorney for the plaintiff in the case of the "Fourteen Diamond Rings," was as follows: In "the relation of the United States to other nations, our government is a sovereign state, and has the right, and as such 'free and independent State has full power, to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do.' In this relation it is correct, as I conceive, to speak of the United States of America as a unit and use a singular verb. It is such unit and has this power because there was created a government upon which the people conferred these powers. If war is declared it must be under the constitution; if peace is concluded it is in the exercise of a constitutional power; if commerce is established it is because Congress under the constitution was given power to regulate commerce; if alliances are contracted it can only be done under the constitution. In short, the sovereign nation exists through the adoption of the constitution, and its powers are derived from that instrument and must be found, as this court has often declared, in the language thereof or by necessary implication therefrom. We are in the Philippines and Porto Rico and can be rightfully there only in the exercise of some of these enumerated powers, as in the language of the tenth amendment, 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.' This amendment designates the constitution as the source of the power of the United States and excludes the idea of power free from constitutional restraint derived by implication from powers delegated by the constitution."—*Supreme Court of the United States, October term, 1900: C. H. Aldrich, Argument in reply.*—"Did the Constitution extend of its own force over newly acquired territory, or was an act of Congress necessary to extend it there? When Congress did act for such territory, was it bound by the limitations imposed by the Con-

stitution upon its powers, or were these limitations confined to acts operative within the territory of the states? Was an extension of the constitution to new territory beyond the repeal of later Congresses? The McKinley administration took the view that the Constitution and laws of the United States did not apply to newly acquired territory unless extended there by Congress. Consequently the collection of duties on goods imported from Porto Rico and the Philippines was continued. A number of cases involving these questions in their various phases, and known as the 'Insular Cases,' were carried to the Supreme Court of the United States in the autumn of 1900, and decided May 27, 1901. The first case was that of *De Lima vs. Bidwell*, to recover duties paid under protest on sugars imported from Porto Rico into the United States after the ratification of the treaty but before the passage of the Foraker Act. The court held that the duties were wrongfully exacted, on the ground that the island of Porto Rico, after its cession to the United States, though it had not formally been embraced within the customs union of the States, was no longer 'foreign country' within the meaning of the Dingley law providing for duties upon articles 'imported from foreign countries.' The court affirmed the right of the United States to acquire territory by treaty, and declared that such territory was acquired as absolutely as if annexed by act of Congress; that a country could not be domestic for one purpose and foreign for another. The opinion of the court was delivered by Justice Brown, and concurred in by Chief-Justice Fuller and Justices Harlan, Brewer, and Peckham. From this opinion Justices Gray, McKenna, Shiras, and White dissented. Justice McKenna delivered a dissenting opinion of some length, holding that Porto Rico occupied a relation to the United States between that of foreign country and domestic territory; that the mere act of cession did not extend the Constitution and laws of the United States over the ceded territory, but that to accomplish this there must be an express provision in the treaty or a subsequent act of Congress; that the products of Porto Rico were, therefore, subject to the Dingley tariff duties. In the case of the 'Fourteen Diamond Rings,' decided December 2, 1901, the same questions were raised as to the status of the Philippine Islands, and the same conclusion reached—namely, that, as the Philippine Islands had ceased to be foreign territory, importations from the Philippines to the United States were not subject to the Dingley law. The decision in the case of *De Lima vs. Bidwell* simply held that duties could not be collected under the Dingley act on goods imported from Porto Rico into the United States. It did not settle the question as to whether Congress had the constitutional right to impose duties on importations from Porto Rico. This issue was adjudicated upon, however, at the same term of the court in the case of *Downes vs. Bidwell*, decided May 27, 1901. In this case the court held that the island of Porto Rico, by the treaty of cession, became a territory appurtenant and belonging to the United States, but not a part of the United States within the revenue clauses of the Constitution, such as that requiring duties, imposts, and excises to be uniform throughout the United States; and further, that the imposition of duties upon imports from Porto Rico by the act of Congress known as the Foraker act was a constitutional exercise of the power of Congress. Justice Brown delivered the decision

in this case, and Justices White, Shiras, McKenna, and Gray concurred in the judgment; but not one of them agreed with Justice Brown in the process of reasoning by which he reached his conclusion. Justice Brown's argument was as follows: 'The Constitution was created by the people of the United States, as a nation of States, to be governed solely by representatives of the States; and even the provision relied upon here, that all duties, imposts, and excises shall be uniform throughout the United States, is explained by subsequent provisions of the Constitution that "no tax or duty shall be laid on articles exported from any States," and "no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another, nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another.'" In short, the Constitution deals with States, their people, and their representatives.' The natural and logical conclusion from this argument would seem to be that the territories are entirely without the sphere of the Constitution, but Justice Brown did not go so far; he drew a distinction between certain rights peculiar to our system of jurisprudence guaranteed to citizens of the *states*, and certain natural rights the violation of which is prohibited in general terms in the Constitution. He disclaimed, therefore, 'an intention to hold that the inhabitants of these territories are subject to an unrestrained power on the part of Congress to deal with them upon the theory that they have no rights which it is bound to protect.' Justice White reached the same conclusion, but based it on different grounds. In an assenting opinion, with which Justices Shiras and McKenna agreed, he laid down three propositions: that the United States has the right to acquire territory; that the Constitution confers upon Congress the right to govern such territory; and that in the exercise of this right Congress is bound by the provisions of the Constitution so far as they are applicable. 'In the case of the territories, as in every other instance, when a provision of the Constitution is involved, the question which arises is, not whether the Constitution is operative, for that is self-evident, but whether the provision relied on is applicable.' He held, however, that Congress derives its authority to levy local taxes within the territories, not from the general grant of power to 'lay and collect taxes, duties, imposts, and excises,' but from its right to govern territories; therefore, in exercising the power to tax in the territories, Congress is not bound by the provision requiring uniformity. To the view here advanced by Justice White, the objection might be raised that duties collected at the ports of the United States are not local taxes. But, he continues, 'the power just referred to, as well as the qualification or uniformity, restrains Congress from imposing an impost duty on goods coming into the United States from a territory which has been incorporated into and forms a part of United States.' We come back to the question, then, what was the status of Porto Rico? Justice White held that it had not been fully incorporated, 'that the treaty-making power cannot incorporate territory into the United States without the express or implied consent of Congress, that it may insert in a treaty express provisions against immediate incorporation, and that on the other hand, when it has expressed in the treaty the conditions favorable to incorporation, they will, if the treaty be not repudiated by Congress, have the force of the law of the land, and therefore by the fulfill-

ment of such conditions cause incorporation to result. It must follow, therefore, that where a treaty contains no conditions for incorporation, and, above all, where it not only has no such conditions, but expressly provides to the contrary, that incorporation does not arise until in the wisdom of Congress it is deemed that the acquired territory has reached that state where it is proper that it should enter into and form a part of the American family.' Justice Gray concurred in the judgment and in substance agreed with the opinion of Justice White, but prepared an opinion of his own."—J. H. 1901 (January).—Apportionment of representatives under the twelfth census.—Question of Fourteenth Amendment.—Restrictions of elective franchise in the states.—Section 3 of Article I of the Constitution requires that "Representatives . . . shall be apportioned among the several States which may be included within this Union according to their respective numbers. . . . The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years. . . . The number of Representatives shall not exceed one for every 30,000; but each State shall have at least one." The first meeting of Congress was in 1789; the required first census of the United States was taken in 1790, and, in obedience to the constitutional requirement, the enumeration has been repeated within the closing year of every decade since, to supply the basis for a new apportionment of representatives among the states. The twelfth census, taken in 1900, called for such new distribution, and action upon it was taken in Congress in January, 1901. As the section quoted above stood in the constitution until 1868, it contained a further clause, inserted as one of the original compromises made between the slaveholding and the free states, requiring that the determination of numbers to be represented in the several states should be made "by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons." This original clause of the Constitution was superseded by the Fourteenth Amendment, adopted in 1868, which introduced this new provision, in its second section: "Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, except Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State." To many persons

it seemed to be very clear that this provision of the amended Constitution required account to be taken of the qualifications by which a number of states have abridged the suffrage, especially where done for the understood purpose of disfranchising colored citizens (see LOUISIANA: 1898; NORTH CAROLINA: 1900; MARYLAND: 1867-1914; MISSISSIPPI: 1890-1892; SOUTH CAROLINA: 1896), and that Congress was left with no discretion to do otherwise. Those holding this view in the House of Representatives gave support to the following resolution, introduced by Representative Olmstead, of Pennsylvania:

Whereas the continued enjoyment of full representation in the House by any State which has, for reasons other than participation in rebellion or other crime, denied to any of the male inhabitants thereof, being 21 years of age and citizens of the United States, the right to vote for Representatives in Congress, Presidential electors, and other specified officers, is in direct violation of the fourteenth amendment to the Constitution of the United States, which declares that in such case "the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State," and is an invasion of the rights and dignity of this House and of its members, and an infringement upon the rights and privileges in this House of other States and their representatives; and Whereas the States of Massachusetts, Maine, Connecticut, Delaware, California, Louisiana, Mississippi, North Carolina, South Carolina, Wyoming, Oregon, and other States do, by the provisions of the constitutions and statutes of said States, and for reasons other than participation in rebellion or other crime, deny the right to vote for members of Congress and Presidential electors, as well as the executive and judicial officers of such States and members of the legislatures, thereof, to male inhabitants 21 years of age and over and citizens of the United States, and such denial in certain of the said States extends to more than one-half of those who prior to the last apportionment of representation were entitled to vote in such States; and Whereas in order that the apportionment of membership of the House of Representatives may be determined in a constitutional manner: Therefore, be it Resolved by the House of Representatives, That the Director of the Census is hereby directed to furnish this House, at the earliest possible moment, the following information: First. The total number of male citizens of the United States over 21 years of age in each of the several States of the Union. Second. The total number of male citizens of the United States over 21 years of age, who by reason of State constitutional limitations or State legislation, are denied the right of suffrage, whether such denial exists on account of illiteracy, on account of pauperism, on account of polygamy, or on account of property qualifications, or for any other reason. Resolved further, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a select committee of five members from the membership of the Census Committee of the House of Representatives, who shall investigate the question of the alleged abridgment of the elective franchise for any of the causes mentioned in all the States of the Union in which constitutional or legislative restrictions on the right of suffrage are claimed to exist, and that such committee report its

findings within twenty days from the date of the adoption of this resolution to the said Census Committee, and that within one week after the said report shall have been received by the Census Committee the Census Committee shall return a bill to the House of Representatives providing for the apportionment of the membership of the House of Representatives based on the provisions of the fourteenth amendment to the Constitution of the United States.

Republicans, hardly less than Democrats, in Congress and outside, were adverse to raising what could not fail to be a burning sectional issue, and grounds for ignoring the constitutional mandate were sought with considerable eagerness on both sides. Strict obedience to the requirement of the constitutional provision was claimed to be impracticable, at least within the time available for proceedings connected with the present apportionment of representatives. But the advocates of obedience to the constitution, supporting the resolutions of Representative Olmstead, planted their argument on the very facts brought against it, as demonstrating the need of measures to check a growing tendency in the country to restrict the elective franchise. Said Representative Shattuck, of Ohio: "We find that in 1870 there were three States that had abridged their electorates—California, Connecticut, and Massachusetts. In these three States there was a constitutional provision for an educational qualification, which disfranchised a certain percentage of the electorate—namely, the illiterates. But, in those States, the percentage of illiteracy is very light, averaging about 6 per cent. The basis of representation would hardly have been affected in those States had the fourteenth amendment been conformed with. An examination into the election laws of the various States reveals an astonishing tendency at this time to abridge their electorates. When the Congress which adopted the existing apportionment discussed the matter ten years ago but three States had abridged their electorate by action of the State, and in these the percentage of disfranchised males was but 6 per cent. But since that time similar policies have been adopted by other States, and to-day we face the fact that ten of the forty-five States of this Union have abridged their electorates, and that in these the percentage of males 21 years of age and over, disfranchised, average over 20 per cent. The constitutions of several other States permit such an abridgment. Besides, there are other States preparing to adopt these policies and to disfranchise thousands of men who to-day hold the right of franchise. In view of this remarkable tendency it is inconceivable that Congress can longer permit the fourteenth amendment to remain a dead letter, and to pass a bill making an apportionment based solely upon the population and neglecting the proviso which applies to all States which have abridged their electorate. We will not review the past by any discussion of the question as to whether the provisions of the fourteenth amendment should have been made effective when the last apportionment was made ten years ago. We find to-day conditions existing which make its enforcement imperative. I do not propose to discuss at this time whether the reasons given for these abridgments by the people of the various States are valid or not. . . . I am simply pointing out the conditions as they exist; I am simply pointing out that the time has come when the tendency of the States

to abridge their electorates has grown to such proportions as to demand that this Congress shall proceed in a constitutional manner in making the new apportionment. I do not say that States have not the right to establish educational qualifications for their electors, but I do maintain that when they have done so they must pay the penalty prescribed in the Constitution, and have their representation abridged proportionately. I do not say that we shall punish only Louisiana; I do not say that we shall punish only Massachusetts; I do not say that we shall punish only California; but I do say and insist, as the representative of a State in which every male member 21 years of age and over is guaranteed the sacred right of franchise, that there is a constitutional remedy prescribed for their acts, and I do demand that that remedy be applied."—*Congressional Record*, Jan. 4-5, 1901, pp. 618-620, 662-665.—The resolutions of Representative Olmstead were not adopted. The reapportionment was made on the basis of the totals of the census returns, with no reckoning of any denials of the right to vote. The following is the text of the act, as passed and approved January 16:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the third day of March, nineteen hundred and three, the House of Representatives shall be composed of three hundred and eighty-six members [the existing number being 357] to be apportioned among the several States as follows: Alabama, nine; Arkansas, seven; California, eight; Colorado, three; Connecticut, five; Delaware, one; Florida, three; Georgia, eleven; Idaho, one; Illinois, twenty-five; Indiana, thirteen; Iowa, eleven; Kansas, eight; Kentucky, eleven; Louisiana, seven; Maine, four; Maryland, six; Massachusetts, fourteen; Michigan, twelve; Minnesota, nine; Mississippi, eight; Missouri, sixteen; Montana, one; Nebraska, six; Nevada, one; New Hampshire, two; New Jersey, ten; New York, thirty-seven; North Carolina, ten; North Dakota, two; Ohio, twenty-one; Oregon, two; Pennsylvania, thirty-two; Rhode Island, two; South Carolina, seven; South Dakota, two; Tennessee, ten; Texas, sixteen; Utah, one; Vermont, two; Virginia, ten; Washington, three; West Virginia, five; Wisconsin, eleven; and Wyoming, one.

Sect. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number three hundred and eighty-six.

Sect. 3. That in each State entitled under this apportionment, the number to which such State may be entitled in the Fifty-eighth and each subsequent Congress shall be elected by districts composed of contiguous and compact territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of the Representatives to which such State may be entitled in Congress, no one district electing more than one Representative.

Sect. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the legislature of such State in the manner herein prescribed, shall redistrict such State; and if there be no increase in the number

of Representatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be redistricted as herein prescribed by the legislature of said State; and if the number hereby provided for shall in any State be less than it was before the change hereby made, then the whole number to such State hereby provided for shall be elected at large, unless the legislatures of said States have provided or shall otherwise provide before the time fixed by law for the next election of Representatives therein.

Sect. 5. That all Acts and parts of Acts inconsistent with this Act are hereby repealed.

No existing State quota was reduced by the new apportionment, and the gains were as follows: Illinois, New York and Texas, 3; Minnesota, New Jersey and Pennsylvania, 2; Arkansas, California, Colorado, Connecticut, Florida, Louisiana, Massachusetts, Mississippi, Missouri, North Carolina, North Dakota, Washington, West Virginia and Wisconsin, 1. That clause of the third section which requires districts to be "composed of contiguous and compact territory" is intended to be a bar to the partisan trick called "gerrymandering." The vote on the bill in the House (165 against 102) was singularly non-partisan. The minority was said to be composed of exactly the same number of Republicans and Democrats, 51 of each, and in the majority vote there were included 84 Republicans and 81 Democrats. The vote was also non-sectional, except that New England voted almost solidly for the measure. East, South and West the State delegations were almost equally divided.—See also SUFFRAGE, MANHOOD: United States: 1864-1921.

1901 (February).—Act to increase the standing army of the nation to 100,000 men.—In his annual message to Congress, December 3, 1900, the President set forth the military needs of the country, created by its new policy of imperial expansion, and recommended that the permanent army be raised to 100,000 in number, from 45,000 to 60,000 of which would be required in the Philippine islands until their people were made submissive to the authority of the United States. In accord with the executive recommendation, Congress passed "an Act to increase the efficiency of the permanent military establishment of the United States," which became law by the President's signature on February 2, 1901. Its first section provides that "from and after the approval of this Act the Army of the United States, including the existing organizations, shall consist of fifteen regiments of cavalry, a corps of artillery, thirty regiments of infantry, one Lieutenant-General, six major-generals, fifteen brigadier-generals, an Adjutant-General's Department, an Inspector-General's Department, a Judge-Advocate-General's Department, a Quartermaster's Department, a Subsistence Department, a Medical Department, a Pay Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Record and Pension Office, the chaplains, the officers and enlisted men of the Army on the retired list, the professors, corps of cadets, the army detachments and band at the United States Military Academy, Indian scouts as now authorized by law, and such other officers and enlisted men as may hereinafter be provided for." A subsequent section enacts that the total enlisted force of the line of the army shall not exceed at any one time 100,000. Section 28, prescribing the rules of promotion and ap-

pointment, is as follows: "That vacancies in the grade of field officers and captain, created by this Act, in the cavalry, artillery, and infantry shall be filled by promotion according to seniority in each branch, respectively. Vacancies existing after the promotions have been made shall be provided for as follows: A sufficient number shall be reserved in the grade of second lieutenant for the next graduating class of the United States Military Academy. Persons not over forty years of age who shall have at any time served as volunteers subsequent to April twenty-first, eighteen hundred and ninety-eight, may be ordered before board of officers for such examination as may be prescribed by the Secretary of War, and those who establish their fitness before these examining boards may be appointed to the grades of first or second lieutenant in the Regular Army, taking rank in the respective grades according to seniority as determined by length of prior commissioned service; but no person appointed under the provisions of this section shall be placed above another in the same grade with longer commissioned service, and nothing herein contained shall change the relative rank of officers heretofore commissioned in the Regular Army. Enlisted men of the Regular Army or volunteers may be appointed second lieutenants in the Regular Army to vacancies created by this Act, provided that they shall have served one year, under the same conditions now authorized by law for enlisted men of the Regular Army."

Section 36 provides: "That when in his opinion the conditions in the Philippine Islands justify such action the President is authorized to enlist natives of those islands for service in the Army, to be organized as scouts, with such officers as he shall deem necessary for their proper control, or as troops or companies, as authorized by this Act, for the Regular Army. The President is further authorized, in his discretion, to form companies, organized as are companies of the Regular Army, in squadrons or battalions, with officers and non-commissioned officers corresponding to similar organizations in the cavalry and infantry arms. The total number of enlisted men in said native organizations shall not exceed twelve thousand, and the total enlisted force of the line of the Army, together with such native force, shall not exceed at any one time one hundred thousand. . . . When, in the opinion of the President, natives of the Philippine Islands shall, by their services and character, show fitness for command, the President is authorized to make provisional appointments to the grades of second and first lieutenants from such natives, who, when so appointed, shall have the pay and allowances to be fixed by the Secretary of War, not exceeding those of corresponding grades of the Regular Army." Section 38 abolishes the so-called "Army Canteen," in compliance with strenuous demands from temperance organizations in the country, notwithstanding much testimony favorable to the canteen system from well-informed and conscientious witnesses. Prompt obedience to this command of law was given by the War Department, which issued the required general order February 4, 1901.—See also MILITARY ORGANIZATION: 43.

1901 (February-March).—Adoption of the so-called "Spoonier Amendment" to the Army Appropriation Bill empowering the president to establish a civil government in the Philippines. See PHILIPPINE ISLANDS: 1901 (March).

1901 (February - March).—Conditions pre-

scribed for independent government in Cuba.—Platt Amendment. See CUBA: 1901 (February-March); WEST INDIES: United States interests.

1901 (March).—Second inauguration of President McKinley.—Inaugural address.—The inauguration of President McKinley, for the second term of office to which he had been elected, was performed with the customary ceremonies, at the capitol, in Washington, on March 4, 1901. He spoke as follows: "My Fellow Citizens: When we assembled here on March 4, 1897, there was great anxiety with regard to our currency and credit. None exists now. Then our treasury receipts were inadequate to meet the current obligations of the government. Now they are sufficient for all public needs, and we have a surplus instead of a deficit. Then I felt constrained to convene the Congress in extraordinary session to devise revenues to pay the ordinary expenses of the government. Now I have the satisfaction to announce that the Congress just closed has reduced taxation in the sum of \$41,000,000. Then there was deep solicitude because of the long depression in our manufacturing, mining, agricultural and mercantile industries, and the consequent distress of our laboring population. Now every avenue of production is crowded with activity, labor is well employed and American products find good markets at home and abroad. Our diversified productions, however, are increasing in such unprecedented volume as to admonish us of the necessity of still further enlarging our foreign markets by broader commercial relations. For this purpose reciprocal trade arrangements with other nations should in liberal spirit be carefully cultivated and promoted. The national verdict of 1896 has for the most part been executed. Whatever remains unfulfilled is a continuing obligation resting with undiminished force upon the Executive and the Congress. But fortunate as our condition is, its permanence can only be assured by sound business methods and strict economy in national administration and legislation. We should not permit our great prosperity to lead us to reckless ventures in business or profligacy in public expenditures. While the Congress determines the objects and the sum of appropriations, the officials of the executive departments are responsible for honest and faithful disbursements, and it should be their constant care to avoid waste and extravagance. Honesty, capacity and industry are nowhere more indispensable than in public employment. These should be fundamental requisites to original appointment and the surest guarantees against removal. Four years ago we stood on the brink of war without the people knowing it and without any preparation or effort at preparation for the impending peril. I did all that in honor could be done to avert the war, but without avail. It became inevitable, and the Congress at its first regular session, without party division, provided money in anticipation of the crisis and in preparation to meet it. It came. The result was signally favorable to American arms and in the highest degree honorable to the government. It imposed upon us obligations from which we cannot escape, and from which it would be dishonorable to seek to escape. We are now at peace with the world, and it is my fervent prayer that if differences arise between us and other powers they may be settled by peaceful arbitration, and that hereafter we may be spared the horrors of war. Intrusted by the people for a second time with the office of President, I enter upon its adminis-

tration appreciating the great responsibilities which attach to this renewed honor and commission, promising unreserved devotion on my part to their faithful discharge and reverently invoking for my guidance the direction and favor of Almighty God. I should shrink from the duties this day assumed if I did not feel that in their performance I should have the co-operation of the wise and patriotic men of all parties. It encourages me for the great task which I now undertake to believe that those who voluntarily committed to me the trust imposed upon the chief executive of the republic will give to me generous support in my duties to 'preserve, protect and defend the constitution of the United States,' and to 'care that the laws be faithfully executed.' The national purpose is indicated through a national election. It is the constitutional method of ascertaining the public will. When once it is registered it is a law to us all, and faithful observance should follow its decrees. Strong hearts and helpful hands are needed, and fortunately we have them in every part of our beloved country. We are reunited. Sectionalism has disappeared. Division on public questions can no longer be traced by the war maps of 1861. These old differences less and less disturb the judgment. Existing problems demand the thought and quicken the conscience of the country, and the responsibility for their presence as well as for their righteous settlement rests upon us all, no more upon me than upon you. There are some national questions in the solution of which patriotism should exclude partisanship. Magnifying their difficulties will not take them off our hands nor facilitate their adjustment. Distrust of the capacity, integrity and high purpose of the American people will not be an inspiring theme for future political contests. Dark pictures and gloomy forebodings are worse than useless. These only becloud, they do not help to point, the way of safety and honor. 'Hope maketh not ashamed.' . . . My fellow citizens, the public events of the last four years have gone into history. They are too near to justify recital. Some of them were unforeseen; many of them momentous and far reaching in their consequences to ourselves and our relations with the rest of the world. The part which the United States bore so honorably in the thrilling scenes in China, while new to American life, has been in harmony with its true spirit and best traditions, and in dealing with the results its policy will be that of moderation and fairness. We face at this moment a most important question—that of the future relations of the United States and Cuba. With our near neighbors we must remain close friends. The declaration of the purposes of this government in the resolution of April 20, 1898, must be made good. Ever since the evacuation of the island by the army of Spain the Executive with all practicable speed has been assisting its people in the successive steps necessary to the establishment of a free and independent government prepared to assume and perform the obligations of international law, which now rest upon the United States under the Treaty of Paris. The convention elected by the people to frame a constitution is approaching the completion of its labors. The transfer of American control to the new government is of such great importance, involving an obligation resulting from our intervention and the treaty of peace, that I am glad to be advised by the recent act of Congress of the policy which the legisla-

tive branch of the government deems essential to the best interests of Cuba and the United States. The principles which led to our intervention require that the fundamental law upon which the new government rests should be adapted to secure a government capable of performing the duties and discharging the functions of a separate nation, of observing its international obligations, of protecting life and property, insuring order, safety and liberty, and conforming to the established and historical policy of the United States in its relation to Cuba. The peace which we are pledged to leave to the Cuban people must carry with it the guarantees of permanence. We became sponsors for the pacification of the island, and we remain accountable to the Cubans no less than to our own country and people for the reconstruction of Cuba as a free commonwealth, on abiding foundations of right, justice, liberty and assured order. Our enfranchisement of the people will not be completed until free Cuba shall 'be a reality, not a name—a perfect entity, not a hasty experiment, bearing within itself the elements of failure.' While the treaty of peace with Spain was ratified on February 6, 1899, and ratifications were exchanged nearly two years ago, the Congress has indicated no form of government for the Philippine Islands. It has, however, provided an army to enable the Executive to suppress insurrection, restore peace, give security to the inhabitants and establish the authority of the United States throughout the archipelago. It has authorized the organization of native troops as auxiliary to the regular force. It has been advised from time to time of the acts of the military and naval officers in the islands, of my action in appointing civil commissions, of the instructions with which they were charged, of their duties and powers, of their recommendations and of their several acts under Executive commission, together with the very complete general information they have submitted. These reports fully set forth the conditions, past and present, in the islands, and the instructions clearly show the principles which will guide the Executive until the Congress shall, as it is required to do by the treaty, determine 'the civil rights and political status of the native inhabitants.' The Congress having added the sanction of its authority to the powers already possessed and exercised by the Executive under the constitution, thereby leaving with the Executive the responsibility for the government of the Philippines, I shall continue the efforts already begun until order shall be restored throughout the islands, and as fast as conditions permit will establish local governments, in the formation of which the full co-operation of the people has been already invited, and when established will encourage the people to administer them. The settled purpose, long ago proclaimed, to afford the inhabitants of the islands self-government as fast as they were ready for it will be pursued with earnestness and fidelity. Already something has been accomplished in this direction. The government's representatives, civil and military, are doing faithful and noble work in their mission of emancipation, and merit the approval and support of their countrymen. The most liberal terms of amnesty have already been communicated to the insurgents, and the way is still open for those who have raised their arms against the government for honorable submission to its authority. Our countrymen should not be deceived. We are not waging war against the inhabitants of the Philippine Islands. A portion of them are making war

against the United States. By far the greater part of the inhabitants recognize American sovereignty, and welcome it as a guarantee of order and security for life, property, liberty, freedom of conscience and the pursuit of happiness. To them full protection will be given. They shall not be abandoned. We will not leave the destiny of the loyal millions in the islands to the disloyal thousands who are in rebellion against the United States. Order under civil institutions will come as soon as those who now break the peace shall keep it. Force will not be needed or used when those who make war against us shall make it no more. May it end without further bloodshed, and there be ushered in the reign of peace, to be made permanent by a government of liberty under law."

1901 (March).—Death of ex-President Harrison.—Benjamin Harrison, president of the United States, 1889-1893, died at his home in Indianapolis, on the afternoon of Mar. 13, 1901, after an illness of a few days.

1901 (March-July).—Capture of Aguinaldo, Filipino leader.—His oath of allegiance to the United States.—Civil government established. See PHILIPPINE ISLANDS: 1901 (July).

1901 (April).—Petition from the workmen of Porto Rico. See PORTO RICO: 1901 (April).

1901 (September).—Assassination of President McKinley.—Theodore Roosevelt becomes president.—Influence of McKinley.—On Sept. 6, 1901, during a public reception at the Buffalo exposition, President McKinley was approached by an anarchist named Leon Czolgosz, and shot. For a week he lingered between life and death, but finally succumbed during the early hours of Saturday, Sept. 14. (See MCKINLEY, WILLIAM: 1901.) "Theodore Roosevelt became President of the United States. The news of McKinley's death, conveyed by messenger, found Roosevelt in the Adirondacks on a tramping expedition just returning from the top of Mount Marcy. A ten-mile walk, a rapid and reckless ride in the storm, and a flight of a mile a minute by railroad brought him to Buffalo, where he took the oath of office on Saturday, September 14."—C. G. Washburn, *Theodore Roosevelt, the logic of his career*, p. 40.—"Between the second inauguration and his death McKinley enjoyed his office and the hold which he had on the people. . . . Elihu Root, McKinley's Secretary of War, said: 'I have talked with him [McKinley] again and again before a Cabinet meeting and found that his ideas were fixed and his mind firmly made up. He would then present the subject to the Cabinet in such a way as not to express his own decision, but yet bring about an agreement exactly along the lines of his own original ideas, while the members often thought the ideas were theirs. . . . He cared nothing about the credit but McKinley always had his way. . . . He had vast influence with Congress. He led them by the power of affectionate esteem not by fear. He never bullied Congress.' Shelby M. Cullom, Senator from Illinois for thirty years, wrote: 'We have never had a President who had more influence with Congress than McKinley. . . . I have never heard of even the slightest friction between him and the party leaders in Senate and House. . . . He looked and acted the ideal President. He was always thoroughly self-poised and deliberate; nothing ever seemed to excite him and he always maintained a proper dignity.' President Roosevelt said in his first message of Congress: 'At the time of President McKinley's death he was the most widely loved man in all the United

States; while we have never had any public man of his position who has been so wholly free from the bitter animosities incident to public life. . . . To a standard of lofty integrity in public life he united the tender affections and home virtues which are all-important in the make-up of national character.' From my point of view it will ever be a regret that the long-standing distrust of and enmity to Spain should have come to a head during McKinley's administration. For he was essentially a peace minister. Coming before the public, the high-priest of protection, he had, through the exercise of executive authority, modified his views. He was diligent in the enforcement of the reciprocity provision of the Dingley Act and named John A. Kasson to negotiate in accordance therewith reciprocity agreements. It was not necessary that these agreements should be ratified by the Senate but some Senators, who were more strongly high tariff than McKinley himself, thought that France had gotten the better of Kasson in the bargain. Nor was McKinley's recommendation of free trade with Puerto Rico immediately adopted."—J. F. Rhodes, *McKinley and Roosevelt administrations, 1897-1909*, pp. 172-173.—A year before the death of McKinley, Mark Hanna had called attention to the fact that there was only one life between Roosevelt, whom he disliked, and the presidency. Now there was only one life between the presidency and the secretary of state, whom the people had not chosen, and who held office at the pleasure of the president.

1901-1905.—Cabinet of President Roosevelt during his first term.—On succeeding the murdered President McKinley, to fill the unexpired term, President Roosevelt retained his predecessor's cabinet, three members of which remained in it throughout the term. These were John Hay, secretary of state, Ethan Allen Hitchcock, secretary of the interior, and James Wilson, secretary of agriculture. Lyman J. Gage, secretary of the treasury, resigned in 1902 and was succeeded by Leslie M. Shaw. Elihu Root, secretary of war, was succeeded by William H. Taft in 1904. John D. Long,

secretary of the navy, retired in 1902, to be succeeded by William H. Moody, who went two years later to the Department of Justice, as attorney-general, taking the place of Philander C. Knox, and being followed in the Navy Department by Paul Morton. Charles E. Smith, postmaster-general, left the cabinet in 1902, and his place was taken by Henry C. Payne, who was succeeded in turn by Robert J. Wynne in 1904. The Department of Commerce and Labor, created in February, 1903, was filled first by George B. Cortelyou, until 1904, then by Victor H. Metcalf.

1902 (February-March).—Visit of Prince Henry of Prussia.—A visit by Prince Henry of Prussia, brother of the German emperor, was an event of considerable importance, in what it signified of friendly relations between Germany and the United States. The prince arrived on February 22 and remained in the country until March 11, visiting and being entertained at Washington (and Mt. Vernon), Annapolis, West Point, Philadelphia, New York, and making a six days trip into the West.

1902 (March).—Creation of a permanent census bureau.—After long urging, Congress, in February, 1902, passed a bill authorizing the organization of a permanent census bureau in the Department of the Interior. See CENSUS BUREAU.

1902 (May).—Unveiling of a monument to Marshal de Rochambeau.—A joint resolution of the two Houses of Congress, in the following words, was approved by the president on Mar. 21, 1902: "That the President be, and is hereby, authorized and requested to extend to the Government and people of France and the family of Marshal de Rochambeau, commander in chief of the French forces in America during the war of independence, and to the family of Marquis de Lafayette, a cordial invitation to unite with the Government and people of the United States in a fit and appropriate dedication of the monument of Marshal de Rochambeau to be unveiled in the city of Washington on the twenty-fourth day of May, nineteen hundred and two; and for the purpose of carrying

out the provisions of this resolution the sum of ten thousand dollars is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the same, or so much thereof as may be necessary, to be expended under the direction of the Secretary of State." The invitation was conveyed to the president of France by an autograph letter from President Roosevelt, while Secretary Hay, at the same time, communicated it officially, through the American ambassador at Paris, to representatives of the families of Marshal de Rochambeau and the Marquis de Lafayette. France, in response, sent a battleship, the *Gaulois*, bearing a general and an admiral, with two aids each, and two officials from the foreign office. The invitation was accepted by the present Count and Countess de Rochambeau; and, as explained by Ambassador Porter in a dispatch, "Mr. Gaston de Sahune de Lafayette and his wife, not being able to proceed to the United States, the invitation is accepted for Mr. Paul de Sahune de Lafayette, who has been living in the United States for the last two years and who speaks English. He is the brother of Mr. Gaston de Sahune de Lafayette." The ceremonies of the unveiling of the monument took place at Washington on May 24, and were followed by official hospitalities to the guests of the occasion at Washington, Annapolis, West Point, New York, Newport, and Boston. With the sailing of the *Gaulois*, on June 1, the formalities of the visit came to an end.

1902 (October).—Settlement of anthracite coal strike.—"The coal strike [in Pennsylvania], which had endured for five months as a result of the operators' refusal to arbitrate, was brought to a close about the middle of October [1902] by the submission of the questions at issue to arbitration. During the whole course of the strike, the miners had vainly struggled for the recognition of this principle, and the retreat of the operators from their untenable position, constituted a clear victory for the men and justified the declaration of the strike. As originally presented in the letter of the operators dated October 13, the offer of arbitration was entirely unacceptable. This defeat, however, being remedied upon the demand of the miners, a return to work was immediately recommended by the District Executive Boards and unanimously approved in general convention on the 21st day of October. The suspension of mining, which for one hundred and sixty-three days had been general throughout the region, thus came to a close. The appointment of the Anthracite Coal Strike Commission will remain a landmark in the history of labor. By this act, the President of the United States asserted and upheld the paramount interest of the public in conflicts affecting injuriously the welfare of the community. In a certain sense, the appointment of the Anthracite Coal Strike Commission was a signal proof of the power of public opinion, and a clear demonstration of the wise manner in which this power can be exercised at critical periods. The sessions of the Commission

were destined to become historical. Preliminary meetings were held on October 24th and 27th, 1902, and with few intermissions, the Commission sat in Scranton and Philadelphia from the 14th of November, 1902, until the 5th of February, 1903. This period was devoted to the taking of testimony, and was succeeded by five days of argument from February 9th to February 13th inclusive. The sessions aroused the liveliest public interest, and thousands of people attended, while hundreds of others were unable to obtain entrance to these meetings."—J. Mitchell, *Organized labor*, pp. 391-392.—See also ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1902-1920; LABOR STRIKES AND BOYCOTTS: 1877-1911.

1902-1903.—German warships off the coast of Venezuela.—Intervention of the United States.—"From this time on, as the Isthmian Canal project came to be a certainty, the Germans redoubled their efforts to get a foothold in the Western Hemisphere and if possible within striking distance of the Canal. In May, 1901, Hay received information that German warships had been inspecting the Santa Margarita Islands, off the coast of Venezuela, with a view to occupying them as a naval base. Later he learned that the Kaiser was secretly negotiating for the purchase of two harbors 'for his own personal use'—whatever that meant—on the desolate coast of Lower California. Both these essays came to nought. In that same year, 1902, one of the periodic outbreaks to which Venezuela was addicted gave him an excuse for putting to the test whether or not the United States would defend the Monroe Doctrine by force of arms. The Venezuelans owed the Germans, the English, and the Italians large amounts which they had put off paying until their creditors began to suspect that they never intended to pay at all. The Kaiser apparently counted on the resistance of the Venezuelans to furnish him a pretext for occupying one or more of their seaboard towns. In order to disguise the fact that this was a German undertaking he looked about for accomplices who would give to it an international semblance. It happened just at that time, that Germany found herself isolated, as France and Russia had renewed their bond of friendship. England, too, always suspicious of Russia, and recently irritated by France, seemed to be looking for a friend. By offers which cannot yet be made public, Germany persuaded the Tory Government to draw closer to her. The immediate result of this adventure in international coquetry was the joint demand of Germany and England on Venezuela to pay them their dues. Venezuela procrastinated. The allies then sent warships and established what they called a 'pacific blockade' on the Venezuelan ports (December 8, 1901). During the following year Secretary Hay tried to persuade the blockaders of the unwisdom of their action. He persistently called their attention to the fact that a 'pacific blockade' was a contradiction in terms and that its enforcement against the rights of neutral nations could not be tolerated. He also urged arbitration. Germany deemed that her opportunity had now come, and on December 8, 1902, she and Great Britain severed diplomatic relations with Venezuela, making

it plain that the next steps would be the bombardment of Venezuelan towns and the occupation of Venezuelan territory. Here came the test of the Monroe Doctrine. If the United States permitted foreign nations, under the pretense of supporting their creditors' claims, to invade a weak debtor state by naval or military expedition, and to take possession of its territory, what would become of the Doctrine? At this point the direction of the American policy passed from Secretary Hay to President Roosevelt. England and Italy were willing to come to an understanding. Germany refused. She stated that if she took possession of territory, such possession would only be 'temporary'; but such possessions easily become permanent. . . . President Roosevelt did not shirk the test. Although his action has never been officially described, there is no reason now for not describing it. One day, when the crisis was at its height, he summoned to the White House Dr. Holleben, the German Ambassador, and told him that unless Germany consented to arbitrate, the American squadron under Admiral Dewey would be given orders, by noon ten days later, to proceed to the Venezuelan coast and prevent any taking possession of Venezuelan territory. Dr. Holleben began to protest that his Imperial master, having once refused to arbitrate, could not change his mind. The President said that he was not arguing the question, because arguments had already been gone over until no useful purpose would be served by repeating them; he was simply giving information which the Ambassador might think it important to transmit to Berlin. A week passed in silence. Then Dr. Holleben again called on the President, but said nothing of the Venezuelan matter. When he rose to go, the President asked him about it, and when he stated that he had received nothing from his Government, the President informed him in substance that, in view of this fact, Admiral Dewey would be instructed to sail a day earlier than the day he, the President, had originally mentioned. Much perturbed, the Ambassador protested; the President informed him that not a stroke of a pen had been put on paper; that if the Emperor would agree to arbitrate, he, the President, would heartily praise him for such action, and would treat it as taken on German initiative; but that within forty-eight hours there must be an offer to arbitrate or Dewey would sail with the orders indicated. Within thirty-six hours Dr. Holleben returned to the White House and announced to President Roosevelt that a despatch had just come from Berlin, saying that the Kaiser would arbitrate. Neither Admiral Dewey (who with an American fleet was then manœuvring in the West Indies) nor any one else knew of the step that was to be taken; the naval authorities were merely required to be in readiness, but were not told what for. On the announcement that Germany had consented to arbitrate, the President publicly complimented the Kaiser on being so staunch an advocate of arbitration. The humor of this was probably relished more in the White House than in the Palace at Berlin. The Kaiser suggested that the President should act as arbiter, and Mr. Roosevelt was ready to serve; but Mr. Hay dissuaded him. Mr. Hay had permitted Mr. Herbert W. Bowen, American Minister to Venezuela, to act as arbitrator for that country, and Mr. Bowen regarded it as improper that the United States, which also had claims against Venezuela, should sit in judgment on the case. Mr. Hay, desirous of validating the Hague Tribunal, saw a further advantage in referring to it this very

important contention. The President acquiesced, therefore, and Venezuela's claims went to The Hague for arbitration. England and Italy, Germany's partners in the naval expedition, gladly complied. England, we presume, had never intended that her half-alliance with Germany should bring her into open rupture with the United States. Although her pact was kept as secretly as possible at home, inklings of it leaked out, and it has since been esteemed, by those who know the details, one of the least creditable items in Lord Salisbury's foreign policy. Whether he or Mr. Balfour originated it, the friends of neither have cared to extol it, or indeed to let its details be generally known."—W. R. Thayer, *Life and letters of John Hay*, v. 2, pp. 284-289.

1903 (February).—Creation of the Department of Commerce and Labor in the National Government.—Bureau of Corporations.—"The establishment of the Department of Commerce and Labor, with the Bureau of Corporations thereunder, marks a real advance in the direction of doing all that is possible for the solution of the questions vitally affecting capitalist and wage-workers. The act creating the Department was approved on February 14, 1903, and two days later the head of the Department was nominated and confirmed by the Senate. Since then the work of organization has been pushed as rapidly as the initial appropriations permitted, and with due regard to thoroughness and the broad purposes which the Department is designed to serve. After the transfer of the various bureaus and branches to the department at the beginning of the current fiscal year, as provided for in the act, the personnel comprised 1,289 employees in Washington and 8,836 in the country at large. The scope of the Department's duty and authority embraces the commercial and industrial interests of the Nation. It is not designed to restrict or control the fullest liberty of legitimate business action, but to secure exact and authentic information which will aid the Executive in enforcing existing laws, and which will enable the Congress to enact additional legislation, if any should be found necessary, in order to prevent the few from obtaining privileges at the expense of diminished opportunities for the many."—*Message of the president to Congress, Dec. 7, 1903.*

1903-1906.—Unearthing of extensive frauds in the Land Office.—Late in December, 1902, the secretary of the Interior Department, Ethan Allen Hitchcock, received information which led him, with the President's approval, to demand the resignation of the commissioner of the Land Office, Binger Hermann, of Oregon. Commissioner Hermann was a man of importance in the Republican party, and he rallied powerful influences to his support. They could not anchor him durably in the Land Office, but they did delay his departure from it for about a month, during which time he is said to have destroyed thousands of letters and documents bearing on land frauds which he was under suspicion of having protected and promoted. Returning to Oregon from Washington he sought and obtained from his party an election to Con-

dition of Secretary Hitchcock and Attorney-General Knox, with neglect of advice from Oregon senators and congressmen. One of the first of the indictments found struck an Oregon Senator, John H. Mitchell, and brought him to a prison sentence, from which death rescued him. Another put a member of the House of Representatives, J. H. Williamson, on trial; a third put its brand on a recently removed United States district attorney, John H. Hall. Binger Hermann, a state senator, and several special agents of the Land Office were among the other subjects of prosecution, besides a large number of private operators in the land-thieves' ring. These proceedings were at the beginning of vigorous measures which have gone far towards, if not fully to the end of arresting the frauds which were rapidly robbing the nation of the last of its valuable public lands.

1904 (May-November).—Presidential election.—Parties, candidates, and platforms.—Election of President Roosevelt.—The questions of leading interest and influence in the canvass preliminary to the presidential election of 1904 were undoubtedly those relating to the governmental regulation of interstate railways and of the capitalistic combinations called "trusts"; but those questions had not yet acquired the height of importance in the public mind which they reached before the next quadrennial polling of the nation occurred. The question of tariff revision and a moderated protective system, in the interest of the great mass of consumers, was rising in interest, especially at the West; but that, too, was but mildly influential in the campaign. As for the imperialistic ambitions that had been excited for a time by the conquests of 1898, they had cooled to so great a degree as to offer no longer much challenge to opposition; opinion in the country now differing on little more than the length of time to which American guardianship over the Philippine islands should be allowed to run. The voters of the United States, in fact, made their election between the men who were offered to it as candidates, far more than between the parties and the policies whom the candidates represented; and President Roosevelt was reelected on personal grounds, in the main, because the kind of vigorous character he had shown was greatly to the liking of a large part of the people. The first nominating convention to be held was that of the Socialist party, whose delegates met at Chicago, May 2, and nominated for president Eugene V. Debs, of Indiana; for vice president Benjamin Hanford, of New York. On the same day the United Christian party, whose declaration of principles appears below, met at St. Louis. The convention of the Republican party, also held at Chicago, came next in time, June 21, and, with Theodore Roosevelt, of New York, for reelection as president, it named for vice-president Charles Warren Fairbanks, of Indiana. The Prohibition party, in convention at Indianapolis, June 29, named Silas C. Swallow, of Pennsylvania, for president, and George W. Carroll, of Texas, for vice president. On July 4, the People's or Populist

THEODORE ROOSEVELT

gress, to fill a vacancy which death had caused opportunely, and this seemed to augment his political power. But agents of the Interior Department were in Oregon and other Western states at the same time, gathering evidence which soon removed all doubt of the huge conspiracy of fraud which Commissioner Hermann had been a party to, and which had wide ramifications wherever public lands of value were open to entry, under the Homestead Act, the Desert Land Act, or the Timber and Stone Act. The frauds were carried on under false appearances of compliance with the requirements of law, and the dismissal of Hermann had not cleared from the General Land Office all the treacherous connivance which made them possible. Other allies of the land-thieves were tracked to their official desks, some at Washington, some in the Interior Department, some in Congress, and some out in the land offices at the West. Then the Federal grand jury at Portland, Oregon, began to turn out indictments, on evidence handled by Francis J. Heney, now entering on a famous career, as special prosecutor for the government. Heney was appointed by the president on the recommen-

party held convention at Springfield, Illinois, and nominated Thomas E. Watson, of Georgia, for president, with Thomas H. Tibbles, of Nebraska, for vice president. Meeting two days earlier, in New York City, but in session some days longer, the Socialist Labor party named for president Charles Hunter Corrgan, of New York, and for vice president William Wesley Cox, of Illinois. The convention of the Democratic party opened its session, at St. Louis, on July 6. Its nominee for president was Alton B. Parker, of New York; for vice president Henry G. Davis, of West Virginia. The National Liberty party met at St. Louis on July 7 and put forth its platform of principles. The last of the nominations were presented on August 31 at Chicago, by a convention representing a new party, the Continental, whose candidates then named declined and were subsequently replaced by Austin Holcomb, of Georgia, for president, and A. King, of Missouri, for vice president. With some abridgment, the declarations of principles and pledges of party policy adopted by these several conventions on the main questions at issue are given conveniently for comparison in the following arrangement by subjects:

Trusts.—The Republican party contented itself with a brief boast of “laws enacted by the Republican party which the Democratic party failed to enforce,” but which “have been fearlessly enforced by a Republican President,” and of “new laws insuring reasonable publicity as to the operations of great corporations and providing additional remedies for the prevention of discrimination in freight rates.” The Democratic party condemned with vigor the failure of Republicans in Congress to prohibit contracts with convicted trusts; declared that “gigantic trusts and combinations” “are a menace to beneficial competition and an obstacle to permanent business prosperity;” denounced “rebates and discrimination by transportation companies as the most potent agency in promoting and strengthening these unlawful conspiracies against trade,” demanded “an enlargement of the powers of the Interstate Commerce Commission,” “a strict enforcement of existing civil and criminal statutes against all such trusts, combinations and monopolies,” and “the enactment of such further legislation as may be necessary to effectually suppress them.” The People’s party set forth the proposition that, “to prevent unjust discrimination and monopoly the Government should own and control the railroads and those public utilities which in their nature are monopolies.” It should “own and operate the general telegraph and telephone systems and provide a parcels post.” Corporations “should be subjected to such governmental regulations and control as will adequately protect the public,” and demand was made for “the taxation of monopoly privileges, while they remain in private hands, to the extent of the value of the privileges granted.” The Continental party contended for a guarded chartering by Congress of “all railroad and other corporations doing business in two or more States,” and for having the “creating of ‘corners’ and the establishing of exorbitant prices for products necessary to human existence . . . made a criminal offence.” The United Christian party declared that “Christian government through direct legislation will regulate the trusts and labor problem according to the golden rule.”

TARIFF.—The Republican party declared “Protection” to be its “cardinal policy,” maintenance of the principles of which policy is insisted upon; wherefore “rates of duty should be readjusted only when conditions have so changed that the public

interest demands their alteration,” and “this work cannot safely be committed to any other hands than those of the Republican party.” The Democratic party, on the contrary, denounced “protection as a robbery of the many to enrich the few;” favored “a tariff limited to the needs of the Government, economically administered,” and called for a “revision and gradual reduction of the tariff by the friends of the masses, for the commonwealth, and not by the friends of its abuses, its extortions and its discriminations.” The People’s party declared for a change in our laws that “will place tariff schedules in the hands of an omni-partisan commission.” The Continental party limited its declaration on this subject to one pronouncing for an “adherence to the principles of reciprocity advocated by that eminent statesman, James G. Blaine, as applied to Canada and all American Republics.”

CAPITAL AND LABOR.—PUBLIC OWNERSHIP.—SOCIALISM.—The Republican party recognized “combinations of capital and labor” as “being the results of the economic movements of the age,” but “neither must be permitted to infringe upon the rights and interests of the people;” “both are subject to the laws, and neither can be permitted to break them.” The Democratic party expressed similar impartiality, in favoring “the enactment and administration of laws giving labor and capital impartially their just rights.” The People’s party pledged its efforts to “preserve inviolate” “the right of labor to organize for the benefit and protection of those who toil.” It would seek “the enactment of legislation looking to the improvement of conditions for the wage-earners, the abolition of child labor, the suppression of sweat shops and of convict labor in competition with free labor;” also the “exclusion from American shores of foreign pauper labor,” and “the shorter work day.” The Continental party adopted these expressions of the People’s party, in identical words. The National Liberty party asked “that the General Government own and control all public carriers in the United States.” The Prohibition party declared itself “in favor of . . . the safeguarding of the people’s rights by a rigid application of the principles of justice to all combinations and organizations of capital and labor.” The United Christian party pronounced simply for “Government ownership of coal mines, oil wells and public utilities.” The Socialist party pledged itself “to watch and work, in both the economic and the political struggle, for each successive immediate interest of the working class”: for “shortened days of labor and increases of wages”; for “insurance of the workers against accident, sickness and lack of employment”; for pensions; for “public ownership of the means of transportation, communication and exchange”; for graduated taxation of incomes, etc.; for “complete education of children and their freedom from the workshops”; for “free administration of justice”; for “the initiative, referendum, proportional representation, equal suffrage for men and women,” etc.; and for “every gain or advantage for the workers that may be wrested from the capitalist system and that may relieve the suffering and strengthen the hands of labor”; but in so doing it proclaims that it is “using these remedial measures as means to the one great end of the co-operative commonwealth.” The Socialist Labor party declared that “the existing contradiction between the theory of democratic government and the fact of a despotic economic system . . . perverts government to the exclusive benefit of the capitalist class;” wherefore, “against such a system the Socialist

Labor Party raises the banner of revolt, and demands the unconditional surrender of the capitalist class."

NOMINATION AND ELECTION.—INITIATIVE AND REFERENDUM.—The Democratic party declared for the election of United States senators by direct popular vote. The People's party demanded "that legal provision be made under which people may exercise the initiative and referendum, and proportional representation, and direct vote for all public officers, with the right of recall." The Continental party demanded "the enactment by the several States of a primary election law"; the "elimination of the party 'boss'"; "direct legislation by the method known as the initiative and referendum," and the possession by each State of "the sole right to determine by legislation the qualifications required of voters within its jurisdiction, irrespective of race, color or sex." The Prohibition party expressed itself in favor of the popular election of United States senators; of "a wise application of the principle of the initiative and referendum," and of making the right of suffrage "depend upon the mental and moral qualifications of the citizen."

NATURAL RESOURCES.—LAND.—RECLAMATION.—WATERWAYS.—The Republican party pointed simply to the fact that it had "passed laws which will bring the arid lands of the United States within the area of cultivation." The Democratic party congratulated "our western citizens upon the passage of the law known as the Newlands Irrigation Act," claiming it as "a measure framed by a Democrat, passed in the Senate by a non-partisan vote, and passed in the House against the opposition of almost all Republican leaders, by a vote the majority of which was Democratic." It declared for "liberal appropriations for the improvement of waterways of the country," and pronounced its opposition to "the Republican policy of starving home development in order to feed the greed for conquest and the appetite for national prestige." The People's party asserted that "Land, including all the natural sources of wealth, is a heritage of all the people, and should not be monopolized for speculative purposes; and alien ownership of land should be prohibited." Each of the party platforms was fluent on many other topics, such as the protection of citizens at home and abroad, the Panama canal, territories and dependencies, injunctions, public economy, taxation, monetary questions, pensions, the civil service, army and navy, merchant marine, liquor licensing and prohibition (the specialty of the Prohibition party), divorce, polygamy, etc.; but these entered so little into the canvass that the party declarations on them had small effect, if any, on the popular vote. "The total number of votes cast in the election of 1904 was smaller than in the election of 1900—13,528,979, as against 13,961,566. Of these Roosevelt received 7,624,489, and Parker 5,082,754, and the electoral vote was 336 to 140. Roosevelt's popular vote and popular majority were the largest ever recorded for any president. He carried even Missouri, thus breaking the solid South, while Parker did not carry a single state outside the South. A remarkable feature of this election was the success of five Democratic governors in states that gave Roosevelt large majorities: Douglas in Massachusetts, Johnson in Minnesota, Toole in Montana, Adams in Colorado, and Folk in Missouri. This result showed that the individual man was no longer dominated to the same extent as formerly by party organizations. The election of Folk, a young man of thirty-five, who had shown marked ability and courage

in prosecuting numerous bribery cases in St. Louis, was one of the many signs of a great civic awakening that was sweeping over the entire country. This movement, though already under way as the result of conditions that were no longer tolerable, undoubtedly received a great impetus from the action and utterances of President Roosevelt. It was particularly strong in the larger cities, resulting in the overthrow of bosses and political machines, and marking the beginning of a veritable municipal renaissance."—J. H. Latané, *America as a world power, 1897-1907*, pp. 239-240.

1904 (October).—Initial invitation by the president to hold a second peace conference. See HAGUE CONFERENCES: 1907.

1904 (November).—President Roosevelt's renunciation of third term candidacy.—On the evening of the day of election, as soon as the result was known to have given him a second term in the presidential office, President Roosevelt issued the following acknowledgment and announcement to the country:

"I am deeply sensible of the honor done me by the American people in thus expressing their confidence in what I have done and have tried to do. I appreciate to the full the solemn responsibility this confidence imposes upon me, and I shall do all that in my power lies not to forfeit it. On the Fourth of March next I shall have served three and one-half years, and this three and one-half years constitutes my first term. The wise custom which limits the President to two terms regards the substance and not the form. Under no circumstances will I be a candidate for or accept another nomination."

1904-1905.—Beginning and organization of work on Panama canal. See PANAMA CANAL: 1904-1905.

1904-1910.—Orinoco steamship case with Venezuela. See ORINOCO STEAMSHIP COMPANY CASE.

1905.—Arbitration treaty with Mexico. See MEXICO: 1904-1915.

1905.—Reopened controversy over American fishing rights on the Newfoundland coast. See NEWFOUNDLAND: 1905-1909.

1905.—Assistance to Santo Domingo against threatening creditors. See DOLLAR DIPLOMACY; SANTO DOMINGO: 1905-1907.

1905.—American goods boycotted in China. See CHINA: 1905.

1905.—Union of two organizations to form the Y. W. C. A. See YOUNG WOMEN'S CHRISTIAN ASSOCIATION: 1905-1913.

1905 (February).—Concentration of forest service in the Department of Agriculture. See CONSERVATION OF NATURAL RESOURCES: United States: 1901-1906.

1905 (February-June).—Recovery from France of the body of Admiral John Paul Jones.—On Feb. 13, 1905, President Roosevelt addressed a message to Congress which gave the following information: "For a number of years efforts have been made to confirm the historical statement that the remains of Admiral John Paul Jones were interred in a certain piece of ground in the city of Paris then owned by the Government and used at the time as a burial place for foreign Protestants. These efforts have at last resulted in documentary proof that John Paul Jones was buried on July 20, 1792, between 8 and 9 o'clock P.M., in the now abandoned cemetery of St. Louis, in the north-eastern section of Paris." On April 14, following a telegram from the ambassador at Paris, General

Horace Porter, announced that his "six years' search for the remains of Paul Jones" had resulted in success, and described the identification of the body. This had been verified by Doctors Capitan and Papillault, distinguished professors of the School of Anthropology, who had ample particulars of information from which to judge. Arrangements were made at once for sending a naval squadron, under Admiral Sigsbee, to France, to bring the remains to the United States. This was done in the following June, when the relics of the first of American naval heroes received the high honors that were due to his exploits. They were deposited in a vault on the grounds of the Naval Academy at Annapolis.

1905 (June-October).—Mediation by the president between Russia and Japan.—Treaty of Portsmouth.—"On February 8, 1904, Secretary Hay again assumed leadership by inviting Germany, Great Britain, and France to unite with the United States in urging Japan and Russia to recognize the neutrality of China in the war which they were beginning, and to localize hostilities within fixed limits. This effort was successful. In January, 1905, Russia announced to us that China was not neutral and could not preserve neutrality; hence that she should be forced to consider Chinese neutrality 'from the standpoint of her own interests.' Mr. Hay was able to convince Russia of the inexpediency of such action. His circular note of January 10, 1905, setting forth our hope that the war would not result in any 'concession of Chinese territory to neutral powers,' brought equivalent disclaimers from Germany, Austria-Hungary, France, Great Britain, and Italy. The culmination of his leadership was reached in President Roosevelt's offer, in [June 8] 1905, of our good offices to bring the war to a close. In the treaty of Portsmouth [September 5], which concluded it, both the territorial and the administrative entity of China, as well as the policy of the 'open door,' were formally respected, although a way was left for their subsequent violation in spirit."—C. R. Fish, *American diplomacy*, pp. 458-459.—Of the negotiations undertaken by Roosevelt to bring about peace between "Russia and Japan, the London 'Times' said, in August, 1905: 'Whatever may be the outcome of the negotiations, civilized mankind will not forget or undervalue the part Mr. Roosevelt has played in bringing them about. The issue rests in other hands than his, but the efforts he has made in the cause of peace, whether followed by success or failure, have won for him the gratitude of the world. He has done his duty as peacemaker faithfully and with a single mind. Because of these services, Roosevelt received the Nobel Prize of about \$40,000, which he gave in support of a plan to establish at Washington, a permanent industrial peace committee—a plan which it has not been found practicable to carry out.'"—C. G. Washburn, *Theodore Roosevelt, the logic of his career*, p. 98.—See also JAPAN: PORTSMOUTH, TREATY OF.

1905 (July).—Proclamation on the death of John Hay, secretary of state.—John Hay, secretary of state, died on July 1. As a mark of respect the president issued a proclamation directing the diplomatic representatives of the United States in all foreign countries to display their flags at half mast for ten days. Further, he directed that the flag should be displayed at half mast for the same period on all forts, and military stations, and all vessels of the United States.

1905-1906.—Moroccan controversy.—Plan for agreement suggested by President Roosevelt.—In a letter, addressed on Apr. 28, 1906, to Whitelaw Reid, then American ambassador in London, Roosevelt wrote: "On March 6, 1905, Sternburg [German minister] came to me with a message from the Kaiser [William II] to ask me to join with the Kaiser in informing the Sultan of Morocco that he ought to reform his government, and that if he would do so we would stand behind him for the open door and would support him in any opposition he might make to any particular nation which sought to obtain exclusive control of Morocco."—J. B. Bishop, *Theodore Roosevelt and his time*, v. 2, p. 468.—It was apparent that "Germany was attempting to intrude in Morocco, where France by common consent had been the dominant foreign influence. The rattling of the Potsdam saber was threatening the tranquillity of the *status quo*. A conference of eleven European powers and the United States was held at Algieras to readjust the treaty provisions for the protection of foreigners in the decadent Moroccan empire. In the words of a historian of America's foreign relations, 'Although the United States was of all perhaps the least directly interested in the subject matter of dispute, and might appropriately have held aloof from the meeting altogether, its representatives were among the most influential of all, and it was largely owing to their sane and ironic influence that in the end a treaty was amicably made and signed [April 6, 1906].' But there was something behind all this. A quiet conference had taken place one day in the remote city of Washington. The President of the United States and the French Ambassador [Jusserand] had discussed the approaching meeting at Algieras. There was a single danger-point in the impending negotiations. The French must find a way around it. The Ambassador had come to the right man. He went out with a few words scratched on a card in the ragged Roosevelt handwriting containing a proposal for a solution. [President Roosevelt suggested that the two governments should consent to go to the conference with no program, and there discuss all questions in regard to Morocco, save where either was in honor bound by a previous agreement with another power. Both governments, France and Germany, agreed on substantially the plan as outlined.] The proposal went to Paris, then to Morocco. The solution was adopted by the conference, and the Hohenzollern menace to the peace of the world was averted for the moment."—H. Howland, *Theodore Roosevelt and his times (Chronicles of America Series, v. 47, pp. 175-176)*.—See also MOROCCO: 1905-1906.

during his second term.—During the second term of President Roosevelt his cabinet underwent the following changes: On the death of John Hay, in July, 1905, Elihu Root became secretary of state, and continued in the office until January, 1909, when he resigned, and was succeeded by the assistant secretary of state, Robert Bacon. Leslie M. Shaw left the Treasury Department in 1907, and the secretaryship was given to George B. Cortelyou. William H. Taft continued in charge of the War Department until his nomination for president, in 1908, when General Luke E. Wright was called to his place. Charles J. Bonaparte, appointed secretary of the navy at the beginning of the president's new term, was transferred in 1907 to the Department of Justice, succeeding Attorney-General Moody, appointed to the bench of the Supreme Court, and being succeeded in the Navy Department by Victor H. Metcalf, previously secretary of commerce and labor. In the Department of the Interior, Secretary Hitchcock resigned in 1907, and James R. Garfield, previously commissioner of corporations, came into his place. George B. Cortelyou had been called to the Post Office Department at the beginning of the new presidential term, and transferred thence to the Treasury Department in 1907. His place in the Post Office was then filled by George von L. Meyer. The secretary of agriculture, James Wilson, remained at the head of that department throughout the term. On the transfer of Mr. Metcalf from the Department of Commerce and Labor to that of the Treasury, in 1907, his place in the former was taken by Oscar S. Straus.

1905-1914.—Organization of the Red Cross. See RED CROSS: American National Red Cross: Various incorporations.

1906.—Naturalization Act passed. See NATURALIZATION: United States:

1906.—Visit of Chinese commissioners to study political and economic institutions. See CHINA: 1906.

1906 (March).—Supreme Court decision enforcing the demand of the government for production of books and papers by the so-called tobacco trust before a Federal Grand Jury. See TRUSTS: United States: 1905-1906.

1906 (April).—Laying the corner stone of an office building for congressmen.—On Apr. 14, 1906, the corner stone of a building designed to supply each member of the House of Representatives with an office was laid with ceremony, the president delivering an address. Besides 410 distinct offices, the design of the building contemplated a large assembly room for public hearings before committees of the House. Its estimated cost was something over \$3,000,000. A corresponding office building for the Senate was also in view.

1906 (April).—Final decision of the Alaska boundary line. See ALASKA BOUNDARY QUESTION: 1906-1914.

1906 (June).—Joint Statehood Act.—By the Joint Statehood Bill, approved by the president, June 16, 1906, Indian Territory and Oklahoma were united to form the state of Oklahoma, the people being authorized to adopt a constitution. Arizona and New Mexico were proffered a similar union, in a state to be called Arizona. On the question of such union the bill provided for a vote to be taken in each territory, following which, if a majority in each should be found to favor the union, delegates to be chosen at the same election should meet and frame a constitution for submission to the people. The proposed vote was taken at the election of November 6, and resulted in the rejection of the proposal by Arizona, while New Mexico gave assent. The project was thus defeated. The plan of union was successful, however, in the creation of the state of Oklahoma. Delegates to a convention for framing its constitution were elected Nov. 6, 1906; the convention began its session on November 20, and finished its labors on July 16, 1907. By proclamation of the president the state,—the forty-sixth of the Federal family,—was admitted to the Union on November 16 following, under the constitution which had been ratified by vote of a majority of the citizens of each of the territories now united in it.—See also OKLAHOMA: 1891-1907.

1906 (June).—Hepburn Rate Bill passed. See COMMODITY CLAUSE OF THE HEPBURN ACT; RAILROADS: 1887-1906.

1906 (July-August).—Represented at Third International Conference of American Republics at Rio de Janeiro. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906.

1906 (August).—Brownsville Affair.—“In 1906, three companies of colored soldiers were discharged from the United States Army without honor because of the shooting-up by some of them of Brownsville, Texas [during which one man was killed and two were wounded]. The guilty men could not be individually determined,—there was a ‘conspiracy of silence’ among their comrades to protect them,—and so the President discharged all and said of his action, ‘If any organization of troops, white or black, is guilty of similar conduct in the future, I shall follow precisely the same course.’ This incident aroused a great deal of criticism and led to an investigation and prolonged debate in the Senate. The matter was finally disposed of in 1909.”—C. G. Washburn, *Theodore Roosevelt, the logic of his career*, pp. 78-79.

1906 (August-October).—Insurrection in Cuba.—American intervention called for.—Cuban government dissolved.—Provisional government established by Secretary of War Taft. See CUBA: 1906 (August-October).

1906 (October-November).—Segregation of orientals in San Francisco schools.—Resentment of Japanese.—“On October 11, 1906, the board of education of San Francisco cast a brand into the tinder by passing a resolution that thereafter all Chinese, Japanese, and Korean pupils should be given instruction in an ‘oriental’ school, and not, as previously, in the ordinary schools. Coming at a time when Japanese pride was more than usually exalted, this action was keenly resented. The Tokio authorities made inquiries, and then demanded that Japanese residents in California be protected in the full enjoyment of the rights

1907 (January).—Act prohibiting corporations from making contributions in connection with political elections.—The following act of Congress was approved by the president, Jan. 26, 1907. "That it shall be unlawful for any national bank, or any corporation organized by authority of any laws of Congress, to make a money contribution in connection with any election to any political office. It shall also be unlawful for any corporation whatever to make a money contribution in connection with any election at which Presidential and Vice-Presidential electors or a Representative in Congress is to be voted for or any election by any State legislature of a United States Senator. Every corporation which shall make any contribution in violation of the foregoing provisions shall be subject to a fine not exceeding five thousand dollars, and every officer or director of any corporation who shall consent to any contribution by the corporation in violation of the foregoing provisions shall upon conviction be punished by a fine of not exceeding one thousand and not less than two hundred and fifty dollars, or by imprisonment for a term of not more than one year, or both such fine and imprisonment in the discretion of the court." According to a statement presented to the Senate in February, 1908, the laws of the following nineteen states and territories contain provisions for the publicity of election contributions or expenditures originally enacted at the dates given: Alabama, 1903; Arizona, 1895; California, 1893; Colorado, 1891; Connecticut, 1895; Iowa, 1907; Massachusetts, 1892; Minnesota, 1895; Missouri, 1893;

Montana, 1895; Nebraska, 1897; New York, 1890; Pennsylvania, 1906; South Carolina, 1905; South Dakota, 1907; Texas, 1905; Virginia, 1903; Washington, 1907; Wisconsin, 1897. The laws of the three following states, which contain no publicity provisions, forbid corporations to contribute in any manner for political purposes: Florida, 1897; Kentucky, 1897; Tennessee, 1897.

1907-1909.—World cruise of the battleships.—"The fleet of sixteen battleships, all of them commissioned since the Spanish-American War, sailed from Hampton Roads on December 16, 1907. Their officers and crews numbered about 12,000 men. They were reviewed before their departure by President Roosevelt, when it was generally supposed that they were going to San Francisco and possibly as far north as Seattle. But after Roosevelt had returned to the White House 'it was announced that the fleet would continue on to our insular possessions and return home by the Suez Canal.' 'I determined on the move,' wrote Roosevelt, 'without consulting the Cabinet. . . . A council of war never fights and in a crisis the duty of a leader is to lead and not take refuge behind the generally timid wisdom of a multitude of councillors. At that time as I happen to know, neither the English nor the German authorities believed it possible to take a fleet of great battle-ships round the world. They did not believe that their own fleets could perform the feat and still less did they believe that the American fleet could. . . . I first directed the fleet of sixteen battle-ships to go round through the Straits of Magellan to San Francisco. From thence I ordered them to New Zealand and Australia, then to the Philippines, China and Japan and home through Suez.' . . . Admiral Evans commanded the fleet to San Francisco; there Admiral Sperry took it. . . . The coaling and other preparations were made in such excellent shape by the Department that there was never a hitch, not so much as the delay of an hour, in keeping every appointment made."—J. F. Rhodes, *McKinley and Roosevelt administrations, 1897-1909*, pp. 371-372, 375.

—“The California controversy was at its height in the summer of 1907, and sensational newspapers in the United States and Japan vying with each other in inflammatory utterances calculated to promote ill-feeling between the two nations. The President had unhesitatingly taken action in behalf of the Japanese in the controversy. In view of the hostile utterances of the Japanese press he deemed it well . . . that the Japanese people should not think that his action had been taken in fear of Japan, and he accordingly decided to send the battle fleet into the Pacific and around the world to show that the United States earnestly desired peace, but was not in the least afraid of war. ‘This demonstration,’ [said Roosevelt], ‘of combined courtesy and strength nowhere received a heartier response than in Japan, which is itself both strong and courteous.’ No English, German or other battle fleet had ever gone to the Pacific.”—J. B. Bishop, *Theodore Roosevelt and his time*, v. 2, pp. 65-66.—“Not a few sober-minded Americans were convinced that Japan, having triumphed first over China, then over Russia, had chosen the United States as her third great antagonist; and that through conquests in Latin America, or in some other way, she would bring on a conflict whenever the time seemed ripe. . . . The center of conflicting national interests and policies in the Orient was China. Here the United States found new points of contact with Japan, and was likewise brought into important relations with all of the leading powers of Europe. Chinese affairs in the decade from 1907 group about two principal developments: (1) the revolution which in 1912 overthrew the Manchu dynasty and established a republic; (2) the estrangement from Japan, caused by Japanese aggressions on Chinese rights. In both the United States had deep concern.”—F. A. Ogg, *National progress, 1907-1917*, pp. 311-312.—“The overthrow of the Chinese monarchy and the Proclamation of a republic in 1911 were viewed with great satisfaction in the United States. It was felt that the awakening of China was due in no small part to American influence. American missionaries and those who supported them were in full sympathy with the political and social revolution that held out such large promises for the future. The new government needed money and American bankers united with British, French, German, Russian, and Japanese bankers in what was known as the Six-Power Consortium. This group was contemplating a loan of \$125,000,000 to China when the American bankers withdrew. . . . In [1915] . . . Japan demanded not only that China should assent to any agreement in regard to Shantung that Japan and Germany might reach at the conclusion of the war, but that she should also grant to her greater rights and concessions in Shantung than Germany enjoyed. China was finally forced to agree to this and to grant the other demands with modifications. While these negotiations were in progress, the United States sent an identic note to China and Japan informing them that it would not recognize any agreement that impaired its treaty rights in China, the integrity of the Republic of China, or the policy of the open door. . . . The Allies were evidently uneasy about Japan and were willing to do anything that was necessary to satisfy her. This uncertainty about Japan may also be the explanation of the Lansing-Ishii agreement, signed November 2, 1917, a few months after we entered the war, in which the United States recognized the special interests of Japan in China, and Japan again reaffirmed her adherence to the principle of the open door.”—

J. H. Latané, *Our relations with China and Japan* (*World's Work*, May, 1921, pp. 41-42, 46).—The text of the Lansing-Ishii Agreement is as follows:

In order to silence mischievous reports that have from time to time been circulated, it is believed by us that a public announcement once more of the desires and intentions shared by our two Governments with regard to China is advisable. The Governments of the United States and Japan recognize that territorial propinquity creates special relations between countries, and, consequently, the Government of the United States recognizes that Japan has special interests in China, particularly in the part to which her possessions are contiguous. The territorial sovereignty of China, nevertheless, remains unimpaired and the Government of the United States has every confidence in the repeated assurances of the Imperial Japanese Government that while geographical position gives Japan such special interests they have no desire to discriminate against the trade of other nations or to disregard the commercial rights heretofore granted by China in treaties with other powers. The Governments of the United States and Japan deny that they have any purpose to infringe in any way the independence or territorial integrity of China and they declare, furthermore, that they always adhere to the principle of the so-called ‘Open Door’ or equal opportunity for commerce and industry in China. Moreover, they mutually declare that they are opposed to the acquisition by any Government of any special rights or privileges that would affect the independence or territorial integrity of China or that would deny to the subjects or citizens of any country the full enjoyment of equal opportunity in the commerce and industry of China.

1908 (April-November).—Presidential election.—Parties and candidates.—Election of William H. Taft.—“The chief concern of the people as the second Roosevelt administration passed into its final year was not elections, but recovery from business depression produced by the panic of the closing weeks of 1907. Opinion as to the causes of that disaster was divided, but not clearly on party lines. Outside of Wall Street fair-minded men were ready to admit that the Administration could not be held responsible; no great campaign issue could therefore be got out of it. Vast national questions loomed on the horizon; tariff revision, currency reform, railroad and trust regulation, readjustment of the legal status of organized labor, extension of the principles of direct govern-

The financial world, and certain railroad and industrial interests, felt bitterly toward him; but among the masses his popularity was still extraordinary and knew no bounds of party. There was no Republican name like his to conjure with, and it seemed doubtful whether any other man could be depended on to defeat the probable Democratic candidate, William J. Bryan. State and local leaders felt that the President's name at the head of their ticket would be a mighty asset; and in several states plans were laid to call early conventions which should choose delegates pledged to his renomination. The third-term movement was fast advancing when, December 11, 1907, a statement was given out from the White House calling attention to the announcement of 1904, and asserting crisply that the President had not changed, and would not change, the determination voiced therein.

PAN-AMERICAN BUILDING, WASHINGTON

ment. But the two great parties were not ready to push them. Their conscious differences were as yet upon matters of emphasis and detail; on the big issues their minds were not made up. Only the inborn American love of politics keeps an electoral campaign under these conditions from falling utterly flat. The first phase of the contest to excite public interest was the attitude of Roosevelt toward a third term. On the night following his election in November, 1904, the President issued a statement to the effect that he considered himself then to be serving his first term; that 'the wise custom which limits the President to two terms regards the substance and not the form'; and that 'under no circumstances' would he be 'a candidate for or accept another nomination.' Until the second administration was far advanced, the country took this declaration to be conclusive. With the approach of election year many observers became convinced that the Republican convention would be stampeded for the President, and that he would be nominated and re-elected in spite of himself.

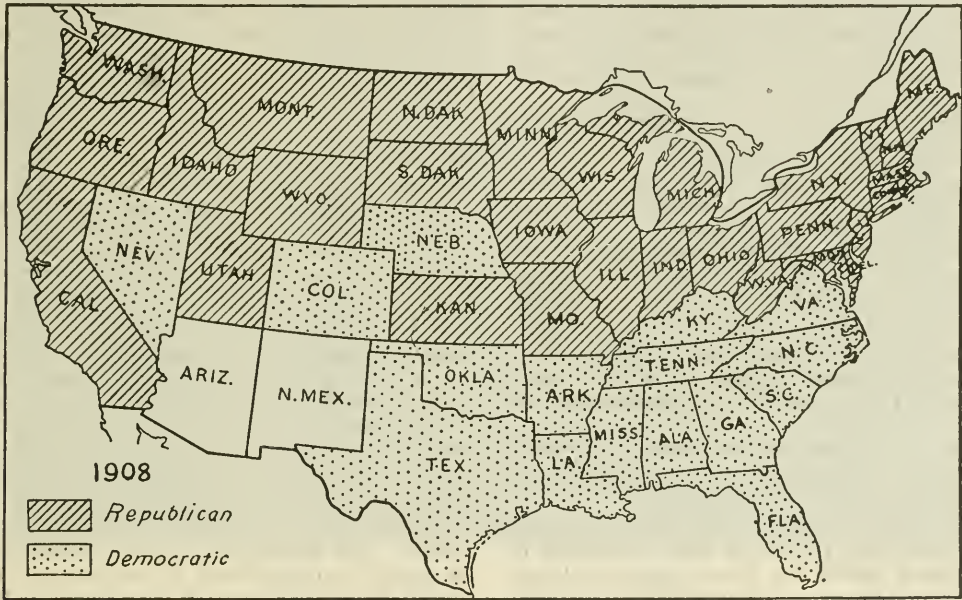

The decision was at last accepted as final, and interest shifted to the claims of other actual or possible candidates. At all stages of the pre-convention campaign the most prominent of these candidates was the Secretary of War, William H. Taft of Ohio. After serving two years on the supreme bench of his state, and three years as Solicitor-General of the United States, Mr. Taft, in 1892, was made a United States circuit judge. In 1900 President McKinley appointed him chairman of the Second Philippine Commission; and on July 4, 1901, he was inaugurated first civil governor of the Philippines. . . . Called home early in 1904 to succeed Elihu Root as Secretary of War, he became one of the most stalwart supporters of the second Roosevelt administration. From an early date it was known that the President looked on him with favor as a successor; and in the early months of 1908 it was charged that the White House was using undue influence, mainly through federal office-holders, to bring about the Secretary's nomination. Roosevelt entered vigorous denial,

but criticism was not silenced. Other men suggested for the nomination were Governor Hughes of New York, Governor Cummins of Iowa, Vice-President Fairbanks, Speaker Cannon, Senator Knox of Pennsylvania, and Senator La Follette of Wisconsin. No one of them rose above the level of a 'favorite son.' On the Democratic side the nomination of William J. Bryan, candidate of the party in 1896 and 1900, was foreordained. The fiasco of 1904, when the candidate was an eastern conservative barely known to his own state, made it clear that the nominee in 1908 must be a western and well-known radical. More closely than any one else, Bryan fitted this description. His campaign for the nomination in 1908 began as soon as Parker was nominated in 1904. . . . By 1908 the candidate's hold on his party was absolute, both in the sense that the party machinery in most of the states was obedient to his will and in the sense that he had a vast, idolizing personal following whose votes could be transferred to no other person. Two classes of Democrats supported him—those who wanted him and those who accepted him because they had to. The former chiefly dwelt in the Mississippi Valley and on the plains of the Great West; the latter were to be found mainly east of the Alleghenies. Other Democrats mentioned for the nomination were Governor John A. Johnson of Minnesota, Judge George Gray of Delaware, and Judson Harmon of Ohio. Johnson was a moderate; Gray and Harmon were decided conservatives. William R. Hearst, founder and sponsor of the Independence League, caused some anxiety by setting up the standard of revolt. But the nomination of Bryan, to meet the expected nomination of Taft by the Republicans, was never really in doubt. . . . The Republican national convention assembled at Chicago June 16. Flags waved; spectators thronged the streets and packed the galleries; frock-coated statesmen harangued the assemblage in true convention style. But the proceedings were as spiritless as in 1904; for again the guiding influences flowed from the Administration and the real work was done in advance. For several months Arthur Vorys of Ohio and Frank H. Hitchcock, formerly First Assistant Postmaster-General, had carried on a vigorous campaign for the election of Taft delegates, and before the convention opened the Secretary's nomination was a certainty. . . . Party platforms may generally be ignored as having little effect on public policy. The Chicago platform of 1908, however, derives interest from its unconscious prophecy of the coming nationwide controversy in Republican ranks. Fully approved in advance by President Roosevelt and Secretary Taft, the instrument lauded the Administration and pledged the party to the continuance *en bloc* of present policies. There it might have stopped. For the question before the voters was simply whether they wanted four years more of the kind of administrative control under which they were living. . . . The Democratic convention met at Denver, July 7-10. The spectator would hardly have surmised that it was the gathering of a party that had been out of power for fifteen years. . . . The work of the convention seemed more spontaneous than that of the Chicago gathering, but in fact it, too, was prearranged. . . . The Denver platform was packed with vote-catching clauses. It was the platform, furthermore, of a party long out of power, ready to denounce freely and to promise lavishly, because it had lost the habit of accountability. The tariff plank was explicit in asserting that 'articles entering into competition with trust-controlled products should be placed

upon the free list and material reductions should be made in the tariff upon the necessities of life, especially upon articles competing with such American manufacturers as are sold abroad more cheaply than at home; and gradual reductions should be made in such other schedules as may be necessary to restore the tariff to a revenue basis.' The currency was handled more cautiously, but the party pledged itself to compel national banks to establish a guaranty fund for the protection of their depositors. The planks on trusts and railways, embodying peculiarly the ideas of Bryan, displayed a curious mixture of Jeffersonian individualism, state's rights, and federal paternalism. 'A private monopoly,' it was asserted, 'is indefensible and intolerable. We, therefore, favor the vigorous reform of the criminal law against guilty trust magnates and officials, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.' Three specific remedies were advocated: (1) a law preventing the duplication of directors among competing corporations; (2) a federal license system; (3) a law compelling licensed corporations to sell to all purchasers in all parts of the country on the same terms. . . . Of the five minor parties that put tickets in the field, four had participated in earlier campaigns. The Populists, with vitality fast oozing, nominated Thomas E. Watson of Georgia. The Socialists named a candidate of other days, Eugene V. Debs of Indiana. The Socialist Labor group put up August Gillhaus of New York. The Prohibitionists nominated Eugene W. Chafin of Illinois. The newcomer was Hearst's Independence Party, sprung from the Independence League, which in late years had been active in the politics of Massachusetts, New York, California, and some other states. In convention at Chicago, it refused to give Bryan its support and nominated Thomas L. Hisgen of Massachusetts. Its sole reason for existence was to protest against the conservatism of the dominant elements in the major parties. Yet its platform contained little that did not appear in the program of one or the other of these parties. . . . 'The campaign closes,' said the *New York Nation*, October 29, 'with the issues yet undefined and with many thoughtful men still dubious as to the proper way to vote.' The election of Taft, however, was virtually assured when the Vermont election of September 1 yielded a normal Republican majority. The total number of votes cast (November 3) was 14,887,133, which exceeded the number cast in 1904 by the heavy margin of 1,364,025. The vote was distributed as follows: Taft, 7,679,006; Bryan, 6,409,106; Debs, 420,820; Chafin, 252,683; Hisgen, 83,562; Watson, 28,131; Gillhaus, 13,825. The plurality of Taft over Bryan was 1,269,900; the majority of Taft over all other candidates was 470,870. [James S. Sherman of New York was elected vice president.] Bryan's vote exceeded Parker's in 1904 by 1,324,615, but he received a smaller proportion of the total vote than in either 1896 or 1900. To the states carried by Parker—those of the South except Missouri—Bryan added Nebraska, Colorado, and Nevada. It is to be observed, however, that since the election of 1904 Oklahoma had been admitted to the Union; also that the electoral vote of Maryland in 1908 was divided between Bryan and Taft, in the proportion of 6 to 2. The electoral vote stood: Taft, 321, Bryan, 162. Elections to the Sixty-first Congress resulted in the choice of 219 Republicans and 172 Democrats. The Democratic party went into the contest of 1908 with a record of fifteen years of

unbroken defeat. Never for an equal period had it been so completely in eclipse. . . . The outcome in 1908 bore the appearance of a sweeping Republican victory, and on the surface there was little to cheer the losers. In reality, however, it was the harbinger of a shift of party power. Bryan was badly beaten, but his party was not; in all parts of the country Democratic candidates for state and local offices achieved great successes. Five Democratic governors were elected in states which gave Taft substantial majorities: Harmon in Ohio, Johnson in Minnesota, Marshall in Indiana, Burke in North Dakota, and Norris in Montana. In Massachusetts the Republican governor-elect's plurality was but half as large as Taft's, in Connecticut but one-third, in Illinois but one-sixth. In New York Governor Hughes emerged from the most significant state contest of the year with a plurality of but 60,000, as compared with Taft's 200,000."—F. A. Ogg, *National progress, 1907-1917*, pp. 1-11, 15-17.

as to the existing conditions of farm life and work in the country, as to homes and schools; means of communication and intercourse; neighborhood organizations; sales of products and supply of labor; banking, credit and insurance facilities; sanitary conditions; social entertainment, and in fact, to enquire into the conditions of almost every phase of rural life. To the five members above mentioned Walter H. Page, afterwards ambassador to Great Britain, Charles S. Barrett of Georgia and William A. Beard of California were added subsequently to the commission. In his autobiography, Roosevelt tells the story of the inception of the commission and the way in which it went about its work as follows: "In the spring of 1908, at my request, Plunkett conferred on the subject with Garfield and Pinchot, and the latter suggested to him the appointment of a Commission on Country Life as a means for directing the attention of the Nation to the problems of the farm, and for securing the necessary knowledge of the actual

1908-1909 (August-February).—Country Life Commission and report.—In August, 1908, President Roosevelt called upon Professor L. H. Bailey, of the New York State College of Agriculture, Henry Wallace, of Wallace's Farmer, Des Moines, Iowa, President Kenyon L. Butterfield, of the Massachusetts Agricultural College, and Gifford Pinchot of the United States Forest Service to form a commission to obtain wide and exact information

conditions of life in the open country. After long discussion a plan for a Country Life Commission was laid before me and approved. The appointment of the Commission followed in August, 1908. . . . The Commission on Country Life did work of capital importance. By means of a widely circulated set of questions the Commission informed itself upon the status of country life throughout the Nation. Its trip through the East, South, and West brought it into contact with large numbers of practical farmers and their wives, secured for the Commissioners a most valuable body of first-hand information, and laid the foundation for the remarkable awakening of interest in country life which has since taken place throughout the Nation. . . . The report of the Country Life Commission was transmitted to Congress by me on February 9, 1909."—*Theodore Roosevelt: An autobiography*, pp. 452-454.—The commission found an unquestionable lack in the country of a well organized rural society, and came to clear conclusions concerning the many causes thereof, which are fully

discussed in its report. The leading specific causes are summarized with brevity at the outset, as follows: "A lack of knowledge on the part of farmers of the exact agricultural conditions and possibilities of their regions; Lack of good training for country life in the schools; The disadvantage or handicap of the farmer as against the established business systems and interests, preventing him from securing adequate returns for his products, depriving him of the benefits that would result from unmonopolized rivers and the conservation of forests, and depriving the community, in many cases, of the good that would come from the use of great tracts of agricultural land that are now held for speculative purposes; Lack of good highway facilities; The widespread continuing depletion of soils, with the injurious effect on rural life; A general need of new and active leadership. Other causes contributing to the general result are: Lack of any adequate system of agricultural credit, whereby the farmer may readily secure loans on fair terms; the shortage of labor, a condition that is often complicated by intemperance among workmen; lack of institutions and incentives that tie the laboring man to the soil; the burdens and the narrow life of farm women; lack of adequate supervision of public health."

1909 (March).—End of President Roosevelt's term.—Summary of his administrations.—Roosevelt's "administration, speaking now of his service of seven and a half years, was fruitful of legislation by a Republican House and a Republican Senate. The following were among the principal acts passed: The Elkins Anti-Rebate Law applying to railroads; the creation of the Department of Commerce and Labor and the Bureau of Corporations; the law authorizing the building of the Panama Canal; the Hepburn Bill amending and vitalizing the Interstate Commerce Act; the Pure-Food and Meat Inspection laws; the law creating the Bureau of Immigration; the Employer's Liability and Safety Appliance laws, that limited the working hours of employees; the law making the Government liable for injuries to its employees; the law forbidding child labor in the District of Columbia; the reformation of the Consular Service; prohibition of campaign contributions from corporations; the Emergency Currency Law which also provided for the creation of the Monetary Commission."—C. G. Washburn, *Theodore Roosevelt, the logic of his career*, pp. 128-129.—"It is too soon to say which will be considered his greatest service to his country. The destruction of evil conditions and the curbing of selfish powers existing prior to his time, or the constructive work, both material and spiritual, conceived, initiated, and started on its way by himself and his aids. But whether in ripping out the old or the building of the new it was as the leader of men more than as the holder of office that he succeeded. The work he laid down will not live so much in Washington as in the factories, the offices, and the homes of America. The written laws on the statute books are mostly the crystallization of the sentiments he aroused in the consciences of Americans, and the vision he gave to American eyes; old truths re-vivified, old principles re-established, old virtues restored to American life and business."—R. H. Post, *Theodore Roosevelt's practice of government (World's Work, May, 1921, p. 68)*.—The great statesman and historian, James Bryce, wrote to Roosevelt two days after his retirement that he had "done more for the advancement of good causes, more to stir the soul of the nation and rouse it to a sense of its incomparable opportunities and high mission" than any of his predecessors in the last hundred years except Abraham Lincoln himself.

1909 (March).—Inauguration of William H. Taft.—Intimations of policy in his inaugural address.—His cabinet.—"On March 4, 1909, when William H. Taft was inaugurated president of the United States, fortune had favored him with better opportunities for acquiring equipment for that office, than were ever given to any of the twenty-five presidents who had preceded him. He was then nearly fifty-two years old, and from his birth, as the son of his eminent father, Judge Alphonzo

Taft, his environment had been almost ideally adapted to equip him for the presidency."—A. H. Walker, *Administration of William H. Taft: A historical sketch*, p. 2.—The ceremonies of the inauguration of President Taft were performed under singularly unfavorable circumstances, in consequence of one of the most dreadful storms that ever visited the capital. Trains blocked by it contained thousands of people who reached Washington too late for what they had traveled far to witness or to take part in, while those who did arrive on the scene were hardly gladdened by their success. The president, however, accepted the untoward conditions with a characteristic high-hearted equanimity. His inaugural address, delivered in the Senate chamber, instead of in the open air at the east front of the capitol, opened with the following words: "Any one who takes the oath I have just taken must feel a heavy weight of re-

(7) The enactment of legislation which will empower the Federal government to enforce treaty promises made to other countries within every State. (8) Such changes in the monetary and banking laws as will insure a greater elasticity of the currency. (9) The enactment of a law providing for postal savings banks. (10) The encouragement of American shipping through the use of mail subsidies. (11) A continuation of work on the Panama canal along the plans which have been adopted for a lock type with such energy as will insure the earliest possible completion of the work. (12) The continuation of a colonial policy which will still further increase the business prosperity of our dependencies. (13) The betterment of the condition of the negro in the South through observance of principles laid down in the Fifteenth Amendment. (14) The promotion of legislation for the protection of labor and the betterment of labor conditions.

From left to right, President Taft, Secretaries MacVeagh, Wickersham, Meyer, Wilson, Nagel, Knox, Dickinson, Hitchcock, Ballinger.

sponsibility. If not, he has no conception of the powers and duties of the office upon which he is about to enter, or he is lacking in a proper sense of the obligation which the oath imposes." The following is a summary of the suggestions of future policy conveyed in the address:

(1) Reorganization of the Department of Justice and the Bureau of Corporations of the Department of Commerce and Labor and of the Interstate Commerce Commission. (2) Tariff revision in accord with the promises made in the national platform adopted at Chicago. (3) A continuation of scientific experiments in the Department of Agriculture for the improvement of agricultural conditions. (4) The enactment and carrying out of laws for the conservation of the resources of the country. (5) Maintenance of the army and navy in such a state of preparation as will insure a continuance of peace with other countries. (6) A continuation of that treatment of aliens which will insure for the people of the United States respect and fair treatment among the peoples of other countries.

On the day following his inauguration the president named his chosen cabinet to the Senate, and the nominations were duly confirmed, as follows: Philander C. Knox of Pennsylvania, secretary of state; Franklin MacVeagh of Illinois, secretary of the treasury; Jacob M. Dickinson of Tennessee, secretary of war; George W. Wickersham of New York, attorney-general; Frank H. Hitchcock of Massachusetts, postmaster-general; George von L. Meyer of Massachusetts, secretary of the navy; Richard A. Ballinger of Washington, secretary of the interior; James Wilson of Iowa, secretary of agriculture; and Charles Nagel of Missouri, secretary of commerce and labor. A few days after the appointment of the cabinet, Jacob M. Dickinson, the new secretary of war, in a speech at Chicago, explained why President Taft had chosen him, a Democrat, for a place in a Republican cabinet, and why he had accepted it. He said that President Taft, as president of the whole country, desired to have a representative of the South among his counsellors. To have chosen a Southern Republican

would have been to perpetuate the bitter sectionalism which it was the president's desire to obliterate. He had therefore chosen a Democrat who had voted against him. Dickinson continued: "That his purpose was broad, magnanimous, and patriotic none can question. The wisdom both of his purpose and his selection must be tried by time, but I have every assurance that his action in appointing me, and my action in accepting, are approved by the South, and, having this approval, I can bear with equanimity any criticism from individual Democrats elsewhere."

1909 (March).—Special session of Congress called.—"President Taft, . . . took the next important step by calling an extra session of the Sixty-first Congress. That session was begun on March 15, 1909, and continued till August 5, 1909, to exclusively attend to the work of amending the tariff laws."—A. H. Walker, *Administration of William H. Taft: A historical sketch*, p. 9.

1909 (May).—Creation of the Senate Committee on Public Expenditures.—An important incident of the special session of Congress which was called by President Taft immediately after his inauguration, was the creation by the Senate of a new Standing Committee on Public Expenditures, the function of which was indicated in the following resolution of the Senate, adopted May 29: "*Resolved*, That the Committee on Public Expenditures be, and they are hereby, authorized and directed, by subcommittee or otherwise, to make investigations as to the amount of the annual revenues of the Government, and as to the expenditures and business methods of the several departments, divisions, and branches of the Government, and to report to the Senate from time to time the result of such investigations and their recommendations as to the relation between expenditures and revenues and possible improvements in Government methods; and for this purpose they are authorized to sit, by subcommittees or otherwise, during the recesses or sessions of the Senate, at such times and places as they may deem advisable, to send for persons and papers, to administer oaths, and to employ such stenographic, clerical, expert, and other assistance as may be necessary, and to have such printing and binding done as may be necessary, the expense of such investigations to be paid from the contingent fund of the Senate." Seven members of the committee are the chairmen of the seven committees in the Senate to some one of which every bill providing for revenue or carrying an appropriation is submitted. "Thus," as has been remarked, "is provided a medium for better co-ordination and co-operation between what may be termed the revenue and appropriation committees. The powers of existing committees are not affected, but an avenue is provided for concentration and distribution of information—a committee forum for the discussion and recommendation of fundamentals affecting the Government."

1909 (May).—Establishment in the government of a General Supply Committee.—On May 13 the president issued an executive order establishing an Administrative General Supply Committee, which is to purchase all supplies for government use, paying one price instead of several prices for the same supplies.

1909 (June).—Refusal of recognition of Belgian annexation of Congo Free State.—Root's message. See **BELGIAN CONGO: 1909**.

1909 (July).—Proposed constitutional amendment authorizing the levying of an income tax.—Without a dissenting vote, on July 5, 1909, the Senate adopted a joint resolution providing for the submission to the several states of a proposed amendment to the constitution of the United States, as follows:

"Article xvi. The congress shall have the power to lay and collect taxes on incomes, from whatever source derived, without any apportionment among the several states and without regard to any census or enumeration."

In reporting this action, a newspaper correspondent of considerable sagacity remarked that the ease with which the resolution glided through the Senate, and would with certainty pass the House, must be regarded as "an indication of the expectation of the representatives of capital and of high protection that twelve states can be found among the forty-six in the union to refuse their assent to the amendment, in which event it will fail." The endorsement of the House to the resolution was given on July 12, by a vote of 317 to 14, the negative votes being all from Republicans. An attempt to have the resolution amended so that the constitutional amendment would be submitted to state conventions for ratification instead of to legislatures was ruled out of order, and an appeal from Speaker Cannon's ruling was voted down, 185 to 143, on a strict party division. The first state to act on the proposed amendment was Alabama, where it was ratified by the legislature and signed by the governor, August 17. In the state of New York, on Jan. 5, 1910, Governor Hughes addressed a special message to the legislature, recommending that the amendment in its proposed form should not be ratified. He said: "I am in favor of conferring upon the Federal government the power to lay and collect an income tax without apportionment among the States according to population. I believe that this power should be held by the Federal government so as properly to equip it with the means of meeting national exigencies. But the power to tax incomes should not be granted in such terms as to subject to Federal taxation the incomes derived from bonds issued by the State itself, or those issued by municipal governments organized under the State's authority. To place the borrowing capacity of the State and of its governmental agencies at the mercy of the Federal taxing power would be an impairment of the essential rights of the State, which, as its officers, we are bound to defend. . . . The comprehensive words, 'from whatever source derived,' if taken in their natural sense, would include not only incomes from ordinary real or personal property, but also incomes derived from State and municipal securities. It may be urged that the amendment would be limited by construction. But there can be no satisfactory assurance of this. The words in terms are all-inclusive. . . . In order that a market may be provided for State bonds, and for municipal bonds, and that thus means may be afforded for State and local administration, such securities from time to time are excepted from taxation. In this way lower rates of interest are paid than otherwise would be possible. To permit such securities to be the subject of Federal taxation is to place such limitations upon the borrowing power of the State as to make the performance of the functions of local government a matter of Federal grace."

the discovery of the North Pole. See ARCTIC EXPLORATION: 1886-1909.

1909 (September-October).—Tour of President Taft.—Meeting with President Diaz on Mexican soil.—In the fall of 1909 President Taft made an extended tour of the country, from New England to the Pacific coast and southward to Mexico and the Gulf, speaking to great assemblies at many points on all the important questions, political and economical, that were then before the country. In the course of the tour a meeting between President Diaz of Mexico and himself was arranged, and took place on October 16 first at El Paso, on the Texas side of the Rio Grande, and then at Ciudad Juarez, on the Mexican side, formal visits being thus exchanged. This was a second time that a President of the United States had left the soil of his own country while in office, President Roosevelt having done the same at Panama in 1906.

1909 (October-November).—Further disclosures of corruption in the customs service.—The shameful disclosure in 1907-1908 of sugar trust frauds on the Federal treasury (see TRUSTS: United States: 1907-1909: Thievery of the sugar trust) afforded glimpses of a state of corruption in the customs service of the government, at the port of New York especially, which were more than verified within the next year and a half. The collector of customs, William Loeb, Jr., who took charge of the New York office in the spring of 1909, exercised a watchfulness which soon put him on the traces of fraud, and he pursued them with an energy and determination that cannot have been brought into action before. In his annual report, made in December, 1909, Secretary MacVeagh, of the Treasury Department, had this to say of the vigorous reformatory measures thus undertaken at the port of New York, and of the significance of the consequent revelations: "The revelations made and proven were so startling and impressive that opposition was silenced; and in this silence the necessary, clear-cut measures could be carried out without meeting serious obstructions. It soon developed that the frauds of the American Sugar Refining Company, while, perhaps, the most important instances, were as had been apprehended, symptoms of a diseased condition, not universal by any means, but almost general. And difficult as it always is to sufficiently bring to light the facts of such a condition to afford a basis for rehabilitation, this has been already largely accomplished. Much has been discovered to afford an understanding of the situation, with the result of numerous seizures, of numerous prosecutions made or projected, and of important and successful beginnings of a complete rehabilitation. While the recovery of evaded duties, and the prosecution of individuals have been of large significance, the greatest asset to the government of these disgraceful conditions is the knowledge and the light which guarantee in time a wholesome reorganization. The study of the causes of the demoralization which has been revealed is still incomplete, but the main causes are evident. It is clear, for instance, that the influence of local politics and politicians upon the customs service has been most deleterious, and has promoted that laxity and low tone which prepare and furnish an inviting soil for dishonesty and fraud. Unless the customs service can be released from the payment of political debts and exactions, and from meeting the supposed exigencies of political organizations, big and little, it will be impossible to have an honest service for any length of time. Any considerable share of the present cost of this demoralization to the public revenues,

to the efficiency of the service, and to public and private morality is a tremendous amount to pay in mere liquidation of the small debts of political leaders. It is also clear that the widespread disposition of returning American travelers to evade the payment of legal duties has greatly helped to create the conditions which have become intolerable. Those Americans who travel abroad belong to the sections of the people which most readily create public sentiment, and are most responsible for it; and the fact that in so many instances these travelers are willing to defraud the government out of considerable or even small sums creates an atmosphere on the docks that strongly tends to affect the morale of the entire customs service. And when to this is added the frequent willingness upon the part of these responsible citizens to specifically corrupt the government's men, then the demoralization is further accentuated."

1909 (November).—Arbitration of the Alsop claim against Chile. See CHILE: 1909-1911.

1909-1912.—Development of the progressive movement.—Although the progressive party was the natural outcome of the progressive movement, the two are quite distinct, and must not be confused. The movement began years before the short-lived party came into being. Moreover, while the progressive party is associated with a break in the Republican party, the movement began in the Democratic ranks. "The development of the progressive movement in the Democratic party may be divided into three periods, with the year 1893 marking the end of the first and the year 1912 the end of the second. The first period may fitly be called a period of preparation, since during the period from the Civil War to 1893 the forces of discontent and protest that were later to furnish strength to the progressive Democrats were forming and finding themselves, and in that same period the question of free silver, on which these forces were to unite, was becoming more and more acute. One of the first of these forces of protest and revolt that later joined the progressive Democrats, appeared in 1868 under the name of the Greenback party. The men in this party believed that much of the distress of the country was caused by stringency of the currency and advocated the continuance in use of the 'greenbacks' that had come into existence during the war. . . . Although the Greenback party had no subsequent history, it is important because it was the predecessor of the Populist party which united with the Democrats in support of Bryan and free silver in 1896. . . . In 1893 the Sherman Act was repealed, and no substitute was enacted to take its place. . . . The period of preparation was over; the progressive movement in the Democratic party had begun. (In a letter to . . . [P. De Witt] Bryan says: 'The progressive movement began in the Democratic party in 1893. The Populist party was the first indication of a growing dissatisfaction with existing conditions'.) . . . Bryan's defeat in 1896 was a serious blow to himself and to the progressive movement in the Democratic party with which he was so closely identified. . . . Direct legislation, control of corporations, the income tax and many other excellent measures all had to walk the plank with free silver. . . . In 1910 thirty-five progressive Democrats formulated a constitution and organized a Democratic Federation. . . . Meanwhile the progressive Democrats were making their influence felt in several of the states. . . . [The movement in the Democratic party] emphasized the need of freeing government from the . . . [influence] of special interests. . . . In the Republican

party, the progressive movement was fundamentally the same, but . . . took the form primarily of a struggle against corporations. This struggle had several phases: first, and most important, was the attempt to find some adequate means of controlling and regulating corporate activities; second, and almost as important, was the resistance to the efforts by corporations to exploit the natural resources of the nation in their own behalf; and, finally, came the revolt against the impudent, open revision of the tariff in 1909 in the interest of trusts and monopolies."—B. P. De Witt, *Progressive movement*, pp. 27-28, 32, 34-35, 38, 46-47.—"Robert M. La Follette was 'the first among the Republican political leaders to comprehend the character of the irrepressible conflict within the party, between public interests and the present day organization of private business', according to the opinion of Senator Jonathan P. Dolliver expressed in a speech in Wisconsin a few weeks before his death in 1910. La Follette began his reform work in 1894. In 1896 and 1898 he lost the Republican nomination for Governor, after entering the conventions with enough delegates instructed and pledged to vote for him, because the delegates were lured away by money and promises of place by the party machine. His experience led him to study out some substitute for the convention and caucus by which nominations might be made directly by the people. . . . When he entered the Senate he was alone in that body as the representative of a new movement in the Republican party which had 'its beginning in a desire to take party control away from men who, as parts of the managing organization . . . maintained a close corporation in manipulation of party affairs and in distribution of rewards, and were too intimate with and subservient to railroad companies and other capitalistic combinations. It rapidly spread to agitation against the corporations themselves, chiefly railroads. . . . In short, it is a movement to emancipate the party from the domination of the establishment "system," and to make the party more directly responsive to the popular will.' At first La Follette was ignored by the older members of the Senate, but he forced them to recognize him by refusing to be suppressed. He broke traditions by speaking a score of times before the end of his first session as a Senator. His place in the Senate was made, however, by a speech on the railroad rate bill of 1906 which revised the powers of the Interstate Commerce Commission. . . . In 1909 he was one of the small group of Republican Senators who refused to vote for the Payne-Aldrich Tariff Act, which was one of the chief causes for the formation of an insurgent faction in that party, and which finally resulted in the division of 1912. No longer alone in the Senate, he had been joined by Senators Dolliver, Beveridge, and Clapp, who were in the Senate when he came; by Dixon and Bourne who entered in 1907; by Borah and Cummins in 1908; and by Bristow in 1909. . . . The succession of Theodore Roosevelt to the Presidency in 1901 gave an opportunity to the Progressive movement in the national sphere that had not been possible under either Bryan or La Follette. The conjuncture of a man and an occasion made Roosevelt the protagonist for nearly eight years of a veritable revolution in national policy. So many and varied were his activities, so diversified his interests that there was hardly a phase of the national life that was not renovated and stimulated; so completely did he dominate the stage that it was hardly an exaggeration to call his administration, as one writer did, the 'Epoch of Roosevelt.' . . . The first real

division in the Republican party came in the House of Representatives and was directed against the arbitrary power of the Speaker which had grown up since the adoption of the 'Reed Rules' in 1890. Joseph G. Cannon of Illinois had been Speaker since 1903, and had used his power to maintain the established system and in opposition to many Progressive measures. . . . [The most important struggle between the regular Republicans and the Insurgents arose in the Senate over the Payne-Aldrich Tariff, and a break between the Progressives and President Taft, who upheld the bill, rapidly developed. This division in the party brought about its natural result in 1910 when] as was to be expected under such circumstances, the State elections resulted in a 'landslide' for the Democrats. In nine States the Republicans lost the legislature which was to elect a Senator, while they gained only one such legislature, 'thereby reducing their number in the Senate, after 1911, from 59 to 46; and raising the Democratic Senators from 33 to 38.' In the House of Representatives, also, the Republicans lost heavily, returning only one hundred and sixty-three members while the Democrats elected two hundred and twenty-seven members. The apparent strength of the Republicans was reduced by the success of the Progressives who carried most of the western seats for the Republicans. The election was a distinct rebuke to the regular Republicans and President Taft was necessarily involved. It indicated that the country supported the position of the Progressive Republicans: they could no longer be ignored. The political importance of the Progressives was plainly shown in April, 1911, when they demanded representation in the 'Republican membership of the Senate Committees in the ratio of 1 to 4, and that their assignments should be made by the four of their group who were on the Republican steering committee, La Follette, Bourne, Cummins, and Bristow.' Senator La Follette, who made the motion to this effect, mentioned as the Progressives, Senators Clapp, La Follette, Bourne, Borah, Brown, Dixon, Cummins, Bristow, Crawford, Gronna, Poindexter, and Works; 'and declared that the division between them and the Regular Republicans "is recognized in the Senate and throughout the country as based upon clearly defined differences on important legislative measures and questions of great public interest.'" The regular Republicans refused these demands, but agreed to give the Progressives 'their full proportionate share of appointments' insisting, however, that the assignments be made by the caucus, 'and that the Progressive should not be recognized as an organization distinct from the Republican majority of the Senate.' During the special session from April to August, 1911, the Progressives 'acted virtually as a third party, and for a time, by an alliance with the Democrats, practically controlled Congress. As a group they vigorously opposed . . . Canadian reciprocity,' although this measure was proposed and urged by President Taft. . . . A division arose among the Progressives as to the candidate who would be most likely to defeat President Taft's renomination. Senator La Follette was first encouraged to announce himself, but later he was urged to withdraw in favor of Mr. Roosevelt as a more popular leader with a better chance of defeating the President. Dissension and recrimination resulted and became the basis for a bitter personal feud between La Follette and Roosevelt. The former declared that he had been used to test the situation, and when it had been found favorable, Roosevelt announced his willingness to enter the

race as he had all along intended to do. On the other hand, it was declared that La Follette had been supported faithfully until his own physical breakdown, as evidenced in his address in Philadelphia in February, 1912, made it plain that another candidate must be found.—F. E. Haynes, *Third party movement since the Civil War*, pp. 390-392, 398, 420, 422-423, 425-426.

1910.—Census Bureau transferred to Department of Commerce.—Thirteenth census.—“The United States was the first nation in the world to make provision for periodic censuses; but as late as 1900 the central machinery of control, as well as the staff of local enumerators and supervisors, was set up anew in each decennial year. So long as the range of inquiry was limited, this hand-to-mouth procedure served. But after the Civil War the censuses grew less and less satisfactory. Statisticians urged the need of more numerous, more experienced, and more permanent census officials; and at last Congress was induced to establish (March 6, 1902) a permanent Bureau of the Census, designed to hold in the service persons familiar with census work, and also to make possible the collection of various classes of statistics during the interval between decennial enumerations. Organized originally in the Department of the Interior, the Bureau was transferred in 1903 to the newly created Department of Commerce and Labor; whence, in 1913, it passed to the separate Department of Commerce. The thirteenth census, authorized by Congress July 2, 1909, and taken as of the date April 15, 1910, was the first complete test of the new facilities. The results were very satisfactory. The census of 1910 showed the population of the continental United States to be 91,972,266, and of the United States including Alaska, Hawaii, and Porto Rico, 93,402,151.”—F. A. Ogg, *National progress, 1907-1917*, pp. 116-117.

1910 (March-June).—Insurgency.—Political unrest.—Overthrow of Speaker Cannon.—Mann-Elkins Act.—Roosevelt's return from Africa.—“Republican complaint in regard to the tariff and the Pinchot-Ballinger controversy were surface indications of a division in the party into conservative or ‘old-guard,’ and progressive or insurgent groups. The same line of demarcation appeared in a quarrel over the power of the Speaker of the House of Representatives, Joseph G. Cannon. Cannon had served in the lower branch of Congress almost continuously for twenty-seven years, and in 1910 was filling the position of speaker for the fourth consecutive time. . . . It was widely believed that Cannon, like Aldrich in the Senate,

effectually controlled the passage of legislation, with slender regard to the wishes or needs of the people. 'Cannonism' and 'Aldrichism' were considered synonymous. For several years an influential part of the Republican and Independent, as well as the Democratic press had attacked Speaker Cannon as the enemy of progressive legislation. Many of them laid much of the blame for the character of the Payne-Aldrich [tariff] act at his door. The *Outlook* decried 'government by oligarchy'; *The Nation* declared that he belonged to another political age; Bryan queried what Cannon was selling and how much he got; Gompers, the head of the American Federation of Labor, pointed him out as the enemy of all reforms. The outcry against the Speaker in the House itself, reinforced by the gathering opposition

NELSON WILMARTH ALDRICH

outside, found effective voice in a coalition of the Democrats and the insurgent Republicans. . . . The result of the change was to compel the speaker to be a presiding officer rather than the determining factor in the passage of legislation. About the time that Cannon's domination in the House was being broken, the announcement that Senator Nelson W. Aldrich and his staunchly conservative associate, Eugene Hale, of Maine, were about to retire indicated a similar change in the Senate. These men had served for long periods in Congress and were looked upon as the ablest and most influential of the 'reactionary' element in the upper house. Coincidentally with the partial disintegration of the conservative wing of the Republican party in Congress, there was passed a large volume of legislation of the type desired by the insurgents. The public land laws were improved; acts requiring the use of safety appliances on railroads were strengthened; a Bureau of Mines was established to study the welfare of the miners; a postal savings

bank system was erected [see *POSTAL SAVINGS BANKS: 1910*]; and an Economy and Efficiency Commission appointed to examine the several administrative departments so as to discover wasteful methods of doing business. Of especial importance was the Mann-Elkins Act of June 18, 1910, which further extended the powers of the Interstate Commerce Commission. [See also *RAILROADS: 1910-1916*.] . . . An act of June 25, 1910, which was amended a year later, required the publication of the names of persons contributing to the federal campaign funds of the political parties, and the amounts contributed, as well as a detailed account of the expenditures of the committees and the purposes for which the expenses were incurred. President Taft also urged the passage of an income tax amendment to the federal Constitution and indicated that he was in favor of an amendment providing for the popular election of senators. Amendments for both these purposes passed Congress; but they were not ratified and put into effect until 1913. In June, 1910, Roosevelt returned from Africa whither he had gone for a hunting trip, after the inauguration of President Taft. Both elements in the Republican party were anxious for his sympathy and support. Roosevelt himself seems to have desired to remain outside the arena, at least for a time, but for many reasons permanent separation from politics was impossible. He became a candidate for the position of temporary chairman of the New York Republican State Convention against Vice-President James S. Sherman."—C. R. Lingley, *Since the Civil War (United States, v. 3, pp. 484-488)*.

1910 (August-September).—New York Republican state convention.—Rift in party.—The New York congressional campaign in 1910 was significant of the coming split in the Republican party. On August 16, the contest began when the state committee indorsed Vice President Sherman for the position of temporary chairman. "In the fall of 1910 a new demand arose that Roosevelt should enter actively into politics. Though it came from his own State, he resisted it with energy and determination. Nevertheless the pressure from his close political associates in New York finally became too much for him, and he yielded. They wanted him to go as a delegate to the Republican State Convention at Saratoga and to be a candidate for Temporary Chairman of the Convention—the officer whose opening speech is traditionally presumed to sound the keynote of the campaign. Roosevelt went and, after a bitter fight with the reactionists in the party, led by William Barnes of Albany, was elected Temporary Chairman over Vice-President James S. Sherman. The keynote was sounded in no uncertain tones, while Mr. Barnes and his associates fidgeted and suffered."—H. Howland, *Theodore Roosevelt and his times (Chronicles of America Series, v. 47, p. 199)*.

1910 (August-November).—Growth of Republican insurgency toward formation of Progressive party.—New Nationalism.—Congressional

elections give Progressives balance of power.—“During the summer and autumn of 1910 . . . [Roosevelt] made extensive political tours. At Ossawatimie, Kansas, he developed the platform of the ‘New Nationalism,’ which included more thorough control of corporations, and progressive legislation in regard to income taxes, conservation, the laboring classes, primary elections at which the people could nominate candidates for office, and the recall of elective officials before the close of their terms. He urged such vigorous use of the powers of the federal government that there should be no ‘neutral ground’ between state and nation, to serve as a refuge for law-breakers. Critics pointed out that these proposals had been urged by the insurgents and the followers of Bryan, and there could be no doubt where the sympathies of Roosevelt lay in the factional dispute within the Republican party. While conditions within the organization were such as were indicated by the hostile criticism of the Payne-Aldrich act, by the Pinchot-Ballinger controversy, the overturn of Speaker Cannon and the disintegration of the Aldrich-Hale group, the congressional election of 1910 took place. Signs of impending change had already become evident [and Progressives were hurrying toward the formation of a new party]. Insurgent Republicans were carrying the party primaries; and the Democrats, who were plainly confident, emphasized strongly the tariff act, Cannonism and the high cost of living as reasons for the removal of the Republicans. The result was a greater upheaval than even the Democrats had prophesied. In nine states the Republicans were ousted from legislatures that would elect United States senators; the new Senate would contain forty-one Democrats and fifty-one Republicans—too narrow a Republican majority in view of the strength of the insurgents. In the choice of members of the lower branch of Congress there was a still greater revolution; the new House would contain 228 Democrats, 161 Republicans and one Socialist, while Cannon would be retired from the Speakership. In eastern as well as western states, Democratic governors were elected in surprising numbers. Maine, Massachusetts, Connecticut, New York, New Jersey, Ohio and Oregon were among them. Of particular importance, as later events showed, was the success in New Jersey of Woodrow Wilson, former President of Princeton University.”—C. R. Lingley, *Since the Civil War (United States, v. 3, pp. 488-489)*.

1911-1912.—President Taft's efforts for international peace.—“The establishment of a world court promoted the formation of treaties between nations by which they agreed to submit their differences to the Hague or to similar courts especially formed. A model, or as it was called a ‘mondial’ treaty was drawn up by the conference for this purpose. Secretary Hay proceeded to draw up treaties on such general lines with a number of nations, and President Roosevelt referred them to the Senate with his warm approval. That body, however, exceedingly jealous of the share in the treaty-making power given it by the Constitution, disliked the treaties, because it feared that under such general agreements cases would be submitted to The Hague Court without its special approval. Yet, as popular sentiment was strongly behind the movement, the Senate ventured only to amend the procedure in such a way as to make every ‘agreement’ a treaty which would require its concurrence. President Roosevelt, however, was so much incensed at this important change that he refused to continue the negotiations. President Taft was perhaps more interested in this problem than in any other. His Secretary of State, Elihu Root, reopened negotiations and, in 1908 and 1909, drew up a large number of treaties in a form which met the wishes of the Senate. Before the Administration closed [1912], the United States had agreed to submit to arbitration all questions, except those of certain classes especially reserved, that might arise with Great Britain, France, Austro-Hungary, China, Costa Rica, Italy, Denmark, Japan, Hayti, Mexico, the Netherlands, Norway, Paraguay, Spain, Sweden, Peru, San Salvador, and Switzerland.”—C. R. Fish, *Path of empire (Chronicles of America Series, v. 46, pp. 281-283)*.

1911-1912 (January-June).—Beginnings of Progressive party.—La Follette and Roosevelt.—Preliminary campaign for the Republican nomination.—“For nearly a year the formation of a national league to promote progressive legislation in the different states had been under discussion among a few of the Progressive Senators and Members of the House of Representatives. And during the holiday recess in the last days of December, 1910, I drafted a Declaration of Principles and form of constitution for the organization of such a league, and submitted the same to Senators Bourne and Bristow. With some modifications suggested by the Senators in our conference, the

declaration and constitution were prepared for signatures and copies mailed to Senators and Members who had returned to their homes for the recess, and to leading Progressives in different states. The organization was effected at a meeting held . . . on the twenty-first day of January, 1911. Jonathan Bourne was elected President; Frederic C. Howe, Secretary; Charles R. Crane, Treasury. Following is the Declaration of Principles adopted: We, the undersigned, associate ourselves together as The National Progressive Republican League. The object of the League is the promotion of popular government and progressive legislation. Popular government in America has been thwarted and progressive legislation strangled by the special interests, which control caucuses, delegates, conventions, and party organizations; and, through this control of the machinery of government, dictate nominations and platforms, elect administrations, legislatures, representatives in Congress, United States Senators, and control cabinet officers. . . . Under existing conditions legislation in the public interest has been baffled and defeated. . . . The Progressive Republican League believes that popular government is fundamental to all other questions. To this end it advocates: (1) The election of United States Senators by direct vote of the people. (2) Direct primaries for the nomination of elective officials. (3) The direct election of delegates to national conventions with opportunity for the voter to express his choice for President and Vice-President. (4) Amendment to state constitutions providing for the Initiative, Referendum and Recall. (5) A thoroughgoing corrupt practices act. Roosevelt was invited to become a member of the National Progressive Republican League, founded upon this simple declaration of elementary principles, but he had not become enough of a Progressive at that time to be willing to identify himself with the organization, and therefore declined. He was urged to join the League for several reasons. The name of a former President would give strength to the organization. It would help, sooner or later, to place him in open opposition to the Taft administration. It would commit him to a clear-cut and definite position upon the five propositions embodied in the Declaration of Principles. This would be very important, as it is his political habit so to state and qualify his positions that you are never quite sure of him. I think it is fair to say that the activities of this League resulted in the enactment of the presidential preference laws in the several states during the legislative sessions of 1912. Oregon had already adopted its statute. Wisconsin, five years before, had enacted a law under which the delegates to the National Republican Convention of 1908 were elected by direct vote of the people. This law was supplemented by the legislature of 1912 providing for a direct vote on presidential and vice-presidential candidates. North Dakota, Nebraska, California, New Jersey, Illinois, and Massachusetts enacted similar statutes, and in South Dakota steps were taken to elect delegates by direct vote under an existing primary law, though the provision authorizing such election of delegates had not previously been invoked. The League, under the direction of its president, Senator Bourne, did . . . effective work in advancing the principles to promote which it was organized. That the Progressive Republicans should present a candidate for nomination for the presidency in opposition to Mr. Taft had long been considered by the leaders of that element of the party, and with

the beginning of the new year (1911) many conferences were held on that subject. These gatherings were attended not only by Progressive members of the Senate and House, but also by representative Progressives who visited Washington from time to time. The interest of the Progressive cause was the controlling thought in all of those deliberations. None of the men whose availability as candidates was discussed manifested any eagerness to undertake the contest, though all were agreed that Progressive Republicans were in duty bound to oppose the renomination of President Taft."—R. M. La Follette, *La Follette's autobiography*, pp. 494-499. —"A division arose among the Progressives as to the candidate who would be most likely to defeat President Taft's renomination. Senator La Follette was first encouraged to announce himself, but later he was urged to withdraw in favour of Mr. Roosevelt as a more popular leader with a better chance of defeating the President. Dissension and re-creation resulted and became the basis for a bitter personal feud between La Follette and Roosevelt."—F. E. Haynes, *Third party movements since the Civil War*, p. 426. —"Not only because of the division which had arisen in the Republican party upon principle was it conceded that his nomination must be opposed, but because whatever the outcome, the integrity and perpetuity of the Progressive movement demanded that it should present for the support of Progressive Republicans throughout the country a candidate who represented its principles. It was well understood that owing to the peculiar conditions existing in the south, which made it certain that the administration through patronage could control the selection of practically all delegates from that section of the country, Mr. Taft had a very great advantage at the outset. Even in the northern states the federal machine is a powerful factor in the election of delegates, though the candidate may be personally weak, or even obnoxious, and the power of the President's steam roller had been demonstrated so thoroughly in the previous convention that every one familiar with that campaign accepted it as a tremendous force to be reckoned with. Taft had almost no individual strength or following in 1908. But President Roosevelt put his personality behind an army of federal officials and nominated him against all opposition. . . . Incredible as it may seem, it is nevertheless a fact in political history, that Roosevelt planned and consummated Taft's succession to the presidency. The campaign of 1912 witnessed the publication by Roosevelt of a letter written to him by President Taft shortly after his inauguration which contained this startling acknowledgment: 'I can never forget that the power I now exercise was voluntarily transferred from you to me, and that I am under obligation to you to see that your judgment in selecting me as your successor and bringing about the succession shall be vindicated according to the standards which you and I in conversation have always formulated.' . . . This was given to the public by the former President, in a speech at Worcester, Mass., April 26, 1912."—R. M. La Follette, *La Follette's autobiography*, pp. 499-502. —"A conference was held in Chicago [Feb. 10, 1912], which was attended by seven Republican Governors and seventy Republican leaders representing twenty-four States. The purpose of this meeting was to promote the nomination of Roosevelt. The Governors present were Stubbs of Kansas, Osborn of Michigan, Hadley of Missouri, Alrich of Nebraska, Bass of New Hampshire, Glass-

cock of West Virginia, and Carey of Wyoming. These seven Governors addressed a letter to Colonel Roosevelt stating their belief that 'a large majority of the Republican voters of the country favor your nomination and a large majority of the people favor your election as the next President of the United States.' They asked him to 'declare whether, if the nomination was offered to him unsolicited and unsought, he would accept it.' Two weeks later Mr. Roosevelt replied that he would accept the nomination 'if it were tendered to him,' and 'expressed the hope that as far as possible the people might be given a chance, through direct primaries, to express their preference as to who should be the nominee of the Republican National Convention.' Three days earlier Mr. Roosevelt had delivered 'a notable address before the Ohio Constitutional Convention' at Columbus in which he declared himself a Progressive and announced his support of 'all governmental devices which will make the representatives of the people more easily and certainly responsible to the people's will.' Among these devices he included the 'recall of judicial decisions,' which he 'explained to mean that when a court decides a constitutional question . . . the people should have a right to recall the decision if they think it wrong.' He distinctly limited the use of the recall to the States. He also favored the initiative and referendum, the short ballot, popular election of Senators, direct nominations, presidential preference primaries, and popular election of delegates to national nominating conventions. He closed the address 'with an earnest plea for social justice, for the moralization not only of political conditions, but of industrial conditions.' This speech was regarded as his political platform, and with the announcement of his candidacy in reply to the letter of the Governors 'an active and by no means friendly campaign' for the Republican nomination was begun. President Taft and Mr. Roosevelt waged a vigorous campaign against each other by means of public addresses during the interval before the assembling of the nominating convention in June. The ex-President accused Taft of being 'a reactionary and of being in league with bosses and the beneficiary of their crooked politics.' The President replied by referring to direct primaries as 'soap-box' primaries and their advocates as 'political emotionalists or neurotics.'—F. E. Haynes, *Third party movements since the Civil War*, pp. 426-427.

1911-1915.—Struggle against monopoly.—"The story of the struggle against monopoly is for the most part told in the record of legislative enactments, state and federal, and of judicial decisions. . . . As the occasions for conflict with open monopoly have passed, the spirit of conflict has gone over into the search for monopolistic tendencies, in the attempt, to quote the language of the President, 'to kill monopoly in the seed.' Within the sphere of federal legislation there has been direct sequence of action, from the Sherman Anti-Trust law of 1890, through the Interstate Commerce act made effective by the amendment of 1906, through the various enactments for the conservation of the national resources, to the more recent acts creating a Federal Reserve Board to restore 'democracy of credit,' and a Federal Trade Commission to attempt the restoration of free com-

pensation in business. . . . Under the plea of 'tariff reform' the Democratic party came into power, and within two years the cry of 'tariff and prosperity' very nearly brought back the Republican party into power. The essential tariff reform is to take the tariff out of politics. . . . The campaign against monopoly produced certain indirect results, affecting the working of the political system and the method of administering the government. . . . It gave the people of this country what English writers call 'the sense of the state,'—not necessarily more devotion to it, but the sense of its power as a political instrumentality. . . . Powerful interests, often representing non-resident capital, as in California and in some parts of the West, had gained control of state legislatures. Suspicion was rife regarding the financial legislation of Congress. It was charged in particular that the Senate had become the seat of privilege. The evident remedy for this state of affairs was to prevent the possible alliance of corrupt politics with corrupt business. Two measures were devised for the accomplishment of this purpose: the primary [see PRIMARIES IN THE UNITED STATES], to do away with the party manager or 'boss,' through whom political deals were made; and the recall, to keep the official representative of the people within their reach while in office. Election to the United States Senate was taken from the state legislatures and put directly into the hands of the people. The movement for more direct government as a safeguard against monopoly was widespread and gave rise to a vast amount of political experimentation."—W. J. Tucker, *Progress of the social conscience (Atlantic Monthly, September, 1915, pp. 292, 294)*.—See also TRUSTS: United States: 1912; 1912-1914.

1912.—Election.—National convention of Republican party.—Split in the party.—"During the whole decade preceding the . . . presidential campaign [of 1912], the progressive and reactionary forces within both the Republican and Democratic parties . . . [struggled] for the ascendancy in their respective party organizations. Neither the progressive nor the reactionary faction of either the Republican or the Democratic party seemed strong enough to gain complete possession or control of either one of the old party organizations. The bitter struggle between the progressive and reactionary elements of the Republican party reached its climax at the National Convention of that party, held at Chicago on June 18, 1912."—G. H. Payne, *Birth of the new party*, p. 13.—"In the great Republican states Roosevelt secured a large majority of the delegates; the Taft forces controlled all the territorial and insular delegates and most of those from the southern states, none of which had cast a Republican ballot in the electoral college since 1876. From many places the Roosevelt forces sent contesting delegations, some confessedly for the sake of the effect on public opinion, others with more merit behind them. To the contention of the Roosevelt adherents that so

clear a manifestation of the will of the rank and file ought to be decisive the Taft supporters retorted that they were under no obligation to change the rules of the game while the game was in progress. Backed up by the influence of many citizens of a conservative cast of mind who stood aghast at the idea of breaking the 'third term' precedent or feared such innovations as the initiative, referendum and recall, and the recall of judicial decisions, the conservative leaders, controlling the convention machinery, determined to make full use of their power. They realized that Roosevelt might bolt and form a new party, but it is incredible that they foresaw that such a movement might attain large proportions. Regularity on the part of the rank and file had so long been the rule that it was accepted as an immutable principle. The fact that the feeling of party loyalty had become greatly weakened, that a spirit of revolt was abroad, had largely escaped them. So the national committee seated enough doubtful Taft delegates to give him a bare control of the convention and to secure for him the nomination. The Roosevelt delegates for the most part refused to vote for any candidate, and through their spokesman, Henry J. Allen of Kansas, announced that 'we shall sit in protest, and the people who sent us here shall judge us.' The same night, in another hall, these delegates informally nominated Roosevelt."—P. L. Haworth, *America in ferment*, pp. 383-384.—"It was not a struggle for the nomination of individual candidates for the presidency, but a life-and-death struggle between divergent and diametrically opposed ideals struggling for the control of the name and trademark of the old Republican party. The final result of the Republican National Convention at Chicago was that the reactionary forces held the name 'Republican' as their party emblem and wrote a reactionary platform rightfully expressing their views of American politics. Heretofore the contending factions had been held together by compromise platforms and compromise candidates, but, in the struggle at Chicago, there was no thought of compromise. Quarter was neither asked nor given. With the triumph of the reactionary element within the Republican party, all men realized that the hour had struck. There was no longer any valid reason or excuse why those of us who had heretofore called ourselves 'Republican' should remain with or longer hold party allegiance to a political party which was openly, avowedly, and deliberately reactionary both as to its candidates and its platform."—G. H. Payne, *Birth of the new party*, pp. 13-14.—The important sections of the platform are as follows: "We believe in our self-controlled representative democracy, which is a government of laws, not of men, and in which order is the prerequisite of progress. The principles of constitutional government, which made provision for orderly and effective expression of the popular will, for the protection of civil liberty and the rights of men, and for the interpretation of the law by an untrammelled and independent judiciary, have proved themselves capable of sustaining the structure of a Government which, after more than a century of development, embraces 100,000,000 of people, scattered over a wide and diverse territory, but bound by common purpose, common ideals, and common affection to the Constitution of the United States. Under the Constitution and the principles asserted and vitalized by it, the United States has grown to be one of the great civilized and civilizing powers of the earth. It offers a home and an opportunity to the

ambitious and the industrious from other lands. Resting upon the broad basis of a people's confidence and a people's support, and managed by the people themselves, the Government of the United States will meet the problems of the future as satisfactorily as it has solved those of the past. The Republican party is now, as always, a party of advanced and constructive statesmanship. It is prepared to go forward with the solution of those new questions which social, economic, and political development have brought into the forefront of the Nation's interest. It will strive, not only in the Nation but in the several States, to enact the necessary legislation to safeguard the public health; to limit effectively the labor of women and children; to protect wage-earners engaged in dangerous occupations; to enact comprehensive and generous workman's compensation laws in place of the present wasteful and unjust system of employers' liability, and in all possible ways to satisfy the just demand of the people for the study and solution of the complex and constantly changing problems of social welfare. . . . The Republican party reaffirms its intention to uphold at all times the authority and integrity of the courts, both State and Federal, and it will ever insist that their powers to enforce their process and to protect life, liberty and property shall be preserved inviolate. An orderly method is provided under our system of government by which the people may, when they choose, alter or amend the constitutional provisions which underlie that government. Until these constitutional provisions are so altered or amended, in orderly fashion, it is the duty of the courts to see to it that when challenged they are enforced. That the courts, both Federal and State, may bear the heavy burden laid upon them to the complete satisfaction of public opinion, we favor legislation to prevent long delays and the tedious and costly appeals which have so often amounted to a denial of justice in civil cases and to a failure to protect the public at large in criminal cases. Since the responsibility of the judiciary is so great the standards of judicial action must be always and everywhere above suspicion and reproach. While we regard the recall of judges as unnecessary and unwise, we favor such action as may be necessary to simplify the process by which any judge who is found to be derelict in his duty may be removed from office. Together, with peaceful and orderly development at home, the Republican party earnestly favors all measures for the establishment and protection of the peace of the world and for the development of closer relations between the various nations of the earth. It believes most earnestly in the peaceful settlement of international disputes and in the reference of all justiciable controversies between nations to an international court of justice. . . . We reaffirm our belief in a protective tariff. . . . We hold that the import duties should be high enough, while yielding a sufficient revenue, to protect adequately American industries and wages. Some of the existing import duties are too high and should be reduced. Readjustment should be made from time to time to conform to changing conditions and to reduce excessive rates, but without injury to any American industry. To accomplish this correct information is indispensable. The information can best be obtained by an export commission, as the large volume of useful facts contained in the recent reports of the Tariff Board has demonstrated. The pronounced feature of modern industrial life is its enormous diversification. To apply tariff rates justly to these changing

conditions requires closer study and more scientific methods than ever before. The Republican party has shown by its creation of a Tariff Board its recognition of this situation and its determination to be equal to it. We condemn the Democratic party for its failure either to provide funds for the continuance of this board or to make some other provision for securing the information requisite for intelligent tariff legislation. . . . We rejoice in the success of the distinctive Republican policy of the conservation of our natural resources, for their use by the people without waste and without monopoly. We pledge ourselves to a continuance of such a policy. We favor such fair and reasonable rules and regulations as will not discourage or interfere with actual bona fide homeseekers, prospectors, and miners in the acquisition of public lands under existing laws. In the interest of the general public, and particularly of the agricultural or rural communities, we favor legislation looking to the establishment, under proper regulations, of a parcels post, the postal rates to be graduated under a zone system in proportion to the length of carriage. . . . We believe in the maintenance of an adequate navy . . . and we condemn the action of the Democratic House of Representatives in refusing to authorize the construction of additional ships. We believe that one of the country's most urgent needs is a revived merchant marine. There should be American ships, and plenty of them, to make use of the great American interoceanic canal now nearing completion. . . . We pledge the Republican party to the enactment of appropriate laws to give relief from the constantly growing evil of induced or undesirable immigration, which is inimical to the progress and welfare of the people of the United States. . . . We invite the intelligent judgment of the American people upon the Administration of William H. Taft. The country has prospered and been at peace under his Presidency. During the years in which he had the co-operation of a Republican Congress an unexampled amount of constructive legislation was framed and passed in the interest of the people and in obedience to their wish. That legislation is a record on which any Administration might appeal with confidence to the favorable judgment of history. We appeal to the American electorate upon the record of the Republican party and upon this declaration of its principles and purposes. We are confident that under the leadership of the candidates here to be nominated our appeal will not be in vain; that the Republican party will meet every just expectation of the people whose servant it is; that under its administration and its laws our nation will continue to advance; that peace and prosperity will abide with the people, and that new glory will be added to the great Republic."—*Republican campaign text-book, 1912, pp. 271-277.*

1912.—**Formation of Progressive party.**—The party insurgency which had shown itself so plainly in 1911 (see above: 1911-1912 [January-June]), was brought to a head in the summer of 1912 by the formation of the Progressive party. "On July 6th, a call signed by sixty-two men, some of them formerly holding allegiance to the Republican and some to the Democratic parties, representing forty States of the Union, was sent forth 'to the people of the United States, without regard to past political divisions' and 'who believe that the time has come for a national progressive move-

ment—a nation-wide movement—on non-sectional lines, so that the people may be served in sincerity and truth by an organization unfettered by obligations to conflicting interests, who believe in the right and capacity of the people to rule themselves and effectively control all the agencies of their government, and who hold that only through social and industrial justice thus secured can honest property find permanent protection; who believe that only through the movement proposed can we obtain in the Nation and in the several States the legislation demanded by modern industrial evolution; who believe that wholesome party management in a spirit of service to the whole country and who hold that the commandment delivered at Sinai, "Thou shalt not steal" applies to politics as well as business—to send from each State a number of delegates, whose votes in the convention shall count for as many votes as the States have Senators and Representatives in Congress, to meet in mass convention in Chicago on August 5, 1912, for the purpose of nominating candidates for President and Vice-President of the United States.' In response to that national-wide call, approximately 1,800 delegates and alternates, men and women, met in Chicago on August 5th. After three days of serious and earnest deliberation, in the presence of an audience approximating 15,000 people and amid scenes never to be forgotten by its eye-witnesses, a new declaration of human rights, as applied to modern social and industrial conditions, was brought forth. Based upon that declaration of principles denominated by the Convention as a 'covenant' with the people, the new Progressive party offered as its candidates for the Presidency and Vice-Presidency of the United States, Theodore Roosevelt and Hiram W. Johnson. No such ticket of strong, virile men of accomplishment standing upon such a human-interest platform had been placed before the people of the Nation in more than half a century."—G. H. Payne, *Birth of the new party, pp. 14-15.*—"Albert J. Beveridge . . . sounded the keynote of the Progressive movement at the Chicago convention in August 1912 [when he said]: 'We stand for a nobler America. We stand for an individual Nation. We stand for a broader liberty, a fuller justice. We stand for social brotherhood as against savage individualism. We stand for intelligent cooperation instead of a reckless competition. We stand for mutual helpfulness instead of mutual hatred. We stand for equal rights as a fact of life instead of a catchword of politics. We stand for the rule of the people as a practical truth instead of a meaningless pretense. We stand for a representative government that represents the people. We battle for the actual rights of man.'"—S. J. Duncan-Clark, *Progressive movement, p. 37.*—The convention officially selected for the party the name "Progressive" and adopted a platform of which the most important sections follow:

"Political parties exist to secure responsible government and to execute the will of the people. From these great tasks both of the old parties have turned aside. Instead of instruments to promote the general welfare, they have become the tools of corrupt interests, which use them impartially to serve their selfish purposes. Behind the ostensible government sits enthroned an invisible government, owing no allegiance and acknowledging no responsibility to the people. To destroy this invisible government, to dissolve the unholy allegiance between corrupt business and

corrupt politics is the first task of the statesmanship of the day. . . . Unhindered by tradition, uncorrupted by power, undismayed by the magnitude of the task, the new party offers itself as the instrument of the people to sweep away old abuses, to build a new and nobler commonwealth. This declaration is our covenant with the people, and we hereby bind the party and its candidates in State and Nation to the pledges made herein. The Progressive Party, committed to the principle of government by a self-controlled democracy expressing its will through the representatives of the people, pledges itself to secure such alterations in the fundamental law of the several states and of the United States as shall insure the representative character of the government. In particular, the Party declares for direct primaries for the nomination of state and national officers, for nationwide preferential primaries for candidates for the presidency, for the direct election of United States senators by the people, and we urge on the states the policy of the short ballot, with responsibility to the people secured by the initiative, referendum and recall. . . . [It] pledges itself to provide a more easy and expeditious method of amending the Federal constitution. Up to the limit of the constitution, and later by amendment of the constitution, if found necessary, we advocate bringing under effective national jurisdiction those problems which have expanded beyond reach of the individual states. . . . The extreme insistence on States' rights by the Democratic Party in the Baltimore Platform demonstrate anew its inability to understand the world into which it has survived or to administer the affairs of a union of states which have in all essential respects become one people. The Progressive Party, believing that no people can justly claim to be a true democracy which denies political rights on account of sex, pledges itself to the task of securing equal suffrage to men and women alike. We pledge our Party to legislation that will compel strict limitation of all campaign contributions and expenditures, and detailed publicity of both before as well as after primaries and elections. We pledge our Party to legislation compelling the registration of lobbyists; publicity of committee hearings except on foreign affairs, and recording of all votes in committee; and forbidding federal appointees from holding office in State or National political organizations, or taking part as officers or delegates in political conventions for the nomination of elective State or National officials. The Progressive Party demands such restriction of the power of the courts as shall leave to the people the ultimate authority to determine fundamental questions of social welfare and public policy. To secure this end, it pledges itself to provide: 1. That when an act, passed under the police power of the State, is held unconstitutional under the State constitution, by the Courts, the people, after an ample interval of deliberation, shall have an opportunity to vote on the question whether they desire the act to become law, notwithstanding such decision. 2. That every decision of the highest appellate court of a state declaring an act of the Legislature unconstitutional on the ground of its violation of the federal constitution shall be subject to the same review by the Supreme Court of the United States, as is now accorded to decisions sustaining such legislation. The Progressive party, in order to secure to the people a better administration of justice and by that means to bring a more general respect for the law and the courts, pledges itself

to work unceasingly for the reform of legal procedure and judicial methods. We believe that the issuance of injunctions in cases arising out of labor disputes should be prohibited, when such injunctions would not apply when no labor disputes existed. We also believe that a person cited for contempt in labor disputes, except when such contempt was committed in the actual presence of the court or so near thereto as to interfere with the proper administration of justice, should have a right to trial by jury. The supreme duty of the nation is the conservation of human resources through an enlarged measure of social and industrial justice. We pledge ourselves to work unceasingly in state and nation for—Effective legislation looking to the prevention of industrial accidents, occupational diseases, overwork, involuntary unemployment, and other injurious effects incident to modern industry; The fixing of minimum safety and health standards for the various occupations, and the exercise of the public authority of state and nation, including the federal control over interstate commerce, and the taxing power, to maintain such standards; The prohibition of child labor; Minimum wage standard for working women, to provide a living wage in all industrial occupations; The prohibition of night work for women and the establishment of an eight-hour day for women and young persons; One day's rest in seven for all wage workers; The eight-hour day in continuous twenty-four-hour industries; The abolition of the convict contract labor system, substituting a system of prison production for governmental consumption only, and the application of prisoners' earnings to the support of their dependent families; Publicity as to wages, hours and conditions of labor, full reports upon industrial accidents and diseases, and the opening to public inspection of all tallies, weights, measures and check systems on labor products. We pledge our party to establish a department of labor with a seat in the cabinet, and wide jurisdiction over matters affecting the conditions of labor and living. . . . We pledge our party to foster the development of agricultural credit and co-operation, the teaching of agriculture in schools, agricultural college extension, the use of mechanical power on the farm and to re-establish the Country Life Commission. . . . To remedy . . . [rural] conditions requires the fullest information and, based on this information, effective government supervision and control to remove all the artificial causes. We pledge ourselves to such full and immediate inquiry and to immediate action to deal with every need such inquiry discloses. We favor the union of all the existing agencies of the federal government dealing with the public health into a single national health service without discrimination against or for any one set of therapeutic methods, school of medicine or school of healing, with such additional powers as may be necessary to enable it to perform efficiently such duties in the protection of the public from preventable diseases as may be properly undertaken by the federal authorities; including the executing of existing laws regarding pure food; quarantine and cognate subjects; the promotion of appropriate action for the improvement of vital statistics and the extension of the registration area of such statistics, and co-operation with the health activities of the various states and cities of the nation. We . . . demand a strong national regulation of interstate corporations. The corporation is an essential part of modern business. The concentration of modern

business, in some degree, is both inevitable and necessary for national and international business efficiency. But the existing concentration of vast wealth under a corporate system, unguarded and uncontrolled by the nation, has placed in the hands of a few men enormous secret, irresponsible power over the daily life of the citizen—a power insufferable in a free government and certain of abuse. . . . To that end we urge the establishment of a strong federal administrative commission of high standing, which shall maintain permanent active supervision over industrial corporations engaged in interstate commerce, or such of them as are of public importance, doing for them what the government now does for the national banks, and what is now done for the railroads by the interstate Commerce Commission. Such a commission must enforce the complete publicity of those corporation transactions which are of public interest; must attack unfair competition, false capitalization and special privilege, and by continuous trained watchfulness guard and keep open equally to all the highways of American commerce. Thus the business man will have certain knowledge of the law, and will be able to conduct his business easily in conformity therewith; the investor will find security for his capital; dividends will be rendered more certain, and the savings of the people will be drawn naturally and safely into the channels of trade. . . . We pledge ourselves to the enactment of a patent law which will make it impossible for patents to be suppressed or used against the public welfare in the interests of injurious monopolies. We pledge our party to secure to the Interstate Commerce Commission the power to value the physical property of railroads. In order that the power of the commission to protect the people may not be impaired or destroyed, we demand the abolition of the Commerce Court. We believe there exists imperative need for prompt legislation for the improvement of our national currency system. We believe the present method of issuing notes through private agencies is harmful and unscientific. The issue of currency is fundamentally a government function and the system should have as basic principles soundness and elasticity. The control should be lodged with the government and should be protected from domination or manipulation by Wall street or any special interests. We are opposed to the so-called Aldrich currency bill, because its provisions would place our currency and credit system in private hands, not subject to effective public control. The time has come when the federal government should cooperate with manufacturers and producers in extending our foreign commerce. To this end we demand adequate appropriations by Congress, and the appointment of diplomatic and consular officers solely with a view to their special fitness and worth, and not in consideration of political expediency. It is imperative to the welfare of our people that we enlarge and extend our foreign commerce. . . . In every way possible our federal government should co-operate in this important matter. Any one who has opportunity to study and observe first-hand Germany's course in this respect must realize that their policy of co-operation between government and business has in comparatively few years made them a leading competitor for the commerce of the world.

"We heartily favor the policy of conservation, and we pledge our party to protect the national forests without hindering their legitimate use for the benefit of all the people. Agricultural lands in the national forests are, and should remain,

open to the genuine settler. Conservation will not retard legitimate development. The honest settler must receive his patent promptly, without hindrance rules or delays. We believe that the remaining forests, coal and oil lands, water powers, and others natural resources still in state or national control (except agricultural lands) are more likely to be wisely conserved and utilized for the general welfare if held in the public hands. . . . We demand that such resources shall be retained by the state or nation, and opened to immediate use under laws which will encourage development and make to the people a moderate return for benefits conferred. In particular we pledge our party to require reasonable compensation to the public for water power rights hereafter granted by the public. We pledge legislation to lease the public grazing lands under equitable provisions now pending which will increase the production of food for the people and thoroughly safeguard the rights of the actual homemaker. Natural resources whose conservation is necessary for the national welfare should be owned or controlled by the nation. We recognize the vital importance of good roads and we pledge our party to foster their extension in every proper way, and we favor the early construction of national highways. We also favor the extension of the rural free delivery service. The coal and other natural resources of Alaska should be opened to development at once. . . . We demand that they shall neither be sold nor given away except under the homestead law, but while held in government ownership shall be opened to use promptly upon liberal terms requiring immediate development. . . . We demand also that extortion or monopoly in transportation shall be prevented by the prompt acquisition, construction, or improvement by the government of such railroads, harbor and other facilities for transportation as the welfare of the people may demand. We promise the people of the territory of Alaska the same measure of legal self-government that was given to other American territories, and that the federal officials appointed there shall be qualified by previous bona-fide residence in the territory. The rivers of the United States are the natural arteries of this continent. We demand that they shall be opened to traffic as indispensable parts of a great nation-wide system of transportation in which the Panama canal will be the central link, thus enabling the whole interior of the United States to share with the Atlantic and Pacific seaboard in the benefit derived from the canal. It is a national obligation to develop our rivers, and especially the Mississippi and its tributaries, without delay, under a comprehensive general plan. . . . We pledge our party to the immediate preparation of such a plan, which should be made and carried out in close and friendly co-operation between the nation, the states and the cities affected. . . . The Panama canal, built and paid for by the American people, must be used primarily for their benefit. We demand that the canal shall be so operated as to break the transportation monopoly now held and misused by the trans-continental railroads by maintaining sea competition with them; that ships directly, or indirectly owned or controlled by American railroad corporations shall not be permitted to use the canal, and that American ships engaged in coast-wise trade shall pay no tolls. The Progressive party will favor legislation having for its aim the development of friendship and commerce between the United States and Latin-American nations. We

believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard of living. . . . We demand tariff revision because the present tariff is unjust to the people of the United States. Fair dealing toward the people requires an immediate downward revision of those schedules wherein duties are shown to be unjust or excessive. We pledge ourselves to the establishment of a non-partisan scientific tariff commission, reporting both to the President and to either branch of Congress, which shall report, first, as to the costs of production, efficiency of labor, capitalization, industrial organization and efficiency and the general competitive position in this country and abroad of industries seeking protection from Congress; second, as to the revenue producing power of the tariff and its relation to the resources of government; and, third, as to the effect of the tariff on prices, operations of middlemen, and on the purchasing power of the consumer. . . . We believe in a graduated inheritance tax as a national means of equalizing the obligations of holders of property to government, and we hereby pledge our party to enact such a federal law as will tax large inheritances, returning to the states an equitable percentage of all amounts collected. We favor the ratification of the pending amendment to the constitution, giving the government power to levy an income tax. . . . We favor an international agreement for the limitation of naval forces. Pending such an agreement, and as the best means of preserving peace, we pledge ourselves to maintain for the present the policy of building two battleships a year. We pledge our party to protect the rights of American citizenship at home and abroad. No treaty should receive the sanction of our government which discriminates between American citizens because of birthplace, race, or religion, or that does not recognize the absolute right of expatriation. Through the establishment of industrial standards we propose to secure to the able-bodied immigrant and to his native fellow workers a larger share of American opportunity. . . . We favor governmental action to encourage the distribution of immigrants away from the congested cities, to rigidly supervise all private agencies dealing with them and to promote their assimilation, education and advancement. We pledge ourselves to a wise and just policy of pensioning American soldiers and sailors and their widows and children by the federal government. . . . We pledge our party to the immediate creation of a parcels post, with rates proportionate to distance and service. We condemn the violations of the civil service law under the present administration, including the coercion and assessment of subordinate employes, and the President's refusal to punish such violation after a finding of guilty by his own commission; his distribution of patronage among subservient congressmen, while withholding it from those who refuse support of administration measures; his withdrawal of nominations from the Senate until political support for himself was secured, and his open use of the offices to reward those who voted for his renomination. To eradicate these abuses, we demand not only the enforcement of the civil service act in letter and spirit, but also legislation which will bring under the competitive system postmasters, collectors, marshals, and all other nonpolitical officers, as well as the enactment of an equitable retirement law, and we also insist

upon continuous service during good behavior and efficiency. We pledge our party to readjustment of the business methods of the national government and a proper co-ordination of the federal bureaus, which will increase the economy and efficiency of the government service, prevent duplications, and secure better results to the taxpayers for every dollar expended. . . . On these principles and on the recognized desirability of uniting the Progressive forces of the nation into an organization which shall unequivocally represent the Progressive spirit and policy we appeal for the support of all American citizens, without regard to previous political affiliations."—E. Stanwood, *History of the presidency, 1897-1909*, v. 1, pp. 281-291.

1912.—Woodrow Wilson and the election.—Democratic convention.—“Meanwhile a spirited contest was being waged for the Democratic nomination, but it lacked the dramatic qualities of the Republican conflict and absorbed a lesser share of the public attention. Yet there were certain points of similarity. The forces of conservatism had determined to control the Democratic convention at Baltimore just as they controlled the Republican convention at Chicago so that, whichever party might win at the polls, the administration would certainly be conservative. The pre-convention fight was, therefore, in a sense a struggle between the conservative and progressive wings of the party, though, for a number of reasons, the lines were not so clearly drawn. The leading progressive candidate for the Democratic nomination was Governor Woodrow Wilson. As a pedagogue and publicist Wilson expressed marked conservative opinions, but his experiences while governor with machine politics in New Jersey had caused him to modify his academic views and to withdraw his criticism of such devices as the initiative, referendum and recall. He was decidedly the candidate of the more intelligent and public-spirited section of the Democratic party, and he had a following in every state.”—P. L. Haworth, *America in ferment*, p. 386.—“The whole course of affairs leading up to the several conventions indicated that 1912 was to be a Democratic year. Nevertheless, from the moment when, at the Washington meeting of the National Committee, January 8-10, Bryan sought fruitlessly to exclude from membership a Pennsylvania reactionary, it was evident that the Democrats would have to face the same issue of progressivism that had disrupted their opponents. One of the first Democratic candidates in the field was Governor Judson Harmon of Ohio, a conservative. Missouri had two candidates, ex-Governor Joseph W. Folk and Speaker Champ Clark, both regarded as progressives; but at an early date Folk withdrew. A candidate of whose progressiveness there could be no doubt was Governor Woodrow Wilson of New Jersey. Other persons mentioned were Governor Marshall of Indiana, Governor Burke of North Dakota, Governor Foss of Massachusetts, Governor Baldwin of Connecticut, Congressman Underwood of Alabama, and Mayor Gaynor of New York City. Bryan was not a candidate, but his power in the party promised to be a leading factor in the contest. In the pre-convention campaign the advantage lay distinctly with Clark. His victories in the primaries of Illinois, Nebraska, Iowa, and California were matched by Wilson triumphs in Pennsylvania, Wisconsin, Oregon, and New Jersey. But when all primaries and conventions had been held the Speaker was found to have

the pledges of more delegates than any other candidate, although far from the two-thirds required by Democratic rules for nomination. The Democratic convention, which assembled at Baltimore June 25, proved not only the longest, but also, like the Republican gathering of the preceding week, one of the most dramatic, since the Civil War. Violent controversy arose at the outset over the temporary chairmanship. The National Committee put forward Alton B. Parker, Democratic candidate for president in 1904. Bryan opposed him as a reactionary, and after a hard fight barely failed to prevent his election. To ease the situation the Nebraskan was offered the permanent chairmanship. This, however, he refused, contenting himself with a fresh demand that the convention purge itself of reactionary influences. Eventually the position went to an ardent Bryan follower, Senator Ollie James of Kentucky. On the second day the progressive element scored an important victory by securing the adoption of instructions to the chairman to make exceptions, in the enforcement of the unit rule, in favor of states which had provided by statute for 'the nomination and election of delegates and alternates to national political conventions in congressional districts.' The tensest moments of the session came on the evening of the 27th, when Bryan strove to carry a resolution which (1) reaffirmed the party's position as 'the champion of popular government and equality before the law'; (2) declared against the nomination of any candidate representing, or under obligation to, any member of the 'privilege-hunting and favor-seeking class'; (3) demanded the withdrawal from the convention of certain capitalists alleged to belong to this class. After angry debate, the third section of the resolution was given up; the other two were adopted. In these proceedings Bryan rose to greater heights of leadership than he had attained in any of his own three candidacies for the presidency. At his further suggestion the usual convention procedure was reversed, and the nominations were made before the platform was adopted. The convention contained 1,092 delegates, and 728 votes were necessary to nominate. The balloting continued from June 28 to July 2. On the first ballot Clark received 440½ votes, Wilson 324, Harmon 148, Underwood 117½, with 56 scattering. On the tenth, New York transferred its vote from Harmon to Clark. After the fourteenth, Bryan, who as a member of the Nebraska delegation had been voting for Clark, created a fresh sensation by announcing in an impassioned speech that he would thereafter withhold his vote from the Missouri candidate as long as New York's vote, alleged to be contaminated by plutocratic influences, should be cast for him. Despite the best efforts of the Speaker and his friends to overcome the effect of this move, the balance began to turn; and on the twenty-eighth ballot Wilson's vote for the first time pushed ahead of Clark's. The end came with the forty-sixth ballot, on which Wilson received 990 votes, Clark 84, and Harmon 12. After two ballots on the vice-presidential candidates failed to yield a choice, Governor Thomas R. Marshall of Indiana was nominated by acclamation. The figures recording the results of the balloting are dry enough; the ballots themselves were taken amidst convention pandemonium perhaps unequalled in American political history. 'It was halloing,' says a journalist describing the scene, 'yelling, screaming, roaring, raised to the nth power; they "hollered," simply hollered, for an hour at a time.

When a telling speech was successfully shouted or a significant vote was cast, they carried banners up and down and around the aisles; they reared mammoth pictures of candidates against the galleries; they sent up toy balloons, and tossed pigeons into the air; they carried a girl about the hall; men and women shied hats through the air; horns, whistles, and infernal contrivances without name contributed to the diabolical din. . . . "Demonstration" followed "demonstration" and passed into "counter-demonstration" without altering a vote. Uproar that shattered the voice of a new chairman every five minutes, and wore out fresh platoons of police every hour; the efforts of bands drowned under the vocal din, and the chromatic clamor of banners assailed the delegates and left them stubborn at their posts. At Chicago they stood pat to the end. At Baltimore they changed, but they refused to stampede. They changed slowly, and only under the slowly increasing realization that Woodrow Wilson was the right man.' It was never charged that the Baltimore convention was a cut-and-dried affair, or that it was boss-ruled. Once more the platform was mainly the work of Bryan.—F. A. Ogg, *National progress, 1907-1917*, pp. 197-201.—The platform was in part as follows: "The high Republican tariff is the principal cause of the unequal distribution of wealth; it is a system of taxation which makes the rich richer and the poor poorer; under its operations the American farmer and laboring man are the chief sufferers; it raises the cost of the necessities of life to them but does not protect their product or wages. . . . We favor the immediate downward revision of the existing high and in many cases prohibitive tariff duties, insisting that material reductions be speedily made upon the necessities of life. Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list. . . . We believe in the preservation and maintenance in their full strength and integrity of the three co-ordinate branches of the Federal Government—the Executive, the Legislative and the Judicial—each keeping within its own bounds, and not encroaching upon the just powers of either of the others. Believing that the most efficient results under our system of government are to be attained by the full exercise by the States of their reserved sovereign powers, we denounce as usurpation the efforts of our opponents to deprive the States of any of the rights reserved to them, and to enlarge and magnify by indirection the powers of the Federal Government. We insist upon the full exercise of all the powers of the Government, both State and National, to protect the people from injustice at the hands of those who seek to make the Government a private asset in business. . . . We congratulate the country upon the triumph of two important reforms demanded in the last national platform, namely, the amendment of the Federal Constitution authorizing an income tax and the amendment providing for the popular election of Senators, and we call upon the people of all the States to rally to the support of the pending propositions and secure their ratification. . . . We favor a single Presidential term, and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible for reelection, and we pledge the candidate of this convention to this principle. . . . We favor the efficient supervision and rate regulation of railroads, express companies, telegraph

and telephone lines engaged in interstate commerce. . . . We favor such legislation as will effectually prohibit the railroads, express, telegraph and telephone companies from engaging in business which brings them into competition with their shippers or patrons; also legislation preventing the overissue of stocks and bonds by interstate railroads, express companies, telegraph and telephone lines, and legislation which will assure such reduction in transportation rates as conditions will permit. . . . We condemn the present methods of depositing Government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, National and State, without discrimination as to locality, upon approved securities and subject to the call of the Government. . . . We recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security. We recognize the value of vocational education and urge Federal appropriations for such training and extension teaching in agriculture in cooperation with the several States. We renew the declaration in our last platform relating to the conservation of our natural resources and the development of our waterways. . . . We hold that the control of the Mississippi River is a national problem. The preservation of the depth of its water for the purpose of navigation, the building of levees to maintain the integrity of its channel and the prevention of the overflow of the land and its consequent devastation . . . imposes an obligation which alone can be discharged by the general government. . . . We favor national aid to State and local authorities in the construction and maintenance of post roads. We repeat our declarations of the platform of 1908 as follows: The courts of justice are the bulwarks of our liberties and we yield to none in our purpose to maintain their dignity. Our party has given to the bench a long line of distinguished justices who have added to the respect and confidence in which this department must be jealously maintained. We resent the attempt of the Republican party to raise a false issue respecting the judiciary. It is an unjust reflection upon a great body of our citizens to assume that they lack respect for the courts. . . . We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine. . . . We favor a reorganization of the civil service, with adequate compensation, commensurate with the class of work performed, for all officers and employees; we also favor the extension to all classes of civil service employees of the benefits of the provisions of the Employers' Liability law; we also recognize the right of direct petition to Congress by employees for the redress of grievances. We recognize the urgent need of reform in the administration of civil and criminal law in the United States, and we recommend the enactment of such legislation and the promotion of such measures as will rid the present legal system of the delays, expense and uncertainties incident to the system as now administered. We reaffirm the position thrice announced by the Democracy in National Convention assembled against a policy of imperialism and colonial exploitation in the Philippines, or else-

where. We condemn the experiment in imperialism as an inexcusable blunder which has involved us in enormous expense, brought us weakness instead of strength and laid our nation open to the charge of abandonment of the fundamental doctrine of self-government. We favor an immediate declaration of the nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established. . . . Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the cooperation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country."—*Democratic national convention of 1912 (Official Report of Proceedings, pp. 365-376)*.—See also CAUCUS: United States: 1910-1915.—"The main outcome of the campaign became almost a foregone conclusion the moment the Democratic convention nominated a candidate reasonably satisfactory to the popular wing of the party. . . . With the choice of Wilson disappeared the Progressive hope of large scale successions from the Democratic ranks. A few rather prominent Democrats did indeed join the Bull Moose herd, and an analysis of the election figures seems to show that some hundreds of thousands of the Democratic rank and file did the same, but there were no wholesale desertions from Wilson's banner. . . . Colonel Roosevelt swept through many states speaking to great crowds until seriously wounded by a half-crazed fanatic, being able to appear subsequently only at two monster meetings in New York City. But the bullet he received in the breast at Milwaukee probably made him more votes than all the speeches he was forced to cancel would have done, for it aroused sympathy in his behalf and the admiration which every real human being feels for a 'game man.' Governor Wilson made a leisurely campaign, more as a matter of form than of necessity, and spoke with much dignity and perspicacity to large audiences. The brunt of the campaign fell upon Bryan and lesser lights."—P. L. Haworth, *America in ferment, pp. 392-394*.—"Aside from the Progressives no new party appeared in the campaign of 1912; and the existing minor parties played unimportant roles. The Socialists held their convention at Indianapolis May 12-18, and adopted a platform which was the product of ingenious compromise between the moderate and revolutionary wings of the party. Their nominees were Eugene V. Debs of Indiana and Emil Seidel of Wisconsin. The Socialist Labor party held a convention in New York City in early April and nominated Arthur E. Reimer of Massachusetts and August Gilhaus of New York. The Prohibitionists assembled at Atlantic City and re-nominated their candidates of 1904 and 1908, Eugene W. Chafin, now of Arizona, and Aaron S. Watkins of Ohio. It was not to be expected that the intense public interest aroused by the spectacular Republican and Democratic conventions would be sustained throughout the campaign. Considering the novelty of the situation, however, the post-convention contest was extraordinarily tame. The defeat of Taft and the triumph of the Democrats over a divided opposition seemed inevitable, and the tenseness which accompanies a contest felt to be really close did not develop. The chief element of uncertainty was the showing of the new Progressive party, and especially of its presidential candidate. Probably at no other

national election in the country's history have so many people voted for a cause felt to be already lost, or in a spirit of revenge, or for a candidate supported under protest. . . . The management of the Democratic campaign was placed in the hands of a committee under the chairmanship of William F. McCombs, who had looked after the candidate's pre-convention interests. During September and October Wilson made extensive speaking tours through the West, emphasizing the changed economic condition of the country; declaring himself to be favorable to 'big business' which should not seek to stifle competition nor to control the government, but opposed to trusts; advocating tariff revision which should eliminate 'cunningly devised and carefully concealed special favors'; and proclaiming the gospel of a 'new freedom,' by which was meant the liberation of private enterprise from domination by trusts and other corporate powers. On more specific lines, he advocated popular election of senators; the initiative and referendum, were likely to be found useful as 'a gun behind the door'; and the recall of administrative officers. To the recall of judges he, like Taft, was strongly opposed."—F. A. Ogg, *National progress, 1907-1917*, pp. 201-202, 205.

1912 (February).—Arizona admitted to Union. See ARIZONA: 1908-1911.

1912 (July).—Rumor of Japanese acquisition of naval base in vicinity of Magdalena bay.—"The year 1912 was marked with a highly interesting extension of the principles of the Monroe Doctrine. Occasion was given for this by the rumors of Japanese aggressions at Magdalena Bay, in Mexico. . . . The Senate in April asked the President for information on the subject, and in reply was assured, on the highest authority, that neither the Japanese government nor any Japanese corporation had acquired, or had ever attempted or purposed to acquire, any land at Magdalena Bay for any purpose. An American syndicate, however, had been attempting to sell to Japanese citizens some tracts of land in that region, but had been estopped from continuing those efforts by an intimation from the state department that such a transaction would not be pleasing to our Government. The accuracy of this report from the state department was amply confirmed by senatorial investigation [made in July, 1912]."—W. F. Johnson, *America's foreign relations, v. 2*, pp. 351-352.—See also MONROE DOCTRINE: 1911-1914.

1912 (August).—Alaska created a territory. See ALASKA: 1884-1912.

1912 (August).—Panama Canal Act exempting American coastwise ships from payment of tolls.—In the summer of 1912, when it was seen that the Panama canal was approaching successful completion, Congress passed an act "to provide for the opening, maintenance, protection and operation of the Panama Canal, and the sanitation and government of the Canal Zone." "The most difficult questions dealt with in the Canal Act of 1912 was tolls. It was understood from the beginning that the Canal was not to be so managed as to yield the United States a large net revenue. But it was always expected that commercial shipping would pay enough for the use of the waterway to cover upkeep, and perhaps interest charges. In two reports submitted to President Taft, August 7, 1912, Emory R. Johnson, an expert on transportation, recommended a charge of \$1.20 per net ton for loaded merchant vessels (with a reduction of forty per cent. In the case of vessels in ballast), and that the same

rate be imposed on American and foreign vessels. The Canal Act [which was approved by the president on August 24] practically carried out this suggestion, and the President was given power to fix a rate not to exceed \$1.25 per ton; but free use of the Canal was granted to vessels engaged in the coastwise trade of the United States."—F. A. Ogg, *National progress, 1907-1917*, pp. 270-271.—See also COMMERCE: Commercial age: 1789-1920.—"The portion of the Act . . . of particular interest from an international standpoint . . . is Section 5, relating to the question of tolls. . . . A considerable portion of the report of the minority, in favor of preferential treatment for American coastwise ships, is devoted to the argument that such treatment is not a violation of the [Hay-Pauncefote treaty (see PANAMA CANAL: 1889-1903)], the opinions of President Taft, the Secretary of War, the Secretary of Commerce and Labor and the State Department being quoted in support of their contention. The argument may be summed up in the following paragraph: It is manifest, from the reading of the treaty, that its purpose was to prevent discrimination against other nations. That free tolls to our coastwise vessels would not discriminate against the vessels of other countries becomes apparent when we reflect that under our navigation laws foreign vessels are prohibited from engaging in our coastwise trade. That being true, it is of no concern to foreign nations, their citizens or subjects, what treatment we accord to our coastwise trade. The opponents of uniform tolls were successful, and the bill as finally passed, contained the provision specifically providing that 'No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.'"—Editorial comment, *Panama Canal Act (American Journal of International Law, October, 1912, pp. 976, 978, 980)*.—Section 5 of the act which provided for preferential treatment of American coastwise ships read as follows: "That the President is hereby authorized to prescribe and from time to time change the tolls that shall be levied by the Government of the United States or the use of the Panama Canal: *Provided*, That no tolls, when prescribed as above, shall be changed, unless six months' notice thereof shall have been given by the President by proclamation. No tolls shall be levied upon vessels engaged in the coastwise trade of the United States. That section forty-one hundred and thirty-two of the Revised Statutes is hereby amended to read as follows: Sec. 4132. Vessels built within the United States and belonging wholly to citizens thereof; and vessels which may be captured in war by citizens of the United States and lawfully condemned as prize, or which may be adjudged to be forfeited for a breach of the laws of the United States; and seagoing vessels, whether steam or sail, which have been certified by the Steamboat-Inspection Service as safe to carry dry and perishable cargo, not more than five years old at the time they apply for registry, wherever built, which are to engage only in trade with foreign countries or with the Philippine Islands and the islands of Guam and Tutuila, being wholly owned by citizens of the United States or corporations organized and chartered under the laws of the United States or of any State thereof, the president and managing directors of which shall be citizens of the United States or corporations organized and chartered under the laws of the United States or of any State thereof, the President and managing directors of which shall be citizens of the United States, and no others, may be registered as directed

in this title. Foreign-built vessels registered pursuant to this Act shall not engage in the coastwise trade; *Provided*, That a foreign-built yacht, pleasure boat, or vessel not used or intended to be used for trade admitted to American registry pursuant to this section shall not be exempt from the collection of ad valorem duty provided in section thirty-seven of the Act approved August fifth, nineteen hundred and nine, entitled 'an Act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes.' That all materials of foreign production which may be necessary for the construction or repair of vessels built in the United States and all such materials necessary for the building or repair of their machinery and all articles necessary for their outfit and equipment may be imported into the United States free of duty under such regulations as the Secretary of the Treasury may prescribe: *Provided further*, That such vessels so admitted under the provisions of this section may contract with the Postmaster General under the Act of March third, eighteen hundred and ninety-one, entitled 'An Act to provide for ocean mail service between the United States and foreign ports, and to promote commerce,' so long as such vessels shall in all respects comply with the provision and requirements of Said Act. Tolls may be based upon gross or net registered tonnage, displacement tonnage, or otherwise, and may be based on one form of tonnage for warships and another for ships of commerce. The rate of tolls may be lower upon vessels in ballast than upon vessels carrying passengers or cargo. When based upon net registered tonnage for ships of commerce the tolls shall not exceed one dollar and twenty-five cents per net registered ton, nor be less, other than for vessels of the United States and its citizens, than the estimated proportionate cost of the actual maintenance and operation of the canal subject, however, to the provisions of article nineteen of the convention between the United States and the Republic of Panama, entered into November eighteenth, nineteen hundred and three. If the tolls shall not be based upon net registered tonnage, they shall not exceed the equivalent of one dollar and twenty-five cents per net registered ton as nearly as the same may be determined, nor be less than the equivalent of seventy-five cents per net registered ton. The toll for each passenger shall not be more than one dollar and fifty cents. The President is authorized to make and from time to time amend regulations governing the operation of the Panama Canal, and the passage and control of vessels through the same or any part thereof, including the locks and approaches thereto, and all rules and regulations affecting pilots and pilotage in the canal or the approaches thereto through the adjacent waters. Such regulations shall provide for prompt adjustment by agreement and immediate payment of claims for damages which may arise from injury to vessels, cargo, or passengers from the passing of vessels through the locks under the control of those operating them under such rules and regulations. In case of disagreement suit may be brought in the district court of the Canal Zone against the Governor of the Panama Canal. The hearing and disposition of such cases shall be expedited and the judgment shall be immediately paid out of any moneys appropriated or allotted for canal operation. The President shall provide a method for the determination and adjustment of all claims arising out of personal injuries to employees thereafter occurring while

directly engaged in actual work in connection with the construction, maintenance, operation, or sanitation of the canal, whether such injuries result in death or not, and prescribe a schedule of compensation therefor, and may revise and modify such method and schedule at any time; and such claims, to the extent they shall be allowed on such adjustment, if allowed at all, shall be paid out of the moneys hereafter appropriated for that purpose or out of the funds of the Panama Railroad Company, if said company was responsible for said injury, as the case may require. And after such method and schedule shall be provided by the President, the provisions of the Act entitled 'An Act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment,' approved May thirtieth, nineteen hundred and eight, and of the Act entitled 'An Act relating to injured employees on the Isthmian Canal,' approved February twenty-fourth, nineteen hundred and nine, shall not apply to personal injuries thereafter received and claims for which are subject to determination and adjustment as provided in this section.'—*United States, Panama Canal Act, Aug. 24, 1912 (American Journal of International Law, Oct., 1812, Supplement, pp. 279-281)*.—A protest was presented by the British government against the exemptions in favor of the United States, on the ground that it was a violation of the Hay-Pauncefote Treaty. It was overruled, however, and on November 23 President Taft issued a schedule of rates in accordance with the act.—See also below: 1914 (March-June); PANAMA CANAL: 1912-1914; RAILROADS: 1912-1914.

1912 (October).—Fourth class postmasters placed in civil service.—By an executive order President Taft placed all fourth class postmasters in the civil service.—See also CIVIL SERVICE REFORM: United States: 1910-1913.

1912 (November).—Results of the election of 1912.—"The closing incidents of the [presidential] campaign foreshadowed Democratic victory; and in the election, November 5, Taft carried but two states (Vermont and Utah), yielding eight electoral votes. Roosevelt carried five states—Pennsylvania, Michigan, Minnesota, South Dakota, and Washington—and received 11 of the 13 electoral votes of California, giving him 88 electoral votes in all. Wilson carried all of the remaining 40 states, with a total of 435 votes, which represented the largest vote, and also the largest majority, in the electoral college ever obtained by a party candidate. The popular vote presented, however, a different aspect. The figures were: Wilson, 6,286,214; Roosevelt, 4,126,020; Taft, 3,483,922; Debs, 897,011; Chafin, 208,923; and Reimer, 29,079. The outstanding fact is that in a large proportion of the states in which the Democrats were victorious—in all indeed, except those in the South—they won by pluralities, not by majorities; and that while Wilson had a plurality of 2,160,194 votes over his closest competitor, his total fell short of the combined votes for all other candidates by 2,458,741, and of the combined votes for Roosevelt and Taft by 1,323,728.

It is further to be observed that the Wilson vote was 181,732 smaller than the Bryan vote of 1896, and 122,892 smaller than the Bryan vote of 1908. The stay-at-home vote was large; and the Socialists drew from the major parties to such an extent that their vote was more than doubled over that of 1908.—F. A. Ogg, *National progress, 1907-1917*, pp. 205-206.—“In the election of 1912 the electorate was not convinced that a vital issue was involved, no appreciable gains were made by the Democracy with the elimination of Bryan as a candidate, and the Progressive strength was Republicanism of a modified form. Yet, notwithstanding the decline in the total vote, the stability of the Democratic vote and the powerful influence of the Republican organizations, the distribution of the vote of 1912 does reveal the strength of the independent voter. For the greater part of the Progressive vote was won by an appeal made to the wider interest that the Middle

1912-1916.—Decline of the Progressive party. —“During the four years which succeeded the Presidential election of 1912 the Progressive party, as a national organization, continued steadily to ‘dwindle, peak, and pine.’ More and more of its members and supporters slipped or stepped boldly back to the Republican party. Its quondam Democratic members had largely returned to their former allegiance with Wilson, either at the election or after it. Roosevelt once more withdrew from active participation in public life, until the Great War, with its gradually increasing intrusions upon American interests and American rights, aroused him to vigorous and aggressive utterance on American responsibility and American duty. He became a vigorous critic of the Administration. Once more a demand began to spring up for his nomination for the presidency; the Progressive party began to show signs of reviving consciousness. . . . All these groups wanted

ELECTION MAP OF THE UNITED STATES, 1912

West has been accustomed of recent years to take in matters of government. Here has been a long-felt desire to break the rule of the party machine. The bolt of a former Republican leader seemed to offer a favorable opportunity. Yet fundamentally there was even in this instance a remarkable expression of regular voting. Few voters crossed the traditional line to the Democracy. The division remained within the Republican party. Moreover this division was due primarily to the campaign of the Insurgent Republicans against the forces dominant in the Taft administration, and this fact must minimize the significance of the immediate independence apparently displayed by a great body of voters in the presidential vote of 1912.—E. E. Robinson, *Distribution of the presidential vote of 1912* (*American Journal of Sociology*, July, 1914, p. 30).

Roosevelt as President. They united to hold a convention of the Progressive party at Chicago in 1916 on the same days on which the Republican Convention met there. Each convention opened with a calculating eye upon the activities of the other. But both watched with even more anxious surmise for some sign of intention from the Progressive leader back at Oyster Bay. He held in his single hand the power of life and death for the Progressive party. His decision as to cooperative action with the Republicans or individual action as a Progressive would be the most important single factor in the campaign against Woodrow Wilson, who was certain of re-nomination. Three questions confronted and puzzled the two bodies of delegates: Would the Republicans nominate Roosevelt or another? If another, what would Roosevelt do? If another, what would the Progressives do? For three days the Republican National Convention proceeded steadily and stolidly upon its appointed course. . . . That Convention did not know what it wanted. It only knew that there was one thing that it was afraid of, and another thing it would

rather not have and was afraid it would have to take. It wanted neither Theodore Roosevelt nor Charles E. Hughes, and its members were distinctly uncomfortable at the thought that they might have to take one or the other. . . . They could nominate one of two men, and to nominate either of them was to fling open the gates of the citadel of party regularity and conformity and let the enemy in. Was it to be Roosevelt or Hughes? When the balloting began in the Republican Convention, the only candidate who received even a respectable block of votes was Hughes, but his total was hardly more than half of the necessary majority. . . . Thus began the final scene in the Progressive drama, and a more thrilling and intense occasion it would be difficult to imagine. It was apparent that the Progressive delegates would have none of it. They were there to nominate their own beloved leader and they intended to do it. A telegram was received from Oyster Bay proposing Senator Lodge as the compromise candidate, and the restive delegates in the Auditorium could with the greatest difficulty be held back until the telegram could be received and read at the Coliseum. . . . Doubtless more thrilling moments may come to some men at some time, somewhere, but you will hardly find a delegate of that Progressive Convention to believe it. Then the Convention adjourned, to meet again at three to hear what the man they had nominated would say. At five o'clock in the afternoon, after a couple of hours of impatient and anxious marking time with routine matters, the Progressive delegates received the reply from their leader [declining the nomination]. . . . Probably few of them as they went out of those doors realized that they had taken part in the last act of the romantic and tragic drama of the National Progressive party. But such was the fact, for the march of events was too much for it. Fate, not its enemies, brought it to an end.—So was born, lived a little space, and died the Progressive party. At its birth it caused the nomination, by the Democrats, and the election, by the people, of Woodrow Wilson. At its death it brought about the nomination of Charles E. Hughes by the Republicans. It forced the writing into the platforms of the more conservative parties of principles and programmes of popular rights and social regeneration. The Progressive party never attained to power, but it wielded a potent power.”—H. Howland, *Theodore Roosevelt and his times* (*Chronicles of America Series*, v. 47, pp. 231-234, 235-239).

1913 (March).—Inauguration of Woodrow Wilson.—His address.—Wilson's position on assumption of office.—His cabinet.—On Mar. 4, 1913, Woodrow Wilson began his eventful ad-

ministration. In his inaugural address he said: “The feelings with which we face this new age of right and opportunity sweep across our heart-strings like some air out of God's own presence, where justice and mercy are reconciled and the judge and the brother are one. We know our task to be no mere task of politics, but a task which shall search us through and through, whether we be able to understand our time and the need of our people, whether we be indeed their spokesmen and interpreters, whether we have the pure heart to comprehend and the rectified will to choose our high course of action. This is not a day of triumph; it is a day of dedication. Here muster, not the forces of party, but the forces of humanity. Men's hearts wait upon us; men's lives hang in the balance; men's hopes call upon us to say what we will do. Who shall live up to the great trust? Who dares fail to try? I summon all honest men, all patriotic, all forward-looking men, to my side. God helping me, I will not fail them, if they will but counsel and sustain me.”—*First Inaugural*, Mar. 4, 1913.—Mr. Wilson's position on his assumption of office in March, 1913, was in one respect strong, in another equivocal. He was under the disadvantage, more apparent indeed than real, of being a minority President. Apart from the million odd votes divided between the Socialist and other minor candidates, he had polled a good million and a third less than the combined totals of Mr. Roosevelt and Mr. Taft. On the other hand, he found himself supported in the Sixty-third Congress, which succeeded to power simultaneously with himself, by a Democratic majority in both Houses. The importance of that backing lay in the fact that all bills must be passed by both Houses and approved by the President, and a difference in political colour between President and Congress, or between the two branches of the latter, makes inevitably for legislative delay and friction. . . . The announcement of the composition of the new Cabinet tended to confirm the President's hold over his party, and so over Congress. The two chief posts were filled by Mr. Bryan and Mr. W. G. McAdoo, of New York, who in 1914 married the President's youngest daughter. Mr. Bryan's selection as Secretary of State was a foregone conclusion in view of the part he had played in securing Mr. Wilson's nomination in the Democratic Convention; while Mr. McAdoo's claim to the Secretaryship of the Treasury was based largely on the impression he had created as a practical business man in carrying through the work of constructing the Hudson River tunnels. Mr. W. B. Wilson, the first Secretary of the newly constituted Department of Labour, was a miner and trade union leader of Scotch birth. . . . The other places were filled as follows: Secretary of War, Lindley M. Garrison (New Jersey); Attorney-General, J. C. McReynolds (Tennessee); Postmaster-General, Albert S. Bursleson (Texas); Secretary of the Navy, Josephus Daniels (North Carolina); Secretary of the Interior, Franklin K. Lane (California); Secretary of Agriculture, W. F. Houston (Missouri); Secretary of Commerce, W. C. Redfield (New York).”—H. W. Harris, *President Wilson, his problems and his policy*, pp. 78-80.—J. C. McReynolds, who was promoted to the Supreme Court in 1914 was followed by Thomas W. Gregory as attorney-general.

1913 (March).—Department of Labor created. See LABOR, DEPARTMENT OF, UNITED STATES.

1913 (April-December).—Extra session of Congress.—“President Wilson called Congress to

meet in extra session in April, 1913, and appeared before the two houses to urge in person the revision of the tariff to which the platform had pledged the party. [By this personal appearance to read his own message, he broke the precedent of sending a written message which had been followed by all the presidents since it was established by Jefferson in 1801.] The Underwood Act, which became law October 3, 1913 [see TARIFF: 1913], was a revision downward of the existing tariff and was framed with a view to encouraging rather than restricting foreign trade. [A graduated income tax was also introduced.] The Federal Reserve Act of December 23, 1913, radically revised the financial system which had grown up under the National Banking Act of 1863. Its object was to decentralize credits by establishing reserve banks in convenient centers throughout the country and thus preventing the accumulation of reserve currency in the New York banks. It has made the currency more elastic and greatly diminished the danger of financial panics to which the old system frequently gave rise."—J. H. Latané, *History of the United States*, p. 549.—See also MONEY AND BANKING: Modern: 1913-1919; INDEPENDENT TREASURY: United States.

ALSO IN: C. R. Lingley, *Since the Civil War (United States, v. 3, pp. 545-553)*.

1913 (June).—Minnesota rate case.—On June 9, 1913, the Supreme Court handed down an important decision in the Minnesota rate case. The essential part of the decision was the declaration that in matters which do not require uniformity of regulation, a state may fix interstate railway rates, even where such action indirectly affects interstate commerce.—See also RAILROADS: 1910-1916.

1913 (August).—Relations with Mexico.—President Wilson's address to Congress.—Mission of John Lind.—Owing to the revolution in Mexico, relations with that country had become difficult. "In accordance with [his policy of non-recognition] Wilson in August, 1913, sent a special but informal agent, John Lind, to convey his terms to Huerta. These were immediate amnesty, security for an early and a free election, and the assurance that Huerta would not be a candidate for the presidency and that all parties would agree to abide by the results. These terms were rejected."—C. R. Fish, *American diplomacy*, p. 485.—On August 27, the president delivered an address, at a joint session of both houses of Congress regarding the situation, as follows: "Gentlemen of the Congress, it is clearly my duty to lay before you, very fully and without reservation, the facts concerning our present relations with the Republic of Mexico. The deplorable posture of affairs in Mexico I need not describe, but I deem it my duty to speak very frankly of what this Government has done and should seek to do in fulfillment of its obligation to Mexico herself, as a friend and neighbor, and to American citizens whose lives and vital interests are daily affected by the distressing conditions which now obtain beyond our southern border. . . . Mexico has a great and enviable future before her, if only she choose and attain the paths of honest constitutional government. The present circumstances of the Republic, I deeply regret to say, do not seem to promise even the foundations of such a peace. We have waited many months, months full of peril and anxiety, for the conditions there to improve, and they have not improved. They have grown worse, rather. The territory in some sort controlled by the provisional authorities at

Mexico City has grown smaller not larger. The prospect of the pacification of the country, even by arms, has seemed to grow more and more remote; and its pacification by the authorities at the capital is evidently impossible by any other means than force. Difficulties more and more entangle those who claim to constitute the legitimate government of the Republic. They have not made good their claim in fact. Their successes in the field have proved only temporary. War and disorder, devastation and confusion, seem to threaten to become the settled fortune of the distracted country. As friends we could wait no longer for a solution which every week seemed further away. It was our duty at least to volunteer our good offices—to offer to assist, if we might, in effecting some arrangement which would bring relief and peace and set up a universally acknowledged political authority there. Accordingly, I took the liberty of sending the Hon. John Lind, formerly

OSCAR WILDER UNDERWOOD

governor of Minnesota, as my personal spokesman and representative, to the City of Mexico. Mr. Lind executed his delicate and difficult mission with singular tact, firmness, and good judgment, and made clear to the authorities at the City of Mexico not only the purpose of his visit but also the spirit in which it had been undertaken. But the proposals he submitted were rejected, in a note the full text of which I take the liberty of laying before you. I am led to believe that they were rejected partly because the authorities at Mexico City had been grossly misinformed and misled upon two points. They did not realize the spirit of the American people in this matter, their earnest friendliness and yet sober determination that some just solution be found for the Mexican difficulties; and they did not believe that the present administration spoke, through Mr. Lind, for the people of the United States. The effect of this unfortunate misunderstanding on their part is to leave them singularly isolated and without friends who can effectually aid them. So long as the misunder-

ing continues we can only await the time of their awakening to a realization of the actual facts. We can not thrust our good offices upon them. The situation must be given a little more time to work itself out in the new circumstances; and I believe that only a little while will be necessary. For the circumstances are new. The rejection of our friendship makes them new and will inevitably bring its own alterations in the whole aspect of affairs. The actual situation of the authorities at Mexico City will presently be revealed. Meanwhile, what is it our duty to do? Clearly, everything that we do must be rooted in patience and done with calm and disinterested deliberation. Impatience on our part would be childish, and would be fraught with every risk of wrong and folly. We can afford to exercise the self-restraint of a really great nation which realizes its own strength and scorns to misuse it. It was our duty to offer our active assistance. It is now our duty to show what true neutrality will do to enable the people of Mexico to set their affairs in order again and wait for a further opportunity to offer our friendly counsels. The door is not closed against the resumption, either upon the initiative of Mexico or upon our own, of the effort to bring order out of the confusion by friendly cooperative action, should fortunate occasion offer. While we wait the contest of the rival forces will undoubtedly for a little while be sharper than ever, just because it will be plain that an end must be made of the existing situation, and that very promptly; and with the increased activity of the contending factions will come, it is to be feared, increased danger to the noncombatants in Mexico as well as to those actually in the field of battle. The position of outsiders is always particularly trying and full of hazard where there is civil strife and a whole country is upset. We should earnestly urge all Americans to leave Mexico at once, and should assist them to get away in every way possible—not because we would mean to slacken in the least our efforts to safeguard their lives and their interests, but because it is imperative that they should take no unnecessary risks when it is physically possible for them to leave the country. We should let everyone who assumes to exercise authority in any part of Mexico know in the most unequivocal way that we shall vigilantly watch the fortunes of those Americans who can not get away, and shall hold those responsible for their sufferings and losses to a definite reckoning. That can be and will be made plain beyond the possibility of a misunderstanding. For the rest, I deem it my duty to exercise the authority conferred upon me by the law of March 14, 1912, to see to it that neither side to the struggle now going on in Mexico receive any assistance from this side the border. I shall follow the best practice of nations in the matter of neutrality by forbidding the exportations of arms or munitions of war of any kind from the United States to any part of the Republic of Mexico—a policy suggested by several interesting precedents and certainly dictated by many manifest considerations of practical expediency. We can not in the circumstances be the partisans of either party to the contest that now distracts Mexico or constitute ourselves the virtual umpire between them. . . . The steady pressure of moral force will before many days break the barriers of pride and prejudice down, and we shall triumph as Mexico's friends sooner than we could triumph as her enemies—and how much more handsomely, with how much higher and finer satisfactions of conscience

and of honor!"—*Congressional Record*, Aug. 27, 1913.—See also MEXICO: 1913-1914.

1913 (October).—Non-recognition of Huerta as president of Mexico.—When "on October 9, 1913, Huerta 'purged' the Mexican Congress by imprisoning over a hundred of its members, Wilson informed him that the United States would not accept the result of the election which was soon to be held. Already in August the United States had warned Americans to leave Mexico, the administration had sent war-vessels to assist their departure, and Congress had appropriated money for the same purpose."—C. R. Fish, *American diplomacy*, p. 485.—See also MEXICO: 1913-1914.

1913-1914.—Conversations with Great Britain on the Mexican situation.—In 1912 "American and British oil operators in Mexico were objects of general suspicion in both continents. They were accused of participating too actively in Mexican politics and there were those who even held them responsible for the revolutionary condition of the country. One picturesque legend insisted that the American oil interests looked with jealous hostility upon the great favours shown by the Diaz Administration to Lord Cowdray's company, and that they had instigated the Madero revolution in order to put in power politicians who would be more friendly to themselves. The inevitable complement to this interpretation of events was a prevailing suspicion that the Cowdray interests had promoted the Huerta revolt in order to turn the tables on 'Standard Oil', to make safe the concessions already obtained from Diaz and to obtain still more from the new Mexican dictator. To determine the truth in all these allegations, which were freely printed in the American press of the time, would demand more facts than are at present available; yet it is clear that these oil and other 'concessions' presented the perpetual Mexican problem in a new and difficult light. [See also MEXICO: 1918; TRUSTS: International: Struggle for oil concessions.] The Wilson Administration came into power a few days after Huerta had seized the Mexican Government. The first difficulty presented to the State Department was to determine its attitude toward this usurper. A few days after President Wilson's inauguration Mr. Irwin Laughlin, then Charge d'Affaires in London . . . was instructed to ask the British Foreign Office what its attitude would be in regard to the recognition of President Huerta. . . . The unequivocal answer that Mr. Laughlin received was that the British Government would not recognize Huerta, either formally or tacitly. Mr. Laughlin sent his message immediately to Washington, where it apparently made a favourable impression. The Administration then let it be known that the United States would not recognize the new Mexican regime. Whether Mr. Wilson would at this time have taken such a position, irrespective of the British attitude, is not known, but at this stage of the proceedings Great Britain and the United States were standing side by side. . . . A few weeks afterward, Great Britain changed its mind and recognized the new government in Mexico. Its action produced the most unpleasant impression upon the new Administration. . . . Mr. Wilson, Mr. Bryan, and their associates in the cabinet easily found an explanation that was satisfactory to themselves and to the political enthusiasms upon which they had come into power. They believed that the

sudden change in the British attitude was the result of pressure from British commercial interests which hoped to profit from the Huerta influence. . . . It was not necessary to believe all the rumours that were then afloat in the American press to conclude that a Huerta administration would be far more acceptable to the Cowdray Company than any headed by one of the military chieftains who were then disputing the control of Mexico. Mr. Wilson and Mr. Bryan believed that these events proved that certain 'interests' similar to the 'interests' which, in their view, had exercised so baleful an influence on American politics, were also active in Britain. . . . Mr. Wilson presently formulated an entirely new principle for dealing with Latin American republics. There could be no permanent order in these turbulent countries and nothing approaching a democratic system until the habit of revolution should be checked. One of the greatest encouragements to revolution, said the President, was the willingness of foreign governments to recognize any politician who succeeded in seizing the executive power. He therefore believed that a refusal to recognize any government 'founded upon violence' would exercise a wholesome influence in checking this national habit; if Great Britain and the United States and the other powers would set the example by refusing to have any diplomatic dealings with General Huerta, such an unfriendly attitude would discourage other forceful intriguers from attempting to repeat his experiment. . . . Mexico and other Latin-American countries would . . . establish a constitutional system, and select their governments by constitutional means. . . . General Huerta, who, in his own eyes, was merely another in the long succession of revolutionary chieftains, was translated into an epochal figure; he became . . . representative of the order which was to come to an end, the man who . . . was to point the new way not only in Mexico, but in all Latin-American countries. The first diplomatic task imposed upon Page [the new ambassador], therefore, . . . was to persuade Great Britain . . . to withdraw its recognition of Huerta, and to join hands with the United States in bringing about his downfall. . . . [Affairs were complicated by an interview with Sir Lionel Carden, the new British minister to Mexico, and an interview with him which was published in one of the New York newspapers, in which he was reported as criticising President Wilson's policy in Mexico.] The British Government promptly denied the authenticity of the Carden interview [on Carden's own flat denial], but that helped matters little for the American public insisted on regarding such denials as purely diplomatic. . . . [In November, Sir Walter Tyrrell, Sir Edward Grey's private secretary, who was in the United States on a visit, had an interview with the president.] Sir William succeeded in persuading the President that the so-called oil interests were not dictating the policy of Sir Edward Grey. That British oil-men were active in Mexico was apparent; but they were not using a statesman of so high a character as Sir Edward Grey for their purposes and would not be able to do so. The British Government entertained no ambitions in Mexico that meant unfriendliness to the United States. . . . In fact, the British recognized the dominant character of the American interest in Mexico and were willing to accept any policy in which Washington would take the lead. All it asked was that British property and British lives be protected; once these were safeguarded Great Britain was ready to stand

aside and let the United States deal with Mexico in its own way. . . . A few days after this White House interview Sir Lionel Carden . . . led a procession of European diplomats to General Huerta, formally advised that warrior to yield to the American demands and withdraw from the Presidency of Mexico. The delegation informed the grim dictator that their governments were supporting the American policy and Sir Lionel brought him the unwelcome news that he could not depend upon British support. About the same time Premier Asquith made conciliatory remarks on Mexico at the Guildhall banquet. He denied that the British Government had undertaken any policy 'deliberately opposed to the United States. There is no vestige of foundation for such a rumour.' These events changed the atmosphere at Washington. [Carden at Mexico City was not persona grata to the United States, and in proof of friendliness he was recalled in January, 1914, and sent to Brazil].—H. B. Hendrick, *Life and letters of Walter H. Page*, pp. 179-183, 199, 204, 209.—See also MEXICO: 1913-1914.

1914.—Relations with Mexico.—Removal and replacement of arms embargo.—Early in 1914, the President removed the embargo on arms and ammunition to Mexico, which had been in effect from March, 1912. "Whereas, by a proclamation of the President issued on March 14, 1912, under a Joint Resolution of Congress approved by the President on the same day, it was declared that there existed in Mexico conditions of domestic violence which were promoted by the use of arms or munitions of war procured from the United States; and Whereas, by the Joint Resolution above mentioned it thereupon became unlawful to export arms or munitions of war to Mexico except under such limitations and exceptions as the President should prescribe: Now, therefore, I, Woodrow Wilson, President of the United States of America, hereby proclaim that, as the conditions on which the Proclamation of March 14, 1912, was based have essentially changed, and as it is desirable to place the United States with reference to the exportation of arms or munitions of war to Mexico in the same position as other Powers, the said Proclamation is hereby revoked." [Since, however, conditions did not improve, but on the contrary grew considerably worse, the embargo was again put in force on October 19.] 'Whereas, a Joint Resolution of Congress, approved March 14, 1912, provides: "That whenever the President shall find that in any American country conditions of domestic violence exist which are promoted by the use of arms or munitions of war procured from the United States, and shall make proclamation thereof, it shall be unlawful to export except under such limitations as the President shall prescribe any arms or munitions of war from the United States to such country until otherwise ordered by the President or by Congress"; Now, therefore, I, Woodrow Wilson, President of the United States of America, do hereby proclaim that I have found that there exist in Mexico such conditions of domestic violence promoted by the use of arms or munitions of war procured from the United States as contemplated by the said Joint Resolution above set forth, hereby made applicable to Mexico, and I do hereby warn them that all violations of such provisions will be rigorously prosecuted. . . .' On the same day (October 19) the President ordered that an exception be made in favor of the Carranza de facto government, by permitting arms shipments into the territory under that govern-

ment's control."—Woodrow Wilson, *State papers and addresses*, pp. 55-57.

1914.—Americanization work started by the Bureau of Naturalization. See IMMIGRATION AND EMIGRATION: United States: 1910-1920.

1914.—Coal lands opened in Alaska. See ALASKA: 1914.

1914 (March-June).—Panama canal tolls exemption repealed.—"On March 5, 1914, President Wilson appeared before Congress with a formal request for the repeal of the tolls exemption clause urging 'the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness.' He asserted his belief that the exemption policy was not only unsound in an economic way, but was 'in plain contravention' of the Hay-Pauncefote Treaty. [Great Britain had sent a second and more formal protest against the Canal Act.] . . . I ask this of you in support of the foreign policy of the Administration. . . . The canal itself, meanwhile, was finished. On April 1, 1914, General Goethals became civil governor of the Canal Zone and a few days later a barge service was inaugurated through the canal. The date for the formal opening was set for August 15. The tolls repeal act passed the House before the end of March and in the Senate was officially defended by Hoke Smith, of Georgia, formerly Secretary of the Interior under Cleveland. Its ablest support came from Elihu Root, while the non-partisan nature of the debate was revealed by the fact that O'Gorman, of New York, chairman of the Senate Committee on Oceanic Canals led in opposing it. Some Senators who were reluctant to repeal the clause and to concede its inequity urged that the matter be referred to arbitration under the existing treaty with England. On June 15 the repeal act became a law."—F. L. Paxson, *Recent history of the United States*, pp. 428-429.—See also PANAMA CANAL: 1912-1914; 1913-1914.

1914 (April).—Mexican situation.—Porfirio Diaz, who had been president of Mexico since 1884 and who had given to his country peace but not hope, was forced to retire in May, 1911, and Francisco Madero was elected president. Madero was murdered by Huerta troops. (See MEXICO: 1910-1913.) "In spite of the continued pressure of the United States and the passive support of its anti-Huerta policy by Great Britain, the Mexican usurper refused to resign. President Wilson now began to espouse the interests of Villa and Carranza. His letters to Page [ambassador to England] indicate that he took these men at their own valuation, believed that they were sincere patriots working for the cause of 'democracy,' and 'constitutionalism' and that their triumph would usher in a day of enlightenment and progress for Mexico. It was the opinion of the Foreign Office that Villa and Carranza were worse men than Huerta and that any recognition of their revolutionary activities would represent no moral gain. . . . [In this opinion the President did not concur. In a letter to the ambassador, dated May 18, 1914, he said] 'As to the attitude of mind on that side of the water toward the Constitutionalists, it is based upon prejudices which cannot be sustained by the facts.' . . . [He enclosed a copy of an interview which had appeared in one of the afternoon papers, which, he said, summed up as well as they could be summed up his own conclusions] with regard to the issues and the

personnel of the pending contest in Mexico [and went on to say]: 'I can verify it from a hundred different sources, most of them sources not in the least touched by predilections for such men as our friends in London have supposed Carranza and Villa to be.'"—B. J. Hendrick, *Life and letters of Walter H. Page*, v. 1, pp. 227-229.—See also MEXICO: 1914-1915.

1914 (April).—Occupation of Vera Cruz, following Tampico incident.—A B C Conference.—On April 6, President Wilson delivered before Congress an address on the state of affairs in Mexico, where confusion had become great. He said, in part: "In international law it is a safe rule that every government which actually represents a nation is entitled to recognition and to diplomatic intercourse. But amid the dust and gore of Mexico it is difficult to distinguish a figure which seems to deserve official recognition by the United States of America. . . . The only question of international law and practice which the Department of State has been called upon to decide is whether the man who calls himself President of Mexico is either de jure or de facto the President of Mexico. Geographically, he is plainly not the President of all Mexico, for at least a third of its area is outside of his authority. From a military point of view he is not the head of the Mexican Republic, because his forces have been defeated by rebel armies in every pitched battle for many months. Constitutionally he is not President of Mexico, for he should be flanked by a Congress chosen in an open election. As the wielder of supreme authority for the time being he is not entitled to recognition, because he is visibly afraid to leave his capital even to defend his Government against armed enemies. . . . The truth is that there is no constitutional or international reason why anybody must be recognized in Mexico. It would have been well had earlier administrations been less hasty in recognizing dictators whose career was destined to be short. If there are two organizations in Mexico, neither of which can show any proof that it is desired by the Mexican people, the obvious common-sense course would seem to be to recognize neither of them. . . . The prospect of a genuinely popular government is discouraging. Apparently most of the Mexican people would accept a just and moderate Government, which was once firmly seated, but, with the single exception of Diaz, the 'strong men' have never furnished anything approaching a just and moderate government, certainly not Huerta. So long as recognition waits upon the existence of a stable government, it may have long to wait. And there is a positive and pressing need for official understanding with some authority in Mexico, because the property and lives of foreigners, including many American citizens, are in daily danger. Some of that property arises from questionable dealings with defunct governments; much of it is fairly and honestly won against great difficulties. Most of the Americans who have established themselves in Mexico did so under a government which seemed likely to retain its authority and keep the peace. Our Government owes to those people moral support at all times, and protection in case of need. Of course, that protection can be offered without recognition of this or that Mexican Government, and it is difficult to see how a constitutional president who can not defend the lives and property of his own adherents in the north, could, by recognition, become suddenly powerful enough to defend

Americans. The main difficulty is not dependent on recognition, nor even on the weakness of Mexican government, but in an instability of Mexican character, which seems to make good government impossible. Leaving the Diaz administration out of account, no government in Mexico has ever been much aided by American recognition, or much marred by the lack of it. Then, what is to be done? How is the United States to protect its nationals, or to make effective those claims for millions of dollars which will soon come pouring in and which in the last resort will have to be paid by the Mexican taxpayer. Failing recognition, intervention has been demanded. If by intervention is meant the military occupation of Mexico, with a view to the pacification of the country and then the withdrawal of troops, there have been some experiences that seem like precedents. A military force was sent to Paraguay in 1859 and to China in 1900. But Buchanan vainly sought from Congress in 1859 authority to send an army into Mexico to break up the Miramon government, and thus open the way for the Juarez government. Even when the French were in Mexico, no American troops ever crossed the border. It seems tolerably clear that any American expedition would forthwith bring about some approach to a real national government by making every decent Mexican ready to meet the Americans, as Tom Corwin put it in 1846, 'to welcome them with bloody hands to hospitable graves.' For, strange as it may seem, the Mexicans, who have never learned how to develop the resources of their country or to give it dignity among nations, have an inveterate love of their own land, a furious hatred of those who attempt to diminish their territory, and a willingness to die in its defense, which, among more highly organized nations, might be called patriotism. Allowing that intervention should begin, when and how is it to end? That is a question of more significance to us than to the Mexicans. Excellent military authorities think that a force of 200,000 men would not be too large for the purpose, which would be by far the largest army ever moved from one country to another in America. And when would that country be ready to take care of itself again? Sixteen years we have been civilizing the Filipinos up to the point where they are unanimous only on one thing, namely, that they want us to leave. Nothing less than a similar experience of education in language, science, and self-government would much affect the disposition of the Mexican people. Supposing that our physical means are sufficient for the task of holding down Mexico, have we not sufficient race and color questions already? Are we so far advanced in the amalgamation of European races, much nearer to us than the Mexicans are in culture and standards, that we can undertake a similar task at long range upon an unwilling people? Is Cuba so certain to remain a dependency instead of to become an integral part of the United States that we can undertake a problem many times more difficult? Have we been so successful in the fair treatment and civilization of our own 300,000 Indians that we wish to be responsible for 14,000,000 more? Is the government of Boston, New York, and Philadelphia so firmly established on principles of truth and righteousness that we can now transfer our energies to the uplift of Tampico and Mazatlan and the City of Mexico? Von Moltke used to say that he had worked out three different detailed plans for the invasion of England by a German army, but he never could contrive a plan for getting the army

back again. A stroke of the pen can send an army into Mexico. How many strokes of the sword will be needed to keep it there?"—*Congressional Record*, Apr. 6, 1914.—"In April an unexpected incident precipitated a crisis. Early in that month a party of United States sailors who had landed at Tampico, the port of the Mexican oil-fields, to obtain petrol, were put under arrest by a Huertist colonel. They were subsequently released with an apology, but Huerta, faced with a demand that the Mexican authorities should salute the American flag as an apology, prevaricated and offered an unacceptable compromise. An ultimatum was dispatched by Mr. Bryan, as Secretary of State, and the President appealed to Congress to invest him with power to take such armed action as the situation might demand."—H. W. Harris, *President Wilson, his problems and his policy*, pp. 122.—The President said: "Gentlemen of the Congress, it is my duty to call your attention to a situation which has arisen in our dealings with Gen. Victoriano Huerta at Mexico City which calls for action, and to ask your advice and cooperation in acting upon it. On the 9th of April a paymaster of the U. S. S. *Dolphin* landed at the Iturbide Bridge landing at Tampico with a whale-boat and boat's crew to take off certain supplies needed by his ship, and while engaged in loading the boat was arrested by an officer and squad of men of the army of Gen. Huerta. Neither the paymaster nor anyone of the boat's crew was armed. Two of the men were in the boat when the arrest took place, and were obliged to leave it and submit to be taken into custody, notwithstanding the fact that the boat carried, both at her bow and at her stern, the flag of the United States. The officer who made the arrest was proceeding up one of the streets of the town with his prisoners when met by an officer of higher authority, who ordered him to return to the landing and await orders; and within an hour and a half from the time of arrest orders were received from the commander of the Huertista forces at Tampico for the release of the paymaster and his men. The release was followed by apologies from the commander and later by an expression of regret by Gen. Huerta himself. Gen. Huerta urged that martial law obtained at the time at Tampico; that orders had been issued that no one should be allowed to land at the Iturbide Bridge; and that our sailors had no right to land there. Our naval commanders at the port had not been notified of any such prohibition. . . . Admiral Mayo regarded the arrest as so serious an affront that he was not satisfied with the apologies offered, but demanded that the flag of the United States be saluted with special ceremony by the military commander of the port. The incident can not be regarded as a trivial one, especially as two of the men arrested were taken from the boat itself—that is to say, from the territory of the United States—but had it stood by itself it might have been attributed to the ignorance or arrogance of a single officer. Unfortunately it was not an isolated case. A series of incidents have recently occurred which can not but create the impression that the representatives of Gen. Huerta were willing to go out of their way to show disregard for the dignity and rights of this Government and felt perfectly safe in doing what they pleased, making free to show in many ways their irritation and contempt. A few days after the incident at Tampico an orderly from the U. S. S. *Minnesota* was arrested at Vera Cruz while ashore in uniform to obtain the ship's mail and

was for a time thrown into jail. An official dispatch from this Government to its embassy at Mexico City was withheld by the authorities of the telegraphic service until peremptorily demanded by our chargé d'affaires in person. So far as I can learn, such wrongs and annoyances have been suffered to occur only against representatives of the United States. I have heard of no complaints from other Governments of similar treatment. Subsequent explanations and formal apologies did not and could not alter the popular impression, which it is possible it had been the object of Huertista authorities to create, that the Government of the United States was being singled out, and might be singled out with impunity, for slights and affronts in retaliation for its refusal to recognize the pretensions of Gen. Huerta to be regarded as the constitutional provisional President of the Republic of Mexico. The manifest danger of such a situation was that such offenses might grow from bad to worse until something happened of so gross and intolerable a sort as to lead directly and inevitably to armed conflict. It was necessary that the apologies of Gen. Huerta and his representatives should go much further; that they should be such as to attract the attention of the whole population to their significance and such as to impress upon Gen. Huerta himself the necessity of seeing to it that no further occasion for explanations and professed regrets should arise. I therefore felt it my duty to sustain Admiral Mayo in the whole of his demand and to insist that the flag of the United States should be saluted in such a way as to indicate a new spirit and attitude on the part of the Huertistas. Such a salute Gen. Huerta has refused, and I have come to ask you approval and support in the course I now propose to pursue. . . . I earnestly hope that war is not now in question. I believe that I speak for the American people when I say that we do not desire to control in any degree the affairs of our sister Republic. Our feeling for the people of Mexico is one of deep and genuine friendship, and everything that we have so far done or refrained from doing has proceeded from our desire to help them, not to hinder or embarrass them. We would not wish even to exercise the good offices of friendship without their welcome and consent. The people of Mexico are entitled to settle their own domestic affairs in their own way, and we sincerely desire to respect their right. The present situation need have none of the grave implications of interdependence if we deal with it promptly, firmly, and wisely. No doubt I could do what is necessary in the circumstances to enforce respect for our Government without recourse to the Congress and yet not exceed my constitutional powers as President but I do not wish to act in a matter possibly of so grave consequence except in close conference and cooperation with both the Senate and House. I therefore come to ask your approval that I should use the armed forces of the United States in such ways and to such an extent as may be necessary to obtain from Gen. Huerta and his adherents the fullest recognition of the rights and dignity of the United States [applause], even amidst the distressing conditions now unhappily obtaining in Mexico. There can in what we do be no thought of aggression or of selfish aggrandizement. We seek to maintain the dignity and authority of the United States only because we wish always to keep our great influence unimpaired for the uses of liberty, both in the United States and wherever else it may be employed for

the benefit of mankind."—*Congressional Record*, Apr. 20, 1914.—"While our government refused to recognize either Huerta or Carranza as officially representative of Mexico, it was in constant relationship with both. In April, 1914 its relations with Huerta became so strained that it was decided to undertake a military occupation of Vera Cruz. [Gen. Funston, with a division of regulars, was sent to relieve the naval landing parties.] This was accomplished [Apr. 21] not without bloodshed. Although the administration announced that hostilities would not be carried farther, the opinion was widespread that war and at least temporary conquest would result. The people of the United States were strongly divided as to the probability and wisdom of such action, Europe was deeply interested. Spanish America was still more intensely aroused, and its press and public men were very generally convinced of the ambitions of the United States. In this crisis, Argentina, Brazil, and Chili known as the A B C powers, offered their mediation. This the Wilson administration promptly accepted, subject to certain restrictions, and a conference was arranged at Niagara [Ontario]. The Mexican factions showed themselves less amenable to suggestion than the United States, and practically nothing was done towards solving the internal problems of Mexico. The attitude of the United States, however, was made clear to Spanish America, and the subsequent withdrawal of the American troops from Vera Cruz confirmed the impression, that it was guided by no motives of territorial aggrandizement."—C. R. Fish, *American diplomacy*, p. 490.—Meanwhile the minister of foreign affairs in Mexico City handed G. F. O'Shaughnessy, the American Chargé d'Affaires, his passport, and on the following day, April 23, the Mexican Chargé d'Affaires in Washington demanded that his passport be given to him.—See also A B C CONFERENCE; MEXICO: 1913-1914; 1914-1915.

1914 (August).—State of American opinion on the World War.—President Wilson asks for neutrality.—"Despite the wars and rumors of wars in Europe after 1910, few Americans perceived the gathering of the clouds, and probably not one in ten thousand felt more than an ordinary thrill of interest on the morning of June 29, 1914, when they read that the Archduke Franz Ferdinand of Austria had been assassinated. Nor, a month later, when it became obvious that the resulting crisis was to precipitate another war in the Balkans, did most Americans realize that the world was hovering on the brink of momentous events. Not even when the most dire forebodings were realized and the great powers of Europe were

drawn into the quarrel, could America appreciate its significance. Crowds gazed upon the Bulletin boards and tried to picture the steady advance of German field-gray through the streets of Liège, asked their neighbors what were these French 75's, and endeavored to locate Mons and Verdun on inadequate maps. Interest could not be more intense, but it was the interest of the moving-picture devotee. Even the romantic voyage of *Kronprinzessin Cecilie* with her cargo of gold, seeking to elude the roving British cruisers, seemed merely theatrical. It was a tremendous show and we were the spectators. Only the closing of the Stock Exchange lent an air of reality to the crisis."—C. Scymour, *Woodrow Wilson and the World War* (*Chronicles of America Series*, v. 43, pp. 27-28).—On Aug. 4, 1914, the president issued a proclamation of neutrality as follows:

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION:

Whereas, a state of war unhappily exists between Austria-Hungary and Serbia, and between Germany and Russia, and between Germany and France; and whereas the United States is on terms of friendship and amity with the contending powers and with the persons inhabiting their several dominions; And, whereas, there are citizens of the United States residing within the territories or dominions of each of the said belligerents and carrying on commerce trade or other business or pursuits therein; And, whereas, there are subjects of each of the said belligerents residing within the territory or jurisdiction of the United States and carrying on commerce, trade or other business or pursuits therein; And whereas, the laws and treaties of the United States, without interfering with the free expression of opinion and sympathy or with the commercial manufacture or sale of arms or munitions of war, nevertheless impose upon all persons who may be within their territory and jurisdiction the duty of an impartial neutrality during the existence of the contest; And, whereas, it is the duty of a neutral government not to permit or suffer the making of its waters subservient to the purposes of war; Now, therefore, I, Woodrow Wilson, president of the United States of America, in order to preserve the neutrality of the United States and of its citizens and of persons within its territory and jurisdiction, and to enforce its laws and treaties, and in order that all persons, being warned of the general tenor of the laws and treaties of the United States in this behalf, and of the law of nations, may thus be prevented from any violation of the same, do hereby declare and proclaim that by certain provisions of the act approved on the 14th day of March, A. D., 1909, commonly known as the penal code of the United States, the following acts are forbidden to be done, under severe penalties, within the territory and jurisdiction of the United States, to wit:

"1. Accepting and exercising a commission to serve either of the said belligerents by land or by sea against the other belligerents.

"2. Enlisting or entering into the service of either of the said belligerents as a soldier, or as a marine, or seaman on board of any vessel of war, letter of marque, or privateer.

"3. Hiring or retaining another person to enlist or enter himself in the service of either of the said belligerents as a soldier, or as a marine, or seaman on board of any vessel of war, letter of marque, or privateer.

"4. Hiring another person to go beyond the limits or jurisdiction of the United States with intent to be enlisted as aforesaid.

"5. Hiring another person to go beyond the limits of the United States with intent to be entered into the service as aforesaid.

"6. Retaining another person to go beyond the limits of the United States with intent to be enlisted as aforesaid.

"7. Retaining another person to go beyond the limits of the United States with intent to be entered into service as aforesaid. (But the said act is not to be construed to extend to a citizen or subject of either belligerent who, being transiently within the United States, shall, on board of any vessel of war, which, at the time of its arrival within the United States, was fitted and equipped as such vessel of war, enlist or enter himself or hire or retain another subject or citizen of the same belligerent who is transiently within the United States, to enlist or enter himself to serve such belligerent on board such vessel of war, if the United States shall then be at peace with such belligerent.)

"8. Fitting out and arming, or attempting to fit out and arm, or procuring to be fitted out and armed, or knowingly being concerned in the furnishing, fitting out or arming of any ship or vessel with intent that such ship or vessel shall be employed in the service of either of the said belligerents.

"9. Issuing or delivering a commission within the territory or jurisdiction of the United States for any ship or vessel to the intent that she may be employed as aforesaid.

"10. Increasing or augmenting, or procuring to be increased or augmented, or knowingly being concerned in increasing or augmenting the force of any ship of war, cruiser or other armed vessel, which at the time of her arrival within the United States was a ship of war, cruiser or armed vessel in the service of either of the said belligerents, or belonging to the subjects of either by adding to the number of guns of such vessels or by changing those on board of her for guns of a larger caliber, or by the addition thereto of any equipment solely applicable to war.

"11. Beginning or setting on foot or providing or preparing the means for any military expedition or enterprise to be carried on from the territory or jurisdiction of the United States against the territories or dominions of either of the said belligerents."

And I do hereby further declare and proclaim that any frequenting and use of the waters within the territorial jurisdiction of the United States by the armed vessels of a belligerent, whether public ships or privateers, for the purpose of preparing for hostile operations, or as posts of observation upon the ships of war or privateers or merchant vessels of a belligerent lying within or being about to enter the jurisdiction of the United States, must be regarded as unfriendly and offensive and in violation of that neutrality which it is the determination of this government to observe; And to the end that the hazard and inconvenience of such apprehended practices may be avoided, I further proclaim and declare that from and after the 5th day of August inst., and during the continuance of the present hostilities between Austria-Hungary and Serbia, and Germany and Russia, and Germany and France, no ship of war or privateer of any belligerent shall be permitted to make use of any port, harbor, roadstead or waters subject

to the jurisdiction of the United States from which a vessel of an opposing belligerent (whether the same shall be a ship of war, a privateer or a merchant ship) shall have previously departed, until after the expiration of at least twenty-four hours from the departure of such last mentioned vessel beyond the jurisdiction of the United States. . . . And I do further declare and proclaim that the statutes and the treaties of the United States and the law of nations alike require that no person, within the territory and jurisdiction of the United States, shall take part, directly or indirectly, in the said waters, but shall remain at peace with all of the said belligerents, and shall maintain a strict and impartial neutrality. And I do hereby enjoin all citizens of the United States, and all persons residing or being within the territory or the jurisdiction of the United States, to observe the laws thereof, and to commit no act contrary to the provisions of the said statutes or treaties or in violation of the law of nations in that behalf. . . . And I do hereby give notice that all citizens of the United States and others who may claim the protection of this government, who may misconduct themselves in the premises, will do so at their peril, and that they can in no wise obtain any protection from the government of the United States against the consequences of their misconduct. In Witness Whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this fourth day of August in the year of our Lord one [SEAL] thousand nine hundred and fourteen and of the independence of the United States of America the one hundred and thirty-ninth.

WOODROW WILSON.

By the President:

WILLIAM JENNINGS BRYAN,
Secretary of State.

—By the President of the United States of America: Proclamation, Aug. 4, 1914 (*Statutes at Large of the United States of America from March, 1913, to March, 1915, v. 38, pt. 2, Private laws, etc., 63rd Congress, pp. 2001-2002*).

1914 (August).—Opening of the Panama canal. —The Panama canal, which had been in course of construction since 1904 was officially opened for traffic on August 15. "The purchase of the rights of the French company was consummated, and the way was thus finally cleared for digging the 'big ditch.' Many practical problems, however, had to be solved before the work could be completed. Yellow fever and malaria began their old-time ravages among the canal workers, but under the energetic direction of the chief sanitary officer, Colonel William C. Gorgas, . . . the Canal Zone was made 'as safe as a health resort.' Difference of opinion existed as to whether it would be better to construct a lock or a sea-level canal. In November, 1905, a board of American and European engineers . . . declared in favor of a sea-level canal. But . . . after careful investigation President Roosevelt wisely decided in favor of a lock canal, and Congress ratified the decision. Congressional insistence upon having the construction work managed by a commission delayed the enterprise, . . . [but] upon the whole, the enterprise was conducted on a high plane, without corruption or notable waste. . . . In February, 1907, President Roosevelt announced that he had decided to put the

undertaking in charge of army engineers. Lieutenant Colonel George W. Goethals was appointed chief engineer, with Majors William L. Sibert and David DuB. Gaillard as assistants. . . . Thenceforward the enterprise moved forward more rapidly. . . . On October 10, 1913, not quite a decade after the Panama revolt, water was turned into the Culebra Cut, and soon after small boats were able to navigate the whole length of the canal. The first commercial use of the water way was made May 19, 1914, when three barges, loaded with sugar from Hawaii, passed through from the Pacific to the Atlantic."—P. L. Haworth, *United States in our own times*, pp. 307-308.—See also PANAMA CANAL: 1913-1914.

1914 (September).—Federal Trade Commission created.—"By Act of Congress approved September 26, 1914, a non-partisan Federal commission was created, which is directed to 'prevent persons, partnerships, or corporations, excepting banks and common carriers subject to the acts to regulate commerce, from using unfair methods of competition in commerce.' To carry out the provisions of the act, the Federal Trade Commission, composed of five members appointed by the President, is empowered to conduct hearings in any city of the United States. If unfair methods are shown, the Commission shall direct the offenders to desist therefrom, and may apply to the U. S. Circuit Court of Appeals for the enforcement of its orders. The Commission is also empowered to enforce compliance with certain sections of the Clayton Act; to conduct investigations into business practices and management; to investigate the enforcement of decrees under the Sherman Act; and to investigate and report to Congress on foreign trade combinations. Maximum penalties of imprisonment for six months, a fine of \$1,000 or both, are provided for refusal to testify before the Commission, falsification of evidence, and failure to submit required reports. The Federal Trade Commission, as established by this act of September, 1914, has not only the functions of investigation and publicity exercised from 1903 to 1914 by the Bureau of Corporations, but it has additional functions of investigation, publicity, and recommendation, and further, it has powers of a quasi-judicial character. Among the new powers of investigation, publicity, and recommendation are notable: Authority to require corporations to make annual or special reports in such form as the Commission may prescribe; general power to investigate corporations; authority, under direction of the President or of either House of Congress to investigate and report concerning any alleged violations of the anti-trust acts by any corporation; authority to investigate trade conditions in other countries with reference to combinations or other conditions affecting foreign trade of the United States; authority to make recommendations to the attorney-general for readjustment of any corporation found to be violating the anti-trust acts; authority to investigate the manner in which any court decrees, restraining corporations from violating the anti-trust laws, are being carried out; and authority to make public such portions of the information obtained in its investigations as it shall deem expedient, except trade secrets and names of customers. The quasi-judicial functions of the Commission may be thus summarized: It has authority to enforce the provisions of the Federal Trade Commission Act relative to unfair competition, and the provisions of the Clayton Act, notably those relative to price discrimination, tying con-

tracts, holding companies, and interlocking directorates, as to all corporations which come under its jurisdiction. There has thus been created and broadly empowered a Federal administrative agent to deal with great industrial corporations which do business beyond the borders of a single state. Such an agent is indispensable if the difficult trust problem of the United States is to be solved scientifically. Men of vision, such men as Justice Harlan, began to point out the need for such an administrative body as soon as the Sherman Law began to be applied. The Bureau of Corporations was a forerunner, which demonstrated the high value of official expert determination of the facts about Trusts. The Federal Trade Commission is the fully developed, fact-finding, and administrative body, all too slowly evolved through the urgent necessities of the situation."—J. W. Jenks, *Trust problem*, pp. 266-268.—See also TRUSTS: United States: 1914.

1914-1917.—German plots in the United States during the period of neutrality.—Efficiency of American Secret Service Bureau.—"Besides undoubtedly many matters which from reasons of public policy the Government has still kept hidden, the House of Representatives Committee on Foreign Affairs, when it presented the war resolution [in April, 1917] following the President's message, went on formal record as listing at least 21 crimes or unfriendly acts committed upon our soil with the connivance of the German Government since the European war began. Among these were: Inciting Hindoos within the United States to stir up revolts in India, and supplying them with funds, for that end, contrary to our neutrality laws. Running a fraudulent passport office for German reservists. This was supervised by Capt. von Papen of the German Embassy. Sending German agents to England to act as spies, equipped with American passports. Outfitting steamers to supply German raiders, and sending them out of American

ports in defiance of our laws. Sending an agent from the United States to try to blow up the International Bridge at Vaneboro, Me. Furnishing funds to agents to blow up factories in Canada. Five different conspiracies, some partly successful, to manufacture and place bombs on ships leaving United States ports. For these crimes a number of persons . . . [were] convicted, also Consul-General Bopp, of San Francisco (a very high German official accredited to the United States Government), . . . [was] convicted of plotting to cause bridges and tunnels to be destroyed in Canada. Financing newspapers in this country to conduct a propaganda serviceable to the ends of the German Government. Stirring up anti-American sentiment in Mexico and disorders generally in that country, to make it impossible for the United States to mix in European affairs. (N. B.—This last, from a humanitarian standpoint, seems peculiarly outrageous. Germany had not the slightest grievance against the helpless Mexicans. To incite them to revolt against their own Government and to make war on the United States simply involved their misery and probably destruction, in return for a very doubtful and round-about gain for Germany. The greatest wrong was not to the United States but to Mexico.) German military usage has been quite in this spirit, however, and approves of such doings. . . . Bribery of enemies' subjects, acceptance of offers of treachery, utilization of discontented elements in the population, support of pretenders and the like, are permissible; indeed, international law is in no way opposed to the exploitation of crimes of third parties."—Committee on Public Information, *War message and the facts behind it (War Information Series, no. 101)*.—"The most comprehensive and successful effort to provoke strikes was made by Labor's National Peace Council, an organization financed by Franz von Rintelen, who came to the United States early in April, 1915. The alleged purpose of the Council was to express the pacific sentiments of the workers and to prevent the United States from entering the war. . . . Along with Lamar, Buchanan, ex-Congressman Fowler, Martin, Monett, and two others, all of whom had assisted in the work of the Council, Rintelen was indicted by the Grand Jury on December 28, 1915, for 'conspiracy to restrain the manufacture, transportation, and export of munitions of war.' . . . Rintelen, Lamar, and Martin were found guilty, and on May 21, 1917, were each sentenced to one year's imprisonment. The indictment against Monett was dismissed and the jury disagreed as to the others. . . . The hand of the German Government was extended to America to influence members of Congress through German-American voters and their sympathizers. The German-American National Alliance had long endeavored to weld persons of German descent in the United States into a compact body, to be used, when desirable, in the interests of Germany. After the war began, in July, 1914, prominent German-Americans organized and supported other societies which aimed to persuade or intimidate members of Congress into adopting pro-German policies. . . . One of these organizations was the American Embargo Conference, established to prevent the export of munitions. . . . If strikes should fail to close American munitions plants, if money were lacking to buy up all their products, and if the Government refused an embargo, Germany's agents had yet another resource—to destroy war materials and other supplies for the Entente States while in

course of shipment by sea. One project of this kind was carried out under the direction of Captain von Papen and Wolf von Igel. It consisted in placing in the holds of steamers incendiary bombs which, at a fixed time, would explode and ignite the surrounding cargo. The bomb shells were manufactured from designs by Dr. Walter T. Scheele, a German chemist of Hoboken, on the *Friedrich der Grosse* of the North German Lloyd line, and were then taken to Dr. Scheele's laboratory and filled with combustibles. . . . Robert Fay, a former officer in the German army, who came to the United States in April, 1915, endeavored to prevent the traffic in munitions by sinking the laden ships at sea. . . . Germany's official representatives on the Pacific coast were engaged in similar enterprises. The leader was Franz Bopp, German Consul-General at San Francisco. His chief assistants were Baron Eckhardt von Schack, the vice-consul, lieutenant Wilhelm von Brincken of the consulate, and Charles C. Crowley, a detective employed by Bopp as secret investigator."—E. E. Sperry, *German plots and intrigues (Committee on Public Information, Red, White and Blue Series, no. 10, pp. 11-12, 14-15, 17-19, 21)*.—"Another military enterprise against Canada was undertaken by a prosperous citizen of the German Empire living in Detroit, Albert Kaltschmidt. He was a leader among the German-Americans of his city, had organized the *Deutscherbund* there and was its secretary. . . . Kaltschmidt was arrested in April, 1917, and his trial completed during December of the same year. The jury found him guilty on all charges in the indictment, and he was sentenced to four years in the Federal prison at Leavenworth, Kansas, and to pay a fine of \$20,000. His sister, Ida K. Neef, was sentenced to three years in the Detroit House of Correction and to pay a fine of \$15,000. Her husband, Fritz A. Neef, was sentenced to two years at Leavenworth and to pay a fine of \$10,000. Two other accomplices received lighter sentences. Another and more successful attack on the Grand Trunk Railway was made at Vanceboro, Maine, where it crosses the international bridge between the United States and Canada. Captain von Papen ordered Werner Horn, a German reserve lieutenant, to blow up the bridge and supplied him with \$700. Horn was arrested immediately after the explosion which partly damaged the bridge. [He was brought to trial in Boston during June, 1917.] Horn was found guilty and sentenced to eighteen months at Atlanta penitentiary and the payment of a fine of \$1,000. In order to have at hand an adequate supply of counterfeit passports, the German Embassy maintained an office in New York City, directed by Captain von Papen, where they were forged wholesale. German consuls in distant cities, as Chicago and St. Paul, were informed concerning this office and sent there for passports the reservists from their several localities. These operations were known almost from the first to the United States Secret Service. Hans A. von Wedell, who managed the office, took alarm and fled in November, 1914, supplied with money by von Papen. In [a] letter, found on one of his associates, who was arrested before he had an opportunity to post it, von Wedell exonerates himself from the charge of deserting his post and shows the complicity of the German Ambassador [Bernstorff] in the business of forging passports. . . . German agents in the United States also endeavored to give military aid to their country by sending coal and other supplies to German warships which were raiding commerce in both the

Atlantic and Pacific oceans. Such action was a violation of American neutrality, and in order to evade the law the conspirators took false oaths before Federal officials concerning the ownership of vessels, the nature of their cargoes, and their destination. These acts, even more than the use of forged passports, were likely to cause friction between the United States and countries with which it was at peace. The Hamburg-American Line, through its high officials in New York, repeatedly defrauded the United States by procuring false manifests. Among those involved were Dr. Buenz, managing director, George Koetter, superintending engineer, Adolph Hachmeister, purchasing agent, and Joseph Pappinghaus, who together worked up an elaborate machinery to deceive the Government. They confessed at their trial that they had sent out twelve ships, which were proved by the Government to have fraudulent papers and all of which were captured and interned before reaching their destination. The Indian Nationalist Party has long aimed to overthrow British rule in India by means of armed rebellion. When the war began, this party was represented in Berlin by a committee which was directed and largely financed by the German Government. . . . The following persons were indicted in March, 1917, 'for feloniously conspiring to set on foot a military enterprise to be carried on from within the territory of the United States against India . . . the object and purpose being to initiate mutiny and armed rebellion in India and to overthrow the Government': Franz Bopp, Eckhart H. von Schack, William von Brincken, Hans Tauscher, F. von Papen, George Rodiek (German Consul at Honolulu), Earnest Sekunna, Wolf von Igel, Har Dayal, Ram Chandra, Bhagwan Singh, Chandra Kanta Chakrabarty, and Haramba Lal Gupta. The case was tried in the Federal Court at San Francisco, California, in March, 1918. All were convicted, except one American of very minor importance and two Hindus, one of whom killed the other and in turn was killed in the court room by a court official. . . . By rebellion in Ireland, as well as in India and Egypt, Germany hoped to paralyze the military strength of England; and in carrying out this plan her diplomatic officials in the United States had the cooperation of some of the Irish revolutionists here. Their close connection with the rebellion which ended so disastrously for Sir Roger Casement and other Irish leaders, and the kind of aid they gave to it, are shown by several communications found among Captain von Papen's papers in the German Military Information Bureau at 60 Wall Street. . . . The aims of German propagandists in the United States were to prove the justice of Germany's cause and the warmth of her friendship for the American people; to procure from Congress an embargo on munitions shipped to the Allies (although Germany sent to the United States a commission with ample funds to buy such supplies for her own use, which commission organized or bought out steamship companies and chartered many vessels to transport its purchases to Germany); to encourage pacifism by teaching the waste and wickedness of war; to provoke strife between America and the Allied states, especially England and Japan. So eager . . . [had] German agents been to cause friction between the United States and England that Paul Koenig attempted through perjury to manufacture evidence that supplies were being sent from New York to British warships. Ambassador von Bernstorff took a direct and active part in purchasing the services of those who would aid Germany by creating opin-

ion in her favor. Franz von Rintelen, according to his own statement, spent many thousands of dollars in carrying on a pacifist propaganda in American newspapers and other publications. He had prepared and widely circulated a small pamphlet, lauding the glory and happiness of peace and denouncing the corrupt and greedy Americans who for the sake of profit were forcing the United States into the present war. . . . The publications which were maintained in the United States by the German Government or were subsidized by it, supported in general the following measures: Enactment by Congress of a law forbidding Americans to travel on the ships of the belligerent states; an embargo on munitions; prohibition by the Government of loans to the Allied powers and the boycott of banks which made them; defeat of Wilson for reelection in 1916 and also of Senators and Representatives who would not vote for bills favored by the German Government; pacifism in the sense that the United States should not defend the lives and property of its citizens from attack by Germany. They also systematically defamed our Government and the public men of the United States. Letters and checks prove that the Austrian Embassy paid subsidies to several foreign language newspapers, among them Polish, Roumanian, and Hungarian publications. The German War Office, acting through Ambassador von Bernstorff and the Austrian Consul-General in New York, von Nuber, directed the American Correspondence Film Company, the purpose of which was to distribute German war films in the United States. The German films apparently had a wide circulation, for Secretary Zimmermann [telegraphed] to von Bernstorff, 'Spread films through all big cities'; and Baron Burian, Foreign Minister of Austria-Hungary, telegraphed to the president of the film company, 'Send films no longer used in United States to South America, China, and Siam.'—E. E. Sperry, *German plots and intrigues (Committee on Public Information, Red, White and Blue Series, no. 10, pp. 29-30, 32-33, 35-36, 38, 42, 47, 53, 55, 57-58)*.—See also PAN-GERMANISM: Pan-German League.—'The alertness of the American Secret Service and the Bureau of Investigation of the Department of Justice prevented the consummation of these plans. There was need for a shifting of the Germanic spies. Immediately after the publication of Count von Bernstorff's warning an exodus of known spies to South America began.'—J. P. Jones, *America entangled, pp. 223-224*.—See also WORLD WAR: Miscellaneous auxiliary services: II. Espionage: a, 4; a, 7; III. Press reports and censorship: d, 1.

1914-1920.—Mercantile marine.—'It required a war to call the national mind to consider what a Mercantile Marine means to a country. The Spanish war of 1898 did this to the extent that there was aroused a strong support for the Panama Canal project. The Act permitting this dates from 1892, and it is really from this year that the new phase begins, though only gradually. If you make direct

and shorter roads on land leading to important trading centres, you obviously at once attract trade. If in the same manner you shorten communications by sea, it will have a similar effect. Quite apart from its warlike strategic value, which is outside our subject, the theory of the Panama Canal was based on the fact that it would reduce the sea route from New York to San Francisco by most of 8000 miles, and to Sydney and Yokohama by about 4000 miles. The 1892 Act also authorised admission to American registry of foreign-built vessels not more than five years old. Then again came another war, the Great War, which began on August 4, 1914, the year in which the canal was opened. Too late America had begun to learn the value of a Mercantile Marine, and now she foresaw that there would be an inadequate supply of shipping to carry her trade across the ocean. Immediately she tried to make up for this by passing a law a fortnight after the outbreak of war removing the age limit in the Act of 1892. And now it becomes necessary to look into the matter somewhat closely, otherwise what followed is not intelligible. When the European War broke out, America, having regard to her population, wealth, overseas trade and length of littoral, was in a curious position. The following figures are for June, 1914, and are eloquent. In that month, of all the world's sea-going steel and iron steam tonnage the British Empire owned 47.7, Germany, 12, Scandinavia 8.7, France 4.5, the United States 4.3 and Japan 3.9 per cent. As the war went on America realised at least that 71 per cent. of the world's steamships were in the hands of belligerents, and therefore the means of transport for American exports and imports—in other words, the exchange of wealth—had been taken away. Even farmers and cotton-growers who had never seen the sea in their lives began to take an interest in the subject when they suffered losses. It took the Great War to wake up the great American nation, as it had taken American clippers to make our sailing ship-owners become active. Shipbuilding in America suddenly began to revive, for from the end of 1915 ships were required by Britain, France and Norway. Mines and submarines had caused losses to the two first, while the third required more ships than ever for the profitable trade she was doing with Great Britain and France. Moreover, the American Mercantile Marine needed ships for herself; and the result was that in 1915 there was a net increase of nearly 500,000 tons added to its commercial service. . . . In 1917 with America a participant in the war, and about to send armies to Europe together with necessary military supplies, the need for American merchant tonnage became positively acute. In the whole of the United States there were not more than sixty-one shipyards of which only thirty-seven were building steel craft.'—E. K. Chatterton, *Mercantile marine, pp. 223-226*.—As a war measure, Congress, on October 6, 1917, opened the coastwise trade to ships qualified for the foreign trade under the act of 1914; but under the Merchant Marine Act of 1920 the coasting trade is restricted to American-built ships and to ships acquired by or from the United States Shipping Board. The limited 'free-ship' provision of 1912 failed to attract foreign-built steamships prior to the outbreak of the war in Europe. Under the more liberal provisions of 1914, a large foreign-built tonnage was added to American registry, consisting for the most part of the property of American citizens previously under foreign flags and seeking greater security

under the American flag during the period of neutrality of the United States. . . . Congressional investigations in regard to shipping conferences had emphasized the need for regulation of ocean carriers, and the war in Europe brought home to the American business world the disadvantage of dependence upon the ships of belligerent nations. Essential lines of trade and communication were disturbed, freight rates became prohibitive, and cargo space unavailable. Diverse proposals were advanced for the rapid development of shipping under the American flag. Subsidies would not prove effective under existing freight rate conditions and overcontracted shipyards, and were not likely to be adopted by the party in power, long committed to opposition to them. The effect of 'free-ship' legislation was soon counteracted by laws and decrees of foreign nations forbidding sale of their merchant vessels during the war. The Wilson administration decided in favor of building

it was empowered to have constructed and equipped or to 'purchase, lease, or charter vessels suitable, as far as the commercial requirements of the United States marine trade may permit, for use as naval auxiliaries or army transports, or other naval and military purposes'; (4) the President was authorized to transfer to the Board such vessels of the War or Navy Department as are suitable for commercial uses and not required for military or naval use in time of peace, and 'to cause to be transferred to the Board vessels owned by the Panama Railroad Company and not required in its business; (5) the Board was empowered, with the approval of the President, to charter, lease, or sell to any citizen of the United States any vessel so purchased, constructed, or transferred; (6) it was also authorized to form under the laws of the District of Columbia one or more corporations for the purchase, construction, equipment, lease, charter, maintenance, and operation of

SHIPYARD AT HOG ISLAND, WHILE UNDER CONSTRUCTION

and purchasing ships to be owned by the government, and, after long controversy, this policy was embodied in the Shipping Act of September 7, 1916. The purpose of this law was twofold: to regulate carriers by water in interstate and foreign commerce and to develop a naval auxiliary and naval reserve and a merchant marine adequate to the needs of our insular and foreign trade. The United States Shipping Board was created, consisting of five members named by the President and approved by the Senate and invested with large powers: (1) it was given regulative control over the port-to-port business of carriers by water similar to that of the Interstate Commerce Commission over inland transportation; (2) it was charged with the investigation of the relative cost of building merchant vessels in the United States and other countries, the comparative advantages of operating under American or foreign registry, the rules under which vessels are constructed in the United States and abroad, marine insurance, domestic and foreign methods of classifying and rating vessels, navigation laws and regulations, and the legal status of mortgage loans on vessels; (3)

merchant vessels in the commerce of the United States. The capital stock of such corporations was not to exceed \$50,000,000, of which the United States through the Board was to purchase and vote not less than a majority. Under the terms outlined above, the United States Shipping Board Emergency Fleet Corporation was organized April 16, 1917. After the United States entered the war, the government undertook the colossal task of securing a merchant fleet commensurate with the unprecedented emergency need. Under the shipping act, greatly reinforced by extraordinary legislation, the Shipping Board acquired a vast tonnage, at first by requisitioning ships already under construction in American yards, seizing enemy ships in our ports, commandeering certain neutral ships, and chartering ships from other foreign powers, but later and in the main by unparalleled development of American shipbuilding. Construction continued long after the armistice, and the entire enterprise involved an expenditure of three or four billion dollars. By 1920 the American fleet had risen from insignificant proportions to a size second only to that of Great Britain, and about two

thirds of the total tonnage was owned and controlled by the government through the shipping Board. With this magical transformation had come new pride and interest in our overseas shipping and new aspects of the question of merchant marine policy. The problem now was so to dispose of government-owned ships and so to shape legislation as to assure to the United States a permanent place of importance in overseas shipping."—G. M. Fisk and P. M. Peirce, *International commercial policies*, pp. 280-283.—See also below: 1920 (June-September); COMMERCE: Commercial Age: 1789-1920; 1914-1921.

1914-1921. — Colombian Treaty. — From 1914 onward the ratification of a treaty with Colombia was periodically before the Senate; but was still pending when the Harding administration came into power. The questions which it was designed to settle lay far back of the Wilson administration, however. "Under the Hay-Pauncefote Treaty [1901], it was explicitly provided that the United States should build the [Panama] canal, should control, police and protect it, and keep it open to the vessels of all nations on equal terms. [See PANAMA CANAL: 1889-1903.] We had assumed the position of guarantor of the canal, including, of course, the building of the canal, and of its peaceful use by all the world. . . . The United States had assumed in connection with the canal certain responsibilities not only to its own people, but to the civilized world which imperatively demanded that there should be no further delay in finishing the work. [In August, 1903 the Hay-Herran Treaty was rejected by the Colombian Senate. (See COLOMBIA: 1902-1903.)] On November 3 [1903], the revolution occurred. Practically everybody on the Isthmus, including all the Colombian troops that were already stationed there, joined in the revolution, and there was no bloodshed. But on that same day four hundred new Colombian troops were landed at Colon. Fortunately, the gunboat *Nashville*, under Commander Hubbard, reached Colon almost immediately afterwards, and when the commander of the Colombian forces threatened the lives and property of the American citizens, including women and children, in Colon, Commander Hubbard landed a few score sailors and marines to protect them. By a mixture of firmness and tact he not only prevented any assault on our citizens, but persuaded the Colombian commander to reembark his troops for Cartagena. On the Pacific side a Colombian gunboat shelled the City of Panama, with the result of killing one Chinaman—the only life lost in the whole affair. The report of the Panama Canal Committee of the Colombian Senate on October 14, 1903, on the proposed treaty with the United States, proposed that all consideration of the matter should be postponed until October 31, 1904, when the next Colombian Congress would have convened, because by that time the new Congress would be in condition to determine whether through lapse of time the French company had not forfeited its property and rights. 'When that time arrives,' the report significantly declared, 'the Republic, without any impediment, will be able to contract and will be in more clear, more definite and more advantageous possession, both legally and materially.' The naked meaning of this was that Colombia proposed to wait a year, and then enforce a forfeiture of the rights and property of the French Panama Company, so as to secure the forty million dollars our Government had authorized as payment to this company. . . . [The president] recognized Panama forthwith on behalf

of the United States, and practically all the countries of the world immediately followed suit. The State Department immediately negotiated a canal treaty with the new Republic. One of the foremost men in securing the independence of Panama, and the treaty which authorized the United States forthwith to build the canal, was M. Philippe Bunau-Varilla, an eminent French engineer formerly associated with De Lesseps and then living on the Isthmus."—*Theodore Roosevelt: An autobiography*, pp. 520-524.—In April, 1914, the treaty, which Roosevelt called "the Panama Blackmail Treaty," was signed by the American minister at Bogotá and promptly ratified by Colombia. The American Senate, however, refused its approval. While the treaty was pending in the Senate, Senator Fowler, of Illinois, introduced the defense of the treaty by Hannis Taylor; which said in part: "The delay occasioned by the exercise of Colombia's constitutional right to deliberate upon a treaty before its ratification precipitated the *opéra bouffe* revolution of November, 1903. Colombia had been at that time an independent State for 93 years, and for 77 years had been so recognized by us. On November 3, 1903, the Republic of Colombia was at peace with the United States, and 'the treaty of peace, amity, navigation, and commerce' of 1846, expressly guaranteeing, in a very solemn manner, her sovereignty over the Isthmus of Panama, was in full force. But despite all those things, the time had now arrived when the pen was to be superseded by the sword. . . . All that Colombia has ever asked of the United States [is] a fair hearing before an impartial international tribunal, either The Hague court or a tribunal specially constituted. No more conclusive argument was ever made than that in which Senator Bacon—at the time of his death the able chairman of the Senate Committee on Foreign Relations—demonstrated Colombia's right to arbitration under the law of nations. Colombia's claim for the value of the territory of Panama, the Panama Railway, the railroad annuities, the contract with the French Canal Co., and other advantages exceeded twofold the pecuniary sum agreed upon in the pending treaty. Not until after her right to have the amount of the damages due her ascertained by an arbitral court had been denied her was the settlement embodied in the pending treaty entered into. An attempt has been made to create prejudice against the treaty by the false statement that Colombia has agreed to pay me a contingent fee of \$1,000,000 upon its ratification. I am her only counsel and our contract is in writing and subject to inspection by the Senate Committee on Foreign Relations whenever that body may see fit to call for it. It simply provides that I am to receive just and reasonable compensation for my services when they are concluded; and, in the event of a difference between us as to the amount, such difference shall be adjusted by arbitration. And here, in conclusion, I feel it my duty to say that my zeal in this matter as counsel for Colombia has been increased by the fact that after an exhaustive study of all the antecedents I have been as profoundly impressed as I could ever be of anything of the justice of her cause, not only in morals but under the principles of international law. Therefore, as an American citizen, I feel that a great good has been accomplished for my country in this grave matter by the making of a settlement which will reestablish the ancient and cordial friendship with a neighboring State, in which the commerce and industry of the United States will find a region most favorable for its development."—H. Taylor,

Why the pending treaty with Colombia should be ratified (*Congressional Record*, July 20, 1914, pp. 13500-13503).—See also **COLOMBIA**: 1909-1917.—On Apr. 20, 1921, the treaty was at length ratified by the Senate, and the claims of Colombia arising from the rebellion and secession of Panama were laid to rest. "The chief provision of the treaty covers the payment of \$25,000,000 in annual instalments of \$5,000,000 each to Colombia. Colombia is also granted the right to transport mails, products of the soil and war materials over the Panama Railway and the Canal route on the same terms as the United States. On the other hand, Colombia agrees to grant formal recognition to the independence of Panama. One clause that stood in the treaty as brought before the Senate [1914] during the Wilson administration expressed the 'sincere regret' of the United States at the interruption of friendly relations between the two countries on account of the canal controversy. This was later eliminated, as it might be construed as an admission that President Roosevelt had acted contrary to international law in obtaining the Canal route. . . . The struggle over the Colombia treaty was the hardest fight the Harding administration . . . [had] yet experienced, and the decisive victory in which it ended . . . [increased] the prestige of the new President. He . . . succeeded in persuading the senate to ratify a treaty which President Wilson [had] labored in vain . . . [from] 1914 to secure."—*Colombia Treaty ratified* (*Independent*, May 7, 1921, pp. 484-485).—"Some idea of the efforts required to achieve this treaty's ultimate passage may be derived from the following record: April 6, 1914—Signed at Bogota. June 16, 1914—Transmitted to the Senate for ratification by President Wilson. Referred to the Committee on Foreign Relations. June 18, 1914—Injunction of secrecy removed. July 15, 1914—Resolution for public hearings introduced by Senator Borah. Dec. 16, 1915—Again referred to Committee on Foreign Relations. Feb. 3, 1916—Again reported to the Senate. March 8, 1917—Again referred to Committee on Foreign Relations. March 14, 1917—Reported by Senator Stone with amendments, March 15, 1917—Motion to consider in open session defeated. March 16, 1917—Further consideration postponed. April 16, 1917—Called for consideration and again postponed. May 29, 1919—Again referred to the Committee on Foreign Relations. July 2, 1919—Reported with amendments. Aug. 7, 1919—Motion of Senator Lodge referred back to the Committee on Foreign Relations. Aug. 8, 1919—Referred to subcommittee. June 3, 1920—Reported to the Senate and ordered printed. March 9, 1921—President Harding, in a message, urged ratification."—*New York Times Current History*, June, 1921.

1915 (January-December).—Expositions at San Francisco and San Diego.—In 1915 the opening of the Panama canal was fitly celebrated by great expositions held at San Francisco and San Diego. "At San Francisco a salt marsh . . . was

transformed into a fairy land of tropical beauty. . . . The [Panama Pacific International] Exposition opened on February 20, and closed December 4. . . . The Panama-California Exposition at San Diego was devoted mainly to the great southwest. . . . [It] opened on January 1 and continued throughout the year."—*American Year Book*, 1915, pp. 735-736.—See also **CALIFORNIA**: 1915.

1915 (February).—**Controversy over contraband of war.**—**The *Wilhelmina*.**—The question of contraband had from the beginning of the war been a subject of controversy with the British government. "The tone of the discussion was notably sharpened [early in 1915] by the seizure of the *Wilhelmina*, supposedly an American ship, though, as later developed, she had been chartered by a German agent in New York, Dr. Heinrich F. Albert, in order to bring the Anglo-American dispute to a head."—C. Seymour, *Woodrow Wilson and the World War* (*Chronicles of America Series*, v. 48, p. 43).—"January 26 she [Germany] took over all the corn, wheat, and flour in the empire and appointed officials to distribute it to the people. . . . February 9 the American steamer *Wilhelmina* laden with foodstuffs and bound for Hamburg, came into Falmouth, England, under stress of weather. She was seized and it seemed that the case would afford an opportunity to test the British contention that foodstuffs bound for Germany were contraband. Great interest in the decision of the prize court was aroused in the United States. But the case progressed slowly and long before it was decided the international controversy had taken on other complications."—J. S. Bassett, *Our war with Germany*, p. 23.—The true significance of the *Wilhelmina* case, and the German purpose in chartering the boat have been fully revealed by the German ambassador to this country. "An important part of the [German] economic propaganda was the institution of the so-called 'Issues', i. e., the attempt by carefully construing individual incidents to make clear to public opinion the fundamental injustice of the English encroachments and their far-reaching consequences in practice. . . . Herr Albert therefore induced an American firm to ship foodstuffs for the civil population of Germany on the American steamer *Wilhelmina*, bound for Hamburg, by himself undertaking the whole risk from behind the scenes. This was arranged in such a way as to preserve in appearance the good faith of the American firm, and to make the shipment seem purely American in the eyes of the American Government and the English."—Count Bernstorff, *My three years in America*, pp. 91-92. Ultimately the ship was released and her cargo was purchased by the British government.—See also **WORLD WAR**: 1915: XI. Politics and diplomacy: a, 1; **WILHELMINA**.

ALSO IN: J. B. Scott, *Diplomatic correspondence between the United States and Germany*.

1915 (February).—**Protest against submarine campaign.**—"In an effort to overcome the naval supremacy of Great Britain, which was never more conclusive than on February 1, 1915, the German government decided to risk upon the sea a decided departure from the rules of international law and to justify it as retaliation against the British restrictions upon neutral commerce. On February 4, 1915, the German Admiralty issued a proclamation declaring a 'war zone' about the British Isles and warning neutrals of the dangers therein. After February 18, 1915, it was the intention that German submarines should destroy every merchant vessel without making provision for safety of crews or passengers. In warfare of such

a nature neutral vessels were subject to peril within the 'war zone', the peril inherent in a situation where mistakes must occur. There was further complication in the fact that British vessels were upon occasion using neutral flags, which placed the neutral vessels in a dangerous position, in view of the fact that a submarine could not visit and search to make sure of identity, but must sink without warning, as the proclamation explained. . . . Keenly alive to the dangerous possibilities inherent in the new situation, the American government, on February 10, 1915, expostulated, particularizing upon the possible destruction of any merchant vessel of the United States or the death of American citizens. The Imperial German government would be held 'to a strict accountability for such acts of their naval authorities'. On the same day the American government protested to Great Britain against the reported use of the American flag on a British vessel while travelling through the war zone."—E. E. Robinson and V. J. West, *Foreign policy of Woodrow Wilson, 1913-1917*, p. 55.

1915 (March).—Indictment of Hamburg-American line.—Fraudulent passports and other German plots.—"March 1, 1915, Dr. Karl Bueuz, managing director of the Hamburg-American Steamship Co. in New York, was arrested with some of the other officials of the company, on a charge of obtaining clearance papers for vessels taking coal and supplies to warships by false assertions. A trial followed, resulting in the conviction of the officials, who, in fact, hardly denied the charges. Dr. Bueuz and two associates were sentenced to serve eighteen months and another for twelve months in a federal prison. Dr. Bueuz, however, was permitted to remain in his own home for a time on account of alleged ill health. In 1918 the public was shocked to learn that he was living in New York in great comfort, receiving visits from his friends, returning them in some cases, attending dinners and walking and riding through the streets. A quick examination revealed that his health was good and he was sent to the federal prison in Atlanta at once. Information obtained in this trial showed that a comprehensive plan had been made by the German government before war was declared by which the German merchant ships in our harbors were organized into a unit under direction of the home war office, with the purpose of sending them to sea in aid of German cruisers. This action virtually made the port of New York a base of German operations in violation of neutrality. It was shown that twelve ships had thus been loaded with the purpose of taking naval supplies out of the borders of the United States, but that only one had eluded the vigilance of the customs officers and the active watchfulness of the allied cruisers. It was also shown in the trial that Captain Karl Boy-ed, German naval attaché, was at the head of these operations."—J. S. Bassett, *Our war with Germany*, p. 33.

1915 (March).—Blockade of German commerce.—Notes sent to warring nations.—Question of ultimate destination.—Germany's submarine blockade quickly led to opposing measures on the part of Great Britain and France. On March 1, they announced their policy. "Germany, they said, had declared the waters around the British Isles, the English Channel and the north and west coasts of France a war zone, and had claimed the right to torpedo without warning any

merchant vessel under any flag. . . . The German declaration substitutes indiscriminate destruction for regulated capture. Her opponents are, therefore, driven to retaliation in order to prevent commodities of any sort reaching Germany. These measures, however, will be enforced without risk to neutral property or the lives of non-combatants. The British and French Governments will be free to detain and take into ports ships carrying goods of presumed enemy declaration, but will not confiscate such vessels and cargoes unless they would otherwise be liable to confiscation. Great opposition was made to this announcement in our country."—J. B. McMaster, *United States in the World War*, p. 77.—"On March 11 [Great Britain] advanced another stage in her restrictive policy by issuing a series of regulations tantamount to a general blockade of the German Empire, and carrying the doctrine of continuous voyage so far as to impose on the shippers of all goods to Holland and the Scandinavian countries the burden of proving, on peril of confiscation, that the goods were not destined for Germany. On account of the control of the Baltic by Germany, the so-called blockade could not be made applicable to the Baltic ports directly. Hence it was devised and enforced on novel lines, and in such manner as to embrace many neutral ports and coasts capable of serving as approaches to the German seats of trade. . . . The issue with Great Britain involved only property; that with Germany involved both property and life."—F. A. Ogg, *National progress, 1907-1917*, pp. 336-337.—A note of protest was sent to Great Britain on March 30, through the United States ambassador in London; and a further exchange of notes between the Department of State and the belligerent governments followed. (See WORLD WAR: 1915: XI. Politics and diplomacy: a, 1; b.) Although the term "blockade" was commonly used to describe Great Britain's restrictive measures, yet she did not establish a blockade in the usual sense. "A realization of this fact will clear up much that is obscure in the naval warfare of the next two years. At the beginning of the Civil War, President Lincoln laid an interdict on all the ports of the Confederacy; the ships of all nations were forbidden entering or leaving them: any ship which attempted to evade this restriction, and was captured doing so, was confiscated, with its cargo. That was a blockade, as the term has always been understood. A blockade, it is well to keep in mind, is a procedure which aims at completely closing the blockaded country from all commercial intercourse with the world. . . . Great Britain, when she declared war on Germany, did not follow President Lincoln's example and lay the whole of the German coast under interdict. Perhaps one reason for this inaction was a desire not unduly to offend neutrals, especially the United States; but the more impelling motive was geographical. The fact is that a blockade of the German seacoast would accomplish little in the way of keeping materials out of Germany. A glance at the map of northwestern Europe will make this fact clear. . . . Great Britain based her blockade measures upon the American principle of 'ultimate destination,' but it was necessary considerably to extend that doctrine in order to meet the necessities of the new situation. President Lincoln had applied this principle to absolute contraband, such as powder, shells, rifles, and other munitions of war. Great Britain now proceeded to apply it to that nebulous class of commodities known as 'conditional contraband,' the chief of which was food-stuffs. If the United States, while a war was

pending, could evolve the idea of 'ultimate destination' and apply it to absolute contraband, could not Great Britain, while another war was pending, carry it one degree further and make it include conditional contraband? Thus reasoned the British Foreign Office. To this Mr. Lansing replied that to stop foodstuffs on the way to Germany through a neutral port was simply to blockade a neutral port, and that this was something utterly without precedent. Seizing contraband is not an act of war against the nation whose ships are seized; blockading a port is an act of war; what right therefore had Great Britain to adopt measures against Holland, Denmark, and Sweden which virtually amounted to a blockade? This is the reason why Great Britain, in the pronouncement of March 1, 1915, and the Order in Council of March 11, 1915, did not describe these measures as a 'blockade.' President Wilson described his attack on Mexico in 1914 as 'measures short of war,' and now someone referred to the British restrictions on neutral commerce as 'measures short of blockade.' The British sought another escape from their predicament by justifying this proceeding, not on the general principles of warfare, but on the ground of reprisal. Germany declared her submarine warfare on merchant ships on February 4, 1915; Great Britain replied with her announcement of March 1st, in which she declared her intention of preventing 'commodities of any kind from reaching or leaving Germany.' . . . Great Britain now proposed to purchase cargoes of conditional contraband discovered on seized ships and return the ships themselves to their owners, and this soon became the established practice. Not only did the Foreign Office purchase all cotton which was seized on its way to Germany, but it took measures to maintain the price in the markets of the world."—B. J. Hendrick, *Life and letters of Walter H. Page*, v. 2, pp. 56-57, 61-63.

1915 (March-May).—Mission of Colonel House.—Violation of American rights.—United States citizens killed.—*Lusitania*.—"Early in the winter of 1914-1915 President Wilson apparently foresaw something of the complications likely to arise from the measures and counter-measures taken by the belligerents to secure control of oversea commerce, and sent his personal adviser, Colonel House, across the Atlantic to study the possibilities of reaching a *modus vivendi*. There was no man so well qualified for the mission. . . . Courteous and engaging, Colonel House was an unexcelled negotiator: he had a genius for compromise, as perfect a control of his emotions as of his facial expression, and a pacific magnetism that soothed into reasonableness the most heated interlocutor. . . . But even the skill of Colonel House was not sufficient to induce Germany to hold her hand, and, as spring advanced, it became increasingly clear that she was resolved to carry her threats of unrestricted submarine warfare into effect. The quality of Wilson's pacifism was about to be put to the test. In March a British steamer, the *Falaba*, was sunk and an American citizen drowned; some weeks later an American boat, the *Cushing*, was attacked by a German airplane; and on the 1st of May, another American steamer, the *Gulflight*, was sunk by a submarine with the loss of two American lives. When was Wilson going to translate into action his summary warning of 'strict accountability?' Even as the question was asked, we heard that the Germans had sunk the *Lusitania*. . . . The German Government had given frigid warning, in a newspaper advertisement, of its intention to affront the custom of nations and the

laws of humanity."—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America Series, v. 48, pp. 47-50)*.—See also LUSITANIA CASE.

1915 (May).—Pan-American financial conference in Washington. See PAN-AMERICAN FINANCIAL CONFERENCE.

1915 (May).—American steamship, *Nebraskan*, torpedoed.—"On May 25th the American steamer *Nebraskan* had a hole blown in her bow off Fastnet Rock. The captain thought he was the victim of a submarine attack, though no submarine was seen. No lives were lost and the vessel reached port. . . . On July 12th the German Foreign Office delivered a memorandum to Ambassador Gerard admitting that the *Nebraskan* had been torpedoed by a German submarine, apologizing for the 'unfortunate accident' and offering to pay damages."—W. L. McPherson, *Short history of the Great War*, pp. 162, 164.

1915 (May-September).—*Lusitania* notes.—Resignation of Bryan and appointment of Lansing.—Unsatisfactory German replies.—"The destruction of the *Lusitania* brought many to demand that a stern ultimatum be sent to Germany, calling for reparation and apology in default of which we should declare war. President Wilson took a less defiant course. He called on Germany for explanations. They were not given in a frank manner, and he sent a second note, only to receive another dilatory reply. Convinced that Germany was flouting him, he then sent a sharp note in which he said that repetition of such acts would be regarded as 'deliberately unfriendly.'"—J. S. Bassett, *Short history of the United States*, p. 876.—"Sober afterthought has generally agreed that Wilson was right. But he was himself led into a serious error that produced consequences which were not soon to be dissipated. Speaking three days after the event, when the world looked to him to express the soul of America, and dealing with the spirit of Americanism, he permitted an unfortunate phrase to enter his address and to cloud his purpose. 'There is such a thing,' he said, 'as a man being too proud to fight.' . . . Wilson, the phrase-maker, was betrayed by a phrase, and it was to pursue him like a Fury. The chorus of indignation and shame aroused by this phrase covered completely the determination and skill with which he entered upon the diplomatic struggle with Germany. . . . At the very outset of the diplomatic controversy with Germany, before the second *Lusitania* note was dispatched, the Secretary of State, William Jennings Bryan, resigned, in the belief that the President's tone was too peremptory. . . . [Robert Lansing, counsellor for the Department of State, was appointed in Bryan's place.] From the very beginning of his attempts to obtain from Germany a disavowal for the sinking of the *Lusitania* and a promise not to sink without warning, the President took his stand upon high ground. Not merely did he insist upon the rights guaranteed to neutrals by the law of nations: he took the controversy out of the class of ordinary subjects of diplomatic discussion and contended 'for nothing less high and sacred than the rights of humanity.' . . . The exchange of notes consumed much time and proved a severe test for American patience. The first *Lusitania* note was sent on the 13th of May and it was not until the 1st of September [and after the sinking of the *Arabic*] that the German Government finally gave a pledge that was acceptable to Wilson . . . that 'Liners will not be sunk by our submarines without warning and with-

out safety of the lives of non-combatants, provided that the liners do not try to escape or offer resistance."—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America Series, v. 48, pp. 51-52, 53-56)*.—See also LUSITANIA CASE; WORLD WAR: 1915: XI. Politics and diplomacy: c; 1.

1915 (June).—First German reply to American protests.—Excuses and regrets.—"The German Government took its time about replying [to American notes], and not until May 28 did it transmit its answer [which reached us in June]. Reparation was promised for the attack on the *Gulflight*, on the ground that a mistake had been made by the submarine commander, but ruthless submarine warfare and the sinking of the *Falaba* and *Lusitania* were defended on the ground of 'just self-defense.' The evidence seems to show that the Germans did not take our protest very seriously."—P. L. Haworth, *United States in our own times, p. 404*.—The verity of the attack on the *Cushing* was doubted, and evidence was asked for.

1915 (June).—League to Enforce Peace.—"As the outgrowth of a series of meetings held in the Century Club, New York, terminating in a call for a conference signed by a National Provisional Committee of 109 members headed by ex-president Taft, an organization known as the League to Enforce Peace, American Branch, was formed on June 17, 1915, in Independence Hall, Philadelphia."—*New York Times Current History, July, 1915, p. 667*.—A foreshadowing of the post-war League of Nations appeared in the resolutions, which included as a main clause, the following: "We, therefore, believe it to be desirable for the United States to join a league of nations."

1915 (June).—Protests by Central Powers against trade with Allies.—Volume of trade.—Return of prosperity.—As the war progressed, "enforcement of a strict neutrality became very difficult. The chief problems arose from the pro-German demand for an embargo on munitions, and from a series of acts of violence intended to frustrate the government's well-reasoned policy of permitting the exportation of munitions under the usual rules of international law. As matters stood, the Entente powers were reaping from their control of the seas the tremendous advantage of being able, as their opponents were not, to import munitions from America in unlimited quantities; and it is not surprising that all of the resources of Teutonic argument, organization, and diplomacy were brought to bear to overcome the handicap. . . . In notes of April 4 and June 29, 1915, the Berlin and Vienna governments pressed this point with ail possible ingenuity. Sound objections could be brought against the trade in munitions, but the contention that it was unneutral failed to carry conviction. . . . As was explained by Secretary Lansing in his reply to the Austrian protest, August 12, 1915, the United States, accustomed to rely on small defensive forces and on the right and power to purchase arms and ammunition from neutral nations in case of foreign attack, was the last nation in the world that could afford to establish a precedent of the kind that was asked. The refusal of the government to modify its attitude was followed by a campaign of violence, intended to check by direct action the manufacture and exportation of munitions. Incendiary fires destroyed or damaged munitions plants; bombs were concealed aboard British, French, and Italian merchant-vessels, and several ships were damaged or sunk; strikes were fomented among seamen and employees of arms and ammunition factories. Re-

sponsibility for these acts was often impossible to fix [though both the German and the Austrian ambassadors in Washington, Von Bernstorff and Dumba are now known to have been instigators]."

—F. A. Ogg, *National progress, 1907-1917, pp. 331-333*.—The munition trade of which the Central Powers complained had by this time reached enormous proportions. "After the paralyzing effect of the news that war was declared had worn away, business men here realized the great opportunity about to be afforded them of furnishing war supplies which must soon be in demand. Their expectations were soon fulfilled, as almost immediately most of the Governments sent commissions to the United States. . . . It was not long until mills and factories were being operated to capacity, turning out boots and shoes, blankets, sweaters, socks, underwear. . . . The situation was different in relation to filling orders for arms and ammunition. At first, as was natural, this business was placed with concerns engaged in the manufacture of these commodities. Shortly they were swamped with orders, and to be able to fill them plants were enlarged, new equipment added, and additional help employed. More and more orders came pouring in, and, as the arms and munition houses were by this time up to and some over capacity, acceptance by them of further business was impossible. Here, then, was the opportunity for the manufacturers of rails, rivets, electrical and agricultural machinery, locomotives, . . . to secure their share of this enormous business being offered."—G. W. Porter, *American war supplies, European War (New York Times Current History, v. 4, 1915, p. 961)*.—See also COMMERCE: Commercial age: 1914-1921.

1915 (July).—Final *Lusitania* note to Germany. See WORLD WAR: 1915: XI. Politics and diplomacy: c, 2.

1915 (July).—German wireless plant taken over by United States government.—In the early summer of 1915, the *Providence Journal* was able to furnish the government with evidence which connected the German embassy in Washington with revolutionary elements in Mexico, and which led to the arrest of Huerta, the ex-president of Mexico. Huerta had come from Spain to America in April, and established himself on Long Island. When arrested, he was on his way to Mexico, where, with the aid of the German embassy, he was to stir up another revolution, and, if possible, bring on war with the United States. Huerta's death occurred early in July soon after his arrest. The plot was exposed through wireless messages which came into the possession of the *Providence Journal*. Accordingly, "on July 8 the wireless station at Sayville, Long Island, owned apparently by the Atlantic Communication Company, but really by the great Telefunken Company of Berlin, was taken over by the Federal Government."—J. B. McMaster, *United States in the World War, p. 169*.

1915 (August).—*Arabic* torpedoed.—Incidents which tended to show Germany's contempt for American rights on the sea continued. On July 9, the *Orduna* with twenty-one Americans aboard was attacked by a submarine; on July 25, the *Leelanaw*, an American freighter, was sunk. "The climax of German effrontery came on August 20th. The White Star liner *Arabic*, bound from Liverpool to New York, was sunk off the coast of Ireland. Forty-four passengers, of whom two were American citizens, lost their lives. Ambassador Bernstorff made a public statement on August 24th, serving notice that he had asked the American Government to withhold judgment on this case. 'If Americans should actually have lost their lives,'

he said, 'this would naturally be contrary to our intentions.' The sinking of the *Arabic* raised a storm of indignation in the United States."—W. L. McPherson, *Short history of the Great War*, p. 165.—See also ARABIC.—Eventually, the German government disavowed the act of the submarine commander who sank the *Arabic*, and offered indemnity for the lives of the Americans.

1915 (August-September).—**Revolution in Haiti.**—**American protectorate.**—Revolutionary disorders which broke out in Haiti early in 1915 made it necessary for American marines from the gunboat, *Wheeling*, to occupy Plaines, Ouanamethes, Fort Liberte, and Limonade, in protection of American interests. "Financial bankruptcy of the Government and the efforts of the United States to remedy it were the principal causes of the revolutionary disturbances recounted above. The United States stood ready to take charge of the financial situation, but there was much opposition to this plan. . . . The continued revolution forced the United States to intervene actively and take possession of the custom houses in August and September. Greater pressure was then brought to bear upon the Government to secure a convention, which would put an end to the conditions of anarchy. The treaty which was signed on Sept. 16, provided for the establishment of a receivership of customs and supervision of the finances under American control, and the formation of American constabulary under command of American officers. The treaty, which was for ten years, was ratified by the Haitian Congress in November."—R. R. Hill, in *American Year Book*, 1915, p. 129.—The American Senate ratified the treaty in February, 1916.—See also DOLLAR DIPLOMACY; HAITI, REPUBLIC OF: 1911-1916.

1915 (August-October).—**Pan-American conference.**—**Recognition of Carranza as president of Mexico.**—"In June, 1915, when the entire northern section of Mexico had been made desolate by conflict, and when even in the capital the people were starving because of the stoppage of railway traffic, President Wilson invited the diplomatic representatives of six Central and South American states—the 'A B C powers' [Argentina, Brazil, and Chile] and Bolivia, Uruguay, and Guatemala—to meet to formulate plans for a provisional Mexican government. By October Carranza was again in possession of Mexico City, with a fair chance of bringing the entire country under control; and the new inter-American conference, sitting at Washington, decided to recommend his recognition. Accordingly, on October 19 the United States and eight of the republics of Central and South America formally recognized 'the de facto government of Mexico of which General Carranza is head.' An American embargo on arms designed for use against the triumphant chieftain was reimposed, and diplomatic relations, after a break of more than two and a half years, were resumed. Recognition by the principal European nations speedily followed."—F. A. Ogg, *National progress, 1907-1917*, pp. 295-296.—See also MEXICO: 1914-1915.

1915 (September).—Attempts to promote strikes in munition plants.—Recall of Austrian ambassador requested.—German intrigue in the United States made itself even more manifest as the year progressed. "It was becoming plain that German and Austrian officials were definitely promoting the attacks on munition plants. . . . The specific evidence that was lacking was discovered when on August 30 the British authorities arrested at Falmouth, James F. J. Archibald, an American

citizen traveling on a neutral ship to Vienna by way of Amsterdam. On his person was found a letter from the Austrian ambassador, Dr. Dumba, to the Austrian foreign minister, Baron Burian, describing plans for strikes in American munition plants by which it was thought 'we can disorganize and hold up for months, if not entirely prevent, the manufacture of munitions in Bethlehem and the Middle West, which, in the opinion of the German Military Attaché, is of great importance and amply outweighs the expenditure of money involved.' The writer asked for authority to proceed with the plans and suggested that he be informed by wireless telegraph. When this document reached the United States the president [September 9] caused a prompt demand to be made for the recall of Dr. Dumba."—J. S. Bassett, *Our war with Germany*, pp. 36-37.—The note sent to the Austro-Hungarian government read in part, as follows: "Believing that the Imperial and Royal Government will realize that the Government of the United States has no alternative but to request the recall of Mr. Dumba on account of his improper conduct, the Government of the United States expresses its deep regret that this course has become necessary and assures the Imperial and Royal Government that it sincerely desires to continue the cordial relations which exist between the United States and Austria-Hungary." . . . "Dr. Dumba, to escape humiliation, asked to be allowed to depart on a leave of absence, but the president did not consider such a mode of withdrawal sufficiently striking under the circumstances and denied the request. Then the Austro-Hungarian government formally recalled their ambassador, who set sail for a neutral port in Europe after the British government had granted a safe conduct through the region patrolled by their navy. The departure of this meddling diplomat occasioned great satisfaction in the United States, where pro-German espionage had excited much feeling. Still greater relief was felt when in the following December the government demanded the recall of Captain von Papen, the military attaché, and Captain Boy-ed, the naval attaché, of the German government on the ground that they were not acceptable to our government."—J. S. Bassett, *Our war with Germany*, p. 37.—"It was not only in the East that such deeds had been done. Agents of Germany had been busy on the Pacific coast, falsifying manifests to clear ships laden with supplies for German cruisers, plotting the destruction of bridges and tunnels in Canada, and hiring men to place bombs on board of ships carrying munitions of war. In December, in San Francisco, Charles C. Crowley, a detective in the employ of the German consulate, Baron George William von Brincken, the Vice Consul General, and a woman were indicted for conspiracy to interfere with and destroy commerce with the Allies, and use the mails to incite arson, murder and assassination by burning certain buildings of munition making firms at Ishpeming, Michigan, and Pinole, California. . . . More arrests followed as the plot developed until in February, 1916, thirty-two conspirators were indicted by a Federal Grand Jury."—J. B. McMaster, *United States in the World War*, p. 190.

1915 (October).—Warning to travelers.—In October the secretary of state issued a warning against unnecessary travel in European countries, which read in part, as follows: "American citizens are advised to avoid visiting unnecessarily countries which are at war, and particularly to avoid, if possible, passing through or from a belligerent country to a country which is at war therewith. It is especially important that naturalized Ameri-

can citizens refrain from visiting their countries of origin and countries which are at war therewith. It is believed that Governments of countries which are in a state of war do not welcome aliens who are traveling merely for curiosity or pleasure. Under the passport regulations prescribed by the President January 12, 1915, passports issued by this Government contain statements of the names of countries which the holders expect to visit and the objects of their visits thereto. The department does not deem it appropriate or advisable to issue passports to persons who contemplate visiting belligerent countries merely for 'pleasure,' 'recreation,' 'touring,' 'sight-seeing,' etc."

1915 (December).—Controversy with Austria-Hungary over sinking of *Ancona*.—"Late in 1915 an issue arose with Austria-Hungary over the *Ancona* case. On November 7th this Italian liner was attacked in the Mediterranean by an Austro-Hungarian submarine. She tried to escape, and was halted. Later she was sunk and the boats to which the crew and passengers took were fired on. [See also ANCONA.] Nine American passengers were drowned. Ambassador Penfield was instructed to ask for an explanation. On November 14th the Austro-Hungarian Admiralty issued a statement exculpating itself. The United States was not satisfied with this *ex parte* justification and on December 6th demanded that the government of the Dual Monarchy 'denounce the sinking as an illegal and indefensible act,' punish the U-boat commander, and offer reparation. Vienna assumed a haughty tone at first, barely noticing the suggestion of the American note. On December 10th our State Department renewed its demands. Germany didn't want the submarine issue reopened in an aggravated form. She brought pressure to bear on her ally. The government at Vienna then reversed itself. On December 29th a note was sent to the United States, agreeing that the obligations of humanity must be lived up to, even in war; accepting the principle that 'hostile private vessels, in so far as they do not flee or offer resistance, may not be destroyed without the persons on board having been placed in safety'; announcing the punishment of the U-boat commander, and promising reparation. The year ended, therefore, with a partial renunciation by both Germany and Austria-Hungary of the illegal practices against which the United States had protested."—W. L. McPherson, *Short history of the Great War*, pp. 162-167.

1915 (December).—Pan-American Scientific Congress in Washington. See PAN-AMERICAN SCIENTIFIC CONGRESS.

1915 (December).—Henry Ford's "Peace Ship."—Pacifist activities were steadily on the increase in 1915. Many associations were formed; but probably the strangest manifestation of pacifism was the "Peace Ship." "Late in 1915 Mr. Henry Ford, wealthy philanthropist of Detroit, announced a commission to go to Europe 'to get the boys out of the trenches by Christmas.' He chartered a ship and sailed on December 4 with a party of well meaning guests who had little idea of the magnitude of the task they had assumed. Mr. Ford seems to have thought that the only thing necessary was to give every government an opportunity to say that it had fought as long as it wished, whereupon by common consent all would suspend their combats and go home. He was too practical to hold this view after arriving on the

other side of the ocean and seeing what the world war was. He abandoned his scheme and his party came home ingloriously. The ridicule with which the newspapers overwhelmed it served to take the edge off our too enthusiastic pacifism. We came to see that human nature was what it had ever been and that enthusiasm could not change it over-night. But all the time the concept widened that as a nation we had a vital interest in the struggle and were concerned with its settlement."—J. S. Bassett, *Our war with Germany*, p. 65.

1916.—Events in the Caribbean.—"The year 1916 may be taken as marking the end of a definite period of American foreign policy toward the Caribbean and the beginning of a new. It was in that year that the 'military occupation' of Santo Domingo was announced. That same year first saw the Panama Canal in full operation. Then the Haitian treaty of 1915 was actually ratified and put into effect. During 1916 the United States ratified the Nicaraguan treaty of 1913, and refused to pay heed to the protests of Salvador, Costa Rica, Honduras and Colombia and to the decision—adverse to the treaty—rendered by the Central American Court of Justice. During 1916 proceedings for the purchase of the Virgin Islands were brought to a head, though formally closed early in the following year. Except for minor instances involving territory, and curious disputes with Panama . . . we have since then acquired no land nor have we used armed force involving internal interference. It will further be noted that the beginning of 1917 marked the withdrawal of American troops from Mexico, and the major portion of them even from the Mexican border. After 1916 came the war. The Caribbean was virtually empty of ships of war save those of the United States. . . . 'The heretofore practically landlocked and internationally unimportant Caribbean republics,' it has been said, 'have acquired a strategic importance which has brought them into international prominence.' St. Thomas, 'one of the finest protected harbors in the West Indies and admirably suited for a naval base, known as 'the Gibraltar of the West Indies,' was acquired at this time, 'particularly for strategic purposes,' as is generally recognized. While American troops in France were helping to push the frontiers of freedom eastward across Europe, the United States Navy was extending its sway southward over the waters of the blue Caribbean. The heavy fortifications established at the Panama Canal, the exclusive privileges gained over the Nicaraguan route, and the possession of Guantanamo were all taken advantage of to insure American strategic control of these seas. . . . All the wartime talk about the 'frontiers of freedom' and 'the rights of small nations' and 'self-determination' and 'making the world safe for democracy' . . . was accepted as the true political faith in tropical waters. These people never thought of looking upon it—as less philosophical and more practical nations might have done—as mere belligerent propaganda enunciated simply 'for the period of the emergency.' Some

of their liberal elements have continued to believe in the high moral qualities of our foreign policy. Cuban liberals in 1916 suggested that the United States supervise and insure fair elections."—E. Colby, *United States paramount in the Caribbean* (*New York Times Current History*, November, 1923).

1916 (January-April).—Status of armed merchant vessels.—Through the early months of 1916 a controversy was carried on over the status of armed merchant vessels of the Allies, which the Central Powers insisted should be treated as war vessels. On January 18, Secretary Lansing addressed a note to the Allies, suggesting that merchant vessels should not be armed. This document read, in part, as follows: "Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers. The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine. . . . If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel. . . . I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government and is seriously considering instructing its officials accordingly."—*Congressional Record*, Mar. 2, 1916.—"To these suggestions the allies replied in identic memoranda on March 23, 1916, declining to leave human life, without guarantees, 'to the mercy of an enemy who, in circumstances of this kind, as in many others, has shown himself to be both faithless and lawless.' The following day the *Sussex* was sunk by a submarine, confirming the position taken by the allies. . . . The armament problem was settled in a note issued on April 7 to the satisfaction of the Entente allies. . . . It was agreed that armed merchantmen were to be allowed in our ports when the authorities were convinced that the guns were to be used for defense only; and the presence of guns on a

merchantman at sea was not to be taken as evidence that it was a warship."—J. S. Bassett, *Our war with Germany*, pp. 55-56.—See also ARMED MERCHANTMEN.

1916 (February).—McLemore resolution.—The notice of the German and Austrian governments, February 10, that armed merchant ships would be sunk on sight, caused considerable alarm in certain factions of Congress. "Despite the general approval of the President's firm stand against Germany, there was an inclination in some quarters to do everything possible to avoid a conflict, even if the effort necessitated the relinquishment of rights that had hitherto been well recognized. In February, 1916, Representative McLemore introduced a resolution requesting the President to warn American citizens to refrain from traveling on armed belligerent vessels, whether merchantmen or otherwise and to state that if they persisted they would do so at their own peril. The House, according to the Speaker, was prepared to pass the resolution. The positions taken on this subject by the administration had not been entirely consistent, but the President was now holding that Americans had the right under international law to travel on such vessels and that the government could not honorably refuse to uphold them in exercising their right. 'Once accept a single abatement of right,' he asserted, 'and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands piece by piece.' Moreover he felt that the conduct of international relations lay in the hands of the executive and that divided counsels would embarrass him in dealing with Germany. He therefore asked the House to discuss the McLemore resolution at once and come to a vote. Under this pressure the House gave way and tabled the resolution, ninety-three Republicans joining with 182 Democrats against thirty-three Democrats and 102 Republicans."—C. R. Lingley, *Since the Civil War* (*United States*, v. 3, p. 565).—See also McLEMORE RESOLUTION.

1916 (February-October).—Case of the *Appam*.—"On February 1, the British steamer, *Appam*, arrived at Newport News in charge of a German crew. She carried also, in addition to her passengers and certain Germans whom she had been taking to England as prisoners, the crews of seven other British vessels."—*American Year Book*, 1916, p. 76.—The *Appam* was made the subject of legal proceedings and finally adjudged the property of her owners.—See also APPAM; WORLD WAR: 1916: IX. Naval operations: c.

1916 (February-November).—Political issues.—Conventions and platforms for the presidential election.—Attitude of Roosevelt.—Large popular votes.—"At the dawn of the presidential year 1916 the political situation was confused. The country was very prosperous, and the people were in a money-getting, rather than a heroic, mood. The Administration was fortified by a brilliant record of reform. Never had platform pledges been redeemed so faithfully; never had such a mass of constructive legislation been put on the statute book in a period so brief. Foreign relations, however, had not been so well handled; and in the differences of opinion on foreign policy, and on internal questions whose roots ran back into the foreign situation, lay the basis of a stirring contest. 'Watchful waiting' in Mexico invited discussion; on the government's attitude toward Germany and

other European belligerents opinion was already deeply divided; in the background lowered the problem of national 'preparedness.' Still, there was much reason for supposing that the unhealed breach in the Republican party would give the Democrats another easy, perhaps inglorious, victory. As the national conventions approached, it became more certain that the campaign would turn on questions of foreign policy. The attack of Villa's bandits on Columbus, New Mexico, March 9, gave the Mexican situation a serious turn [see MEXICO: 1916-1917]; the position of the United States as a neutral in the world war offered fresh difficulties and humiliations; the mobilization of the National Guard on the Rio Grande border disclosed the nation's inability to meet such emergencies; the President's belated conversion to preparedness yielded legislation which many well-informed people judged inadequate. In articles in the *Metro-politan Magazine*, and in addresses, Roosevelt belabored the Administration for inconsistency and timidity."—F. A. Ogg, *National progress*, pp. 367-368.—"The Republicans and the Progressives planned to meet in Chicago on June 7 for the nomination of candidates, in the hope that the two parties might unite upon a single nominee and platform, and thus defeat Wilson who was sure to be the Democratic candidate. At first, however, the two wings of the Republican party were in complete disagreement. As far as principles went they had not thoroughly recovered from the schism of 1912. For their candidate the Progressives looked only to Roosevelt, whom the Republicans would not have. Roosevelt himself refused to enter any fight for a nomination and announced, 'I will go further and say that it would be a mistake to nominate me unless the country has in its mood something of the heroic.' After conferences between Republican and Progressive leaders which failed to bring about unanimity, the Republican convention nominated Justice Charles E. Hughes of the Supreme Court [with Chas. W. Fairbanks for vice president], and the Progressives chose Roosevelt [with John M. Parker as vice presidential nominee]. Hughes was a reformer by nature, recognized as a man of high principles, courageous, able and remembered as a vigorous and popular governor of New York. The Republican platform called for neutrality in the European war, peace and order in Mexico, preparedness for national defence, a protective tariff and women's suffrage. It also advocated some of the economic legislation favored by the Progressives in 1912. The Progressive platform laid most emphasis on preparation for military defence—a navy of at least second rank, a regular army of 250,000 and a system for training a citizen soldiery. It also urged labor legislation, a protective tariff and national regulation of industry and transportation. The Republican platform severely denounced the administration, but the Progressives stated merely their own principles. . . . Subsequently Roosevelt issued a declaration expressing his satisfaction with Hughes, condemning Wilson and urging all Progressives to join in defeating the Democrats. Such an action would, of course, spell the doom of the Progressives as a political organization, but he declared that the people were not prepared to accept a new party and that the nomination of a third party candidate would merely divide the Republicans and ensure a Democratic victory. The action of Roosevelt commended itself to a majority of the National Committee, but a minority were displeased and supported Wilson. The Democrats met at St. Louis on June 14 and renominated President Wil-

son [and Vice President Thomas R. Marshall] in a convention marked by harmony and enthusiasm."—C. R. Lingley, *Since the Civil War (United States, v. 3, pp. 567-568)*.—The Socialist nominee for the presidency was Allen L. Benson, of Yonkers, New York, known as a writer of books and magazine articles on economic and political subjects. The platform of the Socialist party declared, as usual, for a reorganization of economic life, and denounced preparedness for national defense as false, unnecessary, and dangerous. The Socialist Labor party chose for its presidential candidate Arthur E. Reimer, with Caleb Harrison as his running mate. The Prohibition party, which held its convention in St. Paul in July, nominated J. Frank Hanly of Indianapolis for president, and Dr. Ira Landrith, of Nashville, for vice president. "Wilson and his campaign managers were slow to open the struggle. Vance McCormick was his manager; Josephus Daniels, a veteran of many party struggles, lent a hand at times; and Colonel House, still a new figure in public affairs, kept in touch with the Democratic headquarters. Mr. Bryan canvassed the Western states for many weeks, thus performing a service which Clay had refused for Taylor in 1848 and Seward had only grudgingly done for Lincoln in 1860. Francis J. Heney of California, Bainbridge Colby of New York, and others of the former Progressive party gave public support to Wilson. In this team-play of the Democrats and positive assistance of leaders who had formerly worked with Roosevelt there was evidence of good political ability as well as genuine progressiveness in the President. . . . Early in September, Wilson took up his residence at Shadow Lawn, New Jersey, whence he sent forth his notification speech. In that document he said: 'We have in four years come very near to carrying out the platform of the Progressive party as well as our own.' He declared that Labour had been emancipated, rehearsed the long list of economic reforms, and then took up the more delicate matter of the American foreign relations. . . . The German-American Alliance did its utmost to bring Wilson to disaster. Their influence had been made manifest in the Republican convention."—W. E. Dodd, *Woodrow Wilson and his work*, pp. 168, 190-192.—The Wilson campaign received considerable impetus early in the fall by what is known as the O'Leary incident. "An Irish agitator named Jeremiah O'Leary, who had been organizing and speaking against the President and trying to array the Irish vote against him, wrote an offensive letter to the President, calling attention to the results of the Maine elections and to the New Jersey primaries, and to his anticipated defeat in November. The President handed to the newspaper men the following reply to O'Leary: 'I would feel deeply mortified to have you or anybody like you vote for me. Since you have access to many disloyal Americans and I have not, I will ask you to convey this message to them.' This sharp and timely rebuke to the unpatriotic spirit to which O'Leary gave expression won the hearty and unanimous approval of the country to the President. Nothing like this bold defiance came from Hughes until a few days before the election. . . . While the Republican candidate was busily engaged in invading the West in his swing around the circle, the Democratic candidate each week from his porch at Shadow Lawn was delivering sledge-hammer blows at the Republican breast-works."—J. P. Tumulty, *Woodrow Wilson as I know him*, pp. 214-215.—"Beyond appealing to their legislative record, the Democrats gave attention chiefly to answering the charges brought

against their conduct of foreign affairs. They freely admitted that Mexican relations were in an unsatisfactory state; but they argued that a firmer course would have meant war and probable annexation, which the people did not want. They asserted that, without making unreasonable concessions to the belligerents of Europe, the country had been saved from the disaster of war with any one of them. . . . In speech-making tours which reached every important section of the country except the far South, the [Republican] candidate failed to develop any constructive program of domestic and foreign policy to which the party could summon the country on lofty lines."—F. A. Ogg, *National progress*, pp. 376, 378.—"The result of the balloting on November 7 was in doubt for several days because the outcome hinged on the votes of California and Minnesota, either of which would turn the scale. In the end Wilson was found to have received 9,128,837 votes and Hughes 8,536,380. The

1916 (March).—Renewed trouble in Mexico.—Villa's raid across the border.—United States military expedition.—In Mexico, Carranza, whose de facto government the United States had recognized, "proved wholly unable to maintain order, and the northern states continued to be overrun by brigands, threatening such American and other foreign interests as remained. Villa kept up vigorous opposition; he was furious at the recognition of Carranza and, with everything to gain and nothing to lose, was ready to bring on a general war of his country with the United States. To this end he swept with a force of several hundred bandits across the Rio Grande, and on March 9, 1916, fell on the little town of Columbus, New Mexico, and inflicted considerable losses of both life and property before retreating into Chihuahua. . . . [Marcilino Danalas, Carranza's foreign minister, at once offered his government's regrets, and asked for patience on the part of the American

ELECTION MAP OF THE UNITED STATES, 1916

vote in the electoral college was 277 to 254. The outcome was remarkable in several respects. Each candidate received a larger popular vote than had ever before been cast; Wilson won without New York or any of the other large eastern states, finding his support in the South and the Far West; each side was able to get satisfaction from the result, the Republicans because their party schism was sufficiently healed to enable them to divide the House of Representatives evenly with their opponents, and the Democrats because their candidate was successful in states which elected Republican senators and governors by large majorities."—C. R. Lingley, *Since the Civil War* (*United States*, v. 3, p. 573).—For the first time in the history of the United States, a woman, Miss Jeannette Rankin of Montana, was sent to Congress by this election.

people.] On March 10 President Wilson announced that, 'in aid of the constituted authorities of Mexico', and 'with scrupulous respect for the sovereignty of that republic', an adequate force would at once be sent in pursuit of Villa; and General Funston, commander of the Southern Department, was ordered to organize and despatch a punitive expedition. Carranza reluctantly gave his consent. . . . On March 15 two columns, numbering six thousand men, moved across the New Mexican boundary under command of Brigadier-General Pershing. Other troops were sent in succeeding weeks to hold a line that in a month's time reached Parrall, four hundred miles from the point of departure. It was a matter of no difficulty, however, for the bandits to keep out of reach."—F. A. Ogg, *National progress*, 1907-1917, pp. 297-298.—On April 19, Generals Scott and Funston met General Obregon, Mexican secretary of war, on the Mexican border. A conference was held, and an agreement reached, which provided for the policing of the border by Mexican forces. Carranza, however, refused to sign it. "Many of the Mexican

people viewed the expedition as a 'Gringo invasion,' and Carranza repeatedly protested against the continued presence of the troops on Mexican soil. In the middle of June General Trevino announced that he would not permit the movement of American troops in any direction except toward the border. Soon afterward a clash took place at Carrizal, and a force of American colored cavalry were defeated and scattered, with a loss of about twenty killed and seventeen captured. The immediate release of the prisoners was demanded and was soon conceded. In view of the threatening state of Mexican affairs, President Wilson had ordered out practically all of the National Guard, and he sent most of them to the border to do patrol duty. The mobilization was badly conducted, and the weakness of the American military system was again revealed. It was expected by many that vigorous action would at last be taken in Mexico, but the administration resumed its 'watchful waiting.' General Pershing was condemned to inaction, and early in 1917 his force was withdrawn from Mexico altogether."—P. L. Haworth, *United States in our own times*, p. 394.—See also MEXICO: 1916-1917; YOUNG MEN'S CHRISTIAN ASSOCIATION: World War activities: 1916-1917.

1916 (March)—Creation of Council of National Defense. See NATIONAL DEFENCE, COUNCIL OF.

1916 (March-May).—Further submarine sinkings.—Attack on the *Sussex*.—Unsatisfactory German reply to American protest.—"The lawlessness of German submarine practices was illustrated again in the case of the passenger-boat *Sussex*, which was entirely unarmed, mounting not even a signal-gun, and used on the English Channel route from Folkestone to Dieppe. She was carrying over four hundred passengers, including twenty-five American citizens, and was attacked on March 24 by a German submarine about three o'clock in the afternoon, killing or injuring eighty persons, two of whom were Americans. The questions involved were clear. . . . In the latter half of March a number of boats with Americans on board were torpedoed without warning, including the *Eagle Point*, the *Englishman*, and the *Manchester Engineer*. With regard to the *Sussex*, therefore, the State Department immediately directed an inquiry to Berlin to ascertain officially whether a German submarine had been responsible for the sinking. . . . After establishing the facts in the case, Washington sent a note to Berlin. . . . [which concluded as follows:] 'Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether. This action the Government of the United States contemplates with the greatest reluctance but feels constrained to take in behalf of humanity and the rights of neutral nations.' . . . [In reply] Germany, though making a definite promise not to sink merchantmen without warning or without saving human lives, attempted to make this promise contingent upon some action on our part against Great Britain. . . . [In another note sent from the State Department, May 8, the Government of the United States made clear its attitude that it could not admit that the newly announced policy of Germany in regard to the rights of citizens of the United States was in any way dependent upon the conduct of any other Government.] If Germany was unwilling to accept this interpretation it

would be necessary for her to reopen the question. She did not do so and this, therefore, meant that she accepted the American position. In spite of past experiences the United States accepted this promise in good faith."—C. Gauss, *Why we went to war*, pp. 196-199, 201-204, 206.—See also SUSSEX.

1916 (May).—President Wilson's address before the League to Enforce Peace.—On May 27, President Wilson spoke at Washington before the League to Enforce Peace. His address, which indicated an important development in his attitude toward the European conflict and America's relation to it, contained the following significant passages: "We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and Asia. One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future, as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a contest. It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for force. If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the policies and practises against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel, which might have averted the struggle, would have been considered worth weighing and regarding."—Woodrow Wilson, *Address delivered before the League to Enforce Peace (Independent, June 5, 1916)*.

1916 (June).—Army Act.—More preparedness agitation.—"With the Army and Navy Bills before Congress, both the general preparedness campaign and the controversy on Army reform methods were vigorously sustained. A monster preparedness parade in New York in May, headed by Mr. Edison, was followed by similar demonstrations at Chicago, Boston, and Washington. President Wilson, carrying a United States flag, marched at the head of the Washington procession. Under such stimulus the Army Bill [the Hay Act] became law in June. In its final form it provided for a larger force than had at first been proposed. The regular Army was raised from a nominal strength of 100,000 to 175,000, with reserves."—H. W. Harris, *President Wilson*, p. 201.

1916 (July).—Federal Aid Road Act.—Rural Credits Bill.—An important act signed by the president in July, 1916, authorized the secretary of agriculture to cooperate with the states in the construction of roads, provided that the legislature of any state has given assent to the provisions of the act. "The Federal Road Building Act provides that state and national governments shall contribute equally to construction. This law will develop good road building along right lines, stimulate larger farm production and better marketing, promote a fuller and more attractive rural life, and add greatly to the convenience and economic welfare of all the people."—*Wilson and labor* (Labor pamphlet, p.

16).—On July 17, the president signed the Rural Credits Bill. See MONEY AND BANKING: Modern: 1916-1922; RURAL CREDIT: United States: Federal Farm Loan Act.

1916 (July).—Preparedness parade in San Francisco.—Mooney case.—During a Preparedness Day parade in the city of San Francisco, on July 22, 1916, bombs were thrown, causing the death of ten persons and the injury of many others. "It will be remembered that in July, 1916, a preparedness parade was in progress in San Francisco, thousands of patriotic citizens being participants therein. During its progress, and while a portion of the parade was passing a corner of two streets, a bomb was exploded killing a number of people and wounding many more. [Thomas J.] Mooney and others were charged with these murders and one was convicted and sentenced to life imprisonment. Mooney was also tried and convicted and sentenced to death. It was not denied that the woman, of whose murder Mooney was convicted, was the victim of a foul crime, but it was claimed that the defendant was not guilty. The record shows that while the parade was in progress a bomb was exploded causing a death-dealing explosion. The explosive was contained in a suitcase and operated by some sort of time device which took effect after the container had been deposited on the sidewalk near the site of the explosion. It was not possible to prove by direct evidence that this suitcase was deposited by Mooney, but the circumstances pointed to Mooney as the owner of the suitcase and that he with others had planned this diabolical occurrence with a view of terrorizing the people, who believed in preparedness and desired to make a demonstration of their convictions."—*Docket (American Law Review, May-June, 1918, p. 467)*.—Charges and counter charges were freely made, and the case attracted nation-wide attention for a number of years. Claims that evidence was manufactured against Mooney were set up both during and after the proceedings. Moreover, it was claimed that the trial was unfair. "Eye witnesses testified that they had seen an object thrown from the roof of a building at this corner, and that the explosion resulted immediately thereafter. The police began at once to search for the person who had thrown the bomb. Two hours after the explosion this search ended. A private detective, one Martin Swanson, who had previously been employed by the street-railway interests, appeared on the scene and took over the search. Testimony at the trials growing out of the crime brought out the fact that after the entrance of Swanson into the case, the police search came to an end. Swanson at once fixed the crime on Tom Mooney, a member of the International Molders' Union and a labor agitator who had been active in organizing the street railway workers. . . . Swanson made no investigation in his attempt to connect Mooney with the crime. He merely made the accusation against Mooney, Mrs. Mooney, Weinberg, and Billings, a member of the Machinists' Union, who had previously been convicted of carrying dynamite. He alleged that a conspiracy existed to kill the President of the United States, the governor of California and others; that this crime of July 22 was the beginning of a long series of similar crimes; that this plot was formed by Mooney and the others in carrying out their 'anarchistic doctrines.' . . . The case of Billings came to trial first. He was convicted and sentenced to life imprisonment. Mooney's case was the next one called. No motive beyond that of the anarchistic conspiracy was alleged, nor was it proved that Mooney was an

anarchist; it was in fact proved that he was opposed to anarchism. . . . The star witness in the Mooney case was a man named Oxman who called himself a cattle dealer, and a millionaire. He claimed that he saw Mooney in Weinberg's car. In the back seat were Rena Mooney, the wife of T. J. Mooney, and Billings with a suitcase. At Stewart and Market Streets the party got out and Billings deposited the suitcase on the sidewalk. All this occurred after 1:40. . . . [Unbiased witnesses, however, stated that the explosion was caused by a falling object, and photographs were introduced to show that for some time before 1:40, and until after the parade was over, all traffic was kept off Market Street. Mooney was convicted and sentenced to be hung on May 17. An appeal was made at once, and was granted when it was shown conclusively that Oxman who was a resident of Illinois, not of Texas as he had claimed], had come to California at the invitation of his brother-in-law specifically to deliver certain testimony for money."—*American Labor Year Book, 1917-1918, pp. 80-83*.—In 1917, President Wilson appointed a Federal commission to enquire into the case. This commission reported on Jan. 16, 1918, as follows: "1. . . . Without question the explosion was murder—designed on a large scale, and its purpose was effectuated. Six people were killed outright and about forty wounded, of whom three or four subsequently died. Indisputably a most heinous crime had been committed, and the identification of its perpetrators alone had to be established. 2.—The community was deeply stirred. Aggressive activity was at once undertaken by the police department, and the press was filled with clues and theories for solution of the tragic mystery. No premonitory acts furnished a clue, except that a number of letters were mailed, prior to the parade, to prominent citizens and leaders in the parade threatening destruction if the parade was undertaken. These letters undoubtedly had a common source. They all vowed pacifist purposes, threats against such manifestations of 'militarism' as a preparedness parade was conceived by them to be. The public authorities, however, did not deem the letters significant and the identity of their writers has never been established. 3.—The police and district attorney turned for an explanation to a different quarter. Arrests were made of Thomas J. Mooney and his wife, Rena Mooney, Warren K. Billings, Israel Weinberg and Edward D. Nolan. 4.—The antecedents of these five persons, particularly of Thomas J. Mooney, have occasioned the war importance of the case. Mooney, at the time of his arrest, was a well-known labor radical on the Coast [and with his wife had been successful, in the spring of 1916, in organizing the car men of the United Railroads in San Francisco.] . . . 5.—The utilities against which Mooney directed his agitation or who suspected him of mischievous activities undoubtedly sought 'to get' Mooney. Their activities against him were directed by Swanson, private detective. It was Swanson who had engineered the investigation which resulted in Mooney's prosecution. It was Swanson who was active in the attempts to implicate Mooney in the dynamiting of electric towers in 1916, attempts which failed, it appears, because Billings and Weinberg refused offers of a 'reward' by Swanson to implicate Mooney. Shortly thereafter the Preparedness parade explosion occurs. Immediately Swanson takes a leading part, acting for the district attorney and the police in the investigation of the crime. Within four days, under Swanson's leadership, the arrest of Mooney and the others is made. 6.—

Instead of an ordinary criminal case, or even a case of extraordinary interest, there thus emerge elements of a clash of forces of wide significance. On the one hand, a community long in the grip of bitter labor struggles and outraged by peculiarly wicked murders. Accusation is made against a group whose leader has been widely associated with views which justify violence, at least in industrial conflict. The public mind was therefore easily aroused to a belief in the guilt of the accused. An attitude of passion was stimulated by all the arts of modern journalism. It is not surprising, then, that Billings and Mooney were tried in an impregnating atmosphere of guilt. On the other hand, just as Mooney symbolized labor for all the bitter opponents of labor, so he came to symbolize labor, irrespective of his personal merits, in the minds of workers and their sympathizers. 'The Mooney case' soon resolved itself into a new aspect of the old industrial feud instead of a subject demanding a calm search for the truth. 7.—Billings was tried first, undoubtedly in the hope that the pressure of his conviction would lead him to implicate Mooney. He was convicted. His conviction has been sustained. He has been sentenced to life imprisonment. He has not implicated Mooney and protests his innocence. Mooney was tried early in January, 1917, and in February, 1917, was convicted of murder in the first degree. Mrs. Mooney was tried and acquitted. . . . [Weinberg also was tried and acquitted. Nolan was not tried.] 8.— . . . Following the trials of Billings and Mooney there was a change in the evidence, which not only resulted in the acquittal of Mrs. Mooney and Weinberg, but also cast doubt upon the prior convictions of Billings and Mooney. Thus it is that evidence submitted on four trials, taken together, aimed as it was at the establishment of a single issue—their joint participation in the crime—leaves the mind in the greatest uncertainty as to the complicity of the accused. While each record in itself presents evidence which would justify the Appellate Court in sustaining the verdict of the jury, the evidence of the four cases in their entirety must shake confidence in the justice of the conviction. This is due to the dubious character of the witnesses, subsequent revelations concerning them and conflict in the testimony of the same witnesses as the need for change in the testimony developed to fit new theories of the prosecution or new evidence by the defense. . . . 9.—We find in the atmosphere surrounding the prosecution and trial of the case ground for disquietude. This feeling has been reinforced by one factor of controlling importance. The most damaging testimony produced against Mooney came from a witness named Oxman. It was Oxman who testified, with convincing detail, to the presence of Mooney and Billings at the place and at the time where it was essential for them to have been if proof of their participation in the crime was to be established. After Mooney's conviction there came to light letters confessedly written by Oxman prior to his having been called to testify. The plain import of these letters is an attempt by Oxman to suborn perjury in corroboration of vital testimony which he was to give and which he did give against Mooney. It is true Oxman was tried for attempted subornation of perjury and acquitted, but this is beside the present consideration. The fact is he did write letters which tend completely to discredit any testimony he might give, and no testimony from Oxman, in the light of the letters, would receive credence necessary to lead to conviction. In fact, after the exposure of Oxman the district attorney did not

call him, though available, as a witness in the trial of Mrs. Mooney. When Oxman was discredited, the verdict against Mooney was discredited. 10.—As soon as the Oxman letters were disclosed, the judge who presided at Mooney's trial called upon the Attorney General of California to take steps toward a retrial of the case. We quote from Judge Griffin's letter to Attorney General Webb: 'As you will at once see, they bear directly upon the credibility of the witness and go to the very foundation of the truth of the story told by Oxman on the witness stand. Had they been before me at the time of the hearing of the motion for a new trial, I would unhesitatingly have granted it. Unfortunately the matter is now out of my hands jurisdictionally, and I am therefore addressing you, as the representative of the people on the appeal to urge upon you the necessity of such action on your part as will result in returning the case to this court for retrial. The letters of Oxman undoubtedly require explanation, and, so far as Mooney is concerned, unquestionably the explanation should be heard by a jury which passes upon the question of his guilt or innocence.—I fully appreciate the unusual character of such a request coming from the trial court in any case and I know of no precedent therefor. In the circumstances of this case, I believe that all of us who were participants in the trial concur that right and justice demand that a new trial of Mooney should be had in order that no possible mistake shall be made in a case where a human life is at stake.' The Attorney General asked the Supreme Court that, in view of the Oxman exposure, the case should be returned to the trial court for a new trial. The Supreme Court, however, under the laws of California, found itself without jurisdiction to consider matters outside the record. The case now before the Court of Appeals is to be disposed of solely on errors appearing from the record of the trial. If the Supreme Court should find an error, reverse and grant a new trial, relief the situation needs would be provided. If the court finds the record discloses no reversible error, and, therefore, confirms the conviction, relief will have to be supplied through executive action of the Governor of California and co-operation of the prosecuting officers."—*Federal Commission condemns the frame-up in the "Mooney Case" (Commission's report, together with comments by the press of the nation, state officials and defense attorneys, pamphlet, 1918, pp. 1-3.)*—In 1919, the governor of California refused to listen to a plea for the release of Mooney, on the ground that he was convinced of the prisoner's guilt. But in September, 1920, a story was printed in the newspapers which tended to associate the German Consulate with the bomb outrage, and to exculpate Mooney. "Judge Griffith, of the Superior Court, before whom Mooney had been tried, sprung a sensation on November 16 when he announced that he had never been convinced of Mooney's guilt. He urged a re-trial. . . . [The District Attorney declared in November that he would re-open the case, and two members of the jury which had convicted the prisoner asked for a re-trial. The case was brought before the Grand Jury in December, when some sensational evidence was given. One witness, W. H. Taylor, stated that he had been an eye-witness to the explosion and that the man who carried the suit-case was not T. J. Mooney. Frank Macdonald, who at the trial had sworn that he had seen Mooney carrying the suit-case now confessed that he had committed perjury in so saying. Furthermore, he stated that Fickert, the district attorney

who had prosecuted Mooney, had induced him to say that he had seen Mooney place the bomb.] The Macdonald confession forced the Grand Jury to act, and on February 22, 1921, an official investigation was begun. Macdonald was called before the Grand Jury on March 1, but he refused to testify unless he was granted immunity. This the Grand Jury refused to grant. On March 9 District Attorney Brady announced that there would be no retrial of Mooney 'unless his friends succeed in bringing to the attention of the Grand Jury some new evidence that will show conclusively that the case was framed.' . . . [Mooney was brought into court in May. An order was issued for a re-trial on the ground that the prisoner had been convicted on perjured testimony, but the judge denied the application for a new trial], saying that he believed Mooney should have a new trial, but that the writ was not technically applicable to the case."—*American Labor Year Book, 1921-1922, pp. 201, 202.*—In October, 1923, the annual convention of the American Federation of Labor urged that the prisoner should be released; but no further action was taken.

1916 (July).—*Voyage of the Deutschland.*—“On July 9 the German merchant submarine *Deutschland* entered the Chesapeake to discharge a cargo of German dyestuffs at Baltimore and take back a cargo of nickel and rubber to Germany.”—*American Year Book, 1916, p. 62.*—See also SUBMARINES: 1913-1920; DEUTSCHLAND.

1916 (August).—*Jones Act for the Philippines.*—On August 29, the president signed a bill, known as the Jones Act, which bestowed a far greater measure of self-government upon the inhabitants of the Philippine islands than they had hitherto enjoyed. See PHILIPPINE ISLANDS: 1913-1917.

1916 (August).—*Federal child labor law.*—“By 1916 the position of state child-labor regulation and of public sentiment upon the subject was wholly favorable to . . . long-delayed federal legislation. All of the leading parties demanded it in their national platforms, and when Congress showed a disposition to postpone action President Wilson intervened with complete success to turn the scale.”—F. A. Ogg, *National progress, 1907-1917, p. 93.*—“The Keating-Owen Child Labor Bill, as passed, provides that it is unlawful to ship from one State to another: (1) The product of any quarry or mine employing children under 16 years of age. (2) The products of any mill, cannery, workshop or factory employing children under 14 years of age or children from 14 to 16 years of age who work more than 8 hours per day, more than six days per week, or later than 7 p. m. or require such children to get to work before 7 a. m. President Wilson directly intervened on behalf of the passage of this bill, insisting that it be not deferred until the December session, and through his efforts it has become law.”—*Wilson and labor* (Labor pamphlet, p. 13).—This law was later declared unconstitutional.—See also CHILD WELFARE LEGISLATION: 1916-1922.

1916 (August-September).—*Threatened railroad strike prevented by Adamson law.*—“In the midst of the [election] campaign the demands of railway engineers, firemen, conductors, and trainmen for an eight-hour day and other concessions precipitated a serious crisis. Suggestions were made that the dispute should be submitted to the Federal Board of Mediation and Conciliation, a body created in 1913, but the brotherhoods re-

fused. Late in August President Wilson called a conference of the brotherhood chairmen and railway managers, but he was unable to persuade them to compromise. On August 28 the brotherhood representatives left the capital bearing orders for a strike to begin on September 4. On the 29th Wilson asked Congress for remedial legislation. A hundred hours later a measure known as the Adamson Eight-Hour Law was ready for his approval.”—P. L. Haworth, *United States in our own times, p. 415.*—See also ADAMSON LAW; ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1888-1921; RAILROADS: 1916.

1916 (October).—*German U-Boat 53.*—Public opinion was roused to a high pitch when on October 7 the *U-53* appeared in Newport harbor, ostensibly to deliver a letter for the German ambassador, and on her journey back sank five steamers off Nantucket light ship, in the presence of a United States destroyer.—See also WORLD WAR: 1916: IX. Naval operations: b.

1916 (October).—*Correspondence with Great Britain regarding her "black list."*—In accordance with her Trading with the Enemy Act, Great Britain had drawn up a "black list" of persons with whom trade was forbidden. This action drew a strong protest from the United States government. The reply of the British government was forwarded On October 12. See BLACKLIST, COMMERCIAL.

1916 (December).—*German proposal for peace conference.*—President Wilson's request for definition of war aims.—*Effect of note at home and abroad.*—“His reflection gave to the President an opportunity for bringing before the world his international aims. He purposed not merely to end the existing conflict but also to provide a basis for permanent peace and the securing of democracy. During the early summer of 1916 he had received from Berlin hints that his mediation would not be unacceptable and it is possible that he planned at that time new efforts to bring the war to a close. But such a step was bound to be regarded as pro-German and in the state of opinion immediately after the *Sussex* crisis would have produced a storm of American protests. . . . Early in December, the President prepared to issue his note. But Germany acted more rapidly. Warned of Wilson's purpose the Berlin Government, on December 12, 1916, proposed negotiations. . . . The German note itself contained no definite terms. But its boastful tone permitted the interpretation that Germany would consider no peace which did not leave Central and Southeastern Europe under Teuton domination; the specific terms later communicated to the American Government in secret, verified this suspicion. A thinly veiled threat to neutral nations was to be read between the lines of the German suggestion of negotiations. Although it was obvious that he would be accused of acting in collusion with Germany, President Wilson decided not to postpone the peace note already planned. . . . Issued on December 18, 1916, his note summed up the chief points of his recently developed policy. It emphasized the interest of the United States in the future peace of the world, the irreparable injury to civilization that might result from a further continuance of the existing struggle, the advantages that would follow an explicit exposure of belligerent purposes, and the possibility of making 'the perma-

ment concord of the nations a hope of the immediate future, a concert of nations immediately practicable."—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America Series, v. 48, pp. 99-102)*.—The note was not received abroad, particularly in England, as the president had hoped. Walter H. Page, ambassador to Great Britain, "had informed the President, in the course of [an] interview of September 22nd [while on a visit to Washington], how unfavourably Great Britain regarded his efforts in the direction of peace; he had in fact delivered a message from the Foreign Office that any Presidential attempt to 'mediate' would be rejected by the Allies. Yet his earnest representation on this point had produced no effect upon Mr. Wilson. The pressure which Germany was bringing to bear upon Washington was apparently irresistible. Count Bernstorff's memoirs, with their accompanying documents, have revealed the intensity of the German efforts during this period; the most startling fact revealed by the German Ambassador is that the Kaiser, on October 9th, notified the President, almost in so many words, that, unless he promptly moved in the direction of peace, the German Government 'would be forced to regain the freedom of action which it has reserved to itself in the note of May 4th last.' It is unlikely that the annals of diplomacy contain many documents so cool and insolent as this one. It was a notification from the Kaiser to the President that the so-called 'Sussex pledge' was not regarded as an unconditional one by the Imperial Government; that it was given merely to furnish Mr. Wilson an opportunity to bring the war to an end; and that unless the Presidential attempt to accomplish this were successful, there would be a resumption of the indiscriminate submarine campaign. The curious developments of the next two months are now a familiar story. Possibly because the British Government had notified him, through Page, that his proffer of mediation would be unacceptable, Mr. Wilson moved cautiously and slowly, and Germany became impatient. . . . At any rate, on December 12th, just as Mr. Wilson was preparing to launch his own campaign for mediation, Germany herself approached her enemies with a proposal for a peace conference. . . . That President Wilson resented this German interference with his own plans is well known; he did not drop them, however, but on December 18th, he sent his long-contemplated peace communication to all the warring powers. . . . The popular indignation which this caused in Great Britain was so intense that it alarmed the British authorities. The publication of this note in the British press was withheld for several hours, in order to give the Government an opportunity to control the expression of editorial opinion; otherwise it was feared that this would be so unrestrained in its bitterness that relations with the United States might be imperilled."—B. J. Hendrick, *Life and letters of Walter H. Page, v. 2, pp. 199-201, 204-205*.—The president's note read, in part, as follows: "The President . . . feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world, which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part. If the contest must continue to proceed towards undefined ends by slow attrition until the one group of belligerents or the other is exhausted, if million after million of human lives must continue to be offered up until on the one side or the

other there are no more to offer, if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle. The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitely stated. The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guarantees, what political or territorial changes or readjustments, what stage of military success even, would bring the war to an end. It may be that peace is nearer than we know; that the terms which the belligerents on the one side and on the other would deem it necessary to insist upon are not so irreconcilable as some have feared; that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable."—See also *WORLD WAR: 1916: XI. Peace proposals: b; b, 1; b, 2*.

1916-1917.—Campaign for preparedness.—Efforts of Roosevelt to arouse nation to a sense of its peril.—Resignation of Secretary of War Garrison.—Development of president's policy.—"Very early in the war, prominent Americans, among them Theodore Roosevelt, Congressman Augustus P. Gardner of Massachusetts, and General Leonard Wood, began urgently to advocate the need of a stronger army and navy to protect American rights. But the mass of the people proved apathetic, while pacifists and pro-Germans strongly opposed preparedness. Secretary Bryan declared that in case of need 'the United States could raise a million men between sunrise and sunset.' In his annual message of December 4, 1914, President Wilson argued at length against the need of special preparation, though he favored the development of the militia, and the extension of voluntary training. . . . Roosevelt had long been a biting critic of the administration, more especially of its foreign policy, both with regard to Mexico and Germany. He ardently advocated thorough military preparedness as the best insurance against war, and favored a vigorous enforcement, in the old-fashioned way, of American rights. . . . He declared that Wilson was strong in words but weak in action, that he had met a policy of 'blood and iron with a policy of milk and water'—that his course was 'worthy of a Byzantine logothete—but not of an American statesman.'"—P. L. Haworth, *United States in our own times, pp. 409, 412-413*.—Roosevelt's vigorous and persistent appeals to American pride and patriotism bore fruit in a continually increasing demand for military preparedness. "On the other hand, Wilson was assailed by pro-Germans [active in the German-American Alliance] and die-hard pacifists; the former believed that the British blockade justified Germany's submarine warfare; the latter were afraid even of strong language in diplomatic notes, lest it lead to war. . . . The President himself can-

not escape a large share of the blame for America's blindness to the issue. During the first twelve months of the war, when the country looked to him for leadership, he had, purposely or otherwise, fostered the forces of pacifism and encouraged the advocates of national isolation. He had underlined the separation of the United States from everything that went on in Europe and insisted that in the issues of the war the American people had no interest. In deference to the spirit of pacifism that engrossed the Middle West, he had opposed the movement for military preparedness. When, late in 1915, Wilson changed his attitude and attempted to arouse the country to a sense of American interest in world affairs and to the need of preparing to accept responsibility, he encountered the opposition of forces which he himself had helped to vitalize. . . . The 'preparedness movement' . . . was crystallized by the formation of the National Security League, designed to organize citizens in such a way 'as may make practical an intelligent expression of public opinion and may ensure for the nation an adequate system of national defense.' Pacifists and pro-Germans immediately organized in opposition; and the movement was hampered by President Wilson's unwillingness to cooperate in any way. He was flatly opposed, in the autumn of 1914 and the spring of the following year, to compulsory military service. . . . The preparedness movement, none the less, spread through the country and the influence of the National Security League did much to inform the public. In the summer of 1915 there was organized at Plattsburgh, New York, under the authority of General Wood, a civilian camp designed to give some experience in the rudiments of military science. It was not encouraged by the Administration, but at the end of the year the President himself confessed that he had been converted. He was about to abandon his policy of isolation for his new ideal of international service, and he realized the logical necessity of supporting it by at least a show of force. Mere negative 'neutrality' no longer sufficed. His fear that greater military strength might lead to an aggressive spirit in the country had been obliterated by the attacks of submarines and by the German plots. He admitted frankly that he had changed his mind."—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America Series, v. 48, pp. 53, 68, 81-82)*.—"Well aware that his plan would be bitterly opposed in Congress, in his own party and by a large part of the people, especially in the Middle West, the President in January, 1916, set forth on a speaking tour that he might in this way explain the need of national preparedness and appeal for support directly to his fellow countrymen. The first speeches were made at New York City on January 27. . . . January 28, the President set off on his tour of the Middle West, spoke at Pittsburgh and Cleveland, and on the thirty-first reached Milwaukee. There he was in the hotbed of Socialism, in a city whose population was largely German-American and strongly pro-German. To them he said: 'I know that you are depending upon me to keep this nation out of war. So far I have done so, and I pledge you my word, that, God helping me, I will—if it is possible. You have laid another duty upon me. You have bidden me see that nothing stains or impairs the honor of the United States. And that is a matter not within my control. That depends upon what others do, not upon what the Government of the United States does, and therefore there may be at any moment a time when I cannot both preserve the honor and the peace of the United

States. Do not exact of me an impossible and contradictory thing, but stand ready, and insist that everybody who represents you should stand ready, to provide the means for maintaining the honor of the United States.' . . . When St. Louis was reached the tour came to an end. There the President said: 'So far as America is concerned, no man need go about preaching peace. We are disciples of peace already. But suppose my neighbor's house is on fire, and my roof is of combustible shingles, and the fire eats into the wood?' . . . The return of the President to Washington [on February 4] was quickly followed by the resignation of Mr. Lindley M. Garrison, Secretary of War. Since the opening of the year the House Committee on Military Affairs had been busy on a bill for national defense. . . . As to what should be the strength of the Regular Army differences in opinion were slight. But great differences existed as to the character of the force by which it was to be supported. General Scott, Chief of Staff, was for a continental army raised according to the plan of Secretary Garrison. . . . Mr. Hay, Chairman of the Committee on Military Affairs, and the National Guard Association, which maintained an active lobby, were for the federalization of the National Guard. Against this plan Mr. Garrison, January 12, 1916, protested in a letter to the President. . . . The President replied, in substance, that he was ready to abandon the plan of the Secretary for a continental volunteer force and accept that of Mr. Hay for a Federalized militia if it would accomplish the desired result. Mr. Garrison then, January 14, 1916, restated his position briefly and forcibly, and January 17 the President replied that he understood his views. 'You believe, as I do, that the chief thing necessary is that we should have a trained citizen reserve, and that the training, organization and control of that reserve should be under immediate Federal direction. But apparently I have not succeeded in making my own position equally clear to you, though I feel sure that I have made it perfectly clear to Mr. Hay. It is that I am not irrevocably or dogmatically committed to any one plan of providing the nation with such a reserve, and am certainly willing to discuss alternative proposals.'—J. B. McMaster, *The United States in the World War, pp. 237-240*.—After some further correspondence, Secretary Garrison resigned, on Feb. 10, 1916, and the president appointed in his place Newton D. Baker.

1916-1917.—German refusal to state terms.—Allied war aims.—"It was natural in view of the recent German overtures for peace that there should have been some thought that the President's action favoured the German cause. Such a view overlooked the President's previous acts and oft repeated statements of purpose, as well as the pending controversies between the two countries. However, the nature of the President's action became more clear when the German response of December 26, 1916, was found to be a general acceptance only and decidedly not a response in the spirit of the President's request. On the other hand, the response of the Entente Allies, on January 10, 1917, in spite of . . . earlier manifestation of disapproval in England, was more detailed in statement of aim and purpose, and thus came much nearer meeting the President's request. Their definiteness, however, in conjunction with the rejection by the Entente of the German proposal of December 12, 1916, gave opportunity to the Ger-

man government to declare that 'the full responsibility for the continuation of bloodshed' rested upon its enemies."—E. E. Robinson and V. J. West, *Foreign policy of Woodrow Wilson, 1913-1917*, p. 133.

1916-1917.—Opposition to Owen-Keating child labor law.—Adverse decision in North Carolina.—"In spite of the warnings of foreign experience in permitting the exploitation of children under the stress of war conditions, in several of the states efforts were made to pass laws suspending or relaxing child labor laws during the period of the war. More of these attempts would probably have been successful had it not been for the fortunate circumstance that the Federal child-labor act adopted . . . [in 1916] became effective Sept. 1. It was made evident early in the year [1917] that the government intended to enforce it vigorously. An appropriation of \$150,000 was made by Congress on April 17 for the enforcement of the act and the necessary work preliminary to its actual operation. By direction of the Secretary of Labor the administration of the law was placed in the Federal Children's Bureau and a special child labor division was created in that bureau with Miss Grace Abbott as director. As a working basis of cooperation between Federal and state officials the Secretary of Labor appointed as inspectors under the Federal act the state labor officials charged with the enforcement of child-labor laws in the 23 states whose requirements for working certificates were regarded as acceptable under the Federal act. In the other states agents were sent out by the Bureau to issue Federal certificates. It was not to be expected, however, that the new law would be allowed to go into effect unchallenged. An injunction was applied for in the District Court of the western district of North Carolina, and on Aug. 29 Judge Boyd in his decision declared the law unconstitutional."—*American Year Book*, 1917, p. 379.—The case was immediately appealed to the Supreme Court of the United States, where it was heard the following year, when the decision of the Carolina court was sustained.—See also CHILD WELFARE LEGISLATION: 1916-1922.

1916-1918.—Legislation to stimulate foreign trade.—For the purpose of increasing foreign trade, a bill to exempt exports from the restrictions of the Sherman Act and other anti-trust acts, passed the House of Representatives twice in 1916. But the Senate was slow to act, and did not pass the bill until April, 1918, when slight changes were made in the original measure. The text of the bill was, in part, as follows: "Sec. 2. That nothing contained in the Act entitled 'An Act to protect trade and commerce against unlawful restraints and monopolies,' approved July second, eighteen hundred and ninety, shall be construed as declaring to be illegal an association entered into for the sole purpose of engaging in export trade and actually

engaged solely in such trade, or an agreement made or act done in the course of export trade by such association, provided such agreement or act is not in restraint of trade within the United States. Sect. 3. That nothing contained in section seven of the Act entitled 'An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October fifteenth, nineteen hundred and fourteen, shall be construed to forbid the acquisition of ownership by any corporation of the whole or any part of the stock or other capital of any corporation organized solely for the purpose of engaging in export trade, and actually engaged solely in such export trade. Sect. 4. That the words 'unfair methods of competition' wherever used in the Act entitled 'An Act to create a Federal Trade Commission, to define its powers and duties, and for other purposes,' approved September twenty-sixth, nineteen hundred and fourteen, shall be construed as extending to unfair methods of competition used in export trade, even though the acts constituting such unfair methods are done without the territorial jurisdiction of the United States. Sec. 5. That every association now engaged solely in export trade, within sixty days after the passage of this Act, and every association entered into hereafter for the sole purpose of engaging export trade, within thirty days after its creation, shall file with the Federal Trade Commission a written statement setting forth the location of its offices or places of business, and the names and addresses of all its officers, and of all its stockholders, or members, and if a corporation, a copy of its certificate or articles of incorporation and by-laws, and if unincorporated, a copy of its articles or contract of association."—J. W. Jenks, *Trust problem*, pp. 456-458.

1917 (January).—American aims defined by President Wilson.—Application of Monroe Doctrine.—Self-determination.—Peace without victory.—"The replies of the belligerents [to the President's peace proposals] gave to Wilson an opportunity to inform the world more definitely of the aims of the United States, in case it should be drawn into the war. This he did in a speech delivered to the Senate on January 22, 1917. America would play her part in world affairs, he said,

but the other nations must clearly understand the conditions of our participation. The basis of peace must be the right of each individual nation to decide its destiny for itself without interference from a stronger alien power. 'I am proposing as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world; that no nation should seek to extend its polity over any other nation or people, but that every people should be left free to determine its own polity, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful.'—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America Series, v. 48, pp. 103-104)*.—See also *WORLD WAR: 1917: XI. Efforts toward peace: d.*—"This speech, despite the unfortunate phrase, 'peace without victory,' was hailed in all liberal circles, amongst the Allies and in the United States, as a noble charter of the new international order. Wilson had expressed the hope that he was 'speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.' This hope was doubtless realized. The first reaction in France and England was one of rather puzzled contempt, if we may judge by the press. But the newspaper writers soon found that what Wilson said many people had been thinking, and waiting for some one to say."—*Ibid.*, p. 105.

1917 (January).—Militant suffragists in Washington.—"In January, 1917, the Congressional Union for Woman Suffrage began a picketing of the White House to influence the President to support the [Equal Suffrage Amendment] in Congress."—F. L. Paxson, *Recent history of the United States*, pp. 464-465.

1917 (January).—Germany declares unrestricted submarine warfare.—German intrigues in Mexico exposed in Zimmerman note.—"Discussion of peace, and the terms of peace, and ways to enforce peace came to a sudden end when, on January 31, 1917, the German Ambassador [Bernstorff] presented a note announcing the immediate resumption of ruthless submarine warfare. The Imperial Government, the Ambassador said, had carefully considered the message of the President to the Senate on January 22, and was gratified to know that 'the main tendencies of this important statement corresponded largely to the desires and principles professed by Germany. These principles especially included self-government and equality of rights of all nations. Germany would be sincerely glad if, in recognition of this principle, countries like Ireland and India, which do not enjoy the benefits of political independence, should now obtain their freedom.'"—G. B. McMaster, *United States in the World War*, p. 315.—"A wide area surrounding the British Isles, France, and Italy, and including the greater part of the eastern Mediterranean Sea was declared to be a barred zone. [See *WORLD WAR: 1917: VIII. United States and the war: a, 1; a, 2*] All sea traffic, neutral as well as belligerent, the note warned, would be sunk, except that one American ship would be allowed to pass through the zone each week provided that it followed a designated, narrow lane to the port of Falmouth, England, that it was

marked with broad red and white stripes, and carried no contraband."—C. R. Lingley, *Since the Civil War (United States, v. 3, p. 579)*.—"Already, on January 19, 1917, unknown to the people of Germany, Herr Zimmermann, their Secretary of Foreign Affairs, had secretly dispatched a note to their minister in Mexico, . . . instructing him to offer to the Mexican Government New Mexico, Texas and Arizona if Mexico would join with Japan in attacking the United States. . . . The famous 'Zimmermann note,' exposed by our Government March 1, is a document that should stick in the memories of all Americans. Remember, it was composed on January 19, 1917, at a time when Germany and America were officially very good friends and the date was just three days before Mr. Wilson appeared in the Senate with his scheme for a league to assure peace and justice to the world. Zimmermann admitted the authenticity of the note, and only deplored that it had been discovered. The significant parts were these: 'BERLIN, JANUARY 19, 1917. On February 1 we intend to begin submarine warfare unrestricted. In spite of this, it is our intention to keep neutral the United States of America. If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.' The rest of the dispatch tells the German minister in Mexico to open secret negotiations with Carranza the moment war with us is certain, and to get Carranza to draw in Japan. . . . The whole dispatch was so gross a revelation of international immorality that German-American papers immediately denounced it as a forgery, only to have its genuineness brazenly acknowledged and defended by Berlin."—Committee on Public Information, *War message and the facts behind it (War Information Series, no. 1)*.

1917 (January-March).—Withdrawal of troops from Mexico.—Carranza recognized.—The joint American and Mexican Commission, proposed by Carranza, had reported a settlement by which each country was to patrol its own side of the border with the right on the part of the United States to cross the border, if Mexico failed to keep order there. To this decision "Carranza would not agree, and the joint commission was dissolved on January 15, 1917. By this time the relations of the United States and Germany were such that it was not wise to be in a quarrel with Mexico. . . . President Wilson's patience with Mexico was to some extent due to the conviction that we could not afford to begin a war on this side of the Atlantic until we were assured we should not be drawn into the war then being waged on the other side of it. January 28, 1917, three days before Germany announced that she would embark on ruthless submarine warfare, the president gave notice that he would withdraw troops from Mexico, and on February 5 the last of them had recrossed the Rio Grande."—J. S. Bassett, *Short history of the United States*, p. 871.—On January 30 the United States decided to grant Carranza full recognition

and diplomatic intercourse was restored.—See also MEXICO: 1916-1917.

1917 (February-April).—Steps toward war.—Diplomatic relations broken.—Armed neutrality.—Further submarine outrages.—Inauguration.—Promptly following Germany's announcement of unrestrained submarine warfare, the ambassador from that country was formally dismissed. On the same day, February 3, 1917, the President addressed both Houses of our Congress and announced the complete severance of our relations with Germany. The reluctance with which he took this step was evident in every word. But diplomacy had failed, and it would have been the hollowest pretense to maintain relations. At the same time, however, he made it plain that he did not regard this act as tantamount to a declaration of war. Here for the first time the President made his sharp distinction between government and people in undemocratic lands: 'We are the sincere friends of the German people,' he said, 'and earnestly desire to remain at peace with the Government which speaks for them.'—Committee on Public Information, *How the war came to America*, p. 13.—President Wilson "recounted the substance of his earlier correspondence with Germany in regard to submarine warfare and recalled the promise of the German government that merchant vessels would not be sunk without warning and without saving human lives. He declared that the American government had no alternative but to sever relations, although refusing to believe that Germany would ruthlessly use the methods which she threatened, until convinced of her determination by 'overt acts.' Information of the move made by the United States was sent to American diplomatic representatives in neutral countries with the suggestion that they take similar action."—C. R. Lingley, *Since the Civil War* (*United States*, v. 3, pp. 579-580).—See also WORLD WAR: 1917: VIII. United States and the War: a; b.—"Just as the President began his address, the German Ambassador received from the Secretary of State a note of dismissal and his passports. The affairs of the German Embassy were then taken over by the Swiss Minister and preparations were made for the departure of Count von Bernstorff. France and Great Britain each gave a safe conduct; passage was secured, with the consent of the Danish Government, on the *Frederick VIII.*; the German consuls scattered over the United States, and their families, were summoned to Washington; and on February 14 the Ambassador and his party, one hundred and forty-nine persons in all, sailed from the port of New York. . . . At Berlin the break in diplomatic relations and the recall of Ambassador Gerard was followed by the placing of a police guard before the Embassy; but it was not needed as no unfriendly demonstrations of any kind were made. The Ambassador, however, was treated much like a prisoner. His telephone was cut, his mail was stopped, he could not communicate with American consuls, and he was denied permission to cable Washington in cipher. No passports were furnished Americans desirous of leaving Berlin,

nor would the police allow them to set out for Denmark, Holland or Switzerland. Mr. Gerard, it was suggested, should use his good offices with Washington to induce the Government to endeavor to obtain from France and Great Britain safe conducts for the return of German merchantmen from America to German ports. When he refused it was intimated that his help might hasten the departure of Americans, to which he answered, it was reported, that he would sit where he was till Kingdom come before he would go without them. The restraint imposed on Ambassador Gerard was explained by Dr. von Stumm, Under-Secretary for Foreign Affairs. We had, he said, no reports from the United States. We knew not how our Ambassador, consuls and subjects were faring. . . . Not until the good treatment given to Germans in this country were known in Berlin was it arranged that the Ambassador, the Secretaries, *attachés*, members of the consular service, and American newspaper men should go to Switzerland by way of Berne. Thence Mr. Gerard traveled to Paris, Madrid and Barcelona, whence he sailed for Havana and home. The effort to persuade Ambassador Gerard to sign a protocol confirming and enlarging the privileges of German subjects in our country in case of war having failed, the document was sent to Washington and delivered to the Secretary of State by the Swiss Minister on February 10, 1917."—J. B. McMaster, *United States in the World War*, pp. 324, 334-335.—"The expressed hope of the President that the conduct of Germany would be less offensive than its declaration, and that no overt acts would be directed against the United States to drive the country from non-intercourse to war, produced a period of delay following the breach. On February 26 the President appeared before Congress to ask for specific power to defend merchant ships in case they should be attacked by submarines in the course of the unrestricted warfare. The status of the submarine was no more nearly accepted than it had been when the warfare against merchant ships began in 1915. The clear rule of international law, requiring the belligerent to search the enemy ship before destroying it, and requiring condemnation before the prize court as a part of the process, was flagrantly violated by the submarine blockade. The Allied Powers maintained that the submarine blockade, which was never effective, and at no time stopped the commerce that it pretended to cut off, was in itself an act of piracy. International law guarantees safety for the passenger and crew of the merchant vessel that does not attempt flight from an enemy warship, and permits the merchant vessel at its own risk to flee or to try to defend itself. The execution by Germany of Captain Fryatt in 1916 for having attempted to ram a German submarine that sought to torpedo his ship was in violation of accepted law. [See WORLD WAR: 1916: IX. Naval operations: d.] Allied merchantmen were armed by their Governments for the purpose of defending themselves against such piratical attacks, and President Wilson now asked specific authority to defend American vessels by similar methods."—F. L. Paxton, *Recent history of the United States*, pp. 471-472.—"March 1, the House passed an Armed Ships bill, by a vote of 403 to 13, giving the President authority to supply merchant ships of American registry with defensive arms and ammunition. A bill of similar purport, but adding a blanket grant of power, was held up in the Senate by eleven members styled by the President 'a group of willful men'; and the session closed, March 4, without action. March 8,

the new Senate, in special session, adopted by a vote of 76 to 3 a *clôture* amendment bringing to an end the chamber's time-honored rule of unlimited debate. Backed by high legal authority, the President came to the conclusion that he already had most of the power which he desired. Accordingly the announcement was made that guns would be mounted on American merchant ships bound for European waters, and that expert gunners would be supplied by the navy. The decision brought war perceptibly nearer; for the arrangements were almost certain to lead to encounters with submarines, and such encounters would be difficult to view in any light other than as hostile acts. Further session was called for April 16; and lowering clouds caused the date to be set back to April 2. During the interval the country drifted rapidly

Series, no. 1.—See also *WORLD WAR: 1917: IX. Naval operations: c.*—"President Woodrow Wilson took the oath of office for his second term at the National Capitol at noon March 5, 1917, in the presence of 50,000 people. He had previously gone through the formality of taking the oath at noon on Sunday, March 4. The parade was not as long as usual, consisting of about 20,000 soldiers and sailors. There was no inauguration ball, and a general air of solemnity marked the whole occasion on account of the critical international situation. The President was very carefully guarded, but no untoward incident marred the occasion. The inaugural address was short and referred chiefly to international affairs."—*New York Times Current History, Apr., 1917, p. 36.*—The president retained his old cabinet, which was composed sub-

1917 (February-May).—Roosevelt's offer to raise troops for immediate service.—Popularity of proposal here and abroad.—Rejection by secretary of war.—Before the breaking of diplomatic relations with Germany, Theodore Roosevelt offered, in the event of war, to raise two divisions of volunteer troops for immediate service in France; and early in February, he began earnest efforts through correspondence with Newton D. Baker,

secretary of war, to receive permission for such action. "In view of the moral effect which this must have produced, it was strongly urged on the President by Monsieur Clemenceau in a letter and by Marshal Joffre in an interview; but it was rejected upon alleged military ground."—Lord Charnwood, *Theodore Roosevelt*, p. 185.—"Colonel Roosevelt and his friends . . . argued that France needed help immediately, and promised to start one division toward France within four months. They agreed to accept no volunteers subject to the draft. They even promised the army would be financed at the start—armed and equipped—from private funds. And the War Department was assured that the Colonel did not want to lead the army; that he would be satisfied to be the junior brigadier-general in command of one of the brigades. Congress, in passing the draft law, included in the law a provision which left the way open for the Colonel to raise his army, provided the Administration would consent. But President Wilson declined to avail himself of this provision, and the Colonel stayed at home. Colonel Roosevelt thereupon urged those who had volunteered to go with him to enlist in the regular army."—E. Thwing, *Life and meaning of Theodore Roosevelt*, p. 193.—In a public statement in which he declared that purely military reasons led him to reject the Roosevelt plan, the president said, "This is not the time or the occasion for compliment or for any action not calculated to contribute to the immediate success of the war. The business now in hand is undramatic, practical, and of scientific definiteness and precision. I shall act with regard to it at every step and in every particular under expert and professional advice from both sides of the water."—J. B. McMaster, *United States in the World War*, pp. 377-378.

1917 (March).—Purchase of Danish West Indian, or Virgin, islands.—On Aug. 4, 1916, a treaty was signed with Denmark for the purchase by the United States of the Danish West Indies, known as the Virgin islands, and for the relinquishment of American claims by right of discovery in Greenland. Strategic reasons made it highly desirable for the United States to possess these islands which include the three large islands of St. John, Santa Cruz and St. Thomas with its protected harbor of Charlotte Amalie, capable of accommodating a large fleet, besides about fifty very small islands. The group is situated a little to the east of Porto Rico. "The exchange of ratifications of the treaty took place on January 17, [1917]. On March 3 Congress passed an act to provide a temporary government for the islands. The act appropriated the sum of \$25,000,000 for the purchase of the islands and \$100,000 for the purpose of taking over and occupying the islands and carrying the act into effect. . . . It provided that the military, civil and judicial power should be vested in a governor and such other persons as the President may appoint. . . . The purchase price was paid March 31 to the Danish Minister at Washington, and on that date the islands were

formally taken over by the United States Government, Commander Edwin T. Pollock, U. S. N., commanding the Hancock, officiating as the senior officer present. Commander Pollock acted as governor until April 9, when Rear-Admiral James H. Oliver assumed his duties as Governor."—*American Year Book*, 1917, p. 226.—See also VIRGIN ISLANDS: United States purchase; DENMARK: 1917; WEST INDIES: United States interests.

1917 (March).—New railway strike threatened.—"At the moment the President issued the new call, the country was again threatened with a great railroad strike. The Adamson law, passed the previous September, was supposed to go into effect on January 1, 1917, but a federal district court held it unconstitutional. [See ADAMSON LAW; SUPREME COURT: 1917.] The railroads entered into an agreement with the attorney-general to continue on the old basis but to give the men the back pay due them in case the Supreme Court upheld the law. The men were dissatisfied, and on March 15, in the midst of the crisis with Germany, the brotherhoods called a nation-wide strike to begin on the 17th, but consented to postpone it until the 19th. On that day the managers, following an appeal to their patriotism, yielded, and on the same day the Supreme Court, by a vote of 5 to 4, upheld the act. Later in the year the men began an agitation for radical increases in their pay and again were victorious."—P. L. Haworth, *United States in our own times*, pp. 422-423.—See also RAILROADS: 1916; 1916-1920.

1917 (April).—President Wilson asks Congress to declare that a state of war with Germany exists.—War aims defined.—Autocracy the enemy.—On April 2, 1917, President Wilson addressed a joint session of Congress in a message recommending war with Germany. He said: "Gentlemen of the Congress: I have called the Congress into extraordinary session because there are serious, very serious, choices of policy . . . to be made, and made immediately which it is neither right nor constitutionally permissible that I should assume the responsibility of making. On the 3rd of February last I officially laid before you the extraordinary announcement of the Imperial German Government, that on and after the 1st day of February it was its purpose to put aside all restraints of law or of humanity and use its submarines to sink every vessel that sought to approach either the ports of Great Britain and Ireland or the western coasts of Europe or any of the ports controlled by the enemies of Germany within the Mediterranean. That had seemed to be the object of the German submarine warfare earlier in the war, but since April of last year the Imperial Government had somewhat restrained the commanders of its undersea craft, in conformity with its promise, then given to us, that passenger boats should not be sunk, and that due warning would be given to all other vessels which its submarines might seek to destroy, when no resistance was offered or escape attempted, and care taken that their crews were given at least a fair chance to save their lives in their open boats. The precautions taken were meager and haphazard enough, as was proved in distressing instance after instance in the progress of the cruel and unmanly business, but a certain degree of restraint was observed. The new policy has swept every restriction aside. Vessels of every kind, whatever their flag, their character, their cargo, their destination, their errand,

have been ruthlessly sent to the bottom without warning and without thought of help or mercy, for those on board, the vessels of friendly neutrals along with those of belligerents. Even hospital ships and ships carrying relief to the sorely bereaved and stricken people of Belgium, though the latter were provided with safe conduct through the proscribed areas by the German Government itself and were distinguished by unmistakable marks of identity, have been sunk with the same reckless lack of compassion or of principle. I was for a little while unable to believe that such things would in fact be done by any Government that had hitherto subscribed to the humane practices of civilized nations. International law had its origin in the attempt to set up some law which would be respected and observed upon the seas, where no nation had right of dominion and where lay the free highways of the world. By painful stage after stage has that law been built up with meager enough results, indeed, after all was accomplished that could be accomplished, but always with a clear view, at least, of what the heart and conscience of mankind demanded. . . . This minimum of right the German Government has swept aside under the plea of retaliation and necessity and because it had no weapons which it could use at sea except these, which it is impossible to employ, as it is employing them, without throwing to the wind all scruples of humanity or of respect for the understandings that were supposed to underlie the intercourse of the world. I am not now thinking of the loss of property involved, immense and serious as that is, but only of the wanton and wholesale destruction of the lives of non-combatants, men, women, and children, engaged in pursuits which have always even in the darkest periods of modern history, been deemed innocent and legitimate. Property can be paid for; the lives of peaceful and innocent people can not be. The present German submarine warfare against commerce is a warfare against mankind. It is a war against all nations. American ships have been sunk, American lives taken, in ways which it has stirred us very deeply to hear of, but the ships and people of other neutral and friendly nations have been sunk and overwhelmed in the waters in the same way. There has been no discrimination. The challenge is to all mankind. Each nation must decide for itself how it will meet it. The choice we make for ourselves must be made with a moderation of counsel and a temperateness of judgment befitting our character and our motives as a Nation. We must put excited feelings away. Our motive will not be revenge or the victorious assertion of the physical might of the Nation, but only the vindication of right, of human right, of which we are only a single champion. . . . When I addressed the Congress on the 26th of February last I thought it would suffice to assert our neutral rights with arms, our right to use the seas against unlawful interference, our right to keep our people safe against unlawful violence. But armed neutrality, it now appears, is impracticable. Because submarines are in effect outlaws, when used as the German submarines have been used against merchant shipping, it is impossible to defend ships against their attacks, as the law of nations has assumed that merchantmen would defend themselves against privateers or cruisers, visible craft giving chase upon the open sea. It is common prudence in such circumstances, grim necessity indeed, to endeavor to destroy them before they have shown their own intention. They must be dealt with upon sight, if dealt with at all. The German Government denies the right of neu-

trals to use arms at all within the areas of the sea which it has proscribed even in the defence of rights which no modern publicist has ever before questioned their right to defend. The intimation is conveyed that the armed guards which we have placed on our merchant ships will be treated as beyond the pale of law and subject to be dealt with as pirates would be. Armed neutrality is ineffectual enough at best; in such circumstances and in the face of such pretensions it is worse than ineffectual; it is likely only to produce what it was meant to prevent; it is practically certain to draw us into war without either the rights or the effectiveness of belligerents. There is one choice we can not make, we are incapable of making: we will not choose the path of submission and suffer the most sacred rights of our nation and our people to be ignored or violated. The wrongs against which we now array ourselves are no common wrongs; they cut to the very roots of human life. With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves but in unhesitating obedience to what I deem my constitutional duty I advise that the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the Government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it; and that it take immediate steps not only to put the country in a more thorough state of defense, but also to exert all its power and employ all its resources to bring the Government of the German Empire to terms and end the war. What this will involve is clear. It will involve the utmost practicable coöperation in counsel and action with the Governments now at war with Germany, and as incident to that, the extension to those Governments of the most liberal financial credits, in order that our resources may so far as possible be added to theirs.

"It will involve the organization and mobilization of all the material resources of the country to supply the materials of war and serve the incidental needs of the Nation in the most abundant and yet the most economical and efficient way possible. It will involve the immediate full equipment of the Navy in all respects but particularly in supplying it with the best means of dealing with the enemy's submarines. It will involve the immediate addition to the armed forces of the United States, already provided for by law in case of war, of at least 500,000 men, who should, in my opinion, be chosen upon the principle of universal liability to service, and also the authorization of subsequent additional increments of equal force so soon as they may be needed and can be handled in training. It will involve also, of course, the granting of adequate credits to the Government sustained, I hope, so far as they can equitably be sustained by the present generation, by well-conceived taxation. I say sustained so far as may be equitable by taxation, because it seems to me that it would be most unwise to base the credits, which will now be necessary, entirely on money borrowed. It is our duty, I most respectfully urge, to protect our people, so far as we may, against the very serious hardships and evils which would be likely to arise out of the inflation which would be produced by vast loans. In carrying out the measures by which these things are to be accomplished we should keep constantly in mind the wisdom of interfering as little as possible in our own preparation and in the equipment of our own military forces with the duty—for it will be a very practical duty—of supplying the nations

already at war with Germany with the materials which they can obtain only from us or by our assistance. They are in the field, and we should help them in every way to be effective there. I shall take the liberty of suggesting, through the several executive departments of the Government, for the consideration of your committees, measures for the accomplishment of the several objects I have mentioned. I hope that it will be your pleasure to deal with them as having been framed after very careful thought by the branch of the Government upon whom the responsibility of conducting the war and safeguarding the Nation will most directly fall.

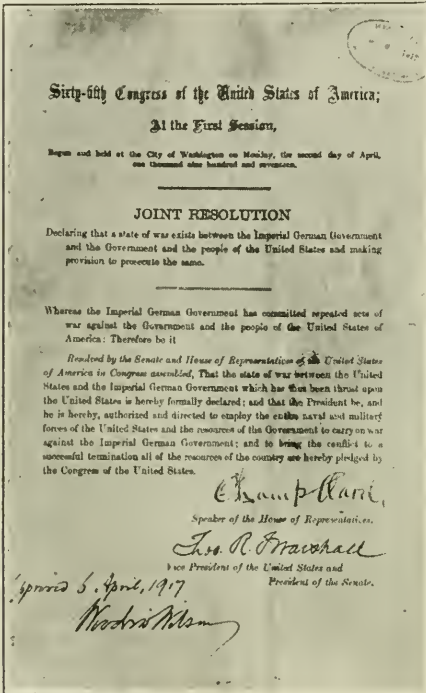

"While we do these things, these deeply momentous things, let us be very clear, and make very clear to all the world, what our motives and our objects are. My own thought has not been driven from its habitual and normal course by the unhappy events of the last two months, and I do not believe that the thought of the Nation has been altered or clouded by them. I have exactly the same things in mind now that I had in mind when I addressed the Senate on the 22d of January last; the same that I had in mind when I addressed Congress on the 3d of February and on the 26th of February. Our object now, as then, is to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power, and to set up among the really free and self-governed peoples of the world such a concert of purpose and of action as will henceforth insure the observance of those principles. Neutrality is no longer feasible or desirable where the peace of the world is involved and the freedom of its peoples, and the menace to that peace and freedom lies in the existence of autocratic governments, backed by organized force which is controlled wholly by their will, not by the will of their people. We have seen the last of neutrality in such circumstances. We are at the beginning of an age in which it will be insisted that the same standards of conduct and of responsibility for wrong done shall be observed among nations and their governments that are observed among the individual citizens of civilized states. We have no quarrel with the German people. We have no feeling toward them but one of sympathy and friendship. It was not upon their impulse that their government acted in entering the war. It was not with their previous knowledge or approval. It was a war determined upon as wars used to be determined upon in the old unhappy days, when peoples were nowhere consulted by their rulers and wars were provoked and waged in the interest of dynasties or of little groups of ambitious men who were accustomed to use their fellow men as pawns and tools. Self-governed nations do not fill their neighbor States with spies or set the course of intrigue to bring about some critical posture of affairs which will give them an opportunity to strike and make conquest. Such designs can be successfully worked out only under cover and where no one has the right to ask questions. Cunningly contrived plans of deception or aggression, carried, it may be from generation to generation, can be worked out and kept from the light only within the privacy of courts or behind the carefully guarded confidences of a narrow and privileged class. They are happily impossible where public opinion commands and insists upon full information concerning all the nation's affairs. A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic Government could be trusted

to keep faith within it or observe its covenants. It must be a league of honor, a partnership of opinion. Intrigue would eat its vitals away; the plottings of inner circles who could plan what they would, and render account to no one, would be a corruption seated at its very heart. Only free people can hold their purpose and their honor steady to a common end, and prefer the interests of mankind to any narrow interest of their own. Does not every American feel that assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening within the last few weeks in Russia? Russia was known by those who knew her best to have been always in fact democratic at heart in all the vital habits of her thought, in all the intimate relationship of her people that spoke their natural instinct, their habitual attitude toward life. The autocracy that crowned the summit of her political structure, long as it had stood and terrible as was the reality of its power, was not in fact Russian in origin, character, or purpose, and now it has been shaken off and the great generous Russian people have been added, in all their native majesty and might, to the forces that are fighting for freedom in the world, for justice, and for peace. Here is a fit partner for a league of honor. . . . One of the things that have served to convince us that the Prussian autocracy was not and could never be our friend is that from the very outset of the present war it has filled our unsuspecting communities, and even our offices of government, with spies and set criminal intrigues everywhere afoot against our national unity of counsel, our peace within and without, our industries, and our commerce. Indeed it is now evident that its spies were here even before the war began and it is unhappily not a matter of conjecture, but a fact proven in our courts of justice, that the intrigues which have more than once come perilously near to disturbing the peace and dislocating the industries of the country, have been carried on at the instigation, with the support, and even under the personal directions of official agents of the Imperial Government accredited to the Government of the United States. Even in checking these things and trying to extirpate them we have sought to put the most generous interpretation possible upon them because we knew that their source lay not in any hostile feeling or purpose of the German people toward us (who were, no doubt, as ignorant of them as we ourselves were), but only in the selfish designs of a Government that did what it pleased and told its people nothing. But they have played their part in serving to convince us at last that that Government entertains no real friendship for us, and means to act against our peace and security at its convenience. That it means to stir up enemies against us at our very doors, the intercepted note to the German minister at Mexico City is eloquent evidence. We are accepting this challenge of hostile purpose because we know that in such a Government, following such methods, we can never have a friend; and that in the presence of its organized power, always lying in wait to accomplish we know not what purpose, there can be no assured security for the democratic Governments of the world. We are now about to accept the gage of battle with the natural foe to liberty, and shall, if necessary, spend the whole force of the nation to check and nullify its pretensions and its power. We are glad, now that we see the facts with no veil of false pretense about them, to fight thus for the ultimate peace

of the world and for the liberation of its peoples, the German peoples included; for the rights of nations, great and small, and the privilege of men everywhere to choose their way of life and of obedience. The world must be made safe for democracy. Its peace must be planted upon the tested foundations of political liberty. We have no selfish ends to serve. We desire no conquests, no dominion. We seek no indemnities for ourselves, no material compensation for the sacrifices we shall freely make. We are but one of the champions of the rights of mankind. We shall be satisfied when those rights have been made as secure as the faith and the freedom of nations can make them. . . . Just because we fight without rancor and without selfish object, seeking nothing for ourselves but what we shall wish to share with

postponing a discussion of our relations with the authorities at Vienna. We enter this war only where we are clearly forced into it because there are no other means of defending our rights. It will be all the easier for us to conduct ourselves as belligerents in a high spirit of right and fairness because we act without animus, not with enmity toward a people or with the desire to bring any injury or disadvantage upon them, but only in armed opposition to an irresponsible Government which has thrown aside all considerations of humanity and of right and is running amuck. We are, let me say again, the sincere friends of the German people, and shall desire nothing so much as the early reestablishment of intimate relations of mutual advantage between us, however hard it may be for them for the time being to believe that this is spoken from our hearts. We have borne with their present Government through all these bitter months because of that friendship, exercising a patience and forbearance which would otherwise have been impossible. We shall happily still have an opportunity to prove that friendship in our daily attitude and actions toward the millions of men and women of German birth and native sympathy who live among us and share our life, and we shall be proud to prove it toward all who are in fact loyal to their neighbors and to the Government in the hour of test. They are most of them as true and loyal Americans as if they had never known any other fealty or allegiance. They will be prompt to stand with us in rebuking and restraining the few who may be of a different mind and purpose. If there should be disloyalty, it will be dealt with with a firm hand of stern repression; but if it lifts its head at all, it will lift it only here and there and without countenance except from a lawless and malignant few. It is a distressing and oppressive duty, gentlemen of the Congress, which I have performed in thus addressing you. There are, it may be, many months of fiery trial and sacrifice ahead of us. It is a fearful thing to lead this great, peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance. But the right is more precious than peace, and we shall fight for the things, which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own Governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free people as shall bring peace and safety to all nations and make the world itself at last free. To such a task we can dedicate our lives and our fortunes, everything that we are and everything that we have, with the pride of those who know that the day has come when America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured. God helping her, she can do no other.”—Committee on Public Information, *War message and the facts behind it* (War Information Series, no. 1, June, 1917, pp. 5-28).

1917 (April).—War declared against Germany.—“In both houses a war resolution was introduced, as follows: ‘Whereas the German Imperial Government has committed repeated acts of war against the government and the people of the United States of America; Therefore be it resolved . . . that the state of war between the United States and the Imperial German government which has been thrust upon the United States is hereby formally declared.’ The full resources of the country

JOINT RESOLUTION FOR WAR WITH
GERMANY

Signed April 6, 1917

all free people, we shall, I feel confident, conduct our operations as belligerents without passion and ourselves observe with proud punctilio the principles of right and of fair play we profess to be fighting for. I have said nothing of the Governments allied with the Imperial Government of Germany because they have not made war upon us or challenged us to defend our right and our honor. The Austro-Hungarian Government has, indeed, avowed its unqualified indorsement and acceptance of the reckless and lawless submarine warfare, adopted now without disguise by the Imperial German Government, and it has therefore not been possible for this Government to receive Count Tarnowski, the ambassador recently accredited to this Government by the Imperial and Royal Government of Austria-Hungary; but that Government has not actually engaged in warfare against citizens of the United States on the seas, and I take the liberty, for the present at least, of

were pledged to bring the conflict to a successful end. The Senate passed this resolution, April 4, by a vote of 82 to 6; the House at 3 A. M. April 6, by a vote of 373 to 50; and thus the United States became a party to the greatest armed conflict in history. . . . The United States had ample cause for war in the attacks upon her lawful commerce, the slaughter of more than two hundred of her citizens upon the high seas, and the intrigues against her neutrality and her security, carried on both within the country and elsewhere. Yet the nation went into the conflict on account of no one of these things, nor all of them together, but rather to combat the spirit of autocracy and ruthlessness that lay behind them."—F. A. Ogg, *National progress, 1907-1917*, v. 27, pp. 396, 398-399.—See also WORLD WAR: 1917: I. Summary: b, 6; VIII. United States and the war: d.—On April 8, the Austrian chargé d'affaires asked for his passports. It was not however, until Dec. 7, 1917, that war was formally declared against Austria-Hungary.

1917 (April).—Establishment of Committee on Public Information.—Duties. See COMMITTEE ON PUBLIC INFORMATION; CENSORSHIP: World War.

1917 (April).—Reaction of America to war prospect.—Last pacifist efforts.—Great rally to the government.—Support by labor.—"The breach with Germany brought to a focus all the elements in America opposing war in general or this war in particular, as the persons and organizations concerned brought pressure upon Congress to prevent the opening of hostilities. William J. Bryan led in the opposition with the advice: 'Wire immediately to the President, your Senators and your Congressmen. A few cents now may save many dollars in taxation and possibly a son.' The pacifist organizations that had grown up under the names of the American Union against Militarism, the Women's Peace Party, the American Neutrality League, and the Anti-Conscription League, opened headquarters in New York on the Monday following the breach under the name of the Emergency Peace Federation. Delegations of pacifists were appointed to wait upon the President and advertisements were run in newspapers that had no sympathy with the obstructive movement. 'Shall we allow the United States to be dragged into the European quarrel?' queried one of these, which bore the signature of R. S. Bourne, Max Eastman, Paul U. Kellogg, Winthrop D. Lane, and Amos R. Pinchot. Within a few days the peace movement took the form of a demand for a national war referendum. Pilgrimages to Washington were organized to bring pressure to bear upon individual Congressmen. . . . [But the final break brought a change of sentiment.] The declaration of war on April 6 was accepted with a high degree of national unity in which the expressed convictions of organized labor had a large share. The degree of this unity was measured in part by the roar of condemnation that greeted the action of an emergency convention of the Socialist Party held at Chicago on April 7. Here the majority of the convention, presided over by a Russian immigrant and supported by other foreign-born leaders, passed resolutions attacking the war as a conspiracy of capitalism. A minority of the party left it on

this issue under the leadership of American Socialists."—F. L. Paxson, *Recent history of the United States*, pp. 470-471, 479-480.—"Splendid was the awakening of America, following on the President's call. The pacifist Bryan . . . promptly declared, 'The quickest road to peace is through the war to victory'; and he telegraphed the President an offer of his services in any capacity. Henry Ford . . . now placed his huge automobile factories absolutely at the disposal of the government, and became a valued worker in one of the new War Boards. Charles Edward Russell, 'choosing to be an American rather than a socialist if he could not be both,' served on a great Commission to Russia, and on his return supported and explained the war with voice and pen. Upton Sinclair in his *Weekly* eloquently defended the war and championed the President as the leader of the world's moral sentiment. The great majority of Americans of German birth or descent also rallied promptly to the flag of the land they had chosen. Most important of all, the organized wage-earners spoke with emphasis and unity for America and democracy: in November the American Federation by a vote of 21,579 local unions as against 402, organized the *Alliance for Labor and Democracy* to support the war."—W. M. West, *Story of American democracy*, p. 716.

1917 (April-May).—War missions from England, France, and Italy.—Hastening of army plans.—The news that the United States had declared war was joyfully received by the Allied nations, and they immediately prepared to cooperate with America in order to secure the best results for all. "In the latter part of April, British and French missions visited the United States. The British mission was headed by Arthur J. Balfour, the British Secretary of State for Foreign Affairs. Heading the French mission were Marshal Joffre and former Prime Minister Viviani. Under Marshal Joffre's urgings the military plans of the government were modified. It had not been intended to send American troops to France on any considerable scale before the end of 1918. But Joffre advised training them in France, instead of at home. His suggestion was sound. It started the small but steady flow of American reinforcements to France which materially heartened the French in the period of depression which set in in the summer of 1917. It also produced, eventually, the strategic reserve which enabled Foch to end the war in the autumn of 1918."—W. L. McPherson, *Short history of the Great War*, p. 252.—Another "object of the British and French missions was to bring technical assistance to our army. Both missions contained trained experts on military and naval matters with the knowledge of the newest methods. These experts went into conferences with American experts, showing us all they knew and helping to give our organization the right turn from the first. Without their direct aid we could not have had an army of nearly four million men in a little more than a year, nor could we have constructed it on such excellent models in a greater time."—J. S. Bassett, *Our war with Germany*, p. 116.—"The Italian War Commission, headed by the Prince of Udine, a cousin of the King, was officially received by President Wilson May 24. . . . The first conferences with the American Government were held May 28."—*Italian Diplomatic Commission (New York Times Current History, July, 1917, pp. 62-63)*.

1917 (May).—**Military unpreparedness.**—Utilization of General Staff.—Passage of Selective Draft Act.—Pershing in France.—Development of national army.—Naval defense.—Although the declaration of war effected a remarkable unity of sentiment in its favor, "the country was completely unprepared for war in a military sense, and must now pay the penalty for President Wilson's opposition to adequate improvement of the military system in 1915 and for the half-hearted measures taken in 1916. Total military forces, including regular army, national guard, and reserves

essential. Thus with a President and War Secretary, both of whom had been instinctively opposed to a large army and who had expressed their fear of the development of a militaristic spirit, and with a majority in Congress favoring the traditional volunteer system, adherence to which had cost the British thousands of lives that might better have been used at home, the building of an effective army seemed a matter of extreme doubt. Great credit must go to both President Wilson and Secretary Baker for sinking their instincts and seeking, as well as following, the advice of the military experts, who alone were capable of meeting the problems that arose from a war for which the nation was not prepared. . . . President Wilson, as historian, was well aware of the tremendous price that had been paid in past wars for such decentralization, accompanied as it was, inevitably, by delays, misunderstandings, and

PRESIDENT WILSON BEING BLINDFOLDED TO DRAW THE FIRST NUMBER IN THE DRAFT OF SOLDIERS, 1917

amounted to hardly three hundred thousand men and less than ten thousand officers. Even the regular army was by no means ready for immediate participation in the sort of fighting demanded by the European war; and, even if adequate troops were raised, the lack of trained officers would create the most serious difficulties. No wonder that the German General Staff ranked the United States, from the military point of view, somewhere between Belgium and Portugal. Furthermore, military experts had been discouraged by the attitude of the Administration. The Secretary of War, Newton D. Baker, had failed, either through lack of administrative capacity or because of pacifistic tendencies, to prepare his department adequately. He had done nothing to rouse Congress or the nation from its attitude of indifference towards preparation. By faith a pacifist, he had been opposed to universal military service. An extreme liberal, he distrusted the professional military type and was to find it difficult to cooperate with the captains of industry whose assistance was

mistakes. He was determined to create a single coördinating command, and his war policies were governed from beginning to end by this purpose. He set up no new machinery, but utilized as his main instrument the General Staff, which had been created in 1903 as a result of the blunders and confusion that had been so painfully manifest in the Spanish War. When the United States entered the World War the General Staff had by no means acquired the importance expected by those who had created it. But to it the President turned, and it was this body enlarged in size and influence that ultimately put into operation Wilson's policy of centralization. It was in accordance with the advice of the men who composed the General Staff that the President elaborated the larger lines of the military programme, and they were the men who supervised the operation of details. . . . The plea [of the foreign missions] determined the President to send General Pershing immediately with a force of about two thousand, who were followed in June and July, 1917, by a sufficient

additional forces to make up a division. Wilson had been authorized by Congress, under the Selective Service Act, to send four volunteer divisions abroad under the command of Roosevelt. But he refused to interfere with the plans of the military experts, who strongly objected to any volunteer forces whatever. . . . The problem of man-power had been carefully considered during the weeks that preceded our entrance into the war and the declaration of war found the Government prepared with a plan for a selective draft. On the 7th of April, the day after the declaration of war, President Wilson insisted that 'the safety of the nation depended upon the measure.' Congress, however, was slow to accept the principle of conscription, and the President encountered fierce opposition. . . . Finally, on May 18, 1917, what is popularly known as the Selective Service Act became law. This Act gave to the president power to raise the regular army by enlistment to 287,000 men, to take into the Federal service all members of the national guard, and to raise by selective draft, in two installments, a force of a million troops. All men between the ages of twenty-one and thirty, both inclusive, were registered on the 5th of June; this with the subsequent registration of men coming of age later, produced an available body of more than ten millions. And when in the following year, the draft age was extended to include all men between the ages of eighteen and forty-five, both inclusive, thirteen millions more were added. From this body the names of those who were to serve were drawn by lot. All men registered were carefully classified, in order that the first chosen might be those not merely best fitted for fighting, but those whose absence on the firing line would least disturb the essential economic life of the nation. Liberal exemptions were accorded, including artisans employed in industries necessary to war production and men upon whom others were dependent. On the 20th of July the first drawings were made, and by the end of the year about half a million of the drafted men, now called the National Army, were mustered in. In the meantime enlistments in the regular army and the national guard had raised the total number of troops to about a million and a quarter and of officers to more than one hundred thousand."—C. Seymour, *Woodrow Wilson and the World War (Chronicles of America series, v. 48, pp. 117-118, 119-120, 122, 126-128)*.—See also WORLD WAR: 1917: VIII. United States and the war: g.—"On the ninth of July the President, acting under the power given to him by the Constitution, called the National Guard into the service of the United States. In eleven States it was to mobilize on the fifteenth of July and gather in such places as might be chosen by the Secretary of War. In eighteen States and the District of Columbia the men were to assemble on the twenty-fifth of the month, and on August fifth those in all States were to be drafted into the new army under provisions of the act of May eighteenth. . . . Mobilization of the young men drawn for selective service began in September. On the fifth of the month five per cent. of the white men enrolled in the first quota of the National Guard were to begin their journey to the sixteen instruction camps scattered over the country. That there might be no congestion on the railroads they were to go in five daily detachments of equal number, and, as far as possible, were to consist of men with some military experience. September nineteenth, forty per cent and October third, another forty per cent were to set out, and

the remaining fifteen per cent were to go as soon thereafter as possible. Never before in the history of our country had such an event occurred. Hundreds of thousands of young men, drawn from every walk in life, physicians, lawyers, business men, clerks, laborers, rich and poor were to leave their homes in every city, town and hamlet the country over, and go into training that they might be made fit to fight on European soil to make 'the world safe for democracy.'—J. B. McMaster, *United States in the World War, pp. 390, 396*.—"From various parts of the country plots and conspiracies to avoid or oppose the draft were reported. In many places those who had failed to register were rounded up and given another chance to enroll. There were also some arrests. Anarchist agitators were the most troublesome, and one of them, Louis Kramer, was sentenced . . . in New York to three years' imprisonment for conspiracy to dissuade men of conscript age from registering."—*Putting the conscription law into operation (New York Times Current History, July, 1917, pp. 13-14)*.—"To provide places for training it was necessary to construct sixteen cantonments, with barracks, hospitals, storage houses and various other necessary buildings. This vast work had to be done from the very beginning, even to the purchase of the sites of the camps and the provision of water supplies and sewerage systems. It was a triumph of construction that it was so far advanced that the first of the drafted men could be received on September 5. During the course of the war the number of training camps was largely increased, and there existed for the various kinds of training as many as thirty-seven when the armistice was signed on November 11, 1918. Under the act of May 18 the president called on the authorities directing the draft to assemble 687,000 men for training as rapidly as they could be received after September 5, and by the end of the year 480,000 had been mustered in. But the National Army, as this body was called, was not the only measure of the recruiting zeal of the country; for the two other services had been increased largely under the act of congress. The Regular Army now included 10,250 officers and 475,000 enlisted men, and the National Guard contained 16,031 officers and 400,900 enlisted men. With a considerable number of reserve officers and men the entire army at the end of 1917 contained 110,856 officers and 1,428,650 men. April 1 it had contained 9,524 officers and 110,856 men. . . . Meanwhile, the navy was undergoing a similar process of expansion. The naval defense act of August 20, 1916, authorized a three year program of construction with sixty-six new ships of various kinds and an increase of personnel to 87,000 in the navy and 17,400 in the marine corp. Like the army act of the same year it contained a number of far-sighted measures that rounded out its various parts and gave opportunity to expand them to suit the demands of war."—J. S. Bassett, *Our war with Germany, pp. 120-121*.—The entrance of the United States into active participation in the War was marked by sending a part of the Navy to European waters. Admiral William S. Sims had been sent to Great Britain soon after the severance of diplomatic relations, and after the declaration of war he was placed in command of American vessels in foreign waters. He worked in close harmony with his Allied associates. Three weeks after the war was declared a small American force was abroad, co-operating with the Allies in combating the dreaded submarine. The American Navy, although small, was well

equipped and prepared for war when it actually came."—W. H. Hudson and I. S. Guernsey, *United States, from the discovery of the American continent to the end of the World War*, p. 566.

1917 (May).—War-time Prohibition Act embodied in Selective Draft Act. See LIQUOR PROBLEM: United States: 1913-1919.

1917 (May).—Mobilization of civilian forces.—Council of National Defense.—Advisory commission.—Financing the war.—Coöperation of representative business men.—"The stupendous energy with which the United States went into the war was an impressive example of what a great democracy could do once its enthusiasm was aroused and its course was clear. . . . Huge appropriations and loans hastened the training and equipment of troops and their dispatch over seas, and transportation, food supply and distribution, and war manufactures were taken under federal control. Enormous shipments of supplies for armies and civilians were poured into Europe, and loans aggregating more than ten billion dollars were advanced to the allied governments. Opposition to the war, both public and private, was ruthlessly suppressed, newspapers and mails passed under a censorship, enemy property was sequestered, and German sympathizers and pacifists were effectually cowed. The stimulation of industry was unparalleled and wages, prices, and profits rose by leaps and bounds."—W. MacDonald, *Three centuries of American democracy*, pp. 274-275.—"The central agency round which the huge machine was created was the Council of National Defense, which had been created in August 1916, when it was fairly evident that the United States was going to be drawn into the vortex of war. [See NATIONAL DEFENSE, COUNCIL OF; WORLD WAR: 1917: VIII. United States and the war: i, 11.] This was composed of seven Cabinet members, with the Secretary of War as chairman. It was assisted by an advisory commission of experts, familiar with the industries that would be of most importance in the prosecution of the war. [Daniel Willard, president of the Baltimore and Ohio Railroad, was chairman.] Several boards and commissions were established to conduct efficiently certain phases of the conflict. The United States Shipping Board was to provide ships for cargoes and troops and was to build ships 'faster than the submarines could sink them.' The Committee on Public Information disseminated news concerning the War and maintained a corps of speakers who took part in campaigns to raise money, etc. The War Industries Board was responsible for developing and producing the vast supplies needed to support the war machine. The National Research Council gathered the scientific talent of the country and directed its efforts toward bringing the War to a successful conclusion. A Labor Commission [with Samuel Gompers as chairman] was created to induce labouring men and women to forget their difficulties with capital and to work whole-heartedly toward successfully terminating the struggle. One of the most important agencies created was the United States Food Administration. It was placed in the charge of Herbert C. Hoover, who had had considerable experience in connexion with relief measures for Belgium. Through widespread advertising, by urging conservation, and by co-operating with the individual families throughout the country he was able to send thousands of tons of food-products to Europe. The work of the Food Administration

was doubly important, because the activities of the submarine had left Europe sorely in need of supplies. A Fuel Administration was established to economize in the use of fuel, so that the maximum amount could be used for military purposes. [See FOOD REGULATION: 1917-1918.] As soon as it was shown that the railroads of the country were not able to solve the vast transportation thrust upon them by the War they were taken over by the Government and put in the hands of the United States Railroad Administration, under the direction of W. G. McAdoo, the Secretary of the Treasury. He merged the railways of the country into one great system, abolished competition, standardized equipment, and managed them solely with a view to efficiency. Rates were raised and passenger services curtailed, but the roads were an effective adjunct in the building of the war machine. [See RAILROADS: 1916-1920.] A War Risk Insurance Bureau was established. Allowances were made to dependents of men on service. Provision was made for taking care of men injured on service, and a Government insurance was provided in case of death or total disability. [See also INSURANCE: Government.] This was designed to do away with the pension abuses that had usually followed in the wake of previous wars. The problem of financing the War was a stupendous one. It was inevitable that the creation of a war machine on a gigantic scale would require unprecedented sums of money. Not only would vast sums of money be used at home, but provision had to be made for the lending of considerable sums abroad. From the outset it was seen that it would be impossible to raise the money by taxation, and that borrowing would have to be largely resorted to. Certificates of indebtedness, war savings stamps, and bonds were the means used to borrow money."—W. H. Hudson and I. S. Guernsey, *United States, from the discovery of the American continent to the end of the World War*, pp. 564-565.—See also below: 1917-1919: Taxation and expenditures.—"One of the pleasant reflections on the work of the council of national defense is its success in obtaining the coöperation of the best representative American business men. . . . As the president . . . began to appoint large business men to the important committees under the council of national defense, cautiously at first, lest he should be embarrassed by an upflare of popular distrust, his action was generally applauded. Eventually he called to his assistance the most powerful 'trust magnates,' giving them the widest authority, and aroused no protest from that portion of his own party to whom the trusts and 'Wall Street' had formerly been the personification of political inequality."—J. S. Bassett, *Our war with Germany*, pp. 132-133.

1917 (June).—American mission to Russia.—Opposing influences.—"In two senses Russia took herself out of the war before the United States got in. The Russian Revolution antedated our declaration of April 6th and the Russian armies

ceased to fight long before our first troops reached the front lines in France."—W. L. McPherson, *Short history of the Great War*, p. 253.—"The United States welcomed the new Russian Republic. Elibu Root was sent to Petrograd [in June] at the head of a special mission to congratulate the Provisional Government, and to offer aid and counsel. He was accompanied by specialists in the fields of industry and war, including the Chief of Staff of the United States Army, Major-General Hugh L. Scott [and Charles Edward Russell, socialist. But] before he reached Petrograd, other missions arrived there from the United States to render Root's success impossible. The refuge offered by the United States to political immigrants from all the world had brought to America in large numbers Russians after the revolutionary movements of 1905. The Russian immigrants accumulated in increasing numbers, their children grasped eagerly the opportunities for education in the American schools, and the sense of grievance that had driven them from Russia was directed against the Government of the land of refuge. The new Russian Government called the exiles home, and one of them, Leon Trotzky, speaking in New York before his departure, warned the United States against assuming 'that the revolution was necessarily pro-Ally,' and avowed that it was 'for an early peace and a better form of government.' Trotzky and his associates carried back into Russia the conventional Socialist belief that the United States was a corrupt capitalistic nation, and that Root, who had been among the most prominent of conservative Republicans in 1912, was the incarnation of capitalism. When the Root Mission reached Petrograd it found that anti-American influences had already been started by the returned exiles."—F. L. Paxson, *Recent history of the United States*, p. 475.—See also *WORLD WAR: 1917: III. Russia and the Eastern front: m.*—Nevertheless in an effort to sustain the new republic the United States made a loan of \$100,000,000 to the new Russian government. "A Red Cross mission was later sent, and Raymond Robbins, a representative of the Roosevelt Republicans, was placed at its head. Perhaps two score men of all shades of opinion composed the two delegations to Russia. They carried the best of wishes and the promise of all the assistance the country could give, if the Russians would continue the fight against Germany."—W. E. Dodd, *Woodrow Wilson and his work*, p. 234.

1917 (June).—Export Council formed. See EXPORT COUNCIL.

1917 (June).—Food and Fuel Control Act.—While the Food Administration, under Hoover, was urging economy upon the nation, Congress was busy with a Food Control Bill, from June until early in August, when it was approved. The following is the text of the act, which is known as the Lever Act:

Be it enacted, etc., That by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement, of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessities; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private con-

trols, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessities during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prescribed.

Sect. 2. That words used in this act shall be construed to import the plural or the singular, as the case demands. The word "person," wherever used in this act, shall include individuals, partnerships, associations, and corporations. When construing and enforcing the provisions of this act, the act, omission, or failure of any official, agent, or other person acting for or employed by any partnership, association, or corporation within the scope of his employment or office shall, in every case, also be deemed the act, omission, or failure of such partnership, association, or corporation as well as that of the person.

Sect. 3. That there is hereby established a governmental control of necessities which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessities, which shall be exercised and administered by the President for the purposes of this act; and all such necessities, processes, methods, and activities are hereby declared to be effected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

Sect. 4. That it is hereby made unlawful for any person willfully to destroy any necessities for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully to permit preventable deterioration of any necessities in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessities; to monopolize or attempt to monopolize, either locally or generally, any necessities; to engage in and discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessities; to conspire, combine, agree, or arrange with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessities; (b) to restrict the supply of any necessities; (c) to restrict distribution of any necessities; (d) to prevent, limit, or lessen the manufacture or production of any necessities, or to enhance the price thereof, or (e) to exact excessive prices for any necessities; or to aid or abet the doing of any act made unlawful by this section.

Sect. 5. That, from time to time, whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessities, in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement of importation, exportation, manufacture, storage, or

distribution of any necessities as set forth in such announcement, unless he shall secure and hold a license issued pursuant to this section. The President is authorized to prescribe such regulations governing the conduct of the business of licenses as may be essential to prevent uneconomical manufacture and inequitable distribution of necessities and otherwise to carry out the purposes of this act. Such regulations may also include requirements for the issuance of licenses and requirements for systems of accounts and auditing of accounts to be kept by licenses, submission of reports by them, with or without oath or affirmation, and the entry and inspection by the President's duly authorized agents of the places of business of licenses. Whenever the President shall find that any rate, charge, or practice of any license is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, thereafter, unless such order is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice. The President may, in lieu of any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, find what is a just, reasonable, nondiscriminatory and fair, or economical rate, charge, or practice; and in any suit in any Federal or State court of competent jurisdiction such finding of the President shall be prima facie evidence. Any person who, without a license issued pursuant to this section, knowingly engages in or carries on any business for which a license is required under this section, or willfully fails or refuses to discontinue any unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, in accordance with the requirement of an order issued under this section, or willfully violates any provision of this section or any regulation prescribed under this section shall, upon conviction thereof, be punished by a fine not exceeding \$5,000 or by imprisonment for not more than two years, or both: *Provided*, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier, nor shall anything in this section be construed to authorize the fixing or imposition of a duty or tax upon any article imported into or exported from the United States or any State, Territory, or the District of Columbia.

Sect. 6. That any person who willfully hoards any necessities shall upon conviction thereof be fined not exceeding \$5,000 or be imprisoned for not more than two years, or both. Necessaries shall be deemed to be hoarded within the meaning of this act when either (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessities produced in surplus quantities seasonably throughout the period of scant or no production; or (c) withheld, whether by possession or under any contract or arrangement, from the mar-

ket by any person for the purpose of unreasonably increasing or diminishing the price: *Provided, however*, That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Sect. 7. That whenever any necessities shall be hoarded as defined in section 6 they shall be liable to be proceeded against in any district court of the United States within the district where the same are found and seized by a process of libel for condemnation, and if such necessities shall be adjudged to be hoarded they shall be disposed of by sale in such manner as to provide the most equitable distribution thereof as the court may direct, and the proceeds thereof, less the legal costs and charges, shall be paid to the party entitled thereto. The proceedings of such libel cases shall conform as near as may be to the proceedings in admiralty, except that either party may demand trial by jury of any issue of fact joined in any such case, and all such proceedings shall be at the suit of and in the name of the United States. It shall be the duty of the United States attorney for the proper district to institute and prosecute any such action upon presentation to him of satisfactory evidence to sustain the same.

Sect. 8. That any person who willfully destroys any necessities for the purpose of enhancing the price or restricting the supply thereof shall, upon conviction thereof, be fined not exceeding \$5,000 or imprisoned for not more than two years, or both.

Sect. 9. That to carry into effect the purposes of this act the President is authorized to purchase, provide for the production or manufacture of necessities; to store them and to provide storage facilities for them by construction, purchase, lease, or otherwise; to sell them; and to require any person having the control of any necessities, or any storage space suitable for the storing of necessities, to furnish the whole or any part of such necessities or storage space to the Government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable. Upon failure of the person to comply with such requirement, the President is authorized to requisition and take possession of any such necessities or storage space, and to pay for them at the price so determined. If the price so determined be not satisfactory to the person entitled to receive the same, such person shall be paid the amount prescribed by the President, and shall be entitled to sue the United States to recover such further sum as, added to the amount so paid, will be just compensation for such necessities or storage space, and jurisdiction is hereby conferred on the United States district court to hear and determine all such controversies: *Provided*, That nothing in this section shall be construed to require any natural person to furnish to the Government any necessities held by him and reasonably required by himself and dependents for a reasonable time. Any moneys received by the United States from or in connection with the disposal by the United States of necessities under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts.

Sect. 10. That whenever the President shall find that it is impossible by license or by voluntary

arrangement or agreement to assure an adequate and continuous supply of necessities, he is authorized to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessities are or may be manufactured, produced, prepared, or mined. Whenever the President shall determine that the further use or operation by the Government of any such factory, mine, or plant, or part thereof, is not essential for the national security or defense, the same shall be restored to the person entitled to the possession thereof. The United States shall make just compensation, to be determined by the President, for the taking over, use, occupation, and operation by the Government of any such factory, mine, or plant, or part thereof. If the amount so determined be unsatisfactory to the person entitled to receive the same, such person shall be paid the amount prescribed by the President, and shall be entitled to sue the United States to recover such further sum as, added to the amount paid, will be just compensation, in the manner provided by section 24, paragraph 20, and section 145 of the Judicial Code. The President is authorized to prescribe such regulations as he may deem essential for carrying out the purposes of this section, including the operation of any such factory, mine, or plant, or part thereof, the purchase, sale, or other disposition of articles used, manufactured, produced, prepared, or mined therein, and the employment, control, and compensation of employees. Any moneys received by the United States from or in connection with the use or operation of any such factory, mine, or plant, or part thereof, may, in the discretion of the President, be used as a revolving fund for the purpose of the continued use or operation of any such factory, mine, or plant, or part thereof, and the accounts of each such factory, mine, plant, or part thereof, shall be kept separate and distinct. Any balance of such moneys not used as part of such revolving fund shall be paid into the Treasury as miscellaneous receipts.

Sect. 11. That, whenever the President finds it essential in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of necessities, hereafter in this section called evil practices, he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit, operations, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices. Further, for the purposes of this section, the President may require all persons coming within its provisions to keep such records and statements of account, and may require such persons to make such returns, verified under oath or otherwise, as will fully and correctly disclose all transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, including the making, execution, settlement, and fulfillment thereof. He may also require all persons acting in the capacity of a clearing house, clearing association, or similar institution, for the purpose of clearing, settling, or adjusting transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, to keep such records and to make such returns as will fully and correctly disclose all facts in their pos-

session relating to such transactions, and he may appoint agents to conduct the investigations necessary to enforce the provisions of this section and all rules and regulations made by him in pursuance thereof, and may fix and pay the compensation of such agents. Any person who willfully violates any regulation made pursuant to this section, or who knowingly engages in any operation, practice, or transaction prohibited pursuant to this section, or who willfully aids or abets any such violation or any such prohibited operation, practice, or transaction, shall, upon conviction thereof, be punished by a fine not exceeding \$10,000 or by imprisonment for not more than four years, or both.

Sect. 12. That, whenever the President shall find that an emergency exists requiring stimulation of production and that it is essential that the producers of any nonperishable agricultural products produced within the United States shall have the benefits of the guaranty provided for in this section in order to stimulate production of such products, he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit. Thereupon, the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States, for which a guaranteed price shall be fixed by notice in accordance with this section, that, upon compliance by him with the regulations prescribed by the President, he will receive for any such products produced in reliance upon this guaranty within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty. When the President finds that the importation into the United States of any such products produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of any guaranteed price therefor fixed pursuant to this section, or materially enhances or is likely materially to enhance the liabilities of the United States under guarantees of prices therefor made pursuant to this section, and shall so proclaim, there shall be levied, collected, and paid a rate of duty, upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President, which amount shall, when added to the value of the product at the time it is offered for entry, be sufficient to bring the price thereof at which imported up to the price which shall have been fixed therefor pursuant to this section; but in no case shall any such rate of duty be fixed at an amount which will effect a reduction of the rate of duty upon any such products under any then existing tariff law of the United States. For the purpose of making any guaranteed price effective under this section, or whenever he deems it essential in order to protect the Government of the United States against material enhancement of its liabilities arising out of any guaranty under this section, the President is authorized also, in his discretion, to purchase any such products for which a guaranteed price shall be fixed under this section, and to hold, transport, or store them, or to

sell, dispose of, and deliver the same to any person or to any Government engaged in war with any country with which the Government of the United States is or may be at war or to use the same as supplies for any department or agency of the Government of the United States. Any moneys received by the United States from or in connection with the sale or disposal of any products under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts.

Sect. 13. That whenever the President shall find that limitation, regulation, or prohibition of the use of foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, or such nonalcoholic beverages as he shall determine, or that reduction of the alcoholic content of any beverage, is essential, in order to assure an adequate and continuous supply of food, he is authorized, from time to time, to prescribe, and give public notice of, the extent of the limitation, regulation, prohibition, or reduction so necessitated. Whenever such notice shall have been given and shall remain unrevoked, no person shall, after a reasonable time, which shall be prescribed in the notice, use any foods, food materials, or feeds in the production of alcohol or nonalcoholic beverages, except in accordance with the limitations, regulations, and prohibitions prescribed in such notice, or produce any beverage having an alcoholic content in excess of the amount prescribed therefor in such notice. Any person who willfully violates this section shall, upon conviction thereof, be punished by a fine not exceeding \$5,000 or by imprisonment for not more than two years, or both.

Sect. 14. That in carrying out the purposes of this act the President is authorized to create an agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss of funds or duplication of work.

Sect. 15. That under regulations to be prescribed by the President the use of the mails of the United States free of charge for postage for exclusively official business in carrying out the purposes of this act shall be extended to any agency or person designated by the President.

Sect. 16. That the President is authorized to make such regulations and to issue such orders as are essential effectively to carry out the provisions of this act.

Sect. 17. That every person who willfully assaults, resists, impedes, or interferes with any officer, employee, or agent of the United States in the execution of any duty authorized to be performed by or pursuant to this act shall upon conviction thereof be fined not exceeding \$1,000 or be imprisoned for not more than one year, or both.

Sect. 21. That the provisions of this act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, the date of which shall be ascertained and proclaimed by the President; but the date when this act shall cease to be in effect shall not be later than one year after the termination, as ascertained by the President, of the present war between the United States and Germany. Nothing in this section shall be construed to prevent the

fulfillment by the United States of any legal obligation incurred pursuant to this act which shall be in force when this act ceases to be in effect.

1917 (June).—First American troops in France.—“Early in June dispatches from London reported the safe arrival in England of General Pershing and staff. The White Star liner Baltic brought them to Liverpool with such secrecy that not a man in the guard of honor drawn up on the landing stage knew why he had been paraded. . . . A special train carried the Americans to London where Lord Derby, the Secretary of State for War, Field-Marshal Lord French and a host of distinguished officers waited to bid them welcome. . . . June 13 the General reached Paris whither a part of his staff had preceded him. ‘From early afternoon,’ said the London Times, ‘Parisians of all sorts and conditions began to line the two mile route along which the cortege was to pass. Thousands upon thousands of workers left shops, offices and factories in time to swell the ranks. The Stars and Stripes were waving in countless windows.’ . . . The departure of Pershing and his staff was no secret, but the people knew nothing of the sailing of the first contingent of fighting men until they heard with pride of its safe arrival on the twenty-fifth of June at a port in France. A second contingent arrived a few days later, and as July drew to a close a third landed at ‘a European port.’ So secretly did they come that no demonstration attended their landing. Only a few spectators saw them as they quickly entrained and left for parts unknown.”—J. B. McMaster, *United States in the World War*, pp. 394-396.—See also WORLD WAR: 1917: VIII. 1917 (August).—Pope Benedict's proposal for peace terms.—Decisive reply from America.—“Germany was in her strongest position as Russia fell away broken and helpless. Yet she called upon the Pope to appeal to the world for a settlement. Benedict XV, bitterly hostile to the Italian Government and angered at the French for breaking the connection of Catholicism with the French Government, called upon Wilson and the other representatives of the allied powers to enter into *pour-parlers* for peace upon the basis then existing. It was August 1, 1917. Germany was the master everywhere and threatening to break with all her power into the plains of northeastern Italy. The moment was well chosen. . . . Wilson alone spoke with confidence. He would have no peace with the Kaiser; he regretted that the Pope had been willing to come to the aid of autocracy.”—W. E. Dodd, *Woodrow Wilson and his work*, pp. 235-236.—See also WORLD WAR: 1917: XI. Efforts toward peace: g; h, 1.

1917 (October).—Trading with the Enemy Act.—German industrial power.—“When the United States became a belligerent, April 6, 1917, a new phase of the problem was soon brought to view. At this date probably no one realized the extent to which the Germans had progressed in their peaceful industrial penetration and occupation of this country. Gradually the officials, and after them the citizens as a whole came to understand that great basic industries here, having to do in one way, or another with the manufacture of munitions, were German-controlled, in some cases subsidized by the German Imperial Treasury and in every case the centre of propaganda, intrigue and espionage of the worst sort. First there was the chemical industry, in which, according to popular legend, the Germans were invincible. Nine-tenths of the dyes used in this country were supplied by six German concerns, and a large proportion of the medicines and other chemicals. Struggling American companies were undersold and their workmen bribed by the six American subsidiaries of the parent German houses. The manufacture of munitions and explosives of all sorts relied heavily upon the related chemical industry, and the situation was intolerable. In the metal world German corporations, consisting of three large combinations, controlled in 1914 the metal markets of Europe and of Australia, especially in zinc and lead. The German influence in the metal industries was not controlling in the United States, though each of the three German corporations owned not only a house directly representing it in this country, but also many subsidiaries. . . . In the field of wireless telegraphy, closely allied to industry, German money had built two high-powered stations, one at Sayville, Long Island, and the other at Tuckerton, N. J. . . . The Bosch Magneto Company and another German company, both owned by one man, controlled 50 per cent. of the country’s battery ignition business. In addition to the companies from Germany operating in the United States, there were many manufacturing concerns here owned wholly or in part in Germany, but quite independent of any control by parent German companies. . . . Six large worsted mills were thus controlled; and enemy subjects owned a majority of the stock in four of them. Other American textile manufactures were owned in Germany. . . . Finally twenty German insurance companies could be added to the list. . . . The Germans had penetrated into every avenue and by-way of trade in the Philippine Islands, and laid quite extensive plans to resume their industrial hold on the islands as soon as the war was over. They owned the most important export and import houses, the chief electrical supply houses, a large proportion, if not a majority, of the tobacco factories of Manila, and were heavily interested in vegetable oil, rubber and cocoanut as well as tobacco plantations. It was found that Germans, when the United States entered the war, owned 30 per cent. of the sugar business of the Hawaiian Islands, the principal business of the islands. There were German interests in the Samoan Islands and in Porto Rico, while in the Virgin Islands, the latest territorial acquisition of the United States [see above: 1917 (March): Purchase, etc.], through the Hamburg-American Line, Germans owned a valuable coaling station, wharves and docks in the port of St. Thomas, the best natural harbor in the West Indies. . . . This German

industrial power in the United States and its possessions was a knife at the throat of the Government, capable on occasions of working incalculable harm; and the implied threat was all the more portentous, since many of the German-controlled interests, such as those in the metals, in chemistry and in dyestuffs, were directly related to the production of munitions and were more or less controlled by German State officials. Therefore it was that the United States, rudely awakened in the crisis, quickly disregarded the tendency of the times, which seemed to be set against the confiscation of enemy property by a belligerent power, and on Oct. 6, 1917, passed the Trading with the Enemy act, which among other things created the office of Alien Property Custodian, who was to have the power to seize and administer enemy property as a common law trustee. [See ALIEN PROPERTY CUSTODIAN.] On March 28, 1918, the real sting was put into the law when the custodian received power to sell enemy property. [See also CENSORSHIP: World War.] How to make the provisions of the new law known was comparatively easy, but how to uncover the enemy property proved to be very difficult. . . . There were many tricks to cover up enemy ownership, many transfers of property quietly effected which were not transfers at all, because the real owners retained the right to repurchase after the war. Here the same test was applied by the officers of the Government as is applied in international law to transfers of vessels in time of war by citizens of a belligerent to citizens of a neutral country. Has the transfer been made in good faith? If so, it is allowed.”—E. D. Fite, *Germany's losses in America* (New York Times Current History, Feb., 1921, pp. 267-270).

1917 (November).—Mission to consult with Allies.—“American Commissioners to consult with the Allies arrived at London, Nov. 7, 1917. . . . Colonel E. M. House of New York, . . . [was] the Chairman; the other members [were] Admiral Benson, Chief of Naval Operations; General Bliss, Chief of the General Staff; a representative of the Treasury in the person of Assistant Secretary Crosby; Vance C. McCormick, Chairman of the War Trade Board; Bainbridge Colby of the Shipping Board, Dr. Alonzo E. Taylor of the Food Administration, and Thomas Nelson Perkins, representing the Priority Board.”—*Colonel House's mission to the Allies* (New York Times Current History, December, 1917, p. 437).

1917 (December).—President Wilson’s message to Congress.—On December 4, the president made his annual address to Congress, in which he stated the aims of the people of the United States in the war, as he understood them, and asked for a declaration of a state of war against Austria. President Wilson spoke, in part, as follows:

"Gentlemen of the Congress: Eight months have elapsed since I last had the honor of addressing you. They have been months crowded with events of immense and grave significance for us. I shall not undertake to retail or even to summarize those events. The practical particulars of the part we have played in them will be laid before you in the reports of the executive departments. I shall discuss only our present outlook upon these vast affairs, our present duties, and the immediate means of accomplishing the objects we shall hold always in view. . . . Our object is, of course, to win the war; and we shall not slacken or suffer ourselves to be diverted until it is won. But it is worth while asking and answering the question, When shall we consider the war won? From one point of view it is not necessary to broach this fundamental matter. I do not doubt that the American people know what the war is about and what sort of an outcome they will regard as a realization of their purpose in it. As a Nation we are united in spirit and intention. I pay little heed to those who tell me otherwise. I hear the voices of dissent—who does not? I hear the criticism and the clamor of the noisily thoughtless and troublesome. I also see men here and there fling themselves in impotent disloyalty against the calm, indomitable power of the Nation. I hear men debate peace who understand neither its nature nor the way in which we may attain it with uplifted eyes and unbroken spirits. But I know that none of these speaks for the Nation. They do not touch the heart of anything. They may safely be left to strut their uneasy hour and be forgotten. But from another point of view I believe that it is necessary to say plainly what we here at the seat of action consider the war to be for and what part we mean to play in the settlement of its searching issues. We are the spokesmen of the American people and they have a right to know whether their purpose is ours. . . . I believe that I speak for them when I say two things: First, that this intolerable thing of which the masters of Germany have shown us the ugly face, this menace of combined intrigue and force which we now see so clearly as the German power, a thing without conscience, or honor, or capacity for covenanted peace, must be crushed, and if it be not utterly brought to an end, at least shut out from the friendly intercourse of the nations; and, second, that when this thing and its power are indeed defeated and the time comes that we can discuss peace—when the German people have spokesmen whose word we can believe and when those spokesmen are ready in the name of their people to accept the common judgment of the nations as to what shall henceforth be the bases of law and covenant for the life of the world—we shall be willing and glad to pay the full price for peace, and pay it ungrudgingly. We know what that price will be. It will be full, impartial justice—justice done at every point and to every nation that the final settlement must affect our enemies as well as our friends. You catch, with me, the voices of humanity that are in the air. They grow daily more audible, more articulate, more persuasive, and they come from the hearts of men everywhere. They insist that the war shall not end in vindictive action of any kind; that no nation or people shall be robbed or punished because the irresponsible rulers of a single country have themselves done deep and abominable wrong. It is this thought that has been expressed in the

formula 'no annexations, no contributions, no punitive indemnities.' Just because this crude formula expresses the instinctive judgment as to right of plain men everywhere it has been made diligent use of by the masters of German intrigue to lead the people of Russia astray—and the people of every other country their agents could reach, in order that a premature peace might be brought about before autocracy has been taught its final and convincing lesson, and the people of the world put in control of their own destinies. But the fact that a wrong use has been made of a just idea is no reason why a right use should not be made of it. It ought to be brought under the patronage of its real friends. Let it be said again that autocracy must first be shown the utter futility of its claims to power or leadership in the modern world. It is impossible to apply any standard of justice so long as such forces are unchecked and undefeated as the present masters of Germany command. Not until that has been done can Right be set up as arbiter and peacemaker among the nations. But when that has been done—as, God willing, it assuredly will be—we shall at last be free to do an unprecedented thing, and this is the time to avow our purpose to do it. We shall be free to base peace on generosity and justice, to the exclusion of all selfish claims to advantage even on the part of the victors. Let there be no misunderstanding. Our present and immediate task is to win the war, and nothing shall turn us aside from it until it is accomplished. Every power and resource we possess, whether of men, of money, or materials, is being devoted and will continue to be devoted to that purpose until it is achieved. Those who desire to bring peace about before that purpose is achieved I counsel to carry their advice elsewhere. We will not entertain it. We shall regard the war as won only when the German peoples say to us, through properly accredited representatives, that they are ready to agree to a settlement based upon justice and the reparation of the wrongs their rulers have done. They have done a wrong to Belgium which must be repaired. They have established a power over other lands and peoples than their own—over the great Empire of Austria-Hungary, over hitherto free Balkan states, over Turkey, and within Asia—which must be relinquished. . . . The peace we make must remedy that wrong. It must deliver the once fair lands and happy peoples of Belgium and northern France from the Prussian conquest and the Prussian menace, but it must also deliver the peoples of Austria-Hungary, the peoples of the Balkans, and the peoples of Turkey, alike in Europe and in Asia, from the impudent and alien dominion of the Prussian military and commercial autocracy. We owe it, however, to ourselves to say that we do not wish in any way to impair or to rearrange the Austro-Hungarian Empire. It is no affair of ours what they do with their own life, either industrially or politically. We do not purpose or desire to dictate to them in any way. We only desire to see that their affairs are left in their own hands, in all matters, great or small. We shall hope to secure for the peoples of the Balkan peninsula and for the people of the Turkish Empire the right and opportunity to make their own lives safe, their own fortunes secure against oppression or injustice and from the dictation of foreign courts or parties. And our attitude and purpose with regard to Germany herself are of a like kind. We intend no wrong against the German Empire, no interference with her in-

ternal affairs. We should deem either the one or the other absolutely unjustifiable, absolutely contrary to the principles we have professed to live by and to hold most sacred throughout our life as a nation. The people of Germany are being told by the men whom they now permit to deceive them and to act as their masters that they are fighting for the very life and existence of their Empire, a war of desperate self-defense against deliberate aggression. Nothing could be more grossly or wantonly false, and we must seek by the utmost openness and candor as to our real aims to convince them of its falseness. We are, in fact, fighting for their emancipation from fear, along with our own—from the fear as well as from the fact of unjust attack by neighbors or rivals or schemers after world empire. No one is threatening the existence or the independence or the peaceful enterprise of the German Empire. The worst that can happen to the detriment of the German people is this, that if they should still, after the war is over, continue to be obliged to live under ambitious and intriguing masters interested to disturb the peace of the world, men or classes of men whom the other peoples of the world could not trust, it might be impossible to admit them to the partnership of nations which must henceforth guarantee the world's peace. That partnership must be a partnership of peoples, not a mere partnership of governments. It might be impossible, also, in such untoward circumstances, to admit Germany to the free economic intercourse which must inevitably spring out of the other partnerships of a real peace. But there would be no aggression in that; and such a situation, inevitable because of distrust, would in the very nature of things sooner or later cure itself, by processes which would assuredly set in. The wrongs, the very deep wrongs, committed in this war will have to be righted. That of course. But they can not and must not be righted by the commission of similar wrongs against Germany and her allies. The world will not permit the commission of similar wrongs as a means of reparation and settlement. Statesmen must by this time have learned that the opinion of the world is everywhere wide-awake and fully comprehends the issues involved. No representative of any self-governed nation will dare disregard it by attempting any such covenants of selfishness and compromise as were entered into at the Congress of Vienna. The thought of the plain people here and everywhere throughout the world, the people who enjoy no privilege and have very simple and unsophisticated standards of right and wrong, is the air all governments must henceforth breathe if they would live. It is in the full disclosing light of that thought that all policies must be conceived and executed in this midday hour of the world's life. German rulers have been able to upset the peace of the world only because the German people were not suffered under their tutelage to share the comradeship of the other peoples of the world either in thought or in purpose. They were allowed to have no opinion of their own which might be set up as a rule of conduct for those who exercised authority over them. But the congress that concludes this war will feel the full strength of the tides that run now in the hearts and consciences of free men everywhere. Its conclusions will run with those tides.

"All these things have been true from the very beginning of this stupendous war; and I can not help thinking that if they had been made plain at

the very outset the sympathy and enthusiasm of the Russian people might have been once for all enlisted on the side of the Allies, suspicion and distrust swept away, and a real and lasting union of purpose effected. Had they believed these things at the very moment of their revolution and had they been confirmed in that belief since, the sad reverses which have recently marked the progress of their affairs toward an ordered and stable government of free men might have been avoided. The Russian people have been poisoned by the very same falsehoods that have kept the German people in the dark, and the poison has been administered by the very same hands. The only possible antidote is the truth. It can not be uttered too plainly or too often. From every point of view, therefore, it has seemed to be my duty to speak these declarations of purpose, to add these specific interpretations to what I took the liberty of saying to the Senate in January. Our entrance into the war has not altered our attitude toward the settlement that must come when it is over. When I said in January that the nations of the world were entitled not only to free pathways upon the sea but also to assured and unmolested access to those pathways, I was thinking, and I am thinking now, not of the smaller and weaker nations alone, which need our countenance and support, but also of the great and powerful nations, and of our present enemies as well as our present associates in the war. I was thinking, and am thinking now, of Austria herself, among the rest, as well as of Serbia and of Poland. Justice and equality of rights can be had only at a great price. We are seeking permanent, not temporary, foundations for the peace of the world and must seek them candidly and fearlessly. As always, the right will prove to be the expedient. What shall we do, then, to push this great war of freedom and justice to its righteous conclusion? We must clear away with a thorough hand all impediments to success, and we must make every adjustment of law that will facilitate the full and free use of our whole capacity and force as a fighting unit. One very embarrassing obstacle that stands in our way is that we are at war with Germany but not with her allies. I therefore very earnestly recommend that the Congress immediately declare the United States in a state of war with Austria-Hungary. Does it seem strange to you that this should be the conclusion of the argument I have just addressed to you? It is not. It is, in fact, the inevitable logic of what I have said. Austria-Hungary is for the time being not her own mistress, but simply the vassal of the German Government. We must face the facts as they are and act upon them without sentiment in this stern business. The Government of Austria-Hungary is not acting upon its own initiative or in response to the wishes and feelings of its own peoples, but as the instrument of another nation. We must meet its force with our own and regard the Central Powers as but one. The war can be successfully conducted in no other way. The same logic would lead also to a declaration of war against Turkey and Bulgaria. They also are the tools of Germany. But they are mere tools, and do not yet stand in the direct path of our necessary action. We shall go wherever the necessities of this war carry us, but it seems to me that we should go only where immediate and practical considerations lead us and not heed any others. The financial and military measures which must be adopted will suggest themselves as the war and its undertakings develop,

but I will take the liberty of proposing to you certain other acts of legislation which seem to me to be needed for the support of the war and for the release of our whole force and energy. It will be necessary to extend in certain particulars the legislation of the last session with regard to alien enemies; and also necessary, I believe, to create a very definite and particular control over the entrance and departure of all persons into and from the United States. Legislation should be enacted defining as a criminal offense every wilful violation of the presidential proclamation relating to alien enemies promulgated under Section 4067 of the Revised Statutes and providing appropriate punishments; and women as well as men should be included under the terms of the acts placing restraints upon alien enemies. It is likely that as time goes on many alien enemies will be willing to be fed and housed at the expense of the Government in the detention camps, and it would be the purpose of the legislation I have suggested to confine offenders among them in penitentiaries and other similar institutions where they could be made to work as other criminals do. Recent experience has convinced me that the Congress must go further in authorizing the Government to set limits to prices. The law of supply and demand, I am sorry to say, has been replaced by the law of unrestrained selfishness. While we have eliminated profiteering in several branches of industry it still runs impudently rampant in others. The farmers, for example, complain with a great deal of justice that, while the regulation of food prices restricts their incomes, no restraints are placed upon the prices of most of the things they must themselves purchase; and similar inequities obtain on all sides. It is imperatively necessary that the consideration of the full use of the water power of the country, and also the consideration of the systematic and yet economical development of such of the natural resources of the country as are still under control of the Federal Government, should be immediately resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need of such legislation is daily becoming more obvious. The legislation proposed at the last session with regard to regulated combinations among our exporters, in order to provide for our foreign trade a more effective organization and method of cooperation, ought by all means to be completed at this session. And I beg that the members of the House of Representatives will permit me to express the opinion that it will be impossible to deal in any but a very wasteful and extravagant fashion with the enormous appropriations of the public moneys which must continue to be made, if the war is to be properly sustained, unless the House will consent to return to its former practice of initiating and preparing all appropriation bills through a single committee, in order that responsibility may be centered, expenditures standardized and made uniform, and waste and duplication as much as possible avoided. Additional legislation may also become necessary before the present Congress again adjourns in order to effect the most efficient coordination and operation of the railway and other transportation systems of the country; but to that I shall, if circumstances should demand, call the attention of the Congress upon another occasion. If I have overlooked anything that ought to be done for the more effective conduct of the war, your own counsels will supply the omission. What I am perfectly clear about is that in the present

session of the Congress our whole attention and energy should be concentrated on the vigorous, rapid, and successful prosecution of the great task of winning the war. We can do this with all the greater zeal and enthusiasm because we know that for us this is a war of high principle, debased by no selfish ambition of conquest or spoliation; because we know, and all the world knows, that we have been forced into it to save the very institutions we live under from corruption and destruction. . . . I have spoken plainly because this seems to be the time when it is most necessary to speak plainly, in order that all the world may know that even in the heat and ardor of the struggle and when our whole thought is of carrying the war through to its end we have not forgotten any ideal or principle for which the name of America has been held in honor among the nations and for which it has been our glory to contend in the great generations that went before us. A supreme moment of history has come. The eyes of the people have been opened and they see. The hand of God is laid upon the nations. He will show them favor, I devoutly believe, only if they rise to the clear heights of His own justice and mercy."

—Woodrow Wilson, *Address to Congress, Dec. 4, 1917*.—The resolution of a state of war against Austria was passed unanimously by the Senate on December 7, by a vote of 363 against 1 by the House, and was signed the same day.

It . . . [went] to war in the grand manner. It was said that the selective draft law would be a failure, and would occasion riots. It did not occasion riots, and it was not a failure; on the contrary, it enrolled 10,000,000 men in one day. It was said that the \$2,000,000,000 loan would be a failure. The \$2,000,000,000 loan was greatly oversubscribed, by over three million people, and the bulk of it was subscribed in small sums. . . . The speeches of all American leaders of opinion . . . [showed] a complete grasp of the moral issues of the war, a complete adherence to . . . democratic principles . . . and a complete determination to achieve the definite triumph of those principles. And if the general conduct of the nation . . . [showed] anything, it . . . [showed] that the nation and the leaders are in admirable unity.”—A. Bennett, *Effect of the United States in the war (New York Times Current History, December, 1917, p. 446)*.—“America had need of her unity and her enthusiasm. The size of the conflict, the number of men that must be raised and trained, the quantity of materials required, the amount of money needed, and above all, the mental readjustment necessary in a nation that had hitherto buried itself in the pursuits of peace—all these considerations emphasized the importance of the task that the United States was undertaking. Into Washington there poured a bewildering stream of offers of assistance; organizations had to be built up over night to take hold of problems that were new to this country; men found themselves hurried into tasks for which they must prepare as best they might, and under crowded working conditions, changing circumstances, and confusion of effort that beggar description. In many cases, America could learn valuable lessons from European experience, and to that end commissions of eminent statesmen and soldiers were sent to this country to give us the benefit of their successes and failures. An important step had already been taken in the creation of the Council of National Defence on August 29, 1916, an act which indicated a realization that the United States might at any time be drawn into the European struggle. [See NATIONAL DEFENSE, COUNCIL OF.] . . . State councils of defense were likewise organized to arouse the people to the performance of their share in the nation's work, to circulate information and to assist the several agencies of the federal government. A National Research Council mobilized the scientific talent of the country and brought it to bear on certain of the problems of warfare. [See NATIONAL RESEARCH COUNCIL.] A Naval Consulting Board examined inventions offered to the Navy Department. The Committee on Public Information furnished condensed war news to town and country explaining the causes of the war and upholding America's purposes in it, and directing speakers who aided people in their duty during the crisis. [See also COMMITTEE ON PUBLIC INFORMATION.] The War Industries Board developed plans for the problem of building sufficient ships to transport troops and cargoes, and to replace vessels sunk by submarines. By means of a Committee on Labor the laboring men gave their support to the conduct of the war and agreed

to delay controversies until the war was over. The exhausted condition of the supplies of food among the Allies, and the size of the armies which America decided to raise, made the Food Administration one of importance. At that time when the United States entered the war there was a dangerous shortage of food in Europe due to the decrease in production and to the lack of the vessels necessary to bring supplies from distant parts of the world. . . . Accordingly, legislation was passed on August 10, 1917, which made it unlawful to destroy or hoard food; it provided for the stimulating of agriculture; and it authorized the President to purchase and sell foods and fix the price of wheat. Wilson appointed as the chief of the Food Administration Herbert C. Hoover, whose experience with the problem of Belgian relief enabled him to act promptly and effectively. Hoover's one great purpose was to utilize all food supplies in such a way as would most help to win the war. He cooperated with the Department of Agriculture which had already started a campaign for stimulating the cultivation of farms and gardens on all available land. [See also FOOD REGULATION: 1917-1918: Food control in the United States.] . . . The vital relation of the transportation system of the country to the winning of the war was apparent at the start. As soon as war was declared, therefore, nearly 700 representatives of the railroads formed a Railroads' War Board to minimize the individual and competitive activities of the roads, coordinate their operation, and produce a maximum of transportation efficiency. The attempt of the railroad executives, however, quickly broke down. In the first place, . . . our entire body of railroad legislation is based upon the idea of separating the several systems and compelling them to compete rather than cooperate. The habits and customs thus formed could hardly be done away with in an instant. In the second place the cost of labor and materials was constantly mounting, and the demand for more equipment was insistent. The railroads could meet these greater costs only by raising rates, a process which involved obtaining the assent of the Interstate Commerce Commission and required a considerable period for its accomplishment. The roads were also embarrassed by an unprecedented congestion of traffic on the eastern seaboard, from which men and cargoes must be shipped to Europe. Accordingly, on December 26, 1917, the President took possession of the railroad system for the government and appointed the Secretary of the Treasury, William G. McAdoo, as Director General. [See also RAILROADS: 1916-1920.] . . . An important part of American preparation for war was the attention paid to the ‘morale’ organizations, which were designed to maintain the courage and spirit of the fighting man. As far as legislation could do it, the most flagrant vices were kept away from the camps. Moreover the Commissions on Training Camp Activities attempted to supply wholesale entertainment and associations. Under their direction, various organizations established and operated theatres, libraries and writing-rooms encouraged athletics in the camps, and offered similar facilities for soldiers and sailors when on leave in towns and cities near by. [See also WORLD WAR: Miscellaneous auxiliary services: IX. War relief: g.] The Red Cross conducted extensive relief work both in this country and abroad; surgical dressings were made, clothing and comfort kits supplied, and money contributed. In France, Belgium, Rus-

sia, Roumania, Italy and Serbia the Red Cross conducted a fight against the suffering incident to war. [See also RED CROSS: American National: 1917-1919; INTERNATIONAL RELIEF.] The legislation which established the system of allotments, allowances and War Risk Insurance was also designed in part to maintain the *morale* of the army and navy. [See INSURANCE: Government.] The total direct money cost of the war from April, 1917, to April, 1919, was estimated by the War Department at \$21,850,000,000, an average of over a million dollars an hour, and an amount sufficient to have carried on the Revolutionary War a thousand years. In addition, loans were extended to the Allies at the rate of nearly half a million dollars an hour. This huge amount was raised in part through increased taxes. Income taxes were heavily increased; levies were made on such profits of corporations as were in excess of profits made before the war, during the three years 1911-1913; additional taxes were laid upon spirits and tobacco, on amusements and luxuries; and the postage rates were raised. In part, also, the cost of the war was defrayed through loans. A portion of the amount borrowed was by the sale of War Savings Stamps. . . . Most of the borrowed money, however, was raised through the five 'Liberty Loans,' a series of popular subscriptions to the needs of the government. In each case the government called upon the people to purchase bonds, ranging from two billions at first to six billions at the time of the fourth loan. There were four and a half million subscribers for the first loan, but after a little experience the number was readily increased until 21,000,000 people responded to the fourth call. Popular campaigns such as never have been seen in America, campaigns of publicity, house-to-house canvassing and appeals to the win-the-war spirit resulted in unprecedented financial support. Isolated communities in the back country and people of slender means in the cities, no less than the great banks and wealthy corporations cooperated to make the Liberty loans of social and economic as well as financial importance."—C. R. Lingley, *Since the Civil War (United States, v. 3, pp. 584-590)*.—See also WORLD WAR: Miscellaneous auxiliary services: XIV. Costs of war.—"It was, of course, necessary for the American authorities to keep close watch on the immense numbers of enemy aliens resident in the United States. Acts of Congress required that Germans and Austro-Hungarians must register as enemy aliens and carry certificates of identification. They were forbidden to go near army camps, navy-yards, and other military and naval establishments without special permits; they were not permitted to reside in, or visit, certain districts. These provisions at first only applied to men, but it was soon discovered that women subjects of enemy countries were, if anything, more dangerous than the men, and by a bill approved by the President the provisions of the espionage act were extended to them. [See also ESPIONAGE ACT; WORLD WAR: Miscellaneous auxiliary services: II. Espionage: a, 4; III. Press reports, etc.; d, 5.] The registration revealed the fact that there were about 500,000 German 'enemy aliens,' and between 3,000,000 and 4,000,000 Austro-Hungarian enemy aliens in the United States. In addition, there were some Bulgarians and Turks, to say nothing of millions of naturalized citizens from the Central Powers, and millions more of their descendants. There had been much uneasiness lest trouble might be caused by this population, particularly by the German

alien enemies. Germans in Germany had even boasted that the United States dare not go to war because to do so would provoke a civil conflict at home. Beyond question there were many disloyal utterances, and some actual damage was done by German spies and sympathizers in the way of blowing up munition plants and causing 'accidents' of one sort or another. Still there were fewer such outrages than many people had expected. In fact, there were not so many after we entered the war as there had been before. [See above: 1915 (July); (September).] Altogether it was found necessary to arrest about 6,000 persons under personal warrants. . . . There were thousands . . . [of] enemy aliens [see ALIEN ENEMIES] and even some citizens of the United States who secretly sympathized with the Central Powers, but when the final test came it is to the credit of citizens of German and Austro-Hungarian origin that the vast majority, whatever their sympathies had been before the United States entered the war, whole-heartedly decided that America was their country, and gave her loyal support. Hundreds of thousands fought valiantly in battle, and many laid down their lives in the contest. The entrance of the United States into the war caused a split in the Socialist party. Some leaders, such as Charles Edward Russell and John Spargo, believed that Germany must be beaten, and supported the war. Others opposed the war, and some seemed really to sympathize with Germany. The Industrial Workers of the World, who had their counterpart in the European Syndicalist [caused the country more serious trouble]. . . . They advocated that workers force the owners of factories to turn their possessions over to the employees. To bring about that object they favored strikes and all manner of damage to property—in short, what is known as 'sabotage.' This word is said to have been derived from the custom of French Syndicalists of throwing their wooden shoes, or *sabots*, into machinery in order to injure it. A favorite form of sabotage in the United States was the putting of emery dust or carborundum into the bearings of machinery. Some of the I.W.W.'s were really in German pay, and did all they could to hamper American war efforts. They put bombs in munition factories, injured machinery, incited strikes, especially among shipbuilders, and set fire to forests, grain elevators, and crops. Many of the I.W.W.'s were arrested, and some, including one of their chief leaders, William D. Haywood, were sentenced to the penitentiary. Others, of foreign origin, were interned as dangerous to the peace and safety of the country. After the armistice was signed, many foreign I.W.W.'s and other radicals, including Emma Goldman and Alexander Berkman, were arrested and deported."—P. L. Haworth, *United States in our own times*, pp. 450-453.—See also below: 1919 (September-December); INDUSTRIAL WORKERS OF THE WORLD: Recent tendencies.

1917-1919.—Taxation and expenditures.—"In spite of its late entrance into the war, the expenditures of the United States, by reason of their

magnitude, at once rivalled those of the leading European belligerents. The country was well prepared to take a leading part in the struggle. As a result of the production of supplies for the European belligerents during the two and a half years preceding, the industries of the country were in a measure adjusted to the herculean task now to be laid upon them. The finances of the country were in good condition. The installation of the federal reserve system had created the financial machinery necessary to handle the enormous loans which were soon to be floated. The tax machinery, too, had been organized and was in good working order, for the income tax was by now running smoothly, and together with the excise taxes, formed the foundation of an easily expanded and lucrative revenue system. . . . The normal peace expenditures of the United States . . . from 1913 to 1916, . . . [for the civil, military and naval establishments, and the pension list, respectively, were as follows:] 1913, \$682,770,705; 1914, \$700,254,489; 1915, \$730,103,591; 1916, \$724,492,998. From the very day of its entrance into the struggle on April 6, 1917, the expenditures of the United States showed a startlingly rapid growth. From an average monthly expenditure of \$65,000,000 during 1916, the ordinary expenditures rose [to \$134,304,040 in June, 1917, with a daily average of \$4,776,801]. . . . The First Liberty Loan Act, passed April 24, 1917, provided for an issue of bonds to the amount of \$5,000,000,000, of which \$3,000,000,000 was to be used to purchase the obligations of government at war with Germany. A popular loan of \$2,000,000,000 fifteen-thirty year gold bonds was issued by the United States in May, 1917, dated June 15, 1917, bearing interest at the rate of 3½ per cent. The bonds were tax exempt, both as to principal and interest, from all taxation except estate and inheritance taxes, and carried conversion privilege into future issues which might be put out at higher rates of interest. Pending the floatation of the loan, the Treasury was authorized to issue one year certificates of indebtedness. The use of such certificates to anticipate the yield of war loans and taxes has characterized the financing of the war in the United States from the beginning. Provision was also made for the convertibility into this issue of the outstanding Panama Canal bonds, of which \$63,945,460 were later actually converted. By this act, as by subsequent loan acts, the responsibility for the success of the bond issue was imposed very largely upon the Secretary of the Treasury. He was given great power and authority under the act and may fairly be held responsible for its success or failure. One of the first steps taken was the organization of the machinery for the sale and distribution of the loan. For this purpose the federal reserve banks formed an admiral base. Under the federal reserve system the United States was divided into twelve districts, and in each district a federal reserve bank was established in a selected city as the head office of the banks in that district. All national banks in each of the twelve districts were required to become members, and all State banks and trust companies were permitted to do so. At the time of the issue of the First Liberty Loan there were 7,581 national banks and 40 State banks and trust companies in the system. Under section 15 of the Federal Reserve Act, it was provided that the federal reserve banks could act as fiscal agents of the United States when required by the Secretary of the Treasury, and an order providing for

this had already been issued. A circular of May 14, 1917, designated the Treasury Department and the twelve federal reserve banks as agents to receive applications for the First Liberty Loan. Each of the twelve banks appointed a central committee of five representative business men to act as a central Liberty Loan committee in the respective districts, and they in turn appointed subcommittees in each of the larger towns and cities. [See also MONEY AND BANKING: Modern: 1912-1913; 1913-1919.] Extensive subscription and publicity campaigns were inaugurated and carried through by these committees which acquired the voluntary cooperation of many persons in the prosecution of the work. Special women's Liberty Loan committees were formed and the aid of the Boy Scouts was secured, both of which gave valuable assistance. The American Bankers' Association offered its services. The vigorous cooperation of the press was secured, and many valuable editorials and news items were devoted to the promotion of Liberty Loan sales. Experienced bond salesmen were enlisted in the work of selling Liberty Bonds. Arrangements were made by banks and trust companies to carry on a reasonable margin large amounts of these bonds for their customers at the same rate of interest as the bonds. The same general procedure was followed in the subsequent Liberty Loan issues. . . . The results of the loan [of which the banks subscribed very large amounts] were regarded as a sort of earnest of the intentions of the United States in the prosecution of the war, and every effort was made to insure its success. The subscriptions amounted to \$3,035,226,850, but only \$2,000,000,000 was accepted. Allotments were made in full to subscribers in amounts up to \$10,000 and over that sum in such proportions as to net the exact amount asked for. The number of subscribers was about 4,500,000. . . . While no new war revenue measure was enacted in the period from April 6, 1917, to the end of the fiscal year, June 30, 1917, the yield during this fiscal year was greatly increased over pre-war normal revenue by the enactments of September 8, 1916, and March 3, 1917, and as these revenue measures, though preceding actual belligerency, were enacted to provide a 'preparedness fund' and carry out an increased naval program, and were diverted to or merged in current war expenditure, they may fairly be regarded, at least in the excess over normal, as war revenues. . . . The Treasury Department had estimated the expenditures for the fiscal year 1917-1918 at \$18,775,010,995. Congress promptly followed the estimate by an appropriation of \$18,870,177,015, or slightly more than the executive estimates, with an additional appropriation of \$2,511,553,925 for contract obligations. The end of the fiscal year showed that actual ordinary disbursements amounted to only \$8,966,532,266 and advances to Allies, \$4,739,434,750, or a total of \$13,705,967,016. The discrepancy between the estimated and the actual disbursements seems to have been due to the assumption that the total productive capacity of the United States for war materials could be used at once and to the full for government purposes. Events of the year proved this assumption to be erroneous; in fact, a full year was to elapse before the necessary adjustments were effected in American industry and trade which made it possible to direct the major resources of the country into war channels. . . .

"As the tax legislation to provide additional revenue was not passed until October, 1917, it

soon became necessary to resort again to borrowing in order to meet the increased demands occasioned by the war and also the need of foreign countries to which the United States was extending credit. Accordingly, the Second Liberty Loan Act was passed on September 24, 1917. This authorized the Secretary of the Treasury to issue bonds, in addition to the \$2,000,000,000 already issued under the first loan act, to the amount of \$7,538,945,460. This sum included the unissued balances authorized under the previous act and a new authorization for \$4,000,000,000. The rate of interest was fixed at 4 per cent, and the bonds were dated November 15, 1917, and made redeemable in 1927 and payable in 1942. They were convertible into the next issue of bonds bearing a higher interest rate, the conversion privilege to cease six months after the next issue (November 9, 1918) if not then exercised, and the bonds of the first issue converted into the new 4s had only coeval conversion rights. The tax exemption privilege of the first issue lapsed if converted (except for a block exemption of \$5,000 principal) and the new 4s were made subject to the estate and inheritance taxes, and to the surtaxes under the income tax law, as well as to excess profits and war profits taxes. The withdrawal of the tax exemption feature was the result of the strong disapproval directed against this provision in the first issue, based on the ground that tax exemption granted a privilege which grew in value as new taxes were imposed and the burden resting upon accumulated wealth became heavier. . . . The lowest denomination of both issues had been placed at \$50. But in order that subscriptions might be obtained from persons of small means who would not be able to take even a \$50 bond, war savings certificates were authorized by the act of September 24, to an amount not exceeding \$2,000,000,000. These were patterned after the British model and were issued in the form of a stamp costing from \$4.12 to \$4.23, according to the month in which purchased, and having a maturity value at the end of five years of \$5. Thrift stamps costing 25 cents each and not bearing interest were also sold which were exchangeable for war savings certificates. The sale of the stamps and certificates was made the occasion for a campaign of education to instill principles of thrift and loyalty. Educational work thus done may be regarded as probably the most valuable result, though the financial return from these stamps was by no means inconsiderable. The sale was begun in December, and by the end of the fiscal year June 30, 1918, the revenue from this source amounted to \$307,092,391. The Third Liberty Loan Act provided for the issue of \$3,000,000,000 4¼ per cent ten year bonds maturing in 1928. Bonds were dated May 9, 1918, and offered on April 6, 1918, subscriptions closing May 4. The tax exemption provisions were the same as in the second loan, but the third issue differed from the previous ones in several respects. In the first place, the optional bond was rejected in favor of a straight ten year bond, which, moreover, was inconvertible. Prior issues converted into the new 4½s also became inconvertible. The Secretary of the Treasury announced that all oversubscriptions would be accepted. Finally, the act provided for a bond purchase fund out of which the Secretary of the Treasury was authorized, until one year after the termination of the war, to purchase bonds to the amount of one-twentieth of the outstanding issues in each year, for the

purpose of sustaining the market price of the bonds. By October 31, bonds to the amount of \$244,036,500 had been purchased under this provision. The act also provided for the issuance of certificates of indebtedness to an amount not exceeding \$8,000,000,000 of the same maturities and for the same purposes as under the previous act. The sum of \$5,500,000,000 was also authorized to be used for the establishment of credits for foreign governments. The subscription to this loan amounted to \$4,176,516,850. . . . The number of subscribers . . . almost doubled, increasing to 18,376,815. This was about one subscriber in every six persons in the United States, or practically one to the normal family. . . . On October 3, 1917, was passed the first war revenue act, which was estimated to raise \$3,400,000,000. It included a drastic addition to the existing surtaxes on income, and added an excess profits tax. Additions were also made in the system of indirect taxes. The old excess profits tax which had been provided for under the act of March 3, 1917, . . . was repealed. Similarly the munition manufacturers' tax was lowered to 10 per cent and was made to cease entirely on January 1, 1916. The backbone of the new act consisted of the income and excess profits provisions. In the former the exemption minimum was lowered to \$1,000 for a single person and \$2,000 for married persons and a normal tax of 2 per cent was levied on all incomes in excess of these sums. This was in addition to the tax of 2 per cent on incomes in excess of \$3,000 for single persons and \$4,000 for married persons which had been established by the act of October 3, 1913, as amended by subsequent acts of September 8, 1916, and March 3, 1917. A scale of additional surtaxes was also prescribed in addition to those imposed by the act of September 8, 1916, on incomes of individuals, which ranged from 1 per cent on incomes from \$5,000 to \$7,500, up to 50 per cent on incomes over \$1,000,000. The highest combined rate which was levied under this act reached 67 per cent in the case of incomes over \$2,000,000. For corporations a normal tax of 4 per cent was prescribed in addition to the existing normal rate of 2 per cent on net income. The excess profits tax was supplementary to the income tax, and provided for an excess profits tax upon the income of individuals, partnerships, and corporations. A specific exemption of \$3,000 in the case of corporations, and \$6,000 in the case of partnerships and individuals, was allowed and also the deduction of an amount of net income equal to 7 to 9 per cent of the invested capital used in the business during the prewar period. The years 1911, 1912, and 1913 were defined as the 'prewar' period. In case the business was not in existence during that time, the deductible income was fixed at 8 per cent. Beginning at this point a graduated tax was placed upon the profits in excess of the amounts exempted. The lowest rate was 20 per cent on excess profits up to 15 per cent; 25 per cent on the excess from 15 to 20 per cent; 35 per cent on the excess from 20 to 25 per cent; 45 per cent on the excess from 25 to 33 per cent; and 60 per cent on the excess profits over 33 per cent. In the case of excess profits derived chiefly from personal or professional services, the rate was a flat one of 8 per cent on the net income in excess of the exemption of \$3,000 for corporations and \$6,000 for partnerships and individuals. Doubt as to the meaning of the law and apprehension as to the effect upon the industry of the country which an unwise in-

terpretation or enforcement might entail, led the Secretary of the Treasury to organize a group of business and professional men designated as 'excess profits tax advisers.' They were able after some months of effort to issue regulations interpreting the principal features of the excess profits tax provisions and establishing the administrative procedure with reference thereto. In spite of this effort to give a working interpretation to a clumsily drawn law, it met with serious and continued criticism. About three-fourths of the internal revenue receipts levied under this act were secured from the sources just described, but in addition a number of other taxes were provided for. Next in importance to the income and excess profits taxes was the war tax on distilled spirits, which was raised from \$2.20 to \$3.20; and that on beer, which was raised from \$1.50 to \$3 per barrel. Other beverages were taxed at more moderate rates. The taxes on tobacco were more carefully classified and considerably raised. War stamp taxes were imposed upon certain legal or business documents, playing cards, parcel post packages, transfers of shares of stock and sales of produce for future delivery. Additions were made to a large number of existing taxes such as the 'war tax on facilities furnished by public utilities and insurance.' New taxes were imposed known as 'war excise taxes' on automobiles, musical instruments, jewelry, sporting goods, cameras, cosmetics, toilet articles and patent medicines, moving picture films, motor boats and yachts. The tax on admissions and dues was also introduced for the first time. An additional war tax on estates graduated from one-half of 1 per cent on estates below \$50,000 to 10 per cent on estates over \$10,000,000 was added to the already existing inheritance tax. This resulted in raising the total rates on inheritance to a scale graduated from 2 per cent to 25 per cent. Finally, the postal rates were increased 50 per cent in the case of first class mail and a zone system at increased rates, was introduced in the case of second class mail. . . . The Treasury Department had estimated the expenditures for the fiscal year 1918-1919 at \$20,687,938,691 ordinary, and advances to Allies at \$4,475,565,250, or a total of \$25,000,000,000, on the assumption that the war would continue during the whole year. The expenditures for the first nine months of the year (to March 31, 1919), totaled \$15,164,224,227, those for December exceeding \$2,000,000,000, including advances to Allies. . . .

"The armistice was declared on November 11, 1918, but this did not at once diminish expenditures, but rather increased it, due to the heavy costs involved in the cancellation of war contracts, the expenses of transporting troops from France, and other charges incident to demobilization. In January, however, a gradual decline set in which continued steadily to the end of the fiscal year. The estimated expenditure of \$25,000,000,000, with estimated revenues of \$8,000,000,000 left a deficit of \$17,000,000 to be met by loans, had the war continued. Accordingly, in July an act was passed authorizing an issuance of \$8,000,000,000 additional bonds, and providing for a further advance of \$1,500,000,000 to Allies. Treasury certificates in anticipation of the fourth loan began at once to be sold. By August the amount outstanding was \$2,183,835,000. The sale continued until they reached \$4,659,820,000 on October 1, 1918, when the Fourth Liberty Loan was offered, which took them up. The sale of war savings certificates had grown steadily since

its inauguration in December, 1917, amounting, as before stated, to \$307,092,391 during the prior fiscal year. In July, 1918, the demand became so great that for a time the Bureau of Engraving and Printing had to cease the work on postage stamps in order to supply enough war savings and thrift stamps to meet the demand. It was estimated about the middle of July that the number of persons who had invested or were 'pledged' to invest in war savings stamps was 34,410,000. For the month of July the total sales amounted to \$211,417,943. This was the highwater mark, however, and during the next months the sales fell off. In September, 1918, Congress extended the prior limitation of \$2,000,000,000 to \$4,000,000,000 and the Secretary of the Treasury prepared a new 1919 series to go on sale January 1, 1919, with a maturity in 1924. Curiously enough, in spite of subscriptions

LIBERTY LOAN POSTER
(Drawn by E. M. Ashe)

to this form of investment, and the purchase of Liberty Bonds, the savings banks of the country reported increased deposits. The same was true of the postal savings banks. In order to meet this latter growth, the maximum amount of money which a depositor might have on deposit was raised on July 22 to \$2,500. This originally had been \$500, and in May, 1917, had been increased to \$1,000. The Fourth Liberty Loan in the amount of \$6,000,000,000 4¼ per cent fifteen-thirty year gold bonds dated October 24, 1918, was offered for subscription on September 28, 1918. The right to allot bonds up to the full amount of the oversubscriptions was reserved, as in the third loan. The tax exemption provisions were the same as in the second and third loans, but in addition there was an exemption from surtaxes and excess profits and war profits taxes allowed on the income of bonds up to \$30,000 principal, and a further exemption from these taxes on the income derived from an

aggregate of \$45,000 principal on the three prior loans. This latter exemption, however, was contingent upon the taxpayer who claimed it being an original subscriber to the Fourth Liberty Loan of an amount of one and one-half times the amount of the three prior loans owned by him on the date of his tax return. The two latter block tax exemptions were for a period ending two years after the war only. This exemption privilege was double barreled, having the effect almost of compulsion in securing additional subscriptions to the fourth loan from holders of prior ones who could thereby secure additional tax exemptions for their holdings, and at the same time it induced subscribers to the new loan to purchase on the market a sufficient amount of prior loans in case they did not then own them, to get the full benefit of the additional exemption. . . . The subscriptions to the fourth loan amounted to \$6,989,047,000 and, according to the announcement, the Treasury accepted the whole amount. This was an oversubscription of 16.48 per cent which . . . represented a total about 60 per cent higher than the largest previous loan. The number of subscribers grew to 21,000,000, or almost one in every five of the population. . . . The first payment of the income tax was made on March 15 and permitted the retirement of about \$1,000,000,000, but it was necessary to provide further funds. . . . Accordingly, on March 3, 1919, the fifth loan was authorized. As the legislation authorizing it was passed so long in advance of its issue, great latitude was granted to the Secretary of the Treasury in fixing the details, even more so than in the case of the previous loans. The act practically determined only the limit, which was set at \$7,000,000,000. The Victory Liberty Loan, as it was called, was offered for popular subscription on April 21, 1919, and consisted of \$4,500,000,000 4¾ per cent three-four year convertible gold notes. The tax-exemption provisions were similar to those of the previous acts, but the notes were made convertible at the option of the holder into wholly tax-exempt (save for estate and inheritance taxes) 3¾ per cent notes. . . . [An additional] exemption was allowed in the interest on notes to a principal amount of \$20,000, provided no noteholder should be entitled to this exemption unless he owned one-third of the amount in Victory Loan notes as an original subscriber. The Treasury announced that no oversubscription would be accepted. . . . A cumulative sinking fund to an amount annually of 2½ per cent of the aggregate of Liberty Bonds outstanding July 1, 1920 (less the amount of obligations of foreign governments held by the United States) was authorized, which it was calculated would expunge the net debt in twenty-five years. Authorization was also given for making further loans to foreign governments for a period of eighteen months after the termination of war, and for converting the short time obligations of foreign governments evidencing such loans into long time obligations maturing not later than 1938. Finally, the War Finance Corporation was authorized, in order to promote commerce with foreign nations, to grant credits to American exporters to a total amount of \$1,000,000,000. The subscriptions to the Victory Liberty Loan totaled \$5,249,908,300—an oversubscription of nearly \$750,000,000, or 16.66 per cent. The number of subscribers was about 12,000,000. . . . The announced policy of the administration and of Congress had been the raising of a quarter to a third of the expenditures by taxation. At the rate expenditures were increas-

ing, it was evident that new revenue would have to be provided, and accordingly a new revenue bill was introduced in the summer of 1918. It was designed to yield about \$8,000,000,000 [which would be one third of the \$24,000,000,000] that it was estimated the Treasury would need for the fiscal year 1919. A tax measure calculated to yield this amount was finally matured at the time the armistice was declared. . . . Immediately upon this event the Secretary of the Treasury suggested to Congress the desirability of reducing the amount of revenues to be raised by taxation from \$8,000,000,000 to \$6,000,000,000 for the fiscal year 1918-1919, and to \$4,000,000,000 for the following year. . . . The existing bill was amended so as to reduce the revenue to the sums suggested. The final act was passed February 24, 1919. . . . The 1919 act greatly changed and distinctly improved the excess profits tax. In this enactment it is styled 'war profits and excess profits' tax, and the distinction between war profits and excess profits is established. Individuals and partnerships were relieved from the excess profits tax, and the act also permits deduction of losses in transactions not directly connected with trade or business, and removes the limitations upon the deduction of interest upon indebtedness. As in the former act, invested capital forms the basis of all computation. More careful definitions are given of such terms as 'net income,' 'invested capital,' 'tangible and intangible property,' 'inadmissible assets,' and special provision is made for exceptional cases, for reorganizations, and for difficulties in interpreting the law. After invested capital is determined, net income must be calculated according to prescribed rules. Excess profits and war profits are differentiated and subjected to slightly different treatment. In the former a deduction of \$3,000 and 8 per cent of the net income on invested capital is allowed to the taxpayer before division with the government. In the latter, a deduction of \$3,000 is allowed, and in addition, an amount equal to 10 per cent of net income on invested capital, or, average pre-war net income on invested capital and 10 per cent on any additional invested capital used in the taxable year. . . . Broadly speaking the legislative intent is to declare normal profits due to the taxpayer to be \$3,000 and 8 per cent of the income on his investment, and in war industry \$3,000 and 10 per cent on his investment. . . . This rate applies for the calendar year 1918, but for 1919 and thereafter the above 30 per cent rate is reduced to 20 per cent, and the 65 per cent rate is reduced to 40 per cent. Profits on United States war contracts are subject to special taxation computation. . . .

"The estate tax was considerably revised. In the first place, a somewhat finer graduation was introduced in the classes between \$450,000 and \$2,000,000; in the second place, the smaller estates from \$50,000 up to \$2,000,000 were taxed at rates beginning with 1 per cent and progressing until at \$2,000,000 they reached 12 per cent. From this point the progression was similar to that of the previous act, running up as high as 25 per cent on estates over \$10,000,000. The fifth title of the act embraced a number of taxes on transportation and other facilities and on insurance. Few changes were made in this group from the taxes imposed by the act of October, 1917. The tax on Pullman tickets was reduced from 10 per cent to 8 per cent, but on the other hand, telephone, telegraph, and radio message charges were considerably increased, and a 10 per cent tax was imposed on leased wires. The greatest change took place in the two next

groups of taxes—those on beverages and tobacco. In general, it may be said of these without going into detail that the tax on distilled spirits and fermented liquors, and on wines and soft drinks, was doubled. Those on cigars, cigarettes and tobacco were subjected to an increase of about 50 per cent. The taxes on admissions and dues were continued, but a more careful classification was made of admission prices and different classes of amusements which tended on the whole to raise the rates of this group. The tax was made to apply to all club dues over \$10 per annum instead of \$12 as in the previous act. The ninth title of the act embraced a miscellaneous assortment of excise taxes. This group was now greatly enlarged by the addition of a number of nonessentials and luxuries. The following were some of the articles taxed: automobiles, motorcycles, motor accessories, pianos and other musical instruments, sporting goods, chewing gum, cameras, photo films, candy, firearms, hunting knives, swords and similar articles, electric fans, thermos bottles, cigarette holders, humidors, slot machines, liveries, riding habits and boots, articles made of fur, yachts, motor boats and canoes, toilet soaps and powders. In addition to these, sumptuary taxes were laid on a large number of luxuries or high priced articles. A tax of 10 per cent was imposed on prices in excess of specified minimums in the case of carpets, rugs, picture frames, trunks, valises, purses, lamps, umbrellas, fans, smoking jackets, waistcoats, hats, footwear, neckwear, silk stockings, men's shirts, night-gowns, kimonos. And finally, a small group of articles evidently regarded as pure luxuries was taxed a certain percentage irrespective of their price. This group included jewelry, precious stones, watches, moving picture films, perfumes, toilet compounds. Under the head of 'special taxes' provision was made for the taxation of brokers, commission merchants, capital stock of corporations and proprietors of amusements. The taxes on brokers were greatly increased; that on corporate capital stock was doubled in rate and the exemption minimum reduced from \$99,000 to \$5,000. The tax on proprietors of theaters, museums and concert halls, circuses, bowling alleys and billiard rooms was doubled, and some new classes subjected thereto, such as street fairs, shooting galleries, riding academies, and automobiles for hire. On the whole, these taxes were in line with those described in the previous paragraph, and were designed to place a heavy burden, even to the point of discouragement, upon activities or transactions regarded as nonessential. In similar fashion the taxes on manufacturers of tobacco were drastically raised by a finer classification according to the sales, which resulted in much heavier taxes on the larger dealers. Stamp taxes under existing laws were evidently found satisfactory, for practically no change was made in this group. There was written into this tax measure a new federal child labor law, which proposed by resort to taxation to prevent the employment in certain specified industries of children under fourteen years of age, and to prohibit the employment in others of children between fourteen and sixteen years for more than eight hours a day, and in the night time. This was done by imposing an excise tax equivalent to 10 per cent of the entire net profits of such employer. Heavy penalties, ranging from \$1,000 to \$10,000 were imposed for infraction of the law. The purpose of the act was of course not revenue, but the prohibition of child labor, and an effort was made by the weapon of taxation

to frame a law which might escape the fate which overtook the Child Labor Law of 1916, which was declared unconstitutional by the United States Supreme Court in June, 1918. The returns from the new tax measure began immediately, for within three weeks of its passage the first instalment of the income tax fell due. For the first time this tax was now made payable in four instalments. The first payment on March 15 amounted to over \$1,000,000,000 and gave promise that the new act would raise the anticipated revenue. For the calendar year 1918 the total revenue receipts amounted to \$4,707,532,307, and for the fiscal year ending June 30, 1919, to \$5,152,257,136, or somewhat less than was anticipated."—E. L. 1918 (January).—Declaration of the "Fourteen Points" by President Wilson.—"Germans, Italians, and Frenchmen looked at that time to the President of the United States as the hope of the world. Thus Wilson came to the greatest of all his war messages, that in which he formulated the fourteen points [which was sent to Congress on Jan. 8, 1918]. It was the climax of Wilson's moral leadership. . . . The fourteen points laid down a magnificent programme of world peace. . . . Last and greatest in the mind of the President was the covenant of 'free Peoples' for a league of nations that should not only prevent future conflicts but serve as a sort of federal constitution of the world and guarantee the enforcement of the terms outlined above."—W. E. Dodd, *Woodrow Wilson and his work*, pp. 245-247.—See also WORLD WAR: 1918: X. Statement of war aims: b. 1918 (January-February).—Shortage of coal.—Measures for relief.—"Shortage of coal, or rather shortage of facilities to transport coal, was the cause of the first serious economic crisis which the United States had to face after its entry into the war. Coal production for 1917 showed a considerable increase over 1916, but the shortage of cars and the general condition of congestion at terminals continued to make it increasingly difficult to move coal from the sources of production to the centres of consumption."—*New York Times*

Current History, Mar., 1918, p. 473.—“War’s first drastic home regulation, Fuel Commissioner [H. A.] Garfield’s coal-conservation order, brought home to everybody, worker or employer, the grim reality of the coal famine, and many who were hit hardest accepted it as a necessary measure to be obeyed with patriotic self-denial. To relieve the coal famine in the eastern states, . . . all factories in the United States east of the Mississippi River and in Minnesota and Louisiana, with some exceptions, were directed to shut down for five days beginning January 18. Moreover, Monday for ten weeks was decreed a holiday on which offices, factories, and stores, except drug and food stores, must use only such fuel as is necessary to prevent damage. The order under which these restrictions were made, according to the Fuel Administration’s statement to the press, was ‘designed to distribute with absolute impartiality the burden,’ and it added that the Fuel Administration ‘counts upon the complete patriotic cooperation of every individual, firm, and corporation affected by the order in its enforcement.’ We read further that the government aims to carry out its plan without ‘undue interference with the ordinary course of business’ and earnestly desires to ‘prevent entirely any dislocation of industry or labor.’ . . . While the five-day suspension order meant the loss of millions of dollars to the wage-earning classes, the *Register* believed the measure would cheer our Allies and depress Germany, and it urged the people to show their determination by accepting without complaint any sacrifices they are called upon to make. . . . From Fuel Administrator Garfield’s explanation of the necessity of the order we cull the following: ‘The most urgent thing to be done is to send to the American forces abroad and to the Allies the food and war supplies which they vitally need. War munitions, food, manufactured articles of every description, lie at our Atlantic ports in tens of thousands of tons, while literally hundreds of ships, waiting, loaded with war goods for our men and the Allies, can not take the seas because their bunkers are empty of coal. The coal to send them on their way is waiting behind the congested freight that has jammed all the terminals. It is worse than useless to bend our energies to more manufacturing when what he have already manufactured lies at tidewater, congesting terminal facilities, jamming the railroad yards and sidetracks for a long distance back into the country. No power on earth can move this freight into the war zone, where it is needed, until we supply the ships with fuel. Once the docks are cleared of the valuable freight for which our men and associates in the war now wait in vain, then again our energies and power may be turned to manufacturing, more efficient than ever; so that a steady and uninterrupted stream of vital supplies may be this nation’s answer to the Allies’ cry for help. . . . This is war. Whatever the cost, we must pay it, so that in the face of the enemy there can never be the reproach that we held back from doing our full share. Those ships, laden with our supplies of food for men and food for guns, must have coal and put to sea.”—J. M. Clark, W. H. Hamilton and H. G. Moulton, eds., *Readings in the economics of war*, pp. 330-334.—See also FOOD REGULATION: 1917-1918; PRICE CONTROL: 1917-1919.

1918 (January-April).—Senator Chamberlain’s attack on the War Department.—President’s defense.—Overman Bill, to provide extraordinary powers for president, enacted into law.—“There were critics of the war measures that had been

passed and the way they had been administered, who recited in Congress facts that they had gathered from the factories and on January 19 Senator G. E. Chamberlain, Democratic chairman of the Committee on Military Affairs, attended a luncheon of the National Security League in New York, and there ‘undertook to show that since the battle of Bunker Hill we had never had a proper military organization or policy.’ In conclusion, he said that ‘the military establishment of America has fallen down. There is no use to be optimistic about a thing that does not exist. It has almost stopped functioning . . . because of inefficiency in every bureau and in every department of the government of the United States.’ The charge of Senator Chamberlain evoked an indignant and point-blank denial from the President, who asserted that it was ‘an astonishing and absolutely unjustifiable distortion of the truth. As a matter of fact, the War Department has performed a task of unparalleled magnitude and difficulty with extraordinary promptness and efficiency.’ A few days later Secretary Baker appeared before the Committee on Military Affairs with an impressive statement of the work done and doing. Senator Chamberlain introduced a bill for the creation of a Munitions Ministry, which received support in principle from Colonel Roosevelt, many of the preparedness organizations, and many members in both parties. An attempt was made by Senator Stone to show that the demand for a Munitions Ministry was in effect a censure of the President inspired by partisan politics. The President announced that he would veto any measure that attempted to take from him or lessen his responsibility for the conduct of the war. When the advocates of a Munitions Ministry insisted that the existing laws on military coordination were inadequate, he suggested that, if they desired to speed up the war, they should give him power to rearrange the agencies of government as need should indicate.”—F. L. Paxson, *Recent history of the United States*, pp. 519-520.—“It was now that Wilson made one of his quickest and most masterly moves. The Democrats in both houses had suffered themselves to be frightened or at any rate, disorganized by the extraordinary attacks . . . just described. . . . Democrats were giving increasing support to the Roosevelt plan for a war cabinet. . . . Wilson suddenly sent in a bill asking for all the powers that were proposed for the new war cabinet and many more. [Senator Overman] . . . introduced the bill early in February, 1918. It would give the President power to rearrange the bureaus and fix duties to suit himself. It would empower him to set up new machinery for war work which the President thought necessary. . . . Hoke Smith and Reed, of the judiciary committee of the Senate, persisted in their opposition to anything Wilson proposed. Sherman of Illinois was quite as bitter. . . . The irreconcilables continued obstructive tactics till April 29th when by a vote of 63 to 13 the bill was passed. The House acted quickly and the issue was closed. [On May 20 the Overman bill was enacted into a law to coordinate or consolidate executive bureaus, agencies and offices.]”—W. E. Dodd, *Woodrow Wilson and his work*, pp. 263-264.

1918 (February).—President Wilson on war aims.—“The fourteen points were already christened the fourteen commandments which all conservative interests must combat. . . . [President Wilson]

said to the Senate on February 11, 1918, that we fought for a 'new international order' and without that new order at the end of the war the world would be without peace. And likewise disconcerting was the closing remark of the same address that the power of the United States 'will never be used in aggression or for the aggrandizement of any selfish interest of our own.' It was the language of the Mobile address and a self-denial which great numbers of people were unwilling to make and which many newspapers had denounced when it was first made."—W. E. Dodd, *Woodrow Wilson and his work*, p. 266.—See also WORLD WAR: 1918: X. Statement of war aims: e.

1918 (February-October).—Aircraft shortage.—Official enquiries.—"Of all the branches of war activity of the United States none gave so much trouble or produced such unsatisfactory results as aircraft production. This was not due to any lack of appreciation on the part of the Government of the importance of military aviation. . . . The failure of the Government to meet expectations in respect to the actual construction of airplanes was due to a number of causes, one of which was its failure to work out a proper system of administration for the handling of aircraft matters. It is with this phase only of the question that we are here concerned. . . . The Aircraft Board was constituted with Mr. Coffin, who had been Chairman of the old Aircraft Production Board, as its Chairman. . . . The difficulties in the way of providing for the production in this country of foreign motors made it imperative that something be done toward producing a motor which, while fulfilling the requirements of service at the front, should at the same time be designed for quantity production in this country. The designing of a standard motor was the engineering objective of the original Aircraft Production Board. Two of the best engineer experts in aviation-motor design in the country were brought together at Washington, and the problem of producing an all-American engine at the earliest possible moment was presented to them. Their first conference was held on June 3, 1917. In consultation with engineers and draftsmen from various sections of the country, they worked continuously until June 30, when the new engine, known as the 'Liberty Motor' was practically complete. For months an acute controversy raged over the merits of this engine. As finally modified under the Aircraft Board it undoubtedly possessed merits of a high order, and although not adapted for all classes of airplanes, it proved to be of great value both to ourselves and to our allies, the latter calling for practically as many motors as could be produced. The delay in the perfection of this motor, or at least to put it into production upon a large scale, the failure of the Government to secure the production of other motors and airplanes, and the widespread belief that there had been great inefficiency, if not positive fraud, in the expenditure of the huge sums, amounting to over \$600,000,000, which had been voted for aviation purposes in 1917, led to the demand for a searching inquiry into the whole subject."—W. F.

Willoughby, *Government organization in war time and after* (F. G. Wickware, ed., *Problems of war and of reconstruction*, pp. 328, 335, 336).—"On June 8, 1917, the official announcement was made that a fleet of 25,000 airplanes would be created. The American program called for enormous quantities of bombing planes and fighting planes which could cope with the Germans and, with overwhelming numbers, drive them from the sky. . . . According to the testimony of Colonel Edgar Gorrell and the tables of statistics submitted from the War Department, the total number of American-built airplanes available for use in the American Expeditionary Forces on Nov. 11, 1918, was 798 De Haviland-4s, of which 196 were on the front, 270 were being used for training in flying schools and 332 were in the air depots. (House Hearings, Aviation, p. 3457.) It will thus be seen that the greatest contribution of American aircraft production was the De Haviland-4s, which, could not be used for fighting or pursuit. . . . The first substantial efforts from the outside to call attention to the fact that the American aircraft program was doomed to failure unless the situation was promptly remedied, were those of Gutzon Borglum, . . . who, prior to the war had been interested in aeronautics. . . . Mr. Borglum's investigations were begun with the consent of the President, and his charges were generally supported in a report by the investigating committee of the Aeronautical Society of America (Congressional Record, vol. 56, pp. 5920 to 5928). . . . His work resulted in disclosures and charges sufficient to attract the attention of the President and the Senate. Finally, the matter was taken up by the Senate, and hearings were begun before what is known as the Thomas Committee. . . . About the same time an independent investigation was undertaken at the request of the President by Hon. Charles E. Hughes. . . . [The investigation] was made with the co-operation of the Department of Justice, and the report was submitted, through the Attorney-General, to the President. To this work Judge Hughes devoted five months, taking testimony in different parts of the country, and it is said that for his services he refused to accept pay. The last major investigation of the Air Service was that by the House Committee on Expenditures in the War Department, the testimony taken by the subcommittee on aviation, known as the Frear Committee, comprising more than 4,000 printed pages. Unfortunately, while this committee was sitting, a political campaign was coming on, and in the findings, charges of bias were bandied back and forth. In all the subcommittees investigating war expenditures, majority reports, subscribed by all the Republican members, and minority reports subscribed by all the Democratic members were filed. Hon. Clarence F. Lea, the Democratic member of the subcommittee on aviation, frankly made the following statement in the hearings (House Hearings, Aviation, p. 450). 'The Hughes investigation was strictly a nonpartisan investigation and as free from political influence as an investigation could be. Here we have a bipartisan investigation. Personally, I am inclined to believe that perhaps Congress made a mistake in making it a bipartisan investigation. I think an investigation similar to the Hughes investigation would have been a preferable method of developing the facts, and the results would have been accepted by the country as a correct disclosure.' . . . Judge Hughes reported that there was no question that grossly misleading statements were published with official authority, and

he recommended that they deserved the prompt attention of the military authorities. That a certain number of training planes were produced, and that the Liberty motor reached large quantity production, as well as that many other things were accomplished, there appears to be no doubt; but as to the main thing—the building of planes that could be used in fighting and sweeping the Germans from the sky—it is now established that the score was zero. . . . In brief, instead of the 20,000 airplanes . . . the only planes of American manufacture on the front when the war ended were the 196 De Haviland-4s. . . . The report of the House Committee on Expenditures in the War Department (Report No. 637, 66th Congress, 2d session, p. 2) shows that the total amount expended or obligated for Signal Corps and aviation purposes . . . to June 30, 1919, was \$1,051,511,988, and that the expenditures or commitments for aviation alone amounted to *over one billion dollars*. . . . Judge Hughes reported that the *estimated profits* . . . by several of the large aircraft contractors, if their schedules were carried out, would be as follows: The Ford Motor Company, \$5,375,000; the Lincoln Motor Company (partly owned by the Dayton Metal Products Company), \$11,250,000, and the Packard Motor Car Company, \$15,000,000. Large sums of Government money were advanced to various contractors on which to operate. In the case of the Dayton-Wright Airplane Company the paid-in capital was \$1,000,000 invested in the plant, and . . . advances by the Government to the extent of \$2,500,000 were authorized. The sum of \$10,800,000 was advanced to the Lincoln Motor Company. The profits which the Dayton-Wright Airplane Company would have received under its original contracts were estimated . . . to be more than \$6,350,000, not including profits on its experimental contract and its contract for spare parts of De Haviland-4s, but it was explained that agreements, contained in letters, for the reduction of the bogie price, would make the profits . . . not less than \$3,500,000. Contracts were made on both the fixed-price and the cost-plus basis, and the report alleges that, while it is probable that large profits were made on the fixed-price contracts, definite information as to their extent would not be available without a survey in detail of manufacturing conditions and tests, . . . an undertaking impracticable in the inquiry. . . . Subjects of criticism in the Hughes findings were business relations of the equipment division, of which Colonel Edward A. Deeds became the active head on Aug. 2, 1917, with former business associates and corporations with which he was connected at the time he entered the Government's service. It was alleged in the findings that a tract of 2,245 acres of land was leased to the Government by the Miami conservancy district, of which Colonel Deeds was the head, and that upward of \$3,000,000 was expended by the Government in its development. . . . The McCook Field, on which \$949,085.35 had been expended by the Government to Aug. 14, 1918, according to the Hughes report, was owned by Colonel Deeds and a business associate to whom Deeds conveyed his interest, after which the land was conveyed to the Dayton Metal Products Company, which then leased the tract to the Government (*ibid.*, pp. 890-893, and Senate Report, pp. 11-13). The Dayton Metal Products Company, of which it was stated that Deeds originally owned one-fourth of the stock, became variously interested in Government contracts . . . under the administration of Colonel Deeds, and it was . . .

further reported that Deeds was one of the incorporators of the Dayton-Wright Airplane Company, . . . owned by the Dayton Metal Products Company. The specifications of the Liberty Motor called for the installation of the Delco ignition system in the first 20,000 engines . . . [which] had not been used before in an airplane engine. The system was controlled by the Dayton Engineering Laboratories Company, . . . owned by the United Motors Corporation, of which Deeds was Vice President and a Director, until Aug. 16, 1917, and on Oct. 13, 1917, he transferred his holdings in the United Motors Corporation to his wife. . . . Among other contracts which caused comment was that of the Engel Aircraft Company, which was organized in August, 1917, by Harry E. Baker, a brother of the Secretary of War. . . . The company received a contract for 1,200 sets of spare parts at a price of about \$1,000,000. When it came to the attention of the Secretary of War, the contract was canceled and arrangements were made for . . . [his brother's] withdrawal from the company upon the payment of his salary and \$15,000 for his promotion services. The contract was then reinstated, and an additional order was given to this concern for 500 sets of spare parts for De Haviland-4s at an estimated cost of \$2,275,000 (Congressional Record, Vol. 57, p. 901, and Senate Hearings, Vol. II, pp. 974-984). . . . In the closing paragraphs of the report by Judge Hughes were the following findings and recommendations, which were submitted to the President, through the Attorney General, on Oct. 25, 1918: . . . '2. The evidence discloses conduct, which, although of a reprehensible character, cannot be regarded as affording a sufficient basis for charges under existing statutes; but there are certain acts shown, not only highly improper in themselves, but of especial significance, which should lead to disciplinary measures. The evidence with respect to Colonel Edward A. Deeds should be presented to the Secretary of War to the end that Colonel Deeds may be tried by court-martial . . . for his conduct (1) in acting as confidential adviser of his former business associate, H. E. Talbott of the Dayton-Wright Airplane Company, and in conveying information to Mr. Talbott in an improper manner with respect to the transaction of business between that company and the division of the Signal Corps of which Colonel Deeds was the head; and (2) in giving to the representatives of the Committee on Public Information a false and misleading statement with respect to the progress of aircraft production for the purpose of publication, with the authority of the Secretary of War. 3. The absence of proper appreciation of the obvious impropriety of transactions by Government officers and agents with firms or corporations in which they are interested compels the conclusion that public policy demands that the statutory provisions bearing upon this conduct should be strictly enforced. It is therefore recommended that the officers found to have had transactions on behalf of the Government with corporations in the pecuniary profits of which they had an interest should be prosecuted under section 41 of the Criminal Code.' On Oct. 31, 1918, Hon. T. W. Gregory, Attorney General, in transmitting this report to the President, stated that at the conclusion of the taking of testimony both he and Judge Hughes, without conference with each other, considered the evidence, and that in this manner each reached his own conclusion and prepared a report; that he found it unnecessary to present the report which had been

prepared in the Department of Justice, and that he found himself in accord with the conclusions presented by Judge Hughes on questions of dishonesty and malversation."—R. L. Scaife, *What was the matter with the air service?* (*New York Times Current History*, April, 1921).—The Senate committee was not unanimous, and two reports were presented on April 12, 1918, differing as to the causes of delay in the execution of the airplane program. The majority report says, in part: "The Signal Corps has established and is now conducting twenty aviation training schools in the United States. Four additional schools are in process of construction and are expected to be finished in June next. The aggregate capacity of the schools now in operation is something over 3,000 cadets; 1,926 have thus far been graduated from this primary training course and commissioned as reserve military aviators. Very few of these have received their advanced training in this country. In addition to the above, the Signal Corps, acting upon the invitation of the several Entente Governments, dispatched some 1,200 cadets to England, France, and Italy last year, who were to receive primary and advanced training in aviation schools of those countries. The experience of a great many of these men has been most fortunate in that at some of the schools a very serious delay has occurred in providing them with the training planes, which it was expected would be manufactured in foreign factories in sufficient numbers. As a result, several hundred of the American cadets have been practically idle and have made no progress. About 450 of them are reported as having completed the primary training, after long delay. The Signal Corps is giving serious consideration to the advisability of bringing the remainder back to the United States to be trained. With the exception of this severe disappointment, the primary training of our aviators, according to the testimony of the aviation officials, appears to be progressing favorably. For some time after the inception of the work the output of primary training planes . . . gave ground for grave concern. . . . The advanced training planes are being turned out in accordance with the schedule. . . . In advanced training planes four types are being made, the total number . . . manufactured being 342. . . . It is apparent from the evidence that the twelve-cylinder Liberty motor is just emerging from the development or experimental stage. . . . A large number of changes have been found necessary, many of them causing delay in reaching quantity production. . . . Twenty-two thousand five hundred Liberty motors have been ordered, 122 have been completed for the army, and 142 for the navy. Four have been shipped overseas. Some of those already delivered are being altered to overcome the defects ascertained during the last few weeks. . . . The production of Liberty planes to date is, of course, gravely disappointing. . . . Government officials . . . in charge . . . have made the mistake of leading the public and the allied nations to the belief that thousands of these motors would be completed in the spring of 1918. . . . The production of combat planes in the United States for use in actual warfare has thus far been a substantial failure. . . . We had no design of our own; neither did we adopt any one of the European designs until months after we entered the war."—*New York Times Current History*, May, 1918, pp. 245-246.—"The President by an executive order dated May 20, 1918, issued under the authority granted to him by the Overman Act of the same date, com-

pletely reorganized the Air Service and provided for the distribution of the duties of the Signal Corps among a number of distinct services. . . . At the same time provision was made for a new 'executive agency' designated the Bureau of Aircraft Production which, as set forth in the order, should have 'full, complete and exclusive jurisdiction and control over the production of airplanes, airplane engines and aircraft equipment for the use of the Army.' . . . There can be no question regarding the great improvement from the organization standpoint resulting from this order. At the time of the cessation of hostilities most of the troubles that had interfered so seriously with the carrying out of the ambitious airplane programme of the Government had been largely overcome, and airplanes and airplane motors were being produced in quantity and shipped to our army and our allies in France. In the meantime our deficiencies had been met, in part at least, by drawing upon the production resources of France and England."—W. F. Willoughby, *Government organization in war time and after* (F. 1918 (September-November).—Austrian peace proposal.—President's address on duties of peace conference.—German appeal to President Wilson.—German revolution.—Armistice of November 11.—On Sept. 15, 1918, the Austrians "proposed a conference for a 'preliminary and non-binding' discussion of war aims. [See WORLD WAR: 1918: Statement of war aims: k.] The President refused the next day, with the observation that America's war aims had been stated so often that there could be no doubt what they were. But it was evident that more peace proposals would follow and on Sept. 27 the President delivered an address in the Metropolitan Opera House in New York in which his latest conception of the duties of the Peace Conference was set forth. He had realized that peace without victory was unsafe in view of the character of the German Government; it must be a peace with guarantees, for nobody would trust the Germans. But it must be a peace of impartial justice, involving no discrimination between those to whom we wish to be just and those to whom we do not wish to be just, and the guarantee must be provided by a League of Nations which the Peace Conference itself—and not a subsequent general conference, as the President had held in the days of his neutrality—must organize. The development was logical: nearly all the American powers had entered the war, and neutrals were far less numerous than in 1916. And he argued that the League of Nations must be formed at the Peace Conference, to be 'in a sense the most essential part' of its work, because it was not likely that it could be formed after the conference, and if formed during the war it would only be an alliance of the powers associated against Germany. [See also WORLD WAR: 1918: X. Statement of war aims: l.] The Germans apparently thought these pronouncements offered some hope. Their Government was hastily being covered with a false front of democratic institutions to suit his insistence, and on Oct. 4 the new Chancellor, Prince Max of Baden, appealed to the President to call a peace conference at once, the basis of peace to be the Fourteen Points and conditions set forth in the President's later addresses, specifically that of Sept. 27. There ensued an interchange of notes

lasting throughout an entire month, in which the President acted nominally as intermediary between the Germans and the Allies, though actually he was in constant touch with allied statesmen. What began as a duel of diplomatic dexterity presently developed into a German diplomatic rout as the German armies, retreating everywhere, drew nearer and nearer German soil. Positions which the German Government had hoped to defend were successively abandoned; the Germans agreed to accept without argument the Fourteen Points, with discussion at the conference limited only to details of their practical application, and to recognize the alterations which had been made in some of them by subsequent decisions of the American Government. They accepted the President's insistence that a peace conference must be conditional on an armistice which would imply complete evacuation of allied territory and the assurance of the present supremacy of the allied armies, and they strove desperately to convince him that the democratization of the German Government was real. Delegates went to Marshal Foch to discuss the armistice terms, and on Nov. 5 the Allies formally notified the President that they accepted the Fourteen Points, with the reservation of the freedom of the seas and subject to a definition of the restitution which the Germans must make for damage done. On the same day sailors of the German High Sea Fleet, ordered out to die fighting in a last thrust at the British, mutinied and began a revolution that spread all over the empire. From the balcony of the Imperial Palace in Berlin Karl Liebknecht proclaimed the republic; the Kaiser fled across the Dutch border between two days; and on Nov. 11 the fighting ended and the Germans submitted to the terms imposed by Marshal Foch."—*New York Times Book Review*, Feb. 27, 1921, p. 9.—See also GERMANY: 1918 (March-November); (November); (November-December); WORLD WAR: Miscellaneous auxiliary services: I. 1918 (November).—Elections.—Women voters.—Democrats defeated.—Non-partisan League.—National Security League.—President's appeal.—“The most noteworthy results of the thirty state elections in November were the reelection of Governor Cox (Democrat) in Ohio and the . . . election of Senator Alfred E. Smith (Democrat) in New York. Although the statewide prohibition amendment was adopted in Ohio by a majority not far from 15,000, Governor Cox, the candidate of the ‘wet’ interests, defeated ex-Governor Willis (Republican), the ‘dry’ candidate, by about 10,000 majority. . . . In New York on the face of the returns, Senator Smith had a plurality around 12,000. . . . For the first time in New York history, women participated in a general election on a footing of equality with male voters. In New York City nearly half a million women took the trouble to register, and in the state as a whole it is estimated that not far from a million women qualified as voters. Full suffrage for women was adopted in Michigan and in South Dakota. In Oklahoma there was a large majority in favor of full suffrage. . . . Despite obstacles rendering it difficult if not impossible for voters absent with the American expeditionary forces in Europe to take advantage of the absent-voting laws enacted by a large number of states, it appears that a good many thousand soldiers voted in the various cantonments in this country. An investigation of the operation of both civilian and military absent-voting laws in this election might furnish material for an interesting study. Until ten days before the election, the congressional campaign was extraordinarily dull and lifeless, due in part to popular interest in the war, the liberty loan campaign, the influenza epidemic, and to the absence of any outstanding issue between the two leading parties. In the house elections there was a total of 51 party changes, in which the Republicans gained 38 seats (mainly in the middle west) and the Democrats 13 (mainly in the east). In the senatorial contests the Democrats lost seats in Colorado, Delaware, Illinois, Kansas, Missouri and New Jersey. In Massachusetts ex-Governor Walsh (Democrat) defeated Senator Weeks, the first time that a Democrat has been elected to the senate from that state since Robert Rantoul was elected . . . in 1850. This Democratic success in New England was offset by the Republican success in Missouri, where Judge S. P. Spencer defeated ex-Governor John W. Folk. As a result of these changes, the next Congress will comprise in the house 238 Re-

publicans, 193 Democrats, 2 Independents, 1 Socialist, and 1 Prohibitionist, giving the Republicans a clear majority of 41; in the senate the party division will be 49 Republicans and 47 Democrats, a Republican majority of 2 replacing the present Democratic majority of 8. This party overturn is in reality less impressive than might be inferred from the size of the Republican house majority. In no section of the country unless Ohio and Kansas may be regarded as exceptions, occurred anything which may fairly be called a Republican landslide, and the Democratic mortality does not appear to be far from the normal expectancy for the party in power in an ‘off-year’ election. To produce this party change in the control of Congress so many factors contributed in such varying degrees and combinations in different sections as to preclude the confident offering of any simple formula by way of explanation. Insufficient data is at hand to warrant even a very satisfactory tentative appraisal of the various factors. They may be indicated, however, and some suggestion made respecting their possible influence. In the enumeration which follows, the less important factors or those whose influence seems to have been confined to relatively small areas will be noted first. (1) Resentment at the treatment accorded by the administration to General Leonard Wood, in command at Camp Funston, has been mentioned as not without its influence in Kansas and possibly other states. (2) Opposition on the part of influential publishers’ organizations to the enactment of the postal zone law was an inconspicuous factor, but one which, in the opinion of an important official in such organizations, assisted in the defeat of 59 congressmen. (3) The Socialist party seems to have been a factor of only negative importance. Fear of its possible success had much to do with the fusion of Republicans and Democrats in certain New York City districts. The Socialist congressional candidates in twelve Manhattan districts were all defeated, including Meyer London, the only Socialist in the present Congress, and Morris Hillquit who ran for mayor of New York in 1917. Victor Berger of Milwaukee . . . [was] the only Socialist in the 66th Congress. (4) The Non-Partisan League was undoubtedly a factor of importance in state elections, and apparently also in congressional elections in North Dakota, Montana, Minnesota, Nebraska, and perhaps in other states. In spite of the charges of disloyalty which have been preferred against some of the officials of the league, its influence [did] not appear to be growing less, at least not in North Dakota, the state of its earliest successes. (5) Woman suffrage organizations were active in several senatorial contests, but it is difficult to find justification for the claim that the general result of the election is a strong rebuke to the Democratic party for its treatment of the federal suffrage amendment. The opposition of the suffragists seems to have contributed in some measure to the defeat of Senator Weeks (Republican) in Massachusetts and Senator Saulsbury (Democrat) in Delaware, both of whom had opposed the federal amendment. Suffragist opposition to the reelection of Senators Baird of New Jersey (Republican) and Borah of Idaho (Republican) and to the election of Mr. Moses (Republican) in New Hampshire, whose position was doubtful, apparently caused these candidates to run behind their party tickets. At the same time new senators favorable to the new suffrage amendment were elected in South Carolina, Kentucky and New Jersey. (6)

The voting record of congressional candidates for reelection, on the principal preparedness and war measures in the 64th Congress and two such measures in the 65th Congress, figured prominently in many districts, including at least three Iowa districts where unsuccessful efforts were made to defeat the present Republican members of the house on the ground that they had not supported all the war measures. The work of the National Security League deserves mention in this connection. The league circulated widely a chart showing the voting records of members of the house on preparedness and war legislation. On the league's 'Roll of Honor,' which included the names of those who had voted 'right' on all the eight test measures, were 47 names, of whom 43 were Republicans and 4 were Democrats; 7 of these were renominated, 3 were defeated and 37 were elected. Of the 117 candidates who voted 'wrong' on from five to eight of the test measures in both Congresses, 24 were not renominated, 79 were elected, of whom 53 came from the South, and 14 were defeated. Of the 20 members of the 65th Congress only, who voted 'wrong' on the two measures coming before that Congress, 7 were not renominated, 10 were elected, of whom 5 were from the South, and 3 were defeated. (7) Resentment at congressional price-fixing for wheat was clearly a factor in Kansas, and probably in other wheat-producing states. This legislation was associated in the public mind with Southern influence in Congress which prevented price-fixing legislation for cotton, and with the operation of the seniority rule in house committee assignments whereby Southern representatives who held more or less pronounced pacifist views were at the head of important committees. Republican gains were mainly in the rural districts of the middle-west. (8) Taxation is never relished, and the policy of imposing heavy war taxes inevitably incurred opposition. To this was added charges of sectionalism in the revenue measures. The indiscreet declaration of the Southern chairman of the committee on ways and means to the effect that the North having forced the country into the war should pay the bill, was given wide circulation by the Republican press and leaders, and it probably had something, and in the opinion of the *New York Times* had much, to do with the Democratic defeat. Mention may also be made of the wide dissatisfaction in business circles with the present Congress for its dilatoriness during the last session in preparing the new war revenue act, a circumstance which led one of the most loyal of administration newspapers to characterize Congress as 'our one great slacker.' (9) Presidential influence was openly exerted in the congressional primaries and elections to defeat Democratic senators and representatives who had voted against administration measures or who had been more or less outspoken in their criticisms of administrative policies. Apparently in large measure as a result of executive condemnation, ex-Governor Blease of South Carolina, running for the senatorial nomination, and Senators Vardaman of Mississippi and Hardwick of Georgia, and also Representatives McLemore and Slayton of Texas were defeated in the primaries. On the other hand, Representative Huddleston of Alabama won renomination and reelection in spite of executive opposition vigorously expressed. The President likewise actively but unsuccessfully intervened in behalf of Democratic senatorial candidates in Rhode Island, New Jersey, New Mexico and Michigan. In other

states senatorial candidates appealed for support on the ground that they were loyal administration candidates. The President indorsed the reelection of Senator Nelson (Republican) from Minnesota, and no Democratic candidate was formally nominated in that state. The foregoing enumeration is believed to include the principal factors in the campaign until shortly before the election. Taken singly, or even in certain possible combinations, they hardly account for the party overturn either in Congress as a whole or in more than a few states and districts. In the aggregate there was a good deal of dissatisfaction with the record of Congress and with some actions of the administration; but it was widely diffused and generally uncrystallized. The administration had been in the main accorded loyal support by Republican as well as Democratic party leaders, while among the rank and file party lines had become indistinct. Even the President's activity in particular cases in the primaries and elections occasioned little more than local resentment, for the public has come to regard such action as a defensible exercise of the President's functions as a party leader. Such seemed to be the state of the public mind that thousands of more or less dissatisfied voters might have allowed the election to go by default or have voted for Democratic candidates. But new factors entered during the last few weeks of the campaign. The correspondence with the German government was openly criticized, and as the prospects for peace developed it became more evident that the President could not count on the same degree of united support for the problems of peace and reconstruction as for the conduct of the war. Under these circumstances the President issued a frank appeal for the election of a Democratic Congress, in order to maintain unity of action in the government. This appeal had the immediate effect of arousing the open antagonism of Republican leaders, dispelled the apathy which had characterized the campaign up to that time, and tended to stiffen party lines and to arouse party zeal and enthusiasm. To some it has seemed the main factor in crystallizing the latent elements of dissatisfaction, and in repelling Republican and independent voters who were hesitating as to the course they should follow. It appears that, at least in some sections, Democratic managers regarded the President's action as a liability rather than an asset. On the other hand it has been argued that the President's appeal served to prevent a still more serious defeat for his party. Reference was made to similar appeals by Republicans, as in the campaign of 1898 and Lincoln's adage about swapping horses, in the campaign of 1864. As between these conflicting interpretations it is difficult, if not impossible, to make a clear decision. But the sectional distribution of party gains and losses indicates that local rather than general factors were of most importance in the result. If any single generalization seems justified, the result of the election should be regarded less as a Republican victory than as a rebuke to the Democratic party."—P. O. Ray, *November elections (American Political Science Review, February, 1919, pp. 78-84).*

1918 (November-December).—Announcement

of the president's intention to attend the peace conference.—Reasons given in his message to Congress.—His departure for Europe.—On November 18, it was reported that the president would attend the peace conference. An official announcement of his intention was made November 29, and in his annual message to Congress he stated his reasons for so doing. The following is the text of his address:

"Gentlemen of the Congress: The year that has elapsed since I last stood before you to fulfill my constitutional duty to give Congress from time to time information on the state of the Union has been so crowded with great events, great processes, and great results, that I cannot hope to give you an adequate picture of its transactions or of the far-reaching changes which have been wrought in the life of our nation and of the world. You have yourselves witnessed these things, as I have. It is too soon to assess them; and we who stand in the midst of them and are part of them are less qualified than men of another generation will be to say what they mean, or even what they have been. But some great outstanding facts are unmistakable, and constitute in a sense part of the public business with which it is our duty to deal. To state them is to set the stage for the legislative and executive action which must grow out of them, and which we have yet to shape and determine. A year ago we had sent 145,198 men overseas. Since then we have sent 1,905,513, an average of 162,542 each month, the number, in fact, rising in May last to 245,951, in June to 278,850, in July to 307,182, and continuing to reach similar figures in August and September—in August 289,570, and in September 257,438. No such movement of troops ever took place before across 3,000 miles of sea, followed by adequate equipment and supplies, and carried safely through extraordinary dangers of attack—dangers which were alike strange and infinitely difficult to guard against. In all this movement only 758 men were lost by enemy attacks—630 of whom were upon a single English transport which was sunk near the Orkney Islands. I need not tell you what lay back of this great movement of men and material. It is not invidious to say that back of it lay a supporting organization of the industries of the country and of all its productive activities more complete, more thorough in method and effective in results, more spirited and unanimous in purpose and effort than any other great belligerent had ever been able to effect. We profited greatly by the experience of the nations which had already been engaged for nearly three years in the exigent and exacting business, their every resource and every executive proficiency taxed to the utmost. We were the pupils. But we learned quickly and acted with a promptness and readiness of co-operation that justify our great pride that we were able to serve the world with unparalleled energy and quick accomplishment. But it is not the physical scale and executive efficiency of preparation, supply, equipment, and dispatch that I would dwell upon, but the mettle and quality of the officers and men we sent over and of the sailors who kept the seas, and the spirit of the nation that stood behind them. No soldiers or sailors ever proved themselves more quickly ready for the test of battle or acquitted themselves with more splendid courage and achievement when put to the test. Those of us who played some part in directing the great processes by which the war was pushed

irresistibly forward to the final triumph may now forget all that and delight our thoughts with the story of what our men did. Their officers understood the grim and exacting task they had undertaken and performed it with an audacity, efficiency, and unhesitating courage that touch the story of convoy and battle with imperishable distinction at every turn, whether the enterprises were great or small—from their chiefs, Pershing and Sims, down to the youngest Lieutenant; and their men were worthy of them—such men as hardly need to be commanded, and go to their terrible adventure blithely and with the quick intelligence of those who know just what it is they would accomplish. I am proud to be the fellow-countryman of men of such stuff and valor. Those of us who stayed at home did our duty; the war could not have been won or the gallant men who fought it given their opportunity to win it otherwise, but for many a long day we shall think ourselves 'accurs'd we were not there, and hold our manhood cheap while any speaks that fought' with these at St. Mihiel or Thierry. The memory of those days of triumphant battle will go with these fortunate men to their graves; and each will have his favorite memory. 'Old men forget; yes, all shall be forgot, but he'll remember with advantages what feats he did that day.' What we all thank God for with deepest gratitude is that our men went in force into the line of battle just at the critical moment when the whole fate of the world seemed to hang in the balance, and threw their fresh strength into the ranks of freedom in time to turn the whole tide and sweep of the fateful struggle—turn it once for all, so that thenceforth it was back for their enemies, always back, never again forward. After that it was only a scant four months before the commanders of the Central Empires knew themselves beaten, and now their very empires are in liquidation.

"And throughout it all, how fine the spirit of the nation was, what unity of purpose, what untiring zeal, what elevation of purpose ran through all its splendid display of strength, its untiring accomplishment. I have said that those of us who stayed at home to do the work of organization and supply will always wish that we had been with the men whom we sustained by our labor; but we can never be ashamed. It has been an inspiring thing to be here in the midst of fine men who had turned aside from every private interest of their own and devoted the whole of their trained capacity to the tasks that supplied the sinews of the whole great undertaking. The patriotism, the unselfishness, the thoroughgoing devotion and distinguished capacity that marked their toilsome labors day after day, month after month, have made them fit mates and comrades of the men in the trenches and on the sea. And not the men here in Washington only. They have but directed the vast achievement. Throughout innumerable factories, upon innumerable farms, in the depths of coal mines and iron mines and copper mines, wherever the stuffs of industry were to be obtained and prepared, in the shipyards, on the railways, at the docks, on the sea, in every labor that was needed to sustain the battle lines, men have vied with each other to do their part, and do it well. They can look any man at arms in the face and say, We also strove to win and gave the best that was in us to make our fleets and armies sure of their triumph. And what shall we say of the women—of their instant intelligence, quickening every task that they touched; their

capacity for organization and co-operation, which gave their action discipline and enhanced the effectiveness of everything they attempted; their aptitude at tasks to which they had never before set their hands; their utter self-sacrifice alike in what they did and in what they gave? Their contribution to the great result is beyond appraisal. They have added a new lustre to the annals of American womanhood. The least tribute we can pay them is to make them the equals of men in political rights, as they have proved themselves their equals in every field of practical work they have entered, whether for themselves or for their country. These great days of completed achievements would be sadly marred were we to omit that act of justice. Besides the immense practical services they have rendered, the women of the country have been moving spirits in the systematic economies by which our people have voluntarily assisted to supply the suffering peoples of the world and the armies of every front with food and everything else that we had that would serve the common cause. The details of such a story can never be fully written, but we carry them at our hearts, and thank God that we can say that we are the kinsmen of such. And now we are sure of the great triumph for which every sacrifice was made. It has come—come in its completeness, and with the pride and inspiration of these days of achievement quick within us, we turn to the tasks of peace again—a peace secure against the violence of irresponsible monarchs and ambitious military coteries, and made ready for a new order, for new foundations of justice and fair dealing. We are about to give order and organization to this peace, not only for ourselves but for the other peoples of the world as well, so far as they will suffer us to serve them. It is international justice that we seek, not domestic safety merely. Our thoughts have dwelt of late upon Europe, upon Asia, upon the Near and the Far East, very little upon the acts of peace and accommodation that wait to be performed at our own doors. While we are adjusting our relation with the rest of the world, is it not of capital importance that we should clear away all grounds of misunderstanding with our immediate neighbors and give proof of the friendship we really feel? I hope that the members of the Senate will permit me to speak once more of the unratified treaty of adjustment with the Republic of Colombia. I very earnestly urge upon them an early and favorable action upon that vital matter. I believe that they will feel, with me that the stage of affairs is now set for such action as will be not only just but generous, and in the spirit of the new age upon which we have so happily entered.

“So far as our domestic affairs are concerned, the problem of our return to peace is a problem of economic and industrial readjustment. That problem is less serious for us than it may turn out to be for the nations which have suffered the disarrangements and the losses of the war longer than we. Our people, moreover, do not wait to be coached or led. They know their own business, are quick and resourceful at every readjustment, definite in purpose, and self-reliant in action. Any leading strings we might seek to put them in would speedily become hopelessly tangled, because they would pay no attention to them, and go their own way. All that we can do as their legislative and executive servants is to mediate the process of change here, there, and elsewhere, as we may. I have heard much coun-

sel as to the plans that should be formed, and personally conducted to a happy consummation, but from no quarter have I seen any general scheme of ‘reconstruction’ emerge which I thought it likely we could force our spirited business men and self-reliant laborers to accept with due pliancy and obedience. While the war lasted we set up many agencies by which to direct the industries of the country in the services it was necessary for them to render, by which to make sure of an abundant supply of the materials needed, by which to check undertakings that could for the time be dispensed with, and stimulate those that were most serviceable in war, by which to gain for the purchasing departments of the Government a certain control over the prices of essential articles and materials, by which to restrain trade with alien enemies, make the most of the available shipping, and systematize financial transactions, both public and private, so that there would be no unnecessary conflict or confusion—by which, in short, to put every material energy of the country in harness to draw the common load and make of us one team in the accomplishment of a great task. But the moment we knew the armistice to have been signed we took the harness off. Raw materials, upon which the Government had kept its hand for fear there should not be enough for the industries that supplied the armies, have been released and put into the general market again. Great industrial plants whose whole output and machinery had been taken over for the uses of the Government have been set free to return to the uses to which they were put before the war. It has not been possible to remove so readily or so quickly the control of foodstuffs and of shipping, because the world has still to be fed from our granaries and the ships are still needed to send supplies to our men overseas, and to bring the men back as fast as the disturbed conditions on the other side of the water permit. But even these restraints are being relaxed as much as possible, and more and more as the weeks go by. Never before have there been agencies in existence in this country which knew so much of the field of supply, of labor, and of industry as the War Industries Board, the War Trade Board, the Labor Department, the Food Administration, and the Fuel Administration have known since the labors became thoroughly systematized, and they have not been isolated agencies. They have been directed by men that represented the permanent departments of the Government, and so have been the centres of unified and co-operative action. It has been the policy of the Executive, therefore, since the armistice, (which is in effect a complete submission of the enemy,) to put the knowledge of these bodies at the disposal of the business men of the country, and to offer their intelligent mediation at every point and in every matter where it was desired. It is surprising how fast the process of return to a peace footing has moved in the three weeks since the fighting stopped. It promises to outrun any inquiry that may be instituted and any aid that may be offered. It will not be easy to direct it any better than it will direct itself. The American business man is of quick initiative. The ordinary and normal processes of private initiative will not, however, provide immediate employment for all of the men of our returning armies. Those who are of trained capacity, those who are skilled workmen, those who have acquired familiarity with established business, those who are ready and willing to go to the farms, all those whose aptitudes are known or

will be sought out by employers, will find no difficulty, it is safe to say, in finding place and employment. But there will be others who will be at a loss where to gain a livelihood unless pains are taken to guide them and put them in the way of work. There will be a large floating residuum of labor which should not be left wholly to shift for itself. It seems to me important, therefore, that the development of public works of every sort should be promptly resumed, in order that opportunities should be created for unskilled labor in particular, and that plans should be made for such developments of our unused lands and our natural resources as we have hitherto lacked stimulation to undertake. I particularly direct your attention to the very practical plans which the Secretary of the Interior has developed in his annual report, and before your committees for the reclamation of arid, swamp, and cut-over lands, which might, if the States were willing and able to cooperate, redeem some three hundred million acres of land for cultivation. There are said to be fifteen or twenty million acres of land in the West, at present arid, for whose reclamation water is available, if properly conserved. There are about two hundred and thirty million acres from which the forests have been cut, but which have never yet been cleared for the plow, and which lie waste and desolate. These lie scattered all over the Union. And there are nearly eighty million acres of land that lie under swamps or subject to periodical overflow, or too wet for anything but grazing, which it is perfectly feasible to drain and protect and redeem. The Congress can at once direct thousands of the returning soldiers to the reclamation of the arid lands which it has already undertaken, if it will but enlarge the plans and the appropriations which it has intrusted to the Department of the Interior. It is possible in dealing with our unused land to effect a great rural and agricultural development, which will afford the best sort of opportunity to men who want to help themselves, and the Secretary of the Interior has thought the possible methods out in a way which is worthy of your most friendly attention.

"I have spoken of the control which must yet for a while, perhaps for a long while, be exercised over the shipping because of priority of service to which our forces overseas are entitled and which should also be accorded the shipments which are to save recently liberated peoples from starvation and many devastated regions from permanent ruin. May I not say a special word about the needs of Belgium and Northern France? No sums of money paid by way of indemnity will serve of themselves to save them from hopeless disadvantage for years to come. Something more must be done than merely find the money. If they had money and raw materials in abundance tomorrow, they could not resume their place in the industry of the world tomorrow—the very important place they held before the flame of war swept across them. Many of their factories are razed to the ground. Much of their machinery is destroyed or has been taken away. Their people are scattered, and many of their best workmen are dead. Their markets will be taken by others, if they are not in some special way assisted to rebuild their factories and replace their lost instruments of manufacture. They should not be left to the vicissitudes of the sharp competition for materials and for industrial facilities which is now to set in. I hope, therefore, that the Congress will not be unwilling, if it should become necessary, to grant to some such agency

as the War Trade Board the right to establish priorities of export and supply for the benefit of these people whom we have been so happy to assist in saving from the German terror and whom we must not now thoughtlessly leave to shift for themselves in a pitiless competitive market. For the steadying and facilitation of our own domestic business readjustments nothing is more important than the immediate determination of the taxes that are to be levied for 1918, 1919, and 1920. As much of the burden of taxation must be lifted from business as sound methods of financing the Government will permit, and those who conduct the great essential industries of the country must be told as exactly as possible what obligations to the Government they will be expected to meet in the years immediately ahead of them; it will be of serious consequence to the country to delay removing all uncertainties in this matter a single day longer than the right processes of debate justify. It is idle to talk of successful and confident business reconstruction before those uncertainties are resolved. If the war had continued it would have been necessary to raise at least \$8,000,000,000 by taxation payable in the year 1919; but the war has ended and I agree with the Secretary of the Treasury that it will be safe to reduce the amount to six billions. An immediate rapid decline in the expenses of the Government is not to be looked for. Contracts made for war supplies will, indeed, be rapidly canceled and liquidated, but their immediate liquidation will make heavy drains on the Treasury for the months just ahead of us. The maintenance of our forces on the other side of the sea is still necessary. A considerable proportion of those forces must remain in Europe during the period of occupation, and those which are brought home will be transported and demobilized at heavy expense for months to come. The interest on our war debt must, of course, be paid and provision made for the retirement of the obligations of the Government which represent it. But these demands will, of course, fall much below what a continuation of military operations would have entailed, and six billions should suffice to supply a sound foundation for the financial operations of the year.

"I entirely concur with the Secretary of the Treasury in recommending that the two billions needed in addition to the four billions provided by existing law be obtained from the profits which have accrued and shall accrue from war contracts and distinctively war business, but that these taxes be confined to the war profits accruing in 1918 or in 1919 from business originating in war contracts. I urge your acceptance of this recommendation that provision be made now, not subsequently, that the taxes to be paid in 1920 should be reduced from six to four billions. Any arrangements less definite than these would add elements of doubt and confusion to the critical period of industrial readjustment through which the country must now immediately pass, and which no true friend of the nation's essential business interests can afford to be responsible for creating or prolonging. Clearly determined conditions, clearly and simply charted, are indispensable to the economic revival and rapid industrial development which may confidently be expected, if we act now and sweep all interrogation points away. I take it for granted that the Congress will carry out the naval program which was undertaken before we entered the war. The Secretary of the Navy has submitted to your committees for authorization that part of the pro-

gram which covers the building plans for the next three years. These plans have been prepared along the lines and in accordance with the policy which the Congress established, not under the exceptional conditions of the war, but with the intention of adhering to a definite method of development for the navy. I earnestly recommend the uninterrupted pursuit of that policy. It would clearly be unwise for us to attempt to adjust our program to a future world policy as yet undetermined. The question which causes me the greatest concern is the question of the policy to be adopted toward the railroads. I frankly turn to you for counsel upon it. I have no confident judgment of my own. I do not see how any thoughtful man can have who knows anything of the complexity of the problem. It is a problem which must be studied, studied immediately, and studied without bias or prejudice. Nothing can be gained by becoming partisans of any particular plan of settlement. It was necessary that the administration of the railways should be taken over by the Government so long as the war lasted. It would have been impossible otherwise to establish and carry through under a single direction the necessary priorities of shipment. It would have been impossible otherwise to combine maximum production at the factories and mines and farms with the maximum possible car supply to move the products to the ports and markets; impossible to route troop shipments and freight shipments without regard to the advantage of the roads employed; impossible to subordinate, when necessary, all questions of convenience to the public necessity; impossible to give the necessary financial support to the roads from the public treasury. But all these necessities have now been served, and the question is, What is best for the railroads, and for the public in the future? Exceptional circumstances and exceptional methods of administration were not needed to convince us that the railroads were not equal to the immense tasks of transportation imposed upon them by the rapid and continuous development of the industries of the country. We knew that already. And we knew that they were unequal to it partly because their full co-operation was rendered impossible by law and their competition made obligatory, so that it has been impossible to assign to them severally the traffic which could best be carried by their respective lines in the interest of expedition and national economy. We may hope, I believe, for the formal conclusion of the war by a treaty by the time Spring has come. The twenty-one months to which the present control of the railways is limited, after formal proclamation of peace shall have been made, will run at the farthest, I take it for granted, only to the January of 1921. The full equipment of the railways which the Federal Administration had planned could not be completed within any such period. The present law does not permit the use of the revenues of the several roads for the execution of such plans except by formal contract with their Directors, some of whom will consent while some will not, and therefore does not afford sufficient authority to undertake improvements upon the scale which it would be necessary to undertake them. Every approach to this difficult subject-matter of decision brings us face to face, therefore, with this unanswered question: What is it right that we should do with the railroads, in the interest of the public and in fairness to their owners? Let me say at once that I have no answer ready. The only thing that is

perfectly clear to me is that it is not fair either to the public or to the owners of the railroads to leave the question unanswered, and that it will presently become my duty to relinquish control of the roads, even before the expiration of the statutory period, unless there should appear some clear prospect in the meantime of a legislative solution. Their release would at least produce one element of a solution, namely, certainty and a quick stimulation of private initiative.

"I believe that it will be serviceable for me to set forth as explicitly as possible the alternative courses that lie open to our choice. We can simply release the roads and go back to the old conditions of private management, unrestricted competition, and multiform regulation by both State and Federal authorities; or we can go to the opposite extreme and establish complete control, accompanied, if necessary, by actual Government ownership; or we can adopt an intermediate course of modified private control, under a more unified and affirmative public regulation and under such alterations of the law as will permit wasteful competition to be avoided and a considerable degree of unification of administration to be effected, as, for example, by regional corporations, under which the railways of definable areas would be in effect combined in single systems. The one conclusion that I am ready to state with confidence is that it would be a disservice alike to the country and to the owners of the railroads to return to the old conditions unmodified. These are conditions of restraint without development. There is nothing affirmative or helpful about them. What the country chiefly needs is that all its means of transportation should be developed, its railways, its waterways, its highways, and its countryside roads. Some new element of policy, therefore, is absolutely necessary—necessary for the service of the public, necessary for the release of credit to those who are administering the railways, necessary for the protection of their security holders. The old policy may be changed much or little, but surely it cannot always be left as it was. I hope that the Congress will have a complete and impartial study of the whole problem instituted at once and prosecuted as rapidly as possible. I stand ready and anxious to release the roads from the present control, and I must do so at a very early date, as by waiting until the statutory limit of time is reached I shall be merely prolonging the period of doubt and uncertainty which is hurtful to every interest concerned. I welcome this occasion to announce to the Congress my purpose to join in Paris the representatives of the Governments with which we have been associated in the war against the Central Empires for the purpose of discussing with them the main features of the treaty of peace. I realize the great inconveniences that will attend my leaving the country, particularly at this time, but the conclusion that it was my paramount duty to go has been forced upon me by considerations which I hope will seem as conclusive to you as they have seemed to me. The allied Governments have accepted the bases of peace which I outlined to the Congress on the 8th of January last, as the Central Empires also have, and very reasonably desire my personal counsel in their interpretation and application, and it is highly desirable that I should give it in order that the sincere desire of our Government to contribute without selfish purpose of any kind to settlements that will be of common benefit to all the nations concerned may be made fully manifest. The peace settlements

which are now to be agreed upon are of transcendent importance, both to us and to the rest of the world, and I know of no business or interest which should take precedence of them. The gallant men of our armed forces on land and sea have conspicuously fought for the ideals which they knew to be the ideals of their country. I have sought to express those ideals; they have accepted my statements of them as the substance of their own thought and purpose, as the associated Governments have accepted them; I owe it to them to see to it, so far as in me lies that no false or mistaken interpretation is put upon them, and no possible effort omitted to realize them. It is now my duty to play my full part in making good what they offered their life's blood to obtain. I can think of no call to service which would transcend this. I shall be in close touch with you and with affairs on this side of the water, and you will know all that I do. At my request the French and English Governments have absolutely removed the censorship of cable news which until within a fortnight they had maintained, and there is now no censorship whatever exercised at this end, except upon attempted trade communications with enemy countries. It has been necessary to keep an open wire constantly available between Paris and the Department of State, and another between France and the Department of War. In order that this might be done with the least possible interference with the other uses of the cables, I have temporarily taken over the control of both cables in order that they may be used as a single system. I did do so at the advice of the most experienced cable officials, and I hope that the results will justify my hope that the news of the next few months may pass with the utmost freedom, and with the least possible delay from each side of the sea to the other. May I now hope, gentlemen of the Congress, that in the delicate tasks I shall have to perform on the other side of the sea, in my efforts truly and faithfully to interpret the principles and purposes of the country we love, I may have the encouragement and the added strength of your united support? I realize the magnitude and difficulty of the duty I am undertaking. I am poignantly aware of its grave responsibilities. I am the servant of the nation. I can have no private thought or purpose of my own in performing such an errand. I go to give the best that is in me to the common settlements which I must now assist in arriving at in conference with the other working heads of the associated Governments. I shall count upon your friendly countenance and encouragement. I shall not be inaccessible. The cables and the wireless will render me available for any counsel or service you may desire of me, and I shall be happy in the thought that I am constantly in touch with the weighty matters of domestic policy with which we shall have to deal. I shall make my absence as brief as possible, and shall hope to return with the happy assurance that it has been possible to translate into action the great ideals for which America has striven."—*New York Times*, Dec. 3, 1918.

"President Wilson's decision to go to Paris as a member of the Commission aroused . . . [fierce] opposition. . . . The decision was one of tremendous significance. At the moment when domestic problems of reconstruction would be most acute, an American President was going to leave the country because of the interest of America in European affairs. The United States was now so

much a part of the world system that domestic issues seemed of less importance than the danger that Europe might fall back into the old international system which had proved unable to keep the peace. The President's voyage to France was the clearest manifestation yet vouchsafed of the settled position of the United States as a world power. . . . But the decision of the President to attend the Peace Conference furnished fresh material for criticism at home. It was a new thing in our history; people did not understand the importance of the issues involved and attributed his voyage to vanity. Unquestionably it weakened Wilson in America as much as it strengthened him abroad. When on the 4th of December, the presidential ship, *George Washington*, sailed out of New York harbor, . . . external enthusiasm was apparently at its height. But Wilson left behind him glowing embers of intense opposition which, during the next six months, were to be fanned into a dangerous flame."—C. Seymour, *Woodrow Wilson and the World War* (*Chronicles of America Series*, v. 48, pp. 250, 252-253).

1918 (December).—Senator Lodge's views on the treaty-making power of the president, and terms of peace with Germany.—Opposition to League of Nations.—The president had scarcely reached Paris before smoldering opposition to him and his views broke out into speech. In the Senate, on December 21, Senator Lodge, chairman of the Committee on Foreign Relations, voiced the growing discontent in a speech which reads, in part, as follows:

"Peace being our object, the first step toward peace is to make a peace with the country with which we have been and are at war—that is, with Germany. If the peace with Germany is to be durable, terms must be exacted which will make it, so far as human foresight goes, impossible for Germany to break out again upon the world with a war of conquest. This can not be done by treaty engagements and signatures to documents. At this juncture of affairs Germany would sign anything, and her pledge would be as worthless as the guaranties she gave to Belgium. . . . Physical guaranties which when taken would make signatures to treaties negligible can alone assure a durable peace with Germany. I do not need to rehearse what those physical guaranties should be, for I have stated my views upon them more than once to the Senate, and I think there is a general agreement upon them not only in the Senate but among the American people. They include the restoration of Belgium, the return of Alsace-Lorraine to France, of the Italia Irredenta to Italy, the establishment of a Jugo-Slav State, and of an independent State formed by the Czecho-Slovaks. They include also the security of Greece, the settlement of Albania and Montenegro, the restoration of Roumania, the consolidation of all the Roumanian people under one government, as well as the neutralization of the straits, the putting of Constantinople under international protection, with Greece perhaps as the mandatory of the powers to administer the affairs of the city, the independence of Armenia, the return of those portions of Asia Minor where Greeks are predominant to Greece, the protection of Syria and Palestine from the Turks, a large, powerful, and independent Polish State, the independence of Russia's Baltic Provinces, the return of Danish Slesvig to the Danes, and the neutralization of the Kiel Canal. These physical guaranties which I have thus far sug-

gested all have one object, and that is so to hem Germany in that she can not attempt conquest in Russia or in the East, and that the Slavic populations, which she has mercilessly used in her wars, can never be used by her again. In addition to these guaranties, there must be heavy indemnities paid by Germany for the ruin she has wrought in Belgium and northern France and in Italy, and for her destruction of vessels, both neutral and belligerent, through the use of submarines. In those indemnities the United States must have its proper and proportional share, not only direct indemnity for its ships destroyed by submarines and its people murdered on the *Lusitania* and other vessels but a suitable restitution, in part at least, of the vast expenses forced upon us by Germany. . . . It will be for the peace conference to determine what disposition should be made of the German colonies, but one thing is essential, and that is that they should not be returned to the tyrannical misgovernment of Germany and that she should be deprived of those means for extending her commerce and building up military outposts in all parts of the world. The payment of the indemnities will be a work of time, and it will be necessary to take and hold ample security for the extinction of these debts. It is the duty of the allies and the United States to meet and determine what terms they will impose upon Germany, and then, and not until then, call in the representatives of Germany and impose the terms upon them. When this is done, the first great step will be taken toward the establishment of the world's peace. If we eliminate Germany from the opportunity to make war, the only source from which a great war is likely to come would be closed for generations. . . . [Referring to the League of Nations, he said:] The words 'the league of nations' are captivating and attractive. Everybody would like to bring about a world condition in which wars would be impossible. . . . We all are deeply in sympathy with the purposes which the words 'league of nations' are supposed to imply. But we ought to be extremely careful that in our efforts to reach the millennium of universal and eternal peace we do not create a system which will breed dissensions and wars. It is difficult to discuss it at this time, because no definite plan of any kind has yet been put forward by any responsible person. . . . We all share in aspirations for complete world peace and for its maintenance; but the attempt to convert these aspirations into the hard, dry, and exact formulas of laws and treaties is a very arduous task. . . . And yet it is essential that before we can pass upon a league of nations we must have the most precise definitions of what is intended. A league of nations is not a bill which can pass by title. A league is an agreement. We must know what we are to agree to, and no one has yet thought it worth while to tell the people of the United States what they are to agree to when a league of nations is formed. If, however, there is to be a league of nations in order to enforce peace, one thing is clear. It must be either a mere assemblage of words, an exposition of vague ideals and encouraging hopes, or it must be a practical system. If such a league is to be practical and effective, it can not possibly be either unless it has authority to issue decrees and force to sustain them. It is at this point that the questions of great moments arise. . . . What nations are to be members of the league? Is Germany to be one of the members? If so, when? How are these nations thus joined in a league to vote in

determining the operations of the league? Theoretically, in international law every independent sovereign nation is the equal of any other nation. Are the small nations to have an equal vote with the great nations in the league, a vote equal to that of the United States or England or France? . . . This system seems open to some objections at first glance, and they are objections which will have to be considered. All the plans which have been put forward tentatively for a league of nations, so far as I know, involve the creation of a court. We must remember that we have carried voluntary arbitration as far as it can practically go. Assuming that there is a distinction between justiciable and nonjusticiable questions, who is to decide whether a question is justiciable or not? Is it to be done by the league, voting in some manner hitherto undefined, or is each nation to decide for itself whether a question affecting its own interest is or is not justiciable? Let me give an example, to make my meaning clearer. We have recently purchased the Virgin Islands. Suppose that that purchase had not been effected and that Denmark undertook to sell those islands to Germany or some other great power. Is that a justiciable question? If it is and it went before a court there can be no doubt that any court would be obliged to hold that Denmark had the right to sell those islands to whom she pleased. In the past the United States would never have permitted those islands to pass out of Denmark's hands into any other hands, because we consider their possession of vital importance to our safety and to the protection of the Panama routes. The same will be true in regard to Magdalena Bay—a case in which the Senate passed a resolution, with unanimity, I think, stating that on the plain doctrine of self-preservation we could not allow Magdalena Bay, or any other similar position of advantage, to be turned into a naval base or military post by another power. Would that be justiciable? And if not justiciable, then is the league of nations to compel, nevertheless, its submission?"—*Congressional Record*, Dec. 21, 1918, pp. 757-762.

1918-1919 (December-February).—Reception

of the president abroad.—Opposition of public and secretary of state.—Opening of the peace conference.—In Europe the president was received everywhere with enthusiasm, was acclaimed as the chief representative of the United States, and given all the old-time royal honors. At home, opposition to his views hardened, especially to his desire for the formation of the League of Nations. He also encountered strong opposition from the secretary of state, a member of the peace commission. Secretary Lansing said: "The principal subjects, concerning which President Wilson and I were in marked disagreement, were the following: His presence in Paris during the peace negotiations and especially his presence there as a delegate to the Peace Conference; the fundamental principles of the constitution and functions of a League of Nations as proposed or advocated by him; the form of the organic act, known as the 'Covenant,' its elaborate character and its inclusion in the treaty restoring a state of peace; the treaty of defensive alliance with France; the necessity for a definite programme which the American Commissioners could follow in carrying on the negotiations; the employment of private interviews and confidential agreements in reaching settlements, a practice which gave color to the charge of 'secret diplomacy'; and, lastly, the admission of the Japanese claims to possession of German treaty rights at Kiaochow and in the Province of Shantung. Of these seven subjects of difference the most important were those relating to the League of Nations and the Covenant, though our opposite views as to Shantung were more generally known and more frequently the subject of public comment. . . . I pointed out certain provisions which appeared to me objectionable in principle or at least of doubtful policy. Mr. Wilson, however, clearly indicated—at least so I interpreted his words and manner—that he was not disposed to receive these criticisms in good part and was unwilling to discuss them. He also said with great candor and emphasis that he did not intend to have lawyers drafting the treaty of peace. Although this declaration was called forth by the statement that the legal advisers of the American Commission had been, at my request, preparing an outline of a treaty, a 'skeleton treaty' in fact, the President's sweeping disapproval of members of the legal profession participating in the treaty-making seemed to be, and I believe was, intended to be notice to me that my counsel was unwelcome. Being the only lawyer on the delegation I naturally took this remark to myself, and I know that other American Commissioners held the same view of its purpose. If my belief was unjustified, I can only regret that I did not persevere in my criticisms and suggestions, but I could not do so believing as I then did that a lawyer's advice on any question not wholly legal in nature was unacceptable to the President, a belief which, up to the present time, I have had no reason to change."—R. Lansing, *Peace negotiations*, pp. 8-9, 107-108.—The peace conference opened in Paris, January 18, 1919. See PARIS, CONFERENCE OF; also VERSAILLES, TREATY OF; LEAGUE OF NATIONS.

ALSO IN: R. S. Baker, *What Wilson did at Paris, 1918-1920*.—Reconstruction begins.—Railroads returned to owners.—New powers given to Interstate Commerce Commission.—Fuel administration revived.—Settlement of bituminous coal strike.—Efforts to combat rising cost of living.—"After the signing of the armistice many of the

war organizations wound up their affairs and passed out of existence. Food control, regulation of industries under the War Industries Board, war control of foreign commerce, among others, rapidly disappeared. Meanwhile the railroads and telegraphs were returned to their owners. In the spring of 1920 Congress repealed many of the war measures, but the President declined to sign the Act and thus the war laws remained on the statute books. Meanwhile Congress enacted a new Railway Act designed to put the roads on a permanent peace basis. The powers of the Interstate Commerce Commission were enlarged and the body was charged with new duties. The Commission was increased to eleven members and the jurisdiction of the body was extended to export rates used by any vessels registered under the lead of the United States. Recognizing the increased cost of operating the roads, Congress authorized the Commission to increase the railroad rates and to make other financial provisions for the roads."—I. Lippincott, *Economic development of the United States*, p. 664.—See also RAILROADS: 1916-1920.—"Although the United States . . . [had] not officially made peace, numerous war agencies, created while the war was in progress . . . [were] dissolved. This began shortly after the signing of the armistice in November, 1918. Some of these agencies . . . [were continued, however], though on a greatly diminished scale. The United States Employment Service was abandoned on October 10 [1919] because of a lack of funds. The Department of Labor, however, continued to supply information to state employment agencies. Late in September the War Department announced that the placing of soldiers had been practically completed. Francis P. Garvan . . . continued to act as Alien Property Custodian. When the strike of 400,000 bituminous coal miners threatened, late in October [1919], the President revived the Fuel Administration and restored the regulations dealing with the fixing of coal prices at the mines and the fixing of dealers' commissions. These regulations were again administered by the Fuel Administrator, Harry A. Garfield. The appeal of President Wilson to the miners, urging them to rescind their strike order, having proved unsuccessful, Attorney General Palmer secured, on October 31, a temporary injunction from Judge Anderson of the U. S. District Court at Indianapolis, restraining the officers and leaders of the miners from sending out further strike orders and the officers of the United Mine Workers from disbursing union funds for strike benefits. Authority for the issuance of this injunction was derived from the Food and Fuel Control Act, which made it a penal offence to conspire to prevent the production of coal during the war. Nevertheless, on November 1, more than 400,000 miners quit work. A week later another injunction was obtained, ordering the officials of the miners union to withdraw the previous strike order. This they did on November 11, but the men refused to return to the mines. The Secretary of Labor finally succeeded in bringing the parties together for a conference at Washington on November 14. The Government was represented by Secretary of Labor Wilson, Fuel Administrator Garfield, Attorney General Palmer and Director General Hines. The miners were represented by John L. Lewis, acting president of the United Mine Workers. During this and succeeding conferences it developed that the Fuel Administrator and the Secretary of Labor entertained different opinions relative to the conditions that should be

offered the miners. The Secretary favored a wage increase of 31.6 per cent. Considering this excessive, the Fuel Administrator proposed a 14 per cent increase with the proviso that operators were not to increase the price of coal to meet the wage increase. On December 9 the President offered as a compromise an immediate increase in wages of 14 per cent and the establishment of a commission to consider further concessions—this commission to consist of three persons to represent, respectively, the miners, the operators and the general public. On the day following, a conference of the district representatives of the miners accepted these terms. Dr. Garfield, dissatisfied with the President's method of settling the strike, resigned on December 13. On December 22 the President named as members of the Coal Strike Commission, Henry M. Robinson, John P. White, former president of the United Mine Workers, and Rembrandt Peale, an independent coal operator. On March 11 the commission submitted a majority report in favor of a general wage increase of 27 per cent without any change in working hours and conditions. On March 29 the joint conference of miners and operators agreed that the award of the commission should become effective on April 1. Early in March the Operators' and Miners' Wage Scale Committee of the anthracite mine districts began negotiations for a new wage agreement. Early in June both sides agreed to the President's plan for the appointment of a commission similar to the bituminous coal commission. The President thereupon appointed William O. Thompson, President of Ohio State University, to represent the public, William L. Connell, an independent operator of Scranton, to represent the operators, and Neil Ferry, of the United Mine Workers, to represent the workers. [See also LABOR STRIKES AND BOYCOTTS: 1919: Bituminous coal strike.] . . . On February 28 President Wilson issued an executive order providing for the continuation of the powers of the Fuel Administration, dividing them however, between the Director General of Railroads and a commission of four. The government's control of bituminous prices was ordered to terminate on April 1.—The Food Administration came to an end early in 1919. However, there remained in existence until June 1, 1920, the Sugar Equalization Board and the Grain Corporation, . . . the chairman of which was Julius H. Barnes. On August 23 [1919] the American Relief Administration closed its Paris Office, thus formally terminating its work. The feeding of 4,000,000 underfed children in various European countries continued to be carried on by a charitable organization formed by Mr. Hoover. During the six months of its existence, ending May 31, 1919, the American Relief Administration distributed supplies valued at over \$800,000,000 in seventeen countries. [See INTERNATIONAL RELIEF.] The War Labor Board ended its existence on August 12 on account of lack of funds. During the fifteen months of its existence the board adjusted over 1,200 labor controversies. In August President Wilson ordered the transfer of the Records of the Committee on Public Information and of the War Industries Board to the Council of National Defense, to be catalogued and preserved for future emergencies. The annual report of the Council, issued in November [1919], summarized the work accomplished since its organization in the winter of 1916. Its total cost was only \$1,500,000. On February 18 [1920] Grosvenor B. Clarkson, director of the Council, resigned. . . . During the pe-

riod under review the Administration made efforts to combat the rising cost of living. Early in August [1919] the President asked Congress for additional legislation. He stated that wheat shipments and credits to facilitate the purchase of our wheat would be controlled so as to lower the price of flour here; that surplus stocks of both food and clothing in the hands of the government would be sold without profit; that foodstuffs would be drawn out of storage and sold by legal action whenever necessary; that combinations of producers and distributors formed to control prices would be vigorously prosecuted; and that publicity would be employed by agencies of the government to inform the public of supplies not available because of hoarding and price manipulation. The Attorney General announced that since investigations by the Federal Trade Commission had disclosed a 'clear violation of the anti-trust laws' by the Chicago meat packers, vigorous action would at once be brought against these combinations. The government's attitude resulted in an agreement between the 'Big Five'—Armour and Company, Swift and Company, Morris and Company, Wilson and Company and the Cudahy Packing Company—and the Department of Justice, under the terms of which the packers and their subsidiaries agreed to sell all their holdings in public stockyards, stockyard railroads and terminals and their interests in market newspapers and public cold-storage warehouses, and forever to disassociate themselves from the retail meat business and such food lines as are unrelated to meat packing. This agreement, it was asserted, would avert the danger of a monopoly in food supplies."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 22-25, 30-31.—See also PRICE CONTROL: 1917-1919; TRUSTS: United States: 1919-1923.

1919.—New South.—"The end of Reconstruction [in 1876] found the tenant system and the 'crop lien' firmly fastened upon the South. . . . Few of the landless whites and practically none of the negroes had sufficient money reserve to maintain themselves for a year and hence no capital to apply to the land on which they were tenants. Yet the land was there ready to produce, the labor was there, more or less willing to work if it could but live while the crop was growing. The country merchant had already assumed the office of banker to the tenant farmer, and his position he still holds [written in 1919] in spite of all efforts to dislodge him. His customers include not only tenants but some landowners, white or black. They buy from him, during the months before the crop is gathered, the . . . supplies necessary for existence, and as many simple luxuries as he will permit. When the crops are gathered, he buys them, or at least the share of them belonging to the tenants, subtracts the store accounts, and turns over the surplus, if any, to the farmers. With thousands of these merchants selling to hundreds of thousands of farmers over a wide area, it is of

course impossible to state the average difference between credit and cash prices. . . . The merchant is supposed to be protected against loss by the institution of the crop lien and the chattel mortgage. . . . As a result of this system in some sections, years ago, nine-tenths of the farmers were in debt. Undoubtedly the prices credited for the crops have been less than might have been obtained in a market absolutely free. If the crops a farmer raises bring less than the advances, the balance is carried over to the next year and no other merchant will give credit to a man whose accounts with his former creditor are not clear. In the past the signing of one of these legal instruments has often reduced the farmer to a state of peonage. Naturally the merchant who has begun to extend credit, sometimes before the seed is in the ground, has a voice in deciding what crops shall be planted. The favorite crops in the past have been tobacco and cotton, particularly the latter. . . . Only winter wheat, sown in the fall and reaped in early summer, is grown in the South, and the crop is somewhat uncertain. A tenant who has secured advances on a crop of wheat during the fall and winter may easily move to an adjoining county or State in the spring and plant cotton there. Half a crop of corn may easily be stolen, eaten by animals, or consumed by the tenant while still green. A further reason for not encouraging the production of corn and wheat is the profit the merchant makes by the sale of imported flour, meal, and bacon. Cotton is therefore almost the only product of sections admirably suited to the growing of corn or to the raising of hogs. The country merchant has helped to keep the South poor. These relations between landlord and tenant show much diversity, but certain conditions prevail everywhere. Few tenants can sustain themselves until the crop is gathered, and a very large percentage of them must eat and wear their crops before they are gathered—a circumstance which will create no surprise unless the reader makes the common error of thinking of them as capitalists. Though the landlord in effect takes his tenants into partnership, they are really only laborers, and few laborers anywhere are six or eight months ahead of destitution. . . . There is a brighter side to this picture, however. Of all the cultivated land in the South 65 per cent is worked by owners (white 60.6 per cent; colored 4.4 per cent) and this land is on the whole much better tilled than that let to tenants. It is true that some of the landowners are chronically in debt, burdened with mortgages and with advances for supplies. Some of them probably produce less to the acre than tenants working under close supervision, but the percentage of farms mortgaged is less in the South than in any other part of the country except the Mountain Division, and unofficial testimony indicates that few farms are lost through foreclosure. . . . The General Education Board, which, with its large resources, had been seeking the best way to aid education in the South, was forced to the conclusion that any educational development must be preceded by economic improvement. . . . 'Dr. Knapp endeavored to teach his hearers not only how to raise cotton and corn, but how to conduct farming as a business—how to ascertain the cost of a crop, how to find out whether they were making or losing money. As rapidly as possible the scope was broadened for the purpose of making the farmer more and more independent. He was stimulated to raise stock, to produce feed and forage for his stock, and to

interest himself in truck gardening, hog-raising, etc.' . . . Throughout the South there are thousands of homes into which no newspaper comes, certainly no agricultural paper, and in which there are few books, except perhaps school books. The cooking is sometimes done with a few simple utensils over the open fire. Water must be brought from a spring at the foot of the hill, at an expenditure of strength and endurance. The cramped house has no conveniences to lighten labor or to awaken pride. The overworked wife and mother has no social life, except perhaps attendance at the services at the country church to which the family rides in a springless wagon. Such families see their neighbors prosper without attempting to discover the secret for themselves. Blank fatalism possesses them. They do not realize that they could prosper. New methods of cultivation, they think, are not for them since they have no capital to purchase machinery. On the other hand, one sees more Ford cars than teams at many country churches, and many larger automobiles as well. Some Southern States are spending millions for better roads, and the farmer or his son or daughter can easily run into town in the afternoon carrying a little produce which more than pays for any purchases. Tractors are seen at work here and there, and agricultural machinery is under the sheds. Many houses have private water systems and a few farmers have harnessed the brooks for electric lights. The gas engine which pumps the water runs the corn sheller or the wood saw. The rural telephone spreads like a web over the countryside. Into these houses the carrier brings the daily or semi-weekly paper from the neighboring town, agricultural journals, and some magazines of national circulation; a piano stands in the parlor; and perhaps a college pennant or two hang somewhere, for many farm boys and girls go to college. In spite of the short terms of the public schools, many manage to get some sort of preparation for college, and in the South more college students come from farm homes than from town or city. This encouraging picture is true, no less than the other, and the number of such progressive farm homes is fortunately growing larger. A greater range of products is being cultivated throughout the South. . . . The output of corn, wheat, hay, and pork has increased in recent years, though the section is not yet self-sufficient. The growing of early vegetables and fruits for Northern markets is a flourishing industry in some sections where land supposedly almost worthless has been found to be admirably adapted for this purpose. An increasing acreage in various legumes not only furnishes forage but enriches the soil. Silos are to be seen here and there, and there are some excellent herds of dairy cattle, though the scarcity of reliable labor makes this form of farming hazardous. The cattle tick is being conquered, and more beef is being produced. Thoroughbred hogs and poultry are common. . . . The mills of the South have continued to increase until they are now much more numerous than in the North. They are smaller in size, however, for in 1915 the number of spindles in the cotton-growing States was 12,711,000 compared with 19,396,000 in all other States. The consumption of cotton was nevertheless much greater in the South and amounted to 3,414,000 bales, compared with 2,770,000 bales in the other States. This difference is explained by the fact that Southern mills, generally spin coarser yarn and may therefore easily consume twice or even three times as much cotton

as mills of the same number of spindles engaged in spinning finer yarn. Some Southern mills, however, spin very fine yarn from either Egyptian or sea-island cotton, but time is required to educate a considerable body of operatives competent to do the more delicate tasks, while less skillful workers are able to produce the coarser numbers. Southern mills have paid high dividends in the past and have also greatly enlarged their plants from their earnings. They had, years ago, several advantages, some of which persist to the present day. The cost of the raw material was less where a local supply of cotton could be obtained, since freight charges were saved by purchase in the neighborhood; land and buildings for plant and tenements cost less than in the North; fuel was cheaper; water power was often utilized, though sometimes this saving was offset by the cost of transportation; taxes were lower; the rate of wages was lower; there was little or no restriction of the conditions of employment; and there were comparatively few labor troubles."—H. Thompson, *New South*, pp. 60-64, 70, 74-76, 82-84, 95-96.

1919 (January).—Death of Theodore Roosevelt.—Memorial address by Senator Lodge.—"Theodore Roosevelt died peacefully in his sleep at his home in Oyster Bay, at 4 o'clock in the morning of January 6, 1919. . . . He died as he would have wished to, in the home that he loved, with his family about him, in the full possession of his faculties, in the midst of work that was nearest to his heart, and at the summit of his fame."—J. B. Bishop, *Theodore Roosevelt and his time*, v. 2, p. 475.—On February 9, Senator Lodge, who had long been his close friend, delivered a memorial address in the presence of both Houses of Congress.

1919 (January).—Recognition of Polish independence. See POLAND: 1919.

1919 (February-March).—Attitude of the Senate toward Covenant of the League of Nations.—Conference of Committee on Foreign Relations with the president.—"The first part of the treaty text to be made public was the Covenant of the League of Nations approved by the Peace Conference on February 14, 1919, which, under the resolution adopted by the Conference on January 25, 1919, 'should be treated as an integral part of the general treaty of peace.' Opposition to the Covenant was expressed in the Senate soon after the text became known in the United States and, when the President returned from Paris to Washington in February, 1919, he invited the members of the Senate Committee on Foreign Relations and of the House Committee on Foreign Affairs to the White House for the purpose of discussing the terms of the Covenant. This took place at a dinner on February 26, 1919. According to one of the Senators present on that occa-

sion, attention was directed to 'what were considered to be vital defects and infringements of our Constitution and form of government. Great changes of our traditional policies were pointed out and discussed, and the President was informed that those changes would be absolutely necessary, and that the Covenant in the form in which it then stood was absolutely unsatisfactory to the Committee on Foreign Relations of the Senate.' The objections thus pointed out informally to the President were given more definite form on March 4, 1919, the last day of the Sixty-Fifth Congress, when . . . [a] resolution, the consideration of which was prevented by lack of unanimous consent, was inserted in the record."—G. A. Finch, *Treaty of peace with Germany in the United States Senate*, pp. 4-5.—The following is the text of the resolution:

Whereas, under the Constitution, it is a function of the Senate to advise and consent to, or dissent from the ratification of any treaty of the United States, and no such treaty can become operative without the consent of the Senate expressed by the affirmative vote of two-thirds of the Senators present, and

Whereas, owing to the victory of the arms of the United States and of the nations with whom it is associated, a Peace Conference was convened, and is now in session at Paris for the purpose of settling the terms of peace; and,

Whereas, a Committee of the conference has proposed a constitution for a League of Nations, and the proposal is now before the Peace Conference for its consideration;

Now, therefore, be it resolved, by the Senate of the United States in the discharge of its constitutional duty of advice in regard to treaties, that it is the sense of the Senate that, while it is the sincere desire that the nations of the world should unite to promote peace and general disarmament the Constitution of the League of Nations in the form now proposed to the Peace Conference should not be accepted by the United States.

And be it resolved further, that it is the sense of the Senate that the negotiations on the part of the United States should immediately be directed to the utmost expedition of the urgent business of negotiating peace terms with Germany satisfactory to the United States and the nations with whom the United States is associated in the war against the German Government, and the proposal for a League of Nations to insure the permanent peace of the world should be then taken up for careful and serious consideration.

1919 (March).—President Wilson defends the League in speech in New York.—Returns to Paris.—“The President’s reply to the request of the thirty-seven Senators for the separation of the Covenant from the treaty was given in his speech at the Metropolitan Opera House in New York City on March 4, 1919, in which, after vigorously defending the Covenant, he said: ‘When that treaty comes back gentlemen on this side will find the Covenant not only in it, but so many threads of the treaty tied to the Covenant that you cannot dissect the Covenant from the treaty without destroying the whole vital structure.’ President Wilson evidently did not at that time doubt his ability to secure the approval of the treaty by the United States, including the Covenant of the League of Nations. His course was warmly defended by Senators of his own party. Some peace societies, notably the League to Enforce Peace, undertook a nation-wide propaganda to develop public sentiment for the League, and the President no doubt felt justified in relying upon the traditionally favorable disposition of the American people and government toward the substitution of peaceful methods for war in the settlement of international disputes. He publicly expressed his confidence in the popular support of his program at home in his speech at New York above referred to, made on the eve of his return to Paris. In opening that address he said: ‘The first thing I am going to tell the people on the other side of the water is that an overwhelming majority of the American people is in favor of the League of Nations. I know that this is true. I have had unmistakable intimations of it from all parts of the country, and the voice rings true in every case.’”—G. A. Finch, *Treaty of peace with Germany in the United States Senate*, p. 6.—Ex-President Taft spoke for the League from the same platform. The following day the president sailed again for Paris.

1919 (May-June).—Special session of Congress.—While in France, the president called a special session of the Sixty-sixth Congress to meet on May 19. A review of the activities of the House during the first month of the session follows: “The special session of the Sixty-sixth Congress has been in session one month. During that time the

House of Representatives has considered and passed the six general supply bills and the railroad deficiency bills which failed in the closing hours of the last Congress at the end of a three months’ session. In the consideration and the passage of these bills the House has effected a saving of approximately a billion dollars in the amounts carried in the same bills which failed in the session that expired March 4 last. These savings were in the main on three bills, though there were some reductions on all, and on these three bills, the Army, Navy, and sundry civil, the reductions were in round figures approximately as follows: On the Army appropriation bill, \$400,000,000. On the Navy appropriation bill, \$225,000,000. On the sundry civil appropriation bill, \$835,000,000. In addition to these reductions the bill to supply deficiencies in railway revenues, as it passed the House, carried \$750,000,000 instead of \$1,200,000,000, as estimated by the Railroad Administration—a reduction of \$450,000,000. These savings, taken altogether, total nearly one and one-half billion dollars as the approximate net reduction on appropriations by this first session of the Republican Congress below the proposed appropriations of the closing session of the Democratic Congress and the estimates. Not only has the House made an unprecedented record during the 30 days of the session in disposing of appropriation bills, but the bills have received careful and businesslike consideration both in committee and on the floor. The reductions have not been made recklessly but after due consideration. Notwithstanding the very great savings that have been accomplished in the appropriations, it can be said without fear of successful contradiction that no legitimate, essential, or useful public service has been injuriously curtailed by the reductions that have been made. The Army and the Navy and the civil services of the Nation will all be adequately cared for and provided for under the appropriations that have been made by the House. At the beginning of the session the Republican majority of the House in conference promised speedy action on these appropriation bills and also prompt consideration of a program of legislation and investigation. There can be no question but what this pledge has been splendidly kept as far as appropriations are concerned, and in the matter of legislation the House has considered and passed the woman suffrage resolution, the daylight-saving repeal, and the bill returning the wires to their owners, and the various committees of the House are actively engaged in the consideration of other important legislation. A committee has been constituted to make an audit and study of the expenditures of the War Department during the period of the war, totaling \$16,000,000,000. This committee has organized, subdivided into subcommittees, and is prepared for work.”—*Congressional Record, June 27, 1919, pp. 2032-2033.*

1919 (July-September).—Discussion over League of Nations.—Peace treaty in the Senate Committee of Foreign Relations.—“An animated debate was taking place in the United States over the league of nations. Practically all Americans were eager to prevent war in the future, but many doubted whether the league would secure that desirable result. The issue was also confused by political considerations. Many Democrats forthwith declared themselves favorable to the league without having actually studied the covenant. Many Republicans took an exactly contrary course. However, some Democrats opposed the league, while a number of Republicans, the most notable of whom was ex-President Taft, ardently favored it. Those who opposed the league made much of the fact that it would involve us in European affairs and meant throwing away for ever Washington’s advice against entangling alliances. Many men did not oppose the general idea of a league, but criticised various features of the one proposed. Amendments adopted by the peace conference removed some of these objections. The most notable of these amendments was the one affirming the continued validity of the Monroe doctrine.”—P. L. Haworth, *United States in our own times*, p. 493.—“Such was the situation when President Wilson on July 10, 1919, personally submitted the peace treaty with Germany to the Senate with an earnest appeal for its prompt ratification. Under the rules of the Senate, the treaty was referred to the Committee on Foreign Relations. The Committee decided to hold public hearings, which began July 31, and ended on September 12. During its consideration of the treaty the Committee met on 37 days, sitting sometimes in the morning and afternoon. In the course of the hearings the Committee had before it Honorable Robert Lansing, Secretary of State and one of the American Peace Commissioners, and several of the technical advisers to the American Peace Commission, including Mr. B. M. Baruch, economic adviser, Mr. Norman H. Davis, financial adviser, and Mr. David Hunter Miller, legal adviser. In addition to these officials who took part in the formulation and drafting of the treaty, the Committee heard a number of private persons interested in particular sections of the treaty, especially those relating to geographical distribution of territories and the self-determination of peoples. The presentation of such subjects was made by American citizens as, under the rules of the Committee, only American citizens could be heard by it. The proposed transfer of Shantung to Japan was opposed by Mr. Thomas F. Millard, who styled himself the unofficial friendly counsellor of China, and Mr. John C. Ferguson, official adviser to the President of China. A statement on this subject was also made by Professor E. T. Williams, technical adviser on Far Eastern affairs to the American Peace Commission. . . . The most important part of the hearings was a conference with the President at the White House, which took place on August 19, 1919. It would be impossible within a short space to give an adequate summary of the conversation between the President and the sixteen Senators who participated. The President’s views were presented in writing at the opening of the conference, of which the following extract contains the material part: ‘Nothing, I am led to believe, stands in the way of the ratification of the treaty except certain doubts with regard to the meaning and implication of certain articles of the Covenant of the

League of Nations; and I must frankly say that I am unable to understand why such doubts should be entertained. You will recall that when I had the pleasure of a conference with your committee and with the Committee of the House of Representatives on Foreign Affairs at the White House in March last the questions now most frequently asked about the League of Nations were all canvassed with a view to their immediate clarification. The Covenant of the League was then in its first draft and subject to revision. It was pointed out that no express recognition was given to the Monroe Doctrine; that it was not expressly provided that the League should have no authority to act or to express a judgment on matters of domestic policy; that the right to withdraw from the League was not expressly recognized; and that the constitutional right of the Congress to determine all questions of peace and war was not sufficiently safeguarded. On my return to Paris all these matters were taken up again by the Commission on the League of Nations and every suggestion of the United States was accepted. The views of the United States with regard to the questions I have mentioned had, in fact, already been accepted by the Commission and there was supposed to be nothing inconsistent with them in the draft of the Covenant first adopted—the draft which was the subject of our discussion in March—but no objection was made to saying explicitly in the text what all had supposed to be implicit in it. . . . The right of any sovereign State to withdraw had been taken for granted, but no objection was made to making it explicit. Indeed, so soon as the views expressed at the White House conference were laid before the Commission it was at once conceded that it was best not to leave the answer to so important a question to inference. No proposal was made to set up any tribunal to pass judgment upon the question whether a withdrawing nation had in fact fulfilled “all its international obligations and all its obligations under the Covenant.” It was recognized that that question must be left to be resolved by the conscience of the nation proposing to withdraw; and I must say that it did not seem to me worth while to propose that the article be made more explicit, because I knew that the United States would never itself propose to withdraw from the League if its conscience was not entirely clear as to the fulfilment of all its international obligations. It has never failed to fulfil them and never will.

“Article 10 is in no respect of doubtful meaning when read in the light of the Covenant as a whole. The Council of the League can only “advise upon” the means by which the obligations of that great article are to be given effect to. Unless the United States is a party to the policy or action in question, her own affirmative vote in the Council is necessary before any advice can be given, for a unanimous vote of the Council is required. If she is a party, the trouble is hers anyhow. And the unanimous vote of the Council is only advice in any case. Each Government is free to reject it if it pleases. Nothing could have been made more clear to the conference than the right of our Congress under our Constitution to exercise its independent judgment in all matters of peace and war. No attempt was made to question or limit that right. The United States will, indeed, undertake under Article 10 to “respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League,” and that engagement constitutes a very grave and solemn moral obligation.

But it is a moral, not a legal, obligation, and leaves our Congress absolutely free to put its own interpretation upon it in all cases that call for action. It is binding in conscience only, not in law. Article 10 seems to me to constitute the very backbone of the whole Covenant. Without it the League would be hardly more than an influential debating society."—G. A. Finch, *Treaty of peace with Germany in the United States Senate*, pp. 7-13.

1919 (July-September).—President Wilson's endeavors to obtain unconditional ratification of the treaty.—Speech-making tour.—Illness of the president.—"Debate in the Senate continued while the treaty was under consideration by the Committee on Foreign Relations. It increased in volume and diversity until the Senators became divided into three groups. A small number of Senators absolutely opposed the ratification of the treaty in any form, and because of their insistent opposition they became known as the 'irreconcilables.' A larger group supported the President's demand that the treaty be ratified as signed, but later indicated their willingness to accept reservations of an 'interpretative character.' The third group was made up of Senators who favored the ratification of the treaty on condition that it contain reservations safeguarding what they believed to be the substantial rights and interests of the United States. This group itself did not remain compact, but developed a schism of so-called 'mild reservationists' who favored a larger participation of the United States in world affairs and therefore a minimum of reservations, as against the more restricted participation and maximum program of reservations advocated by the main group of reservationists. As the debate progressed in the Senate and individual Senators expressed their views, it became apparent that the treaty could not obtain the necessary votes for ratification even with 'interpretative reservations.' President Wilson endeavored to save the situation by personal conferences at the White House with mild reservation Senators; but the serious probability that the Senate would not fully approve his work at Paris forced him to play what he evidently relied upon as his strongest hand, namely, a direct appeal to the people to support the treaty and to bring sufficient pressure to bear upon the opposing Senators to obtain its ratification in form acceptable to him. Accordingly the President undertook to accomplish this purpose in a speech-making tour of the West. . . . His physical exertions on this strenuous 9,500 mile trip to bring about their ratification, in the course of which he made thirty-seven addresses of an average length of 5,000 words each in twenty-nine cities on eighteen days, exclusive of Sundays, spending his nights and the intervals between speeches in his Pullman car, came near resulting unfortunately in the tragic fulfilment of the declaration made in the course of his address at Spokane, Washington, on September 12, 1919, that 'I am ready to fight from now until all the fight has been taken out of me by death to redeem the faith and promises of the United States.'"—G. A. Finch, *Treaty of peace with Germany*, pp. 14-15.—"To be ratified by the United States the treaty must receive the votes of two-thirds of the senators voting upon it. A majority of the senators were Republicans, and feelings in the Senate against Wilson had come to be very bitter. . . . A number of senators, including Johnson and Borah, who opposed the League altogether, fol-

lowed a few days behind him [President Wilson], speaking at the same places, and they . . . were greeted by large crowds. On his way back from the Pacific Coast the President had an apoplectic stroke and was forced to give up the rest of his tour. For several months he was confined to the White House and was able to see only a few persons and to consider only extremely important questions. Meanwhile the mass of the people were kept in ignorance of his exact condition."—P. L. Haworth, *United States in our own times*, pp. 493-494.

1919 (August).—Plumb plan proposed for solving problem of nationalization of railroads. See RAILROADS: 1919: Plumb plan.

1919 (August).—Repeal of daylight saving law. See DAYLIGHT SAVING MOVEMENT: 1919.

1919 (August-November).—Problems of living.—Labor difficulties.—Railway strikes.—Settlement through government intervention.—"Hectic conditions prevailed in the United States. Shortage of commodities of almost all kinds had soon stimulated industry and solved the problem of unemployment, but prices soared to heights hitherto undreamed of, profiteers reaped rich harvests at the public expense, and there was great unrest among laborers. Increased prices provoked demands for increased wages and vice versa, and no one could say when this pyramiding would end. Great strikes among steel-workers, bituminous coal miners, and railway men deranged industry and threatened the welfare of the country. It was clear that the question of industrial peace was one of the most serious that confronted the country. Our industrial society had become so complicated and the parts so interdependent that it was possible for a comparatively small minority of workers to bring want and misery to the whole country."—P. L. Haworth, *United States in our own times*, p. 497.—"In spite of the large increases in the wages of railroad employees the last seven months of government control were notable for serious labor difficulties. These difficulties were complicated by the insistence of the brotherhoods upon the so-called 'Plumb Plan.' [See RAILROADS: 1919: Plumb plan.] On August 1 a strike occurred among the railway shopmen, who demanded an increase of 17 cents an hour over their previous wage of 68 cents. The strike was not authorized by the national officers of the shopmen's union. Early in the year the men had presented their grievances to the official Wage Adjustment Board, but no decision had been reached. In July the Director General asked Congress to create a new wage board. This request, however, was refused. Thereupon the President, on August 7, directed Mr. Hines to use the authority vested in him to adjust wage differences, on condition that the strikers return to work. In the meantime the strike had spread from the Chicago district to New York and Boston, causing freight embargoes and the cancellation of numerous trains. The President directed the Railroad Administration to use its full authority to move the trains in the southwestern states where unauthorized strikes had occurred. District attorneys were ordered to arrest persons interfering with traffic. The Director General sent an ultimatum stating that all employees not reporting for duty on August 30 would be regarded as having terminated their employment. On August 25 President Wilson in a statement appealed to the men to postpone their

demands. He offered, however, to grant the shopmen an increase of 4 cents an hour so that their wages would correspond with those of other classes of railroad employees. On September 21 it was announced that the shopmen's union had accepted the offer. On November 15 Director General Hines submitted to the representatives of the four railway brotherhoods propositions increasing the wage scale approximately \$36,000,000 a year. This increase, which was accepted in lieu of the workers' demands, affected trainmen, firemen, engineers and conductors, but more particularly those employed in the slow-freight service. As a result of a conference of the Railroad Administration and the Brotherhood of Maintenance-of-way Employees and Railway Track Laborers on November 24, a new wage and working agreement was signed. Approximately 400,000 men were affected. While the demands of the union were not fully met, the eight-hour basic day was established for track laborers, and time and a half pay for overtime was granted."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 25-26.

1919 (August-December).—Administration endeavors to deal with the high cost of living.—Fair price committees.—Sugar Control Bill.—"On August 10 [1919] the Attorney General in a dispatch to former state food administrators urged that fair price committees be appointed to secure accurate information relative to charges of profiteering in necessary commodities, such information to be reported to the Department of Justice. A vigorous campaign against hoarding food in cold storage for speculative purposes was at once instituted. Government prosecutors in many localities began filing libels for the seizure of eggs, sugar, rice, meat, etc. On November 21 the President again placed the government in control of the nation's food supply by transferring the authority of the Food Administration to the Attorney General. The immediate cause of the revival of these war functions was the effort to avert a sugar famine. Immediate steps were taken to allocate the sugar stocks in the country. On the last day of the year the President signed the McNary Sugar Control Bill, under which the Sugar Equalization Board was continued for one year."—*Ibid.*, p. 31.

1919 (September).—Signing of Treaty of St. Germain ending war with Austria. See ST. GERMAIN, TREATY OF.

1919 (September-November).—Treaty of peace in the Senate.—Rejection of resolutions of ratification.—On September 10, the Committee on Foreign Relations reported the treaty of peace with Germany to the Senate with recommendations of a number of amendments and reservations. "The treaty of peace [Treaty of Versailles] became the regular business before the Senate on September 15. On the following day its consideration was begun section by section. On September 27, the first 111 articles had been read and the reading was interrupted to take up the amendments proposed by the Committee to eliminate the United States from participation in certain work connected with the execution of the treaty. The amendments eliminated the American representatives from the commissions to run the frontiers between Belgium and Germany, Poland and Germany, and Czecho-Slovakia, and from the commissions to administer the Saar Basin, Upper Silesia, East Prussia and Schleswig during the pe-

riods of the plebiscites and to carry out their results. They also eliminated the participation of the United States in future negotiations regarding the status of Luxemburg and from the proposed agreements with Poland and Czecho-Slovakia regarding the protection of minorities. The United States was further eliminated from any part in the appointment of the manager of the Central Rhine Commission, and from the acceptance of any right or title in Memel and Danzig or participation in the future settlement of their status. The above amendments were debated until October 2, when they were put to a vote under a unanimous-consent agreement. All were rejected by votes ranging from 58 yeas to 30 nays to votes without the formality of a roll call. The reading of the treaty was resumed on October 7 and 8, when the amendments were reached transferring to China instead of Japan the German lease and rights in Shantung. Debate on these amendments continued until October 16, when they were also voted upon under a unanimous-consent agreement, and rejected by a vote of 35 yeas to 55 nays. The reading of the treaty was immediately resumed and on the following day, October 17, the Committee's amendment was reached restricting the participation of the American member of the Reparation Commission to matters arising under Annex 3 to the reparation clauses, unless otherwise specifically instructed by his government to take part. The amendment was promptly voted upon and rejected by a *viva voce* vote. The reading of the treaty then proceeded until October 20 when it was completed. On October 22 the Senate took up the first amendment, which had been passed over, intended to secure equality of voting of the United States in the Council and Assembly of the League of Nations. This amendment proposed to insert the following proviso at the end of Article 3 of the Covenant: 'Provided, that when any member of the League has or possesses self-governing dominions or colonies or parts of empire, which are also members of the League, the United States shall have votes in the Assembly or Council of the League numerically equal to the aggregate vote of such member of the League and its self-governing dominions and colonies and parts of empire in the Council or Assembly of the League.' The amendment was rejected on October 27 by a vote of 38 yeas to 40 nays. The second Committee amendment on the same subject was then taken up. It proposed to insert the following paragraph in Article 15 of the Covenant: 'Whenever the case referred to the Assembly involves a dispute between one member of the League and another member whose self-governing dominions or colonies or parts of empire are also represented in the Assembly, neither of the disputant members nor any of their said dominions, colonies, or parts of empire shall have a vote upon any phase of the question.' . . . On October 30, Senator La Follette moved to strike out Part XIII of the treaty dealing with the International Labor Organization. This motion was defeated on November 5 by a vote of 34 yeas to 47 nays. On November 4, Senator Lodge moved to strike out Articles 156, 157, and 158 of the treaty dealing with the question of Shantung. This proposal was immediately rejected by a vote of 26 yeas to 41 nays. On November 5, Senator Gore proposed to insert at the end of the first paragraph of Article 12 of the Covenant a proviso that members of the League should not resort to war until an advisory vote of the people shall have been taken, which was rejected on November 6 by a vote of 16 yeas to 67 nays. The argument

chiefly used by the opponents of textual amendments was that their adoption would necessitate a resubmission of the treaty to the Peace Conference, including Germany. As shown by the votes upon the amendments, the majority of the Senate was opposed to such a course. The opposition to amendments was so evident that on the same day that they were taken up in the Senate for consideration (October 22), the Committee on Foreign Relations met for the purpose of substituting reservations for them. On October 24, Senator Lodge, on behalf of the Committee on Foreign Relations, reported a new draft of the reservations already reported, together with certain additional reservations, making fourteen in all, preceded by a preamble. On November 6, after the Senate had rejected all of the proposed amendments, Senator Lodge moved the adoption of the new reservations and preamble. Voting upon them began the following day. . . . [The "Lodge reservations" were adopted.] After all of the reservations had been acted upon on November 18, those adopted in the Committee of the Whole were reported to the Senate and concurred in as adopted, except No. 4, which was amended. . . . The resolution of ratification, including the reservations adopted, was presented by Senator Lodge immediately upon the convening of the Senate on November 19, when ninety-three of the ninety-six Senators answered the roll call. After a number of Senators had explained why they intended to vote for or against the resolution of ratification, the vote was taken and resulted in 39 for and 55 against, so that the resolution of ratification was rejected, two-thirds of the Senators present not having voted in favor of it. A formal motion to reconsider the vote was adopted. . . . Senator Lodge's resolution of ratification was then reconsidered and again rejected by 41 yeas to 51 nays. A resolution of unconditional ratification offered by Senator Underwood was also rejected, the vote being 38 yeas and 53 nays. Whereupon the Senate adjourned." G. A. Finch, *Treaty of peace with Germany in the United States Senate*, pp. 22-24, 39-41.

"For many weeks the struggle over the treaty dragged along in the Senate. All amendments to the League of Nations Covenant were voted down, but the committee of the whole adopted fourteen 'reservations' limiting America's liability under the Covenant. President Wilson strongly opposed the reservations, and a situation developed which resulted (November, 1919) in the defeat of the treaty by a vote of 55 to 39. Four Democrats voted for ratification with reservations and 13 Republicans against ratification. The special session of Congress then adjourned. Each side to the controversy sought to throw the blame for the failure upon the other. Meanwhile the United States continued to be technically at war with Germany. When Congress met in December the treaty was again submitted to the Senate, and a new struggle ensued. As in the special session, the main battle raged over the reservation to Article X of the Covenant. This article bound members of the League 'to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League.' On March 15, 1920, after days of debate, the Senate, by a vote of 56 to 26, voted the following reservation to Article X: 'The United States assumes no obligation to employ its military or naval forces, its resources or any form of economic discrimination to preserve the territorial integrity or political independence of any other country, or to interfere in

controversies between nations—whether members of the League or not—under Article X, or to employ the military or naval forces of the United States under any article of the treaty for any purpose unless in any particular case the Congress, in the exercise of full liberty of action, shall by act or joint resolution so declare.' Supporters of the reservation contended that it did little more than reaffirm the Constitution of the United States, which reserves to Congress the right 'to declare war.' But President Wilson took the view that Article X must not be touched. Of a milder reservation adopted the previous autumn he had declared that it was a 'knife-thrust at the heart of the covenant,' and he now reiterated the view that any reservation which sought 'to deprive the League of Nations of the force of Article X cuts at the very heart and life of the covenant itself.' In a letter addressed to his party on January 8, 1920, he said that, if the treaty could not be adopted as it stood, it should be submitted to a solemn referendum at the coming election. Not all Democrats took this view. William Jennings Bryan, for example, declared in favor of compromise, and many Democratic senators refused to support the Wilsonian stand. Fourteen joined the Republicans in adopting the reservation, and 23 voted for the ratification of the treaty with reservations, of which there were 15 in all. The final vote on ratification (March 19, 1920), counting pairs, stood: for ratification, 34 Republicans, 23 Democrats; against ratification, 15 Republicans, 24 Democrats. The vote for ratification lacked seven of the necessary majority, and thus the treaty again failed. A joint resolution declaring the war at an end passed both houses in April and May but was vetoed by the President."—P. L. Haworth, *United States in our own times*, pp. 494-496.

1919 (September - December). — Campaign against Communist agitators.—Deportation of alien "Reds."—"During the year [1919] the government conducted a vigorous campaign against radical agitators. The campaign was carried on mainly through the Department of Justice and the Post-Office Department in the enforcement of the Espionage Act and the laws denying the use of the mails for distributing improper publications. On November 7 simultaneous arrests were made of several hundred officers and members of radical organizations in a dozen cities of the United States on warrants charging them with advocating the forcible overthrow of the government. The authorities also secured possession of large quantities of radical literature. A week later, government agents disclosed the fact that much 'red' propaganda had been carried on in the United States via Mexico, and on the following day Attorney General Palmer, in response to a Senate resolution asking for a statement regarding the activities of his Department, requested further legislation to strengthen his hands in dealing with dangerous persons. He presented statistics relative to radical and seditious literature distributed in the country, much of which, he said, was in open advocacy of the destruction of the United States government. During the summer and autumn of 1919 a considerable number of alien agitators had been collected at Ellis Island for deportation. Although the federal court of New York had held that the government had authority to deport them, it ap-

peared that Immigration Commissioner Frederic C. Howe failed to act vigorously in their deportation. For this he was severely criticized. On December 22 the *Buford* or '*Soviet Ark*' sailed from New York for Russia, carrying 249 alien residents of the United States found guilty of revolutionary agitation. All were former citizens of Russia. Among those deported were Emma Goldman and Alexander Berkman. The campaign against the 'red' agitators has been continued. Wholesale arrests have been made and many incriminating papers seized. Drastic sedition bills were introduced in Congress. There has been widespread criticism of the Department of Justice for the methods used in its campaign against the radicals. Nor has this criticism come solely from the radicals themselves."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 32-33.

1919 (November).—Treaty of Neuilly signed with Bulgaria. See NEULLY, TREATY OF (1919).

1919-1920.—Changes in cabinet.—Return of American peace delegation.—"The year under review witnessed numerous changes in President Wilson's cabinet. On August 20 the Senate confirmed the nomination as Attorney General of A. Mitchell Palmer, who since March 5 had been serving under a recess appointment. To succeed William C. Redfield, who resigned November 1, President Wilson nominated as Secretary of Commerce, Joshua Willis Alexander, who took office on December 16. On January 31 David Franklin Houston succeeded Carter Glass as Secretary of the Treasury, the latter having been chosen Senator from Virginia. On the same day Edwin Thomas Meredith became Secretary of Agriculture, succeeding Mr. Houston. Franklin Knight Lane resigned as Secretary of the Interior on February 7. He was succeeded by John Barton Payne, chairman of the United States Shipping Board. On February 13, following correspondence with the President, who charged him with usurping executive power by calling cabinet meetings during the President's illness, Robert Lansing resigned the office of Secretary of State. Late in the month President Wilson nominated Bainbridge Colby of New York to succeed him. From September 2 to April 14 the President was unable on account of illness to meet with his cabinet. Frank Lyon Polk resigned on June 15 as Under-Secretary of State. He was succeeded by Norman Davis, who in November had succeeded Leo S. Rowe as Assistant Secretary of the Treasury. . . . In June, 1919, the Federal Civil Service Commission was completely reorganized. The three former commissioners resigned, and Martin L. Morrison and George R. Wales succeeded them. On March 22 the President appointed as the third member of the Commission Mrs. Helen Hamilton Gardener. . . . On December 20 the last of the members of the American Peace Delegation, Frank Polk, General Tasker H. Bliss and Mr. Henry White, returned to the United States. After that date American interests in Paris were in charge of Ambassador Wallace."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 22-23.

1919-1920.—High cost of living.—"The balance of trade [which, during the war, had turned in favor of the United States (see below: 1922: Economic situation)] had not only created great debts owed to the United States, but it had caused alarming decline in foreign exchange that acted as an automatic embargo on the American export trade. On February 4, 1920, the pound sterling could be bought in New York for \$3.19 instead of its ordinary \$4.84; and French and Belgian francs fell to between seven and eight cents, while the German mark, under the influence of defeat as well as balance of trade, incited speculation at over forty to the dollar, instead of four. After February the foreign condition gradually improved, as Europe got again to work. But American prices remained at the peak caused by the various forces of actual scarcity, high cost of labor, impeded transportation, inflation of the currency, and the spendable savings of citizens whose Liberty bonds were thrown on the market now the emergency was over. Retail food prices averaged 207 in the first six months of 1920 as against 146 in 1917, and 100 in 1913. The continuance of high prices exasperated citizens, who felt that they were in some way the fault of the Administration, and gave basis for the renewed demands of workers in every field for higher pay. In the schools and colleges, where salaries were low at best, a fear of the decay of scholarship and instruction inspired a general effort to correct the pay schedules."—F. L. Paxson, *Recent history of the United States*, p. 580.—John Hays Hammond and Jeremiah W. Jenks (writing in 1920) give a graphic account of the plight of small salaried workers, who felt the situation keenly. "A survey [they said] made in 1919 of the annual earnings in a number of different classifications of service reveals the gravity of the situation of the average salaried employee. The compensation of a large number of college professors was shown to be \$1300 and less, and the average salary of high school teachers in cities of 100,000 and over between \$1200 and \$1400. In this same salary group are found many government employees, salaried officials in the smaller municipalities, railroad clerks and the less fortunate office employees. In the corresponding wage group are found some of the lower paid day workers in the iron and steel, coal mining and manufacturing industries and the building trades. In other words, from the standpoint of earning capacity, these professors, teachers, school principals and others . . . are now on a level with loaders, oilers, car runners, trackmen and others in the coal mines, the lower paid operatives in the textile industry, and freight handlers. Many skilled workers . . . receiving wages far above this level. Marine captains and engineers earn between \$3000 and \$4000 a year. Rollers and pourers in the steel mills and superintendents and managers in several of the manufacturing industries are also in this class. Train dispatchers and passenger engineers, as well as a number of craftsmen in the steel industry, average between \$2500 and \$3000 annually,—more than many university professors now receive. The medium salary of professors in colleges listed by the Carnegie Foundation is \$2000. The yearly earnings of boilermakers in railway work average \$2059. A number of other steel workers receive between \$1800 and

\$2000, as do railroad passenger firemen, machinists, motormen and engineers in the anthracite coal mines, and tinsmiths and sheet metal workers. Since 1914 practically all these wage-earners have received increases of from 75 to 150 per cent. The compensation of the salaried class has meanwhile in many cases practically remained stationary. From the standpoint of income, the relative positions of the two classes have been reversed. In a lower group, with annual earnings from \$1000 to \$1200, the elementary school teachers of the National Capital and certain government clerical employes are found on a financial level with railroad section men, street railway conductors and motormen, coal mine laborers and members of other unskilled occupations. The average yearly wage of the 100,000 packing house employees included in this group is \$1163. Even lower still is the stipend of the teacher in elementary schools in the cities, the average being between \$800 and \$1000, on the same level as the annual wage of the common laborers in the building trades and saleswomen in department stores. Still farther down the scale, on a parity with office boys, messengers, janitors, charwomen and the like, are the clergymen and school-teachers in villages and rural communities, with incomes below \$800 a year. The inadequacy of these incomes in the light of the present day prices is apparent. Recent estimates by well-known economists place the amount necessary for the maintenance of the average family in health and reasonable comfort at from \$1700 to \$2500 a year. The Federal Department of Labor stated that in April, 1920, the cost of living was practically double what it was in 1914. No doubt a considerable proportion of the great body of wage-earners is still below a proper living standard; a majority of these were underpaid before the war and their increases have only served to keep them on the same plane as before. Many others, however, have realized advances in rates of pay which more than compensate for the higher cost of living. Figures . . . published concerning the earnings of more than half a million employees engaged in various industries indicate that the average wage of industrial workers for 1920 will be approximately \$1450. This, of course, means that many will earn less than this amount and that a considerable number will receive more. In 1915 the average earnings of these same workers was only \$595; their wages, therefore, have increased nearly 150 per cent, so that they are in reality better off than before the war. The salaried employes, on the other hand, have received relatively small advances—often none at all—and prices have cut their earnings in half. There is every evidence that high prices have brought unusual prosperity to business managers as well as to the small shopkeepers of the country; but while some good is mixed with the evil, no one can doubt that the world would be happier and better off if we could maintain a certain degree of stability in the prices of the articles in most common use.”—J. H. Hammond and J. W. Jenks, *Great American issues*, pp. 89-91.—“It is unquestionably the middle class that were the chief victims of the war-time high cost of living. Labor was no worse off than it had been before; probably it was somewhat better off, especially during the early part of 1920; though there were great bodies of unskilled laborers, like those in steel manufacturing, whose earnings remained decidedly below the lowest possible standard of living. As for the organized skilled trades, they were relatively prosperous. Most business managers were favored by the trend of prices,

some were made into profiteers, and some of the big corporations realized fabulous profits. But the middle class suffered. Salaries responded to the price curve more slowly than wages, and much more slowly than profits. Ministers perhaps suffered as badly as anybody. Thousands of capable middle-aged men left the teaching profession, discouraged and in many cases embittered.”—R. L. Finney, *Causes and cures for the social unrest*, p. 82.—See also PRICE CONTROL: 1917-1919.

1919-1921.—Relations with Japan.—Shantung transfer in Treaty of Versailles.—Immigration question.—Anglo-Japanese Alliance.—“In the Treaty of Versailles Germany renounced, in favor of Japan, all her rights, titles, and privileges in Shantung acquired by the treaty of March 6, 1898. . . . [See VERSAILLES, TREATY OF: Part IV: Section VIII.] The transfer of the German interests in Shantung to Japan raised a storm of indignation. The reason was that President Wilson had in his Fourteen Points set up a new standard of international morality, and public opinion was disposed to hold him strictly to that standard. The secret treaties of the Allies upholding Japanese claims were not revealed until the disposition of the German islands in the Pacific was under discussion at the Peace Conference. When informed by Baron Makino that the islands north of the Equator had been pledged to Japan by treaties signed two years before, President Wilson inquired whether there were other secret agreements, and was informed that the German rights in Shantung had also been promised to Japan. As the other powers were pledged to support Japan's claims, President Wilson found himself in a very embarrassing situation, especially as he had also to oppose Japan's demand that a clause recognizing racial equality be inserted in the Covenant of the League of Nations. This was a moral claim that Japan urged with great strategic effect. In pushing her claims to Shantung she ignored all moral considerations and relied entirely upon her legal status, secured (1) by the secret treaties with the Allies, (2) by the treaty of 1915 with China, and (3) by right of conquest. When charged with having coerced China into signing the treaty of 1915, Japan replied with truth that most of the important treaties with China had been extorted by force. Japan urged her demand for racial equality until her claims to Shantung were recognized. She then dropped a demand which she probably never had much hope of securing, for she must have known that the United States would never consent to have the status of Japanese in California brought within the jurisdiction of the League. Japan gave an oral promise at the Conference to restore Shantung to China in full sovereignty, retaining only the economic privileges transferred from Germany. . . . [Our relations with Japan were further complicated by the Anglo-Japanese Alliance, which was still in effect.]”—J. H. Latané, *Our relations with China and Japan* (*World's Work*, May, 1921).—See also CHINA: 1919: Shantung controversy; JAPAN: 1922 (December).

1919-1923.—Events in the Caribbean.—“A Venezuelan revolutionary representative in 1919 asked for the American Minister, the American Army and the American Navy . . . [to insure fair

elections]. In March of the same year, after constitutional guarantees had been suspended and martial law declared in Cuba, the request was repeated. In 1920 and in 1921 the deposed President of Guatemala appealed to President Wilson to secure his release from prison. In 1922, after the Government of Panama had amended the Constitution, the Opposition asked Secretary Hughes to pass upon the propriety of the alteration. . . . It is indeed on purely idealistic principles that the State Department has proclaimed its policy ever since the famous declaration of President Wilson that he would not recognize any ruler who offered for the diplomatic clasp a hand stained with the blood of revolution. 'So long as the power of recognition rests with me,' he said, in accepting renomination in 1916, 'the Government of the United States will refuse to extend the hand of welcome to any one who obtains power in a sister republic by treachery and violence.' This raises a difficult question, and a frequent one, for it is well known that Latin-American States are subject to revolutions. . . . Let us not minimize the financial interests we now have in the Caribbean. In money alone the figures are astounding, even without securing the data for oil investments and fruit developments. A region that has a commercial business amounting to \$2,000,000,000 annually is important. Fruit forms a large part of that; and the Americans are the greatest fruit eaters in the civilized world. European finance is feeble and weak from the strain of war and reconstruction, not to speak of preparation. Capital must flow in from somewhere. The war may have turned the military minds of Europe away from the Caribbean. It has also turned the European money away. American money replaces it. 'In the northern countries of Latin America,' it is said, 'such as Mexico, Cuba, Central America and Santo Domingo, American money has predominated for some time.' For instance, in 1918, Cuba secured a loan of fifty millions from the United States Government. In 1920 Nicaragua borrowed nine millions in New York for a transcontinental railway. In 1922 Guatemala secured fifteen millions; Colombia arranged for eighty millions and Haiti for sixteen millions, though this last was most arranged so as to retire a French franc loan at a 60 per cent. saving. This borrowing affects diplomacy, here as elsewhere. Nicaragua is stated to have paid up all her current obligations 'as a result of diplomatic aid extended by the United States.' The Haitians chiefly object to their existing treaty because it permits uses of funds and pecuniary resources in ways other than they desire. The Venezuela episode and Olney's famous dictum about the fiat of the United States being law hereabout all arose from a financial tangle. Where an influential man invests his money, or big bankers lend it, they will see that the State Department attends to their interests. All the more is this true now, and all the easier, since the State Department has made it plain that Washington wishes to scrutinize and 'approve' of foreign loans before they are consummated. There is another illuminating instance in the matter of the Colombian treaty, drawn up in 1914, and ratified in 1921. After the first turmoil in the Senate over the apology clause had passed, the treaty was presented again and discussion revived in 1920. About this time President Suarez issued some decrees nationalizing oil supplies. North American oil interests objected; the Colombian Supreme Court declared the measures unconstitutional; and the Senate Committee in Washington

promptly re-reported the Treaty to the Senate. You may scoff at this and call it dollar diplomacy or what you will, but it is modern diplomacy just the same."—E. Colby, *United States paramount in the Caribbean (New York Times Current History, November, 1923)*.—See also DOLLAR DIPLOMACY.

1920.—Final rejection of the Treaty of Versailles by the Senate.—"Lodge's refusal to accept Wilson's treaty was as unshakable as Wilson's refusal to accept Lodge's treaty. When the special session ended and the regular session began the President eventually yielded a little and consented to interpretative reservations proposed by Senator Hitchcock. But this would not satisfy the Republicans; and on March 20 the rejected treaty was finally sent back to the White House."—*New York Times Book Review and Magazine, Feb. 27, 1921, p. 11*.—"Congress convened in regular session on December 2, 1919, but no formal action was taken upon the peace treaty until February 9, on which date the Senate recommitted the treaty to the Committee on Foreign Relations with instructions to report it back immediately, together with the resolution of ratification rejected in November, including the reservations previously adopted. These instructions were complied with on the following day. On February 11 Senator Lodge presented certain proposed amendments to the reservations which he stated had been discussed by an informal bipartisan committee during the last two weeks of January. . . . The vote was then taken on the resolution of ratification, including the fifteen reservations as a part and condition thereof. . . . [This was on March 19.] Upon roll call there were 49 yeas and 35 nays, and the resolution, not having received the affirmative votes of two-thirds of the Senators present, was not agreed to and the Senate did not advise and consent to the ratification of the Treaty of Peace with Germany. . . . The Senators were divided generally into three groups, namely, those who opposed the ratification of the treaty, those who advocated the ratification of the treaty either unqualifiedly or with 'interpretative reservations,' and those who favored substantial reservations. In voting upon the reservations adopted, the treaty opponents invariably voted for the reservations and then voted against the ratification of the treaty. On the other hand, the treaty advocates generally voted against the reservations and after they had been adopted, voted against the resolu-

tions of ratification of which the reservations formed a part. The third group, namely the reservationists, with one or two exceptions, voted throughout in favor of the reservations adopted and also in favor of the resolutions of ratification. . . . The reasons of the advocates of the treaty in voting against the resolutions of ratification may probably best be taken from a letter written by President Wilson to Senator Hitchcock on November 18, in which he said that, in his opinion, the resolution containing the reservations adopted by the Senate 'does not provide for ratification but, rather, for the nullification of the treaty.' He added: 'I sincerely hope that the friends and supporters of the treaty will vote against the Lodge resolution of ratification. I understand that the door will probably then be open for a genuine resolution of ratification.' After finally voting upon the treaty on March 19, 1920, the Senate adopted a resolution by a vote of 47 yeas to 37 nays, instructing the secretary of the Senate to return the treaty to the President and inform him that the Senate has failed to ratify it, being unable to obtain the constitutional majority therefor."—G. A. Finch, *Treaty of peace with Germany in the United States Senate*, pp. 41, 55, 59, 64.

1920.—Controversy between Admiral Sims and Secretary Daniels.—Investigations into conduct of war.—Army Act.—Attacks on administration.—Attitude of labor.—Federal Reserve Board policy.—In March, 1920, "a serious controversy developed between Admiral W. S. Sims, formerly in command of the American naval forces in European waters, and Secretary of the Navy Daniels. The former claimed that the inefficiency and delay in the Navy Department at Washington actually prolonged the war. He stated that his recommendations as commander of the fleet overseas had not been followed and that the morale of the navy had been 'shot to pieces' because of 'flagrant injustices' in conferring decorations. These charges brought forth vigorous denials from the Secretary of the Navy before the Senate Naval Investigating Committee."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 34.—"The artificial state of war, prolonged in the United States by the failure of the peace treaty, did not prevent steps toward the restoration of normal conditions. The series of loans, by which the United States supplemented her military effort in the war, was stopped with nearly all the authorized ten billion dollars advanced to the Allies. 'The United States could not, if it would, assume the burdens of all the earth,' said Secretary Houston when he announced that loans would cease. . . . Congress brought its regular session to a close a few days before the Republican Convention [in June]. It had failed to end the state of war. On March 19 the treaty had been defeated for the second time, and on May 27 Wilson had vetoed a joint resolution repealing the war declaration. The session had done less in reconstruction than the Republican advocates had promised in the campaign of 1918, and had spent months of time in patient though fruitless search for official misconduct in the war. Since March it had engaged in a naval investigation growing out of criticisms advanced by Sims. The investigation of the War Department, begun a year earlier, brought forth much testimony to the unreadiness of the country when war came, and to the blundering and waste that accompanied the hurried mobilization of in-

dustry and society. But no scandals were uncovered equal to those that followed the war with Spain. Appropriations were pared down to bring expenditures to a peace basis, and at the very end of the session laws were approved relating to the army and the merchant marine. The Army Act of June 4, 1920, revised the National Defense Act of 1916 in the light of the experience of the years of war. It authorized a strength of about three hundred thousand for the regular army, and left the organization of the forces largely in the hands of the War Department. The General Staff was directed to confine itself more strictly to coordination than had been the practice during the war, but was left large enough to operate, and able to conduct the various schemes of professional education that had been found indispensable in the A. E. F. The post-graduate courses developed in the Roosevelt-Root administration of the army had justified themselves, and were now made the basis of advancement for all officers. For the enlisted men new schemes of education and specialized training were provided. Compulsory service or training in peace-time failed to find a majority. The National Guard was continued, but in closer and more organic relations with the regular army than ever before. And the three field armies, which the armistice had found in Germany, were perpetuated in a new military arrangement for the United States under which the old departments were to disappear. The Jones Merchant Marine Act, passed June 5, 1920, rearranged the powers of the United States Shipping Board and withdrew many of the emergency powers granted for the time of war. [See below: 1920 (June-September).] In the same spirit the Republican Convention adopted a plank reopening the Panama Canal tolls controversy, and favoring the repeal of the law secured by President Wilson in 1914 whereby the merchant ships of all nations were put upon an even footing. The Democratic Administration was under continuous attack by the Republican majorities in both houses of Congress, and only occasionally did President Wilson intervene openly from his seclusion in the White House. . . . Labor continued uneasy during the summer of 1920, with many outlaw strikes, which labor leaders could not or would not restrain. Farmers were in protest against the fall of prices that became visible after July. To them the conduct of the Federal Reserve Board in raising the discount rate, and in refusing credit to borrowers who wanted it for the purpose of hoarding necessities for a higher price, was a sort of treason. But the Federal Reserve Board justified its creation by preventing panic as prices started back to normal. Sugar, which had been extensively hoarded, dropped from thirty-five to under ten cents per pound. In the early summer the textile mills noted a decline in orders and laid off hands. When Henry Ford cut his prices to a pre-war basis in the autumn there was no resulting crisis, although the act was generally accepted as proof of the post-war decline."—F. L. Paxson, *Recent history of the United States*, pp. 579-580, 584-585, 587.

1920 (January).—Volstead Act put into effect. See LIQUOR PROBLEM: United States: 1919-1920.

1920 (January-March).—Troops withdrawn from Siberia. See SIBERIA: 1920-1922.

1920 (February).—Esch-Cummins Act.—"Under the Railroad act of 1918, which fixed the terms of Government control, it was provided that the roads must be returned to their owners twenty-

one month after the war. Director-General McAdoo asked to have this period lengthened in order to have an opportunity to test the system in times of peace. This was refused by Congress, which seemed indisposed either to allow Government control, or to turn the roads back. Under the stimulus of presidential threat to deliver the roads to their owners at the earliest date unless Congress should act, the Esch-Cummins bill was passed in February for the return of the roads on March 1, 1920."—F. L. Paxson, *Recent history of the United States*, p. 581.—See also RAILROADS: 1920: United States.

1920 (February).—Railroad Labor Board created to settle labor disputes. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1888-1921.

1920 (March).—Supreme Court decision upholding validity of the Prohibition Amendment. See AMENDMENTS TO CONSTITUTIONS: Court decisions.

1920 (March).—Intervention in dispute of Bolivia and Chile over seaport. See BOLIVIA: 1920-1921.

1920 (March-June).—Charges against Board for Vocational Education.—"In March serious charges of incompetency were brought against the Federal Board for Vocational Education by Harold Littledale, a reporter for the *New York Evening Post*. It was charged that, while the board had 209,000 cases registered with it on January 17, nineteen months after its creation, it had placed in training only 24,000 men and had trained and placed in employment only 217. Charges of undue harshness were also made. The House Education Committee thereupon made an investigation. In its report filed on June 4, the committee recommended that the rehabilitation service be placed under the supervision of the Treasury Department as a bureau, or that it, together with the War Risk Insurance Bureau and the health service, be transferred to the Interior Department, each to constitute a bureau in that department."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 33-35.

1920 (May).—Passage of bill to abolish sub-treasury system. See INDEPENDENT TREASURY, UNITED STATES.

1920 (May).—Mandate for Armenia offered and declined.—"The mandate over Armenia was offered to the United States. President Wilson had said at Paris that the offer would be accepted, but in this, as in some other matters, he promised more than he could perform. A commission sent out by him to Armenia estimated that acceptance would necessitate the use of 59,000 troops as a police force and that five years' occupation would cost \$756,000,000. Congress considered that these and other objections outweighed humanitarian arguments, and voted to reject the mandate."—P. L. Haworth, *United States in our own times*, p. 492.—"The tale of the relations of the outgoing Administration with the League is concluded by a reference to mandates. Wilson's request made in May, 1920, for permission to accept a mandate over Armenia had been refused. Later the Council of the League asked Wilson to mediate between Kemal and the Armenians to save Armenia. In consenting to do so, and in appointing Mr. Henry Morgenthau as his mediator, President Wilson acted only in his personal capacity. But it was

too late for any mediation by the United States to be effective. The Near East was aflame, and Armenia was soon lost in conflagrations that it was beyond the power of the United States to quench."—T. H. Dickinson, *United States and the League*, p. 30.—See also ARMENIA: 1919-1920.

1920 (May-November).—Presidential elections.—Senate pre-convention expense investigation.—Republican convention.—Party platform.—Democratic convention.—Party platform.—Other party conventions.—Presidential campaign.—Results of elections.—Party movements from 1908 to 1920.—"Before the return of the railroads was accomplished, the preliminaries of the new presidential campaign were so far advanced that all public acts were directly affected by it. It was the wish of President Wilson that public attention should be kept fixed upon the treaty and the League of Nations, making the election a 'solemn referendum' on that issue. 'The United States enjoyed the spiritual leadership of the world,' he wrote, 'until the Senate of the United States failed to ratify the treaty by which the belligerent nations sought to effect the settlements for which they had fought throughout the war.' His own health was too uncertain to permit him to take any active part in the struggle, and in the absence of his aggressive leadership his party ranged in opinion from those who supported his views to those who accepted Bryan's policy of ratification with any amendments that might be needed to secure action, and even to those who believed with Reed, of Missouri, that there should be no league at all. Among the Republicans opinion was equally divided, with a tendency for the treaty opponents to receive support from League advocates who thought the failure of the treaty due to the stubbornness of Wilson. In this uncertainty the candidacy of Herbert Hoover had an immediate appeal when his friends announced it in January. As a mining engineer, living much outside the United States, Hoover had no known political affiliations. The *Democratic New York World* supported him none the less, as did the liberal *New Republic*, the Republican *Philadelphia Public Ledger*, and the non-partisan but ubiquitous *Saturday Evening Post*. His supporters came largely from those who were unorganized in politics, the women and college professors, and business men, large and small. He appeared to represent a wave of thought that was tired of politicians and wanted the National Government administered upon the same high and impartial ideals that had made the Commission for the Relief of Belgium an international triumph. Moreover, he wanted a League of Nations, and was a proper continuator of American war policies. The Hoover boom came to nought. Its supporters lacked cohesion and experience, and the powerful cement that comes from wanting something for themselves. So long as Hoover remained outside both parties he could expect no aid from active politicians. So soon as he was forced to admit that it was the Republican nomination he desired, he lost at once the support of such Democrats as had been willing to adopt him. The Republican leaders did not want him, as they had not wanted Roosevelt in 1900. They preferred instead some one in harmony with the senatorial associates who had fought the treaty under the leadership of Lodge. Instead of Hoover, the opponents of Wilson gathered around the names of Leonard Wood, who was supposed to embody something of the spirit of Roosevelt; Hiram Johnson, who had made himself the personification of irreconcilable opposition to any

league; or Governor Frank O. Lowden, of Illinois, whose appeal was that of a business man turned into an admirable executive. . . . 'Any good republican can be nominated for president and can defeat any democrat,' said Senator Boies Penrose, who knew as much as any one about the organization of the party."—F. L. Paxson, *Recent history of the United States*, pp. 581-583.—"On May 20 the Senate adopted the Borah resolution calling for an investigation of pre-convention campaign expenditures by presidential candidates. Senator Kenyon of Iowa was chairman of the committee. This committee's exposure reacted unfavorably toward the candidacies of General Wood and Governor Lowden, in whose behalf the largest sums had been spent. It appeared that considerably over \$1,000,000 had been raised for Wood, more than half of that amount being contributed by Colonel William Cooper Procter, his campaign manager. Governor Lowden's campaign fund was found to be over \$400,000, most of which he himself had contributed; that of Senator Harding, \$113,000; Senator Johnson's, \$200,000 and that of Governor Cox, \$22,000."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 43.—"Although the national nominating conventions of the two major political parties were preceded by a number of strenuous primary campaigns, the great majority of the delegates to both conventions were uninstructed. Hence, in no real sense did the voters play a determining rôle in the nomination of presidential candidates. The prediction that through the development of the primary system nominations would be secured by popular referendum and that the nominating conventions would merely ratify the choice of the party voters failed signally of fulfilment. The Republican National Committee met in Washington on December 10 and 11 and decided to hold the National Convention at Chicago on June 8. The 'call' for the convention issued by Chairman Hays provided for the election of 984 delegates from the several states and territories. A new method of platform drafting was initiated late in January by Mr. Hays when he appointed a large committee of representative Republicans to aid the National Committee in 'ascertaining the needs of the nation, and frankly, honestly, and definitely stating the fundamentals of the party's plan for the solution of problems in a comprehensive program of constructive measures.' Under the direction of Mr. Ogden L. Mills of New York as Chairman, a list of topics was made out, subcommittees were appointed, and the general line of inquiry determined upon. Based in part upon the returns received from questionnaires, which were widely distributed, Mr. Mills and his associates prepared a series of reports for the platform committee. . . . Senator Watson of Indiana was chosen chairman of the Committee on Resolutions over Ogden L. Mills of New York. The report of this committee was anxiously awaited, for it was known that there was decided difference of opinion relative to the League of Nations plank. The irconcilables, headed by Senators Johnson, Borah and McCormick, opposed the Treaty in any form. Others favored the Treaty with reservations of various kinds. There were rumors that a bolt was unavoidable. After a forty-eight hour session the committee submitted a unanimous report which the convention accepted on June 10 with enthusiasm."—*Ibid.*, pp. 35-36.—At the Friday session of the convention four prominent candidates were presented. "These were General Leonard Wood,

son of California, and Senator Harding . . . [whose] name was presented to the convention by his friend Frank B. Willis [governor of Ohio. By this time, Herbert C. Hoover was completely out of the running, and Hiram C. Johnson, who had also been put forward, was found too outspoken]. . . . The leading candidates on the first ballot were General Wood and Governor Lowden, and it is possible that one of them might have been successful on a subsequent ballot had it not been for the . . . aspersions which were cast upon them . . . [by Democrats]. It was discovered that William C. Procter, of Cincinnati . . . [had issued] informative literature in the interest of General Wood's campaign. [There was no hint of corruption] but the cry was raised that it was a monstrous thing to spend so much money in a campaign, and that General Wood had—or his friends had—been trying to 'purchase the nomination.' . . . A somewhat similar attack was made upon Governor Lowden . . . [some of whose supporters had paid considerable sums of money to certain party leaders in Missouri, for campaign purposes]. On the first ballot Wood and Lowden were the leaders, though neither came near having a majority. Hiram Johnson stood third, and Harding fourth, with only 65½ ballots. That order was maintained with slight changes for ballot after ballot until the seventh, when some of Lowden's votes changed to Harding, giving him 105, and putting him in third place, ahead of Johnson, though still a long way behind the leaders. . . . [On the eighth ballot he received 133½ votes.] On the ninth ballot a large part of Lowden's vote went to Harding, giving him 374½, and on the tenth he received 602, and was nominated; the nomination being immediately made unanimous. Calvin Coolidge, Governor of Massachusetts, was promptly nominated for Vice-President, and the convention adjourned."—W. F. Johnson, *Life of Warren G. Harding*, pp. 78-81.

The text of the Republican platform was in part as follows: "The Republican party stands for agreement among the nations to preserve the peace of the world. We believe that such an international association must be based upon international justice, and must provide methods which shall maintain the rule of public right by the development of law and the decision of impartial courts, and which shall secure instant and general international conference whenever peace shall be threatened by political action, so that the nations pledged to do and insist upon what is just and fair may exercise their influence and power for the prevention of war. We believe that all this can be done without the compromise of national independence, without depriving the people of the United States in advance of the right to determine for themselves what is just and fair when the occasion arises, and without involving them as participants and not as peace-makers in a multitude of quarrels, the merits of which they are unable to judge. The covenant signed by the President at Paris failed signally to accomplish this great purpose, and contains stipulations, not only intolerable for an independent people, but certain to produce the injustice, hostility, and controversy among nations which it proposed to prevent. That covenant repudiated, to a degree wholly unnecessary and unjustifiable, the time-honored policies in favor of peace declared by Washington, Jefferson, and Monroe, and pursued by all American administrations for more than a century, and it ignored the universal sentiment of America for generations past in favor of international law and arbitration, and

it rested the hope of the future upon mere expediency and negotiation. The unfortunate insistence of the President upon having his own way, without any change and without any regard to the opinions of a majority of the Senate, which shares with him the treaty-making power, and the President's demand that the Treaty should be ratified without any modification, created a situation in which Senators were required to vote upon their consciences and their oaths according to their judgment against the Treaty as it was presented, or submit to the commands of a dictator in a matter where the authority and the responsibility under the Constitution were theirs, and not his. . . . We pledge the coming Republican administration to such agreements with the other nations of the world as shall meet the full duty of America to civilization and humanity, in accordance with American ideals, and without surrendering the right of the American people to exercise its judgment and its power in favor of justice and peace. We favor a liberal and generous foreign policy founded upon definite moral and political principles, characterized by a clear understanding of and a firm adherence to our own rights, and unflinching respect for the rights of others. . . . We feel the deepest pride in the fine courage, the resolute endurance, the gallant spirit of the officers and men of our army and navy in the World War. They were in all ways worthy of the best traditions of the nation's defenders, and we pledge ourselves to proper maintenance of the military and naval establishments upon which our national security and dignity depend. . . .

"Never has our nation been confronted with graver problems. The people are entitled to know in definite terms how the parties purpose solving these problems. To that end, the Republican party declares its policies and program to be as follows: We undertake to end executive autocracy and to restore to the people their constitutional government. The policies herein declared will be carried out by the Federal and state governments, each acting within its constitutional powers. . . . As a matter of public policy, we urge all banks to give credit preference to essential industries. The Federal Reserve System should be free from political influence, which is quite as important as its independence of domination by financial combinations. The burden of taxation imposed upon the American people is staggering; but in presenting a true statement of the situation we must face the fact that, while the character of the taxes can and should be changed, an early reduction of the amount of revenue to be raised is not to be expected. . . . The whole fiscal policy of the Government must be deeply influenced by the necessity of meeting obligations in excess of five billion dollars which mature in 1923. But sound policy equally demands the early accomplishment of that real reduction of the tax burden which may be achieved by substituting simple for complex tax laws and procedure; prompt and certain determination of the tax liability for delay and uncertainty; tax laws which do not, for tax laws which do, excessively mulct the consumer or needlessly repress enterprise and thrift. We advocate the issuance of a simplified form of income return; authorizing the Treasury Department to make changes in regulations effective only from the date of their approval; empowering the Commissioner of Internal Revenue, with the consent of the taxpayer, to make final and conclusive settlements of tax claims and assessments barring fraud, and the creation of a Tax Board consisting of at least three

representatives of the tax-paying public and the heads of the principal divisions of the Bureau of Internal Revenue to act as a standing committee on the simplification of forms, procedure and law, and to make recommendations to the Congress. The annual expenses of the Federal Government can be reduced hundreds of millions of dollars without impairing the efficiency of the public service. We pledge ourselves to a carefully planned readjustment to a peace-time basis and to a policy of rigid economy, to the better co-ordination of departmental activities, to the elimination of unnecessary officials and employees, and to the raising of the standard of individual efficiency. . . . We pledge ourselves to earnest and consistent attack upon the high cost of living by rigorous avoidance of further inflation in our government borrowing, by courageous and intelligent deflation of over-expanded credit and currency, by encouragement of heightened production of goods and services, by prevention of unreasonable profits, by exercise of public economy and stimulation of private thrift and by revision of war imposed taxes unsuited to peace-time economy. . . . The uncertain and unsettled condition of international balances, the abnormal economic and trade situation of the world, and the impossibility of forecasting accurately even the near future, preclude the formation of a definite program to meet conditions a year hence. But the Republican party reaffirms its belief in the protective principle and pledges itself to a revision of the tariff as soon as conditions shall make it necessary for the preservation of the home market for American labor, agriculture and industry. . . . The farmer is the backbone of the nation. . . . The crux of the present agricultural condition lies in prices, labor and credit. The Republican party believes that this condition can be improved by: practical and adequate farm representation in the appointment of governmental officials and commissions; the right to form co-operative associations for marketing their products, and protection against discrimination; the scientific study of agricultural prices and farm production costs, at home and abroad, with a view to reducing the frequency of abnormal fluctuations; the uncensored publication of such reports; the authorization of associations for the extension of personal credit; a national inquiry on the co-ordination of rail, water and motor transportation with adequate facilities for receiving, handling and marketing food; the encouragement of our export trade; an end to unnecessary price-fixing and ill-considered efforts arbitrarily to reduce prices of farm products which invariably result to the disadvantage both of producer and consumer; and the encouragement of the production and importation of fertilizing material and of its extensive use. . . . Conservation is a Republican policy. It began with the passage of the Reclamation Act signed by President Roosevelt. . . . The Republican party has taken an especially honorable part in saving our national forests and in the effort to establish a national forest policy. . . . We are using our forest resources faster than they are being renewed. . . . The Federal Government, the States and private interests must unite in devising means to meet the menace. . . .

"We recognize the justice of collective bargaining as a means of promoting good will, establishing closer and more harmonious relations between employers and employees, and realizing the true ends of industrial justice. The strike or the lockout, as a means of settling industrial disputes, inflicts such loss and suffering on the community as to justify

government initiative to reduce its frequency and limit its consequences. We deny the right to strike against the government; but the rights and interests of all government employees must be safeguarded by impartial laws and tribunals. In public utilities we favor the establishment of an impartial tribunal to make an investigation of the facts and to render a decision to the end that there may be no organized interruption of service necessary to the lives, health and welfare of the people. The decisions of the tribunals should be morally but not legally binding, and an informed public sentiment be relied on to secure their acceptance. The tribunals, however, should refuse to accept jurisdiction except for the purpose of investigation, as long as the public service be interrupted. For public utilities we favor the type of tribunal provided for in the Transportation Act of 1920. In private industries we do not advocate the principle of compulsory arbitration, but we favor impartial commissions and better facilities for voluntary mediation, conciliation and arbitration, supplemented by that full publicity which will enlist the influence of an aroused public opinion. The Government should take the initiative in inviting the establishment of tribunals or commissions for the purpose of voluntary arbitration and of investigation of disputed issues. We demand the exclusion from interstate commerce of the products of convict labor. We urge Congress to consider the most effective means to end lynching in this country which continues to be a terrible blot on our American civilization. We welcome women into full participation in the affairs of government and the activities of the Republican party. We earnestly hope that Republican legislatures in states which have not yet acted on the Suffrage Amendment will ratify the amendment, to the end that all of the women of the nation of voting age may participate in the election of 1920 which is so important to the welfare of our country. The supreme duty of the nation is the conservation of human resources through an enlightened measure of social and industrial justice. . . . We pledge the Republican party to the solution of these problems through national and state legislation in accordance with the best progressive thought of the country. The Republican party stands for a Federal child labor law and for its rigid enforcement. If the present law be found unconstitutional or ineffective, we shall seek other means to enable Congress to prevent the evils of child labor. . . . The principle of equal pay for equal service should be applied throughout all branches of the Federal government in which women are employed. Federal aid for vocational training should take into consideration the special aptitudes and needs of women workers. We demand Federal legislation to limit the hours of employment of women engaged in intensive industry, the product of which enters into interstate commerce. We endorse the principle of Federal aid to the States for the purposes of vocational and agricultural training. Wherever Federal money is devoted to education, such education must be so directed as to awaken in the youth the spirit of America and a sense of patriotic duty to the United States. . . . The public health activities of the Federal government are scattered through numerous departments and bureaus, resulting in inefficiency, duplication and extravagance. We advocate a greater centralization of the Federal functions, and in addition urge the better co-ordination of the work of the Federal, State and local health agencies. We hold in imperishable remembrance the valor and patriotism of

the soldiers and sailors of America who fought in the great war for human liberty, and we pledge ourselves to discharge to the fullest the obligations which a grateful nation justly should fulfill, in appreciation of the services rendered by its defenders on sea and on land. . . . We are opposed to government ownership and operation or employee operation of the railroads. . . . We endorse the Transportation Act of 1920 enacted by the Republican Congress as a most constructive legislative achievement. We favor liberal appropriations in co-operation with the States for the construction of highways, which will bring about a reduction in transportation costs, better marketing of farm products, improvement in rural postal delivery, as well as meet the needs of military defense. . . . The national defense and our foreign commerce require a merchant marine of the best type of modern ship flying the American flag, manned by American seamen, owned by private capital, operated by private energy. We endorse the sound legislation recently enacted by the Republican Congress that will insure the promotion and maintenance of the American merchant marine. We favor the application of the Workmen's Compensation Acts to the merchant marine. We recommend that all ships engaged in coastwise trade and all vessels of the American merchant marine shall pass through the Panama Canal without payment of tolls. . . . We declare it to be our policy to encourage and develop water transportation service and facilities in connection with the commerce of the United States. We renew our repeated declaration that the civil service law shall be thoroughly and honestly enforced and extended wherever practicable. The recent action of Congress in enacting a comprehensive civil service retirement law and in working out a comprehensive employment and wage policy that will guarantee equal and just treatment to the army of government workers, and in centralizing the administration of the new and progressive employment policy in the hands of the Civil Service Commission is worthy of all praise. We favor a fixed and comprehensive policy of reclamation to increase national wealth and production. We recognize in the development of reclamation through Federal action with its increase of production and taxable wealth a safeguard for the nation. We commend to Congress a policy to reclaim lands and the establishment of a fixed national policy of development of natural resources in relation to reclamation through the now designated government agencies. We approve in general the existing Federal legislation against monopoly and combinations in restraint of trade, but since the known certainty of a law is the safety of all, we advocate such amendment as will provide American business men with better means of determining in advance whether a proposed combination is or is not unlawful. . . . We pledge the party to an immediate resumption of trade relations with every nation with which we are at peace. . . . The Republican party pledges itself to a consistent, firm and effective policy towards Mexico that shall enforce respect for the American flag and that shall protect the rights of American citizens lawfully in Mexico to security of life and enjoyment of property in accordance with established principles of international law and our treaty rights. . . . We deeply sympathize with the people of Armenia and stand ready to help them in all proper ways, but the Republican party will oppose now and hereafter the acceptance of a mandate for any country in Europe or Asia. "For Hawaii we recommend Federal assistance

in Americanizing and educating their greatly disproportionate foreign population; home rule; and the rehabilitation of the Hawaiian race. . . . The immigration policy of the United States should be such as to insure that the number of foreigners in the country at any time shall not exceed that which can be assimilated with reasonable rapidity, and to favor immigrants whose standards are similar to ours. . . . The existing policy of the United States for the practical exclusion of Asiatic immigrants is sound, and should be maintained. There is urgent need of improvement in our naturalization law. No alien should become a citizen until he has become genuinely American, and adequate tests for determining the alien's fitness for American citizenship should be provided for by law. We advocate, in addition, the independent naturalization of married women. An American woman, resident in the United States, should not lose her citizenship by marriage to an alien. . . . We demand that every American citizen shall enjoy the ancient and constitutional right of free speech, free press and free assembly and the no less sacred right of the qualified voter to be represented by his duly chosen representatives; but no man may advocate resistance to the law, and no man may advocate violent overthrow of the government. Aliens within the jurisdiction of the United States are not entitled of right to liberty of agitation directed against the government or American institutions."—*Republican campaign textbook*, 1920.

"The first reaction was disappointment over the Presidential nominee. Among the group of Republicans affiliated previously with the progressive wing of the party it was charged that the convention had been finally controlled by 'standpatters' and 'the Old Guard Senators.' There was also visible disappointment among the active supporters of the other candidates. However, three or four days later, it was evident that the Republicans as a whole were thoroughly united for the first time in twelve years and that the nominee would receive strong support from all wings of the party. The selection of Governor Coolidge for Vice President was enthusiastically received throughout the country, and his choice was regarded as a distinct help to the ticket. Warren G. Harding started life as a printer's devil in Marion, Ohio, and worked there as printer, reporter, circulation manager, business manager, editor and publisher before he entered politics. . . . He placed President Taft in nomination for President before the Republican National Convention in 1912 and was Chairman of the Republican Convention, making the keynote speech, in 1916. He supported the Lodge reservations to the Peace Treaty in the Senate. Governor Coolidge was born in Plymouth, Vt., July 4, 1872; graduated from Amherst College in 1895, studied law at Northampton, Mass., and opened a law office there. . . . He leaped into national fame in the Winter of 1919-20 when he defied the Boston police strikers and by his firmness in installing a volunteer police force saved the city from riots and lawlessness, becoming the chief factor, by his example, in ending the strike tendency of municipal functionaries, such as police and firemen."—*New York Times Current History*, July, 1920, p. 554.

"The Democratic National Committee at its meeting in Washington on January 7-8 decided to hold the Democratic National Convention at San Francisco on June 28. Chairman Homer S. Cummings of the National Committee issued the formal call on January 13. It provided for the election of 1092 delegates. The preconvention campaign of

the Democrats did not arouse so much interest as the Republican campaign. The preference primaries were of relatively small importance, there being no candidates making such nation wide campaigns as those of General Wood and Senator Johnson. Several states, however, instructed their delegations for favorite sons. Thus the Oklahoma convention instructed for Senator Owen; the North Carolina convention for Senator Simmons; the Nebraska primary for Senator Hitchcock; the Ohio primary for Governor Cox; and the Pennsylvania primary for Attorney General Palmer. The number of delegates instructed was something like 300.—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1923, *Supplement*, p. 39.—President Wilson had announced "no choice for his successor, but it was believed that William G. McAdoo would be a welcome selection. . . . A Mitchell Palmer was an aggressive aspirant for the nomination. As Alien Property Custodian during the war, and as Attorney-General after it, he had gained much prominence. Under his direction the federal anti-red campaign was waged, and an attack was made upon the profiteers. He was opposed by most of the radical Democrats on the ground that he had gone beyond reasonable limits in the restriction of freedom of speech and opinion. Outside the Administration group were Governor Edwards, of New Jersey, with aspirations founded upon his defense of 'personal liberty' in his opposition to the Eighteenth Amendment, and Governor James D. Cox, of Ohio, who had the distinction of three elections to that office in a doubtful State. William J. Bryan was again a leading figure at the Democratic Convention, held in San Francisco at the end of June; not as a candidate, but as the champion of peace and prohibition. He failed to secure action for the latter cause, for this convention, like the Republican, treated the 'dry' amendment as a closed issue and said nothing to stir up either side of the long fight. Ireland was present at San Francisco, as it had been at Chicago, demanding planks in support of the pretensions of the Sinn Fein Republic to independence."—F. L. Paxson, *Recent history of the United States*, pp. 585-586.—"The outstanding candidates were William G. McAdoo, former Secretary of the Treasury, A. Mitchell Palmer, Attorney General, and Governor James M. Cox of Ohio. The opening session of the Democratic National Convention on June 28 resolved itself into an enthusiastic demonstration in favor of President Wilson. A message acclaiming him as the unquestioned leader of his party and praising the accomplishments of his administration was sent the President by a unanimous vote of the convention. Chairman Cummings in his 'keynote' speech attacked the party responsible for the rejection of the Treaty, thus bringing the Treaty and the League of Nations forward as the major issue of the coming campaign. He reviewed the achievements of the Wilson Administrations which, he said: 'Republican managers and the Chicago platform seek to shame and besmirch.' He condemned the appointment of numerous congressional 'smelling committees' to ascertain 'whether or not there was any graft in the conduct of the great war.' 'Through the hands of a Democratic Administration,' he declared, 'there have passed more than 40 billions of dollars, and the finger of scorn does not point to one single Democratic official in all America.' This record he contrasted with the record of the conduct of the Spanish-American war and asserted that 'not one single Democratic official has either been indicted or accused or even suspected; and the only

dignitary in America, of any outstanding political significance, who is moving in the direction of the penitentiary, is Truman Newberry [Republican] of Michigan.' Senator Joseph T. Robinson of Arkansas was selected as permanent chairman of the convention and Senator Carter Glass of Virginia as chairman of the important Committee on Resolutions. For several days the Committee on Resolutions held hearings at which divergent views were advanced, chiefly on three important issues, viz., prohibition enforcement, the Treaty and the League of Nations, and the Irish question. The Committee on Resolutions reported the platform on July 2. As reported it contained no reference to prohibition. This satisfied neither the 'drys' led by Mr. Bryan nor the 'wets' led by Mr. W. Bourke Cockran of New York. Hence minority reports were presented and debated before the convention. Mr. Bryan's 'bone dry' plank was defeated, 929½ to 155½, and Mr. Cockran's wet plank, 726½ to 356. Mr. Bryan's League of Nations plank, urging ratification with reservations, was lost overwhelmingly, as was a minority report proposing to go beyond the committee's expression of sympathy with the aspirations of the Irish people. After all amendments had been decisively defeated, the platform as it came from the committee was adopted unanimously. While the platform was being drafted by the Committee on Resolutions the several candidates were placed in nomination before the convention. On June 30, in an eight-hour session, the following ten candidates were presented. Senator Robert L. Owen of Oklahoma, ex-Ambassador James W. Gerard of New York, Homer S. Cummings of Connecticut, Senator Gilbert M. Hitchcock of Nebraska, Attorney General A. Mitchell Palmer of Pennsylvania, Secretary of Agriculture Edwin T. Meredith of Iowa, Governor James M. Cox of Ohio, Governor Alfred E. Smith of New York, ex-Secretary of the Treasury William G. McAdoo of New York and Governor Edward I. Edwards of New Jersey. On the following day four more candidates were nominated: Senator F. M. Simmons of North Carolina, Senator Carter Glass of Virginia, Ambassador John W. Davis of West Virginia and Francis Burton Harrison, Governor General of the Philippines. The convention went on record in favor of full sex equality, deciding that henceforth the National Committee should be composed of one man and one woman from each state. Balloting began [on June 2] immediately after the platform was adopted. . . . On the forty-fourth ballot [on the evening of July 5] Governor Cox secured the nomination. The vote necessary to nominate was 729. When Cox had 699 votes to his credit, Vice-Chairman Amidon of the National Committee and manager of the McAdoo followers, moved to make the nomination unanimous. On July 6 Franklin D. Roosevelt of New York, Assistant Secretary of the Navy, was chosen by acclamation as the party's candidate for Vice-President."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 39-40.—"The deadlock of the Democratic Convention over the leading candidates lasted longer than it had done at Chicago. In each case no one of the leaders could command the support of the tested professional politicians of the party; and as the Republican Senators swung to Harding at the end, so the Democratic city politicians swung the convention to Cox on the forty-fourth ballot, and gave him the two thirds needful for a nomination. Franklin D. Roosevelt, Assistant Secretary of the Navy was named for Vice-President."—F. L.

Paxon, *Recent history of the United States*, p. 586.

The text of the Democratic platform was, in part, as follows: "The Democratic Party favors the League of Nations as the surest, if not the only, practicable means of maintaining the peace of the world and terminating the insufferable burden of great military and naval establishments. . . . It was upon this basis that the President of the United States, in pre-arrangement with our Allies, consented to a suspension of hostilities against the Imperial German Government. . . . We not only congratulate the President on the vision manifested and the vigor exhibited in the prosecution of the war, but we felicitate him and his associates on the exceptional achievement at Paris involved in the adoption of a League and Treaty so near akin to previously expressed American ideals and so intimately related to the aspirations of civilized peoples everywhere. . . . We endorse the President's view of our international obligations and his firm stand against reservations designed to cut to pieces the vital provisions of the Versailles Treaty and we commend the Democrats in Congress for voting against resolutions for separate peace which would disgrace the nation. We advocate the immediate ratification of the Treaty without reservations which would impair its essential integrity; but do not oppose the acceptance of any reservations making clearer or more specific the obligations of the United States to the League Associates. . . . We reject as utterly vain, if not vicious, the Republican assumption that ratification of the Treaty and membership in the League of Nations would in any wise impair the integrity or independence of our country. The fact that the Covenant has been entered into by twenty-nine nations, all as jealous of their independence as we are of ours, is a sufficient refutation of such charge. The President repeatedly has declared, and this convention reaffirms, that all our duties and obligations as a member of the League must be fulfilled in strict conformity with the Constitution of the United States.

"A review of the record of the Democratic Party during the administration of Woodrow Wilson presents a chapter of substantial achievements unsurpassed in the history of the republic. For fifty years before the advent of this administration periodical convulsions had impeded the industrial progress of the American people and caused inestimable loss and distress. By the enactment of the Federal Reserve Act the old system, which bred panics, was replaced by a new system, which insured confidence. . . . Under Democratic leadership the American people successfully financed their stupendous part in the greatest war of all time. The Treasury wisely insisted during the war upon meeting an adequate portion of the war expenditure from current taxes and the bulk of the balance from popular loans, and, during the first full fiscal year after fighting stopped, upon meeting current expenditures from current receipts. . . . We advocate tax reform and a searching revision of the War Revenue Acts to fit peace conditions so that the wealth of the nation may not be withdrawn from productive enterprise and diverted to wasteful or non-productive expenditure. We demand prompt action by the next Congress for a complete survey of existing taxes and their modification and simplification with a view to secure greater equity and justice in tax burden and improvement in administration. . . . The last Democratic Congress enacted legislation reducing the taxes from eight billions, designed to be raised, to six billions for the first year after the armistice,

and to four billions thereafter; and there the total is left undiminished by our political adversaries. Two years after Armistice Day a Republican Congress provides for expending the stupendous sum of \$5,403,390,327.30. . . . We pledge the Democratic party to a policy of strict economy in government expenditures, and to the enactment and enforcement of such legislation as may be required to bring profiteers before the bar of criminal justice. We reaffirm the traditional policy of the Democratic party in favor of a tariff for revenue only and we confirm the policy of basing tariff revisions upon the intelligent research of a non-partisan commission, rather than upon the demands of selfish interests, temporarily held in abeyance. In the interest of economy and good administration, we favor the creation of an effective budget system that will function in accord with the principles of the Constitution. The reform should reach both the executive and legislative aspects of the question. The supervision and preparation of the budget should be vested in the Secretary of the Treasury as the representative of the President. The budget, as such, should not be increased by the Congress except by a two-thirds vote, each House, however, being free to exercise its constitutional privilege of making appropriations through independent bills. The appropriation bills should be considered by single Committees of the House and Senate. The audit system should be consolidated and its powers expanded so as to pass upon the wisdom of, as well as the authority for, expenditures. . . . We favor such alteration of the rules of procedure of the Senate of the United States as will permit the prompt transaction of the nation's legislative business. . . . We favor such legislation as will confirm to the primary producers of the nation the right of collective bargaining and the right of cooperative handling and marketing of the products of the workshop and the farm and such legislation as will facilitate the exportation of our farm products. We favor comprehensive studies of farm production costs and the uncensored publication of facts in such studies. . . . The nation depends upon the products of labor; a cessation of production means a loss and, if long continued, disaster. The whole people, therefore, have a right to insist that justice shall be done to those who work, and in turn that those whose labor creates the necessities upon which the life of the nation depends must recognize the reciprocal obligation between the worker and the State. They should participate in the formulation of sound laws and regulations governing the conditions under which labor is performed, recognize and obey the laws so formulated and seek their amendment when necessary by the processes ordinarily addressed to the laws and regulations affecting the other relations of life. Labor, as well as capital, is entitled to adequate compensation. Each has the indefeasible right of organization, of collective bargaining and of speaking through representatives of their own selection. Neither class, however, should at any time nor in any circumstances take action that will put in jeopardy the public welfare. Resort to strikes and lockouts which endanger the health or lives of the people is an unsatisfactory device for determining disputes, and the Democratic party pledges itself to contrive, if possible, and put into effective operation a fair and comprehensive method of composing differences of this nature. In private industrial disputes, we are opposed to compulsory arbitration as a method plausible in theory but a failure in fact. With respect to government service, we

hold distinctly that the rights of the people are paramount to the right to strike. However, we profess scrupulous regard for the conditions of public employment and pledge the Democratic party to instant inquiry into the pay of Government employees and equally speedy regulations designed to bring salaries to a just and proper level.

"We indorse the proposed 19th Amendment of the Constitution of the United States granting equal suffrage to women. We congratulate the legislatures of the 35 States which have already ratified said Amendment and we urge the Democratic Governors and legislatures of Tennessee, North Carolina and Florida and such States as have not yet ratified the Federal Suffrage Amendment to unite in an effort to complete the process of ratification and secure the 36th State in time for all the women of the United States to participate in the Fall election. We commend the effective advocacy of the measure by President Wilson. We urge co-operation with the States for the protection of child life through infancy and maternity care; in the prohibition of child labor and by adequate appropriations for the Children's Bureau and the Women's Bureau in the Department of Labor. We advocate full representation of women on all commissions dealing with women's work or women's interests and a reclassification of the Federal Civil Service free from discrimination on the ground of sex; a continuance of appropriations for education in sex hygiene; Federal legislation which shall insure that American women residents in the United States, but married to aliens, shall retain their American citizenship and that the same process of naturalization shall be required for women as for men. Co-operative Federal assistance to the States is immediately required for the removal of illiteracy, for the increase of teachers' salaries and instruction in citizenship for both native and foreign-born; increased appropriation for vocational training in home economics, re-establishment of joint Federal and State employment service with women's departments under the direction of technically qualified women. The Federal Government should treat with the utmost consideration every disabled soldier, sailor and marine of the world's war, whether his disability be due to wounds received in line of action or to health impaired in service; and for the dependents of the brave men who died in line of duty the government's tenderest concern and richest bounty should be their requital. . . . The Federal Board for Vocational Education should be made a part of the War Risk Insurance Bureau, . . . and this machinery of protection and assistance must receive every aid of law and appropriation necessary to full and effective operation. We believe that no higher or more valued privilege can be afforded to an American citizen than to become a free-holder in the soil of the United States and to that end we pledge our party to the enactment of soldier settlements and home aid legislation which will afford to the men who fought for America the opportunity to become land and home owners under conditions affording genuine Government assistance unencumbered by endless difficulties of red tape or advance financial investment. The Esch-Cummins bill went to the President in the closing hours of the time limit prescribed, and he was forced to a choice between the chaos of a veto and acquiescence in the measure submitted however grave may have been his objections to it. There should be a fair and complete test of the law and until careful and mature action by Congress may cure

its defects and insure a thoroughly effective transportation system under private ownership without Government subsidy at the expense of the taxpayers of the country. Improved roads are of vital importance not only to commerce and industry, but also to agriculture and rural life. . . . We favor a continuance of the present Federal aid plan under existing Federal and State agencies amended so as to include as one of the elements in determining the ratio in which the several states shall be entitled to share in the fund, the area of any public lands therein. . . . We strongly favor the increased use of the motor vehicle in the transportation of the mails and urge the removal of the restrictions imposed by the Republican Congress on the use of motor devices in mail transportation in rural territories. . . . We pledge the policy of our party to the continued growth of our Merchant Marine under proper legislation so that American products will be carried to all ports of the world by vessels built in American yards, flying the American flag. The urgent demands of the war for adequate transportation of war material as well as for domestic need, revealed the fact that our port facilities and rate adjustment were such as to seriously affect the whole country in times of peace as well as war. We pledge our party to stand for equality of rates, both import and export, for the ports of the country, to the end that there may be adequate and fair facilities and rates for the mobilization of the products of the country offered for shipment. . . . We pledge ourselves to the further development of adequate transportation facilities on our rivers and to the further improvement of our inland waterways; and we recognize the importance of connecting the Great Lakes with the sea by the way of the Mississippi River and its tributaries, as well as by the St. Lawrence River. We favor an enterprising Foreign Trade Policy with all nations, and in this connection we favor the full utilization of all Atlantic, Gulf and Pacific Ports, and an equitable distribution of shipping facilities between the various ports. . . . We . . . favor a liberal and comprehensive policy for development and utilization of our harbors and interior waterways. We commend the Democratic Congress for the redemption of the pledge contained in our last platform by the passage of the Flood Control Act of March 1, 1917, and point to the successful control of floods of the Mississippi River and the Sacramento River, California, under the policy of that law, for its complete justification. We favor the extension of this policy to other flood control problems wherever the Federal interest involved justifies the expenditure required. By wise legislation and progressive administration, we have transformed the Government reclamation projects, representing an investment of \$100,000,000, from a condition of impending failure and loss of confidence in the ability of the Government to carry through such large enterprises, to a condition of demonstrated success. . . . We favor ample appropriations for the continuation and extension of this great work of home-building and internal improvement along the same general lines, to the end that all practical projects shall be built, and waters now running to waste shall be made to provide homes and add to the food supply, power resources, and taxable property, with the Government ultimately reimbursed for the entire outlay. The Democratic party heartily endorses the creation and work of the Federal Trade Commission in establishing a fair field for competitive business, free from restraints of trade and monopoly, and

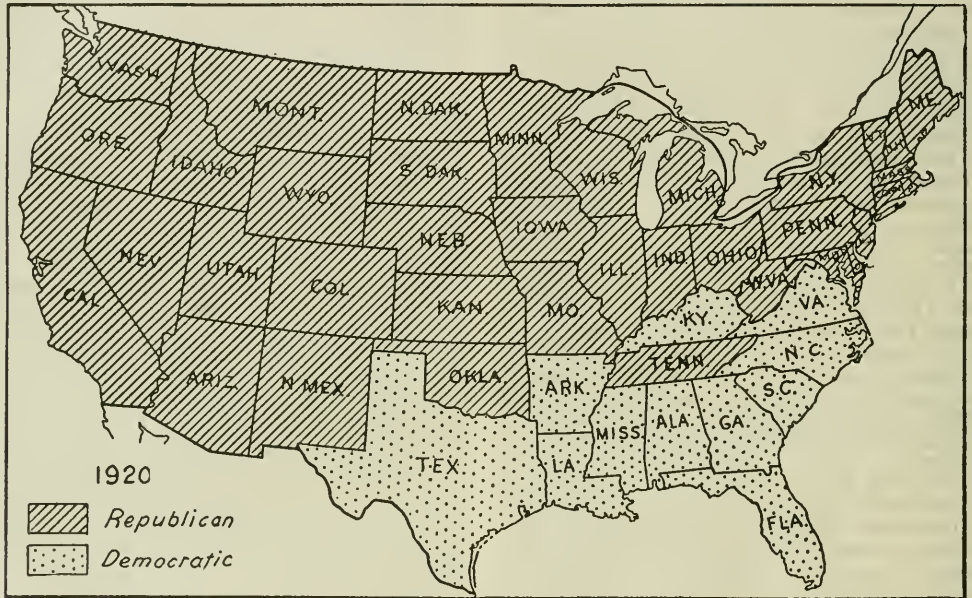

recommends amplification of the statutes governing its activities so as to grant it authority to prevent the unfair use of patents in restraint of trade. For the purpose of insuring just and fair treatment in the great interstate live stock market, and thus instilling confidence in growers through which production will be stimulated and the price of meats to consumers be ultimately reduced, we favor the enactment of legislation for the supervision of such markets by the national Government. . . .

"When the new Government of Mexico shall have given ample proof of its ability permanently to maintain law and order, signified its willingness to meet its international obligations and written upon its statute books just laws under which foreign investors shall have rights as well as duties, that Government should receive our recognition and sympathetic assistance. . . . The Democratic party recognizes the importance of the acquisition by Americans of additional sources of supply of petroleum and other minerals and declares that such acquisition both at home and abroad should be fostered and encouraged. We urge such action, legislative and executive, as may secure to American citizens the same rights in the acquirement of mining rights in foreign countries as are enjoyed by the citizens or subjects of any other nation. . . . The importance of Hawaii as an outpost on the Western Frontier of the United States demands adequate appropriations by Congress for the development of our harbors and highways there. We favor granting to the people of Porto Rico the traditional territorial form of government, with a view to ultimate statehood. . . . We commend the Democratic Administration for inaugurating a new policy as to Alaska as evidenced by the construction of the Alaska railroad and opening of the coal and oil fields. We declare for the modification of the existing coal land law, to promote development without disturbing the features intended to prevent monopoly. For such changes in the policy of forestry control as will permit the immediate initiation of the paper pulp industry. For relieving the territory from the evils of long distance government by arbitrary and interlocking bureaucratic regulation, and to that end we urge the speedy passage of a law containing the essential features of the Lane-Curry bill now pending co-ordinating and consolidating all Federal control of natural resources under one department to be administered by a non-partisan board permanently resident in the territory. . . . The policy of the United States with reference to the non-admission of Asiatic immigrants is a true expression of the judgment of our people, and to the several states whose geographical situation or internal conditions make this policy and the enforcement of the laws enacted pursuant thereto of particular concern, we pledge our support. . . . Believing that we have kept the Democratic faith and resting our claims to the confidence of the people not upon grandiose promises, but upon the solid performances of our party, we submit our record to the nation's consideration and ask that the pledges of this platform be appraised in the light of that record."—*Democratic campaign textbook, 1920, pp. 1-42.*

"The passions aroused in the canvass of 1920 were inspired less by the candidates than by the idea of punishing either the President for his arrogance or the Senate for its defeat of the treaty. The hopes of third-party reformers were aroused by the apathy of the campaign. An attempt was made in July, by a committee of forty-eight progressives, to unite the labor parties, the Non-Parti-

san League, and all the other discontented elements in a new party of reform. The Socialists had already [in convention held in New York, May 8-14] nominated Eugene V. Debs for the fifth time, although he was now behind the bars in the Atlanta penitentiary [for violation of the Espionage Act. Seymour Stedman was nominated for vice-president. The platform, which was presented to the convention by Morris Hillquit of New York, represented the views of the more conservative wing of the party. The convention declared the adherence of the party to the Third International.] The other dissenting groups proved non-fusible; the farmers captured the convention of the 'Forty-Eighters' and made so radical a platform that most of the callers of the convention repudiated the result. La Follette declined to accept a nomination from the group, and P. P. Christenson, of Utah, headed their ticket."—F. L. Paxson, *Recent history of the United States*, pp. 586, 587.—"The debate of 1920 centered upon the

ran third, but a better third than ever because of the radical reaction against war restraint and the protest against suppression of opinion. His votes measure in part the lack of interest in the two great parties. In both houses of Congress the Republican majorities were greatly increased. Like the Civil War, but for different reasons, the World War had driven the Democratic Party out of power, and left the future, whose outlines were but faintly visible, in the hands of the party of the North and West."—F. L. Paxson, *Recent history of the United States*, pp. 587-588.—"It is characteristic of the unostentatiousness of Warren G. Harding that when the call came to him to become the standard bearer of the party, he chose for his rostrum his own front porch. There he addressed delegations who came from near and far, and the small town of Marion, Ohio, became famous overnight. . . . It was something new in campaigning and it got the attention of the populace. . . . When the time came to face the country

ELECTION MAP, 1920.

League of Nations, but with a majority of voters determined to vote without reference to its logic. Cox supported the League with enthusiasm, visiting nearly every State. Harding, speaking generally from his front porch in manner reminiscent of the campaign of 1896, varied his emphasis from day to day in the determination not to offend beyond recall either Root and Taft who wanted the League, or Borah and Johnson to whom it was anathema. But whatever he said, the underlying current was that of the majority party determined to return to power after two administrations of self-incurred defeat. In his favor were the habitual Republican votes, the anti-Wilson votes, and the support of the multitude of Americans who had chafed under the unusual restrictions and penetrating taxation of the World War. Harding and Coolidge were elected in November, with a popular plurality of 6,998,964 over Cox and Roosevelt, with every Northern State supporting them, and with Arizona, New Mexico, Oklahoma, Tennessee, and all the border States, except Kentucky and Virginia, in the Republican column. Debs

he said frankly that he was not a great man. He proposed to seek advice from the 'best minds' without respect to party. His own attribute that he relied upon principally was his power of conciliation, the fruit of his graciousness and gregariousness. He believed that he could do good work in bringing together the minds that had been torn asunder in the controversies of the latter days of the Wilson administration, and that out of the harmony of those minds would come a sound policy for the country. He believed also, that he could restore harmony between the executive and the legislative departments of the country. . . . Senator Johnson and Senator Borah said the Republican party stood outright against the League of Nations; Elihu Root, Mr. Hughes, Mr. Taft, and others of the party's intellectuals, said it stood for the League of Nations with reservations. In his pre-election speeches Mr. Harding took no definite stand on controversial issues. He hoped for unity within his party, and was determined to be as conciliatory as possible. Toward the latter part of the campaign, in his Des Moines speech,

he seemed to turn his back on the League and to side definitely with Mr. Borah and Mr. Johnson, but he still was for an 'association of nations.' On such issues as the tariff, he took the traditional position of his party. . . . The popular vote for Harding was 16,152,200; the vote for the Democratic candidate, James M. Cox, 9,147,353. The socialists gave some 900,000 votes for their candidate, and the Farmer-Labor party over 260,000 for theirs. The electoral vote for Harding and Coolidge was 404."—W. F. Johnson, *Life of Warren G. Harding*, pp. 93, 95, 98.—"It is . . . fair to say that the enormous size of President Harding's plurality was a great surprise. . . . The actual extent of the Republican victory, as compared with previous political landslides, is obscured by the increase in the number of votes brought about by woman suffrage. Unless we make an actual calculation, we cannot tell how far the larger plurality of Harding is a matter simply of more votes on both sides and how far it is a real shift of strength from the Democratic to the Republican side. It is this shift in which we are most interested and this is a matter of percentage of the total vote. . . . The great outstanding facts as to the strength of political parties since 1908 are: 1. In 1912 the Democrats merely held their own; they were, as they had long been, a minority party, having only 45 per cent. of the total vote of the two parties. They won the election in 1912 simply because the opposing party was temporarily divided. 2. In 1916 the Democrats won over about one-fifth of the disintegrating Progressive Party (really the radical wing of the Republican Party) and became a majority party, securing 51 per cent. of the total Republican-Democratic votes. 3. In 1920 the old Progressive bolters returned largely to the Republican fold and many former Democrats voted for Harding, leaving the Democrats not only again a minority party but in a smaller minority than at any time since the Civil War, their total for the whole country being only 36 per cent., which is the same as the percentage for Vermont in 1916, the minimum percentage for any State in that year. The following table gives in full the percentages which the Democratic vote formed of the total (of the major parties) beginning in 1864:

	Per Cent.
1864—Lincoln—McClellan	45
1868—Grant—Seymour	47
1872—Grant—Greeley	44
1876—Hayes—Tilden	52
1880—Garfield—Hancock	50
1884—Cleveland—Blaine	50
1888—Harrison—Cleveland	50
1892—Cleveland—Harrison	52
1896—McKinley—Bryan	48
1900—McKinley—Bryan	47
1904—Roosevelt—Parker	40
1908—Taft—Bryan	45
1912—Wilson—Taft—Roosevelt	45
1916—Wilson—Hughes	51
1920—Harding—Cox	36

"Harding's was the largest swing between the two parties which ever occurred in four years. . . . If we regard the pendulum as in its normal stationary state in 1908 and 1912, Wilson's first term sent it flying to the left, and his second term sent it flying to the right, not only the 6 per cent. back to stationary, but 9 per cent. beyond. But what was the secret of this tremendous rightward swing of the pendulum? Was it 'desire for a change,' 'hatred of Wilson,' disapproval of the

League of Nations, disapproval of some other features of the Versailles Treaty, the effect of the women's vote or of prohibition, the 'H. C. L.,' the powers of persuasion of the large Republican campaign chests and the large Republican press, or what? Undoubtedly most of these factors played some part . . . [but probably] the dominant factors were two. The natural reaction against the party in power, which inevitably accumulates enemies in proportion to its length of office holding, its activities and aggressiveness and the historical untoward accidents for which the party in power is always held responsible by unthinking masses of men. Some of the Italian-Americans were disgruntled over Fiume. Some of the Irish-Americans were angry because Irish freedom had not been provided for and because England was supposed to have six votes in the League. The German-Americans and the Austrian-Americans hated the reparation features of the Versailles Treaty. Besides the special disgruntlement of the foreign-born, there was probably a general disgruntlement among unthinking people because of the numerous discomforts which our country had suffered [since 1916], . . . including especially the high cost of living. . . . [The natural reaction probably accounted for] about half of the landslide. The mere return of the Republican votes lost in 1916 would account for 40 per cent. It is significant that, in comparing the different States, we find, in general, the larger the left shift in 1916, the larger the right shift in 1920. . . . It is interesting to observe that the high cost of living, besides being a thorn in the flesh, gave an accidental lift to the Republicans. It was one reason for their large campaign fund! When prices are rising, as they did during recent years, the process creates profits to business men, and the Republican Party had a greater constituency among business men than the Democratic Party. But it was the foreign-born defection which most hurt the Democratic Party. We find that the shift of votes in the States with a large element of Germans, Austrians, Italians and Irish . . . [was] large and the shift in the States where such elements were small . . . [was] small. The larger the foreign-born element in any State, the more the votes gained by the Republican Party. . . . The closest connection is that between the German population and Harding's gains. These are correlated 49 per cent. of a perfect accord. The Austrian Republican connection is found to be 45 per cent., the Irish Republican 21 per cent. and the Italian Republican 12 per cent. To find the effect of woman suffrage the best statistical index of the extent of the new woman's vote is the ratio of increase in the total vote in each State. Where there was no increase, as in California, Oregon, Washington, Montana, Nevada, Colorado, Illinois and Mississippi, we may assume that the Nineteenth Amendment had little or no influence. Where the vote was swelled 75 per cent. or more over the 1916 vote, as in Rhode Island, Massachusetts, Delaware, Minnesota, Indiana, New Hampshire, West Virginia, North Dakota, New Jersey, Ohio, Oklahoma, North Carolina, and Alabama, we may assume that the influence of that amendment was greatest. The other States range between. Now the statistical connection between this ratio of increase of the vote in any State and the slide toward the Republican Party is found to be a correlation of minus 23 per cent.; that is, so far as statistical indications tell the tale, the new woman's vote helped Cox rather than Harding. We may guess that the reasons were the belief that the Democrats were more

sympathetic than the Republicans toward the League of Nations and that they had done more for woman suffrage. . . . The prohibition question . . . [does not seem to have] cut any appreciable figure in the statistics of the election. The shifts in the States which had had State prohibition showed no marked difference from the shifts in the States which had their first taste of prohibition under the Eighteenth Amendment. It seems impossible to analyze the minor causes of the Republican sweep. There are always currents and counter currents, and probably in the election of 1920 there were more than usual."—I. Fisher, *Explaining the nation's vote* (*New York Times*, Mar. 6, 1921).

1920 (June).—Stringent law against alien anarchists passed.—"On May 31 the Senate Immigration Committee, in ordering the House . . . [Immigration Bill] favorably reported, made certain modifications broadening the Government's powers to deport alien anarchists and to prevent their admission to the country. As amended the bill was finally passed on June 5 and was signed the same day by the President. The new law, which embodies the Sterling and Johnson bills, provides for the exclusion or deportation of all aliens who belong to organizations that advocate sabotage, revolution, or destruction of property. This means that all foreigners who are members of the Industrial Workers of the World, the Communist Party and the Communist Labor Party are subject to deportation on the mere evidence that they are active members of such organizations. The law also provides that no persons belonging to these revolutionary parties shall be allowed to land here as immigrants. It excludes likewise all aliens who write, publish or distribute any written or printed matter advocating the overthrow of the United States Government by violence, the assaulting or killing of officials, the injury of property, or other acts of sabotage. Representative Johnson of Washington, Chairman of the House Immigration Committee, who had sponsored the bill in the House, said after its passage: 'The act means that these foreign revolutionists shall not preach their doctrines, circulate their literature or contribute their money for these purposes. It is aimed at aliens in such revolutionary organizations as the I. W. W., the Communist and Communist Labor Parties. Deprive these organizations of their aliens and they will either become American or fade away. The United States is not going to be run by aliens who do not vote, and if officers in charge of the deportation of these aliens will not carry out the intent of Congress, expressed in previous laws, perhaps they will do better under more explicit legislation.' Mr. Wallis, the new Commissioner of Immigration at New York, stated on June 6 that . . . there were only 58 persons of the anarchist class at Ellis Island at that time, . . . but there were 600 or 800 in Federal prisons."—*New York Times Current History*, July, 1920, p. 703.

1920 (June).—Naval oil reserves transferred to Navy Department.—In consequence of the fact that oil was coming largely into use as a fuel for warships, the administration decided in 1920 that the Navy Department should have control of the oil producing public lands which had been reserved for its use. In furtherance of this decision a proviso for the transfer of the lands was incorporated into the Naval Appropriation Act of June, 1920, which declared that the secretary of the navy should "take possession of all properties within the naval petroleum reserves as are or may become subject

to the control and use by the United States for naval purposes, and on which there are no pending claims or applications for permits or leases under the provisions of an Act of Congress approved February 25, 1920, entitled 'An Act to provide for the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain,' or pending applications for United States patent under any law; to conserve, develop, use, and operate the same in his discretion, directly or by contract, lease, or otherwise, and to use, store, exchange, or sell the oil and gas products thereof, and those from all royalty oil from lands in the naval reserves, for the benefit of the United States: And provided further, That the rights of any claimant under said Act of February 25, 1920, are not affected adversely thereby."—*United States Statutes at Large, Public Laws of the United States of America*, v. 41, pt. 1, passed by the 66th Congress, 2nd Session, ch. 228, 1920, p. 813.

1920 (June-September).—Merchant marine.—Jones Act.—Refusal by the president to carry out provisions incompatible with commercial treaties.—"The Jones Act, approved June 5, 1920, declared that it was 'necessary for the national defense and for the proper growth of its foreign and domestic commerce that the United States shall have a merchant marine of the best equipped and most suitable types of vessels sufficient to carry the greater portion of its commerce and serve as a naval or military auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the United States' and that it was 'the policy of the United States to do whatever may be necessary to develop and encourage the maintenance of such a merchant marine.' With a view to the attainment of this object, (1) the Shipping Board was increased to seven members at a salary of \$12,000 each, was intrusted with all vessels and related properties acquired by the government under war legislation, and was given a fairly free hand as to the sale of them and as to the determination and operation of lines deemed essential to the development of foreign and coastwise trade and the provision of postal service; (2) a loan fund was authorized to give financial encouragement to the building of approved types of ships; (3) American-built vessels of approved types were granted partial exemption from excess and war profits taxes; (4) provision was made for the extension of our coastwise laws to all our insular possessions when adequate American steamship service to them should be established; (5) as far as practicable, all United States mails were to be carried on ships of American registry; (6) preferential railway rates on imports or exports were to be limited to goods carried in American ships, provided suitable American shipping facilities to and from the points involved were available; (7) the President was directed to give notice of the termination of such articles or

provisions of existing treaties as restricted the imposition of discriminating customs duties on imports brought in foreign ships and discriminating tonnage duties on foreign ships entering our ports; (8) and provisions were enacted in regard to ship mortgages, marine insurance, and classification of vessels owned by the government—all of which are calculated to encourage investment in American shipping. The outstanding characteristic of this law is its emphasis upon indirect aid and upon discrimination as means of conserving and upbuilding the merchant marine, though the free hand given the Shipping Board and the Postmaster General in the matter of mail contracts implies also the possibility of postal subvention.”—G. M. Fisk and P. M. Pierce, *International commercial policies*, pp. 283-284.—“Section 34 of the Merchant Marine Act, commonly called the Jones Act, . . . is as follows: ‘In the judgment of Congress, articles or provisions in treaties or conventions to which the United States is a party, which restrict the right of the United States to impose discriminating customs duties on imports entering the United States in foreign vessels and in vessels of the United States, and which also restrict the right of the United States to impose discriminatory tonnage dues on foreign vessels and on vessels of the United States entering the United States should be terminated, and the President is hereby authorized and directed within ninety days after this Act becomes law to give notice to the several governments, respectively, parties to such treaties or conventions, that so much thereof as imposes any such restriction on the United States will terminate on the expiration of such periods as may be required for the giving of such notice by the provisions of such treaties or conventions.’ The period of ninety days thus specified expired September 5 without any such notices of termination by the President. In explanation of the failure to act, the Secretary of State issued, September 25, the following statement: ‘The Department of State has been informed by the President that he does not deem the direction contained in section 34 of the so-called Merchant Marine Act an exercise of any constitutional power possessed by Congress.’ Under the provisions of the section referred to, the President was directed within ninety days after the act became law to notify the several governments with whom the United States had entered into commercial treaties that this country elected to terminate so much of said treaties as restricted the right of the United States to impose discriminating customs duties on imports and discriminating tonnage dues, according as the carrier were domestic or foreign, quite regardless of the fact that these restrictions are mutual, operating equally upon the other governments which are parties to the treaties, and quite regardless also of the further fact that the treaties contain no provisions for their termination in the manner contemplated by Congress. The President, therefore, considers it misleading to speak of the ‘termination’ of the restrictive clauses of such treaties. The action sought to be imposed upon the Executive would amount to nothing less than the breach or violation of said treaties, which are thirty-two in number, and cover every point of contact and mutual dependence which constitute the modern relations between friendly states. Such a course would be wholly irreconcilable with the historical respect which the United States has shown for its international engagements and would falsify every profession of our belief in the binding force and the reciprocal obligation of treaties in general.”—J. S.

Reeves, *Jones Act and the denunciation of treaties* (*American Journal of International Law*, v. 15, 1921, p. 33).

1920 (July).—Fisheries treaty with Canada.—“The conclusion of a treaty between the United States and Canada for the protection and conservation of the great salmon fisheries of the Fraser River and Puget Sound was announced by the State Department at Washington on July 26. The necessity for such a treaty is seen in the fact that the output of these fisheries had dwindled from 2,300,000 cases of canned salmon in 1913 to about 65,000 cases in 1918, and has now reached an even lower figure. The treaty will come before the Senate at its next session for ratification. The whaling industry is also the subject of consideration by the two Governments, and a world-wide conference is proposed, with the object of saving the remnants of the once mighty herds that roamed the seas in the great days of the whaling industry. These facts were disclosed by publication of the report of the International Commission, which in 1918 assembled to study the outstanding fisheries questions of the United States and Canada.”—*New York Times Current History*, September, 1920, p. 1013.

1920 (November).—Foreign policy at close of Wilson administration.—Mexican affairs.—President announces Armenian boundaries.—“During 1920 old issues that had long been hidden behind the war clouds came out into the open again. Obregon overthrew Carranza and entered into power in Mexico, but the Wilson Administration maintained neutrality during the brief struggle. Ambassador Fletcher had resigned, but Henry Morgenthau, appointed to succeed him, did not obtain the confirmation of the Senate, and the new Administration had not been formally recognized at the end of President Wilson’s term. A controversy over the status of American oil rights was one of the chief impediments to recognition, though Obregon’s general attitude was far more friendly to America than that of Carranza. [See also MEXICO: 1920-1921.] The President in November announced the boundaries of Armenia, which he had drawn at the request of the European Allies. But these boundaries were of no particular interest by that time, since the Turks and the Bolsheviki were already partitioning Armenia; and the mediation between the Turks and Armenians which the Allies requested the President to undertake was forestalled by the Bolshevik conquest of the remnant of the country.”—*New York Times Book Review*, Feb. 27, 1921, p. 11.—See also ARMENIA: 1919-1920.

1920 (November).—Note to Great Britain on oil policy.—Influence of oil on foreign affairs.—“Although the United States produces about 70

per cent. of the world's oil, it already consumes 25 per cent. more than it produces. Moreover, American oil fields are becoming exhausted. Our reserves are estimated to be only 9,150,000,000 barrels, which, at our present rate of consumption, will be exhausted in twenty years. . . . In contrast with our own situation, the world's oil reserves are calculated to last 250 years. . . . Even before the terms of the San Remo agreement were made public the oil policy of Great Britain had irritated American operators. When our oil concerns entered foreign countries for the purpose of securing concessions they repeatedly found themselves blocked by foreign financial and commercial influence. . . . [In 1919 a question was raised by the arrest in Palestine of an American oil prospector who was working under a concession given by the Turkish government to the Standard Oil Company. In answer to a protest by the United States government, the British Foreign Office declared that], pending the establishment of a local government in Palestine, all operations had been forbidden to Britishers and foreigners alike. In Mesopotamia, several American claimants contested the concessions of the Turkish Petroleum Company, among them the Chester concession. (See Trustr: International: Struggle for oil concessions.)] . . . Thus neither the Turkish Petroleum Company nor the Chester interests had a clear title to the fields. Another group of claimants representing American capital were the twenty-two heirs of Abdul Hamid, II. . . . Certain American interests acquired part of these claims and were represented at the Lausanne conference. . . . After Great Britain's oil policy was brought to the attention of the United States Senate in the Spring of 1920 it adopted a resolution asking the State Department to report on the measures foreign governments had taken to exclude Americans from oil fields. In April 1920, Congress passed the Public Lands Leasing Act, which provided that no public lands should be leased to an alien unless his country extended the same right to Americans. The following month, President Wilson sent a special message to the Senate which declared that the policy of the British was to exclude foreigners from owning or operating oil-producing properties throughout most of the empire, and also for the Government itself to participate in oil undertakings. This message was indirectly denied by Lord Curzon, the British Secretary of Foreign Affairs, in a Memorandum to Ambassador Geddes, dated July 5, 1921, in which it was stated that the British Government was not co-operating with British commercial interests to secure 'an undue share' of the petroleum resources. Lord Curzon also insisted that there was an absence of a 'general policy of exclusion of foreigners from British fields.' In 1920 the Philippine Legislature passed a law barring aliens from the exploitation of the public oil lands of the Philippines. Some months later the State Department supported the Costa Rican Government in cancelling the Amory concession, an oil grant given to a British concern by the Tinoco Government. . . . During the Summer of 1920 a vigorous correspondence was carried on between the United States and Great Britain over the question of oil. On Nov. 20, 1920, Secretary of State Colby dispatched another note protesting against the San Remo oil agreement and the exclusion of American oil interests from mandates established under the League of Nations."—R. L. Buell, *Oil interests in the fight for Mosul* (*New York Times Current History, March, 1923*). —The note also gives a clear statement of the stand taken by the administration on the subject

of mandates in general. It reads, in part, as follows:

"My Lord: I have the honor to refer to your note of August 9th, regarding the application of the principle of equality of treatment to the territories of the Near East to be placed under mandates, and specifically to the petroleum resources of those territories as affected by that principle. Before considering the observations of His Majesty's Government on the general principles advocated by the United States and agreed to by the Allied Powers for application to the mandates over former Turkish territory, as outlined in the notes of May 12th and July 28th, addressed to you on behalf of this Government, I think it will clarify the discussion to indicate certain of your statements and assurances which this Government has been pleased to receive. Thus, I note that the assignment to Great Britain of the mandate for Mesopotamia was made and accepted, subject to no friendly arrangement whatever with any third Government regarding economic rights, which, of course, would have been wholly at variance with the purpose and contemplation of any mandate. It is also gratifying to learn that His Majesty's Government is in full sympathy with the several propositions formulated in the note of May 12th, above referred to, which embody or illustrate the principles which this Government believes should be applied in the mandated regions, and which are essential to the practical realization of equality of treatment. . . . This Government welcomes your pledges to the effect that the natural resources of Mesopotamia are to be secured to the people of Mesopotamia and to the future Arab State to be established in that region, and that it is the purpose of the British Government, fully alive to its obligation as a temporary occupant, not only to secure these resources to the Mesopotamia State, but also its absolute freedom of action in the control thereof, and in particular that it is far from the intention of the mandatory power to establish any kind of monopoly or preferred position in its own interest. . . . Adverting at this point to the views of His Majesty's Government regarding the nature of the responsibility of mandatory powers under the League of Nations, I desire to call the attention of His Majesty's Government to the fact that while the draft mandate, Form A, was not adopted at Paris, it was the understanding of the American representative there present that the British Government entertained and had expressed convictions favorable to said form and that presumably its representatives would exercise their influence in conformity with those convictions. I need hardly refer again to the fact that the Government of the United States has consistently urged that it is of the utmost importance to the future peace of the world that alien territory, transferred as a result of the war with the Central Powers, should be held and administered in such a way as to assure equal treatment to the commerce and to the citizens of all nations. Indeed, it was in reliance upon an understanding to this effect, and expressly in contemplation thereof, that the United States was persuaded that the acquisition under mandate of certain enemy territory by the victorious powers would be consistent with the best interests of the world. It is assumed, accordingly, that your statements with reference to Mandate A, together with the statement that the draft mandates for Mesopotamia and Palestine have been prepared with a view to secure equality of treatment for the commerce and citizens of all States which are members of the League of Nations,

do not indicate a supposition on your part that the United States can be excluded from the benefits of the principle of equality of treatment. This Government is pleased to find that His Majesty's Government is in full sympathy with the principles, formulated in its communication of May 12th and July 28th. But it is unable to concur in the view contained in paragraph 15 of your note, that the terms of the mandates can properly be discussed only in the Council of the League of Nations and by the signatories of the covenant. Such powers as the allied and associated nations may enjoy or wield, in the determination of the governmental status of the mandated areas, accrued to them as a direct result of the war against the Central Powers. The United States, as a participant in that conflict and as a contributor to its successful issue, cannot consider any of the associated powers, the smallest not less than itself, debarred from the discussion of any of its consequences or from participation in the rights and privileges secured under the mandates provided for in the Treaties of Peace. This Government notes with interest your statement that the draft mandates for Mesopotamia and for Palestine, which have been prepared, with a view to secure equality of treatment and opportunity for the commerce, citizens and subjects of all States which are members of the League of Nations will, when approved by the interested allied powers, be communicated to the Council of the League of Nations. The United States is undoubtedly one of the powers directly interested in the terms of the mandates, and I therefore request that the draft mandate forms be communicated to this Government for its consideration before their submission to the Council of the League. It is believed that His Majesty's Government will be the more ready to acquiesce in this request in view of your assurance that His Majesty's Government is in full sympathy with the various principles contained in the two previous notes of this Government upon this subject. The establishment of the mandate principle, a new principle in international relations, and one in which the public opinion of the world is taking a special interest, would seem to require the frankest discussion from all pertinent points of view. It would seem essential that suitable publicity should be given to the drafts of mandates, which it is the intention to submit to the council, in order that the fullest opportunity may be afforded to consider their terms in relation to the obligations assumed by the mandatory power and the respective interests of all Governments, which are or deem themselves concerned or affected. The fact cannot be ignored that the reported resources of Mesopotamia have interested public opinion of the United States, Great Britain and other countries as a potential subject of economic strife. Because of that fact they become an outstanding illustration of the kind of economic question with reference to which the mandate principle was especially designed and, indeed, a peculiarly critical test of the good faith of the nations which have given their adherence to the principle. This principle was accepted in the hope of obviating in the future those international questions that grow out of a desire for the exclusive control of the resources and markets of annexed territories. To cite a single example, because of the shortage of petroleum, its constantly increasing commercial importance and the continuing necessity of replenishing the world's supply by drawing upon the latent resources of undeveloped regions, it is of the highest importance to apply to the petroleum in-

dustry the most enlightened principles recognized by nations as appropriate for the peaceful ordering of their economic relations. This Government finds difficulty in reconciling the special arrangement, referred to in paragraphs 18 and 19 of your note and set forth in the so-called San Remo petroleum agreement, with your statement that the petroleum resources of Mesopotamia, and freedom of action in regard thereto, will be secured to the future Arab State, as yet unorganized. Furthermore, it is difficult to harmonize that special arrangement with your statement that concessionary claims relating to those resources still remain in their pre-war position, and have yet to receive, with the establishment of the Arab State, the equitable consideration promised by His Majesty's Government. This Government has noted in this connection a public statement of His Majesty's minister in charge of petroleum affairs to the effect that the San Remo agreement was based on the principle that the concessions granted by the former Turkish Government must be honored. It would be reluctant to assume that His Majesty's Government has already undertaken to pass judgment upon the validity of concessionary claims in the regions concerned and to concede validity to certain of those claims which cover apparently the entire Mesopotamian area. Indeed, this Government understands your note to deny having taken, and to deny the intention to take any such *ex parte* and premature action. In this connection I might observe that such information as this Government has received indicates that, prior to the war, the Turkish Petroleum Company, to make specific reference, possessed in Mesopotamia no rights to petroleum concessions or to the exploitation of oil; and in view of your assurance that it is not the intention of the mandatory power to establish on its own behalf any kind of monopoly, I am at some loss to understand how to construe the provision of the San Remo agreement that any private petroleum company which may develop the Mesopotamia oil fields shall be under permanent British control. Your Lordship contrasts the present production of petroleum in the United States with that of Great Britain, and some allusion is made to American supremacy in the petroleum industry. I should regret any assumption by His Majesty's Government or any other friendly power that the views of this Government as to the true character of a mandate are dictated in any degree by considerations of the domestic need or production of petroleum or any other commodity. I may be permitted to say, however, for the purpose of correcting a misapprehension which your note reflects, that the United States possesses only one-twelfth, approximately, of the petroleum resources of the world. The oil resources of no other nation have been so largely drawn upon for foreign needs, and your Lordship's statement that any prophecies as to the oil-bearing resources of unexplored and undeveloped countries must be accepted with reserve hardly disposes of the scientific calculation upon which, despite their problematical elements, the policies of States and the anticipations of world production are apparently proceeding. The Government of the United States assumes that there is a general recognition of the fact that the requirements for petroleum are in excess of production, and it believes that opportunity to explore and develop the petroleum resources of the world, wherever found, should without discrimination be freely extended, as only by the unhampered development of such resources can the

needs of the world be met. But it is not these aspects of oil production and supply in so far as they are of domestic interest to the United States with which I am concerned in this discussion. I have alluded to them in order to correct confusing inferences, liable to arise from certain departures, which I believe I discern in your Lordship's communication, from the underlying principles of a mandate, as evolved and sought to be applied by the allied and associated powers to the territories brought under their temporary dominion by their joint struggle and common victory. This dominion will be wholly misconceived, not to say abused, if there is even the slightest deviation from the spirit and the exclusive purpose of a trusteeship as strict as it is comprehensive."—*Contemporary Review*, Feb., 1912, pp. 245-250.

1920 (December).—Cost of the war announced by secretary of the treasury.—President Wilson submits peace commission expenses.—"The net cost of the war to the American Government was fixed by Secretary of the Treasury Houston, December 8, at \$24,010,000,000. This, he said, represented the 'adjusted' expenditure of the Treasury, excluding all outlays which had no relation to the actual prosecution of the war during the period from April 6, 1917, to June 30, 1920, covering the extremes of the Government's wartime fiscal operations. The Treasury figures showed that total expenditures by the Government during the period indicated, excepting postal disbursements from postal revenues, totaled the sum of \$38,830,812,895. Of this amount \$16,078,844,097 was obtained in taxes and revenue from sources other than borrowed money. Mr. Houston said that a deduction of \$9,523,000,000—the amount loaned to foreign Governments—should be made from the grand total, since these loans would be repaid and consequently could not be charged as an actual expenditure. The Secretary made other deductions, aggregating about \$4,500,000,000, which, he said, represented the excess cost of Government operations for the three years and three months over what they would have been in normal times. President Wilson in an official communication informed the Senate on Dec. 8 that the actual expenses incurred by the American Peace Commission in Paris totaled \$1,651,191.09. The President submitted an itemized expense bill which covered the smallest details. The largest single item in the bill was \$283,560.47 for food, hotel and kitchen supplies, and the smallest was \$166.17 for telephone hire. The mission of William C. Bullitt to Soviet Russia cost \$5,000."—*New York Times Current History*, Jan., 1921, p. 21.

1920-1921.—Export trade.—"In the postwar peak year, 1920, the volume of United States exports was almost double that of 1914, and the import tonnage was more than 50 per cent greater; but in 1921 there was a general decline in volume of our oversea trade, particularly in exports. In regional distribution of this trade there was a shift in favor of Mexico and South America at the expense of Europe and the Mediterranean region. The middle American region, in each of the years under consideration, accounted for considerably

over half of the entire tonnage of oversea imports into the United States. . . . This increase in total imports is accounted for mainly by the enormous expansion in receipts from Mexico. . . . Considerable expansion in trade with the United States . . . [took] place also in the South American region. . . . The United States trade with Europe and the Mediterranean region in 1914 constituted slightly over three-fifths of our oversea exports and almost two-fifths of our imports. In 1920 this region took 71 per cent of the oversea exports, but contributed less than 8 per cent of our oversea imports. . . . The world-wide industrial depression in 1921 was reflected in the general decline in volume of United States oversea trade from the peak year of 1920, particularly in exports. . . . The principal exports from the United States to [Middle America] were coal and coke, foodstuffs, wood and its manufactures, iron and steel products, oils, greases, and fertilizers. The falling off in shipments of coal to this region in 1921 accounted for most of the decline from exports recorded in 1920. Middle America, in each of the four years specified, accounted for over half of the entire tonnage of our oversea imports. . . . Because of the density of population and its relatively high purchasing power, the countries included in the European and Mediterranean region have been and continue to be our greatest market. To this district the United States sent well over half of its total oversea exports in all of the four years included . . . the percentage ranging from 61 in 1914 to 71 in 1920. In 1921 Europe took 69 per cent of the volume of our oversea exports, more than half of this going to the United Kingdom, France, and Belgium."—F. E. Benjamin, *Transportation (Commerce Reports, United States Department of Commerce*, no. 20, May 14, 1923, pp. 456-457).—See also below: 1922: Economic situation.

1920-1921 (April-July).—Resolution of peace with Germany passed by Congress.—Vetoed by President Wilson.—Resolution re-introduced in 1921, passed by Congress and signed by President Harding.—In April, 1920, resolutions to repeal the declarations of war against Germany and Austria were introduced in both Houses of Congress. The House resolution was passed on Apr. 9, 1920, by a vote of 242 to 150, but was dropped in favor of the resolution introduced in the Senate, on May 5, by Senator Knox of Pennsylvania. In his address in support of the resolution, Senator Knox maintained that the Treaty of Versailles, which was signed by the president, terminated the war, even though the treaty had not been ratified by the Senate. He claimed that "by the treaty itself, which [he said] is now with our consent and by virtue of our stipulation come, in that respect, into full force and effect, the war has terminated; and in this connection I venture to observe that if . . . the making of the peace is an Executive function, then the Executive has already acted. If it is not an Executive function, then Congress may, as to appropriate matters, act in a manner to bring peace. It has resulted furthermore from the deposit of ratifications as above outlined that Germany and the other powers concerned are observing and carrying out the terms of the treaty in full detail. . . . Committees and organi-

zations provided for by the treaty have been organized and are functioning. . . . The various measures of Germany's disarmament, demobilization and evacuation of territory, of the holding of plebiscites, of the surrender of territory, of the adjustment of territorial rights are being carried out to the letter save as they are modified by the mutual consent of the parties. The privileges and advantages stipulated in the treaty for nationals of the allied and associated powers . . . are being carried out and enjoyed by the nationals of all the powers, including our own, save only where our own citizens are being injuriously curbed by the restrictions imposed by our own government. . . . There is everywhere outside of the United States itself, with all the great powers, including ourselves (save only Russia), peace from the recent conflict. . . . Internationally, therefore, we are at peace. . . . All are going forward on a peace time basis under terms and conditions of a treaty negotiated by our associates and us, and ratified by them and the enemy. . . . The war is at an end by virtue of the armistice of Nov. 11, 1918, . . . such armistice being in fact a capitulation ending hostilities by the virtual surrender of the enemy. The war is at an end by the silent cessation of hostilities, which concluded the war in fact. The war is at an end because the Government against which we specifically declared war has ceased to exist. . . . The war is at an end because we, together with our associates in the hostilities, negotiated with the people with whom we had been fighting, . . . a new treaty of peace which provided in terms that the war should terminate and diplomatic relations be resumed when the treaty came into force; and because the treaty, pursuant to its provisions, did come into force in January last (1920) when it was ratified by Germany on the one hand and three of the allied and associated powers on the other hand." On May 21, 1920, the House of Representatives adopted the Knox resolution which was supported by nineteen Democrats, and by all the Republicans except two. The following is, in part, the text of the resolution: ". . . That the joint resolution of Congress, passed April 6, 1917, declaring a state of war to exist between the Imperial German Government and the Government and people of the United States, and making provisions to prosecute the same, be, and the same is hereby, repealed, and said state of war is hereby declared at an end: Provided, however, that all property of the Imperial German Government, or its successor or successors, and all of the German nationals, which was, on April 6, 1917, or has since that date come into possession or under the control of the Government of the United States or any of its officers, agents, or employees, from any source or by any agency whatsoever, shall be retained by the United States and no disposition thereof made, except as shall have been heretofore, or specifically hereafter be provided by Congress, until such time as the German Government has, by a treaty with the United States, ratification whereof is to be made by and with the advice and consent of the Senate, made suitable provisions for the satisfaction of all claims against the German Government of all persons, wheresoever domiciled, who owe permanent allegiance to the United States and who have suffered, through the acts of the German Government or its agents since July 31, 1914, loss, damage, or injury to their persons or property, directly or indirectly, whether through ownership of shares of stock in German, American, or other corporations, or in consequence of hostilities or of any operations

of war, or otherwise, and also provisions granting to persons owing permanent allegiance to the United States, most favored nation treatment, whether the same be national or otherwise, in all matters affecting residence, business, profession, trade, navigation, commerce and industrial property rights, and confirming to the United States all fines, forfeitures, penalties and seizures imposed or made by the United States during the war, whether in respect to the property of the German Government or German nationals, and waiving any and all pecuniary claims based on events which occurred at any time before the coming into force of such treaty, any existing treaty between the United States and Germany to the contrary notwithstanding. Sect. 2. That until by treaty or act or joint resolution of Congress it shall be determined otherwise, the United States, although it has not ratified the Treaty of Versailles, reserves all of the rights, powers, claims, privileges, indemnities, reparations or advantages to which its nationals have become entitled, including the right to enforce the same under the terms of the armistice signed Nov. 11, 1918, or any extensions or modifications thereof or which under the Treaty of Versailles have been stipulated for its benefit or to which it is entitled as one of the principal allied and associated powers. Sect. 3. That the joint resolution of Congress approved Dec. 7, 1917, 'declaring that a state of war exists between the Imperial and Royal Austro-Hungarian Government and the Government and the people of the United States are making provisions to prosecute the same,' be and the same is hereby repealed, and said state of war is hereby declared at an end."—*Knox peace resolution (New York Times Current History, May, 1921, p. 106)*.—On May 27, the president returned the resolution to the House of Representatives with a veto message in which he said: "I have not felt at liberty to sign this resolution because I cannot bring myself to become party to an action which would place ineffaceable stain upon the gallantry and honor of the United States. The resolution seems to establish peace with the German Empire without exacting from the German Government any action by way of setting right the infinite wrongs which it did to the peoples whom it attacked and whom we professed it our purpose to assist when we entered the war. Have we sacrificed the lives of more than 100,000 Americans and ruined the lives of thousands of others and brought upon thousands of American families an unhappiness that can never end for purposes which we do not now care to state or take further steps to attain? The attainment of these purposes is provided for in the Treaty of Versailles by terms deemed adequate by the leading statesmen and experts of all the great peoples who were associated in the war against Germany. Do we now not care to join in the effort to secure them? We entered the war most reluctantly. Our people were profoundly disinclined to take part in a European war, and at last did so only because they became convinced that it could not in truth be regarded as only a European war, but must be regarded as a war in which civilization itself was involved and human rights of every kind as against a belligerent Government. Moreover, when we entered the war we set forth very definitely the purposes for which we entered, partly because we did not wish to be considered as merely taking part in a European contest. This Joint Resolution which I return does not seek to accomplish any of these objects, but in effect makes a complete surrender

of the rights of the United States so far as the German Government is concerned. . . . Notwithstanding the fact that upon our entrance into the war we professed to be seeking to assist in the maintenance of common interests, nothing is said in this resolution about the freedom of navigation upon the seas, or the reduction of armaments, or the vindication of the rights of Belgium, or the rectification of wrongs done to France, or the release of the Christian populations of the Ottoman Empire from the intolerable subjugation which they have had for so many generations to endure, or the establishment of an independent Polish State, or the continued maintenance of any kind of understanding among the great powers of the world which would be calculated to prevent in the future such outrages as Germany attempted and in part consummated. We have now, in effect, declared that we do not care to take any further risks or to assume any further responsibilities with regard to the freedom of nations or the sacredness of international obligations or the safety of independent peoples. Such a peace with Germany—a peace in which none of the essential interests which we had at heart when we entered the war is safeguarded—is, or ought to be, inconceivable, as inconsistent with the dignity of the United States, with the rights and liberties of her citizens, and with the very fundamental conditions of civilization.' The day following a motion to override the veto was lost by a vote of 219 yeas to 152 nays, 29 less than the necessary two-thirds; 17 Democrats voted yea, 2 Republicans nay. This action definitely ended all chances of final action on the Peace Treaty and League of Nations at that session of Congress, as it adjourned sine die on June 5; moreover it had the effect of making the question squarely a dominant political issue in the Presidential campaign."—*New York Times Current History, July, 1920, pp. 707-709.*—Thus the matter stood until April, 1921, when in his first message to Congress, President Harding included a recommendation that Congress should establish the state of technical peace without delay. (See below: 1921 [April].) "Almost immediately Congress took up the question of peace with Germany and passed a resolution declaring the war at an end, but expressly reserving to the United States and its citizens whatever rights or advantages which had been accorded to them by the armistice, by the Treaty of Versailles, or as a result of the war."—W. F. Johnson, *Life of Warren G. Harding, p. 112.*—On April 13 the Knox resolution was re-introduced, and on April 30 it was passed by the Senate by a vote of 49 to 23. No change was made by the Senate in the resolution as reported by the Foreign Relations Committee. It would repeal the war resolutions affecting Germany and Austria-Hungary, impound alien enemy property, and reserve to the United States all rights and privileges under the Treaty of Versailles and other peace treaties. In May, because of an attempt by Germany to evade payment of reparations, President Harding requested the House to suspend action on the resolution. After the question of the reparations had been settled for the time, however, it was again brought up. It passed the House on June 30 by a vote of 263 to 59, was sent back to the Senate, which passed it on July 1 by a vote of 38 to 19, and on July 2 it received the signature of the president. The text of the resolution as passed is as follows:

"JOINT RESOLUTION TERMINATING THE STATE OF

WAR BETWEEN THE IMPERIAL GERMAN GOVERNMENT AND THE UNITED STATES OF AMERICA AND BETWEEN THE IMPERIAL AND ROYAL AUSTRO-HUNGARIAN GOVERNMENT AND THE UNITED STATES OF AMERICA. Sect. 1. That the state of war declared to exist between the imperial German Government and the United States of America by the joint resolution of Congress approved April 6, 1917, is hereby declared at an end. Sect. 2. That in making the declaration, and as a part of it, there are expressly reserved to the United States and its nationals any and all rights, privileges, indemnities, reparations or advantages, together with the right to enforce the same, to which it or they have become entitled under the terms of the armistice signed Nov. 11, 1918, or any extension or modification thereof; or which are acquired by or are in the possession of the United States of America by reason of its participation in the war or to which its nationals have thereby become rightfully entitled; or which, under the treaty of Versailles, have been stipulated for its or their benefit; or to which it is entitled as one of the principal allied and associated powers; or to which it is entitled by any act or acts of Congress or otherwise. Sect. 3. That the state of war declared to exist between the imperial and royal Austro-Hungarian Government and the United States of America . . . is hereby declared at an end. Sect. 4. That in making this declaration . . . [all advantages, as above, to which the nationals of the United States are entitled under the treaty of St. Germain-en-Laye] or by virtue of any act or acts of Congress . . . are reserved. Sect. 5. All property of the imperial German Government or its successor or successors and of all German nationals which was on April 6, 1917, in or has since that date come into the possession or under the control of . . . the United States of America . . . and all property of the imperial and royal Austro-Hungarian Government, or its successor or successors, and of all Austro-Hungarian nationals which was on Dec. 7, 1917, in or has since that date come into the possession or under the control of . . . the United States of America . . . shall be retained by the United States of America and no disposition thereof made except as shall have been heretofore or specifically hereafter shall be provided by law until such time as the imperial German Government and the imperial and royal Austro-Hungarian Government or their successor or successors, shall have respectively made suitable provision for the satisfaction of all claims against said Governments respectively, of all persons wheresoever domiciled, who owe permanent allegiance to the United States of America and who have suffered through the acts of the imperial German Government or its agents, or the imperial and royal Austro-Hungarian Government or its agents, or the imperial and royal Austro-Hungarian Government or its agents, since July 31, 1914, loss, damage or injury to their persons or property, either directly, or indirectly, . . . and also shall have granted to persons owing permanent allegiance to the United States of America most favored nation treatment, whether the same be national or otherwise, in all matters affecting residence, business, profession, trade, navigation, commerce and industrial property rights and until the imperial German Government and the imperial and royal Austro-Hungarian Government or their successor or successors shall have respectively confirmed to the United States of America all fines, forfeitures, penalties and seizures imposed or made by the United States of America during the war,

whether in respect to the property of the imperial German Government or German nationals or the imperial and royal Austro-Hungarian Government or Austro-Hungarian nationals, and shall have waived any and all pecuniary claims against the United States of America."

1921.—Secretary Colby's mission to South America.—Late in the year 1920, Bainbridge Colby, the secretary of state, accompanied by Admiral Basset and General Cronkhite, set out on an official visit to South America, from which he returned at the end of January, 1921. The object of his visit, as stated by him, was as follows: "I am primarily commissioned to represent President Wilson in returning the visits of President Pessoa of Brazil and President Brum of Uruguay to the United States. My visit is, of course, official, and yet is strictly friendly and social. Both parts of our continent are conscious of the similarity of their political and social aims, and each is working toward the realization of those aims under dissimilar and, in many instances, entirely distinct conditions. To deepen our understanding of each other must always be the aim of enlightened policies. The friendship between our countries has been developing more than a century, and is acquiring every day a firmer foundation and a deepening mutual respect. I shall be very happy and contented if my short calls at the capitals of Brazil, Uruguay and Argentina serve pleasantly to emphasize the respect and cordial good will which is felt toward those Governments by the people of the United States." He sailed on the *U. S. S. Florida*, and, after having paid a visit to the island of Barbados, Dec. 9, 1920, he arrived on December 21 at Rio de Janeiro, where he was officially received by President Pessoa with every evidence of cordiality. At Rio de Janeiro he reiterated the Latin American policy of the United States, when, in his speech at the Brazilian president's official banquet on the evening of his arrival he said. "We want no gains, we covet no prizes which are the reward of craft or oppression." "Mr. Colby was formally received by the Brazilian congress next day, and in a speech of welcome Senator Alfredo Ellis took occasion to praise the Monroe Doctrine, by which 'the American government became the champion of liberty throughout the New World.' . . . [He left Rio de Janeiro on December 24, and proceeded to Montevideo, where he was again received with enthusiasm, which, however, was tempered, by] a tendency to resent any assumed superiority of the United States as a protector. This sentiment ran through every address of welcome heard. As Brum expressed it, Uruguay believes in the Monroe Doctrine, but she wants it to be for reciprocal protection and is willing to do her full share in enforcement of the doctrine. . . . [The secretary left Montevideo on December 31, on board the Argentina cruiser *Libertad*, for Buenos Aires, the capital of Argentina, where he arrived on New Year's Day.] At Buenos Aires there was an absence of popular enthusiasm in decided contrast to his reception in Uruguay. Several reasons are adduced for this: resentment at the unsolicited protection provided by the Monroe Doctrine, a feeling of distrust caused by America's occupation of several republics, the passage of the Fordney Tariff bill in the House of Representatives, which
