Corner Fifth and K Sts., San Diego, Cal.

To Our Patrons and the Public.

In presenting this our second annual catalogue we take pleasure in announcing that we have a very large and fine stock of home grown trees and plants, &c., which we shall offer at greatly reduced prices.

Our trees are grown with the greatest care and are absolutely free from pests of all kinds, and such as we are obliged to purchase elsewhere, will be from reliable parties, and first class in every particular.

In the selection of fruit trees, we are governed by the varieties that have proved themselves best adapted to Southern California and in obtaining new varieties we choose only those especially desirable.

We use the greatest care to guard against mistakes of all kinds and especially that every article shall be true to name. But it is expressly understood between the purchaser and ourselves, that we only hold ourselves to correct such error as are brought to our notice within ten (10) days.

All goods will be carefully packed and delivered free of charge at R. R. Station, Express office or carriers after which our responsibility ceases.

Terms cash on delivery of goods or approved acceptance from unknown parties.

Thanking our patrons for past favors and soliciting a continuance of the same, we earnestly request all who desire first class goods at low prices to examine our stock before purchasing elsewhere.

All orders by mail will receive prompt attention.

We also have a collection of choice garden and flower seeds which we are confident will please all who give them a trial.

Send for Price List.

ALLEN & ORCUTT

San Diego, Cal.

When to Plant.

For deciduous trees, it is by far the best, to plant as soon as possible after the winter rains commence, for if the trees are set early, in this climate the rains will settle the soil around the roots and new ones started, so that when buds put forth, the tree can make a strong and vigorous growth, and be able to withstand successfully the warm dry summer; but if planting is delayed, the roots do not have time to become established, the tree makes a feeble growth, and in consequence, is very apt to die during the heat and draught of summer.

Descriptive Catalogue.

FRUIT DEPARTMENT.

Our list of fruit trees will comprise a great many varieties not described in our small catalogue.

SUMMER APPLES.

Early Harvest.—Above medium size; round, bright straw color when ripe; slightly acid; a universal favorite, and should be in every collection. Tree grows moderately; very productive. Ripens last of July and through August.

Early Sweet Bough.—Large, oblong, ovate; pale greenish yellow; a rich, sprightly sweet. The earliest sweet apple worth cultivating. Tree grows moderately and bears abundantly. Ripens from the middle of July to the middle of August.

Duchess of Oldenburgh.—A large, beautiful, Russian apple; roundish streaked red and yellow, tender, juicy and pleasant. Tree, a vigorous and fine grower, and a young and abundant bearer. August.

Red Astrachan.—Large, roundish, nearly covered with a deep crimson, overspread with a thick bloom, very handsome; juicy, good, though rather acid. Tree, hardy, vigorous, and an early and abundant bearer. The best early apple. August.

AUTUMN APPLES.

Fall Pippin.—Very large, roundish, a little flattened, sometimes ribbed; rich yellow when ripe; very tender and mellow; rich aromatic flavor. October to December.

Golden Russet.—Medium size; dull russet with a tinge of red on the exposed side; flesh greenish, crisp, juicy and high flavored. Tree hardy and vigorous. September and October.

King of Thompkin's County.—Large, broad, yellowish red, shaded and striped with crimson; rich, vinous, aromatic, sub-acid flavor. Tree very vigorous and bears abundantly almost every season.

Skinner's Pippin.—Skinner's seedling. Originated in the Orchard of Judge Skinner, San Jose, and is considered one of the best early fall varieties: fruit large, skin thin, pale yellow, often with a blush on sunny side; flesh very tender, juicy, sub-acid. Tree a close vigorous grower. September.

Baldwin.—Large, roundish; deep bright red; juicy, crisp, sub-acid, good flavor; very productive of fair, handsome fruit.

Ben Davis.—New York Pippin. Large, handsome, striped, and of good quality; productive and late keeper.

Kelsey Japan. A new variety introduced from Japan; a distinct type of plums, the tree and foliage resembling a peach more than a plum. Fruit very large; greenish yellow covered with red on the sunny side; flesh very solid and firm when ripe, juicy, and with a rich, vinous flavor; pit very small. It will undoubtedly prove one of the best varieties for shipment to distant points. September.

PRUNE.

Bulgarian. A variety cultivated in Alameda county under this name; above medium size; almost round; dark purple, sweet and rich, with a pleasant acid flavor. Tree a vigorous grower and an early, regular, profuse bearer. Valuable as a dried fruit.

Fellenberg. (Large German Prune, Swiss Prune, Italian Prune.) Medium size, oval; dark purple; flesh juicy, and delicious; parts from the stone; fine for drying. Tree a free grower and very productive.

French Prune. (Petite d'Agen, Burgundy Prune.) The well known variety so extensively planted for drying, medium size; egg shaped; violet purple, juicy, very sweet, rich and sugary; very prolific bearer.

German Prune. (Common Quetsche.) From this variety, the dried prunes exported from Germany, are made; the name however has been applied in this State to numerous plums and prunes, which are all sold under it. The fruit of the true German Prune is long, oval, and swollen on one side; skin purple, with a thick blue bloom; flesh firm, green, sweet, with a peculiar pleasant flavor; separates readily from the stone. September.

Hungarian Prune. [Grosse Prune d' Agen.] Very large, dark red, juicy and sweet. Its large size, bright color, productiveness and shipping qualities, render it a profitable variety for home or distant markets.

Robe de Sargent. A variety lately introduced from France. It is this, which in a dried state forms the celebrated "*Pruneon d' Agen*"; fruit medium size, oval; skin deep purple approaching to black, and covered with a thick blue bloom; flesh greenish yellow, sweet and well flavored, sugary, rich and delicious, slightly adhering to the stone; a valuable drying and preserving variety.

Silver Prune. Originated with W. H. Prettyman, of Oregon; it is said to be a seedling of Coe's Golden Drop, which it much resembles, but it is much more productive and larger than its parent. In the judgment of fruit experts it is entitled to rank with the best drying plums and prunes, because of its large size, handsome appearance and superior flavor.

PEACHES.

RIPENING NEARLY IN THE ORDER NAMED.

Pean [or saucer peach.] First of the season; flattened or saucer shape; skin white, with a delicate blush next the sun; flesh white, juicy, pit extremely small, prolific bearer; fine for early market.

Alexander. Generally considered to be the best very early freestone; medium to large size; greenish white, nearly covered with a deep, rich red, very juicy, sweet, and of good quality; valuable as an early market sort.

Briggs' May. Originated with J. B. Briggs, Marysville, Cal. Medium size, round; white skin, with red cheek; flesh white, melting, juicy, and sweet. A valuable early variety.

Mountain Rose. Large, round, white, with bright cheek: firm and good in every way, either for shipping, canning or evaporating.

Coolidge's Favorite. A popular New England peach, large, roundish, skin clear, smooth white, with a fine crimson cheek; flesh very melting, with a rich, sweet, and high flavor.

Foster. A large yellow peach, resembling Early Crawford, but of better quality, and ripening a few days earlier. The fruit is very uniform in size.

Early Crawford. A magnificent, large, yellow peach, of good quality. Its size, beauty and productiveness make it one of the most popular varieties. It is probably more extensively planted than any other sort.

Muir. This very remarkable peach originated with G. M. Thissel, of Winters, Cal., who gives the following description: "I believe it to be a seedling from the Early Crawford, though the tree does not resemble the Crawford; the leaf is more like a willow. It is an excellent bearer, does not curl. The fruit is large to very large; is a very free stone: never saw one stick to the pit. It is a fine shipper, and one of the best canning peaches in the United States. It requires but little sugar, and many pronounce it sweet enough without any. As a drying peach, it excels all others ever introduced into the market."

Late Crawford. Fruit very large, roundish, skin yellow, with dark red cheek, flesh deep yellow, juicy and melting, with a very rich and excellent vinous flavor. A well known popular variety.

Beer's Smock. [Smock Free.] Medium to large; yellow, with a dull red cheek; flesh yellow, dry, but good; a regular bearer and enormously productive, making it very profitable in many sections; free stone, first of October.

Salway. A large, yellow, English peach, with deep yellow flesh; very juicy, melting and rich, the most valuable late market variety.

CLING-STONE VARIETIES.

Heath. The most delicious of all cling-stones; fruit very large; skin downy, cream colored white, with a faint blush of red in the sun; flesh greenish; white very tender and exceedingly juicy, with the richest, highest, and most luscious flavor.

Lemon. A very large and beautiful lemon-shaped cling; skin fine, yellow flesh firm, yellow, with a rich, sprightly, vinous, sub-acid flavor.

Runyon's Orange. This variety originated with Mr. Solomon Runyon on the Sacramento River, is much superior to the common Orange Cling, and is not subject to mildew like that variety. Fruit very large; skin yellow, with a dark crimson cheek; flesh yellow, rich, and sugary, with a decided vinous flavor.

Chinese. A very popular peach in the South, of immense size, oblong; skin creamy white, beautifully mottled; flesh white, juicy, and of high flavor.

APRICOTS.

Breda. Small, round, dull orange marked with red in the sun; good flavor, an excellent very early variety.

- Moorpark.** One of the largest, most popular and widely disseminated apricots, deep orange or brownish red; flesh quite firm, bright orange, parting freely from the stone, quite juicy, with a rich and luscious flavor. A favorite canning variety. August.
- Large Early Montgamet.** A large apricot, introduced from France, compressed, reddish next the sun, flesh orange yellow, very firm, with a perfumed vinous flavor, ripens one week before the Royal. Tree a vigorous grower and prolific bearer.
- Peach.** Very large, handsome and delicious flavor, skin deep orange, mottled with dark brown, flesh of a fine, saffron yellow color, juicy, rich and high flavored, one of the best. August.
- Royal.** A standard variety of French origin, nearly as large as the Moorpark, and ripens a week or ten days earlier. Skin dull yellow, with an orange cheek, flesh pale orange, firm and juicy, with a rich, vinous flavor, tree a vigorous grower and regular bearer, the most desirable variety north of San Francisco Bay. July.
- St. Ambrose.** A very large, early apricot, the size of and ten days earlier than the Moorpark. It is compressed, of a deep yellow color, reddish next the sun, and very smooth. Flesh juicy, rich and sugary, a valuable addition to the canning varieties. Tree vigorous, productive.

NECTARINES.

- Boston.** Large, deep yellow, with a bright blush and deep mottlings of red, flesh yellow, without any yellow at the stone, sweet, though not rich, with a pleasant and peculiar flavor, tree very hardy and productive.
- Lord Napier.** A new variety of the largest size, and ripening amongst the earliest of nectarines; skin pale cream color, with a very dark crimson cheek in the sun, flesh very white, tender, melting, juicy, separating freely from the stone.
- New White.** Fruit rather large, nearly round, skin white, with a slight tinge of red when exposed, flesh white, tender, very juicy, with a rich vinous flavor. August.

QUINCES.

- Apple or Orange.** Large, roundish, with a short neck, fruit a bright beautiful golden yellow color, an old favorite sort. September.
- Champion.** Fruit very large, fair and handsome, very productive, surpassing all others in this respect, flesh tender, flavor delicate; imparting an exquisite quince taste and order to any other fruit with which it may be cooked.
- Rea's Mammoth.** A very large and fine variety of the orange quince, of late introduction, a strong grower, and very productive.
- Meech's Prolific.** Large, skin thin, of a bright golden yellow, exceedingly fragrant and of high flavor, ripens early in October, remarkable for its early bearing, productiveness, uniformity in size, regularity in bearing and superior quality, it meets every requirement of a perfect quince.

FIGS.

- California Black.** The well known local variety, large, dark purple, very productive.

Adriatic. Lately introduced from southern Europe, and said to be one of the very finest of all figs. Skin white and thin, pulp red, fine and exceedingly aromatic, in a dried state it is apparently not surpassed by the best dried figs of commerce.

ALMONDS.

Paper Shell. Medium size, shell very tender, easily broken between the finger and thumb, kernel large, white, sweet and relishing.

King's Soft Shell. Originated in San Jose, California, shell very thin and soft, regular and abundant bearer.

IXL. This and the following variety were introduced by Mr. Hatch, of Suisun Co., Cal., whose description we give. Tree a sturdy, rather upright grower, with large leaves, nuts large, with, as a rule, single kernels, hulls easily, no machine being needed, nor is any bleaching necessary, shell soft, but perfect. It bears heavily, and up to and including this season, very regularly.

Nonpareil. First called *Extra*. Of a weeping style of growth, smaller foliage than the IXL, but still forms a beautiful tree. An extraordinary heavy and regular bearer, with very thin shell, of the paper shell type. Mr. Hatch adds that these two varieties and the Drake's Seedling have been, so far, entirely free from Red Spider with him.

Japan Mammoth. A monstrous fruit, larger than the European, and flavored like the American sweet. Tree bears when quite young.

OLIVES.

California or Mission This variety, cultivated at the old Mission, yields a very fine oil, fruit of medium size, and matures late.

Picholine.—Introduced from Italy some ten years ago, and has proved a desirable variety, and exceedingly prolific. The fruit is rather small, but from it the finest grades of oil and pickles are made in Italy. Bears very young.

Washington Navel (Synonyms, Riverside Navel, Bahia).—Large, round, seedless, heavy, rind medium thickness, pulp melting, flavor delicious. Bears a peculiar umbilical formation on the summit or blossom end of the fruit, this protuberance is not so prominent in this as in some other varieties of Navel oranges. Tree nearly thornless, bears young, prolific, foliage distinct. Fruit commands a higher price than other sorts in the market, where it is easily distinguished by its particular mark. In quality it is, perhaps, the finest orange grown.

Mediterranean Sweet. Medium size, skin smooth; pulp melting, quality best. Tree thornless (or nearly so) and bears young, foliage peculiar. Imported.

Maltese Blood. Medium round, pulp of a blood-red color. This appears in the form of flakes when the fruit begins to ripen, which gradually increases until the entire pulp is colored. Prolific, strong grower, nearly thornless, foliage peculiar. Imported.

LEMONS.

Sicily. Imported. One of the genuine lemons of commerce. Size medium, rind sweet, skin smooth, thin tough and dense, membrane covering segments of pulp thin and small in quantity; pulp juicy, acid, fine, quality, best.

MISCELLANEOUS FRUITS.

Raspberries, Blackberries, Strawberries, Guavas, Gooseberries, Currants, etc.

ORNAMENTAL TREES.

- Acacia Lopantha.** (Crested Wattle) A very rapid growing evergreen tree, of fine form and beautiful foliage, desirable for shade, also as a wind break or first shelter in desert places, affording copious vegetation. Cattle browse on the leaves.
- Asacia Pyenantha** (Golden Wattle.) Very desirable ornamental shade tree on account of its rapid growth, beautiful foliage and profusion of fragrant yellow flowers.
- Acacia Florabunda.**—Beautiful ornamental tree of rapid growth, having long spikes of yellow flowers; a continual bloomer.
- Pine** [Monterey, Insignis].—A very rapid growing tree, well known and planted everywhere.
- Cupressus Macrocarpa.** [Monterey Cypress.] A tree forty to sixty feet high, with rough bark, spreading, horizontal branches, with rich, green foliage, very ornamental for lawns or parks, also used extensively for hedges.
- E. longifolia.** [Woollybutt.] An average size tree. Fair timber for fencing and building purposes, it is a good fuel for domestic use, very durable. 100 to 120 feet.
- E. tereicornis.** [Gray Gum or Red Gum.] A very strong, durable hardwood, almost equal to Ironbark for some purposes, lasts in the ground, inferior fuel. 150 feet.
- E. Bicolor.** [Black Box.] A highly valued timber tree; it is equal to the best Ironbark for all the purposes for which that wood is used, and is more easily wrought. It is sometimes called "Ironbark." 100 to 150 feet.
- Catalpa Speciosa.** A variety which is said to have originated at the West. It is represented to be finer and harder than the common, hence better adapted to forest and ornamental planting.
- Sequoia gigantea.** [Wellingtonia gigantea.] The mammoth tree of California. This is the largest tree known to exist on the American continent. The bark is from one to two feet thick. One of the largest trees—the so-called Grizzly Giant of the Mariposa Grove—is 93 feet in circumference at the ground.
- Grevillea robusta.** [Silk Oak of East Australia.] Beautiful fern-like foliage, attains a height of 100 feet, withstands drouth, of rapid growth, and flowers when about twenty feet in height, then it is a sight worth seeing, covered from top to bottom with bright orange-scarlet flowers.
- Golden arbor vitæ.** A beautiful evergreen shrub of dwarf habit and symmetrical form; for this reason particularly desirable for lawns and cemeteries. Is covered in the spring with golden yellow foliage, which gives its name, changing to a lovely green, withstands drouth.
- Magnolia grandiflora.** A native of the Southern States, but is perfectly at home in California. The grandest of all American evergreen trees. Attains a great size, with beautiful, glossy green foliage, and a profusion of large, very fragrant white flowers.

China Umbrella Tree, or Texas Umbrella. [*Melia Azadarach Umbraculi formis.*] A variety of the Pride of China tree, but more hardy. It assumes a dense spreading head, resembling a gigantic umbrella, and is of unique appearance. The most popular shade and avenue tree in the Southern States.

Pepper Tree. [*Schinus Molle.*] A well-known tree, with beautiful glossy green leaves.

Loquat, or Japan Medlar. A very fine evergreen, with a delicious fruit ripening in spring.

FUCHSIAS.

We have the finest stock of fuchsias, embracing those of recent introduction, also the most desirable old sorts. The following are a few of them:

Phenomenal, the new giant fuchsia. This is a new sort of great merit. The plant is a tall, strong grower, branching like a tree. Its flowers are of enormous size, as large as teacups, and very double; sepals scarlet, corolla rich violet purple.

Midnight. This is an acquisition. Grows somewhat taller than its companion, Storm Cloud, but for genuine beauty its deep midnight blossoms are hard to beat, and is certainly the largest; finest, most floriferous dark purple fuchsia grown, having good habits, very healthy, bushy, and covering itself with great blossoms.

Storm Cloud. The largest, finest, double white fuchsia we have ever seen, and its great snow-white balls, borne in such prodigal profusion, almost completely hide the foliage of the plant. It is ahead of Bridal Veil, Storm King, Snowstorm and any other double white fuchsias known in freedom of bloom, in size of blossom, healthfulness and vigor of growth.

HONEYSUCKLE.

Halliana. A new white monthly honeysuckle. It is evergreen, retaining its freshness during the entire winter; flowers pure white, turning to pale yellow, with the fragrance of the Cape Jessamine; hardy, vigorous grower; a constant bloomer. This is one of the most valuable of the late introductions.

Bignonia. [Trumpet vine.] Magnificent, hardy deciduous climber, with brilliant flowers, deserving first place as the most ornamental and effective covering for walls, houses, etc. Hardy perennial.

MOONFLOWERS.

The moonflowers are quite a new class of climbers, and are creating a great sensation. They are the largest and finest of all vines, growing with an astonishing rapidity, and producing thousands of flowers of the most striking novelty and beauty. They are suitable for trellises, arbors, fences, verandas, sides of buildings, etc. No climber grows so rapidly or will cover such a large space in a season. A fair-sized plant will produce from 30 to 100 of their large blossoms every evening. The flowers open about five o'clock in the afternoon and close about eleven o'clock the next day. They surprise everyone who plants them, and are a center of attraction in any neighborhood.

Ipomæa Noctiphiton. Common Moonflower or Evening Glory. Flowers pure white, four to five inches in diameter. Very rapid grower and free bloomer.

First National Bank of San Diego.

CAPITAL, \$300,000.

SURPLUS, \$100,000.

Ipomæa Learei. The Blue Moonflower. This is a grand companion for the white variety. It is similar in all respects, except the color, which is a lovely satin blue with crimson bars. When grown with the white one the contrast is striking and the effect grand.

ROSES.

Our collection of roses is extensive, embracing the most desirable of both old and new sorts, a few of which are described.

Agrippina. Rich, velvety crimson, moderately double, fine in bud. One of the best.

Lamarque. Almost pure white, beautiful buds, large full flowers, very sweet. Too well known to need further comment.

Marechal Niel. One of the largest and most beautiful roses grown; flowers extra large, very double and deliciously perfumed; color deep golden yellow; buds of immense size.

Safrano. A bright apricot yellow; beautiful in bud. One of the best winter bloomers.

Papa Gontier. Extra large, finely formed bud and flowers; full and fragrant; color brilliant carmine, changing to pale rose.

The Bride. The finest of all white tea roses. Buds and blossoms are very large, and of the most exquisite form, very double, often measuring four inches across. The blossoms are more durable than any rose we know, and last a long time when cut and placed in water. The exquisite, delicate white blossoms are borne on long graceful stems, and in great profusion.

Catharine Mermet. Bright, rosy flesh color; perfect in bud and flower; vigorous grower; extra good.

Bougere. This is a superb rose, extra large, very full and double; exceedingly sweet in scent; color, bronze rose or violet crimson, delicately shaded with lilac; a splendid sort.
