1877 MAULE'S SELECTED LIST OF BULBS AND NURSERY STOCK 1928

For Fall Planting

BEAUTIFY your home surroundings by planting more bulbs, such as, Tulips, Hyacinths, Narcissus, Crocus, Lillies, etc. Our prices are exceptionally low this year. These bulbs must be planted in the Fall, and are ready for delivery in September. You should plant all bulbs outdoors in September to November for spring blooming. Can also be planted in pots or water glasses for indoor Winter flowering.

Flowering Shrubs, Hardy Vines, Hardy Perennials, and Hedge Plants

These hardy plants occupy a permanent place in your garden, blooming early next Summer and growing larger in size of plant and producing more beautiful flowers each year. Producing a wealth of bloom the entire season.

Home Garden and Orchard Fruits

Fall is an excellent time for setting out such fruits and vegetable roots as Strawberries, Blackberries, Raspberries, Grapes, Apples, Pears, Asparagus, and Rhubarb.

You run no risk by planting your fruit trees or plants in the Fall. October is the best month to set out, advancing the bearing season of your trees one year in advance. No fruit is enjoyed so much, or tastes so good, as that which you grow yourself.

All Flowering Shrubs, Perennial Plants, Fruit Trees, and Berry Plants are freshly dug, and sent direct from our nursery at your proper planting time. Instructions for planting, fertilizing, pruning, etc., sent with every order. We will not ship Nursery Stock C. O. D., remittance to cover their cost must be sent with order.

We guarantee the safe arrival of all goods to points within the United States, and Canada. Shipments of Nursery Stock to Mexico or foreign countries will be made entirely at customers' risk.

Order Articles Wanted by Their Correct Number and Name

Maule's Vegetable and Flower Seeds

Now is the time for planting your late Summer, and fall garden. In the North, we advise sowing early maturing varieties. In the South, any of the varieties listed can be sown.

Maule's Farm, Grain, Clover, and Grass Seed

Late Summer or Early Fall is the proper time to sow any of these seeds. September or October are the proper months to sow your Lawn Grass Seed. This will insure you a good stand of grass which will live over the Winter, and produce a beautiful green lawn early next Spring.

A very attractive class of late-flowering Tulips, with large flowers of most artistic and quaint form, the petals of which have curiously cut or feathered edges. The colors are striking and brilliant and the peculiarity of the colors of this class is that they show shades of green. Because the stems are comparatively slender, the flowers are not suited for general bedding purposes but they are very valuable for growing among shrubbery and in the mixed border, where a natural and graceful effect is the object. They are becoming more popular each year.

Rembrandt Tulips

These Late or May-flowering Garden Tulips, in general habit of growth, resemble the popular Darwin Tulips. They are in reality Darwin Tulips which have "broken" into permanent variegations—flowers of various rich colors, are striped, blotched, and marked with different shades and colors. On account of their odd colorings and variegations, a place should be found in every garden for Rembrandt Tulips. The stems average 18 to 22 inches in height.

82B41 Bougainville This is an excellent forcing variety. The ground color is a rich Amaranth which is striped with white.

82B43 Caracalla Rich fiery scarlet stripes upon a white ground.

82B45 Hebe White, attractively relieved by stripes of lilac and maroon.

82B47 Red Prince Fiery scarlet upon a soft rose ground. Large.

HYACINTHS

The Hyacinth is one of the most beautiful, as well as the most fragrant of the Winter and early Spring-flowering hardy bulbs. For house culture in the Winter there is nothing in culti-

vation more beautiful, and for the garden in early Spring they deservedly stand foremost in the list of all Spring-flowering bulbs. They are also adapted for growing in water in the house.

From a long list of named Hyacinths we have selected the following varieties on account of their free-blooming qualities, perfect form and distinct colorings.

Selected First-Size Bulbs

82B61 Enchantress Sky-blue shading lighter to the center. A lovely Hyacinth with long and attractive flower-spikes.

82B63 Gertrude Bright, rosy pink; very choice variety for indoors or bedding. When in full bloom a spike is just a solid mass of color.

82B65 Grand Maitre Deep porcelain blue. One of the popular blue Hyacinths for bedding, but just as useful as a forcing variety.

82B67 King of the Blues Bright, dark blue; outclasses all other deep blue varieties on account of its purity and richness of color. Large, full spike of perfect form.

82B69 Lady Derby Grown in the open the color is a beautiful clear rose-pink; grown indoors the flowers are of a slightly deeper shade.

82B71 La Victoire or Victory Brilliant light red when grown in the open; when forced, it is bright pink turning to red. One of the earliest of all Hyacinths to come into bloom staying in full bloom for an exceptionally long time.

82B73 L'Innocence Pure white; very large spikes and bells. The best of all white Hyacinths for all purposes.

82B75 Yellow Hammer Creamy yellow; large spike and bells. Blooms early; fine for forcing or bedding.

Any of the above selected, first size, named Hyacinths, your choice:

25c each; any 3 for 70c; any 6 for \$1.30;
any 12 for \$2.50; any 25 for \$4.75;

Maule's Hardy Flowering Shrubs

Extra Selected, Well Developed, Bushy Two-year-old Plants

As the slogan of the American Association of Nursemeymen aptly puts it—"It's not a Home until it's planted." The proper utilization of ornamental shrubs and trees adds mightily to the attractiveness of the home surroundings. The Shrubs offered on this page and pages 24, 25 and 26 lend themselves ideally to beautifying the home grounds and are the varieties best adapted for fall planting.

A Word About Maule's Low Prices

There is scarcely any article of merchandise in which the quality may differ so widely as in plants. A Shrub, Rose or Fruit Tree may be a well-developed specimen plant or it may be a "whip," just a single stalk often advertised as "mailing size." The variance in prices in different catalogs can thus be understood. Our plants are two-year-old or older, extra selected, branched, strong and vigorous. Give them a trial; you won't be disappointed.

Lilac or Syringa

Old-time garden shrubs, whose flowers never fail to charm with their delicate beauty or refresh with their fragrance.

HYBRID OR FRENCH LILACS

These named varieties of Lilacs are marvels of beauty and elegance—far superior to the older varieties in size, form, freedom and color. They must be seen to be appreciated. Their growth is comparatively short and stocky and while usually trained as small trees, they soon attain a shrub-like appearance.

The following varieties are considered to be the very best of their respective colors

94N55 Charles X A strong grower of upright habit, with large single purple flowers.

94N57 Mme. Lemoine The finest double white Lilac. Immense clusters of beautiful deliciously scented flowers.

94N59 President Grevy Double. Clusters large and full. Buds pale tones of lilac, flowers beautiful light blue.

Hedge Plants

Two-year-old Plants—Well-branched; Well-rooted

Hedges are desirable not only for their beauty, but for their usefulness as screens, wind-breaks, barriers and for outlining properties, edging gardens, walks, pools, etc. They are less expensive to maintain than a wooden, iron or picket fence and far more attractive. What fence can compare in summer with the cool walls of well-kept California Privet or in the Fall with the fiery flames of Barberry, or its berries a few months later?

California Privet is the most widely used plant for hedges and may be kept trimmed to any desired height or shape

Japanese Barberry is the ideal plant for low hedges and does amazingly well in the shade

95N22 California Privet

The popular hedge plant, with glossy deep green leaves. Stands shearing well.

98N45 Strawberry, Mastodon

Maule's Pot-Grown Strawberry Plants

To yield a full crop of fruit next year, your Strawberry Plants must be well established before frost comes. The earlier in the summer you set out your plants, the better the results will be.

Pot-grown Strawberry Plants are best suited for such plantings because they have a compact well-developed root system which is able to take care of itself in spite of the heat and dry weather of late summer days.

June-Bearing Strawberries

98N28 Early Jersey Giant The earliest variety producing large fruit, and by far the best extra early. Of extra high quality, very attractive and extremely productive. It is surely "the Strawberry without a fault."

98N32 Premier Extra early. Produces vast quantities of good size attractive berries of excellent quality.

98N36 Senator Dunlap Early to mid-season. Probably the most productive variety yet introduced. Fruit not very large but of good quality.

98N34 Joe (Joe Johnson or Big Joe). Very large, medium red, very fine quality. Especially adapted to poor, sandy soil but responds quickly to good care and fertility. Claimed by many to be the best mid-season variety for nearby market or home use.

98N40 Lupton Very prolific, producing quantities of large brilliant red, smooth-surfaced, glossy berries of high flavor. We consider this one of the very finest of the varieties fruiting late and an ideal berry for preserving.

98N42 William Belt An "All-Season" variety, fruiting from early to late. Very popular on account of its high quality, and the fact that it does well on a great variety of soils.

Pot-grown plants of any of the above varieties:

\$1.25 per doz.; 25 for \$2.15, prepaid.
Not prepaid, 50 for \$3.75; \$7.00 per 100.

Everbearing Strawberries

For best results (though this is not essential), plants should be disbudded until about July 10 after the main June crop is past. They will then bear crops beginning early in August and continue to produce delicious berries right up until severe freezing weather.

98N45 Mastodon "The Wonder-berry." We find this to be truly the largest, most delicious and heaviest yielding of all Everbearing sorts. It outyields some of the finest June bearing sorts during their season and continues to bear, throughout summer and fall, large berries of surpassing quality.

\$2.75 per doz.; 25 for \$5.00, prepaid.

Not prepaid, 50 for \$8.00; \$15.00 per 100.

98N47 Champion Very productive in both spring and summer. Fruit of fair size, excellent flavor, and fine color. Well adapted to almost all kinds of soil. Plants thrifty and bear a very heavy yield of fine dark red, delicious berries.

\$1.75 per doz.; 25 for \$3.25, prepaid.

Not prepaid, 50 for \$5.50; \$10.00 per 100.

98N49 Progressive Of vigorous habit, the plants multiply better than many of the fall-bearing varieties and yield profusely. The berries, which are smooth and uniform in size, are deep crimson, glossy, and of good quality.

\$1.50 per doz.; 25 for \$2.65, prepaid.

Not prepaid, 50 for \$4.50; \$8.00 per 100.

Blackberries

Our Blackberry Plants are either **Root-Cutting Plants** that have been grown from pieces of roots in nursery rows, or they are heavily rooted bearing-age **transplanted** plants. Both are far superior to ordinary sucker plants, which we do not grow nor recommend.

98N04 Blowers An iron-clad variety that never winter kills; a mammoth, upright grower; enormously productive. Fruit is large, glossy, firm and luscious, ripening a few days earlier than Eldorado. Extra good everywhere.

Raspberries

Raspberries will do equally well on light or heavy soil provided it is well drained. A fruit garden is incomplete without this delicious berry. They are so desirable whether fresh from the plants or in jams, preserves, pies, etc. They are, particularly the Red fruited varieties, the hardiest and thrive the best in northern latitudes where other cane fruits winter kill.

98N15 Cuthbert A strong grower and productive; very large, bright red; fruit firm, of very fine quality; season medium to very late. Has long been considered the standard of excellence whether for home use or market.

98N18 St. Regis Everbearing Unlike any other raspberry it bears a moderate crop the first season. Berries are of large size, surpassing quality, rich, sugary, with full raspberry flavor and bright crimson in color. Bears a large crop of fruit in the regular season and then continues bearing all summer and fall on the new canes.

St. Regis is such a thrifty and rugged bush that it will produce a large number of suckers. Limit these to a single row of plants or not to exceed 3 or 4 to a hill.

Grapes Extra strong 2-yr.-old plants

Comparatively few fruits equal the grape in general usefulness, and ease of culture. The best reason for its widespread popularity is its ready adaptability to many soils and sections. It will bear fruit under unfavorable conditions, but good culture will result in better fruit. Grapes seem to thrive best in rich, mellow and well-drained soil. They are useful in the making of delicious jams and jellies, grape juice and other beverages, besides being a splendid table fruit.

97N04 Agawam Deep red, almost maroon. Large, loose bunch; berries large, meaty, with rich aromatic flavor. Ripens a little after Concord.

97N08 Catawba Dull purplish-red, medium large berries. Bunch large, long and broad. The standard red Grape.

97N34 Diamond Large and compact bunches. Berries are large, greenish-white, juicy and of good quality. Ripens early.

97N63 Moore's Early Berries are large, jet black with purple bloom. Ripens earlier than Concord; very profitable for commercial growers.

97N76 Niagara The most popular white grape; thin skinned, tender pulp, sweet and luscious.. Mid-season.

97N87 Worden Resembles Concord but ripens a week or ten days earlier. Large bunches of large dark purple berries.

Hardy Perennial Flower Seeds

Varieties Best Adapted for Summer and Fall Sowing
Full Cultural Directions Are Printed on Every Size Package of Maule's Seeds

Seeds of Hardy Perennials may be sown any time during the **Summer or early Fall** (the earlier the better) in the garden or coldframe to produce plants that will flower the next season, and continue to bloom each succeeding year. Transplant where intended to remain as soon as the seedlings are large enough to handle. Dur-

ing the winter it will prove beneficial to the plants if a covering of loose litter or straw manure is provided. A hardy bed or border, when once established, requires practically no attention and will, if varieties have been properly selected, provide an abundance of flowers from early spring until frost.

Maule's Giant Pansies

(Heartsease
Hardy Biennial)

For early Spring blooming, sow seeds in July, August or early September in the open ground or cold frame. They are quite hardy, but we recommend giving them a slight protection with straw or coarse litter during the Winter. Pan-

sies demand good soil, thriving best in a cool, moist but well drained position. Do not plant Pansies in the shade of a tree or building, as this causes straggly plants with very few blooms.

1614 Maule's Prize Mixed Giant Pansies

A carefully prepared mixture of all the richest, handsomest and largest Pansies known, in a full range of colors. All the types that are really desirable.

We have included a little white clover in the mixture, regarding it as essential, but will omit it on special request. Nothing better can be purchased on the American market, no matter what claims may be advanced by other seedsmen. Grass seed can be sown any time but not later than September or October. Use 1 pound to 300 square feet of ground or 25 pounds will sow a plot 100 feet wide and 108 feet long, or 100 pounds per acre.
