STATUS OF JAPANESE PROCUREMENT

1. To date, NPR has procured and issued ~~1751~~ 1740 vehicles consisting of following:

Truck Cargo 2 ton 4x2 (substitute)	1650	each
Truck Dump 2½ ton 4x2	50	"
Sedans	40	"

2. Trucks 2½ ton 6x6 and 4 ton 6x6, cargo, dump, wreckers, and special purpose shop trucks are also to be procured in Japan. Delivery is expected by mid 1952.

3. Only approximately 10% of vehicle parts and accessories have been procured, with 90% remaining to be procured. Approximately 5% of vehicle tool items have been procured. Procurement of initial issue of these items will be completed by middle of 1952.

CIVIL AFFAIRS SECTION (ANNEX)
Logistics Division

SECURITY INFORMATION

10 January 1951

MEMORANDUM FOR: Executive Officer

SUBJECT: Daily Activities Report (Weapons)

1. Ordnance Depot informed this division that they had difficulty in securing spare parts for machine guns and that it will be necessary to delay shipments until Thursday, 11 January. They assure that all shipments will be made the evening of 11 January with the exception of rocket launchers, which they have previously reported will be delayed approximately 2 weeks.

2. Unit supply officers or their authorized representatives reported to Logistics Division for purpose of accepting delivery of these weapons. They were thoroughly oriented on accountability procedures, requisitioning for re-supply of spare parts and procedures to be used for accounting for ammunition and requisitioning of ammunition. They were also thoroughly oriented on supply procedures.

H. R. WEETMAN
Lt Col, Armor
Dir, Logistics

CIVIL AFFAIRS SECTION (ANNEX)
Logistics Division

SECURITY INFORMATION

6 January 1951

MEMORANDUM FOR: Executive Officer

SUBJECT: Daily Activities Report (Weapons)

1. Officers this division visited Tokyo Ordnance Center on 5 January and made final arrangements for shipment of weapons. These weapons are now available for shipment. No requisitions are required. Shipping instructions have been prepared and are ready for release to the Ordnance Depot.

2. In order to take every caution necessary that these weapons are accounted for at all times and delivered promptly to camps, it is strongly recommended that the following plan be adopted. That an EM or officer from each camp REGT report to this section for the purpose of taking delivery of weapons and that at the time he takes delivery he accomplishes shipping documents. Logistics Division will arrange to accompany the responsible officer to the Ordnance Depot and set up rail transportation. If this plan is adopted, it will assure proper accountability and that the location of weapons is known at all times.

SECURITY INFORMATION

3 January 1951

MEMORANDUM FOR: Executive Officer

SUBJECT: Daily Activities (Weapons)

1. Copy of letter from GHQ to JLC authorizing immediate issue of additional weapons for NPR was received. Letter was staffed with Operations Division for the purpose of determining where weapons are to be shipped and amounts. Conference was held with Operations relative to computation of training ammunition required for subject weapons.

2. During informal conversations between Lt Col Sherry, Civil Affairs Section, GHQ, and Lt Col Englert, G-4, GHQ, it was indicated that in addition to the weapons to be furnished from JLC all of the ordnance previously recommended to D/A for issue to NPR will be made available in the near future.

XXXXXX

XXXXXXX

SUBJECT: Requirements for Add itional U.S. Advisory Personnel For NPRJ Schools.

1. In reply to memorandum, subject same as above, dated 10 December 1951, CAS, the following data is submitted regarding U.S. Advisory personnel.

a. Schools in Operation, and Contemplated: At present, the only school program for the Weapons Section, NPR, which requires U.S. Advisory personnel, is The Weapons School at Tachikawa, Japan. Courses of instruction for this school are outlined in Inclosure No.1.

b. Requirements of U.S. Advisors, based upon this school program, are indicated in Inclosure No. 2 and annex thereof. At the outset of this school program, immediate supervision will be mandatory for instruction conducted, in order that NPRJ personnel le arn and follow U.S. methods and echelons of maintenance. The utilization of U.S. personnel to augment actual instructors from NPRJ will be required for at least six months, or at least such time as is sufficient to obtain well trained NPRJ personnel to assume complete operational and administrative control of school activities without continued direct supervision. The number of Advisors listed constitutes a minimum requirement for adequate supervision of the courses currently scheduled at The Weapons School.

ad 83

SECRET SECURITY INFORMATION

BASIC: Requirements for Additional U.S. Advisory Personn el for NPRJ Schools.

2. Courses not presently scheduled for the Weapons School are listed as Inclosure No. 3. These courses must be initiated as soon as the heavy equipment to which they pertain is issued to the NPRJ. By the time these courses are initiated, presently scheduled courses should have well trained NPRJ instructors for their supervision and the U.S. Advisor-Instructors will be utilised to initiate the new courses an d train the required instructors. Consequently, the need for the U.S. Advosors listed in Inclosure No. 2 will continue throughout the foreseeable future.

SUBJECT: Weapons and Ammunition for NPRJ

TO: Commanding General
Japan Logistical Command
APO 343

AG RECORDS FILE

1. Information received in this headquarters indicates that certain requisitions for weapons and ammunition for NPRJ installations and for training of NPRJ students at the Eta Jima School Command are being held in the Ordnance Section, your headquarters, pending a clarification of basis for issue. In order that the training and effectiveness of the NPRJ will not be retarded by delayed delivery of required items, the following information is submitted:

a. To date the NPRJ has been furnished 59,941 carbines and 4,122,830 rounds of carbine ammunition.

b. At the present time the carbine is the basic and only weapon of NPRJ: basis for issue one per individual; authorized strength 75,000.

c. Basis for distribution of ammunition by rounds per weapon:

Basic Load Reduced	Combat Training	Individual Qualification
53	130	150

d. Basis for issue of ammunition to Eta Jima School Command for NPRJ training: AR 775-10, based on the number of students in the school during a given period and the variety of weapons being used. These allowances should not be deducted from the allowances established for NPRJ camps.

2. Attention is directed to Department of the Army message W85429, 11 July 50, which states that 75,000 carbines and 25,000,000 rounds of carbine ammunition are being shipped

SECRET

SECURITY INFORMATION

0-127

400 (.)CAS(Anx)-L, subj: Weapons and Ammunition for NPRJ

from the Zone of the Interior for NPRJ, CINCFE message CX 57738, 12 July 50, which furnishes shipping instructions for such weapons and ammunition and to 1st Indorsement, this headquarters, AG 600.12 (28 Aug 50)GD, to letter, your headquarters, AGGS 600.12, subject: National Police Reserve Japan, Project, 28 Aug 50, dated 8 September 50, which contains authorization for issues referred to in Paragraph 1, above.

BY COMMAND OF GENERAL MacARTHUR:

MEMORANDUM FOR RECORD

Informal conversations between Lt Col Judson and Warrant Officer Beers, Ordnance Section, Headquarters Japan Logistical Command, and Major Sherry, Civil Affairs Annex, indicate that certain requisitions for carbines and ammunition for NPRJ camps, to bring them up to their authorized allowances, together with requisitions for training ammunition for Eta Jima School Command are being held in the Ordnance Section, Japan Logistical Command, by the Ordnance Section because said Ordnance Section is of the opinion that there is insufficient authorization to provide more than 69,712 carbines and small amounts of carbine ammunition for familiarization training only. The foregoing letter has been written to clarify this misconception. At the present time there is a need for 15,059 carbines to bring NPRJ up to authorized allowance in that weapon and ammunition based on ~~338~~ rounds per weapon, minus 4,122,830 round on hand, to support these weapons. Ammunition allowance per weapon is based on the following:

Basic Load (Reduced)	Combat Training	Individual Qualification
53	130	150

This allowance is in accordance with the combat and training allowances prescribed by AR 775-10. The basic load has been reduced so that issues will not exceed the 25,000,000 authorized NPRJ by the D/A.

Carriers, Personnel, M29C

CAS G-4 21 NOV 1951

1. 1. In order to equip one MPRJ Region located in HOKKAIDO and NORTHERN HONSHU for cold weather operations and insure adequate equipment for the movement of personnel, supplies and equipment over deep snow and through mountainous areas, it is essential that 349 carriers, cargo, M29C be made available from U.S. Sources. A similar or adequate substitute type cargo carrier cannot be made available from Japanese sources at this time.

2. The requirements have been computed on the minimum requirements for Companies and Battalions to permit oversnow movement of equipment and supplies and establishment of communications. The basis of issue is as follows:

Unit	No. Required Per-Unit	Total Units	Total Required
Hq & Hq Co., Region	8	1	8
Reconnaissance Co.	6	1	6

SECURITY INFORMATION

GENERAL HEADQUARTERS, FAR EAST COMMAND, APO 500 10 Sept '50

TO: Commanding General, Japan Logistical Command, APO 343

1. It is contemplated that "NPRJ" will require limited logistic support from the Japan Logistical Command for supply and maintenance of 75,000 police. United States sources must provide Class II supplies of certain Ordnance, Signal, Chemicl and Medical items which cannot be procured from Japanese sources, and all Class V supplies required. It is anticipated that this requirement will continue for an indefinite period. When firm requirements are determined you will be informed.

2. Recent advice from the Department of the Army is to the effect that all requirements from the zone of the interior necessary to equip NPRJ are to be submitted to the Department of the Army prior to actual requisitioning. In view of the foregoing it is desired that no further requisitions in support of NPRJ be entered on the San Francisco Port of Embarkation pending further instructions from this headquarters.

3. You are authorized to honor requisitions from NPRJ for locally available items for immediate training and familiarization, issues to be in accordance with established priorities. Some of this equipment, as mutually agreed upon, may be in unserviceable condition.

Loan of U.S. Equipment to NPRJ

CAS G-4

1. 1. Request that the equipment listed on inclosure number 1 be issued to CAS for use in the NPRJ Weapons Maintenance School at Camp Tachikawa. This issue will be considered as on a loan basis, except for the ammunition and empty ammunition containers requested.

2. At the present time the items requested are not available thru NPRJ channels or will not be delivered thru NPRJ Procurement in time for initial courses at the NPRJ Weapons Maintenance School. Initial classes are scheduled to start on 4 Jan 52 if equipment and facilities are available.

3. Items listed on inclosure number 1 will be needed by the Weapons Maintenance School until purchasing can be effect thru NPRJ channels.

4. Courses and number of students to attend each class at subject school are listed below as a basis for this request.

No. of Students per class	Course
35	Basic Weapons Maintenance Officers Course
35	Small Arms Repair
90	Automotive Mechanics
25	Automotive Electricians
25	Automotive Fuel Induction

Remarks:

Has this been coorinated with your counterparts?

They have made a survey and requested certain reparations equipment already:

The quickest way to get this equipment is to have NPR initiate a request for specific items known to be usable. We can expedite release by asking CPC GHQ to speed items.

It is not necessary to ask G-4.

Request for Reparations Equipment

CAS G-4 LHW

1. 1. Request release of reparations equipment of the types and quantities indicated in Inclosure No. 1, for use in the NPRJ Weapons School, opening on or about 4 January 1952, at Tachikawa, Japan.

2. Subject equipment would be utilized to train NPRJ personnel as technicians for duty in technical repair assignments within NPRJ.

3. Requested items cannot be made available through appropriation during current fiscal year; budget precludes procurement at present time.

4. U.S. stock numbers are indicated to provide further identification when determining similar items within reparations stockage.

DEFENSE AGAINST CHEMICAL, BIOLOGICAL AND RADIOLOGICAL WEAPONS

References: See ANNEX 1.

1. GENERAL: The development of the atomic bomb by a potential enemy and the possibility of Chemical, Biological and Radiological attack introduces a new disaster hazard to both military and civilian personnel, installations and activities in JAPAN. Vital areas, both military and civilian are key targets. Any installation or concentrated troop areas in JAPAN is vulnerable to a CBR attack and the resultant effects. The purpose of this plan is to provide a basis for planning for the coordinated action to be taken in the defense of the XVI Corps zone of responsibility against a CBR attack, to minimize the hazards and effects of such an attack to personnel and material, and to provide relief and rehabilitation of areas attacked. This plan is closely related to the Hqrs 1st Cav Div, XVI Corps Disaster Plan, dated 5 May 1951 and Passive Air Defense Plan (PAD), dated 24 May 1951. Pertinent parts of referenced plans apply.

a. ANNEX 2 (Intelligence).

b. Friendly Forces.

(1) Commanding General, Far East Air Forces:

(a) Prepares plans to exercise CBR Defense responsibility for 314th and 315th Air Divisions, FEAMCOM and separately assigned units within JAPAN.

(b) Provides active air defense of JAPAN.

(c) Disseminates air raid warnings through the ADCC, 314th Air Division.

(d) Directs Air Force base commanders to coordinate plans with appropriate JLC area commanders, and appropriate Army zone commanders.

(2) Commander, Naval Forces Far East:

(a) Prepares to exercise CBR defense for Fleet Activities, YOKOSUKA and SASEBO and separately assigned units within JAPAN.

(b) Supports FEAF in active air defense of JAPAN.

(c) Directs Naval installation commanders to coordinate plans with appropriate JLC area commanders, and appropriate Army zone commanders.

(3) Commanding General, Japan Logistical Command prepares overall plans for CBR defense for all personnel and installations in JAPAN, south of the JLCOM - XVI Corps boundary.

(4) Commanding General, Japan Logistical Command prepares CBR defense plans for the care, hospitalization, housing and evacuation of U. S. Civilian Nationals and dependents in JAPAN.

(5) Commanding General, Northern Command prepares plans for CBR defense of JLCOM installations in support of XVI Corps plan.

15 DEC 1951
66752

SECURITY INFORMATION
SECRET

SECURITY INFORMATION

SECRET
Security Information

(6) Commanding General, Central Command prepares plans for CBR defense of JLCOM installations and Metropolitan YOKOHAMA area in support of XVI Corps plan.

(7) Commanding General, Headquarters and Service Command, General Headquarters, Far East Command prepares plans for CBR defense of Metropolitan TOKYO area for GHQ, Hq & Svc Comd and JLCOM personnel and installations in support of XVI Corps plan.

(8) Commander Fleet Activities, YOKOSUKA prepares plans for CBR defense of Naval installations in support of XVI Corps plan.

(9) Commanding General's 314th, 315th Air Divisions and FEAMCOM prepare plans for CBR defense of bases in support of XVI Corps plan.

c. Assumptions.

(1) General

(a) Potential enemy powers have the requisite means of launching CBR warfare on a large scale within the XVI Corps zone of responsibility at the initiation of hostilities.

(b) JLCOM and adjacent commands will be able to furnish the reciprocal action necessary for the implementation of this plan.

(2) Radiological

Definition: For purposes of this plan radiological defense will be defined to include defense against the blast and heat effect of an atom bomb.

(a) Little or no advance warning may be expected and positive differentation of an atomic bomb attack from a conventional bomb attack is uncertain. The blinding flash of light, many times the intensity of the mid-day sun, is likely to be the first means of detecting that an atomic bomb has been employed.

(b) Targets selected by an enemy force for an atomic bomb attack would be closely populated troop areas, major ports, key installations in the support of the defense or war effort, concentrated industrial areas and densely populated civilian areas.

(c) The atomic bomb relies primarily on its blast and heat effects to destroy the enemy. Thus, it is a highly inefficient means of employing radioactive materials.

(d) Any nation possessing an atomic pile of suitable size has a potential source of RW Agents. These piles will probably be used for production of plutonium for the bomb rather than for the production of radioactive isotopes. Therefore, it is improbable that the enemy is prepared to use radiological warfare as such.

(3) Chemical

(a) The enemy is capable of employing G-Agents (nerve-gases) and nonpersistent casualty agents to produce immediate casualties on troops or civilian concentrations.

(b) Mustard gas and other persistent agents would probably be employed either tactically on personnel, supplies, equipment and terrain, or strategically on industrial areas, to produce casualties or render objects and areas hazardous.

SECURITY INFORMATION

SECRET
Security Information

SECRET

SECURITY INFORMATION

(4) Biological

Biological organisms could be effectively employed subversively, tactically, or strategically, to produce disease and illness on man, animals, and plants.

2. MISSION OF XVI CORPS:

a. Responsible for the coordination of an overall Army, Navy, AF CBR defense plan for that portion of JAPAN north of the JLCOM - XVI Corps boundary.

b. Coordination of the CBR defense plan with local civil authorities, in zone, as may be directed by the Commander-in-Chief, Far East.

c. To minimize damaging effects to material and personnel from a CBR attack to include: Organizing, equipping and training all armed forces personnel, civilians, dependents, indigenous personnel essential for the logistical support of the armed forces under command of CG, XVI Corps.

3. TASKS FOR SUBORDINATE UNITS:

a. Commanding General, 40th Infantry Division:

(1) Prepare CBR defense plans for all divisional organic and attached units on N HONSHU.

(2) Coordinates with CG, Northern Command and CG, Central Command in preparation of mutual assistance CBR defense plans for posts, camps, stations and installations in Division zone.

(3) Organizes, equips and trains all divisional units for CBR defense.

(4) Coordinates with CG, Hq and Svc Cond, GHQ, FEC and Comdr Fleet Activities, YOKOSUKA in preparation of mutual assistance CBR defense plans for installations.

(5) Is responsible for preparation of overall CBR defense plan in Division zone of responsibility on N HONSHU.

(6) Coordinates with CG's 313th and 315th Air Divisions and FEAMCOM in preparation of mutual assistance CBR defense plans for AF bases and Division installations in Division zone.

b. Commanding General, 1st Cavalry Division (Infantry):

(1) Prepares CBR defense plans for all divisional organic and attached units on HOKKAIDO.

(2) Coordinates with CG, Northern Command in preparation of mutual assistance CBR defense plans for posts, camps, stations and installations on HOKKAIDO.

(3) Organizes, equips and trains all divisional units for CBR defense.

(4) Is responsible for preparation of overall CBR defense plan for HOKKAIDO.

(5) Coordinates with CG, 314th Air Division in preparation of mutual assistance CBR defense plans for AF bases and Division installations on HOKKAIDO.

DEFINSE AGAINST CHEMICAL, BIOLOGICAL AND RADIOLOGICAL WEAPONS, Cont'd, 12 Dec 51.

c. Commanding General, 2d Engineer Special Brigade (56th Amphibious Tank and Tractor Battalion Attached):

(1) Prepare CBR defense plans for organic and attached units.

(2) Coordinates with CG, 40th Infantry Division and CG, Central Command in preparation of mutual assistance CBR defense plans.

(3) Organizes, equips and trains all brigade units for CBR defense.

d. Commanding General, 187th Airborne Regimental Combat Team:

(1) Prepares CBR defense plans for RCT units.

(2) Coordinates with CG, Southwestern Command in preparation of mutual assistance CBR defense plans.

(3) Organizes, equips and trains RCT units for CBR defense.

e. Commanding Officer, 34th Infantry (63rd Field Artillery Battalion Attached):

(1) Prepare CBR defense plans for organic and atchd units.

(2) Coordinates with CG, 40th Infantry Division in preparation of mutual assistance CBR defense plans.

(3) Organizes, equips, and trains organic and atchd units for CBR defense.

x. (1) Plans for CBR defense will include:

(a) Provisions for the utilization of existing buildings and facilities presently under military control as protective shelters, decontamination stations, aid stations, hospitals, warehouses and alternate command posts. Facilities not under military control will be used by units of this command only on specific authority from this Headquarters.

(b) Protective measures for and the utilization of indigenous personnel employed in the support of commands in the event of CBR attack.

(c) Provisions for the protection against contamination by CBR agents of food, water, beverage and medical supplies.

(2) Plans will give consideration to:

(a) Maximum dispersion practicable of facilities and supplies (See SR 210-20-30 dated 23 August 1950).

(b) First aid.

(c) Mass evacuation and treatment of casualties.

(d) Control of fires to include dispersed, independent, or self-contained water supplies.

(e) Prevention of panic among military and civilian population.

(f) Detection and survey methods and procedures.

(g) Decontamination of personnel, material and areas.

(h) Training.

(i) Emergency assignments for all personnel of the command in case of CBR attack. Alternates will be assigned to all key positions.

(j) Emergency sanitary measures for the prevention of spreading of disease.

(k) Repair of utilities and emergency provision of facilities for water, heat, light and power.

(l) Traffic control in affected areas.

(m) Security measures for the prevention of sabotage.

(3) In the event of an unexpected attack with CBR Agents or atomic weapons, commanders of affected areas will:

(a) Notify this Headquarters by the most expeditious means available.

(b) Preserve order, alleviate human suffering, and effect emergency rehabilitation of affected installations upon which occupation forces will be dependent to maximum extent consistent with missions assigned under operations plans.

(c) When authroized by this Headquarters, extend such assistance to Japanese Government officials as is possible without jeopardizing the relief mission to occupation forces.

(4) All commands are responsible for the preparation of CBR defense plans of own installations.

(5) CBR defense plans for all commands in Corps zone will be furnished this Headquarters, in triplicate.

(6) All commanders maintain current files of CBR technical information, as available.

(7) Each commander disseminate CBR information to personnel authorized and required to receive such information.

4. ADMINISTRATION AND LOGISTICAL MATTERS:

a. See current Administrative Order.

b. See Annexes hereto.

5. COMMAND, COORDINATION AND SIGNAL MATTERS:

a. Communications. ANNEX 11 (SIGNAL PLAN).

b. Direct communication is authorized and directed between commanders concerned in coordination of planning details.

SECURITY INFORMATION

ANNEX 2 (INTELLIGENCE) TO CBR DEFENSE PLAN

1. SUMMARY OF ENEMY SITUATION:

a. See current Intelligence Summaries.

b. There are potential enemy forces which have the capability of launching chemical, biological, or radiological attacks against JAPAN. Such attacks may be launched without warning and may be followed by an amphibious and/or airborne landing in the zone of responsibility of the XVI Corps. The attacks may be directed against key military installations, ports, airfields, and centers of transportation, communications and population.

2. ESSENTIAL ELEMENTS OF INFORMATION:

a. Where, when and with what strength was the attack made?

b. What type agent was used?

c. How was the attack made? Air submarine, surface ship, etc.

d. What was the identification of the attacking force?

e. How much damage resulted from the attack and how large an area was affected?

f. Will the enemy follow the attack with an amphibious or airborne landing? If so, where, when and in what strength?

3. INTELLIGENCE MISSIONS:

a. In general, all divisions, corps troops and supporting commands will consider EEI in paragraph 2 above as basic directives for their collection effort.

b. Request to higher commands.

(1) GHQ, FEC.

(a) Request visual and photographic air reconnaissance of the area attacked.

(b) Request visual air reconnaissance of coastal areas in XVI Corps zone of responsibility.

(c) Request aerial photo reconnaissance of any amphibious or airborne landing area.

(d) Request that report of results be disseminated to XVI Corps and divisions subordinate to XVI Corps by fastest available means.

4. MEASURES FOR HANDLING PRISONERS, CAPTURED DOCUMENTS AND MATERIAL:

a. Prisoners of War.

(1) Commanders will stress intelligence value of prisoners.

(2) Captured air crews and other enemy personnel will be reported and evacuated without delay to XVI Corps.

(3) Captured enemy agents, saboteurs, agitators, etc., will be reported to CIC for interrogation.

SECRET
SECURITY INFORMATION

b. Captured and/or confiscated documents.

(1) Documents will be delivered to the nearest unit intelligence officer and will be evacuated through intelligence channels without delay other than that required for examination for information of immediate tactical value to the unit concerned. Documents will be enclosed in a wrapper which will show place, date, circumstances and capturing unit.

(2) Documents found on prisoners of war will be evacuated with the prisoner.

(3) Documents found in crashed aircraft and air PW will be evacuated to Corps immediately.

c. Captured Material.

(1) Captured enemy material will be reported through intelligence channels to G2, XVI Corps by type, quantity, location, date of capture, and disposition.

(2) Captured samples of CBR material will be forwarded through technical service channels with report to G2, XVI Corps.

(3) The desirability and use of enemy material for intelligence purposes will be determined by reference to technical service intelligence teams.

5. MAPS AND AERIAL PHOTOGRAPHS:

a. Maps. - - See Opn O No. 1, Hq XVI Corps, 1 Apr 51.

b. Photographs. - - Requests for photo coverage will be submitted to G2, XVI Corps.

6. COUNTERINTELLIGENCE:

See Opn O No. 1, Hq XVI Corps, 1 Apr 51.

7. REPORTS AND DISTRIBUTION:

a. See Annex 1 to Opn O No. 1, Hq XVI Corps, 1 Apr 51.

b. In the event of implementation of this plan by CBR attack, ISUMs will be forwarded as scheduled without further instruction. Spot Reports will be forwarded as information is received. Periodic Intelligence Reports will be prepared when requested by this Headquarters.

ANNEX 3 (ORGANIZATION AND TRAINING) TO CBR DEFENSE PLAN.

Organization and training for defense against CBR attack is a responsibility of command. This Annex defines organizational and training responsibility of commanders and is prepared to guide and aid commanders and staffs in the preparation of those plans as prescribed in Basic Plan.

SECTION I

1. ORGANIZATIONAL POLICY:

Enemy employment of CBR weapons will present a simultaneous need for many or all of the countermeasures normally applied against other types of enemy action and against conditions created by major disasters. To effect maximum utilization of personnel and facilities, military organization for CBR defense will be included within the existing organization of this command.

2. Echelons of non-medical CBR defense duties within the command structure:

a. CBR defense duties will be performed within the existing chemical defense organization as shown in FM 21-40. Unit CBR defense personnel will perform duties outlined below in addition to their primary duty assignments.

(1) Staff Chemical Officer at all levels will serve as technical advisor to the commander and staff in CBR matters.

(2) Unit CBR Defense Officer below the division and similar level: CBR defense duties within the unit will be supervised by the Unit CBR Defense Officer in accordance with the provisions of FM 21-40. Each Combat or service unit, to include each brigade, regiment, battalion, and company or similar unit will have a minimum of one qualified CBR Defense Officer and at least one qualified alternate. Additional alternates will be appointed wherever practicable and all officers so appointed will be qualified to perform their duties by completion of a prescribed course of training at the Far East Command Chemical School or its equivalent.

(3) Unit CBR Defense Non-commissioned Officer will assist Unit CBR Defense Officer in the performance of duties pertaining to CBR defense as prescribed in FM 21-40. Each combat or service brigade, regiment, battalion, company or similar unit will have appointed unit CBR defense non-commissioned officers on the following basis:

(a) Brigade or similar unit - minimum of one unit CBR defense non-commissioned officer.

(b) Regiment or similar unit - minimum of one unit CBR defense non-commissioned officer.

(c) Battalion or similar unit - minimum of one unit CBR defense non-commissioned officer.

(d) Company or similar unit - minimum of two (2) CBR defense non-commissioned officers.

At least one alternate will be appointed for each unit CBR defense non-commissioned officer required, and all appointees will be qualified to perform their duties by completion of a prescribed course of training. Unit CBR defense non-commissioned officers will be selected from individuals of the Top four grades.

RESTRICTED

SECURITY INFORMATION

SECURITY INFORMATION

(4) CBR Defense Monitors. Trained enlisted personnel will be required to assist unit CBR defense officers and non-commissioned officers in performing instrument surveys and obtaining CBR data in areas contaminated, or suspected of being contaminated with CBR materials. CBR defense monitors will perform this duty in addition to their primary duty assignments. Each combat or service regiment, battalion, company, and similar unit, will have CBR defense monitors appointed by the unit commander, on the following basis:

(a) Regiment or similar unit - minimum of one CBR defense monitor.

(b) Battalion or similar unit - minimum of one CBR defense monitor.

(c) Company or similar unit - minimum of two CBR defense monitors. At least one alternate will be appointed for each CBR defense monitor required. CBR defense monitors will be selected from individuals below the top four grades, and will be qualified and unit trained to perform their duties by completion of a prescribed course of training. Insofar as practicable, all unit personnel will be trained in monitoring operations and techniques so as to insure the availability at all times of individuals qualified to operate CBR detection instruments and devices in an emergency.

b. In addition to those CBR defense positions enumerated above, certain Radiological job positions are required and will be filled at a later date. Pending completion of training of individuals and assignment to this command, duties outlined below will be performed by appropriate individuals at the several echelons of command.

(1) Radiological Defense Engineers - These specially trained officers will normally be assigned to duty with the staff Chemical Sections of theatre of operations headquarters, communication zone headquarters and other major headquarters, on the basis of individual requirements, and will serve as advisors and technical experts in all matters pertaining to the non-medical aspects of radiological defense. The position of radiological engineer will be a primary assignment, and will be filled by officers who have completed a prescribed course of post-graduate and field training.

(2) Radiological Defense Medical Officers - These specially trained officers will normally be assigned to duty with Staff Medical Sections of theater of operations headquarters, communication zone headquarters, and other major headquarters, on the basis of individual requirements, and will serve as advisors in all matters pertaining to the medical aspects of radiological defense. The position of radiological defense medical officer will be a primary duty assignment, and will be filled by officers who have completed a prescribed course of post-graduate training.

(3) Radiological Instrument Repairman - Organizational, field, and base maintenance on radiological equipment will be performed by radio repairmen who have received instruction by Signal Corps Personnel in the maintenance and repair of radiological detection instruments. Radiological instrument repairmen who have had this specialized training will be required at all echelons to perform organizational, field, and base maintenance on radiation detection instruments and devices used by the Army. Certain phases of organizational maintenance including calibration of instruments and replacements of defective or worn out batteries can be performed by radiological defense monitors, under the general supervision of unit CBR defense personnel.

SECURITY INFORMATION

(4) Radiological Defense Medical Laboratory Officer - An MSC officer trained at the post-graduate level in radio-chemistry, biology, bio-assay and allied radiation fields; such officers will supervise bio-assay laboratories.

Security Information

RESTRICTED
Security Information

SECURITY INFORMATION

(5) Radiological Defense Laboratory Technician (Medical) - Enlisted technician of the Medical Department trained in the techniques peculiar to biological, radio-assay laboratories.

(6) Radiological Defense Laboratory Technician (Non-Medical) - Enlisted technician trained in radio-chemistry analysis and radiation measurement.

SECTION II

1. TRAINING FOR CBR DEFENSE:

The integration plan of CBR defense training throughout this command provides for three general training categories.

a. Basic indoctrination in accordance with the privisions of SR 380-80-1, and appropriate training directives for all military personnel, and specialized training with the unit for selected CBR monitors.

b. Military technical training as provided by the Far East Command Chemical School for unit CBR defense officers and non-commissioned officers. Medical and Signal technical training requirements are excepted and are outlined in ANNEX 5 and ANNEX 11, respectively, to this plan.

c. Advanced theoretical education as provided by post graduate training for radiological defense of selected officers within the zone of interior. Upon completion of the training program of individual officers, assignments will be made to fill the position vacancies of radiological defense engineers, radiological defense medical officers, and radiological defense medical laboratory officers at higher staff levels.

2. CBR defense training is a responsibility of command. Commanders will insure that all personnel receive radiological training as prescribed in Chemical Annex Training Directive No. 1, Headquarters, XVI Corps, dated 25 May 1951 and CBR Instruction in ANNEX 2 (Chemical) Training Memorandum No. 1, General Headquarters, Far East Command. 1 July 1951.

3. Practice alerts and other training situation which call for action by commanders and their staffs, as well as by individuals, will be scheduled periodically to include CBR defense situations. When so scheduled, units will notify this Headquarters three (3) weeks in advance of the proposed training situations.

ANNEX 4 (PROCEDURES AND MONITORING) TO CBR DEFENSE PLAN

1. General:

a. Definitions:

(1) CBR defense is the defense against any chemical, biological or radiological substance that poisons or destroys body tissues by itself, its products, or its radiations.

(2) Chemical defense consists of protective measures taken against chemical agents - substances which by their chemical action produce death or casualties, an injurious or irritant effect, a screening effect, or an incendiary action.

(3) Biological defense is the defense taken against biological agents - agents which include living organisms or their toxic products.

(4) Radiological defense consists of measures taken to minimize personnel and material damage from radioactivity.

(5) CBR Monitoring includes all procedures involved in measuring, collecting, recording, evaluating, and controlling Chemical, Biological, or Radiological contamination for which the essential requirements for effective montioring of intensities are three-fold:

(a) The collection of reliable data on radiological intensities and CB concentrations in an area.

(b) A rapid assimilation of data and its evaluation.

(c) Prompt dissemination of evaluated data and control of all personnel, equipment and areas that are contaminated.

b. Purpose:

(1) The development of modern warfare by a potential enemy has introduced the need for planning for defnse against chemical, biological, and radiological attack. The techniques developed against chemical warfare have proved to be effective against the newer hazards of biological and radiological attack so that the same personnel responsible for chemical defense are now charged with the responsibilities of the defense against radiological and biological attack.

(2) The purpose of this annex is to establish procedures in defense against chemical, biological, and radiological attack.

2. Responsibilities:

a. CBR defense training of units and individuals are basic responsibilities of command.

b. Corps and Division Chemical Officers are responsible for the technical advice to their Commanding General and Staff. The unit CBR Defense Officers will exercise technical supervision within their units as special staff officers.

c. The unit CBR Defense Officer is responsible for the following activities within his unit:

(1) Personnel.

Recommending personnel for assignment to CBR duties and for special CBR training. (See ANNEX 3)

SECURITY INFORMATION

RESTRICTED

Restricted
Security Information

SECURITY INFORMATION
Restricted
Security Information

(2) Intelligence.

(a) Obtain information on enemy CBR activities.

(b) Assist in identification of enemy CBR agents.

(c) Posts the CBR situation on the maps of the unit.

(d) Investigates CBR attacks for unit intelligence officer, reporting directly thereto and to the organization Chemical Officer.

(e) Forwards information on captured enemy CBR supplies to unit intelligence officer and the organization Chemical Officer.

(3) Training and operations.

(a) Instructs and trains unit officers and NCOs in CBR warfare.

(b) Prepares unit SOP for defense against CBR attack.

(c) Advises unit commander on weather conditions as they effect CBR warfare, routes of march, and passage through contaminated terrain.

(d) Recommends collective defense measures, including protection of food and equipment, posting of CBR sentinels, and construction of CBR shelters.

(e) Recommends methods of decontamination of contaminated areas and equipment.

(f) Advises in the care of CBR protective equipment.

(g) Directs use of radiation detection instruments and devices.

(h) Supervises CBR monitors in unit areas.

(i) Advises the commander on the casualty rate to be expected following a radiological attack or from a continuous occupation of an area and aids in preparation of work party schedule to keep within tolerance limits.

(j) Monitoring teams of enlisted men will be organized and trained in all units on a minimum basis of four members per company, or equivalent, to function in addition to their other duties. Extra trained teams are necessary to replace those teams which have exceeded their tolerance dose for the period and must be replaced in order to carry out essential monitoring.

(k) During the training phase of teams, students will learn the use of all monitoring instruments, how to calibrate survey meters, uses of and kinds of protective clothing, specific contamination hazards, emergency first aid, map reading (including plotting of radiation and isodose lines for a contaminated area), radio operation, and maintenance of R.M.M.C. equipment.

(l) In the event of any CBR disaster all monitoring teams of each Command will be made available for mutual assistance as may be required.

Restricted
Security Information

RESTRICTED
Restricted Security Information

SECURITY INFORMATION

(4) Supply.

(a) Maintains contact with the unit supply officer and advises unit commander regarding quantity and condition of CBR supplies.

(b) Upon request assists unit supply officer to properly prepare CBR supplies for movement.

(c) Through the unit supply officer, supervises maintenance of all CBR equipment.

(d) Supervises preparation of an adequate quantity of markers for posting of contaminated areas. (See Appendix hereto)

3. Detection:

a. General.

Upon the outbreak of CBR warfare, a CBR attack will be presumed likely in connection with any bombardment by low flying aircraft within 1,000 yards. All personnel will mask and take other individual protective measures immediately without waiting for confirmation of the presence of CBR agents. Personnel with field glasses will observe the bombardment by aircraft for signs of the release of aerosols (fine mists or sprays), or smoke. At night, if available and the tactical situation permits, searchlights may be turned on to reveal the presence of aerosols, which will be immediately apparent in a bright light.

b. Chemical Agents.

(1) The M9A1 Chemical Agent Detector Kit will reveal the presence of lethal concentration of most chemical agents. Vesicant Detector Paper and Paint will detect liquid blister gases.

(2) The physiological effects of the G-series gases, as observed in other personnel, may be the first indication of their presence.

(a) G-Agents (nerve gases) are much more toxic by liquid contact than other standard casualty producing chemical agents. Casualties contaminated with persistent liquid gases endanger unprotected personnel. Handlers of such patients should wear protective clothing where there is any chance of skin or clothing contact with the liquid agent.

(b) Self Aid.

Individuals put on the gas mask at once if any of the following effects are noticed:

1 A faint, sweetish, fruity odor, which cannot be accounted for.

2 A feeling of tightness or constriction in the chest.

3 Difficulty in breathing, either on inhaling or exhaling.

4 The light appears to be getting dimmer than usual, for no apparent reason.

5 The eyes of individuals in the vicinity have very small pinpoint-sized pupils.

6 A drawing, slightly painful sensation is felt in the eyes.

(c) If real difficulty in breathing is encountered and the chest feels very tight, remove the atropine ampin from the Protective Ointment Kit, M-5 and inject into the muscle.

RESTRICTED SECURITY INFORMATION

SECURITY INFORMATION

Restricted
Security Information

(d) Aviators should not attempt to fly an airplane for the first 12 hours after taking atropine.

(e) Caution: Do not take an injection of atropine until positive that it is needed.

c. Biological agents.

Biological agents are only detectable immediately by the means used for dissemination, as given above for CBR agents. Any sudden outbreak of disease will be reported immediately through intelligence and Medical channels.

d. Radiological agents are readily detected by radiological detection instruments.

4. Alarm and Alarm System.

a. Pending re-issue of gas alarms in the event CBR warfare develops, unit improvised alarm from artillery cartridge cases, pieces of pipe, pans, or similar percussion devices will be used immediately upon detection of CBR attack.

b. CBR defense sentries, on positive detection of a Chemical or Biological attack or upon notification of CBR attack, will give local warning by means of the gas alarm.

5. Procedure in case of attack:

a. On receipt of warning of a possible attack the following action will be taken:

(1) Personnel and equipment will be dispersed to the extent permitted by the tactical situation and the performance of their duties.

(2) Gas-proof shelters will be prepared for use.

(3) Protective clothing will be issued and maintained ready for wear as directed by commander concerned.

b. Action to be taken during attack:

(1) All sentries including military police will assist as CBR sentries.

(2) All activity will be reduced to a minimum.

(3) Personnel will be dispersed to take advantage of all protection and cover.

(4) Individuals remain calm.

SECURITY INFORMATION

(5) All individuals mask rapidly.

c. Action to be taken after attack:

(1) Unit CBR defense personnel will determine the nature of attack.

(2) Immediate first aid will be administered to casualties and those needing further treatment will be evacuated.

(3) In the event of a Radiological attack, monitoring teams will determine the intensity, extent of contamination and inspect personnel for contamination.

Restricted
Security Information

District of Columbia Security Information

RESTRICTED SECURITY INFORMATION

(4) It is the duty of monitoring teams to proceed through designated portion of the area attacked reporting the extent and type of contamination to the commander concerned. Continuing surveys will be made to determine the decay rate of radiation; posting and the correction of markers indicating contamination extent; monitoring casualties; assisting in rescue and repair operations as directed.

(5) Upon leaving a contaminated area, monitoring personnel will pass through a Personnel Decontamination Station.

(6) Operation of motor vehicles.

If the tactical situation permits, vehicle drivers will move vehicles to cover, upwind, and out of the contaminated area. If practicable, drivers will stop to inspect vehicles for contamination when out of the area. If, on inspection, the vehicle is found to have been contaminated with persistent agents, the agents will be neutralized by first and second echelon decontamination in accordance with the principle of paragraph 60, TM 3-220.

(7) Personnel remove gas masks only on order.

(8) Personnel perform self-aid.

6. Individual Protection:

a. Gas Masks.

(1) All personnel will be instructed in the proper use and care of the gas mask.

(2) While sleeping or when duties prohibit carrying the mask, it will be kept within easy reach at all times.

(3) Upon warning of a possible CBR attack, gas masks will be carried by all personnel as directed.

7. Area Monitoring:

a. Radiological intensity readings should be taken at belt height. While this reading is considerably lower than the actual intensity on the ground, it is a fair indication of the average radiation intensity to which an individual's body is subjected.

b. Only rough average intensities over large radiological contamination areas are obtained. The monitor should average the general readings in his mind and arrive at an overall figure. Local "hot spots" however, should be traced down and marked.

c. Tests for Chemical agents with the detector kit should be made at the same distance as for radiological intensity readings from suspected contamination.

d. Special attention must be given to wood, concrete, fibers and other porous surfaces since these tend to absorb and retain CBR contamination.

e. Items such as rope, canvas, rough or rusted surfaces, greasy and oily surfaces, bituminous coverings, pumps, drains, wood, air intakes and water systems should be closely checked.

f. Care must be exercised to obtain readings of intensities which represent only radiological contamination existing on equipment. In some cases localized "hot spots" on the ground may give distorted values to readings obtained on equipment in that area.

RESTRICTED SECURITY INFORMATION

SECURITY INFORMATION

8. Marking of Contaminated Areas:

a. Radiological.

(1) The proper usage for CBR markers is contained in Training Circular 24, Department of the Army, dated 3 Aug 51. The surface of the marker which faces away from the contamination is colored black and white for radiological contamination. In all cases the surface of the marker facing the contamination is painted white. The word "ATOM" will be painted or written in black in three (3) positions as shown in APPENDIX "A".

(2) The triangles will be made of metal, wood, plastic, composition board, or any other similar rigid material.

(3) Holes will be punched in each corner of the triangles to facilitate placement. If material and time permit a short length of wire will be installed through the holes to facilitate rapid placement.

(4) The marker is always placed with the right angle apex downward. The marker will also be placed habitually above the ground on boundary fences, trees, rocks, or stakes. Written on the back of each marker erected should be the following information:

(a) Radioactivity is present.

(b) Intensity reading.

(c) Length of time personnel can stay in area.

(d) Time and date reading was taken.

(e) Unit and team number of monitoring team that took reading.

b. Chemical.

The general procedures and marking of a chemical contaminated area are similar to the marking of radiological contamination with the following exceptions:

(1) The surface of the marker which faces away from the decontamination area will be colored yellow for gas contamination as shown in APPENDIX "B".

(2) The surface of the marker facing the contamination area is painted white. The word "GAS" will be painted or written in black in three (3) positions as shown in APPENDIX "B".

(3) Written on the back of each marker erected should be the following information:

(a) Gas or Chemical agent present.

(b) Length of time personnel can stay in area.

(c) Time and date of contamination.

(d) Unit and team number of monitoring team that made identification.

SECURITY INFORMATION

Restricted
Security Information

RESTRICTED
Restricted Security Information

SECURITY INFORMATION

c. Biological.

The general procedures and marking of a biological contaminated area is similar to the marking of radiological contamination with the following exceptions:

(1) The surface of the marker which faces away from the decontamination area will be colored yellow and red for biological contamination as shown in APPENDIX "C".

(2) The surface of the marker facing the contamination area is painted white. The word "GERMS" will be painted or written in black in three (3) positions as shown in APPENDIX "C".

(3) Written on the back of each marker erected should be the following information:

(a) BW agent present.

(b) Time and date of contamination.

(c) Unit and team number of monitoring team that took samples.

9. Tactical Protection:

a. Chapter 8, FM 21-40, with the following modifications may be used as a guide in CBR tactical protection:

(1) Substitute "CBR" for "Chemical" and CBR agents for the word "GAS".

(2) Radiological contaminated areas will not be burned.

b. Defensive areas.

(1) Defensive planning will provide for occupation of alternate positions.

(2) In event it becomes necessary to retain a contaminated area, personnel will be given all available protection and relieved within the safe time limit. Provision for personnel decontamination will be made available for the contaminated personnel.

10. Intelligence:

In addition to reporting enemy chemical activities through Command channels, reports will be forwarded immediately through technical channels.

11. Decontamination:

a. General:

(1) After a CBR attack, CBR defense personnel will inspect all personnel, food, clothing and equipment to determine the necessity for decontamination. Contaminated food and water will be destroyed if they cannot be readily decontaminated.

(2) When CBR agents are used, at least eight (8) enlisted men in each company or its equivalent will be made available as a decontamination team. This team will operate under the supervision of the unit CBR defense officer.

RESTRICTED
Restricted Security Information

SECURITY INFORMATION
Security Information

b. Personnel.

(1) Personnel will use protective ointment, M-5 as directed in the kit for elimination of liquid contamination.

(2) General decontamination of personnel will be accomplished wherever possible by bathing and change of clothing.

c. Equipment.

(1) Gun crews, vehicle drivers, and assistants will be responsible for the decontamination of their own equipment. If it is necessary to decontaminate a large number of vehicles, it will be done in a segregated area by units under the supervision of the CBR defense personnel.

(2) The following methods of equipment decontamination will be used:

(a) Chemical agents will be decontaminated by the use of bleach, DANC (Decontamination Agent, Non-Corrosive) (except G-agents), or soap and water.

(b) Radiological agents will be removed with soap and water.

(c) Biological agents will be decontaminated with bleach, DANC and fire.

(d) In large scale operations precautions will be taken to prevent contaminated wash water from draining into an area where it would be dangerous to personnel. Areas will be posted during and after accomplishment of decontamination activities.

12. a. Supply procedures and Salvage:

(1) In the absence of any specific Table of Allowances for protective clothing or R.D/I.C equipment to implement this plan, the following will be the basis upon which units will make their requisitions:

Suit, Protective, permeable	One (1) per monitor
Suit, Protective, impermeable	One (1) per monitor
GM survey meter complete with phones and batteries.	One (1) per monitoring team
Instrument, survey meter, radiation gamma, ionization chamber	One (1) per monitoring team
Instrument, dosimeter, picket 200 mr, full scale reading	Twenty (20) per Co or its equivalent.
Film Badge	Three (3) per individual
Charger, dosimeter	One (1) per Co or its equivalent
BW Sampling Kit	One (1) per monitoring team

(2) Equipment pertaining to CBR defense, but which is not classed as Chemical Corps equipment will be issued by the service concerned.

(3) Chemical Corps protective equipment will be requisitioned through normal supply channels.

SECURITY INFORMATION
Restricted Security Information

RESTRICTED
SECURITY INFORMATION

ANNEX 4 (PRECAUTIONS AND MONITORING) TO CBR DEFENCE PLAN, Contamination

b. Maintenance:

(1) Unit commander concerned is reponsible for first and second echelon maintenance of protective equipment.

(2) Unserviceable equipment which cannot be repaired by the using unit will be disposed of through normal channels.

c. Salvage:

(1) Contaminated salvage clothing and equipment will not be mixed with uncontaminated salvage items.

(2) Contaminated salvage will be marked to avoid casualties among handling personnel. When moving contaminated salvage, use will be made of clothing containers, impregnated paper and paulins to avoid contamination of personnel and adjacent equipment.

ANNEX 5 (MEDICAL) TO CBR DEFENSE PLAN.

1. GENERAL. This plan provides for special medical measures to be taken in event of CBR attack anywhere in the XVI Corps zone of responsibility.

2. CONCEPTS.

a. For the purpose of planning and operating medical aid stations under this plan, this Headquarters is dependent upon the organic medical facilities of units attached or assigned to XVI Corps.

b. Medical elements of all units assigned or attached to XVI Corps will operate in a normal tactical support role.

c. In the event that personnel from organic medical facilities of XVI Corps are insufficient in number, then support from Japan Logistical Command medical installations and Far East Air Force Medical Installations will be requested through Surgeon, Hq, XVI Corps.

d. Medical Supplies will be procured through established medical supply channels.

3. RESPONSIBILITIES.

a. The Surgeon, each major or separate unit, is responsible for the administration and operation of aid stations and evacuation of casualties to the nearest JLC Medical Installation within the zone of action or responsibility of that unit.

b. The Surgeon of each unit is responsible for the training of all medical personnel within his unit in the handling, treatment, and evacuation of CBR casualties.

c. The Surgeon of each unit is further responsible for establishment of an SOP for operation of a medical installation processing CBR casualties (segregation, decontamination, disposal or care of clothing and equipment, etc.) and for the training of the medical units therein.

4. ADMINISTRATIVE.

a. Aid Stations.

Location. Aid Stations will be located at the discretion of the local regimental or separate battalion or similar sized units Surgeon, with the normal command approval.

b. Supplies and equipment. Emergency requisitions for additional medical supplies will be forwarded through established supply channels.

c. Evacuation.

(1) Evacuation of casualties from the disaster area to the aid stations will be based on vehicles of the medical unit operating the station plus vehicles from the parent unit.

(2) Evacuation of casualties from the aid stations to hospitals will be by elements of the division medical service, supported by vehicles made available by the local commanding officer on request.

RESTRICTED
SECURITY INFORMATION

DECLASSIFIED E. O. 12065 MR/RAC 3-402 / NNBJ No: 77-0012

SECURITY INFORMATION
Security Information

(3) Casualties coming from areas suspected of contamination will be monitored, and to minimize contamination of medical supplies and equipment, will be processed through personnel decontamination centers prior to being received for treatment.

(4) Casualties requiring hospitalization will be evacuated from aid station to presently existing hospitals in the area, or in the event that these facilities are no longer tenable to Division clearing stations, or hospitals at redesignated sites.

d. Food and Water.

(1) The Surgeon, in cooperation with the unit CBR Defense Officer and the Local Unit Engineer, will monitor all food and water in affected areas, and will be responsible for pronouncing such food and water safe or unsafe for human consumption.

(2) All food in unopened containers may be considered probably safe for consumption, but ordinarily will not be consumed until specific instructions to this effect have been issued by the proper authorities. However, as an emergency measure, such items of food may be utilized after first washing all outside surfaces.

(3) Water from deep wells, outside or inside the disaster area, may be considered safe for drinking or washing purposes after letting the water flow through the pump system for a period of at least ten (10) minutes. No other water sources will be utilized except upon direction of the proper authorities.

e. Radiation Dosage.

(1) The maximum tolerance dose of radiation under wartime conditions is accepted to be 100 r. (This is construed to mean a one-time dose and/or a cumulative dose during a short period of time.)

(2) The amount of radiation individuals may be necessarily exposed to for military reasons is dependent upon several factors and will be announced by the Commanding General, XVI Corps, at an appropriate time.

f. Records of Radioactivity Exposure.

(1) Unit Commanders will prepare a record of exposure on each individual in their respective unit, using APPENDIX "A", as a guide, and will be responsible that data required is maintained up-to-date.

(2) This record will be initiated and/or continued by medical installations where applicable.

(3) Information relative to exposure dosages will ordinarily be furnished by CBR Monitoring Teams.

APP: Record of Radioactivity Exposure.

ANNEX 6 (ENGINEER) TO CBR DEFENSE PLAN

1. REFERENCES:

a. Supply: See Current XVI Corps Admin O.

b. Construction: See a., above and JLC Cir 39, 10 Oct 51.

c. Repairs and Utilities: See current XVI Corps Admin O and JLC Cir 39, 10 Oct 51.

d. Water Supply: See TM 5-295 and C-1 thereto.

2. MISSION:

The Engineer Section, XVI Corps, will provide technical supervision and advice on all phases of protective construction, reconstruction and rehabilitation of routes of communication, bridges, tunnels, utilities and water supply. It will provide technical supervision and advice for the collection, evaluation and dissemination of all phases of Engineer intelligence data.

3. RESPONSIBILITIES:

a. Engineer, XVI Corps:

(1) Will assume command of all engineer units within Corps zone not assigned or attached to subordinate commands.

(2) Will recommend the procurement and employment of engineer troops and their allotment to subordinate units for decontamination details for utilities and reservoirs and other larger contaminated areas where earth moving equipment may be required.

(3) Will supervise and advise on priorities to be set on all phases of planning, construction and rehabilitation of roads, tunnels, R.R. and highway bridges, utilities and water supply facilities within the Corps zone of responsibility.

(4) Will co-ordinate with and advise the Chemical Officer, QM Officer and Medical Officer (Corps) on the construction of shelters, decontamination centers, baths and medical facilities.

(5) Will co-ordinate with Corps Medical and Chemical Officers in clearing water supply points and pumping stations for operation and in their decontamination.

(6) Will maintain complete data on water facilities as to location, degree of contamination and keep all units within the Corps zone informed on the location of decontaminated water points.

(7) Will advise on the proper disposal of sewage, refuse and debris which may have a high degree of radiological contamination.

(8) Will supervise the collection, evaluation, and compilation of information on all phases of engineer intelligence and maintain records of all engineer data required for research and future study.

(9) Will cooperate with the Corps Chemical Officer in publishing guides in sketch form for contaminated areas.

SECRET
SECURITY INFORMATION

DECLASSIFIED E. O. 12065 SEC. 3.4(b) NNBD NO. 7805

SECURITY INFORMATION

SECRET
Security Information

(10) Will co-ordinate with civil authorities in surveying for contaminated electrical power plants, dumps for both solid and liquid fuel, boiler plants and refrigeration plants other than private residences.

(11) Will advise the Provost Marshal on circulation plans for traffic around and thru contaminated areas and setting up of road blocks.

(12) Will cause the preparation and posting of signs for the remarking of routes and recommend traffic regulations and roads and bridges as dictate by their physical condition.

(13) Will advise Military Government Officer and local authorities on the construction of compounds and temporary shelters for refugees.

b. Detachments of the 94th Engineer Maintenance Co located at Camp SCHIMMELPFENNIG, HONSHU, and Camp CHITOSE, HOKKAIDO, will provide field maintenances of Engineer equipment for units within zones of responsibility.

c. Area Commands:

See current XVI Corps Admin O.

d. Post Commanders are responsible for supervision of rehabilitation, temporary construction and utilities within their command, see JLC Cir # 39, dated 10 Oct 1951.

e. Division Engineers:

The Division Engineers are responsible for:

(1) Temporary repairs for emergency use of buildings and structures with priorities as follows: Medical Facilities, water points, storage and housing.

(2) Operations of utilities in conjunction with civilian authorities upon the advice of Corps Engineer.

(3) Minimum road and bridge construction and repair for safe passage of traffic. Priorities will be given to roads required for military operations and those leading to medical facilities, food storage areas and utilities.

(4) Moving Bn and heavy equipment to contaminated areas for assistance to decontamination teams.

(5) Collecting and forwarding Engineer Intelligence to Corps Engineer for record and study.

(6) Training mechanics, heavy equipment operators and water specialists as R.D Control Monitors.

4. SUPPLY:

a. Requisitioning Engineer Supplies:

See current XVI Corps Admin O.

b. Turn-In of Engineer Supplies and Equipment:

See Section III, JLC Cir # 22 dated 14 July 1951. Highly contaminated supplies and equipment will be segregated but turned in only on the advice of the Corps Engineer.

ANNEX 8 (QUARTERMASTER) TO CBR DEFENSE PLAN

1. GENERAL:

a. The Quartermaster, in coordination with staff Chemical Officers will establish decontamination centers using T/O&E bath and laundry equipment. These decontamination centers will be operated by personnel as directed by the division or other unit commanders concerned, in their zones of responsibility.

b. Where T/O&E equipment is not available, the Quartermaster is responsible for procurement of Quartermaster Clothing, Equipment and Supplies required for operation of decontamination centers.

c. The Quartermaster is responsible for procurement and laundering of protective clothing.

2. SUPPLIES AND EQUIPMENT:

a. See Current Administrative Order, Headquarters XVI Corps.

b. Supply officers of all units determine and keep current requirements for protective clothing, and supplies for decontamination centers. Requisitions to be submitted only on order placing CBR Defense Plan in effect.

3. OPERATIONS:

a. Divisions' Quartermasters prepare plans to establish four decontamination centers, See APPENDIX "A", utilizing divisional T/O&E bath equipment and personnel.

b. Division Quartermasters utilize divisional T/O&E equipment, laundry, in support of decontamination centers.

c. Supply Officers of non-divisional units prepare requirements for bath and laundry equipment necessary to establish decontamination centers.

ANNEX 9 (PROVOST MARSHAL) TO CBR DEFENSE PLAN

1. GENERAL:

The purpose of this plan is to provide a basis for planning and action by Military Police units in the XVI Corps zone of responsibility, in the event of Chemical, Biological or Radiological attack.

2. SCOPE:

To minimize the hazards and after effects of CBR attack to personnel and material. To assist in providing relief and rehabilitation of area or areas attacked, the Military Police Units of XVI Corps will:

a. Train and indoctrinate all Military Police in the hazards resulting from attack with CBR weapons, to include ability to perform simple monitoring operations.

b. Prepare, and maintain current, plans for establishment of straggler points, traffic control (with alternate routes), refugee evacuation areas and other matters connected with control and discipline of military and civil populace in the event of CBR attack.

c. Be prepared to assist Civil Affairs/Military Government Officers in maintenance of law and order in the XVI Corps area of responsibility.

d. Military Police elements of XVI Corps, Divisions, Regiments and attached troops will be prepared to carry out their CBR mission to meet training and emergency Military Police requirements within the areas of their commands' responsibility.

3. MISSION:

The CG, XVI Corps, is charged with maintaining good order and discipline in the XVI Corps zone of responsibility; enforce laws, regulations and orders pertaining to the control of traffic and to aid in the protection of life and property. Provost Marshal responsibilities are as follows:

a. To advise the Commanding General on Military Police matters.

b. Will exercise operational control of non-divisional Military Police Units attached or assigned to XVI Corps.

c. Will obtain from Assistant Chief of Staff, G4, circulation plans for traffic around and through contaminated areas and establish Traffic Control Points.

d. Coordinate with Corps Engineer in the posting of signs for the marking of routes, roads and bridges in effected areas.

e. Obtain from Civil Affairs/Military Government, XVI Corps, information concerning the locations of shelters for refugees.

f. Obtain from Surgeon, XVI Corps, locations of aid stations established for treatment of casualties from the effected areas.

g. Obtain from Chemical officer, XVI Corps, location of decontamination centers within the XVI Corps area of responsibility.

h. Make arrangements with Civil Affairs/Military Government, XVI Corps, for coordination of Military and Civil police between Corps and Division areas.

4. OPERATIONS:

Plans for Military Police Units in XVI Corps zone of responsibility will include the following:

a. Establish traffic control in the effected areas to ensure the orderly and uninterrupted movement of vehicles, troops and supplies.

b. Aid in establishing control in the affected areas to prevent panic among both military and civil populace.

c. Assist in the mass evacuation of casualties.

d. Preserve order among military personnel.

e. Coordinate with Civil Affairs/Military Government and Counter Intelligence Corps in security measures for the prevention of sabotage.

f. Coordinate with Civil Affairs/Military Government to ensure that the civil police forces are enforcing law and order among the civil populace and that controls are established to prevent individuals from entering dangerously contaminated or effected areas.

g. Be prepared to render in an emergency (when ordered by the Commanding General, XVI Corps), within the XVI Corps zone of responsibility, Military Police assistance to military installations.
