INDEX TO THE

JANUARY 4 TO JUNE 28, 1916.

A

Accidents, Help, 119.
 Accounts, Oil, Coliving, 143.
 Acetamid, Distinction from Phenacetin, 232.
 Solvent, 583.
 Acetum Convallariae, 534.
 Acetylene Tetrabromide, 342.
 Acetyl-Leuco-Methylethyl-Blue, 91.
 Acid, Boracic, Harmless (Ed.), 56.
 Benzole, Manufacture from Coal Tar, 362.
 Carbolic, Advance, 41.
 And the Boer War, 257.
 Sole (Ed.), 1.
 Hydrobromic, 494.
 Hydrochloric, 494.
 Phosphoric, Manufacturers, 35.
 Phospho-tungstic, 335.
 Quinic, 286.
 Silico-Tungstic, 448.
 Vanadic, Developer, 361.
 Acroelin, 411.
 Adheson, 37.
 Adulor, 148.
 Advertising Methods, 23, 341, 552.
 Retail Druggists', 19, 23, 420, 698.
 Story, Illustrated, 327.
 Window, S. 140, 225.
 "After-Sheave", 612.
 Air, Dissociation at Ordinary Pressure, 313.
 Liquid, Factory, 146.
 Airogon, 36.
 Albumen, Szoizoidal as Reagent, 259.
 Tanet's Test, 343.
 Alcohol, Free, 71, 346, 352.
 Manufacture, 67.
 Alcolohism, Treatment, 415, 670.
 Aldehydes, Compounds with Pot-Dis, 10.
 Alkaloidal Chemistry, Century, 609.
 Alpha vs. Beta-Naphthol, 286.
 Apsol, 326.
 Atruria Food, 671.
 Aluminum Aceto-Tartrate, 236.
 Amber and Copal, to Distinguish, 370.
 Solvent, 149.
 American Drug Stores, Supplement, 363.
 Ammonia, Household, 122.
 Violet, 474, 701.
 Ammonium Benzoate, Solubility, 204.
 Cyanate, 91.
 Sulphate for Export, 626.
 Anaesthetic, Legrand's, 371.
 Analysis, Quantitative and Prescription, 367.
 Anatomy, New, 57.
 Anabulum, Alkaloids, 411.
 Anemia, 428.
 Ant, Exterminator, 371.
 Antharthin Tablets, 342.
 Antidiphtheric Serum, Nature and Production, 66.
 Anti-Ethylin, 280.
 Antiferments, 336.
 Antigliad, 148.
 Antimony, Black, Coal Dust, 85.
 Antimony, 608.
 Localizing City Sales, 155.
 Antitussin, 91.
 Apothecaries, National Guard, 292.
 Apothecary, Twentieth Century, 259.
 Apothecary's Prayer, 25.
 Apoptotic, Education (Ed.), 252.
 Argentinum Iodocum, 627.
 Arscodyle, 37.
 Arsenic Administration, 205.
 Sulphide, New, 494.
 Arsenocinclin, 312.
 Arsenism, 379.
 Assofolic, Confiscated, 403.
 Asiatic Lucidity, 120.
 Aspirators, 223.
 Associations, Organic, 198.
ASSOCIATIONS, PHARMACEUTICAL (Clubs, Societies, Drug Clerks, Paints, Alumin, etc.—Adams Co. (Ill.) Druggists, 211; Akron (O.), 74; Alabama, 597; Allen Co. (O.) Druggists, 347; American Chemical Society, New York Section, 40, 131, 202,

ASSOCIATIONS, ETC., Continued.

COMPLETE IN ONE YEAR. * * *

Students May Begin at Any Time.

THE ERA COURSE IN PHARMACY.

Modern,
Systematic,
Thorough,
Practical,
Economical.

ANNOUNCEMENT.

The Era Course in Pharmacy has been completely revised and improved. The division into Junior and Senior classes has been discarded, and hereafter the lectures will be issued in monthly instalments.

Students may begin at any time and complete the full course in twelve months.

The lectures on the various subjects are systematically arranged and graded with particular reference to the needs of the pharmacy student, his intellectual development and thorough equipment for future work. The Course is thoroughly up-to-date and qualifies the student to pass the examinations of a board of pharmacy, and for practical work in the drug business.

FEES.

To students in the United States or Canada, \$10 per year.

To foreign students within the Postal Union, \$12 per year.

All fees must be paid in full before enrolment.

The fee covers the entire cost of the Course to the student, and includes a full year's subscription to the Pharmaceutical Era, tuition fee, printed questions, quiz master's fees, postage on recitations returned to students, etc., etc. Upon the successful completion of his studies the student is given a certificate, or for a small additional fee a handsome diploma, suitable for framing, attesting his progress and proficiency.

WHEN TO BEGIN.

* The first instalment of the lectures of the Course will be mailed to students Oct. 10. Every thirty days thereafter succeeding instalments will be mailed until the student has received the full course. Students can enrol at any time without falling behind, as new classes are organized every month. No examination is required to enter the classes.

ADDRESS, THE PHARMACEUTICAL ERA,

Telephone: 2 40 Franklin. 396 Broadway,
Cable Address: "Era"—New York. NEW YORK.

To Our Subscribers.

Most of the sheets for the first edition of the ERA BLUE BOOK are now in the bindery, and unless some unforeseen accident arises, we shall begin shipping the books about January 10th, and expect to have all copies shipped before the close of the month.

Each copy of the Book will weigh between four and five pounds, and the entire edition, 20,000 copies, will consume some 50,000 pounds, or 40 tons, of paper.

If we are not mistaken, no edition of any price list publication for the drug trade has ever been issued which approaches in amount of material consumed, this first edition of the Era Blue Book.

As to the value and general usefulness of the contents of the book, we prefer to let these speak for themselves. We have given our subscribers many reasons to expect something of exceptional value, and we promise to fulfill these expectations.

The WEEKLY CHANGE SHEETS we start with this issue. In two or three weeks these will be working smoothly, and will keep our readers fully advised of all changes and additions.

These Change Sheets and the Era Blue Book, together with the regular Market Reports in the Era, complete our service for keeping drug buyers posted on all prices and changes and new goods in Drugs and Chemicals, Pharmaceuticals and Proprietary and Patent Medicines.

NEW ADVERTISEMENTS IN THIS WEEK'S ERA.

THE SALE OF CARBOLIC ACID.

A movement essentially good in principle can very easily be killed by the character of those who are backing it. While it is very desirable that the sale of carbolic acid should be hedged about with all due precautions to prevent the ignorant and careless use of this article, especially that it be difficult to obtain by would-be suicides, yet any such regulations must be drawn up by those possessing common sense and a thorough acquaintance with the conditions governing the case. It is very easy to say this can be done, but it is an entirely different thing to provide how it shall be done. Edward Thimme, of malodorous fame through his connection with the bogus Retall Druggists' League for Shorter Hours, is again forcing himself into public notice by advocating that carbolic acid should be sold only upon physicians' prescriptions. This shows the total ignorance of the man, for if he had even a glimmering of intelligence regarding the nature and use of carbolic acid he would at once see how impossible it will be short of the millennium to enforce such a regulation as this. Carbolic acid has a widespread use in the family as a household disinfectant, for various domestic purposes, and it is ludicrous to think that all this use can be made dependent upon obtaining a physician's prescription. People will have carbolic acid, and they will not procure a prescription in order to get it. The most practical step to take would be to include carbolic acid among the poisons scheduled by law, and, more than this, enact that it shall be sold only by registered pharmacists. As it is now, carbolic acid can be and is sold by any and all classes of tradesmen, and the law requires nothing more than mere labeling of it. The drug trade especially would be glad to have it placed in the poison schedule where it belongs, and consistency and good reasoning demand also that its sales should be confined to those who by education and training are competent to handle it with intelligence and care, and whom the law should hold to strict accountability therefor. The medicinal use of carbolic acid is comparatively limited, and to require that a physician's prescription should be procured for each sale is the height of absurdity, and yet this latter is what Mr. Thimme in his ignorance thinks can be enacted by the State Legislature, and there have even been published statements recently that the State Medical Society is to advocate such a bill. We hardly believe this latter statement, for it is incomprehensible that medical men should be so ignorant of conditions and requirements. The thing to do is to put carbolic acid in the poison schedule; do this at once, limit its sales to qualified pharmacists, and then prosecute to the extreme any druggist who is found violating the law. Thimme's scheme means, if carried out, total abolition of the sale of carbolic acid for any purpose whatsoever. But it could not be carried out, it would in no degree prevent the illegitimate use of the article, but would merely impose unnecessary, unwarrantable hardship upon all those selling and using it for legitimate pur-

poses. A two-dollar prescription to procure five cents' worth of carbolic acid is ludicrous. If those who wish to improve and regulate the drug trade will only educate themselves a little better concerning the requirements of the people and the nature of the pharmaceutical profession, they will not be so apt to render themselves a laughing stock to every well-informed individual. Regulate the sale of carbolic acid in a proper way, but be sure that it is the proper way. This way is to class it as a poison, and treat it as one in its sale and registration.

MANUFACTURER'S RIGHT AND ABILITY TO CONTROL PRICES.

A case which will be watched with considerable interest, as it involves a principle of much importance to the drug trade, is before the courts of Massachusetts. This principle is the right of the manufacturer to control the price of his product when sold by the retail dealer. It is the essence of the whole cut-rate controversy. The manufacturer of phenyo-caffeine has brought suit against a druggist in Worcester, Mass., for selling this article for less than 25 cents, the advertised, established retail price. The manufacturer in marketing his goods makes a contract with every wholesale and retail dealer that the price of the article shall not be cut, and it is only upon signing such a contract that the dealer can obtain the goods. The druggist in question violated this agreement, and the manufacturer now is suing him for small damages merely to establish the legitimacy of such a contract. If successful in this case he will institute similar action against many other druggists elsewhere who have broken their agreement. We believe that there is no doubt that the manufacturer will win his case, for there is nothing in law and justice which can be held to justify the retailer in violating a contract of this character. To be sure, during the past fifteen or twenty years of cut-rate discussion, many manufacturers have claimed that they could not control the sale of their goods after once they left their hands. This contention has been just as generally and vigorously denied. At any rate, wherever the manufacturer has honestly and earnestly endeavored to control the retail price of his preparation he has been successful in doing so. The trouble has been that not many have made the trial. The phenyo-caffeine case will furnish pretty good ammunition for the N. A. R. D. in its warfare against the cut-rate abuse. The case will come to final trial some time next month.

PHYSICIANS ARE NOT PHARMACISTS.

The Virginia State Legislature a few days ago passed, in the face of much opposition, a bill allowing a physician in a town in that State to practice pharmacy without passing the examination required by law. The individual in question had not availed himself of the privilege of registering under the provisions of the pharmacy law when it went into effect years ago, and now he asked that the Board of Pharmacy be compelled to register him without examination, and, it seems, he succeeded. One of the Senators in opposing the bill declared that the State pharmacy law was not a harsh one, but that if the Legislature should continue to pass these relief bills he would offer a bill to repeal the pharmacy law. This, it seems to us, is the only logical and consistent position to maintain. If the pharmacy law exists, it should be respected, and not nullified by action of this character. Just why physicians who wish to conduct drug stores should be so afraid to undergo

the board of pharmacy examination is hard to explain, unless it be that they know in their hearts that they are not well qualified for the office. Just because a man is a doctor is not proof that he is a pharmacist and knows anything whatever about the preparation and compounding of medicines. On the contrary, as medical education in this country is to-day, the fact that a person is a doctor is pretty sure proof that he knows nothing at all of pharmacy, for this art and profession is not taught in medical schools. The average doctor has no knowledge of chemistry, of incompatibilities and all that goes to make a pharmaceutical education, and were it not for a well trained class of pharmacists his mistakes in these particulars would bring upon him public condemnation as one unfitted for his particular calling. The doctor depends upon the druggist to protect the patient against error in prescribing and in the compounding of remedies. The best educated physicians are quick to recognize their indebtedness to the pharmacist. It is only the uneducated, the ignorant, who strive to creep in the back door. If the doctor wishes to practice pharmacy, compel him to prove by examination, as a pharmacist must, that he knows enough to be a safe dispenser behind the prescription counter. Such legislation as that just provided in Virginia for the individual, indicated in this paragraph is a disgrace to any enlightened law-giving body.

THE JADE WINCES.

As most druggists know, the retail trade in Omaha has formed a very strong local organization, and of late has been very successful in its efforts to remove the cut-rate abuse in that city. The local druggists have received the support of the local wholesalers, the jobbers in other cities have respected their requests quite generally, and as a consequence the aggressive cutters have found it increasingly difficult to obtain supplies, not only of patent medicines, but of any character whatsoever, and now they are beginning to squeal. One of the cutting concerns is a retail drug firm which, before going into this illegitimate business, stood high in the trade. Without any regard, however, for the welfare of brother druggists this firm started cutting, and now because the other druggists have so well succeeded in making it difficult to obtain goods, it is loading up the local papers with all sorts of abuse of what it calls "the amalgamated association of retail medicine venders." This firm also attacks the N. A. R. D., which it holds responsible for much of its troubles, and by the ordinary specious sort of statement and fallacious argument is trying to work up sentiment against all the other druggists in the town by accusing them of being boycotters, members of a combine, etc., etc. It charges against them slander and gossip and lies of the most virulent type, and calls upon the public to "express its disapproval in a manner not to be misunderstood." Evidently in Omaha, at least, the retailers are winning out in good shape. It is unfortunate that the firm in question should not have enough brotherly spirit and the proper conception of the province of the pharmacist and the rights and privileges of the retail druggists to lead it to cast in its lot with the local association, and do all in its power to help along the good work of bringing back to the drug trade what legitimately belongs to it.

The Secretary of the Michigan State Board of Pharmacy says there are in that State seventy-six registered women pharmacists. Can any other State show more?

THE CHEMISTS' CLUB.

An Organization to Advance the Professional and Social Interests of the Chemists of the United States.

THE CLUB HOUSE AND LIBRARY.

About one year ago there was organized in New York City the "Chemists' Club." Its founding grew out of the determined feeling on the part of several of the most prominent professional chemists in New York that such a club was a most desirable, if not a necessary, thing. This feeling had been growing in intensity for several years. Local sections of the American Chemical Society and the Society of Chemical Industry had long existed and accomplished good work in their field. But while these bodies had provided meetings for the reading and discussion of papers upon scientific themes, they had not been exactly successful in bringing the chemists together socially. Indeed such work hardly came within their scope or purpose. So, many of the members of the local sections of both these societies came to consider that a club would be the best form of organization to further the interests of the chemists living and working in or near New York. The project was discussed frequently wherever two or three chemists came together, and about three years ago an attempt was made to incorporate a club, but for some reason the plan fell through.

Early in the autumn of 1898 the subject was again considered, and this time many of the most prominent chemists in the city took hold of the matter in earnest. The officers of the local section of the American Chemical Society took the first step, and finding that a suitable building in a convenient and accessible place might be secured if a club were organized without delay, they issued a call to the chemists to attend a "smoker" on the evening of September 28, 1898. A gratifyingly large number attended that meeting, and before it ended twenty or more guarantors had been found for the project. A representative committee was selected to proceed with the work of organization, and this committee worked so well that on December 2, 1898, a constitution was adopted and the Chemists' Club was fairly launched.

The committee which perfected the plans for the Chemists' Club comprised the following gentlemen: Charles F. Chandler, William McMurtrie, Thomas J. Parker, William H. Nichols, Edward R. Squibb, Edward R. Hewitt, I. W. Drummond, Charles A. Doremus, Charles F. McKenna and Marston T. Bogert.

Those chemists who volunteered to become responsible for any deficiency in income of the club during the first year, to an amount not to exceed \$100 each, were the following: C. F. McKenna, William McMurtrie, J. H. Walnwright, M. T. Bogert, A. A. Breneman, P. T. Austen, C. A. Doremus, R. W. Scheller, H. D. Walker, Durand Woodman, R. Mollneux, M. Loebe, H. Fries, C. F. Chandler, E. R. Squibb, E. R. Hewitt, E. G. Love, M. Toch, Dr. Volney, A. P. Hallock, Edgar Richards, E. E. Smith, Edwin F. Hicks, P. DeP. Ricketts, G. M. Williamson, C. E. Pellew, W. H. Nichols and T. J. Parker, twenty-eight in all.

The Chemists' Club has passed successfully its first year, and is to-day in prosperous condition. It now has 132 resident members. It is domiciled in the handsome club house at No. 108 West Fifty-fifth street, Manhattan Borough, which was formerly the home of the Mendelssohn Glee Club. This house is admirably adapted to the needs of the Chemists' Club. On the first floor the entrance hall leads directly to a large assembly hall, where prominent chemists are periodically invited to lecture upon their specialties, and where the meetings of the New York Section, American Chemical Society, are held. On this floor also is the general reading-room, containing the current periodicals devoted to chemistry. The main library and smaller reading-rooms are on the second floor. The furnishings of the house are above all neat and comfortable, making an ideal home for an organization of this kind.

According to the constitution of the Chemists' Club: "The objects of this club shall be the promotion of good fellowship among its members and the advancement of the science and application of chemistry." Any person who is interested in the science or practice of chemistry is eligible to membership, and there are two classes of members, resident and non-resident.

The officers who have conducted the affairs of the club so successfully the first year are the following: President, Dr. Charles F. Chandler, professor of chemistry in Columbia University; vice-presidents, Edward R. Squibb, Thomas J. Parker; secretary, Marston Taylor Bogert; treasurer, Charles F. McKenna. These men, with the exception of Dr. McKenna, will be continued in the same offices for the year 1900. The new treasurer is E. E. Smith. The trustees are: William McMurtrie, J. H. Walnwright, A. A. Breneman, Charles A. Doremus, E. G. Love and James Hartford. The standing committees for the year 1899-1900 are: House Committee, E. G. Love, Charles A. Doremus, E. E. Smith; Library Committee, A. A. Breneman, Elwyn Waller, J. F. Geisler; Membership Committee, Thomas J. Parker, Morris Loebe, G. N. Williamson, George C. Stone and Clifford Richardson.

The founders of the club believed the existence of such a club "would do much to bring together all the members of the profession, producing an esprit de corps which would be most beneficial, as well as assuring concerted action upon questions touching the interests of chemists at large, in place of sporadic efforts." Realized the hopes of the founders have been in large part realized, the first year of the club's life has been an experimental stage, and no effort has been made to put into execution many of the plans for the organization's greatest usefulness.

The idea of a great chemical library in connection with the Chemists' Club had been continuously a part of the plan from the conception of the project. It was felt that no feature of the club would tend to make it more useful and attractive to professional chemists; and even before the organization had been perfected steps had been taken to provide in connection with it a place of deposit for and a means of making accessible the library of the American Chemical Society, which had been for several years in storage and practically useless to chemists. The result has been that the library of that society is now well housed and within call of all members of the society in the vicinity of New York. The arranging of the library and the preparation of a catalogue are well under way, and the library of the club, a constantly increasing collection of new and important works on chemistry, is incorporated with the larger library and available to all readers. The co-operation of the society and the club in this way will result in the accumulation of a most valuable collection of chemical literature, including the chemical periodicals of the world.

It is proposed also to inaugurate a system by which competent chemists can be engaged to send to members of the society living at a distance abstracts, copies, or translations of chemical articles from the material to be found in this library or elsewhere in the city of New York. This plan, however, is not fully developed as yet, but it seems entirely feasible, and, with the co-operation of the chemists of the country, it will be carried out.

A directory of all chemists living in the United States or Canada is also being prepared, and will be most useful for reference.

What the club offers to non-resident members in the way of reading is the advantage of a large and rapidly growing chemical library, including files of all the leading chemical journals, and with the surroundings and facilities of a private study, when they may be temporarily in New York.

The officers of the club are so well pleased with its first year, and so confident that its future is an assured success, that they have now set about the carrying out of these plans for the club's usefulness. The president, Dr. Charles F. Chandler, has issued a circular in which he appeals to the chemists of the United States and Canada to rally to the support of the Chemists' Club and help to extend its benefits. The circular is in part as follows:

"It is believed that the Chemists' Club can be made of the greatest advantage for the entire chemical profession of the United States and Canada. It is proposed, if a sufficient number of members will join, to establish a complete chemical library, as far as practicable in duplicate, in order that there may always be at headquarters of the club copies of all chemical books that any chemist may wish to consult, and, at the same time, there may be duplicates which may be sent all over the country, for a limited period, to members who may wish to consult them. It is proposed to place in

MEETING ROOM.

be possible to do all that is proposed. Of course, if chemists hold off to see whether the other chemists are going to join, the enterprise will be a failure, but if every chemist comes up promptly and joins the club its success will be assured. The club has already passed the experimental stage, and the dues of the present members meet the actual running expenses; but before we can accomplish all that we intend it will be necessary to have a largely increased income and funds for the purchase of books and journals.

"This statement is issued as an appeal to the chemists of the country: First, to join the Chemists' Club at once; secondly, to contribute liberally, each according to his means, to the library fund; thirdly, to send to the club any chemical books or journals which he can spare from his own library; fourthly, to interest every chemist of his acquaintance in the enterprise and secure his co-operation."

As a result of this appeal chemists in all parts of the land are sending in their applications for membership, and the prospects are bright for the establishment of one of the finest and most complete libraries in the world. If the project succeeds the Chemists' Club of New York will have conferred upon the workers of this branch of science one of the greatest benefits its history knows.

THE CLUB HOUSE.

charge of this library one or more men, well educated chemists, familiar with chemical literature, able to read French and German, who will take charge of sending out books to members who write for them, and who will also be prepared to furnish information to members with regard to the best books on special subjects, together with references to journals and other matters which may be desirable. It is also proposed to provide copyists and typewriters for the purpose of making extracts, and translations of journals and articles where they may be called for; in fact, it is the intention to make this club as useful as possible for the chemical profession. All that is proposed is entirely feasible if the profession will respond liberally, and if every chemist in the country is willing to do his part. The dues have been made as small as possible—twenty-five dollars for resident members living within a radius of twenty-five miles of the City Hall, and five dollars a year for non-resident members living outside this distance. It is believed that there are five thousand chemists in the United States and Canada. If half of them would join the Chemists' Club it would

LIBRARY AND READING ROOM.

Concluded from page 866, Dec. 28.

SYNTHETIC CHEMISTRY, ITS CONTRIBUTIONS TO MODERN THERAPEUTICS.

By J. W. WAINWRIGHT, M. D., New York City.

Synthetic chemistry is said to have begun with the accidental discovery, made by Wöhler in 1828, that a substance identical with urea can be produced by the reaction between potassium cyanate and ammonium sulphate; but Professor Meldola in an address delivered before the British Association in 1895, declared that Henry Hennell had made, in 1826, the synthesis of alcohol from coal gas, thus antedating Wöhler some two years. In either even Wöhler's experiment was the first artificial preparation of an inorganic compound. Soon afterward the announcement was made that synthesis of the hydrocarbons had been successfully accomplished by Frankland in England. Then came Perkins, another English chemist, who in 1856, artificially prepared mauvein, the first aniline dye. Following this, carbolic acid or phenol was discovered in coal tar, and this discovery led to investigations, the result of which are familiar to all, and to which I have not time even to allude. Next we come to modern discoveries of compounds of which acetanilid is a type, and the therapeutic fact that they have antipyretic and analgesic properties. This gave a mighty impulse to the study of the hydrocarbons. The discovery of Kairin demonstrated the probabilities of building up compounds of identical structure and with medicinal actions similar to the natural products, and thus opening a new field for therapeutics. Encouraged by this, chemists everywhere set resolutely to work and many valuable synthetic products have resulted from their industry and skill.

The clinician found that these medicinal products not only imitated Nature's remedies, but that therapeutically they were in some instances decidedly superior. New conditions arose and new remedies were at hand to combat them. Cocain, with its toxic and appetite-producing properties, was supplanted by local anesthetics free from these objections. Atropin for ophthalmic use was improved upon, in homatropin. Opium, Nature's hypnotic and anodyne, has also been vastly improved on by a host of substitutes, all which are the products of synthesis.

There can be no doubt that our knowledge of the physical properties of the chemical composition and structure of substances will eventually enable us to predict to a great extent the physiologic action of the value of a remedy in treatment, for we know that the action of certain drugs may be so modified by the introduction of a new molecule as not only to lose their original properties, but actually to become pharmacologically active in the reverse direction—for instance, morphin and apomorphin. On this basis there is much promise of progress being made in the treatment of disease. The therapy of drugs will, ere long, resolve itself into a question of chemical structure. The practitioner endowed with the knowledge of what the specific remedial requirements of his patient are, will be enabled to minister to those requirements by adding or omitting, so to speak, groups or radicals in the compound, which are, or are not, requisite in the case before him. It is true that the specific therapeutic action of a drug depends not so much on its composition as on its constitution, therefore, the more we find out concerning the chemical structure of remedies, the more satisfactory will be their administration.

The symptoms of the various stages of disease are but manifestations of the physiologic action of specific chemical substances, or toxins, produced by synthesis, and due to the action of the micro-organisms. This is illustrated in the symptoms caused by a pathogenic bacillus, where general systemic disturbances are produced when the germs are to be found only at the initial seat of disease; diphtheria being an example. Diphtheria antitoxin serum unquestionably owes its action to certain chemical substances which it contains, and which in the circulation probably enter into direct union with the toxins and neutralize the poisonous effects. All degenerate and pathogenic bacteria produce by synthesis chemical substances which are toxic to a greater or less degree, and these chemical products are chiefly responsible for the characteristic symptoms of disease. Certain chemical

substances found in cadavers or in decomposed albuminous compounds resembling the vegetable poisons, such as morphin, conin, etc., were first discovered by Selmi about 1870, and were by him given the general name of "ptomaines." Since then this title has been rather loosely applied also to toxins or toxalbumins and other poisonous agents produced in the human body by bacteria.

It would be a task indeed to even mention the products of synthetic chemistry which have appeared within in the last, even twenty-five years. Take only a general classification, for instance:

The antipyretics, antipyrin, antifebrin, phenacetin; the anodynes and hypnotics, chloralamid and trional; the uric acid solvents, lysidin, uricedin, uretropin; the local anesthetics, ethyl chlorid, which produces anaesthesia by rapid evaporation, and the non-toxic orthoform, nirvanin and holocain—instead of the dangerous cocain; the antiseptics, too numerous to mention. Then the nutrient and reconstituent tonic albuminoids, nutrose and somatose; last, but by no means least, the animal remedial preparations, the serums and organic extracts.

With these products, chemicals of definite therapeutic character, products whose identity is thoroughly established and whose use gives uniform results, the practitioner is able to anticipate therapeutic effects with a degree of certainty never dreamed of with the natural products. You will remember with what misgivings you formerly watched for the physiologic actions at times of remedies like digitalis, hyoseyamus, nux vomica, cannabis indica, opium and numerous, in fact, nearly all, the items in the Pharmacopoeia of, say twenty-five years ago; how much depended on the prompt effect you were able to secure with these remedies; how you needed their prompt action to carry your patient over a crisis. With all the advance made in the manufacture of these galenic medicaments, with the better knowledge of their chemistry, of the art of preparing them so that the required amount of the active principle be contained in the finished preparation, it will hardly be claimed that uniform results are to be looked for. None of them are chemically pure; the variety of elementary substances present are often more or less antagonistic, which, taken together with the resins and the inert components, make their action uncertain.

In the synthetic product we have a remedy of a definite chemical and therapeutic action without physiologic or chemical incompatibles; one which may be depended on to produce a certain action. It is a remedy of necessity chemically pure. Does a high temperature which can not be safely endured rapidly consume the tissues of your patient? You have certain and safe antipyretics. Does pain rack his joints or destroy his peace? You have your anesthetics and analgesics. Is there necrosis of tissue with accompanying formation of pus and the constant danger of septic poison? You will resort to the antiseptics and soon have the healthy repair. In fact, there is scarcely a condition which has not its appropriate remedy at hand.

You ask who uses these preparations. Anticipating such a thought, if not question, I requested six of the most prominent prescription pharmacists in New York City, as well as the apothecaries in three representative hospitals, to inform me what proportion of their prescriptions was composed of synthetics as against natural products. The figures will doubtless surprise you. In every instance there was a decided percentage in favor of the synthetic products, the lowest in the pharmacies being 75 per cent. of the synthetics to 25 per cent. of the natural products, and the highest being 88 per cent. of the former to 12 per cent. of the latter. In the hospitals, the percentage was not so large in favor of the synthetics, being on an average of 60 per cent. of the synthetics to 40 per cent. of the natural products. It is a question, however, if the price does not account for this difference between the pharmacies and the hospitals, as many of the prescriptions received at the pharmacies were from the same physicians who were on the staff at the hospitals. This is true in the great intellectual centre of New York, and I doubt not inquiry would disclose a decided percentage in favor of synthetic products in other centres if I had had time to investigate.

Now what constitutes a test of worth; who is to decide if an article has merit? Is it not the physician, the medical scientist who is best equipped with the means and skill which will aid him to determine? He who properly studies the physiologic and chemical action of such remedies in the laboratory first, then upon animal life, is best able to assure his conferees of the article's worth and its clinical applications. It is said that there are too many such synthetic products; that one could not make use of them all; that new ones are presented before the real worth of a preceding one has been established; and that it is always the last one which is supposed to possess the greatest merit. "Prove all things, hold fast that which is good" until you find a better. To have established the real worth of an anesthetic or an analgesic does not imply that the end has been reached, rather it proves—if it proves anything at all—that inasmuch as this is an advance, a still further advance is desirable and may possibly be obtained by intelligent investigation, and here again we can not stand still. Not long since I was told by a physician that life was too short to indulge in trial of every new remedy brought to his attention. Yes, but we can not be satisfied with continuing the methods considered good twenty-five years ago. If all men in all branches of thought were content to hold fast to that which their teachers said was good, we would—well, I leave the result to your imagination.

I lately re-read one of the text books which I used while a student of medicine some twenty-five years ago. It was a work on the theory and practice of medicine, written by a man who at that time was considered the ablest teacher and practitioner of internal medicine on the American continent, and I distinctly remember with what reverence we listened to this man's teachings, and with what pride we read his book. I then proceeded to contrast this book with one world-famed, treating of the same diseases, and published in 1800—"only twenty-five years," you will say, "not long enough to have made material changes in the treatment of diseases." Well, I can answer this by advising my critic to read two such works. This refers only to internal treatment. What can indeed be said concerning surgical treatment? A work on surgery by another of my early friends, which represented the most advanced thought and application of surgical means twenty-five years ago, does not even mention scores of diseases, much less the means of treating them—knowledge, which is now considered prerequisite to graduation at any respectable medical school.

For the advancement of knowledge and science, constant study is required to discover Nature's laws, and to learn how to apply these same laws to practical purposes. It is he who devotes himself to original investigation, who invents new methods for the advancement of our knowledge, who discovers new laws and the methods of applying them, who multiplies our means of culture as well as supplies us with the weapons with which to combat disease, who most deserves our encouragement and reward. While occasionally, there are those provided with wealth and a desire to achieve fame as well as to benefit humanity, who employ their time and means for the advancement of knowledge and science without the hope of gain other than the credit which will follow, yet fortunately for the advancement of civilization, the progress of the race has not been dependent on these individuals; on the contrary, advance in all directions has been due to the efforts of those who live by their work, or for the hope of financial reward. The advancement of science and art must depend on these people.

To conduct the business of manufacturing chemist, and to foster the making of original research, labor and capital must be invested, for which the investor must receive adequate return; and in order that advance shall not be retarded, that protection shall be granted as an inducement to investigators and inventors, it is the policy of all civilized governments to offer the reward of a patent, limited as to duration, for the invention. Surely such a beneficent plan deserves the encouragement of all men, and especially of the medical profession. Is it wise, therefore, to decline to investigate or publish the facts concerning the newer remedies as they appear, because they are patented? If a remedy is unworthy of a place in our armamentarium, let the world know it, but be

equally just and make known its benefits for the good of humanity. If patented, it is not secret, and it is only the question of a few years when it will become public property, as in the case of antipyrin.

The medical profession can no more stand still than can any other branch of learning; in fact, it is of the learned professions the most advanced; the most closely in touch with all that concerns the uplifting of man, physically, morally and intellectually. Among the things contributing most to the three higher attributes of man I would place health first, and by health, or wholeness, which it implies, I encompass its whole range of meaning. With good physical health, I associate truth and intellect; for having health, physical and moral, we will necessarily have intellect. Therefore I repeat that it is the physician who leads in the uplifting of man. It follows in logical sequence that he must adopt means which will most surely secure desirable ends. To close his eyes and reject the modern weapons which science and synthetic chemistry place ready at hand with which to combat disease, is to retrograde. It is not possible for him to stand still, he must advance with the great minds and thought, or he must fall behind and lose the vantage ground already gained, from which he should strive to make further advance. Following the example of a surveyor, as aptly observed by Oliver Wendell Holmes, he should place himself on the limits of the known and triangulate out into the great unknown fields of science which still remain to be explored all around him.

PHARMACIST AND PHYSICIAN.*

By R. F. RUPPILER, Louisville, Ky.

The universe moves in cycles. Night has followed day since time out of mind. Seasons follow seasons with the regularity of clockwork. Man, coming from eternity, passes from infancy to his prime, from his prime to his second infancy, and goes into eternity. Diseases whose cycles extend over days, and diseases whose cycles it takes centuries to complete (syphilis), increase in virulence and intensity for a while, exhaust the soil in which they flourish, and become less virulent and intense. The soil in which diseases flourish, and that flesh is heir to, becomes uninculcable, and, lying fallow for a while, resumes its fertility.

Pharmacy and medicine, springing from the same root stock, have moved in their respective cycles, leaving noble evidences along the separate courses of their progress, only to meet again in the twentieth century physician-pharmacist. A question of the pharmacist and the physician of to-day is: "How close are we to becoming merged into one?" The time must be close at hand when the pharmacist tells the physician, "Keep off my ground," and the physician says to the pharmacist, "Don't trespass on my premises." The pharmacist and the physician have so closely one interest, when the elevation of their profession is concerned, that the cycles of their progress throughout the centuries will hold them together.

The Future of the Pharmacist.

We might as well be driving a stake into the ground and holding it try to stop the earth from going round, as by raising our voices against modern innovations attempt to check the immutable law of progress. We have but to observe the trend of pharmacy and medicine to foresee the physician-pharmacist of the future. The pharmacist will become a physician-pharmacist by the law of self-preservation, to annihilate the empirical proprietary medicines of secret formulae that physicians prescribe, and which almost take the pharmacist's occupation from him. The physician-pharmacist, by using his prerogative and influence as a physician, in superseding this class of preparations by the preparations of the National Formulary and others of authoritative source, will accomplish the two-fold object of elevating medicine and pharmacy—annihilating quackery in the former and perpetuating the latter along legitimate lines. Springing from the physician-pharmacist, the pharmacist and the physician will likely again separately resume the practice of their professions, with the proprietary man and his secret formulae weeded out, until heaven knows when or how or by what other unknown parasite they will be forced to unite again for reasons of self-preservation.

*Reprinted from the Western Druggist.

The days of the pharmacist whose range covered the entire science and art of pharmacy are nearly over. The pharmacist, in keeping himself posted on the rapidly increasing number of medicaments, will find little time for manufacturing pharmaceutical products made by tedious processes. These will be relegated to the manufacturing pharmacist. Let the pharmacist take one last lingering look at those good old days that he reads about, and that he may perhaps wish back again, when he had a laboratory wherein he compounded the whole catalogue of pharmaceutical products, turn his face into the future, and say with Holmes:

Build these more stately mansions, O my soul!

As the swift seasons roll!

Leave thy low-vaulted past!

Let each new temple, nobler than the last,

Shut thee from heaven with a dome more vast,

Till thou at length art free,

Leaving thine outgrown shell by life's unresting sea!

While looking into the future, it may be well, however, not to overlook the present. Political, social and commercial metamorphoses are not brought about in a day, or even a lifetime. The most urgent and most necessary concern that man has, who is affected by them, is daily bread and butter. No man would be satisfied with a meal that is guaranteed him fifty years hence. The physician-pharmacist by no means has reached his zenith, nor will he ever be the exclusive apostle of medicine and pharmacy. The present standpoint of the pharmacist is the one that prompts the penning of this article, and it is from this standpoint that we shall consider his right course of conduct. Experience and observation are, perhaps, our best teachers, and it is from them that I cull a few tenets.

The Pharmacist's Attitude Toward Physicians.

There are but three courses open to the pharmacist: To succeed as a merchant; to succeed as a pharmacist, or to study medicine.

Omitting a discussion on his success as a merchant, as not coming within the scope of this article, the main point, his success as a pharmacist, may be considered. As a pharmacist he cannot succeed unless in one way or another he gets the patronage, in all that the word implies, of the physician. To gain the physician's support and co-operation, then, is the main problem; and next to that is the problem of gaining the confidence of the public. If he succeeds in getting the former, he will have little difficulty in gaining the latter.

The vast majority of physicians are of the opinion that it is the pharmacist's province solely to compound medicines. It is to the pharmacist's interest to convince the physician that he is still in the business, by competing with every empirical proprietary medicine, as best he can, with legitimate pharmaceutical products from his own laboratory. A classification of proprietary medicines may be necessary to clear up some doubt and confusion as to what class the pharmacist should particularly oppose, as this is an important factor in considering the pharmacist's relationship to the physician.

Patented synthetic chemicals occupy a unique position among proprietary medicines. While they should not be officially recognized, they find justification in the fact that to evolve them requires a much higher order of intellect and much greater research than do proprietary mixtures, and that their originators seek reward by patents, just as authors do by copyright protection. No objection can in reason be urged against that class of proprietary medicines whose formulas are known in their entirety, that are put up by manufacturing pharmacists. These is an open and legitimate competition. The affront that is offered, not only to the pharmacist, but to the physician as well, is by that class of proprietary mixtures that appeal to the physician, where no formula or an incomplete formula is given, and for which superiority is claimed by special but unmentioned manipulation. This latter class of preparations are a slap in the face at the physician's intelligence. "Patents" have no place whatever in the physician's consideration, and only a mercantile interest for the pharmacist.

It is undoubtedly true that the pharmacist, and no one knows it better than himself, is severely threatened as a pharmacist, by that class of exorbitant-priced proprietary preparations particularly for which there is no scientific or ethical justification, which fact the physician has all too frequently overlooked. I do not believe, in the

face of all the real progress that has been made in medicine and pharmacy, that this class of preparations will be permitted to live, in spite of their present popularity. The physician-pharmacist, largely a consequence of the same, will not only eventually drive them from the field, but, by his superior equipment and more ready accessibility to the public, will also drive out the physician who prescribes them. He will demonstrate by illustrative example that "whatever is, is right." It is the present pharmacist's attitude towards the physician, however, that we wish to consider.

Let the pharmacist periodically send his head prescription clerk to all physicians in his district with samples and formulas of the preparations to which he desires to call the physician's attention. Let him dilate on the merits of his own preparations of known formulas in opposition to those of large manufacturers of secret formulae. He has the physicians constantly at hand, whom he can reach without cost, while larger manufacturers incur great expense in canvassing the same physicians. If it pays them, why should it not pay the pharmacist, especially if he can gain the physician's personal confidence? Let the physician know that any formulae can be prepared for him that he would desire. The pharmacist's stock of proprietary medicines will suggest what preparations should and can be replaced advantageously. The National Formulary and other sources of information will supply him with formulas.

It is by a personal appeal through circular letters, interviews, samples, presents of pharmaceutical literature and suitable books like the National Formulary that the pharmacist can come in touch with physicians and lay his sentiments before them. He must not expect the doctors to find out his grievances by bemoaning them to others. The following conclusions are drawn from individual experience of others vividly presented at close range. I have embodied them in a set of principles to apply to the doctor, which it would be well, it seems to me, for the pharmacist to hang in his intellectual cabinet and ponder upon when his course towards the physician seems unclear to him and his work is shrouded in a haze of resultlessness. They would serve to form the nucleus of his professional platform, to which his own experience could add considerably, and as such have value when laid before physicians.

A Professional Platform.

First.—We believe that the future of both medicine and pharmacy depends on the legitimate practice of both professions, inasmuch as the physician cannot assume the prerogatives of the pharmacist, and thus best serve the interests of medicine and pharmacy.

Second.—Our position regarding the vexatious problems that tend to bring the professions to a clash, is that in the conduct of our business we adhere strictly to those ethical rules that make us the physician's coadjutor and that make the physician our friend.

Third.—We discourage the sale of "patent" medicines at all times, although we cannot suppress the sale of them; and patients who come to us for medical advice are referred to their physicians.

Fourth.—The sale of such simple remedies as cough syrup, liver pills, headache powders, sarsaparilla blood-purifiers, etc., when asked for, we do not consider as conflicting with the physician's practice, and the necessity of custom forces us to supply them. They are outside of all professional pretensions and considerations. They are merely mercantile commodities, the use of which we discourage when we deem it to the interest of those who insist on having them.

Fifth.—As the public has been taught self-medication, largely through the partial approval by physicians of that class of high-priced proprietary medicines with easily remembered names and vagueness regarding composition, we have undertaken to supplant these preparations as much as possible by calling the physician's attention to the more authoritative preparations, with definitely known formulas, of the National Formulary and other authoritative sources; with a view also, inasmuch as the titles are not as easily comprehended by the public, to repeat the practice of medicine, with the physician's support, at all times in its legitimate channels.

Sixth.—We feel a personal responsibility in our preparations, by a knowledge of their exact constituents and

of the purity of the drugs that enter into them, and we deem it especially essential to the legitimate practice of medicine that the physician be similarly equipped regarding an exact knowledge of what he is prescribing.

Seventh.—We take pleasure in offering the physician samples and formulae of the product of our laboratory.

Eighth.—Specification of proprietary medicines will in all cases be respected.

Ninth.—We carry a full line of physician's needs—surgical dressings, cottons, lints, gauzes, plasters, etc., tablet triturates, hypodermic tablets, needles and syringes, antitoxins and vaccines, rare alkaloids and chemicals.

Tenth.—Only graduates in pharmacy and registered pharmacists are permitted to conduct manipulations in our laboratory and dispensary.

A set of principles, merely as the expression of an opinion, is of hardly any use whatever, unless the principles are lived up to and acted upon. It may be no more than just to say that the foregoing are not a theoretical compilation, but the result of watching successful methods of gaining the physician's support. A simple rule fearlessly and aggressively put to practice is more productive of results than a complex theoretical proposition that finds its origin and its end in the mind only.

The Physician-Pharmacist.

If the pharmacist cannot gain the co-operation of the physician, there is still one remaining course open to him, and that is to study medicine himself. In the way of culture the pharmacist and the physician are very nearly peers. The Ph. G., M. D., is undoubtedly better fitted than the M. D. to practice medicine. It is a noteworthy fact in late years that no better acknowledgment of the opinions of many pharmacists, as to the best means of solving the problem of gaining the physician's co-operation could be made than the fact that so many have taken up the study of medicine. Failure to gain the physician's support has led the minds of thinking pharmacists in widely different sections of the country to converge to this solution. The practice of medicine is protected against the danger of degenerating into the practice of proprietary medicines, into which its thoughtless votaries would gladly plunge it, by the encroachment of thinking pharmacists into its province to crowd them out. The physician-pharmacist is undoubtedly better equipped than the proprietary physician, and his chances are good for accomplishing the two-fold object of a higher status for medicine and a higher status for pharmacy, where either status seems to be most threatened. Water seeks its level. Men comport themselves to conform to their surroundings.

Pharmacists and physicians who are closely in touch with one another, and whose aims are high, do not take up each other's callings. Pharmacists whose aims are practical frequently take up the study of medicine. When the mediocrity of a physician compels him to rely on the brains of proprietary medicine manufacturers, to the pharmacist's detriment, I believe that the aggressive physician-pharmacist can absorb nearly all of his practice. I have seen the experiment tried, greatly to the detriment of physicians who ignored the pharmacist's ability to remedy the situation.

A public supposition is that the doctor not only knows how to use medicines, but that he also has a scientific knowledge of the medicines he uses. The doctor who has this knowledge is invariably searched for when important medical aid is needed, while the one who relies largely on the self-interested testimonials of manufacturers of empirical preparations to meet pathological conditions is shoved aside to wonder why. The scientific physician inspires public respect and confidence, while the doctor who, through advertisements, relies on others than his natural coadjutors is made the tool by which the public is initiated into the ways of self-medication. From the pharmacist's standpoint it is hardly reasonable to ask a person to show his professional credentials to prove that he can prescribe a secret proprietary preparation, and yet physicians are daily instructing thousands in the use of these medicines, while often accusing the pharmacist of counter-prescribing to account for the falling-off in their practices. This is not saying that the proprietary medicines cure his patients, but it is saying that, while the credulous may avail themselves of the doctor's wisdom, not only for present but also for future

use, the more intelligent can see through the decidedly thin and gauzy veil of a little bluster that is to keep the real situation from them, that this method of taking medicine has no more to do with the physician's knowledge of drugs and the rational treatment of disease than the swallowing of a half-dozen bottles of bona-fide "patent" medicines on the strength of their own testimonials would have. It is the rankest kind of empiricism that is made up of equal parts of medical advertisements, the physician's neglect of duty and the patient's gullibility.

If the pharmacist is so unfortunately placed that his prescription files call mostly for proprietary *mirkurs*, and he cannot leave or improve his situation, let him study medicine. He will have the advantage of a better equipment, a more ready accessibility to the public and its greater confidence, greater profits, a knowledge of what he is prescribing, and an influence affecting "patent" medicines that he can get in no other way. He will not incur the animosity of first-class practitioners by combining the practices of medicine and pharmacy, because they are too far away out of reach to have reason for such petty animosities likely to be incurred. These suggestions may not be practicable for all druggists, but the condition is confronting thousands of pharmacists who have not reached their prime, and it is as practicable to meet it as any other condition that confronts the pharmacist, if the necessities of the surroundings force him to it. Moreover, if he so elects, he can use the drug store as a stepping stone to something higher, and thus, having passed from the bottom up through all the stages of a practical pharmaceutical and medical schooling, not retard the real progress of pharmacy by the makeshifts of perhaps a moneyless early and premature medical career, during which the importance and value of pharmacy is ill understood.

I do not wish to be understood that only men who have passed through a pharmaceutical career make good doctors. On the contrary, it is only by concentration of energy and mind that a high order of merit can be attained. But, as a general proposition, it may be truly said that the drug store is the most likely source from which to obtain good students for our medical colleges; that the condition of medicine and pharmacy to-day makes it favorable for pharmacists to take up the study of medicine; and that many differences between pharmacist and physician would be obviated by an influx into medicine from this source.

I have seen where, owing to the hearty co-operation of physicians, it would have been unfeasible and ruinous to have combined the practices of medicine and pharmacy, and this condition was obtained largely through the system of maintaining the relationship with the physician that I have outlined. On the other hand, I have also seen by the example of colleagues that drug stores on the verge of bankruptcy, through want of physicians' support, were not only placed on a paying basis, but a considerable fee for medical services was put into the pockets of their physician proprietors besides.

DEWEY'S SALVE.

One of the big firms in the shopping district decorated the front of its store with an immense portrait of Dewey, and beneath it placed the word "salve" in large letters. A stranger in town, much pleased at the decoration, openly expressed his admiration, but being a trifle short on Latin, and not understanding that "salve" meant hail instead of ointment, remarked indignantly: "Don't you think it's a pity that people will spoil a fine picture of Dewey like that one by trying to advertise with it a poultice for wounds and bruises?"—Chicago Daily News.

A WINDOW LIGHTHOUSE.

To illustrate the catch-line "Life Savers" a druggist constructed in his window a lighthouse. It is built of small boxes of pills, represented as one of his own preparations. At the top is a piece of cylindrical glass chimney, surrounded by a paper railing and covered with a low, broad cone. Within the chimney, and projecting from below, is a miniature electric light. A water effect around the base of the lighthouse is made by dark green open-mesh gauze over mirror glass. With a black background the display shows up in good style and attracts much attention.

EXAMINATION QUESTIONS
NEW YORK CITY BOARD OF PHARMACY.
 PHARMACY

- 1.—How many grammes will 24 fluid ounces of glycerin weigh?
- 2.—How does the Pharmacopœia specify that decoctions shall be prepared, if the strength is not directed by the Physician?
- 3.—Name the kinds of prescription incompatibilities, and give an example of an unintentional incompatibility, which can be avoided.
- 4.—What is the color of Liquor Ferri et Ammonii Acetatis? What is the nature of the decomposition which occurs in it upon standing?
- 5.—State what emollient you would employ in making a pill mass containing bismuth subnitrate and sodium bicarbonate, and why.
- 6.—Name three organic and three inorganic bodies, which, when triturated with potassium chlorate, are liable to cause dangerous explosions.
- 7.—How would you distinguish Liquor Ferri Tersulphatis from Liquor Ferri Subsulphatis?
- 8.—Name two methods by means of which volatile oils are removed from plant parts, giving an official example under each method.
- 9.—Name the official excised salts, and state how excision differs from desiccation.
- 10.—How is Strupum prepared? What object is sought to be attained by the addition of ammonia water?
- 11.—Unguentum Hydrargyri Nitratiss: State how it is prepared and give its composition.
- 12.—Describe the process of reprecipitation and state in the case of what class of official preparations the Pharmacopœia authorizes its use.
- 13.—What is the object of evaporating a liquid in a vacuum? Illustrate by example.
- 14.—Why is glycerin sometimes added to solid extracts? State what per cent. may be added in accordance with the Pharmacopœia.
- 15.—How many grammes of total alkaloids should 1,000 cubic centimeters of fluid extract of nuxvomica yield upon assay?

MATERIA MEDICA.

- 1.—Which is the largest class of drugs of the United States Pharmacopœia?
- 2.—Name one important alkaloid in each of the following: (a) Belladonna; (b) Jaborandi; (c) Hemlock; (d) Henbane.
- 3.—Name two official drugs that belong to the Natural Order Conifera.
- 4.—Is there any material difference between Cannabis Indica and Cannabis Sativa? If so state fully.
- 5.—From what are the following obtained: (a) Iodine; (b) Bromine; (c) Salol; (d) Naphthalin?
- 6.—State constituents, percentage of total alkaloids and percentage of quinine in Cinchona.
- 7.—Is the Oil of sweet almonds a volatile or a fixed oil?
- 8.—In what respects do essential oils differ from fatty oils?
- 9.—What is the official name of Isinglass? From what is it obtained?
- 10.—Name the ingredients in the following preparations: (a) Basham's Mixture; (b) Brown Mixture; (c) Griffith's Mixture.
- 11.—Give the botanical name and habitat of the following: (a) Ipecac; (b) Nux Vomica; (c) Digitalis; (d) Jaborandi.
- 12.—What is: (a) an Alkaloid; (b) a Glucoside?
- 13.—From what part of the plant are the following drugs obtained: (a) Asafetida; (b) Lupulin; (c) Kino; (d) Aloes?
- 14.—Oleum Theobromæ.—Give common name, from what obtained, and its principal use in pharmacy.
- 15.—Give the official names of the following: Glauber's Salt, Wormwood, Saffron, Corn Silk, Yellow Dock, Witch Hazel.

TOXICOLOGY AND POSOLOGY.

- 1.—In poisoning by what class of drugs is Tannin a suitable antidote, and how should it be used?
- 2.—When should the use of the stomach pump be avoided, and in what class of cases may it be employed to advantage?
- 3.—When should the use of oil, as an antidote, be avoided, and what are indications for its use?
- 4.—How would you perform artificial respiration?
- 5.—Why is coffee administered in some kinds of poisoning?
- 6.—What emergency treatment would you employ for poisoning by Lunar Caustic? By Caustic Potash? Why?
- 7.—What emergency treatment should be employed for poisoning by Potassium Cyanide? By Salts of Lemon?
- 8.—What kind of poisoning may result from eating bitter almonds? Give emergency treatment.
- 9.—What symptoms would lead you to suspect Morphine poisoning?
- 10.—What is the largest dose of Santonin that ordinarily may safely be given to a child 2 years old? Give emergency treatment for overdose.
- 11.—What is the dose of Acetanilid, Ammonium Bromide, Cerium Oxalate, Guaiacol, Resin of Podophyllum?
- 12.—What is the dose of Salicin, Santonin, Sparteine Sulphate, Sulphonal, Thymol?
- 13.—What is the dose of Croton Oil, Potassium Chlorate, Potassium Iodide, Oil of Peppermint, Solution of Ammonium Acetate?

- 14.—What is the dose of Extract of Hyoscyamus, Extract of Nux Vomica, Infusion of Digitalis, Spirit of Chloroform, Compound Spirit of Ether?
- 15.—What is the dose of Tincture of Belladonna Leaves, Tincture of Ipecac and Opium, Tincture of Indian Cannabis, Wine of Colchicum Root, Wine of Ipecac?

CHEMISTRY.

- 1.—In what states does matter exist? Give examples.
- 2.—State how water may be dissociated and name the products formed.
- 3.—Theoretically, how many grammes of Sulphur, Oxygen and Hydrogen can be obtained from 100 grammes of H₂SO₄?
- 4.—Name the elements which constitute the Nitrogen Group, and state what compounds nearly all of them form with Hydrogen.
- 5.—Define the term, Isomorphism, giving an example.
- 6.—Give the chemical name for each of the following: (a) L-charge; (b) Sal-Ammoniac; (c) Potash Alum; (d) White Precipitate.
- 7.—What is a dec-normal Volumetric Solution? How is it prepared, and for what purpose is it employed?
- 8.—What is the difference between a Gravimetric and a Volumetric Process of Assay?
- 9.—Give a characteristic test for each of the following: (a) Acetates; (b) Chlorides; (c) Nitrates; (d) Tartrates.
- 10.—Write the chemical formula for the two Oxides of Arsenic.
- 11.—Describe the element Hydrogen, and show by an equation how it can be obtained.
- 12.—What compound is formed when Anilin and Glacial Acetic Acid react with one another?
- 13.—State how primary Sodium Sulphate is prepared, giving its formula.
- 14.—Write the chemical formula for each of the following: (a) Chloric Acid; (b) Lead Acetate; (c) Potassium Sulphocyanate; (d) Ammonium Bicarbonate.
- 15.—Complete the following equations:

(a) $Fe_2(SO_4)_3 + 3MgO + 3H_2O =$	(c) $2CCl_3COH + Ca(OH)_2 =$
(b) $K_2SO_4 + H_2O + HCl =$	(d) $HgCl_2 + (NH_4)_2CO_3 +$

PHARMACY.

NUTRITIVE PREPARATION from yeast and fat is prepared by Kleinschmidt by fusing a mixture of yeast, fat and salt and subjecting the liquid to 150° C. (Apoth. Ztg.)

CALCIUM CARBIDE AS ESCHAROTIC is employed by Dr. v. Herff after cancer operations by application to the wounds. The action is due to calcium hydrate in the nascent state. (Pharm. Post.)

FERRUM OXYDATUM LACTOSACCHARATUM is a preparation placed on the market by Huebler, of Dresden. It is readily soluble in water, tasteless, and does not injure the teeth. (Pharm. Post.)

VINUM CREOSOTI COMPOSITUM—Fraenkel recommends the following formula: Creosote 13 parts, tincture of gentian 30 parts, alcohol 250 parts, sherry wine sufficient to make 1,000 parts. The dose is 2 or 3 tablespoonfuls for incipient consumption. (Apoth. Ztg.)

CHLORAL AS ANTIDOTE FOR COCAINE.—Gloffried proposes chloral hydrate in doses of 3 to 4 gm. (45 to 60 grains) as antidote in cocaine poisoning, on the strength of experimental and clinical experience. Paraldehyde and sulphonal have a similar effect. Cocaine cannot be used as antidote to chloral. (Apoth. Ztg.)

CHLOROFORM IN TUBES has been placed on the market for the convenience of the physician, in order always to have at hand a definite quantity of chloroform in convenient form. The tubes consist of gelatin, contain 30 to 50 Cc. They are colored brown, and are non-breakable. When the chloroform is wanted the wall of the tube is pierced with a heated needle. (Pharm. Post.)

TROPON-SANO.—Pure tropon has several disadvantages that makes it inapplicable in various cases, such as its insolubility and lack of carbohydrates. The deficiencies are overcome, according to Aufrecht and Sternberg, by the admixture of "sano," a wheat flour in which the starch is converted in greater part into dextrin and glucose. The mixture contains 25 per cent. of sano, and is called "tropon-sano." A similar preparation intended for children contains 18 per cent. They are recommended as nutritive agents for invalids, are well borne and readily assimilated. (Drog. Ztg.)

CARAPA FAT is a vegetable fat, heretofore but little known, found in large quantities in the French Soudan. A sample examined by Millian showed the following characteristics: A firm, white, translucent mass, melting at 30.7° C. After fusion it is a colorless, nearly odorless and tasteless oil. The sp. gravity is 0.912 at 15° C. The solid fat acids are composed of $\frac{4}{5}$ stearic and $\frac{1}{5}$ palmitic acid. The liquid portion consists almost entirely of oleic acid. The high content of stearin is characteristic, giving it a close resemblance to beef tallow. (Apoth. Ztg.)

ICHTHYOL SUPPOSITORIES.—According to Eschenburg (Apoth. Ztg.), ichthyol causes a decided lowering in the melting points of the mixtures of cacao butter and wax generally used for the preparation of suppositories. A mixture of 3 p. cacao butter, 0.2 p. white wax and 1 p. ichthyol melts at 36° C., while a mixture in the proportion of 2:0.05:0.5 melts at 33°. Without addition of wax a plastic mass cannot be obtained, but it is advised to add it carefully, not exceeding the proportions required to form a mass that will melt at body temperature. The ichthyol itself should not be added until the mixture of wax and cacao butter begins to solidify.

COMPOUNDS OF AROMATIC ALDEHYDES WITH PROTEIDS.—Proteid, such as albumin, peptone, albumoses, casein, etc., form condensation products with aldehydes of the benzol series, when the components are brought together for a sufficiently long time and heated. From a solution of egg albumen and an aromatic aldehyde a flocculent emulsion is first obtained by continued agitation, which after some time forms a thick mass. On heating this on a waterbath, coagulation takes place, and the product is then readily separated from the aqueous fluid, washed and dried. The proteid substance may also be moistened with alcohol or other suitable liquid and heated in an autoclave with the aldehyde. The products are proposed by the "Farbenfabriken" as antiseptics. (Apoth. Ztg.)

CELLULOSE TETRACETATE.—For the manufacture of this substance, which promises to find many technical applications, a process has recently been patented, that consists essentially in heating a mixture of cellulose and magnesium or zinc acetate with acetyl chloride. The product is insoluble in alcohol, ether and acetone, soluble in chloroform, glacial acetic acid and nitrobenzol. The solution in chloroform, evaporated on glass plates, produces an extremely fine, thin film of remarkable firmness. The compound is not affected by alkalis or concentrated acids, except nitric acid. From the cellulose nitrates it differs chiefly in being non-explosive. It is a valuable insulating material for electrical apparatus. As a substitute for celluloid it has the advantage of being non-inflammable. It also finds application in the textile industry. (Drog. Ztg.)

PISANG WAX is the product of a wild pisang variety growing in the forests Koenigden and Tjilatjap, Dutch-India, a tree that has not yet been investigated by botanists, and is known by the natives as pisang karet. The leaves are of immense size and are covered on the lower side with a white, mealy deposit, which the natives scrape off with wooden knives, melt over a fire, then collect in a pan or cocoanut shell and pass through a sieve to remove extraneous matter. The product comes into the market as a fine, white wax. It seems seldom or never to have found its way to Europe. Samples of it examined by Greshoff (Pharm. Weekbl.) were in form of very hard cakes of glassy appearance, white, cream-yellow or light green—all more or less translucent, breaking with a coarse, granular, crystalline fracture, and easily reduced to powder. The melting point ranged between 79° and 81° C. The wax is but slightly soluble in alcohol (about 1 per cent.), and the solution solidifies on cooling to a thick gelatinous mass, that shows crystalline needles and spheres under the microscope. Solutions in boiling chloroform, acetone, ether and petroleum ether acted in a similar manner. The wax dissolves readily in boiling oil, oil of turpentine, carbon bisulphide and amyl alcohol. Elementary analysis, treatment with soda-lime, saponification, etc., showed the wax to be quite similar in composition to the other well-known vegetable waxes. (Apoth. Ztg.)

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Beal, ScD, Ohio.

The above rule is important, and we want every student to observe it. It has been published time and again in this column, but there are many who seem to have paid no attention to it and who cause annoyance both to themselves and us by persisting in sending their recitations to this office. We must then go to the expense of remailing them, and the student suffers considerable loss of time in the rating of his answers.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

This column is to be read each week by all students, whereby much unnecessary correspondence will be prevented, many points made plain, and in all ways it will be of direct assistance.

We have received numerous requests to prepare an appropriate pin or badge which may be used by students of the Era Course in Pharmacy. We should be glad to have students send in their suggestions relative to the design of such a pin, and give us an idea of the range of cost which would be suitable. If these responses are numerous enough to justify preparing such a badge or pin, the work will be undertaken at once, and the pin ready for sale at the lowest price possible to all students wishing it.

In the Era of Dec. 14 were sent to students lectures 25 to 31 inclusive. This is a sufficient supply to last until the issue of the Era of Jan. 18, 1900. Students are requested to note especially that with the copies of the Era intervening before the last-named date they will receive each week the regular edition of the Era without lectures. When this supply of lectures is exhausted another instalment sufficient for a month will be forwarded.

The regular holiday vacation for the Era Course commenced December 21 and terminates to-day. Students are now expected to resume work in regular manner.

All correspondence regarding lectures, questions, etc., should be addressed to the Director, Prof. J. H. Beal, ScD, Ohio.

Read This Bulletin Each Week.

ADVERTISING HINTS.

Suggestions for Advertising Druggists Clipped from Here and There.

"The only way to get customers is to go after them."
"Advertising pays only when it is done in a sensible way."

"A generality has no place in an advertisement, no matter how much it glitters."

"Nothing will ever supersede the booklet for dainty, compact and complete presentation of a business subject to the public."

"Better to cover a small territory thoroughly than a large one thinly and ineffectively."

"A business proposition should go straight to the point. If there is a reason for advertising, a plain statement will carry better than anything else."

"True economy in advertising is not so much in using cheap methods and mediums as in employing good ones."

"The newspapers of larger cities are a veritable mine of hints for the local retailer, if he will read them carefully and use their contents intelligently. There are hundreds of apt phrases and tricks of expression which serve to brighten up the advertising and make it interesting. There are arguments that a retailer himself would not think of. All these things are good material for the advertiser to study and to use when they are appropriate."

PROPOSED NEW PHARMACY LAW FOR NEW YORK CITY.

The Joint Conference Committee, representing the New York College of Pharmacy, the German Apothecaries' Association and the Kings County Pharmaceutical Society delegated to draft a new bill to amend the present pharmacy law (which is comprised in title V. of the Greater New York charter) held a second meeting at the New York College of Pharmacy on Thursday, December 28, and finished its labors on the draft. This bill will be submitted for approval to each of the organizations represented in the conference at the first meeting held by each in the new year, and will then be sent to the Legislature. As the provisions of the bill do not differ materially from those of the kindred measure which passed the Assembly last year (and all but passed the Senate, failing by a mere fluke) the members of the Conference Committee are confident that its passage can be secured at the coming session.

The bill, as adopted by this Conference Committee, is as follows:

Section 1.—Section 1510 of said act is hereby amended so as to read as follows: It shall be unlawful for any person, unless a registered pharmacist within the meaning of this title, to prepare or dispense a prescription or a physician's prescription, or to dispense or sell at retail poisons or medicines, or to open or conduct, have charge of or supervise any pharmacy or store for retailing, dispensing or compounding medicines or poisons in the City of New York, as constituted by this act, hereinafter provided; provided that the widow or legal representative of a deceased person who was a registered pharmacist within the meaning of this title may continue the business of such deceased pharmacist, provided that the actual retailing, dispensing or compounding of medicines or poisons be only by a person who is a registered pharmacist within the meaning of this title.

Section 2.—Section 1511 of said act is hereby amended so as to read as follows: Any person, in order to be registered, shall be a graduate in pharmacy or a licentiate in pharmacy. But a license as a pharmacist granted any person after the examination of said board of pharmacy legally created under the laws of this state shall entitle such person to a license or certificate of registration from the board of pharmacy created by this title upon presenting to said board his license and complying with the formal requirements of the laws, provided that he also furnish proof by his own affidavit or otherwise to the satisfaction of said board last mentioned that for at least ninety consecutive days preceding the presentation thereof he has actually practised pharmacy, under the license so presented, in the county or district for which the Board of Pharmacy which issued such license is created. Any person who actually practised pharmacy previous and up to January 1, 1898, under a license granted by the State Board of Pharmacy as pharmacist in Richmond county and in those parts of Westchester and Queens counties now included in the City of New York, as constituted by this act, shall be entitled hereafter to open or conduct any pharmacy or store for retailing, dispensing or compounding medicines or poisons in the City of New York, and to be registered by the Board of Pharmacy created by this title.

Section 3.—Section 1512 of said act is hereby amended so as to read as follows: Graduates in pharmacy within the meaning of this title shall be those who have had at least four years' experience in stores where prescriptions or medicinal preparations have been compounded and who, after the completion of such four years' experience, have obtained a diploma from any legally authorized college of pharmacy within the state of New York; and graduates in pharmacy shall be those persons who have had at least four years' experience in stores where prescriptions by medical practitioners have been compounded, and who have passed an examination either before the board for the examination of the senior assistants and druggists and prescription clerks in the city of New York, as heretofore existing, established by an act passed March 28, 1871, or before the Board of Pharmacy in the City of New York, as heretofore organized, or before the Board of Pharmacy of the County of Kings; or before the Board of Pharmacy created by this title, for the City of New York, as constituted by this act. Junior assistants and druggists in pharmacies shall not compound or dispense prescriptions, except in the direct presence and under the personal supervision of a registered pharmacist, whose certificate must be conspicuously displayed upon the pharmacy or store where such prescriptions are compounded or prepared.

Section 4.—Section 1513 of said act is hereby amended so as to read as follows: The members of the Board of Pharmacy of the City of New York, which is constituted in the Borough of Manhattan, the members of the German Apothecaries Society of New York, and the members of the Kings County Pharmaceutical Society shall meet on the Monday in January, eighteen hundred and ninety-eight, and on the same day every third year thereafter,

at a special meeting held by each for that purpose, elect five competent pharmacists, who shall form and be known as the Board of Pharmacy. Of these five members, three shall be elected by the said New York College of Pharmacy, one by the German Apothecaries' Society and two by the Kings County Pharmaceutical Society. The members of this board shall, within thirty days after their election, or thereafter individually take and subscribe before the Clerk of the City of New York an oath faithfully and impartially to discharge the duties prescribed for them by this title, and to hold office for a term of five years, and until their successors are duly elected and have qualified, and, in case of any vacancy in this board, the organization which elected the member or members whose position or positions have become vacant shall fill such vacancy or vacancies at once by an election at a special meeting. The said board shall organize for the transaction of business by electing from their own number, for the whole term, a president and secretary. The board shall meet at least every three months, and three members shall constitute a quorum. The said board shall have power: (1) To examine all applicants for license or registration under this title, and to grant licenses or certificates of registration to such as may be entitled thereto under this title. Any person applying for examination shall pay to the secretary of said board a fee of ten dollars, and if he pass a satisfactory examination, and satisfactorily to the said board, he shall be furnished with a certificate as to his competency and qualification, signed by the said Board of Pharmacy. (2) To keep a record of all pharmacists licensed or registered by it. (3) To investigate all complaints of disregard of, non-compliance with, or violation of any provision of this title, and of any other statute regulating the dispensing or sale of poisons or medicines, or the practice of pharmacy in the City of New York, as constituted by this act, and to take and hear testimony with reference thereto, and to prosecute the same. (4) For a violation of any of the provisions of this title, or of the other statutes aforesaid, or of the rules made by said board, or for fraud or wilful false representations in obtaining a license or certificate of registration from the said board, or for an error in issuing any license or certificate of registration, or for wilful substitution by the holder of any license or certificate of registration, for any drug or ingredient in a physician's prescription or medical preparation, or for any drug or ingredient, to revoke, after hearing, upon due notice, except where this title provides that notice need not be given, any license or certificate issued by said board, and to pay during the process of such revocation the funds coming into the hands of such board. (5) To make such rules, not inconsistent with the constitution or laws of this state as may be necessary for the further carrying out of the practice of pharmacy in the City of New York and to add to or amend said rules.

Said board shall be deemed to be a board within the meaning of sections 843 and 854 of the Code of Civil Procedure.

Section 5.—Section 1514 of said act shall be amended so as to read as follows: It shall be the duty of the secretary to keep a book of registration at some convenient place, of which due notice shall be given through the public press, in which book shall be entered, under the supervision of said board, the names and places of business of all persons coming under the provisions of this title. It shall be the duty of all such persons to appear before the said Board of Pharmacy and register, and the fee for the registration of pharmacists shall not exceed two dollars. Any pharmacist registered under the meaning of this title now and hereafter registered in the City of New York, as constituted by this act, shall appear before the said Board of Pharmacy and register again within ninety days after the first day of January, and again within ninety days after the first day in January in every third year thereafter. The date of the expiration of such certificate shall appear on the face thereof. There shall be such fee for such re-registration, in dollars for each person so re-registered. The secretary shall give receipts for all moneys received by him, which moneys shall be used for the purpose of defraying the expenses of the Board of Pharmacy and the balance of any surplus shall be for the benefit of the College of Pharmacy of the City of New York, situated in the Borough of Manhattan, and two-fifths of such surplus shall be for the benefit of the Brooklyn College of Pharmacy, situated in the Borough of Brooklyn. The salary of the secretary shall be fixed by the board and shall be paid out of the moneys received.

Section 6.—Section 1515 of said act is hereby amended so as to read as follows: Every individual, co-partnership or corporation being the proprietor or proprietors of a pharmacy or store for retailing, compounding or dispensing medicines or poisons, shall have conspicuously displayed upon a sign which shall be kept conspicuously placed upon the exterior of the pharmacy or store, in which pharmacy or store is conducted. The name or names so displayed upon the sign shall be followed by the word "proprietor" or "proprietors," as the case may be, and shall be conspicuously displayed, in every instance, on such pharmacy or store. Every license or certificate of registration granted by the Board of Pharmacy created by this act shall at all times be conspicuously displayed

in the pharmacy or store or other place wherein the holder of such license or certificate practices pharmacy. Every pharmacist shall be held responsible for the quality of all drugs, chemicals and medicines he may sell or dispense, with the exception of those sold in the original packages of the manufacturer, and also those known as patent medicines. Any person who fraudulently introduces adulterated or fraudulently adulterates or causes to be adulterated such drugs, chemicals or medicinal preparations; every proprietor whose name does not appear upon the sign as herein provided and every holder of a license or certificate of registration who refuses to display the same as above provided, shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be punished by a fine of not less than twenty dollars and not more than sixty dollars, or by both such fine and imprisonment, and in addition thereto his license or certificate shall be revoked without further hearing.

Section 7.—Section 138 of said act is hereby amended so as to read as follows: Any person who shall attempt to procure, or who shall procure, registration for himself or for any other person under this title, by making, or causing to be made, any false representation, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof, be punished by a fine of not less than two hundred dollars nor exceeding five hundred dollars, or by imprisonment for one year, or by both such fine and imprisonment. Any proprietor of a pharmacy, drug store or other prescriptions are compounded or dispensed by any person or persons not registered, except under the immediate supervision of a registered pharmacist; any person or persons not registered by said board who shall prepare or dispense a medicine or prescription, or sell or retail poisons or medicines, except under the immediate supervision of a registered pharmacist, whose license or certificate of registration is displayed in the place where the same is prepared, dispensed or sold, or so long as any person not registered by said board who shall open or conduct or have charge of or supervise any pharmacy or store for retailing, dispensing or compounding medicines or poisons; any person who shall fraudulently represent himself to be registered, or any registered pharmacist or other person who knowingly refuses any member of said board to enter a pharmacy for the purpose of lawfully inspecting the same, or intentionally prevents the lawful inspection of any pharmacy; any person whose license or certificate of registration is not duly renewed by said board, and who refuses to deliver up his license or certificate to said board; any registered pharmacist or dealer in medicines or poisons, or other person who shall violate any of the provisions of this title, in connection with the retailing and dispensing of drugs, medicines or poisons, for which violation no other punishment is hereinbefore imposed, shall for every such offense be deemed guilty of a misdemeanor, and upon conviction thereof, shall be punished by a fine of fifty dollars, or by imprisonment not to exceed sixty days, or by both such fine and imprisonment. All fines imposed shall be collected by any of the provisions of this title shall be paid over to the said Board of Pharmacy, and shall be distributed by said board as directed by section 1519 of this title.

Section 8.—Section 8 of said act is hereby amended so as to read as follows: Three-fifths of each and every penalty recovered and of every fine paid under this title shall be paid to the trustees of the College of Pharmacy of the City of New York, situated in the Borough of Manhattan, and two-fifths of the same to the Brooklyn College of Pharmacy, situated in the Borough of Brooklyn. The sums so paid to the trustees of the said College of Pharmacy of the City of New York shall form and be known as the library fund of the said College of Pharmacy, and shall be expended for the purchase of books for the library of said college; and the sums so paid to the trustees of the said Brooklyn College of Pharmacy shall be known as the library fund of said college, and shall be expended for the purchase of books for the library of said College of Pharmacy.

Section 9.—The jurisdiction of the State Board of Pharmacy over those parts or portions of Westchester and Queens counties and the whole of Richmond county, now included in the City of New York as constituted by the act, is hereby abolished.

Section 10.—This act shall take effect immediately.

The most important points in which this bill differs from the existing law are in Section 4, defining the powers and duties of the Board of Pharmacy; Section 6, requiring the display of the owner's name on the exterior of a drug store, and making adulteration a misdemeanor, and Section 7, fixing the penalties for violations of the act.

HOSPITAL DISPENSERS NEED NOT BE REGISTERED PHARMACISTS.

Washington, Dec. 26.—The matter of a person not a registered pharmacist compounding prescriptions at the Eastern Dispensary and the Almshouse, in Washington, having been recently brought to the attention of the District Attorney, that official has given an opinion to the effect that a registered pharmacist is not required by law. It appears that the prescriptions at the asylum are compounded by a graduate physician. The attorney

held that the question for consideration was whether the Act of Congress, approved June 13, 1875, which refers to the practice of pharmacy in the District, was applicable to the case. The attorney dwells upon the circumstance that in the different sections of the law the words "druggist" and "pharmacy" are used.

"The act is in terms restricted," the opinion reads, "to persons engaged in the conduct of any pharmacy or store for the purpose of retailing, compounding, etc. It becomes important, therefore, to determine the meaning of the words 'pharmacy or store,' as used in the act. A physician compounding his own prescriptions and supplying his patients with such drugs or medicines as they may need, is certainly not engaged in the 'conduct of any pharmacy or store,' and yet he is compounding and dispensing medicines for medicinal use. A physician would not have the right, however, to enter a drug store and compound and sell drugs or poisons to persons not his patients.

"In my opinion, the language used in the act, construed literally, has no application to a graduate physician in compounding prescriptions at a hospital for use at such hospital. Moreover, in my opinion, it is quite apparent from a reading of the act that it was not intended to apply to anyone not engaged in the conduct of a store or pharmacy, or in the employ of one conducting such store or pharmacy where drugs are sold and dispensed. The act was intended to be restricted in its scope to persons making a business of selling medicines or poisons, and at stores or pharmacies.

"In construing a statute, the mischief designed to be remedied is to be considered. The dispensing of drugs and the compounding of prescriptions by a graduate physician at a hospital for use of such hospital was certainly not within the mischief to be remedied by the act 'to regulate the practice of pharmacy in the District of Columbia.' For the reasons hereinbefore stated, I am of the opinion that said act has no application to a graduate physician engaged in compounding prescriptions for use of the Washington Asylum."

WORCESTER DRUGGISTS IN A PECULIAR POSITION.

Boston, Dec. 30.—The cutting of prices which the association of pharmacists in Worcester has been waging against the Hall & Lyon Co., which recently began business at No. 10 Front street, as a branch of their Providence, R. I. store, has developed many features, among which is the amusing position of the members of the association. They determined to meet and cut the prices of the invaders of their business territory, but, unluckily, they have had difficulty in learning just what their rivals' prices were. It is just like the old fable of cooking a hare, and druggists cannot well cut prices until they know what these may be. Customers enter some store and say that at the Hall & Lyon place they can get this or that article for such and such a price—of course, something low. The druggist must rely wholly on the word of his customer, if he desires to meet the cut price. The rival company issues no stated list, but shifts its charges from day to day, requiring a constant "guessing."

PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

The Entertainment Committee of the Philadelphia Association of Retail Druggists held their regular weekly meeting on Friday night, December 29, in the Odd Fellows' Temple. There were present: D. M. Harris, chairman; Clarence Campbell, J. G. Howard, H. L. Stiles, Thomas Newbold, J. G. Baer, H. C. Blair, Jr., W. L. Cliffe, E. J. Finnerty, E. T. Spencer and Charles Leedom.

All committees reported progress and a number of handsome prizes were received, a list of which will be published later. One of the handsomest of these prizes was presented by the well known West Philadelphia druggist, Lawson C. Funk. The plans for the time and place of holding the euchre party were changed to Wednesday evening, February 7, at Horticultural Hall on Broad street, near Spruce. The tickets will be 50 cents, and the number sold is to be limited to 1,200. There will be 150 prizes, and the euchre is to be followed by a dance. The next meeting of this committee will be held on Tuesday evening, January 2, at the residence of J. G. Baer, 1713 Pine street.

PATENT MEDICINE SALES CONFINED TO DRUGGISTS.

Chicago, Dec. 28.—The following is the text in full of the opinion delivered by the Supreme Court of Illinois in the case of Sadler vs. The People. The decision is important in that it sustains the constitutionality of the Illinois pharmacy law.

Mr. Justice Wilkin delivered the opinion of the court:

"This was a suit brought by the people against Charles and Mary Sadler, before a Justice of the Peace, by summons, to recover the penalties provided by the pharmacy act as amended by the act of 185 (Laws of 1855, p. 246) for an alleged violation of said act. Judgment was rendered by the Justice against plaintiffs in error, from which an appeal was taken by the Circuit Court, where a trial had before a jury resulting in a verdict and judgment for \$20 in favor of the people. From that judgment this writ of error is prosecuted.

"The prosecution was under section 2 of the act, which prohibits any person not registered as a pharmacist within the meaning of this act, to open or conduct any pharmacy, dispensary, drug store, apothecary, shop or store, for the purpose of retailing, compounding or dispensing drugs, medicines or poisons, and any person violating the provisions of this section shall be liable to a penalty of not less than \$20, nor more than \$100, for every such violation.

"Then follows a proviso not material to be considered in this decision. By instructions to the jury asked on behalf of the defendants and refused by the court, the constitutionality of the law was raised, and hence the writ of error was sued out of this court.

"Section 4 of the act defines the term 'drug store or pharmacy' to mean a store, shop or other place of business where drugs, medicines or poisons are compounded, dispensed or sold at retail prices. This definition, read in section 2, makes it unlawful for any person to open any drug store, shop or other place of business where drugs, medicines or poisons are sold at retail prices, unless the person charged is shown to be within the proviso in said section 2, which is not relied upon by the defendants in this case.

"On the trial the people called as a witness the defendant, Charles Sadler, and he objected to this competency because this is a criminal prosecution and under the statute the plaintiff has no right to call the defendant as a witness against himself, which objection was overruled, and this is rightly so. Under this competency provided for the recovery of the several penalties prescribed by the suit in the name of the people of the State of Illinois having jurisdiction, the recovery to inure to the Board of Pharmacy, and not to the State, and no criminal. It was so held in Webster vs. the People, 14 Ill. 365, and in many later cases. People vs. Blue Mountain Joe, 129 Ill. 376. The witness himself claimed no privilege, as he might have done. The objection to his competency was properly overruled.

"The witness testified, in substance, that he and his co-defendant—his sister—were engaged in general merchandise, principally groceries, in the city of Kankakee, and had been engaged in that business for fifteen years; that in February preceding the trial I kept in stock Castoria, cough drops, candies. We carried it when they were ordered by the customers. I ordered it for them. I had half a dozen bottles of Castoria at a time, bought from a druggist. I did not retail it out to parties calling for it, or anybody in my store to my knowledge. I only know what they order and what is brought in orders for. They were filled and the boys took the Castoria out. When the people in Bradley called for it I sent it. I purchased the Castoria from Ed. BeTourne. This store was located in Kankakee in the city of Bradley. This store testified that the druggist from whom he bought was a registered pharmacist; that the way I came to sell Castoria was this: We have got customers in Bradley and our subdivisions, and they buy some of them three times a week. Whenever they want any medicines, Castoria or anything else, we get it in the drug store and charge it to them, and they generally pay us every two or three days. This is how I got in the Castoria business. I got tired of sending to the druggist for bottle after bottle, so bought half a dozen at a time. These bottles that were called Castoria I got at no other place than that druggist. I was a druggist, unless he sometimes sent out himself and got it. A witness named Chaffee, who testified that he came to Kankakee under the direction of the secretary of the Board of Pharmacy, at Springfield, testified that he employed by that Board; that on the 18th of June, 1899, he called for and purchased a bottle of Castoria from a lady in charge of the Sadler store, for which he paid thirty-five cents. It was also proved that Castoria was a medicine, and that fact is in no way disputed.

"The objection to the validity of the statute is without force. It is an act to regulate the practice of pharmacy in this State, its scope and its effect is to regulate and secure the health and lives of the people. The enactment of it was, therefore, clearly within the police power of the State. As we said in Williams vs. The People, 129 Ill. 84. It is the exercise of legislative power to prescribe regulations for securing the admission of qualified persons to professions and callings demanding special skill, and nowhere is this undoubtedly and exclusively the power of the State more wise and salutary and more imperiously called for than in the

case of the practice of medicine. It concerns the preservation of the health and lives of the people. All this is equally true of the compounding, dispensing and selling of drugs, medicines or poisons, which are but a part of and pertain to the practice of medicine.

"All the objections urged to the constitutionality of the section of the statute under which the plaintiffs in error were convicted are fully met and answered by what is said in the case just cited, and that of People vs. Iturbe Almonte. The objections made to other sections are based upon an unwarranted construction of their language, and we find no tenable grounds for adding either of them violative of any provision of the constitution. But even if all that is said against them could be sustained the validity of section 2 would be unaffected. On the merits of the case it must be admitted that the offense was not of a serious or aggravated character, and that the lightest punishment authorized by the law. The testimony, however, of Charles Sadler himself clearly established a violation of section 2, considered with section 4, as above, by both himself and his co-defendant. They kept a store where medicine was sold at retail prices, and sold only to customers who sent in orders for it; they might keep in stock half a dozen bottles of this doubtless innocent kind of medicine and sell it to customers on special orders, and if they could, with the same justification, keep and sell any drug, medicine or poison in the same way, thereby rendering nugatory the provisions of the statute.

"The inaccuracies in the instructions which were given to the jury at the instance of the People, but in the light of the evidence they are not such as work any injury to the defendants, and cannot work a reversal of the judgment.

Judgment affirmed.

THESE MEDICINES ARE EXEMPT FROM STAMP TAX.

On December 28 the Commissioner of Internal Revenue designated about eighty kinds of medicinal articles all of which are either patented or trade-marked, that are declared exempt from taxation under the war revenue law. These drugs and chemicals have been examined in the laboratory of the Treasury Department and found to be definite chemicals and are held to be covered by that clause of the act which says no tax shall be imposed on any un-compounded medicinal drug or chemical. The list is:

- Acid carbolic, Merck (Pheno).
- Agathin (Salicyl-methyl-phenyl-hydrazone).
- Airal (Bismuth oxydine subgallate).
- Alumol (Beta-naphthol-disulphate of aluminum Antifebrin (Acetanilid).
- Antiseptic (Crede (Chrate of silver).
- Apolin (Monochloro-quin-iodine-citric acid).
- Argitol (Di-iodo-allylmin).
- Baking Soda (Bicarbonate of Soda), Arm & Hammer brands, Cow brand and baking sodas.
- Benzosol (Guaiacol Benzozate).
- Beta Eucaline (Hydrochlorid of benzoyl-vinylidene-otomakamin).
- Blennostasin (Chichonidine diuremid).
- Bromin (Hexamethylene-tetramin-brom-ethylate).
- Chloralid (Chloral-formamid).
- Dermatol (Bismuth subgallate).
- Dithion (Dithio-salicylate of sodium No. 2).
- Eucal (Guaiacol Carbonate).
- Euloxin (Bismuth salt of tetra-iodo-phenolphthalein).
- Eupthalmin (Hydrochlorid of methyl-vinylidene-otomakamin-phenyl-glycol).
- Euphorin (Ethyl-urethane).
- Euquinin (Ethyl-carbonic ester of quinin).
- Europien (Isobutyl-ortho-cresol-iodid).
- Exalgin (Methyl-acetanilid).
- Ferrypine or Ferrypine (Ferric-chlorid-antipyrine).
- Formalin (Solution of formic Aldehyd).
- Gocosol (Guaiacol valerate).
- Guaiacol-salicyl (Guaiacol salicylate).
- Guaiacolin (Pyrocatechin-mono-acetic acid).
- Guaiquin (Quinin-guaiacol-bisulfonate).
- Heroin (Acetic ester of morphin).
- Iodol (Para-diethoxy-ethyl-diphenylaminid Hydrochlorid).
- Hydrogen Dioxide, Oakland brand.
- Hyposal (Mono-Chlorid-Antipyrine).
- Iodol (Tetra-iodo-pyrol).
- Kryofin (Methyl-glycolic-phenetidid).
- Lactophenin (Lactyl-Phenetid).
- Losophan (Tri-iodo-meta-cresol).
- Metol (Methyl-Piperazin Tartrate).
- Lysidin (Methyl-glyoxalid, solution in water).
- Neurodin (Acetyl-p-oxy-phenyl-urethane).
- Oleoguaiacol (Guaiacol chloride).
- Ortho (Beta-naphthol Bismuth).
- Orthoform hydrochloride (Methyl-para-amidometa-oxybenzoate hydrochloride).
- Orthoform, new. (Methyl-meta-amido-para-oxybenzoate).
- Para-Chloro-Salol (Salicylate of chlor-phenol).

Paraforn (Paraformaldehyde).
 Paracetin (Para-acetyl-phenetidin).
 Phenocol Hydrochlorid (Amido-aceto-para-phenetidin-hydrochlorid).
 Piperazine (Diethylene-diamin).
 Protazol (Silver and albumen).
 Pyoktannin, yellow, (imido-tetramethyl-di-pi-amido-di-phenyl-methane chloride).
 Pyrimidon (Di-methyl-amido-phenyl-dimethyl-pyrazolon).
 Pyridon (Acetyl-phenyl-hydrazin).
 Quinalgen (Ortho-oxyethyl-alpha-benzoyl-amido-quinolin).
 Salacolat (Salicyl-ethyl).
 Sali-pyrin (Salicylate of Antipyrine).
 Salol (Phenyl Salicylate).
 Salophen (Acetyl-para-amido-salol).
 Sozodol Mercury (Sulfolodate of mercury).
 Sozodolium Sodium (Di-iodo-para-phenol-sulphonate of sodium).
 Sozodolium Zinc (Sozodolodate of zinc).
 Sulphonal (Di-ethyl-sulfon-dimethyl-Methane).
 Stypticin (Cotarnin Hydrochlorid).
 Tannoform (Methylen-ditannin).
 Tannigen (Diacetyl-Tannin).
 Tannopon (Hexamethylene-tetramin-tannin).
 Thermo-din (Acetyl-para-ethoxy-phenyl-urethane).
 Trional (Di-ethyl-sulfon-methyl-ethyl-methane).
 Triphenon (Propionyl-phenetidin).
 Tusonal (Antipyrine Mandelate).
 Urotropin (Hexa-methylene-tetramin).
 Water, distilled.
 Xeroform (Tri-Brom-Formolate of bismuth).

THE AMERICAN PHARMACEUTICAL ASSOCIATION.

Secretary Charles Caspari, Jr., is now distributing the volume of Proceedings for 1899. This work is getting better every year, and reflects great credit upon the secretary for the thoroughness of his labors. The present volume contains a full report of the meeting at Put-in-Bay last summer, all of the papers in full, Prof. Diehl's usual masterly Report on the Progress of Pharmacy, and all other statistical and general information which makes the A. P. A. Proceedings the pharmacist's most valuable reference work. The volume numbers 891 pages.

Enclosed in the Proceedings are circulars from several of the section committees, requesting members to be liberal in their contributions of papers to be read at the next annual meeting in May, 1900, at Richmond, Va. As the time is short, it is hoped that writers will get to work at once, and have their contributions in the hands of the respective committees in good season. The following are the queries submitted by the respective committees:

Section on Education and Legislation: C. B. Lowe, chairman, 3 W. Phil.-Eliena street, Philadelphia.

1.—A draft of a "uniform poison law," with penalties for violation of the same.

2.—A draft of a "pure food law," with penalties attached for adulterations.

3.—What amount of pharmaceutical education is being given to the medical students of the present time, and how far do they profit by it?

4.—Who is responsible for the large growth in the use by physicians of proprietary articles? How can this tendency be best controlled?

5.—What practical steps can be taken by the association towards the repeal of the present unjust trademark laws?

6.—To what extent have pharmacists been benefited by pharmacy laws?

7.—To what extent are these laws observed by pharmacists?

8.—Some of the pharmacy laws recognize only "registered pharmacists," others have an additional class called qualified assistants, which is preferable?

9.—Under what restrictions should pharmacists be permitted to sell liquors?

10.—Should pharmacy boards be supported by the fines and fees accruing through the administration of the law, or by direct appropriation from the State treasury?

11.—What are the arguments, pro and con, for the admission of some of the more important of the new synthetic remedies into the U. S. P.?

12.—Give a list of those whose admission would seem desirable, and the names under which they should be admitted.

13.—A dose list is wanted for the articles in the U. S. P., and in addition the maximum amount that can be given in twenty-four hours.

Section on Scientific Papers: Frank G. Ryan, chairman, 145 North Tenth street, Philadelphia, Pa.

1.—A paper on urine and bacteriological examinations by pharmacists.

2.—Cannot disinfection of infected houses be undertaken by pharmacists in the smaller cities and towns with profit to themselves? A paper on the methods employed is desired.

3.—To what extent are official plasters employed in the practice of pharmacy and medicine?

4.—What has been the effect of serum therapy on the practice of pharmacy?

5.—Official aspidium is said to be difficult to obtain. What is usually supplied for it, and what is the medicinal value of the substitute?

6.—Is it desirable to increase the strength of official syrup of hydriodic acid?

7.—What is the quality of potassium iodide and bromide usually found in the market?

8.—Give a method of making liquor petroleum free from odor and color.

9.—Is it practically to make red mercuric oxide, commercially entirely free from nitric acid or nitrates?

10.—What effect has age on podophyllum, after collection, as to the amount of resin it will yield?

11.—What is the real medicinal value of Carthagenajpecoa?

12.—Have favorable results been obtained by the use of acetic acid fluid extracts in medicine?

13.—Hydrochloric acid sold as chemically pure is said to often contain iodine and bromine. Is this a fact?

14.—Is the U. S. P. sulphuric acid test for organic impurities in salicylic acid and sodium salicylate too rigid?

15.—Is salicylic acid prepared from oil of wintergreen more desirable for medicinal use than a carefully prepared synthetic product?

16.—Is the oil of cade usually found in the market such as the U. S. P. describes?

17.—Some pills sold as quinine sulphate are found to approach in solubility in water quinine bisulphate. Is it proper to sell such pills for pills of Quinine sulphate? Examine commercial samples.

18.—Is it practically to make a compressed tablet which, when added to water, will make liquor calcis of the strength of the U. S. P.?

19.—What fluid extracts are best made from "green drugs"?

20.—What official solid extracts can be replaced by extracts in powdered form? Give methods for making the same.

21.—Give a formula for making effervescent tablets of lithium citrate, which will yield a product reasonably permanent.

22.—What is the most satisfactory diluent for use in making hypodermatic tablets?

23.—Asafetida of commerce is said not to conform with the U. S. P., as to its solubility in alcohol. Should the requirement be changed, and, if so, what standard should be adopted?

24.—Embalming solutions are now largely employed by undertakers. Would not the manufacture and sale of these solutions be a proper and profitable business for pharmacists? Give reliable formula for their manufacture.

25.—A paper on "Notes and Observations" of interest to pharmacists.

Committee on Practical Pharmacy and Dispensing: Henry P. Hynson, 423 North Charles street, Baltimore, Md. This committee submits a general circular, of which the most important paragraph is as follows:

Everywhere to-day there seems to be a keen relish for common sense, practical matter, and this is what this committee wants from you, Mr. Pharmacist—something you know to be good; something you have tried; something you have proven. No matter how plain or commonplace, if it is of a positive quality, we want it. Again, we want what you do not know, what you would like to know, and what you can't find out. If it pertains to your business, and would be helpful, we want it. We want, practically, everything pharmaceutical; what you have and what you want.

The committee requests you to keep diaries of your professional work. Write up one or two busy days, noting each movement of interest; tell what you did, and how you did it.

Queries are also very desirable; we will try to answer them. While we prefer that prospective writers of papers should select their own subjects, the committee will offer these if requested to do so.

PAMPHLETS RECEIVED.

"Synthetic Chemistry, Its Contribution to Modern Therapeutics," by J. W. Walnwright, M. D., New York City. Reprint from Jour. Am. Medical Association.

Proceedings First Annual Convention National Association of Retail Druggists, held at Cincinnati, October 3 to 6, 1899.

Proceedings State Pharmaceutical Associations, 1899: Maryland, Massachusetts, Minnesota and Pennsylvania. Pharmaceutical associations have not yet attained uniformity in size and style of their annual volumes of proceedings. Those received this year vary greatly in these respects. Some are in cloth covers, some in paper. The variation in size is an inch or two. Some cover their cost by levying contributions upon the wholesale trade in the way of advertising; some get along without it. All, however, are very creditable in a typographical and editorial sense to the secretaries of the respective organizations who pass them through the press.

DEADBEATS IN THE DRUG TRADE.

The List Getting Smaller—Fraser and Crosher the Last of the Old Gang.

The drug trade, like nearly every branch of business, has its frauds and deadbeats to contend with. In recent years it has had more than its share of such depredators, but, thanks to the continued efforts of The Pharmaceutical Era, the gangs of swindlers which have preyed upon the drug trade have been pretty thoroughly broken up and scattered. Two years ago the Era's directory of frauds and swindlers, chiefly in New York City, contained about thirty-five names. The Era kept exposing these rascals and warning merchants and manufacturers against them to such good purpose that to-day a similar directory of deadbeats would not contain half a dozen names. The worst members of the gang which carried on its operations from New York, with two or three exceptions, have been driven out and forced into the confining retirement of the jails and penitentiaries. The notable exceptions are Henry P. Crosher and Thomas E. Fraser, who are to-day about the only members of the old gang attempting to do any business in drugs, chemicals and similar lines.

Tom Fraser has been downed several times, but, with a persistence and vitality that are amazing, he bobs up serenely after every fall and continues the same kind of trickery. For nearly a full year Fraser remained inactive, but about one month ago he again began operations, and this time on a larger scale than ever. The story of his new venture was printed in the Era of December 7 last, but for the benefit of new readers who may not have seen that account, it may be well to tell the story again.

With the backing of one A. H. Rosenblat, who, it is said, was formerly in the bicycle business, Tom Fraser secured the retail drug store formerly owned by Leslie A. Fraskic, at 81 Amsterdam avenue, corner of Sixty-third street, New York City. This is a small shop which never has done a pretentious business. Fraser also rented a small office in a building at 23 Duane street. This is an irregular shaped structure, like the letter "L," with the shorter arm fronting on Park row, but there is no entrance on that street. He secured a typewriter somewhere, and at once sent out orders for drug and chemical supplies of all kinds. These orders were written on stationery having the following display heading:

Offices: 23 Duane Street and 106 Park Row.

Laboratory: 2723 Third Avenue.

FRASER & CO.,

WHOLESALE DRUGGISTS.

AND MANUFACTURING CHEMISTS.

81 AMSTERDAM AVENUE, COR. 63RD STREET.

A few of his orders have brought the goods (none of which have yet been paid for), more of them brought answers from the manufacturers that they would sell to this concern only for spot cash. Several of them were sent, or answers were sent, to Fraser & Co., of 262 Fifth avenue, which firm is again being bothered and injured just as it was two years ago by the dealings of Tom Fraser. The reason Tom Fraser is so determined to use the title "Fraser & Co." is made perfectly plain by the existence of this firm of Fraser & Co. at 262 Fifth avenue. This firm has been in existence for many years. It has a first-class credit and excellent ratings in all the commercial agency books. Its head is Horatio N. Fraser, who is also president of the Fraser Tablet Triturate Manufacturing Company.

Tom Fraser schemes that the people from whom he orders goods will take it for granted that the order comes from the firm having the satisfactory rating. His whole business is trading on the good name and credit of the Fifth Avenue Fraser & Co. But a manufacturer who uses ordinary discretion and care will not be caught by this sharper. When Fraser was in the same kind of business before at 219 Greenwich street the books issued by Dun and Bradstreet printed the following warning: "Fraser & Co., 219 Greenwich street. Do not confound with Fraser & Co., 262 Fifth avenue." The local managers of both Dun's and Bradstreet's have assured this journal that a similar warning will be printed again in

the next books issued by them. Further than this, they have sent special reports to every branch agency in the country, pointing out that Fraser & Co., of 23 Duane street and 81 Amsterdam avenue, are not worthy of one cent's worth of credit, and giving the past history of the operations of Tom Fraser.

Tom Fraser says that his new partner pays him a salary to manage the business, and has also given him a small share in it to make legal use of the name "Fraser & Co." Tom now poses as a much injured man, and says that he was not responsible for the swindling that was done in his name at 219 Greenwich street. He said to a reporter:

"In that affair I got tangled up with a lot of sharpers, lost all I had and went to jail. A man named Granville proposed the opening of the place, and I was given a salary to manage it. The first time I knew that anything crooked was proposed was when he said to me: 'How do you expect to make anything out of this if you pay for the goods?' I was a victim of the morphine habit at that time, and the others took advantage of that weakness, filled me up with the drug, and then got me to write letters, send orders and sign my name. I admit that my association with that crowd has hurt me. I was the one who got plucked. I have quit using morphine, and am trying to get on my feet again. Our place on Amsterdam avenue has just been opened, and we cannot do everything at once. We buy our goods on the basis of thirty days, and our first bill for goods bought will not be due until January 6 or 7. Come around after that date and I'll show you a lot of receipted bills." (Algeron Granville, the thief referred to by Fraser, is serving out a sentence in the Federal prison at Moundville, W. Va.)

Fraser's partner, A. H. Rosenblat, said to the reporter: "I supplied most of the money needed to buy this place. We intend to re-paint it, fit it up and supply it with a full line of goods. We are selling under no false colors; we have the right to use the name of Fraser & Co., and nobody can keep us from doing so. Anyone who says we are here to get goods fraudulently or on the reputation of any other house knows what he is doing and must stand the consequences."

This man Rosenblat is unknown in the drug trade, but Tom Fraser is too well known for any wide-awake manufacturer to extend him credit at this late day. About ten years ago Fraser started in the retail drug business. He was a good druggist, and his prospects were bright. But he could not be satisfied with the ordinary gains of legitimate business. His habits and bad company led him into various scrapes. Three or four years ago he started the concern at 219 Greenwich street, under the name of Fraser & Co., which conducted one of the most extensive swindles ever known in the drug trade. Fraser says now that it was Granville. Heretofore he has always said that it was Henry P. Crosher who led him astray, and filling him up with drugs made him sign all sorts of papers and do other wrong things. His memory must be falling. The gang which Fraser gathered about him at the Greenwich street place was broken up in May, 1898, and Fraser spent a month in the Ludlow Street Jail. In November, 1898, Fraser tried to start a wholesale drug business without capital up in Harlem under the name of Braun & Co., associating with him a poor little retailer named William Braun. At about that time Fraser was also carrying on a fake business under the name of the Lincoln Drug & Specialty Co., at 439 Third avenue. These schemes were frustrated by the Era, and since they were broken up Fraser has not been able to do very much.

CROSER IS STILL AT IT.

Henry P. Crosher is the only other member of the old gang who is still trying (and with some measure of success) to get goods without paying for them. He was always the bravest of the crowd, and he remains at the old stand, 168 Greenwich street, and continues his practices as boldly as ever in his own name. He has been arrested several times for his misdeeds, but each time the accommodating attaches in the District Attorney's office have let Crosher go without a trial.

The latest venture in which Crosher was implicated was a questionable business carried on under the title of the American Import and Trading Company, of 255 Washington street. Associated with Crosher in this concern were Edward Baruch, Moses D. Brandes, Henry Maus and Emil Klein.

Another member of the crowd is August F. Clark, who has just been released from the penitentiary, whither he was sent for conducting the mail order swindle at 25 East Fourteenth street, under the name of J. E. Branigan, an uptown druggist of good reputation and credit. So far as known Clark has not attempted any new swindling operations since his release. All that can be said about him is that he has been seen of late with Henry P. Crosher.

PHARMACY LAW FOR MARYLAND.

Baltimore, Dec. 6.—The work of interesting the members of the Maryland General Assembly and all other persons who are in a position to aid the cause in the proposed State pharmacy law is now well under way. As a result of the last meeting of the Maryland Pharmaceutical Association copies of the bill, which has the endorsement of the druggists and of their organizations, are being circulated, together with such other printed matter as is calculated to advance the movement. Physicians are being included in the list of those whose influence the pharmacists regard as beneficial, and a most active canvass will be made throughout the state, even among the general public. Druggists are being urged to point out that Maryland is the only state which has no pharmacy law, and where the people are not protected against incompetency or imposition; that the measure, if enacted, will not be retroactive, and, consequently, that none of those now in the business of selling drugs will be in any way interfered with; that under existing conditions the buyer of medicinal compounds has absolutely no guarantee that what he purchases is of standard strength; that the absence of regulations compelling adherence to standards is a constant source of danger to the lives of persons; and that the proposed bill is really simpler and less exacting than any of those passed by other states. Support of the measure is urged, not because the druggists themselves can hope to derive great benefits from such a statute, but for the reason that the pharmacists feel the isolated position of Maryland in the matter of pharmacy legislation to be a standing reproach, all other commonwealths having adopted such restrictions. There can be no doubt that the question will receive more exhaustive discussion than ever before, and if the proposed bill fails to pass it will not be the fault of those who champion the measure.

BANQUET GIVEN BY THE SMITH, KLINE & FRENCH CO.

Philadelphia, Dec. 30.—The Smith, Kline & French Co. gave a banquet to the salesmen, detail men and others connected with the "Eskay's Albumenized Food Department" on Wednesday evening at the Manufacturers' Club, on Walnut street, west of Broad street. Their representatives had been called in from all over the country for the purpose of mapping out the work for the coming year in the light of the experiences during the year just completed. There were thirty-five covers laid for as many guests and the occasion was one of enjoyment to all who were present. The menu was very elaborate.

There were a number of toasts following the cigars and coffee, which were responded to as follows:

"Qualifications of the Ideal Detail Man," by the veteran, Dr. J. A. Good.

"News from the Metropolis"—what's the news?—Dr. L. D. S. Banker.

"Our Yankee Hustler," by one of the craft, Mr. Fred. H. Wildes.

"Can Chicago be Relied Upon to Beat the Record in 1900?"—possibilities of the great West—Dr. J. W. Van Winkle.

"Some Experiences," by the lamb of the flock, J. Percy Remington.

"When May We Look for Dividends?" our vice-president, Mr. Harry B. French. They are bound to come!

"The Chemist"—why, by analysis, Eskay's is shown to be best—Mr. Chas. H. Lawall.

"The Doctor"—as seen by one of them—Dr. C. W. Simmons.

"The Advertising Man"—how to reach the people "from infancy to old age"—Mr. C. W. Havens.

"The Druggist"—how to secure his interest—By a salesman. All join in the chorus.

Speech by D. E. Bransome—J. & J.'s man.

"Retrospect and Prospect,"—our general manager, Mr. M. N. Kline. A long pull, a strong pull, a pull all together!

The following is a list of guests who attended:

Dr. J. W. Van Winkle, Fred H. Wildes, Dr. C. W. Simmons, C. W. Havens, P. D. Baum, J. Percy Remington, Charles H. Lawall, D. E. Bransome, J. W. Dunleavy, Clarence Kline, L. F. Kehler, D. M. Harris, J. M. Whitaker, Theo. Drake, David Horn, J. Miller, W. Chew, Mr. Kennedy, H. E. Smith, B. G. Smith, C. C. Churchill, Mr. Estler, Mr. Sellers, E. Smith, C. Roberts, T. Neil and C. Buchanan.

The evening was enjoyed by all present, many of them meeting for the first time socially, though working together every day. The Smith, Kline & French Co. believe that harmonious relations are necessary to ensure business success, and for some time past efforts have been put forth toward this end.

NEW YORK AND VICINITY.

—Nearly all the travelers for Parke, Davis & Co., who visit the drug trade in the eastern section of the country were rounded up in New York last week, and Sidney Carragan, who "keeps track" of them, had his hands full. Among these travelers were: A. G. Standt, Philadelphia; George E. Reed, Philadelphia; C. H. Greer, New York State; C. W. Walker, New York State; Dr. W. A. Dixon, New York State; George Andrews, Pennsylvania; N. Nicolai, Massachusetts; W. C. McGinnis, Boston; L. S. M. Glidden, Boston; Philip Matty, Vermont; H. R. Saunders, New York State; F. Gunton, Maine; Harry Thornton, Pennsylvania; H. K. Mundorf, Philadelphia; A. C. Fowler, Connecticut; H. B. Putnam, New York; W. P. Rich, New Jersey, and A. G. Bissell, New Jersey.

—An interesting match game between the teams of the class of '99 and the Alumni Association of the Brooklyn College of Pharmacy Bowlers, took place at Smith's Alleys, Grand avenue, Brooklyn, on Thursday night, December 21. It was the first meeting of these teams, each was confident of success and their friends filled every available spot in the alleys. The games were hotly contested, especially the first one, which was in doubt until the last ball was rolled in the tenth frame, when it was found the Alumni had won by fourteen pins. The team scores follow: Alumni Association, 534, 539, 610; Class of '99, 520, 459, 511.

—A fire which nearly destroyed the six-story building at 134 and 136 William street on Sunday morning, December 24, also damaged the adjoining buildings, occupied respectively by Henry Allen, dealer in druggists' glassware, and by Thurston & Braidich, drug importers, each of whom suffered a loss of about \$5,000.

—Out of a class of forty-two who took the last examination given by the New York City Board of Pharmacy on December 18, eight persons passed successfully; their names are: John S. Burns, Mary L. Campbell, Percy J. Collins, Karl Emeleus, Wesley C. Foster, Samuel Lass, Giuseppe Lisanti, Lucrezio F. Santoro.

—The annual festival and ball of the New York German Apothecaries' Association will be held at Terrace Garden, corner of Third avenue and Fifty-eighth street, on Friday evening, January 26, beginning at 10 o'clock. Extensive preparations have been made to insure a good time for all who attend.

—Antonio Tomas, who formerly had a drug store in this city, at Columbus avenue and Sixty-fifth street, and who is now the proprietor of a drug business in Cienfuegos, Cuba, came to New York last week on his wedding trip, having recently married a Cuban lady.

—John Sidley, the well-known retired druggist, who formerly had a pharmacy at Columbus avenue and Ninety-fourth street, was afflicted sorely last week in the death of his wife. He has the sympathy of many friends in the drug trade.

—The Totten Remedy Company, of Jersey City, has been incorporated under the laws of New Jersey to manufacture drugs on a capital of \$2,000. Incorporators: Van Wart Totten, of Jersey City; L. G. Warford, R. E. Hicks, both of New York.

—H. A. Smith, of Norfolk, Va.; W. B. Moore, of the Chicago branch of Dodge & Olcott; P. Meyer, of Chicago, and Charles Leedom, of Philadelphia, were among out-of-town drug men who visited the local market during the week.

—Alfred Terry, a druggist of Cienfuegos, Cuba, who formerly conducted a pharmacy at Columbus avenue and Eighty-ninth street, Manhattan, has been visiting friends in the city this holiday season.

—The Apothecaries' Bicycle Club will hold its "third anniversary banquet, meeting and election of officers," at the Hotel May, No. 50 West Twenty-eighth street, on Thursday, January 4, at 1:30 p. m.

—A. Goldberg has sold his drug store, at the corner of Varet street and Bushwick avenue, P. ooklyn, to Max Gluckman. Mr. Goldberg has opened a new pharmacy at 662 Broadway, Brooklyn.

—H. H. Hoyt, who has a pharmacy at No. 73 Fulton street, Brooklyn, has bought the drug store of John G. Franz, at No. 79 Main street, the same borough.

—John B. Reynolds, a druggist of 2000 North Front street, Philadelphia, made a business trip to this city the middle of last week.

IN AND ABOUT BOSTON.

Boston, Dec. 30.

—January first marks the beginning of the changes to take place at the big store of Cutler Bros. & Co., as the place in Battery-march and Broad streets for so long has been known, and which now is a part of the great triumvirate of drug houses. The various people there will be scattered in the future. Charles F. Cutler, who has been the senior partner of the former firm, will hereafter make his headquarters at the store of the former firm of George C. Goodwin & Co., and others from the force of employees also will be transferred to duty at the Goodwin place in Hanover street. William W. Cutler, Mr. Robert E. Anderson, head clerk, and others, will after this be found at the West & Jenny place in Franklin street. It is so near the Cutler place that it will be easy to run back and forth between the two places, while the present stock still on hand at the Cutler store is being gradually diminished. Just how long it will take to clear this out, will, of course, depend largely on the state of future trade. The building thereafter will be abandoned by the firm.

—State officers have just arrested a man named Gilbert Whitney on the charge of illicit conveyance of morphine into the Charlestown prison. On this charge he was heard in the Municipal Court in Charlestown, and was placed under bail. It appears that Whitney visited the prison and left a bunch of bananas for his brother, who has been an inmate there since early in 1897. Soon after the fruit was left at the prison an officer made an examination of the bananas, and discovered three small phials in three of the bananas. Each contained from 150 to 200 morphine pills. The officer found that the ends of these bananas had been cut around and a portion of the fruit dug out, so that there was room enough for each of the phials to fit snugly in its hiding place. Toothpicks were then stuck into the cut sections, and by this means the severed ends remained firmly fastened.

—On the last trip to the port of Boston of the steamer Winifredian, of the Leyland Line, she brought an immense cargo, among which was a large amount of chemicals in casks. Those having merchandise to come by the steamer were apprehensive lest she be taken by the British Government, as had been rumored would be done, for use as a transport vessel to South Africa. Not until she actually passed out of her dock at Liverpool was it certain that this would not be the fate of the steamer. The same problem confronts the company regarding other future cargoes for this port, since the Winifredian has just been chartered for South African service.

—W. H. Corliss, Boston manager for Dodge & Olcott, of New York and Boston, has been admitted to membership in the New England Confectioners' Club, the annual meeting of which has recently taken place. Mr. Corliss, in his present position, succeeded Hubert Phelps Whitmarsh, the former manager for Dodge & Olcott, who left business life to pursue his literary work, in which he is rapidly coming to the front.

—The usual monthly meeting of the Boston Druggists'

Association took place at Young's Hotel, the evening of Tuesday, December 26. The president, Charles F. Cutler, presided. There was no special feature to mark the occasion, the president being unfortunately disappointed at the last moment regarding his speaker of the evening, a professor from Harvard College.

—C. E. Baker's drug store at Fall River was damaged by water and smoke, when the building at the corner of Pocomass and South Main streets was burned on Christmas night, causing a loss of about \$7,000. The loss is covered by insurance. Mr. Baker was part owner of the property.

—In an automobile accident at South Boston, whereby an aged woman was knocked down and injured by one of the new vehicles, the victim of the accident was taken to the drug store of Thomas J. Joyce & Co., at 44 West Broadway, where her injuries were cared for.

—An emergency hospital was made of White's drug store in Haverhill, one night this week, when a man fell off from the rear platform of a car and was badly shaken up. He was taken into the drug store and received necessary medical attention.

—Harry L. Timmons has purchased the pharmacy of James Howard, at the corner of Broadway and School street, in Lowell. Mr. Timmons has in the past been a clerk at the drug store of Frank E. McNabb, in that city.

—A fine new drug store is to be opened in Lynn by W. A. Wilson, who used to be a clerk for Davis & Young. The store will be at the corner of Central avenue and Liberty street.

—J. J. McCarthy has opened his new store in his new block on the corner of Charles and Pearl streets, in the Edgeworth district in Malden, a thickly populated section.

—The drug store of George H. Alexander, 100 Dorchester street, South Boston, was entered one night this week and cigars and money amounting to \$37 were taken.

—The corner store in the Leavitt Block, on the corner of Essex and Peter streets, in Salem, is to be used as a pharmacy by T. B. Nichols.

—What is known as the Sasseville drug store, on Lincoln street, in Marlboro, has been bought by Henry Harpin.

—The drug store of William E. Mahern, at Woburn, has been purchased by S. R. King, of Everett.

PHILADELPHIA.

Philadelphia, Dec. 30.

—A popular subscription has been inaugurated in Caambersburg, Pa., for the purpose of erecting a suitable monument over the grave of Walter S. Sellers, the apothecary aboard the battle ship Maine, who lost his life at the time of the blowing up of that vessel. Mr. Sellers had but recently graduated from the Philadelphia College of Pharmacy and was a popular student of unusual ability. The Alumni Association of that institution, therefore, has taken steps toward placing a memorial tablet in the college building in commemoration of his untimely death. The committee having charge of the matter consists of H. L. Stiles, J. W. England and Dr. J. Louis D. Morison.

—It is hardly ever customary among the larger wholesalers to give Christmas presents to their steady customers, although some of the smaller firms do it with the hope of keeping their customers from straying off, and sometimes the salesman does it on his own account, to keep a patron's good will. The most extraordinary case ever reported has just come to light of a man who went to the wholesale house where he had dealt for some years and asked them to give him a Christmas present, mentioning as his preference a good suit of clothes. He was not suited with the answer he got, it is needless to say.

—Dr. Thomas J. Morton, Coroner's Physician for the city of Philadelphia, has blood-poisoning, from an operation conducted by him some time ago. Dr. Morton's condition is quite serious, and it is significant of the seriousness of his official position, that he is the third consecutive coroner's physician to acquire this terrible disease. Dr. Mattern, his predecessor, who was also a pharmacist, died from blood-poisoning several years ago, and Dr. Formad, who preceded Mattern, met with the same fate.

—D. H. Ross, Dr. A. W. Miller, Joseph W. England, J. D. Burg and James C. Perry have been appointed members of a committee, by the Alumni Association of the Philadelphia College of Pharmacy, to arrange for a reception which is to be given by the association to Apothecary Hammar of the Olympia, on the occasion of his visit to Philadelphia, which will occur in the near future.

—No indications have been discovered as yet of work among the drug clerks by the "Shorter Hours League" ounce steerer, although many clerks have been interviewed on the subject with the hope of getting some information regarding this elusive personage who recently sent out his correspondence from Philadelphia. He must be laying low for hard times to come and give him a show.

—The quarterly meeting of the members of the Philadelphia College of Pharmacy was held on Thursday afternoon of this week, being postponed from the last Monday in the month, which is the usual day, on account of it being Christmas day.

—Olive Curtis Johnson, one of last year's women graduates of the P. C. P., has successfully passed the State Pharmaceutical Examining Board of Pennsylvania, and is now managing a pharmacy in Danville, Pa.

—Professor Henry Kraemer is in New Haven this week attending the meeting of the "American Association of Naturalists," where he read a paper before the Botanical Section of the meeting.

—It has been reported in the newspapers that Munyon, of homeopathic fame, will spend some millions of dollars of his surplus profits in the erection of a home for crippled children.

—Alexander B. Newton, of Wayne and Manheim streets, Germantown, is building up a prosperous business in his locality and reports the past year as the best one he ever had.

—All wholesale and manufacturing houses closed for the entire day on Christmas, and most of them will close a half day on New Year's day.

—D. F. Horn, J. Miller and George B. Raser were noticed among the salesmen who were in the city during the past week.

—C. K. Young, of Lykens, Pa., has purchased the pharmacy owned and conducted by Arthur Porter of Tamaqua, Pa.

BALTIMORE.

Baltimore, January 2.

—An attempt to swindle Druggist Robert G. Loy, of No. 900 North Charles street, was made on Christmas night, about nine o'clock. Frank Duffy, sixteen years old, and employed at the Baltimore Club, met a young colored man on the street who handed him a letter addressed to Mr. Loy, asking Duffy to deliver it, while he waited on a nearby corner. Mr. Loy, on opening the envelope, found that it contained a check for \$35 and a note signed ostensibly by Mrs. John Gill, of No. 929 North Charles street, requesting Mr. Loy to cash the check. Certain marks about the paper raised doubts as to its genuineness. Mr. Loy, in company with the boy, went to look for the colored man, but the latter had disappeared. Inquiry at Mr. Gill's house proved that the check and letter were a forgery.

—Last Thursday night, at the Rennert, Oscar W. Smith, manager of the Baltimore branch of Parke, Davis & Co., tendered a dinner to some of the travelers operating in the Baltimore district. The following were present: Nathaniel Nicolai, who is connected with the New York office; H. E. Heintzsch, who is about to represent this firm in the Carolinas; Drs. J. K. P. Gleason and Ernest Roach; Geo. H. Dawson, R. H. Bond, Peter Hamilton, J. Emory Bond, A. F. Ehrlich, and T. A. Pindell. Mr. Smith acted as toastmaster and the responses were particularly happy and entertaining; in fact, in some instances brilliant. The affair altogether was a great success, and was not wound up until the wee hours of the morning.

—The holidays have detracted somewhat from the interest in the contests of the Baltimore Drug Trade Bowling Club, but the members continue hard at work and are knocking the pins down with great skill. On Friday,

December 22, the Sharp & Dohme quintette met Guth Bros. & Co., and took all three games by 831, 811 and 633, against 667, 686 and 612. Goldsborough, of Sharp & Dohme, made high score, having a total of 210 points to his credit in one of the games. He also got high individual average, with 182 1-3.

—The sale of the pharmacy conducted by the late Dr. Louis C. Horn, at the corner of Myrtle avenue and Mulberry street, at auction last week has resulted in the addition of another store to the places where drugs are dispensed at retail. The old establishment will be continued by Amanda Horn, and the L. C. Horn Drug and Chemical Company, recently incorporated, will open a new pharmacy at the corner of Myrtle avenue and George street.

—One of the handsomest soda fountains in Baltimore that recently installed in the pharmacy of Oscar E. Ross, on East Baltimore street, formerly Lilly, Rogers & Co. It is of onyx, almost white in color, and without any streaks or flaws. In the center are large mirrored surfaces, and graceful columns give the fountain a highly artistic and rich appearance.

CINCINNATI.

Cincinnati, O., Dec. 30.

—More injunctions have been served against druggists and others in the city during the past few days, restraining them from selling Canadian phenacetine. Among them were John Bauer, of Milton and Sycamore streets, and William S. Downey. Samuel Fletcher, who was accused of selling the drug, filed a reply yesterday, claiming that he neither handled or knew anything about phenacetine. The litigation is proving of considerable interest to the drug trade in general, and further developments are anxiously awaited, as many retail druggists of this city have received notices from the Elberfeld Company demanding an accounting of how much phenacetine they have used or disposed of which did not have the United States trade-mark or copyright on the container. Despite the action of the Elberfeld Company, the mails are loaded down with circulars and prices from Canadian concerns who claim that there is no risk whatever in buying from them, as they pay the duty and guarantee safe delivery.

—The annual meeting of the Retail Druggists' Insurance Company will be held in this city January 9, 1900, when the annual election of directors will take place. Seven directors are to be voted for to serve the coming year. The candidates are as follows: M. A. Burkhardt, Dayton; F. T. Bower, Toledo; John Byrne, Cincinnati; Joseph Berger, Columbus; Chas. T. P. Fennel, Cincinnati; Robert Groenland, Cincinnati; John C. Firmin, Findlay; Lewis C. Hopp, Cleveland; T. B. Huston, Toledo; Philip Lehr, Cleveland; C. N. Nye, Canton; John Ruppert, Cincinnati; Geo. W. Voss, Cleveland; John Weyer, Cincinnati. M. A. Burkhardt is president of the association, and John Weyer is secretary. Mr. Weyer says the association is in a flourishing condition, having had very few losses this year.

—The Hamilton County Druggists' Association held their monthly meeting at Odd Fellows' Temple, Tuesday, December 26. Letters were read from the officers of the N. A. R. D., congratulating the local association on the progress they have made and wishing them all the success possible. From all appearances, it is not hasty to predict a restoration of prices in the city very shortly. The officers and members of the association have been working very hard and it seems their efforts will be crowned with success.

—C. C. Reakert, of J. & C. Reakert, the wholesale druggists, is again able to be about, after being confined to his home for over six months. Mr. Reakert met with an accident last spring, when his hipbone was fractured, and for a long time his life was despaired of, owing to his extreme old age. A hardy constitution and careful nursing finally secured his recovery.

—Michael Callaghan has just completed his twenty-fifth year as clerk at John Keeshan's pharmacy. During the time he has been with Mr. Keeshan Mike has served under many clerks who are now engaged in business for themselves, but Mike says he is satisfied to stay at the old store as long as it exists.

—Wm. B. Kallmeyer died December 24 after a lingering illness, aged fifty-one years. Mr. Kallmeyer was one of the most prominent chemists in this city, and was formerly employed by the Standard Drug Company.

—After a severe illness of several weeks' duration, Herman Koehnen is again able to resume charge of his drug store at Park avenue and McMillan street, Walnut Hills.

—Andrew C. Cattell, Race and Arcade streets, druggists' rubber goods, etc., filed a petition in bankruptcy December 27. Liabilities \$14,000; assets unknown.

—The Amberg & Brill Co., wholesale dealers in notions and druggists' supplies, will remove to New York shortly after January 1, 1900.

CHICAGO.

Chicago, Dec. 28.

—The store of B. F. Parnell, at Robey and Fowler streets, was damaged by fire during the early part of the week. The stock was insured. The amount of the loss is now being found by the appraisers. Mr. Parnell several years ago was head clerk for L. K. Waldron, but later bought a store on the west side. His many friends extend much sympathy to him, but feel assured that he will come out all right.

—Returns from the retail drug stores seem to show that those which laid in the most complete assortment of the holiday goods had the best trade. Those in which the stock was meagre had little business. The public seemed to pass them by for the downtown stores, where the assortment was more varied. This may serve as a hint to dealers.

—White L. Hansen, a druggist, whose store burned some time ago, has sued three fire insurance companies for a total of \$5,750, being money claimed to be due on policies of insurance.

—T. P. Flannery has bought the drug store at 1332 North Halsted street, which was recently closed up. He will continue the business in the present quarters.

—John E. Serwe and Ed. J. Mallory, representing Lazell, Dalley & Co., of New York, in the West, have gone to New York to visit the house and relatives.

—Thomas H. Chechman, Ohio, representative of Lazell, Dalley & Co., left Chicago this week, where he has been for some days, for Ohio, to visit his sister.

—Batt's drug store at Forty-third street and Calumet avenue was broken into on the night of December 26, and about \$35 worth of cigars stolen.

—It is rumored that a new cut-rate drug store will soon be opened on State street, near Madison.

—C. Thompson has bought the drug store of W. F. Stamm, at 507 Grand avenue.

THE NORTHWEST.

St. Paul, Minn., Dec. 29.

—George W. Douglas, a druggist of Winona, Minn., who was arrested last week on evidence furnished by a representative of the State Board of Pharmacy, for selling drugs without a license, has been sentenced to pay a fine of \$50 or go to jail for ten days. The outcome of this case was being watched for with interest by the board, and it is understood that the board will now vigorously prosecute violations of the pharmacy law in other cities. It is believed that a number of other Winona cases, which have been held back for this decision, will now be brought before the court.

—Among the visiting druggists this week were the brothers Bert Barker, who has succeeded to his father's business in Monticello, and Fred I., who has for several years held the responsible position of pharmacist to the State Hospital at Fergus Falls.

—A large portion of the town of Fessenden, N. D., was burned Wednesday night. Dr. McGregor's drug store was among the business establishments destroyed.

—Among the buildings destroyed in a fire at Canton, Minn., this week, was the drug store of Dr. H. H. Haskins. His loss is about \$5,000.

—A. J. Countryman, of Belview, has just returned from a visit to North Dakota. He has just recovered from a long siege of typhoid fever.

—W. H. Flinn is this week taking a small stock into the new town of Foley, and in the Spring will build a new store there, and stock it.

—A drug store has been started at Aberdeen, Wash., with George A. Todd as manager. The ownership has not been revealed.

—J. E. Stevens, Seattle, Wash., has been succeeded by E. L. Bickford; George M. Hübner, Marion, Ia., by George Hobbs & Co.

—A judgment of \$2,500 on a ball bond has been rendered against G. W. Brush, Sioux Center, Ia.

—Arthur E. Peterson is now working at Virginia, Minn., in Sodergren's drug store.

—N. Gregg is taking charge of Sanger's drug store at Windom, for a month.

—Charles A. Begun, Des Moines, Ia., has given a bill of sale.

—J. A. Cummings, Albany, Ore., is reported to have sold.

—The E. W. Brooke Drug Co., Portland, Ore., has sold out.

ST. LOUIS.

St. Louis, Dec. 30.

—Fred J. Carter, who for five years has managed the St. Louis office of Parke, Davis & Co., has resigned, effective January 1, in order to go with the Luyties Homeopathic Pharmacy Company. He will go to Chicago and open a branch house for them somewhere on Washab avenue in February or March. F. M. Ferry is here from Detroit and will have charge of the St. Louis end until Mr. Carter's successor is appointed.

—Druggist Charles A. Schrier, who, as told in the Era, sued John Lingner and George M. Galloway for \$500 damages for the loss of his beautiful black moustache, the result of thirty years careful training, had the case dismissed by paying the costs. He will straightway raise another in order to recoup himself.

—Eli Lilly & Co., of Indianapolis, have at last opened a regular branch here. Their office is in the Granite Building, Fourth and Market streets, and will carry a full line of their products. J. B. Cuykendall is in general charge with George B. Sell in charge of the city trade.

—Ferd Christianman, of Noll & Christianman, and J. B. Hicks, clerk for L. J. Lehman, both received ultra-fine Christmas presents from their wives. The boy baby of the Christianman family arrived on the 19th, while the Hicks's got their Christmas morning.

—Frank L. Thrasher, a contractor and builder, has bought the M. C. Huggins drug store in East St. Louis, from the estate. Frank Ross, a drug clerk from Cobden, Ill., will run the store for Mr. Thrasher.

—The St. Louis Purchasing Company has been incorporated with a capital stock of \$5,000, by W. C. Gordon, J. T. Samuels, Anderson Russell and others.

—Louis Schurk, the well-known Olive street druggist, has the sympathy of the trade on the death of his mother, which occurred this week.

—Meyer Bros.' Drug Co. are busy with stock-taking, and will be closed to-day, with 120 teams at work. They will open again January 2.

—The Goodwin Manufacturing Company, manufacturers of soaps and candles, were damaged \$400 by fire Wednesday night.

—The Grebe Drug Company, East St. Louis, will open another drug store in the extreme east end of that city.

—The J. S. Merrell Drug Company took stock Wednesday, making no deliveries on that day.

—William H. Lamont, representing Eli Lilly & Co., spent the holidays at his home here.

—J. W. Estes' house salesman has been laid up with a case of chills for a couple of days.

—Lucian Simmons, representing Bauer & Black, spent Christmas with his friends here.

—Dr. F. J. Minnich, manager of the city department of the J. S. Merrell Drug Co., is ill.

Billings, Clapp & Co.'s New Year Greeting.

The first of a series of announcements to the drug trade from Billings, Clapp & Co., of Boston, appears in this issue. The firm, whose goods are well and favorably known to druggists all over the country, have furnished their new laboratory, said to be one of the best equipped plants in the United States for the manufacture of pharmaceuticals and chemicals, and they solicit an opportunity to increase druggists' profits in 1900.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA—Mobile.—John G. Hulsbush, 73-75 Government street, new store.
COLORADO.—Greeley.—Clark & Faulkner, new store.
Hooper.—George W. Simpson, sold to Dr. E. L. Foster.
Leadville.—Leadville Drug Co., Sixth and Harrison streets, sold to R. L. Newman.
CONNECTICUT.—Middletown.—J. T. Wall, 414 Main streets, deceased.
GEORGIA.—Savannah.—F. A. Wheeler, 118 Bull street, sold to L. M. Kennon.
ILLINOIS.—Bloomington.—Funk & Shorthose, 110 West Washington street, sold to George C. Ripley.
Chicago.—James Stevenson Drug Co., 735 Clark street, sold to James H. Wells.
Oakland.—Palmer & Fisher, new store.
INDIANA.—Hammond.—Stauffer & Hubbel, succeeded by E. R. Stauffer & Co.
Selma.—W. G. Bortfield, sold to Good & Williams.
IOWA.—Des Moines.—C. A. Begun, Opera House Pharmacy, sold to W. C. Stillwell & Co.
Emerson.—J. E. Stevenson & Co., sold to A. O. Blair.
Marion.—George M. Hibner, sold to George Hobbs & Co.
KANSAS.—Caldwell.—S. H. Horner, sold to R. J. Stevens.
KENTUCKY.—Greensburg.—J. L. Wilson, sold to the Heizer Drug Co.
MAINE.—Camden.—Edwin S. Rose, of the firm of Rose & Chandler, deceased.
MARYLAND.—Baltimore.—McGraw & Woody, 1000 Edmondson avenue, sold to William G. Lauer & Co.
MICHIGAN.—Grand Marais.—W. B. Minthorn, sold to H. W. Schall.
Hadley.—George S. Hadley, damaged by fire.
MINNESOTA.—Mankato.—L. G. Dustin, 527 South Front street, removed to Jeffers.
MISSISSIPPI.—Ridgely.—Dr. W. D. McCallif, removed to Cleveland, Miss.
Sheridan.—P. O'Dougherty, sold to A. Williams.
NEBRASKA.—Franklin.—W. H. Finley, sold to R. E. Davenport & Co.
NEW JERSEY.—Englishtown.—A. E. Gammidge, burnt out; insured.
NEW MEXICO.—Roswell.—P. C. Dunn, sold to Hodges & Ogil.
NEW YORK.—Constantia.—R. S. Lindsay, sold to H. F. Talcott.
Elmira.—J. T. Van Nort, Agent, in D. D. List, should read J. T. Van Nort. Agent was inserted after the name in error.
Port Jervis.—West Side Pharmacy, 136 West Main street, sold to Howard E. Gould.
Saranac.—Clinton County.—Boudreau Bros. Co., should be added to D. D. List.
Syracuse.—P. L. Ryan Drug Co., 470 South Salina street, sold to J. A. House & Co.
OHIO.—Cleveland.—H. B. Angles, 2578 Broadway, should be R. R. Ruggles, in D. D. List.
Franklin.—M. W. Earhart, succeeded by M. W. Earhart & Son.
OKLAHOMA.—Muhall.—Kincald-Childers Drug Co., sold to Scott & Norris.
Weatherford.—Custer County.—Hadlock & Davis, should be added to D. D. List.
OREGON.—Pendleton.—H. F. Johnson & Co., sold to Brock & McComas.
PENNSYLVANIA.—Hazelburt.—J. Haney & Co., sold to I. E. Burt.
Johnstown.—Harry W. Bolar, 500 Franklin street, new store.
SOUTH CAROLINA.—Florence.—W. H. Darby, damaged by fire, partly insured.—F. U. Lake, damaged by fire, fully insured.
TEXAS.—Greenville.—C. E. Wicker, sold to Dr. I. Ardis & Co.
Italy.—Credille & Carlisle, succeeded by C. S. Credille.
New Waverly.—J. W. Strange, damaged by fire.
Petty.—W. V. Vaughter, burnt out, partly insured.
ROSSIGN.—Anderson Bros., sold to E. W. Shaunfield.
VERMONT.—Newport.—Davis & Cook, succeeded by Davis & Livingston.

TORREY BOTANICAL CLUB.

December 12, 1899.—The scientific programme was opened with a paper by Dr. L. M. Underwood on "The Genera of the Schizaceae." Dr. Underwood explained the peculiar dehiscence of the Sporangium by which this order of ferns is distinguished, illustrating with figures,

and then sketching the history of the order. The second paper was by Dr. D. T. MacDougal, "Studies on Hexaletris." This rare Southern orchid is of great interest on account of its supposed near relationship to Corallorhiza, which develops short coralloid undergrowths without roots, but producing a mycorrhiza. The third paper was by Dr. N. L. Britton, "Notes on Species of Crataegus." Dr. Britton exhibited and discussed thirty-four species of the Northwestern United States, and remarked upon the great need of persistent field study in determining this genus. One must have flowers, mature leaves and mature fruit from any individual bush before he can begin to find its relationship to any other form.

Dr. Britton is endeavoring to get together at the Botanic Garden a collection of these species, and now has a dozen or more, but the wild stock is very difficult to grow, and is impatient of transplanting. Most gardeners graft or grow seed. After discussion by Dr. Rydberg, President Brown and others, the club adjourned.

EDWARD S. BURGESS, Secretary.

PHILADELPHIA COLLEGE OF PHARMACY.

The pharmaceutical meeting held on Tuesday afternoon, December 19, was the most successful one of this year's series in point of attendance. There were many students present and many representative pharmacists of the city, among the latter being William McIntyre, E. M. Boring, F. W. E. Stedem, F. W. Haussman, James T. Shinn, Dr. Clement B. Lowe, Profs. Kraemer, Ryan and Moerk, L. F. Keber and others. The most important feature of the meeting was the paper by Prof. A. R. L. Dohme, of Baltimore, on "The Constitution of Alkaloids," which was read by the author in person, and, considering the abstract nature of the subject dealt with, its presentation was so clear and intelligible that it was appreciated by all who heard it, and elicited no little discussion.

The second paper on the programme was by Charles H. La Wall, and was entitled "Drugs and Herbs Sold on the Sidewalks of Philadelphia." The author stated that the study of the subject was begun several years ago at the suggestion of Prof. Henry Trimble, recently deceased, who had always manifested great interest regarding this subject. The lack of knowledge of our common medicinal plants possessed by the present-day pharmacist was contrasted with the familiarity which former pharmacists showed regarding the indigenous and naturalized official drugs. The vendors of these roots and herbs at the present time are colored people living in New Jersey, and the list of substances handled by them was surprising in its variety and completeness. From a list of sixty-nine official drugs, concerning which inquiry was made, forty-seven were either on sale or would be supplied on order. The list of unofficial drugs aggregated fifty, while the list of flowers, fruits and decorative plants sold by these vendors, who earn a living by this occupation alone in most cases, was still larger. There is no likelihood of obtaining these drugs anywhere nearly as cheaply as in the regular markets, but for experimental purposes or for exhibition as specimens these drugs are unequalled. Specimens and photographs accompanied this paper, which was afterwards commented upon by Prof. Kraemer.

James T. Shinn presided as chairman, and the authors of both articles were honored by receiving votes of thanks for their papers.

The alumni reception, held the same evening in the college museum, was in reality a reception tendered to the college football team by the class of 1900. The hall was elaborately decorated with palms and ferns, which blended harmoniously with the blue and white drapery representing the college colors. The football team consisted this year of the following students: M. J. Brantin, roaniger; Louis Stolz, treasurer; E. H. Young, captain; H. W. Jago, 1902; H. J. Garrett, 1900; W. T. McElwain, 1900; H. M. Carey, 1900; G. E. Jelliff, 1900; H. W. Hughes, 1900; R. W. Dentler, 1900; J. L. Werts, 1900; G. E. Helzine, 1900; G. H. Borrowes, 1900; J. T. O'Hanlon, 1902. Substitute: M. L. Baker, 1900; W. L. Swartz, 1902; J. G. Hayes, 1902; W. F. Kiefer, 1900.

A programme of music occupied the first part, and the latter portion of the evening was devoted to dancing, refreshments being served during the intermission. These events do much to cement the good fellowship so advantageous to college life, and are looked for each month with pleasurable anticipation.

F. E. Holliday, Topeka, Kan. D. E. Prall, Saginaw, Mich.
 H. P. Hynson, Baltimore, Md. A. Timberlake, Indianapolis, Ind.
 F. W. Cheswright, Pittsburg, Pa. A. De Lang, Cincinnati, O.

Watch this column for the latest reports of what is going on in the National Organization.

At a meeting of the Executive Committee, held in Chicago December 18 and 19 (reported in the Era last week) there were considered the reports of the chairman of the committee, the secretary, and the treasurer, and the Committees on National Legislation and Trademarks and Patents. A bulletin giving the results of the meeting will be issued shortly. Upon December 22 the national secretary sent out a circular letter to the secretaries of affiliated societies calling attention to a petition drawn up by the Committee on Legislation, requesting Congress to repeal or modify the stamp tax on proprietary medicines. This circular letter enclosed copies of the petition in question, which, it is hoped, would be brought to the attention of every Congressman during the holiday vacation by the druggists and local organizations in his immediate territory. The substance of the petition was along the same lines as the resolutions adopted by other national, state and local druggists' organizations, asking that the stamp tax be entirely removed, or, if this be deemed inexpedient, that it be reduced to one per cent. and extended in its application so as to cover all trademarked and copyrighted articles. The arguments set forth by the committee were terse, direct and forceful, and much good is expected to result therefrom.

In one form or another the question is constantly being asked, "What is the N. A. R. D. good for?" Much of the correspondence that goes out from the national secretary's office relates to this question. The following is a sample reply: "You ask in your letter the 'Object of forming an organization?' To answer briefly and directly, the main object is to put money into your pocket and the pockets of other druggists of your county by saving their business from impending demoralization. If this department store at — keeps on doing business it will not be long before the druggists of your own town will find their revenues diminishing perceptibly, and it is this we would like to prevent. It is difficult to conceive how any question could appeal to you with greater force."

A prominent manufacturing firm in the West writes to the national secretary as follows:

"If at any time during the coming year a small donation from us would be acceptable, we shall be pleased to contribute to the good work in which you are engaged, as we think you are working along the right lines, in the interest of the drug trade, as well as of all legitimate manufacturers. When we make a small donation to help cover the expenses of the clerical work, printing, etc., we do so without attaching any conditions whatever to the amounts contributed for the good work. As long as you are actively engaged in using the money for the benefit of all concerned we do not feel that you are under any obligations to us whatever in accepting our mite with the other contributions necessary to enable you to carry out your plans."

The secretary of the Adams County (Ill.) Druggists' Association writes that the retail drug trade in that city (Quincy) and vicinity is remarkably free from the cut-rate evil. The association is a strong one, having in its membership all but two of the retail firms of the state and many of the prominent druggists in the surrounding country district. In the city the sale of drugs and patent medicines is entirely in the hands of the retail drug trade, and for ten or twelve years past full prices on patents have been secured.

The Cayuga County (N. Y.) Druggists' Association has affiliated with the national organization and paid its dues. Every druggist but one in the county is a member, and there is practically no price-cutting. Auburn, the county seat, has a population of 25,000.

At a meeting held December 14 of the San Antonio (Tex.) Druggists Association, resolutions were unanimously adopted recognizing and approving the action of the N. A. R. D. in the fullest measure and voting the unanimous co-operation of this organization.

The President and Executive Committee of the Vermont State Association wrote that "our members will individually and collectively stand united in supporting the legitimate work of the National Executive Committee."

To conform to the desires of the N. A. R. D., the Henry Heil Chemical Company, of St. Louis, has reduced the price of its Diamond Eczema Cure from \$8.40 to \$8 per dozen.

THIS FIRM WILL STAND BY THE RETAILERS.

The J. S. Merrell Drug Company, of St. Louis, Mo., of which Cyrus P. Walbridge is president, is out with a circular letter to the retail drug trade, affirming this company's position, that it is perfectly within its rights to sell or refuse to sell to anyone whomsoever, and that the courts cannot interfere with this privilege. It will be remembered that when the Missouri so-called Whaley Anti-Trust law went into effect a few months ago the cutters in St. Louis visited the wholesale houses, tendering orders for supplies, and received these goods in all cases except from the J. S. Merrell Drug Company. Mr. Walbridge and the firm he represents have been generally commended for the position they then assumed, and this circular letter will be looked upon as still further evidence of a determination to stand by the retail drug trade in its present national struggle for its rights and its very existence. The following paragraphs from the letter in question are quoted:

"We believe in the right of retail druggists of this country to so conduct their business as to prevent unreasonable, unnatural competition, the result of which must be the destruction of many independence on the part of retail druggists and the removal of all incentive on the part of citizens to become skilled in the compounding of drugs.

"We believe it is the duty of every wholesale druggist and every manufacturer of articles in the drug line to sustain retail druggists in the exercise of these natural and reasonable rights.

"Believing this, we declare our intention to so sustain the retail druggists until courts of competent jurisdiction command us to do otherwise.

THE AYER 25c. CHERRY PECTORAL PLAN.

The J. C. Ayer Company has recently adopted a special plan of sale, applying it to its 25-cent size Cherry Pectoral, by the terms of which the legitimate dealer, not an aggressive cutter, who will agree not to substitute, is enabled to buy this medicine in any quantity, even a dozen or less, at a 10 per cent. discount, equivalent to \$2.18 per dozen. In half gross quantities he can secure the preparation with an extra 5 per cent. discount, making the net price \$2.05, and should he order a full gross or order a \$25 assorted lot of the Ayer preparations, another 5 per cent. additional is given him by the jobber from whom he purchases, making the net cost of the Pectoral—ordered in such an assorted lot—\$1.94 per dozen. The best price the goods can be sold by the jobbers to cutters is \$2.28 per dozen, which price can only be allowed on gross orders. The retail druggist, therefore, no matter how small his purchase, has an advantage over the cutter should the latter order in gross quantities, of 12 cents on the dozen. If the retailer buys in larger quantities his advantage is even greater—on half gross purchases, 23 cents, on gross lots 34 cents per dozen. In case the cutter finds a jobber who is willing to disregard his contract and give away all the profit he has in the goods, the cost to him would be \$2.16 per

dozen. So that in no event can the cutter secure the goods at a less price than the legitimate dealer. If no jobber violates his contract with the manufacturer, a certain advantage over the cutter is assured the legitimate dealer, even in the smallest quantity, and this feature is thought to be absolutely novel.

Of course, the object of the plan is to protect the druggist against the incursions of the price cutter and assure him a satisfactory profit, and the circular in which it is set forth also carries a strong letter of endorsement signed by F. E. Holliday, Chairman Executive Committee, N. A. R. D. We shall watch with interest the developments in the case, for probably the druggists will not be slow to take advantage of the offer made. Full explanations are to be had by addressing J. C. Ayer Co., Lowell, Mass.

HOW ONE DRUGGIST VIEWS IT.

West Superior, Wis., Dec. 22, 1899.

Editor Pharmaceutical Era:

N. A. R. D. is what we want—a good thing! etc. Why so says everybody, but what do they do?

City organization is a farce, unless there's a man who wants to do all the work and get all the kicks. Country organization, there is not.

How to reach the average druggists? is the question. Druggists are queer, hermit-like animals, who consider themselves complete organizations individually. Now, humor them, my friends, because if you can't bluff a man humor him. Why not convert our ornamental State Associations into something useful? Let them take one event from their yearly programmes (for instance the chewing-gum contest or the greased-pig race), and have them devote their time during that hour to electing a committee for the interests of the N. A. R. D., who should during the year address every druggist in their state personally, sending him literature, fully explaining the aim of the N. A. R. D. and inviting him to join, by sending so many cents to Mr. So-and-So, and sign an agreement to practice personally, as near as he can, the rules of the N. A. R. D. That would be easy, and Mr. John Smith, Ph. G., and Mr. James Brown, druggist, could then work together for their own advantage without having to sit in the same room and shake each other's hands during association meetings. And Mr. Charlie Jones, of Countryville, dealer in drugs, window-glass and farmers' produce, could also join, and tell his bucolic friends of an evening round the stove (with the Sp. Frumment handy) about the great work he is engaged in against the trusts and other common enemies. Then there would be no time lost, and nobody would object to a dollar more in dues to pay the expenses of the committee, and the committee itself would have the satisfaction of knowing that they were really doing something and that they would be the best known druggists in their State (and no expense). And by the time twenty or twenty-five thousand of our thirty thousand druggists would be members—why, the proprietors would consult quarterly with the august body of our N. A. R. D. as to what they thought their marvelous remedies were worth, and also to please tell them to whom they could sell them, and the downtrodden druggist would indeed be a power in the land.

P. A. LIGNELL.

HE'S A DOUBTING THOMAS.

Denver, Col., Dec. 16.

Editor Pharmaceutical Era:

In response to the query what the retail druggist can do to assist the N. A. R. D., I desire to state at the outset that I am a "doubting Thomas." I don't think that much good will accrue from the efforts of this association. They start out well, with a lot of high-sounding resolutions and several high-salaried men, who, perhaps, are more competent to run the affairs of all the retail druggists in these United States than they have proven able to run the small drug businesses that they have in years gone by been connected with. However, be this as it may, I think one of the greatest drawbacks to the working out of some plan for the betterment of the condition of the craft is their seeming unwillingness to stick together; petty jealousies are allowed to creep in, one thinks that his neighbor across the street is getting the best of him, and so he starts out in some way to do up, so to speak, the aforesaid neighbor, and so it goes. The retail drug-

gists as a class are not true to themselves, and until they learn this lesson perfectly not much can be accomplished toward bettering their condition. I do think, however, that the Proprietary Association can and should accomplish much in the next six months that will effectively restore prices on their products to a point that will allow to the vendors a living profit. This can be done, and it seems to me that these men stand in their own light in not doing so at the earliest possible moment. It is human nature for a man to try and sell that upon which he can make enough of that necessary evil to keep away from his door that wolf we hear so much about.

I am willing to do all in my power to assist this movement known as the N. A. R. D., yet, as I said before, I doubt very much if any great amount of good will come from their work. Yours truly, CHARLES E. WARD.

SURVIVAL OF THE FITTEST.

The efforts of the N. A. R. D. tend to protect the druggist against the encroachments of unfair competitors and against imposition by hard-handed manufacturers. Are these the only thorns in his bed of roses? Overcoming these, is he free from disturbing elements?

The N. A. R. D., if it can do nothing else, has accomplished a great work; it has cemented the internal relationships of the drug trade and made druggists realize their dependence upon one another in the advancement of their collective interests. But exclude the existing and engrossing evils and there will still be druggists who find it difficult to make ends meet. They are faithful and upright, but somehow they do not "catch on." This does not refer to men of established business and reputation; their path is beaten, and old trees stand the storm well. Each year brings its quota of fresh material and competition is stimulated afresh. Excluding the cutting of prices, that man will survive and grow whose methods of conducting business are well regulated. Systematic advertising, store department, close and careful buying, methodical bookkeeping and uniform courteous treatment of customers in every walk of life mean cash in the end every time.

• • •

Are drug clerks well paid? A noted economist once said that "a market for products is products in market," interpreting the phrase to indicate the balance between supply and demand. The action of drug clerks' associations in requesting druggists to give preference to their members suggests that the supply exceeds the demand. The unemployed prefer to work for small wages to being idle, and this necessarily depresses their general monetary value in situations for which there is no fixed remuneration.

Quality is an important factor, and the best clerks, not attracted by the emoluments of clerking, bend every energy to start out for themselves. Competition is thereby increased, and more bites of the cake means smaller bites for all.

• • •

Good measure is exact measure. A British journal, in the jocular style of that nation, notes the incident of a customer purchasing a sponge of an apothecary. Seeing him weigh it, she remarked, "You weigh the holes, too, I see." "Yes," he replied, "but we do not charge for them."

Exactness of measure and weight are indispensable at the prescription desk, but there is a great variation in the amount of Epsom salt or castor oil sold for five cents. Should not the same precision be exercised in selling this merchandise as in dispensing? When a customer wants an ounce of Rochelle salt charge him for an ounce, and don't say "about ten cents." The reputation for exactness is worth the trouble of computation and "two cents change."

Free Additions to "Non-Secret Formulas."

T. M. Griffiths, of St. Louis, publisher of Griffiths' "Non-Secret Formulas," supplies all purchasers of the book with new formulas, at intervals, for two years after the book is bought, without extra charge. His announcement in this issue contains a list of new formulas supplied up to January 1, 1900, and mentions a number of others in preparation. "Non-Secret Formulas" is a practical and popular book, largely used by druggists, and is sold at \$5, delivered.

THE ONLY WEEKLY
PHARMACEUTICAL JOURNAL
IN AMERICA.

THE PHARMACEUTICAL ERA

EVERY THURSDAY.

The contents of this publication are covered by the general copyright, and articles must not be reprinted without special permission.

TO THE TRADE.

This Era Blue Book is offered to the drug trade in the confident belief that it will provide a most efficient, even indispensable, aid to drug buyers in the conduct of their business. This Blue Book supplies, within the covers of one volume, up-to-date price quotations on nearly all the multitudinous variety of medicinal articles which constitute the druggist's stock. It combines in this one easy reference volume the most complete price lists of drugs, medicines and proprietary articles yet published, together with the Price Lists of a host of individual manufacturing houses, thereby doing away with the nuisance of separate lists of all sorts and shapes and sizes, which accumulate rapidly, are difficult to preserve in readily accessible condition and which constitute an annoying nuisance to the buyer.

But the Blue Book does not constitute our entire service. The Pharmaceutical Era is the only weekly drug trade paper in America. Its Market Reports and Prices Current are up-to-date and complete, and are compiled with special reference to the druggist's needs as a drug buyer, and to supplement and complete the Blue Book's service.

The connecting link between the two, rendering both complete and at ready service, is the WEEKLY CHANGE SHEET, which is sent every Thursday to each possessor of a Blue Book. The sheet contains the latest information of price fluctuations in drugs and chemicals, changes in, and additions to, the list of patent medicines and their prices, and, specially, all corrections in the Manufacturers' Price Lists which are so serviceable to the careful drug buyer, if promptly published.

Taken together, the Blue Book, the Era and the Weekly Change Sheet constitute a trade service which is complete in both its details and its entirety, and which is placed before druggists in the hope and expectation that it will prove instantly acceptable and worthy of their commendation.

No effort or expense will be spared to make this service continually and progressively more satisfactory, and any and all suggestions and criticisms to this end will be thankfully received so that each annual edition may be more complete than its predecessors.

A PHARMACOPOEIA FOR THE DOCTORS.

As every reader of pharmaceutical journals is aware, there has been much published upon the question of what to do to make the Pharmacopoeia more helpful to and popular with the medical fraternity. Though this official standard and guide is compiled and revised by physicians and pharmacists jointly, its employment is limited almost entirely to druggists, and the great bulk of physicians hardly know that such a book exists. We have heard the pharmacist's views many a time, and know all of the arguments he can advance. In advance of the forthcoming revision, it is very desirable to ascertain what the doctors would like to see in the Pharmacopoeia; how that book can be altered and improved for their service. It is therefore with pleasure that we reprint elsewhere in this number a careful letter from an up-to-date, wide-awake doctor, himself a member of the Committee of Revision, who discusses this question from the physician's point of view. The principal suggestions he offers are that doses should be included, and that the book shall contain up-to-date information upon new remedies, including as many as possible of those which, while not being sufficiently important to be made official, are yet of enough use and employment to require careful description for the physician's information. Another, and it seems to us a most advisable, change is suggested, the inclusion of information regarding the best methods of administration of remedies. The doctor is always glad to get this kind of information, for, not being a chemist or pharmacist, he frequently is at a loss to know in what combinations to prescribe the desired remedy, and he will feel grateful for a hint on the proper vehicle, adjuvant, solvent.

As a suggestion merely, this writer believes that the publication of two editions of the work, one especially for pharmacists, the other for physicians, would solve the problem in a great degree. Taken all together, his suggestions are directly practical and are worth the careful consideration of those who are to frame and produce the next United States Pharmacopoeia.

SHOULD PHARMACISTS STUDY MEDICINE?

In this paper last week was printed a paper whose writer advocates that, having tried all other methods without avail to secure the support of the physicians and build up a lucrative drug business, the druggist should, as a final resort, study medicine, and after

receiving his degree combine the professions of medicine and pharmacy for his self-preservation. The article in question is sound common sense throughout. The thinking and observing man will agree that the writer's recommendation as to the study of medicine is already being put into practice by many pharmacists. Every college of pharmacy in the country can produce proof to this effect. All have been particularly struck of late by the large number of druggists and students of pharmacy who are taking a course in medicine. An examination of the rosters of various medical colleges shows that each of these institutions has a formidable contingent of matriculates who have been or are still connected with pharmacy. The reason for this condition of affairs is evidently the growing unprofitableness of the drug business. Competition among the druggists themselves, owing to their number and the keen rivalry of cut-rate price establishments, as well as the diversion of trade by the department stores, have combined to deprive the druggist of various sources of income which he could formerly rely upon, and have eliminated the element of gain from the sale of a long list of articles. That all those who failed in the drug business or who deemed it an undesirable occupation will make a success of medicine is not to be expected. At the same time, the profession of doctor seems to hold out greater rewards than those which fall to the lot of all but a favored few engaged in the sale of drugs and pharmaceutical preparations. Perhaps the necessarily intimate relations which exist between the physician and the druggist prompt the latter to regard his pursuit as a logical stepping stone to the science curative.

ARE PATENT MEDICINES MEDICINES?

The decision of the Supreme Court (published in this journal last week) that in Illinois the sale of patent medicines in any store not conducted by a registered pharmacist is a violation of the pharmacy act, is obviously a very important ruling. It is only common sense, however, to exact that medicinal agents should be handled only by experienced pharmacists, though unfortunately, with the exception of Illinois, we know of no state where such law exists. The pharmacy laws in all other states make specific exemption of patent medicines from their provisions, and allow their sale by any class of merchants. Secret medicines, therefore, by law seem to be neither, fish, fesh nor fowl. If they are medicines, as their manufacturers claim for them, why should they not be treated as medicines and their sales confined to pharmacists? This is just what the proprietors fight against with their money and influence in every state legislature in which such a proposition is advanced. If patent medicines are not medicines (either in law or in fact), then their sale should of course be allowed to anyone and by anyone, but in this case druggists would have no right to them above other merchants. As a matter of fact the prevailing condition is an anomalous and inconsistent one. Proprietors tell the public that their preparations are medicines, and yet when they sell them they do not wish them to be considered as medicines. It is this condition which has caused such great trouble in the marketing of these lines, and has involved the retail drug trade in the cut-rate difficulty. Patent medicines are handled and sold and considered by the public as mere merchandise, which any uneducated clerk can hand over the counter without responsibility, and so long as they are such merchandise druggists will be unable to confine their sale to the drug trade. Of course many of these preparations are just as potent in a medicinal sense as the standard official articles the druggist car-

ries, but the law does not so regard them. The Illinois decision, however, will clear up the atmosphere in that state somewhat, though it will be bitterly opposed by patent medicine manufacturers, who have heretofore sold their goods in that state through all manner of agents outside the drug trade.

DANGERS OF SAMPLE DISTRIBUTION.

A little child in Wilmington, Del., swallowed a couple of dozen small pills which he found in a box in the dining room. As a result he died, and chemical analysis later disclosed that strychnine in the pills was the direct cause of death. The child's sister was acting as sales agent for these pills, stimulated by her desire to secure a set of dishes, to be given by the manufacturers as a premium for a certain number of sales. This case furnishes additional strength to the argument that the indiscriminate distribution of secret medicines is a very dangerous practice, and should be entirely prohibited by law. Many patent medicines contain potent ingredients likely to cause death if used in large quantities by the careless or ignorant. Children especially are very likely to think that the pretty little colored pills are candy, and the case in question is not the only one where death has followed as the result of such supposition. Several cities have ordinances prohibiting the distribution of medicines from house to house, but what is wanted is a law which will confine the sales of all kinds of medicines to those competent by education and training to handle them safely. When strychnine pills are sold by agents secured by advertising in the newspapers, as was the case here, there certainly is an element of danger which should be removed as quickly and permanently as possible.

PHARMACEUTICAL LEGISLATION IN NEW YORK STATE.

The annual circus at Albany has opened, with flag-flying and trumpets flourishing. The show promises to contain more rings than usual this year and to provide lively and interesting performances in each. Already the announcements, reports and rumors of bills concerning pharmacy are numerous enough to bewilder even the Nestors of the profession who have followed pharmaceutical legislation since the days of the fathers.

So far the bills reported include an "All-State Pharmacy Board" bill, amendments to the New York City charter provisions regulating pharmacy, two different measures to regulate the working hours of drug clerks in New York City, a new "poison bottle" bill and a bill to prohibit the sale of carbolic acid except upon a physician's prescription.

And besides, the Governor has been asked to appoint a commission to examine into the existing pharmacy laws and then to formulate a new act to provide uniform regulations for the whole state.

It will be seen by all who have the welfare of pharmacy at heart that the legislative animals need to be watched as closely and as constantly this year as ever before, if deleterious legislation is to be prevented. Gird on your armor, brother watchers, and—Heaven help you!

WORK OUT YOUR OWN SALVATION.

We are very glad to print the following from an esteemed subscriber. There is a good deal of hard common sense in his statements, and there are many druggists who, we have no doubt at all, will agree with him in every particular:

"The great majority of druggists are to-day neglecting the professional part of the drug business in their frantic efforts to bring about a condition of prices on proprietary medicines, which evil at this

time is spreading, with absolutely nothing more in sight to restore full prices now than ten years ago. The very pharmacologists they did make at one time are now being bought from the jobber, their claim being that they can buy cheaper than make them. The physician is neglected. No effort is being made to either assist him or supply his wants in any way; in fact he is ignored, and the enterprising manufacturer's agent gets their trade. Satisfy yourself, as I have done, make a canvass of the druggists and physicians—physicians in particular—and they will tell you "the druggist don't seem to care very much for our patronage or good will," and there you are. The druggists are not making the effort in the right direction. Drop the question of proprietary goods. Make your own preparations, and become as interested in pleasing your patrons as you have been in restoring high prices. Be friendly to your neighboring physicians, and the effort will have a telling and a wholesome effect, and the druggist will soon be able to pay his bills promptly and will have gained a victory for a good cause. Don't, I ask, neglect these points."

YOU'RE GOOD FELLOWS.

The druggists in Toledo and surrounding territory reorganized the other day under the name of the Northwestern Ohio Retail Druggists' Association. The prime purpose of this step is to lend allegiance to the N. A. R. D. and its aims, and to do everything possible to bring about better trade conditions. The local jobbers, to show their good will toward the movement, corralled the entire meeting upon adjournment and feasted the members at a nearby cafe. This is but one of several instances where jobbers and manufacturers have endeavored to show their good will toward the N. A. R. D. by courtesies to the retail druggists. If the N. A. R. D. has done nothing else it has at least brought into closer touch, into more friendly relations, the three branches of the drug trade, and in this may be found an earnest of a greater success in the ultimate objects of the association.

BLUE LAWS NOT SATISFACTORY.

A week or two ago there were handed to the druggists of Lawrence, Mass., circulars containing an extract from the published statutes restricting Sunday sales, and the civic authorities stated their intention to see that the law was strictly observed. As a consequence all the druggists restricted their sales on Sunday to drugs, and these only upon prescription. The people, however, did not take kindly to the new order of things, are protesting vigorously, and it is expected that very shortly the drug stores at least will be allowed to resume their old practices of selling any and everything on the first day of the week as well as on the other six. Between Sunday laws, liquor regulations and the like, the druggists of Massachusetts seldom know just where they are at.

DOLLAR DAILY FOR LEG'S BOARD.

Eleven years ago a New Hampshire man was obliged to have his leg amputated. He requested a local druggist to suitably preserve the severed member until his decease and then see that it was buried in his coffin with him. A few days ago this man died, the leg was buried with him, and now there is a squabble over the will. The druggist has brought in a claim for \$3,450 for "the storage and care of ———'s amputated leg." Leaving out Sundays, the amount claimed is at the rate of about \$1 a day, and the executors are trying hard not to pay the bill. One dollar a day is a pretty stiff charge, especially as the leg did not eat anything, but then it must be remembered that alcohol for preserving purposes costs money.

LOOK OUT FOR THE FIT-THROWER.

A pretty slick game has recently been played by sharpers upon a few of the more credulous druggists of Salt Lake City. A woman, or in some cases a man, would fall down upon the sidewalk in front of a drug store and put up a very good semblance of a fit. Accomplices would run into the store and beg the assistance of the proprietor and clerks, who, rushing out to assist the fit-thrower, would leave opportunity for these accomplices to rob the money till and abstract easily portable articles of value. The game worked well in several places, and up to last report the operators have not been apprehended.

NOT MANY, IT IS HOPED.

The Excise Commissioner of St. Louis, spurred by the local Liquor Dealers' Association, has complained to the prosecuting attorney that some druggists are in the practice of selling intoxicating liquors at their soda fountains without licenses. If this statement is found sustained in fact cases will be brought against the guilty druggists and prosecuted vigorously.

CRITICISM, BUT NOT CORRECTION.

Braidentown, Fla., Dec. 30, 1890.

To the Editor: Permit me to draw your attention to an error in the text of lecture 24, junior class, on page 58, Era of Nov. 30. You are correct in giving .00366 as the co-efficient of gaseous expansion, but when you undertake the assertion that it is the co-efficient of gaseous contraction, you are "kicking against the pricks." The co-efficient of gaseous expansion is an invariable number, and .00366 is approximately correct, but the co-efficient of contraction is variable, it varies with every degree of temperature. In your own calculation your error is apparent; not to any marked degree, however; but suppose we consider the expansion of 1000 cc. of gas from 0° C to 273° C, and then consider its contraction from 273° C to 0° C, where shall we land at? This calculation reminds me of a certain Welsh preacher who was noted for his splendid sermons. He was once approached by one of his congregation who told him that he was a great admirer of his abilities, but did not think that he was the author of, or that he composed his own sermons. "Well," said the preacher, "I will tell you the secret of the composition of my sermons. I have a book of sermons composed and written by a very eminent divine. I take one of his sermons as it is written in the original English and translate it into Welsh, then, about three days after, I retranslate in into English, and I will then defy any man to find any trace of the original sermon in it."

Just so if we apply your figures to the expansion of 1000 cc. of gas from 0° to 273°, then the contraction of 2000 cc. from 273° to 0°. If your remarks had been confined to expansion alone they would have been all right, but in trying to apply them to contraction you were in error, that is, in applying the co-efficient. The rule by proportion is correct.

Yours very truly,

J. CH. STANSFIELD.

FOR PROHIBITION STATES.

An old-school physician, practicing in a small town supporting only one druggist, of over scrupulous principles, wrote for one of his patients the following prescription:

R. Spir. frumenti, q. s.

A. B. C., M. D.

Fearing that the druggist might hesitate to fill the prescription—it being Sunday—he added the following: Please give the bearer the above-named potion;

He's a pretty good chap, and employed at the station; The liquid he craves is known as Frumentum.

And the name at the bottom will tell you who sent 'im. The letters "q. s." to be very explicit.

Is a medical dodge known as "quantum sufficit;" But if a special translation you crave for

It is simply this: Give him all he can pay for.

—The Doctor's Factotum.

(Special to the Era.)

SPANISH PHARMACY REORGANIZED.

PRIL 12th, 1898, is the date of the Royal decree by which the medical and pharmaceutical professions, throughout Spain were organized in provincial groups or "colegios." The striking events that followed—Mr. McKinley's ultimatum on the 20th, the affair on Manila Bay on May 1—naturally diverted public attention from details of home government, but the measure has now been in force long enough to merit a brief summary and a few comments.

The "Colegio" or Professional Guild.

is an idea 700 years old. The apothecary-grocers of the thirteenth century formed "colegios" in Barcelona, Madrid, Valencia, Seville, Tarragona, Zaragoza, Pamplona, etc., to inspect drug stores, examine apprentices, etc., etc. They gradually died out, in Spain as elsewhere. Their revival was passably suggested by the success of the French pharmaceutical "syndicates." There is, however, one great difference between the French bodies and the new Spanish organization. The Paris and other syndicates are purely voluntary. No one is forced to join, and aggressive cutters are blackballed if they present themselves for admission. In many departments no syndicate yet exists. The Queen of Spain's decree, on the contrary, provides for the formation of one medical and one pharmaceutical "colegio" in each of the Spanish provinces; and no doctor or pharmacist will be allowed to practice unless he forms part of the local body. It is the compulsory character of the regulation which has called forth some fierce criticism, much opposition and a host of petitions to the Minister of State.

An Executive Committee

or "Junta de Gobierno" is to be elected by the pharmacists of each province. Spanish provinces (like the states of the American Union) vary largely in size and population. They are divided into three classes, the "first class" or more important provinces have a Junta composed of eight members, while seven and five suffice respectively for second and third class provinces. Only those pharmacists who have held the diploma for a given term of years, and who pay a certain amount of taxation, are eligible for election as committeemen. For instance, the chairman of the Junta of a first-class province must have "exercised" his profession for fifteen years, while six years' experience will qualify a pharmacist for the post of "vocal" (ordinary committeeman), secretary or treasurer in the smaller provinces. The idea is, of course, to secure these posts for the real leaders of pharmacy in each district.

Professional Self-Government

and mutual co-operation for the repression of abuses are to be the object of these juntas. Every member of the colegio (and consequently every pharmacist in Spain) promises to advise the junta of his changes of address, not to give medical consultations, not to league himself with a particular doctor by secret arrangement, not to possess or manage more than one pharmacy, and generally to do his best to uphold the dignity of his profession.

For the first offense the Junta can only issue a warning; in case of repeated offenses fines can be inflicted (the maximum varies from \$10 to \$100, according to the "class" of province and the number of previous transgressions), and even in extreme cases the temporary revocation of the offender's right to practice pharmacy may be decided upon. The right of appeal to the Minister of State is provided for.

The Registration Fee

to be paid by every pharmacist on entrance as member of the colegio is fixed at ten, six and three dollars for provinces of the first, second and third classes, respectively. For the first year, however, the rates will be only \$2, \$1.50 and \$1.

As a general rule, this idea if "colegiacion" was popular among the younger pharmacists, but disliked by some of the elder men. The doctors seemed specially hurt, and protested that a slight had been cast upon their professional dignity, and that the advantages were purely illusory. However, the provinces organized one by one. Last June a group of representatives from the colegios of the Pyrenean provinces met at Pamplona, and the idea of a National League of these bodies—a sort of Spanish N. A. R. D.—was seriously talked of.

In Seville

the matter was discussed further, and the project formed of a National Congress of Pharmacists. The capital of sunny Andalusia is the seat of one of the four Spanish Faculties of Pharmacy. The Southerners corresponded with their Madrilené colleagues, energetic action was taken, and on October 18 last

The National Congress

met in the hall of the old Madrid Colegio of Pharmacy. Thirty provinces were actually, and seven indirectly, represented; the eleven absentees were mostly places of minor importance. From Corunna, on the Atlantic seaboard, to sunny Malaga, on the Mediterranean; from rock-bound Biscay and the Pyrenean provinces to the old

A STREET IN SEVILLE.

Moorish lands of Granda and Murcia; from bustling Barcelona to sleepy Cuenca, every important section of Spain had sent its delegates, and Senor Madariaga, of Madrid, who presided at the opening meeting, warmly congratulated the Sevillanes on their happy initiative.

Four sections were at once organized to study, (1) education, (2) legal reform and the new sanitary law, (3) bye-laws for colegios, and (4) various other matters. Our space will only permit of a summary of the principal resolutions voted.

The Educational Section

resolved, (1) That the re-establishment of a two years' "stage" (or period of practical experience behind the counter, which has always been exacted in modern France, and was obligatory in Spain (1868) was desirable; (2) that a chair of bacteriology should be created at

each faculty of pharmacy; (3) that lessons on chemical analysis, especially that of food, medicaments and poisons, should be given daily; (4) that public hygiene be properly taught to all pharmaceutical students. Some interesting points regarding

Imported Mineral Waters and Patents

were discussed in section II. It was voted (1) that the sale of all mineral waters and proprietary medicines should be exclusively reserved to pharmacists; (2) that no "patent" medicines be admitted by Spanish customs unless approved by the Madrid Academy of Medicine and full composition stated on label; (3) that the same regulation be applied to Spanish proprietary medicaments; (4) that reciprocal terms be enforced by Spanish customs as to entry of foreign mineral waters and patents.

This last resolution requires a slight explanation. At present all mineral waters may be introduced into Spain so long as customs duties are paid. But France exacts that all Spanish mineral waters be counter-analyzed by the Paris Academy of Medicine, and if the result does not tally with the Spanish analysis furnished by the exporter his goods are not allowed to pass the French Custom house. This is felt to be a case for reprisals, and the new sanitary law, now before the Spanish Senate, will probably embody a clause stipulating the reciprocal measures above reported.

Druggists

exists in Spain (as in France) as a separate class to pharmacists. Mr. Andres, of Valencia, proposed two classes, (1) "industrial druggists," to sell certain scheduled articles of every-day use, but prohibited from selling patents, mineral waters, galenicals, etc.; (2) "medicinal drug stores," for the wholesale and retail sale of medicaments, to be kept by registered pharmacists only. The two classes of business not to be permitted in the same shop. This was discussed and approved.

The Limitation of Pharmacies,

as in Germany, etc., was discussed in section IV., Prof. Gomez Pamo in the chair. The scheme approved of was the principle of one pharmacy per 5,000 inhabitants in towns. In rural districts the colegio could best decide local needs. The number could be gradually reduced as deaths and vacancies occurred, and proper compensation accorded to heirs, etc.

Municipal Pharmacists.

In Spain each town (or collection of villages) passes an annual contract with a pharmacist—sometimes a local man, sometimes an outsider, brought in by special tender—to fill all prescriptions brought him by persons certified by the Alcalde (or Mayor) as indigents. It is manifestly hard on a man, if he has specially set up a pharmacy in a small place on the strength of this contract, to be deprived of this (possibly the main) portion of his income at the end of a twelvemonth through a caprice or prejudice of the Municipal Corporation. The "partidos" or districts also require to be re-adjusted and other abuses abolished; it is, in fact, one of the knotty questions of modern Spanish pharmacy. Senor Baranguan's paper on the subject was exhaustive and conclusive. The "titulary" pharmacist, brought by open competition, ought to be assured a permanent position, he held, while the local man should also hold his post for life if his contract were renewed for three years consecutively. On the other hand, the "titulary" pharmacist should engage himself to fill all prescriptions brought by those inscribed on the paupers' list, and act as municipal adviser in sanitary work, analyst of drinking water, food, etc.

Urgent Remedies.

It was also unanimously resolved that the provincial colegios should have the right of authorizing Town Councils, in places where no pharmacy exists, to keep a "bottiquin" or stock of medicines useful in urgent cases. This stock, like all pharmacies, to be periodically inspected by the officials of the local junta, supplied by the "titulary" pharmacist as above described, and paid for by the municipal authorities.

Municipal Laboratories.

It was proposed, should be made compulsory in all towns of over 12,000 inhabitants—not necessarily completely equipped establishments such as exist at Madrid, San Sebastian, etc., but in accordance with the size and wealth of the township. A local pharmacist, with a salary of \$200 a year, would suffice as head analyst.

The Closing Meeting.

on October 25, was presided over by Senor Carlos Maria Cortezo, Director General of Public Health, and was marked by the same cordial tone as pervaded the whole proceedings. Votes of thanks were passed to the chair-

MADRID COLEGIO.

man, the colegio, the daily press and the pharmaceutical journals. A "viva" for "United and Regenerate Spain," and another for "Spanish Pharmacy," and the congress dispersed, only to meet again at

The Banquet.

organized by the Madrid Junta at the Hotel Ingles. Senor Baranguan received quite a little ovation—his study on "Municipal Pharmacy" was considered the feature of the congress—and was warmly complimented and publicly embraced by Senor Cortezo. It was decided that the portraits of the delegates should be framed in a group and hung in the board room of the Madrid Colegio, where the photos of the members of the 1866 National Congress may still be seen.

Military Pharmacies.

Before leaving Madrid the provincial delegates joined their comrades of the metropolis and formed deputations to the Prime Minister and the Minister of Gobernacion (Home Affairs) on the subject of military pharmacies. These establishments, founded to supply officers and soldiers, were allowed (on the proposition of Gen. Salamanca) to extend their operations to the families of military men. It is asserted that this privilege is grossly abused, and that a mass of unauthorized persons obtains medicaments at military pharmacies. Last April the Madrid Faculty (teaching staff) and Colegio (business men) of Pharmacy joined in a deputation to Senor Silveira. In July Senor Ruiz Jimenez brought the question before

The Spanish Parliament.

He told the Congress of Deputies that in spite of increasing population thirty-three pharmacies had closed in Madrid during the last ten years. The reason was plain enough—the four existing military pharmacies executed 500 prescriptions daily. He asked for no new law, but appealed to the Prime Minister to enforce the Royal Decrees of 1884.

Senor Silveira promised to consult his colleague, the Minister of War, as to the best method of preventing abuses.

The Pharmacists' Deputation.

who waited on Senors Silveira and Dato after the close of the Pharmaceutical Congress, received similar assurances and many compliments from the Prime Minister, the Minister of Gobernacion, and it is to be hoped that the exertions of Senor Ruiz Jimenez in the Lower House and Senator Julian Callega (Professor at the Faculty of Medicine) will not be fruitless.

Sisters of Charity

still dispense in many Spanish hospitals. Prof. Gomez Pamo's motion that a petition be addressed to the Government asking for the appointment of a properly qualified pharmacist and assistants in each hospital was adopted.

SHALL THE SCOPE OF THE PHARMACOPOEIA BE INCREASED?

BY ROBERT EDES, M. D.

Among the many suggestions and remarks which the approach of the time of calling the convention for revising the Pharmacopoeia is eliciting, the query why the sale of this book is so small among physicians often appears, and why they are so little acquainted with its contents and its merits. That such a condition exists is undoubted, but it is also true that there is a reason for it, and it seems to me, without yielding to anyone in my respect for the book in the position it is intended to fill, that the reason is a good one.

Dr. Long, in an article which tends in the same direction as my own thoughts, asks whether we—physicians—"are not shirking our duty when we allow pharmaceutical influence to predominate in the convention which directs its issue?" To this I would answer that, if medical colleges and societies send 85 out of 100 delegates, as they did to the convention of 1890, medical interests are fully represented. The details of the pharmacopoeia are properly in the hands of pharmacists.

It is true, as Dr. Long says, that the Pharmacopoeia originated in the needs of physicians, but that was at a time when a very large proportion were of necessity their own pharmacists. A well-known Boston doctor, whose practice was largely among the wealthier classes, used to say that there was no use in a physician pretending to be anything else; he always would smell of rhubarb.

But now the amount of information which the up-to-date practitioner is absolutely obliged to acquire has so enormously increased, without, so far as any one can see, his capacity having been correspondingly enlarged, that he must cut off all that does not necessarily come within his province. On the other hand, the processes and scope of pharmacy have been so specialized that the practitioner can have this part of his work done so much better than he can do it if he had the time, that the separation has taken place with great mutual advantage. The physician asks the pharmacist for a drug and expects to have him provide it pure, but probably not once in ten thousand times does he apply the pharmacopoeial tests to see whether it is really so. It might have been premised that the pecuniary success of the edition of 1890 has been such that there is no financial reason for desiring to increase the sale of the next one, except that it could perhaps be afforded a little cheaper. The receipts have provided for much research in preparation for the coming revision and there is still a considerable balance unappropriated.

But it is desirable, in the interests of the medical profession, that its members should become acquainted with the official and authoritative statement of their pharmacologic instruments, and that they should be able to look to some disinterested source for information on the enormous number of new remedies—good, bad and indifferent, honest and fraudulent—which are constantly thrust before them in advertisements and specimens, and in regard to which it is almost impossible that they should independently inform themselves. Information there is, if they have the disposition and the time to look for it, but each is much more likely to take what is offered him, buried as the truth may be among proprietary preparations and garbled pseudo-medical literature. The implicit confidence in the ignorance and credulity of the medical profession in regard to drugs, displayed by such hosts of advertisers, and evidently grounded on long experience, is a scandal and disgrace, a part of which might perhaps be averted by familiarity with a work in which no self-interest can be allowed to appear.

There are two reasons why the Pharmacopoeia is comparatively unknown to the physician. The first is that it contains so much that he does not want and can not use; the second, that it does not contain the information for which he most frequently consults a book of reference, *i. e.*, doses and new remedies, or sometimes the best forms of administration.

The pharmacologic ground which the physician wishes to traverse is now covered by two sets of books, among

which are several of which American medicine and pharmacy may well be proud. Of these, the two dispensaries are the most comprehensive, and against them there is nothing to be urged except size and consequent expense. But the man who buys one of these has but little use for the Pharmacopoeia, which is practically included in them. The numerous and excellent works on therapeutics usually contain enough of pharmacologic detail for ordinary use by the practitioner. All of these discuss non-official remedies.

It is with such works as these that the next Pharmacopoeia must in some way compete, if it is to have any extensive sale among physicians, and the question at once arises whether it is for the interests of medicine and pharmacy to undertake this new responsibility or leave it where it now is, in private hands. There is certainly room for more than one opinion on this point. In regard to doses, it would not be advisable for the Pharmacopoeia to state them in any such authoritative and absolute way as to relieve the physician of his full responsibility in any individual case, but usual or average doses might very properly be given, and a statement of the amount of active principle contained in different preparations of the same drug. There are many most useful drugs now in the Pharmacopoeia, whose chemical constitution is so illy defined that a short statement of the safe or proper dose is really nothing but a judicious summary of clinical experience. Such, for instance, is digitalis. Even more is this true of some of the most important and useful additions to the medical armamentarium; for instance, the whole group of toxins.

It may be said that if the Pharmacopoeia once enters the wide and unsurveyed territory of the most recent investigation and discovery, it will at last find itself in a swamp of speculation, and standing on the same level with all sorts of absurdities and frauds. But it is to be remembered that medical practitioners and pharmacists are already forced to enter this region, whether they like it or not, and will most heartily welcome even a feeble and uncertain light of science which is at least distinguishable from a mere will o' the wisp, by honesty of purpose and impartiality.

A work occupying the position of the Pharmacopoeia and possessing the qualities of disinterestedness, impartiality and freedom from individual prejudice, for which the method of its preparation and publication would be a guarantee, must be of the highest value to the medical profession and would meet with a warm reception therefrom.

Some simple additions to the book as at present arranged would not materially increase its size or cost, and could be made to cover the matter of dosage, but a consideration of non-official medicines would be another matter.

Would it not be possible to publish, under the auspices of the convention, two editions, to be called respectively the physicians' and pharmacists' editions, using the same arrangement and the same text so far as appropriate to each, but having in the physicians' an appendix containing, in an abridgment, all that is positively known of non-official drugs? For this appendix room would be made by the omission of a large amount of detail unnecessary and cumbersome for the physician.

In the pharmacists' edition, it might be unnecessary to put many articles which are not, and probably for many years will not be, subject to exact chemical and pharmacologic tests of purity. Still, as most of these are now to a great extent for sale in the shops, it seems more practical for the authority in use by the pharmacist to take cognizance of them, even if unable to test and guarantee their purity and efficiency. Such an edition would be really an abridged dispensatory, and would be unnecessary for those who have the larger one. On the other hand, it could be sold at a much smaller price and could be more easily remodeled at short intervals than the more elaborate works.

In conclusion, although I am unworthily a member of the Committee of Revision, this letter embodies the views of no one except myself, and is intended as a suggestion rather than as an argument.—(Correspondence in the Jour. Amer. Med. Assoc.)

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Manufacturers of Sodium Phosphate and Phosphoric Acid.

(J. G. C.) Nearly all manufacturers of medicinal chemicals make sodium phosphate and phosphoric acid. Write any of the following: Powers & Weightman, Philadelphia; Rosengarten & Sons, Philadelphia, Pa.; Herf & Frerichs Chemical Co., St. Louis; Larkin & Scheffer, St. Louis.

Books on Clays.

(D. P. C.) You can profitably consult the various annual reports of the U. S. Geological Survey (Mineral Resources of the United States). Recent volumes of these reports contain special articles on the clay-working industries of this country (see 18th annual report, part IV., page, 1,128, and also the 19th annual report, part VI, page 469). These Reports contain very full information concerning the technology and use of calcareous clays. The chemistry and methods employed in the analysis of clays are discussed in the following works: Thorpe, "Outlines of Industrial Chemistry," \$3.50; Blount and Bioxam, "Chemistry of Manufacturing Processes," \$4.50; Ashby, "How to Analyze Clay," "Practical Methods for Practical Men;" Ulzer and Fraenkel, "Chemical-Technical Analysis," \$1.25.

Spotting Cigar Wrappers.

(J. N.) It is said that tobacco leaves used for cigar wrappers may be "spotted" by sprinkling upon them a chlorinated solution like Javelle water or Labarraque's solution. Solutions containing sulphurous acid gas have been similarly recommended. The following formula for a liquid used in the factories at St. Louis, has been published: Sodium carbonate, 3 parts; calcium chloride (chlorinated lime), 1 part; hot water, 8 parts. Put the sodium carbonate in a pot, pour hot water over it, and boil until dissolved. Let boil for four or five minutes longer, add the calcium chloride, and at once remove from the fire. When cool, decant into earthenware or stoneware jugs, cork tightly, and keep in a cool place. The corks of jugs not intended for immediate use should be covered with a bit of bladder or strong parchment paper, and tightly tied down to prevent the escape of gas, and consequent weakening of the bleaching power of the fluid. The prepared liquid is sprinkled on the tobacco, the latter being then exposed to light and air, when, it is said, the disagreeable odor produced soon disappears.

Loeffer's Solution.

(H. L. H.) A number of formulas have been published under this title. Here are some of them:

- | | |
|---|----------|
| (1) Menthol | 10 grams |
| Toluol, q. s., to make | 36 Cc. |
| Then add: | |
| Absolute alcohol | 60 Cc. |
| Solution ferric chloride, (G. P.) | 4 Cc. |
| (2) Menthol | 10 grams |
| Toluol, q. s., to make | 36 Cc. |
| Then add: | |
| Creolin | 2 Cc. |
| Absolute alcohol | 65 Cc. |

(3) A staining agent sometimes used in the histological laboratory and known as "Loeffer's Alkaline Solution" is prepared by adding 30 Cc. of a concentrated alcoholic methylene blue solution to 100 Cc. of a solution of caustic potash (0.01:100). Filter before using.

Loeffer's Moriant Solutions.

(1) Ten Cc. of a 20 per cent. solution of tannin, 5 Cc. of a cold saturated solution of ferrous sulphate, 1 Cc. of an aqueous or alcoholic solution of fuchsin (or 1 Cc. of an

alcoholic solution of methyl-violet). (2) One per cent. solution of caustic soda. (3) Sulphuric acid solution of such strength that 1 Cc. will be completely neutralized by 1 Cc. of 1 per cent. caustic soda solution.

Oil Liniment.

(F. W. M.) We are not familiar with the preparation you name. The following formulas have been recommended under the above title:

- | | |
|---------------------------|--------------|
| (1) Oil of cedar | 4 fl. ounces |
| Oil of cajuput | 4 fl. ounces |
| Oil of cloves | 4 fl. ounces |
| Oil of sassafras | 4 fl. ounces |
| (2) Oil of origanum | 4 fl. ounces |
| Oil of henlock | 4 fl. ounces |
| Oil of cajuput | 4 fl. ounces |
| Camphor | 4 av. ounces |
| Capsicum, powdered | 2 av. ounces |

Mix, macerate for seven days, agitate occasionally, and filter in well-covered funnel.

- | | |
|-----------------------------------|------------|
| (3) Gum camphor | 2½ ounces |
| Chloroform | 4 ounces |
| Sulphuric ether | 4 ounces |
| Chloral hydrate | 1 ounce |
| Oil of origanum | 6 ounces |
| Oil sassafras | 2 ounces |
| Turpentine | 192 ounces |
| Alkanet root, q. s. to color red. | |
| (4) Chloroform | 2 ounces |
| Liniment of camphor | 4 ounces |
| Lingseed oil | ½ pint |
| Olive oil | 1 pint |

Mix.

Red Elixir.

(H. E. L.) We cannot give the formula for the vehicle employed in the manufacture of the proprietary preparation. A "red" elixir may be made by coloring the official aromatic elixir of the Pharmacopoeia with tincture of cudbear, as is done in the preparation of compound elixir of pepsin of the National Formulary, a book you should possess. The following formula produces a very satisfactory vehicle for the administration of medicines in the form:

- | | |
|--|-----------|
| Oil of orange | 1½ drams |
| Oil of lemon | ½ dram |
| Oil of cardamom | 10 minims |
| Oil of coriander | 5 minims |
| Tincture of vanilla, made from
vanillin | 2 ounces |
| Cologne spirit | 2 pints |
| Simple syrup | 3 pints |
| Rose water | 1 pint |
| Water, distilled | 2 pints |
| Magnesium carbonate | 1 ounce |

Dissolve the oils in 4 ounces of the cologne spirit; place the magnesia in a large mortar, pour on the solution of oils and triturate well. Take 12 ounces of the spirit, mix with the 32 ounces of water, and slowly add to the contents of the mortar, stirring constantly and uniformly for 10 minutes to insure its solubility; filter and set aside. Mix the syrup and rose water, and to this mixture add the remaining pint of spirit, then add 2 ounces of vanillin extract, and shake well. To this add the soluble flavoring and mix thoroughly. If the syrup is clear (as it should be) no further filtration is needed—If red elixir is desired, color with carmine and caramel, q. s. This elixir has a very fine flavor, is easily made and can be used with iron salts.

Oil of Larkspur Seed.

(Medicus.) The seeds of Delphinium staphisagria (stavesacre, or larkspur) contain several alkaloids, the most important being delphinine, delphinine and delphinidine. The seeds also contain a fixed oil, which has been recommended when diluted with olive oil for the destruction of pediculi. In commenting upon this line of treatment, Shoemaker says that any bland oil would answer the purpose, as lice are air-breathing insects and are suffocated by being immersed in oil; poison is therefore unnecessary. He also states that an ointment consisting of 1 part of the oil of stavesacre to 7 parts of lard has been found efficacious in prurigo scitilis. Regarding the alkaloids above mentioned Charalampi (Inaug. Dissert. Dorpat) found that, although delphinine and delphinine have the same chemical composition, they differ slightly in their behavior to water, alcohol, ether and benzol, but still more in their physiological effects. Delphinine was an acrid, numbing taste, while delphinine

is bitter, leaving a burning sensation on the tongue. Delphinoline, which is amorphous, has a bitter, scarcely acid taste, is soluble in ether, and yields amorphous salts, which are soluble in water. The mixture of principles insoluble in alcohol, known hitherto as staphisagrine, consists of at least four alkaloids, all of which are amorphous and have a bitter taste. The physiological action of the different alkaloids was determined by Professor Kobert. He found that they do not dilate the pupil; otherwise they resemble aconite, though decidedly weaker, differing among themselves in their effects. Delphinine shows a very close relation to aconitine.

Some additional information may be found in the last edition of the U. S. Dispensatory.

Boils.

(U. W. C.) It is said that a diet too rich in nitrogen or too suddenly changed is likely to predispose to boils, and they may manifest themselves in any condition associated with impoverished blood. The following suggestions for treatment are abstracted from "Minor Ailments." The general health is given tone by a generous but unstimulating diet. Of more direct medicines, iron and quinine, in quantities sufficient to produce their full physiological effect, are chiefly favored. Tablespoonful doses of "barm," three or four times a day before meals are said to prevent the repetition of boils. Some writers speak highly of the value of small doses of calcium sulphide (up to ½ grain three times a day). The local treatment depends of course upon the stage which the boil has reached when it comes under observation. When just forming (i. e., at the itching stage), the process may be often arrested by plucking out the hair of the involved follicle. If the inflammation has already extended to the surrounding tissues, the best plan is to apply some soothing sedative preparation such as glycerol of belladonna, or belladonna or opium plaster, a small hole being perforated in the plaster if the boil comes to a head, to allow the escape of pus. Pain generally ceases at once, inflammation is reduced, and the necrosed centre is discharged painlessly. If the pain is stinging and the inflammation diffused, with restlessness and headache, warm poultices of starch or of linseed meal sprinkled with dilute solution of lead acetate or smeared over with boric acid ointment are useful; poultices should be discontinued as soon as the hardness gives place to doughiness. In all these applications it is necessary to avoid irritating the adjacent skin (e. g., by impermeable coverings). After the slough has separated, the surface may be dressed with Peru balsam, or any antiseptic ointment, and protected from injury by pads and the like.

Blue Print Paper.

(J. D. E.)
 (1) Iron citrate, soluble, 96 grains
 Distilled water, enough to make.... 1 fl. ounce
 No. 2
 Red prussiate of potash..... 72 grains
 Distilled water, enough to make.... 1 fl. ounce
 No. 3
 Potassium bichromate..... 5 grains
 Distilled water..... 1 fl. ounce
 Mix Nos. 1 and 2, add No. 3; filter quickly, and use immediately. The iron citrate should be in scales, free from powder, and should not have been exposed to light. The prussiate must also be free from any adherent powder.

To coat the paper this must be done by gas light. Four some of the solution into a saucer, dip a soft pad of absorbent lint into it and pass quickly across the paper; again dip the pad in solution and pass across the paper from where you left off. When all the paper has been thus coated take an artist mop varnish brush and remove the excess of liquid.

Ferro-prussiate, or blue printing paper, much used for architectural and mechanical drawings, has the unfortunate habit of not keeping well (Pharm. Jour.), but the following will keep much better than the ordinary commercial makes:

Gum arabic 2 grams
 Ammonio-citrate of iron..... 3 grams
 Tartaric acid 2 grams
 Distilled water 20 Cc.
 Dissolve the solids by agitation or trituration in a mortar, and then transfer to a bottle of 50 to 60 Cc. capacity,

and add liq. ammonia, 4 Cc., and shake well. Then add the following solution:

Potassium ferricyanide 25 grams
 Distilled water 10 Cc.
 and shake the mixture well and allow to stand for a quarter of an hour. This solution, which must be kept in the dark, should be applied to the paper with a soft broad brush by artificial light and then dried in the dark. It is exposed under a negative in the ordinary way till the half-tones show a dark violet color, and it is then placed face downwards on water for about ten seconds and removed, and exposed to the air for a short time, thoroughly washed in water and then immersed in a bath of
 Eau de Javelle 50 Cc.
 Water 1000 Cc.
 till it turns a deep blue.

"HAPPY THOUGHTS."

"The post-mortem examination showed that the unfortunate girl was a teacher's daughter."

"When the housemaid entered the bedroom at the usual hour she found her master already a corpse. Soon afterward he withdrew altogether from the political arena."

"The gas lamps, which at this time were not yet lighted, made the streets appear still darker."

"Death trod with rough hand this tender blossom."

"Upon the grave stood a cross rusted by the tooth of Time."

"The laurel wreath upon the head of Mr. Refiners has hit the right nail upon the head."

"The new political current failed to take root in this district."

"The happy moment is not always seized to grasp the wheel of Time by the forelock."

"Near the child lay an old man standing by the edge of the grave."

"In this question the steps of the government go hand in hand with the manufacturers."

"The hinges upon which this affair turns are too transparent."

"When the doctor arrived he found the platform covered with blood—the passengers had been bruised on the fore head."

"The hall divided itself into two parties."

"So he hurried away, the cowardly murderer, with Cain's mark upon his brow, pursued by the Eumenides and two police constables."—(Drug Topics.)

NEW USE FOR CALF'S BRAIN.

The following is printed, without question of its accuracy, by a contemporary:

"The most delicate surgical operation ever performed, and which has so far proved successful, was accomplished by Dr. Harman and other physicians, recently, at Harman, W. Va. Jay Lutz, mine boss in the Harman mines, was almost killed by falling slate, his skull in the back of his head being badly crushed. All hope of his recovery was abandoned, but Dr. Harman concluded to resort to the last means to save the man's life, and accordingly had brought in from the pasture field a young heifer, and the brains of the animal were removed and substituted for those which were badly lacerated in Lutz's head. The transfer of the delicate members was tedious, but was, it is believed, so successfully done that Lutz will recover. After the heifer's brains were removed she was turned loose in the pasture field. The beast stands in one place all the time unless started by some one, and it is necessary to start her jaws to moving when she is fed and to stop them when she completes her meal."

The unfortunate man here mentioned will probably eat hay hereafter.

WANTED PROOF OF THE PUDDING.

A Scotchman went to London for a holiday. Walking along one of the streets, he noticed a bald-headed chemist standing at his shop door, and inquired if he had any hair restorer. "Yes, sir," said the chemist; "step inside, please. There's an article I can recommend. Testimonials from great men who have used it. It makes the hair grow in twenty-four hours." "Aweel," said the Scot, "ye can gie the top o' yer head a bit rub w'th, and I'll look back the morn and see if ye're tellin' the truth." The chemist returned the bottle to the shelf, and kicked the errand boy for laughing.—Med. Stand.

PHARMACY.

HONTHIN is a new tannin-albumin combination prepared by Sztankay, stated to be even less soluble in the gastric fluid than tannalbin. (Ztsch. f. Pharm.)

ATROPINE FOR SEASICKNESS.—F. Rebate (Bull. de Therap.), recommends atropine, given hypodermically, as an excellent remedy for seasickness. (Apoth. Ztg.)

CALMIN is the trade name for an alleged chemical combination of antipyrin and heroin. It is advertised as a sure remedy for whooping cough, asthma, etc. (Ztsch. f. Pharm.)

AIROGEN is another trade name for bismuth iodogalate, which is also in the market under the name "Alrol." It is an odorless, non-toxic substitute for Iodoform. (Ztsch. f. Pharm.)

MAY-OL-CADAVEROL is an embalming fluid having a pale violet color, consisting of a solution of salicylic and boric acids, and sufficient of an iron salt to produce the violet coloration. (Pharm. Post.)

IMPERVIOUS PAPER may be prepared by coating both sides with a solution of 1 part gelatine, 1 part glycerin and 4 parts water, drying, then immersing in a 10 per cent. formaldehyde solution and drying again. (Rev. Chem.)

PRESERVATION OF EGGS with sulphuric acid is proposed by C. Reinhard. The acid changes the surface of the shell to a perfectly airtight cover, completely preventing the penetration of air, even on keeping a long time. (Apoth. Ztg.)

ARSECODYLE.—F. Uhlmann-Eyraud, in Geneva, brings the cacodyl preparations (cacodylic acid and its sodium salt) in the market under this name, in three forms, as hypodermic injections, rectal injections and pills. (Ztsch. f. Pharm.)

FORMALDEHYDE POTASSIUM METABISULPHITE is a new crystalline compound claimed to have valuable antiseptic properties, obtained by the reaction between formaldehyde and potassium metabisulphate. The corresponding sodium salt is also recommended. (Ztsch. f. Pharm.)

GUAIACOL AND CREOSOTE SYRUPS.—Syrup of Guaiacol: Crystallized guaiacol, 7.5 parts; glycerin, 92.5 parts; simple syrup, 900 parts. Dose, a dessertspoonful 5 to 6 times daily. Syrup of Creosote: Creosote, 5 parts; glycerin, 80 parts; simple syrup, 915 parts. Dose as above. (Rev. Med. Pharm.)

COPYING INK.—For an ink that may be used for copying letters without moistening and without a press, Vincenzani & Goulhard give the following formula: Ordinary ink, 100 parts; glycerin, 60 parts; honey, 20 parts; rock candy, 20 parts; alcohol, 10 parts, and molasses, 50 parts. (Bull. de Therap.)

LACTIC ACID FOR BALDNESS is proposed by Balzer (Sem. Med.). He rubs a 30 per cent. solution of lactic acid upon the bald places until the skin becomes inflamed. The application is then stopped for a few days, but continued as soon as the inflammation is allayed. Balzer observed a growth of hair after three weeks of this treatment. (Apoth. Ztg.)

EXPERIMENTAL LEAD POISONING.—Oppenheimer (Ap. Ztg.) administered subcutaneous injections of a 2 per cent. solution of lead acetate to five rabbits, gradually poisoning them in 21 days, and then determined the distribution of the poison in the organism. He found that the brain, the bones and bone marrow contained relatively large quantities, the liver, kidneys and muscles much less, while the blood contained but very little.

ELIXIR DE VIRGINIE is a French proprietary preparation containing witch hazel as the chief ingredient. A liquid closely resembling it may be obtained by the following formula: Fluid extract of witch hazel, 3 parts; syrup of orange peel, 50 parts; tincture of vanilla, 2 parts; alcohol (50°), 18 parts; distilled water, 27 parts. (Apoth. Ztg.)

DETECTION OF SALOL is readily effected, according to Jour. de Pharm., by placing a little of the sample into a porcelain capsule and adding a few drops of sulphuric acid containing a little nitric acid. On the further addition of ammonia a yellow, brown, and finally green coloration is produced. In presence of resorcin the color will be dark-blue, becoming red on addition of water, and blue after addition of ammonia.

PEREZOL, A NEW INDICATOR, is proposed by M. Duyk for alkalimetry. It is obtained from *Perezia adnata*, and occurs in yellow needle-like crystals, sparingly soluble in water. The solution in water is colorless or faintly yellow, but becomes rose or orange-red on the addition of a trace of alkali. This red solution becomes again colorless on acidulating, except with boric acid. This characteristic makes the substance useful for the titration of acids and alkalies. (Ztsch. f. Pharm.)

STERESOL AND ADHESOL.—Steresol is a liquid varnish for use in antiseptic bandages, intended to adhere to the skin or mucous membranes. It is composed as follows: Shellac, 270; benzoin, 10; tolu balsam, 10; phenol, 100; oil of cinnamon, 6; saccharin, 6, and sufficient alcohol to make 1,000 parts. Adhesol is a similar preparation, less adhesive, of the following composition: Copal, 35; benzoin, 3; tolu balsam, 3; alpha-naphthol, 0.3; oil of thyme, 2; ether, 100 parts. (Bull. gen. de Therap.)

CASEON-PLASMON is a new albuminous nutritive preparation, obtained from skimmed milk, in the form of light yellow granules or powder. It is free from odor, and has a bland taste, suggestive of sweet milk. With cold water it forms a jelly, which dissolves with aid of heat to a turbid, milky fluid. The preparation has the following composition: Nitrogen, 12.39 p. c.; nitrogenous matter, 78.94 p. c.; fat, 4.29 p. c.; milk sugar, 4.7 p. c.; ash, 7.79 p. c. (Pharm. Post.)

SPILENIFERRIN is a new medicinal agent prepared by Dr. R. Rohden from the dried spleen-pulp of bees, its effect being increased by an addition of albuminate of iron. H. Nasse found in the spleen-pulp of old bees and horses nearly 5 per cent. of iron, almost three times the quantity found in young animals. Spleniferrin has been subjected to a long series of experiments and has proved itself not only equally as efficient as the best iron preparations known, in its general effect on the organism, but it seems to be superior to them because of its ready assimilability and the ease with which it is taken for prolonged periods. (Apoth. Ztg.)

UNGUENTUM DOMESTICUM is a mixture proposed by Unna, composed of egg yolk 2 parts, and expressed oil of almond (or other bland fixed oil), 3 parts. The egg yolk is first triturated alone, and then the oil added in drops, under constant trituration. This ointment produces on the skin a smooth, elastic, rapidly drying film. If it is to be kept for some time, addition of Peru balsam (1 p. c.) is recommended. The ointment permits a mixture with 0.5 p. c. corrosive sublimate, 5 p. c. lead acetate, 10 p. c. Gaulard's extract, ichthyol, lime water, camphor, liantral, sulphur, talcum, starch, storax, tar, vinegar, etc. The mixture with sulphur develops after some time an odor of volatile sulphur compounds, which may be masked by adding a little camphor. An ointment of egg yolk, oil and petroleum is serviceable for vermin of the head. A number of substances are incompatible with unguentum domesticum, since they cause separation of the oil from the egg yolk. These include carbolic acid, salicylic acid, resorcin, pyrogallol and sodium salicylate; also most metallic salts and oxides (particularly zinc oxide, mercuric oxide, white precipitate, bismuth subnitrate); further, chrysoarabin, pyroxylin, kieselguhr and magnesium carbonate. (Ztsch. f. Pharm.)

WHAT IS A POISON?

There is a great necessity for a concise, yet sufficiently comprehensive, definition of the term "Poison." A correspondent, whose letter is published below, thinks he is helping us to supply this need, but his definition is surely not concise, whatever opinion we may hold as to its comprehensiveness. He writes:

Some time ago somewhere along the month of March or April 1880, there appeared in the Pharmaceutical Era a definition of the term "poison," which definition did not seem to me, as being sufficiently comprehensive and inasmuch as you have expressed a desire of introducing a more comprehensive definition of the term Poison, I herewith cheerfully append the more comprehensive definition of the term "Poison:"

Poison Defined.

In the most extreme comprehensible sense of the philosophical term of "A Poison" constitutes any substance which, if it be, by any means, or in any form, introduced into any vital organic system, invariably destroys the vitality either wholly or in part, that is to say, either wholly or in part the existing vitality of such a vital organic being, at which and to which, such a substance chances to be applied, either locally or in conjunction therewith at the time of its introduction, extending such Vitality Destructive action either wholly or in part, throughout the entire Vital Organic System, and in event, that such a substance, although having at times such vitality destroying properties as a rule, for any reason be not possessed of such a characteristic property of a Vitality Destroyer as above described, then such a substance, in such instances, does not constitute a poison for that particular Vital Organic System, in which such a substance under such prevalent conditions be applied. In a more restricted sense, the term Poison is chiefly applied to all such substances having similar properties, as the above described, when introduced into or applied to the animal vital organic systems, and then more chiefly in reference to the Vitality Destruction caused by such substances, when the latter be introduced into the Vital Organic Human System. Poisons are either of organic or inorganic derivation, that is to say either animal or vegetable or mineral, non metallic mineral metallic mineral extraction, and if of organic extraction, whether animal or vegetable, can then either be of a vital organic or non vital organic state of existence. Examples of the former, in the case of vital organic animal poisons, that of a snake bite, mad dog bite, wasp sting, spider sting, etc., in the case of vital organic vegetable poisons, by a touch of the living poison ivy, the mercury plant or vine and others; examples of non vital organic poisons being amply contained and diffused in the numerous drugs of both animal and vegetable origin. And again, a vital organic or non-vital organic poison may be such for another vital organic system, those of animal extraction for other vital animal systems or for the vegetable systems, and poisons of vegetable origin, for extraction, for other vital organic vegetable systems or for vital organic animal systems. Poisons of inorganic, whether of a metallic or non metallic source or origin, may be poisons or vitality destroyers, either of the vegetable vital organic systems and not with animal vitality, or such are for animal vitality and not for vegetable vitality, or such non-metallic or metallic poisons, as such, may be such for both animal, as well as for vegetable-vitality. The metal Hg and its compounds are types of the latter, whereas ammoia, Cl, CO₂, I, S, P, and their compounds and others are types of the former inorganic poisons. Moreover there are any number of substances of solid, fluidal and ethereal extraction, which are at times Vitality destroyers, and which nevertheless are by no means poisons, as the term is usually comprehended, but are only vitality destroyers or become such owing to the fact of the abnormally excessive quantities of such substances as may be thrust into the vital organic system at any one given time, or perchance already aggregated in any part of such vital organic system, which substances, owing to the fact, that, they can no longer be assimilated or eliminated by the vital organic system, cause a stagnation in the circulating media, where such substances are located, such arrests of the circulating media, if sufficiently long prolonged, in turn resulting in Vitality Destroyers. All of the numerous vitality sustaining nutrients of the vital organic systems, such as air, water, digestive nutrients, vitals in any of their forms, whether of animal, vegetable or mineral extraction, are all types of this kind of vitality destroyers, and yet are by no means poisons as ordinarily understood.

STRONTIUM BROMIDE AND IODIDE have for some time found application as substitutes for the respective potassium salts. It is asserted that they are free from the unpleasant secondary effects exerted upon the heart and stomach by potassium compounds. More recently, A. Lockart has employed these preparations successfully in the treatment of Basedow's disease in children. The following mixture is recommended: Bromide of strontium, 6 parts; iodide strontium, 12 parts; distilled water, 40 parts; peppermint water and peppermint syrup, of each 20 parts. This is given in doses of a teaspoonful three times daily. (Apoth. Ztg.)

STUDENTS' BULLETIN.

ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Beal, Scio, Ohio.

The above rule is important, and we want every student to observe it. It has been published time and again in this column, but there are many who seem to have paid no attention to it and who cause annoyance both to themselves and us by persisting in sending their recitations to this office. We must then go to the expense of remailing them, and the student suffers considerable loss of time in the rating of his answers.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

This column is to be read each week by all students, whereby much unnecessary correspondence will be prevented, many points made plain, and in all ways it will be of direct assistance.

Another supply of lectures will be sent to students next week, January 18.

All correspondence regarding lectures, questions, etc., should be addressed to the Director, Prof. J. H. Beal, Scio, Ohio.

Read This Bulletin Each Week.

VACCINE AS A BEVERAGE.

"These queer new-fangled names that they get up for summer drinks confuse the country folks," said the clerk at a soda fountain, "and, honestly, I don't much wonder. A man carrying a big old-fashioned valise came wandering in here the other day at the hottest part of the afternoon, and sat down by the counter. He pulled out a red bandana handkerchief, and while he was mopping his forehead he looked the place over from top to bottom. I could see he was trying to make up his mind what he could get the most of for his money, so I said nothing and waited for his order. Pretty soon he noticed that sign hanging on the corner of the fountain: "Fresh vaccine received daily." 'Is that there vax-eeen fresh?' he asked. 'Yes, sir,' says I, thinking he must be a country doctor. 'Got it in to-day?' 'Yes, sir,' I said, 'just arrived.' He thought for quite a while and then he suddenly pulled out his pocketbook. 'Oh, well,' he said, 'I reckon y' kin gimme a glass.'—Times-Democrat.

INSUFFICIENT CREDENTIALS.

A commercial on his first trip called upon a well-known chemist. He was nervous as he put his hand in his pocket and handed out a card.

"I represent that concern," said the young man.

"You are fortunate," replied the chemist.

The commercial was encouraged, and said:

"I think so, sir. And the chemist who trades with us is even more so. My firm has the finest line of cosmetics in the country."

"I shouldn't have thought it," slowly responded the man of medicines. "Her complexion looks natural."

And he handed back the photograph which the young man had given him by mistake. He took it and left without waiting to make any farewell remarks.—Canadian Druggist.

NOT FOR HIM.

Serious minded man asks for a certain infant's food.

Young Woman Clerk: "I'm sorry, but we are just out of that. We have Blank's Granum and Dash's condensed milk and Space's Lactatum."

The serious citizen looked doubtful. "I'm afraid they would not do," he said.

"I suppose," said the young woman, sympathetically, "you don't like to change?"

"Oh, it isn't for me," said the serious citizen, hastily. And after he got out of the store he wondered why the clerks laughed so suddenly.—(N. E. Drug.)

No Back Numbers.

Whenever, for any reason, you find you have in your stock any J. C. Ayer goods which seem to hang fire and stay with you too long; let us know it at once, and we will put you in the way to turn them into money. Our goods are not intended to become "shopkeepers."

Every bottle we put up is expected to get right out among the people and sell another bottle or two for us quick and soon. Neither you nor we should be content to see any other course. We will at any time exchange for you any lot of our goods that you are unable to turn over in a reasonable length of time; or, in case the circumstances fairly warrant such action, we will give you money for them.

In other words, our interest in the goods we make does not cease when they have left our hands and we have the jobber's money for them.

They must be consumed and make room and demand for more, and if there is an obstruction at any stage of their progress the removal of such obstruction is more important to us than to any other party to the transaction. Tell us about any trouble that comes up in the "Ayer Department" of your business, and see if we can't iron out some of your rough spots and promote good business for both of us.

J. C. AYER CO., Lowell, Mass.

Ayer's Hair Vigor, \$1.00 size only; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00, 25c. size is a very rapid seller; Ayer's Pills, 25c., more for the money now than ever; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of Pills free; Ayer's Ague Cure, 50c. now, new and improved; Ayer's Cherry Pectoral Plasters, 25c., "they take the ache."

Ayer's Comatone will mean new business for you.

Allen & Hanburys' Specialties.

- The "Allenburys" Milk Food No. 1.
Specially adapted to Infants, under three months of age.
- The "Allenburys" Milk Food No. 2.
Specially adapted to Infants, between three and six months of age.
- The "Allenburys" Malted Food No. 3.
Specially adapted to Infants over six months of age.
- The "Allenburys" Throat Pastilles.

American Agents, - New York.

ROUGH ON BUNIONS

NEW AND SUCCESSFUL TREATMENT. ONLY COMPLETE. PERFECT CURE.

35¢ AT DRUGGISTS OR SENT BY MAIL.

E. S. WELLS, Chemist, JERSEY CITY, N. J. U. S. A.

QUICKLY RELIEVES TENDERNESS & PAIN. SUBDUES FEVER, INFLAMMATION, SORENESS AND ALLAYS ALL IRRITATION AT ONCE. REDUCES ENLARGEMENT OF THE JOINTS. GIVES EASE AND COMFORT.

TO THE DRUG TRADE:--

"ROUGH ON BUNIONS" is not only a remedy, but is guaranteed an absolute cure. We guarantee it to do what we claim. Druggists are authorized to warrant this fact, and to refund the money to any dissatisfied purchaser, and we will make it good to the druggist. There may be many remedies, but there is but one cure for bunions, and that is "Rough on Bunions," and for sore, tired, tender or fevered feet it has no equal. It is a most remarkable remedy. Retail at 35c. per bottle, \$3.00 per dozen.

Put up in a neat and attractive manner. Send your orders to wholesalers or jobbers.

E. S. WELLS, JERSEY CITY, N. J.

MAKES ALSO A GRATEFUL LOTION FOR TENDER, TIRED OR FEVERED FEET.

NEW YORK GERMAN APOTHECARIES' ASSOCIATION.

The annual meeting of the New York German Apothecaries' Association was held on Thursday evening, January 4, with President Carl F. Schlessner in the chair, and about sixty members present. The yearly reports from the officers and committee were received, and these showed the association to be in a flourishing condition. President Schlessner read a paper on the progress made during 1899, which showed that the society had gained in several directions and had accomplished good work.

Two new members were admitted. They are: Arthur H. Missidine, Lenox avenue and 114th street, and Richard Jorgenson, 736 Melrose avenue. George Vockrath, of Tenth avenue and Forty-fourth street was proposed as a regular member, and Henry E. Lang, of Gattenburg, N. J., as an extraordinary member. The bill to amend the pharmacy law section of the city charter, which was drafted by a joint conference committee of the local associations (see Era for January 4) was approved. The association's members of the conference on lists of jobbers and of aggressive price cutters reported the lists prepared for the N. A. R. D., and these lists were approved. The following officers were elected to serve for the ensuing year:

President, Carl F. Schlessner; first vice-president, George Gregorius; second vice-president, Charles Schur; recording secretary, Dr. Charles F. Klippert; corresponding secretary, Sidney Faber; treasurer, Felix Hirseman; librarian, George C. P. Stolzenburg; archivist, George Leinecker; delegates to American Pharmaceutical Association, George Gregorius, Gustave Ramsparger, F. G. Werner, Otto Boeldiker, and C. F. Schlessner. The following committee chairmen were selected; scientific, Dr. G. Pfingsten; amusement, Paul Arndt; business, George Kleinau; widows' and orphans' fund, Charles Schur.

The illustrated talk announced by Dr. Virgil Coblenz had to be postponed until the next meeting, as Dr. Coblenz had not been able to have his lantern slides prepared in time. The annual auction sale of books and papers was also postponed until the February meeting.

NEW YORK DRUG CLERKS' ASSOCIATION.

The regular fortnightly meeting of the New York Pharmaceutical Clerks' Association was held at the New York College of Pharmacy on Wednesday, January 3, with President Charles W. Dietz in the chair. One new member was elected; Jacob P. Muller, of No. 228 East Forty-seventh street. The most interesting subject brought before the meeting was a small batch of correspondence between Governor Roosevelt and Secretary Deutschberger concerning the new bill for regulating the working hours of drug clerks. Governor Roosevelt sent a letter to Secretary Deutschberger requesting him to advise with Jacob A. Riis in regard to the provisions of the bill. Mr. Deutschberger sent the following answer to the Governor:

"I beg to acknowledge with grateful thanks the receipt of your highly esteemed communication in which you suggest the advisability of my communicating with J. A. Riis regarding the framing of an adequate drug-clerks' short hours bill. In reply I would respectfully state I have had several conferences with Mr. Riis on this subject during the past month, and have acquired a fair knowledge of the ideas and opinions entertained by him regarding the matter in question, and that there is nothing that he can advise upon which he has not already expressed. I hesitate considerably to encroach upon your time, but you have always manifested so kindly an interest in our doings that I am emboldened to make a complete and impartial statement to you of the whole subject, and this I enclose on a separate sheet. I would like to assure your excellency on behalf of the various pharmaceutical associations that we are not only anxious to leave our interests in your hands, but to abide by any judgment which you deliver in the matter. The proposed bill has been placed in the hands of Dr. Nelson H. Henry, member of the Assembly from the Fifth District, and if you would care to suggest any changes in the bill before it is introduced in the Legislature, I would ask you to kindly advise me at an early date, so that I may notify Dr. Henry in time.

To this Governor Roosevelt replied, with thanks for the information, that he would consult with Dr. Henry.

The secretary also reported that Dr. Henry has promised to introduce the bill in the Assembly at the earliest possible opportunity.

After the usual business was gone through with, the following resolution was adopted:

Whereas, The existence of three different pharmacy laws and of three separate boards of pharmacy in three different sections of the State of New York works a great hardship to clerks, who are registered by one of said boards wish to accept positions in the territory under the jurisdiction of another board, and

Whereas, The several laws differ in important respects; therefore be it

Resolved by the Pharmaceutical Clerks' Association of New York City that the Governor of the State of New York be and hereby is respectfully petitioned to appoint a commission to examine into the character of the various pharmacy laws in force in this State; to draft and introduce in the Legislature a uniform law to govern the practice of pharmacy throughout the entire State, and providing for a single board of pharmacy to have jurisdiction over the whole State.

A LOVE FEAST.

Detroit, Jan. 8.—The banquet tendered by Nelson, Baker & Co., manufacturing chemists, to the retail druggists and their friends of Detroit, this evening, at the Russell House, proved a grand success in every way. About two hundred gentlemen, including the officers of the Detroit Retail Druggists' Association, members of the association, jobbers, heads of departments in the jobbing houses, and invited guests from out of town, sat down to the loaded tables and did full justice to the elaborate menu. After the inner man was satisfied came the toast list, which was as follows, the intervals being satisfactorily filled by music of excellent character:

TOASTS.
"Come, we'll have you merry. I'll bring you where you shall hear music, and see the gentlemen. But shall I hear him speak?—Aye, that you shall?"—Two Gentlemen of Verona.

TOASTMASTERS.
Mr. Jas. E. Davis. Mr. J. W. Seelye.
Invocation Rev. Rufus W. Clark.
The Battle of Manila Arranged by Jarvis.

Mr. Harold Jarvis.
The Proprietary Manufacturer Mr. H. L. Kramer.
"They work while you sleep."—Cascarets.

Irish Monologue
Mr. Jno. A. Donovan.

The Wholesale Druggist Mr. Harvey C. Clark.
"Each morn a thousand roses brings, you say."—Rubayat.
The Deathless Army Trotere.

Mr. F. W. Warington.
The Retail Druggist Mr. W. H. Burke.
"All your strength is in your union. All your danger
A Rose in Heaven A. S. Parker.

Mr. Harold Jarvis.

Auld Lang Syne.

Accompianist, H. P. C. Stewart.

(Specially Contributed.)

PHARMACY IN AUSTRALASIA.

Sydney, N. S. W., Dec. 5, 1899.

Business in Sydney, and in fact throughout the colonies, is very slow for this time of year. But for the development of the influenza epidemic into a malignant form, the pharmacists and medical men would have met Christmas in a very lugubrious disposition. The simple form of the "dog's disease," as it is now termed, didn't alarm the people, but when it struck down the strongest and compelled all who were attacked to take to bed, the doctor and pharmacist came in for a press of work. The aching heads resulting caused a run on antipyrine, and the price went up considerably. Cocaine, for some reason not explained on this side, has gone up to 88 per ounce.

Quite a big trade is now being done in perfumes bottled in the colonies. They are imported in fats and distilled here, and then neatly put up in fancy bottles and colored labels under fictitious names. The profit is, therefore, very much greater to both the wholesaler and retailer than from the importation of perfume in retail bottles. The majority of the tinctures and many of the ordinary extracts are likewise prepared by the wholesale houses. Twenty years ago the pharmacists made most of the tinctures in their shops; now they don't prepare any, it being found cheaper to get them from the wholesale establishments. Even an article like spirits of camphor compound is procured from the big houses. The pharmacists are little more than dispensers and retailers of soap, proprietary medicines and fancy goods.

There has been great commotion among the Sydney pharmacists over the compulsory 9 p. m. closing clause in the Early Closing bill now before Parliament. All but three city men have approved of the movement, and those three have fought the matter tenaciously. The bill went through the Lower House without objection. When it reached the Upper House some minor amendments were put in, still the prearranged opposition to the pharmacists' early closing couldn't shake the majority of the members. The bill went through committee with the 9 p. m. hour undisturbed, but a clause was added permitting masters to dispense and sell proprietary and patent medicines after that hour, the door, however, having to be closed at 9 o'clock, assistants not to be employed after that hour. Two members of the Upper House have expressed their determination to fight for the absolute exemption of pharmacists on the schedules of the bill coming coming up for discussion, either this week or next.

The New Zealand Pharmacy Act has been amended so that it debars men from the other colonies from being registered there pending the consummation of the reciprocity movement.

The customs authorities of Melbourne (Victoria), have decided that Collodion (as liquid cement) must pay 20 per cent. ad valorem, and "Wright, Layman & Umney," not being a culinary essence, \$3 per gallon; all medical preparations containing alcohol (except those specifically mentioned as 25 per cent. ad valorem), \$3 per gallon. Bush & Co.'s Oil of Raspberry (contains 101.5 per cent. proof spirit), \$3 per gallon; Pasteurizers for vineyard use, 15 per cent. ad valorem; Vaseline, white liquid, when recommended for medicine, 25 per cent. ad valorem.

The statistics for 1899 give the number of registered chemists and druggists in the respective colonies, as follows: New South Wales, 669; Victoria, 802; South Australia, 118; Queensland, 194; Western Australia, 97; Tasmania, 100. The highest number ever on the New South Wales register was 684; Victoria, 1,225; South Australia, 234; Queensland, 368; and Tasmania, 113. The decreases are due to the stringency of the new Pharmacy Act. There are 1,046 pharmacies in the Australian Continent. New Zealand is only now forming a register, and figures are not yet available. In ten years the number of registered pharmacists in Australia properly only increased to the number of 223, i. e., taking the figures then and now. A great many men have gone to South Africa and Western Australia from New South Wales, Victoria and South Australia.

Samuel Park, a Melbourne, Victoria, pharmacist, has filed his schedule. Liabilities, \$5,550; assets, \$15. This is a true sign of the times with pharmacists.

Blogg Bros., manufacturing chemists and importers, of Melbourne, have dissolved partnership, F. E. Watling retiring from the business, which will be continued by J. K. and K. H. D. Blogg.

Trade-mark applications have been granted to the Hillside Chemical Co., Newburgh, N. Y., U. S. A., for "Terraline," in New South Wales, West Australia and New Zealand; to C. F. Miller, Lancaster, Pa., U. S. A.; for "Dr. Raub's Soap," in New South Wales, and the Potter Drug Co., Boston, Mass., U. S. A., for "Cuticura Soap," in Fiji.

ANOTHER "POISON BOTTLE" BILL.

Again the poison bottle bill has made its annual appearance in the New York Legislature—or at least is about to do so. Senator Wilcox, of Auburn, announced last week that he would introduce a bill providing that poison may be sold only in a bottle of such peculiar shape that it can be readily distinguished in the dark by the touch.

Wilcox is the man who last year secured the passage by Senate and Assembly of a bill to compel the use of a specially designed, patented "poison bottle," which bill was manifestly such a "grab" measure that the Governor vetoed it at once.

Wilcox now says that he proposes to avoid all opposition based on the ground of discrimination in favor of some particular manufacturer with a patent design by incorporating in his bill a provision that the style of bottle shall be determined by a committee of the State Medical Society, acting in conjunction with the State Board of Health. With such a provision, he says, he feels confident the bill will go through.

N. Y. SECTION AMERICAN CHEMICAL SOCIETY.

A regular monthly meeting of the New York Section, American Chemical Society, was held at the Chemists' Club, in West 55th street, on Friday evening, January 5, Chairman of the section, Dr. Charles F. McKenna, presided, and there was a large attendance of members. Before the program of the evening was taken up Chairman McKenna welcomed the new president of the Society, Dr. William McMurtrie, who was elected at the annual meeting held at Yale University, New Haven, December 27 and 28, and Dr. McMurtrie responded briefly.

Prof. Barker, of Philadelphia, was then introduced and spoke on fridum, samples of which were exhibited. The following papers were read and discussed: "Filters for Purifying Water Supplies," by Allen Hazen; "Laboratory Method for the Continuos and Uniform Generation of Acetylene and its Purification," by J. A. Mathews; "Upon the Carbide of Gold," by J. A. Mathews and L. L. Watters; and "On the Reactions of Alkalis with the Cellulose Nitrates," by C. W. Volney.

PROF. FLOYD'S NEW STORY.

The publishers of The Bookman (Dodd, Mead & Co., New York), announce that they will publish as their only serial during 1900, Prof. J. U. Lloyd's novel, "Stringtown on the Pike," a study of Kentucky life and events during the latter part of the civil war. The selection of this work by this conspicuous literary publication, is a decided honor to one raised in pharmaceutical pursuits, but Prof. Floyd's friends have no fear that it will not credit both him and them. The story will commence in the March number of The Bookman.

Stringtown on the Pike is a novel drenched with the American spirit and rooted in American traditions. It is a work that could only be produced by one who has brooded long and patiently over the types and forms which are unified into a drama of American life on a large scale. It has its rise and progress and close in one little obscure and undiscovered corner of the land, a Kentucky village. The characters are well defined and distinctly wrought out. That of the Red-Haired Boy has a characteristic note and sturdy individuality that make him unusually attractive and strong. The heroine has that sort of elusive, shy, untamed nature whose next act can not be calculated upon, that puts her among that portion of her sex which is hard to be classified. The old villagers, the Judge, the Professor, the Clergyman, the Colonel, etc., impress one so vividly and clearly that one feels that they are drawn to the life. But of all the characters in the story none can be said to be so distinctly

a creation of which any author might be proud as Old Cupe. He is the great triumph of Stringtown on the Pike. If for no other reason, this character would lift the book far above mediocrity and give it distinction and literary achievement worthy of a noble pen. Cupe, proud, kindly, dignified, last selen of an ancient African monarchy, is every inch the King he claims to be by hereditary right. He dominates the story, as does his fateful spell. He threads its situations and crowns its action in the climax of the novel. In the telling of the story Prof. Lloyd is simple, yet strong; lucid, yet forceful in diction; eschewing literary forms, yet falling naturally into a spontaneous narrative style that has a grace of its own.

NEW YORK WHOLESALE DRUG BOWLERS.

The Wholesale Drug Trade Bowling Association of New York City resumed its tournament after the holiday recess last Saturday, January 6, at Reid's Church street alleys. The team of Colgate & Co. and that of R. W. Robinson & Son each scored a double victory. The team of Merck & Co. lost two games. The General Chemical Company team was also defeated twice and dropped from fourth to seventh place. The team scores were: National Lead Company, 757; Merck & Co., 719; Colgate & Co., 756; Merck & Co., 670; Colgate & Co., 786; National Lead Co., 734; R. W. Robinson & Son, 729; General Chemical Co., 653; Seabury & Johnson, 796; General Chemical Co., 778; R. W. Robinson & Son, 789; Seabury & Johnson, 710.

NEW YORK AND VICINITY.

—A feud between Druggist Fred J. Stoch, of No. 81 Catharine street, and Dr. Arnold Burkelman, of No. 3 Charlton street, reached the police court stage a few days ago, and the druggist did not get the best of it. On Christmas Day he sent a mock dinner to Dr. Burkelman, consisting of cigar stumps, fish tails, insect powder, clothes pins, a wooden turkey and other equally delicate morsels. The whole neighborhood was apprised of the gift and people who enjoyed the idea gathered around the doctor's door and laughed when Burkelman came out, greatly excited, and kicked the mock meal into the gutter. A week later he had the druggist arrested on a charge of disorderly conduct. In Jefferson Market Police Court Stoch told Magistrate Poole it was a joke. The magistrate decided, however, that it was not a joke, and placed the druggist under \$400 bail to keep the peace.

—The Alumni Association of the New York College of Pharmacy will hold its fifth annual ball on Wednesday evening, January 31, at Lenox Lyceum, Madison avenue and Fifty-ninth street. The chairman of the committee of arrangements writes to this journal: "We intend to make this ball the most successful of its kind ever held, and necessarily we must have the co-operation of our own members and wholesale trade as well. Such a reunion allows an opportunity for an intercourse which otherwise would never be felt in our daily walk of life. No effort has been spared to make this affair a huge success. The dinner will be given by one of the finest caterers in the city, the music will be furnished by a famous regiment band, and the evening will be, all in all, one of merriment and hilarity."

—The firm of William Pickhardt & Kutfroff, by limitation, ceased to exist on December 31, 1899. Adolph Kutfroff, as sole surviving partner, assumes the liabilities, and will receive the assets of said firm, at No. 123 Duane street, Manhattan. A new corporation has been formed, to be known as Kutfroff, Pickhardt & Co. It will carry on the business of importing and selling chemicals, colors and dyes, at No. 123 Duane street, New York City, and with branch offices in Boston, Providence, Philadelphia and Chicago. The officers of the company are Adolph Kutfroff, president; Carl Pickhardt, vice-president; Charles Herbert, treasurer; Frederick Kutfroff, secretary.

—Five of the traveling salesmen of Lehn & Fink spent the greater part of last week in New York. They were A. C. Fick, whose headquarters are in Chicago; S. H. Cohen, who visits the druggists in the neighborhood of Louisville; W. W. Wilcox, who tours Eastern Pennsylvania; F. P. Hingston, whose territory is New York

State; and G. E. Ebers, who looks after Western Pennsylvania and part of Ohio. They all reported excellent business in the sections visited by them, and that the outlook promised an increasingly good trade for the coming year.

—Stallman & Fulton, the well-known importers and exporters of drugs, of this city, announce that all assets and liabilities of the firm have been taken over by a newly incorporated concern to be known as the Stallman & Fulton Co., which is to continue the business in the same manner and with the same capital as heretofore. Mr. John Fulton, Jr., retires from active management of the business on account of poor health. The officers of the new copany are: John H. Stallman, president; J. H. Z. Stallman, vice-president; F. L. Stallman, secretary and treasurer.

—Dr. Durand Woodman announces that he has enlarged his laboratory at No. 80 Beaver street, and No. 127 Pearl street, Manhattan, and is better than ever equipped for analytical, technical and experimental work in chemistry, and investigations and tests connected with the chemistry of engineering, manufacture, etc. Dr. Woodman has been engaged in analytic, technical and consulting chemistry since 1886, and is one of the best known men in this line of work in the country.

—The Apothecaries' Bicycle Club held its third annual meeting and banquet at the Hotel May, in West twenty-eighth street, on Thursday, January 4. Those who were present say they had a glorious good time. The following officers were elected: President, Sidney Faber; vice-president, George Thum; secretary, Hugo Kantowitz; treasurer, George Leinecker. Edward Pfaff was elected an honorary member.

—John W. Doe, proprietor of a drug store in Bar Harbor, Me., stopped in this city last week long enough to call on some of the local wholesalers. He was on his way to Palm Beach, Fla., where in partnership with his clerk, and under the firm name of Doe & Gonya, he has opened the "Poinciana Pharmacy." Mrs. Doe was with him and they intend to remain at Palm Beach till the spring.

—The class of 1900, of the New Jersey College of Pharmacy celebrated New Year's Day with a banquet, held at Jacoby's, in Newark. About sixty persons enjoyed the occasion, most of them students of the college, the professors of which were present as their guests. Percy De Stanley, of Elizabeth, N. J., president of the class, presided as toastmaster.

—Jacob Ruden, who was formerly in the drug business at No. 13 East Broadway, Manhattan, and who failed disastrously some time ago, has abandoned drugs for the dry goods business, having just opened a store at the corner of Grand and Pitt streets, Manhattan. The new business is being conducted under the name of H. Ruden, his brother.

—Among the guests entertained at the New York Drug Club during the week were the following visitors from out of town: Consul H. G. Schmidt, Berlin, Germany; E. B. Voorhees, New Brunswick, N. J.; S. E. Infanta, Washington; G. W. Lee, Detroit; B. Y. Gilbert, Philadelphia; W. C. Martin, Philadelphia; J. H. Whinford, Baltimore; and C. A. Deveraux, Newark, N. J.

—Reinhart Lucke, who had a drug store at No. 437 Amsterdam avenue, Manhattan, has gone to Delta, Colo., where he has bought the drug store of J. M. McMurray. Mr. Lucke was in the employ of Mr. McMurray in that town four years ago, and the local papers bespeak for him a good business there.

—Prof. E. H. La Pierre, of the Massachusetts College of Pharmacy, who is also proprietor of two drug stores in Cambridgeport, spent a few days in New York last week, combining business with pleasure during his visit. Dr. Norton, who is associated with him in business, also visited the city.

—His friends in this city last week received invitations to the wedding of J. C. Turner, now of the firm of Turner Brothers, druggists, of Columbus, Ga., and who formerly traveled for New York drug houses. He is to marry Miss Paterson, of Columbus, and the ceremony is set for to-day, January 11.

—A newly formed firm, to be known as Pickett Bros., has bought the Norcross Pharmacy at Wallingford, Conn. One of the brothers forming the new partnership has

been for some time head clerk in the drug store of H. B. Peck, at Derby, Conn. The other brother is in the lumber business.

—J. F. Brookfield, southern traveller for McKesson & Robbins, who had been spending the holidays in New York, started on January 4 on his usual southern trip. He has been canvassing the southern territory for over twenty years, and reports that 1899 was the banner year in sales.

—Wills L. Mix, of New Haven, Conn.; L. B. Switzer, of Southport, Conn.; W. G. Albertson, of Amityville, L. I.; Frank Rowley, of Plainfield, N. J.; were among the druggists from out-of-town who had business with the local jobbers which brought them to New York during the week.

—Incorporation has been secured in this State by the Minnehaha Medicine Company, of Nyack, to manufacture medicines on a capital of \$3,000. The incorporators are W. M. Coates, W. H. Cook, both of Nyack, and J. P. Demarest, of West Nyack.

—On Sunday, January 7, Augusta Cook Bruen, daughter of Albert Bruen, head of the wholesale drug firm of Bruen, Ritchey & Co., died at the family home in Brooklyn. Mr. Bruen has the sympathy of many friends in this affliction.

—The traveling staff of Sharp & Dohme gathered at the office in this city last week from all parts of the country, and kept busy Mr. Sprague busier than ever. He says their visit almost "did him up."

IN AND ABOUT BOSTON.

Boston, Jan. 6.

—The Eastern Drug Company has sent broadcast among the trade a circular letter telling of the January changes in location, etc. The company will call its places the "Hanover Street Branch," which has been the store of Geo. C. Goodwin & Co., and the "Broad Street Branch," West & Jenney's store, in the past. Orders will be received at either place, however, but will be filled with greater facility if those mainly for proprietary goods be sent to the Hanover Street Branch, while orders for heavier drugs, chemicals and the like, will be best cared for at the Broad Street Branch. A general stock will be carried at both branches, and customers may suit their own convenience as to where they shall trade. To facilitate the settlement of outstanding accounts, Cutler Bros. & Co. have carried their books over to the Hanover Street branch, where Mr. Charles F. Cutler, with the firm's former bookkeepers, will be found to look after these accounts. The books of Geo. C. Goodwin & Co. are still at the old place, where Mr. Underhill has had the charge of them for more than thirty years. He will look after the liquidation of old accounts. The old accounts of West & Jenney will be settled at their usual place, now called the Broad Street Branch.

—A salesman who claims to represent a Boston firm, and who gave the name of Moses C. Chassy, alias V. G. Chasse, and claiming to live in Lewiston, has been arrested in Augusta, Me., on the charge of illegal sale of intoxicating liquors. About Christmas time he was in that city taking orders, and it is said that between 300 and 400 packages supposed to contain liquor were delivered to his customers. The officers learned of his sales and, when the man appeared again on the scene, arrested him. He claims that what he has been selling is a medicine composed of white wine, iron and quinine. The court found him guilty and he therefore paid a fine of \$100 and costs. The man was very frank before the court, saying that he had tried to sell wine and quinine to druggists and others, but that he was asked instead to procure whisky. In doing this (the delivery of one lot leading to discovery and arrest) he claims he simply acted as agent for the druggist, rather than as salesman for his firm.

—Among several cases in the court at Brocton, this week, for alleged illegal liquor sales, was that in which John H. Timpany, proprietor of a drug store on the corner of Centre and Montello streets, was charged with violating the liquor law. Two inspectors testified to visiting this drug store and finding there a quantity of liquor in pint bottles, in drawers under a counter. A special officer testified to seeing fifteen men go inside the store in as many

minutes, one day during the noon hour. He stood on the corner at the time and said "he knew them to be drinking men, because of the way they were dressed," He admitted the only way he could distinguish the men he saw enter the store from men who do not drink was alone by their clothes, though he could not tell in what way they were differently dressed from men who do not drink. The judge ordered the charges dismissed.

—Again has the case regarding "Matzoon" come into prominence in the United States Circuit Court of Appeals, Boston, where Judges Putnam, Aldrich and Lowell have affirmed the earlier decree of the Circuit Court, which dismissed the plaintiff's bill in the case of Marker G. Daddirian vs. Gamliale M. Yacubian, et al. The plaintiff besought the court to grant him an injunction to restrain the defendants from using the word "Matzoon" in connection with the preparation and sale of sterilized or fermented milk. The decision, however, says that the costs of the case must be paid by the defendants.

—The police have arrested a man who gives his name as G. Milton Bell, on the charge of obtaining by false pretenses liquor to the value of more than \$150 in June last, from the Quincy House, Boston. He pretended that he had leased a summer hotel at Monument Beach, and he said he wanted the liquor for the hotel. However, he really sold it to the former firm of Geo. C. Goodwin & Co., Hanover street, so it is alleged, reshipping the liquor to Boston. The prisoner is 52 years old. The drug house, in buying the goods, of course acted perfectly innocently, never dreaming them to be stolen.

—Under the firm name of Henry O. Nute & Co., John H. Blanchard has applied for a license to sell intoxicating liquors, as a druggist of the sixth class, at No. 335 Columbus avenue and No. 105 Dartmouth street, in this city, in two rooms on the first floor and in the cellar of that place. This is the store so long occupied as a drug store by William J. Conkling & Co., who have lately met with financial reverses. A fire occurred in this drug store on the morning of January 3, from some cause unknown, resulting in damage to the amount of \$500.

—A decision has been given in the case of the "Inhabitants of Clinton, Mass., vs. W. F. Heagney, et al.," and the full bench of the Supreme Court orders the case to stand for trial, thus reversing a previous finding of the Superior Court. The case was an action upon a bond given by Heagney, a druggist of Clinton, when he was town treasurer, and the other defendants in the case were his bondsmen. It was contended that the town had never authorized the bringing of the suit, but the court holds otherwise.

—George C. Milner, buyer of all supplies for the large new soda fountain at R. H. White Co.'s department store, was on New Year's presented by his friends with a beautiful loving cup of silver. The donors, Messrs. Gordon, McDonald, Folsom & McCloud, serve soda at this big store, and they called at Mr. Milner's home, bringing their gift with them and the "wherewithal" to dedicate it. Music, both vocal and instrumental, proved enjoyable and a supper was served. Other friends also were present.

—The collections of internal revenue in Massachusetts for the six months ending January 1, 1900, from all sources, were \$4,232,343, showing an increase of \$17,889 over the previous six months. Of this total sum, \$1,719,620 was collected for beer, \$365,577 for spirits, \$234,913 for cigars, \$4,764 for snuff, \$1,383 for tobacco, \$172,888 from special tax stamps, \$153,075 from proprietary stamps, and so on. The sum of \$15,996,735 in all has been collected since April 20, 1897, under Collector Gill's administration.

—Dodge's drug store, at the corner of Salem street and Broadway, in that part of Malden which is called Maplewood, has been closed by order of the State Board of Pharmacy, because no registered pharmacist was employed to put up prescriptions. The case of Everett S. Dodge, charged with keeping and exposing liquor for sale, came up in the district court this week and was continued to a later date.

—Among the patents recently issued to New England inventors is that to Leonard Tufts, Medford, and H. A. Hopkins, Cambridge, assignors to the American Soda Fountain Company, Trenton, N. J., for a carbonating apparatus.

—On January 1, Harvey S. Sears retired from member-

ship in the firm of Billings, Clapp & Co., manufacturing chemists, High street, Boston. Edgar P. Billings is now the remaining partner.

—The week's exports from the Port of Boston (and Charlestown) include, drugs and chemicals, \$7,129; India rubber manufactures, \$6,067; tobacco, \$1,400; wax, \$738, and spirits, \$102,112.

—Burglars recently visited several business places in Merrimac, among them Parker's drug store, where a small amount of money and a few other things were taken.

PHILADELPHIA.

Philadelphia, Jan. 6.

—The details of the plot, which was successfully carried out by a number of medical students some few months ago, by which the State Board examination questions passed into their hands before the time of examination, have just been made public by the voluntary confession of one of the students who was in the clique. It appears that an attempt was made by these same students, who were members of last year's senior class at the University of Pennsylvania, to obtain the questions of their final examination in the same way, and they even went so far as to shadow the dean of the faculty in order to find out where the printing was done. Unsuccessful in obtaining the questions, a number of them bribed the monitor who took charge of the papers containing the answers until they were delivered to the professors, and and by prompt work wrote out new sets of answers after looking up the subjects and had them substituted for the answers given by them in the examining room. The same crowd obtained the aid of a student from Harrisburg, who has been prominent in athletics in his time, and by bribing an employe of the State printing department obtained advance proofs of the questions which were to be asked by the State Board. They all passed the examination successfully, and had it not been for the cupidity of some of the clique who resold the questions after posting themselves to students of their own and other colleges who expected to come up for examination, the secret would never have become known. As it is now, there is a great deal of excitement and scandal over the exposure, and further developments are looked for with interest. Probably all the certificates issued to those students having copies of the questions will be revoked and a lasting disgrace attached to the names of the dishonest ones.

—A Chester street car conductor had an exciting time the other day with a man who took laudanum with suicidal intent. The man, who was connected with Wanamaker's credit department, and got \$2,500 a year, asked the conductor to run into a drug store and get him ten cents worth of laudanum, as he had a severe toothache. The conductor kindly did as requested, and a moment later was horrified to see the man drain the contents of the bottle. The car was speeded up, and when Shriver's drug store was reached the man who worked in and a neighboring doctor was summoned who taken hard to save the patient's life, but it was too late, and he died without recovering consciousness. The large number of similar cases of suicide by poison has begun to arouse the attention of the profession, and may have the effect of hastening the passage of a new poison law, which, properly framed, would greatly diminish the number of such occurrences and the druggists would enjoy greater peace of mind as a result, for the notoriety occasioned by occurrences of this kind is exceeding unpleasant to reputable pharmacists.

—John Franks, aged 60, who for twenty-five years conducted a drug store at Front and Brown streets, until last Spring, when he failed, attempted suicide by taking strychnine on Thursday night of this week. He boarded a trolley car after midnight, and went out to the park near Memorial Hall, where he got off, and after taking three grains of strychnine, wandered around and waited for death to come. At 8 o'clock on Friday morning he wandered into the Lancaster Avenue Police Station, and told the house sergeant what he had done, but deplored the fact that the attempt had been unsuccessful. He was taken to the Presbyterian Hospital, where prompt treatment saved his life. He said, however, that he would make a thorough job of it as soon as he is able. The rea-

son given for his rash act by those who know him, is dependency over his falling health and lack of money.

—The Academy of Natural Sciences has lost the chance to buy the Cope collection of paleontological specimens, which was sold to the New York Museum of Science last week for \$50,000. This collection is the finest in the world of its kind, and it was intended by Professor Cope that the Philadelphia Academy should possess it, and he fixed the price at \$50,000, \$40,000 of which was to revert to the Academy to establish a professorship in paleontology. The money had been raised by the Philadelphians, but part of it was not immediately available for legal reasons, so the New Yorkers came down with the ready money and carried off the prize.

—Felton & Sibley, varnish manufacturers, have made it a custom for years to clean out their chimneys annually by burning out the deposit under forced draught. This year, some one in the neighborhood who was ignorant of this fact, turned in an alarm of fire on seeing the flames bursting out of the chimney, and the neighborhood of Fifty-fourth and Media streets, where the works are located, was full of excitement for a short time.

—The chemical works of Charles B. Lennig, situated at Bridesburg, in the northeastern part of the city, were partially destroyed by fire on Tuesday night of this week. The fire originated in the storage room by the spontaneous combustion of lead nitrate, and before the flames were subdued the hyposulphite of sodium building had also been destroyed. The loss is \$12,000 on buildings and \$18,000 on stock; both covered by insurance.

—Thomas F. McCoy, of Conshohocken, who, besides practicing the profession of pharmacy, has occupied the position of Borough Treasurer in that town, was recently married to Miss Elizabeth O'Neill, of the same place. He also sold the store, which is located in Fayette street, above Elm avenue, to his brother, C. J. McCoy, and will devote all of his time and attention to the management of his other store.

—B. P. Ashmead, who has for some years conducted a pharmacy at 900 Gray's Ferry road, has sold out his business to Dr. W. L. Matthews, of Twenty-fifth and Christian streets. Mr. Ashmead, it will be remembered, was appointed drug examiner in the Custom House, for the port of Philadelphia, after passing a competitive examination under the civil service rules.

—The drug store of August Weber, at Sixth street and Washington avenue, was entered by thieves on Thursday night. The policeman discovered that the door had been forced, and tried to capture the thieves, but failed. They carried away four boxes of cigars and an overcoat when they left.

—Frank McConnell, eighteen years old, who is employed by D. F. Shull & Co., druggists, of 3923 Market street, West Philadelphia, drank laudanum on Friday of this week, while under the influence of liquor. Prompt treatment on the part of the attending physicians saved his life.

—William Sharp, of Coatesville, Pa., recently opened a drug store in that town. The new store is located at the corner of Second and Main streets, and is fitted up in the handsomest modern style, making it one of the finest stores in that section.

—James H. Mercer, of Bloomsburg, Pa., besides being a pharmacist, is also an enthusiastic sportsman. He came out second best last week in a live pigeon shooting contest, killing but one bird less than the winner.

—Solomon Mitz Miller, lately apothecary at the Norris-town Hospital for the Insane, has severed his connection with that institution and will take a course in medicine at the Jefferson Medical College of this city.

—The Philadelphia College of Pharmacy Sub-Committee on Research for Revision of the U. S. Pharmacopoeia, held its monthly meeting on Thursday afternoon, January 4, at 8 o'clock in the college library.

—Professor Joseph P. Remington went over to New York for a few days last week to confer with Dr. Charles Rice upon the subject of the approaching revision of the Pharmacopoeia.

—The number of positions vacant this week, according to the advertising columns of the papers, is seventeen; while thirty-five clerks are seeking employment.

—Stephen Reice, who is with Aquila B. Hoch, at No.

543 East Thompson street, took a few days' vacation to visit his old home during the holidays.

—John E. Dougherty, manager of Harry Swain's Pharmacy at Third street and Snyder avenue, took a flying trip to Washington, D. C., last week.

—John P. Frey, the pharmacist of many stores in Southern Philadelphia, spent several days this week on a hunting trip to Sea Isle City.

—There is a rumor of a new drug store to be established in Ogontz, one of Philadelphia's prettiest suburbs, in the near future.

—Herman Rife has accepted a position in the store of S. Harry Conover, at Eighteenth and Jefferson streets.

—Elmer G. Brugler, of 2002 Tloga street, made a flying trip to Baltimore during the fore part of this week.

—Bowman Winger, clerk in one of Frey's downtown stores, spent New Year's Day at Westchester.

BALTIMORE.

Baltimore, January 9.

—The work of creating sentiment favorable to a state pharmacy law for Maryland is now fully in progress. In addition to the literature sent out by President A. R. L. Dohme, of the association, recently, asking the co-operation of physicians and all other persons in a position to render assistance, another lot of circulars was distributed yesterday. They urge upon druggists the expediency of petitioning the legislative representatives of their respective counties to give the measure which the druggists desire to have passed special consideration, and to impress upon them the need of pharmacy regulations. Louis Schulze, chairman of the canvassing committee, is also at work soliciting druggists everywhere to become members of the association and thereby increase its influence. A determined effort will be made to secure a more compact and comprehensive organization than ever before, and to interest particularly the members of the drug trade in the efforts being put forth to promote the welfare of the profession in a business, as well as scientific way. It is the intention of those in charge of the campaign to send out suitable literature at stated intervals as long as the General Assembly remains in session, and thereafter to keep the enthusiasm of all persons concerned alive and active.

—The Root and Herb team of the Baltimore Drug Trade Bowling Club started the new year auspiciously by winning three games from Parke, Davis & Co. by 795, 714 and 839, against 662, 609 and 625 points. Baumgartner, for the winners, made high score with 204 points, and also got high individual average. On last Friday night the Winkelmann & Brown Drug Company's team met the quintette from Gilpin, Langdon & Co., and captured two games out of three, the scores being: Winkelmann & Brown Drug Company, 672, 696 and 745; Gilpin, Langdon & Co., 675, 675 and 664. Smuck's score of 181 was the highest made in the course of the evening. The redoubtable Lockwood only succeeded in running his tally up to 169, with an average of 164. Altogether, the opening games of the new year were not conspicuous for extraordinary features.

—The Wedgewood Club, the prospective formation of which was mentioned in the Era not long ago, has been organized. Its purpose, as stated at the time, is to promote social intercourse between members of the drug trade. The name was taken from the material of which mortars are made. The membership is limited to twenty-five. Meetings will be held once a month. A committee, consisting of Dr. Alfred R. L. Dohme; chairman; Owen C. Smith and J. Webb Foster, has been appointed to make arrangements for the first dinner, on January 18. At each festivity of this kind different officers will preside. The club is modeled after the Flint Club, a body composed of physicians.

—The colored youth who tried to swindle Druggist Robert G. Loy, of 900 North Charles street, on Christmas night by means of a bogus check for \$35, has been caught. He is Thomas Carter, 19 years old, and has been employed by Dr. Isaac E. Atkinson, of 609 Cathedral street. His detection was brought about through the circumstance that the note containing a request to cash the check and purporting to be signed by Mrs. John Gill was written on paper with the name of Atkinson at the top. This di-

rected suspicion toward Carter, and his identification by the boy to whom he had entrusted the delivery of the note became an easy matter.

—The new year has been productive of only one business change in the wholesale drug trade of this city, the single instance being that of Shakman & Loewy, 4 North Howard street. The firm has been dissolved and the business will hereafter be conducted by the Loewy Drug Company. Either M. Shakman or S. Levy is authorized to sign in liquidation. The house will be managed on much the same lines as heretofore.

—James Hancock, representing Dr. J. F. Hancock, manufacturer of medical lozenges, at the southeast corner of Howard and Baltimore streets, has recently returned from a tour of three months through Ohio and parts of West Virginia. He reports the business conditions everywhere as highly prosperous, and the druggists as being benefited accordingly.

—Among the out-of-town visitors in Baltimore last week were A. C. Blackstone, of Georgetown, Del.; and Paul Jannesch and Paul Winchester, of Dallas, Texas. The latter represents Sharp & Dohme in the Lone Star State, and had come East for the annual conference. Trade conditions in Texas are reported to be excellent.

—Adrian M. Kloczewski, a druggist at Ninth and E streets, Washington, has been adjudged of unsound mind, and his wife, Marie Kloczewski, will administer the estate under an order from court.

—R. L. Bowman, a prominent druggist of Petersburg, Va., and Miss Lillian Louise Gates were married on the afternoon of January 3 in St. John's Episcopal Church, at Wilmington, N. C.

CINCINNATI.

Cincinnati, Jan. 5.

—The 'Druggists' Bowling Club bowled their last game for 1899 at the Koo Koo Alleys on December 29. It was decided by a vote of the members to bowl at Kunkel's Alleys for the month of January. A pleasant feature of the afternoon's enjoyment was the announcement by the club's president, John Linneman, that he was forty-six years old on that day, and he invited all the members to have a good time at his expense. Every one present agreed that John was the youngest "old" man in the club, and wished him many more anniversaries. The following were the scores made during the afternoon:

	1	2	3	4
Muehlberg	203	150	225	165
Leuchtenburg	163	185	180	144
Linneman	111	98	132	121
Dornhoff	151	162	116	128
Voss	124	160	135	148
Nicholas	113	138	183	170
Heineman	122	107	166	126
Kipp	178	133	155	145
Streichhorst	137	152	138	169
Fresberg	110	124	130	174

—William Farrell, aged eighteen years, was locked up at the House of Detention, charged with the theft of \$35. Farrell was employed at Ritter's drug store, Fifth avenue and Broadway, and when Mr. Ritter sent him to the bank to make a deposit on January 2, he failed to return. Mr. Ritter reported the affair to the police, who were unable to locate the boy, but an older brother of his discovered him in a bowling alley on Vine street, and turned him over to the authorities. He only had a few dollars remaining of the sum. He spent the balance in having a good time.

—The recent cold snap caused much annoyance to the druggists in this city in the way of frozen water pipes and drains. Dr. Norton, Professor of Chemistry at the University of Cincinnati, had a very queer experience, created by the explosion of a gas heater in his private office, which set fire to the floor. Simultaneously with the explosion the water pipe burst and put out the fire. The janitor, after shutting off the supply of water, finally succeeded in cleaning up the office, although the carpet was ruined entirely.

—Charles Diehl, the well-known representative of the Pictorial Printing Co., met with a very painful accident while entering his home on Christmas day. He slipped on the doorstep and fell to the ground, causing three ribs to be fractured, besides bruising himself otherwise.

—Jacob Rauber, a clerk at Kinzbach's drug store, was severely burned about his face and body on December 23.

He was heating a bottle containing carbolic acid when it exploded, causing the liquid to splash on him.

—The explosion of a can of kerosene caused a threatening blaze at L. C. Widrig's drug store, Newport, Ky., on the morning of Jan. 1. Prompt action by the fire department kept the loss below \$100.

—John Ratje, former clerk at Hills' drug store at Hartwell, is now with C. D. Bristle in Cumminsville.

—Edward Kipp is nursing a badly mangled finger, the result of an accident with his cash register.

—John Granger, clerking at Rendigs Bros., is confined to bed with a severe illness.

—Henry Wrede, Jr., has accepted a position as clerk at Weatherhead's Pharmacy.

DETROIT.

Detroit, Jan. 6.

—Will L. White, Quartermaster-General of Michigan National Guard, for many years a retail druggist at Grand Rapids, latterly of the firm of White & White, manufacturing chemists of the same place, having been indicted by the Grand Jury on the charge of defrauding the State and misappropriating State funds, "skipped" on the eve of his arrest, and has not been located up to date. He is supposed to be on his way to Honduras, and is a very much wanted man at present, not only by the State of Michigan, but by the Fidelity Company (Maryland), which went his bond for \$50,000 at the time he entered upon his State office. This company is distributing his picture broadcast, together with a very accurate description of Mr. White, and it is believed he cannot escape. Even should he get across the border into Mexico, his offense is extraditable, and if he can be found he will undoubtedly have to suffer the extreme penalty of the law—not less than ten years in prison. His family are not of such social standing that they can help him very much. Mr. White's alleged crime—the one at which he seems to have been caught—as follows: At the end of the Spanish-American war, Michigan had on hand a surplus of soldiers' clothing, in all about \$53,000 worth. White, as Quartermaster, had the handling and disposing of the supplies. This clothing he is alleged to have loaded onto cars and sold to the "Illinois Supply Company" for \$10,000, which amount went into the coffers of the State. It is supposed that the "Illinois Supply Company" consisted of a single confederate, for upon arrival at Chicago the cars were not unloaded, but were shipped to the Henderson-Ames Company at Kalamazoo. There girls were hired to change the buttons on the garments and otherwise make alterations, and in course of time the whole amount was sold back to the State for \$69,000. On the deal as a whole, somebody, presumably White, made about \$40,000. White's share alone is considered to be nearly half of that amount. The fraud was brought to light by the confession of a Kalamazoo party, a man by the name of Bickerstaff, who was purchasing agent for the Henderson-Ames Company. White kept up a brave front upon his indictment, but when Governor Pingree demanded his resignation he realized that his chief prop had been taken from him and that there was no one to stand between him and arrest. The confession of Bickerstaff, of Col. Harry Smith, White's assistant, and the statement of the cashier of the Fourth National Bank at Grand Rapids that White had deposited large sums of money in his own name were sufficiently strong hints to Mr. White that he would better get away from the country. Will White is pretty generally known among the Michigan druggists. Of fine physique and appearance, a "swell" dresser, free with his money, and rather inclined to be "sporty," would about sum up the man as he was known throughout the State. As a retail druggist he seemed to be successful in business, and had the most fashionable drug store in Grand Rapids. His partner was another Will White—a man who had married White's divorced sister—so that the two men were brothers-in-law. A while ago White & White sold out their retail store, and went into an extensive manufacture of the "White & White Headache Powders." It is said that they have been very successful in their new venture. Rumors of White's deals in buying supplies for the Michigan troops have long been current in the city. One of the rumors is to the effect that he went over to Chicago and placed a

\$5,000 order in the hands of the drug jobbers there, when it would not have been any more than should be expected that he would place the State's money in the State. Again, his accounts or statements showed that he paid \$3 and up for cough syrup that any little country druggist could buy for at most \$2. When he was accused of paying about one-third more for grocery supplies for the soldiers than ordinary merchants had to pay, his answer was, it was necessary "because of the exigencies of the occasion," and that answer went. Everything in the way of Quartermaster's supplies for the camp at Island Lake was secured through his influence, and it is supposed that he shared in the profits of the milk, beer, garden vegetables, meats, tobacco and groceries in general, as well as on the clothing, guns, ammunition, and so on. No one except those who secured their privileges from White was allowed to bring any articles for sale to the camp. It is said that White sent a check for \$500 to his divorced wife the day before he left, together with a note saying he would take care of her as long as he lived. If the profits of his office are as great as they now appear to be, he will be abundantly able to do so—provided Uncle Sam and his officers are not smart enough to catch him.

—The holiday week is the time of the year when most of the traveling men for the several wholesale drug houses and manufacturing chemists of Detroit get home at the same time, and many are the jolly little dinners and affairs given among them. Sometimes little jokes are played. Walter S. Everts, traveler for Farrand, Williams & Clark, was the latest victim. It seems that for years Mr. Everts has carried a common little old purse. No remarks that the boys were in the habit of making about it, no amount of fun they poked at it, no persuasion on their part availed to make him give it up. Every time they saw him he ostentatiously flourished the little old purse. A few days ago one of the boys went out and invested a quarter in a buckskin purse about 5 inches long—a regular "farmer's purse," deep and wide. About 5 o'clock a crowd of them congregated in the back part of the store, and then sent for Mr. Everts, who braced himself for the reception of a gold watch or some equally valuable present. Louis Wolff made the presentation speech, and coughed it in the most elaborate phraseology. He described Mr. Everts' purse as a disgrace to himself and the firm he represented, and dwelt pathetically upon the sufferings of his fellow salesmen when he lined up beside them and paid—debts—out of that purse. And at last, after referring to himself as unworthy of the honor of making the presentation speech, Mr. Wolff handed over the 25-cent purchase. Mr. Everts could not find words to respond in a manner befitting the occasion, but already the boys are wondering what particular kind of revenge he will have upon them. They know he will "get even" some way some day.

—All the interest of Detroit retailers for the week has been centered on the banquet to be given them next Monday evening at the Russell House by Nelson, Baker & Co. It will be an informal affair, and every druggist in town is planning to go. F. W. R. Perry, Nelson & Baker's representative, has had considerable to do with the affair, and he has been a busy man for the last few weeks. Preparations are on the most elaborate scale, and the menu promises all sorts of good things to eat—and drink. The druggists are trying to get themselves ready to do it full justice. One of them says he has eaten nothing at all for a week, and does not expect to eat anything for a week after his repast on Monday night. Everybody seemed to have some plan by which he expects to get the most out of the spread, except one poor fellow who had not decided, as late as to-day, whether to go without drinking anything at all beforehand, so as to be able to accommodate everything on the bill of fare—or to drink a good deal so as to be accustomed to that kind of living. All realize that there are no better promoters of harmony than a good spread and an evening of social enjoyment, and many feel that the outcome of next Monday's evening will be a better condition among Detroit druggists than has ever before existed. Mr. Holliday, chairman of the Executive Committee of the N. A. R. D., is coming, and will be the star of the evening.

—Harry T. Carver celebrated his nineteenth year with Farrand, Williams & Clark (and their predecessors in business) on January 1, 1900. Until very recently Mr.

Carver supposed that he was the senior employe of the firm, but a few days ago a circumstance brought out the fact that D. A. Harrison had preceded him by four days. A little talk among the F. W. & C. boys concerning the length of service for the firm establishes W. F. Griffith next after Messrs. Harrison and Carver, Mr. Griffith having a record of 17 years. Shortly after Mr. Griffith began work, F. M. Mosher put in an appearance. Walter S. Everts came on the scene about 13 years ago; "Andy" Webster, nine years ago, and W. V. Kunyon six years. There is an unusual amount of friendship and good fellowship existing among the employers and employes of this firm, which goes far to explain its great success.

—Frederick Stearns & Co. are moving into their new laboratories on Jefferson avenue. Already the printing department and the finishing department are located in the new buildings, and the other departments will be taken over as soon as possible. The moving is being done by rail, and it is believed that there will be at least 1,000 car loads before all is done. They hope to be all settled by the first of February. At present both the old and new plants are in operation, but the old will be abandoned as soon as all moving is done. Many of the Stearns employes have been with them for years, and have bought homes near the old laboratory. Some of them will sell and move nearer the new plant, which is at least six miles from the old.

—Nelson, Baker & Co. gave a banquet at Hotel Ste. Claire to about thirty of their traveling salesmen on the evening of December 30. E. H. Nelson acted as toastmaster. A very enjoyable evening was spent. It is the custom of this firm to entertain their travelers annually at this time of the year, when many of them are in town getting their contracts fixed up for the coming year, and talking over business generally. About half of their travelling force happened to hit the town just right this year, and the rest of them hope for better luck next time.

—Church & Co., New York State soda ash manufacturers, established several years ago a branch plant just behind Wyandotte. Profits were not as large as was expected, and for three years the works have been idle. Lately, G. N. Skinner, of Detroit, procured an option on the plant, and will organize a company with a capital of about \$200,000 to manufacture all grades of salt, under the name of the Trenton Salt Company. It is understood that the new company will spend \$150,000 on buildings and machinery.

—Three members of the Public Lighting Commission of Detroit have tendered their resignations, and it is probable that Mayor Maybury will send the name of James E. Davis to the Common Council as a nominee for one of the vacancies. Mr. Davis was East during the holidays, but is now back. The position of Public Lighting Commissioner is an honorary one, with no salary attached, but it carries with it considerable political patronage.

—Dr. John E. Clark, of the Detroit College of Pharmacy, is Wayne County's chemist and analyst. His annual report, just submitted to the county auditors, shows that he has examined during the year the stomach, liver and kidneys of 19 persons; that he has analyzed numerous samples of gasoline and illuminating oils; that he has attended 7 post mortems, and that he has given expert testimony in court 15 times.

—D. H. Meeker, druggist at Perrinton, Mich., was the victim of an explosion on the evening of January 4. Taking a lighted lamp with him he went into his cellar to recharge his carbide gas plant. Same old story. Mr. Meeker's injuries were severe, and it was only by quick work that the entire block was saved from destruction by fire.

—Perry & Rudig, druggists, of North Manchester, Indiana, have sold out to George Burdige; M. A. Miller, of the same place, has sold out to Fred. Bechtold.

—A. E. Kent, of the city department of Farrand, Williams & Clarke's wholesale drug house, is lying sick at the Crawford House, Windsor.

—Little & Young's drug store, at Rapid City, Mich., burned on the morning of January 3. Loss, \$2,000. No insurance.

—Clem Becker will soon start a new drug store at New Haven, Indiana.

CHICAGO.

Chicago, Jan. 6.

—On January 5 the Chicago Drug Trade Bowling Club received the following challenge:

Chicago Drug Trade Bowling Club—Gentlemen: We hereby challenge a team from the Chicago Drug Trade Bowling Club, known as the "Lobsters," for a game to take place any time in the next thirty days.

(Signed)

JOHN A. MULDOON,
Captain Fuller & Fuller Team.

The score of the Bowling Club on December 29, at the regular Friday evening games was as follows:

Bauer	176	172	178
Mathews	156	164	144
Medbery	161	179	122
Thomas	154	171	108
Waldron	161	156	133
Blocki	132	157	100
Fechter	139	119	112
Delbridge	129	99	84
Armstrong	126	90	84

Mr. Bauer won the high average medal for the week.

The score and handicaps for the year, on January 5, 1900, were as follows:

Armstrong (8c.)	267	143	143
Baker (7)	169	210	168
Bauer (12)	135	131	197
Delbridge (47)	81	128	102
Fechter (49)	167	131	86
Blocki (39)	100	95	148
Storer (23)	135	142	134
Medbery (10)	136	136	121
Waldron (39)	111	116	111
Robert (43)	83	110	106
Mathews (10)	129	128	153

Mr. Baker won the medal for the week.

—Highwaymen held up the Alhambra Pharmacy at Nineteenth and State streets one morning this week during the small hours. At daybreak three men entered the store and called for a package of cigarettes. As Calvin Wadsworth, the clerk, turned to the cigar case, one of the men pushed the muzzle of a revolver against the clerk's ear, and told him to hold up his hands. Seeing three men with revolvers, he obeyed. "Keep your glad young face to the wall, and don't get gay with us, or we'll plug you one or two," growled one of the robbers. Then one of the men rifled the cash drawer, another took Wadsworth's watch and chain, and the third filled his pockets with cigarettes. "Better get this guy to fix us up a little nip of liquor," suggested one of the men, so Wadsworth was marched to the rear of the store and ordered to point out the whisky bottle. "Now, then, you take a drink on us," commanded one of the footpads. "If you have pointed out whisky, it's all right, and if you have pointed out 'pizen' the drink is on you. Now drink." The clerk drank. Seeing that he did not go into convulsions, the robbers drank also. After the bottle had been passed around, Wadsworth was marched from behind the prescription case, and placed with his face to the wall. One of the robbers, with a facetious remark about embalming, sent a bullet through a glycerin bottle above the clerk's head, bringing the contents down upon him. They then departed, and are still gone. The police have no clue.

—With regard to pharmacy laws in general, and that of Illinois in particular, Albert E. Ebert ventures this assertion: "The Illinois pharmacy law is the only one in the United States which makes no distinction between patent medicines and other kinds of medicine. There can, logically, be no difference in the way in which the law regards them. Those laws which seek to make a distinction and allow one kind of medicine to be sold where another may not be sold, are class legislation, and can not be constitutional." In the case of Sadler vs. The People, reported last week in these columns, the Supreme Court of Illinois was not able to distinguish between medicine and medicine, and declared that the law of Illinois restricting the sale of all medicines to persons properly qualified to sell them, is a proper exercise of the police power of the State, and therefore constitutional. It is not class legislation to make the same conditions apply to all comers. Illinois, therefore, has a pharmacy law that will hold. How do other States fare?

—On Christmas night the store of R. C. Engels, Forty-seventh street and Union avenue, was robbed under the following circumstances: "The clerk, George McLean, had returned to the store about an hour and a half earlier than usual, that being his day off. He was sitting in the rear of the store smoking a Christmas cigar and ruminat-

ing over the events of the year just gone, when two men entered. Mr. McLaren at once rose to wait upon them, and was confronted by two revolvers and the command: "Hands Up!" The result of the whole matter is that the clerk is minus a gold watch and \$14 of his own money and the store is out \$17, taken from the cash drawer by the robbers. Hereafter Mr. McLean will take his full time off.

—Governor Tanner has just reappointed Bernard Schwartz, Jr., of Salem, to the Board of Pharmacy for the full term of five years. Mr. Schwartz is a recent member, who took the place of one of the deposed board members whose term would have expired on December 31, 1899. In reappointing Mr. Schwartz, the Governor has ignored the names of those selected by the Illinois Pharmaceutical Association—Messrs. Rogers, of Salem; Schuh, of Cairo, and Prickett, of Centralia. The Governor has not sought the advice of the druggists nor respected their wishes; he has not foreborne from politics in the board; he has not kept the promise made to a board member and by him repeated in Danville.

—A. M. Foster & Co., 120 Lake street, dealers in druggists' glassware and sundries, whose entire stock was destroyed by fire some two weeks ago, are doing business next door to their former location, but expect to be back at the old stand with an entire new stock in thirty days. Their whole stock was destroyed, but, of course, orders can be filled for glassware just as usual. The orders are transmitted to the factory. The loss by fire amounted to about \$35,000, but was fully covered by insurance.

—Max McCoy, formerly with James Adams, at Forty-seventh street and Vincennes avenue, bought Smith's Pharmacy, at Sixty-first street and Prairie avenue, about six weeks ago, and says that during the holiday season he has had a fine trade. He is well pleased with his business and location.

—Carlton Sealey Welch, Western representative of the Crown Perfumery Co., of London, Eng., has been appointed general manager of the company's business for the United States. His offices are to be in New York city.

—Goodenough Bros., formerly in the drug business in Englewood, have opened a printing office down town. From the pill roller to the ink roller is a tolerably long stride, but we wish them success.

—The many friends of William F. Faver will be pleased to learn that he is again drumming the trade for James A. Davidson. Mr. Faver has been ill and unable to work for nearly six months.

—V. H. Chantler has bought the drug store formerly owned by C. Kampmann, 1656 Garfield Boulevard.

—The Illinois State Board of Pharmacy will meet next Monday at Springfield for a week's session.

—L. M. Lovett & Co., of Oak Park, Ill., are opening a new drug store in River Forest, Ill.

—J. H. Sullivan has sold his West Lake street store to a Mr. Schroeder.

THE NORTHWEST.

St. Paul, Minn., Jan. 5.

—Successions: Calvin Blythe, Woodburn, Ia., by the Trent Drug Co.; Peter Schneider, Hampton, Minn., by Schneider & Hoffman; Shell Lake (Wis.) Drug Co., by O. Wang; H. A. Barber & Co., Iowa Falls, Ia., by Norton & Hibner; George M. Hibner, Marion, Ia., by George Hobbs & Co.; John T. Wright, La Grande, Ore., by E. E. Hewitt; A. Cowles, Brown's Valley, Minn., by Cowles & Lines.

—As a result of temperance agitation at Melrose, Wis., W. F. Pearing, who has a drug store there, was recently arrested and charged with illegal liquor selling. Upon being found guilty he was fined \$50, and costs of \$53 more. He appealed, and the next day was arrested for selling to a minor. His trial is yet to come.

—E. A. Lieberg, formerly with Noyes Bros. & Cutler, of this city, and who went South this Winter for his health, is now with the San Antonio Drug Co., of San Antonio, Texas.

—J. A. Ross has sold his drug business at Chatfield, Minn., to Joseph Donohue, who takes possession at once. Ross will remove to Princeton.

—D. C. Carson, of Detroit, Minn., is on a sick bed. W. W. Johnson, of Litchfield, is in charge of the drug store.

—W. T. Gilmore is to run the new drug store being put into Iona by G. S. Woodgate, of Slayton.

—A drug store has been started at Aberdeen, Wash., with George A. Todd as manager.

—P. A. Henk, Jr., N. W. Painesville, Minn., has admitted E. A. Malm in to partnership.

—Arthur Gephart, Ottumwa, Ia., is reported seeking relief in bankruptcy.

—Duncan F. McNab, of Moorhead, Minn., sustained a fire loss this week.

—J. S. Huan is in the store of Olson & Hallenberg, Fargo, N. D.

—John Hollentzsch has returned to this city from Hastings.

—J. H. Wilts, Pomeroy, Ia., is "up against" a mechanic's lien.

—S. H. Brownlee paid the city a flying visit this week.

—R. A. Sturgeon, Canton, Minn., has sold.

—J. R. Brown, of Berlin, Wis., is dead.

ST. LOUIS.

St. Louis, Jan. 6.

—F. E. Holliday, of Topeka, Kans., chairman of the Executive Committee of the N. A. R. D., and also the representative of the Proprietary Committee of the N. W. D. A., was in the city Friday and Saturday. Mr. Holliday admitted that his business here was to confer with the wholesalers regarding the betterment of conditions, and the settlement of some little irregularities. This was duly accomplished. Mr. Holliday stated, but he courteously declined to go into details for publication. Mr. Holliday is on his way to Detroit, where he will attend a banquet and meeting of the retailers here next Monday afternoon. Mr. Holliday spoke encouragingly of the progress of N. A. R. D. matters, especially in New England. He is fresh from Kansas City, and brought news from a meeting of the Executive Committee of the retailers' association there day before yesterday, at which it was decided to take more aggressive measures to solve the cut-rate problem. He says that while the State seems to be lagging in its prosecution of the Kansas City druggists in the anti-trust suits, there is a disposition on the part of the druggists to have the suits pressed in order that their position before the law may be clearly defined.

—There will be a unique applicant for registration at the meeting of the State Board of Pharmacy at Jefferson City next week, if a report from the capitol is true. It states that Robert Young, who entered the Penitentiary seven years ago on a ten years' sentence, has been released under the three-quarter rule and wants to take the examination before the Board. Young was a school teacher before his incarceration, and, presumably on account of his superior intelligence, was trained in the prison dispensary and given the duties of druggist, which he has held, it is stated, for five years past.

—Fred R. Sharlach, president of the Missouri Pharmaceutical Travelers' Association, says he finds druggists throughout the State looking forward with great interest to the meeting of the Missouri Pharmaceutical Association in June, and that the travelers will see that their end of the entertainment programme is cared for in a thoroughly satisfactory manner.

—The drug store of G. W. Polston, 1301 North Broadway, was entered Wednesday night by burglars who secured \$25 worth of cigars. No clue to the burglars. A week or so ago Mr. Polston's father-in-law was held up and robbed in the same neighborhood.

—Wm. Roeschell, of Boonville, Mo., who recently died, was one of the oldest druggists in the State and did a wholesale business in Boonville before there were any railroads there. His son, W. E. Roeschell, is in the retail drug business at Boonville.

—The drug store of D. H. Byrne, No. 300 North Grand avenue, caught fire from an overheated stove last Saturday night, and the contents almost entirely destroyed. Furniture and fixtures were insured for \$500 and stock for \$1,500.

—J. G. Churchman, formerly with the Evansville Drug Company, will travel for Moffitt-West Drug Company in Southern Illinois and Kentucky, the territory covered by W. H. Hornbrook, now in the retail business at Indianapolis.

—J. H. Ewing, manufacturers' agent, representing several Eastern houses, has opened an office and sample

room, with 'phone service, at 209 Bank of Commerce Building, Broadway and Olive street.

—J. R. Meyers has sold his retail drug store at Sedalia Mo., to Meyers & Dow. The Meyers of the new firm is no relation to the former owner, who will go into the real estate business.

—The smallpox scare at Montgomery City and Wells-ville, Mo., is over; the quarantine was withdrawn last week and druggists there are all reported as doing a good business.

—Dr. O. A. Wall, Jr., entertained a number of friends at his home Thursday evening of last week, among whom were several ex-graduates of the College of Pharmacy.

—The Banks Medicine Company, of St. Louis, has been incorporated with a capital stock of \$2,000 by L. L. Banks, E. D. Cain, J. C. Banks and others.

—Ralph Ellfret, formerly with Hoefer & Ellfret, Huggins-ville, Mo., will travel for the Liquid Carbonic Acid Gas Company, in Kansas.

—John Sherman, manager of the sponge department of the M. R. D. Co., has returned from a two weeks' business trip to New York.

—Geo. Steinger, formerly with Moffitt-West Drug Company, will travel in Southeast Missouri for Meyer Bros. Drug Company.

—Fleet Miller, formerly with J. F. Curry, Moberly, Mo., has accepted a position with Searle & Hereth Co., in Northern Iowa.

—Robert L. Caley, manager, of the Caley Drug Co., Milan, Tenn., was married December 28, to Miss Annie Thomas.

—Frank Hoover, a former St. Louis drug clerk, is back at his old home, Boonville, Mo., clerking for D. T. Woolridge.

—Edgar Reisdell, formerly of Lebanon, Mo., has opened in the retail drug business at California, Mo.

—J. R. Tatum, druggist, Glasgow, Mo., recently burned out, will resume at an early date.

—Ernest Floyd, formerly with O. W. Smith, Sedalia, Mo., is now clerking in Kansas City.

—P. S. Reynolds & Co. have moved their drug stock from Napton to Blackwater, Mo.

—Hicks & Co., have bought Hahn's drug store, Cottage and Taylor avenues.

—Payne's drug store, Ft. Smith, Ark., advertises a closing-out sale.

—C. K. Harryman, of Pawnee, Ark., is putting in new fixtures.

—Dr. R. L. Hopper has opened a drug store at Columbia, Mo.

KANSAS CITY.

Kansas City, Mo., Jan. 6

—Mr. H. W. Evans, of Evans-Smith Drug Co., wholesale druggists: "The condition of the retail druggists of the West and Southwest, while growing no worse, seems to be about stationary. This is likely due to the fact that the number engaged in the trade are too numerous and the increase of stores more rapid than the growth of the country, which, however, is in a very prosperous condition. In my opinion sentiment favorable to the National Association of Retail Druggists is on the increase, and when the healthy growth now enjoyed by this Association finally crystallizes with a perfect organization I hope to see a check made to the patent medicine and sundries business of the department stores, which is now undoubtedly on the increase. Drug men should give close study to their sundries business. I think it would be wise for them to take a more hopeful view of this branch of their business and by good stocks and reasonable prices gain the favor of the public. The wholesale trade was never in a more prosperous condition, customers being more numerous and collection good."

Mr. Frank A. Faxon, of Faxon, Horton & Gallagher, wholesale druggists, said "The wholesale drug business in this section of the country for 1899 was larger than ever before, and the outlook for 1900 is most encouraging. Trade is in a healthy condition and collections are good. The farmers generally are prosperous and the mining interests throughout the West are in excellent condition, so we may look forward with hope. The National Association of Retail Druggists is making constant headway, and while it would be too much to hope

that the cutting evil will finally disappear altogether, it is safe to say that it will become greatly modified. The retail organization is receiving accessions every day, and it is becoming stronger all the time. It is officered by level-headed men who do not expect too much but who believe that the retailers of the country by organizing and working together, keeping one purpose in view, will accomplish an amount of good which will be a great help to all parties interested."

—The holiday trade, with the down-town drug men this year showed a marked increase over former years—a happy result of the determined and intelligent efforts to reach the Christmas buyers. Good stocks and reasonable prices landed a good share of the business. The few days preceding Christmas the crowds that thronged the drug stores were a sight to please the partisan of the retail druggist. Empty show cases and radiant faces tell the result of the Christmas business more eloquently than words, though these have great force when spoken with such visible evidence of their truth. The next year should see an intelligent and earnest effort on the part of the retail druggist to get the sundries business. This can be accomplished by keeping a good stock, enough to make the impression on the people that in both variety, quality and price all competition can be met. Personally investigate what the department stores are doing, and then go after them.

—The movement of our council to have a monthly dinner, at which municipal affairs are to be discussed, has suggested the idea that this would be a good innovation for the retail druggists. Such a gathering would be of great value to the trade. Matters of importance to the professional and business side of the druggist's relations to each other and the public could be discussed with benefit and a friendly feeling promoted, which is a good thing under all circumstances, and an essential factor if the external evils that confront the trade are ever to be overcome by concerted action.

—The drug business in this section of the country is in better condition than for years. The great Southwest, with the strength of youth, is expanding her commercial interests very rapidly. The wholesale houses at this point are a good indicator of these conditions. Your representative visited these busy concerns during the past week and was favored with the views of the heads of the firms on the drug situation of the Southwest.

—Mr. Keely, who for many years has been identified with Parke, Davis & Co., as city representative, has severed his connection with that house and taken the representation of Merrell's pharmaceuticals in the city. Dr. Woods is the new city representative of Parke, Davis & Co.

—E. H. Russell, owner of the store at Twelfth and Campbell streets, took the road for Eli Lilly & Co., on January 1, covering Oklahoma. It is said that Mr. Russell contemplates the removal of his store into the territory at a future date.

—Keely & Williams, druggists' sundries, have opened an office at 906 Main street. Both partners expect to travel, while Frank Du Chur, at present with Federman & Hallar, will have charge of the office.

—Henry Harmon, of Mound City, Mo., was in the city this week purchasing an opening stock for the new store he is to open in Oklahoma City, Okla., to be known as the Harmon Drug Co.

—Alexander Bros., druggists of Cameron, Mo., will open about Feb. 1 in Oklahoma City, Okla., a wholesale drug house under the name of the Alexander Drug Co.; paid-up capital stock, \$50,000.

—Your correspondent has been informed on good authority that the evidence against those recently indicted for selling liquor without a dram shop license is largely worthless.

—H. J. Shepard, formerly clerk for A. N. Doerschuk and W. S. McCann will open a new store in the East bottoms near Heim's Brewery about Feb. 1.

—The Northwest Chemical Company expect to begin operations in March. They will give employment to about two hundred and fifty men.

—Walter Davis, of Ottawa, Kansas, was in the city the past week buying an opening stock for his new store which he is soon to start.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Elba.—Boyet & Moseley, sold to West Brothers.
ARKANSAS.—Alicia.—L. E. Campbell, of the firm of Huggins & Campbell, deceased.
CALIFORNIA.—San Jacinto.—McKim & Chambers, loss by earthquake.—L. A. Wright Drug Co., loss by earthquake.
 Vacaville.—Vacaville Pharmacy, J. W. Stitt, proprietor, sold to R. L. Reid.
FLORIDA.—Marianna.—Lewis & Co., succeeded by Pierce & Lewis.
ILLINOIS.—Abingdon.—Cortelyou & Cannon, succeeded by Dr. J. S. Cannon.
 Tonic.—Hall Brothers, sold to G. H. Forster & Co.
INDIANA.—Dunkirk.—A. W. Kennedy, damaged by fire.
 Hartford City.—Wrennick & Co., out of business.
 Medaryville.—Provo & Moreland, succeeded by Moreland & Becker.
 Mitchell.—L. B. Crawford, sold to W. R. Richardson.
 Porter.—Charles L. Jones, sold to Dr. L. H. Kelly.
INDIAN TERRITORY.—Paul's Valley.—Bruce & Berry, succeeded by C. P. Bruce.
IOWA.—Iowa Falls.—H. A. Barber & Co., sold to Merton & Hibner.
 Woodburn, Clark County.—C. Blythe, sold to Trent Drug Co.
LOUISIANA.—New Orleans.—Fred. Turney, No. 470 Jackson avenue, sold to J. T. Baltger.
MARYLAND.—Baltimore.—J. S. Woodward (Sparrows Point), Station K, should be added to D. D. List.
MASSACHUSETTS.—Fall River.—Philip A. Brosseau, No. 32 Lindsey street, now at corner of Sixth and Pleasant streets.
 Randolph.—F. Porter, deceased.
MISSOURI.—Dallas.—S. L. Malone, sold to Sampel Watts.
 St. Louis.—D. A. Byrne, No. 3755 Lindell avenue, damaged by fire.
NEVADA.—Tuscarora, Elks County.—Owyhee Pharmacy, should be added to D. D. List.
NEW HAMPSHIRE.—Somersworth.—J. E. Barll & Co., out of business.
NEW YORK.—Brooklyn.—A. Goldberg, No. 390 Busbwick avenue, sold to Max Gluckman.—A. C. Vosseler, No. 179 Grand street, removed to No. 147 Grand street, corner of Bedford avenue.
 Stoney Centre.—George E. Holley, assigned.
OHIO.—Columbus.—C. J. Fahrback, No. 413 South High street, assigned.
OKLAHOMA.—Oklahoma City.—Alexander Drug Co., wholesale druggists, new firm.
SOUTH CADOLINA.—Newberry.—W. E. Pelham, damaged by fire.
TEXAS.—Blinn.—W. F. Hicks & Son, discontinued.
 Dallas.—Patton-Worsham Drug Co., wholesale druggists, new firm.
 Kingsland.—King & Merritt, sold to S. B. Norwood & Co.
 Kirk.—J. D. Therrell, sold to W. W. David.
 Odessa.—J. R. Dawson, sold to S. F. Cuberson.
UTAH.—Salt Lake City.—A. C. Smith Drug Co., wholesale druggists, succeeded by the Salt Lake Drug Co.
VERMONT.—Randolph.—E. E. Evans & Co., sold to A. C. Bailey & Co.
WISCONSIN.—Berlin.—J. R. Brown, No. 302 Huron street, deceased.
MANITOBA.—Winnipeg.—John F. Howard & Co., No. 445 Main street, assigned.
NOVA SCOTIA.—Bridgewater.—Charles T. G. Taylor, deceased.
QUEBEC.—Montreal.—La Pharmacie Nationale, E. Giroux, proprietor, No. 216 St. Lawrence street, assigned.

Tarry Ammonia.

Is there anything more disagreeable than the nauseous, gasy and tarry odor which reaches the nostrils the moment a bottle of ordinary Concentrated Ammonia is opened? We understand that the Herf & Frerichs Chemical Company, of St. Louis, manufacture their entire production from Sulphate Ammonia, and not from Gas-liquor, and consequently the objectionable features mentioned above are absent in their product.

Pharmacists are demonstrating their appreciation of the superior quality by specifying and underlining Concentrated Ammonia 26° H. & F.

OBITUARY.

JOHN BUCK.—After more than a year's illness at his home in Chelsea, Mass., John Buck, the oldest resident of that city, and probably the oldest druggist in Massachusetts, died on the night of Saturday, December 30. Mr. Buck was born in Malden in 1819. He was educated in the public schools of Malden, and also went to Warren Academy in Woburn, from which place he was graduated in 1837. After this he took up the study of pharmacy, as an apprentice to Seth W. Fowle, of Boston, with whom he remained until 1841, and he then went into business for himself in Chelsea. He prospered and built up a large business, and for a long time his store in Broadway was one of the busiest and most popular places in Chelsea. Two or three years ago Mr. Buck sold his business to a savings bank corporation, which erected a new building. Mr. Buck then retired to private life. He had belonged to several organizations. In 1858 he became a member of the American Pharmaceutical Association, and at the time of his death was a life member of the organization. He served for several years on the Common Council of Chelsea, first being elected to the board in 1861. He was one of the oldest Odd Fellows in Chelsea, and had belonged to the old Chelsea fire department, and was a member of the Chelsea Veteran Firemen's Association. Mr. Buck was an active member of the First Congregational Church of Chelsea, serving for a long time as its treasurer and being for many years one of its deacons. A widow and one son survive him. The funeral took place from his home, and the body was cremated at the Forest Hills Crematory.

DAVID T. FULLER, for ten years past manager of a pharmacy at Madison avenue and Fifty-third street, New York City, died December 29, from heart trouble. He was born in Columbus, Ohio, 55 years ago, and was a son of Justice David Thurston Fuller, of the Ohio Supreme Court. For many years before coming to New York Mr. Fuller had conducted a drug business in Waterbury, Conn. His tastes were of a literary turn, and he had contributed to the New York Ledger.

RICHARD G. RUTHERFORD, one of the oldest druggists in Brooklyn, N. Y., died on January 6, at his home, No. 180 Myrtle avenue. He had conducted a drug store at that address for fifty years. Mr. Rutherford was born seventy-nine years ago at Kingston, Jamaica. He came to New York in 1838, and studied pharmacy with the firm of Adamson, Olliffe & Co., at 6 Bowery. He left a wife and a married daughter.

BENJAMIN F. CHAMBERS died at his home in Brooklyn, N. Y., on December 28, of apoplexy. He was sixty-five years old and was a native of New Jersey. He was for many years in the drug business in New York City, retiring six years ago. He had lived in Brooklyn for twenty-five years. A widow and married daughter survive him.

S. WINANS WHITEHEAD, aged seventy-five years, one of the oldest druggists of Elizabeth, N. J., died on December 30 last. He was one of the founders of the Westminster Presbyterian Church in that town, and was a past master of Washington Lodge, F. and A. M.

C. P. HISEY, a popular druggist of Edenburg, Va., died there on December 30 after an illness of six weeks of liver trouble. He was 40 years old and leaves a widow and one small child.

CARL L. RECKNAGEL, a retired drug importer, died at his home in Brooklyn, N. Y., on January 3, at the age of seventy-nine years.

The "Allenbury's" Series of Infant Foods.

The specialties of the well-known London firm of Allen & Hanbury, Ltd., are becoming as staple in the United States as they have been for years in England. The American branch of this firm, which is located at 82 Warren street, New York, is keeping physicians and nurses well informed as to the merits of the "Allenbury Foods," etc., and the goods, which are frequently ordered, can be obtained through jobbers in all sections.

Watch this column for the latest reports of what is going on in the National Organization.

Chicago, Jan. 6, 1900.

A few weeks ago a letter was sent out by the National Executive Committee in which this request was made: "You are urged to send to the National Secretary with the least possible delay the decision reached by your association upon the important question—Will your members, individually and collectively, stand behind the National Executive Committee?" Some of the replies to this question have been published already in the "Notes." The following extracts from a few of the others will be of interest:

"I can say for my association that it will stand by the N. A. R. D. in all matters—Alda M. Ferris, secretary, San Diego County (Cal.) Retail Druggists' Association."

"At the last meeting of this society the following resolution was passed: Resolved, that the secretary of this society be instructed to write the secretary of the N. A. R. D., reaffirming the support of this society.—Dr. F. P. Tuthill, secretary Kings County (N. Y.) Pharmaceutical Association."

"The committees may be assured of the cordial support and co-operation of the Burlington County (N. J.) Association.—E. R. Sparks, secretary New Jersey Pharmaceutical Association."

"The following resolution was unanimously carried: RESOLVED, That the Norfolk Pharmaceutical Association, of Norfolk, Va., hereby ratifies its allegiance to the pharmaceutical profession through the service of the National Association of Retail Druggists, and pledges itself individually and collectively to stand by the association and its Executive Committee.—J. W. Thomas, Jr., secretary."

"After deliberation by our Executive Committee we have concluded that we may safely count on the support of our members on any action taken by the National Executive Committee.—E. F. Hollenback, secretary Retail Druggists' Association of Hamilton County, Ohio."

"I am directed to say that we are in hearty concurrence with the object of the N. A. R. D., and will as a body support it in all its efforts to further the interests of the retail druggists.—J. W. Gayle, secretary Kentucky Pharmaceutical Association."

"We fully indorse and approve of the policies and plans inaugurated by the National Committee.—W. I. Ellsworth, secretary Linn County, Kan., Pharmaceutical Association."

"After careful consideration by the association it was resolved, that the Associated Retail Druggists of San Francisco pledge themselves to stand loyal to the N. A. R. D., and give to its Executive Committee every possible support, in carrying out its plans.—H. Haman, secretary Associated Retail Druggists of San Francisco."

The following letter and the extracts from the reply to it give an insight into the work being done in the National Secretary's office. It is quite impossible to carry on properly the work of organization by mail, but the work is being prosecuted early and late, and it is hoped the seed that is being sown will, in time, yield a satisfactory harvest:

"Mr. Thos. W. Wooten, Secretary, Chicago. Dear Sir: Yours of Dec. 14th at hand and in reply beg to say that the writer understands full well the necessity of co-operation by retail druggists, but he also understands that druggists as a class are unruly and jealous, and it is very hard work now to organize and have them fall in line and stick together. I have not time to devote to this class of work, but would like it very much. I realize the condition of the retail druggists throughout the United States and think that something ought to be done, but am unable to give it the attention that it should have. Yours very truly,

"Dear Sir: It is regretted you do not see your way clear to taking up for me the work of organizing the druggists of _____ into an association. Our only hope of improving the condition of the drug trade is through organization, and if this cannot be accomplished the movement to which we are devoting our energies will certainly fail. It should not be forgotten by you that the N. A. R. D. was started and is being pushed by men

actively engaged in the retail drug business, men whose interests are as large as yours, and the demands upon whose time and energies are quite as exacting. Indeed, the work of the world is being done by busy men. No good work has ever been or ever will be done by people of leisure, and the staunchest supporters of our movement, those who are doing the most for its advancement are men who are devoting much of the little leisure they are able to enjoy, to our interests. In view of these facts we think you ought not to hesitate, even though you are busy, to undertake the work of organizing the druggists of your county for their own benefit and in order to help along the good work of the N. A. R. D. * * * Your county is of too much importance for us to pass it by without a strong effort to secure the cooperation of its druggists. I should like to have you write me again after you have given the subject careful consideration, and if you cannot possibly undertake the work of organization please designate someone in _____ County whom you think could be relied upon to do this work, so useful to your welfare as well as that of your fellow druggists. We are determined to leave no stone unturned for the accomplishment of our purposes because we are convinced this is the last effort that will be made to save the retail trade of the country from impending ruin."

The Marion County (Indianapolis), Ind. Association has adopted the Louisville certificate plan. The following is the card issued to the representatives of manufacturing and jobbing houses:

SALESMAN'S CARD.
 Issued by Marion County Druggists' Association.
 Indianapolis, Ind.

The bearer _____ representing _____

has agreed not to offer, exhibit or sell his goods or products to those not in sympathy with our organization, and pledges his house to the same effect. He is recommended to the members of this association.

_____, President. _____, Secretary.

Void after _____

The salesmen to whom the cards are issued are required to sign an agreement to the effect that the pledges made by them and their houses, at the time the cards are given, shall be binding for one year from the date of issue.

The following extract from a letter written to a druggist in a town where the druggists are thought to be "too few to organize" and where they have no price-cutting will be of interest to others similarly situated:

"There is one obstacle to the success of druggists in the smaller cities and towns which is little talked about, but which is of the most vital concern—the mail-order houses of the large cities. Every year thousands of dollars' worth of business is taken away from the druggists in the small towns by these houses, and one of the objects of the N. A. R. D. is to prevent these people from selling proprietary goods at cut prices, which of course is the one inducement for farmers and their friends to send money in advance for merchandise. The growth of this method of doing business is a menace to the welfare of every druggist in the country outside of the larger trade centers. The N. A. R. D. purposes benefiting all; it deserves at the hands of all cordial support."

The Cleveland (Ohio) Pharmaceutical Association has begun a vigorous campaign in behalf of the N. A. R. D. The dues of the members is now \$1.00 per month, and a capable man has been engaged to devote his entire time to the interests of the organization. The project of uniting all the druggists of Northeastern Ohio into a strong organization has many enthusiastic advocates. The phenomenal success of the Western Pennsylvania Association is proving to be an invaluable stimulus to organization throughout the entire country.

The reports that are being received from various parts of the country indicate that the petitions to Congress requesting a repeal of the Stamp Tax on medicines are awakening general interest. They are not only being signed by druggists and forwarded to members of Congress, but the signers are calling on their Congressmen, writing them personal letters and in other ways bringing forcibly to their attention the justice of the law and the desirability of securing its repeal.

Bulletin No. 7, giving the details of the meeting of the Executive Committee recently held in Chicago, is now in the hands of the printer. It will give the work accomplished since the annual convention as shown by the report of the members of the committee and officers, as well as the plans for the future work.

THE JACOBS' PHARMACY METHODS.

Atlanta, Ga., Jan. 3.

Editor Pharmaceutical Era:

We do not furnish reading matter of any character to patrons waiting for prescriptions to be filled. We make no special provisions for the accommodations of prescription customers, except chairs and seats conveniently arranged in the rear of our store. Most prescriptions are left to be filled and called for, or to be delivered by a messenger. We try to discourage the waiting for prescriptions for several reasons (except in cases of emergency). Most people have other errands and we diplomatically suggest that they can do what other shopping or errands they may have and return for the prescription, which will be filled in ten, twenty or thirty minutes, as the case may be. Customers quite frequently get impatient, and we occasionally have a complaint about prescriptions not being filled as promptly as they think they should be. Investigation often reveals that the customer has been waiting only five or ten minutes, when he, without observing the time, claims to have been waiting twenty or thirty minutes. Our prescription department is differently located from that of most stores; it is in the basement directly under our retail room. We find this quite an advantage over the old arrangement, as we can give the department much more room than can be had on the main floor.

We removed the prescription department from the main floor for two reasons; first, to improve its service, and to secure larger quarters; second, for the reason that we do not believe that the best and most careful work can be done amidst the whirl and rush of a busy store. As it is now, prescription men do nothing but prescription work. While every man in our employ is competent to do prescription work, we believe the best results both for our patrons and ourselves are secured by the separation. We use a check for receiving and delivering prescriptions (sample enclosed).

Jacobs' Pharmacy

TWO STORES:

6 and S Marietta St.,
23 Whitehall St.

Retain this check and present when prescription is finished. If you do not wait, have check presented by person calling for prescription.

X749

WAIT TIME

CALL

COPY

X749

X749

We also double check all prescriptions and attach a ticket showing by whom the prescription was checked and filled, also the price. We find the price ticket quite a good thing; it saves lots of misunderstanding about prices previously paid.

The facts which, in our opinion, have contributed to whatever success our advertisements may have attained are, briefly, these: We spend very little money in advertising, except in the daily newspapers. We use no specified amount of space, but vary the space according to the story to be told. In some issues we use as little as five inches single column, and often use as much as a half and on special occasions as much as a whole page. We quote prices in all of our advertisements. A large percentage of our "Ads" deal solely with proprietary and toilet articles of our own manufacture. We change copy with each issue of the paper. We make our advertisements as plain and to the point as possible, and never

make a statement in the papers that is not fulfilled in the store.

To be a successful advertiser one must learn to write just as he would talk to a customer over the counter, using plain every-day language, the plainer the better. We issue once a year a complete catalogue containing over 230 pages; in this we devote quite a large amount of space to our own preparations. Toilet articles and druggists' sundries are illustrated and described as accurately as possible. This catalogue brings us quite a good deal of business, mostly mail orders. We issue booklets quite frequently, only one subject to a booklet, and these are distributed by one being enclosed in every package that leaves the store. Programme and scheme advertising are good things to let alone.

Yours very truly,
JACOBS PHARMACY CO.,
C. A. Smith, Ad. Manager.

DON'T BE AFRAID TO ASK.

Canton, O., Jan. 5.

Editor Pharmaceutical Era:

In regard to a united effort by all branches of the drug trade to have Section B of the War Stamp Tax Act amended, I believe Section B is unjust because it is oppressive class legislation; consequently, we should ask for its repeal. I never lost anything by asking for what was justly due me. I well remember one good old Methodist Brother who almost invariably in his prayer would say: "O, Lord, give us faith and courage to ask largely from Thee." If, however, it is the consensus of opinion that we ask for an amendment, I think this amendment should be formulated by a committee from the various national associations of the different drug branches. I think we can bring the most effective pressure to bear on the "powers that be" by having our petitions signed, as far as possible, by the chairmen of the various political campaign committees, County, State and National, of all political parties. I believe such a petition would be most potent.

Truly yours, FRED P. SHANAFELT.

"WHEN YOU'RE IN ROME, ETC."

A druggist of New York's east side knows his business in studying the people who pass his store. Devoid of elegance, but very applicable to a certain trade, a sign in his window reads:

STEP RIGHT IN, GENTLEMEN, AND GET A SMOKE.

I won't make you, break you, buy you a farm you a west, or set you up in business, but I'll give you a chance to smoke the best cigar you ever put between your lips.

What do you like, mild or medium?

When asked how the sign "took," the clerk replied: "We're working overtime at the cigar stand, especially Saturday nights."

THIS WAS A TAKER.

Perley & Co., Pringhar, Ia., received good returns by sending out previous to the holidays a liberal supply of postal cards, bearing the following, in mimeograph copy:

GOOD EVENING:
HAVE YOU SEEN
PERLEY & CO'S, STOCK
OF NEW HOLIDAY GOODS?

New Year's Greeting from "S. & D."

Sharp & Dohme sent out a neatly engraved card as a New Year's greeting to their friends and customers. All who have business relations with this firm will doubtless join the Era in reciprocating the good wishes for 1900 extended by them.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

1900 Will Be Their Best Year.

The Hart Manufacturing Co., of Chicago, are about to increase the size of their salesrooms and offices to more than four times their present size, and have already largely increased their factory space, so great has been the recent demand for "Hart" soda water apparatus. They say that the orders received for next season are noticeably for much larger and finer apparatus than ever before, and the indications are that their business for 1900 will be more than double that of any previous season. This report is very encouraging generally, and specifically shows that fountains from the "Hart" factory are retaining their old friends and gaining new ones steadily. Photographs of some of this company's latest styles will interest prospective buyers and will be sent free on request.

A New Booklet from Tufts.

The latest "Tufts" booklet, of which over a million copies have just been distributed, is one of the most attractive ever sent out by James W. Tufts, which is saying a good deal. Its publisher has a right to be proud of it. It discusses the "profit possibilities" of a good soda fountain in a very practical, businesslike manner, and to show what good fountains are, contains some excellent illustrations of the latest "Tufts" styles. What "Tufts, and Nothing but Tufts" means in soda fountain language is aptly explained in an advertisement in this issue, by comparison with some well-known popular fallacies in every-day English. Druggists who have not received the new booklet referred to above are invited to write for copies.

Whitall, Tatum & Co.'s 1900 Price List.

Promptly with the beginning of the new year the annual illustrated catalogue of Whitall, Tatum & Co.'s goods has been distributed to the trade. It is, as usual, a very handsomely illustrated and printed book; this year's edition shows an unusually large number of additions to the firm's line, and some changes in prices of the familiar and reliable "W., T. & Co." goods, which druggists have learned by years of experience to buy with such entire confidence. It may be safely said that every good buyer in the drug trade uses this list and discount sheet as a reference book, and welcomes each issue as a valuable assistant in buying glassware, druggists' sundries, etc.

Glycerinized Vaccine on Ivory Points.

In a pamphlet issued by the National Vaccine Establishment, Washington, D. C., and illustrated with views of their extensive laboratories, a resume of the improvements in the manufacture of vaccine since their laboratory was started in 1882, is given. This concern claims to have been the first propagator in the country to call physicians' attention to "what was good and what was bad vaccine, as then understood," and have long been known as offering a very superior product. Their latest improvement is glycerinized vaccine lymph on ivory points, instead of in sealed tubes, the advantages of which are explained in the pamphlet. Copies can be secured free by writing for them.

"Ideal" Rubber Specialties.

The attention of the Era's readers is again called to the popular line of "Ideal" rubber specialties, atomizers, syringes, etc., in an advertisement in this issue. The demand for these goods is steadily increasing, and the Ideal Rubber Co.'s Brooklyn factory has been kept extremely busy to supply them for the past year. Their special good points are known to physicians and to large consumers, and as they are easily sold by retail druggists they are subjects of frequent speculation on orders to jobbers. The manufacturers supply a complete illustrated price list on request.

"Freck" Tablet Machines in Foreign Countries.

The good reputation of the "Freck" tablet machine has reached many foreign countries, and these machines are now said to be used in England, France, Russia, Germany, etc., and even in Japan. The reports which reach the manufacturers from these countries from users of their machines are very encouraging, while the demand in this country is rapidly increasing. "Freck" machines are supplied with a capacity of from 60,000 to 360,000 tablets daily, under absolute guaranty, by the William Freck Co., 116 South Clinton street, Chicago, who send detailed description to druggists on request.

A New "Hughes" Illuminated Mortar.

Thomas Hughes, No. 25 Clinton place, New York, successor to F. McLewee & Son, manufacturer of illuminated sign mortars, has designed an entirely new "Hughes No. 3, mortar, embodying many improvements. It is suitable for electric light or gas, with imported convex glasses, and thoroughly up to date in every respect. These mortars can be obtained through drug jobbers or direct from the manufacturer, who invites correspondence in regard to special designs of illuminated mortars, refinishing of old ones, etc., etc.

Reduced Prices on Doane's Seidlitz Powders.

Chas. R. Doane, the Brooklyn seidlitz powder manufacturer, has reduced the prices of his goods, and careful buyers should take advantage of this opportunity to replenish stock. Doane's powders are well known in the trade and are relied on for purity and full weight; they are made by machinery and on this account can be sold to druggists for less money than the latter can put them up by hand.

Larger Circulation for Era "Want Ads."

The increased circulation of the Era makes its "Want" columns more valuable than ever for advertisements of "stores for sale," "clerks wanted," "positions wanted," etc., etc. The Era's promptness in reaching the trade each week is an important factor in obtaining quick replies to such announcements. The rates are 2 cents per word (no adv. taken for less than 50 cents), and copy should reach the Era's offices by Monday of each week.

Micajah's Wafers for Rectal Ulcers.

Dr. Otto Juettnet, Cincinnati, Ohio, reports: "In rectal ulcers I prescribe with success the following: Micajah Wafers, two; Ol. Theobrom, q. s. M. sig. Ft. suppos. No. 6. One every evening to be followed by a warm rectal irrigation the next morning. If used in this way the wafers are the best routine application I know of. The protoscope should be used twice every week and the ulcer inspected. Of course, these directions may be modified as required."

Their Business Is "Booming."

The Carlstedt Medicine Co., of Evansville, Ind., manufacturers of Otto's Spruce Gum Balsam and other popular remedies, reports "business booming," and a most encouraging outlook for the new year. This company supplies druggists with free advertising matter, which sells their goods and also make several attractive "special introductory offers," the details of which will interest good buyers.

"Russian Brands" Chocolate, Etc.

The Clarke Manufacturing Co., 191 Greenwich street, New York, have introduced a line of Russian chocolates, cocoas and confections, which are said to be extremely attractive in style and taste, and which are being largely advertised to the public and trade. The manufacturers solicit dealers' orders and correspondence, and will quote trade discounts on request.

Lord Coleridge writes: "Send me fifteen dozen Cook's Imperial Extra Dry Wine. I tried it while here and find it superior."

THE ERA BLUE BOOK.

The Era Blue Book is offered to the drug trade in the confident belief that it will provide a most efficient, even indispensable, aid to drug buyers in the conduct of their business. This Blue Book supplies, within the covers of one volume, up-to-date price quotations on nearly all the multitudinous variety of medicinal articles which constitute the druggist's stock. It combines in this one easy reference volume the most complete price lists of drugs, medicines and proprietary articles yet published, together with the Price Lists of a host of individual manufacturing houses, thereby doing away with the nuisance of separate lists of all sorts and shapes and sizes, which accumulate rapidly, are difficult to preserve in readily accessible condition and which constitute an annoying nuisance to the buyer.

But the Blue Book does not constitute our entire service. The Pharmaceutical Era is the only weekly drug trade paper in America. Its Market Reports and Prices Current are up-to-date and complete, and are compiled with special reference to the druggist's needs as a drug buyer, and to supplement and complete the Blue Book's service.

The connecting link between the two, rendering both complete and at ready service, is the WEEKLY CHANGE SHEET, which is sent every Thursday to each possessor of a Blue Book. The sheet contains the latest information of price fluctuations in drugs and chemicals, changes in, and additions to, the list of patent medicines and their prices, and, specially, all corrections in the Manufacturers' Price Lists which are so serviceable to the careful drug buyer, if promptly published.

Taken together, the Blue Book, the Era and the Weekly Change Sheet constitute a trade service which is complete in both its details and its entirety, and which is placed before druggists in the hope and expectation that it will prove instantly acceptable and worthy of their commendation.

No effort or expense will be spared to make this service continually and progressively more satisfactory, and any and all suggestions and criticisms to this end will be thankfully received so that each annual edition may be more complete than its predecessors.

THE PUBLISHERS.

WORK OF THE N. A. R. D.

There are being received almost daily letters from correspondents who inquire what the N. A. R. D. is doing, what it has done, what it is going to do. One writer says "the time has come for the N. A. R. D. to show its vitality. We must be either hammer or anvil. We have been anvil long enough, let us try hammer." Another wants to know what the N. A. R. D. is going to do about the various combinations of druggists in our large cities formed for the purpose of buying from manufacturers for distribution among their members. If the N. A. R. D. cannot cut off these buying-clubs, then it falls in one of its greatest purposes.

We should be very glad to have readers of this journal contribute freely their views and suggestions relative to the N. A. R. D. and its work. The task undertaken by the national organization is one not to be accomplished in a day, or a year, but progress must be made each day, each week, each year. The N. A. R. D. needs the helpful suggestions and the co-operation in every way of every retail druggist in the United States. It can effect its purpose only when it has the majority support of retailers; it can do nothing with only the minority back of it. So hurry up, druggists, become one of the majority in this great work, which is undertaken entirely for your own direct personal benefit. If you do not try to help yourself you may be sure that no one else will be able or even willing to help you. The N. A. R. D. will help you if you will help it.

* IS A COLLEGE A CHARITABLE INSTITUTION?

The sheriff has advertised for sale, to satisfy a tax bill for about \$150, the property of one of the smaller colleges of pharmacy in one of the interior States. The college has asked for an injunction on the ground that it is a charitable institution, and by law exempt. This claim on the part of the college will probably be a surprise to most readers, as the general impression is that most, if not all, our colleges of pharmacy are far from being charitable organizations. Most of them charge a good, round fee for tuition, and we have yet to hear of any one which doles out its education in a purely charitable (free of cost) manner to the young man who wishes to get it for nothing. There are some of the colleges of pharmacy which are really in business only for what there is in it, both for the sake of the income from students' fees and for the purpose of providing good positions and honors for certain of their backers who have that uncontrollable itching for professorial position. But whether charitable or not, it would seem only good business judgment and policy in this case to pay the small tax bill rendered.

THE SLOT 'PHONE.

A druggist in Chicago, who is an enthusiastic supporter of the slot telephone, tells us of the direct benefit this has conferred upon him. He has had the slot

telephone just four years, during which time he has not been obliged to pay \$200 a year for it. This saving is to him a direct profit of \$800, and in addition, his rake-off has amounted to about \$200, and the effect upon his business otherwise has been excellent, his patrons have been pleased, and there has been no dissatisfaction anywhere. In this connection he inquires why it is that "sewers generally stop up in winter time, that doors usually have the lock out of order when it is below zero, and that the postage stamp fiend universally leaves the store door open." He points out the fact that paying customers are considerate enough to close the door and behave themselves; the stamp fiend, however, is a boor; "he steals your temperature by leaving the front door wide open in winter, he mars your temper by making himself a general nuisance. This is one reason why I am against the old deadbeat telephone system and in favor of the slot, which compels the user to cough up the stuff."

UNREGISTERED DRUGGISTS IN WASHINGTON.

Detectives recently detailed to enforce the laws regulating the practice of medicine in Washington, D. C., have submitted a report of the drug firms found to be without registered proprietors. In the District of Columbia the total number of drug stores is 192. There are 206 proprietors, thirty-one of whom are not registered pharmacists. Of the drug stores twenty-two are said to be without registered proprietors. There are seven drug stores which have no registered person (proprietor or clerk) in them. Five of these are allopathic and two are homoeopathic stores. There are employed 152 regular clerks, thirty-nine of whom are not registered pharmacists, and there are in addition fifty-seven relief clerks, all registered but one. Notices have been served upon the unregistered proprietors that they must comply with the law or suffer the consequences. It was found that all but ten of the drug stores keep the required register of sales of poisons, but only about one-fourth of them keep these registers in full, most omitting in one or more particulars some of the required features. This stirring up in Washington is calculated to have a good effect and conduce to a much more general observance of the law.

VANILLA MUST BE VANILLA.

The State Food Commissioner of Michigan has warned the trade that hereafter all extracts of vanilla, or tonka, or both, found upon the shelves of retailers must be true to their claims as labeled and branded. Prosecutions will follow wherever this requirement is disregarded. So far at least as vanilla extracts are concerned, therefore, the residents of Michigan may hereafter depend upon the genuineness of the articles they consume. This same principle could, with satisfaction, be extended to cover a very wide range of food products. Correct labeling and branding form the basis upon which is to be founded the proper sort of pure food and drug legislation. Supply the people with adulterated or cheapened products, if you will, but let them know what they are purchasing. Every man has a right to eat poor stuff if he wishes, but no one has a right to force upon him poor stuff and make him believe that it is good.

BORACIC ACID HARMLESS.

In the District Court at Des Moines, Ia., the other day, a decision was handed down in a case against a man accused of adulterating milk with boracic acid. The Court holds that boracic acid as a preservative in milk is not harmful, and that the legislature had no constitutional right to interfere with its use. The manufacturers of a milk preservative fought this case

for the defense. In England it has been very decisively ruled that boracic acid must not be used in milk, though it may be permitted for the preservation of meats and other food products. In this country it would seem that there is law and law, and one can get any variety of law he really wishes and endeavors to secure. Milk preserved by boracic acid is undoubtedly not harmful to adults, but we believe that the infant should not be fed with anything but the freshest and purest milk.

NO EXCUSE.

A sixty-nine year old druggist and doctor in a Utah town waited upon a customer who wished seventy-five cents' worth of gin. By mistake carbolic acid was dispensed, the bottle was not labeled and the customer drinking the stuff was very quickly killed by it. Two complaints have in consequence been entered against the druggist, one for feloniously and negligently substituting and delivering a poison which caused death, and the other for failing to label a poison. The druggist admits his error and will rely upon the mercy of the Court. This seems to be one of those unaccountable instances of temporary mental aberration, for in no other way can such error be explained.

HERE'S CHARITY.

A patent medicine firm in Chicago has distributed free to the poor 5,000 packages of its preparation. To explain its unwonted generosity the firm states that the medicine being such a valuable curative agent they wanted the poor, who are unable to buy it, to have it anyhow. Without considering the possible value of this action as an advertisement, it may be pointed out that very seldom is a patent medicine concern to be found which will give away anything. Perhaps more would, however, if it were really a fact that the world is clamoring for and is in urgent need of their concoctions.

LONG LIFE WITHOUT MEDICINES.

There is a man over in Connecticut who is 101 years old. Up to the age of twenty-one he constantly took medicines to improve his health, but notwithstanding remained weak and sickly. At his majority, however, he swore a vow never again to take medicine, and his longevity he attributes entirely to this determination. The question whether medicines aid or injure any one is debatable. It is true, however, that if the majority of people were like this centenarian the druggist, like Othello, would find his occupation gone.

PURIFICATION OF RANCID OILS.—Nitrous ether is stated to be an excellent medium for purifying impure oils and rendering them completely odorless. A small quantity of this ether mixed with the oil removes all disagreeable odor and subsequently warming renders it perfectly bland and pure. An addition of 1.5 part of nitrous ether to 1,000 parts of oil prevents the latter from becoming rancid for an indefinite time. To restore rancid castor oil it is recommended to warm 100 parts in a kettle to 25° F., and add to it a mixture of 1 part strong alcohol and 1 part concentrated sulphuric acid. This is then allowed to stand until the following day, when the supernatant layer of oil is cautiously removed from the subsided impurities. The oil is then boiled during a half hour with pure water, put aside in a covered vessel for 24 hours and the pure oil drawn off from the water. (Pharm. Post).

HECTOGRAPH MASS.—Ordinary glue, 5 parts; glycerin, 20 parts; sulphate of barium, 1 part; water, 1 part. The ingredients are heated together until a homogeneous mass is formed and poured into the forms. For washing, an 8 to 10 per cent. solution of salt is used. (Pharm. Post).

III.

THE NEW ANATOMY.

Practical Medicine has collected the following instances of the newer (literary) anatomy:

The murderers have discovered some astonishingly vulnerable parts of the human anatomy of late. From a paper this morning we learn that a Georgia colonel was "shot in the ticket office;" the other day a man was fatally shot "through his door," and not long ago another received a fatal wound "in his window."—New York Commercial Advertiser.

He kissed her passionately upon her reappearance.—Jefferson Souvenir.

She whipped him upon his return.—Hawkeye.

She seated herself upon his entering.—Akiya Democrat.

We thought she sat down upon her being asked.—Saturday Gossip.

She fainted upon his departure.—Lynn Union.

He kicked the tramp upon his sitting down.—American Pharmacist.

We feel compelled to refer again to the poor woman who was shot in the oil region some time ago.—Medical World.

The fact of the woman being accidentally shot in the waterworks, or the man injured upon the long bridge.—Colorado Medical Journal.

And why not drop a tear for the man who was fatally stabbed in the rotunda, and for him who was kicked on the highway?—Lancet Clinic.

SCENT FOR CENT.

Those penny-in-the-slot machines,

From which we may purloin

A perfume for the handkerchief

For one copper coin,

Can't make enough to pay the rent

Though by the crowd beset,

Because they have to give a scent

For every cent they get.

—(Exchange).

I.—7 A. M.—Mr. Smiley awakes with a headache. II.—8 A. M.—He tries numerous remedies, which seem to increase the pain. III.—9 A. M.—He hurries to Linger & Waite's Pharmacy for a bromo-cafein. IV.—He is asked to be seated a moment. V.—10 A. M. finds him still waiting. VI.—11:06 A. M.—Mr. Smiley's headache has finally subsided, therefore he does not require the bromo-cafein, and he resolves hereafter to patronize Speedy & Prompt Pharmacy, across the way.

(For the Era.)

PORKISS' PERFECT PURPLE PURGATIVE, OR THE GENESIS OF A PATENT MEDICINE.

I made the acquaintance of Mr. George Cornelius Porkiss at the final examination of the State Board of ———. I was one of the examiners, he was a candidate, and he was the first person to draw my attention to the fact that Phytostigmine was "a gum resinous exudation from the preputial follicles of *Physiter macrocephalus*. Nat. ord. Leguminosae." This was in the oral examination; he had previously propounded a scheme to another examiner for making Spiritus Aetheris Nitrosi from nitric acid and sulphuric ether, "by mixing the acid with the ether, boiling and then filtering." Mr. Porkiss always declared that we were jealous of his inventive genius, whereas we simply considered that he was too good a man to waste his life in the prosaic routine of a retail drug store. While he blamed us for refusing to pass him, we unwittingly did him a very good turn, and ourselves a very bad one, as I will proceed to relate.

Mr. Porkiss decided not to present himself for examination a second time, and went north into the State of ———, where true genius is appreciated, and boards of examiners are more reasonable and up to date. Within six months of his rejection in ——— the "Institute of Medicine and Surgery of the State of Illinois" had, after due examination, seen fit to confer the degrees of Doctor of Medicine and Surgery and Graduate in Pharmacy upon him. With the parchment diplomas attesting these facts in his pocket, and his fresh acquired knowledge in his brain, Doctor Porkiss left Chicago and made his way to one of the New England States, where a legislature of agricultural gentlemen declined to pass any act which would place undue restrictions on persons desiring to practice medicine, surgery or pharmacy. Now, though I considered that George Cornelius had a very defective education and was too lazy to study, I always admired his financial abilities. He realized, when he began to practice, that his very slender resources would not justify him in opening an office in Boston or New York, and that the hands of his professional brethren (especially those who had taken four or five years to acquire the degrees he himself had taken after a six months' course) would be against him; so he proceeded to establish a practice in a Godforsaken little fishing village, where there was no doctor, no drug store and very little civilization.

The aborigines were of the opinion that one doctor was as good as another, and, as Dr. Porkiss' arrival saved them the trouble of rowing or driving ten miles for medical assistance, and materially diminished the expense of "doctor bills," they took to him from the first. After two years sojourn in this locality, the doctor married the daughter of the principal storekeeper in the place, and she brought him by way of dowry a ten-acre field, twenty acres of barren land and a cottage. This real estate had a frontage of three or four hundred yards on the beach, and was in the center of the bay by which the village stood. If the doctor's income was small, his expenses were proportionately light. His day grew at his door; his horse grazed on the barrens; his patients kept him supplied with produce which almost "ran his house"; his clothes, boots and groceries came from his father-in-law's store, and his drugs and medicines cost him a nominal sum a year.

Now the doctor was quite a student of human nature, and before he had resided in Frog Beach for many months he discovered that the great majority of the inhabitants preferred to any other a medicine which would act as an immediate laxative. Not wishing to offend their prejudices he prepared a compound of magnesium sulphate, senna, ginger, licorice root, capsicum and aloes, which he dispensed in "square-face" gin bottles (they being the least expensive form of glassware procurable) at 50 cents per "square face." The dose of this compound was one-half a teacupful and enough spirit was added to it to insure its keeping for a reasonable time. The directions for use were written on the cheapest note paper, and affixed to the bottles by Mrs. Porkiss, who believed that her husband was one of the greatest medical geniuses the present century has seen.

From dispensing this mixture in his surgery the doctor took to carrying it around in his buggy. It was a standing rule with him never to let a bottle leave his hands without the equivalent in current coin. His patients might pay for a consultation "in kind," but unless they had the requisite 50 cents in cash they got no medicine. I do not for one moment insinuate that the doctor pinned his faith to this mixture entirely, but he certainly prescribed it in two-fifths of the cases he attended.

Perhaps he would have still been dispensing it in square faces at 50 cents a bottle had it not been for a most unforeseen, and, for him, a most fortunate event. I allude to the "discovery" of Frog Beach. The story of the discovery belongs to another place in literature; it is sufficient to say that from the day the branch of the railway reached the place, its growth was phenomenal. Summer residences sprang up among the pine scrub like mushroom, the abandoned, dilapidated wharves took a new lease of life, the crooked, dirty "street" was straightened, widened and cleaned up, and the solitary tavern of Frog Beach was displaced by a Summer hotel. The very name of the place was abandoned and changed to "Pleasant Harbour."

Doctor Porkiss was the proprietor, as I have stated before, of some thirty acres of real estate. When the "boom" came he sold certain portions at a very reasonable price, and with the proceeds he built and stocked a small drug store. For several years he had a monopoly of the drug business, for, though the "season" always brought one or two medical men to Pleasant Harbour, they usually left when the visitors took their departure. The doctor, however, retained his hold on the residents and received a salary from the railway company. It was shortly after the opening of the "Atlantic Drug Store" that Porkiss' Perfect Purple Purgative emerged from the egg. The doctor had a heavy bill against the editor and proprietor of the Pleasant Harbour Times, and the editor had a lot of vacant space for sale cheap. Now, when a man has been fool enough to invest ten years' savings in starting a paper, he doesn't like to see that paper "go under," and he sold at sheriff's sale. Between medical attendance and money advanced to the "Times," the doctor had the unfortunate editor between the upper and nether mill-stones, and he proceeded to grind him exceedingly small. The "Times" was a neatly got-up little paper, and the editor was able to turn out a good editorial, and used his scissors and paste pot with a good deal of discretion. A full page "ad." was bound to attract considerable attention, and when the "ad." was supplemented with a short editorial, it became doubly efficient. The size (and dosage) of the Perfect Purple Purgative were decreased to sixteen ounces and a tablespoonful, respectively, and the price remained as before—50 cents. The doctor was not inclined to burn money, but he paid no less a sum than \$2.50 in cash for the writing of that "ad." It commenced: "The most important medical discovery since the days of Harvey," and wound up with a string of testimonials from patients who had been cured of every disease, from an abscess to "writer's cramp." Previous to the insertion of this advertisement the doctor "took the road," and filled up every country store he could with from one to three dozen of the Perfect Purple Purgative; his discount was 50 per cent. on the first consignment. Wherever he found a local paper whose editor had need of hard cash he bought space. For this he paid in advance, and took a list of subscribers which he forwarded to the editor of the "Times." So it came to pass that on the day the special edition of the "Times" was printed, a dozen other small papers had also advertised the Perfect Purple Purgative. Every general store for twenty-five miles round Pleasant Harbour had a stock of the medicine, some druggists had "taken hold of it," and the general public read the advertisement, and some of them purchased the preparation.

Now, the first cost of a bottle of this medicine did not exceed 15 cents, inclusive of bottle, label and ingredients—the labels were printed now, not written, and the bottles were mostly second hand. The contents were prepared over the kitchen stove in the Porkiss family's leisure moments, and a brother-in-law of the doctor labelled and wrapped them for wages which amounted to little more than his keep. The mixture was in a more concentrated form than when the doctor sold in square faces, and it tasted (if possible) a little more vile, but still it was a

purgative, and the testimonials vouching for the cures of chronic heart disease, locomotor ataxia and diabetes were on file. The public bought it, took it, made wry faces over it, and gave fresh testimonials to its efficacy.

The doctor disliked unnecessary expense, but since he had opened the campaign he decided to abide by the results. His next move was to engage a rather clever comedian, who was down on his luck, and, accompanied by Professor O'Moore, he sallied forth like a medical Don Quixote. The professor was a gentleman whose forefathers had been kings, he inherited their original wit, and his vocal ability was above the common order. British tyranny had driven him into exile, and an overpowering thirst for whisky kept him in poverty. Between ourselves, the doctor's second campaign was a venture taken in the dark, and its success was more owing to Professor O'Moore's talents than to Doctor Porkiss's eloquence. They avoided the larger towns, gave free concerts and medical lectures in the villages, paid out nothing they could avoid paying, and made a success of the trip.

On entering a place where they were unknown they filled up the drug store, if there was one, with goods on consignment, and the doctor usually sent enough "prescriptions" to the druggist or dealer to pay his way. The class of people who patronize free concerts, and obtain free medical advice from an itinerant doctor, are not, as a rule, very critical. O'Moore's vocal abilities were of the third rate music hall style, but they "went" with his audiences in the same way the doctor's diploma, with its red seal and ribbon, was evidence enough for his patients. The medical fraternity were powerless to interfere, however much they would have liked to have done so. Some of them cautioned their patients against the doctor and his preparation, and in return Mr. O'Moore held them up to the public as vampires who had fattened for years on the flesh and blood of their fellow creatures, and were now desirous of driving away the generous alleviator of human suffering, who gave the benefit of his many years of experience to humanity at large, without fee or reward of any kind. A druggist who refused to accept the Perfect Purple Purgative on consignment, was referred to as "a hyena-like satellite of a medical octopus, whose rapacity was only equalled by his lack of brains."

The free consultations and concerts came to an end, and the demand for Purple Purgative increased. The local buyers began to receive orders for small quantities of it. Dr. Forkiss found it necessary to engage a qualified assistant to look after his practice and drug store during his absence—the Legislature had at last passed a medical act. This assistant had graduated fairly well from an old-established medical college; he had also taken a Ph. G., and it was mainly due to him that the Perfect Purple Purgative assumed its present form. About a week's acquaintance with Dr. Porkiss convinced him that his employer was abysmally ignorant of his profession, and further acquaintance rendered him aware of the fact that what the doctor lacked in knowledge he made up in financial ability and unmitigated "brass." Dr. Porkiss, on his part, realized that he had got a good man "real cheap," and that a faked diploma, though it may do very well among illiterate people, will not of itself hold a practice.

Pleasant Harbour was growing rapidly, and it was cheaper and better to pay an assistant, who was under a bond not to start a practice of his own, than to put up with an independent opposition, which would inevitably ruin his business. Dr. McNeill thoroughly disliked his position, but he was content to endure it till he got a better one. It was his idea to prepare the purple purgative using glycerin and syrup in place of water and cheap spirit, and, by one or two alterations in the formula, the purgative became infinitely more pleasant to the taste and retained its efficacy as a laxative.

It was Dr. Porkiss who thought of the master stroke which "made" the reputation of the Purple Purgative. McNeill devised a preparation which could be taken in teaspoonful doses. Porkiss raised the price at once to 88 a dozen, or a \$1 a bottle at retail. The medicine had been on the market for five years, and there were many gross of it scattered round the country. Porkiss proposed to call all this in free of charge, and to replace every bottle for which the holder paid 25 cents with an eight-ounce bottle of the new formula, the new bottle to retail at \$1. The

carton and label of the new bottle were works of art, the banner given to each party who dealt in Purple Purgative was an advertisement in itself, and the "ads." cost the doctor a sum he shuddered to think of. On the day the new price came into effect, he found himself almost where he started in life, his cash gone, his property mortgaged, and a bill of sale on his stock in the drug store. The outlook was gloomy enough, but the old proverb says that the darkest time is always just before dawn. The small dealers who held the bulk of the medicine would naturally do all they could to push an article which returned them 75 per cent. net on their original purchase, especially when that article was well advertised. Within six months of the change of price the orders for the Perfect Purple Purgative increased wonderfully. The stocks held by country dealers had run out, and several jobbers were obliged to stock the preparation at the regular jobbers' rates of \$100 a gross, ten off, and five for cash, thirty days.

When orders for gross lots began to come in the doctor realized that he had turned the corner, but he still had a hard fight before him. His assistant, clerks—he kept four now—workmen, and the interest he paid on mortgages and bill of sale were a fearful drag on his small resources, his advertising bill was a continual nightmare to him, and his glassware, printing and drugs dragged the money from him almost before he received it. Popular gossip in Pleasant Beach stated that the Porkiss family lived on bread and molasses, and the sympathies of the feminine part of the population were aroused when Mrs. Porkiss, "who had brought the doctor all that valuable land, the very home he lived in," was unable to keep a servant or buy a decent dress. Mrs. Porkiss did not complain, however; she had long since ceased to assist at the preparation of the Purple Purgative, and had devoted her energies to the account and advertising department. Her husband's maxim was to devote 50 per cent. of his profits to advertising, and on the never-to-be-forgotten occasion, when he made the first ten gross sale for spot cash, it was by her suggestion that he "tackled" two of the larger towns. Newspaper space cost there; so did general advertising, medical lectures were out of the question, so were free concerts; but an advertising syndicate came in and gave Porkiss a lift—for which he had to pay through the nose—and when he returned to Pleasant Beach he hired more help, raised his bill of sale and presented Mrs. Porkiss with a larger sum of money than she had seen since she was married.

It is not necessary to follow the Perfect Purple Purgative and its proprietor through the vicissitudes of the next five years; it is sufficient to say that ten years from the day the doctor first "took the road" he opened his new office and laboratory in a large New England town. His practice in Pleasant Harbour had been sold to Mr. McNeill, and the doctor had retired from general practice and devoted himself entirely to the Purgative. He lived in a most economical style, it is true, but every month showed a satisfactory increase in his business, and he had correspondents as far west as Chicago, and even in Canada. Most men would have been content with what they had done; Porkiss wasn't; he proceeded to form a joint stock company, with a capital of \$500,000, and succeeded in floating it. The company paid expenses the first year, thanks to his skillful financing; the second year the shareholders got a small dividend, and from then to the present day it has paid 8 per cent. on an average. The Perfect Purple Purgative is in every drug store from Boston to San Francisco, and (incidentally) in every department store. When the late war broke out the proprietors were very reluctantly obliged to raise the price to \$9.50 a dozen on account of the war tax. The department stores sell it at 85 cents a bottle, and we have to follow suit. I can't open a magazine, newspaper or novel without seeing it advertised. I can't walk down the street without encountering rainbow handbills extolling its virtues. I have circulars from the Porkiss Medical Institute left on my counter and sent me through the mail; if I go into a house I see the Porkiss calendar (which costs the company \$8 a hundred) hung on the wall, and yesterday I noticed an item in "The Glucosidal Critic," a journal which devotes itself to the iniquities of druggists and the perfection of glucosides as therapeutic agents. It commenced:

"While we are as a rule opposed to secret remedies, we and again have occasion to speak highly of one or other of these preparations. Such a one is Porkiss' Perfect Purple Purgative. We neither know or care of what it consists, but it certainly possesses laxative qualities which render it a most valuable preparation, &c., &c." Coming from a journal which raves at druggists who push the sale of their own headache powders, and which would gladly make the sale of a box of Bland's pills without a written prescription a felony without benefit of clergy, this is indeed a testimonial. Possibly the fact that Doctor Porkiss holds a big block of stock in the "Skowhegan Chemical Company," wholesale manufacturers and importers of glucosides,* accounts for it. Porkiss only wants one thing more, and that is a poetical testimonial from Mr. Rudyard Kipling. When he gets it I shall make my will (if I have anything to leave) and retire into my grave. I hope the doctor will not wish to advertise his Perfect Purple Purgative on my tombstone. I don't know whether he ever found the physostigmine-bearing specimen of *Physeter Macrocephalus*.

THERSITES MENDAX, Ph. G.

P. S.—A customer has just come in and complains that I charged her 85 cents for a bottle of Perfect Purple Purgative she had booked to her six months ago, while they only charge 80 cents at the department store in the next block. I devoutly wish I hadn't plucked Porkiss.

THE WORK OF THE AMERICAN PHARMACEUTICAL ASSOCIATION IN RELATION TO THE MATERIA MEDICA OF THE FUTURE.*

By F. E. STEWART, M.D., Ph.D.

On account of the high degree of learning and skill required in its practice and the philanthropic nature of the calling, medicine is classed as a liberal profession. The primary object of medical practice being to discover and remove the causes of disease, and secondarily to cure those who are afflicted, it is also classed as a philanthropic profession.

Because of the great extent of the evil to the community resulting from ignorance and incompetency in the practice of the medical arts, entrance to the medical profession is hedged about with protective laws. Those laws are destined to limit the vocation of persons who are specially educated and trained for the practice. If the actual effects of ignorance, cupidity and pretence could be plainly stated, it would be instantly seen that a vocation in which health and life are at stake is in need of such systematic regulation. The people are quick to see dangers affecting property and recognize the necessity of guarding the public from ignorant and dishonest lawyers, but they are slow to comprehend that there is equal necessity to protect themselves from the charlatans and quacks, and so there are some who consider medical laws as objectionable class legislation.

Pharmacy, or the science and art of preparing medicines, is dependent on therapy, or the science and art of applying medicine to the cure of the sick. It is therefore a branch of medical science, can not be classed as an independent profession, should be in close fraternal relations with therapy and be recognized as a branch of medical practice. It should be conducted in the same liberal and beneficent manner as the practice of medicine, as a liberal and philanthropic profession. Entrance to the profession of pharmacy should be hedged about with restrictive laws similar to those governing the entrance to medical practice. Pharmacy laws should protect the public from ignorance, incompetency and cupidity in the preparation, compounding and dispensing of medicine. These laws should be so constructed and enforced as to regulate and control pharmaceutical practice, forcing those who are engaged in the vocation to conduct it along professional lines. The manufacture and sale of medicines should be strictly limited to educated pharmacists.

Materia medica is the name given to the collection of

substances used in the treatment of the sick. It is self-evident that these agents should be so prepared as to fit them in the highest manner for the purpose for which they are intended. Recognizing this fact, the medical and pharmaceutical professions assemble in congress once in ten years for the purpose of revising the list of medicinal agents prescribed by physicians, and determining how best to prepare them for use. This list is called the "Pharmacopoeia." A pharmacopoeia is defined as an authoritative list of medicinal substances, with definitions, descriptions, or formulae for their preparation. The necessity for authoritative standards to define the character, establish the purity and regulate the strength of medicines, is recognized by all civilized nations. Countries having no national pharmacopoeia adopt the standard of other countries, or supply standard pharmacopoeial works for the same purpose. The pharmacopoeias of all nations, except those of the United States, Mexico, Chili and Greece, are issued under the authority of the respective governments, and therefore partake of the nature of laws. The "United States Pharmacopoeia" was originally devised, and is decennially revised, by a committee appointed from the professions of medicine and pharmacy. It should be a truly representative list of drugs and preparations employed in therapeutics.

Before a medicinal agent can be made official in the "United States Pharmacopoeia" it must conform to the requirements of medical science which are that each drug, chemical and preparation shall bear a name which shall belong to and identify it; shall mean the particular thing, kind and variety of it, and nothing else, and the name shall belong to the common language and not be the private property of any individual, firm or manufacturing house. Science also requires that exact knowledge of the substance shall be published in language sufficiently explicit to permit of its complete recognition. In relation to preparations of drugs and chemicals, a complete knowledge of ingredients, percentage-composition and method of preparation must be published, so as to permit their duplication at any time by those skilled in the art of pharmacy and chemistry. Unless these requirements are complied with there is danger that the pharmacy of the preparations may become a lost art and the preparations themselves finally disappear altogether. The effect of this on the literature of medical science would be to make such literature to that extent unintelligible to future generations. Medical science demands that the literature of therapeutics should be protected from any such danger, so that physicians a thousand years hence reading the same may know what is meant by the names referring to medicinal agents used in treating the sick by physicians of the present day. If we fill our medical journals, text-books and pharmacopoeias with meaningless terms claimed as the private property of individuals or firms, we will deservedly draw down on us the contempt of future generations.

The practice of pharmacy as a profession, in the meaning of that word as understood by the medical fraternity, is impossible except under restrictive laws which shall prevent anyone from employing commercial methods in its conduct. By commercial methods I mean to include secrecy either as to source, nature, composition or method of preparing medicinal agents, and the creating of a demand by circulating advertising matter in contradistinction to scientific matter. By advertising matter I mean *ex parte* or one-sided evidence intended to create a demand regardless of the true therapeutic merits of an agent compared with other therapeutic agents employed for the same purpose. It is said that in case such restrictive laws are presented to our lawmakers for consideration, the opposition will not be confined to the manufacturers of secret nostrums or the daily newspapers, but will also come from sources from which many would expect the strongest endorsement. Be this as it may, we must admit that the medical profession and the medical press are not free from fault in the matter. Physicians should not habitually prescribe medicinal agents which do not conform to the requirements of science, and the medical press should educate the profession to know what those requirements are and aid in enforcing them. That the press has neglected its duty in this regard no one who has had experience as a medical journalist will attempt to deny.

*Presented to the Section on Materia Medica, Pharmacy and Therapeutics, American Medical Association. Reprinted from the Jour. Am. Med. Assoc.

As pharmacy cannot conform to scientific and professional requirements until the members of the medical profession discriminate, in prescribing, between medicinal agents known to science and those which are not scientifically defined, it stands to reason that the ad raised about commercialism in pharmacy is not only absurd, but savors somewhat of hypocrisy. In the light of the above it is idle for the profession to say that "while it is true that many of the agents prescribed are unknown to science, their active ingredients and their quantitative proportions have, according to the statements of their manufacturers, been published with sufficient exactness to enable physicians to prescribe them in a proper manner, and the method of manufacturing them concerns us not." But it does concern us, for, although many of the articles belonging to this class are valuable medicinal agents, yet, until their working formulas are published and standards established for their identity and purity, they cannot be made official in the Pharmacopœia, for they do not conform to scientific requirements.

It is evident that it will be a long time before the ideal can be realized in which the medical profession is sufficiently educated in pharmacy to discriminate between what may be classed as scientific pharmaceuticals on the one hand, and medicinal agents monopolized by secrecy on the other; in which the pharmaceutical profession ceases to conduct its vocation as a commercial business and carries it on as a liberal profession; in which the public is sufficiently educated to pass and enforce laws preventing anyone from practicing pharmacy as well as therapy unless properly educated and trained for these vocations, and in which the professions themselves shall take measures to expel from their ranks those who practice therapy and pharmacy unworthily. Yet in the meantime a step in the right direction can be made by sending to the next convention for revising the Pharmacopœia, which meets in Washington, in 1900, a representative delegation of physicians and pharmacists who shall make the next Pharmacopœia truly representative of the materia medica by adding to its pages many things which are extensively prescribed, and leaving out a great deal of matter which is no longer of sufficient value to be retained.

It is idle for the medical and pharmaceutical professions to say that a great many of the medicinal agents now extensively prescribed do not conform to the requirements of science, and therefore can not be made official in the "United States Pharmacopœia," for the combined professions have sufficient power to force all manufacturers of medicinal agents to conform their preparations to scientific and professional requirements. Moreover, it is a duty which the professions owe the public and, if it is properly done and the next Pharmacopœia becomes what it should be, the public will begin to realize the importance of proper legislation on this account.

Owing to the rapid strides of knowledge and the constant additions to the materia medica resulting therefrom, ten years is a long time to wait for the revision of the Pharmacopœia; and it seems to me that the committee on revision could serve the professions by publishing a year-book, in which should appear all those additions to the materia medica which conform to scientific requirements, as they are made from time to time. By so doing physicians and pharmacists would have some means of knowing what progress is being made in the knowledge of materia medica. It would not be necessary for physicians to prescribe anything not listed in the year-book, except it be for the purpose of original research of some of the newer things before they appear in the year-book. But such prescribing should be the exception and not the rule.

The American Pharmaceutical Association endeavors "to enforce such proper relations among druggists, pharmacists, physicians and the people at large, as may promote the public welfare; to improve the science and art of pharmacy by diffusing scientific knowledge among apothecaries and druggists, fostering pharmaceutical literature, developing talent, stimulating discovery and invention, and encouraging home production and manufacture in the several departments of the drug business; to prevent, as far as practicable, the evils flowing from deficient training in the responsible duties of preparing, dispensing and selling medicines; to suppress empiricism, to restrict the dispensing and sale of medicines to regularly

educated druggists and apothecaries, and to uphold standards of authority in the education, theory and practice of pharmacy." These objects, stated in the Constitution of that Association, if carried into effect, would bring the medical and pharmaceutical professions under one flag—the flag of science and professionalism, and convert the practice of pharmacy into a liberal profession as a branch of the medical practice auxiliary to the practice of therapy. Harmonious fraternal relations would be established between physicians and pharmacists, and secrecy as to the composition or method of manufacturing medicines would come to an end. Therefore, what I have just advocated is in line with the work of the American Pharmaceutical Association as described in its constitution.

For several years past that association has been making special efforts to carry out its high ideal. A committee on national legislation was appointed for the purpose of making a special study of some of the laws affecting the relations of pharmacy to medicine and the pharmacist to the physician. As chairman of that committee I beg to call your attention to this work, with the view of asking your aid in our effort to make pharmacy of the future what it should be, viz., a branch of medical science.

A GATING GUN PRESCRIPTION.

J. A. Hassell, of Eagle Pass, Texas, writes: "We have all heard of 'shot gun' prescriptions. I send you one which I have christened a gating gun prescription. I would be pleased to have you publish facsimile, so that brother druggists throughout the country may have some idea of what we have to contend with out here on the border:

Del Dr. L. BERSON.

SYRUP OF ARSENATE OF IRON—The following formula is given in Rép. de Pharm.: Arsenate of soda, 0.34 part; sulphate of iron, 0.5 part; citric acid, 9.5 part; distilled water, 10 parts; simple syrup, 990 parts. The sulphate of iron is dissolved in 5 parts of water with the citric acid, this mixed first with a solution of the arsenate of soda in the remainder of the water and then with the syrup. Each teaspoonful contains 1 mg. (1/200 grain) of arsenate of iron. (Bull. Comm.)

(Specially Prepared for the Era).

The Metric System: A Century's Progress.

THE idea of a universal and scientifically exact decimal standard of length seems to have first dawned in France about 230 years ago, when Abbé Mouton proposed to employ the minute of a meridian as a basis, with decimal divisions and multiples. About the same time (1670) a French astronomer, Jean Picard, besides measuring an arc of meridian near Paris, proposed the distance traversed by a pendulum in one second as a unit of length. The scientific missions equipped in 1731 by the Paris Academy of Sciences to measure meridians, (1) in Peru, (2) in the Arctic regions, should also be noticed, as well as the curious book written by Collignon in 1785, in which he proposed the billionth part of the circumference of the globe as the unit, with a very complete decimal system of multiples, etc.

A Historical Decision.

But the Metric System, as we know it to-day, is the outcome of the French Revolution. On May 8, 1790, Talleyrand proposed, and the National Assembly voted, the following motion: "That the King be asked to write to his Britannic Majesty, and to request the King of England to co-operate with the National Assembly in fixing a national unity of weights and measures," so that, under the auspices of the two nations, commissions of the Paris Academy of Sciences and the Royal Society of London might combine action "to establish the length of the beat of the pendulum," etc., etc.

This decree was signed by Louis XVI. on August 22, 1790, and Borda Lagrange, Laplace, Monge and Condorcet were named by the Academy of Sciences to draw up a report, which was published on March 17, 1791. In this report, the pendulum idea was abandoned, and the circumference of the globe recommended as the surest base of action.

Metric Work in Revolutionary Times.

England's reluctance to join in the work—based probably on her lack of sympathy with the progressive ideas of the French Revolutionary party—has retarded, by about a century, the universal adoption of the Metric System. But France set steadily to work, in spite of internal struggles and foreign invasion. Méchain and Delambre, deputed to measure the distance from Dunkerque to Barcelona in 1793, pursued their task amid a hundred disadvantages. The latter began his measurements near Dunkerque, if not actually upon the battlefield, at least in sight of two hostile armies, while Méchain was detained at Barcelona in a state of semi-imprisonment, for a long period. While Paris was being convulsed by the execution of the king and queen, and the massacres of the Terror, Lefevre-Gineau was patiently working out the comparisons between the existing weights and the new kilo in a manner that even now excites the admiration of scientists. Lavoisier, the "Father of French Chemistry," who was guillotined in 1794, did much useful work in connection with the establishment of the new weights and measures. He made experiments on the dilatation of brass and platinum in his garden on the Boulevard of the Madeleine as late as May and June, 1793; and a set of 24 cubic metal recipients which he used in studying the measures of capacity, may still be seen at the Arts and Metiers Museum, Paris.

Cassini, Coulomb and Borda experimented with the pendulum to check the measurements of Delambre and Méchain. As soon as the two latter had terminated their work, the French Government invited the foreign nations to take part in the establishment of the definite standard.

The political situation was still unfavorable, and it will be readily understood that the great European nations who had been coalised in war against the French Republic failed to respond to the appeal. Spain, Savoy, Switzerland, Denmark and half a dozen of the surrounding small countries which had felt the impulse of the Revolution and transformed themselves into Republics (Holland, Tuscany, Liguria, Rome, etc.), were alone represented.

In 1795 the official names of the new weights and measures were fixed by the law of the 18 Germinal, and in the month of Prairial the same year a brass (temporary) standard metre was completed by Borda and Brisson, as well as a glass carafe of one cubic decimetre. But it was not until just

One Hundred Years Ago.

that the report of the International Committee and the standard metres in forged platinum (the metal could not be melted in those days) were presented to the French Parliament—a little ceremonial described in the Era of last June. As these metres are the originals from which the whole of those now used throughout the civilized world have been copied, the following translation of the document which is shown (along with the brass metre and the litre above mentioned) in a glass case at the Paris Arts and Metiers Museum, is of historical interest.

"The year VII., 4 Messidor,* citizen Pierre Simon Laplace, one of the ex-presidents of the National Institute of Sciences and Arts, citizens Lefevre-Gineau, Antoine Monge, the national and foreign members of the Committee of Weights and Measures" (here follows a list of

LEFEVRE-GINEAU (1754-1829).

the names already published in the Era's centenary notice); "citizens Lenoir and Fortin, artists attached to the Committee, and citizen Garrau Conlon.

After having presented to the two councils the standard metre standard klogram, both in platinum, went to the Archives Building, as enacted by the law of 18 Germinal, year III., to deposit the two said standards, each in a locked box.

A. G. Camus, keeper of the Archives, received the two standards and at once shut them in a double cupboard, locked with four keys."

This document is signed by the whole of the Committee and the other persons therein named.

Legal Enforcement in France.

In 1801 the Metric System was declared to be the only legal French standard but its adoption was slow and some delay and compromises were allowed—a fact which everyone in France nowadays sincerely regrets. It was not till 1840 that it became the exclusively and obligatory system (the law was passed in 1837). When Queen Victoria ascended the English throne, therefore, the metric system was not obligatory in a single country on the face of the earth, although it had existed for forty years. But let those who doubt its final universal adoption read the details of its

Sixty Years' Progress

The 1851 exhibition in London was the first of these international "Worlds' Fairs," of which Chicago in 1893 and Paris in 1900 represent the prodigious modern devel-

*22nd June 1790.

opment. The Arts and Metiers (Technical and Scientific) School of Paris, exhibited a collection of metric weights and measures. In 1855 Paris held her first International Exhibition, and an International Congress of Statistics was held. It was then that 200 of the committeemen and Jurés of the Exposition recommended their respective governments to adopt the Metric System. Sir James Yates, F.R.S., Astronomer Royal of England, convoked a meeting with the object of forming an International Association for the Decimal System of Weights and Measures. At the next Paris Exhibition—the Universal Expositions are ever milestones of metric progress, it will be noticed—most countries were willing to be represented in the Committee. The Committee was formed in 1860 "to give satisfaction to foreign nations, while reserving to France her due share of action and initiative." It was decided to copy the original standard Metre deposited in the Archives, and to distribute copies to the various countries.

The propitious moment seemed to have arrived, and the first meeting had already been held at the Paris Arts and Metiers School in 1870—the United States sending official delegates for the first time—when the Franco-German war broke out; followed by the Commune (during the suppression of the latter the metric standard narrowly escaped destruction).

Victor and Vanquished.

It is suggestive of the real intrinsic merit of the metric system that the "Terrible Year" (as Victor Hugo called it) of 1870, while it deposed France from her place as the political arbiter of Europe, was the date of the commencement of the universal adoption of the weights and measures which are among the many triumphs of her scientific and progressive genius.

On January 1, 1870, nine months before Sedan, the use of the Metric system was legalized in Germany; and in 1872, ere the last Prussian garrison had quitted French territory, these weights and measures were declared obligatory throughout the New German Empire.

It is much to be regretted that the Germans did not at the same time adopt the French monetary unit (which forms part of the decimal metric system) and thus give all Europe a uniform coinage.*

France's Other Neighbors.

Belgium and Holland, Switzerland and parts of Italy were largely under French domination or influence in the days when Napoleon I.'s empire extended eastward to Hamburg and Trieste, and the metric system thus became generally known. When Belgium came (through France's aid), a separate kingdom, she naturally adopted the metric system, and the obligatory use of the system in Italy dates from 1861, when Italian unity was in steady progress and favored by French influence. Switzerland experimented in 1851 with a decimal system founded on the English foot, but the French system became obligatory in 1877. Denmark was metric a century ago, Portugal employs the system, in Spain the metre is everywhere known, although the old measures are still tolerated.

Eastern Europe.

Germany having adopted the metre, its use quickly spread eastward. Austria declared the system legal in 1873, and obligatory in 1876; Hungary followed four years later, while the Czar's ukase, authorizing the use of metric weights and measures for customs declarations, dates from 1870. Thus surrounded, the Balkan Peninsula must necessarily fall into line. But, with the exception of Roumania, where the system is obligatory since 1864—these countries are somewhat behind hand in civilization. Servia declared the system obligatory in 1880, Montenegro in 1888. Bulgaria officially recognizes it, but it is little used. Turkey is supposed to have officially decreed the metre in 1870, but the law of 1882, applying the name of the old Turkish meas-

The franc, weighing 5 grams, and its equivalents are used in Belgium, Bulgaria, Greece, Italy, Roumania, Servia, Spain and Switzerland, Tunis and the Congo. Most South American States have a coin of similar nominal value. Russia and Austria coin 20 franc gold pieces that pass in France. But the German mark, like the English shilling, represents the quarter, and not the one-fifth of the United States dollar.

DELABRE (1749-1822).

ures to the units of the new system has, it appears, produced a delightful state of uncertainty thoroughly worthy of the Ottoman Empire. Greece is steadily adopting the metre in Sweden the system is generally obligatory since 1880, and in Norway it is in vigor since 1882.

England and Russia

are, therefore, the only important countries in Europe where the metre is not generally used. But the British Parliament has just passed an act which renders the system legal, though not compulsory; and Russia, besides admitting customs declarations in metres, kilos, and litres, allows Finland to use the metric weights and measures.

In Asia.

where the British and Muscovite Empires are the two predominating powers, the influences are all non-metric. Yet the two most enlightened of the independent states, Japan and Siam, seem likely to join the metric union shortly; at present its use is confined to France's Indo-Chinese colonies.

Africa

seems likely to be practically divided between France and England. Here we find the metre in Algeria, Senegal and the French colonies generally, also in the Congo Free State. Egypt employs metric terms in her state contracts since 1880.

South America.

of essentially Latin civilization, is mostly metric—officially, at least—it is well not to venture too far on such slippery ground.

Here, for instance, is Chili, where the system was decreed in 1848, but where the ancient weights and measures seem not a penny the worse for their legal abolition. In Colombia, Bolivia, Ecuador, or Paraguay, are the state decrees more effective? "Quien Sabe?" is the safest answer to most questions to these favored lands. In Brazil we are assured that since 1878 the metric system is really adopted, and that Venezuela and Peru are in the same case, while Uruguay (where the decree dates from 1864), passed a law six years ago forbidding the use of the old measures. In the Argentine Republic the old and new systems flourish side by side. The same is true of Mexico, where the metric system is "obligatory" since 1895, and of San Salvador.

In Central America.

Costa Rica, Nicaragua and Guatemala have officially adopted the metre. Honduras is still obdurate.

The Pearl of the Antilles

for weights and measures is Hayti, where the old French system of over a century ago is still to be found in use. St. Domingo is officially metric.

North America,

essentially Anglo-Saxon, tolerates the metric system without enforcing it, both in the United States and Canada.

The Two Sketch Maps

which accompany this article are intended to convey two general impressions, (1) the vast territories where the system (which thirty years ago was practically confined to France) is now recognized, and in many cases obligatory; (2) the great salient fact that once England and the United States decide that the system (now tolerated) shall be enforced, the whole civilized world will be metric. It should be carefully borne in mind that the English system has never spread except under the shelter of the Stars and Stripes, or the Union Jack, the only two exceptions, we believe, are the Orange Free State and the Transvaal; whereas the French system has penetrated where the tricolor is unknown. Nowadays catalogues, price lists, etc., drawn up in metric terms are comprehensible to the commercial and educated classes in the whole of Europe, and South America; and wherever the French, German and Spanish languages prevail these expressions form a sort of universal language for scientific and business men.

How Best to Spread the System

is the crucial question. As a member of the International Metric Bureau recently remarked, liberty-loving Anglo-Saxons are not to be forced into its use by official pressure, like the more disciplined populations of Continental Europe. Readers of foreign publications (scientific, commercial, statistical), travelers and residents abroad, scientific men, consuls, etc., etc., soon learn to "think in metres and kilos." The homestayng population forms the conservative body—but here the schoolmaster can do much among our coming men and women, and the public press and public platform are powerful in Anglo-Saxon communities. As America's manufacturers gradually push their trade throughout Europe and South America, they will learn to know and respect the "sweet simplicity" of the metric system; less conservative and quicker in change than their British competitors, they will doubtless prove a useful factor in spreading the knowledge of the system in their home establishments.

IODOL-PERU BALSAM OINTMENT.—This ointment, which is usually prepared by incorporating 1 part of iodol and 1 part of Peru balsam with 100 parts of vaseline, has the disadvantage of soon becoming black. Spots gradually form in various places, and after some time the mass becomes black throughout. This is due to the liberation of iodine and subsequent formation of a dark colored compound of this with some constituents of the balsam. Schweissinger (Pharm. Zentr.) obviates this by adding 0.1 per cent. of sodium hyposulphite, dissolved in a little water.

(Special Correspondence.)

NOTES FROM THE BRITISH ISLES.

London, Jan. 6, 1900.

The Hospital Ship Maine.

A large amount of interest has been and is being taken in the American hospital ship Maine. On Saturday, December 16, H. R. H. the Duke of Connaught presented a flag from Her Majesty the Queen, and it is recorded that this is the first occasion on which the Stars and Stripes and the Union Jack have floated side by side on the same boat. The ship was fitted out to serve as a hospital ship for the British forces in South Africa by the American citizens in London, headed by Lady Randolph Churchill. The Maine, which was originally a trans-Atlantic cattle transport, has been adapted for its present function in very complete style, and no expense has been spared. Accommodation is provided for about 250 patients. The medical staff is entirely American, the chief is Surgeon-Major Cadell, formerly of the U. S. Army, who served in the Philippines, and his colleagues are Dr. G. E. Dodge and Dr. H. H. Rodman, of New York; Dr. C. H. Weber, Philadelphia, and Dr. T. Hastings. The nursing staff is also American, as are the dispensers, Mr. Alfred Spotts, a graduate of the Philadelphia College of Pharmacy, and Mr. C. Haigh, of the New York College. Burroughs, Wellcome & Co., and Parke, Davis & Co. presented the medicines required, and most of the instruments came from Max, Son & Thompson. Mr. H. S. Wellcome personally designed the medicine chest, an extremely handsome oak chest covered with Carthaginian cowhide, and bearing portraits of the Queen, General Washington, President McKinley, and other designs emblematical of the blood-union of the two Anglo-Saxon nations. "No distance breaks the tie of blood" (Kebble), and "Our kin across the sea" (Bayard) are two of the appropriate inscriptions. Every Englishman feels deeply the practical sympathy of his American cousins as evidenced by this splendid boat of mercy.

Death of Mr. E. C. C. Stanford.

Mr. Stanford, whose original name was Cortis, died at Dalnair on December 8. Mr. Stanford was born at Worthing about 70 years ago. He gained his pharmaceutical education in the Pharmaceutical Society's School, and was awarded two medals in 1857. In 1863 he migrated to Scotland, and for the last 36 years has been prominently associated with chemical industry in that country, being an acknowledged authority on iodine extraction. Mr. Stanford was president of the Society of Chemical Industry in 1893-94, and he had also served as chairman of the Scottish section. He was one of the founders of the British Pharmaceutical Conference, and president for the Edinburgh meeting in 1892. He had been for some years manager and director of the British Chemical Co., Limited, of Glasgow. In addition to being a pharmaceutical chemist and a life member of the Pharmaceutical Society, Mr. Stanford was a fellow of the Institute of Chemistry, and of the Chemical Society. His researches on iodine and iodides are well known.

Irish Druggists and Branch Shops.

Every retailer or compounder of poisons in Ireland must, if he does not manage his establishment himself, employ a qualified pharmaceutical chemist or druggist for the purpose, and recently a druggist at Athlone named Doyle, was prosecuted by the police and fined for carrying on a branch shop managed by an unqualified person. This is the first case of the kind which has been heard. There is no similar regulation in Great Britain, where only the unqualified manager can be proceeded against, the owner not being liable under any statute unless he is himself unqualified.

The War and the Trade.

The war in South Africa has had a considerable effect on the personnel of the drug trade. Many of our prominent wholesalers and retailers are volunteer officers, and a large number of the rank and file of our soldier-citizens are also pharmacists. Many of these have already volunteered for service in South Africa. We note also that the War Office is advertising for qualified dispensers at the front. These will be enlisted for twelve

months or for the duration of the war, and the pay will be 3s. 6d. per day, with free rations, kit, etc., and a gratuity of two months' pay at the end of the term of service. The rate of pay is certainly not sufficient to tempt qualified men, but the military authorities no doubt depend upon the patriotism and martial ardor of knights of the pestle.

Lieut. T. W. Whiffen, son of Mr. Thomas T. Whiffen, the well-known quinine manufacturer, of Battersea, was among the wounded in Sir R. Buller's unsuccessful attempt to force the passage of the Tugela.

Chemists and Mineral Waters.

The Chemists' Aerated and Mineral Waters Association, Limited (called shortly Camwal), was founded some 20 years ago for the purpose of supplying aerated waters to retail chemists and hospitals only. All the shareholders are chemists. For the first few years no dividend was paid, but lately dividends varying (including bonuses) from 15 to 20 per cent., have been distributed. The company is shortly to be reconstructed and the articles of association enlarged, so that hotels and other institutions which do not compete with chemists can be dealt with. At the same time, the capital will be increased. The company have now branches in London, Mitcham, Bristol, Birmingham, Manchester and Harrogate, and it is contemplated to open others. There are now 4,849 shareholders. The profits last year reached £7,716, and a dividend of 10 per cent., with a bonus of 5 per cent. will be distributed for the year.

Liquor Strychnine for Spt. Ether. Nit.

An inquest was held at Manchester last week on the bodies of two patients of the Crumpsall Workhouse Infirmary, who died from strychnine poisoning. The evidence showed that a number of patients, including the two victims, exhibited signs of strychnine poisoning after taking medicine supposed to contain sweet spirit of nitre, and it was further shown that the stock bottle intended for spirit of nitrous ether had been filled up with liq. strychnin. The mistake was made by one of the dispensers, but it was impossible to fix the blame on an individual. The jury returned a verdict of accidental death, and advised that in future all medicines should be initiated by the dispenser who compounded them. Three qualified dispensers are employed in the infirmary.

Pharmaceutical Reciprocity.

Steps are being taken to endeavor to secure reciprocity of pharmaceutical certificates between Great Britain, Ireland and the colonies. New South Wales and Canada, among other colonies, have endeavored to secure the recognition of their diplomas in the mother countries, but hitherto without success. It may be stated that this reciprocity, however desirable, provided that a sufficiently high standard is fixed for every certificate included in the scheme, is not likely to come into force just yet, one of the main difficulties being that neither the British nor the Irish Society has power to accept certificates granted by other bodies (the British and Irish licenses are not interchangeable), and further, it is more than doubtful if the British Society is in favor of reciprocity.

Deaths.

Sir Richard Thorne Thorne, K. C. B., F. R. S., M. D., D. S., LL.D., F. R. C. P., principal medical officer of the local Government Board, and one of the Crown members of the General Medical Council, died suddenly on December 18. The cause of death was a blood clot from a varicose vein which separated and passed into the circulation. Sir Richard was knighted in 1897. He was a frequent guest at the Pharmaceutical Society's annual dinners. His chief work was in connection with measures against epidemic diseases.

John Frederick Hodges, M. D., F. I. C., F. C. S., original member and ex-councillor of the Pharmaceutical Society of Ireland, died at Belfast on December 13.

Certificated Opticians.

The Worshipful Company of Spectacle Makers recently inaugurated an examination for opticians, and from the first a large number of pharmacists have been among the successful candidates. At a recent examination, out of sixty passes fourteen were pharmacists, only two of the craft failing.

To Oppose the Pharmaceutical Society.

As one consequence of the successful case brought by the Pharmaceutical Society against a firm of seedsmen for selling an insecticide consisting of 35 per cent. solution of nicotine, an association of seedsmen, agricultural requisite dealers, etc., is spoken of, to endeavor to secure free trade insecticides, sheep-dips, weed-killers and similar articles. This association is not likely to meet with much success.

Sentence Reduced.

Some few weeks ago an unqualified retailer at Wolverhampton was sentenced to four months imprisonment in default of paying a fine of £40 for selling defective drugs. The Home Secretary has now reduced the term of imprisonment by one-half.

Triplets.

The Chemist and Druggist recently gave portraits of what are believed to be the only triplets in the British drug trade. They are two daughters and a son of Mr. Valentine Norman, a chemist of Godalming. The age of the trio is eight years.

Are Victims of the Drug Habit Inebriates?

A case has been before the Brentford Magistrates, and stands adjourned, which involved the question whether morphine and cocaine slaves are liable to the Inebriates Act, and can be placed under control.

Parke's Drug Stores.

This company, which has 23 chemists' shops in London, made for the 15 months ended September 30, a profit of £4,027, and a dividend of 6 per cent. will be paid.

Hovenden & Sons.

This well-known London sundries business has been floated as a limited liability company with a capital of £200,000.

PHARMACY NOTES.

Nitrous Ether.

John Barelay, B. Sc. (Midland Chemists' Assistants' Association), states as a result of experiments that (a) B. P. liq. ethyl. nit. does not suffer serious loss in strength when in daily use for dispensing purposes for a considerable time. (b) B. P. spt. ether. nit. will in sixty days, when used as above, sink below the minimum strength allowed. (c) A small proportion of alkaline carbonate retards loss in spt. ether. nit. (d) Spt. ether. nit. B. P. suffers little loss when kept in unopened full bottles in a cool dark place.

Sandal Wood Oil.

E. J. Parry, B. C., F. I. C., F. C. S., has succeeded in preparing a crystalline compound of santalol (or of one of its components) which will probably throw light on whether santalol is a definite body or a mixture. This body is the santalyl ester of phenyl-carbamic acid, and is formed by acting on santalol with phenyl isocyanate, it has the formula $C_{12}H_{12}O-CO-NHC_6H_5$. It occurs in white needles, melting at about 237° C.

Jaborandi as an Adulterant of Coca Leaves.

John Barclay, B. Sc. (Midland Chemists' Assistants' Association), notes a specimen of Bolivian Coca, adulterated with from 40 to 50 per cent. of small jaborandi leaves.

Liquor Strychnine and Liquor Sodii Arsenatis.

Thomas Dunlop (Pharmaceutical Society), shows that owing to solutions of arsenate of sodium being alkaline, separation of strychnine occurs when the two liquors are mixed.

Aqueous Tincture of Opium.

John Barclay, B. Sc. (Midland Chemists' Assistants' Association), recommends a menstruum of water 3 parts and alcohol, 90 per cent., 1 part.

MANUFACTURE OF BROMINE AND IODINE.—A recently patented process consists in the employment of chlorine in liquid form, which permits of a close adjustment of the necessary quantity, all excess being easily avoided. Bromine entirely free from chlorine is thus readily obtained from the salt liquors containing magnesium bromide. In a similar manner liquid chlorine is used to advantage in separating the iodine from the liquors of saltpetre factories. (Apoth. Ztg.)

CITROPHEN, or mono-phenetidn-citrate, was discovered by Dr. J. Roos. It is a white powder having an agreeable acidulous taste, soluble in 250 parts of cold and 5 parts of boiling water. On cooling a hot saturated, aqueous solution to 170° C., the liquid retains it in the proportion of 1 in 40. In carbonated water citrophen is very soluble, but alcohol takes up only minute quantities. It melts at 186° C. Dr. Benario has shown it to be absolutely harmless by experiments on mice and rabbits. Its physiological action places it among the antipretics and artineuralgics, and it may advantageously replace antipyrin, migranin, phenacetin and salicylates. In doses of 0.5 gm. (8 grains), three times daily, it is analgesic and soporific. Its faint, agreeable acidity makes it desirable in children's practice. Twenty minutes after ingestion paraphenetidin may be detected in the urine by ferric chloride, which produces at first a dark-yellow color, gradually becoming dark-red, varying in intensity with the quantity of the excreted paraphenetidin. (L'Union Pharm.)

METALLIC SALTS AS ANTIDOTES FOR POISONING WITH CYANIDES.—To test the antidotal effect of the salts of heavy metals on cyanogen compounds, Meurice (Repert de Pharm.), has instituted a series of experiments on animals, by administering to frogs, pigeons and rabbits certain quantities of the metallic salt, cobalt nitrate, nickel nitrate, copper sulphate, ferrous sulphate, etc., and then injecting below the skin gradually increased doses of a cyanogen compound. It was shown that the poisonous effects of all the compounds employed were neutralized by the metallic salts, except benzo-nitrile. Cobalt nitrate proved the most effective; then followed, in the order of their efficacy, nickel nitrate, copper sulphate and ferrous sulphate. It does not seem, according to the investigations of Meurice, that the antidotal action is due to any formation of insoluble compounds with the cyanogen compounds, since particularly those salts, that form no precipitates with cyanogen compounds, are the most powerful antidotes. (Apoth. Ztg.)

MIXTURES FOR SILVER PLATING.—(a) Nitrate of silver, 3 parts; chloride of sodium, 2 parts; cream of tartar, 210 parts. This mixture is used by rubbing upon the metallic surface with a damp cloth.—(b) Distilled water, 6 to 10 parts; chloride of silver, 14 parts; oxalate of potassium, 21 parts; chloride of sodium, 30 parts; chloride of ammonium, 7½ parts. Apply to the metallic surface by friction, with a piece of moistened flannel. (c).—The following is a paste for plating articles of copper, whose surfaces are subject to friction: Chloride of silver, 7 parts; cream of tartar, 14 parts; chloride of sodium, 21 parts; water, sufficient to form a paste. The mixture must be protected from light, to prevent reduction of the silver salt. For use, spread the paste upon the surface of the metal and let it dry. After a few hours, rinse with acidulated water, then immerse in a solution of cyanide of potassium, and wash again. If a heavier plating is desired, the process may be repeated. (L'Union Pharm.)

FORMALDEHYDE DISINFECTANT.—Sedan and Fraissinet, of Marseilles, have patented the following method: A 50 per cent. solution of tri-oxy-methylene (para-formaldehyde) in a liquid boiling below 100° C., for instance, wood spirit, is heated in a strong, closed copper vessel until a pressure of 10 to 15 atmospheres is reached. The source of heat is then removed and the pressure released by opening a spigot at the end of a tube connecting with the interior of the kettle. The room to be disinfected is at once tightly closed. The contents of the kettle vaporize rapidly and completely and have great penetrating power. No polymerization of the formaldehyde takes place. (Apoth. Ztg.)

TOLOKNO is a dietic preparation obtained from oats. By softening it in water, then roasting and grinding, after removing the husk, a grayish-yellow flour of agreeable taste is produced. The albuminous matter is peptonized by this process, the starch grains broken, and a certain amount of diastase and dextrin formed. (Pharm. Post.)

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Beal, Scio, Ohio.

The above rule is important, and we want every student to observe it. It has been published time and again in this column, but there are many who seem to have paid no attention to it and who cause annoyance both to themselves and us by persisting in sending their recitations to this office. We must then go to the expense of remailing them, and the student suffers considerable loss of time in the rating of his answers.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

As the result of the suggestions of a large number of students, an Era Course in Pharmacy pin has been designed, and is shown in the accompanying illustration. This pin consists of 10-carat gold, the letters and symbols being in different colored enamels. It can be secured in either style,—a stick pin, a safety pin or button. The price is \$2.00, which includes cost of mailing. Nothing at all creditable could be secured for less than this figure. Students in ordering are requested to state which style is wanted. The cash must accompany order.

Questions for the Mid-winter Examination are now being mailed to students. It is requested that answers be mailed to the director as soon as possible.

It was erroneously stated last week that another supply of lectures would be sent to students with this issue. It should have read, with the issue of January 25. Next week, therefore, enough lectures will be sent to both juniors and seniors to last a full month.

Read This Bulletin Each Week.

EXTRACT OF LIVER FOR DIABETES.—Rogues prepares an extract of liver for the treatment of diabetes according to the method of Gilbert and Carnot, in the following manner: Fresh ox liver is washed with sterilized water, cut with aseptic instruments into small pieces and macerated 24 hours with an equal weight of glycerin. The liquid is then filtered through sterilized paper, and a 0.7 per cent. solution of sodium chloride added, one-half as much in weight as the glycerin employed. The brown or rose-red liquid thus obtained is preserved in sterilized vessels. This extract is injected per rectum in doses of 60 gm. (2 fl. ounces), after irrigating the intestine with lukewarm water, and warming the extract to the temperature of the body on a waterbath. (Apoth. Ztg.)

ALL WIDE AWAKE DRUGGISTS

OUR PURE CRUSHED FRUITS

for soda fountains are unsurpassed.

DISCOUNTS

Nearly everybody supplying the drug trade gives discounts, either from list prices, for quantities or for cash.

These discounts are given through correspondence, or are printed in price lists or upon slips of paper.

Nine times out of ten the retailer can't find this information when he wants it. He can find it in an instant if he has an

ERA COST AND STOCK BOOK

It has 24 blank pages for keeping record of such things. Discounts are profits and time is money. It pays to keep a record of discounts for quick reference and to keep it where you can always find it.

The book has 176 other pages for keeping record of cost and selling prices, location of stock in store, inventory, etc. It is a most valuable assistant for doing business as it should be done.

Price \$2 50 Per Copy, Postpaid.

Gordon's CHEMICALLY PURE Glycerin.

The Oldest Brand. The Purest Glycerin.

Every druggist should use it and dispense it. There's no good reason why he shouldn't do so, as it is easily obtained from jobbers in any quantity desired and it costs no more than other brands. All that's necessary is to specify "Gordon's" on your orders to jobbers. They all supply it.

The Standard for Nearly Fifty Years.

POISON LAWS

Have, in most cases, been made after the druggists have unitedly and forcibly asked for them. The public expects the druggist to faithfully and carefully observe both the letter and spirit of such laws. The druggist naturally inclines to the easiest and best way for observing the requirements, and in the matter of registering sales.

THE ERA POISON REGISTER

Furnishes the easiest way. It contains space for 800 entries, providing for the register of name and quantity of poison sold, date, price, purpose for which it is to be used, name of purchaser, witnesses, remarks, etc.

A DIGEST OF THE POISON LAWS of all the States and Territories is included. It presents in condensed form all the essential requirements and is handy for reference whenever there is doubt as to the law. The book is bound in stiff board covers, with leather back. Size of page, 8 x 11 inches.

PRICE, 60 CENTS PER COPY, POSTPAID.

NEW YORK.

NEW STATUS OF FREE ALCOHOL FOR THE ARTS QUESTION.

Congressman Russell, of Connecticut, has introduced in the National House of Representatives a bill designed to make operative that section of the tariff law of 1894 which exempted from the regular internal revenue tax all alcohol used in the arts and manufactures, but which was never carried out because Secretary of the Treasury Carlisle refused to make the necessary regulations the law empowered him to make.

This new bill provides: "That the failure of the Secretary of the Treasury to prescribe regulations for the use of alcohol in the arts and in medicinal and other like compounds, as required by Section 61 of the Act of August 28, 1894, shall not operate as a defense on the part of the United States to any suit of a manufacturer under said act heretofore brought in any court of the United States, and a new trial may be granted hereunder in any such suit heretofore dismissed."

The bill has been offered at the urgent request of the association formed last June by the claimants who have sought in vain through the courts to obtain a rebate of the tax paid by them, and it has the support of all the manufacturers who used alcohol at the time the law's provision should have been carried out.

Readers will remember that the claim of R. Dunlap & Company, the New York hat manufacturers, was made a test case under the law and argued before the United States Supreme Court on December 1, 1898, the principal argument for the claimant being made by the Hon. Joseph H. Choate, who held that the rights of a citizen under a tax law could not lawfully be destroyed because of the failure of the executive branch of the Government to enforce the law. But the Supreme Court decided against him by a bare majority, holding that Section 61 of the act gave to the Secretary of the Treasury discretionary power either to enforce the law or to dispense with its provisions, as he might see fit.

A second test case, that of the American Aristotype Company, which involved about \$62,000, is now pending in the Court of Claims.

Should Congress enact Mr. Russell's bill it will require, it is estimated, from five to eight years for the courts to examine and pass upon the claims. It is estimated also that the amount which Congress would be asked to appropriate for manufacturers' claims in any one year, if the technical defense raised by the Government be removed, would not exceed \$750,000. It is said further that no appropriation will be requested until at least one year after the measure is enacted.

The medicine manufacturers interested in this matter assert that they are paying their share of taxes in other ways, the proprietary stamp tax, for example, and that the burden imposed by the ruling of the former Secretary of the Treasury should be lifted.

ALL STATE BILL INTRODUCED.

Assemblyman Hill, of Buffalo, on Monday, January 15, introduced in the New York State Assembly the "All State Pharmacy Bill," which received the approval of the State Pharmaceutical Association at its annual meeting last June. The full text of this bill was printed in the Era for July 6, 1899. A digest of it was printed in the report for December 21, 1899. In brief, the bill is to create a State Board of Pharmacy, which is to consist of fifteen members. It divides the State into three sections, eastern, middle and western, and each section is to be represented by five members of the board. It creates two licenses or certificates, for pharmacists and for druggists, the latter class being permitted to practice "limited pharmacy"—to dispense, compound or retail drugs in any place of less than 500 people, and also under a pharmacist anywhere in the State, except New York City, where the grade of licensed druggist is not to exist.

Some interesting interviews on the subject of this bill were printed in the Era for December 21, and for December 28, 1899.

KINGS COUNTY, N. Y., SOCIETY MEETING.

The regular monthly meeting of the Kings County Pharmaceutical Society was held at the Brooklyn College of Pharmacy on Tuesday, January 9, with President Adrian Paradis in the chair. In the regular course of business the following new members were elected: S. B. Caldwell, 1222 Bedford avenue; August G. Jung, 258 Humboldt street; Carl Mittenzweig, 412 Central avenue; T. G. Prythorch, 263 Reid street; Adolph G. Rave, M. D., New Hyde Park.

William Muir, chairman of the Committee on Legislation, reported the bill to amend the New York City Pharmacy Law, which was drawn by a joint conference committee a few days previously. (This bill was printed in The Era for January 4, page 11). The Legislative Committee had been given power in this matter, and its work was approved by the society.

The meeting then went into executive session to receive a report from the Committee on Trade Matters on its work with similar committees from the other local societies in preparing lists of jobbers and of cutters for the N. A. R. D.

When the reporters were again admitted, William C. Anderson reported the new bill to regulate the working hours of drug clerks agreed upon with the Pharmaceutical Clerks' Association. There was considerable discussion of this subject, and Mr. Muir spoke strongly against such legislation as injurious to the professional aspect of pharmacy and discouraging to the independence and standing of the clerks themselves. Professor Anderson counseled accepting this bill as the lesser of two threatening evils, and said he thought it would not work a hardship on anybody. His report was accepted.

Secretary Tutill announced the death of R. G. Rutherford, one of the oldest members of the society. He was instructed to send a letter of sympathy to the family. The secretary also read a letter from the Centaur Company pointing out that some Brooklyn druggists were handling "spurious Castoria" not made by the Centaur Company, and asking the help of the society in discouraging such practices. A motion to refer the letter to the Committee on Trade Matters was amended by Mr. Muir, whose motion that the "Kings County Pharmaceutical Society condemns substitution in any form and will use its best endeavors to stop such practices," was carried.

SEEKING TO AMEND PROPRIETARY STAMP TAX.

Acting upon the suggestion of the N. A. R. D., the Jersey City Druggists' Association has asked Representative William D. Daly, of the Seventh Congressional District of New Jersey to work for the passage of an amendment to the War Revenue Act of 1898 to lower the rate of the stamp tax on proprietary medicines, so that the burden may not fall so heavily upon druggists as at present. The association's petition to the Congressman points out that under the present tax druggists are obliged to pay to the Government one-quarter of their profits on more than half of their sales.

Representative Daly has promised to do all in his power toward securing a reduction of the tax rate.

RETAIL HOWLERS WIN FROM SEABURY & JOHNSON.

The New York Retail Druggists' Bowling Association met Seabury & Johnson's team of the Wholesale Association last Saturday night, and beat that team and had a merry time. It was their second meeting. The first time, however, several weeks ago, the S. & J. team won by 304 pins, carrying things with a high hand. But this time the retailers retaliated and beat their opponents by 84 pins. Each team consisted of ten men. The retailers were George E. Schweinfurth, Frank Pond, Leo Geisler, Mathew Mahler, Charles H. White, R. Timmerman, Gilbert T. Reeder, S. F. Haddad, Reuben R. Smith, G. H. Hitchcock. Seabury & Johnson's team comprised George J. Seabury, W. Coughney, E. A. Sayre, L. Withers, H. C. Lovis, W. M. Davis, W. J. Sawyer, E. L. Benjamin, M. Judge and G. W. Hopping. L. W. De Zeller, the captain of the S. & J. team, did not bowl on account of

a sprained finger. But he was present and gave valuable assistance in the merrymaking. In the second and third games the fun took the form of prizes for high and low scores. In the former Gilbert T. Reeder rolled 191 and was awarded high score prize, a box of ten pins. George J. Seabury received the "booby" prize—a boiled lobster. In the last game W. Coughney for high score received a box of Uneceda biscuits and another lobster went to Dr. Lovis. A third contest will probably be arranged for next month.

SYMPATHY FOR DRUGGIST WHO VIOLATED RAINES LAW.

The following letter has been received from a subscriber who does not wish his name published. It might be interesting to know whether other druggists of New York State regard the matter in the same way that he does.

N. Y., Jan. 11, 1900.

"The Pharmaceutical Era: Was your attention ever called to subdivision 2 of section 34 of the Raines Law where it states that a pharmacist holding a liquor license under subdivision 3 of section 11, who violates it shall be punished, in addition to the regular fine or penalty imposed, by having his pharmacy license revoked by the State Board of Pharmacy. Now it seems very unfair and unjust that a druggist who has worked years and perhaps spent money to go through college or to get his license, which is his only means of livelihood, should have it taken away from him for breaking the Raines Law. The pharmacy license of Daniel Prescott, of this place, has been revoked by the State Board for violating the subdivision 3 of section 11 of the Raines Law, leaving himself, wife and two children in very hard circumstances. I would judge the law was unconstitutional and something that should be amended in that feature of it. I thought I would inform you of this, thinking you could not better please or protect the druggists of the State than by trying to have this part of the Raines Law changed. I do not want my name used in this matter for good personal reasons, and don't think it necessary that it should be. Hoping this may interest you as to the unjustness of the law, I remain,

Yours respectfully, _____, Ph.G."

PHARMACEUTICAL STILLS EXEMPT FROM TAX.

On January 10 the Commissioner of Internal Revenue issued the following ruling concerning stills used for pharmaceutical purposes:

"The manufacturer of a still that is to be used only for pharmaceutical purposes, or for distillation of volatile oils, is not required to pay special tax thereon, provided he furnish to the collector evidence under oath, setting forth the purpose for which the still is to be used.

"Every still, immediately upon being set up, must be registered with the collector in strict compliance with the provisions of section 3258, Revised Statutes."

NEW YORK WHOLESALE BOWLERS.

An interesting series of games was rolled last Saturday in the tournament of the New York Wholesale Drug Trade Bowling Association, although no high scores were made. The teams of Parke, Davis & Co., and of Dodge & Olcott each won two games. The team scores follow: National Lead Co., 691; R. W. Robinson & Son, 684; Parke, Davis & Co., 747; R. W. Robinson & Son, 723; Parke, Davis & Co., 731; National Lead Co., 707; Dodge & Olcott, 809; Merck & Co., 693; Dodge & Olcott, 772; Seabury & Johnson, 651; Seabury & Johnson, 774; Merck & Co., 693.

SHORTER HOURS BILL INTRODUCED.

Assemblyman Nelson H. Henry, of the Fifth District of New York city, on January 11 introduced in the Assembly the new bill to regulate the working hours of drug clerks. This is the bill which was agreed upon last month by a conference committee representing the Pharmaceutical Clerks' Association, the Manhattan Pharmaceutical Association, the German Apothecaries' Association and the Kings County Pharmaceutical Society. Dr. Henry undertook to see the bill through at the request of the Pharmaceutical Clerks' Association. The full text of the bill was published in the Era for December 21, 1899, page 838.

—Eggers Apothecary Hall has been incorporated under the laws of New Jersey to conduct a drug business on a capital of \$50,000. The incorporators are F. W. Eggers, G. H. B. Martin and W. F. Eldell.

NEW YORK AND VICINITY.

The "Foragers" Feed.

—The city salesmen of the toilet goods trade held their annual dinner last week at the Brevoort House, and a merry occasion it was. These gentlemen, twenty-five in number, formed a club over a year ago, but did not decide upon a name until this meeting, when "The Foragers" was adopted. Besides the banquet there was a business meeting, and the following officers were elected: President, John W. Watkins; vice-president, Robert White; secretary and treasurer, Samuel K. Kramer. The firms represented were Colgate & Co., Ladd & Coffin, Lubin, Schieffelin & Co., McKesson & Robbins, Hodgman Rubber Co., Butler H. R. Co., George R. Gibson, M. Aalholm, T. L. Lutkins, George E. Evans & Co., the Celluloid Co., A. A. Smith, Caswell, Massey & Co.

An Old Gag Still Works.

—A rather slick individual, evidently well acquainted with the drug trade, has been perpetrating a small swindle recently. Going into an office after the principal has departed about "even song time," he delivers a small package containing seeds, marked for Mrs. So and So., with correct street address of residence, explaining to the porter or office boy that it is too late to take the package to the house himself, but requesting that it be left on Mr. So and So's desk to be carried home next day; he also leaves minute directions for the use of the seeds and winds up by collecting 25 cents charges. The trick is so old one wonders at its success, but one philosopher in the wholesale market says: "The swindler will probably never be caught, no matter how many times exposed in public print, his constituency being external, his game may go on indefinitely."

H. B. Warner in Bankruptcy Court.

—Hulbert H. Warner, who was formerly head of the Warner Safe Cure Co., of Rochester, N. Y., but who now lives at the Hotel Endicott, Columbus avenue and Eighty-first street, this city, last week filed a petition in bankruptcy, with liabilities of \$2,319,027, and no assets. His petition states that all the debts were contracted at Rochester prior to 1893, when he made an assignment. There are thirty-three judgments against him, and the debts are for notes, borrowed money and services. Of the liabilities \$1,391,631 are unsecured, \$657,678 are secured, and \$269,718 are on notes of other persons which he indorsed.

Fred Perry Comes to New York.

—Fred B. Perry, who has traveled for Powers & Weightman for many years, and who is well known in drug circles East and West, has been advanced to the position of associate manager of that firm's New York establishment. He is expected in New York the last of the present month. Mr. Baird, who has been in sole charge since the death of James M. Farr, last June, and who had been associated with Mr. Farr in the New York office for many years, still remains; but there is too much work for one man, and so Mr. Perry has been selected to help him.

Chemical Industry Society Program.

—The next meeting of the New York Section, Society of Chemical Industry, will be held at the New York College of Pharmacy, in West Sixty-eighth street, on Friday evening, January 19. The program will include the following papers: "Some Remarks on Photometric Standards, with Exhibit of Harcourt's Pentane Lamp," by E. G. Love; "Development and Manufacture of Smokeless Fuel," by E. Taylor; "Notes on Texas Petroleum," by Clifford Richardson; "Petroleum from the New Olinda Field in Southern California," by the same; "Research on Hops," by Ernst Hantke.

NOTES.

—John Hepburn, a pharmacist of No. 103 Main street, Flushing, Queensborough, has a custom of placing on ex-

hibition in his store windows once a year the prescription file of his pharmacy, which grows in interest and size each time it makes its appearance. The file was placed in the show windows last week. It has grown now to 157 volumes, dating from 1870, and marking the growth of the business from its founding in that year by S. G. Welling. The present proprietor was then a clerk. The pharmacy was in the same location, but had only half the space it now occupies. The first day of the store's existence only three prescriptions were filled. Five years later they averaged twenty a day. The grand total now has passed 301,000 prescriptions.

—At the monthly meeting of the directors of the New York Drug Club last week the following new members were elected: A. Magnus, Joseph H. Bowne, Clarence L. Fabre, M. A. Mass, S. P. Mendel, W. B. Kaufman, Arthur L. Garford, J. W. Delaney, E. R. Drake, Frank W. Silkman, John H. Wheeler, Jacob H. Shaffer, Emil F. Henning, M. Rosentrelm, Lewis W. Boynton, J. D. Billard, Henry S. Chatfield, Charles R. Watson, J. S. Meng, John Fulton, Jr., Max B. Kaesche all of New York City; E. Gerlach, of San Francisco; W. A. P. Andrews, of New Haven, and H. W. Newton, of Buffalo.

—The McKesson & Robbins Mutual Benefit Association held its annual meeting last Saturday. The reports of officers showed the organization to be in a flourishing condition, with \$700 in the treasury. The past year was one of the best in the history of the association, which has been in existence for twenty years. The following officers were elected for the coming year: President, George F. Moore; secretary, James J. Kane; treasurer, A. Hageman; board of trustees, J. A. Cross, T. F. Farrell, H. Belden, T. Quinn, and J. Hutchings.

—Among the out-of-town drug men visiting the local market during the week were the following: C. R. Meredith, Casselton, S. D.; W. J. Brace, Washington; M. J. Bernstein, Binghamton, N. Y.; W. O. Newcomb, Cleveland; F. B. Davis, Youngstown, O.; L. Becker, Baltimore; James Moore, Albany; C. T. McBride, Kingston, N. Y.; W. Corwith, Southampton, L. I.; N. McDonald, Bay Shore, N. Y.; Henry Woodward, Middletown, Ct.; Samuel Davis, Boonton, N. J.; D. W. Baker, Trenton; John H. Allen, Millbrook, N. Y.

—Henry Thayer & Co., the manufacturing chemists and wholesalers of Cambridgeport, Mass., who have just established a branch office in New York at No. 93 Nassau street, under the management of F. C. Kinsman, are to be represented in this territory by the following local salesmen: I. McG. Adams, T. A. Heslin, N. E. Noxon, G. B. Bradford, J. F. Barbier, Charles G. Wulff, Henry E. Lehr, C. W. Widrick, and O. J. Rowland, M. D.

—The salesmen of Ladd & Coffin, the Barclay street perfumers, have been home for their annual conference, and last week returned to their respective fields of labor. Vernon Waldron went to the Pacific coast; E. T. Van Alen to Chicago, A. T. Ballard to the Middle West, E. A. Coffin to the West and South, T. J. Coffin to the East, Harrison W. James to New England, and J. Howard Wells to Philadelphia, Baltimore and Washington.

—F. C. Kinsman, for some time past manager of the New York office of E. L. Patch & Co., of Boston, has accepted a like position with Henry Thayer & Co., manufacturing chemists and wholesalers, of Cambridgeport, Mass., for which firm he has just opened a New York office in the Bennett Building, No. 93 Nassau street. Mr. Kinsman was formerly a salesman for the old house of Henry Thayer & Co., for about seven years.

—Edward F. Sargent, said to have been a druggist of Plymouth, Mass., killed himself with morphine on January 11, in his room at the Eastern Hotel, at the foot of Whitehall street, Manhattan. He had been arraigned in the Yorkville Police Court the preceding Monday, charged by his alleged wife with deserting her about five weeks ago, soon after they were married. His body was taken to the morgue.

—C. A. Johnston has been added to the traveling force of the Empire State Drug Co., and is calling on the druggists of Greater New York. William H. Whitney, the manager of the company's local branch, is to give all his time to the enlarging of the membership. He reports increasing interest in this cooperative concern and a good steady growth.

—Among the guests entertained at the New York Drug Club during the week were the following visitors from out of town: M. P. Gould, New Haven; M. Marx, Pittsburg; P. H. Hayes, New Haven; Stanley Latham, London; F. W. Mengles, Edinburgh; Washington Irving, Short Hills, N. J.; E. S. Rice, Chicago; Curtis W. Turner, Philadelphia.

—A. C. Vosseler, who has long conducted a pharmacy at 179 Grand street, Brooklyn, has bought the building at 171 Grand street, corner of Bedford avenue, and fitted up the ground floor as a handsome drug store with a tile floor, marble counters and other modern improvements, into which he has moved his stock from the old store.

—Witt & Brigglin, a newly formed firm, have opened a new drug store at 165 McKibben street, Brooklyn. The junior partner, J. Brigglin was formerly a clerk in the pharmacy of A. Braunstein, at 41 Manhattan avenue, Brooklyn.

—E. Wheeler Carr, general sales agent and manager of the local office of the A. R. Bremer Co., has started on a ten-day trip to visit the jobbers of the Northeast, and start some new salesmen in that territory.

—Sigmund Hirsch, of the firm of Henry Nordlinger & Co., the Washington street dealers in seeds and herbs, who has been abroad for some time, sailed for home from Liverpool on the Oceanic last Thursday.

—George Benjamin Wert, who had a drug store in Bloomfield street, Hoboken, N. J., has disposed of the business and returned to the home of his parents in Hackettstown, N. J., in broken health.

—Dr. James Johnston, a druggist of Brownstown, Jamaica, who served as that island's commissioner to the Philadelphia Exposition, visited the local wholesale market last week before sailing for home.

—Druggist George E. Holly, of Sidney Center, Delaware County, on January 9, made an assignment to C. H. Gerome. His liabilities are \$1,259.47, and he scheduled his stock and fixtures at \$1,355.

—S. L. Neier, managing director of the Red Cross Drug Co., of Dover, N. J., was in town buying supplies the middle of the week. He says this new firm is doing a successful business.

—Frank Pickett, of Philadelphia, formerly in the drug business in that city, came to New York last week on a wedding trip. He called on some old friends in the local drug market.

—A. R. Bremer, head of the A. R. Bremer Co., patent medicine manufacturers of Chicago, is making an Eastern trip. He came to New York the middle of last week.

—Dr. E. G. Rave has just presented to the Brooklyn College of Pharmacy a herbarium containing some 800 handsome specimens, neatly mounted and labeled.

—Charles F. Scott, Western salesman for McKesson & Robbins, after spending the holidays in New York, has started on a six months' trip to the Pacific coast.

—Karl Schnackenberg, proprietor of drug stores at 426 Pearl street and at 437 Amsterdam avenue, Manhattan, has gone to Germany for a visit of six months.

—Druggist C. V. S. Rea, of Hackettstown, N. J., has gone to Florida for six or eight weeks, to escape the rigors of the winter climate in this latitude.

SHIPMENT OF TONS OF PATENT MEDICINE LITERATURE.

Boston, Jan. 13.—One of the largest and heaviest single shipments of mail matter ever known hereabouts was that sent out this week from the post office at Lynn. It was sent by the Saugus Branch of the Boston & Maine Railroad to Boston, for further distribution to many points, and filled a special baggage car. There were tons of patent medicine literature sounding the praises of Lydia E. Pinkham's Vegetable Compound. It all filled two hundred and twenty-six sacks, which made a combined weight of almost twelve tons! This great mail was made up at the laboratory of the company, in Lynn, by a mail clerk specially detailed from the Lynn post office to take charge of the mailing department of the company. Five large express carts were required to transport the mail from the factory to the railroad station. Between \$4,000 and \$5,000 worth of postage stamps was required to forward all this patent medicine literature.

IN AND ABOUT BOSTON.

A DRUGGIST STIRS UP BOSTON POLITICIANS.

Boston, Jan. 13.—Probably no man in Boston has been more talked about recently, or has been more in the public eye, than Daniel J. Kiley, a retail druggist whose store is on Broadway in the South Boston district.

As president of the Common Council in Boston in 1899, Mr. Kiley often became acting mayor. He was re-elected to the Council for 1900. He again took the chair, against the strong protestations of many members, who refused to recognize any right on his part to assume the chairmanship. Indeed, many left the chamber, so that a quick adjournment of the first meeting of the Council followed. All these proceedings caused great uproar, not alone among the Councillors, but as well among the great crowd of hangers-on, always to be found in the galleries and corridors of City Hall. A second meeting was called, before which there was general speculation whether Mr. Kiley would be recognized as chairman. To suppress expected riotous proceedings a squad of police was detailed to preserve order at the second meeting. Mr. Kiley again occupied the chair and, as his faction was the stronger, he stayed there the whole evening and some business was taken up.

The Republicans, however, are not satisfied with this state of affairs and feel aggrieved, not alone because of the action of the so-called Lomasney-Kiley faction after having reached an agreement regarding action, but they say that sensible financiers will not wish to make a big loan of money when there is even a question of the legality of Mr. Kiley's election and the validity of his signature. If for no other reason, it is believed that they will resort to an application to the courts for a decision as to the legality of the election. Many Republicans of the Council, who abided by the caucus agreement, are angry because certain Republican members allowed themselves to be influenced to break away from their associates, as well as because an agreement to re-elect Mr. Kiley was not carried out.

President Kiley says that he is absolutely certain that he has a legal right to be in the chair. There are many, however, who do not agree with him, and the burning question is one which is yet to be clearly decided.

A BILL WHICH WILL HELP THE RETAIL DRUG TRADE.

Boston, Jan. 13.—At the recent meeting held in this city to determine if the Massachusetts State Pharmaceutical Association should become a part of the greater National Association of Retail Druggists, it will be recalled that considerable was said regarding the relation of the great department stores in all cities to the retail drug trade. The matter of taxes on the big shops was discussed from all view points, F. E. Holliday, of Topeka, Kans., as the chief speaker, telling much that has come within his personal experience regarding the matter, especially in Missouri, where he has made a close study of the subject. It therefore is interesting to know now that a bill has been introduced in the Massachusetts Senate by Senator Innes, for taxing department stores in the State. He has shaped his bill along the line of that adopted by the State Legislature of Missouri. Small retail merchants hereabout have agitated the matter and urged Senator Innes to take the formal step in the introduction of the bill. It defines a department store as "A retail store in which a variety of goods not included in any distinct line or department of trade shall be offered for trade and sold, and in which more than fifteen persons are employed as salespeople."

Taxes imposed by this bill include those on drugs, perfume and toilet articles, \$2,000; patent medicines, \$2,000; confectionery, soda water, etc., \$1,000; cigars, tobacco, etc., \$1,000. On bicycles, which many druggists are agents for, the tax is put at \$1,000, and on cameras and supplies the tax is the same. One sees so many retail drug store windows filled with cameras and their belongings and so many handsome "sample" bicycles displayed in the same way that it is not impossible that the department stores may in turn call attention to this fact, especially since here and there one finds in Boston retail drug stores employing more than fifteen persons.

WHAT'S IN A NAME.

Boston Jan. 13.—"What's in a Name?" There is a good deal in it when a man with the same family name, and who lives in the same street that you do, is killed in an accident, so it appears. Recently a man by the name of C. B. Heath, while attempting to board a car in the subway in this city, fell and received injuries which later caused his death. The account of the accident was published broadcast in the newspapers of the city, but each account neglected to give the man's occupation. His residence was given at No. 14 Worcester square.

William B. Heath is a well known druggist of this city, and proprietor of a pharmacy at the corner of Tremont and West Springfield streets. For a number of years he owned a drug store in Jamaica Plain, and, as he was interested in politics in that section, his circle of friends was very large. He resides at No. 29 Worcester square, not far from the home of C. B. Heath. When the notices of this accident in the subway were published, many of William Heath's friends, when they read it, jumped to the conclusion that he was the victim. As one after another learned of their misapprehension and that William B. Heath, the druggist and their friend, did not reside at No. 14 Worcester square, but at No. 29, the relief was great.

It rarely happens that two men of the same name reside near each other on the same street without either knowing of the others' being a neighbor, but it was so in this case.

MARRIAGE OF A WOMAN WHO HAS MADE A NAME FOR HERSELF.

Boston, Jan. 13.—Because of the fact that she has made a name for herself as a prominent chemist, as well as that she is the daughter of the renowned late Professor Eben Horsford, more than common interest surrounds the marriage on January 10 of Miss Lillian Horsford, of Cambridge, to Professor W. G. Farlow, also of Cambridge. The wedding took place in the afternoon at the home of the bride's mother, on Craigie street, in the University City. Rev. Dr. Alexander McKenzie officiated. About fifty guests, all intimate friends or relatives, were present. The bride is prominent in educational as well as social circles about Boston. She has the distinctive honor of being one of the associates of Radcliffe College and a member of the council, and is a trustee of Wellesley, in which college her father was always deeply interested. She also is president of the Rumford Chemical Works in Providence, R. I. Mr. Farlow is professor of cryptogamic botany at Harvard College and holds the degree of LL.D. He is a graduate of the University and has lived in Cambridge for more than twenty years.

Druggists on a Tour.

—After more than a quarter of a century in business, Charles Coleman and his brother George, both of whom have been favorably known as pharmacists in the West End district, have disposed of their business and started on a pleasure trip to Europe. A large number of friends of the travellers saw them leave Boston by train. They retired from business a few months ago and will now see something of the world. They will make a tour of Ireland, the birthplace of their parents. During their visit abroad they will meet their brother, Richard Coleman, who was the original "Peck's Bad Boy" when the play was first brought out in this country, and who of late years has been playing in England and Australia. He is now filling an engagement in London. The party sailed from New York, Mrs. George Coleman going with her husband.

F. M. Keeler Co.

—Massachusetts men are behind the F. M. Keeler Company, just incorporated at Kittery, Me., with a capital stock of \$20,000, of which nothing has yet been paid in. The company proposes to deal in druggists' supplies. C. H. Field, of Lynn, is president, and L. H. Palmer, of Melrose, is the treasurer. S. F. Frothingham, of Boston, and George R. Coyle, of Somerville, are the other incorporators. Mr. Field, Mr. Frothingham and Mr. Coyle are salesmen and Mr. Palmer bookkeeper for Fisher M. Keeler & Co., 112 Franklin street, Boston, dealers at wholesale in druggists' sundries.

Druggist Divorced.

—Alphonso Sumner, a druggist on Huntington avenue, Boston, has been sued in divorce proceedings on statutory grounds, his wife, Mabel A. Sumner, seeking also alimony and the care of their son, with means for his support. The couple were married in 1882. Mr. Sumner did not contest his wife's action against him. Judge Hardy heard the case in the Superior Court, divorce session. It occupied only forty minutes of the court's time. Mr. and Mrs. Sumner have lived apart since March, 1897. He stayed out nights a good deal, which first aroused suspicion. Mrs. Sumner employed detectives and their evidence in court seemed so conclusive that no defense was made by Mr. Sumner's lawyers. Decree nisi was granted.

Moxie Co. Branches Out.

—The Moxie Nerve Food Company has purchased four parcels of property situated at Nos. 65 and 68 Beverly street and Nos. 65, 67, 69 and 71 Haverhill street, Boston, to convert to its needs and purposes. The property consists of 5,600 square feet of land, with a frontage of forty feet on each street, together with three large brick buildings. The total tax valuation of the property is \$65,000, of which \$42,600 is on the land. The consideration paid for the property was considerably in excess of the assessed valuation. Early next fall the Moxie Company intends to tear down the buildings on Haverhill street and erect a six-story building, which they will occupy in addition to the one in Beverly street.

NOTES.

—In the United States District Court, a petition has been filed by the Massachusetts National Bank of Boston to force B. F. Larrabee & Co. into bankruptcy. The G. W. Dillingham Co., of New York, and the National Wall Paper Co., of the same city, unite with the bank in this petition. The aggregate claims, under this petition, amount to \$5,204, of which the bank claim is \$5,000. Three creditors are all that the law requires to join in a petition for involuntary insolvency.

—William W. Bartlet, for a long time a leading pharmacist in Boston, and who still retains deep interest in all that concerns the trade, even though he is not as actively engaged in it as formerly, has been elected warden at the annual meeting of St. Mark's Episcopal Mission, Columbia road, Dorchester, where he lives. Mr. Bartlet was also chosen as a delegate to the meeting of the archdeaconry.

—The plate glass window of the drug store of Dr. J. T. Leary, at Dorchester, was smashed to bits by a runaway horse. The horse also tore a United States mail box from its fastenings, breaking open the box and scattering the mail about in every direction. The horse left the vehicle hanging in the window of the drug store.

—Walter A. Kneeland, of Malden, and Joseph R. Wood, of Brookline, at the recent quarterly meeting of the Massachusetts Board of Registration in Pharmacy, were granted certificates. The board will hold its next meeting for examination about the middle of March.

—A prisoner who was arrested at Franklin, on account of drunkenness, and sentenced to three months in jail, decided to seek leniency against the imprisonment by "peaching," and claimed that he bought alcohol at Jackman's drug store. The druggist pleaded not guilty when arraigned on the complaint.

—Vast improvement has resulted from the changes which have for some time been going on at the drug store of Henry Adams, at Amherst, and the place seems practically like a new store. It certainly is one of the best appointed pharmacies in Western Massachusetts.

—Hon. Gorham D. Gilman, of Gilman Brothers, the wholesale druggists, was the speaker at the last meeting of the new Phillips Brooks Club. Mr. Gilman is the Hawaiian consul for the New England States.

—Under the impression that she was taking a simple effervescent powder which her druggist had sold her for a stomach trouble, an East Boston woman accidentally took poison with fatal results.

—At the annual meeting and banquet of the Business Men's Association of Clinton, among the members present were Thomas D. Tate and J. H. McGrath, leading druggists of that town.

—A new and clever little machine is an automatic feeder

arrangement to be used as an adjunct to a bottling machine. It is the scheme of Frank O. Woodland of Worcester.

—Not until some time in the spring will F. W. Sirmard open his drug store at Clinton, in the block which is now being built there by O'Toole Brothers.

—Julius Wiltig, a clerk in the drug store of Oscar A. Burdett, at Clinton, has been quite seriously ill at his home in that town.

—Among the exports of the week from the Port of Boston were drugs and chemicals, \$17,299; tobacco, \$5,531; spirits, \$28,450.

—Benjamin H. Bradbury, of Melrose, druggist, has assigned, with liabilities of \$10,953 and assets of \$2,550.

PHILADELPHIA.**PHILADELPHIA RETAIL DRUGGISTS ASSOCIATION**

The January meeting of the Philadelphia Association of Retail Druggists was held in the library of the Philadelphia College of Pharmacy, on Friday afternoon, January 5th, at 3 o'clock.

The meeting was called to order by First Vice-President W. H. Foley, who took the chair in the absence of William McIntyre, president of the association. There was an unusually good attendance of members and four new members joined and had their names entered on the roll book.

A petition relative to the Revenue Stamp Tax on medicines has been given to each ward chairman to obtain the signatures of all the druggists in their respective wards. When completed the petition will be forwarded to the congressmen of this district for the purpose of obtaining their support in a movement to equalize the burden of the taxation of proprietary articles, which is very unequally distributed at present.

The promissiveness with which the members are paying their dues for the ensuing year is very gratifying to the officers of the association, as there are few delinquents and it indicates that everybody is in the association to stay and help work for the millennium of retail pharmacy.

C. H. Campbell read the report of the entertainment committee and stated that Horticultural Hall, on Broad street below Locust street, has been engaged for the progressive euchre which will be given by the association on Wednesday evening, February 7th, and that from present indications the affair will prove to be very successful, as about 150 prizes are promised already.

The next meeting will be held in the College of Pharmacy library on Friday, February 2nd, at 3 P. M.

Philadelphians Want Free Alcohol.

—Philadelphia pharmaceutical manufacturers are interested in the bill which has been introduced into Congress by Representative Russell of Connecticut, relative to the refunding of the tax on alcohol used in the arts and manufactures. It will be remembered that the act which was originally passed provided for the refunding of the tax on all alcohol so used, upon proof of the facts, but owing to the inadvertence of the legislators who had charge of the bid there was no provision for the enforcing of the measure, which enforcement entailed more work than the Internal Revenue department could accomplish. When a test case was brought up before the Supreme Court the manufacturers lost by a majority of one vote. Now that the matter is being revived the manufacturers who went to the trouble and expense of keeping a record of all alcohol used, are very much interested, although few of them have any hope of the ultimate success of the bill.

Wants Nuisance Stopped.

—Jacob L. Kolp, proprietor for some years of the pharmacy at 1000 Buttonwood street, is located in the building adjoining the machine tool manufacturing plant of the Pedrick & Ayer Company. The vibrations caused by the running of heavy machinery are very plainly felt in all parts of the store, and Mr. Kolp has instituted proceedings to prevent Pedrick & Ayer from running their machinery, as he claims it renders his fine balances worthless and is a constant annoyance. Several years ago Pedrick & Ayer started a night shift, intending to

run continuously night and day during their busy season, but Mr. Kolp secured an injunction from the courts which prevents them from running their plant later than 10 p. m. Now he is trying to stop them altogether and a sharp legal battle is looked forward to by both parties.

Tons of Sulphur Ablaze.

—The Delaware River fire boats had a tough job one night in the early part of this week. A vessel containing a cargo of sulphur, amounting to 1,500 tons, from Sicily, lay at the Columbia avenue wharf, and in some unknown manner the sulphur in one of the compartments of the vessel's hold caught fire, and the fire boat was kept busy the whole night pouring water in on the burning mass. The sulphur dioxide gas generated made the fire very difficult to cope with and the firemen departed twice after having the fire apparently extinguished, only to be called again upon the breaking out of the fire each time. The only loss that was sustained was from the sulphur that burned, for the cargo is not injured by water and needs only to be dried out to render it salable.

NOTES.

—Professor Persifer Frazer, an eminent Philadelphia scientist of all around ability, testified as a trial-writing expert for the prosecution at the Mollineux hand in New York this week. Professor Frazer was aided in his previous study of the case by Professor Samuel P. Sadtler, the well known chemical expert, who is Professor of Chemistry in the Philadelphia College of Pharmacy.

—Early this week the sponge and charmois house of E. G. Haenlen & Co., at Seventh and Arch streets, had a small conflagration which threatened the entire building for a time. A waste paper bin, which was located too near the heater, was the starting point, and the density of the smoke drove the firemen away again and again; but at last the blaze was located and extinguished.

—A meeting of the Philadelphia Section of the American Chemical Society will be held at the Harrison Chemical Laboratory of the University of Pennsylvania, on Thursday evening, January 18th. Two papers are announced as follows: A Study in Iodination, by J. F. X. Harold; Some Notes on the Pharmacopœia of 1900, by Lyman F. Kebler.

—The Graduate Botanical Club of the University of Pennsylvania held a meeting in Biological Hall on Wednesday evening. Dr. Macfarlane gave a report of the recent naturalists' meeting in New Haven and three or four papers of interest to the members present were read.

—C. Oscar Pfeiffer, who is proprietor of the pharmacy at 2500 Richmond street, was the victim of a bogus check swindler recently. Mr. Pfeiffer, however, had a chance to enter a charge against the culprit, as he was arrested several days ago for stealing an overcoat.

—D. E. Bransome, salesman for Johnson & Johnson, whose headquarters are in Philadelphia, has changed his office to 17 South Eleventh street. His new quarters are handsomely furnished and Bransome's smile is more genial than ever, if such a thing be possible.

—George Maurer, the well known pharmacist at Twenty-first and Fitzwater streets, is an enthusiastic member of several secret societies. He was recently elected Apothecary of Court Americus, No. 57, of the Foresters of America.

—Dr. Thomas W. Franklin, a well known Atlantic City pharmacist, who has been in business for years in that place, dropped dead suddenly while filling a prescription on Tuesday of this week. The cause of death was heart disease.

—F. W. Allison, of Clearfield, Pa., is clerking at the store of Elmer G. Brugler, 2002 Tioga street, while attending the course of lectures at the Medico-Chirurgical College Department of Pharmacy.

—Ernest Rieber, who is with E. C. F. Miekley, at Twenty-eighth street and Girard avenue, visited some friends at Green Lane for a day or so last week.

—William R. Warner, Jr., made a short business trip to New York last week.

BALTIMORE.

Bowling at Baltimore.

—The several teams of the Baltimore Drug Trade Bowling Club continue to keep the balls rolling, and the second series of games is now well under way. Last week, however, was not productive of particularly high scores. With a single exception the totals did not pass much above the 700 mark, the exception being the third game played last Friday night between the teams of Sharp & Dohme and Parke, Davis & Company, when the former rolled up 847 against 590. The other scores of the evening were 646 and 728 against 651 and 602. Parke, Davis & Company thus managed to get one of the three contests. On Tuesday night the team of James Bally & Son competed with Muth Bros. Company, with the result that the latter quintette got one game out of three. The scores were: James Bally & Son, 688, 709 and 588; Muth Brothers & Company, 604, 666 and 583. The standing of the teams follows:

Teams.	Games Won.	Lost.	Percentage.
Root and Herb.....	23	1	.958
Sharp & Dohme.....	20	4	.833
Winkelmann & Brown Drug Co	16	8	.667
Gilpin, Langdon & Co.....	7	17	.292
Jas Bally & Son.....	7	17	.292
Muth Bros. & Co.....	6	18	.250
Parke, Davis & Co.....	5	19	.200

Fine Drug Exhibit.

—A feature of the annual meeting of the Seaboard Medical Association, which includes the physicians and surgeons of Tidewater Virginia and Northeastern North Carolina, at Newport News, Va., last Thursday and Friday, was a very creditable drug exhibit. Among the principal exhibitors was the Warwick Pharmacy Company, which showed numerous samples of crude and powdered drugs, medicinal compounds, surgical instruments, splints and hospital appliances. A notable part of the display consisted of a collection of Alexander vaccine virus preparations, in charge of T. J. Lynch. Powers & Anderson, of Richmond, were represented with a magnificent assortment of surgical instruments and hospital supplies and furniture, in charge of E. R. Anderson. W. S. Henning had supervision over H. K. Wampole's tasteless cod-liver oil and milk food compounds.

NOTES.

—The January meeting of the Maryland College of Pharmacy, which will be held next Thursday morning at the institution on Aisquith street, promises to be of unusual importance, and all the members are urged to attend. Two vice-presidents and two members of the Board of Examiners are to be elected and reports of all the standing committees will be received. Besides several papers, Dr. A. R. L. Dohme will submit the results of an assay of various laboranti leaves, while Professor Daniel Base, of the college faculty, will discourse on electricity as applied to the manufacture of chemical substances. A discussion on the question, "Are tablets a benefit or bane to the pharmacists?" will be participated in by Charles H. Ware, Louis Schulze, Dr. Dohme and H. P. Hynson.

—A meeting of the executive board of the Baltimore Retail Druggists' Association has been called for to-morrow at the Maryland College of Pharmacy. It is expected that reports will be submitted by the committee in charge of the work to increase the membership of the organization, and that all the later developments in the exchange of communications between the association and the wholesale druggists will come up for consideration, together with any new features in the labors of the national body.

—W. Stedman Badgett, who until recently conducted a retail pharmacy at the corner of Lombard and Stricker streets, has taken a position as manager of the store conducted by Amanda Horn, Myrtle avenue and Mulberry street.

—Mr. Anderson, for some time past a clerk in the pharmacy of Samuel L. Robinson, Greene and Franklin streets, has taken a position with Sharp & Dohme.

—M. E. Eyler, who clerked for a short time at the store of C. L. Meyer, Madison avenue and McMeichen street, has given up his position.

—J. Carcaud, a retail druggist at Randall and Light streets, has sold out to J. Russell Talbot and retires from business.

DRUGGISTS' EUCHRE AND DANCE, HORTICULTURAL HALL,

Wednesday Evening, Feb. 7, 1900.

*** OVER 150 VALUABLE PRIZES. ***

Philadelphia, Jan. 13.—The Entertainment Committee of the Philadelphia Association of Retail Druggists held a meeting at the committee room in the Odd Fellows Temple, Broad and Cherry streets, last Tuesday evening. The members present were D. M. Harris, C. H. Campbell, T. M. Newbold, Mahlon Kratz, E. J. Flinnerty, H. L. Stiles, J. M. Baer, H. C. Blair, Jr., J. G. Howard, Charles Leedom, E. T. Spencer and W. L. Cliffe.

Reports were received from the various sub-committees and read by the chairman. Report was made that the Smith, Kline & French Company had made an offer of a cash prize of not more than \$100 nor less than \$50 to be used according to the will of the committee. It was unanimously decided to accept \$50, this being considered an extremely liberal offer, which was made voluntarily without any solicitation whatever. The secretary of the committee was directed to write a letter of thanks to the donors of this generous prize and to make public announcement of the fact to the members of the association at their next stated meeting. Prizes were reported as having been received from a number of persons, the following being a partial list:

Pharmaceutical Era, New York.
Smith, Kline & French Company, Philadelphia.
Merck & Company, New York.
L. C. Funk, Philadelphia.
Frank Teller & Company, Philadelphia.
Langdorf Company, Philadelphia.
W. A. Rumsey, Philadelphia.
James C. Perry, Philadelphia.
Emerson Company, Baltimore.
H. K. Mulford Company, Philadelphia.
J. Ellwood Lee Company, Conshohocken, Pa.
Seabury & Johnson, New York.
Johnson & Johnson, New York.
Western Druggist, Chicago.
Mr. B. F. Lockwood, Cigar Dept. Smith, Kline & French Company, Philadelphia.

The intention of the committee was to have 150 prizes, but, from the way the offers are coming in, that number will be exceeded.

Five hundred large window cards have been distributed among the leading druggists throughout the city and two tickets have been mailed to each member of the association for purpose of sale, members of the association having the preference. There is little doubt from the number already purchased that all tickets will be sold long before the date of the event. Accommodations have been provided for 1,200 players and for spectators also. During the progress of the game dancing will take place in the lower assembly hall. At 10:30 the game will be stopped and the awarding of the prizes will be done in a room especially set apart for the purpose, thus avoiding unnecessary confusion. Every member of the committee is working hard to make the affair a memorable event in the history of the Philadelphia Retail Druggists' Association.

Mr. Charles Leedom, of the Committee on Cards, reported that the Russell, Morgan Company, otherwise known as the United States Playing Card Company, had donated two gross of cards for the occasion. The generosity of this firm will be appreciated when it is understood that they donated a card of the highest quality, being superior even to the card upon which quotations were requested by the committee having charge of this matter.

All printing matter required so far has been done without charge by several firms in Philadelphia. Among these may be mentioned Hance Brothers & White and the Jensen Press.

The next meeting of the committee will be held at the same place next Tuesday evening, when the cash will commence to arrive. As soon as the money is received it will be handed over to the treasurer, H. C. Blair, Jr., and

the members say that they hope to turn in such a large sum that they will have to require a bond from the treasurer.

It is also rumored in pharmaceutical circles that dress-makers and tailors are already overcrowded with their work; the former being deluged with orders for new dresses for the druggists' wives and daughters and the latter devoting all of their time to pressing the dress suits of the members. Indeed one member is credited with saying that he had not been afforded an opportunity to wear his dress suit for nearly twenty years. This may be an exaggeration, but the fact remains that never before have the Philadelphia druggists shown such enthusiastic interest in the promotion of harmonious relations as is exhibited in the present instance.

The committee wish it to be generally understood that any member who, during the progress of the game, is discovered in the attempt of playing his cards to further the sale of his own preparations, will suffer the penalty of being compelled to take a bottle of each such preparation himself. Some of the foresighted druggists have purchased copies of Hoyle and are practicing the game during the dull periods of business each day. Those experienced in progressive euchre are laughing up their sleeves at this, for they know skill of play is one of the smallest factors of success in winning a prize.

PHILADELPHIA COLLEGE OF PHARMACY NOTES.

Philadelphia, Jan. 13.—About twenty-five members of the senior class at the P. C. P. have organized a "Bachelor's Club." The first meeting was held at the home of W. S. Stinson, the vice-president, 108 Green street, who tendered a smoker to the boys on the night of the 12th inst.

The mid-winter examinations, which are held for the purpose of determining the fitness of the second year students for taking the final examinations in March, were held on Wednesday of this week, and the boys of that class will remain on pins and needles for a few days until the results are published. The third year students also are beginning to hustle around to get their theses in shape for handing in to the dean of the faculty, Professor Joseph P. Remington, the last date being February 15th.

The January social meeting of the Alumni Association will be held in the College Museum on Tuesday evening, January 16th. The programme contains several features for the entertainment of the students, among which the dancing is not the least important.

The pharmaceutical meeting for this month will be held next Tuesday afternoon, January 16th, at 3 P. M. The programme consists of the following papers:

1. Immunity; What is it, and upon what does it depend, by Professor Joseph Macfarland, of the University of Pennsylvania.
2. Bismuth Salicylate (Basic). By Lyman F. Kebler, Ph.C.
3. Syrup of Orange and Syrup of Wild Cherry. By Frederick W. Haussmann, Ph.G.
4. Notes on Beeswax. By Professor H. V. Army.

A number of interesting specimens will be exhibited and it is hoped that the attendance will be as good as it has been during the previous meetings of this winter's series.

The football team of the Philadelphia College of Pharmacy students, which made such a creditable record during the past season, was honored by the publication of a photograph of its members in one of the evening papers recently. To look at the crowd as a whole one would scarcely think of them as pill rollers. They have more of an appearance of athletes than is usually associated with the members of the profession of pharmacy.

Watch this column for the latest reports of what is going on in the National Organization.

Chicago, January 13, 1900.

"Montreal, Canada, January 10, 1900. Thos. V. Wooten, Sec'y, Chicago. Dear Sir:—I have much pleasure in forwarding to you our society's application for affiliation with the N. A. R. D., and have by the same mail sent to your treasurer, Mr. Charles T. Heller, of St. Paul, Minn., an express money order for the sum stated in the application. The amount forwarded is to cover the fifty-cent assessment upon each member of our society, which, we believe, is in accordance with your requirements. As our membership increases, which we expect will shortly be the case, we will remit you further amounts. Thru our connection with the N. A. R. D. may prove mutually advantageous, I remain yours truly, E. Muir, Sec'y-Treas., The Society of Retail Druggists of the Province of Quebec."

The reports from various parts of the country indicate that the petitions recently circulated by the N. A. R. D. are receiving not a little attention. The members of the organizations are to be congratulated on the success of their efforts, but they are urged to continue these efforts until our object is obtained.

The following from a letter of the Robinson-Pettet Co., Louisville, will be of interest: "We have a letter from our member of Congress, Mr. Oscar Turner, in which he says that he is most heartily in favor of the repeal of the tax mentioned, and suggests that he be advised as to who will introduce the bill, in order that he might have a personal interview with him in regard to the matter. If you can inform us on this point, we will be very glad to correspond further with Mr. Turner.

In the next issue of the "Notes" the name of the representative who will introduce the measure will be given, in order that each Congressman may be urged to work and vote for So-and-So's bill.

"Louisville, Ky., Jan. 11, 1900. Mr. Thos. V. Wooten, Sec'y, Chicago. My Dear Sir:—A contribution for \$35.00 was mailed by me on January 6th, 1900, to Treasurer Heller. This sum was a portion of the money turned over to the L. R. D. A. for sales on Malt Extract of Pabst Brewing Company, which we consider as only too small to adequately express our appreciation of the good work of the national association. Matters here are ripening rapidly and indications are now for a solution of the cut-rate problem very soon. With regards and best wishes for 1900. I am, Yours very truly, G. L. Curry, Sec'y. L. R. D. A."

This organization, which numbers 157 members, paid into the national treasury during the fiscal year ended December 31, 1899, \$198.50. Of this amount only \$25.00 was contributed by anyone else than a member of the association.

"St. Louis, Mo., Jan. 6, 1900. Thos. V. Wooten, Sec'y., Chicago. Dear Sir:—We beg to advise that we to-day mail the treasurer, Mr. Chas. T. Heller, our check for \$300.00, covering subscription to your association, which we trust will duly reach him and will be of help in forwarding the interests of the retailers. We should have remitted this long ago had we been advised of its acceptance, but we heartily for the cordial expressions of good will, which we beg to reciprocate, and stand at all times ready to do anything in our power to advance the interests of the retailers, their interests being our interests. With kind re-

gards, very truly yours, Meyer Bros. Drug Co. C. W. Wall, Treas."

"Chilton, Wis., Thos. V. Wooten, Sec'y., Chicago, Ill. Dear Sir:—Our county of Calumet is a very small one, it contains only five drug stores, and we all belong to the Calumet County Druggists' Association and work in harmony. The general stores here do not handle drugs and patent medicines, consequently there is no cutting done at all to my knowledge. Our association is ready at any time to assist the N. A. R. D. wherever and whenever we can. Respectfully yours, Henry Rollman, Sec'y., Wisconsin Pharmaceutical Association."

New statistics are being requested of all organizations that have not reported since July, 1899. Important changes are taking place in the personnel of the officers of the affiliated societies, the number of their members, price-cutting, etc.; and the National Secretary ought to be in possession of all these facts in order that, when needed, they may be placed in the hands of the Executive Committee without delay.

The Minnesota State Pharmaceutical Association has issued an appeal to the congressmen from that State, urging the importance of relieving the drug trade of the burdens imposed by the Internal Revenue Law of 1898, and petitioning each to use his influence in behalf of a repeal of the objectionable sections of that law. The petitions are receiving general attention from the pharmacists of the State.

"Danbury, Conn., Jan. 10, 1900. Thos. V. Wooten, Sec'y, Chicago. Dear Sir:—The condition of the retail drug business is fairly good in this city, the only trouble is with baby foods, which are cut by grocers, and with toilet soaps, which are cut by dry-goods stores. It seems to me that Western Connecticut is in good condition for county organizations. Yours fraternally, A. L. Dickinson, Danbury Druggists' Association."

Through the mediation of the N. A. R. D. price-cutting has been stopped at Garnett, Kans., much to the gratification of the members of the Anderson County Association. The jobbers of St. Joseph, Mo., are entitled to the thanks of the National Association for their co-operation in restoring amicable relations between the retailers of that locality.

Treasurer Heller has received the dues of the Manhattan (New York City) Pharmaceutical Association. This organization, which only recently became actively identified with the N. A. R. D., numbers 210 members.

Chairman of the Executive Committee Holliday was in Chicago Wednesday and Thursday, the 17th and 18th, conferring with the jobbers and the Executive Board of the Chicago Retail Druggists' Association.

The Akron (Ohio) Pharmaceutical Association has made a liberal donation to the funds of the N. A. R. D.

CHICAGO.

Robbery of a Druggist.

Chicago, Jan. 13, 1900.

—After holding up and robbing John Parsons, an aged druggist, in his store at No. 194 Thirty-first street, last night, two bold young burglars locked him in his own cellar, where he remained a prisoner until they made their escape. The police are appalled by the boldness of the robbery, though the plunder secured was only a gold watch and \$54. Parsons, who is seventy years old, was alone when one of the men made his appearance and presented a prescription to be filled. While the aged chemist was working at it behind the prescription counter the "customer" pointed a revolver at his head and threatened to shoot if he made an outcry. Parsons seized the hand that held the weapon and struggled with the thief, who was immediately joined by a companion, who seized the druggist from behind and threw him to the floor, kicking him until he ceased his outcries for help. While one marauder stood guard over the pro-

prior to the other threw off his coat and stepping behind the counter divided his time between waiting upon customers who dropped in and searching for plunder. In his search the burglar discovered a trap leading to the cellar, and securing a light he explored the chamber. Finding nothing of value he ordered the druggist below. Parsons foresaw his plight and pleaded not to be locked in. The robbers, however, forced him into the dark aperture, slammed the door and bolted it down. They then coolly walked away. After wasting his strength in an ineffectual effort to force open the trap door Parsons struggled over boxes and barrels to the Thirty-first street front of the cellar and managed to open a narrow window on a level with the sidewalk. A heavy wire grating prevented his escape. Pressing his face close against the barrier he called loudly for some one to enter the store and release him. Finally Parsons succeeded in attracting the attention of a man who went into the store and released him. The police were notified, and because of the frequency of such affairs strenuous efforts were put on foot to capture the perpetrators. Soon a number of suspects were gathered in. The police are particularly perturbed over the robbery, because it follows so closely upon another just committed in the same neighborhood. Mr. Parsons' loss amounted to about \$50 in cash, and a gold watch and chain. The robbers promised to leave the latter because Mr. Parsons told them it had certain sentimental relations. They said they would leave it on the show case near the cellar door. "Do you know," said Mr. Parsons, this evening, with a laugh, "I was simple enough to look for it when I got out?"

Chicago Bowlers.

—The following is the score of the Chicago Drug Trade Bowling Club last night:

Bauer	200	128	165
Parker	157	183	142
Merbery	149	142	188
Armstrong	113	186	138
Thomas	141	128	158
Matthes	136	128	137
Gilbert	133	126	133
Waldron	128	119	136
Storer	105	135	118
Blocki	103	124	124
Pechter	111	120	118
Deuridge	101	98	106

Mr. Bauer captured the medal for the week.

U. S. P. Co. Election.

—A meeting of the United States Pharmaceutical Company was held on Tuesday, January 9, at 10 a. m. Much important business was transacted. There was an excellent attendance and a large delegation came from the country. The reports submitted showed that while the fire caused quite a loss, yet the business is in excellent condition, both as to the demand for the goods and the financial condition of the company. The following directors were elected for this year: Messrs. L. K. Waldron, Andrew Scherer, Fred M. Schmidt, F. Kline and Lawrence Hesselroth, of Chicago, and H. F. Hessebrock, of St. Louis, Mo.

NOTES.

—Manager Hughes, of the Chicago Telephone Company did not send a collector for the rent from Fred Parker, a druggist at Chicago avenue and Marion street, but a smooth swindler called and collected the amount—\$13.50. Then he telephoned Mr. Hughes that he had the money and was much obliged.

—J. B. Gordon, Indiana and Michigan representative of Lazell, Dalley & Co., New York, was married on January 8 to a well-known and popular young lady of St. Joseph, Mich. Mr. Gordon was formerly foreign representative of the above firm. Mr. and Mrs. Gordon will make their home in St. Joseph.

—Burglars working in plain view of the front door of the Woodlawn Police Station gained entrance to the drug store of Albert F. Schroeder, No. 239 Sixty-fourth street, Sunday night, and carried off \$15 in cash. The thieves entered through a window at the rear of the store.

—Friends of Dr. E. L. Leonard, who owns two drug stores in South Chicago, are much worried over his disappearance and have asked the South Chicago police to aid them in their search. He has been missing about a week.

—John E. Serwe, Pacific coast representative of Lazell,

Dalley & Co., having been East on a visit to the house, returned to Chicago this week and will leave for San Francisco Monday night.

—M. F. Dattelzweig, has bought the store formerly owned by Dattelzweig & Hazen, at No. 1124 Southport avenue, having bought out Mr. Hazen's interest in the business.

TO ASK AMENDMENT OF LAWS.

Springfield, Ill., Jan. 11.—Several important matters have been acted upon by the members of the State Board of Pharmacy, which closed a four days' session here today. Among the questions which came up for consideration in addition to the regular business matters was in regard to amendments in the pharmacy act. It was decided to request all registered pharmacists and drug associations to unite with the State Board in an appeal to the Legislature in 1901 to amend the measure so that the expense of administering the law, which is primarily intended to protect the public, shall be borne by the State, and thus relieve the druggists of an unjust and heavy burden.

Another matter which came up for consideration, and which is considered of importance and of interest to the druggists throughout the State, pertains to the recent decision of the Supreme Court, which upholds the law wherein is prohibited the sale of proprietary medicines by general merchants and travelling vendors. Encouraged by this decision the board has decided to make an effort to get into closer touch with all the local organizations of druggists and enlist their aid in enforcing the law.

The board is also striving to prevent uneducated boys obtaining registration as apprentices. In addition to presenting affidavits from employers and school teachers in reference to age, character and preliminary education, as at present required, it has been decided that each applicant should present himself to the nearest member of the board for an examination. This member will report in reference to his fitness for apprenticeship to the board at its next meeting.

The members of the board assembled here Monday and completed organization for the year by admitting the newly appointed member, Bernard Schwartz, of Salem. All the others were in attendance, and after preliminaries had been attended to officers were elected as follows:

- President—William A. Dyche, Evanston.
- Vice-President—William C. Simpson, Vienna.
- Treasurer—Colonel Thomas A. Jewett, Oregon.
- Secretary—Luman T. Hoy, Woodstock.

Business of a routine nature first was given the attention of the board. In addition to conducting examinations of applicants for registration, the president was authorized by the board to secure the services of an expert accountant to audit the books of the office.

DRUGGIST ACCUSED OF EMBEZZLEMENT.

St. Paul, Minn., Jan. 12.—It is unpleasant to record a case where a druggist is placed in the light of having gone "agin" the law, but this must be done in the matter of Richard C. Trudgeon, of No. 1028 West Seventh street, this city. Mr. Trudgeon was arrested yesterday on a bench warrant issued on two indictments returned by the United States Grand Jury. The indictments charge embezzlement and issuing money orders without receiving the money therefor. The amount involved is \$280.75. Mr. Trudgeon was the clerk in charge of Sub Station fourteen of the St. Paul postoffice. The station was in his drug store and it is claimed that he converted to his own use money which belonged to the Government. October 10 last one of the postoffice inspectors made an examination of the station and claims to have found the cash short. He reported and the charge was made against Mr. Trudgeon. The matter was taken before the Grand Jury and the indictments were returned Wednesday. Mr. Trudgeon was before Judge Lochren of the United States district court yesterday and pleaded not guilty. Bail at \$1,000 was immediately furnished. It is probable that the cases will be tried at the present term of the court. The shortage, if one existed, has been made good. Mr. Trudgeon declined to talk about the matter, preferring to make his statement later.

ST. LOUIS.

Drug Clerks' Banquet.

The annual banquet of the St. Louis Drug Clerks' Society was held at the West End Hotel Thursday evening. There were about seventy-five guests, including members of the society, and a few invited guests and members of the faculty of the St. Louis College of Pharmacy. The menu was an excellent one. President L. H. Schlenker presided and informal talks were made by Prof. Hinrichs, Dr. Falke, Prof. Francis Hemm and Dean J. M. Good. The evening terminated by an excellent vaudeville performance, composed of a dozen numbers from the principal theatres. The entertainment committee, which had charge of the arrangements, consisted of Chairman Charles S. Roth, S. E. Barber, L. Seegal, A. T. Kauffma, and E. C. Huyer.

NOTES.

—Oscar A. Brown, of the Cudahy Pharmaceutical Company, Omaha, was here last week. Their contract with Parke, Davis & Co., has expired and they are this year marketing their product direct to wholesalers and manufacturers, and to purchasers of pound lots among the retailers.

—The Fountain Park Pharmacy, Euclid Avenue and Suburban Tracks, has moved to No. 4418 Easton avenue. Dr. Curtin started the store a couple of months ago.

—Arthur Gephart, druggist, Otumwa, Ia., has filed a voluntary petition in bankruptcy. He claims assets \$16,755.29; liabilities, \$10,957.32.

—There have been no developments in the case of the State against the druggists, no briefs having been filed or opinion rendered as yet.

—A. H. Friedberg, Sixteenth and Biddle streets, has sold his store to Henry Kelm, '93 St. Louis College of Pharmacy.

—Quincy, Ill., drug clerks are forming an association. It will have a membership at the start of about twenty-five.

—C. F. Allen succeeds Fred J. Carter as manager of the St. Louis office of Parke, Davis & Co.

MISSOURI BOARD.

The Board of Pharmacy for Missouri held a meeting at Jefferson City, Monday, January 8, 1900. There were thirty-two applicants present for examination, ten of whom succeeded in attaining the necessary 70 per cent. to entitle them to a certificate of registration.

Those successful were D. F. Bennett, F. Cremer, O. W. Klee, A. N. Townley, of St. Louis, Mo.; W. O. Baker, Huntsville, Mo.; James Lysaght, St. Joseph, Mo.; James R. Neil, Columbia, Mo.; Ermino G. Roth, Highland, Ill.; George J. Tamm, Sedalia, Mo.; R. R. Young, Bethany, Mo.

The next regular meeting will be held at Kansas City on Monday, April 9, 1900. A special meeting may be held in St. Louis in March, provided a sufficient number petition the board to hold such a meeting.

"The case of Bob Young, to whom the State Board of Pharmacy granted a pharmacist's certificate, is a remarkable one in more respects than one," said Dr. August T. Fleischmann, secretary of the board. "Young was an ex-convict, he having been released under the three-fourths rule after serving seven and one-half years of a ten years' sentence. Young rode with me from Jefferson City to Sedalia, and en route I learned much of his history. He is a native of Virginia and is thirty-six years old. He has a wife and one child, a son eleven years old, who does not know his father has been behind prison bars several years. At the time of his sentence Young was living at Bethany, Mo., where he had been employed as a school teacher. He was recognized as one of the most prominent citizens of that section, and was once a candidate for county superintendent of schools. Soon after his arrival at the prison Young entered the dispensary as an assistant, where he began the study of pharmacy, with a view to becoming a druggist. He passed a highly creditable examination before the Board of Pharmacy. After the examination had been concluded the members of the Board of Pharmacy had a long talk with Young, in which he told of his hopes and ambitions, and their unstinted sympathy went out to him. It was a surprise to the board

at the number of people in Jefferson City who took a deep interest in Young and were anxious to know if he had passed a successful examination. He was a model prisoner from the date of his confinement to the time he was discharged, and he left the State capital carrying with him the best wishes of the entire community. Young goes home full of hope and confidence, and I shall be surprised if he does not live down the past and achieve success in the business world."

OKLAHOMA'S ALL RIGHT.

Editor Pharmaceutical Era:—The year 1899 just closed has been one of general growth and prosperity to the drug trade of Oklahoma. Crops of all kinds were excellent. Oklahoma's resources in this line are probably as abundant as those of any section of the United States. Wheat, corn, cotton, castor beans and broom-corn are all grown in Oklahoma, all of which are wealth-producers to the farmer who properly tills the soil, and it is upon him that the pharmacist as well as all other trades and professions must depend for support.

Railroad building in the Territory has been active, and many new towns have been started, creating a demand for more drug stores. The supply, however, has been equal to the demand and the ever active "pill roller" has let no opportunity escape him as a pioneer. If not the first on the ground, he has not been far behind in the establishment of his business.

During the year thirty registered pharmacists have been added to the rolls by the Territorial Board of Pharmacy, and there are now two hundred and five registered pharmacists of good standing in the Territory. The fact that not a single failure of a druggist in business in the Territory has occurred during the year speaks for the general prosperity shared by the druggist.

The "cut-rate evil" has not reached Oklahoma, and for this the profession can thank their association work. The Oklahoma Pharmaceutical Association was organized the year following the opening of the Territory, and has been an active organization ever since. Through its efforts an excellent pharmacy law was passed at the first session of the Territorial Legislature, which for a new country was fairly well enforced. Through the efforts of the association an entire new law was passed by the third session of the Legislature containing the best part of the old law and a provision prohibiting merchants from selling patent medicines except by license from the Board of Pharmacy. This feature has to a large extent protected us from the cutting of prices on patents.

The prospects for the future of the Oklahoma pharmacist are bright—even more bright than the past, for the reason that the country's development will increase in the next two or three years in a much greater ratio than in the past, and the pharmacist who lives up to his opportunities has a bright future in store for him in Oklahoma. The prosperity can be greatly enhanced if every pharmacist in the Territory will help by putting his name on the roll of the O. P. A. and aid to make our association a unit in everything that pertains to the welfare of our profession.

The next meeting of the association will be held at Shawnee, Okla., on the 4th and 5th of April, and it should be the banner meeting of our history.

For the information of those who think of locating in Oklahoma, it is well to say that the Board of Pharmacy grants certificates of registration only upon examination. The Board meetings are held quarterly, the next regular meeting being at Shawnee, on April 3d. Blank applications and any needed information can be obtained by request from the secretary, enclosing stamp for reply.

F. B. LILLIE,

Sec'y Board of Pharmacy.

January 9, 1900.

Guthrie, O. T.

NO USE FOR RECEPTION ROOM.

Petersburg, Va., Dec. 30.

Editor Pharmaceutical Era:

Since the telephone has come into general use, we have no use for reception rooms or anything of that kind. A great many people telephone us to send for prescriptions. Then those who bring them, ask to have them send out. Very few ever wait for them to be put up.

Very truly,

E. R. BECKWITH & CO.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Black Rock.—Townsend Bros., succeeded by H. W. Townsend.

COLORADO.—Canon City.—Palace Drug Store, George Pedley, manager, new store.

Delta.—I. M. McMurray, sold to Reinhard Lucke.
CONNECTICUT.—Vallingford.—The Norcross Pharmacy, sold to Pickett Bros.

DISTRICT OF COLUMBIA.—Washington.—W. J. Ryder, No. 247 G street, N. W., deceased.

FLORIDA.—Miami.—Townley Bros., damaged by fire; insured.

ILLINOIS.—Amboy.—C. A. Wilcox, sold to Jacob Wehnke. Disco.—C. S. Rice, deceased.

Metropolis City.—J. P. Ochsner and G. A. Stewart have consolidated, under firm style, Willis & Stewart.

INDIANA.—Evansville.—Alexander R. Patterson, No. 720 Mary street, sold to Louis Heckman.

Ironton.—W. I. Gorman, sold to R. Lesuttery.

Winchester.—John White, should be added to D. D. List.

INDIAN TERRITORY.—Ardmore.—William Green, burnt out; insured.

IOWA.—Massena.—Frank Fee & Co., damaged by fire.

KENTUCKY.—Fulton.—R. L. Radford, sold to Kellam & Peed.

Lockport.—W. W. Leslie, sold to Payne Drug Co.

MASSACHUSETTS.—Arlington.—Clark & Loomis, sold to M. L. H. Leavitt.

Fall River.—C. A. Baker, No. 67 South Main street, damaged by fire; insured.

MICHIGAN.—Beacon.—W. J. Gill, burnt out.
Grand Rapids.—Thomas Heffernan, No. 565 Cherry street, sold to Eaton Drug Co.—E. T. Horning, No. 74 Sixth street, new store.—Dr. W. H. Wills, corner Fifth avenue and South Division street, deceased.

Mears.—J. H. Chapman, damaged by fire.

MISSISSIPPI.—Columbus.—E. C. Chapman, Gilmer Hotel corner, sold to J. W. Jones.

MISSOURI.—Carl Junction.—J. W. Jamison, new store; D. Stires, out of business.

St. Louis.—Charles P. Ochsner, Finney and Vandewater, sold to L. L. Ochsner.

Walker.—Morrison Drug Co., succeeded by Walker Drug Co.

NEBRASKA.—Florence.—Tracy & Co., sold to Dr. H. C. Smith.

NEW JERSEY.—Plainfield.—Horsley Barker, Front and Grove streets, sold to Clayton M. Nagie.

NEW YORK.—Brooklyn.—John G. Franz, No. 79 Main street, sold to H. H. Hoyt.—R. G. Rutherford, No. 180 Myrtle avenue, deceased.

New York City.—John Coghlin, Second avenue and 106th street, now at . . . 659 Third avenue.—Reinhard Lucke, No. 137 Amsterdam avenue, sold to Karl Schnackenberg.

OREGON.—La Grande.—J. T. Wright, sold to E. E. Hewitt.

Lebanon.—N. W. Smith, sold to E. E. Elliott.

PENNSYLVANIA.—Philadelphia.—B. A. Hertsch, No. 4164 Germantown avenue, sold to Crumie Bros.

TEXAS.—Cleburne.—Secrest & Eolding, sold to J. B. & A. H. Overton.

Comanche.—Hill & Rodgers, damaged by fire; insured.

William Reese, damaged by fire; insured.

Crawford.—J. D. McCollum, succeeded by McCollum Bros.

Lone Oak.—R. H. Hughes, sold to Harrison & Weeden.

Quannah.—William H. Dunson, sold to Henry W. Miller.

Richland.—C. R. Walton, sold to W. T. Grogan.

Wortham.—F. W. Bourde, burnt out.

VIRGINIA.—Edenburg.—C. P. Hisey, deceased.

WEST VIRGINIA.—Charleston.—Thomas & Porterfield, burnt out; insured.

WISCONSIN.—Milwaukee.—Weigle & Kraenzlein, No. 3426 Lisbon avenue, succeeded by Hugo Kraenzlein.

Racine.—Robinson Drug Co., W. & R., sold to Kradwell-Thiesen Drug Co.

Shell Lake.—Shell Lake Drug Co., sold to O. Wang.

THE NORTHWEST.

St. Paul, Minn., Jan 12.

—D. L. Stevens, owner of a drug store at Plankinton, S. D., is in trouble in his capacity as banker. He was the proprietor of the State Bank of Plankinton, which closed its doors last Tuesday in obedience in instructions telegraphed his cashier by Mr. Stevens, who had gone

East presumably in search of financial assistance. Mr. Stevens transferred his drug business to his head clerk. His was the only bank at Plankinton and the failure has serious consequences.

—Successions: V. A. Schmitz, Seattle, Wash., by J. E. Stevens; J. M. Currie, Hinckley, Minn., by S. H. Brownlee & Co.; W. R. K. Johnson, Balsam Lake, Wis., by Hudson & Co.; William Edwards, Bowdle, S. D., by C. P. Slate; J. A. W. Peterson, Hennig, Minn., by E. Theodore Dillner & Co.

—Maurice Lonergan, formerly of White Bear, Minn., now in the drug business at Grantsburg, Wis., is now to be found among the ranks of the benedicks, having achieved a wife last week.

—J. H. Tyrrell is temporarily working in a Winona drug store, but expects to go on the road for a while known firm very soon.

—B. Handke, of the drug firm of Handke & Mock, Brantford, S. D., paid a brief visit to the city this week.

—Mr. Medin has sold his interest in the Finlen-Medin Drug Company, Butte, Mont.

—The stock of Pittott & Company, Hudson, S. D., was damaged by fire this week.

—J. W. Conn, of the Conn Drug Company, Astoria, Ore., has been attached.

—A store has been started at Webster, S. D., by T. N. Kjerland.

—J. T. Gardner, Walker, Minn., is opening a branch at Cass Lake.

—A. E. Grout, Mason City, Ia., has given a bill of sale.

—Fee & Co. have been burned out at Massena, Ia.

—A Hillier & Company, Sumpter, Ore., have sold.

—C. E. Nilson is clerking at Runnels, Ia.

DETROIT.

—Michigan's nine sugar-beet factories turned out 22,675,004 lbs. of sugar last year from a 175,838-ton crop of beets. This is not so large as was expected, owing to the effect upon the tests of the severe drought last Summer. It is estimated that there was but a two-thirds crop.

—Frederick Humburg, long identified with the drug interests of Detroit, died on Friday, January 12. For many years Mr. Humburg was in business for himself, but of late years he has been on the relief corps, supplying both in the city and throughout the state.

—A. C. Schumacher, of Ann Arbor, has been appointed a member of the Michigan Board of Pharmacy for a term of five years. Mr. Schumacher began his labors on the Board December 31, 1894.

—The University of Michigan has finished the work of putting up its liquid air plant, and it is now in good running order. A public exhibition was given Friday night, January 12.

—Mr. Betzen, proprietor of the Russell Street Pharmacy, Detroit, has sold out to Mr. Lang.

—Druggist George E. Clark, corner Chene and Chestnut streets, is succeeded by Gustav Kempf.

THE WAR IN SOUTH AFRICA.

Gen. Buller's forward movement to the relief of Ladysmith is freighted with great possibilities. If he reaches the beleaguered town and rescues General White and his 8,000 or 10,000 men, it probably will go far toward restoring British prestige, both in South Africa and in world politics, to its former high position. Not only will such an outcome of the advance put new heart into the British and discourage the Boers, but it will check the growing disloyalty among the Dutch of Cape Colony. If, on the other hand, the Boers can repulse Buller's army, the British situation will be very serious. None of the London war experts or the correspondents in the field seem willing to hazard a prediction as to how long the war will last. The size of the British force now afield is certainly formidable. The number of men is estimated at 120,000 and they are commanded by a field marshal, two full generals, four lieutenant generals, and twelve or fourteen major-generals. The Union Army in the Civil War had no officer higher than lieutenant-general, and our forces in the war with Spain none higher than major-general. All kinds of conjectures are made in regard to the size of the Boer army. The British generals have reported after each battle that they were outnumbered, and Winston Churchill, the captured newspaper correspondent, declared after his escape that the British would need 250,000 men to win. A letter from a man in the Boer army says that there are 100,000 men in the Transvaal and the Orange Free State who are capable of bearing arms. He also gives some interesting facts about the make-up of the Boer army. It contains one brigade, he says, of 2,000 Germans, most of them men who have served in the German army, commanded by trained German officers. Another brigade is made up of French, Scotch and English, with European officers, and there is still another made up of 2,500 Irish, most of them from California and other Western States. It has been repeatedly shown that letters from private soldiers are often more picturesque than true, but as this is practically the first information that has appeared in regard to the Boer forces, it is of interest as casting light on a subject where every ray is welcome.

The British public, after the first shock of disappointment over the reverses of their generals, have begun to call the War Office to account, and the Salisbury ministry is facing a fierce storm of popular indignation. It seems that the Boers have for years been importing big guns boxed and labeled "kitchen furniture," smaller guns hidden in coffins, rifles put up in piano boxes, and all kinds of war material disguised in various ways, while the British Intelligence Department suspected nothing. The result has been the surprising Boer superiority in artillery and rifle fire, which has been costing England dear. A British victory would do much to restore popular confidence in the Salisbury cabinet. There are rumors that the British supply of cartridges is running low, but this is not widely believed. The German Emperor has warned the Krupp firm not to supply either side with war material—a restriction that will hurt England more than it will the Boers. It is said that England had placed with Krupp an order for a large quantity of Lyddite shells. The Emperor's action may have been taken in reprisal for England's recent seizure of German steamers, although both acts are capable of being defended under international law.

THE SITUATION IN THE PHILIPPINES.

The debate in Congress on the Philippine question gives an added interest to the progress of General Otis' efforts to put down the native uprising. All the reports seem to indicate that he has broken down most of the organized resistance in the northern part of Luzon. Several of Aguinaldo's advisers, several members of his cabinet and even most of his family have been captured, his strongholds are taken, and his followers broken up into small bands. Even Senator Hoar admitted, in a recent public letter, that "the Philippine armies are scattered, Aguinaldo is a fugitive, and in concealment." The fact that the native forces abandoned Lieutenant Gillmore and his men, showed that they expect to do their fighting on the run from now on and cannot afford to be burdened with prisoners. Lieutenant Gillmore, who has

been studying the native character during his nine months of captivity, says that he believes the rebellion will last as long as there is a native left who can carry a gun.

South of Manila the campaign is just beginning, and General Otis hopes to demoralize the native troops before the rainy season stops operations in May. A rebellion is said to be going on in Panay, and a considerable number of troops are likely to be needed there, but the rest of the islands of the Philippine group are comparatively peaceful. The fate of the islands has brought out considerable eloquence in Congress, and bids fair to bring out more. Last week Senator Beveridge, of Indiana, demonstrated that the days of American oratory are not entirely past. The most valuable part of his speech was his outline of a form of government for the Philippines. He would have the government of the islands administered by a governor-general, who would have almost absolute power; the best natives might be asked for advice, but their advice would not be binding. The Senator would also have English adopted as the official language of the islands, taught in the schools, and used in the courts. As to the eventual fate of the islands, he would have them remain permanently under American rule. Senator Hoar, a leader of the anti-expansionists, has outlined his plan. He suggests that General Wood, General Miles, or Admiral Dewey be sent to Manila to treat the natives exactly as we are treating the Cubans—to train them for self-government and promise them ultimate independence. A majority of the members of both houses of Congress are believed to favor the administration's policy of putting down the rebellion by force of arms and retaining the islands permanently under American rule.

MR. ROCKEFELLER ON TRUSTS.

The shots at the trusts, from press and platform, come in so continuous a bombardment that the defense put forward by John D. Rockefeller, founder of the first and greatest industrial combination, and still its president, is one of the important topics of the week. This defense, which was in the form of answers to questions asked by the Industrial Commission, deals first with a long-standing charge against Mr. Rockefeller's concern, the Standard Oil Company—the charge that he built up a monopoly of the oil business by getting freight rebates that his rivals could not obtain, and that his rivals were sometimes overcharged and the margin actually turned over to the Standard Company. Mr. Rockefeller denied these charges specifically, saying that he had received no railroad favors since 1887, and none before that time that his rivals could not have obtained also. As to the general subject of industrial combinations, he said that they have become a necessity, the only dangers being that they may sometimes be formed merely for speculation, and that they may temporarily raise prices instead of lowering them; but the fact that these abuses are possible, he says, "is no more of an argument against combinations than the fact that steam may explode is an argument against steam." He recommends "federal legislation under which corporations may be created and regulated," or, if that be impossible, "state legislation, as nearly uniform as possible, encouraging combinations of persons and capital for the purpose of carrying on industries, but permitting state supervision, not of a character to hamper industries, but sufficient to prevent frauds upon the public."

SAMOA AGAIN.

Just as England, Germany and the United States thought that the eternal Samoan question was settled at last by a partition of the islands, Malietoa Tanu, one of the deposed kings, addresses a protest to each of the three powers, branding the partition as a crime against the law of nations only equalled by the dismemberment of Poland, Denmark and France. The Hague Conference, he says, is proved the greatest farce of the century. He makes the serious charge that the "civilization" introduced by the civilized countries makes the natives of the South Seas, Africa and elsewhere worse than before, leading to wars and to the decimating of the people by contagious diseases and spirituous liquors. The missionaries too, he charges, have introduced religious dissensions and have induced the natives to pay them large sums in the hope of gaining favor with God.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

Frederick Stearns & Co.'s New Home.

Frederick Stearns & Co., who are now installed in their new laboratory at Detroit, extend an invitation to their friends and customers to call and inspect the new plant, which is said to be the most perfectly appointed and completely equipped institution of its kind in the world. No expense has been spared to make the Stearns factory, like the goods it sends out, up-to-date in every respect.

Reliable Caustic Pencils.

Unquestionably the best method of retailing lunar caustic is in the shape of "caustic pencils," and with these the requisite silver nitrate strength is important to obtain the proper results. The S. H. Wetmore Co., of New York, guarantee their "Wetmore's Caustic Pencils" to contain 90 per cent. silver nitrate and ask druggists to specify these goods on orders to jobbers, all of whom carry them in stock. In the new style package, adopted last year, they make a handsome display, and the dozen price (75 cents) is low for reliable goods.

"Duroy" Wines Specially Adapted for Drug Trade.

The superiority of the genuine "Duroy" wines, as to flavor and bouquet, is acknowledged all over the country, and their adaptability to the requirements of the drug trade is vouched for by many of the most prominent and successful retailers of all sections, who frequently relate their profitable experience with these wines, either sold in bottles to customers or dispensed at soda fountains. The growers and makers of "Duroy" wines, The Duroy & Haines Co., of Sandusky, O., invite druggists wishing to improve their stocks to write for free samples of Duroy Port, Sherry, Claret, or Catawba wines.

New Prices on Thomas' Prepared Chalk.

The Thomas Manufacturing Co., of Baltimore, has issued a revised price list of their Thomas' English Prepared Chalk, which took effect January 1, 1900. The price of both "white" and "pink" remains the same for single crate lots (40 and 50 cents per box, respectively.) Five-crate lots of "white" are now 38 cents, and ten-crate lots 36 cents per box, while rates for "pink" in the same quantities are 47½ cents and 45 cents per box. The trade is cautioned to look for the company's "three-cats" trade-mark brand on all packages, and free samples of the goods are still sent to druggists who write for them.

Tablets Hemonervine "S. & H."

Phosphoglycerate of Lime, which the French Academy of Medicine has strongly recommended as the most valuable reconstructive tonic, is an important ingredient of Searle & Hereth's specialty, "Tablets Hemonervine." In which it is combined with hemoglobin, iron in soluble form, and strychnia. The convenience and elegance of the tablet form in which this remedy is supplied, and the actual results obtained from its use have given physicians a high opinion of its merits, and many of them are prescribing it regularly. It is supplied in bottles of 100 tablets, by jobbers or the manufacturers.

An Immense Export Shipment by McCormick & Co.

A recent export shipment of sewing-machine oil made by McCormick & Co., of Baltimore, amounted to 262 gross of bottles, weighed over six tons, and represented fifteen barrels of oil. The goods went to South American points principally and required special Spanish labels, etc., but nevertheless the firm were but seven days in completing the order, and that without neglecting any of their regular patrons. One of this firm's specialties, "Iron Glue," which retails in this country at 5 cents, is, among others, being regularly exported in large quantities to Mexico, South America, Australia, South Africa and to European countries.

Medal and Diploma for Welch's Grape Juice.

One of the handsomest and busiest booths at the recent Philadelphia National Export Exposition was that of the Welch Grape Juice Co., of Westfield, N. Y. Four demonstrators were kept busy telling of Welch's Grape Juice dispensing sumples, and selling by the bottle, by the glass and in soda water. Many physicians and others already acquainted with Welch's Grape Juice spoke in the highest terms of it. Sample orders were delivered in twenty-three States, showing the wide scope of the exposition, and the interest a sample of Welch's Grape Juice creates. The Franklin Institute recognized the superiority of Welch's Grape Juice and awarded it silver medal and diploma—the highest award granted.

White Rabbit Egg Dyes for Easter.

April 15, 1900, is Easter Sunday. The druggist's business interest in Easter begins before that date, however, in the buying of a stock of Easter egg dyes, and attention is called to the advertisement of the Donnell Manufacturing Company, of St. Louis, on another page. This enterprising concern has utilized the old familiar German child-love myth, that the white rabbit is responsible for colored Easter eggs, and combined it with a most attractive line of "White Rabbit" egg dyes, which have become very popular with the children, and with the trade also, on account of their ready sale and the fact that there is 100 per cent. profit in them. In "White Rabbit" paper dyes for 1900 there are some new and catchy ideas; each five cent package contains sixteen different color designs, among them being pictures of prominent men, and in each box are packed forty handsome pictures for free distribution. These dyes are well established sellers, and millions of packages have been sold with complete satisfaction to everybody. The trade are also asked to look for the two-page "White Rabbit" colored insert, which will appear in one of the February issues of the Era, and to make notes in their "want books" to order the goods from jobbers in time to supply the Easter demand.

Chloretone: A New Hypnotic and Local Anesthetic.

A hypnotic which will not weaken the action of the heart or interfere with the working of the digestive organs is thought to have been discovered in Chloretone, a derivative from chloroform and acetone, which Parke, Davis & Co. have put on the market. The method of production is thus described: Chloretone is formed when caustic potash is slowly added to equal weights of chloroform and acetone, and may be isolated from this mixture, after the removal of any excess of acetone and chloroform, by distilling with steam. Obtained in this manner it is a white crystalline compound, having a camphoraceous odor. When freed from water by melting and allowed to cool, this odor is more pronounced, and its general appearance resembles camphor more closely. It is very soluble in chloroform, acetone, strong alcohol, ether, benzol, and glacial acetic acid, sparingly soluble in cold water (1 per cent.), more soluble in boiling water. Dilute acids and alkalis are apparently without effect; concentrated sulphuric acid decomposes it. Chloretone is dispensed both in the original crystals and in tablets. The latter contain 3 grains of chloretone, and two or three tablets are usually found sufficient to produce somnolency, though in obstinate cases much larger doses can be administered without fear of untoward results. A glass of hot soda water or other beverage may be taken with advantage as a diluent.

Besides being a most valuable hypnotic Chloretone is nearly an ideal anesthetic for use in experimental surgery, physiology, pharmacology, etc., as has been abundantly demonstrated by Abel, of Johns Hopkins; Cushny, of Ann Arbor, and Parke, Davis & Co.'s experience in their own laboratories. The drug also possesses analgesic and antiseptic properties, which make it available for the assuaging of pain and as a dressing for wounds. Possibly it will also be found a good general anesthetic when administered in large doses, but before pronouncing on this point it is considered desirable to get the reports of several eminent physicians who are now conducting experiments with the drug.

A History of Soda Water in America.

From an interesting booklet bearing the above title, recently issued by A. D. Puffer & Sons, of Boston, it is learned that of the sixty-eight years since the manufacture of soda apparatus was begun in this country this firm has been conspicuous among the leaders for fifty-eight years, A. D. Puffer having started in 1842. By far the greater number of improvements in apparatus have been made since the latter date, and many of them originated in Puffer's factory. It also appears that the first white marble apparatus was made in 1854, while the present elaborate designs of colored marbles, onyx, etc., were not introduced until 1869. It is now estimated that from 60,000 to 70,000 soda fountains are in use, with millions of money invested in the making and serving of this distinctly American beverage. Dispensers generally will be interested in this booklet and can obtain free copies on request.

A Chance for Unusual Sales and Profits.

Nearly every druggist has among his regular customers some invalids, either temporary or permanent, to whom invalid chairs are necessities, or at least great conveniences. The druggist can frequently influence sales of such goods by recommending a good reliable article, and in so doing, add something to his own profits

in a legitimate way. Among the manufacturers who cooperate with druggists in this way is the W. D. Allison Co., of Indianapolis, a concern of known reliability, one of whose styles is illustrated herewith, and they invite correspondence from the drug trade. They also make physicians' chairs, operating tables, instrument and medicine cabinets, etc., all of which druggists can sell to some extent. Full particulars in regard to discounts, terms, etc., are supplied by the company on request.

A CARD FROM THE RAY CHEMICAL CO.

The Reason Why We are Entitled to the Business of Patent and Proprietary Medicine Venders.

If you have a private formula, and it is made by a manufacturer who also markets a line of the same character—pills, tablets, extracts, etc., heralded as a cure for everything that flesh is heir to—this concern is a direct competitor. To be sure, it may claim to be professional or ethical, while denominating your preparation as a patent medicine, a "fake," "quack-stuff," etc., and only fit to be placed under a ban. Nevertheless, this firm of manufacturers is your competitor (!) and while it meets you with a "glad hand" and guarantees to make you the very best of preparations, with the other hand it is trying to belittle and smother your legitimate enterprise.

We carry no stock preparations, consequently have not the same incentives as the manufacturers of the class just mentioned. Our business is, exclusively, the making of formulas to order.

We give the best quality, full quantities, and provide the best finish that money, science and experience can adduce.

Are we not, therefore, entitled to your business?

THE RAY CHEMICAL CO.,

Detroit, Mich.

State of Trade.

Continued Satisfactory Conditions.

New York, Jan. 16.—Continued satisfactory conditions have prevailed throughout the wholesale drug market during the past week, and the outlook is encouraging to steady improvement as the season advances. Quotations have been revised and are mainly unimportant, but several changes of more or less consequence have been brought about by recent developments.

Continued lack of demand has caused an easier feeling in opium, and quotations for this leading commodity show a slight reduction. Competition was partly responsible for the decline, as holders have shown considerable anxiety to secure the few consuming orders which have appeared. Conditions abroad have not changed materially and it is still evident that improvement would follow an increased demand for consumption. Manufacturers of morphine have advanced their quotations 15c. per ounce, and the higher prices are said to be due to the fact that the stock of low-cost opium purchased a long time ago has been exhausted, and that present prices of the crude material make the advance in the manufactured product necessary.

Quinine is decidedly stronger, and, as anticipated in last week's report, manufacturers' quotations have been advanced 2½c. per ounce. At the January bark sale in Amsterdam on Thursday last, the unit value of the raw material was advanced over 16 per cent., and this was immediately followed by the marking up of quinine prices. Outside holders also advanced their quotations to the full parity of the figures named by manufacturers, and even at the advance they offer sparingly, as they feel very confident that still higher prices are likely to prevail in the near future. Their belief is based on the strong statistical position of bark and an expected large increase of consumption. The stock in second hands is unusually small, and as the London market is very strong with values there fully on a parity with local quotations, there is no opportunity for replenishing spot supplies except at higher prices.

In the essential oil department the only change in wholesale quotations is a decline in natural wintergreen, due to increased shipments from various producing sections, and consequent larger available supplies. In a jobbing way Baltimore wormseed is quoted at a slightly higher range, and bergamot shows a decline.

Fresh arrivals of belladonna leaves have caused an easier feeling among holders and quotations for round lots are about 2c. per pound lower. Arnica flowers are firmer owing to the strong tenor of advices from France, to the effect that stocks cannot be replaced except at prices above current spot quotations. Supplies are very light both here and abroad, and extreme prices are looked for. Chamomile flowers are a shade easier in a jobbing way, but first hand prices are without quotable change.

Competition has developed among manufacturers of iodoform and has resulted in an unsettled market, with quotations somewhat irregular. Balsam Peru is easier owing to fairly liberal stocks and a continued slow demand from the consuming trade. Manufacturers of acetic acid have advanced quotations for commercial and redistilled grades, 15c. per 100 pounds, but former prices are still current for pure.

Manufacturers of coppers have advanced their prices and quotations of dealers are correspondingly higher. Ergot is very firm, owing to steadily diminishing stocks and extreme scarcity abroad, and holders of the light available spot supply decline to sell except in very limited quantities. There is no variation in prices of golden seal or German dandelion roots, but both are held with considerable steadiness and sales are reported of fair sized parcels at quoted figures. Colchicum seed is firm in sympathy with primary markets, and jobbers have advanced quotations for whole, ground and powdered.

Better Than the Average.

Boston, Jan. 13.—Perhaps a bit better than the average has been the condition of this week's trade, and things are picking up somewhat. There is a greater prevalence

THE EDITOR.

BACK TO FIRST PRINCIPLES.

It has often been advocated that druggists study medicine, thus combining the two professions of pharmacy and medicine. It is new, however, to learn of a druggist, of whom there is one in Connecticut, who has entered a dental college, and proposes to practice this branch hereafter in connection with his drug business. There was a time, we believe, many years, even centuries ago, when the apothecary was also the public tooth-puller, but these professional branches have for long been separated. The case under notice seems to be an attempt to re-establish the old order of things.

IS EMERGENCY TREATMENT PRACTICE OF MEDICINE?

The way of the druggist is hedged about with difficulties of no ordinary character. An Omaha woman tried suicide recently, and now threatens to sue a neighboring druggist for damages because he frustrated her attempt by the prompt administration of sulphate of zinc, and a mixture of warm water and mustard. She claims his certificate as a druggist did not entitle him to practice medicine. So, druggists, be careful! If this woman establishes the point she raises, it will be dangerous to follow the instructions posted in your store regarding prompt emergency treatment in poison cases.

WHAT ABOUT BUYING CLUBS?

If the N. A. R. D. is to succeed in its aims, one of its most important accomplishments must be to stop entirely the many purchasing clubs among pharmacists in the large cities. These clubs, bearing various names, are conducted purely for the purpose of purchasing quantity lots of patent medicines, to get the discount thereon, then to divide the goods among the club members according to their necessities. A fundamental principle of the N. A. R. D. is to confine the sale of proprietaries by the manufacturers to the legitimate jobbing trade, and that no retail druggist or combination of retail druggists shall be favored in prices. If it is found impossible to close up these clubs, the N. A. R. D. might as well go out of business. In this city, for instance, there exists an influential association of pharmacists which has professed allegiance to the N. A. R. D., not only paying its membership dues, but having been very liberal in contributions as well, but in which association there exists a large co-operative concern of the nature described. It is plain that such an association cannot consistently be affiliated with the N. A. R. D., so long as this purchasing club exists within its own membership. Similar conditions exist, we believe, in other large cities. If the retail druggists who are members of and receive the benefits of such clubs are not willing to give them up, they cannot expect that the N. A. R. D. will be successful in its work. The very life essence of the N. A. R. D. is the principle of equal treatment of all retail druggists, and there cannot be a favored class among them. The retail drug trade is beginning to inquire with a good deal of earnestness what the N. A. R. D. proposes to do, and what it can do with reference to these co-operative purchasing combinations.

In this connection it may be pointed out that the foregoing remarks apply equally well to co-operative manufacturing concerns existing in the retail trade. These companies and the purchasing combinations were both established as a measure of self-protection by the retail druggists, and were, and undoubtedly are, very effective in this regard, so long as nothing better offers to take their place. But here comes the N. A. R. D., which proposes to solve the very

troubles which brought into existence these co-operative combinations, and which, it is believed, can be done only by unanimous support on the part of the retail druggists themselves. Which shall it be, therefore? Will the druggist cling to his buying clubs to secure his own individual benefit, or will he sacrifice this only apparent benefit in favor of the national plan, which aims to secure the greatest good for the greatest number?

PROVES OUR CASE.

An esteemed correspondent takes exception to an editorial in this journal a couple of weeks ago under the heading, "Are Patent Medicines Medicines?" and in which it was stated that they are considered such only by the pharmacy law of the State of Illinois. He wishes to point out "that the Kentucky law so considers them, and confines their sale to registered pharmacists, *except that they may be sold by general merchants in country stores*, [italics ours. Ed.] It should be borne in mind that country stores must necessarily be in the country, hence in all towns patent medicines can be sold only by registered pharmacists." Our friend, instead of correcting an error, merely gives added proof and force to our statements. By his own assertion, backed up by the law itself, as set forth in the italicized phrase above, he justifies our announcement that all the laws save Illinois make an exception in favor of patent medicines. Illinois is, we believe, the only State where patent medicines cannot be sold by others than registered pharmacists in either cities, towns or in the country. The point of the decision quoted in these pages upholding the Illinois law is that "general merchants in country stores" cannot deal in these goods.

A. PH. A. COMMITTEE ON PRACTICAL PHARMACY.

Some have complained that the retail druggist has not received sufficient attention in the deliberations of the American Pharmaceutical Association. This charge may have had some justification in the past, but if so, there seems no longer any valid reason for it. Members possessed of keen discernment became impressed with the importance of the retailer in the trade, and perceived that the prosperity of the association is intimately connected with active and energetic promotion of the retailer's interests. The professional and scientific side of pharmacy has always had adequate representation in the counsels of the national body, but it remained for an independent movement started during the last two years to emphasize the fact that the co-operation and effective support of the influential and numerous element engaged in the dispensing of drugs and medicinal compounds could only be enlisted by giving it a place in the counsels of the association proportionate to its numerical strength. It was recognized that the science of pharmacy will never lack earnest and enthusiastic advocates, but that it would be a mistake to underrate and neglect consideration of the business side and of the men who come in direct contact with the public.

The creation of a committee on practical pharmacy and dispensing, as is generally known, was the result of the agitation on the subject. This committee has gone promptly to work to engage the activities of the retailer all over the country, and to point out how he may gain in an increasing measure the sympathy and help of the association. The keen relish for common sense practical matter is universal, and only needs to be taken advantage of to keep the retailer prominently in view. Everyone is in a position to assist in the work by contributing whatever he may have learned by practical experience or ascertained in

the course of his laboratory investigations. No matter how simple or commonplace, the results of actual business routine possess a positive value. Furthermore, the manifestation of an inquiring spirit, of a disposition to learn what one does not know, tends to give direction to labors, and brings out what is calculated to prove most helpful and beneficial to the trade. It has been suggested that diaries be kept for recording the details of professional work, and that each movement of interest be noted therein. Queries are also desirable, and efforts will be made to answer them. The committee is also prepared to suggest subjects to writers of papers, although independent selection is preferred.

These hints ought to be the means of bringing out a great mass of material, much of which will doubtless be found useful. A free and extended interchange of opinions must inevitably tend to arouse thought, and can be made the means of disseminating information on a vast variety of topics related to the practical aspects of pharmacy.

ADVANCE IN CARBOLIC ACID.

A few days ago the drug trade was surprised by the announcement of a great advance in the price of carbolic acid, and this was followed by the statement that for some time to come this article would not be sent to the United States by the English manufacturers, as all they can make must be used as one of the ingredients of the explosives used in the British-Boer war. As England is the producing center of carbolic acid, and if the reasons given are correct, there is likely to be a famine in this article in this country, and various dealers are said to be hustling in order not to be caught with short stocks. Perhaps we could get along without carbolic acid at all for a short time, at any rate the scarcity should be instrumental in decreasing the number of suicides with this poison, of which Mr. Thimme so loudly complains, and which he attributes entirely to the rascality and unworthiness of retail druggists.

ICE CREAM NECESSARY; PEANUTS NOT.

An attempt is being made to enforce the Sunday law in Connecticut. The Mayor of a certain town in that State has very kindly promulgated an opinion of what constitutes Sunday necessities, and what articles should not be sold on that day. He rules that Sunday shaving, ice cream, soda water, soft drinks in general, shoe shines and Sunday papers are necessities, while cigars, fruits, confectionery and peanuts are entirely unnecessary, as well as harmful to digestion. Drug stores may remain open, but they must seal the show cases containing cigars and confections. This Solomon evidently did not feel quite sure of his ruling, for as soon as it was published he left the city on a fox-hunting trip, which some of his detractors claim was to include Sunday. It is well to remember, however, that a mere opinion of this character does not adequately settle the case.

CHRISTIAN SCIENCE INCOMPATIBILITY.

An Iowa druggist who has been in business for twenty years has recently gone into insolvency. His failure is said to be directly attributable to his belief in and practice of Christian Science, of which he has been a disciple for a few years past. Christian Science and Faith Cure do not hitch well with the drug business, for these doctrines have no use for drugs as medicinal and curative agents. The druggist in question, however, says that his business failure does not affect his Christian Science faith. If he is able to operate hereafter as a full-fledged "healer" he may find it more lucrative than the drug trade.

"For the appetite! I want a cure for the appetite."

Correspondence.

We are pleased to publish here communications from our readers on topics of interest to the drug trade. Writers are requested to express their views as briefly as possible. Each article must be signed by its writer, but his name will not be published if so requested.

TO THE RETAIL PHARMACISTS.

Decatur, Ill., Jan. 20.

The writer is informed that the Ways and Means Committee is well pleased with the millions of revenue received every month from druggists and medicine makers, nevertheless, it is the most unjust law ever passed in this country. It taxes the sick man's necessities, not only the dollar, but down to the penny, preparations.

This law will soon be modified if every druggist will at once write a protest to his Senators, his Congressmen, and the Ways and Means Committee at Washington, D. C. Let there be united action.

This is an age of oppression to retail pharmacists, as the business is not properly organized to produce a political impression. A few words at once on a postal or otherwise will act like magic. Write to-day; in union there is strength. Yours for justice and prosperity,

S. M. IRWIN,
Registered Pharmacist.

EARLY CLOSING IN BROOKLYN.

H. B. Richards, manager of one of the drug stores of R. C. Werner, in Brooklyn, asks publication of the following: "Harmony among the Twenty-sixth Ward druggists seems to be pretty fully accomplished, and most of those who signed the agreement to close their stores at 10 P. M. are living up to their promise. There are a few, however, who still keep open to accommodate postage stamp and soothing-syrup customers who fail to procure their supplies at the proper time. Now, gentlemen, why not stand firm together, close your stores at 10 P. M., and give the tired clerks a chance to enjoy a few moments before retiring to rest and sleep. In a little while the people of the ward will learn to make their purchases before closing time, and if emergencies arise they can ring the night bell, just as they do now after midnight, and have their wants supplied. Prescriptions require care and exactness in compounding, and there is always danger that a sleepy, tired-out druggist

may make a mistake. Give them reasonable hours for work and safety is assured. Let all live up to the agreement, then we will have good times and all that is coming to us, even if we are only poor pill pounders.

THE NEGRO AS TRAVELING SALESMAN.

Fayetteville, N. C., Jan. 16, 1900.

To the Editor:—I have been thinking of the negro as a traveling representative for a pharmaceutical house. When we take into consideration the many physicians and a few druggists of his race there seems to be a field for some competent travelling salesman of the race. The colored physician and druggist are intelligent and race-loving, and would lend all of their energies to make one of their number succeed. Doubtless the time has not yet come for him to call upon the white physician and druggist, but he could reach the colored druggist direct, and the white druggist through the colored physician, thereby making the order of the white salesman much larger. The gulf of prejudice existing between the intelligent white and colored man in the South is by far narrower than outsiders think; hence he would often meet white druggists who would give him orders.

I consider the Era the fountain head of pharmaceutical knowledge. May I hope to have your thoughts on this subject through its columns.

H. H. PERRY.

BAKING POWDER CONTROVERSY.

An interesting condition exists in Minnesota. That State has passed a law which provides that any baking powder sold in that State after January 1, 1900, shall bear upon its label a full, truthful statement of its composition. The bill is supposed to be aimed against alum baking powders, and to be the result of the intense competition between manufacturers of the many varieties of baking powders. Grocers and other dealers in the State are held accountable for any violation of this law in the way of selling improperly labeled articles. They therefore insist that not only shall all powders containing alum so state upon their labels, but that the non-alum-containing powders shall give their true formulas as well. This latter proposition does not meet with the favor of the manufacturers of this kind of article, however, and as a consequence a very pretty fight is on. Two baking powder companies refuse to comply with the law, and the grocers say they will not handle their products. The outcome of the fight is awaited with interest.

A SPICY AFFAIR.

An Indiana farmer killed hogs and made one hundred pounds of sausage recently. He flavored the sausage with pepper procured from the local druggist. All who ate of the ground hog suffered soon after from symptoms of poison. An investigation showed the so-called pepper used was white hellebore, supplied by the druggist in error. No fatal results followed, but a little financial expense was placed upon the druggist, who, the papers state, "cheerfully paid for the sausage." If druggists are to carry spices as a side line, it is important that they be sure of the identity and purity of the goods. There are many articles in the average drug store which it would not do to mix with or supply for ground spices.

COAL DUST IN BLACK ANTIMONY.

Coal dust, it is reported, is being used very extensively as an adulteration of, even sometimes a total substitute for, black antimony. This adulteration has been frequently discovered in past years, but it is claimed that at present it is more prevalent than ever before. A druggist should be very careful in his purchases of this article, and be sure that it is of the right quality.

THE CO-OPERATION OF THE PHYSICIAN AND PHARMACIST.*

By EDWARD A. HAY, Portland, Me.

To get a more clear understanding of our subject, it may be well to consider the two vocations from the raw material, so to speak, the two boys starting in life. They both attend the same schools, possibly both graduate from college, or perhaps both stop with the high school. We have the same material up to this point. One chooses medicine, the other pharmacy. Here the ways divide.

Let us follow the two lines for the succeeding four or five years. Everyone is more familiar with the medical student's course. Three or four years' hard study and drilling in the theory of medicine, disease and healing, together with scientific branches allied to it, then a year or two of arduous but interesting duty in a hospital, if he is so fortunate, and the physician is ready to begin his career and receive compensation for his good offices.

The embryo pharmacist at once seeks a position in a pharmacy, and after several years of hard practical work, with every day equal in hours to two of the ordinary working man's days, and seven days a week, he may meet the board of pharmacy and take a rigid examination. Then comes the college of pharmacy, with its two or three years' training in chemistry, botany, materia medica, pharmacognosy, practical pharmacy and the minor analytical processes.

To be a graduate in pharmacy means four years' actual experience in a dispensing pharmacy, or the college laboratories, and two years (though three are advised) attendance upon lectures. Of course, all do not have the advantage of this school work, but the percentage is rapidly increasing year by year. Those who do not must serve three years in a store, and faithfully study by themselves to pass the board of pharmacy and receive a certificate of registration. Are not the physician and pharmacist who have been faithful to such training worthy of public trust, and the confidence and respect of each other? They surely should be.

But there may be shortcomings on both sides. The physician's work is wholly professional, the pharmacist's is a mixture of professional, mechanical and mercantile. It takes them into different channels. The physician's duty is diagnosing disease, suggesting and ordering remedies. The pharmacist's work is preparing, storing and supplying these remedies. The first breach of friendly relations, if it comes, may arise just here, in not carefully observing the dividing line. The physician may say "Go to the drug store and get some of this or that remedy. I won't write a prescription because he will charge you more." Possibly the patient drops this remark to the pharmacist, and the trouble has begun. Perhaps next time the patient goes directly to the pharmacist and says he will have some more of it, or asks, "What can you suggest that is as good or better?" He wishes to economize on the office-fee end, as economy was suggested by the physician. Here the physician has been too mercantile, and the pharmacist, if he suggests a remedy, too professional. The pharmacist is accused of counter-prescribing, and mutual confidence begins to waver. Frequently both are too busy in these modern days to come together and talk over a simple event, and so the lines are drawn for a controversy.

Right at this juncture comes the detail man, or perhaps the drummer taking orders for office supplies. His remedies are the only reliable ones, and the physician should protect himself against the unscrupulous pharmacist by putting in a line of the tablets and ready-made cures. He draws charges against the poor, absent, defenceless pharmacist, saying: "That man constantly practices counter-prescribing, he will always substitute on your prescription a cheaper, similar remedy, or the nearest he has on hand if he hasn't the right one. His stock is incomplete, your patients will have to wait until he orders. He is careless and incompetent; so are his clerks. He re-fills your prescription as often as called for, and your patient lends the bottle to the neighbors to use. You are losing half your rightful business. In self-pro-

tection and as a duty to your patients you should have a line of these tablets and cures."

He gets a good sized order and departs. Business is business, he says to himself, and goes down to the corner druggist and tells him how Dr. — is impressed with these goods, and the pharmacist should stock up and be ready for his prescriptions. Of course the pharmacist buys and waits, and is still waiting. This may be an exaggeration to a degree, of the real facts. No doubt perfect harmony exists between many physicians and their brother pharmacists, as it should.

But let us go over to the other side and look back. The pharmacist has usually spent as much time and money on his education as the physician. This "know how" is part of his capital, the same as with the physician. He expects compensation for it, along with a fair commercial profit on the materials. He and his assistants must necessarily be idle at times, and his stock must wait for demand to come. He must have returns for this waiting time. If he gets two or three times the cost on one or two ounces of some chemical that costs five cents or ten cents, has he been unreasonable? He rightly resents the remark of the physician who tells patients that the pharmacist's prices are high. Why shouldn't the pharmacist say to his customer: "Dr. X. is unreasonable to charge you \$2.00 for fifteen minutes of his time. It is only worth fifty cents, and Dr. Z. will attend you for that." It would be just as fair and right. It seems unprofessional for a physician to do so.

The matter of counter-prescribing is most always exaggerated. Patent medicines (or ready-made cures) are countenanced by all our State laws. They are an evil, no doubt, but must be dealt with by working at the source of demand instead of trying to check the supply. The people must be convinced of this evil and brought to realize it.

Many of these patents were prescriptions originally, and we all know a few of them are of unquestionable merit if intelligently handled and rightly used. What is often called counter-prescribing is entirely self-prescribing on the part of the customer, or a suggestion of one of his friends, and the pharmacist is an innocent, second party. Can you think of a house where a few simple remedies are not kept regularly on hand, some more, some less in number and variety? It is a question how far people will carry this dosing themselves when they should call a physician.

Many in moderate circumstances feel that they cannot afford the doctor and they do not wish to seek the charity of the free clinic or city physician. These are the ones who come in and ask if "Quino-Bromides Tablets" are good for colds, or if the pharmacist has something better. Is the pharmacist then to sell them what they ask for, or send them away with advice which they would neither follow nor thank him for?

If a man's complaint is at all serious very few pharmacists would venture to recommend a remedy, though the man's direct request for any named remedy would probably be honored and supplied, if for any article of unrestricted legal sale. Of course in a few instances a pharmacist may be guilty of actual counter-prescribing, but they are far less frequent than usually believed by physicians. On the charge of limited stocks and incompetent service most city stores now-a-days are both well equipped and conducted.

The re-filling of prescriptions is a matter easily in the control of the physician. The "not to be repeated" clause is always honored by the pharmacist, but seldom used by the physician. The dispenser would be relieved to more often find it and know just what was expected of him.

The pharmacist has a grievance again in the case of the dispensing physician. The country doctor must, of course, depend upon his own supply of medicine, and so must the city doctor have an emergency case for night calls, but are the large office case and the regular back room drug store a necessity for those physicians who are in easy reach of several good pharmacies which should be their source of supply?

If a physician wants to use a special drug, wishes a formula worked out, or any new remedy, he can depend upon the near-by pharmacy to supply his want as quickly and reasonably as the man from out of town.

*Read at a meeting of the Maine Academy of Medicine and Science, January 8, and contributed to the Era for publication.

The pharmacist has less chance each year to practice the professional side of his calling, on account of the tendency toward ready-made remedies which find their way into more than half the prescriptions. The physician shows his lack of confidence in his friend (the pharmacist) right here. He specifies A., B., or C.'s make of every preparation, instead of allowing the dispenser to supply a good preparation of his own make, or perhaps of a reputable manufacturer, if he is unable to make it himself.

Here follows the great evil substitution. The doctor orders "A.'s" product, the pharmacist has only "B.'s" or "C.'s" and gets consent to use one of those. This is all right if they are reliable makers, but occasionally a pharmacist with an uncontrollable desire for gain puts in a cheaper and less reliable make, and then all his brother pharmacists have to contend with an accusation of substitution, which belongs to very few. Substitution is less frequently practiced than is commonly believed, and never in most of our pharmacies.

As a step in the evolution of pharmacy, the manufacturer's laboratory is a marvel, and accomplishes many things impossible in a small way, both in fine appearing products and reduction of cost, by which the patient profits. Many discoveries and advances in pharmacy are made in these laboratories. But it also proves a disadvantage, in a way, to the dispensing pharmacist.

His stock must comprise not only everything one man makes, but he must also have three or four other complete lines to satisfy all demands. Here the physician may help the pharmacist much by allowing the option of some two or three makes that may be in stock, and as often as possible prescribing a full original package to avoid an accumulation of unredeemable open packages.

With the increase of these heavily capitalized corporations in pharmaceutical manufacturing, it will not be surprising if in a few years more some of them absorb and control retail dispensing stores in all the large cities, much as some of our trusts in other lines have done. In fact, England already has one large corporation owning and controlling quite a number of pharmacies.

One favor which the pharmacist is able to and does gladly extend, is affording protection and safety to physicians upon doubtful prescriptions. The wrong article or dose may be written for, possibly no quantity given. It is all brought quietly to the prescriber's attention without the patient's knowledge.

Does the physician do as much for the pharmacist when the medicine seems to him doubtful? Is he always sure before he openly condemns it that it was correctly and clearly ordered? Could he not sometimes say that he wished to try another kind, and call in another doctor and investigate?

Does the physician understand how close into the respect, esteem and confidence of his customers the pharmacist often grows? How almost every day the pharmacist is consulted as to the standing of certain physicians? Are they careful men of good judgment and conscientious in their work? How the pharmacist has opportunity to speak well of them and praise their skill?

Can we get some real practical help from all these facts? If the physician follows prescribing and avoids dispensing, if the pharmacist attends to supplying what the physician wants for his patients, avoids prescribing, and keeps posted on the progress of pharmacy, if they both meet and frankly discuss every grievance, little else is needed for hearty co-operation.

Trusting a spirit of forgiveness will prevail if we have called into use any facts that seem to offend, and wishing to be criticised ourselves where we merit it, we hope for good fellowship at all times.

ANTISEPTIC SOLUTION.—A solution of 8 parts of boric acid in 1,000 parts of water is macerated during four or five days with 160 parts of flaxseed, with frequent shaking. The liquid is then strained through gauze and mixed with 128 parts of glycerin, 192 parts of strong alcohol, 12 parts of carbolic acid and 16 parts of cologne water. After twelve hours the liquid is passed through fine linen, brought up to 1,500 parts by addition of water and filled into small bottles. (Pharm. Post.)

THE PHARMACEUTICAL PRESS.*

Our kind hosts have exhibited to me in particular, the spirit of a most delicate and courteous hospitality, and I should be requiring it in a shabby manner if I were to seize this opportunity of pronouncing a panegyric on the Pharmaceutical Press. No, believe me, I am not here for the purpose of lauding my profession. Of the pharmaceutical journals we may wisely say what Doctor Samuel Johnson once said about books; they stand or fall by what is said in them, and not of them. The pharmaceutical press, like the daily newspaper, stands absolutely on its intrinsic merit. Puffing and advertising do not avail much. If the contents of the journal fail to give the subscriber a conviction of ability, force, courage and real usefulness in the every-day work of the druggist, that journal is infallibly doomed; it cannot be bolstered for long; it cannot long escape the fitting penalty of mediocrity, laziness, cowardice or stupidity.

The result of the keen and merciless competition prevailing in pharmaceutical journalism shows itself in the very high character of the pharmaceutical press. Compare that press with the medical press or with the organs of any other calling, whether professional or commercial, and you will realize with what zeal, and energy, with what knowledge and intelligence it seeks to advance your interests, to point out every promising avenue of progress, to attack your evils, to advocate your reforms, to gird up the loins of your organizations and to send forth regularly a fund of material comprising and everything profitable that it can buy, borrow or originate. Just look about among your other pharmaceutical institutions—your boards, your colleges, your associations—and see how faulty and feeble some of them are. Granting a great preponderance of good in the work they accomplish, it cannot be denied that some of them have gaping holes in their armor. And, yet, barring a few wretched travesties of pharmaceutical journalism, barring a few periodicals which merely succeed in clinging to the skirts of a profession which repudiates and casts them off, I challenge the severest critic to find the stones with which he may justly pelt the pharmaceutical press. No, if you will stop to consider that probably not much more than half the druggists of the country take any journal at all; that the total revenue of the drug press is derived only in small measure from its subscribers; and that it is in reality the advertiser and not the druggist who supports the pharmaceutical periodicals, you will hold with me that the drug press gives you a service and a support far beyond what you pay for.

The limited time at my disposal forbids even a hasty historical sketch of the development of the drug press, and it forbids likewise an attempt at a definite classification of journals. Suffice it to know that in order to satisfy the varying wants of teachers, investigators, dispensers and drug merchants, different types of pharmaceutical periodicals have arisen, ranging from the trade newspapers to the scholarly magazines of a strictly scientific character. We have the practical, the newsy, the learned; we have the advertising compend; we have the combination of several of these; and we have the monthly review which essays to cover the whole field of the druggist's many-sided activity. I believe that the application of newspaper methods to the pharmaceutical press has been a blessing, and I hasten to pay my tribute of admiration to those energetic men who had the courage to cast tradition to the winds and shattered the old-time conventions of the pharmaceutical press, building up popular and successful periodicals by methods calculated to rattle, fracture and powder the dry bones of the ancient and stereotyped journal. Although the change is not by any means an unmixed good, it has on the whole conferred a lasting benefit on the drug press, by enforcing the need of enterprise and progress, by emphasizing the ever-present danger of falling into a rut and the deadly sin of routine. Charles A. Dana used to say that if two successive issues of the Sun looked too much alike he would go out and hire a lot of carpenters and bricklayers to run his paper, so as to prevent its suffering from the Chinese spirit of mechanical repetition. And the pharmaceutical press cannot afford to forget that besetting danger!

*Response delivered by Jos. Helfman to a toast at the Nelson, Baker & Co. banquet, Detroit, Jan., 1900.

Some months ago I had occasion to address a few words to the Ohio Pharmaceutical Association, and I ventured to dwell briefly on the natural antagonism between the drug press and the associations. I referred to the scanty attendance and the insignificant numerical strength of nearly all the State organizations, and I explained their decline, their poverty of paper and the languid character of their discussions, by the growing circulation and the influence of the drug press. If you will read Victor Hugo's Notre Dame, you will see how the invention of printing has been most detrimental to architecture, and how it has diverted men's thoughts, dreams, hopes, aspirations and prayers from the heaven-seeking cathedral to the book, the poem, the review. Note also for yourselves the immense decline in the authority of the pulpit under the influence of the daily press. Now, the same antagonism of institutions prevails in the smaller and narrower sphere of pharmacy. Men do not care to read papers before a few hundred when they can reach thousands through the drug press with vastly less trouble, effort and expense. If they have an important message for their colleagues they don't need to wait a month or a year; they can choose their own time, and the entire community of druggists becomes their audience. Moreover, the reading of papers involves the expense of travel, whereas the writing of an able article is a source of income. Brains, gentlemen, are the only commodity on which you can put your own price, and I can refer you to any one of a half dozen pharmaceutical editors who will pay you anything you ask for a strong and brilliant contribution. For these reasons, though the press has most generously and loyally supported the associations, local, State and National, giving them space without stint, and incessantly urging their benefits, the educational organizations have not been able to escape their fate nor the periodicals their success. Natural laws are not readily evaded, and taking my stand on facts which everyone must acknowledge, I have the right to apply to the mutual relations of the drug press and the associations the story of Wendell Phillips when one of his anti-slavery speeches in Boston was interrupted by a howling mob. The orator defied the mob, and turning to the table where sat the reporters for the newspapers, he exclaimed: "How on! I speak here to forty millions of people!" It is not to be wondered at if pharmacists who have something serious and important to say prefer to address themselves to forty thousand readers rather than a handful of listeners.

But when the association is not educational, but rather commercial and executive in character, no such natural antagonism emanates from the press—only, as you have abundant reason to testify, hearty cooperation, enthusiastic support and unwearied persistence in well-doing. The finest spectacle that the pharmaceutical press has ever presented, in my estimation, has been the unanimity, the promptitude, the ardent zeal with which it has rallied about the standard of the National Association of Retail Druggists, holding up the hands of its executives, dispelling doubts, creating sentiment, multiplying partisans, and putting forth every conceivable effort on its behalf. And I am happy to know, gentlemen, that among you, the work of the pharmaceutical press in your cause has not been passed over in a chilling and ungrateful silence. At the Cincinnati meeting of the N. A. R. D. it was a Michigan man, now with us, Mr. D. E. Prall, who moved, "That this association tender a vote of thanks for the liberal treatment we have received at the hands of the pharmaceutical press." And it was the esteemed president of your association, Mr. James W. Seelye, who said in seconding the motion, "I wish to say that the druggists of this country are largely indebted to the technical press for the information they have received relative to the work of this association. I believe that this association will be more than willing to pass a vote unanimously." Undoubtedly the thought which is tonight uppermost in the mind of nearly every man in this audience is the ultimate success of the National Association of Retail Druggists. Let us hope that this goal will soon be reached; let us hope that the time of your rejoicings and thanksgivings and hallelujahs is close at hand. And when that time comes I trust that some of you will be thoughtful enough to weave a few garlands for the allies who hastened your triumph.

The pharmaceutical press may at all times be depended upon to espouse every cause and to urge every reform conducive to the welfare of the druggists of this country. Reluctant as I am to detain you, there is one coming reform from which I hope you will none of you withhold your moral and practical support. I refer to the determination recently reached by the Illinois Board of Pharmacy to insist upon preliminary examination in arithmetic and other elementary studies before permitting the applicant for a license as registered pharmacist to undertake the technical examination. I tell you, gentlemen, it is a heaven-crying scandal for any Board of Pharmacy to permit the licensing of men—no matter how much they know about technical pharmacy—who cannot tell you how much cocaine is present in an ounce of three per cent. solution, or how much morphine is contained in a teaspoonful dose of a four-ounce mixture. These are the abstruse problems in arithmetic which—I am ashamed to say it—some graduates of our colleges of pharmacy are found unable to solve! A chorus of disgust and indignation has already gone up from the entire pharmaceutical press, and if the wrong be not speedily righted, I predict some very bad half-hours for those who are to blame. Young men so illiterate or stupid have no business in a drug store. Keep them out! The public safety demands it, and in no other manner can you possibly elevate your calling more effectually. Cheap men, cheap methods! Most of the abuses which afflict you to-day come from the presence in the drug business of men possessing little of the self-respect, the dignity and the professional spirit by which pharmacists were once characterized.

(Special Correspondence.)

FRENCH PHARMACEUTICAL NEWS.

Paris, Jan. 10, 1900.

The date for the opening of the International Pharmacy Congress has been definitely fixed for August 2d, 1900. The grand closing meeting on August 8 will be held at the new Palace of Congresses; the other gatherings at the School of Pharmacy, as already announced. Prof. Prunier will be chairman, and M. Leger secretary, of the First Section (General and Chemical Pharmacy).

Section II. (pharmacognosy) has M. Bavay as president, M. Collin as vice-president, and M. Dethan as secretary. M. Grimbart, one of our new assistant professors, will preside over Section III, where the questions of Biological Chemistry and Bacteriology (in which he takes so much interest.) will be discussed. M. Alex. Henry Martin is secretary of this Section, which also includes Hygiene. M. A. Pettey is chairman of the Fourth Section (professional interests,) his secretary being M. Desvignes.

The programme already announced, besides the opening meeting, will include meetings of sections and one or several general meetings, inauguration of the Pelletier-Caventou monument, scientific and other excursions, and the official closing meeting.

The International Pharmacopoeia has (as hinted) been officially added to the list of subjects for discussion, also the choice of methods for the dosage of drugs containing alkaloids, glucosides, etc.

The Southeastern Federation

of Pharmacists, which met at Valence on October 1, is formed like the sister "federations" of the Southwest and South, of a group of syndicates representing the various departments of that part of France, banded together for a common object. The south of France is interesting from a pharmaceutical point of view as the point of departure of the

Anti-"Patent" Crusade

which is still being actively preached in various reunions. The cutting of prices, which forces retail pharmacists to sell proprietary medicines practically at cost has caused many to favor the idea of a "boycott" of profitless articles. Such a scheme, naturally impossible in England or America, is easier in a country where medicaments can be retailed by the pharmacist only. But the first condition of success is to gain the support of a crushing majority.

In the meantime, it is generally agreed that it is prudent to stock all the leading patents, and to make no

difficulties if they are asked for by good regular customers. But in the case of a casual inquiry, it is just as easy to reply the article is not in stock as to go to the cellar for it, wrap, label and sell without profit.

A newer idea, (the legality of which has yet to be examined) is to place on each label or wrapper a ticket "Mr. X, pharmacist, declines all responsibility or guarantee for products not bearing his own seal or label," or words to that effect—a statement naturally likely to make a nervous invalid think twice before taking his medicine.

Some few owners of proprietary medicines here are making an effort to arrange matters and to prevent the sale of their goods at unprofitable prices. A little more decided and combined action of this sort might do much to calm the spirit of revolt engendered by the handling of profitless goods.

M. Chevreton, of St. Etienne, who has been a leading spirit in the endeavor to ensure a profit for the pharmacist, asks the General Association to invite and publish propositions as to the best method of securing this sine qua non. If the Council of the Association ignores his letter, he will, he states, raise the question at the first general meeting of the association.

The "Elixirs of Life" Again.

The reporter of a Paris daily has interviewed M. Metchnikoff at the Pasteur Institute, and states the savant hopes to find a method of postponing old age by combating the waste of tissue. By a series of different vaccines the cells of various organs are to be maintained in their pristine vigor. But the professor is careful to add that his researches so far are merely laboratory experiments, not necessarily conclusive.

Berthelot's New Book.

"Vegetable and Agricultural Chemistry" is a résumé of his work for the last sixteen years at the Meudon Station of Vegetable Chemistry. The first volume of treats of the fixation of azote, the second of the progress of vegetation and chemical action of light. Volume III. gives the elements and immediate principles of vegetable life (metalloids, azotate, etc.), and the chemical history of sugar, while the fourth volume treats of the analysis of vegetable mould and contains a treatise on the "bouquet" of wines.

A New Pharmaceutical Magazine.

is the "Bulletin des Etudes Pharmaceutiques," which may be said to represent the younger generation of pharmaceutical savants, the assistant professor at the Paris School of Pharmacy taking a large part in the editorship. Those who read French will find it scientifically interesting.

The *Passe-Temps Pharmaceutique*, another new venture, is, as its name implies, of an amusing and light character.

Who Invented the Feeding Bottle?

was the question raised by a Parisian medical journal some little time since.

When Gaul was part of the Roman Empire, the bodies of adults were always burned, but the Roman law forbade the cremation of children under seven years of age

(see Juvenal's 15th Satire, verse 138.) Figures 1, 2 and 3 show small articles of glass and earthenware found in the little coffins dug up by Abbé Cochet in the old Gallo-Roman cemeteries of Normandy, and preserved in the museums of Rouen and Sevres. Cochet and other antiquaries hold that these can be nothing else but feeding bottles.

Coming down to the day of the Pilgrim Fathers, No. 4 is sketched from Jordan's "Infancy of Jupiter," one of the masterpieces of the Dutch School in the Louvre galleries of art. The little bottle which the child holds in his chubby hand is evidently destined to hold the milk of the goat close by. Possibly such bottles crossed the Atlantic in the "Mayflower" and her successors.

The First Steam Heater

ever installed in Europe was the old apparatus (just being renovated) at the Paris Bourse. It was Rumford the Anglo-American physicist who first proposed steam heaters in Paris, and he had much to do with designing this one; although the three eminent chemists Gay-Lussac, Thenard and Darcet were officially deputed for the work. It cost \$17,200, and has burnt since 1826 without any important repairs, which is certainly a sterling testimonial to these savants' capabilities as heating engineers.

Fruits as Food

have been chemically examined by M. Bolland, army pharmacist, one of our leading food analysts. In some pappy fruits there is 92 per cent. of water, while dry olives and some nuts contain 58 to 68 per cent. of oil. Some sugary fruits, like bananas, dates, etc., may be considered as light aliments of a hydrocarbonized nature, but on the whole, fruit contains but little nutritive matter, and may be rather classed as a condiment than as a food.

Science Prizes.

The Academy of Sciences held its annual public meeting on December 18. The La Caze prize (physics) of \$2,000 goes to M. Blondlot for his electrical studies, the Chemistry prize of the same value to Prof. Engel. The Jecker Chemistry prize (value also \$2,000) has been awarded to M. Marcel Henriot, of the Paris Faculty of Medicine, and president of the Paris Chemical Society during 1899. Dr. Zeeman, of Leyden University, takes the Wilde Chemistry prize of \$800.

M. Schlagdenhauffen, director of the Nancy School of Pharmacy divides the Barbier prize with four other savants. He isolated, in collaboration with M. Reeb, "coronilline," a new active principle extracted from the coronilla scorpioides.

The Arago Medal has been awarded to Sir George Gabriel Stokes (England). The prize founded by Baron Larrey, the celebrated military surgeon, is gained by M. M. Arnaud and Lafaëulle for their account of Tuberculosis in the French army, while the Institut Pasteur takes the J. J. Berger prize of \$3,000 for "services rendered to the city of Paris." The particular "service" thus rewarded is the diminution of the usual Parisian mortality from diphtheria.

The following statistics speak for themselves:

1892.....	1,406 deaths.	1895.....	435 deaths.
1893.....	1,266 "	1896.....	444 "
1894.....	1,069 "	1897.....	298 "

(Serum introduced December, 1894).

M. Van Tieghem, who presided at this annual meeting, alluded in his address to the recent progress of science, wireless telegraphy, motor cars, X-rays, etc., and remarked, with reference to

Chemistry.

"Handling with ease, thanks to the electric furnace, temperatures exceeding 3,500° (centigrade), she has reproduced the diamond, studied the metallic carbides, and obtained refractory metals in a pure state, latterly uranium, the type of radiant metals. Able on the other hand, to obtain temperatures of 16° above absolute zero, she has not only liquefied air, which nowadays is easily handled in a liquid state in all laboratories, but has also first liquefied and then solidified hydrogen. The word 'permanent gas' thus disappears from the language of science."

Concrete Essences

of flowers are the latest development of the wholesale raw perfumery trade, so important in Southern France. A costly and elaborate apparatus for obtaining these

solid extracts (one pound of which contains as much perfume as 100 pounds of "pomade") has just been established at Frejus.

Any of your readers interested in this industry will find a description and illustration of the apparatus in "La Nature" of December 23.

Obituary.

At the close of a year, one naturally looks back on those who have disappeared from amongst us. Senator Scheurer-Kestner, chemical manufacturer, the first to proclaim Dreyfus's innocence, died the very day the latter was released from prison, ignorant that success had crowned his efforts.

M. Wurtz and M. Jean Thomas were two well known and respected members of the Paris Society of Pharmacy; the latter was for eighteen years one of our Paris Mayors.

M. Pascal Hugouneq, of Lodeve, was a prominent citizen who started in business as a pharmacist fifty years ago. By his knowledge of applied chemistry he carried on several important undertakings very successfully, became Mayor of the town, assured its water supply and hygienic standing, and was a striking example of the important position of general usefulness to which a capable and scientific pharmacist sometimes raises himself even in a comparatively small town.

Killed in the Alps.

M. Cauro was appointed, last May, assistant professor of physics at the Paris School of Pharmacy. While spending his vacation in the Alps, he wished to make some experiments as to the interruption of the electric current by ice. He accordingly left Chamouin (at the foot of Mont Blanc) on August 28 (with M. Lesplau and three guides) for the Grands Mulets. At Mont Corbeau rain began to fall. M. Cauro imprudently approached too near the edge of the precipice. His foot slipped on the wet grass, he fell 900 feet, striking the rock twenty times. M. Lesplau put his mangled frame in surety and returned to Chamouin. Next day the search party, headed by the venerable M. Janssen, of the Academy of Sciences, conveyed the unrecognizable remains of the young savant to the Mer de Glace Hotel. The limbs were broken and the skull completely brained. He was buried at Chamouin.

LEMON FLAVORING EXTRACT AND ITS SUBSTITUTES.*

By A. S. MITCHELL.

As many valuable papers have lately appeared upon the subject of vanilla flavoring extract, while little has been done upon lemon extract and its substitutes, I have ventured to here outline the results of the investigation of these goods as found upon the market, and made in the course of work for the Wisconsin Dairy and Food Commission.

Lemon extracts, following the U. S. P. formula for "Spiritus-Limonis," should contain at least five per cent. of oil of lemon, dissolved in deodorized alcohol and should be colored only with the coloring of lemon peel.

A preliminary examination of the extracts supplied by grocers showed them to contain alcohol in amounts varying from fourteen to ninety-four per cent. by weight, and oil of lemon from none to eight per cent.

The extracts low in alcohol had in many cases a fine aroma, derived from agitation with new oil of lemon in some cases, but more frequently produced by citral and the so-called "soluble oil of lemon," or from lemon-grass or citronella aldehyde and frequently with the addition of tincture of nutmeg, mace or capsicum. The cheaper grades contained so little oil in solution that the addition of water frequently failed to produce turbidity.

As no standard methods were in use for the examination of lemon flavoring extracts, it was thought desirable to make an examination of the oils used. Optical methods proved most satisfactory for this purpose.

*Portion of a paper published in the Journal of the American Chemical Society.

The following table gives the results of examination of a few characteristic extracts:

1.: Alcohol, 21.0 per cent. by weight; rotation 0.2, oil of lemon less than one-tenth per cent.; coloring-matter, naphthol-yellow.
2. "Special Extract of Lemon:" Alcohol, 20.6 per cent.; rotation 4.6°, cane-sugar 1.31 per cent.; rotation due to oil 0.6°, equivalent to two-tenths per cent. oil of lemon; colored.
3. "Triple Extract of Lemon:" Alcohol, 94.3 per cent.; rotation 23.1°, equal to six and seven-tenths per cent. of oil; color, lemon peel only.
4. "Ten Cent Lemon:" Alcohol, 71.7 per cent.; rotation 21.5°, equal to six and three-tenths per cent. oil; precipitation with correction showed five and six-tenths per cent. oil; difference due to presence of cane-sugar; color, tropaneol.
5. "Monarch Lemon Extract:" Alcohol, 94.66 per cent.; rotation 25.7°, equal to seven and a half per cent. oil; precipitation gave seven and three-tenths per cent. oil of lemon, having a refraction of 65°-69°.
6. "Bon-ton Extract of Lemon:" Alcohol, 22.55 per cent.; rotation 0.1 (trace of oil); coloring-matter, dinitro-cresol.
7. "Extract of Lemon:" Alcohol, 89.9 per cent.; rotation 20.8°, equal to six and one-tenth per cent. oil; precipitation yielded six and two-tenths per cent. oil of lemon, of refraction 63°-68°.
8. "Double Strength Lemon Extract:" Alcohol, 54.4 per cent.; rotation, 1.8°, equal to one-half per cent. oil; color, dinitrocresol.
9. "Lemon Extract from Druggist:" Alcohol, 92 per cent.; rotation 13.9°, equal to four and nine-tenths per cent. oil; precipitation showed five per cent. oil, of refraction 64°-68°.

Only such extracts as fail to precipitate with water occasionally show a slight laevorotation.

HINTS TO DRUGGISTS AND CLERKS.

A drug store must be opened at a regular hour every morning and closed at a regular hour every night, thereby showing customers that you have a business method of conducting your store.

The physician who discovers that his druggist makes a habit of ordering cheap drugs and chemicals will soon send his prescriptions to another store, thereby possibly saving a human life.

See that your clerks are as pleasant and agreeable to all customers as you are, for a kind word now and then means not only the retaining of that patron but others who may hear of it as well.

Drug clerks should have the interests of the proprietor at heart, for are they not being paid for their services, and have they not an opportunity of increasing their own salaries by attending strictly to business?

Wholesale druggists will always sell a retailer cheap drugs at cheap prices, but bear in mind that pure drugs and chemicals only should be used in prescriptions and shelf preparations if you expect to have a clear conscience.

Accommodate your neighboring druggist and he will treat you likewise. Discount your bills and watch carefully prices made to you by keeping posted, which can be accomplished by subscribing to several drug journals containing price lists. (New Eng. Drug.)

IN MAINE.

Visitor: I don't believe in abolishing the sale of liquor. To restrict it is another matter.

Native: Well, stranger, we haven't abolished it. We've just restricted it to the drug stores.

FORMATION OF OZONE BY THE DECOMPOSITION OF WATER BY FLUORIN.—In a recent number of *Comptes Rendus*, (Science), Moissan has described the formation of ozone by the decomposition of water by fluorin. If the temperature of the water into which the fluorin is led is kept at or below zero, it is possible to get over 14 per cent. ozone (by volume) in the gas over the water. Moissan points out the possible practical application of this method, for though the electrolytic production of fluorin from hydrofluoric acid is still a rather difficult operation, it is not an expensive one. The ozone formed in this process has the advantage of being completely free from the oxides of nitrogen.

PHARMACY.

POMADE FOR DANDRUFF.—Benzoinated lard 120, precipitated sulphur 5, lanolin 20, alcohol 20, salicylic acid 1, oil of geranium 1, rose water 60 parts. (Pharm. Post.)

COUGH MIXTURE FOR CONSUMPTIVES.—Bromoforn 30 drops, alcohol 10 Cc., syrup of ipecac 30 Cc., cherry-laurel water 20 Cc., and syrup of opium 150 Cc. (Bull. de Therap.)

PUNCH ESSENCE.—Green tea 15 parts, cinnamon bark 6 parts, make an infusion with 300 parts water, add 300 parts white wine, 1,500 parts sugar, 1,750 parts arrac, and 10 parts citric acid. (Pharm. Post.)

HEADACHE POWDER.—For migraine and neuralgia Robin recommends a powder consisting of antipyrine 0.5, potassium bromide 0.5, cocaine hydrochloride 0.01, caffeine 0.02, guarana 0.3 Gm. (Pharm. Post.)

TO PREVENT DRIPPING OF CANDLES it is recommended to dip them into a solution of 15 parts each of magnesium sulphate and dextrin in 100 parts of water. The solution dries rapidly and does not affect the lighting power of the candles. (Apoth. Ztg.)

CREME DES INDES.—Melt on a water bath 3 parts white wax and 2 parts spermaceti, and add 20 parts of olive oil that has previously been digested with alkanet root until it assumes an intense red color. Strain, and while still warm, add a little oil of lavender and tincture of ambergris. Stir until cold. (Pharm. Post.)

DEEP BLACK INK.—Dissolve 200 parts of logwood extract in 1,000 parts of water on a waterbath, set aside for some time, and decant from the deposit formed. Dilute 200 parts of the solution with 500 parts of water, heat to 90° C., and add, in drops, a mixture consisting of potassium bichromate 2 parts, chrome alum 50 parts, and oxalic acid 10 parts, dissolved in 150 parts of water. Heat again to 90° C., and maintain this temperature about a half hour, dilute with water to 1,000 parts, and add 1 per cent. of carbolic acid. After two or three days fill into bottles. (Pharm. Post.)

SYNDETIKON.—A cement closely resembling this specialty is stated to be obtained as follows: 10 parts of sugar are dissolved in 30 parts of distilled water, 2.6 parts of hydrate of lime added, and the mixture frequently shaken during three days, the temperature being kept at 70 to 75° C. The undissolved residue is then allowed to settle, and 30 parts of glue dissolved in 20 parts of the clear fluid. This solution is then heated during ten hours in a covered vessel, the evaporated water being replaced from time to time, and the alkalinity of the lime neutralized with oxalic acid. As a preservative carbolic acid may be used, and as a diluent, acetic acid of 90 per cent. (Pharm. Post.)

ACETYL-LEUCO-METHYLENE-BLUE is a colorless derivative of methylene-blue, prepared by G. Cohn (Arch. de Pharm.), having all the important therapeutic properties of the mother substance, without sharing its unpleasant secondary effects. The new compound occurs in colorless needles, permanent in the air, and melts at 179 to 180° C. It is sparingly soluble in ether and benzol, quite soluble in hot glacial acetic acid, and in consequence of its basic character is readily dissolved by dilute murlatic acid, from which solution it is again precipitated unchanged in white flakes by the addition of ammonia. A solution in concentrated sulphuric acid is yellow, assuming on warming at first an olive color, which finally becomes green. Addition of water to this produces a blue color. The new compound differs from methylene-blue in being but little toxic and giving to the urine only a greenish color. (Ztsch. f. Pharm.)

Marguerite—We've got scarlet fever and measles at our house.
Gladys—That's nothin'. We had six different diseases to wunst, and the drug store man eured 'em all.

ANTITUSSIN IN WHOOPING COUGH.—Antitussin is an ointment consisting of 5 parts difluor-diphenyl, 10 parts petrolatum and 85 parts wool fat. It has been used by Dr. Heim with good results in treating whooping cough, applied on the neck, chest and back, between the shoulder blades. Before application the skin is washed off with warm soap suds and rubbed dry; then a portion of ointment of the size of a walnut is rubbed on energetically with the palm of the hand until it is absorbed. (Apoth. Ztg.)

AMMONIUM CYANATE.—A peculiar interest attaches to this substance from the fact that it was the spontaneous conversion from this salt into urea which first bridged over the gulf between the inorganic and the organic, and in the hands of Wöhler gave the great impetus to the study of organic chemistry. Owing to its instability it has been very difficult to prepare ammonium cyanate in a pure condition. It is shown, however, in the Proceedings of the Chemical Society (London), by J. Walker and J. K. Wood, that the substance may be readily formed by mixing the cooled solutions of ammonia and cyanic acid in ether. It is also formed when the vapors of ammonia and cyanic acid are brought into contact, provided the reacting gases are sufficiently diluted with some indifferent gas. The transformation of solid ammonium cyanate into urea is facilitated by heat, and very greatly accelerated by presence of moisture.—Science.

NEW METHOD FOR MANUFACTURING TABLE SALT.—The following method, recently introduced at the salt wells of Schoenebeck, Germany, is stated to produce a nearly chemically pure, perfectly white salt, in form of very fine granules of crystalline structure. The well clarified brine is first concentrated in covered, round pans to effect a complete separation of the less soluble constituents. To remove alkali sulphates, sufficient chemically pure chloride of calcium is added to convert them into the insoluble sulphate of calcium, which is separated by filtration along with the other insoluble matter. The salt solution is then further evaporated in pans provided

with mechanical stirrers, and the separated salt dried in centrifugals, whereby the last traces of the more soluble contaminating salts are thrown out. The salt, which contains now only 1 to 1.3 per cent. of water is further dried and passed through a fine sieve. (Drog. Ztg.)

REMEDIES FOR CORYZA.—The following formulas are given in *Apotheker Zeitung*: Mentholin.—(a). Menthol, 1 part; boric acid and roasted coffee, both in very fine powder, of each 10 parts. (b) Boric acid, 2.5; powdered starch, 15; cocaine, 0.2; tannic acid, menthol, of each 10 parts. (c) Menthol, iodoform, of each 1.0; sugar of milk, roasted coffee, of each 10 parts. (d) Menthol, 1.0; dermatol, 2; sugar of milk, starch, of each 6 parts. In addition to these powders, the following liquid preparation is recommended: Menthol, 1 part and chloroform, 10 parts; or menthol, 1 part; chloroform and alcohol, of each 5 parts. A few drops of one or the other mixture are rubbed between the hands and the vapors inhaled through the nose. Small rolls, to be inserted into the nostrils, may be prepared from gauze upon which the following ointment is spread: Iodoform, 10 Gm. (15 grains); oil of fennel, liquefied carbonic acid, of each, 5 drops; petrolatum, 30 Gm. (1 ounce).

ESTIMATION OF OIL IN EMULSIONS.—Schneegans gives the following quantitative method: A mixture of 300 parts of the emulsion with 50 parts each of coarse sand and kaolin is concentrated by evaporation. Near the end of the operation, 50 parts of anhydrous sulphate of soda are added, and the mixture brought to dryness, stirring occasionally. The residue is powdered, extracted with ether, the latter evaporated and the residual oil weighed. This method is applicable only to emulsions made with gum as emulsifying agent. Those prepared with yolk of egg may be heated for some time at 100° C. in a stoppered bottle, to coagulate the albumen. The turbid liquid may then be readily shaken out with ether. Since yolk of egg contains ether-soluble matter (fat and lecithin), the results will be somewhat too high, an egg containing approximately 6 Gm. of these substances. With seed emulsions the method cannot be used, as the ether is completely emulsified by the agitation. (Pharm. Post.)

CARBONIC OXIDE ABSORBED BY PLANTS.—In his presidential address, delivered before the British Association, (Sci. Amer.) Mr. Horace Brown gives an account of the experiments which he has carried out in order to determine the conditions under which the carbonic oxide of the atmosphere is absorbed by the leaves of plants. He finds that the surface of the leaves absorbs the carbonic oxide at about one-half the rate at which the same gas would be absorbed by an equal surface kept constantly wet with a solution of caustic alkali. He considers that the gas penetrates only by the mouths or pores of the leaf, these occupying a relatively small proportion of the surface. He makes some calculations as to the rate of speed with which the carbonic oxide passes through the pores, and finds that in the case of the plant under consideration, a variety of catalpa, the gas must pass at the rate of 150 inches per minute. To imitate the action which takes place in the leaf of the plant, he has carried out a series of experiments, using a recipient containing an alkaline solution and provided with openings of various diameters. In this way the speed of penetration of the carbonic oxide is found to increase very rapidly, as the diameter of the aperture is lessened and for minute openings this speed is necessarily very great. Mr. Brown has also made determinations to find out what proportion of the solar energy is utilized for the vital processes of the plant. This proportion is much greater in diffused light than when the leaf is exposed to the direct light of the sun. In the former case he estimates that 35 per cent. of the energy absorbed may be utilized; of this, 2.7 per cent. represents the work of assimilation and the remainder is used for evaporation of the water contained in the leaf. In the second case, that of exposure to direct sunlight, only 28 per cent. of the energy was utilized, and for the work of assimilation but ½ per cent. Among other calculations, he estimated that 6.5 per cent. of the total energy of solar radiation consists of rays which are capable of being absorbed by the chlorophyll of the leaf.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.

(C. E. W.) wants information concerning "ulonolin;" what is it and what is it used for? Who can tell him?

Iron-Blackened Whiskey.

(C. P. D.) See this journal, November 23, 1899, page 705.

Journals on Window Dressing.

(C. N. W.)—During the past three years the Era has published a great deal on window dressing and displays for the drug store. See the various semi-annual indexes under the subject headings window displays, advertising for retail druggists, etc. There is no journal devoted wholly to drug store window dressing, though the subject forms a part of the field covered by Harman's Journal of Window Dressing and Decorating, published at 125 S. Clark street, Chicago. Another journal which claims to be the official organ of the National Association of Window Trimmers of America, is the "Show Window," published in the Caxton Building, Chicago.

Potassium Iodide, Potassium Chlorate and Tincture of Ferric Chloride.

(Subscriber) asks criticism upon the following:

Potassium iodide	1½ drams
Potassium chlorate	½ dram
Tincture of ferric chloride.....	2 drams
Syrup of tolu	2 ounces
Syrup of lemon, enough to make.....	3 ounces

Several reactions may take place in combining this mixture, each depending upon the order of procedure. Thus, if potassium chlorate be added to tincture of ferric chloride, free chlorine is liberated. Again, potassium iodide and ferric chloride form free iodine, ferrous chloride and potassium chloride, the reaction being thus expressed:

The prescription should not be dispensed.

Horehound Candy.

(P. & O.) Dutch crushed sugar.....	10 pounds
Dried horehound leaves.....	2 ounces
Cream of tartar	¾ ounce
Water	2 quarts
Anise seed flavoring, q.	

Pour the water on the leaves and let it gently simmer until reduced to three pints; then strain the infusion through muslin, and add the liquid to the sugar. Put the can containing the syrup on the fire, and when at a sharp boil add the cream of tartar. Put the lid on the pan for five minutes; then remove it and let the sugar boil to stiff boil degree. Take the pan off the fire and rub portions of the sugar against the side until it produces a creamy appearance; then add the flavoring. Stir all well, and pour into square tin frames, previously well oiled.

Ink Erasive.

(C. W. C.) Here are some formulas from the Era Formulary:

(1) Immerse blotting paper or any similar material in a hot concentrated solution of citric acid, roll it into a pencil, and coat the larger portion of it with paper or lacquer. Moisten the eraser with water, and rub over the ink to be removed. Drop upon the ink spot a drop of water containing chloride of lime. The ink immediately disappears.

(2) Mix equal parts of oxalic acid and tartaric acid in powder. When to be used dissolve a little in water. It is poisonous.

(3) Dissolve equal parts of cream of tartar and citric acid in water.

(4) Cold aqueous or acetic acid solution of calcium hypochlorite, bleaching powder, eau de Javelle.

Liquid Cosmetic.

(W. C. D.)—We cannot give the formula for the proprietary article. The following are formulas for liquid cosmetics or lotions containing powders held in suspension:

- (1) Zinc oxide 2 ounces
Glycerin 6 fl. ounces
Water 8 fl. ounces
Oil of bergamot 4 drops
Oil of lemon 4 drops
- (2) Bismuth oxychloride 1½ ounces
Precipitated chalk 3 ounces
Glycerin 6 fl. ounces
Water 13 fl. ounces
- (3) Bismuth subnitrate 2 ounces
Glycerin 1 fl. ounce
Water, enough to make 16 fl. ounces
- (4) Zinc oxide 2½ ounces
Precipitated chalk 3 ounces
Alcohol 3 fl. ounces
Water 12 fl. ounces

Any of these preparations may be tinted by the addition of a suitable amount of solution of carmine, or an alcoholic solution of eosin.

Warburg's Tincture, Modified.

(D. & B.)—There is no official formula under the above title. The National Formulary gives two formulas, the first containing no aloe, and intended to serve as a stock tincture from which the regular Warburg's Tincture is to be made when required. There are modifications of the original formula, but just which one a particular manufacturer may use we do not know. Hager gives the following formula:

- Quinine sulphate 1 part
- Spirits of camphor 2 parts
- Tincture of aloe and myrrh 22 parts
- Alcohol 16 parts

The following formula is taken from Griffiths' Non-Secret Formulas:

Warburg's Tincture—Modified.

- Camphor 2 drams
- Rhubarb, coarse ground 4 drams
- Aloe, soc., powdered 4 drams
- Quinine sulphate 4 drams
- Cinchonidine sulphate 4 drams
- Gum myrrh, powdered 8 drams
- Oil of angelica 10 drops
- Oil of caraway 10 drops
- Alcohol diluted, q. s. to make 4 pints

Almond Cream.

(J. K.)—Various formulas for preparations of this character have been published in the Era. Consult the indexes of previous volumes. Hager gives the following:

- (1) White wax 80 grams
- Spermaceti 80 grams
- Expressed oil of almond 500 grams
- Water 250 grams
- Borax 5 grams
- Oil of bergamot 2 grams
- Oil of rose 0.5 gram
- Oil of bitter almond 10 drops
- (2) Cold cream 5 parts
- Expressed oil of almond 5 parts
- Glycerin 5 parts
- Boric acid 5 parts
- Solution of soda 12 parts
- Muclage of quince seed (1 to 8) 25 parts
- Distilled water 143 parts

Perfume, a sufficient quantity.

Heat the cold cream and almond oil together. Add gradually the solution of soda (5 per cent.), and heat together until an emulsion is formed. Add a small quantity of water, then the muclage of quince seed and glycerin. Mix thoroughly, and lastly add the boric acid and the perfume.

Bougies of Protargol.

(G. D.)—We have had no practical experience in making bougies containing protargol. However, the following basis proposed by Helbing works satisfactorily with most

medicaments, and it will probably answer for the Incorporation of protargol:

- Best gelatin 10 ounces
- Glycerin 16 ounces
- Water, sufficient.

The gelatin is dissolved in sufficient water and the glycerin by the aid of a water bath in a porcelain dish, the water lost by evaporation being compensated for by the addition of more. The ingredients, if not soluble in water, are mixed in a finely powdered condition with the warm and tenacious glue, and the pencils are moulded in moulds similar to those used for making caustic, previously moistened with oil or soap liniment. When cold they are quite elastic but not sticky.

Another formula containing cacao butter and acacia is the following, recommended by Pritzker:

- Cacao butter 480 grains
- Powdered acacia 240 grains
- Water 240 minims
- Glycerin 120 minims
- Powdered boric acid, sufficient.

Melt the cacao butter and triturate it in a warm capsule with the acacia, and add the water previously mixed with the glycerin; place the capsule in cold water or on ice until the mass has solidified, and set the vessel aside. When required for use, take of the above 4 drams, incorporate it with the medicaments and with from 10 to 25 per cent. cacao butter, triturate until intimately mixed, and roll out into 10 bougies.

Violet Water.

(W. C. D.)

- (1) Spirit ionone, 10 per cent. ½ dram
- Distilled water 5 fl. ounces
- Orange flower water 1 fl. ounce
- Rose water 1 fl. ounce
- Cologne spirit 8 fl. ounces

Add the spirit of ionone to the alcohol and then add the waters. Let stand and filter.

- (2) Violet extract 2 ounces
- Cassie extract 1 ounce
- Spirit of rose ½ ounce
- Tincture of orris ½ ounce
- Green coloring, a sufficiency.
- Alcohol, to 20 ounces
- (3) Tincture of orris 64 ounces
- Tincture of vanillin 16 ounces
- Oil sandalwood ¼ ounce
- Oil bergamot 1 ounce
- Oil rose geranium ½ ounce
- Cologne spirit 80 ounces
- Rose water 96 ounces

Dissolve the oils in the spirit; add the tinctures, and set aside for 3 days; then add the water slowly, stirring well, and let stand for 2 weeks before filtering. Color with chlorophyl or aniline green to the tint required. The Evergreen Chemical Co. of this city manufacture a satisfactory green coloring for this purpose.

Cough Drops.

(P. & O.)

- (1) Brown sugar 10 pounds
- Tartaric acid 2 ounces
- Cream of tartar ¼ ounce
- Water 1½ quarts
- Anise seed flavoring, q. s.

Melt the sugar in the water, and when at a sharp boil add the cream of tartar. Cover the pan for five minutes. Remove the lid and let the sugar boil up to crack degree. Turn out the batch on an oiled slab, and when cool enough to handle work in the acid and flavoring and cut into lozenges.

- (2) Granulated sugar 14 pounds
- Glycerin 3 pounds
- Tartaric acid 3 ounces
- Paregoric 2 ounces
- Oil of anise 3 drams
- Water 4 pints

Extra Strong.

- (3) Granulated sugar 9 pounds
- Brown sugar 5 pounds
- Licorice paste 1½ pounds
- Liquid extract of popples 2½ ounces
- Tartaric acid 1½ ounces
- Ipecacuanha powder 1 ounce
- Tincture of tolu 1 ounce
- Oil of anise ½ ounce
- Cream of tartar ½ ounce
- Water 4 pints

Melt the sugar in the water and bring them to a sharp boil. Add the cream of tartar, and continue to boil to a degree of crack; put in the extract of popples and licorice paste, and continue to boil for five minutes, then pour upon the slab and add the remainder of the flavoring ingredients. Work thoroughly and cut into tablets.

Heroiné.

(M. M.) Diacetyl morphine (heroiné), according to Manges (N. Y. Med. Jour.), was discovered and studied by Wright in 1874, and by Hesse in 1884. We cannot give here an outline of the process of manufacture. Heroiné is described as a white crystalline and odorless powder, slightly bitter in taste and alkaline in reaction. Its melting point is 173° C., and although it is practically insoluble in water, yet solutions may be readily obtained on the addition of a few drops of acid. Chemically, it is the diacetic-acid ester of morphine, or morphine in which both hydrogen-hydroxyl atoms have been replaced by the acetyl radical OC. CH₃. Heroiné hydrochloride is a neutral salt which is very soluble in water (1 to 2); it is also a white, crystalline, odorless powder, like heroin, but its melting point is much higher (230° C.). The reactions of heroiné are very similar to those of morphine and cocaine, yet it differs from morphine, since the characteristic blue color which appears on the addition of ferric chloride to neutral solutions does not follow at once, but takes some time for its appearance; the same is true of the addition of dilute solution of ferric chloride and potassium ferrocyanide. No iodine is separated in an iodine acid solution. Cocaine and heroiné may be distinguished by the color reaction with chloral hydrate and sulphuric acid at a high temperature; cocaine giving a green color to the solution, heroiné, yellow. It is said that both heroiné and heroiné hydrochloride may be prescribed in combination with other drugs; the only incompatibility reported thus far has been the combination with apomorphine, and it is also to be noted that alkalies are not to be employed in solution of the hydrochloride. Various paragraphs concerning the therapeutic uses of heroiné have been published in previous issues of this journal.

Antiseptic Solution.

(P. & O.)—The following formulas have been published, the last one being taken from the Formulary of the Cincinnati Academy of Pharmacy:

(1) Oil of eucalyptus.....	110	grains
Oil wintergreen.....	10	grains
Menthol.....	10	grains
Thymol.....	10	grains
Thymol.....	10	grains
Eric Acid.....	1/2	ounce
Alcohol.....	4 1/2	ounces
Water, sufficient to make.....	16	ounces
(2) Benzoic acid.....	64	grains
Boric acid.....	125	grains
Thymol.....	30	grains
Menthol.....	30	grains
Borax.....	30	grains
Oil eucalyptus.....	4	drops
Oil wintergreen.....	4	drops
Oil horsemint.....	5	drops
Alcohol.....	4	ounces
Water, enough to make.....	1	pint
(3) Boric acid.....	13	grams
Sodium bicarbonate.....	8.5	grams
Benzoic acid.....	17	grams
Thymol.....	3	grams
Menthol.....	2	grams
Oil of gaultheria, 42 drops or.....	1.34	gram
Oil of eucalyptus, 21 drops or.....	.67	gram
Tincture of baptisia, 450 drops or.....	9	Cc.
Alcohol.....	400	Cc.
Distilled water, a sufficient quantity to make 1,000 Cc.		

Dissolve the sodium bicarbonate and the boric acid in 300 Cc. of water. Dissolve the remaining ingredients in the alcohol. Add the first solution to the second, and then add sufficient distilled water to make 1000 Cc. Filter if necessary.

Haarlem Oil.

(H. G.) Pharmaceutical Formulas gives the following interesting information concerning Haarlem oil: It is impossible to say what the true Haarlem oil is composed of. It is still made in the city of Haarlem, costs six times more than the imitation, is lighter in color, and more transparent, but the properties are very similar. As to what it was originally there is also some doubt. One writer says that it was the red oil obtained as a second fraction in the dry distillation of resin; another, that it was made by the dry distillation of a mixture of aloes, myrrh, oilbanum and olive oil; and another, that it was a mixture of balsam of sulphur, oil of turpentine, and Dippe's oil. The last, minus the oil animals, is the form generally adopted now, and the following is a translation of directions for making it followed in Denmark and

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Beal, Scio, Ohio.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

As the result of the suggestions of a large number of students, an Era Course in Pharmacy pin has been designed, and is shown in the accompanying illustration. This pin consists of 10-carat gold, the letters and symbols being in different colored enamels. It can be secured in either style,—a stick pin, a safety pin or button. The price is \$2.00, which includes cost of mailing. Nothing at all creditable could be secured for less than this figure. Students in ordering are requested to state which style is wanted. The cash must accompany order.

In the Students' Edition this week are sent Junior Lectures 33 to 37, and Senior Lectures 31 to 34. In the issue of February 8 another supply will be forwarded.

Read This Bulletin Each Week.

Holland: Mix in an iron vessel large enough to allow some frothing 4 parts of linseed oil and 1 part of sulphur. Heat to a temperature of 165° C., stirring well all the time, until the mixture drops off the stirrer with a glassy appearance. Remove from the fire and add 15 parts (by weight) of oil of turpentine, and agitate until solution is complete or nearly so. Then filter. The liquid should be limpid and of a brownish-red color.

Hager recommends to prepare Haarlem oil by combining with the aid of a gentle heat:

(1) Sulphurated linseed oil.....	5	parts
Oil of turpentine.....	10	parts
Oil of cade.....	20	parts

The first ingredient is prepared by boiling 16.6 parts of sublimed sulphur with 100 parts of linseed oil.

Parrish gives the following:

(2) Sulphurated oil.....	5	pints
Barbadoes petroleum.....	1	pint
Oil of amber, crude.....	1 1/2	pints
Oil of turpentine.....	8	ounces
Linseed oil.....	4	ounces

(3) Linseed oil.....	40	ounces
Resin.....	1	pound
Sulphur.....	1	pound

Boil till stringy; remove from the fire and add:
 Oil of turpentine..... 20 ounces
 Stronger water of ammonia..... 50 minims

Wyeth's Soluble Powder=Capsules

or, Capsuled-Powders are a new and novel form for administering medicines. They contain the various substances in a perfectly powdered condition, which is certainly the most efficient form for administration; thus a desideratum of utmost importance to the physician has been attained. There is no previous preparation made necessary, as in other forms of medicine—notably **gelatine-and sugar-coated pills**—no cohesive or excipient is required or used. The materials or medicines are simply enclosed in a pliant, soft, soluble gelatine capsule, quickly dissolved in the warmth and fluids of the stomach, presenting no such objectionable resistance as the ordinary double-cased, **hard**, gelatine capsules. In addition to this brief description, an inspection will at once impress the judgment. Physicians and pharmacists are urged to examine these products.

Triumph at Export Exposition!

SILVER MEDAL---HIGHEST PRIZE

And sole and only award for Soda Fountains carried off by our
POLAR SYSTEM!!

OUR PRIZE WINNER.
MAGNIFICENT ONYX WALL FOUNTAIN, 12 FEET IN LENGTH,
WITH WHITE AND GOLD SUPERSTRUCTURE.

The Trust got nothing--no merit.

At every exhibition where the Soda Fountain Trust has competed with our apparatus, we have carried off the first prizes.

In fact, in every contest we have had with the TRUST we have been victorious. We have placed most important contracts in spite of their bitter competition and misrepresentation of our fountains. We beat them in a great patent suit in which they spent three years of valuable time and upwards of five thousand dollars trying to prevent by injunction the sale of our fountains.

PICK A WINNER FOR 1900

when you buy the new fountain. Don't buy an outclassed Trust make. Get the apparatus that the competent and disinterested judges of the National Export Exposition decided to be the best NOW ON THE MARKET, viz., GREEN'S POLAR SYSTEM.

Catalogue of Polar System Fountains free to prospective purchasers. Also Catalogue of our large line of bargains in "Seconds." Old Fountains taken in exchange. Easy terms of payment. Write us; you will like our business methods and our goods.

Factory and Onyx Works, 1413 to 1419 Vine St., PHILADELPHIA, PA.

(S. P. 4.)

ANNUAL REPORT OF NEW YORK CITY BOARD OF PHARMACY.

The Secretary of the Board of Pharmacy of Greater New York has prepared the following report on the work of the board for the year ending December 31, 1899, for the New York College of Pharmacy, the German Apothecaries' Association and the Kings County Pharmaceutical Society—the three bodies from which the members of the board are elected. The report was read at the quarterly meeting of the New York College on Tuesday evening, January 16. It will be submitted to the other societies at their next meetings.

"From January 1 to December 31, 1899, 607 persons were registered, making a total of 5,013-registered by this Board since its organization. During the year ten examinations and ten business meetings were held. Number of candidates examined, 845, of whom 344 passed, as follows: 213 at their first examination; 68, their second; 22, their third; 22, their fourth; 9, their fifth; 5, their sixth; 3, their seventh; 1, his eighth, and 1 his tenth. Rejected on account of false statements as to experience, 14; rejected for copying at examinations, 5.

"The attendance at examinations was:

Month.	Number Attending.	Passed.	Rejected.
January	55	18	37
February	196	146	54
March	97	43	54
April	89	28	52
May	75	21	54
June	102	20	82
September	73	21	52
October	66	18	48
November	59	21	38
December	42	8	34

"One hundred and six senior students took the February examination.

"The great number of rejected candidates proves that many come up for examination without previous study, simply trusting to good luck to pass. No less than five, mistrusting their chances of getting through, fortified themselves with "aids to falling memory" in the shape of cuffs inscribed with various formulæ, tiny books convenient to carry in the vest pocket, containing much information in condensed form; but they were detected and expelled. Fourteen applicants were refused examination as they did not have the four years' experience prescribed by law. The Board has gone to a great deal of expense and loss of time in investigating statements made by applicants, and has found in a number of instances that employers did give false evidence in that regard.

"The nationality of the candidates was as follows: United States, 363; Russia, 273; Germany, 101; Italy, 44; France, 1; Great Britain, 32; Scandinavia, 3; Austria, 23; Denmark, 8; Spain, 1; Holland, 1. This table shows that Russia is making severe inroads upon the profession of pharmacy. Germany, which for many years ranked second, now occupies the third place.

"Quite a number of the men rejected for not having the prescribed experience were students from a so-called "Board of Pharmacy" Institute of this city. One of these was a car conductor, another a "tonsorial," and still another a "sartorial" artist. It appears that a great many persons who have never had any pharmaceutical experience, such as cigar makers, shirt makers, etc., are studying pharmacy at this school, trusting to be able to deceive the Board as to the length of their experience.

"It is greatly to be deplored that such a concern should be permitted to call itself by a title which seems to intimate that it has some kind of connection or relation with the Board of Pharmacy. The title selected is misleading and very apt to lead the ignorant, especially our foreigners, into the belief that this so-called "Board of Pharmacy" Institute has some recognition from the Board. The proprietor of the school evidently has firm faith in the efficacy of printer's ink, judging by the circulars sent out broadcast after every examination to every junior clerk in this city. The circulars generally contain fulsome effusions from the students of the

writer's school who happen to pass. They never state, however, how many times they have tried the examination. One of these testimonial writers had been up for examination no less than eight times, but his innate modesty forbade his stating that fact in his letter of thanks, as he calmly announced having passed at his first attempt. If the person conducting this school would call it by a proper name, after himself, for instance, and would make it a point to see to it that his students had the requisite four years' experience before coming up to the Board for examination, then no further objection could be raised.

"The Board has always made it a special object to investigate the statements made by applicants for examination regarding their pharmaceutical experience. To this end, employers were written to or called upon by the inspectors, and the truth ascertained. However, in a number of instances, they found employers who were ready to corroborate false statements made by applicants. As this was notoriously the case with a certain class of employers, the Board ruled that applicants must present affidavits from employers, drawn up and sworn to before a notary public, upon a printed form furnished by the Board, which specifies that the applicant has been employed in such place for such a period of time, working there daily, at least seventy hours per week. In one instance an employer had certified to the fact of a certain young man having been four years in his service. Upon investigation it was found that deponent was a scholar attending the City College, and had previous to that been continuously in public school for a number of years! Another instance: A rather prepossessing young girl claimed four years' pharmaceutical experience in a certain down town drug store located in "Little Russia." Her employer gave her a certificate stating she had been four years in his service. Upon being confronted by an inspector he persisted in his statement, naively adding "without pay." Further parley and the threat of publicity made him confess that she had only been with him about six months, a few hours evenings, in order to read up books on pharmacy. He then explained that he had given the certificate at the solicitation of a physician, a friend of his, who had bought a drug store and wanted to place the girl in charge of it as soon as she was licensed. Owing to many similar discoveries the Board made the rule requiring affidavits from employers. The Board has the gratification of announcing that it has succeeded in stopping the former quarter-annual heira of our foreign friends to the examination of the State Board at Yonkers. Great credit for this, however, is due to Mr. Edward S. Dawson, Jr., the efficient Secretary of the State Board of Pharmacy, who heartily co-operated with this Board in suppressing this nuisance.

"During the year the Board employed as inspectors: Messrs. Conway, Delacy, Anderson, Ferguson and Wischart, and congratulates itself on having been able to obtain the services of such able, painstaking gentlemen. They have performed their duties to the satisfaction of the Board in every respect. After making a thorough inspection of the stores in this city, Brooklyn and Queens County, and notifying all delinquents, prosecutions for violations followed.

"Record of prosecutions and convictions for year 1899.

"It gives the Secretary real pleasure in being able to state emphatically that the many inspectors made prove that the great majority of our pharmacists comply with the law in every respect, notwithstanding the slanderous vociferations voiced in "yellow journals" by a certain pestiferous individual pushing himself forward as the Moses, preordained to lead the poor downtrodden drug clerk out of his serfdom, for a consideration, of course.

"The undersigned also takes pleasure in acknowledging the obligations he is under to all the members of the Board, for their assistance in every way, shape, manner or form; but special thanks are due to Dr. George C. Diekman for his constant assistance in lightening the clerical work of the Secretary.

"The Secretary also extends his thanks to Dr. William Balsler, former Secretary of the old New York City Board for valuable advice freely given.

"He also thanks the officers and members of the College of Pharmacy of the City of New York for the accommodation given and the consideration shown the Board. The Board is under great obligations to every person connected with the College of Pharmacy, from the President down to the janitor.

"Very respectfully,

"SIDNEY FABER, Secretary."

In addition to the above, Mr. Faber stated that 40.71 per cent. of the applicants for examination passed, as compared with 40.78 per cent., the ratio shown by the books of the old City Board for three years.

JERSEY CITY DRUGGISTS HAVE A GOOD MEETING.

A regular quarterly meeting of the Jersey City Druggists' Association was held at Phillips' Hall, Bergen avenue and Montgomery street, Jersey City, on Tuesday, January 16. President J. C. Gallagher occupied the chair, and the attendance showed that interest in the work of the association was increasing. A deal of business was attended to, and the session was both interesting and profitable to those who attended.

Secretary Kuehne sent word he could not come, so Charles W. Levering was chosen temporary secretary. Edward A. Doyle, of No. 37 Erie street, was elected a member.

The secretary read a letter from Congressman William D. Laly, of the Seventh Congressional District of New Jersey, who had been asked by the association to work for the repeal or modification of the Proprietary Stamp Tax, in which he promised to do all that was possible in the interests of the druggists. A letter was read from Secretary Wooten, of the N. A. R. D., asking if the Jersey City association was ready to "back up" the national body in its work. After considerable discussion as to the best course of action it was voted to receive and file the letter and instruct the secretary to answer that the Jersey City Druggists' Association reaffirms its allegiance to the N. A. R. D. Blanks were also received from Secretary Wooten for a list of acceptable jobbers and a list of aggressive cutters. The work of preparing such lists was entrusted to a special committee composed of Messrs. W. R. Laird, C. J. McCloskey and Maxwell Abernethy. A letter from the Louisville (Ky.) Retail Druggists' Association telling of a resolution passed in condemnation of the Potter Drug & Chemical Corporation was received and filed. A letter was also read from the Chicago Retail Druggists' Association in reference to the salesman's certificate plan adopted by that society.

Chairman Gallagher of the Executive Committee reported progress with the price schedule prepared by that

committee. The agreement had been signed by twenty-eight druggists, and by six others conditionally. While somewhat discouraged at this result, Mr. Gallagher said the committee would still keep at work. A letter was read from John J. Mooney, in which he said price cutting on patents, especially homeopathic remedies, tended to encourage the public to forsake physicians, and so reacted to the detriment of the druggists' prescription business. This was followed by considerable discussion, all the speakers agreeing with the substance of the letter.

The Dinner Committee reported that it had not been able to hold a meeting. The committee was continued.

Two resolutions were adopted. The first instructed the secretary to appeal to representatives in Congress to repeal or modify the Proprietary Stamp Tax, extending it to all protected proprietaries and stating in the law who is to pay the tax. The second was: "Resolved, That it is the sense of this association that the United States should not grant patents on medicines or chemicals, as such, and should not give foreign inventors greater protection than is granted by their own country." This also is to be sent to Congressmen, with the request that they support any remedial legislation that may come up during this session of Congress.

Charles W. Levering, of the Committee on Incorporation, reported that the necessary papers could be filed as soon as the association elected a board of trustees, which the law required. Upon motion of William R. Laird, it was voted to constitute the Executive Committee a board of trustees and incorporate the association at once.

An assessment of fifty cents a member was voted to pay the annual dues of membership in the N. A. R. D., after which the meeting was adjourned.

ANNUAL MEETING DRUG TRADE SECTION NEW YORK BOARD OF TRADE AND TRANSPORTATION.

The Drug Trade Section of the Board of Trade and Transportation of New York city, held its tenth annual meeting and luncheon at the New York Drug Club on Thursday, January 15. There were eighteen members present. The various committees submitted their reports, and officers were elected for the ensuing year, as follows:

Chairman, John McKesson, Jr., of McKesson & Robbins; vice-chairman, Joseph A. Velsor, of Peck & Velsor; secretary, Ernest Stoffregen, of Sharp & Dohme; treasurer, William D. Faris, of H. J. Baker & Bro.; standing Executive Committee, Thomas P. Cook, of the N. Y. Quinine & Chemical Works, chairman; John M. Peters, of William J. Matheson & Co., and Albert Bruen, of Bruen, Ritchey & Co.; director in Board of Trade representing the Drug Trade Section, William Jay Schieffelin, of Schieffelin & Co.

Chairman McKesson, of the Committee of Jobbing Druggists, reported having written to firms in the Eastern and Middle States on the subject of box and cartage charges, which has been revived in the Southern States, the latter urging the co-operation of the Northern States in the matter. All the firms written to had agreed not to take the subject up. The section therefore decided not to enter into the controversy.

John H. Stallman, chairman of the Committee of Importers of Drugs and Chemicals, presented a memorial relative to the importation of Carthagenae ipecac, addressed to the Secretary of the Treasury. The memorial, which will be signed by all the leading importers, in part reads:

"The importation of Carthagenae ipecac is prohibited through the port of New York by the present customs authorities, and it has been the practice of the department here to uniformly reject shipments of this article ever since it made its appearance, because it is not regarded by them as the standard article of ipecac.

"Carthagenae ipecac is an article of commerce in all European countries. Its intrinsic value is often higher than the Rio ipecac found in this market, as the percentage of emetine in Carthagenae ipecac is greater than in the inferior grades of the Rio article, against which there is no prohibition.

"Notwithstanding the prohibition against the importation of Carthagenae ipecac at this port, it can be bought openly in the market, thus proving that it is admitted into this country at other ports.

"This fact is one which, it will be perceived, works an injustice against the trade at New York, and inasmuch as the article is rejected solely because it generally contains a smaller percentage of the active principle than the higher grades of Rio Ipeacac, while the lower grades of Ilo are inferior to the Carthagena article, and both are sold on their intrinsic value, your petitioners believe that no harm can come from removing the prohibition against the Carthagena product, which would make it a legitimate article of commerce in this country and permit of its being imported and dealt in regularly. Your petitioners therefore pray that the prohibition against the importation of Carthagena ipeacac be removed."

The Committee on Legislation reviewed its work of the past year. The report said:

"During the last session of the Legislature several bills were introduced purporting to protect public health, all of which, in fact, afforded no protection in addition to that now provided by law, but on the contrary imposed upon the public unreasonable and injurious restrictions. A review and criticism of these several bills was adopted by the Section in March, and later circulated throughout the State. The committee, acting in cooperation with representatives of the other drug and pharmaceutical societies of the State, was instrumental in preventing legislation in this behalf. The most prominent of these measures were known as the "Shorter Hours Drug Bill," and the "Patent Poison Bottle Bill." In connection with the latter, your committee was enabled to arouse considerable public interest.

The committee has also taken active interest in the matter of the attempt of the Internal Revenue Department to class chemists making absolute alcohol as rectifiers, and also the effort to improve the status of the pharmacists of the United States Army, Navy and Marine Hospital Service. The committee has also prepared and forwarded to Congress a memorial for the repeal or modification and extension of the internal revenue tax, imposed under Schedule F, Section 20, of the War Revenue Act now in force. It has given the matter considerable attention and has endeavored to enlist the active interest and assistance of the members of Congress, from the State of New York particularly."

The report also contained statements received from Senator Thomas C. Platt and Congressman Amos J. Cummins that they would do all in their power to secure the modification of the Stamp Tax asked for.

[The memorial from the Drug Trade Section was presented in the Senate on January 22 by Senator Thomas C. Platt. Ed.]

On motion of Thomas F. Main, the section decided to invite President E. C. Frisbie, of the N. W. D. A., to attend the annual banquet of the Board of Trade and Transportation, to be held at the Waldorf-Astoria on January 31, as the guest of the Drug Trade Section. After passing a vote of thanks to the retiring officers the meeting was adjourned.

N. Y. COLLEGE OF PHARMACY MEETING.

A stated meeting of the New York College of Pharmacy was held at the college, in West Sixty-eighth street, on Tuesday evening, January 16th, with President Edward Kemp in the chair. Thomas F. Main, of the delegation to the last meeting of the American Pharmaceutical Association, submitted a report in writing, which was received and filed. A resolution, offered by Oscar Goldman, was adopted voting the thanks of the college to President Kemp for a complete set of physical apparatus. The Chair then appointed as a nominating committee to name a set of officers to be voted for at the annual election in March the following gentlemen: Ewen McIntyre, Gustav Ramsperger, A. H. Merritt, Sidney Faber, Reuben R. Smith, Herbert D. Robbins, and Oscar Goldman. William Massey was appointed chairman of the Commencement Committee, with power to associate others with himself on that committee.

An official invitation was received from the German Apothecaries' Association to its annual festival and ball, to be held on Friday evening, January 26th.

William H. Ebbitt, at the request of the Association of Military and Naval Apothecaries of the State forces, offered a resolution favoring the elevation of apothecaries in the State service to the title of "Pharmacist," and the rank of first lieutenant. This occasioned a lengthy discussion, but was finally adopted, with the amendment that all such apothecaries so elevated must be graduates in pharmacy.

Sidney Faber, secretary of the Board of Pharmacy of New York City, submitted a report of the work accomplished by the Board during the year 1899, which was received with thanks. (The full text of Mr. Faber's report is printed elsewhere in this issue of the Era.)

Clarence O. Bigelow presented a bill to amend the pharmacy section of the city charter, which was drawn up last month by a joint conference committee representing the College of Pharmacy, the Kings County Pharmaceutical Society, and the German Apothecaries' Association. Mr. Bigelow explained the work of the committee, and the bill was endorsed without reading.

NEW YORK AND VICINITY.

Manhattan Pharmaceutical Association.

The Manhattan Pharmaceutical Association held a regular monthly meeting at the New York College of Pharmacy, in West Sixty-eighth street, on Monday evening, January 15. President Reuben R. Smith occupied the chair. The usual reports from officers and committees were received, and most of the time of the meeting was consumed in a discussion of pending pharmaceutical legislation.

The All-State Pharmacy bill and the new bill to amend the Pharmacy Section of the City Charter were the measures under discussion, at the conclusion of which the association voted its approval of the bill to amend the charter.

A communication was read from the N. A. R. D., urging the Manhattan Association to support the movement to secure the repeal or modification of the Proprietary stamp tax.

A communication was also read from the Association of Military and Naval Apothecaries of the State Forces, which asked the Manhattan Association to lend its support toward securing an increase in the number of men in the hospital corps of the National Guard, and the elevation of the apothecaries serving in the State forces to the title of pharmacist and the rank of first lieutenant. The association favored this, provided the apothecaries were graduates in pharmacy.

East Side Druggists Will Have a Dance.

The New York Retail Druggists' Association, an organization composed of about seventy-five pharmacists of the "Lower East Side," is preparing to give an "annual concert and ball" at the Lenox Lyceum, corner of Madison avenue and Fifty-ninth street, Friday evening, March 2. To help to pay the expenses of this celebration it is proposed to print the advertisements of manufacturers and wholesale houses in the official program. A canvasser has been at work for the past week or so soliciting such advertisements. By stating that the issue of the program would number 20,000 copies he got more suspicion than advertising from the people he approached. He was working with a card from E. Mishking, vice-president of the association. An Era reporter called Mr. Mishking's attention to the statement made by the solicitor, and that gentleman said he had already censured the solicitor, and insisted that he must stop misrepresenting the society. The officers of this East Side Association are the following retail druggists: President, Wolf Tulchinsky, 53 Canal street; first vice-president, M. Kingsberg; Jefferson street; second vice-president, M. Kingsberg; secretary, M. Marmour; financial secretary, E. Buckschitzky; treasurer, H. Bakst.

New York Section, Chemical Industry Society.

The regular monthly meeting of the New York section of the Society of Chemical Industry was held at the New York College of Pharmacy, in West Sixty-eighth street, on Friday evening, January 19, with Chairman Thomas J. Parker presiding, and a good attendance of the members present. The programme comprised the following papers: "Some Remarks on Photometric Standards, with Exhibit of Harcourt's Pentane Lamp," by E. G. Love; "The Development and Manufacture of Smokeless Powder," by E. Taylor; "Notes on Texas Petroleum," and "Petroleum from the New Olinda Field in Southern California," both by Clifford Richardson, and "Research on Hops," by Ernst Hantke.

Westchester County Society Elects Officers.

The Westchester County Pharmaceutical Association held its annual meeting at the Weber House, Mount Vernon, on January 10. Reports were read on the work of last year, and the following officers were elected for

the coming year: President, James T. Lennon, of Yonkers; first vice-president, James Horton, Peekskill; second vice-president, J. W. Townsend, Sing Sing; treasurer, J. B. Sackett, Tarrytown; secretary, Ulrich Wiesendanger, Yonkers. Executive Committee, A. Van Houten, Yonkers; George Gill, Mount Vernon, and James A. Hart, Sing Sing.

New York Wholesale Bowlers.

At last Saturday's tournament of the New York Wholesale Drug Trade Bowling Association there were some lively and interesting games, and the honors were pretty evenly distributed among the teams competing. The team of Parke, Davis & Co. was the only one winning two games. The team scores follow: Dodge & Olcott, 810; Roessler & Hasslacher Chemical Co., 686. Parke, Davis & Co., 703; Roessler & Hasslacher Chemical Co., 591. Parke, Davis & Co., 766; Dodge & Olcott, 761. Merck & Co., 743; National Lead Co., 636. National Lead Co., 753; Colgate & Co., 739. Colgate & Co., 789; Merck & Co., 697.

Four Druggists Held for Trial.

The inspectors of the New York City Board of Pharmacy last week found a number of druggists who were violating the law by permitting unregistered clerks to compound prescriptions, and by leaving their stores in charge of such unlicensed clerks. During the week the following druggists of Manhattan Borough were arraigned in the police courts on this charge: A. Richter, 1010 Third avenue; Adolph J. Dittmar, 1180 Second avenue; Carl Koehler, 813 Third avenue, and William Hambergh, 472 Third avenue. Each was held in \$100 bail for trial by the Court of Special Sessions.

The Bill the Drug Clerks Don't Want.

Assemblyman Maher has again introduced the bill to regulate the working hours of drug clerks formulated by the so-called Druggists' League, which passed the Senate and Assembly last year but met a veto at the hands of the Governor. The bill provides that drug clerks shall not work more than 168 hours in two weeks, and its enforcement is placed in the hands of the Board of Health. The bill is labeled a "health measure," but has been referred to the Assembly Committee on Labor and Industries, which announced that it would give a hearing on the measure on Tuesday, January 23.

Buffalo Retailers Form a Wholesale Company.

Several of the leading retail druggists of Buffalo, N. Y., have associated themselves for the purpose of entering the jobbing trade. They will do this under the title of the Buffalo Wholesale Drug Company, which they have just incorporated under the laws of New York, with a capital of \$10,000. The incorporators named in the certificate are R. K. Smither, H. A. Sloan, H. P. Hayes and W. C. Dambach, all retail druggists of Buffalo.

NOTES.

—John A. Clark, treasurer of the Ontario Chemists Manufacturing Company, Ltd., of Hamilton, Ont., came to this city last week to make purchases for the spring trade. He reports a large increase in their business during 1899, and anticipates even greater results for the coming year. His company is a successful co-operative enterprise which requires the druggists to sign contracts to sustain retail prices. While in this city Mr. Clark is making his headquarters with the Empire State Drug Company, at 133 William street.

—H. B. Lumley, who started a drug store in Arlington, N. J., two months ago, failed last week, and his stock was seized by C. B. Smith & Co., wholesale druggists, of Newark, who held a mortgage for \$800. The soda fountain in the store was also mortgaged for \$935. The capital on which Lumley started in business was supplied by a friend, who is a physician. The drug store did not at once pay, and therefore the support was withdrawn. As a consequence, the druggist failed.

—Among the out of town druggists who came to New York during the week to trade in the local wholesale market were Charles Hubbard and of S. W. Snow, of Syracuse, N. Y.; George Stoddard, of Saratoga, N. Y.; Mr. Hepburn, of Plainfield, N. J.; J. A. Walker, of Freehold,

N. J.; F. A. Hubbard, of Newton, Mass.; A. H. Smith, of San Francisco; J. F. Gibson, of Providence, and W. B. Jones, of Philadelphia.

—On Wednesday morning, January 17, an explosion caused a fire in the "Red Cross Pharmacy," conducted by Emil Bruner, at the corner of Eighth avenue and Thirty-fourth street, Manhattan, which did damage to the extent of about \$2,000 before it could be controlled. The store has been closed since, but will be reopened as soon as the necessary affairs can be made.

—A regular meeting of the New York Pharmaceutical Clerks' Association was scheduled for Wednesday afternoon, January 17, at the New York College of Pharmacy, but for some reason unexplained there were not enough members present to form a quorum. The only officer who appeared was a vice-president from Queensborough.

—The Weber Medical Tea Company, of Brooklyn, has secured incorporation under the laws of West Virginia for the purpose of manufacturing and selling a medicinal preparation. Its capital stock is \$5,000. The incorporators are: L. C. Raeger, S. L. Moody, N. Heuschelmer, E. Goepfel, Cora E. Gast, all of New York city.

—F. W. Kinsman, Jr., of the firm of F. W. Kinsman & Co., proprietors of a successful pharmacy at No. 343 Fourth avenue, and who also has a pharmacy at No. 280 West 125th street, has leased a store at the corner of Eighth avenue and Thirty-ninth street, Manhattan, and is preparing to open a new drug store there.

—Dr. R. A. Otiwell, who had been formerly for some time in the pharmacy of George Kneuper, at 263 Broadway, Manhattan, has fitted up a new drug store at 701 St. Nicholas avenue, Manhattan, on the site formerly occupied by the store of Arthur Friedlander, which was sold at auction a few weeks ago.

—W. S. Douglas, for the past twenty-two years in the employ of Ladd & Coffin, has severed his connection with that firm, and associated himself with the Frank Presbrey Co., of 12 John street, to devote his energies to the placing of advertisements and the designing and writing of advertisements.

—T. R. Anderson & Co., of Newton, N. J., have secured incorporation in that State to conduct a drug business on a capital of \$10,000. The incorporators are T. R. Anderson, F. N. Wood, and T. M. Kays, all of Port Jervis, N. Y., where Mr. Anderson has had a drug store for several years.

—Charles Mitzenus, who formerly had a drug store in Jersey City, which he sold last year, has completed the construction of a new store and residence at No. 980 Avenue D, Bayonne, N. J. He opened the new pharmacy last week.

—Incorporation has been secured in New Jersey by the Roberts Chemical Co., of Jersey City, to deal in chemicals on a capital of \$100,000. The directors named are C. N. King, N. R. Vanderhoof, and LeGrand Bouker.

—C. W. Cannon, of the firm of Cannon & Co., retail druggists of No. 2339 Broadway, Manhattan, is preparing to open a new pharmacy at the corner of Broadway and 114th street, about the first of February.

—Max Hartvigson has sold his pharmacy at Amsterdam avenue and 162nd street, Manhattan, to John Delsom. Mr. Hartvigson intends to open another drug store soon, but has not yet decided upon a location.

—Henry C. Roth and Walter Flower, constituting the firm of Roth & Flower, retail druggists at No. 463 Hudson street, Manhattan, have been succeeded by the Flower Drug Co., incorporated.

—Jacob Broadway has succeeded George B. Wert as proprietor of a pharmacy at No. 1047 Bloomfield street, Hoboken, N. J. Mr. Wert gave up the business because of frail health.

—Charles McDowell, a druggist of Paterson, N. J., filed a voluntary petition in bankruptcy on January 15th. His debts amount to \$5,595.45, and his assets are \$4,596.11.

—Assemblyman O'Connell on January 18 introduced a bill in the New York Assembly prohibiting the issuance of trading stamps, and making it a misdemeanor to do so.

—A. F. Segul, formerly manager of the pharmacy of H. S. Johnston, in Maspeth, L. I., has opened a new drug store in Grand street, Maspeth.

—F. A. Seaman, proprietor of two drug stores in Perth Amboy, N. J., started on January 12 for the South, to spend a few weeks in Florida.

—Otto P. Zeitfuss, formerly of Morris Heights, has bought the drug store of Herman A. Garlipp, at No. 65 Union avenue, Brooklyn.

—Drug Clerk W. H. G. Crocker has accepted a position in the pharmacy of Julius Jungmann, at No. 1028 Third avenue, Manhattan.

—J. F. Van Nort, a druggist of 144 West Water street, Elmira, N. Y., is in this city with his family for a visit of a fortnight.

—Horsley Barker has sold his drug store at the corner of First and Grove streets, Plainfield, N. J., to C. M. Nagle.

—William Mueller has bought the drug store of Anton Nielson & Co., at No. 1624 Fulton street, Brooklyn.

—James Rogers has opened a new drug store at Mamaroneck, N. Y.

IN AND ABOUT BOSTON.

Bankruptcy of a Chemist.

Boston, Jan. 20.—In the United States District Court, in Boston, an involuntary petition in bankruptcy has been filed by Azariah F. Crowell, a chemist whose home is in Falmouth. His liabilities amount to \$61,726, nearly all claims being unsecured. There are no assets of practical value. The estate of Edwin D. Crowell of Dennis, holds twenty-one claims, aggregating \$7,543. The estate of Polly D. Crowell has a claim of \$13,200 for money loaned. Other creditors having large claims include the Cape Cod National Bank, \$7,139, and the Cape Cod Five-Cent Savings Bank, \$1,510, both of Harwich; Christopher C. Crowley, of Blair, Neb., has one claim for \$6,666 and another for \$500; the Yarmouth National Bank, Yarmouth, \$3,395; Eva C. Powers, Newton, \$6,666, and a second claim for \$1,789; First Ward National Bank, Boston, \$5,236; Persis A. Crowell, Woods Holl, \$1,000, and the Bowker Fertilizing Company, Boston, \$400.

Proposed Tax of Department Stores Felt to Be Unconstitutional.

Boston, Jan. 20.—The bill introduced in Massachusetts by Senator Innes, whereby a tax shall be imposed on stores "where a variety of goods not included in any distinct line of trade is offered for sale and where there are more than fifteen people employed as salespeople," is not likely to become a law, failing either because of direct votes against the measure or because it is felt to be unconstitutional. In the department stores of this city well equipped departments for toilet goods, manure and like things, creams, lotions, and a hundred and more kinds of articles form an important part of the trade. Some big shops also have drug, patent medicine and prescription department as well. Heads of several firms here express the opinion first, that the bill is wholly unconstitutional, and thus never should pass, and further that should it by any chance be enacted, it would at once result in higher prices on all lines of goods affected by the tax. It is felt to be a limitation upon legitimate trade, and as such most unjust. One leading merchant says the big stores are taxed to the limit now, and deserve no more impositions. Because a firm has succeeded in building up a large business, those who have not succeeded in doing so should not complain. The little shops are not as great sufferers as in their imagination they think they are. The department store business is not confined to one store, but to many, and competition therefore, is rather helped than hindered.

Manufacturers Ought to Give This Author a Life Ticket Good at Any Soda Fountain.

Boston, Jan. 20.—That a play has been given the title of "Moxie" is about as good a means as could be desired for calling attention of the public mind to the beverage by the same name. The writer of this three-act comedy, "Moxie" happened to think the word a good one for the title of his piece. The name is the title of the leading female character. The play has just had a public performance in Brattle Hall, Cambridge, which has been the scene of many swell dramatic performances in years past. Miss Marguerite Hammond played the part of "Moxie." Perhaps no other similar instance is on record of a play being named after a proprietary article. A reversal of this state of things,

PUSHING HIS BUSINESS.

however, is found in "X-zalla," a lotion which druggists keep. A play of that name was once tried, but unsuccessfully. Later those who had been concerned in this theatrical venture stood behind the manufacture and marketing of "X-zalla," the remedy, and thus chose the name for it.

NOTES.

—In an accident whereby a man was knocked down by an electric car and then afterward taken into the Sanford Pharmacy, corner of Washington and West Brookline streets, the proprietor, F. M. Gardner, and clerks of that place, after a quick examination, determined that the man probably was seriously injured internally. An ambulance took the man to the City Hospital, where the doctors could find no marks or bruises of any kind. They thought the man was under the influence of liquor, and sent him to a police station. There he was booked for drunkenness and locked up. Later, however, the house officer was called by him and the man complained that his back pained him, and that he could not move. A physician, after examination, said he thought that the man's spine was injured, and he was taken to the hospital again, showing the correct surmise of the druggists.

—Extensive improvements have been completed at the drug store of W. B. Hunt & Co., Massachusetts avenue, Cambridgeport. New shelves back of the counters have been put in for proprietary medicines; a cashier's desk has been put in near the entrance. A desk for the front of the store is another addition. Irving R. Heath is manager of this store, which is one of several conducted in different places by this firm. Mr. Robbins, one of the partners, also has general oversight of the business, and there are, all told, about a dozen clerks. The store is open all night.

—Among many handsome calendars issued with the incoming New Year is a curious one that the Theodore Metcalf Drug Company have gotten out. It represents a Japanese mother and her child gathering flowers by the side of a river. The calendar is in the form of a pagoda, from the roof of which hang small imitations of paper lanterns. A look inside these lanterns reveals tiny monthly calendars arranged in pairs.

—In a coasting accident, which took place on College Hill, Medford, on Saturday night, January 13, W. F. Turner, a clerk at the College Drug Store, was severely

injured. A heavy double-runner was used, and the front sled collapsed, throwing Turner against a hydrant nearly twenty-five feet away. He was picked up unconscious, and an examination showed a large gash in the thigh.

—Hon. Gorham D. Gilman, of the wholesale drug firm of Gilman Bros., is in constant demand as an after-dinner speaker. At a dinner given this week by the New England Iron and Hardware Association, Mr. Gilman was the guest of honor, and during the evening gave his well-known lecture on the Hawaiian Islands.

—While an express wagon was temporarily left without the driver, some thief stole a large bundle which was on its way to J. E. Garfield's drug store, Maplewood Square, in the Maplewood district of Malden. It contained 400 cigars and twelve pounds of tobacco.

—The late Felix Morris, the comedian, who delighted audiences throughout this country thousands of times during his long career, and who has just died in New York, of pneumonia, was once a drug clerk in a Boston pharmacy, when he was a young man.

—A new business enterprise to be started at Amherst is the bottling and sale of the mineral water which comes from the natural springs on the Orient grounds at West Pelham, nearby.

—Francis Grady, of Clinton, has concluded work at McGrath's drug store to resume his studies at the Massachusetts College of Pharmacy.

—A Boston woman, Ida L. Robinson, has invented a medicine bottle which she calls the "non-refillable," and has had it patented.

—It is probable that W. T. Cummings, a Winchendon druggist, will open a new drug store in the bank building at Baldwinville.

—A new drug store is to be opened at Natick, by M. C. Brigham, on Main street, corner of Central street.

PHILADELPHIA.

Pharmacy Board Meeting.

Philadelphia, Jan. 20.—The January meeting of the Pennsylvania State Pharmaceutical Examining Board was held to-day in the High School building at Broad and Green streets, and as a result there will be a large number of pharmacists residing on Anxious street for a few weeks until the results of the examinations are made known. The board meets four times a year, and the January and October meetings are always held in Pittsburg and Philadelphia simultaneously. This results in a much larger number of applicants than at the other two examinations; the April examinations taking place in Harrisburg and the July examination in Williamsport.

College Social Meeting.

Philadelphia, Jan. 21.—The social meeting of the Alumni Association, held at the Philadelphia College of Pharmacy building on Tuesday evening of this week, was as pronounced a success as its predecessors have been. The evening was spent enjoyably by students and pharmacists alike. The next meeting will be held on Tuesday, February 16, and the second year class will have charge of the affair. These occasions are always conducted by the students themselves, the different classes taking their turns at the honor.

NOTES.

—The Franklin Institute held its seventy-fifth annual meeting on Wednesday evening, January 17th. The annual election of officers took place and all of the former officers were re-elected. The report of the board of managers showed that substantial progress had been made by the society during the year just ended, the membership having increased materially, principally by the accession of non-resident members. The library has also increased greatly and is the most valuable asset of the institute at the present time. The financial condition is also gratifying. The day was one of double significance to the society, being also the one-hundred and ninety-fourth anniversary of the birth of Benjamin Franklin, in whose name the institute was started.

—By reason of the peculiar circumstances and the direct conflict of testimony, the suit brought against Dr. John Tomlinson, pharmacist at Fifty-fifth street and

Westminster avenue, by Joseph Schlick, for \$10,000 damages for personal injuries, was too difficult for the jury to decide in Court of Common Pleas, and the twelve men, after being out over twelve hours, were discharged for not being able to agree upon a verdict. The suit was brought by Schlick in consequence of the alleged sale of carbolic acid in mistake for tincture of iodine, Schlick being badly burned from the use of the substance as a result of the alleged mistake.

—J. W. Landis, superintendent of the Smith, Kline & French Company's laboratories, has been confined to his home in Swarthmore for the greater part of the week. Mr. Landis suffered a slight abrasion of his right thumb last week which had apparently healed, when symptoms of blood poisoning appeared, and for several days it looked so serious that it was feared that he would have to lose the thumb.

—M. N. Kline made a short business trip to Washington on Wednesday of this week. When interrogated as to the proposed reconsideration of the alcohol tax bill, mentioned in last week's issue of the Era, Mr. Kline stated that he had no expectation whatever that the decision would be reversed, and that the chances of a reconsideration even were very slim.

—W. N. White, of Eleventh and Jackson streets, one of the down town druggists, served the judicial district in the capacity of juror during the past week.

—E. L. Klopp has opened a handsome new pharmacy at Glenside, near Ogontz, one of Philadelphia's prettiest and most fashionable suburbs.

—George H. Witmer, the well-known druggist of Bridge-ton, N. J., was noticed among the trade visitors in Philadelphia this week.

—N. M. Osborne has fitted up an attractive store at Ashbourne, Montgomery County, Pa., a few miles outside of Philadelphia.

—Mahlon N. Kline was elected a director of the Trades League at the annual election of officers, which was held this week.

BALTIMORE.

The College and Its Affairs.

Baltimore, Jan. 23.—The monthly meeting of the Maryland College of Pharmacy held last Thursday at the college on Aisquith street, was unusually important. H. A. Elliott was elected first vice-president; C. V. Emich, second vice-president, and J. E. Hengst and Charles H. Ware members of the board of examiners. All were re-elections, with the exception of Mr. Hengst, he being chosen to take the place of Louis Schulze, who had declined to serve another term on the board of examiners. The treasurer's report showed the college to be in an excellent financial condition. Secretary H. P. Hynson reported a falling off in membership during the past year, which prompted the approval of a resolution calling upon the active members of the college to make special efforts with a view to making up the deficiency in the roll.

The committee on the Pharmacopoeia submitted a report practically endorsing the changes suggested by the American Pharmaceutical Association and indicating its preference for certain other modifications. The report was accepted and made the special order of business for the meeting of the college in February, when it will be thoroughly discussed. Much interest was manifested in the discourse of Dr. A. R. L. Dohme on the results of investigations to determine the relative value of different samples of labradori leaves. In ordinary commerce the size of the leaves is permitted to determine the price, the large leaves commanding more than the small ones. Dr. Dohme found that exactly the reverse method of valuation should be adopted, as the small leaves contain more of the active principle—pilocarpine—than the large ones. His address was listened to with close attention. Prof. Daniel Base, of the college faculty, gave a very entertaining talk on "Electricity as Applied to the Manufacture of Chemical Substances." He showed how the ability to produce high temperatures with the aid of an electrical current has already facilitated laboratory work and cheapened processes, so that various substances could be produced at greatly lessened cost. By way of illustration he cited potassium chlorate, which was cheaply obtained by transforming potassium chloride.

The Card System.

Baltimore, Jan. 20.—The Canvassing Committee and the Executive Board of the Baltimore Retail Druggists' Association held a joint meeting on Wednesday last at the Maryland College of Pharmacy. Reports were received from the members of the committee which had been appointed to canvass the retail druggists of the city to ascertain their views as to the proposed adoption of the card system, under which no pharmacist is able to obtain goods from jobbers and manufacturers unless he can show a card proving him to be a member of the trade in good standing. The reports were to the effect that almost absolute unanimity prevailed, nearly every druggist seen having expressed himself as favoring the system. As the canvass was far from complete, however, the meeting resolved upon a reallocation of names, and the Canvassing Committee was instructed to report again to Chairman Owen C. Smith. A called meeting is to be held on January 31 at the Maryland College of Pharmacy, when the association will probably take definite action looking to the adoption of the plan.

With the Bowlers.

Baltimore, Jan. 20.—After a series of victories broken only by a single defeat the Root and Herb team of the Baltimore Drug Trade Bowling Club came to grief last Tuesday evening, suffering two reverses at the hands of the team from the Winkelmann & Brown Drug Company, which was made up of Vordemberge, Kothe, Mueller, Land and Lockwood. The highest score made was only 182, this being the record of Kothe, but all the other members of the team put up a fairly strong game. A remarkable feature of the match was the fact that the losers made a higher average for the three contests than the winners. Last night James Baily & Son met Gilpin, Langdon & Co., taking all three games by 735, 751 and 685 against 721, 733 and 673. Owing to the closeness of the score excitement ran high and much interest was manifested. The standing of the teams is now as follows:

Teams.	Games won.	Games lost.	Percentage.
Root & Herb.....	23	3	.852
Sharp & Dohme.....	20	4	.833
Winkelmann & Brown Drug Co.....	18	9	.667
James Baily & Son.....	10	17	.370
Gilpin, Langdon & Co.....	7	20	.257
Muth Bros. & Co.....	6	18	.250
Parke, Davis & Co.....	5	19	.269

A Question of Ethics.

Baltimore, Jan. 22.—The commissioners of Baltimore County were treated to an exhaustive discussion of the ethics, proprieties and amenities of druggists on last Thursday. Some time ago an order had been passed by the board directing the physician to the almshouse to purchase all of his drugs from the firm of Rich & Saulsbury, at Towson. On Wednesday, after the firm had enjoyed its monopoly only one week, another order was passed instructing the doctor to obtain the required medicaments from Benjamin Marley, also of Towson. At this stage the physician himself took a hand in the game, and asked that both orders be rescinded, so that he might be in a position to buy drugs wherever he pleased. The commissioners were disposed to compromise and offered to give each of the contending druggists a share of the almshouse trade, they to be allowed to furnish supplies for one month alternately. Mr. Marley demurred to this, arguing that his months would be like unto the seven lean cows of the Scriptures, while the rival firm would enjoy the fat months. The commissioners finally settled the difficulty by rescinding the order, and the physician can now get medicaments wherever he desires.

The Pharmacy Law.

Baltimore, Jan. 20.—The pharmacy law for Maryland, advocated by the Maryland Pharmaceutical Association and allied organizations, has been introduced in the General Assembly, Dr. George W. Truitt, formerly in the drug business at Roland Park, being the sponsor. Under its provisions no one may engage in the retail drug trade without a license, which is to be issued only after a successful examination as to competency before a board of pharmacists, who must have had at least ten years' experience and are not to be connected with any school

of pharmacy. All prescriptions must be put up by licensed clerks. The sale of standard articles and of drugs in unbroken packages is permitted in stores, as at present. There are stringent regulations as to the dispensing of poisons, and the purpose of the proposed law is to raise the professional standards. A determined effort will be made to secure its enactment at the present session. This purpose can be accomplished if all the druggists in the State take an active interest in the matter.

The Vogeler Company Assignment.

Baltimore, Jan. 20.—The recent assignment of the Charles A. Vogeler Company, manufacturers of St. Jacob's Oil and other preparations, has had a sequel in the filing, on last Thursday, of a petition to have Christian Devries and his wife, Minnie A. Devries, adjudicated bankrupts. The petition was filed in the United States District Court by the National Mechanics' Bank, the People's National Bank, and Doblér & Mudge, paper dealers. The petitioners claim that the assignment, on December 18, was an act of bankruptcy. It is alleged that Mr. and Mrs. Devries owe the petitioners \$11,630.71. An order was issued requiring cause to be shown why the petition should not be granted.

Two Weddings.

Baltimore, Jan. 20.—Miss Alice K. Rinehart was married at Chambersburg, Pa., last Wednesday, to Howard B. Fahrney, of Dr. D. Fahrney & Son, Hagerstown, Md., manufacturers of proprietary articles. The ceremony took place at the home of the bride, the Rev. T. J. Sherrard, of the Central Presbyterian Church, tying the knot. After receiving the congratulations of friends and relatives the newly wedded pair went on an extensive tour. They will reside at Hagerstown, the groom being a partner in his father's business.

Miss Fannie Hamilton Hogshead, a sister of the Hogshead Bros., the leading druggists of Staunton, Va., was married there last Wednesday to John Dale Clothier, of Marion, Ind., where the couple will make their future home.

NOTES.

—Among those who attended the last meeting of the Maryland College of Pharmacy was Dr. Mercer Brown, of Wye Mills, Md., probably the oldest druggist in the State. He was a member of the college years ago, afterward studied medicine and engaged in the practice thereof, and eventually drifted back into his first profession. Some months ago he opened a store at Wye Mills, and it is his intention to pass the balance of his days there. He relates many interesting reminiscences.

—Druggist E. A. Schaefer, of Pittsburg, Pa., stopped over in Baltimore last week on his way to Florida. He is taking the trip for the benefit of his health, which has lately given cause for some anxiety, and will be away from home for several months. Mr. Schaefer has probably the finest store in the Smoky City, and supplies a number of adjacent buildings with electric light, operating his own plant.

—The Caffeine Drug Company, of Baltimore, was incorporated on Friday last by Louis E. Wetter, Charles Busher, Howard P. Wetter, Walker Jameson and George H. Wetter. The capital stock is \$50,000, divided into \$1 shares. It is the intention of the company to manufacture a proprietary article.

—Druggist W. H. Moore, of Third street and Elm avenue, Hampden, a Baltimore suburb, has been succeeded by J. H. Sencindiver.

—G. H. Danettel has opened his new drug store at the corner of Highland avenue and Baltimore street, Highlandtown.

Low Prices for Medicated Lozenges in Bulk.

In their advertisement in this issue, Billings, Clapp & Co., of Boston, quote some very interesting prices on Brown Mixture, Bronchial and Slippery Elm Lozenges in bulk. Although these prices are unusually low for the fine quality "B., C. & Co." goods are known to possess, they include prepayment of freight, which should secure many orders from close, careful buyers. Those interested can obtain free samples by writing the firm.

CINCINNATI.

The O. K. & I. Exchange.

Cincinnati, Jan. 19.—The members of the Wholesale Druggists' Exchange of Ohio, Kentucky and Indiana held their annual meeting at the St. Nicholas Hotel, on Tuesday, January 16th. Matters of interest to both the jobber and the retailer were discussed, after which the election of officers for the ensuing year was held. Samuel J. Hale, of Cincinnati, was elected president; George Lattimer, Columbus, Ohio, vice-president; Robert Bradley, Toledo, Ohio, secretary and treasurer. Among the many jobbers in attendance were E. H. Neat, W. H. Richardson, Arthur Peter, Charles H. Pettit, Louisville, Ky.; J. R. Miller, J. G. Mueller, A. Mooney, J. Carey, M. Ward, Indianapolis, Ind.; G. F. Sichelstiel, C. T. Walther, G. H. Kelly, Jr., Pittsburg, Pa.; E. T. Strong, Cleveland, Ohio; George B. Kauffman, G. W. Lattimer, J. D. Price, Columbus, Ohio; W. J. Walding, J. S. Kinnan, R. H. Bradley, Toledo, Ohio; A. Bailey, Zanesville, Ohio; Carl Leich, Evansville, Ind.

The visiting members were entertained while here by the local wholesale druggists—Hale, Justis & Co., The Stein-Vogeler Co., and Lloyd Brothers. Among the pleasing features was a banquet at the St. Nicholas, an evening at the Columbia Theatre and a trolley ride on chartered cars through the city; also a visit to the Zoological Garden. The next meeting will be held at Indianapolis.

Campbell County Association.

Cincinnati, Jan. 19.—The Campbell County Druggists' Association held a meeting at Newport, Ky., this afternoon, and elected officers for the following year. Several new members were elected, as follows: Miss Ada Scheffner, Miss Louise Scheffner and Mr. N. J. Blank. The officers elected were: Charles F. Keener, president; Miss L. G. Scheffner, vice-president; H. Wertheimer, treasurer; Guido Schmidt, secretary.

Retailers' Insurance Company.

Cincinnati, Jan. 20.—The Retail Druggists' Insurance Association has elected the following officers: M. A. Burkhardt, Dayton, Ohio, president; Robert Groenland, Cincinnati, Ohio, treasurer; John Weyer, Cincinnati, Ohio, secretary; F. T. Bower, Toledo, Ohio, John Byrne, Columbus, Ohio, J. C. Firmin, Findlay, Ohio, Phillip Lehr, Cleveland, Ohio, directors. A bitter fight was waged for the office of treasurer between Mr. Groenland and Charles T. P. Fennel who has held the office for several years. Mr. Groenland was elected by a handsome majority.

Bowling.

Cincinnati, Jan. 20.—The Druggists' Bowling Club met at Kunkel's Alleys yesterday afternoon and made several remarkable scores. All the contestants were in good trim, particularly Ralph Freiher, who scored very nearly 200. The Oskamp-Nolting Co., wholesale jewelers, have offered a stick pin to any member who makes a score of 200 or over. This will prove an incentive to the members, and next week's meeting will no doubt have a very large attendance.

NOTES.

—Miss Gertrude, a daughter of Otto Betz, the druggist at Hyde Park, met with an accident Friday which came near proving serious. While helping prepare a luncheon at a church party she accidentally turned on the knob of a gas stove, which ignited and set fire to her clothes. It was at first feared that her eye-sight was destroyed, but upon examination it was found that she had escaped serious injury.

—The seventy-fourth regular meeting of the Cincinnati Chemical Society was held at Hanna Hall on the evening of January 17th. The feature of the meeting was a paper read by Dr. Otto Dieckman on "Original Researches in Methyl-Benzamid-Azole." Dr. Dieckman's address was listened to by a very appreciative audience. Dr. Thomas Evans, the new president of the society, presided.

—Stein-Vogeler Drug Co. celebrate the fiftieth anniversary of the establishment of their house by issuing a jubilee number of the Review, published by them. They claim it to be the most complete list ever issued from this city.

—L. D. Fitzhugh has opened a drug store at Lexington,

Ky. Mr. Fitzhugh has served in the United States Navy for the past five years. He purchased his stock and fixtures in Cincinnati.

—The venerable father of Joseph and George O'Maley, well known druggists of Covington, Ky., died on Monday, January 15th, at the O'Maley residence on Walnut Hills.

—Henry Meiner, at Western avenue and York street, is opening another store at Race and Liberty streets, in the premises formerly occupied by Grimme's Pharmacy.

DETROIT AND MICHIGAN.

Annual Elections.

Detroit, Jan. 20.—During the week now closing the annual meetings of the principal drug firms of this city have been held and officers elected—in most cases old officers re-elected. At Parke, Davis & Co.'s, all of the officers and the board of directors are as they were last year: President, T. D. Buhl; vice-president, D. C. Whitney; secretary, H. A. Wetzel; treasurer, J. H. Smedley; general manager, William M. Warren.

Nelson, Baker & Co. also re-elected their old officers: President and general manager, E. H. Nelson; vice-president, George Peck; secretary, Dr. A. B. Lyons; treasurer, William S. Baker.

The officers of the Michigan Drug Co. stand as they did last year: President William C. Williams; vice-president and general manager, James E. Davis; second vice-president, Charles C. Hinchman; treasurer and auditor, John M. Hinchman; secretary, A. S. Brooks.

It is rumored, although not officially stated, that so satisfactory was the showing made for 1899 by the above-named firms, that their general managers received a very material increase in salaries. It is stated, without reserve, that the year's business was something unprecedented and unlooked for. They attribute it to three things: First, to the "better times" existing all over the country; second, to most extensive advertising; and third, to the large increase in the force of travelling representatives. In the last five years the number of travelling men has been about doubled for each firm, and they are all men who sell goods. There are no unvisited spots of any size in the territory, and dealers do not have time to forget from one visit to another. A most satisfactory business for the present year is anticipated.

More Stearns Generosity.

Detroit, Jan. 20.—The Regents of the University of Michigan have made public announcement of the recent magnificent gift of F. K. Stearns, of Detroit, of a famous collection of musical books, scores, and sheet music. A short time ago Frederick Stearns gave to the University a wonderful collection of musical instruments, gathered from every quarter of the globe. This supplementary gift of F. K. Stearns gives to the University of Michigan the most complete musical library in the country—Yale and Harvard not excepted. Prof. A. A. Stanley, of the School of Music, is placing and assorting the volumes, of which there are about 1,600. There are many full sets of the old masters and much of modern composition, the classics of every language and nation being represented. It is estimated that the value of the gift is near \$3,000. F. K. Stearns has spent several years in gathering the scores, and his critical study of the subject has enabled him to select only that which is of the greatest value.

Drug Clerks' Annual Meeting.

Detroit, Jan. 20.—The annual meeting of the Drug Clerks' Association of Michigan was held on Thursday evening last, and the following officers elected: President, G. W. Stevens; first vice-president, A. P. Young; second vice-president, J. A. Stewart; recording secretary, A. M. Edwards, Jr.; financial secretary, W. F. E. White; treasurer, W. S. Dupont. F. E. North, E. Kolbe, Joseph Hackett, W. M. Longstaff and G. E. Robinson, chairmen of the various committees of the association, will form, together with the regular officers, an executive committee or board which will meet once a month to attend to the business of the organization. Besides, there will be, once a month, a regular meeting of the association as a whole, with some kind of a social feature in connection. The association has every indication of a prosperous future.

CHICAGO.

The Sunday Closing Question.

Chicago, Jan. 20.—At a meeting of the Southwest Side Druggists' Association, held night before last at Stiles' Hall, on Millard avenue and West Twenty-second street, it was decided to arrange for a meeting of all the druggists in Chicago in the near future to discuss the question of Sunday closing. The attendance was unusually large, and, with one or two exceptions, enthusiastic on the subject of Sunday closing. For some time this association has been agitating the early closing idea. It is the pioneer in this line in Chicago, so far as practical results are concerned. It has accomplished the closing of drug stores in the southwest part of the city at 7 p. m. on Sunday evenings, and now sets out to accomplish a larger work for all the druggists of Chicago.

Fred. A. Thayer, at West Madison street and Ogden avenue, declares himself opposed to the Sunday closing of drug stores, at least in so far as it relates to his store. "It is always necessary to have a man on duty," said Mr. Thayer, "and when there is a clerk here he might better be waiting on customers than killing time. Drug stores are primarily to supply the wants of sick people. People become sick on Sunday just as readily as on any other day."

W. A. Armbricht, No. 325 West Madison street, is decidedly opposed to the Sunday closing plan. "It is only taking money out of the druggist's pocket," said Mr. Armbricht. "I am not over-worked. I take Sunday afternoon or evening off every Sunday, and allow my clerk to get away from duty when I am on. My clerk gets every Wednesday off, and that should be enough for him. Sunday is the best day I have, and I do not think it would show very good business judgment on my part to close my doors on the day on which I can make the most money. My cigar and soda water trade on Sunday make up for a great many other shortcomings of the week."

Milton C. Smucker, Ashland Boulevard and West Madison street, is a strong advocate of Sunday closing. Mr. Smucker said: "It is next to the best day I have the year around, but I would be only too glad to close if my fellow druggists would do the same. There is no reason why they should not close that I can think of. My soda water trade is better than that of the vast majority of druggists, located as I am here on the Boulevard. It will be a hard task to bring the druggists to a head on the subject, but the subject is one which is entitled to a great deal of consideration. Most of the men in the business have been accustomed to spending such long hours in their stores that they have gradually grown to believe there is nothing else for them to do, and that is the reason they are so set in their way of thinking. I presume that with the proper amount of consideration they would at least make an effort to take part of the day on Sunday. An example of how hard it is to get them to close their stores can be seen in an experiment I tried on Chicago Day, 1898. I went to all the druggists in the neighborhood and asked them to close on that day, and they all agreed to do it, but when Chicago Day came around there were as many of them who allowed their stores to remain open as closed. I afterward took them to task about it, and each one began to tell me about some other fellow who had not closed. That is the way it goes. Each one is waiting for his neighbor to close, and as a result none of them close."

J. S. Stiles, No. 1812 West Twenty-second street, is enthusiastic over the success of the plan so far as it has been carried out. Mr. Stiles has suggested that the druggists make a canvass of their customers. He wants the subject left to a decision by vote of the people. The vote, he says, can be taken in each store, if the druggists will get together on the question and ask their customers as they come into the store to cast a vote either for or against Sunday closing. In this way, he says, the people will have the say whether the store shall be closed, and then if anything should happen because the corner drug store was not open there could be no blame lodged against the druggist, and it would show only the more plainly the wisdom of people keeping themselves supplied with medicines which experience has taught them they are the most likely to need at any time.

O. J. Freeman, at North Clark street and Sheffield avenue, believes in the commandment to keep the Sabbath day holy, and ever since he has been in business has closed his store on Sunday. He lives in the flat over his store, and an electric bell and speaking tube are put in use. Whenever a prescription is required to be filled on Sunday he attends to it, otherwise the store is closed. J. Walther, Jr., at West Polk and Paulina streets, is of the same opinion. Many of the downtown druggists favor Sunday closing because Sunday is a day when the streets are practically deserted and little business is done.

A Drug Store Episode.

Chicago, Jan. 20.—One evening a week or so ago a man entered the drug store of W. T. Adams, at Fifty-fourth and Halsted streets, and accosted the clerk, Mr. Henniger, with the command, "Hands up!" at the same time pointing a revolver. The clerk's brother took in the situation from behind the prescription case and immediately issued forth with a chair, which he heaved at the robber, knocking him down. Before the brothers could close on him, however, he had leaped to his feet and fled. It is said that he ran so fast that the rush of air in his wake blew off the hat of a pedestrian just passing. The Henniger brothers are expert boxers, and extend the robber a cordial invitation to call around any time and settle the matter with each in turn a la Marquis of Queensbury.

Bowlers.

The score of the Chicago Drug Trade Bowling Club last night was as follows:

Delbridge	120	92	95
Storer	147	124	127
Thomas	136	221	147
Armstrong	167	160	187
Matthews	147	170	176
Odert	129	109	109
Bauer	139	106	167
Medbery	156	157	173
Block	94	133	147
Peebler	112	144	125
Waldron	171	127	136

Mr. Armstrong made the best score, and wears the medal.

NOTES.

—The following remarkable order was recently sent by Morrison, Plummer & Co., to Morris D. Newman & Co., of Philadelphia, makers of the "White Knight" cigar: Jan. 8, 1900.

To Morris D. Newman & Co.,
Cor. Broad and Walker Sts.
Enter our order for one million "White Knight" cigars.
Ship fast as possible.

MORRISON, PLUMMER & CO.,

Per G. A. Showers, Mgr. Cigar Dept.

—Above the door of W. C. Barrel's pharmacy, at Lake and Dearborn streets, is a sign reading: "For thirty days, all physicians' prescriptions compounded, 10 cents." Inquiry elicited the fact that the customer having a prescription filled would be charged at wholesale rates for the drugs used and 10 cents for the labor of compounding. The sign is therefore literally true—"compounded for 10 cents."

—On the night of January 14 fire broke out in the rear of the prescription case in Manley & Simmons' drug store in the Stewart building, at Washington and State streets. The damage was slight. The fire, it is said, was caused by sulphur left burning in the drug store for the purpose of suffocating moths.

—I. N. Emory, for many years manager of the pharmacy of H. Hurlbut, Sixty-seventh street and Wentworth avenue, which was sold recently, has opened a laboratory in the place formerly occupied by the drug store, and will put up prescriptions and manufacture his own preparations for the market.

—McKenzie Brothers, formerly at West Thirty-fifth and Paulina streets, have bought the drug store of Dr. A. O. Wright at Waukegan, Ill. One of the brothers has just returned from a three months' vacation in Scotland, and he declares that the United States is the only country to live in.

—The two men who robbed Engel's pharmacy, at Forty-seventh street and Union avenue recently, were caught last week and have been held to the Grand Jury. They

are old offenders, and the evidence against them is strong. They will probably receive the maximum sentence.

—The wife of I. W. Blood, the well known druggist at Forty-first street and Cottage Grove avenue, died suddenly last week of pneumonia. The many friends of Mr. Blood extend him their most heartfelt sympathy.

—The baby girl of Mr. and Mrs. George V. Haering, at Madison and Jefferson streets, died very suddenly week before last. The many friends of Mr. an Mrs. Haering extend profoundest sympathies.

—Mr. Skillman, of Skillman & Stone, Spokane, Wash., having been on a visit to his former home in Ohio, stopped in Chicago on his return and left a good order with Morrison, Plummer & Co.

—The firm of Lang & Nienaber, at Twenty-second and State streets, has dissolved partnership. Mr. Nienaber will continue the business under the name of the "Crown Pharmacy."

—David Kaplansky, formerly manager of the Alliance Prescription Pharmacy, in the Alliance building, Chicago, will open a new drug store in Michigan City, Ind.

—Saul C. Sexauer, of Wilmette, Ill., a former druggist, filed a petition in bankruptcy this week. His liabilities are \$5,396.96, and has assets \$264.60.

—Asa Oren, formerly at Sixty-ninth and Halsted streets, has opened a drug store at Sixtieth street and Center avenue.

—A. F. Hautau has bought the store formerly owned by J. M. Godfrey, at Washtenaw and Portland avenues.

—George B. Baker, the well-known druggist, is laid up with an attack of influenza.

THE NORTHWEST.

C. T. Heller on the Board.

St. Paul, Minn., Jan. 19.—Governor Lind this week appointed Charles T. Heller of this city a member of the State Board of Pharmacy, to succeed William A. Frost, whose term has expired. Mr. Heller, who is treasurer of the N. A. R. D. and one of the brainiest and most progressive druggists of Minnesota, will prove a valuable acquisition to the board. Mr. Frost, who retires, has served on the board many years, much of the time as president, and has ever been vigilant and efficient in guarding the interests of Minnesota pharmacists. Mr. Heller, it is understood, will be secretary of the board, succeeding the retiring one.

NOTES.

—Successions: H. F. Fisher, Delta, Ia., by Mitchell & Fisher; Hulett & Erickson, Red Oak, Ia., by G. B. Erickson; J. A. Monohan, Minneapolis, Minn., by A. D. Larson; F. A. Mayo, Bemidji, Minn., by Mayo & Barker; S. C. Gibbs & Co., Hamburg, Ia., by C. Stoner & Co.; John J. Palmer, Gibbon, Minn., by Paul Kuske; L. O. Kron, Rothsay, Minn., by O. H. Ekeren; City Drug Store, Grants Pass, Ore., by J. A. Sloyer; J. A. Peterson, Henning, Minn., by E. T. Dillner & Co.; Stevenson & Co., Emerson, Ia., by A. O. Blair; J. S. Pierson, Trempleau, Wis., by J. S. Pierson & Son; W. J. Graham, Park River, N. D., by the Dunn Drug Co.

—Injunction proceedings have been commenced in the United States Circuit Court in this city by Farbenfabriken of Elberfeld, Germany, against Henry McCall. The action is to restrain the defendant from selling a patented drug known as phenacetine and to compel him to account for income and profits of past sales. This is one of a large number of similar suits instituted throughout the country.

—Every druggist in St. Paul, with one exception, has signed the pledge not to handle Cuticura medicines. The missionaries are now trying to get the Minneapolis druggists in line.

—E. I. Barker, who has for several years been the pharmacist at the State Hospital, Fergus Falls, has bought a half interest in Mayo's drug store at Bemidji.

—H. S. Clark has gone to Hutchinson this week to invoice a drug stock for Mr. Frankenfield, who is in California seeking health.

—W. J. Graham, Jr., Park River, N. D., N. W. Smith, Albany, Ore., and the John G. Slayden Co., Spokane, Wash., have sold.

—E. T. Dillner, who has recently bought out the Peterson drug store at Henning, was in the city on business this week.

—Among a number of business men burned out at Wadena, Minn., this week was Druggist R. F. C. Iltis.

—W. E. Chilcote, of Chilcote & Cook, Washington, Ia., died this week. Cook & Sherman succeed the firm.

—The stock and store of T. J. Martin, Mason City, Ia., were damaged by fire the other day.

—L. C. Edwards has started in at Sumpter, Ore., and O. K. Wineman at Duluth, Minn.

—Hodgins & Reese, Moscow, Idaho, and Howard & Mahan, Carson, Idaho, have dissolved.

—J. W. Morgan's building at Watsburg, Wash., was partially burned this week.

—Dr. Henry Chappelle, head of the Chappelle Drug Co., Billings, Mont., is dead.

—W. R. K. Johnson, Turtle Lake, Wis., has sold his branch at Balsam Lake.

—J. A. Sullivan has withdrawn from George H. Gardner & Co., Perry, Ia.

—E. T. Gibbons is going to Kilkenny to run Piesenger's branch store.

—F. H. Richman's store at Waterville, Minn., was singed recently.

—W. E. Kraft is now working in J. P. Allen's store in St. Paul.

—Rudolph Best, Milwaukee, has given a bill of sale.

—Sam Ellingsen is working in Grand Forks, N. D.

ST. LOUIS.

Changes in P. D. & Co. Force.

St. Louis, Jan. 20.—C. F. Allen, who, as reported last week, has succeeded Mr. Carter as manager of the St. Louis office of Parke, Davis & Co., is a man of wide experience in his line, having formerly been with John Wyeth & Bro., and more recently representing Reed & Carnrick in the Northwest. Several further changes have been made in the force. Al. Finke, formerly representing them in Illinois, has gone with Luytjes Homeopathic Pharmacy Company, in Indiana, and his territory will be taken by J. F. Cummings, formerly of the city force, E. C. Bauer leaves to-day to accept a position with the Luytjes Homeopathic Pharmacy Company. Robert L. McCormack and J. C. Hester are posting up to take city positions. J. D. Van Hook will cover Missouri, as in the past. The offices in the Chemical Building will be refitted. H. M. Ferris, who has been here since January first, will return to Detroit in a few days.

For a New Glass Plant.

St. Louis, Jan. 20.—A report became current in East St. Louis yesterday that a new glass manufacturing plant was to be started in that city shortly by persons now connected with the Obeur-Nestor Glass Company, whose works are in East St. Louis, and whose salesroom is at Main and Vine streets, in this city. Mr. S. H. Wyss, of East St. Louis, when asked about the transaction, said that he had an option on the stock owned by Fred and Michael Nestor, in the Obeur-Nestor Glass Company, and that the two brothers would probably retire from the company, and, with Dr. H. J. de Haan, of East St. Louis, start a rival factory. Joseph Nestor, vice-president of the Obeur-Nestor Glass Company, remaining with the old firm. The location contemplated was said to be some distance from the business section of East St. Louis, on the line of the Louisville & Nashville Railroad.

A Druggist Graber.

St. Louis, Jan. 20.—Walter L. Graber, druggist, at 712 Carr street, is going to inaugurate an unique departure. He will run a private bank in connection with his drug store. The capital stock will be \$5,000, and Mr. Graber will be president, cashier, receiving and paying tellers, and, in fact, the whole thing. He filed notice of his intention on Thursday of this week. Banks of this kind are common in smaller towns, but very unusual in large cities.

Paint, Oil & Drug Club.

St. Louis, Jan. 20.—St. Louis Paint, Oil & Drug Club held its annual banquet at the Mercantile Club Thursday evening. About seventy-five persons were present, including ladies. President A. M. Hughes, of the Kansas City Paint, Oil & Varnish Club, was one of the guests

of the evening and made an address. Other speakers were W. E. Scheppe, C. P. Walbridge and Rev. Dr. Luc-ock. President Biot acted as toastmaster.

Alumni Will Dance.

St. Louis, Jan. 20.—Great preparations are being made for the annual dress ball of the Alumni Association of the St. Louis College of Pharmacy, which will take place at Liederkrantz Hall the night of February 1st. Two thousand invitations have been sent out. Elegant souvenirs, consisting of silver cups in the form of druggists' mortars, will be given to the ladies. The entertainment committee consists of T. F. Hagenow, acting as chairman in the absence from the city of W. M. Lamont; R. S. Vilt, A. V. Marquardt, L. A. Seitz, Paul Schneider and Dr. O. F. Claus.

NOTES.

—The St. Louis Academy of Science will give a popular demonstration of the uses of the microscope in some of the sciences, arts and industries on the evening of February 5th, at its building, Sixteenth and Locust streets. The idea originated with Dr. H. M. Whelpley, who will have general charge. The other members of the faculty of the St. Louis College of Pharmacy who will assist are William K. Ilhardt, Dr. Otto A. Wall, Jr., O. H. Elbrecht, and Dr. J. C. Falk.

—The Grebe Drug Company, East St. Louis, has postponed opening the branch store previously reported until the new works of the Shickle, Harrison & Howard Iron Company commence operations, which will be about April 1st, as the store will be mainly dependent upon their employes.

—William Graham has offered \$10 to the first member of the Druggists' Cockeyed Hat League who rolls eighty. Louis Pauge made a wild attempt to win the prize Thursday evening and only missed it by two points, scoring seventy-eight.

—It is rumored that Ludwig & Bremmer, proprietors of the Newstead avenue pharmacy, contemplate opening a branch store on North Broadway.

—J. M. Campbell, formerly in the drug business at Albany, Mo., will represent the Moffit-West Drug Company in Northern Missouri and Iowa.

—Mr. Kallis, formerly clerk for J. L. Hilby, contemplates going into business for himself, but has not decided as to location.

—The Fountain Park Pharmacy, since its removal from Euclid avenue and Suburban, has changed its name to the Gem Pharmacy.

—The drug firm of Blackburn & Ellis, Ellsberry, Mo., has been dissolved. The business will be continued by Mr. Blackburn.

—B. H. Plumbge, formerly clerk at Maxter's, will open a drug store at 8034 North Broadway about February 1st.

—W. R. Grant, 3718 Olive street, has returned from his trip to Eureka Springs much improved in health.

—William Tritschler, formerly with C. T. Hahn, has gone with H. J. Black & Co. as city salesman.

—John H. Allen has taken hold of the local interests of the U. S. Pharmaceutical Company of Chicago.

—Gaster & Baker will open a new drug store at Morrell, Ark., about February 1st.

—Louis Bray, formerly with J. A. Fritz, is now with the Arcade Pharmacy.

—Hutchison & Swan have succeeded Hutchison & Robinson, Troy, Mo.

—W. D. Kuhlman, druggist of Nashville, Tenn., has been in the city.

father, the son moved to Commercial street. He retired from active business a few years ago, yet kept his office, where he had a counting room and transacted business connected with his private affairs. Up to within two years he was found daily at his desk. He was a member of the First Parish Society of Watertown, and was for years identified with the old Brattle Square Church in Boston. The funeral services were held from his late residence, on Mt. Auburn street, Watertown.

GEORGE H. NICHOLS, founder of the Nichols Chemical Co., of New York City and Laurel Hill, L. I., died at his home, No. 253 Clinton avenue, Brooklyn, on January 9. He was born in Rhode Island seventy-seven years ago, and had lived in Brooklyn for fifty years. He retired from the active management of the Nichols Chemical Co. several years ago. Mr. Nichols was a deacon and trustee of the Clinton avenue Congregational Church, Brooklyn, a director of the Brooklyn Eye and Ear Hospital, a member of the advisory board of the Brooklyn Orphan Asylum, and a patron of the Home for Consumptives and of the Children's Aid Society. He left three sons, William H., E. R., and G. E. Nichols.

EDWARD S. ANTHONY, who has just died at Providence, R. I., was one of the oldest druggists in that city. His death, which was from heart failure, was unexpected. He had been about attending to his business up to the day before he died. He was treasurer of King Philip Lodge, F. and A. M., was a charter member of Godfrey DeBouillon Commandery, and a member of the Fall River Lodge, I. O. O. F. He was about fifty-five years old.

JABEZ S. PAUL, who died at his home, 1318 North Carey street, Baltimore, on January 17, entered the employ of W. S. Frey & Co., dealers in sponges and wholesale druggists, on South Calvert street, when ten years old. At one time he conducted a drug store on Pennsylvania avenue. He was seventy-nine years of age and is survived by several children.

ALEXANDER SCOTT, SR., one of the best known residents of the Eighth Ward, Pittsburg, Pa., died at his home, 1312 Webster avenue, on January 1, in his seventy-fifth year. He was with the drug firm of R. E. Sellers & Co. for thirty-five years.

SAMUEL H. DRUIT, in his sixty-fourth year, died on January 14 at his home, 64 Southern avenue, Pittsburg, Pa., of apoplexy. He was one of the pioneer residents of Mount Oliver and had been in the drug business for twenty-five years.

NELSON WILLIAMS, for thirty years a resident of Minneapolis, Minn., and at one time engaged in the wholesale drug business with George R. Lyman, died December 30. He was seventy-five years of age.

EDWIN S. ROSE, of Camden, Me., a druggist well known throughout his part of the State, died from paralysis, December 23. He was fifty-one years of age and leaves a widow.

MILTON BURGESS, of the firm of Downar & Burgess, druggists at Cambridge, Ohio, died December 21 from the effects of an overdose of cocaine. He was thirty-four years old.

DR. DAVID WHYBORN, a druggist, sixty-four years of age, died January 9 at Syracuse, N. Y. Death was due to a complication of diseases. A widow and one daughter survive.

WESLEY W. SAWHILL, one of the oldest druggists of Pittsburg, died January 9. He had been in ill health for some time. He leaves a wife and six children.

PAUL D. CARTER, a druggist at Lehigh, Indian Territory, died recently. His remains were taken to Wichita for interment.

GEORGE W. HEYER, druggist, Houston, Texas, died January 12. He was thirty-seven years of age.

OBITUARY.

GEORGE A. STEARNS, an old-time Boston merchant, has just died at his home in Watertown, of old age. He was born in Boston in 1813, and was educated in Boston, and then went into business with his father under the firm name of Simon Stearns & Son, with offices at No. 8 India street. He was a dealer in potash, made from the wood in New Hampshire and Vermont, in the days before chemicals for manufacturing this product came into use. The firm was a leader in its line and enjoyed almost a monopoly for several years. After the death of the

SOUTH AFRICA.

Gen. Buller's army in Natal is making a strong effort to relieve Ladysmith and enter the Transvaal Republic. To accomplish this, Sir Charles Warren has attacked the extreme right of Gen. Joubert's army and is trying to turn his flank. Heavy fighting, with generally favorable results for the British, occurred last Saturday and Sunday. Continued skirmishing and heavy artillery fire are in progress, and the British report steady, although slow, advance.

Major-Gen. Sir Frederick Carrington, the well-known South African officer and commander of the Belfast District, has been ordered to South Africa.

Charles E. Macrum, formerly United States Consul at Pretoria, left Port Said the 15th on the steamer Koenig, for Naples, on his way home.

It is said at Johannesburg that twenty field guns were recently smuggled through Delagoa Bay for the Boers. On the 10th, Mafeking was held out as stoutly as ever. There was then no likelihood of capitulation. The garrison had plenty of cattle and tinned meats.

The British loss in killed, wounded and captured, up to the time Gen. Buller's forces crossed the Tugela River, amounted to 7,987 officers and men; the Boers' loss, to 6,425.

A mass meeting of women of Vancouver was held the 18th to arrange for providing the British soldiers in South Africa with necessary comforts.

The German Post Office has, in view of the British cable regulations, advises the German people, when writing messages for African cable lines, to use the English language, avoiding cipher.

The British War Office announces the appointment of the Duke of Marlborough as staff captain in connection with the Imperial Yeomanry, who are going to South Africa.

The cargo of the German mail steamer Bundesrath, detained by the British, has been released, and she will reload and proceed.

The German bark Marie, loaded with flour for the Transvaal Republic, was seized in Delagoa Bay the 19th and sent to Durban as a prize crew.

Formal orders have been issued from the British War Office to mobilize the Eighth Division of the British Army.

Adelbert Hay, the new United States Consul for Pretoria, arrived at Cape Town the 19th, and started next day for his new post.

Assistant Secretary of the Interior Davis is visiting the Transvaal. President Kruger, it is reported, has offered him the use of his private car.

Montagu White, the Transvaal's London agent, is in Washington.

A meeting in support of the Boer cause was held in Washington Sunday. Several Senators and Representatives made addresses.

THE PHILIPPINES.

Brig.-Gen. Kolbe has been appointed Governor of Albay Province and Catanduanes Islands, and has been given temporary charge of the islands of Samar and Leyte, his command embracing the principal hemp ports, and he has sailed with a brigade to occupy the country.

Great excitement has arisen in the Philippines over reports that Archbishop Chapelle intends to reinstate the friars.

Gen. Wheeler is to start soon for this country from Manila.

Repeated victories of the American troops over the Tagals in Luzon are reported, and the natives are being driven southward.

Col. F. F. Hilder, of the United States Bureau of Ethnology, has been ordered to the Philippines to make a thorough investigation as to the ethnological, ethnological and general scientific conditions in the archipelago.

Beginning April 1, the Philippine postal service will be placed upon an independent footing, as in Cuba and Puerto Rico. Heretofore the Philippine service has been under the supervision of the Postmaster at San Francisco.

Later advices from the Island of Negros show that the recent uprising was not a rebellion of the local police, as first reported, but an organized insurrection, led by officials, who had been put into local offices by United States authority. More outbreaks are feared.

OTHER FOREIGN NEWS.

Persistent rumors that Germany is trying to acquire Macao continue, in spite of the assertions of the German Foreign Office that the rumors are the inventions of certain colonial enthusiasts.

The German Health Office has adopted plague precautions.

Fritz Plank, the famous Bayreuth Wagnerian singer, who recently fell thirty feet in the Royal Theatre at Carlsruhe, has died of his injuries.

Emperor William has commissioned William Pape to paint a picture commemorative of the recent New Year's court reception. Ambassador White will figure in the painting.

The Customs Committee of the French Chamber of Deputies has resolved to hear delegates from the industrial and agricultural bodies before deciding in regard to the Franco-American commercial treaty.

Official figures show that Germany's exports to the United States were \$90,900,461 last year, an increase of \$8,548,847 over 1898.

Referring to a Washington dispatch concerning the "open door" in the Philippines, Ambassador White said at Berlin on the 18th that in all discussions with Count von Buelow regarding the "open door" in the East, it had been assumed that such a policy would be reciprocated in the Philippines, although no formal request for a promise had been made.

A petition has been presented to the British Columbia Legislature from all the leading mines of West Kootenay, representing \$50,000,000 worth of capital, seeking the repeal of the eight-hour law, and declaring that it has been prematurely and improperly introduced, and has excluded capital and deprived mine owners of working at a profit.

Foreign bankers in Caracas have been thrown into a fortress for refusing to lend money to the Venezuelan Government.

John Ruskin, the famous English author, died Saturday from influenza.

Richard D. Blackmore, author of "Lorna Doone," died in London on Sunday.

The United States Minister at The Hague has informed the Government of States that a new order has been issued exempting from duty sulphuric ether, required in the preparation of albumen from milk.

The Swiss Bundesrath has granted permission for the importation of dried American fruits and fresh fruits, subject to examination at the Basle Custom House.

The German shoe industry has begun an agitation in favor of a higher duty on American footwear.

Gen. Torres and his Mexican troops are reported to have administered a crushing defeat to the Yaqui Indians at Micoyaca on the 18th, killing over 200 and taking 500 prisoners.

A severe earthquake shock was felt in Mexico the night of the 18th, with the disturbances extending from the Atlantic to the Pacific. Seven lives were lost in Colima, and sixty persons injured. In Guadalajara several churches were damaged, and in Mexico City there was some damage and much excitement.

CONGRESSIONAL.

The debate on the Philippine question was continued with spirit last week. Senator Pettigrew, of South Dakota, on the 16th made a bitter attack on the Administration. Senator Colfax, of Colorado, in reply, made a scathing arraignment of Senator Pettigrew, and sharply criticized Senator Beveridge's speech for the spirit of greed which seemed to animate it. On the 16th Mr. Pettigrew proposed an amendment to the Hoar resolution of inquiry calling for the President's instructions to the Paris Peace Commissioners, was rejected by a vote of 41 to 21. The Hoar resolution was adopted by the Senate on the 17th. Senator Wellington, of Maryland, spoke for an hour on the Philippine question on the 18th.

The Senate Committee on Inter-oceanic Canals agreed unanimously on the 16th to report a bill for the construction of the Nicaragua Canal.

Mr. Richardson made an attack on the Secretary of the Treasury in the House the 16th for his course in connection with the New York Custom House sale.

Mr. Hopkins, of Illinois, replied, defending the Secretary.

The Senate has determined to take the final vote on the Financial bill February 15.

The Senate on the 17th adopted the Hale resolution inquiring in regard to the British seizure of American flour.

The House on the 17th passed the Urgency Deficiency Bill.

The House on the 18th passed the Senate bill to extend the powers of the Director of the Census.

The Mississippi Senate on the 18th adopted a memorial to Congress, asking the Government to take entire charge of the Mississippi River levees.

The House Committee on Election of the President and Vice-President have agreed to report favorably on the joint resolution for an amendment to the Constitution for the election of United State Senators by direct vote of the people. The Senate has not shown any disposition to favor any such resolution, however.

Senator Hale, of Maine, delivered an impassioned speech in the Senate on the 19th, declaring that nine-tenths of the American people sympathized with the Boers in their struggle with Great Britain. He said that the war "had been brought on by a sharp Cabinet Minister engaged with gold speculators."

The Pension Appropriation bill (amending \$145,245,250, was passed by the House on the 19th after a sharp debate, in which the Northern Democrats assailed the Commissioner of Pensions.

Representative Payne, of New York, chairman of the Ways and Means Committee, introduced a bill on the 19th to extend the customs laws of the United States to Puerto Rico, and make it a customs district.

The Senate ratified the Samoan treaty on the 16th, but

THE "PITTSBURG"

DESCRIPTION

The entire front is of selected foreign Onyx. The double-thick ends are Onyx inlaid, with Onyx top and base moldings and tablets. This apparatus fills the demand for a fountain making nearly if not quite the same display as one built entirely of Onyx, and costs less money.

Any of the lighter colored varieties of imported marbles, such as St. Euame or Siena, blend particularly well with Onyx, and should be used as the material for the ends. The engraving shows the sixteen syrup machine; it is, however made in all the sizes noted.

afterward voted to reconsider their action, and it will be discussed this week in executive session. The House Investigating Committee has unanimously decided that Mr. Roberts, of Utah, is a polygamist; the majority favors a refusal to seat him, the minority favors seating and then expelling him.

OTHER DOMESTIC NEWS.

The United States Supreme Court on the 15th dismissed the suit of the State of Louisiana vs. the State of Texas and its health officer, involving the right of Texas to quarantine so rigorously against Louisiana, as was done during the recent prevalence of yellow fever in New Orleans. The court held that no direct issue between the States is presented in the controversy.

Halsey J. Boardman, 65 years of age, formerly president of the South & Winnipeg Railroad Co., died in Boston on February 12 next.

Formal charges of heresy have been made against the Rev. Dr. Arthur C. McGiffert, of the New York Presbytery, and he has been summoned to answer them on February 12 next.

By confirming the nomination of S. Davies Warfield to be Postmaster of Baltimore, the Senate has ended a long fight, in which the Maryland Senators were opposed.

Andrew Carnegie has offered to give \$50,000 to Ottumwa, Iowa, for a public library, if the city will agree to spend \$5,000 a year to maintain it, and has made a similar offer to York, Pa.

The Sunday closing movement is being felt in Chicago, and many grocery stores and meat markets formerly open are now closed all day on Sundays.

The exports of merchandise from the United States during 1899 amounted to \$799,834,620, as against \$634,954,448 in 1898. The exports amounted to \$1,275,486,641, as against \$1,255,546,266 in 1898.

Manufacturers of chinware have agreed, it is reported, to raise the price of their goods an average of 40 per cent.

The Iowa Legislature has chosen J. H. Gear (Rep.) to succeed himself in the United States Senate.

The Kentucky Legislature has chosen J. C. S. Blackburn (Dem.) to represent Kentucky in the United States Senate.

The Board of Rapid Transit Commissioners of New York have awarded the contract for building the underground railway in New York City to J. B. McDonald. His price was \$35,000,000. He expects to have the work completed in the next year.

Judge James Phelps, of Connecticut, aged 78, an ex-Congressman and well-known jurist, died on the 16th.

A large part of the business section of Dawson, in the Kankakee mining region, was destroyed by fire on the 10th. The loss will exceed \$500,000.

Capt. Sigbee has been detached from the command of the battleship Texas, and assigned to the head of the Naval Intelligence Bureau, under the command of W. C. Gibson will succeed to the command of the Texas.

The differential rate on sugar has been abolished by agreement between the Canadian Pacific and Grand Trunk railways. This, it is said, will materially assist Canadian refineries in competing with those of the United States.

A bill has been introduced into the Ohio Legislature providing for equal wages for men and women.

The State of Missouri has applied to the United States Supreme Court for leave to file a bill praying for its injunction against the State of Illinois and the city of Chicago to restrain them from operating the recently opened drainage canal. The canal gates at Lockport, Ill., were opened on the 17th, and the water from Lake Michigan is now flowing into the Desplaines river on its way to the Mississippi.

The Virginia House of Delegates passed a bill on the 17th requiring separate cars for whites and blacks on railways.

Charleston, S. C., is arranging for an industrial exposition in 1901.

The principal bridge manufacturers of the United States are reported to have formed a combination with a capital stock of \$25,000,000.

The Board of Naval Bureau chiefs have decided against the use of double turrets for the new battleships, and will ask Congress for permission to eliminate from these ships the sheathing which is at present a feature of the new construction.

The Mississippi Legislature has elected ex-Gov. McLaurin to the United States Senate for the long term and William V. Sullivan to the Mississippi term.

Henry K. Carroll, President McKinley's special commissioner to Puerto Rico, recommends, in his report just made public, a territorial form of government for the island.

The Maryland Legislature practically laid on the table last week a resolution inviting William J. Bryan to address the body. He addressed a large audience in Baltimore Saturday.

Ex-Congressman David G. Colson, of Kentucky, a colonel in the Spanish-American war, shot and killed three men in a hotel in Frankfort and wounded two others, on the 16th, as the result of a feud growing out of war experiences.

The annual report of the Interstate Commerce Commission was made public on the 15th. The commission shows with alarm the gigantic railroad combinations that are forming, and fears that shippers may soon

find themselves at the mercy of the transportation interests. The commission asks for more power from Congress to regulate exorbitant and unfair rates.

Now that the Federation of Railway Employees has been dissolved, it is said that the officers of the Order of Railway Conductors and of the Brotherhood of Locomotive Engineers are working on a plan to bring these organizations together in a protective and defensive alliance, to deal with the railway companies of the country on wage and other questions.

Gov. Pingree, of Michigan, who announced some time ago his intention to retire from politics, now declares that he will not. Michigan Republican Governor, he will enter the race on an independent ticket.

Samuel G. Keiskell (Dem.) was elected Mayor of Knoxville on Saturday.

Brig.-Gen. G. M. Anderson, commander of the Military Department of the Lakes, was elected on the 20th.

Martin Bergen, catcher on the Boston baseball team, shot and killed his wife and two children, and then himself at his home in North Brookfield, Mass., on the 19th.

Smallpox is prevalent in fourteen counties in Indiana. Secretary Root, for the relief of the Puerto Rican farmers and small property holders, issued an order the 19th, extending the time for the foreclosure of mortgages on property in Puerto Rico six months; on condition, however, that such extensions shall not apply if contrary to legislation enacted by Congress in the interval.

The bubonic plague is prevalent in Honolulu. Surgeon General Carmichael, of the Marine Hospital Service there, reports that the people are almost panic-stricken and that the plague, in spite of the best efforts of the authorities, seems to be spreading. There were twenty-three deaths between December 12 and January 12.

The Navy Department has prepared a tariff for the island of Guam based on the schedules now in use for the islands of Cuba and Puerto Rico.

The Interstate Commerce Commission, in its annual report, recommends the adoption of the merit system in the new possessions.

A report from Chicago has it that practically all the railroad systems east of the Mississippi have formed a combination, and will divide the traffic by agreement hereafter, instead of by competition. None of the officers of the roads in question has confirmed the report.

—The Rhode Island Pharmaceutical Association held its twenty-sixth annual meeting at Providence, January 19. Two new members were elected. The committee on legislation reported that it had presented to the Legislature certain matters which, if enacted into laws, would prevent adulteration in drugs. The committee stated that these suggestions had not met with success, because of the objections raised by outside parties. In his annual address President Wood reported there were 232 registered pharmacists in Rhode Island, of whom a little more than half were members of the association. He recommended the appointment of a membership committee to work for the remedy of this condition. The treasurer reported that the receipts for the past year were \$479.59; expenditures, \$158.47; balance on hand, \$314.12. Twelve members had joined during the year. The association voted to assess each member 50 cents for the benefit of the N. A. R. D. Papers were read by Frederick H. Franklin, John E. Groff and Charles H. Daggett. The following officers were elected: President, Mason B. Wood (re-elected); vice-presidents, Howard A. Pearce, S. W. Hinds, C. M. Barber, G. T. Wright, William H. Buffington; secretary, Charles H. Daggett; treasurer, Albert Fenner. Executive Committee—Albert Fenner, George E. Fairbanks and Charles A. Glancy.

Good Advertising.

The Liquid Carbonic Acid Mfg. Co.'s four-page insert in this issue is a conspicuous example of "good advertising." Its artistic appearance alone will attract widespread attention and the illustrations of new styles in soda apparatus are so clear and distinct that any practical dispenser can with the short descriptions accompanying them get a perfect idea of the apparatus themselves. This company's ability to "make everything for soda fountains" is supplemented by equal ability to put the goods properly before buyers; the result has been an immense success.

A New England Agent for Some Good Firm.

R. W. Huntress, manufacturers' agent at No. 28 Broad street, Boston, wishes to handle one more first-class account among New England drug jobbers. He offers good references and solicits correspondence from manufacturers, who desire a resident agent in that territory.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

Refreshing—Nourishing—Satisfying. The verdict given Cook's Imperial Champagne Extra Dry, by connoisseurs.

A 25-Cent Size of Listerine.

The new size Listerine, to retail at 25 cents, recently introduced by the Lambert Pharmaceutical Co., is proving a very popular article. The many uses constantly made of Listerine and the desire of purchasers to obtain it in original packages, even when small quantities only are wanted, has made an immediate and active demand for this small size.

Are You Buying Capsules Right?

Buyers of empty gelatin capsules are referred to the announcement of the Warren Capsule Co., of Detroit, in this issue. This company asserts that druggists or medicine manufacturers who pay more for capsules than the prices quoted for "Warren" goods are not buying right, and they are evidently prepared to "back up" this assertion by supplying samples to the trade for comparison, and quoting prices.

Vaccine Orders Filled Within 15 Minutes of Receipt.

Attention is called to the advertisement of the H. K. Mulford Co. in this issue. In addition to their guarantee of 100 per cent. successful vaccinations in primary cases with Mulford's Glycerinized Vaccine, and their liberal treatment of druggists who handle it, they now agree to ship all vaccine orders within fifteen minutes after receipt (except Sundays). This is prompt service and should be remembered by druggists who want supplies in a hurry.

Over 100 Per Cent. Profit.

In announcing a "special offer" on Mallory's Liquid Smoke, the manufacturers, Charles W. Mallory & Co., of Bryan, O., make a proposition to druggists which affords the latter over 100 per cent. profit. The trade price of this preparation is \$5.00 per dozen quart bottles, and it retails at 75 cents; with each dozen ordered direct from the above firm two bottles extra are packed, and the goods are sent, charges prepaid to destination, on the same day the order is received. The goods are guaranteed to satisfy consumers in every respect.

A Fine Factory for American Bottle Caps.

Since the removal of the Saylor Paper Specialty Co. from Philadelphia to their new factory building at Camden, N. J., they report a gratifying increase in business, which, with the increased facilities, they are handling promptly. Their new building is three stories high and entirely occupied by them, the offices, raw material storage rooms and engine room being on the first floor, the factory proper on the second, and warehouses for finished goods on the third. Altogether it is undoubtedly the most complete bottle cap factory in this country.

Sharp & Dohme's Hypodermic Tablet Case.

An elegant morocco case, containing 102 tubes, assorted (practically a full line) of Sharp & Dohme's hypodermic tablets, is offered the trade at \$15, list, less regular discount. This is what the tablets alone would cost, no charge being made for the case. The advantage to the druggist in displaying one of these cases is that physicians will use a greater variety of tablets and sales and profits can be much increased; the cases are very handsome and serviceable, and in view of the great popularity of "S. & D." tablets with physicians, every druggist should have one.

Prize Medal for R. M. Green & Son's Fountains.

The advertisement of Robert M. Green & Sons, of Philadelphia, on another page, contains an illustration of their "Polar System" soda apparatus, which was awarded a silver medal—the highest prize—at the recent National Export Exposition. It was of onyx, with white and gold superstructure twelve feet long, and the securing of this prize is considered quite a triumph. Among recent purchasers of Green & Sons fountains are R. K. Truitt & Son, an old established firm of Salisbury, Md.; E. H. Fienhold, Thirteenth and Morris streets, Philadelphia, who has fitted up an elegant store, including a fine onyx and jasper fountain, and D. P. Schindel, of Hagerstown, Md., who is putting in a sixteen-syrup onyx fountain—the second one he has bought from the firm.

An Interesting Experiment.

At a meeting of the Western Surgical and Gynecological Society the last week in December at Des Moines, Ia., an interesting incident took place. In 1870, William R. Warner & Co. filled an order for pills for Chilcote & Cook, of Washington, Iowa. One of the bottles being still on hand, it was forwarded by the firm to Dr. Wilton McCarthy, of Des Moines, who exhibited and tested the solubility of these pills, made 29 years ago, before the society. The results are fully explained in the following letter:

Des Moines, Ia., Jan. 1, 1900.

Wm. R. Warner & Co:

I am pleased to inform you that the pills which were made by your firm in 1870, and sent to me by Chilcote & Cook, of Washington, Iowa, were tested as to their solubility at the meeting of the Western Surgical and Gynecological Society, held in our city last week. They were readily soluble in water at a temperature of 100 degrees, and were completely disintegrated at the expiration of fourteen and one-half minutes. Respectfully,

WILTON MCCARTHY, M.D.

Messrs. Warner & Co. report that they have had on exhibition since 1873 a mahogany case filled with sugar-coated pills. After a quarter of a century they do not show the effects of age, but are as good as when first made.

The Liquid Carbonic Acid Mfg. Co.

We are pleased this week to refer our readers to the attractive advertising insert of the Liquid Carbonic Acid Manufacturing Co., which it will certainly pay soda water dispensers to examine carefully. Three types of soda fountains are shown—the "Pittsburg," the "Priscilla" and the "Alhambra Kohinoor," the Kohinoor being a novelty in the soda fountain line. All the fountains built by the "Liquid People" have their patent tilting jar, said to be superior to any jar on the market. Their coolers also are exceedingly efficient, giving a maximum of coldness with a minimum consumption of ice. The fourth page of the insert is very unique, and contains the photographic reproduction of Mr. Charles Baur, the vice-president of the Liquid Company, in the pineapple field. This photograph is surrounded with a fine reproduction of a most elegant specimen of Bahama pineapple. The line of "Liquid Fruits," all flavors, which the company are putting on the market, have an excellence which is all their own, and the dispenser who once uses them will use no other. It is only necessary to know the care with which these "Liquid Fruits" are prepared to understand readily the reason for their superiority.

"Everything, from a Straw to Soda Fountain," is the watchword of the Liquid Carbonic Acid Manufacturing Co. They have their own brass foundry and machine shop; their own silver, nickel and gold plating establishments; build all their own fountains from the ground up, and their wonderful success is largely attributable to the fact that they make the best quality goods and tell the truth about them. Their celebrated "Diamond Brand" "Liquid Gas" is made from sugar, and is the sweetest gas on the market, as well as the purest. Not only do they stand at the front in the manufacturing line, but their methods as a business house are above reproach. We can with confidence recommend them to dispensers. They have offices and factories in most of the principal cities of the United States, and are in quick touch with the trade everywhere. A letter or a telegram will bring an immediate response, and their new catalogues will be sent on application.

THERE ARE MANY PHARMACEUTICAL JOURNALS IN AMERICA;
ONLY ONE WEEKLY.

THE PHARMACEUTICAL ERA

EVERY THURSDAY.

VOL. XXIII.

NOTICE.

We are now shipping 800 to 1,000 Blue Books daily and will soon have our subscribers supplied with copies.

THE PUBLISHERS.

INDEX TO VOLUME XXII.

Drop us a postal card at once if you wish a copy of the Index to Volume XXII. of the Era, July to December, 1899. We have printed a supply of the Index sufficient for all subscribers who preserve their copies and require such an index for reference. It is necessary to notify us promptly, however.

THE PUBLISHERS.

ERA WANT ADSV.

Every druggist with a store to sell or the money to buy one, with unsalable patent medicines to exchange, or who wants anything which a brother druggist can supply, should use the Era Want Advs. They are read in every principal town in the country, and rarely fail to bring the desired results. See Page 20.

THE PUBLISHERS.

WINDOW DISPLAYS.

We have in preparation a supplement to appear soon in the Pharmaceutical Era. This will be a collection of carefully executed half tone reproductions of photographs of attractive window displays in drug stores. We should be pleased to receive good photographs from our friends of window displays that they have found profitable, and of drug store interiors as well. Please send these very promptly if you desire them to be included in the supplement, and that there may be no delay in issuing it.

THE EDITOR.

See Students' Bulletin, Page 122.

SCIENCE NOT CRUEL, BUT KIND.

There has been presented to the United States Senate by Senator Gallinger, a so-called anti-vivisection bill. This bill, whose provisions relate to the District of Columbia only, prohibits entirely all experiments on animals. It is advocated by anti-vivisectionists in general, but is even more vigorously opposed by those having at heart true scientific progress and that form of biological and medical research which has contributed more than any other one or all other factors toward bringing the science of medicine to the proud position it now occupies.

Vivisection as a term applied to the acts of biological investigators is wholly a misnomer. In its popular conception it is believed to mean cruelty and nothing but cruelty to poor dumb beasts. No one reprobates cruelty in any form more severely than the vigorously denounced vivisectionists themselves. As a matter of fact the experimenter, the investigator, is kinder, less cruel, than his antagonist, the so-termed anti-vivisectionist. If cruel, he is cruel only to be kind. The experiments made, the investigations successfully carried out, the wonderful results achieved by these patient workers in science, have not added cruelty to the store of the world's unhappiness, but rather materially, enormously, decreased cruelty both to dumb animals and human beings.

The majority of experiments upon animals are without any pain to the animals themselves; but even in cases where pain is inflicted the result is that thousands, the majority, have been directly benefited thereby through the discoveries thus made for the alleviation or removal of the causes of suffering. The discovery of diphtheria antitoxin may have necessitated the destruction of many animal lives, but it has brought life and health to thousands of human beings who otherwise would have been beyond succor. And so all through the list; the despised vivisectionists are not enemies of the brute creation or of the human race but rather their greatest benefactors. Is it not far better for a few animals to die, even if in great pain (which is seldom the case), than that the world shall stand still and no progress be made in the methods for the alleviation of disease and the postponement of death?

The antis themselves are the ones against whom restrictive legislation could most properly be directed; they are the really cruel ones. There is no more tender-hearted, no gentler one, than the progressive physician, but he often finds it necessary to inflict pain in order that relief may the more surely be attained. The sole object

kept constantly in mind by biological investigators is the relief of suffering, not its needless, causeless infliction.

Bills such as that proposed are the result, mainly, of hysteria, shallow emotionalism and false sympathy, all coming from insufficient knowledge of existent conditions. Nothing could be devised more sure to cause a continuance of suffering than legislation of this character. It is calculated to hinder medical progress, to nullify the great beneficial work being carried on in all branches of medical science, to close our foremost medical schools, and in every way to defeat the very objects for which it is ostensibly instituted. These anti-vivisectionists proceed upon the false assumption that all experiments of the indicated class are necessarily cruel, that they are needless, that the results therefrom are of no value and in no way warrant the sacrifice of animal life which has been found necessary. In all of these assumptions they are radically wrong. In some cases there may be suffering on the part of the animal experimented upon, but wherever it is possible to prevent this suffering the investigator is sure to employ the necessary means. But even were it true that all experiments of this nature were accompanied by great suffering of the victims, the argument would be none the less strong, inasmuch as the results therefrom are of such incalculable benefit to mankind in general. The impartial observer has only to look at the record of vaccination, of the countless lives this has saved, of the very few animals which were destroyed or even subjected to slight pain in bringing about this marvelous result. In surgery thousands of lives are annually saved to-day which twenty years ago must have been sacrificed, and all this due to the great advance made in surgical art, an advance in large measure attributable to experiments and researches upon living animal organisms. If one will approach and study this subject unbiased, unprejudiced, he cannot but be convinced that the enactment of such legislation as that requested, not only in the District of Columbia, but in the States at large, would be one of the greatest calamities imaginable. It is not a case of cruelty and non-cruelty ranged opposite each other, as the antis would have us believe, but is a battle between life and death for human beings. If this life can be secured through the sacrifice of some few animals it is cheaply bought.

We do not wish to pose as supporters of the cruel-minded, therefore we do not support the anti-vivisectionists. On the contrary, we realize that the truest kindness, truest humanity, is that which confers the greatest benefits, and this being so we feel justified in speaking these words of opposition to the proposed legislation at Washington. The medical fraternity, acting in the best interests of their clientele, humanity, cannot afford to let such laws be placed upon our statute books. The proposition is founded upon misconception of both fact and theory. The truest kindness is to advance in every way

the interests of the biological investigator who is giving his life, his work, to search into the mysteries of life and to discover a cure for disease and a postponement of death.

THIS IS NOT A PUFF.

A correspondent, of whose connection with the drug trade we are uninformed and who writes upon hotel paper from St. Louis, sends us a two-column clipping descriptive of a mammoth department store to be erected in that city, and which will contain, it is said, a very elaborate drug department. Our informant writes. "This will make quite an item of news to the trade in general, as a chance to secure a department in a store as large as this one is seldom given. By sending them a copy of your paper with a big puff you might secure them as a subscriber."

Really, we cannot give the desired "big puff," even if we were sure of being munificently rewarded with a three-dollar subscription order. Our correspondent seems to be unaware of the fact that the drug trade and drug journals have no very friendly feelings for department stores which institute and carry on drug departments. To such stores retail druggists attribute much, if not most, of the evils which have befallen them in these latter days. We are quite sure our druggist subscribers will uphold us in refusing the requested "puff."

THE PLAN WORKING.

In a Kentucky city recently proceedings in involuntary bankruptcy were brought against a druggist who for some years past has been running a cut-rate store of the most aggressive character. He attributes his trouble to the crusade against him instituted by the other druggists of the city, and by the N. A. R. D., resulting in a refusal by wholesalers to sell to him, necessitating obtaining his goods in roundabout ways and at a distinct advance in cost. He was obliged to buy in larger amount than his trade warranted, became overstocked, and could not pay his accounts. We may all feel very sorry for the individual, but we are justified in the feeling of satisfaction that the principle he has represented has now been shown to be vicious and detrimental in every way to sound trade practices. This is no inconspicuous feather in the cap of the trade of that locality.

PRELIMINARY EDUCATION

That there is justification for establishing a preliminary educational standard to be reached by applicants for examination by the Illinois Board of Pharmacy is evident from the fact that of twenty-nine candidates at the last board meeting eight were rejected because of such lack of qualification. It is well to repeat what was said upon this question by one of the speakers at a recent banquet: "Young men illiterate or stupid have no business in a drug store. Keep them out. The public safety demands it."

Correspondence.

We are pleased to publish here communications from our readers on topics of interest to the drug trade. Writers are requested to express their views as briefly as possible. Each article must be signed by its writer, but his name will not be published if so requested.

THE BUYING CLUB'S POSITION.

New York, Jan. 26.

Editor Pharmaceutical Era: In your editorial article in the Era of January 23, headed, "What About Buying Clubs," you refer to an influential association of pharmacists in this city, which professes allegiance to the N. A. R. D., not only paying its membership dues, but also contributing liberally as well, but in which association there exists a large co-operative concern for the purpose of buying in large quantities.

This statement of facts is correct, still, being one of the founders of the aforementioned concern, I consider a lucid explanation of this apparent incongruity due to your readers and the members of the N. A. R. D.

Six years ago a number of the members of the association, forced by the stress of circumstances, organized the co-operative concern for the purpose of improving the condition of our members, each one of whom contributed his share of the capital in the business venture. It proved an unqualified success and a blessing to our members. We are now confronted with a peculiar condition; we are asked to give up that which for the past six years has enabled us to successfully compete with the cutters, and to trust to the future in bringing back the good, old times. We have been loyal to the N. A. R. D. in every respect, have worked for its success and shall continue to do so, but we also have great faith in the old adage, "A bird in the hand is worth a dozen in the bush."

Suppose, for illustration, that the N. A. R. D. should not prove a success. What would be the consequences for our members?

They would have voluntarily deprived themselves of the only efficient means of combating the cutting evil. They would lose all they have gained during the six years' experience of a jobbing business. Is it fair, is it just, to ask anybody to give up a solid, substantial benefit he now possesses and has possessed for the last six years, trusting solely to the chances of success of the N. A. R. D.? Put yourself in our place and consider what you would do.

A favorite and terse axiom of our martyred Lincoln was: "Never swap horses till you have crossed the stream." That illustrates the position of this co-operative concern.

We stand ready to give up co-operative buying as soon as there is a fair chance of the well laid plans of the N. A. R. D. materializing, but in the meantime, having a vivid recollection of the failure of many other plans for improving the condition of the retail pharmacist, we must decline to give up the advantage we now possess, for the possibility of something better in the future.

If the N. A. R. D. insists upon it, we are ready to engage in a regular wholesale and jobbing business, selling goods to any one not a cutter. We would prefer avoiding this alternative, as we do not want to compete with our wholesale houses, for whom we have only the most friendly feelings, but if this is insisted upon, we shall become wholesalers in fact, although very loth to do so.

ORA ET LABORA.

(Trust in God and keep your powder dry).

POISON SALES IN ILLINOIS.

Austin, Ill., Jan. 20.

The Editor Pharmaceutical Era: The Chicago Evening Post of the 19th published an attack on the Board of Pharmacy because some woman swallowed carbolic acid instead of brandy. The writer of the article must be as ignorant of the facts as he is of grammar. The traffic in poison is regulated by the criminal code, and carbolic acid is not one of the four poisons enumerated.

No law prevents the purchase of carbolic acid; no law can prevent the mistake of taking carbolic acid for

brandy, and I regret exceedingly that no law prohibits such outbreaks of ignorance aggravated by biliousness and a certain tired feeling, as shown in aforesaid attack. "Criminal Law." E. R. BOLLER.

The article referred to by the above correspondent is the following:

Board of Pharmacy and Poisons.

Chicago, Jan. 18.—To the Editor: In the Evening Post of Thursday, last week, appeared, under the title "To Ask Amendment of Laws," a dispatch from Springfield relating to a meeting of the Board of Pharmacy, held in the capital during the four days preceding, with the announcement that it was "the general opinion that never before has the board held so important a session," and that the board asks associations of pharmacists to join "in an appeal to the legislature in 1901 to amend the pharmacy act, so that the expense of administering the law," which is primarily intended to protect the public, "shall be borne by the State, and thus relieve the druggists of an unjust and heavy burden."

The anxiety of the board to "regulate" those engaged in the practice of pharmacy, the sale of proprietary or patent medicines, and incidentally to elevate the profession, and the measures proposed to effect these desirable conditions, are set out with considerable confidential detail, but we fail to discover anything in this programme to support the view that the board is doing anything really practical "to protect the public."

Immediately following the article referred to appears this item:

Mrs. Matilda Reuting, No. 44 Brigham street, died last night from the effect of carbolic acid she swallowed the night before. It was said the poison was taken accidentally. Mrs. Reuting, who was 42 years of age, had prepared some brandy to be taken when she retired for the night. She picked up a cup containing carbolic acid and swallowed its contents before she discovered the error.

While the board is holding important sessions formulating new examinations and devising schemes to prevent any one selling patent medicines—except country stores, which pay the board an annual license, and department stores—also giving the prosecuting department an extraordinary amount of money, absolutely nothing to prevent the promiscuous sale of poisons, and especially carbolic acid, the use of which, as in the above instance, has a death record long since distancing that of the trolley.

As a matter of fact and law, there is no warrant for a pharmacy law or a board of pharmacy except for the protection of the public against poisonous substances. How inadequate the present law is in this respect and how miserably the board has failed in this fundamental particular to protect the reckless or ignorant against this death-dealing stuff, let the columns of the newspapers of Chicago, together with the records of the Coroner's office, bear witness.

C. S. N. HALLBERG.

HOW THEY LOVE EACH OTHER.

Philadelphia, Jan. 23.

The Editor Pharmaceutical Era: Allow me to make a correction of an article printed in your issue of January 18, page 73, under the heading of Philadelphia College of Pharmacy Notes, in which attention is called to the next social meeting of the Alumni Association. In the programme they refer to a paper to be read upon "Immunity, and What Is It?" by Prof. Joseph McFarland, of the University of Pennsylvania, which, while correct as to his graduation, is not correct as to what he is to-day. He is Professor of Bacteriology and Pathology at the Medico Chirurgical College, Seventeenth and Cherry streets, and I think that is to whom he should be associated with when spoken of as he is in the programme of the P. C. P.

If I am in error as to my opinion why the P. C. P. reporter saw fit to use U. of Pa. instead of M. C. C. in placing the professor, I beg his pardon, but to me it seems like a bit of jealousy, which I know exists; nevertheless I trust I may be wrong.

I believe in giving credit and putting credit where it belongs, and trusting that the error may in some way be corrected, I remain, most respectfully yours,

WM. J. RITTER.

Care of Medico Chirurgical College, Class '02, Med.

SOME THOUGHTS ON PROTECTION.

Chicago, Ill., Jan. 19.

The Editor Pharmaceutical Era: You ask for my opinion on the new Protective Association; I must plead ignorance. I have not seen the charter of the new association, and am not posted as to its scope and object. But so far as the name is concerned, I am for protection. I am for a law that protects honest and punishes dis-

STRANGE WHY THE CLERK WAITS ON THESE CUSTOMERS WITH LESS ALACRITY THAN ON

honest citizens, druggists or otherwise. At present the air is full of schemes to fight the cut rate evil. If we druggists were banded together as firmly and loyally as the railroad laborers—who for weeks defied the United States Government in '96—I say *if*, then what could we do? Issue an edict that no registered pharmacist would be allowed to work for a department store or any cutter, and the problem would be solved, for without registered pharmacists in their employ, no drug store can do business, here in Illinois, at least, and almost everywhere else. That would be protection that would protect, and whoever can bring about such a close knit organization will be the savior of pharmacy. Such an edict, implicitly carried out, would drive the calico drug stores right back into their holes and pull in the hole itself. Such an edict would regulate prices among druggists who at present suffer more from dishonesty among themselves in regard to prices on staples than they do from practices of department stores. But, how can we get such a powerful organization? I give it up. I know of one device only that ever succeeded in making druggists stick to agreements, and that is an automatic machine, making agreement compulsory! For years we had devised and agreed and resolved, to regulate charges for the use of public telephones. With what result? The druggists paid \$150 for their 'phones and the public nothing. The automatic 'phone reversed the order. The public does all the paying.

W. BODEMAN.

HUNGARIAN PHARMACY.*

By VASVARI BELA.

The history of pharmacy in Hungary from the earliest times to the present has been intimately connected with the country's political history. In the middle ages, during the time of the Crusades and Turkish despotism and the numerous wars with neighboring States, the internal development of Hungary was very much retarded.

In studying the middle ages in Hungary, we find that the first apothecary stores were opened in those parts which were least affected by the wars. The earliest pharmacies, as a rule, were established among the Highland German people. Thus, in Loose, an apothecary store was established as early as 1503; in Pozsony, in 1500, and in Szepesvaralja, in 1560. One was opened in the country of the Magyars, in Eger, in 1639, and one in Nyiregyhaza, in 1650. There was none established in Budapest, the Hungarian metropolis, until 1686.

As in nearly all the other European countries, so in Hungary, the monks were the first apothecaries, but of the pharmacies that they established, only a few still exist. The almost innumerable wars in which Hungary has been engaged made it necessary for her early in her history to open military pharmacies, concerning which there is considerable information to be gained from manuscripts written in the middle ages. After the Turks had been driven from Hungary, Austrian despotism further retarded the development of the State, since Austria wished to Germanize the entire country. Two centuries of struggle, however, overthrew the Austrian tyranny, and now we are managing our own affairs and progressing along the lines of other foreign civilization.

Forgetting the past, let us look at modern Hungarian pharmacy, which did not really begin until after the year 1867. From that time to now is over thirty years. During this time the pharmacy law has been promulgated, and the higher education of pharmacists has been insisted upon. Before that time the old Austrian laws were in force.

At the present time pharmacy in Hungary is in many respects as ideal as anywhere on the continent, excepting, perhaps, the German States. Nevertheless, this wonderfully rapid development has its disadvantages, and, while now everything seems very roseate, I fear sooner or later there will be a reaction.

Before the year 1867 the number of apothecary shops was not over 500. In 1897 there were nearly 2,000, and these were divided as follows: Regular pharmacies, 1,562; hand pharmacies, 367; domestic, 40; making a total of 1,969. This great increase in the number of pharmacies has brought about a very serious business condition. The apothecary's expenses are larger than before, there has been a great reduction in prices, and, at the same time, a very perceptible decrease in the amount of illness, so that many apothecaries eke out a living from their stores with difficulty. In the suburbs it sometimes happens that an apothecary almost never sees money, as nearly all the business is done by bartering, drugs being given in exchange for eggs, hens, etc.

Prof. Oldberg has said that the condition of modern pharmacy demands the druggist should keep a pharmacy and not a store. To this I may say that in Hungary pharmacists do not sell patent medicines, excepting toilet articles, nor tobacco, nor other general merchandise. On the other hand, it is true they do not understand how to make urinary analysis and other chemical investigations, and cannot learn how because of lack of facilities.

*Adapted from the *Spatula*.

—THESE!

The fact is, the country apothecary does not prosper. Why not? I think it is because the system is bad. We have in Hungary too many stores. The best solution of the difficulty is to have the pharmacies controlled by the State.

In getting a pharmaceutical education, three years' practice is required, after which two years must be spent at the University. Hungary has three universities—one each in Budapest, Kolozsvár and Zagreb. The language taught in the last is Slavish. The term of study is two years. The first year are taught botany, elementary chemistry, mineralogy and zoology. In the second year are taught chemical analysis, materia medica, the laws and therapeutics, with urinary analysis and food examination as electives. The education of the pharmacist would be much better if the examinations were more rigorous. The Hungarian law does not recognize first and second class pharmacists, only those with a diploma and those without one. The man with a diploma, who has practiced in all five years, and who has taken a course at the university, may buy or open a pharmacy with the consent of the minister, but this cannot be done by the man without a diploma. When a student becomes a diploma man, he is obliged to practice for two years more. Permission to open a pharmacy can only be obtained through influence. Merit has nothing to do with it, although the applicant may have labored and studied very hard.

Hungary contains 18,000,000 inhabitants, of whom 2,000 are apothecaries. As a rule, there is no pharmaceutical manufacturing in Hungary. There are only two factories, and those are in a primitive condition. One is the laboratory of Kochmeister's successor, at Budapest, and the other a volatile oil factory at Erzebetsfalva, near Budapest, which is a Hungarian branch of a German establishment. Carbonic acid is made in Erdely, Transylvania, and there are a few small chemical factories in other parts of the State.

The trade here is almost wholly German and Austrian. We receive very little from France—I think only toilet articles. England and the United States are represented by a couple of stores and one factory. We know from England Messrs. Allen, Macfarlain & Wellcome, and the Maypole Soap Company; from the United States only Messrs. Parke, Davis & Co., and Seabury & Johnson.

To speak of the intellectual life in Hungary, there are three weekly publications, a chemical monthly, and a few scientific papers. They are very small, because the business cares of the apothecary absorb all his time, and even where there is more time and plenty of money,

papers are not cared for, as the apothecaries are not interested in the development of pharmacy. The contents of our weeklies are devoted entirely to business matters. They contain very little original matter, except when their editors are fighting one another. Nearly all the matter is reprint. The best is the Gyogyszereszi H. Kozolony (Gazette), and the next best The Ertesito (Herald). The third is the official organ, the Hetilap.

FEARFULLY AND WONDERFULLY MADE.

"Depend upon it, children," said the benignant old gentleman who was addressing the Sunday school, "we were fashioned by a wiser power than ourselves. There was no mistake made in putting us together. If our hands were placed where our feet are, and our feet where our hands are, how could we get along? It would be exceedingly awkward, children, exceedingly awkward. I stretch my hand out this way. I move my fingers like this. Now, what is this an evidence of, children?" There was no reply, and after waiting a moment the speaker answered the question himself. "It is an evidence of design. Don't forget that, children," he continued, impressively. "It is an evidence of design. Suppose, for instance, my eye, instead of having lids and lashes, had legs. Suppose my eyes had legs. How could I use them?" "You could use them in running your eye over the congregation, couldn't you?" replied a deeply interested little boy near the door.—Chicago Tribune.

TOO MUCH KNOWLEDGE.

"You would like the situation, would you?" asked the druggist. "Got any recommendations?"

In reply the applicant for the position flashed a diploma.

"That's all right, so far as it goes," observed the druggist, looking it over. "Ever had any experience?"

"Yes, I clerked some in a drug store before I went to the college."

"You can tell the difference at a glance, I suppose, between sulphate of magnesia and epsom salts?"

"I should say I could."

"Then you can do more than I can, young man," rejoined the proprietor, bowing him out.

SHORT.

Life: Young Doctor—Did you diagnose his case as appendicitis or merely the cramps?

Old Doctor—Cramps. He didn't have money enough for appendicitis.

LONDON, PARIS, AND BERLIN.

Three Metropolitan Cities of the Old World. Their Places in History, Pharmacy and Commercial Importance.

A SERIES OF DESCRIPTIVE ARTICLES FOR THE TOURIST AND PHARMACEUTICAL VISITOR TO THE WORLD'S FAIR IN 1900.

FIFTH PAPER

(Written for the Era.)

The Customs.

PARIS is not, like London or Chicago, a vast mass of buildings covering an indefinite number of square miles, to define the exact boundaries of which would considerably puzzle the average citizen. The French capital is a small, compact city, with limits sharply defined, not (like New York), by the hand of Nature, but by

The Fortifications.

When the Parisian speaks of the "fortifs" he does not allude to the outer ring of great modern forts which protect the city, nor to the inner and more ancient circle—Mont Valerien, Montrouge, Issy, names which all the world learned in 1870—but to the grass covered earth-works and dry moat which surround the entire city since 1845. In times of peace this "wall," with its limited number of gates, is useful in facilitating the levying of the town dues exacted on liquors, etables, fuel, etc., a tax which produces about \$35,000,000 per annum. It is not, perhaps, generally known that the population of Paris (about 2,500,000) only includes the dwellers within the walls. To avoid these town dues, most factories are established just outside the walls—one might instance the perfumers, who thus avoid the heavy city tax on alcohol. The working classes cluster round the factories, so that, were its suburbs included, Paris would probably be classed as a city of 3,000,000 souls.

A Favored City.

It is evident that the town thus largely freed from smoky factory chimneys and trade refuse, working class dwellings and heavy goods traffic; where house rent is high through limited area, and many necessities of life rendered expensive by town dues; but where, on the other hand, the money thus raised is largely spent in street improvements, planting trees and gardens, keeping up roads, etc., must be an agreeable and rather select

dwelling place. A bright and pleasant climate, a people whose natural gaiety, neatness and politeness permeate to even the poorer classes, add to its attractiveness, and make it the Mecca of the money-spender and the pleasure seeker from all countries. There are other attractions of a more intellectual nature. The foreign art student (from Europe or America) often prefers Paris to Rome itself as a center of modern art; the musician finds no "opera season" in the French capital, for the Grand Opera is open all the year round; the latest French novel and the last Parisian play are translated into all the leading modern tongues; her actors "star" in the leading theatres throughout the two hemispheres. In the minor arts also—if we may be forgiven by elderly bachelors and youthful spinsters for thus alluding to cookery, vintage and millinery—the Frenchman is still the arbiter of the civilized globe.

Modern Paris

dates from the Second Empire (1851-1870), when Baron Haussmann carried out his grandiose and expensive scheme of cutting wide, straight, modern streets and avenues through the heart of the city, usually from one principal building to another. Napoleon I. had done much to beautify Paris, and would have done more had not his great campaigns kept him so long absent from the capital. He it was who conceived the idea of

The Arc de Triomphe,

perhaps the most remarkable monument in Paris. The names of his ninety-six battles are inscribed under the main arch, which is 90 feet high inside, the total height of the structure is 152 feet. The view from the top is unique, twelve magnificent tree-bordered avenues spread like the spokes of a wheel, from the circular "Place de l'Etoile," in the center of which the arch is placed. One of these great thoroughfares, named after Napoleon's "Grand Army," runs westward for several miles, straight as a dart, to the statue of the "Defence of Paris" (1870, at Courbevoise. Its eastward continuation is known as the

Avenue des Champs Elysees,

and is the most striking and best known of the great Paris thoroughfares. In this and the neighboring avenues are the wealthiest homes of Paris, and the gardens on each side of the lower part of the avenue, (from which the name "Elysian Fields" is derived) are the playground of their children, for few youngsters know the privilege of a garden of their own in this city of seven-

OPERA HOUSE.

HOTEL DE VILLE.

NOTRE DAME

DOME OF THE INVALIDES.

story houses let out in flats. On a fine day in early summer, when the horse-chestnut trees are in bloom, the wide roadway, full of smart turn-outs (no heavy traffic is allowed), and the hundreds of chairs on the sidewalk are occupied by fashionably dressed loungers, gaily beribboned nursemaids and merry children, the sight is one long to be remembered.

At the end of the avenue is the Place de la Concorde (where Louis XVI. and Marie Antoinette were guillotined), which claims to be the finest square in Europe, and is certainly

The Center of Paris

as far as the tourist is concerned. In the middle of the square stands the obelisk brought from Luxor (Egypt); at each corner are two statues representing the great French towns, that of Strasburg is ever covered with crowns of immortels and tricolor flags—symbols of mourning and of hope. Over the bridge on the right is the Chamber of Deputies, a colonnaded building where the Lower House meets; the Senate sits at the Luxembourg Palace, a mile or so further on. On the right is the rue Royale, a short street of handsome shops leading to the Grand Boulevard, and terminated by the well-known Madeleine Church, the front of which is exactly opposite and very similar in architecture to the Chamber of Deputies. Straight in front are the Tuilleries Gardens. The Tuilleries Palace, home of French Royalty for three centuries, was burnt during the Commune of 1870, but the neighboring Louvre still remains, once also a Royal Palace, and now one of the finest art galleries in Europe. Just visible, over the river, is the gilded

Dome of the Invalids.

under which the ashes of Napoleon I. "rest on the banks of the Seine, amidst the French people," as he had asked in his will. The open circular crypt with its massive granite sarcophagus surrounded by statues of victory, forms one of the most impressive tombs in existence, and few, indeed, omit this pilgrimage when at Paris. The scores of tattered battle flags hanging in the church just behind, the old army pensioners in quaint uniform who guard the building, and the remarkable museum of arms and armor, add to the interest of the "Hotel des Invalides," a vast collection of buildings

dating from the spacious days of Louis XIV. Few streets are better known to the English speaking tourist than the Rue de Rivoli, which runs from the Place de la Concorde toward the Hotel de Ville. Its arcaded sidewalk, a mile long, is a pleasant lounge for rainy afternoons, and here shops for photos and Parisian knick-knacks follow in close succession, terminating with the big dry goods store opposite the Louvre (the paradise of feminine visitors to Paris), and the Oratory, the leading French Protestant church of Paris, with its statue of Admiral Coligny.

The Hotel de Ville

is a modern building replacing the old town hall burnt by the Communists in 1871. Its salons and ballrooms are decorated by the most talented of modern French artists. Further on is the site of the celebrated Bastille, now part of a large square, in the center of which a column has been raised to the memory of those who fell for Liberty's sake during the "Three Glorious Days" of the second Revolution (1830). This is the working quarter of Paris. One may return to the Place de la Concorde along the Grand Boulevard, the center of true Parisian life. Here (once the Place de la Republique passed) are the theatres and the cafes, the leading newspaper offices, restaurants, banks, hotels, etc., and many smart shops. The best part of the Boulevard is that adjoining the

Grand Opera,

the finest opera house in the world, as every Frenchman claims and most foreigners admit. Finished twenty-five years ago, its internal arrangements are perhaps even more remarkable than its original and artistic exterior. The grand staircase and the "foyer" are especially noteworthy. Just opposite, the Avenue de l'Opera—one of Haussmann's new streets—leads to the Comedie Française, now, as two hundred years ago, the home of high class acting. Here dramatic artists like Sarah Bernhardt and Coquelin win their first laurels. The rue de la Paix is the street par excellence for fashionable shoppers, especially of the fair sex. The amount of money annually spent by foreign customers (not to speak of wealthy Parisians) in the jewelry shops and dressmakers and milliners' establishments, which practically monopolize this short thoroughfare, is stupendous. At the end of

THE CLUNY MUSEUM.

this street is the Vendome Column, a bronze pillar cast from the cannons captured from the Austrians by the "Grand Army" of Napoleon I. It is surmounted by a statue of the Emperor, and adorned with bas reliefs celebrating this campaign. Pulled down by the Communists in 1871, it was re-erected as soon as order was restored. This quarter of Paris is full of hotels, patronized by wealthy foreign visitors, especially Americans and English, and the English chemists, etc., are mostly to be found hard by.

The tourist agencies, express, Atlantic steamship and cable companies, offices of the English newspapers and the New York Herald, etc., all cluster around the Opera. Not far off is the Bourse and business quarter.

In this brief walk we have of course omitted many places of interest. The lover of art will not fail to visit the immense collections of the Louvre, the small but remarkable collection of modern French painting and sculpture at the Luxembourg, the Gobelins Tapestry Works, the Sevres Porcelain Museum and Works (just outside Paris), and the School of Fine Arts.

Some New Attractions,

established since the last exhibition, may be pointed out to old Parisian tourists.

The Cernuschi Museum is a collection of Chinese and Japanese bronzes, bequeathed to the city of Paris a year or two ago. The Galliera Museum is a tiny but

exquisite building near the Trocadero, containing a small art collection. The "Carnavalet" Museum of the City of Paris, which contains such interesting historical relics of all ages, has just been re-arranged and enlarged, the new rooms contain relics and souvenirs of the siege of Paris in 1870. This is lodged in the house where Mme. de Sevigné lived over 200 years ago. The "Sabretache" collection, added to the Invalides Museum about a year ago, contains uniforms and relics of the French army from 1800 to 1900, and is highly picturesque and curious. Among the older museums one may just name the Cluny Museum (antiquities), the Trocadero (architecture), the French Mint and its collection of coins and medals, the old musical instruments preserved at the Conservatory of Music, the Arts and Metiers Museum of Industry and Manufacturing Processes, the Conciergerie Prison, where Marie Antoinette's dungeon is shown weekly; the magnificent National Library—which rivals the British Museum library in completeness and far surpasses it in appearance; the National Archives, housed in a quaint old building; the Palace of Justice, etc., etc.

Those who are in search of the novel and curious will visit the Morgue, which has nothing particularly repulsive except to those who have never seen a corpse; or the Catacombs, an underground walk of a mile or two (candle in-hand), through quarried galleries with stacks of skulls and bones (removed from the intramural cemeteries) at intervals. Another curious trip is through the main sewers in trolleys and in barges—very much less disagreeable than one might expect. The ascension of the Eiffel Tower is also considered obligatory by most self-respecting tourists. Paris, like every Catholic metropolis, is rich in magnificent churches.

Notre Dame,

described in Victor Hugo's well-known novel, is the historic cathedral of Paris. It dates from 700 years ago, and is, like the Sainte Chapelle (a small building close to the Palace of Justice) a masterpiece of Gothic art. St. Eustache has a fine interior; St. Germain-des-Prés and St.-Etienne-du-Mont are ancient and interesting—the list might be indefinitely extended. It may here be noted that the English idea that a church must necessarily be Gothic does not obtain in France. Among the great modern edifices, the Trinité Church is Florentine; St. Vincent-de-Paul Græco-Byzantine; St. Angustine non-descript, and the immense and brand new basilica of the

PANTHEON.

ARC DE TRIOMPHE.

STATUE OF GUY DE MAUPASSANT.

Sacred Heart, which crowns Montmartre (one of the very few hills in this flat city) is Byzantine. The Madeleine is one of the purest existing specimens of modern Greek architecture; designed for a Temple of Glory, it has nothing ecclesiastical in its appearance, but it is one of the most fashionable churches of Paris.

The Pantheon.

or Church of St. Génévieve (the patron saint of Paris) stands, like the Sacré-Cœur, on a conspicuous hill. It is dedicated, as the inscription on the portico attests, "By a grateful fatherland to its great men," and many leading men of the Republican era, from Rousseau and Voltaire to Victor Hugo and Carnot, have their tombs in the crypt. The walls are covered with paintings (mostly of the highest artistic merit by modern artists) of the career of France's best and noblest—Joan of Arc, Charlemagne, etc., etc. But in human interest, it falls immeasurably behind Westminster Abbey.

Nearly all these churches, and many of the other buildings mentioned, are striking examples of the Parisian idea of always placing a noble building in a worthy and conspicuous site, even should it be necessary to demolish whole blocks to clear the ground and show up the frontage. One cannot help contrasting this with many handsome and costly structures erected in other cities, but left in sites so hemmed around by lofty buildings and narrow streets that the tout-ensemble is practically invisible—St. Paul's Cathedral, London, for example.

The Public Statues

of Paris are as numerous as they are artistic, and in this line, again, the French are past masters. Joan of Arc in the rue de Rivoli, Claude Chappe in the rue du Bac, Guy de Maupassant in the Parc Monceau, Watteau in the Luxembourg Gardens, and the Washington and Lafayette group in the Place des Etats-Unis ("United States Square"), are merely examples, cited at hazard among dozens, of how successfully the French modern sculptor can glorify the warrior, inventor, writer, artist or patriot in bronze and marble. In crystallizing a general idea into an allegorical figure or group, he is not

less happy; witness the Lion of Belfort, the Triumph of the Republic, Carpeaux's group, "the Dance," outside the Opera, etc., etc. But why multiply instances when Bartholdi's statue of Liberty stands at the entrance to New York harbor?

HELP IN CASE OF ACCIDENTS.

Drowning.—1. Loosen the clothing, if any. 2. Empty lungs of water by laying body on its stomach, and lifting it by the middle so that the head hangs down. Jerk the body a few times. 3. Pull tongue forward, using handkerchief, or pin with string, if necessary. Imitate motion of respiration by alternately compressing and expanding the lower ribs, about twenty times a minute. Alternately raising and lowering the arms from the sides above the head will stimulate the action of the lungs. Let it be done gently, but persistently. 5. Apply warmth and friction to extremities. 6. By holding tongue forward, closing the nostrils, and pressing the "Adam's apple" back (so as to close entrance to stomach), direct inflation may be tried. Take a deep breath and breathe it forcibly into the mouth of the patient; compress the chest to expel the air, and repeat the operation. 7. Don't give up! People have been saved after hours of patient, vigorous effort. 8. When breathing begins, get patient into a warm bed, give warm drinks, or spirits, in teaspoonfuls, fresh air and quiet.

Burns and Scalds.—Cover with cooking soda and lay wet cloths over it. Whites of eggs and olive oil. Olive oil or linseed oil, plain, or mixed with chalk or whiting. Sweet or olive oil and limewater.

Lightning.—Dash cold water over a person struck.

Sunstroke.—Loosen clothing. Get patient into shade and apply ice-cold water to head. Keep head in elevated position.

Mad Dog or Snake Bite.—Tie cord tight above wound. Suck the wound and cauterize with caustic or white-hot iron at once, or cut out adjoining parts with a sharp knife. Give stimulants, as whisky, brandy, etc.

Fainting.—Place flat on back; allow fresh air, and sprinkle with water. Place head lower than rest of body. Tests of Death.—Hold mirror to mouth. If living, moisture will gather. Push pin into flesh; if dead, the hole will remain; if alive it will close up. Place fingers in front of a strong light; if alive, they will appear red if dead, black or dark.

Fire in One's Clothing.—Don't run—especially not down stairs or out of doors. Roll on carpet, or wrap in woollen rug or blanket. Keep the head down, so as not to inhale flame.

Fire in a Building.—Crawl on the floor. The clearest air is the lowest in the room. Cover head with a woollen wrap, wet if possible. Cut holes for the eyes. Don't get excited.

Fire from Kerosene.—Don't use water, it will spread the flames. Dirt, sand or flour is the best extinguisher, or smother with woollen rug, table cloth or carpet.

Suffocation from Inhaling Illuminating Gas.—Get into the fresh air as soon as possible, and lie down. Keep warm. Take ammonia—twenty drops to a tumbler of water, at frequent intervals; also, two to four drops tincture nux vomica every hour or two for five or six hours.—(Amer. Soap Journ.)

SELLING TOOTH BRUSHES.

The difficulties incident to the sale of tooth brushes are familiar to every drug dealer. Fred. A. Conger, of Conger Bros., St. Paul, Minn., thus tells how he has smoothed the way in his case: "Every tooth brush we sell is disposed of with an absolute guarantee that the quality is as represented, or money refunded. And right there the argument stops and sale takes place. The surprising feature is that very rarely is a murmur afterward heard from the customer."

OBSCURE.

Patent Medicine Man—I don't know whether to publish this testimonial or not.

His Partner—What is it?

Patent Medicine Man—(Reads)—"Your cough syrup has been used with wonderful success for my boy, aged 10. He confesses that he would rather go to school any time than to take your preparation."—Puck.

POWDERED EXTRACTS; THEIR MODE OF PREPARATION AND EXTRACTION.*

By WILLIAM E. JENKS.

Having for many years enjoyed exceptional opportunities in the laboratories of John Wyeth & Bro., Philadelphia, to assist in the development of this particular line of work, the writer has been encouraged to offer a brief contribution and endeavor to present in a comprehensive manner a few essential features necessary to ensure representative products of this class of the highest therapeutic value, believing at the outset that there evidently exists in the minds of many practical pharmacists but an imperfect conception of the details involved in the preparation of these important products, occasioned, no doubt, by the limited literature published in pharmaceutical journals relating to this subject, as well as by the omission of official recognition as a class in the U. S. Pharmacopœia.

The impression formerly prevailed, and is undoubtedly entertained to this day by many actively engaged in the advancement of pharmacy, that nearly all these products present the same general uniform properties, devoid of individual and distinctive characteristics, and evidently appreciated only in proportion to their permanency as powders. If the average pharmacist should be asked for a descriptive definition, the information elicited would probably be "A light or dark brown powder, more or less hygroscopic, possessing in a moderate degree the physical properties of the drug and a heavy predominating, or what may be described as a charred, odor." An examination of the standard powdered extracts of to-day would be a revelation to many who entertain such delusive impressions. They will be found entirely divested of the slightest evidence of oxidation, possessing in a marked degree the well-defined physical and sensible characteristics of the respective drugs from which they are derived, such as odor, taste and color, and embodying and retaining in a concentrated condition and in their natural organic combinations all the original, proximate principles of the drug. This remarkable transition has been effected entirely through the introduction and perfection of an improved system of vacuum distillation, enabling a skillful operator to concentrate the various percolates to complete dryness, protected during every stage of the operation from the oxidizing influence of the air. The vacuum pan or still, which is designed for this purpose, is constructed in such a manner that a practically perfect vacuum, at a temperature not exceeding 120° F. is maintained until every trace of moisture has been eliminated and a perfectly dry, brittle mass remains. At this stage the extractive matter, as it is removed from the pan, presents a variety of interesting conditions in marked contrast to the charred masses resulting from open evaporation. The odor of the drug is strongly predominant, the fracture glistening and resinous in character, more or less transparent in thin layers, and in every case, so far as the writer's observations have extended, perfectly soluble in the original menstruum employed, indicating undoubtedly the unaltered condition of the proximate principles. After a careful determination of the actual weight of the dry extractive, sufficient diluent, in the nature of milk sugar or powdered drug, is added to bring the final product to a definite and unvarying relation to the drug, corresponding approximately to the pilular extract; and, after thorough incorporation, reduced to a uniform powder. To insure an almost palpable degree of fineness, as well as the utmost permanency for this class of preparations, it is imperative that every vestige of moisture should be dissipated, and the mass as it is discharged from the pan should be in condition to be speedily powdered.

If there should remain in the charge the slightest trace of moisture, it would occasion in time a tendency to what is commercially known as "cake," a soft, pasty condition, which it assumes preparatory to reverting to the original, solid state. It is an established fact and one universally recognized by pharmacists, that powdered extracts possess an inherent affinity for moisture; the

hygroscopic nature of many is such that they can only be employed with perfect freedom in exceedingly dry weather, and if, as is frequently the case, it should become necessary to manipulate the extracts in a moist, humid atmosphere, the operation should be conducted with the utmost dispatch, and the exposure be as limited as possible. The absorption of moisture is frequently not observable at first, but shortly becomes manifest in the sinking of the powder, which eventually resolves itself into an intractable mass.

In conclusion, the writer cannot sufficiently impress upon the dispensing pharmacist the importance of exercising the utmost discrimination in the selection of powdered extracts, for if they are not made by the vacuum process they must necessarily suffer much deterioration.

THE VALUE OF GOOD CREDIT.

A good credit is something worth striving for, and when attained the possessor may rightfully feel a just pride in the fact that he possesses the confidence of those with whom he deals. A good credit standing properly used is an acquisition of unlimited value, but when abused becomes one of the worst abuses that can be entailed upon an individual.

It should not be inferred because one is in good credit standing that he is entitled to unlimited credit or that his honesty is called in question should the jobber or manufacturer place a limit on the amount he is willing the merchant should owe him. It must be borne in mind that honesty alone will not pay debts. One may be absolutely honest and not able to pay. The fact that he does not pay is not an evidence that he is dishonest. It will readily be seen that one's ability to pay must be taken into account as well as his honesty.

To obtain and maintain a good credit, it is essential that the merchant, in addition to having capital, be it large or small, should be honest, capable and industrious, and should have a just appreciation of the rights of those from whom he seeks credit. If he possesses these qualities he will have no trouble in obtaining all the credit his business demands. There is danger, however, that he may be led thereby to overstep the bounds of prudence and load himself with debt for goods on his shelves in excess of the legitimate requirements of his business, which state of affairs is likely to lead to effort by sales on credit, often injudiciously extended to relieve the pressure, or to establish branch stores for the same purpose, both of which means only add to the burden and usually lead to failure.

If credit is extended at all by the retail merchant, it should be upon distinct terms as to time of payment, and only to those who are known to be worthy of credit, and prompt payment at maturity should be insisted upon.

The retail merchant should pay his bills promptly at maturity, if he does not discount them. Otherwise the jobber of whom he buys on credit is in reality the one who bears the burden of the unpaid accounts of those who have no claims upon him and in whom he has no interest. The jobber's rights are thus invaded, and the credit of the merchant suffers.

It is very important to every retail merchant that he keep his business well in hand, the details properly looked after, the stock well insured, expenses carefully guarded, his debts within easy control and his collections promptly looked after. Failure is not likely to come to those who appreciate the value of a good credit and who take the proper means of meriting and retaining it.—T. H. Green, in *New Idea*.

ASIATIC LUCIDITY.

"Gentlemen who come in hotel not say anything about their meals they will be charged for, and if they should say beforehand that they are going out to breakfast or dinner, etc., and if they say that they not have anything to eat they will be charged, and if not so they will not be charged, or unless they bring it to the notice of the manager of the place, and should they want to say anything they must order the manager for one, not anyone else, and unless they bring not it to the notice of the manager they will be charged for the least things according to the hotel rate, and no fuss will be allowed afterward about it."—*Calcutta Times*.

*Read before the Alumni Association Phila. Coll. Pharmacy, and reprinted from Alumni Report.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.

(J. H. F.) wants the English or botanical name of a bark known by the Indian name of "sing-sa-goo-ga." Who can give the information?

Antiseptic Solution.

(C. G.) See last week's issue, page 94.

Hectograph.

(F. E.) See this journal February 10 and June 2, 1898, pages 212 and 830 respectively. Formulas for inks and instructions for operating the hectograph appear in the Era of August 18, 1898, page 220.

Linseed Oil Stains on Clothing.

(F. S.) Stains made by linseed oil on clothing may generally be removed by carefully sponging them out with oil of turpentine. A good plan is to saturate blotting paper with the turpentine, or benzol, and applying it to the stain iron over with a hot iron.

Elixir Hydrastis Compound.

(F. S.) We fear you have not closely followed the formulas given in this journal February 2, 1899. We suggest you do a little experimenting upon your own hook. Try the first formula (by percolation). A clearer or more transparent elixir may be made by filtration through a wetted talcum filter as directed for the preparation of many elixirs of the National Formulary.

Aromatized Castor Oil.

(Carolina.) Castor oil has but little odor but its peculiar taste is said to be readily removed by thoroughly washing the oil with hot water and incorporating sufficient saccharin ($\frac{1}{2}$ to 1 per cent) to impart a sweet taste. The oil may be then flavored by adding small quantities of oil of cinnamon and extract of vanilla or other suitable flavoring substances. Suggestions on suitable flavors for oils are given in the National Formulary under "Emulsions."

Saturated Solutions.

(T. E. B.) The Pharmacopoeia and works of reference like the Era Dose Book give tables of solubilities which may be employed in the preparation of saturated solutions. These tables will tell you at a glance the solubility of most official and medicinal substances in water and other solvents. In making saturated solutions it is important to keep in mind the degree of rapidity with which the substance is dissolved, and also that the speed of solution decreases very much as the point of saturation is reached. This subject you will find very fully discussed in works on practical pharmacy.

Granulation of Salts for Making Compressed Tablets.

(F. S.) Mix your salts in the desired proportions and then granulate by adding one-tenth of their weight of cane sugar and one-twentieth of acacia, mix thoroughly and moisten with water until the mixture is of such consistency that it can readily be forced through a No. 12 sieve without sticking to it or clogging it. The mixture is then dried. The finished granulation should always be dry, as a damp granulation causes the mixture to stick to the dies and punches. The granulation is now forced through a No. 20 sieve and the particles which do not readily pass through the meshes are forced

through by the aid of a flat pestle. In adding the water to make the granulation, it should be thoroughly and evenly incorporated so that all the particles contain as nearly as possible an equal amount of moisture. The water is best added in small portions at a time.

Extract of Witch Hazel.

(J. C. C.) By "extract of witch hazel" we presume you mean the ordinary distilled extract, a formula for which may be found in the National Formulary. This preparation is usually bottled and sold without further dilution. Here is a formula for a perfumed preparation which may be used as a face lotion:

- | | | |
|-----|---|-----------|
| (1) | Spirit of lavender | 1 ounce |
| | Rose water | 6 ounces |
| | Distilled extract witch hazel, enough to make | 16 ounces |
| (2) | Glycerine | 3 ounces |
| | Orange flower water | 5 ounces |
| | Distilled extract witch hazel, enough to make | 16 ounces |
- Of course, the perfume may be altered to suit the taste.

Benzoin Lotion.

(C. & T.) want a two-ounce mixture which shall contain glycerin, tincture of benzoin, listerine and rose water; what quantity of each ingredient shall be employed? There are no definite proportions to be designated; the quantity of each is governed entirely by individual opinion and judgment. The following combination will probably answer:

Tincture of benzoin	$\frac{1}{4}$ dram
Glycerin	$\frac{1}{2}$ dram
Listerine	2 drams
Rosewater, enough to make	2 fl. ounces

Mix the tincture of benzoin and glycerin and gradually add the rose water, previously mixed with the listerine, and shake vigorously.

Extract of Walnut Shells.

(C. N.) Deite states that an alcoholic extract of ordinary walnut shells may be prepared by mixing the expressed juice of the green shells with 10 parts of alcohol, allowing the mixture to stand for ten days, and then filtering. This extract is said to color the hair brown.

Walnut Hair Dye.

Bruise 40 parts of fresh green walnut peel with 5 parts of alum, digest with 200 parts of olive oil until all moisture has been dissipated, strain and perfume the oil as desired.

Walnut Hair Pomade.

Work in a mortar to a uniform paste $\frac{1}{2}$ pound of fresh green walnut shells and 2 ounces of alum. Digest the paste with 2 $\frac{1}{2}$ pounds of benzoinated lard and tallow on the water bath until the fat appears clear. Then strain off the fat, stir until cold, and perfume with 1 $\frac{1}{2}$ drams of neroli oil and $\frac{1}{2}$ dram of rose oil.

Hair Oil.

- (J. C. C.)
- | | | |
|-----|-----------------|---------------------|
| (1) | Nut oil | 20 ounces |
| | Olive oil | 40 ounces |
| | Alcohol | 5 ounces |
| | Essence of musk | $\frac{1}{2}$ ounce |
| | Oil of bergamot | $\frac{1}{2}$ ounce |
| | Oil of orange | 2 drams |
| | Otto of rose | 10 minims |
- Burdock Root Hair Oil.
- (2) Digest at a moderate heat 8 pounds of olive oil or sesame oil with 2 pounds of fresh burdock roots; then pour off the oil from the roots, add 7 ounces of castor oil, color with alkannin, and perfume with bergamot oil 2 ounces and palma rose oil 1 ounce.
- | | | |
|-----|-----------------------|--------------------|
| (3) | Benzoinated oil | 10 ounces |
| | Jasmine oil (floral) | 10 drams |
| | Oil of cloves | 10 minims |
| | Oil of bergamot | $\frac{1}{2}$ dram |
| | Otto of rose | 5 minims |
| | Oil of orange-flowers | 20 minims |
| | Oil of thyme | 1 minim |

Liquor Carbonis Detergens.

(C.) The solution prescribed in the formula you submit is that known as "liquor carbonis detergens." The following formula is that generally used by physicians in this country:

Coal tar	4 ounces
Tincture quillaja, N. F.	8 fl. ounces
Alcohol	8 fl. ounces

Digest for two days, decant and filter. Under the title "Liquor Picis Carbonis" a similar formula is offered in the British Unofficial Formulary. It follows:

Prepared coal tar 4 ounces
Tincture quillaja 1 pint

Digest at a temperature of 120° F. for two days, allow to become cold, and decant and filter. Prepared coal tar, or "Fix Carbonis Liquida, Preparata," is made from commercial coal tar by placing it in a shallow vessel and heating at a temperature of 120° for one hour, stirring frequently.

It is prescribed by dermatologists as a wash in eczema, psoriasis, pruritis and other skin diseases.

Ammonia for Household Use.

(J. C. C.)

(1) Yellow soap 10 grains
Borax 1 dram
Lavender water 20 minims
Stronger ammonia water 6 ounces
Water, enough to make 20 ounces

Dissolve the soap and borax in 5 ounces of boiling water; when cold add the lavender water and ammonia, and make up to a pint with water.

(2) Methylated spirit 1 gallon
Soft water 1 gallon
Stronger ammonia water 1 gallon

(3) Ammonia water 5 pints
Distilled water 5 pints
Soap 100 grains
Olive oil 5 drams

Cut the soap in shavings, boil with the oil and water, cool, add the ammonia water, and bottle. For use in laundries, baths and general household purposes, add one tablespoonful to one gallon of water.

Oxygen from Sulphuric Acid.

(T. B.) When decomposed by heat in a suitable retort sulphuric acid splits up into sulphur dioxide, water and oxygen. This method is one among others suggested for the preparation of oxygen cheaply on the large scale, the acid, according to Roscoe, yielding 15.68 per cent. of its weight of the gas, or in practice, 55 grams of acid yield 6 liters of gas, thus:

The operation is conducted by allowing a thin stream of sulphuric acid to flow into a retort filled with broken bricks and heated to redness. Upon the small scale this decomposition may be readily shown by allowing sulphuric acid to drop slowly into a platinum flask filled with pumice stone and heated strongly over a lamp; the mixture of gases which escapes consists of one volume of oxygen to two volumes of sulphur dioxide, the latter being absorbed by passing through water containing caustic soda, the oxygen escaping in the free state. In employing this method provision must be made for the collection and condensation of any undecomposed sulphuric acid which may pass over.

Cherry Extract (Artificial).

(S. H. G.)

(1) Oenanthe ether 1 fl. dram
Acetic ether 5 fl. drams
Benzoin ether 5 fl. drams
Glycerin 3 fl. drams
Saturated alcoholic solution of benzoin acid 1 fl. dram
Alcohol, deodorized, enough to make 16 fl. ounces

(2) Black.
Benzoin ether 5 fl. drams
Acetic ether 10 fl. drams
Oil of bitter almond (deprived of hydrocyanic acid) 2 fl. drams
Saturated alcoholic solution of benzoin acid 2 fl. drams
Saturated alcoholic solution of Oxalic acid 1 fl. dram
Alcohol, deodorized, enough to make 16 fl. ounces

(3) Red.
Benzoin ether 1 fl. ounce
Oenanthe ether 2 fl. drams
Amyl butyrate 4 fl. drams
Amyl acetate 2 fl. drams
Oil of bitter almonds (deprived of hydrocyanic acid) 1 fl. dram
Cherry juice 2 fl. ounces
Glycerin 2 fl. ounces
Alcohol, deodorized, enough to make 16 fl. ounces

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Beal, Seto, Ohio.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

As the result of the suggestions of a large number of students, an Era Course in Pharmacy pin has been designed, and is shown in the accompanying illustration. This pin consists of 10-carat gold, the letters and symbols being in different colored enamels. It can be secured in either style,—a stick pin, a safety pin or button. The price is \$2.00, which includes cost of mailing. Nothing at all creditable could be secured for less than this figure. Students in ordering are requested to state which style is wanted. The cash must accompany order.

In the Students' Edition last week were sent Junior Lectures 23 to 37, and Senior Lectures 31 to 34. In the issue of February 8 another supply will be forwarded.

Read This Bulletin Each Week.

Toilet Lotion.

(J. K.) Try one of the following:

(1) Glycerin 6 fl. ounces
Quince seed 1 dram
Hot water 21 fl. ounces
Deodorized alcohol 5 fl. ounces
Perfume as desired.

Place the quince seed in a bottle, pour on the hot water and agitate occasionally until a mucilage is formed; then strain through muslin. To this add the glycerin and shake thoroughly. Dissolve the desired perfume in the alcohol and add the solution to the mucilage, agitating briskly until of a uniform consistency.

(2) Tragacanth 2 drams
Oil of rose geranium 15 minims
Alcohol ½ ounce
Glycerin 3 ounces
Water 6 ounces

Dissolve the oil of rose geranium in the alcohol and add to the tragacanth contained in a mortar; mix well, then add all at once the glycerin and water, previously mixed, and stir until uniform.

(3) Quince seed 2 ounces
Rose water 4 pints
Glycerin 2 pints
Tincture of benzoin 2 ounces

Macerate the quince seed in the rose water for 24 hours, strain, and add the glycerin and tincture of benzoin.

"LANOLINE" CLAIMED AS A TRADE MARK.

Patent Has Expired, but American Agents Say Makers Calling It Lanoline Will Be Proceeded Against.

Interest is rife in drug trade circles over the circumstances and conditions attending the expiration of the United States patent on lanolin. The patent was owned by a German firm of manufacturers, and now the American agents assert that that firm has trade mark rights in the word "Lanoline," and that those rights will be upheld in the courts if necessary.

Letters patent No. 271,192 were granted by the United States Patent Office on January 23, 1883, to Dr. Otto Braun and Dr. Oscar Liebreich, of Berlin. In the specification filed with their application the inventors furnish the following description of their product and its manufacture:

Our new product, which we have termed lanolin, is a compound of clean wool-fat with water. It forms an opaque, white, creamy mass. It is insoluble in water, and when heated splits up into water and wool-fat. When stirred together with water at the ordinary temperature, the wool-fat again absorbs water so as to produce lanolin, but if the lanolin is heated it splits up again into water and wool-fat. Under the microscope it appears as a homogeneous mass.

Many attempts have already been made to obtain the possible fat from wool, not from wool-fat, or from the wool-washing water. The methods used heretofore, however, are ineffective, since in the most favorable case the product obtained is sour and has an unpleasant odor, and benzine, petroleum, or other volatile materials are used for the extraction of the fat, the odor of the extracting medium also adheres to the product. The reason of this unsatisfactory result is due partly to the carbonic acid which is always evolved by the decomposition of alkaline liquids, and which attaches itself in small bubbles to the little particles of dirt adhering to the fat and carries up a large portion of the heavy earthy admixtures of the fat, so that upon the sour liquid a dirty, muddy mass is formed, from which fat can only be obtained by pressing under heat. Furthermore, during the progress of the operation the lyes pass over into acid fermentation, causing annoyance to the neighborhood and imparting to the resulting fat an obnoxious odor which cannot be removed. Moreover, this method requires much space and a considerable quantity of acid, because the earthy portions, which always contain decomposable lime salts, or other acids, must be saturated with the acids necessary for the separation of the fats. Furthermore, there is a loss of material, due to the portion of the fat which remains in the press-cakes. By our method we are enabled to obtain first, by means of the separation of the dirt and unsaponified fat from each other and from the soapy water before the latter has been decomposed by acid; second, means for the production of lanolin, or of a new compound formed of purified wool-fat and water, as above stated.

In carrying out our invention, we proceed as follows: The fresh, undecomposed waste liquor or lye is passed through a centrifugal machine, in which the dirt and the fat are separated from each other, while the cleansed soap-liquor is continually drawn off by means of a pipe and led directly into the vat, which serves for the acidification. The raw wool-fat is then thoroughly kneaded by suitable machinery in cold flowing water until the water which flows off is as clear as the water which flows in. The raw lanolin is then heated with water, whereby it is split up into fat and water. The latter is skimmed from the surface and cooled, and for further purification it can be again treated in the centrifugal machine in a melted condition, or it can be dissolved in ether, ethylated, or methylated spirits, or other solvents, and the solution can be separated from the residue by filtration or other means. The solvents can be recovered by treatment in suitable stills. After the fat has been cleaned, as above stated, it is thoroughly kneaded with water for a long time, and a perfectly white, neutral, colorless unguent is obtained, which is our new product. From the mud deposited in the lowest part of the centrifugal machine, a still further portion of lanolin can be obtained by stirring in the same up with clean or salt water and again treating it in the centrifugal machine or extracting it either in a wet or dry condition, by means of a solvent, after which it is treated as above.

Instead of producing our lanolin from wool-washing water, it may be obtained from commercial wool-fat by stirring this wool-fat together with water containing carbonate of soda or caustic soda, and adding to the mixture of these to form a thin, milky solution, which is treated in the manner above described.

We are aware that wool oil has been obtained by acidulating the alkaline waters used to remove grease from wool, collecting the gelatinous substance obtained, and treating it with a fixed or volatile oil, the latter being afterward driven off by distillation; also it has been obtained direct from the wool by washing it with

volatile oil or sulphuret of carbon and employing gentle heat, as well as by other methods. All these processes are, however, subject to the objections already mentioned, inasmuch as they affect the product either by the odor adhering thereto, or by its positive deterioration in quality, or both.

What we claim as new, and desire to secure by Letters Patent, is:

1.—As a new article of manufacture, the product composed of clear wool-fat and water, and having the characteristics above set forth.

2.—The within described process for manufacturing wool-fat by first treating wool-washing water or an alkaline solution of commercial wool-fat in a depositing centrifugal machine, then purifying the product and finally treating the same with water substantially as set forth.

The inventors assigned their rights secured by this patent to the Fabrik Chemischer Produkte Actiengesellschaft, which in turn transferred the same to Benno Jaffe & Darmstaedter, of Charlottenburg, which firm has been and is still making and marketing "Lanoline." The word "Lanoline" was registered as a trade mark in 1886, four years after the patent was granted. Notice has been called to the difference in spelling. The trademarked name has a final "e," but the patent was issued on "lanolin."

The sales agents for Dr. Liebreich's Lanoline in America are Victor Koechl & Co., of No. 122 Hudson street, New York. The president of that firm, H. A. Metz, said to the Era reporter:

"While the patent on lanoline expired on January 23, and anyone may now make the product, manufacturers must call it adeps lanae, or some other name than lanoline. The German manufacturers who held the patent right also have the trade mark rights in that name. We have hitherto prohibited the use of the name, and we shall continue to do so. Some people seem to think that the case is analogous to that of antipyrine—that the name the inventors gave their product is the only name of the substance. But this is not so. 'Lanoline' is a trademarked word, and the manufacturers will protect their rights in it. For that reason, I do not anticipate any reduction in price. We shall continue to sell Lanoline Liebreich at the old figures. If it becomes necessary later on to meet competition with other makes of adeps lanae, we may put out a cheaper grade of lanoline, as we did with antipyrine, but there will be no reduction in the price of 'Lanoline Liebreich.'

In England there has been considerable litigation over the patent rights in lanoline. The British patent was granted to Dr. Liebreich in 1882. Benno Jaffe & Darmstaedter in December, 1893, succeeded in obtaining from the High Court of Justice, in London, a decree restraining J. Richardson & Co., Ltd., of Leicester, from making and selling "Anaspalin," a mixture of purified wool fat and vaseline, the court agreeing with the plaintiffs that the article was an infringement upon the product of Liebreich's patented process. Justice Romer, who wrote the decision of the court, after holding the patent to be good, said:

"Now, admittedly, what the defendants are selling under the name of anaspaline is (putting aside an immaterial ingredient) merely lanoline. The question is, how is it made? . . . They adopt in substance the whole process of the patent. . . . They appear to me to have taken the essence, or what is sometimes called the pith and marrow, of the invention. . . . It follows that the plaintiffs are entitled to the usual relief against the defendants as infringers."

The English patent expired two or three years ago, and since that time "British lanolin" has been made and marketed in England by others than the German firm which held the patents.

OWEN & MOORE DRUG CO., INCORPORATED.

The Owen & Moore Drug Company has been incorporated at Clarksville, Tenn. The incorporators are B. H. Owen, J. D. Moore, J. F. Parker, E. P. Jordan, G. W. Coulter and J. D. Owen. The old firm of Owen & Moore, which the new company succeeds, was established in 1870. The new company will transact both a wholesale and retail business.

PROGRESSIVE EUCHE AND DANCE

Horticultural Hall, Philadelphia, Feb. 7.

Mayor Samuel H. Ashbridge Will Open the Festivities

ENTERTAINMENT COMMITTEE.

D. M. Harris,	E. J. Finnerty,	J. G. Howard,
C. H. Campbell,	H. L. Stiles,	Chas. Leedom,
T. M. Newbold,	J. M. Baer,	E. T. Spencer,
Mahlon Kratz,	H. C. Blair,	W. I. Cliffe

Philadelphia, Jan. 26.—The Entertainment Committee of the Philadelphia Retail Druggists' Association held a meeting on last Tuesday evening in the committee rooms at the Odd Fellows' Temple, Broad and Cherry streets, all the members of the committee being present. The reports of the various sub-committees were received and an accounting of the sale of tickets was rendered by those having charge of the matter. It will be remembered that the number of tickets issued was limited to 1,200, so, when the reports showed that 1,000 had already been sold, with several additional parties to hear from, the measure of success may be appreciated. It was decided by the committee that no tickets would be sold at the door of the hall on the night of the euche, but there will not likely be any left by that time anyhow.

J. G. Howard, H. C. Blair, Jr., and D. M. Harris were appointed as a committee to wait on Mayor Ashbridge to extend to him an invitation to be present at the opening exercises and to make an address of welcome. An invitation was sent to the Mayor by mail, after which he was called upon by the committee with results as follows:

Office of the Mayor,
Philadelphia.
Jan. 25, 1900.

Mr. D. M. Harris,
4400 Grand Avenue.

Dear Sir—Mayor Ashbridge directs me to say in reply to your letter of January 24th that he accepts the invitation to make a brief address before the Philadelphia Association of Retail Druggists, at Horticultural Hall, February 7th, at 8.15 p. m.

Yours very truly,

J. HAMPTON MOORE,
Secretary.

This will be of additional interest to many when they learn that the mayor was at one time connected with the drug business with the firm of Robert Shoemaker & Sons.

D. M. Harris will be Master of Ceremonies and will be assisted by the following leading druggists, members of the association. C. H. Campbell, T. M. Newbold, Mahlon Kratz, E. J. Finnerty, H. L. Stiles, J. M. Baer, H. C. Blair, Jr., J. G. Howard, Charles Leedom, E. T. Spencer, W. L. Cliffe, W. H. Gano, A. Eberly, W. T. Steinmetz, L. C. Funk, Frank Groff, Charles Rehfuess, W. H. Laubach, W. A. Rumsey, J. C. Perry, Russell Blackwood, Wm. J. Pechin, Warren Poley, George Lambert, Jesse Pechin.

The following is the list of patronesses who will honor the occasion by their presence and many of whom are taking an active interest in the success of the affair: Mesdames A. F. Ashmead, H. C. Blair, J. D. Burg, H. J. Batdorff, E. M. Foring, T. J. Buckmann, J. M. Baer, H. A. Borell, G. McL. Bowman, E. L. Brown, R. C. Brodie, C. H. Bohn, C. F. Chandler, R. C. Cadmus, W. L. Cliffe, Theo. Campbell, W. H. Campbell, G. P. Conner, C. H. Campbell, W. C. Chalfant, J. L. Crothers, B. Frank Davis, Eberly, C. A. Eckels, J. Eppstein, W. A. Fetters, L. C. Funk, E. A. Fahy, G. W. Fehr, E. J. Finnerty, Jr., W. Fitch, Farrow, A. J. Frankeberger, W. H. Gano, E. R. Gatchell, Louis Genois, F. Groff, C. H. Gubbins, D. M. Harris, J. G. Howard, S. G. Haydock, C. E. Howard, A. Hoch, S. E. R. Hassenger, Wm. Harris, J. W. Harrigan, W. B. Jones, F. W. Jordan, C. E. Keeler, Mahlon Kratz, W. H. Lantz, Chas. Leedom, J. G. Long, W. H. Lacey, Wm. McIntyre, F. E. Morgan, C. C. Meyer, E. G. F. Nickley, Louis Murjahn, J. P. Mallon, Wm. Morrison, J. B. Moore, J. D. McFerron, M. O. Milligan, Robt. McNeill, H. B. Morse, T. M. Newbold, H. A.

ONE OF THE COMPETITORS.

Nolte, H. E. Nicoud, J. J. Ottinger, A. Oettinger, J. C. Perry, W. H. Poley, E. M. Platt, W. Proctor, D. G. Potts, T. H. Potts, W. J. Pechin, David Preston, A. T. Pollard, J. A. Rudy, W. A. Runsey, H. D. Ross, D. W. Ross, U. G. Ruff, Chas. Rehfuess, N. P. Reidenauer, J. F. Sands, C. Scattergood, E. T. Spencer, H. L. Stiles, F. W. E. Stedem, M. F. P. Streepner, A. J. Seeler, J. M. Stoever, H. Swain, W. F. Steinmetz, J. D. Sellenring, H. J. Seigfried, J. S. Schmelz, E. C. Stout, E. W. Supplee, W. A. Shannon, W. G. Toplis, W. H. Vandergrift, G. Y. Wood, G. B. Weinbrener, N. F. Weisner, J. Wolgemuth, C. A. Weiderringer, Geo. W. Shingle, C. W. Warrington.

The music will be by McDermott's celebrated orchestra, which has for many years played for the Philopatrian balls given every February.

The following order of exercises will be adhered to:

At 8.15 p. m. sharp Mayor Ashbridge will be introduced to the guests and will give a brief address of welcome.

The euche will commence at 8.30 promptly. The players will be divided into twenty-five sections, each of which sections will be presided over by one of the members of the association armed with a special game-recording stamp made expressly for the occasion. These sections will consist of ten tables each, with four players to a table, making a grand total of one thousand players.

At 10.30 the game will be stopped by a signal, the scores will be examined and prizes will be awarded to those who have been lucky enough to get good partners at each change of tables. There are not quite enough prizes to go around so that each player will get one, but the hundred and fifty as first announced has now grown to one hundred and seventy-five, and the total may reach two hundred, or one for every fifth player.

The complete list to date of the firms and individuals who have generously donated prizes is given as follows: Pharmaceutical Era, Smith, Kline & French Company, Eavenson Soap Company, L. C. Funk, Langdorf Company, Frank Teller, B. F. Lockwood, Jensen Press, Johnson & Johnson, J. Elwood Lee, Frank Groff, Colgate & Company, H. K. Mulford & Company, Robert Shoemaker & Company, Seabury & Johnson, C. F. Chandler, Royal Malt Company, New York Consolidated Playing Card Company, George Geyer Company, Shoemaker & Busch, Parke, Davis & Company, Whitall, Tatam & Company, Armour & Company, Merck & Company, William R. Warner & Company, Frank E. PLASTER MAKERS FIGHT.

Court Asked to Decide Who is Entitled to Red Cross Brand.

JOHNSON & JOHNSON vs. SEABURY & JOHNSON.

In the Court of Chancery of New Jersey, Johnson & Johnson, manufacturing chemists of New Brunswick, N. J., have instituted suit against Seabury & Johnson, manufacturing chemists, of 59 Maiden Lane, New York City, for infringement of trade-mark. The bill of complaint, addressed to the Hon. Alexander T. McGill, Chancellor, was filed last week. The defendants are given until the first week in February to appear, and until the first of March to file their answer. The bill of complaint is a weighty legal document, filling some thirty pages of type-written manuscript, foolscap size. The following is a summary of this complaint:

Johnson & Johnson, a corporation of New Brunswick, N. J., incorporated under the laws of New Jersey in 1887 to manufacture and sell medicinal articles and specialties of various kinds, soon after its incorporation devised new and original packages to contain its manufactures, and in connection therewith made use of a red cross as a symbol to prevent confusion and mistake in the market. The bill asserts that this corporation was the first to make use of a red cross as a mark or designation or in such a way that the symbol was calculated to give a name to the goods, and claims that it is entitled to the exclusive use of a red cross and its equivalent descriptive words, "Red Cross," as a trade-mark and trade name. As an example of usage Johnson & Johnson's absorbent cotton is instanced as being known to the trade as "Red Cross Cotton."

The bill then charges that Seabury & Johnson "fraudulently imitated" the complainant's absorbent cotton, "Borated Cotton," "Carbolated Cotton," "Salicylated Cotton," and gauze, and of which articles, as made by Johnson & Johnson, were known in the markets of the United States and of South America to bear a red cross as a symbol; and further, that the defendant firm offered and sold its absorbent cotton, put up and marked in imitation of Johnson & Johnson's product in the United States and in South America.

It is charged further that the defendants did this after Johnson & Johnson had succeeded in creating a demand for its "Red Cross Cotton," put up in blue cartons of characteristic appearance and differentiated from other cottons, and that in the month of July, 1899, the defendants devised cartons which were unnecessary imitations in size and shape, and in color of interior wrappings, and "sold the said simulated packages bearing labels consisting in part of a red cross as and for 'Red Cross Cotton,' and as and for the cotton of Johnson & Johnson."

These things are characterized as "acts essentially unfair, inequitable and fraudulent, and to the great loss and injury of Johnson & Johnson," which corporation petitions the court for that relief in the premises to which it is in equity entitled, namely, that the firm of Seabury & Johnson be restrained from using the Red Cross symbol, and imitating the goods and packages of the complainant, and that such further relief be granted "as the nature of the case may require and as shall be agreeable to equity and good conscience."

Rowland Cox, of New York City, who is counsel for Johnson & Johnson in this procedure, said to the Era reporter,

"The bill of complaint has only just been filed, and the defendants have not yet made their answer. You may read the bill, if you like, but further than that I do not care to say anything about the case—for several reasons."

THE OTHER SIDE.

When asked for their answer to this complaint Secretary Henry C. Lewis, of Seabury & Johnson, said they had not yet received the complaint but had been notified simply that the suit had been brought. He dictated the following statement, which was all he cared to say at this time:

"Suit has been brought in the Chancery Court at Trenton, N. J., by Johnson & Johnson against this corporation to restrain the use by it of the Red Cross labels which have been used for many years on our packages—long before Johnson & Johnson were in existence.

"We shall defend this suit to the fullest extent and take this opportunity to notify the trade that we shall fully protect all holders and purchasers of our goods bearing this mark."

FORMER RED CROSS LITIGATION.

In 1897 Johnson & Johnson won a similar suit in the United States Court of Appeals against Bauer & Black of Chicago. The case was begun two years or more before that to restrain Bauer & Black from using as a trade mark on their goods a Maltese Cross, which in the opinion of Johnson & Johnson was sufficiently like their trade mark, a Greek cross, to constitute an infringement. The United States Circuit Court for the Northern District of Illinois, in which the suit was begun, decided against Johnson & Johnson, but the higher court upon their appeal reversed that decision.

DRUGGIST AND DRUG CLERKS ARRESTED FOR ARSON.

J. C. Casto, a Terre Haute, Ind., druggist, and four of his clerks were arrested January 28 for a conspiracy to burn and blow up his drug store at that place. The fire was discovered, and after it was extinguished dynamite and powder were found to have been placed where they would do the most destruction. Thirty-two lives were endangered. Fuses were attached to barrels of oil. The paints and oils in the stairway had been connected with the fire. Holes had been cut through the floor to make draughts. Casto was released on \$6,000 bonds, but he feared personal violence and surrendered himself to the police and went to jail. The druggist says his enemies tried to destroy his property because he had been prosperous in business.

LINCOLN DRUG CO. TO BE PROSECUTED.

Lincoln, Neb., Jan. 24.—The Lincoln Drug Company was notified a few days ago, that complaint would be filed against it for violation of the anti-trust law. About nine months ago the largest local drug firm in the city started a cut price patent medicine department. The other drug stores organized to fight it, but soon gave up. Recently they secured the assistance of the wholesalers, who now refuse to sell to the cut-price man, who is shut out of obtaining supplies in this State. The matter was laid before the attorney-general to-day. The Nebraska law provides for a maximum fine of \$5,000 and forfeiture of charter.

EARTHQUAKE WRECKS A DRUG STORE.

In the earthquake which visited Southern California Christmas morning the drug store of McKim & Chambers, San Jacinto, was badly wrecked. The roof of the building fell inward, sweeping one side of the room clean of shelving and goods, smashing counters and show cases and ruining more than one-half of the stock. The drug store of Dr. Wright was also damaged, the bottles being shaken off the shelves and piled in broken heaps of glass on the floor. Falling bricks also smashed the show cases and spoiled some of their contents. McKim & Chambers' loss is \$3,500; Dr. Wright's, \$300. The former have secured new quarters.

BUILDING COLLAPSES AND CAUSES LOSS.

Denver, Col., Jan. 28.—The three-story building being erected by W. A. Hoover & Co., wholesale druggists, in this city, collapsed to-day, causing a \$50,000 loss.

N. A. R. D. NEWS.

Chicago, Jan. 20.

The Retail Druggists' Association of Spokane, Wash., has become identified with the N. A. R. D. The organization represents nearly the entire trade of this city of 50,000. It is the first local organization in the State to join the national body, but the State association has been in line for a number of months.

Druggists who know of the existence of local associations that are not affiliated with the N. A. R. D., are requested to write to Thomas V. Wooten, secretary, No. 153 La Salle street, Chicago, giving the name of one or more of its officers.

E. A. Craighill, of Lynchburg, who represented the Virginia Pharmaceutical Association at the Cincinnati Convention, says in a recent letter to Secretary Wooten: "The more I read and think over these matters, the more am I convinced that there are three essentials for our success viz.: to satisfy all interested that it is financially beneficial to proprietors, jobbers and retailers that we shall co-operate and work as one body to break up price cutting. The proprietors and jobbers understand this now, but all of the retailers do not, and I believe the pharmaceutical journals and the N. A. R. D. should educate them up to an understanding of the situation. If all retailers understood and would see this as I think I, with thousands of others, do, they would organize everywhere, spend their money and time in the cause, and success would be assured. One great trouble is, that while the journals have done such noble work, the druggists do not read and do not comprehend the conditions as they exist outside their immediate surroundings. The best way to reach these that I know of is by missionary work. Foreign missionaries like Mr. Atolliday, Mr. Timberlake, Mr. Hynson, et al, could do more in an hour than home talkers will do in a year, yes in years, for one or two here have exhausted all efforts in organizing a working association in our section. If one or more of these foreign missionaries will visit us, I will guarantee that the N. A. R. D. shall have no expense for their keep. This brings me to mention, with your permission, the finances. It seems to me that if a general appeal was issued by authority of the N. A. R. D. to proprietors, jobbers and retailers for funds, with the understanding that the names and amounts would be published in all the journals, it would bring many dollars into our treasury that we would not otherwise get. Money is what we want, or the missionaries cannot do their work, and retail druggists generally are so poor they cannot supply this money; other means must be devised, if all are like many with whom I come in contact."

Treasurer Heller has received a contribution of \$50 from George A. Kelly & Co., of Pittsburg, also \$50 from W. J. Gilmore & Co., of Pittsburg. The 1899 dues of the Lafayette (Ind.) Pharmaceutical Association have been received.

In answer to the question, how often a local society should meet, one of the officers of the National Association replies: "It seems to me that it is altogether desirable that your people should be called together frequently. If our cause is to succeed, it will be because of the vigorous activity of the affiliated societies. The more vim and aggressiveness we can infuse into our local associations of the country, the more certain are we of ultimate success. The cutters and their abettors among the manufacturers and jobbers do not want anything better than for the retail trade to remain in its present condition of coma. If our onusness is to be saved, it will be brought about by agitation, and this agitation should be begun at once and kept alive by well-timed efforts on the part of every retailer who considers the calling of the pharmacist something that deserves to be a source of profit and of satisfaction to those engaged in its prosecution."

The following is a sample of the sort of letters that buoy up the spirits of the executive officers and strengthen their determination to do all in their power for the association's success: "Buffalo, N. Y., Jan. 15, 1900—Dear Mr. Wooten: At our local meeting, I was directed to send a hot reply to the enclosed to the effect that we as an association and as individuals will stand behind

the Executive Committee, and had you been present and heard the speeches, etc., you will not wonder why I cannot write them, they were so hotly N. A. R. D. that they would burn the paper.—J. A. Lockie, secretary Erie County Pharmaceutical Association."

The Richland County (Mansfield, Ohio) Pharmaceutical Association has joined the N. A. R. D. The officers are E. H. Lindsey, president, and Ira E. Flinck, secretary. Richland is a very large county, taking in several towns of considerable size. With two exceptions, the organization includes all the druggists in the county. There is very little price cutting.

N. Y. GERMAN APOTHECARIES' ANNUAL BALL.

Friday evening, January 26, was a gala night in New York City's German pharmaceutical circles. On that evening the German apothecary closed his store at 9 o'clock, left the key with the nearest friendly doctor and told that worthy if he needed anything to help himself. Then the apothecary donned his evening clothes and hid himself to Terrace Garden. He took his wife or his daughter or his sweetheart, and at the "garden" he met his brother apothecaries and their sweethearts, wives and daughters. He went intending to have a thoroughly good time, and he had it.

This was the occasion of the forty-ninth annual ball of the New York German Apothecaries' Association. These functions have always been successful in previous years, but this one was a bigger success than all the others that had preceded it. The hall, intended to accommodate about 300 people, was filled to overflowing; the dancers needed all the space, and the onlookers had to content themselves with chairs in the balcony or in the refreshment room. Indeed the attendance, in spite of inclement weather, was larger than had been expected, and all conditions were so encouraging that the association then and there contracted for the larger ball room in the same building for next year, when the fiftieth annual ball will be made a jubilee celebration.

The most characteristic thing about the entertainments of the German Apothecaries' Association is their good, old fashioned homey quality. The association, when its members come together upon occasions of this kind, is like one great family. Each member is on the best of terms with his fellows, and each is there to see that every other has a good time. Needless to say this ensures to everyone the best of enjoyment; and when one adds that the forty-ninth annual ball was the happiest of such occasions for all who participated, what further may be said?

A meed of praise should go to the committees which worked faithfully to make the entertainment the success it was. These were:

Reception Committee (the officers of the association)—Ex-President, Gustav Ramsperger; president, C. F. Schlessner; first vice-president, George Gregorius; second vice-president, Carl Schur; recording secretary, Carl F. Klippert; corresponding secretary, Sidney Faber; treasurer, Felix Hirsman; archivist, George Leinecker; librarian, G. C. P. Stolzenburg.

Arrangements Committee—Theodore Louis, Carl Kessler, Carl Schur.

Dance Committee—William Gregorius, Richard Staebler, George Riefflin, Carl Mittenzweig.

Entertainment Committee—Emil Roller, John Albert, Henry Vogt, Paul Arndt, William Gregorius, William Weigand.

A few of those who were present were: John Albert, Jr.; Otto Alexander, Martin Arneemann, Otto Boeddiker, Henry C. Boysen, F. W. Bruckmann, Dr. George C. Dienman, Paul Fels, John M. Fischer, Leo Geissler, Rudolph Gies, George Goetting, George Gregorius, L. F. Gregorius, William P. L. Gregorius, Fred Haas, Charles F. Hatterman, C. Helmerzhimer, H. Heller, Felix Hirsman, Hugo Kantowitz, Carl E. Kessler, John Kiehl, George Kleinman, Otto Lenz, William T. Lins, Gustav Pfingsten, M. K. Poulsen, Carl F. Schlessner, Max Schneider, L. F. W. Seifert, R. Staebler, R. R. Smith, C. E. Vetter, W. H. Weygant, Paul Zimmermann.

NEW YORK AND VICINITY.

Thimme Tries to Found a New Order.

Edward Thimme, agitator and arch-enemy of druggists, drug clerks and the drug trade, is trying to found a new order. The Druggists' League, in which he is "the whole thing," has been discredited by the drug clerks, by all pharmacists, and even by the labor organizations, which for a time Thimme "worked" to the Queen's taste. There are no drug clerks in the league, and in frantic effort to keep that fact from the public Thimme has kept the league a secret organization. Feeling his power waning he now tries to increase it by starting a new secret society for dupes, on similar lines to those of the league. Failing to lure the drug clerks into the one he now invites them to join another, which is called the "Drug Clerks' Circle." This is done by sending to the drug clerks of the East Side of New York city the following appeal, in which Thimme's name does not appear, but which is eminently characteristic of his style:

Dear Sir:—This letter approaches you as a representative of the Drug Clerks' Circle, a society which has recently been organized for the purpose of improving the prevailing evil conditions of the drug clerks in this city. It is clear to every drug clerk that the pharmaceutical profession to-day is in a more critical condition than it has ever been.

The embarrassed life of the drug clerk, with his limited hours of labor and limited freedom, has always been pitiable and is becoming worse with every day.

It is for the purpose to try every reasonable effort to secure better and more human conditions for those that are in the profession that a number of pharmacists have laid a foundation, and hereby earnestly request your co-operation in carrying out their worthy undertakings.

In order to bring our work to the desirable termination it is an absolute necessity to secure a large membership, and we do not doubt that all will realize the usefulness of our organization and of joining us immediately. We therefore request you not to delay, and appear to our regular meetings, which will be held on Wednesdays, at our club rooms, 317 Henry street, from 10 P. M. till 12 P. M.

THE DRUG CLERKS' CIRCLE.

This letter is a printed circular. On the bottom is written: "P. S. No initiation fee will be required from January 1st till February 1st, 1900. Weekly dues 15 cents."

With the Pharmaceutical Clerks' Association in flourishing condition there is no need for any drug clerk to join the "Drug Clerks' Circle," and that unnecessary organization will doubtless fail as signally as the Druggists' League.

The Bill the Drug Clerks Don't Want.

At Albany, on January 23, the Assembly Committee on Labor and Industries gave a hearing on the bill introduced by Mr. Maher to limit the working hours of drug clerks in New York city. This is the bill which agitator Edward Thimme and his mis-named Druggists' League are trying to have passed, and which the drug clerks themselves do not want. A telegram was received by the committee from ex-Assemblyman Robert Mazet, of New York city, asking for an adjournment on behalf of the opposition for two weeks. This was granted, but Chairman Costello decided to hear those who were present to favor the bill. These included Edward Thimme, C. F. Doherr and John Gallagher, representing the Druggists' League; Maurice Zeitlin, Henry Brody and Benjamin Halpin, representing the "Drug Clerks' Circle," a brand new organization of Thimme's followers on the "East Side"; and John J. O'Hanlon, of the State Workmen's Federation. Thimme and his associates made the same old threadbare statements that the labor reform and religious organizations of New York city and the newspapers of the State favored the bill. And they urged the committee to report it favorably.

The opposition to this bill includes all the bona-fide organizations of pharmacists and drug clerks in New York city. Delegates from the Pharmaceutical Clerks' Association, the Manhattan Pharmaceutical Association, the Kings County Pharmaceutical Society and the German Apothecaries' Association met in conference at the New York College of Pharmacy the day before the hearing at Albany, and decided to employ Mr. Mazet to secure an adjournment and to advise them further as to what steps should be taken to defeat the Maher bill.

Drug Trade Contributions to Hospitals.

Charles Lanier, general treasurer of the Hospital Saturday and Sunday Association, has reported the following contributions from the New York drug, chemical and dye stuffs trades to the annual collection now in progress:

By Auxiliary—John L. Riker, president; Adolf Kutroff, treasurer.

J. L. & D. S. Riker.....	\$50	Cohn, Redington & Co.....	\$10
William Pickhardt & Kutroff.....	50	Edward Kalldeisch & Son.....	10
Roessler & Hasselbacher.....	50	Charles H. Phillips Chemical Company.....	10
Farbenfabriken of Elberfeld Company.....	50	William D. Phillips.....	10
Wm. E. F. Davis.....	50	W. A. Ross & Bro.....	10
C. F. Boehringer & Soehne.....	50	E. F. Davis Company.....	10
General Chemical Co.....	50	Puerst Ross & Co.....	10
P. Hill's Sons & Co.....	25	Heller, Hirsch & Co.....	10
Heller & Merz Co.....	25	Schoeckhoff, Hartford & MacLagan.....	10
John J. Keller & Co.....	25	Stone & Ware Co.....	10
C. Bischoff & Co.....	25	Hall & Ruckel.....	10
Thurston & Braudich.....	25	Harway Dyewood & Extract Mfg. Co.....	10
Lehn & Pink.....	25	Scherling & Gleitz.....	10
Wing & Evans.....	25	Parke, Davis & Co.....	10
E. Fougere & Co.....	25	Read, Holliday & Sons.....	10
John Campbell & Co.....	25	Charles Cooper & Co.....	10
Victor Koehl & Co.....	25	Max Zeller.....	10
McCleson & Robbins.....	25	Henry M. Rau.....	10
Schieffelin & Co.....	25	John Pill & Granule.....	10
Abram De Ronda & Co.....	25	Prud'homme & Co.....	10
Berlin Aniline Works.....	25	Warren Chemical & Manufacturing Co.....	10
Grasselli Chemical Co.....	25	Parshall Brothers.....	10
Dillon & Co.....	25	Foster.....	10
Kalle & Co.....	25	Welch, Holme & Clarke Company.....	10
Tartar Chemical Co.....	25	Henry Klein & Co.....	10
Charles Pfizer & Co.....	25	Lawrie & Co.....	5
A. Klipstein & Co.....	20	Fr. Schroeder.....	5
Elmer Amend.....	20		
Stamford Mfg. Co.....	20		
Otto Hahn & Bro.....	15		
James Lee & Co.....	10		
Geisenheimer & Co.....	10	Total.....	\$1,175

Scores of the Wholesale Bowlers.

The New York Wholesale Drug Trade Bowling Association has completed the first half of its yearly tournament, and the statistician has compiled the following record of the standing of the various teams in the association:

Team	Total Pins	Average	Games Won	Games Lost	High Score
Colgate & Co.....	12,439	777 1/16	13	3	915
Dodge & Olcott.....	12,000	756 1/4	11	5	845
Seabury & Johnson.....	11,725	752 3/16	8	8	795
F. W. Robinson & Son.....	11,665	732 1/16	8	8	795
National Lead Co.....	11,532	720 5/16	8	8	796
Merck & Co.....	11,352	709 1/4	8	8	796
Parke, Davis & Co.....	11,276	704 3/4	8	8	796
General Chemical Co.....	11,248	707 1/4	9	7	773
"R. & H.".....	10,210	683 1/4	1	15	710

He has computed also the averages of the 63 men who have bowled. Of these Ruddiman heads the list with an average of 173. S. B. Colgate is the high score man, with a record of 228. Other scores over 200 are the following:

Howe.....	227
Smith.....	216
Faulkner.....	215
Littell.....	213
Ruddiman.....	210
Heins.....	202
Judge.....	202
Scrimsshaw.....	202

At last Saturday's tournament the team of Parke, Davis & Co. made the highest gains by winning two games. The team scores were: General Chemical Co., 738; National Lead Co., 714. General Chemical Co., 742; Dodge & Olcott, 833. Dodge & Olcott, 783; National Lead Co., 799. Colgate & Co., 725; Seabury & Johnson, 721. Seabury & Johnson, 734; Parke, Davis & Co., 822. Parke, Davis & Co., 854; Colgate & Co., 670.

U. S. Government Exhibits Start for Paris.

The U. S. Transport Prairie, which has been at the Brooklyn Navy Yard for the past fortnight, is to sail today (Thursday) for Baltimore, and from that port about February 15 to carry the exhibits of the United States Government for the Paris Exposition. Most of her cargo was taken on here, and comprised machinery of many kinds, the newest electrical appliances, models of naval vessels, safes and other heavy manufactures. At Baltimore the exhibit of agricultural products will be taken aboard, and then the Prairie will start across the Atlantic. Besides her own crew of 148 men, the Prairie will carry eighteen officers and 240 men for the cruiser Albany, which this Government ought from Chile just before the war with Spain, and which has been kept at the

Armstrong yards, Newcastle, England. The Prairie will go to Newcastle direct to leave the crew of the Albany, and then proceed to Havre or Rouen to unload her cargo. She will return to America probably in April.

The apothecary of the Prairie is Charles E. Miller, one of the younger men in the service. He has made two or three trips in the Prairie, and during the Spanish war he served on the Columbia. He expects to be kept pretty busy this trip on account of the extra crew, but anticipates some fun on the passage, and still more pleasure ashore in England and France.

To Confer on Shorter Hours Bill.

As the Era goes to press an announcement is received of a conference on Wednesday, January 31, at the New York College of Pharmacy, by the Executive Committee of the Pharmaceutical Clerks' Association, Messrs. Doherty and Gallagher of the Druggists' League, Messrs. Cutting, Williams and Reynolds of the City Club, and Jacob Riis, Governor Roosevelt's special representative. The last-named gentlemen are desirous of favoring some form of legislation which will be a real benefit to the drug clerks. But because of the two bills for shorter hours now before the New York Legislature, and the loud noise made in some quarters over the subject, they are pretty much at sea. Therefore this conference was asked by R. Fulton Cutting and the gentlemen associated with him.

Pharmacists in Department Stores.

Assemblyman Gale on January 24 introduced in the New York Legislature a bill to require registered pharmacists in the drug departments connected with department stores in New York city.

On the face of it this measure would seem to be superfluous. The existing pharmacy law has been interpreted as covering such cases. The present law says: "It shall be unlawful for any person unless a registered pharmacist within the meaning of this title to open or conduct any pharmacy or store for retailing, dispensing or compounding medicines or poisons in the city of New York."

The City Board of Pharmacy, which has done excellent work in enforcing this provision, has required the department stores to employ registered pharmacists where prescriptions are compounded and poisons are sold.

An Ignorant Class Examined by City Board.

At the last examination by the New York City Board of Pharmacy, held at the Brooklyn College of Pharmacy on January 15, forty-four candidates were examined. Out of that number three passed. They were: Samuel Rackasin, Fred. Smith and Harry C. Nott. The Secretary of the Board says: "It is the unanimous opinion of the examiners that this is the poorest class that ever presented itself for examination, and the examiners are getting tired of rating answers and finding so much nonsense in them."

Bill to Compel Cleaning of Second-Hand Bottles.

At Albany, on January 23, Assemblyman Fiske introduced a bill regulating the use of bottles collected on dumps by providing that no person engaged in the manufacture, bottling or sale of any article of food or drink shall use a bottle, flask or jar collected on the dump unless thoroughly cleansed by the use of hot water and soap at a temperature of 200 degrees and then steamed out at a pressure of at least 60 pounds for at least five minutes.

NOTES.

—Among the drug men from out of town who visited the local wholesale market during the week were: Richard Shoemaker, Philadelphia; J. W. Ballou, New Haven; Frank Benjamin, River Head, L. I.; Samuel Davis, Boonton, N. J.; J. T. Van Nort, Elmira, N. Y.; W. H. Leonard, North Tarrytown, N. Y.; T. S. Armstrong, Plainfield; W. J. Albertyson, Amityville, L. I.; H. F. Bailey, Mt. Kisco; George M. Burr, Northport, L. I.; and Dr. Julius Garst, president of the Phenyl Caffein Co., of Worcester, Mass.

—Stein & Co. are preparing to move their pharmacy from the corner of Grove and Montgomery streets, Jersey City, in a few days, four or five doors farther west

in Montgomery street, where handsome new quarters are being fitted up in a building owned, by Edward T. N. Stein, the hustling young principal of the firm.

—Among the guests entertained at the Drug Club during the week were the following visitors from out of town: R. J. Eads, Indianapolis; James M. Denton and E. W. Wakelee, Paterson, N. J.; Col. John W. Lowe, New Haven; Mr. and Mrs. J. T. Robertson, Manchester, England; H. E. Young, Hanover, Pa.

—Judge Schuchman, in the Supreme Court, has appointed Theodore H. Friend receiver in supplementary proceedings for Alfred Van Horn, Guy R. P. Ellison and S. Harry Ellison, formerly of the firm of Ellison & Co., druggists, of No. 765 Fifth avenue, Manhattan.

—Incorporation has been secured in this State by the Langham Medicine Co., of Le Roy, N. Y., to manufacture medicines on a capital of \$25,000. The incorporators are P. B. Wait, W. H. Foster, Emma M. Davis, M. M. Wait, of Le Roy, and J. D. Langham, of Holly.

—The Mulligan Cyclone Liniment Co., of Elmira, N. Y., has been incorporated under the laws of this State to manufacture medicines on a capital of \$5,000. The incorporators are E. H. Mulligan, J. B. Stanchfield and G. W. Buck, of Elmira.

—Miss Gertrude Ricksecker, the sixteen-year-old daughter of Theodore Ricksecker, manufacturing perfumer of this city, in a fit of melancholy on January 24 committed suicide by taking laudanum. She was attending school in Oberlin, Ohio.

—The College of Pharmacy of the City of New York has just issued a neat little pamphlet containing the charter, by-laws and code of ethics of the college, to which is appended (for the first time) a complete roll of the members.

—J. W. Van Dyke has just opened a new drug store at Madison avenue and 129th street, Manhattan. He was formerly in the employ of E. J. Griffith, at No. 2241 Third avenue.

—John Warren Conn, a druggist of Astoria, Queens Borough, has filed a petition in bankruptcy stating liabilities of \$21,881 and assets amounting to \$15,234.

—P. J. Torney, of San Francisco, where he looks after the interests of Schieffelin & Co., is making his yearly visit to New York.

—L. A. Frasier, formerly in the drug business in this city, has bought the Red Cross Pharmacy at Northport, L. I.

—Henry A. Schaefer last week sold his drug store at No. 1987 Third avenue, near 109th street, Manhattan.

THOMAS A. COBB.

Thomas A. Cobb has just been elected general superintendent of the Charles Baumbach Company, one of the largest wholesale drug houses of Milwaukee. Mr. Cobb was in New York last week completing arrangements preliminary to entering upon the duties of his new position, and receiving the greetings of his many friends in

the local drug trade. The genial "Andy" has been known to the drug trade far and wide for a long time. He was with Morrison, Plummer & Co., of Chicago, for eighteen years, most of the time in the capacity of general superintendent and buyer. He has always occupied the unique position of being a salesman as well as a buyer; for his popularity among the retailers has been no less than his

influence with manufacturers and proprietors. It is due to good judgment and business acumen of Mr. Yahr of the Baumbach Company that his services have been secured. It goes without saying that when his push and energy are applied to anything, his influence is speedily felt. The Baumbach Company is to be congratulated upon securing his services. The Manufacturers' Distributing Agency, of Chicago, which Mr. Cobb has conducted for the past two or three years, will be continued under the immediate supervision of his father-in-law, J. B. Black.

IN AND ABOUT BOSTON.

This Man May Have Operated Elsewhere.

Boston, Jan. 27.—Several business concerns have been swindled through false orders purporting to be issued by the Davidson Rubber Company, and which have been circulated by a man who is described as about forty years old, five feet seven inches tall, and weighs about 160 pounds. He is of light complexion, and has been wearing a brown suit and a dark-colored overcoat. According to the police inspectors, he went to a printing office and had some blank orders printed, claiming that they were for the Davidson Rubber Company. He presented these orders at several places, including the store of the Choate Drug and Chemical Company, under the Revere House, and a few dollars' worth of goods were secured there. He further tried the store of the Franklin Rubber Company, No. 13 Franklin street. Here he obtained seven rubber coats valued at \$23.50; another order was presented at the store of the Cable Rubber Company, No. 28 Essex street, and goods to the value of \$20 were secured.

The case was called to the attention of the police by the Davidson Rubber Company, when it began to receive the bills for the goods which had been delivered. The police feel that this swindler may have operated similarly in other cities, and advise that a watch for him be kept.

Druggists' Association Observes Its Twenty-fifth Anniversary.

Boston, Jan. 27.—For a quarter of a century the Boston Druggists' Association has been established, and recognition of its silver anniversary was taken by the members in a meeting and dinner at Young's Hotel. The president, Charles F. Cutler, presided and made the address expected on the annual occasions from their chief executive officer. He reviewed the work of the past year, and emphasized the present good standing and condition of the association. At the business meeting, the annual election resulted in the choice of: President, George W. Cobb; treasurer, George H. Ingraham; secretary, James O. Jordan; Executive Committee, Amos K. Tilden, Reuben L. Richardson, Frank S. Davidson, Fred. S. Hubbard, Fred. L. Carter, Luther L. Jenkins and George E. Markoe; Membership Committee, George F. Kellogg, Henry Canning, D. Wallace Rintels, John I. French and Edwin W. Shedd. Among the guests and participants in the after-dinner exercises were Rev. Stephen H. Roblin and Samuel W. Creech, a lawyer of this city, both of whom spoke eloquently regarding the late Dr. Thomas L. Jenks, for a long time treasurer of the association. His life and its example proved a fruitful topic. Another speaker was Prof. Silas MacVanem, who talked informally about the war in South Africa. His sympathy is placed in the English cause. He explained her right in the position taken by England as to franchise and freedom in trade, and also in support of the negroes who, so he stated, have been from the first refused any rights of fellow-citizenship from the hands of the Boers.

Sunday Observance.

Boston, Jan. 27.—In the Massachusetts House of Representatives, a bill has been introduced by Representative Daly, of Lawrence, to forbid the sale of soft drinks, cigars, tobacco, confectionery, milk or newspapers between the hours of 6 a. m. and 10 p. m. on Sundays, except by such persons as believe in the observance of the seventh day as the Sabbath. In this class are meant Hebrews, Adventists and some other religious sects who observe some other day than the Christian Sabbath. Representative Daly has also introduced a bill limiting the hours of labor of all employes of meat shops, provision, tea and grocery shops to sixty hours per week. Drug stores were not included in the list presented.

NOTES.

—The Weeks & Potter Company, this city, has filed a petition to have declared as bankrupt Solomon A. Epstein, a cut-rate druggist at No. 12 Tremont Row. The company sold Epstein drugs aggregating \$2,500, since October

7 last. They claim that the druggist on October 2 received a mortgage of personal property and stock and fixtures of the drug store above mentioned. This mortgage, dated September 19, 1899, transferred property to Epstein's brother, Frank A. Epstein, "with intent to hinder, delay and defraud his creditors," as the petitioners allege. They further allege that, while insolvent, Epstein transferred a portion of his property to one of his creditors, with intent to show preference over others, all of which the petitioners claim to have been contrary to the United States bankruptcy act.

—The liabilities of Benjamin F. Bradbury, the Melrose druggist, whose store is at No. 637 Washington street, Boston, include a great many accounts which for the most part are less than \$100 each, yet aggregating \$11,000. The greatest indebtedness are notes for \$900, held by a leading wholesale drug house of this city, and two for \$1,075 and \$184 respectively, held by New York firms. The unsecured claims amount to almost \$5,000, and the other claims, aggregating about \$6,000, are secured by Mr. Bradbury's wife's property. Only a small valuation is put upon the stock and fixtures of the drug store.

—Most people have heard of "a bull in a china shop," but Haverhill has had a dog and a cat in a drug store, with dire results. In White's drug store a handsome cat reigns supreme over any rats or mice coming within her kingdom. Recently, however, a dog of the fox terrier breed dared not only to enter the store, but tried to "do up" the cat. There was then a lively scrimmage. The cat sprang upon the top of a lot of goods in a show window, as a place of refuge, and knocked them down into the window. A general smash was the result.

—About forty members attended the January meeting and dinner of the Massachusetts College of Pharmacy Alumni Association, at the American House. W. E. Capper presided. The chief guest was Amos K. Tilden, of the Massachusetts Board of Registration in Pharmacy. He made an address, and other speakers were Henry Canning, S. A. D. Sheppard, W. W. Bartlet, Joel Orne, William Butler and Prof. R. W. Greenleaf.

—Israel B. Kranberger (known also to some of the drug trade as Cranberger), a Lowell druggist, has failed, with liabilities amounting to \$4,575 and no assets. Of his indebtedness, the largest sums represent two promissory notes to New York parties, for \$600 and \$100 respectively; rent, \$450; electric lighting expense, \$94; liquors, \$110. He is a voluntary petitioner in bankruptcy.

—D. Wallace Rintels, of the Walker-Rintels Drug Co., and Sydney Rintels, of the Harrington-Rintels Drug Co., Lynn, sailed January 25 on the Ward Line steamer *Vigilancia* for Cuba. They expect to be gone about six weeks and will make a complete tour of Cuba and Porto Rico before returning.

—Cambridge officials chase virtuously after druggists who are thought to sell liquor. Morris J. Bailey, clerk at F. H. Cowell's Pharmacy, was in court there recently, to answer to that charge.

—At the "Newton Street Pharmacy," Waltham, are being made extensive alterations, which will put the place among the best drug stores in the "Watch City."

—Arthur Reyeroft, the Massachusetts avenue druggist, Cambridge, is getting to be an expert bowler, and is earning an excellent reputation by his good scores.

—Henry A. Miner, of H. A. & F. L. Miner, druggists of Malden, is in Havana. After a little stay there, he will return to Florida, to remain for several months.

—Albert Kidder, formerly a clerk there, has returned to the establishment of Charles A. Bass, the Putnam Square druggist, in Cambridge.

—A new drug store will soon be opened at Russell, in the Western part of the State, by P. P. Curtin, in his block on Peck's road.

—Judged guilty of the charge of keeping liquor in his drug store at Fall River, Dr. Louis V. Cabana was fined \$120, with costs.

—Important changes are being made in the interior of the drug store of Frank M. Pease, Pittsfield.

—Mills & Nolan, who have a pharmacy at Haverhill, are to move their stock to Boston.

PHILADELPHIA.

Board of Pharmacy Affairs.

Philadelphia, Jan. 27.—The State Pharmacy Board is not asleep by any means, as many persons have been taught to believe. This week the Board arrested Frank Carbury, of 739 South Seventh street, for selling drugs, medicines and poisonous substances and filling prescriptions without a certificate giving him the legal right to do so. The hearing was given by Magistrate Devlin on Tuesday, January 23d, and the prisoner held for trial. There are a number of similar violators who will share the same fate before long. The illegal sale of opium in the section of the "Tenderloin" known as Chinatown was brought emphatically to the notice of the public the other day during the testimony before the coroner's jury at the inquest held over the body of a young girl who died in an opium joint on Tuesday night. It appears that smoking opium can be procured at any one of a dozen places specified, in quantities from 15 cents worth up, and even children may obtain it without difficulty. The city authorities will doubtless look after the business, as it is within their province to do so. The State Board has plenty to do in looking after the drug stores which are conducted illegally, many of them right in this city. It has been learned on good authority that registered managers' certificates, which are often legally possessed by persons having no use for them (as in the case of a student who after graduating and passing the State Board examination enters the employ of a wholesale or manufacturing establishment) are sought after and rented at so much per month, when the owner of a certificate thinks more of a dollar than his honor. This is actually done all the time and is an evasion of the law which is detected only with great difficulty.

Dinner of the Philadelphia Drug Exchange.

Philadelphia, Jan. 26.—The fourth annual dinner of the Philadelphia Drug Exchange was held in the dining hall of the Bourse last evening. The dinner was elaborate and well served. The retiring president, Clayton F. Shoemaker, of Shoemaker & Busch, acted as toastmaster. Walter V. Smith, of Valentine N. Smith & Company, the newly elected president, was unable to be present. His inaugural address was read by C. F. Shoemaker. In this address Mr. Smith expressed his appreciation of the honor conferred upon him, outlined the work done by the exchange during the past year and stated the policy to be pursued in the future. Professor Joseph P. Remington delivered an address in which he congratulated the trade upon the good feeling which has come to exist between the wholesaler and manufacturer and retailer. Joel Cook entertained the guests by telling some of the things he did not know about the drug business. Joseph McKee, president of the Philadelphia Branch of the National Credit Men's Association, read an article referring to the credit relations of the trade. Dr. W. P. Wilson, director of the Philadelphia Commercial Museums, undertook to explain the aims, objects and accomplishments of the Museums. He referred to the work which has been accomplished abroad and stated that efforts are now being made to secure further appropriations from Congress with which to extend the work by establishing branches in the principal cities of the United States. George E. Bartol, president of the Bourse, made a witty speech in which he described the personal characteristics of several of the more prominent members. During the evening the guests were entertained at various times by selections by the Temple Quartette of this city, and also by Mr. Ryan, one of the guests, who rendered several songs in an effective manner.

NOTES.

—The "Food Exposition," or "Food Show," as it is popularly termed, is now in full swing at the Armory Hall of the Second Regiment, N. G. P., at Broad and Diamond streets. Among the exhibitors are Shinn & Baer, of Broad and Spruce streets, and H. C. Blair, Jr., of Eighth and Walnut streets. Both are exhibiting their respective makes of Liquid Rennet.

—The Philadelphia Drug Exchange Tuesday afternoon

elected the following officers: President, Walter V. Smith; vice-president, Thomas E. Shoemaker; secretary, William Gulager; treasurer, Edward H. Hance; directors, Charles E. Hires, Mahlon N. Kline, Dr. R. V. Mattison, John Ferguson, Dr. A. W. Miller, A. C. McIlvaine and Adam Pfotmmer.

—The Chemical Section of the Franklin Institute has elected: President, Dr. W. J. Williams; vice-president, Lyman F. Kebler; secretary, William E. Rideour. The paper of the evening was by Prof. Bradbury. Tuesday evening, January 30th, Professor S. F. Peckham will read a paper entitled "What is Parilante?"

—Among the successful women pharmacists of Philadelphia is Miss Clara Sprissler, who manages a drug store at the corner of Ninth and South streets. She owns two houses in Philadelphia also.

—The store and business of J. Mitchell Higgins (recently deceased), at Norris street and Germantown avenue, have been purchased by E. K. Cope, head clerk for Dr. Higgins for some years past.

—Paul Traub, junior clerk in Moyer Brothers store, at Bloomsburg, Pa., was in Philadelphia last week taking the examination of the State Pharmaceutical Examining Board.

—Ellwood K. Rhieger, of York, is clerking with Eberly Brothers at their store at Twenty-fifth and Oxford streets.

—Richard L. Fishbourne, one of the '90 graduates of the P. C. P., has purchased Francisco's store at Lock Haven, Pa.

BALTIMORE.

Drug Stores Closed on Sunday.

Baltimore, Jan. 29.—The last Grand Jury had much to say in its valedictory about the laxness with which the Sunday law is enforced, about the sale of intoxicants on the Sabbath and with regard to the difficulties of securing sufficient evidence to convict where arrests had been made for infractions of the statute. This, together with the new mayor's rather rigid notions about Sunday observance, induced the police commissioners to inquire of the present Grand Jury if this body would find indictments against persons charged with offenses against the Sunday law. On receipt of an affirmative reply the marshal of police was instructed to notify all shopkeepers that under the provisions of the statute only ice, milk and medicines, the latter bona fide prescriptions of physicians, could be sold on Sunday, and that failure to limit trade to these articles would result in their names being sent before the Grand Inquest for prosecution. In consequence of this notification yesterday presented the appearance of a New England town in the last century. Side doors, heretofore conveniently open, were tightly closed and the old familiar Masonic knocks failed to elicit a response from within. Among the druggists a general disposition to comply with the order was manifested. Many, in fact, went even a step farther and closed their pharmacies entirely, displaying signs that persons desiring prescriptions compounded would have to ring the night bell.

The Wedgewood Club.

Baltimore, Jan. 29.—The newly organized Wedgewood Club, an association of druggists modeled after the noted Flint Club, a body composed of physicians, held its first monthly session at Dr. Frank Tierney's laboratory on North Calvert street last Thursday night. Of the twenty-three members on the roll seventeen were present, the invited guests being Drs. J. B. Schwatka, E. M. Reid, J. W. Chambers and J. F. Martenet, of Baltimore, and R. S. McKinney, a druggist of Taneytown, Md., the former honored and experienced members of the Flint Club. H. P. Hynson presided and J. Webb Foster was elected permanent secretary. Some entertaining and diverting lectures were delivered in the course of the evening by the president, Dr. A. R. L. Dohme, Dr. Blake, Dr. Chambers and others, but all those present devoted themselves assiduously to the analysis of the various compounds produced by the skill of Dr. Tierney's chief scientist, an adept in the art of cooking. The various dishes bore such characteristic names as "pharmaceutical

punch," "croquettes a la pestle," etc. The session proved most enjoyable. The diners, besides those mentioned, included Dr. A. J. Corning, Charles H. Ware, Henry C. Croft, W. M. Fouch, O. C. Smith, T. A. Conly, August C. Schrader, G. Frank Bally, J. F. Hancock, J. E. Huggins, J. S. Parr, John H. Weisel, John G. Beck, John S. Muth, O. W. Smith and J. Forrest Cochran.

With the Bowlers.

Baltimore, Jan. 29.—Last week's games of the Baltimore Drug Trade Bowling Club proved to be exceedingly interesting. On Tuesday night Muth Bros. & Co. met the team of Parke, Davis & Co., taking two of the three games by 647, 590 and 628 against 630, 716 and 621 points. On Friday night the Winkelman & Brown Drug Company's representatives gave battle to Sharp & Dohme. The Winkelman & Brown Drug Company took two out of the three games. The scores were 778, 782 and 785 against 727, 861 and 718 respectively. Sattler, of Sharp & Dohme, made high score with 213, and Blummer, of the same team, ran his tally up to 201 in the last game. The standing of the teams is now as follows:

Teams.	Games Won.	Games Lost.	Percentage.
Root and Herb.....	24	3	.863
Sharp & Dohme.....	21	6	.773
Winkelman & Brown Drug Co	20	10	.667
James Bally & Son.....	10	17	.370
Muth Bros. & Co.....	8	19	.296
Gilpin, Langdon & Co.....	7	24	.257
Parke, Davis & Co.....	6	31	.161

Proposed Drug Law Progresses.

Baltimore, Jan. 29.—In reply to a letter addressed to the chairman of the Committee on Hygiene of the House of Delegates a large party of members of the Maryland Pharmaceutical Association and others interested in the enactment of the proposed drug law will go down to Annapolis on February 6 and submit reasons why the measure under consideration should be passed. The party will leave Camden Station for the State Capital at 8.30 a. m., and it is especially urged that druggists from the different counties put in an appearance when the delegation submits its arguments. President Dohme has sent out invitations dwelling upon the importance of a full representation in order that the committee may be impressed with the strength of the sentiment in favor of a pharmacy law.

NOTES.

—E. M. Forman, of Centreville, Md., a member of the Legislative Committee of the Maryland Pharmaceutical Association, was in Baltimore last week looking after matters in connection with the pharmacy bill now before the Legislature.

—Z. D. Gilman, a Washington druggist, has recently enlarged the rear portion of the building occupied by his pharmacy so as to obtain the additional room demanded.

—Louis Dohme, president of Sharp & Dohme Manufacturing Company, sailed from New York last week on a tour to the Orient. He will be absent for several months.

—The Christiani Drug Company, successors to Mr. Christiani, at Washington, has made extensive improvements and reports that the business is increasing rapidly.

—Mr. Garges, who recently purchased the Ebbitt House Pharmacy in Washington, is meeting with much success and has thoroughly rehabilitated the old stand.

—Among the visiting druggists in Baltimore last week were W. G. Burgess, of Newport News, Va., and R. S. McKinney, of Taynetown, Md.

—Robert L. Wrenn will shortly open a drug store at Twenty-fourth street and Pennsylvania avenue, Washington, D. C.

—J. A. Taylor, of Milton, N. C., has come to Baltimore to attend the Maryland College of Pharmacy.

—Druggist H. N. Beall, of Washington, is visiting his country home in Talbot county.

DAVIS—BURTON.

Tuesday evening, Jan. 16, at Toocoo, Ga., occurred the marriage of E. R. Davis and Miss Katie L. Burton. The groom is the head of the drug firm of E. R. Davis & Co. of that place.

CINCINNATI.

Fight Over a Drug Store.

Cincinnati, Jan. 27.—Much excitement and interest were caused by a fight between the Federal Court and the Kenton County Court, at Covington, Ky., the past week, as to who should take possession of Kavanaugh's drug store. The controversy dates back to May, 1898, when suit was brought against Kavanaugh to recover a bill amounting to \$54 and judgment given against him. At that time Mr. Kavanaugh pleaded non-ownership of the drug store. The case was carried to Judge Tarvin's court, who held the opinion that the sale was the same as an assignment, as no consideration was found to have been given. Judge Tarvin appointed George M. Keefer as assignee. Mr. Keefer immediately employed as a clerk Mr. Kavanaugh, who has continued the business as Kavanaugh's Pharmacy ever since until a few days ago, when Mr. Kavanaugh filed a voluntary petition in bankruptcy in the United States Court, and U. S. Commissioner J. C. Finnell appointed M. M. Durrett as referee in bankruptcy. Mr. Durrett authorized Mr. Kavanaugh to take charge of the store as a trustee. Armed with this authority Kavanaugh closed the store, carrying the key with him. Mr. Keefer hearing this immediately had the doors broken open, and after putting new locks on the door declared that he, as receiver, appointed by the circuit judge, would remain in control of the premises. Mr. Kavanaugh called upon Marshall Compton, who demanded the keys and ordered Mr. Keefer to vacate, which he reluctantly did. Mr. Keefer applied for an injunction, which was granted, and again tried to assume charge of the store. The outcome of the entire affair was a clash between the different authorities, which was carried before Judge Walter G. Evans, of the U. S. Court at Louisville, Ky., who sustained Judge Tarvin in his action and allowed Keefer to hold the store. Meanwhile Kavanaugh is out of a position, and when the case will be settled it will be found that the expenses of the court, costs, etc., will take all the assets, and the creditors will receive nothing.

Hamilton County Association.

Cincinnati, Jan. 24.—The regular monthly meeting of the Hamilton County Druggists' Association was held at Odd Fellows' Temple yesterday. The meeting was strictly a secret one and all reporters were excluded. A good attendance was present and it is supposed very important matters were discussed and active means taken to get the support of the jobbers of this city. The only favorable answer yet received from the six wholesale houses who supply the trade here was from the Gray & Huston Co., who are in accord with the principles of the N. A. R. D. Committees were appointed who will call upon the other wholesale houses, and unless some favorable reply is received, some action will be taken shortly and a new plan presented to the membership which will prove effective. Already much talk is going on among the retailers, and it may be that the near future will find a new wholesale drug house in this city, which will work for the interest of the legitimate pharmacist.

Clerk Tries Suicide.

Cincinnati, Jan. 25.—Harry Stanley, a drug clerk at Craig's Pharmacy, on Sixth street, attempted suicide last night. He had appeared downcast all the day, and in a fit of despondency he swallowed about two ounces of Fl. Ext. Henbane. He was found lying on the floor of the store shortly afterward by a customer, who notified the police, and he was removed to the hospital. Antidotes and the stomach pump were promptly used and succeeded in saving his life for the present, although he is still in a critical condition. Stanley has been subject to epileptic fits, and it is supposed his desire to die was on that account. No other reason can be assigned, as his family and business associations were of the most pleasant nature.

Bowling.

Cincinnati, Jan. 27.—The Druggists' Bowling Club met yesterday afternoon at Corryville and bowled some of the highest scores of the year. The surprise of the afternoon were the remarkable scores made by Edwin Helme-

man and Joe Nicholas. By a unanimous vote it was decided to bowl at the same alleys during the month of February. Scores were as follows:

	First.	Second.	Third.	Fourth.
Rendigs	158	192	128	157
Leuchtenburg	136	199	180	159
Nicholas	203	101	104	125
Frederg	128	124	163	105
Heineman	113	164	164	232
Muehberg	162	180	185	169
Knoemoller	146	169	179	162
Voss	172	191	169	170
Linnehat	129	175	124	158
Streithorst	138	138	137	138

\$5,000 Damage Suit Against Druggist.

Chicinnati, Jan. 26.—Mary N. Compton has filed a suit against George W. Kyllus, a druggist of this city, for the sum of \$5,000. She alleges that medicine given to her by the druggist caused her to become unconscious and resulted in her becoming paralyzed. She claims that on December 10, 1898, she was a sufferer from extreme nervousness, and, at her request, her husband called at Kyllus' drug store for medicine which would relieve her nervous condition. Mr. Kyllus, she says, gave a patent medicine which he said would cure her, and she took it as he directed until the last of February, 1899, when she became paralyzed and was confined to her bed for three months under the constant care of a physician. The attorneys for the plaintiff promise to fight the case to the limit, while Mr. Kyllus is equally determined to defend himself.

NOTES.

—A serious fire was narrowly averted at Foertmeyer's pharmacy, Bellevue, Ky., on the evening of January 20th. Mr. Foertmeyer's four-year-old son, while playing, accidentally overturned a lamp in the residence above the store, setting fire to the tablecloth and other furniture. Mr. Foertmeyer heard the screams of the child and rushed upstairs in time to save the boy from fatal injury, although he was burned about the hands and arms.

—The Voss Concentrated Soup & Food Company of this city made an assignment for their creditors on January 24th. The company was engaged in the manufacture of compressed tablets to be used in the making of soups, etc. These were given a trial by the U. S. Army. J. P. Carrothers and Edward Voss, the druggist at Twelfth and Vine streets, were the heaviest stockholders.

—Julius Hoffman will celebrate the 30th anniversary of his clerkship with Yorston's drug store on February 4th. This is a record any clerk should be proud of, and one seldom equalled for continuous service. Mr. Yorston, who has been afflicted with paralysis for some time past and unable to attend to his store, has left Mr. Hoffman in charge.

—John W. Vester, for many years head clerk at Weatherhead's, has purchased Ritter's drug store, corner Fifth and Broadway. The store was sought by several other druggists owing to its location among the many doctors who have offices in the neighborhood.

—J. M. O'Maley has removed his drug store in Covington, Ky., to the corner of Pike and Main streets, and will make many improvements in the way of new fixtures.

—Albert Beckman has left Fratz's drug store to accept a position as clerk for Herman Hoberg, at Wade and Cutter streets.

DRUG CLERK COMMITS SUICIDE.

George Drake, a clerk for fifteen years in the employ of Druggist Allen Pence, Terre Haute, Ind., shot himself on January 13. He lived until the following day. No reason can be given for the act, with the exception of a nervous disorder resulting from an unbalanced mind. He was 35 years of age, and had always borne a good reputation.

FORT BRAGG HOSPITAL AND DRUG CO.

The Fort Bragg Hospital and Drug Co., Fort Bragg, Cal., has made a change in its business. The drug department will hereafter be conducted under the name of the Fort Bragg Drug Store, H. R. Baum having taken over that part of the business.

CHICAGO.

Coming Meeting of the C. R. D. A.

Chicago, Jan. 27.—Under the caption "Fried Snowballs: Are They to be Our Regular Diet," the secretary of the Chicago Retail Druggists Association has issued the following call for a meeting to be held on Tuesday, January 30:

The National Association of Retail Druggists has now approximately 20,000 members. It is endeavoring, as you know, to solve the problem of price-cutting. Every association of retailers has been asked to select from among its jobbers those who can be relied on to refuse supplies to aggressive cutters. With this purpose in mind, would you recommend that all the Chicago jobbers be placed on the new approved list? As showing the co-operation of the National Association in receiving from the jobbing trade of some sections, it is significant that when W. F. Klusmeyer, the arch cutter of Louisville, failed recently, he was indebted to only one jobbing house, a firm in Cincinnati.

Another thing the National Association has asked of the Chicago retailers is a list of their "aggressive" cutters. To whom, in your opinion, can this designation rightfully be applied?

The annual renewal of registration which takes out of the pocket of every registered pharmacist in the State a dollar and a half is by many considered an imposition. The State pays for its other examining boards, why should it discriminate against the Board of Pharmacy? What do you think about it? Can the State be made to pay for the Board of Pharmacy also? Is it wise to demand it? Would such a demand jeopardize the Pharmacy Law?

It is claimed that certain Chicago manufacturers, whose preparations are being sold from house to house by peddlers, have set the Pharmacy Law and the Board at defiance, and that they are not being prosecuted with the requisite vigor. What do you know about it?

Complaint is made that alleged violators of the Pharmacy Law, no matter in what part of the city they may be doing business, are all prosecuted in two justice courts lying adjacent to each other in a locality remote from the business centre, thereby entailing needless hardship. Is this complaint well founded? If so, what shall be done about it?

Certain manufacturers of physicians' supplies (tablets, granules, etc.), in this city, notwithstanding the fact that they solicit the patronage of the drug trade for goods of their manufacture, are endeavoring to obtain a license in which they proclaim that the habit of prescribing is extremely hurtful to the interests of doctors as well as their patients and teaching the doctors to hold the drug trade in contempt. Wouldn't it be a satisfaction to know who they are?

In order to create a fund that would permit more aggressive work than has been done heretofore, the Chicago Retail Druggists' Association voted at its last regular meeting to make its annual dues \$3. Some members are disposed to think this is too much. What is your idea? What is the best plan for getting really effective work out of the organization?

In the fourth Ward prices have been advanced materially, the stores are closed part of the day on Sunday, and other substantial benefits have been obtained as the result of forming an active Ward Club. These druggists say they are doing so much better under the new arrangement that they can now afford to pay their dues in all associations to which they care to belong, and to pay relief clerks to stay in their stores when they want to attend meetings. There are many who believe this to be the way of organizing the city in order to change the diet of its druggists. Other wards beside the Tenth present striking evidences of the value of local organization. Does the plan of organizing the city by wards appeal to your judgment?

All these matters will be discussed at the meeting of the Retail Druggists Association to be held next Tuesday afternoon, Jan. 30, at 9:30 p. m. in Room 412, Masonic Temple. Muzzles will be provided for long-winded talkers, and every druggist will be given an opportunity to be heard. Druggists who are making so much money they do not feel the need of the co-operation of their fellows are requested to remain away; all others are cordially urged to come.

Fraternally yours,
JOHN S. HOTTINGER, Secretary.

New Association Formed.

Chicago, Jan. 26.—The druggists of the Thirty-second Ward of this city have formed an organization composed of sixty-three members and have agreed by solemn compact after February 1 to resume regular prices on all listed goods and have fixed, where necessary, higher prices on all other drug merchandise.

NOTES.

—A stockholders' meeting of the United States Pharmaceutical Company will be held on Tuesday, January 30, to hear the report of the auditing committee. This report will be favorable. Since January 1 the stock has materi-

lally increased, sales have been good and the inventory of the management is found to be correct in every respect. Everything is in good shape, the accounts are correct to a dot and will be so reported by the committee.

—The Committee of Arrangements of the Alumni Association of the Chicago College of Pharmacy, consisting of Messrs. W. B. Day, W. P. Knoche, A. D. Thorburn and L. I. Schreiner, has decided to hold a series of three monthly meetings for the purpose of discussing the revision of the United States Pharmacopoeia. The first meeting will be held in the parlors of the Palmer House on February 8.

—A gentleman of this city well known as the framer of a model pharmacy law, having for five or six years contributed his suggestions to the American Pharmaceutical Association, recently stated in one of the daily papers that pharmacy laws should exist for no other purpose than to prevent the public from being poisoned. This is a brief conclusion to a long argument.

—The many friends of A. E. Rutherford, the well-known druggist at Twenty-second street and Wabash avenue, are congratulating him over his marriage to Miss Mae Snyder of this city on Wednesday, January 24.

—Oscar Liestner, Western representative of Oscar L. Strauss & Company, of New York, importers of druggists' sundries, returned from New York this week and will depart soon on a far Western trip.

—Among those who have visited the jobbers recently are C. E. Alley, Grinnell, Ia.; Dr. M. E. Blanchard, Marseilles, Ill.; F. S. Kimball, Waukesha, Wis.; and A. I. MacLay, Delavan, Ill.

—A postal card has made its appearance in Chicago from Canada quoting bed rock prices on phenacetine and kindred products.

—The Court has entered an order that Metcalf & Miller's business on North Clark street be sold by the receiver.

—Henry C. Lee is now visiting the trade of Northern Illinois on behalf of Lord, Owen & Company.

—George F. Hendrie, a druggist of Snohomish, Washington, is in Chicago this week.

THE NORTHWEST.

St. Paul, Minn., Jan. 26.

—Successions: L. E. George, Syracuse, Neb., by George Barbee; Walter W. Beebe, New Richmond, Wis., by Beebe & Webster; Goodenow, Winter & Enkema, Clara City, Minn.; by Enkema Bros. & Co.; Lucas & Co., Fessenden, N. D., by Macgregor & Co.

—John Edling, Jr., was among those who passed as registered pharmacist last week. He has gone on a brief visit to Moorhead.

—The business of the late T. I. McKenny, Olympia, Wash., has been sold to the B. L. Hill Drug Company.

—Fred Barker has started at Bemidji, Minn., and the Yellowstone Drug Company at Bigtimber, Mont.

—A. E. Lofstrom is leaving Wisconsin to enter into the drug business in this State or further West.

—S. E. Yoder, Wymore, Neb., was burned out this week. His loss is \$4,600, with \$3,000 insurance.

—Herman Lueders has gone to work in Allen's drug store on East Seventh street, St. Paul.

—E. J. Anderson, Hector, Minn., has executed a trust deed for the benefit of creditors.

—H. A. Gibbs has gone to Pine City, Minn., to work for J. Y. Breckenridge.

—A. F. Hart has bought the Frankenfield drug store at Hutchinson, Minn.

—C. A. Waldron has returned from Duluth to Minneapolis.

—A. P. Long is said to have discontinued at Springdale, Wash.

—Dorn & Co., Waterville, Minn., have dissolved.

A PERFUMERY FARM.

Reports from Monrovia, Cal., indicate that there will be soon established in that neighborhood by New York and Chicago capitalists a perfumery farm and perfume manufacturing plant. The company will be incorporated in Illinois.

ST. LOUIS.

A Remunerative Ad.

St. Louis, Jan. 27.—Fred Whitcomb, who bought the May drug store, corner Garrison and Washington Aves., some time since, has made a notable success of the business, and among other things is proving himself past master of the art of advertising. The following advertisement appeared in the morning papers:

CLERK WANTED.—Quick, accurate, registered drug clerk, at Whitcomb's Pharmacy; must have mustache; Garrison and Washington aves.

Of course reporters followed up the cue, and lengthy articles appeared describing the various types of beautiful mustachios which appeared at the Whitcomb store, attached to eager and jobless registered pharmics. Mr. Whitcomb was duly interviewed by the daily press and said that his idea was that customers would have more confidence in a clerk with a mustache than they would in a beardless youth. This was the substance of his remarks, but they were long drawn out in the papers. At any rate, Mr. Whitcomb got his clerk and several hundred dollars worth of reading matter thrown in.

NOTES.

—Druggist Albert W. Stiehl, 2767 Park ave., had both his heart and pocket touched Friday morning, Jan. 26. A well-dressed negro entered the store and told him a once-wealthy lady in the neighborhood desired to sell her remaining jewels to persons from whom she could redeem them. Stiehl handed over three dollars for a ring which he afterwards found was of the phony type and could be bought at \$1.80 per dozen.

—The Druggists' Coked Hat League opened their 2nd series Thursday evening, Jan. 25. The Mustards won four of the five games from the Dandelions, the Catnips won four of the five from the Junipers and the Burdocks won four of the five from the Chamomiles. The Mustards and Burdocks will roll off a match game for the championship of first series.

—Murray C. Kalls, formerly clerk for J. E. Kilby, Washington and Vandeventer sts., and Mr. Latimore, a student at Barnes Medical College, have purchased the Gibson Heights Pharmacy, and will move the stock to 4600 Page ave., where they will open in a few days.

—Robert Knoll, who formerly clerked for F. H. Fricks, 19th and Madison sts., has become a proprietor by purchasing the store opened a few months ago by Isaac Reinhold, cor. John and Florissant aves.

—C. P. Walbridge, president of the J. S. Merrell Drug Co., was re-elected president of the St. Louis Business Men's League, at the annual meeting held Tuesday evening of this week.

—The Meyer Bros. Drug Co. commenced the manufacture of their own mixed paints under the name of Meyer Bros. Paint Co., at 316-318 South Third st. on Jan. 15.

—F. M. Norris, city salesman for Moffitt-West Drug Co., will leave in a few days for the South for his health, which has been impaired for some time.

—A. N. Merrell, of the J. S. Merrell Drug Co., has the sympathy of the trade in the loss of his 3-year-old baby boy that died this week.

—Kay Peterson, formerly with Kipp Bros., Indianapolis, will represent the M. B. D. Co. on sundries in Illinois.

—C. D. Webb, formerly with Daniel Stewart Co., Indianapolis, will represent M. B. D. Co. in Indiana.

—A. C. Bromlitt, who will open a drug store at Corinth, Miss., bought his stock in St. Louis.

—Dr. N. C. Shanahan, of the Marion Sims Pharmacy, is seeking health at Denver, Colo.

—A new drug store will be opened at Mokane, Mo.

—Druggist C. W. Hahn is quite ill.

Improvements in Bradley Ice Cream Cabinets.

The famous "Bradley" ice cream cabinets for next season are to have new iron doors and other improvements, making them finer than ever before. The Bradley Manufacturing Company, New Haven, Conn., who, in addition to the above, also manufacture the well-known "Burrows" cabinets, invite inquiries from druggists for their new catalogue.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

SOUTH AFRICA.

Gen. Buller's attempt to turn the right flank of the Boers has resulted disastrously and he has returned to the south bank of the Tugela River. A British detachment under Gen. Woodgate succeeded in seizing Spion Kop, a small mountain commanding the Boer position, but found it too hot to hold, and was compelled to retreat with heavy loss. Gen. Buller, after viewing the Boer defenses, believes that it would be a needless sacrifice of life to attempt to take them, so the British forces were withdrawn. It is generally believed that Gen. White's beleaguered garrison in Ladysmith will soon be compelled to surrender.

Reports from Pretoria say that the bombardment of Kimberley has been resumed, and that the shelling of Ladysmith is still going on.

A Paris paper publishes an interview with Dr. Leyds, the Transvaal European representative, in which he denies that Charles E. Macrum, former United States Consul at Pretoria, has been entrusted with any mission to President McKinley. "It is not time for intervention," said Dr. Leyds, "we must await events."

The forces of Generals French and Gatacre in Northern Cape Colony are now in touch.

A rumor is in circulation saying that Mafeking was relieved on January 25.

The recently seized German steamer Marie has been unconditionally released by Great Britain.

A report from Vienna has it that the idea of intervention between the British and the Boers is gaining ground among the European powers.

Gen. Hector Archibald MacDonald has reached the Modder River and taken the late Gen. Wauchope's place in command of the Highlanders.

THE PHILIPPINES.

The American troops drove the Filipinos from Balayan, in Southern Luzon, on January 22, chased them through Calaca and Ternery and took Taal, their stronghold, together with four cannon and a quantity of rifles.

The plague statistics at Manila show a total of fourteen cases and eleven deaths.

Gen. Otis reported last week Wednesday that the coast of Laguna Bay and neighboring sections would be open to unrestricted traffic this week, and that the western coast of Panay is now open to commerce.

Gen. Wheeler sailed from Manila January 25 on the transport Warren for San Francisco.

The transport Grant reached Manila last week, Wednesday, with the Forty-eighth Volunteer Infantry.

Aguinaldo has issued an appeal to the people of the United States, giving his version of the causes that led to the outbreak of the Philippine conflict, and asking for recognition and sympathy.

Gen. Otis cables that released Spanish prisoners to the number of 74 officers, 1,000 enlisted men, 22 civilian officials, 21 wives and 35 children were furnished transportation to Spain last week Thursday.

A report from Copenhagen has it that Denmark and the United States are arranging that the Danish West Indies shall enter at Zollverein with the United States, which may be a prelude to the cession of the islands to the American Government.

The Swedish budget contains provisions for a large increase in the military force.

Three hundred and sixty out of 400 sugar factories in Berlin have signed the proposal for a sugar trust.

A royal edict in China announces that the Emperor has abdicated in favor of Putschang, the son of Prince Tuan, who, the decree said, would ascend the throne January 21.

The Bank of England's rate of discount was reduced $\frac{1}{2}$ per cent. to 4 January 25, and the discount of the Bank of France was reduced $\frac{1}{2}$ per cent. to $\frac{3}{4}$ per cent.

The Commerce Committee of the French Chamber of Deputies are hearing the views of those opposed to the reciprocity treaty with the United States.

The British Royal Commission appointed to inquire into the cause of railway accidents has recommended the compulsory use of automatic couplings.

The bubonic plague has broken out at Rosario, Argentine Republic, and a rigorous quarantine has been established.

Vienna diplomatic circles think that a serious situation is developing in China, and that civil war may break out there.

Brazilian gunboats and troops have been sent to enforce the protocol as to the boundary limits agreed upon between Brazil and Bolivia.

DOMESTIC.

CONGRESS.

The President sent to the Senate on January 23 the nomination of Col. George M. Randall of the Eighth Infantry, and Col. James M. Bell, of the Twenty-seventh Infantry, United States Volunteers, to be Brigadier-Generals.

A bill to divide the State of New York into four judicial districts was passed January 23.

Senator Pettigrew's resolution, calling upon the President for information regarding the treaty with the Sultan of Sulu was passed January 24, after Mr. Pettigrew had made an attack upon the administration for entering into an agreement which, he said, authorized slavery.

The Senate passed the Urgency Deficiency bill on January 25, carrying an appropriation of about \$9,000,000.

The debate as to whether Brigham H. Roberts, of Utah, should be excluded from the House, or whether he should be admitted and then expelled, occupied most of three days last week. Mr. Roberts speaking in his own behalf on Tuesday. On Thursday, by a vote of 268 to 50, the House excluded him, declaring his seat vacant. The minority resolution to seat and expel had previously been defeated by a vote of 244 to 81.

Mr. Clark, of Missouri, introduced a bill on January 24 to make the District of Columbia a Territory to be known as the "Territory of Columbia." He also introduced a bill to place binding twine on the free list. A bill to establish an Art Commission of the United States was introduced by Mr. Budd, of Maryland.

Majority and minority reports on the Quay case were presented by the Committee on Privileges and Elections on January 23. The majority favor his exclusion, the minority his admission. Mr. Quay was appointed Senator by the Governor of Pennsylvania under circumstances which make the appointment of doubtful legality.

Senator Money, of Missouri, made a speech on the race question in the South on January 25, and following his speech he had a heated colloquy with Mr. Chandler, of New Hampshire, who charged that the Southern Senators by interperate statements were reopening the whole Southern question in the Senate, after it was supposed to be dead.

It is said that Senator Elkins will be a candidate for the Republican Vice-Presidential nomination.

POLITICAL.

Gov. Gage, of California, will soon call an extra session of the California Legislature, probably to select a United States Senator.

The Virginia General Assembly will soon call a convention to frame a new State constitution.

The Kentucky House of Representatives unseated a Republican in favor of a Democrat on Saturday. This was the first test of strength in the Goebel-Taylor contest. A thousand armed men reached Frankfort, the capital of Kentucky, on Thursday, and stacked their arms in the State House grounds. A public meeting was held and resolutions adopted asserting their determination to uphold their rights and liberties. The men all wore Republican badges, and the movement is considered a threat to the Goebel Democrats, who are trying to out the Republican officeholders through the courts and the Democratic Legislature.

Bourke Cockran has declared that he will support Bryan on the anti-expansion issue, believing the gold standard to be firmly established.

OTHER DOMESTIC NEWS.

It is said that definite notes, guaranteeing our treaty rights, or the "open door" in China, have been received from all the powers except Japan and Italy.

All the important railroads and steamship lines of the South and Southeast, at a conference in Atlanta last week, decided to raise rates on Cuban business 20 to 25 per cent.

The Rev. Dr. Francis E. Clark, who sailed for the Orient on the steamer China last week, will attend conventions of Christian Endeavorers in China, Japan and Korea, and continue his journey through Siberia and Russia to London.

A freight train containing a car of dynamite ran away on a steep grade down a mountain side near Ashley, Pa., last week, Thursday evening, collided with an engine at the foot of the mountain, and exploded the dynamite, killing six men and maiming six others.

A sword and a silver service were presented to Commander Richard Wainwright, who was in command of the Gloucester in the naval battle of Santiago, by citizens of the District of Columbia on January 24.

Governor-General Wood is making a tour of inspection through Cuba.

The bill providing for separate cars for whites and negroes in the railroads in Virginia has passed both houses of the Virginia Legislature.

The cruiser Olympia is to be repaired at the Boston Navy Yard, at a cost of \$500,000.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

WYOMING.—Cheyenne.—L. H. Hallock, sold to L. J. Hallock.

ONTARIO.—Chatham.—A. I. McCall & Co., succeeded by A. I. McCall.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

What's a table, though nicely spread, without Cook's Imperial Dry Champagne at its head?

Lucas's Paints for 1900.

John Lucas & Company's paint and varnish specialties, etc., and the "Lucas" plan for helping the druggist to increase his paint sales and profits are well known in the drug trade, and the company remind their regular patrons to "get in line" for the spring trade, and order their stocks early. Those who have not handled "Lucas" paints in former seasons will do well to write for full particulars of the "Lucas Selling Help" plan, and complete catalogues, color cards, etc.

White Rabbit Easter Egg Dye.

The manufacturers of White Rabbit Egg dyes call attention to their beautiful novelties in Easter egg coloring, photos of prominent men, figure faces, birds and animals, shown in the various colors and designs. In their solid color dyes, dealers can supply 108 colors and shades for five cents, and in their paper dyes sixteen artistic color designs for decorating Easter eggs in all the colors of the rainbow for five cents. No two are alike, and each is an exquisite novelty, which should make any child happy. White Rabbit Egg Dye is the leader in novel and artistic effects in original ideas; in handsome, catchy advertisements, that attract and hold the attention of old and young; in strength and brilliancy of colors and in number of color designs. Is the only Easter dye that gives a white rabbit enzel, which makes a handsome advertisement on the show case, and gives forty beautiful, lithographed pictures with each box for free distribution by the retailer. If you want the best sellers and the biggest profits, buy the White Rabbit Egg Dyes for your Easter trade. They are up-to-date, the handsomest put up and the best advertised dyes. See two-page lithographed insert in this issue.

Wampole's Milk Food.

A new product from the laboratory of H. K. Wampole & Co., of Philadelphia, is Wampole's Milk Food for infants, invalids, etc., which, judging from its composition, as stated in the firm's announcement in this issue, should completely "fill the bill." It is supplied in four sizes, packed only in glass jars, and druggists are urged to write the manufacturers for a liberal supply of free samples, literature, etc.

A Large Assortment of Ice Cream Cabinets.

The Chocolate Cooler Company, of Grand Rapids, Mich., large manufacturers of ice cream cabinets, say they have twenty different sizes and styles in stock, and can fill orders promptly. In such an assortment every buyer should find what he wants, and interested soda fountain owners are asked to write the company for a complete catalogue, before deciding on new cabinets for the season of 1900.

John A. Falck Co.'s New Location.

The John A. Falck Company, formerly of Philadelphia, proprietors of "One Minute Headache Cure" and "One Minute Toothache Cure," and manufacturers of a large line of drug specialties, supplied under buyer's own name, are now located at Bordentown, N. J., where their facilities are much increased. They offer a number of special inducements to the trade which are well worth knowing about, and will send full particulars and free samples of their goods to any druggist who writes them.

Billings, Clapp & Co. Protect Their Customers.

Billings, Clapp & Co. announced that they are protecting their regular customers for actual wants in Carbolic Acid and chemicals made from it, notwithstanding prices have advanced and supplies are scarce, and that they shall continue to do so. It pays retailers to be in touch with such manufacturers as this firm, which invites all who buy chemicals in bulk quantities to write for the "B. C. & Co." monthly price list, with interesting market notes, etc.

"W. T. & Co.'s" Massage Rollers.

Whitall, Tatum & Co. now make and supply the trade with electric massage rollers, with which, as they say, "it is not necessary to send a compass in order to prove that they generate an electric current when in operation." Two convenient shapes are made, each illustrated and quoted in the firm's advertisement on another page. Reliable instruments of this kind, scientifically made and moderately priced, will find many users among the advocates of genuine electrical massage treatment in disease.

Home Soap Co.'s Limited Offer.

A special offer is made in this issue by the Home Soap Co., of New York, on their introductory assortment of castle soaps, to supply this assortment (which at regular trade prices amounts to \$12.41) at \$10.50 for a limited time, but only one order will be filled from each store at this price. This lot of soaps yields \$21.00 at retail, a profit of 100 per cent., and an additional premium is added in goods which increases this profit. The company wants the entire retail drug trade to become thoroughly acquainted with its goods, and therefore offers the above special inducement; many druggists already handle "Home" brands of castle soap regularly and are highly pleased with them.

Removal Notice.

W. E. Kennedy, New York City, successor to Kennedy & Simon, importers and manufacturers of soda fountain specialties, has removed from 78 and 80 Murray street to 370 Greenwich street. The move was made imperative by a very large increase in business, which required a much larger store room and better facilities generally. These have been secured at the new location and a cordial invitation is extended to friends and patrons to visit Mr. Kennedy there or write him in regard to their wants in his line.

Hints for Soda Fountain Purchasers.

On another page will be found matter of interest to those who contemplate the purchase or exchange of soda water apparatus. That veteran firm, the Hart Manufacturing Company, of Chicago, do not come before the drug trade as strangers. They have been engaged in the manufacture of this line of goods for over a quarter of a century. With long experience, ample capital, a finely equipped plant and an established reputation for making only high grade fountains and appurtenances, the trade will find their goods all that is claimed for them. However, it is upon individual merit alone that they sell their goods. Having given much time and careful study to perfecting their apparatus, the prospective buyer will find, upon investigation and comparison, that they are producing the best that can be had for the money. We know of nothing to which the old saying that "the best is the cheapest" will apply with more truth than to soda water fountains, and the Hart Manufacturing Company have a reputation of producing the best.

Card from the Ray Chemical Co.

"Cheap Stuff" is the constant cry of competitors, who have been bleeding the trade for twice what their products are worth. They now realize that the business is going to a house that is making as good goods (if not better) than their own, and yet is willing to sell them at a reasonable price and at a legitimate profit.

These competitors realize that to reduce prices now would be a reflection upon their good faith to the trade, and stultify utterances previously made; consequently they raise the cry that individual brands of Digestive Ferments are the "only standards," ignoring the fact there is only one official standard, the U. S. Pharmacopœia. A highly ornamental label is a poor excuse for exacting exorbitant prices for the goods covered by these labels. The wide-awake buyer of to-day will not be gulled, either by false standards or unique labels. He will certainly purchase goods which represent the highest standards of the U. S. Pharmacopœia at their true market value. He will always give the preference to facts rather than to high sounding verbiage. Our house is the only one that markets strictly U. S. P. Pepsin and Pancreatin at a legitimate margin, and our half-pound Special Package of either Ferment at \$2.50 is a proof of it. We are the pioneers in legitimate products at legitimate prices as regards Digestive Ferments and the preparations thereof. Our bulk package prices lead them all.—The Ray Chemical Co., Detroit, Mich.

Awarding of Scott & Bowne's Prizes.

It will be remembered that recently Scott & Bowne offered three prizes to the retail druggists for the best answers to the following questions:

"Why a druggist injures himself by trying to persuade his customers to take something else when Scott's Emulsion is asked for."

"Why a druggist should give his customers Scott's Emulsion when called for."

In reply to this offer, hundreds of articles were received, many of which bore evidence of great care and study.

These papers were submitted to the editor of a well-known medical magazine, and he has just submitted his report. Scott & Bowne were fortunate in securing for this work Dr. Charles H. Stowell. For many years Dr. Stowell, while professor in the University of Michigan, was the editor and proprietor of a journal called "The Microscope and Its Relation to Medicine and Pharmacy." Later he removed to Washington, and there established "The National Medical Review," also editing the well-known New York journal, "Practical Medicine." Dr. Stowell is also the author of at least a dozen text books used in our colleges and public schools. We feel sure the competitors in this contest may rest assured that most careful consideration has been given each paper.

The first prize has been awarded to Mr. G. Y. Holmes, corner of Main and Green streets, Claysville, Pa. His paper will be found in full in our advertising pages. The second prize is given to Mr. B. P. Flora, Schooley's drug store, Harrisonville, Mo., and the third to T. W. Norwood, of Austell, Ga. Both will be published later.

State of Trade.

No Abatement of Activity.

New York, Jan. 30.—There has been no perceptible abatement of activity in the jobbing movement, but there has not been any material increase in demand for round lots, and only occasionally have individual transactions shown more than average jobbing proportions. The feeling among dealers, however, has continued firm regarding prices and all are sanguine that satisfactory results will be shown at the close of the current season. Climatic conditions recently have been more favorable to a better movement of seasonable articles, and the cold wave that made its appearance last week was hailed with delight by merchants generally.

Nothing of consequence was developed in opium and the market for this leading commodity has remained quiet with quotations unchanged, and business has been limited to small jobbing sales. Quinine also has ruled quiet, but holders continue firm in their views and there is no apparent anxiety to realize. The bark situation continues strong and the outcome of the next Amsterdam auction sale is awaited with no small degree of interest.

One of the more important changes for the week was a reduction of 50 cents per ounce in manufacturers' quotations for cocaine due to weaker markets abroad, presumably caused by an improved outlook for securing fresh supplies of crude material. The recent sharp upward movement in carbolic acid, reference to which was made in this column last week, has been followed by an advance in salicylic acid and sodium salicylate. Under the same influence quotations for picric acid have scored a substantial advance.

There has been a material improvement in values of iodine, and manufacturers' quotations for iodoform are correspondingly higher, with the tone of the market strong. The advance in iodine is also responsible for a revision of prices of ammonium, sodium, potassium and other iodides, all of which have been marked up to correspond with the new iodine quotations. All bismuth preparations have been advanced by manufacturers, and circulars were sent out on Saturday last quoting the new prices in detail.

In the essential oil department general market conditions have been rather tame, and while business has been of a fair volume it was mostly of a routine order and consequently there were very few fluctuations in prices. The easier feeling in anise noted last week continues, and a further slight concession has been made in wholesale prices. Clove continues strong in sympathy with the spice, which has steadily moved upward during the past week and is now held at the highest figure for a long period. Synthetic wintergreen shows increased firmness under the influence of the stronger position of crude material.

Menthol is easier owing to cable reports of weaker markets abroad and spot quotations for round lots are about 10c. per pound lower. Lycopodium shows steadily increasing strength, owing to diminishing stocks, and continued scarcity in producing markets. Spot holders have further advanced quotations and offer very sparingly.

Prickly ash berries have advanced sharply owing to extreme scarcity and reports that the new crop is a total failure. Wholesale quotations have been marked up about 200 per cent.

Gum chicle is decidedly firmer under reduced supplies, which are very closely concentrated. It is reported that he output this year will be very small, as the gatherers have turned their attention to other employment, claiming that the prices obtained for their labor during the past few years have not been sufficiently remunerative to warrant their continuing in the business of gathering chicle.

Paraffine wax continues scarce and in good demand from the consuming trades, and manufacturers announce a further advance of 1/2c. per pound in quotations for all grades. Consumers are experiencing considerable difficulty in securing supplies, and it is not improbable that values will be still higher.

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c.

50c. and \$1.00 per bottle.

Trade price-list on application.

Manufacturers of the crystals have reduced their quotations about 5c. per pound. This is the first decline since the metal began to react from the higher figures recorded during the upward movement in nearly all metals.

Trade Still Excellent.

Philadelphia, Jan. 27.—The acceleration of business noted in last week's report still continues to the satisfaction of the wholesalers and the joy of the retailers. Grip, as an epidemic, seems to be coming back with some of its old-time vigor, and prescriptions are numerous, as most people have discovered by experience that it does no good to resist the grip, so they go and see a doctor at the outset. Prices are still stationary at the figures noted before, but a rise is anticipated in morphine and quinine.

Not Quite So Good in Baltimore.

Baltimore, Jan. 29.—The local jobbing drug trade was not so good last week as the week before. But this falling off is not believed to have any special significance. The out-of-town orders were of larger volume, and, generally speaking, very satisfactory conditions prevail. The manufacturers of pharmaceuticals are all busy and report that the movement exceeds that of last year. The advance in the price of carbolic acid and other articles has somewhat retarded the dealings in them, but no unfavorable features have developed. The rigid interpretation of the Sunday law may have a pronounced effect upon the retail business, but it is yet too early to determine with any exactness to what extent the Sunday closing movement will be felt. Heavy chemicals are in satisfactory demand and a prosperous year is expected.

Trade Active, Demand Strong and Steady.

Chicago, Jan. 27.—Trade has been active during the week. The demand has been strong and steady. Few failures are reported. There are not as yet many new stores, but prospective buyers are already making inquiries. Business shows a good average for the week in both city and country trade. Goods are selling easily on an advancing market.

Blithe as Birds in Springtime.

St. Paul and Minneapolis, Jan. 26.—Hardly more blithe is the bird in the tree of springtime than the average druggist of these cities just now. The weather has become more seasonable, being clear, bright, and just cold enough to be bracing, which endows everybody with revived cheerfulness, puts one in trim to make a little more money, and bestow a portion thereof upon the vender of pills, powders "and sich." General trade behind the counter is holding its own, and a little more, too, while jobbers declare that the receipts of town and out-of-town orders continues in satisfactory volume. The prices of carbolic acid, naphtha, etc., have been playing such pranks as to overshadow interest in the values of purely western commodities. The latter, indeed, revealed not the slightest change this week, repeating in this respect the record of the two weeks immediately preceding. Collections are quite satisfactory in most cases.

Active Country Trade, Prescriptions Dull.

St. Louis, Jan. 27.—Wholesalers report a very active country trade, stocks having, of course, been held down to the minimum the latter part of last year, and stocking up on staples is now in progress. One house reports that January sales will exceed those of the corresponding month last year by \$100,000, and all houses report a strong increase. Substrate of bismuth has advanced 20 cents per pound. Local retail trade is quiet, prescription business being especially dull.

Market Reports.

NEW YORK MARKET.

New York, Jan. 30.—In a jobbing way business continues active, with the majority of price changes in favor of sellers and market conditions are satisfactory to dealers.

OPIMUM.—A continued quiet market is reported, with jobbers quoting \$3.89@3.50 for 9 per cent. and \$3.40@3.60 for 11 per cent., as to size of order.

POWDERED OPIMUM.—Transactions are mostly of a retail character, but prices are maintained at \$1.50@1.60 for 13 per cent. and \$5.10@5.25 for 16 per cent.

MORPHINE.—Business continues good, with quotations steady on the basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for less.

QUININE.—Small lots are moving fairly, and the tone of the market continues firm. The jobbing quotations are 33¢@35¢ for bulk in 100-oz. tins, 55¢@57¢ in 50-oz. tins and 49¢@42¢ in ounce vials.

CARBOLIC ACID.—Jobbers have further advanced quotations to 55¢@56¢ for prime white crystals in pound bottles, and 52¢@60¢ in 5-lb. bottles. Amber bottles, 5c. less.

OIL WINTERGREEN.—Natural is unchanged, but synthetic has been further advanced to 80¢@90c., as to quantity.

OIL ANISE.—A continued easy feeling prevails, and jobbing quotations show a further decline to \$1.80@1.90. **PRICKLY ASH BERRIES.**—Extreme scarcity has caused jobbers to advance quotations to 95¢@81¢.

TIN CRYSTALS.—Manufacturers' prices are lower, and jobbers have reduced quotations to 22½¢@24c. in kegs and 32¢@37c. for less.

COCAINE.—A reduction in manufacturers' prices has been followed by a decline in jobbing quotations to \$5.85@6.15, as to quantity.

MENTHOL.—Foreign markets are weaker, and spot quotations have been reduced to \$3.25@3.35.

GUM CHICLE.—A firmer feeling has developed, and quotations for small lots have been advanced to 45¢@50c.

IODINE PREPARATIONS.—All varieties are higher in sympathy with an advance by manufacturers, and the revised quotations are as follows: Iodine, resublimed, \$2.50@3.70 in pounds; Iodoform, \$3.00@3.80 in pounds, 25c. in ounces; Iodide of potash, \$2.85; soda, \$3.40; sulphur, 30¢@35c. in ounces; iron, \$3.20@3.30 in pounds, 26¢@32c. in ounces; arsenic, 35¢@40c. in ounces; calcium, 20¢@35c. in ounces; mercury, green and yellow, \$2.50@2.75 in pounds, 21¢@25c. in ounces; red, \$2.70@2.90 in pounds, and 23¢@28c. in ounces.

BISMUTH PREPARATIONS.—Manufacturers' prices are higher, and jobbers have advanced quotations to \$2 for subcarbonate, \$1.95 for subgallate and \$1.85 for substrate.

SODIUM SALICYLATE.—Quotations have been advanced to 55¢@56c.

PARAFFINE WAX.—Values are higher, owing to scarcity, and jobbers now quote 15¢@20c. for 130 degrees. **SALICINE.**—Jobbing prices show a further advance to \$4.50@4.75 per pound and 35¢@40c. per oz.

POTASH.—Jobbers have advanced quotations to 57¢@6c. by the barrel and 9¢@12c. for less. There is an additional charge of 81 for breaking and 50c. for ½ inspection.

CACAO BUTTER.—Cakes in 12-lb. boxes have been advanced to 48¢@49c. by the box and 50¢@55c. for less.

LOBELIA HERB.—Supplies are light, and values firmer, with jobbers quoting 25¢@30c. for whole and 30¢@35c. for reduced.

RAPE SEED.—German has declined to 3½¢@3¾c. by the bag and 57c. for less.

GALLIC ACID.—Jobbing prices have been advanced to 85¢@90c.

CALENDULA FLOWERS.—Scarce and firmer, with quotations advanced to 70¢@80c.

HARLEM OIL.—Jobbers have advanced prices to \$3 per gross and 55¢@50c. per doz.

COLD LAYER OIL.—Prices in a jobbing way have been reduced to \$24¢@27 by the barrel and \$1.10@1.25 per gallon for less.

NITRATE OF BARIUM.—Powdered has declined to 61¢@6c. by the keg and 9¢@12c. for less. Nitrate of strontium, 7½¢@8c. by the keg and 10¢@12c. for less.

NAPHTHALINE.—Balls have been advanced to 3½¢@4c. by the barrel and 5¢@7c. for less; flake, 3¢@3½c. and 4¢@5c. respectively.

CHLORIDE OF LIME.—Market firmer, with barrels held at 34¢@35c. and smaller quantities 5¢@7c.

BICARBONATE OF SODA.—Jobbing quotations show a decline to 15¢@20c.

BLACK PEPPER.—Quotations have been advanced to 46¢@20c. for whole and 19¢@22c. for powdered.

BROMIDE OF LITHIUM.—Values for jobbing quantities have been marked up to \$3.15@3.25 per lb. and 32¢@35c. per 100 lbs.

TARTRATE OF IRON AND POTASH.—Market firmer, with quotations advanced to 48¢@52c.

LACTOPHOSPHATE OF CALCIUM.—Jobbers have advanced quotations to \$26¢@28 per lb. and 1¢@2c. per oz. **GUAIACOL.**—Absolute has declined in price to \$3.25@3.50 per lb. and 25¢@30c. per oz.

WHAT CAN DRUGGISTS DO TO INCREASE THEIR PROFITS?

This is the important and all-engrossing question confronting the retail druggist. From various causes and through various influences the druggist's profits on many lines of goods have been cut down to a degree incompatible with the life of the business. Cut rate practices in proprietary medicines, competition on general lines of merchandise, over-crowding in the profession, are all contributing factors.

The druggist inquires, therefore, with great earnestness, what he can do to increase his business profits to afford him a fair livelihood and a legitimate return for his education, responsibility and capital invested.

As there is wisdom in a multitude of counselors, the Era has obtained the views of a large number of prominent men in each of the several branches of the drug trade with reference to this timely topic, and in next week's Era, February 15, we shall begin the publication of their communications.

In these views will be included those of wholesale druggists, retail druggists and manufacturers of proprietary preparations.

No druggist can read these suggestions and recitals of experience without deriving therefrom some hint which he can adapt with benefit to his own personal business. We specially commend to the consideration of our readers these practical papers upon this important question, which directly concerns the vitality and very life blood of the retail drug trade.

See Students' Bulletin, Page 150.

THEY WANT TO KNOW.

There are evidences of considerable restiveness on the part of the retail druggists, and they are beginning to ask questions concerning the work of the N. A. R. D. This association was formed to accomplish certain ends, and druggists want to know what progress is being made. The official bulletins and news letters from the executive office are very general in nature, they give no real information, and being unable to gain from them any definite idea of what is being done the druggists do not know where they're at. They accordingly want to know:—

How many State associations have paid dues and are affiliated with the N. A. R. D.? A list is wanted.

How many local associations have done likewise? Name them.

What is the total number of retail druggists represented by this membership?

How many proprietors and who are they who have pledged allegiance to the N. A. R. D., and are they keeping their promises? Print their names.

Who are the jobbers who are similarly loyal? Print their names.

Only by receiving definite replies to these inquiries can the druggists know whether any progress is being made. As things are now every one is in the dark. The policy of mutual concessions, compromise and you're a good sort of fellow may be all right, but some retailers are beginning to think it will not work. They want to know exactly what has been done up to date, and what is proposed for the future. It is generally agreed that the N. A. R. D. must succeed this year or not at all. It is very necessary that the trade know if it is gaining ground; just as necessary to know if it is not. Druggists have a right to demand answers to the above questions, and it will do a great deal of good to give such answers as full and explicit as they can be made. Glittering generalities cut no ice: who are our friends and who are our enemies? The rank and file of the drug trade do not know what is being done with them or for them. They are told that the executive committee has held a meeting, that member so and so has visited Boston, or New York or Chicago, and held "an important conference" with proprietor so and so, but they don't know what has been done. May be they have no right to ask, but still they do ask. It is the only means they have for justifying their hope in the N. A. R. D.

We are not expressing our own views alone, merely reflecting those of the retail druggists.

They want to know these things, and why shouldn't they be told?

When the N. A. R. D. started a year and a half ago it was stated that 20,000 retail druggists were represented in its membership. A couple of weeks ago this statement was repeated. Has it gained no strength? It can only succeed by having the strength of the majority, at least 75 per cent., and it must have it soon, or its failure is inevitable. If it is not gaining it has already failed, and the sooner we know it the better.

None have done more for the N. A. R. D. than the drug journals, and no journal has done more than this one; we have preached organization, have tried in every way to awaken the druggists to their opportunity, have employed every means to help the thing along. It is essential right at this point to know what is the result. If organization is not yet sufficiently complete, and if there is no prospect of finishing the job during the present twelve-month, the cause is lost. We earnestly hope not, but no one knows definitely one way or the other.

RELATING TO "SCHEDULE B."

Considerable discussion has arisen concerning the circular recently sent out by the Secretary of the National Association of Retail Druggists with regard to the proposed repeal of the stamp tax in so far as it relates to "Schedule B." The feeling is unanimous that the tax should be removed from the articles embraced in all of that section. If, however, Congress is not willing to repeal "Schedule B" in its entirety, then there should be a material reduction, so that the tax would not exceed one per cent., exempting nothing except the articles in the official pharmacopoeias and those in the National Formulary, and not, as suggested in the circular heretofore referred to, all the articles in pharmacopoeias, dispensatories, text books, formularies and all other literature of the profession. Such an amendment to the law would entail greater confusion and hardship to the trade than now exists.

CURE FOR CONSUMPTION.

The Hundred Year Club met in New York recently and discussed ways and means to attain longevity. The majority of the club members, as do we all in general, believe that temperate living in all respects is essential to reaching a ripe old age. But a bombshell was thrown into the camp upon the occasion in question in the shape of a new theory from a young lady, who advanced as a cure for consumption a treatment consisting of a combination of late hours, late suppers, and a general disregard for all the rules customarily observed by invalids. She says that if a person finds he has inherited consumption, or acquires it, he should not think about it at all. "He should not stay in bed, but get up, run around at night, eat lobster salads and Welsh rarebits for supper and enjoy life generally." Whatever we may believe concerning the ultimate success of such method of treatment, we

will all admit that it has the merit of attractiveness, if nothing else.

CLEANING FLUIDS DANGEROUS.

Quite a little is being said in the papers of late concerning the dangers resident in the practice of druggists supplying cleansing liquids, naphtha, benzine, etc., to customers without labeling such articles with full precautions and warnings against fire. It has been pointed out that often the purchaser is unaware of the dangerous nature of the volatile fluid he secures, and being in consequence careless in its use disastrous explosions and conflagrations frequently result. It is suggested that not only should druggists observe greater care, but that the matter should be considered by municipal fire and police departments, and stringent regulations drawn up. There is a hint in all this to the druggist which he may find to his advantage to act upon.

THE STAMP TAX.

The law makers at Washington cannot consistently plead ignorance of the arguments and desires of the drug trade relative to the removal or the modification and extension of the war tax on proprietary medicines. The Senators have been flooded with petitions and memorials from their constituents, and more formal appeals and protests have come from the several national and many state and local drug trade organizations. Many of them have already been brought to the attention of the proper committees in both the House and Senate. It is to be hoped that the attention and action the due of right and equity will be accorded these deliverances.

INDEX TO VOLUME XXII.

If you want a copy of the index to Volume XXII. of the Era, July to December, 1899, drop us a postal card at once, as the supply is fast being depleted. It will be sent free on request, but you must be prompt.

THE PUBLISHERS.

ERA DRUGGISTS DIRECTORY.

The current edition (seventh) was published last October. The advance orders nearly exhausted the edition, but we have a few copies left which we offer at \$10 per copy, net, postpaid, while they last. This edition is the most complete we have ever published and contains features not included in former issues.

THE PUBLISHERS.

WINDOW DISPLAYS.

If you have an attractive window exhibit, or if the interior plan of your store contains some unique feature, photograph it and send us a print. We have in preparation a special supplement which will consist of reproductions of show windows and store interiors, and we want to include in this as many good specimens as possible. Send in your contributions very promptly, that there may be no delay in issuing this sheet.

THE EDITOR.

Correspondence.

We are pleased to publish here communications from our readers on topics of interest to the drug trade. Writers are requested to express their views as briefly as possible. Each article must be signed by its writer, but his name will not be published if so requested.

PUSH YOUR OWN PREPARATIONS.

Lafayette, Ind., Jan. 26, 1900.

To the Editor—Although the druggists throughout the country are showing considerable opposition to the present high price of the average patent medicine, I consider it really a benefit to the retail druggist. It is a well-known fact that the larger part of that down-trodden individual's daily sales are patent medicines. The increased cost price has so cut down his profits that he necessarily has, as a means of making a living, to find some other way of making a profit, and of course there is no way quite so easy or profitable as manufacturing and pushing his own preparations. Manufacturers claim that the cost of selling their goods is so great that they cannot be sold for less than \$8 per dozen. It costs money to sell goods, of course, but all druggists will remember when the average cost of a \$1 preparation was \$7.50. In those days the druggist pushed the goods—he pushed them hard. If a customer entered the store ailing, the druggist would get a bottle of patent medicine and make the sale by adding his own personal recommendation to it. In those days the word "Substitution" was unheard of. Later the average price was advanced to \$8 and the druggist for self protection began to look for something to take the place of the \$8 remedies, which of course increased the cost of selling patent medicines. The average price is now \$9 a dozen, or nearly so, making the cost of selling still greater, as the retail druggist must make up more of his own preparations and must push harder, of course much to the detriment of the manufacturer.

The manufacturer will find that the higher he puts the prices of his goods the greater will be the cost of selling. If he will increase the price of his remedies to \$11.50 per dozen it will cost him about \$11.50 per dozen to sell them.

The aggressive cutter and department store have, of course, injured the retailers as well as the manufacturers by taking the retailer's profits and substituting by imitation for the advertised goods.

There are two good ways to stop cutting. One is an individual effort, the other is the efforts of the local association, or a number of local druggists. Of course it is practically impossible to stop cutting so long as the manufacturers cheerfully supply their favorite cutters direct, and just as cheerfully swear they don't. The druggist, therefore, can hardly expect much help from them, but must stop it himself by killing all sales possible on those cut remedies. One sale per week on any remedy throughout the United States would mean \$0,000. Try that scheme and see how quick the manufacturer will ask you what you want. Make a line of your own preparations and push them. You will be surprised at the number of your own sold in one day.

Study human nature. Study your customer. Get at it slowly and systematically. If a customer comes in for ———— tablets get them for him, but call his attention to your own superior remedy. Make a note of those who have used ———— tablets and got no good results. You will find many such. No remedy, it matters not how good, will cure all the sick, and the druggist who keeps his wits with him will hear of them. Tell your customer of the complaints you have heard and ask him to try yours next time, and if you have any circulars of your own wrap one up with his package. Tell him who has used yours with good results. You will find that in many cases your customer will ask you to exchange the one he asked for for yours and apologize for putting you to so much extra trouble. But if he doesn't, you have given him something to think about and the chances are in your favor of getting him next time. A druggist who is reliable and has the proper standing in the community will find that a large majority of the people have more confidence in the opinion of their druggist than in a remedy made by a stranger in some way-off village.

The next plan is by local association or by agreement of part or all local druggists. This plan I have frequently explained to traveling men and to the Indiana Pharmaceutical Association; it can be made exceedingly effective and with no cost to the druggist. Let the druggists adopt a line of goods; all have the same; have them displayed as much as possible; have them made by some reliable manufacturer, but to contain the name of the manufacturer, not a local name merely. Then when a customer calls for ———— Resolvent, or ———— Sarsaparilla, get it out for him, but call his attention, not to something just as good—never use these words—but to a better preparation, a remedy that you would prefer yourself under the circumstances the same as your customer's. Note who don't like ———— Resolvent and tell your customer so. Note who does like the better preparation and tell him about it. Don't get the idea in your head that a remedy to be effective must be secret and made by a millionaire way off some place else. If you will stop to think, very few patent medicine manufacturers are pharmacists, but are simply advertisers.

Of course your customer came for ———— Resolvent, and it is hardly advisable to persuade him against his will. Explain the merits of your own and let him go. The next time perhaps that customer drops in a store a little farther down the street and calls for ———— Resolvent. Again the druggist gets it down and incidentally calls the customer's attention to the better article. That better article is no longer a new remedy to him—he has heard of it before. But still he came for ———— Resolvent, perhaps he still prefers that. All right, you have done your duty; let him go. The next time a customer drops in a store a little farther down street, asks for ———— Resolvent. Yes, the druggist has ———— Resolvent; says he is not selling very much now; asks his attention to the better preparation. The first time the customer's mind is fixed; the second time he hardly knew which was best, but the third time, in 97 chances out of 100 your customer will take the better article and be glad of the chance.

In time, when the manufacturer finds that the department store and the aggressive cutter are advertising patent medicines at cost, or less than cost, and that the retail druggist, the very man that he holds in supreme contempt, the man who he thought did not know enough to make a remedy of his own, is actually selling more of his own goods, then the manufacturer will promptly do what he claims he could not do before—cut the cutter!

H. E. GLICK.

TO KANSAS DRUGGISTS.

Marysville, Kan., Jan. 26, 1900.

The Era, one of the members of my family, for as such I esteem it, and welcome it heartily on its appearance every Saturday, may possibly aid Kansas druggists, as it has others, in promoting their welfare.

To Kansas druggists. This means that the time has arrived for Kansas druggists to awake from their Rip Van Winkle sleep, into which they have allowed themselves to drift, and get a move on themselves before the next State Legislature convenes and arrange for that body to so amend our pharmacy law that the druggist will be able to obtain that right which by law is conferred upon him, but which during his time of dormancy the medical profession have been permitted to steal from him. I refer to dispensing by physicians, which exists almost universally in our State and which, according to section 11, chapter 150, of Kansas Laws, is virtually accorded to them when it reads: "Nothing hereinbefore contained in this act shall apply to any practitioner of medicine who does not keep open shop for retailing, dispensing, or compounding of medicines or poisons, nor prevent him from administering or supplying to his patients such articles as he may deem fit and proper, etc."

Now whither does all this tend? In the first place to the ruination of the retail druggist and those dependent upon him; and secondly, ruining his business and professional career until he is nothing more than a hand-'em-down merchant, though his duties and profession laid

down by law are of far greater importance. It is he in whom the people not only repose their confidence, but trust their lives in his hands when in want of remedies to assist nature. This confidence in the majority of cases and places in our State is bestowed upon the non-professional, self-dispensing, uneducated physician, who tries to be a pharmacist and chemist by virtue of possibly having received twenty-five or fifty hours pharmaceutical drill by a professor as ignorant as himself.

To what can we attribute this dispensing evil other than to the pernicious loop-hole in our pharmacy law? Did you, fellow druggists, ever seriously reflect on this section? I doubt not that some of my colleagues have, who are placed in similar circumstances to myself. Marysville, Marshall County, Kansas, is a county-seat town. We have three druggists, nine doctors; everyone of these doctors dispenses his nostrums and as a consequence we have three druggists, nine doctors and twelve drug stores operated by three registered and nine unregistered would-be pharmacists, when the law distinctly declares that a person who compounds and dispenses must be a registered pharmacist. It is also true that the law says one who keeps an open shop for retailing and dispensing of poisons must be such a registered pharmacist. Observation has taught me that it is this non-registered doctor who sells (retails) and dispenses more quinine, salol, antipyrin, syrup, etc., than the pharmacist of whom the State demands an education to fulfill this particular want. This leads us to the fact that the State demands and commands, but does not protect. It is a self-evident fact that when a thing can be demanded then that thing must also be protected. Now, as said before, Kansas, as well as other States of this great Union, demands from every person who desires to practice pharmacy so much of an education, knowledge of chemistry, pharmacy, materia medica and general four years' experience as it takes to pass the examination before the State Board of Pharmacy, and if a certain individual is not competent to pass this examination he is debarred from opening a drug store. But what does our friend the practicing physician do under the circumstances? Why, he is a privileged character and does what others can not do under the law. He dispenses and compounds and retails as though there was no pharmacy law. His is nothing but an act of imposition and he encroaches upon the right and earned privileges of his goody, goody friend the druggist. Further, the State demands a fee for examination of \$5, a \$1 annual registration fee and that the "certificate" must be at all times conspicuously displayed in your place of business. So far as the protection is given I will leave that for some of my colleagues to answer.

What, then, is a remedy for this great evil by which we are overcome, and where can it be found? This question I will also leave for some brother druggist to answer.

Believing that Kansas druggists can act no wiser than by agitating this question among themselves, by expressing their opinion through the columns of the Era, and next Fall when representative candidates appear for your influence, demanding also their influence to this end, I doubt not that the Era will gladly allow space to every druggist who wants to express his views in its columns.

Truly yours,
D. v. RIESEN, Ph.G.

THE BOARD OF PHARMACY INSTITUTE REPLIES TO MR. FABER.

New York, Jan. 31, 1900.

Editor Pharmaceutical Era—In the Era for January 25, there appeared the annual report of the New York City Board of Pharmacy (which, by the way, is the individual production of Mr. Sidney Faber, and was read at the New York College of Pharmacy before even the Board of Pharmacy knew that such a report was to be read), a great portion of which is devoted to an attack on the Board of Pharmacy Institute.

The space in the Era will not permit us to go deeply in the matter, but we will only mention that we have sent to Mr. Faber an exhaustive communication on the matter, which we hope will convince that gentleman that the charges made in his report were utterly un-

founded and based on hearsay rumors or insinuations of jealous and disgruntled individuals. We have shown him, in a way which cannot fail to be convincing, wherefrom the largest contingent of undesirable candidates issued. We have proved to him that the testimonial writer referred to by him, who passed his examination the eighth time, has entered our institute *after* he had failed seven times. He entered our institute at the recommendation of his friends, but very sceptical himself as to his ability ever to pass the examination, and nevertheless, in less than three months' study (he entered June the 26th and went up to the examination September the 18th; no examinations being held by the New York City Board during July and August) he passed his examinations successfully. We have a number of such students, who, after having taken courses with other instructors, or having studied by themselves, and after having failed from two to six times, finally enter our institute, and after two or three months' instruction go up and pass at the first attempt. We have further shown that we have as much right to the name "Board of Pharmacy Institute" as the Board of Pharmacy to its name; the title "Board of Pharmacy Institute" being the name under which we are chartered by the Regents of the University of the State of New York. We have further shown him that his assertion that our title could mislead anybody into the belief that we have some official connection with the Board of Pharmacy could be nothing but a groundless assumption, as we have persistently and continually stated in unequivocal language in all our announcements that we had no "pull" with the Board of Pharmacy, could have no "pull," and would not *care* to have any if we could. We have for many years persistently and unceasingly instilled into our students' and into the drug clerks in general, that they could not expect to pass the Board of Pharmacy examination except on their merits, and that if they came to us with the expectation of getting anything else besides a most excellent course of instruction, they came to the wrong place. We have shown him that Russians, against whom Mr. Faber seems to have a special grievance, form but a small percentage of our students; that people of his own nationality, namely, Germans, form a greater percentage than do the Russians, while Americans, English and Irish form fully 50 per cent. We make the greatest bid for students from outside of Greater New York, as we find that they generally possess a much better preliminary education, and those students come to us in large numbers.

In short, we have shown to Mr. Faber by facts and by incontrovertible arguments that his attack was unjust, and must have resulted from his ignorance of the true state of affairs. And we hardly have any doubt that that gentleman will make the proper reparation.

Yours truly,
THE BOARD OF PHARMACY INSTITUTE.
WM. J. ROBINSON, Ph.G., M.D.

THE PHENYO-CAFFEIN PLAN.

Worcester, Mass, Jan. 30.
Editor of the Pharmaceutical Era:

Kindly permit us to say a few words to correct a misapprehension of our plan, concerning which you kindly said a few words in your issue of January 4.

We now consign, but do not sell our goods to wholesale druggists. The wholesalers of our goods act in the capacity of *agents*, so that in buying from them retailers are buying from us and become responsible to us. In accepting the goods with the notice that is on each dozen the buyer thereof enters into a contract with us—*without signing*—to sell at the prices stipulated by us. He may not admit this. He may claim that not having signed any contract he is at liberty to sell at such price as he chooses. This is the issue. We have ceased arguing the matter with self-constituted jurists and are preparing to obtain a decision from an official jurist.

To require retailers to sign our contract would be to handicap honest men and play into the hands of unfair competitors.

The chief advantage of our new contract is: the burden of enforcing it rests upon ourselves. This we shall endeavor to do by using a number of prominent cutters

SCIENTIFIC THOUGHT IN THE NINETEENTH CENTURY.*

By WILLIAM NORTH RICE.

In intellectual as in physical phenomena, we are tempted to overestimate the magnitude of near objects and to underestimate that of distant ones; but science and art tend to advance with accelerated velocity, and we are undoubtedly right in ranking the achievements of our age in science and its applications as far greater than those of any previous century.

Our predecessors a hundred years ago could avail themselves of no other means of transportation than those which were in use before the time of Homer. If the distances over land were too great for convenient walking, they were carried or drawn by horses. If they had occasion to cross bodies of water, they used oars or sails. We are carried to-day by the forces of steam and electricity.

The harnessing of these mighty forces for man's use has transformed not only the modes of transportation, but the processes of production of all kinds of commodities. It has wrought a revolution in the whole industrial system. The day of the small workshop is gone. The day of the great factory is come. Every phase of human life is affected by those arts which have arisen from the applications of science. Comforts and luxuries which a hundred years ago were beyond the reach of the most wealthy are now available for the use of even the poor. Aniline dyes give to fabrics used for clothing or decoration colors beside which those of the rainbow are pale neutral tints. Sanitary science arrests the massacre of the innocents, and increases the average duration of human life. Anesthetics and antiseptics take away from surgery its pain and its peril. Our thoughts to-day dwell, not upon the vast progress of the useful arts, but upon the progress of pure science. Not the economic and the industrial, but the intellectual history of our century claims our attention.

I do not propose to give an inventory of the important scientific discoveries of the nineteenth century. The time would not suffice therefor, even were my knowledge of the various sciences sufficiently encyclopedic to justify me in the attempt. I wish rather to call attention to a single broad, general aspect of the intellectual history of our age. I wish to remind you in how large a degree those general ideas which make the distinction between the unscientific and the scientific view of nature have been the work of the nineteenth century.

The first of these ideas is the extension of the universe in space. The unscientific mind looks upon the celestial bodies as mere appendages to the earth, relatively of small size, and at no great distance. The scientific mind beholds the stellar universe stretching away beyond measured distances whose numerical expression transcends all power of imagination, into immeasurable immensities.

The second of these ideas is the extension of the universe in time. To the unscientific mind, the universe has no history. Since it began to exist it has existed substantially in its present condition. Among Christian peoples, until the belief was corrected by science, the Hebrew tradition of a creative week six thousand years ago was generally accepted as historic fact. If, on the other hand, unscientific minds not possessed of any supposed revelation in regard to the date of the world's origin, thought of the universe as eternal, that eternity was still conceived as an eternity of unhistoric monotony. The scientific mind sees in the present condition of the universe the monuments of a long history of progress.

The third of these ideas is the unity of the universe. To the unscientific mind the universe is a chaos. To the scientific mind it becomes a cosmos. To the unscientific mind the processes of nature seem to be the result of forces mutually independent and often discordant. Polytheism in religion is the natural counterpart of the unscientific view of the universe. To the scientific mind the boundless complexity of the universe is dominated by a supreme unity. One system of law, intelligible, formulable, pervades the universe, through all its meas-

"Five cents' worth of powder, please."
"Yes'm. Face or seidlitz?"

In Massachusetts. If the highest court of said State sustains our contention we shall feel warranted in undertaking to protect the retail prices of our goods in other States.

Very respectfully,
PHENON-CAFFEIN CO.

WHAT IS A POISON?

New Paris, Ohio, Jan. 29, 1900.

To the Editor—I have read several articles in the Era giving definition for a poison. In my opinion nothing has been given that was equal to Professor T. G. Wormley's definition given us in Starling Medical College thirty-five years ago. Professor Wormley said: "A poison is anything which, if introduced into the system or applied externally, is capable of producing deleterious results by being absorbed."

This is the best, shortest, most exact and comprehensive definition for poison I ever heard.

Many things can produce deleterious results by being introduced into the system or by being applied externally in too forcible a manner. But nothing is a poison unless it is susceptible of being absorbed in sufficient amount to produce harm. We have had to give up some of the names and formulas for chemicals which the professor gave us, but his definition for poison is still orthodox.

E. L. CARLTON.

COLLECTING OLD ACCOUNTS.

W. W. Noble, of St. Paul, Minn., has thought out and tried an effective method of bringing delinquent customers to time. Mr. Tardy, we will say, owes Mr. Noble \$10, and has owed it for some time; so long, in fact, that he is ashamed to "show up" at this particular drug store, and buys his drugs of some other dealer. Mr. Noble writes him, with his proverbial courtesy, that if he will pay \$5—just half of the bill—he will call it square. Glad to get off with so heavy a discount, Mr. Tardy accepts the offer, pays up, sees the gray-whiskered account wiped off the books and resumes trading with Mr. Noble. If Mr. Tardy had declined the \$5 offer Mr. Noble would probably have suggested a compromise on the basis of \$2.50, which would, of course, have "fetched" Mr. Tardy. And Mr. Noble gets back the gentleman's trade and rids himself of a dead, worthless account and thus in the long run finds himself the gainer. The druggist in question firmly believes it is better to accept as low a rate as five cents on the dollar than carry the account on his books eternally.

ureless extension in space and time. The student of science may be theist or pantheist, atheist or agnostic; polytheist he can never be.

What then, let us ask ourselves, has been the contribution of our century to the development of these three ideas, which characterize the scientific view of nature:—the spatial extension of the universe, the historic extension of the universe, and the unity of the universe.

The development of the idea of the extension of the universe in space belongs mainly to earlier times than ours. The Greek geometers acquired approximately correct notions of the size of the earth and the distance of the moon. The Copernican astronomy in the sixteenth century shifted the center of the solar system from the earth to the sun, and placed in truer perspective our view of the celestial spheres. But, though astronomy, the oldest of the sisterhood of the sciences, attained a somewhat mature development centuries ago, it has in our own century thrown new light upon the subject of the vastness of the universe. The discovery of Neptune has greatly increased the area of the solar system; the measurement of the parallax of a few of the brightest and presumably the nearest of the stars has rendered far more definite our knowledge of the magnitude of the stellar universe; and the telescopes of higher magnifying power than had been used before have resolved many clusters of small and distant stars.

If the development of the idea of the spatial extension of the universe belongs mainly to an earlier period, the idea of its historic extension belongs mainly to our century. It is true, indeed, that Pythagoras and others of the ancient philosophers did not fail to recognize indications of change in the surface of the earth. And, in the beginning of the Renaissance, we find Leonardo da Vinci and others insisting that the fossils discovered in excavations in the stratified rocks were proof of the former existence of a sea teeming with marine life, where cultivated lands and populous cities had taken its place. Hutton's "Theory of the Earth," which in an important sense marks the beginning of modern geological theorizing, appeared in the Edinburgh Philosophical Transactions in 1785, but was not published as a separate work till seven years later. Not till 1815 was published William Smith's Geological Map of England, the first example of systematic stratigraphic work extended over any large area of country. To the beginning of our century belong also the classical and epoch-making researches of Cuvier upon the fossil fauna of the Paris basin. By far the larger part, therefore, of the development of geological science, with its far-reaching revelations of continental emergence and submergence, mountain growth and decay, and evolution and extinction of successive faunas and floras, belongs to the nineteenth century. Far on into our century extended the conflict with theological conservatism, in which the elder Silliman, James L. Kingsley, and others bore an honorable part, and which ended in the recognition, by the general public as well as by the select circle of scientific students, of an antiquity of the earth far transcending the limits allowed by venerable tradition.

To our century also belongs chiefly the development in astronomy of the idea of the history of the solar system. It is, indeed, true that, in the conception of the nebular hypothesis, Laplace, whose "Théorie de la Monde" was published in 1796, was preceded by Kant and Swedenborg; yet the credit of the discovery belongs not so much to the first conception of the idea as to its development into a thoroughly scientific theory. Our century, moreover, has added to those evidences of the nebular theory, which Laplace derived from the analogies of movement in the solar system, the evidence furnished by the spectroscopic, which finds in the nebulae matter in some such condition as that from which the solar system is supposed to have been evolved.

By far the most important contribution of this century to the intellectual life of man is the share which it has had in developing the idea of the unity of nature. The greatest step prior to this century in the development of that idea (and probably the most important single discovery in the whole history of science) was Newton's discovery of universal gravitation two hundred years ago; but the investigations of our century have revealed, with a fullness not dreamed of before, a threefold unity in

nature—a unity of substance, a unity of force, and a unity of process.

Spectrum analysis has taught us somewhat of the chemical constitution, not only of the sun, but also of the distant stars and nebulae; and has thus revealed a substantial identity of chemical constitution throughout the universe. Profoundly interesting, from this point of view, is the recent discovery, in uraninite and some other minerals, of the element helium, previously known only by its line in the spectrum of the sun. Profoundly interesting will be, if confirmed by further researches, the still more recent discovery of terrestrial coronium.

The doctrine of the conservation of energy formulates a unity of force in all physical processes. In this case, as in others, prophetic glimpses of the truth came to gifted minds in earlier times. Lord Bacon declared heat to be a species of motion. And Huyghens, in the seventeenth century, distinctly formulated the theory of light as undulation, though the mighty influence of Newton maintained the emission theory in general acceptance for a century and a half.

When Lavoisier exploded the phlogiston theory, and laid the foundation of modern chemical philosophy, it was seen that, in every chemical change, there is a complete equation of matter. But there was in the phlogiston theory a distorted representation of a truth which the chemical theory of Lavoisier and his successors ignored. They could give no account of the light and heat and electricity so generally associated with chemical transformations. These "imponderable agents," as they were called, believed to be material, yet so tenuous as to be destitute of weight, haunted like ghosts the workshop of the artisan and the laboratory of the scientist, wonderfully important in their effects, but utterly unintelligible in their nature. It was almost exactly at the beginning of our century that the researches of Rumford discovered the first words of the spell by which these ghosts were destined to be laid. When Rumford declared, in his interpretation of his experiments, "Anything which any insulated body or system of bodies can continue to furnish without limitation, cannot possibly be a material substance," the fate of the supposed imponderable fluid heat was sealed; but it was not till near the middle of our century that Joule completed the work of Rumford by the determination of the mechanical equivalent of heat. About the same time Foucault's measurement of the velocity of light in air and in water afforded conclusive proof of the undulatory theory of light. In these great discoveries was laid the strong foundation for the magnificent generalization which the sagacious intuition of Mayer and Carpenter and Le Conte at once extended beyond the realm of inorganic nature to the more subtle processes of vegetable and animal life. In this connection I may be permitted to refer to the work of some of my colleagues, with the Atwater-Rosa calorimeter, which has given more complete experimental proof than had previously been given of the conservation of energy in the human body.

But by far the greatest of the intellectual achievements of our age has been the development of the idea of the unity of process pervading the whole history of nature. The word which sums up in itself the expression of the most characteristic and fruitful intellectual life of our age is the word evolution. The latter half of our century has been so dominated by that idea in all its thinking that it may be well named the Age of Evolution. We may give as the date of the beginning of the new epoch the year 1858; and the Wittenberg thesis of the intellectual reformation of our time were the twin papers of Darwin and Wallace, wherein was promulgated the theory of natural selection.

And yet, of course, the idea of evolution was not new when these papers were presented to the Linnean Society. Consciously or unconsciously, the aim of science at all times must have been to bring events that seemed isolated into a continuous development. To exclude the idea of evolution from any class of phenomena is to exclude that class of phenomena from the realm of science. In the former half of our century evolutionary conceptions of the history or inorganic nature had become pretty well established. The nebular hypothesis was obviously a theory of planetary evolution. The Lyellian geology, which took the place of the catastrophism of the last century, was the

conception of evolution applied to the physical history of the earth.

Nor had there been wanting anticipations of evolution within the realm of biology. The author of that sublime Hebrew psalm of creation, preserved to us as the first chapter of Genesis, was in his way a good deal of an evolutionist. "Let the earth bring forth," "let the waters bring forth," are words that point to a process of growth rather than to a process of manufacture in the origination of living beings. In crude and vague forms, the idea of evolution was held by some of the Greek philosophers. Just at the beginning of our century Lamarck developed the idea of evolution into something like a scientific theory. Yet it is no less true that the epoch of evolution in human thought began with Darwin. manifold suggestions there were of genetic relationships between different organisms, whether organic forms were studied by the systematist or the embryologist, the geographer or the paleontologist; but each and all found the path to any credible theory of organic evolution blocked by the stubborn fact that variations in species appeared everywhere to be limited in degree, and to oscillate about a central average type, instead of becoming cumulative from generation to generation. In the Darwinian principle of natural selection, for the first time, was suggested a force, whose existence in nature could not be doubted, and whose tendency, conservative in stable environment, progressive in changing environment, would account at once for the permanence of species through long ages, and for epochs of relatively rapid change. However Darwin's work may be discredited by the exaggerations of Weismannism, however it may be minified by Neo-Lamarckians, it is the theory of natural selection which has so nearly removed the barrier in the path of evolution, impassable before, as to lead, first the scientific world, and later the world of thought in general, to a substantially unanimous belief in the derivative origin of species. Certain it is that no discovery since Newton's discovery of universal gravitation has produced so profound an effect upon the intellectual life of mankind. The tombs of Newton and Darwin lie close together in England's Valhalla, and together their names must stand as the two great epoch-making names in the history of science.

Darwin's discovery relates primarily to the origin of species by descent with modification from pre-existing species. It throws no direct light upon the question of the origin of life. But analogy is a guide that we may reasonably follow in our thinking, provided only we bear in mind that she is a treacherous guide and sometimes leads astray. Conclusions that rest only on analogy must be held tentatively and not dogmatically. Yet it would be unreasonable excess of caution that would refuse to recognize the direction in which analogy points. When we trace a continuous evolution from the nebula to the dawn of life, and again a continuous evolution from the dawn of life to the varied flora and fauna of to-day, crowned as it is with glory in the appearance of man himself, we can hardly fail to accept the suggestion that the transition from the lifeless to the living was itself a process of evolution. Though the supposed instances of spontaneous generation all resolve themselves into errors of experimentation, though the power of chemical synthesis, in spite of the vast progress it has made, stops far short of the complexity of protoplasm, though we must confess ourselves unable to imagine any hypothesis for the origin of that complex apparatus which the microscope is revealing to us in the infinitesimal laboratory of the cell, are we not compelled to believe that the law of continuity has not been broken, and that a process of natural transition from the lifeless to the living may yet be within reach of human discovery?

Still further. Are we content to believe that evolution began with the nebula? Are we satisfied to assume our chemical atoms as an ultimate and inexplicable fact? Herschel and Maxwell, indeed, have reasoned, from the supposed absolute likeness of atoms of any particular element, that they bear "the stamp of a manufactured article," and must therefore be supposed to have been specially created at some definite epoch of beginning. But, when we are speaking of things of which we know as little as we know of atoms, there is logically a boundless differ-

ence between saying that we know no difference between saying that we know no difference between the atoms of hydrogen, and saying that we know there is no difference. Is it not legitimate for us to recognize here again the direction in which analogy points, and to ask whether those fundamental units of physical nature, the atoms themselves, may not be products of evolution? Thus analogy suggests to us the question, whether there is any beginning of the series of evolutionary changes which we see stretching backward into the remote past; whether the nebula from which systems have been evolved were not themselves evolved; whether existing forms of matter were not evolved from other forms that we know not; whether creative Power and creative Intelligence have not been eternally immanent in an eternal universe. I cannot help thinking that theology may fitly welcome such a suggestion, as relieving it from the incongruous notion of a benevolent Deity spending an eternity in solitude and idleness. The contemplation of his own attributes might seem a fitting employment for a Hindoo Brahm. It hardly fits the character of the Heavenly Father, of whom we are told that he "worketh hitherto."

In the last suggestion I have ventured outside the realm of science. But most men are not so constituted that they can carry their scientific and their philosophical and religious beliefs in compartments separated by thought-proof bulkheads. Scientific and philosophic and religious thought, in the individual and in the race, must act and react upon each other. It was, therefore, inevitable that our century of scientific progress should disturb the religious beliefs of men. When conceptions of the cosmos with which religious beliefs had been associated were rudely shattered, it was inevitable that those religious beliefs themselves should seem to be imperilled. And so, in the early years of the century, it was said, if the world is more than six thousand years old, the Bible is a fraud, and the Christian religion a dream. And later, it was said, if physical and vital forces are correlated with each other, there is no soul, no distinction of right and wrong, and no immortality. And again it was said, if species originate by evolution, and not by special creation, there is no God. So it had been said, centuries before, if the earth revolves around the sun, Christian faith must be abandoned as a superstition. But in the nineteenth century, as in the sixteenth, the scientific conclusions won their way to universal acceptance, and Christian faith survived. It showed a plasticity which enabled it to adapt itself to the changing environment. The magically inert Bible may be abandoned, and leave intact the faith of the church in a divine revelation. The correlation of forces acting in the human cerebrum with those of inorganic nature may be freely admitted; and yet we may hold that there are other forms of causation in the universe than physical energy, and that the inexpugnable belief of moral responsibility is more valid than the strongest induction. The "carpenter God" of the older natural theology may vanish from a universe which we have come to regard as a growth and not a building; but there remains the immanent Intelligence.

"Whose dwelling is the light of setting suns,
And the round ocean, and the living air,
And the blue sky, and in the mind of man;"

the God in whom "we live and move and have our being."

The church has learned wisdom. The persecution of Galileo is not likely to be repeated, nor even the milder forms of persecution which assailed the geologists at the beginning, and the evolutionists in the middle of our century. And science, too, has learned something. In all its wealth of discovery it recognizes more clearly than ever before the fathomless abysses of the unknown and unknowable. It stands with unsanded feet in the presence of mysteries that transcend human thought. Religion never so tolerant. Science never so reverent. Nearer than ever before seems the time when all souls that are loyal to truth and goodness shall find fellowship in freedom of faith and in service of love.

FOR CHAPPED HANDS Comby recommends application of an ointment consisting of menthol 1, salol 2, olive oil 10 and lanolin 30 parts. (Pharm. Post.)

A VISIT TO A LIQUID AIR FACTORY.

On January 9 a reporter for The Pharmaceutical Era visited the plant of the General Liquid Air and Refrigerating Company, in West Thirty-fourth street, New York city, where on that day this most interesting product was being turned out at the rate of thirty gallons an hour. There is nothing about the outside of the building to distinguish it from its neighbors. But the steady "puff, puff" of the powerful engine, heard a block away, and the clouds of steam sent whirling up into the blue give the passerby an idea of intense activity of some sort within. Upon entering the place one finds himself in a large, oblong room open to the roof, two and a half stories high. This room contains four great furnaces, into which firemen keep shoveling the coal, two engines, or compressors, a bewildering array of pipes of various sizes, which spread all about the place both vertically and horizontally, and lastly, near the front of the building, a curious tub-like reservoir from which an attendant is drawing off a colorless, watery-looking liquid that sends little clouds of cold air down around his feet and keeps the floor colder than that of an ice-house.

This plant, which has been operated since last June, contains one of the most successful appliances for liquefying air and other refractory gases that has yet been invented. This is the machine devised by Oscar P. Ostergren and Moritz Berger, of New York city, which is protected by patents in the United States and in the principal foreign countries. Mr. Ostergren is a graduate of the Royal Institution of Sweden, and has followed the profession of naval designer. He says he began to work out his design for a liquid air plant in 1896, two years or so before public attention was called to the subject. His associate, Mr. Berger, is a graduate of the Royal Polytechnic School of Munich.

In this plant the air is passed through filtering, purifying, cooling, drying and separating apparatus before reaching the liquefier. All of these auxiliary parts are of ingenious design, and at all points regulating and safety valves are provided so that the operator can see at a glance the exact working condition of the machinery. The plant is the largest liquid air factory in the world. Its two compressors using about 100 horse power, and applying to the charge a pressure of 1,250 pounds to the square inch. After being filtered to remove its impurities, the air passing from one compression cylinder to another is cooled by water jackets. From the compressors it goes to a brine or equalizing tank, thence to a tall separator, where moisture, oil, etc., are removed from it, and from this separator the air enters the liquefier at the temperature of cool water, and under a pressure of not more than 1,250 pounds per square inch.

In the liquefier, while the system employed is not new, the design of the apparatus is altogether novel, and its details are different from all other machines of the kind. A part of the air under high pressure is allowed to escape from a valve, as in Linde's machine, and is expanded while its pressure drops from 1,250 pounds to 300 pounds per square inch. By thus causing a large and continuous fall of temperature that part of the air remaining in the high-pressure system of pipes ultimately becomes liquid.

The inventors worked to secure the most complete insulation from the heat of the external atmosphere during the process of liquefaction, and also the under-cooling of the product to such an extent that it would not at once return to the gaseous state upon being drawn from the liquefier. This result is obtained by surrounding the coils of pipes in the liquefier and under cooler by a spiral space which is traversed constantly by a current of cold and rarified air. This current thus surrounds the working parts of the machine and insulates them from the external atmosphere.

The liquefier has a total cooling surface of 2,200 square feet. Externally it is about seven feet high, and its upper part is six feet in diameter. The lower part, or under-cooler, is considerably smaller. The current of air under a pressure of 1,200 pounds to the square inch, enters the liquefier through a standpipe from which thirty-six copper tubes, each five-eighths of an inch in diameter and 200 feet long, lead in flat spirals toward the center of the liquefier. Here these tubes connect with a casting con-

taining two concentric chambers, having a regulating valve between them which is controlled by a wheel at the top of the liquefier. When the air to be liquefied has passed this valve the pressure drops from 1,200 to 300 pounds to the square inch, and the greater part of this air, at this reduced pressure, flows through the second chamber of the casting as a return current into a similar set of thirty-six tubes to an exit pipe, and so goes back to the compressor to be raised to 1,200 pounds and sent on its round again. The two sets of spiral tubes are soldered firmly together, forming a vertical wall of seventy-two tubes and enclosing the spiral space referred to above as serving as an insulator.

The heat of the inflowing current of air under high pressure is absorbed by the returning low-pressure current, which has been cooled by its passage through the regulating valve and its expansion on its return path. This action is so complete that the inflowing and outflowing currents have practically the same temperature in the pipes just outside the liquefier.

From the chamber just below the regulating valve part of the air, which under a pressure of 300 pounds is either liquefied or about to become liquid, is allowed to expand a second time to an absolute pressure of ten pounds in the under-cooler (which, as has been stated, is directly beneath the liquefier). This part of the air, a second time expanded, is drawn out of the under-cooler as a second return current by the suction of the first compressor, and, after serving as an additional cooler by passing through the channel formed by the spiral turns of the wall of seventy-two tubes in the liquefier, enters again in its round of compression and cooling, and in turn contributes to the liquid product of the machine.

This system has been termed the "self-intensification of cold"; and is fundamental in all machines that have succeeded in producing liquid air. The value of the Ostergren and Berger machine over all others so far devised is that it carries the "intensification" farther, so to speak. In all previous machines the air has been brought only to its boiling point, or at best a very little below it, in the liquefier; and when drawn off into the open air it boils with violence, and a large proportion returns at once to the gaseous condition. The Ostergren and Berger machine is the first one to prevent this waste. This is done by the "under-cooler," and the inventors believe the air could even be frozen in the lower part of this under-cooler by evaporating liquid air in the vacuum produced by the first pump. At any rate the product obtained is so cold that it does not boil at once on being drawn out, and from the faucet there is no appreciable waste.

Now that liquid air can be produced commercially the problem confronting inventors is to preserve it. This problem also has been at least partly solved by Messrs. Ostergren and Berger. They have invented a container, on the same general principle as their liquefier, and upon this a claim has been allowed by the United States Patent Office. This consists of a central sphere of copper surrounded by two air spaces with an insulating layer between them, and an external vessel over all. A puppet-valve closes the opening into the inner vessel. The expanding vapors from this vessel lifts the valve and passes into the space surrounding the vessel of liquid air. Thence it must pass through the insulating covering and the second air space and open a valve in the bottom of the external can before reaching the outside atmosphere. Thus the expanding vapor is made to cool the whole surrounding space. Pressure gauges may be attached. To draw the liquid air a tube extending to the bottom of the receptacle is provided, which operates on the principle of the "siphons" for mineral waters.

Mr. Ostergren said to The Era reporter:

"With our present plant we are producing liquid air at a cost of twelve cents a gallon. With improvements in our machinery, the newest steam engines, etc., we figure that we can make it at a cost of three cents a gallon. So that if there were a sufficient demand we could sell it at five cents a gallon. The application and use of liquid air are as yet in the experimental stage, and the chief demand we have for it is from college professors and others who lecture upon the liquid air. We have been asked to supply it to various refrigerating and cold storage companies; the Buffalo Cold Storage Company,

which I am told is the largest in the United States, is ready to contract for 600 gallons a week at the present cost. But we have not yet decided whether to take the contract.

"We are operating the plant twice a week, and we are experimenting all the time. My own idea in producing liquid air was the obtaining of free oxygen. I believe we can produce 1,000 cubic feet of oxygen at a cost of one cent. Free oxygen means fuel, and the possibilities in that line are practically limitless. Liquid air we can separate into its component oxygen and nitrogen, and then we can get all the nitrogen products easily. We are only on the threshold in the employment of this powerful agent, and no one can tell what the next developments may be."

Counsel Gardenhire, of the General Liquid Air & Refrigerating Company, said: "We have not exploited our company yet to any extent. All our effort has been expended toward the perfecting of our plant and in experimenting. The company is a small one, but the men who compose it have plenty of money, and no stock has been offered for sale. But we are nearly ready to branch out on a large scale, and when we do you may look for some surprising developments."

SILVER NITRATE TEST FOR COTTONSEED OIL.—

Investigation of Charabout and March (Bull. Soc. Chim. de Paris) throw some light on the value of this test in presence of olive oil. The free fat acids obtained from 50 Gm. of cottonseed oil by saponification were treated in accordance with the method of Milliau on a waterbath with a 3 per cent. solution of silver nitrate and the brown precipitate thus formed, subjected to a chemical examination. It was found to consist chiefly of a brown silver salt composed of a fat acid melting at 52° and congealing at 49° to 50° C., and of sulphide of silver. Olive oil, which contains a sulphur compound of an analogous composition is also capable of forming a more or less distinct precipitate of a dark-colored silver sulphide with nitrate of silver. It is important to bear this fact in mind when examining olive oil for cottonseed oil. (Apoth. Ztg.)

MAYOL, a meat preservative, is stated by Than to be a mixture of methyl and ethyl alcohol with boric acid, glycerin and ammonium fluoride. (Drog. Ztg.)

THE WIDOW'S MITE.

THE METRIC SYSTEM.

The Committee on Coinage, Weights and Measures of the House of Representatives is again considering the subject of the adoption of the metric system of weights and measures as the legal system of the United States with a view of presenting a report to Congress upon this subject. The chairman of the Special Committee on Weights and Measures of the American Pharmaceutical Association would urge all members of the association and all pharmacists of the United States who favor the adoption of the measure to write to the Hon. James H. Southard, chairman of the House Committee, Washington, D. C., presenting their views upon this subject.

Probably no class of persons would be more benefited by the adoption of this measure than the pharmacists of this country, hampered and annoyed as they now are by being compelled to use *avoirdupois* and *apothecaries'* weight, wine measure and in some sections Imperial measure as well as the metric system.

Since the foundation of the Republic there probably has never been a time when the importance of this subject was more apparent than it is at present. With the acquirement of new territory in distant parts of the world and the increase of our commerce with foreign nations, a universal system of weights and measures becomes more than ever desirable. Pharmacists of the United States are to be congratulated on the advanced position they have taken in securing the adoption of the metric system exclusively by the United States Pharmacopoeia in 1890, and it is hoped that they will continue to aid in securing its adoption by Congress as the only legal system of weights and measures in the United States.

I WONDER.

Why the retail druggist is not more particular about the quality of the drugs he buys?

Why he does not systematize his buying, that he may get the best goods at the lowest market price, instead of digging up a few shorths every day or two for Tom, Dick or Harry, as the case may be?

Why he kicks about cutters, and will not help out the people who try to protect him?

Why he stays behind the prescription case doing nothing, while the patient drummer waits out in front to see him, post him up, and, if possible, get his order?

Why he does not take advantage of the market before an advance and lay in a supply? The argument is mighty poor that "when he pays more he charges more."

Why he buys goods from the specialty men who sell department stores, and kicks if the drug salesman does the same thing?

Why he does not solicit the trade of the laundries, dye works, barber shops and candy makers in his town?

Why he does not carry a better assortment of physicians' supplies, such as fever thermometers, hypodermic syringes, needles, etc.?—(Meyer Bros. Druggist).

COLIC TINCTURE FOR HORSES AND CATTLE.—

In Pharm. Post. the following is recommended: Take tincture of *asafoetida*, tincture of *aloes* and sulphuric ether, of each 20 Gm. (about 5 drachms), mix with 250 Cc. (about ½ pint) of water, shake well and give this mixture two or three times at intervals of one hour. Tympanitis of cattle is best treated with a simple mixture of ammonia water 1 part and water 10 parts. Distension of the stomach in calves is most readily relieved with a mixture of equal parts of *calamus* root, peppermint herb and caraway seed, given mixed with milk.

SOLID PETROLEUM may be obtained, according to Drog. Ztg., in the following manner: Common soap is dissolved in hot water and the solution cooled, then mixed with a solution of aluminum sulphate in water. An extremely fine precipitate of oleate of aluminum is formed, which is washed and dried. It is a nearly white powder resembling talcum. If this be mixed with 10 to 30 per cent. of petroleum and the mixture warmed gently a mass of unctuous consistence is obtained. This is readily incorporated with water and is recommended particularly for treating leather, which, when saturated with it, is stated to be greatly improved in durability.

PHARMACY.

ANTI GLACID is a liquid of secret composition proposed as a substitute for glycerin for filling gas meters. (Pharm. Post.)

WATERPROOF PASTE for paper labels, etc., is an ammoniacal solution of casein, to which a little formaldehyde is added. (Pharm. Post.)

BOU DAULT'S ELIXIR OF PEPSIN is composed of pepsin 2 parts, distilled water 10 parts, Malaga wine 40 parts, simple syrup 40 parts, and alcohol 80 parts. (Apoth. Ztg.)

SODIUM SACCHARATE is a gelatinous preparation having instead of a sweet an alkaline taste. It is soluble in water and is a good solvent for metallic oxides. In a pure state it is a white powder. It is obtained by precipitating with alcohol a solution of sugar mixed with sodium hydrate. (Pharm. Post.)

NICOTIANA SOAP is prepared from an extract of waste tobacco of cigar factories. The extract is mixed with precipitated sulphur and a superfatted soap mass, and perfumed with oil of bergamot. It is brown soap containing 5 per cent. of tobacco extract and sulphur and is used for skin diseases and scabies. (Pharm. Post.)

BIOS, EUROSTOSE AND CARNOS are yeast preparations, Bios being of Belgian origin and obtained by artificial digestion of yeast. It contains albumen in the form of peptones and albumoses. Eurostose is a concentrated form of bios resembling meat extract. Carnos is obtained by boiling the ruptured yeast cells with malt germs and has a taste resembling that of beef extract. (Pharm. Post.)

TOOTHACHE DROPS.—Daushez recommends the following: (1) Cocaine hydrochloride, 0.01; menthol, crystallized carbonic acid, of each 0.1; oil of cloves, 5 drops; spirit of camphor, sufficient to make 10.0 Gm. (2) Orthoform, carbonic acid, of each 0.1; camphor, chloral hydrate, of each 4.0 Gm. Insert upon cotton in the previously dried tooth cavity. (Pharm. Post.)

MANGANESIA is a French proprietary remedy for diabetes, containing as active ingredients permanganate and arsenate of potassium. According to an analysis by Alfred Blomquist, of Stockholm, the solution contains 8.76 per cent. of potassium permanganate and 0.3 per cent. of potassium arsenate. Two cases treated with the remedy in Sweden were not benefited by it. (Ztsch. f. Pharm.)

ADURÖL is a new photographic developer, obtained by the action of bromine or chlorine on hydroquinone. It occurs in the form of a white, granular powder, readily soluble in water. It is stated to be a very stable compound, the solution keeping well in open bottles, neither does it stain the hands or attack the skin. Aduröl acts more rapidly than hydroquinone and is not influenced by temperature. (L'Union Pharm.)

TOXIC ACTION OF CAFFEINE.—Dr. Zenety considers caffeine contraindicated in all kidney diseases because of its cumulative action. In three cases of death, which were hastened by caffeine, it was found in the autopsies that the heart was tightly drawn together in a typical manner. Although much used and in high favor with many practitioners, the physiological effects of caffeine have been studied but little, which is shown by the many contradictory statements concerning it made by various authors. (Apoth. Ztg.)

PASTA GLICIRIDA is the name given by Roderfeld (Apoth. Ztg.) to a rat poison, which he recommends in place of phosphorus mixtures because of its harmlessness to cats, dogs, etc. It consists of lard 500 Gm., salicylic acid 5 Gm., 1 onion, tallow 50 to 100 Gm., barium carbonate 500 Gm., ammoniated solution of copper acetate (20%) 50 Gm. The onion is cut in small pieces, roasted with the fats, then the other ingredients added.

PEROXIDE OF CALCIUM AS INTESTINAL ANTI-SEPTIC.—Dr. Rochkovsky (Semaine Medicale) has successfully employed calcium peroxide in the treatment of children troubled with digestive disturbances. This substance is a yellowish powder, insoluble in water, which liberates oxygen slowly but continuously. It is given in daily doses of 3 to 10 grains in milk. The effect is that of an antacid as well as antiseptic. (L'Union Pharm.)

FORMALIN MOUTHWATER.—In 500 parts alcohol dissolve 25 parts formalin (4 p. c), then add 100 parts tincture of benzoin, 25 parts tincture of myrrh, 1.5 part oil of peppermint, 1 part oil of anise, 0.5 part oil of cinnamon and 1 part powdered cochineal, the last ingredient being previously triturated with a little alcohol. After one or two days maceration with occasional shaking the liquid is ready for filtration. A tablespoonful is used for a glass of water. (Pharm. Post.)

PROPERTIES OF ATROPINE.—Recent investigations by O. Hesse may be summarized as follows: Absolutely pure atropine is optically inactive. Commercial atropine, uncombined, if optically active at the beginning, gradually loses on keeping the power of turning the plane of polarization. The optical activity of commercial atropine sulphate is due to the presence of hyoscyamine sulphate. Commercial atropine sulphate does not suffer any change on keeping with respect to its optical activity. Atropine, when in form of the gold salt, is gradually reconverted to hyoscyamine, from which it was originally formed, through the influence of any hyoscyamine that may be present. (Pharm. Post.)

THE SOLUBILITY OF TRIONAL IN FIXED OIL OF ALMOND is utilized by Pouchet (Bull. de Therap.) for administering this remedy in the form of emulsion or cylinder. For the former the following formula is offered: Trional, 1 Gm.; Oil of Almond, 20 Gm.; White Sugar, 8 Gm.; Tragacanth and Acacia, of each 2 Gm.; Orange Flower Water, 10 Gm.; Cherry Laurel Water, 2 Gm. To be taken in a small glass of milk or water. For a cylinder the following is recommended: Trional, 0.5 to 1 Gm.; Oil of Almond, 10 to 20 Gm.; one Egg Yolk and Water 150 Cc. Trional is also soluble in 3 parts of paraldehyde, but the remedy probably undergoes reaction with the solvent, and it is yet to be determined whether the two substances are therapeutically compatible or not. (Apoth. Ztg.)

RECTIFICATION AND PRESERVATION OF CHLOROFORM, as conducted in the laboratory of the Paris Military Hospital, is described by V. Masson (Jour. de Pharm. et Chim.). It comprises six operations: (1) Washing of chloroform with distilled water. (2) Treatment during two or three days with 2.5 per cent. of concentrated sulphuric acid, which is removed several times if necessary. (3) Treatment during three to four days with 3 per cent. of caustic soda solution, sp. gr. 1.33. (4) Again washing with distilled water. (5) Treatment with 2.5 per cent. of fused and powdered calcium chloride during two to three hours and subsequent addition of 2.5 per cent. of poppy seed oil. (6) Distillation. The distillate is collected in graduated receivers, containing 2 Gm. of pure, absolute alcohol for every 1,000 Gm. of chloroform to be collected. The specific gravity of the chloroform thus obtained is 1.498 at 15° C. It is kept in glass-stoppered bottles, sealed with bichromate-gelatin of the following composition: Solution A.—Gelatin 100 parts, distilled water 300 parts, glycerin 10 parts. Solution B.—Potassium bichromate 20 parts, distilled water 200 parts. Solution A. is mixed with one-half its weight of solution B. at 55° to 60° C. and the mass used at this temperature. (Apoth. Ztg.)

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Queries of Non-Subscribers Not Answered.

Joseph Sargood, Elkhart, Ind.; John M. Klein, Waterboro, S. C., and Geo. D. Case, Milledgeville, Ga., should read the rules at the top of this column. This department is restricted to the use of subscribers and their clerks. Queries of non-subscribers are not answered.

Information Wanted.

(R.) had a call for "beaver-alis" or "beaver-alice." The article is not "beaver-oil." What is it?

Solvent for Amber.

(T. E. E.) There is no satisfactory solvent for amber. It is practically insoluble in water, alcohol, fatty and essential oils, but it is said to be superficially softened in boiling linseed oil. When treated in the comminuted state with ether, chloroform, benzine, or oil of turpentine it swells but does not dissolve.

Insects Infesting Crude Drugs.

(H. M. B.) Insects infesting ginger root or other crude drug may be destroyed by subjecting the crude drug to the fumes of bisulphide of carbon. This may be readily done by placing the drug in an air tight vessel, the vapor of the bisulphide of carbon being deadly to all insects in all stages. Prevention of attack may be accomplished in some degree by the use of tight containers. Occasional inspection of the containers will detect the presence of the pests before they have had time to do much damage.

Elixir Terpin Hydrate and Codeine.

(H. P. C.) See this journal July 6, 1899, page 19. Here is a formula contributed to a recent issue of an exchange: Dissolve 17.5 grams of terpin hydrate in 400 c. c. of alcohol (a gentle heat may be applied to hasten solution), and add 400 c. c. of glycerin, and lastly add enough distilled water to make 1,000 c. c. An elixir thus prepared will hold the terpin hydrate in solution indefinitely at the ordinary temperature. When exposed to a low temperature some of the terpin hydrate will crystallize out, but this will redissolve on gently warming on a water bath. The desired quantity of codeine may be dissolved in the elixir.

Emulsification of Bromoform.

(A. P. M.) asks what causes precipitation in the following mixture:

Bromoform	1 dram.
Tincture of belladonna.....	1 dram.
Syrup of acacia.....	½ ounce.
Gaultheria water, enough to make.....	2 ounces.

A precipitation occurs when the tincture of belladonna is added directly to the syrup of acacia. However, the principal difficulty in compounding the mixture is that there is an insufficiency of acacia to properly emulsify the bromoform. This may be overcome by first mixing the bromoform with a small quantity of oil of sweet almond and emulsifying with a suitable amount of acacia and the gaultheria water. After the emulsion is made the tincture of belladonna should be gradually added and the mixture thoroughly agitated after each addition. Enough sugar may be incorporated to sweeten the mixture. The prescription as it stands is not a desirable combination and the wisdom of combining a vaso-motor stimulant like tincture of belladonna with bromoform is not apparent.

A Combination of Specialties.

(J. A. H.) submits the following:

Fowler's solution	1 dram.
Specific tincture of nux vomica.....	½ dram.
Lloyd's hydrastis	5 grains.
Listerine	2 ounces.
Water, enough to make.....	1 ounce.

He asks what causes the precipitation. Precipitation occurs when anyone of the other ingredients is added to "specific" tincture of nux vomica. Listerine also becomes "milky" when combined in a similar manner. The composition of the several specialties prescribed is not stated, and we cannot give the exact nature of the various reactions. But this makes little difference. Our correspondent is a physician and we leave him to determine whether such a combination is judicious though the patient "be advised to shake the bottle each time before taking."

Cathartic Pills.

(Dr. R.) The following formulas have been recommended, the resulting pills being of small size and moderately "active:"

(1) Aloin	10 grains.
Podophyllin	10 grains.
Capsicum	10 grains.
Extract of nux vomica	20 grains.
Make 100 pills.	

(2) Aloin	10 grains.
Jalap	10 grains.
Extract of herbene	5 grains.
Extract of nux vomica	5 grains.
Oleoresin of capsicum.....	5 grains.
Podophyllin	20 grains.
Make 100 pills.	

Active Cathartic Tablets or Granules.

Aloin	1/10 grain.
Extract nux vomica.....	1/10 grain.
Podophyllin	1/5 grain.
Oleoresin capsicum	1/100 grain.
Extract of colocynth.....	1/10 grain.
Croton oil	1/15 grain.
For 1 tablet.	

Elixir Rhubarb and Pancreatin.

(M. R. A.) Try the following:

Rhubarb	320 grains.
Golden seal	100 grains.
Cinnamon	100 grains.
Potassium bicarbonate	320 grains.
Pancreatin	320 grains.
Spirit of peppermint.....	1 fl. dram.
Simple syrup	2 fl. ounces.
Diluted alcohol, simple elixir, of each, sufficient.	

Moisten the rhubarb, golden seal and cinnamon (first reduced to a suitable powder) with diluted alcohol and pack moderately in a percolator; allow to macerate 48 hours and then percolate with diluted alcohol until 6 ounces have been obtained; in the percolate dissolve the potassium bicarbonate and add the pancreatin previously dissolved in the syrup and add about four fluid ounces of elixir; mix thoroughly, add the spirit and enough elixir to make the whole measure 16 fluid ounces and filter.

A similar preparation may be made by using the fluid extracts instead of the crude drugs.

Fluid Extract of Larkspur Seed.

(Medicus.) The menstruum usually directed for the preparation of a fluid extract of larkspur seed is alcohol, the seed being first reduced to No. 60 powder, macerating and percolating in the usual manner. Fenner gives the following general process for making fluid extract of larkspur seed by "water-bath percolation:"

Larkspur seed, in No. 60 powder, 16½ av. ozs.
Alcohol, a sufficient quantity.

Moisten the powder with from 6 to 8 fluid ounces of alcohol, pack firmly in a water-bath percolator, pour on it enough alcohol to saturate and cover the drug and set in a warm place for two days; then heat very moderately and after one hour begin to percolate very slowly, adding alcohol to the drug and continuing the heat and percolation until 14 fluid ounces have passed, which reserve. Turn off the heat and continue the percolation with alcohol until the drug is exhausted. Distill the alcohol from this last portion of the percolate until only 2 fluid ounces remain, which add to the reserved portion to make a pint of the fluid extract. Lastly, after standing a few days filter through paper or muslin, add

ing enough alcohol through the filter to make the measure a pint.

The only official preparation of this drug is the ointment. A strong tincture has been employed as an embrocation in the treatment of rheumatism. The following is an eclectic formula:

Tincture of Stavesacre.

Stavesacre seed, fine powder, 11 av. ounces.

Absolute alcohol, sufficient.

Percolate the drug with the absolute alcohol so as to obtain 16 fluid ounces of product.

Library Paste.

(J. D. T.) (1) Dissolve 2 drams of alum in a quart of water and add flour sufficient to make a thick cream. Powder together 10 cloves and a dram of rosin and stir the powder into the cream. Put on the fire in a vessel of sufficient size 4 ounces of water and bring to a boil. When in active ebullition pour into the vessel the mixture of flour, etc., in a thin stream, stirring all the time to prevent burning. Pour into an earthenware vessel, cover tightly and keep in a cool place. This paste keeps well. When needed for use take out a portion and replace cover on container. If needed, thin down with boiling water.

- | | |
|-----------------------|----------------|
| (2) Rice starch | 2 ounces. |
| Gelatin | 6 drams. |
| Water | 16 fl. ounces. |
| Oil of cloves | 15 minims. |

Incorporate the starch powder with the water, add the gelatin and heat gently over a water-bath until a jelly-like compound results.

- | | |
|---|---------------|
| (3) Best Bermuda arrow root | 1 3/4 ounces. |
| Sheet gelatine or best Russian glue | 50 grains. |
| Water | 15 ounces. |
| Methylated spirit | 1 ounce. |

Put the arrowroot into a small pan, add 1 ounce water and mix it thoroughly up with a spoon, or the ordinary mounting brush, until it is like thick cream; then add 14 ounces water and the gelatine broken into fragments. Boil for four or five minutes, set it aside until partially cool, then add the methylated spirit and six drops of carbolic acid. Be very particular to add the spirit in a gentle stream, stirring rapidly all the time. Keep the paste in a corked stock bottle and take out as much as may be required for the time, and work it up nicely with the brush. Some other formulas are given in this journal, November 11 and December 2, 1897, pages 720 and 839 respectively.

Cough Syrup.

(Carolina). The National Formulary offers several formulas for cough remedies which may be manufactured and sold under any special name you wish to give them, as, for instance, compound syrup of white pine or compound syrup of Irish moss. A combination of syrups of tar and wild cherry is much used as a general cough remedy. Here are some formulas:

- | | |
|----------------------------------|------------------|
| (1) Syrup tar | 64 fl. ounces |
| Syrup wild cherry | 45 fl. ounces |
| Syrup squill | 16 fl. ounces |
| Theodorized tincture Opium | 4 fl. ounces |
| Fluid extract lobelia | 6 fl. drams |
| Fluid extract ipecac | 4 fl. drams |
| (2) Syrup tar | 13 fl. ounces |
| Syrup tolu | 13 fl. ounces |
| Syrup wild cherry | 50 fl. ounces |
| Syrup squill | 16 fl. ounces |
| Syrup senega | 6 fl. ounces |
| Ammonium chloride | 2 1/2 av. ounces |
| Morphine sulphate | 15 grains |
| Tartar emetic | 30 grains |
| Water | 20 fl. ounces |
| Glycerin | 10 fl. ounces |

Dissolve the ammonium chloride, morphine sulphate, and tartar emetic in the water, filter the solution, and add the other ingredients.

- | | |
|---------------------------------|------------------|
| (3) Pine tar | 1 1/2 tr. ounces |
| Sugar, granulated | 24 tr. ounces |
| Diluted alcohol | 18 fl. ounces |
| Oil anise | 20 minims |
| Chloroform | 1 1/2 fl. ounces |
| Fluid extract wild cherry | 2 1/2 fl. ounces |
| Fluid extract ipecac | 1 fl. ounce |
| Simple syrup | 1 fl. ounce |
| Syrupy glucose, of each | sufficient |

Triturate the tar with the sugar, add the alcohol, then enough of equal parts of syrup and syrupy glucose to

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Reclamations to Prof. J. H. Beal, Scio, Ohio.

In sending reclamations to the director enclose these upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

All students who wish to procure the Era Class Pin are requested to send in their orders promptly. The price of the pin is \$2; the lowest cost consistent with good material and good workmanship. This pin has been illustrated in this column for some time past. It is of ten carat gold, with the letters and design in colored enamels; very attractive and tasty and sold at bare cost of production. Cash must accompany order, and please state what style of pin is desired, whether stick pin, button or safety pin.

Another supply of lectures is sent with this issue to both junior and senior students; juniors receiving lectures 38 to 45 and seniors 35 to 42. This installment will last until March 8.

Read This Bulletin Each Week.

make 66 fluid ounces; add the remaining ingredients, let stand for several hours and strain.

A great number of formulas for cough syrups have been published in previous volumes of this journal. Consult the indexes. The Era Formulary also may be profitably consulted.

Ginger Ale Extract.

(S. H. G.)

- | | |
|--|---------------|
| (1) Jamaica ginger, coarse powder .. | 4 ounces |
| Mace, powder | 1/2 ounces |
| Canada snakeroot, coarse powder .. | 60 grains |
| Oil of lemon | 1 fl. dram |
| Alcohol | 12 fl. ounces |
| Water | 4 fl. ounces |
| Magnesium carbonate or purified talcum | 1 av. ounce |

Mix the first four ingredients, and make 16 fluidounces of tincture with the alcohol and water, by percolation. Dissolve the oil of lemon in a small quantity of alcohol, rub with magnesia or talcum, add gradually with constant trituration the tincture, and filter. The extract may be fortified by adding 4 av. ounces of powdered grains of paradise to the ginger, etc., of the above before extraction with alcohol and water.

- | | |
|-----------------------------------|--------------|
| (2) Capsicum, coarse powder | 8 ounces |
| Water | 6 pints |
| Essence of ginger | 8 fl. ounces |
| Diluted alcohol | 7 fl. ounces |
| Vanilla extract | 2 fl. ounces |
| Oil of lemon | 20 drops |
| Caramel | 1 fl. ounce |

Boil the capsicum with water for 3 hours, occasionally replacing the water lost by evaporation, filter, concentrate the filtrate on a hot water bath to the consistency of a thin extract, add the remaining ingredients, and filter.

- | | |
|-----------------------------------|------------|
| (3) Jamaica ginger, ground | 12 ounces |
| Lemon peel, fresh, cut fine | 2 ounces |
| Capsicum, powder | 1 ounce |
| Calcined magnesia | 1 ounce |
| Alcohol | sufficient |

Extract the mixed ginger and capsicum by percolation so as to obtain 16 fluidounces of water, set the mixture aside for 24 hours, shaking vigorously from time to time, then filter, and pass through the filter enough of a mixture of 2 volumes of alcohol and 1 of water to make the filtrate measure 32 fluidounces. In the latter macerate the lemon peel for 7 days, and again filter.

OZONIZED SOAP SOLUTIONS AND EMULSIONS are proposed for disinfecting purposes. The solution or emulsion is treated with a current of ozone so long as it is absorbed. The preparation is patented in France. (Apoth. Ztr.).

CHARLES H. ADAMS,
 DRUGGIST,
 183 WASHINGTON AVENUE.
 TELEPHONE, 248.

SPECIALTIES:
 LAN-LAN.
 ADAMS' COLD CURE.
 ADAMS' DENTALINE.
 ADAMS' HARMLESS HEADACHE CURE.

CHELSEA STA., BOSTON, MASS., Jan. 18, 1900.

J. C. Ayer Co.,

Lowell, Mass.

Gentlemen:

The way that you are conducting your business as regards Ayer's Cherry Pectoral 25-cent size should be reciprocated by every retail druggist, and I for one in every way in my power will do all I can to assist you.

Would to God that we had more manufacturers like J. C. Ayer Co.

Respectfully,

(Signed) C. H. Adams.

DO YOU WANT YOUR Brush Sales and Profits TO GROW STEADILY?

If so, begin right with a full line of

G. B. Kent & Sons' Best British Brushes

Kent's Brushes are the best in the world; have been best for over a hundred years, and buyers have known and preferred them all that time. The reputation of these goods is already established and they increase the prestige as well as profits of every druggist who sells them.

The line includes all grades and styles of

Tooth, Hair, Nail, Bath, Flesh, Cloth and Hat Brushes,

and the prices suit all classes of trade.

We make up assortments to suit retailers; write us about this, giving quantities wanted and range of prices which suit your trade.

McKESSON & ROBBINS,
American Agents, - New York.

We Are Anticrats.

HIGHEST AWARD—SILVER MEDAL—AT
NATIONAL EXPORT EXPOSITION, 1886.
Our competitors—the Trust—were well represented, but got NOTHING.

This is a new word—Anticrat, the last syllable is derived from the Greek word "Kratos," meaning "power," as an autocrat is a "person vested with absolute power," so an "Anticrat" is *against power* and against all other "crats," such as Pluto-crats, hence it follows logically that we must be *Anticrats* because we are

Against Trusts

including even the Soda Fountain Trust, a combination of Pluto-crats who stated in their Prospectus that "no competitor could establish a profitable business." In spite of their misrepresentations about our work our business has continued to grow and expand until it is now larger than that of most of the Trust branches. Our patent Polar System of Porcelain Syrup Tanks and Cyclone Coolers, and other exclusive features, combined with the best workmanship and materials the market affords, backed with a Five Years' Guarantee, is the secret of our success.

Send for Catalogue

of elegant designs if thinking of buying a soda fountain or exchanging your present fountain, and for our

Illustrated List of Secods,

if you want to "make a show" at small cost, or are "doubtful whether soda would pay," and don't care to invest much money to try the venture. **EASY TERMS TO ALL.**

THE BILLS TO SHORTEN DRUG CLERKS' HOURS.

A Conference in New York and a Hearing at Albany the Same Day.

At the request of R. Fulton Cutting and other gentlemen of the City Club who are interested with him in the pending legislation to regulate the working hours of drug clerks in New York City, a conference was held at the New York College of Pharmacy on Wednesday afternoon, January 31, with a view to effecting a compromise between the differing elements and a unification of the two bills which have been introduced in the State Legislature. There were present Messrs. Cutting, Williams and Reynolds, of the City Club; Messrs. Doherr, Gallagher and Abbott, of the Druggists' League, and the Executive Committee of the Pharmaceutical Clerks' Association, among whom were Messrs. Dietz, Deutschberger, Firth, Rafter, Mularkey, Cohen, Raabe, Farnival and Flannery. Reuben E. Smith, president of the Manhattan Pharmaceutical Association, came in while the conference was in progress.

Mr. Cutting explained that he and his associates were interested simply to secure some measure of relief to the drug clerks. There appeared to him to be very little difference in the two bills, and he thought it should be an easy matter to make them over into one bill which would be satisfactory to all concerned. He read each bill, cited the differences and on each proposed a compromise. His suggestions were then discussed by several speakers on each side. As a whole Mr. Cutting thought the bill framed by the Pharmaceutical Clerks' Association was the better measure, but he thought it could and should be strengthened. He wished the insertion in the first section of a clause requiring the proprietor to give to the clerk one full day off every two weeks and a half day every week. The clerks contended that such a clause was not necessary, as the clerk would get such time off under the bill anyway by the schedule agreed upon by the proprietors, which was the only one practicable as drug stores were conducted to-day. There is such a clause in the Druggists' League bill. The latter fixes the working time at 68 hours a week. The Clerks' bill calls for 70 hours a week. Mr. Cutting suggested a compromise of 138 hours in two weeks.

Section 2 of the clerks' bill, he thought, would be useless. It would give the Board of Health no power that it did not already have. He suggested as a substitute section the following, which had been drawn up by Mr. Williams:

"No proprietor of any drug store shall require or permit any clerk to sleep in any room or apartment in, or connected with, a drug store that does not comply with the sanitary regulations of the local Board of Health; and it shall be the duty of the Board of Health in any city affected by the provisions of this act to formulate and adopt rules and regulations as to the sleeping apartments of clerks in any pharmacy or drug store, and a failure on the part of the Board of Health within a reasonable time after the passage of this act to provide such rules and regulations shall be deemed a violation of the provisions of this act and shall be punishable as herein provided."

"It shall also be the duty of the Board of Health to provide for the enforcement of the provisions of the last section and of such rules and regulations as it may adopt by the employment of inspectors and by the prosecution of any violation of the provisions of this act."

This met with strenuous objection from the clerks as placing the whole domination of the drug business in the hands of the Board of Health—the chief objection from the first against the Druggists' League bill.

After prolonged discussion of all the suggestions the committee from the Clerks' Association agreed to refer these matters to the various associations which had voted approval of their bill, and the conference ended.

ASSEMBLY COMMITTEE FAVORS CLERKS' BILL.

On the same afternoon that this conference was held the Assembly Committee on Public Health held a hearing at Albany on the clerks' bill, which had been introduced by Assemblyman N. H. Henry, of New York City. There

were several speakers in favor of the measure, but no opposition to it, and the committee decided to report the bill favorably, which it did the following day, February 1. The full text of this bill was printed in the Era for December 21, 1899, page 838.

SUED FOR CONSPIRACY.

Muswick & Co. Cry "Boycott" and Ask for \$50,000 Damages.

Louisville, Jan. 30.—Muswick & Co., of this city, yesterday began a \$50,000 damage suit in the Circuit Court against nineteen local wholesale and retail druggists. The complainants allege that the defendants conspired and refused to buy goods of drummers and manufacturers unless they signed a statement they would not sell to the plaintiff. Among the firms sued are The Simon N. Jones Company, Peter-Bauer Drug Company, Neat-Richardson Drug Co., Robinson-Pettet Co., Simon N. Jones, president of the N. A. R. D., Oscar Dilly, J. C. Fowler, William Voetteler, Theodore Kectanus, William G. Zubrod, Henry Schweitzer, Henry Buschmeyer, Jr., and Buschmeyer & Bro. Muswick & Co. claim the defendants have conspired to prevent them (Muswick & Co.) from purchasing drugs in the wholesale market, and have gone so far as to threaten and assert that they would not purchase of any wholesale house that had Muswick & Co. for a customer. The complainants further state that they have repeatedly offered cash for drugs in the market but have been refused because the wholesale houses had promised other customers not to sell to cutters. The complainants also aver that certain local druggists secured the passage of resolutions by the Wholesale Druggists' Association last October, and by the N. A. R. D., at Cincinnati, to the effect that the aggressive cutters were to be driven out of the business if possible. Muswick & Co. allege that because of the "boycott" they have had to carry a stock worth \$10,000 more than they needed, on which the loss by breakage was \$5,000, and by interest \$3,000, the latter amount being the aggregate for the five years of their business career.

GENERAL CHEMICAL CO.'S SUCCESSFUL YEAR.

The first annual meeting of the General Chemical Company, the combination of several leading concerns engaged in the "heavy chemical" trade, was held at Philipstown, N. Y., on January 31. The reports presented showed that the company had had a successful year. A dividend of four per cent. on the common stock was declared. The profits for the ten months, after deducting all doubtful accounts, were \$359,696, and after paying extraordinary expenses, such as revenue taxes, the expenses of committee in appraising plants, the net profits were \$874,773. During the first ten months of the company's existence there was paid as dividends on the preferred stock the sum of \$396,063, which left a surplus on December 31 of \$478,710.

The following officers were elected for the coming year: President, William H. Nichols; first vice-president, Sanford H. Steele; second vice-president, Chas. Robinson Smith; treasurer, Jas. E. Morgan, Jr.; secretary, Albert Winter; assistant secretary, J. Herbert Bagg; chairman Executive Committee, George W. Kenyon; directors, William H. Nichols, George W. Kenyon, Sanford H. Steele, Chas. Robinson Smith, Henry W. Chappell, Howard F. Chappell, Frederick Phillips, Jas. L. Morgan, Jr., Clarence P. Tiers, William M. Johnson, E. H. Rising, R. N. Hall and Eugene Waugh.

THE NAME "VICHY" IS COMMON PROPERTY.

The United States Circuit Court of Appeals has affirmed an opinion of the Circuit Court, which denied to the Vichy Company, as lessee, and the Republic of France, as principal, the right to enjoin makers of mineral waters from using the word "Vichy" as a name for their products. The appellants sought to establish trade-mark rights in the name, but the courts hold that anyone may use it.

NEW YORK COLLEGE OF PHARMACY ALUMNI BALL.

The fifth annual ball of the Alumni Association of the New York College of Pharmacy was held at the Lenox Lyceum on Wednesday evening, January 31. Those who counted said there were nearly 400 people present, and everyone of those people agreed that the affair was the most successful and the most delightful of its kind in the history of the association. Everyone said: "Boerggreve is a hustler, and he has certainly done splendidly." And they were right. Fred. Boerggreve was chairman of the Committee on Arrangements, and he worked as hard as anybody to make the entertainment successful. When he set to work he announced:

"We intend to make this ball the most successful of its kind ever held. Such a reunion allows an opportunity for intercourse which otherwise would never be felt in our daily walk of life. No effort will be spared to make this affair a huge success, and the evening will be, all in all, one of merriment and hilarity."

Mr. Boerggreve kept his promise. He enlisted the help of other known workers in the Alumni Association, and never before were their efforts so well rewarded.

From ten o'clock to eleven a stream of people surged into the building. When the dancing began, at 11.30, there were 125 couples on the floor, and they still kept coming until the big circular floor was fairly crowded. The great hall was tastily decorated, the music by Crowley's Eighth Regiment Band was good, the many ladies were handsomely gowned, the whole scene was one of liveliness and gaiety, and happy faces beamed everywhere. There were twenty-one numbers on the regular "Order of Dancing," and there were many "extras" besides, for the entertainment was a dance pure and simple, and no lesser pleasures were allowed to interfere. All moved gracefully under the able floor management of S. S. Shears and Rudolph Gies, who had for helpers the following Floor Committee:

Chas. H. Bjorkwall, C. S. Bailey, Alfred Cosden, Geo. C. Diekmann, M. D., B. F. Dauscha, H. B. Ferguson, Phar. D., Chas. Friedgen, W. P. Gregorius, W. A. Hoberg, Jr., A. Higginbotham, E. P. Lant, John J. Maffia, John Oehler, F. N. Pond, Joseph Pierson, Arthur C. Searles, Fred. C. Shumacker, G. E. Schweinfurth, Alfred Stover, Julius Tannenbaum.

The Reception Committee comprised the following members: Nelson S. Kirk, chairman; Jos. Aquaro, E. A. Boetzel, Virgil Coblentz, Ph. D., Walter W. Columbus, G. E. Conlin, Thom. M. Davies, Carl F. Dyna, W. H. Ebbitt, H. E. Engle, E. Eichler, L. G. B. Erb, Geo. F. Ferdinand, Geo. A. Ferguson, Ph. B., L. H. D. Fraser, H. A. Graeser, M. D., Otto Grube, John Glassford, L. W. Geisler, Gordon Hager, H. A. Herold, Jeannot Hostmann, Adolph Henning, F. Hogel, Henry Kreuder, M. D., W. M. Keer, Fred. W. Lannig, Jr., R. Lauer, James J. Morgan, L. E. Michel, E. C. Purdy, C. H. Remele, A. Robinson, H. O. Rolfs, Henry Sasse, Henry Struck, F. M. Stage, W. L. Schaaf, K. Schnackenberg, W. C. Stubenrauch, Chas. R. Tyler, J. Henry Thomas, J. A. Ulmschneider, Edward Uhe, A. E. Vars, W. C. Vincent, H. Wurthmann, M. D., M. Wolk, R. A. C. Walter, H. H. Zincke.

The following members composed the Press Committee: Eugene F. Lohr, chairman; Peter J. Ehrigott, Geo. J. Durr, C. G. H. Gerken, E. A. Meinecke, T. Bruce Furnival, Harold Thomas, Rob. B. Livingston.

The following were among those present: Mr. and Mrs. A. C. Searles, Mr. and Mrs. S. V. B. Swan, Mr. and Mrs. J. Tannenbaum, Mr. and Mrs. A. B. Anderson, Mr. and Mrs. Robert Brunser, Mr. and Mrs. G. A. Ferguson, Mr. and Mrs. O. J. Griffin, Dr. and Mrs. Rudolph Gies, Mr. and Mrs. B. B. Hamlin, Mr. and Mrs. H. A. Herold, Mr. and Mrs. W. T. Harper, Mr. and Mrs. M. R. Mandelbaum, Mr. and Mrs. G. E. Schweinfurth, Messdames F. Schaefer, Joseph, Lemmon, Hayward, Levy, Bauer, Ottendorfer, Pfister, Race, Rothenberg, Fitzpatrick, Humphreys, Dresmer; Misses Owens, Parshley, Reber, O'Leary, Pfadt, Ryan, Rothenberg, Rowland, Stage, Sellwood, Stoddard, Schwartz, Williamson, Wayne, Wehl, Bjorkwald, Zincke, Blancke, Barnett, Cheney,

Clark, Dawson, Durr, Eben, Ehlin, Griffin, Grooms, Grebe, Helmuth, Krone, Kendrick.

Messrs. A. L. Adatti, T. R. Allen, H. F. Ahrens, M. A. Auerbach, J. E. Anrig, S. Ackerman, B. A. Bradbury, Fred Boerggreve, E. J. Banzhof, F. E. Burke, A. Brooks, C. H. Bjorkwall, T. W. Brecht, E. A. Boetzel, F. W. Brown, A. E. Colcord, J. W. Casey, Robt. Gardner, F. W. Christ, A. F. Decker, George C. Diekmann, B. F. Dauscha, J. G. Durr, Thomas M. Davies, Charles S. Erb, L. G. B. Erb, W. H. Ebbitt, F. Fries, L. H. D. Fraser, T. Bruce Furnival, Harry B. Ferguson, W. F. Green, W. A. Guthrie, G. W. Geschwind, George Gregorius, Jr., L. F. Gregorius, W. L. P. Gregorius, L. W. Geisler, Jr., Herman Graeser, H. R. Hamilton, W. G. C. Hubner, C. P. Hart, F. B. Hays, Lieut. Hooley, W. A. Hoberg, Jr., H. W. Ihmsel, F. A. Jordan, L. Jorgenson, M. A. Kaehle, Wm. Kaehle, Nelson S. Kirk, J. S. Kirk, E. P. Lant, E. F. Lohr, F. X. Lynch, G. W. Morse, J. A. Murphy, J. Martin, Wm. McManus, M. H. Mason, E. A. Meinecke, J. J. O'Connor, D. S. Priest, J. Pierson, F. N. Pond, C. F. Pfister, E. F. Plaff, J. P. Paisley, C. C. Pugliese, H. A. Reynolds, A. Remquist, W. G. Robinson, H. Sasse, J. W. Schlegel, F. Schaefer, W. C. Stubenrauch, S. S. Shears, E. L. Stephens, F. M. Stage, J. Siegman, R. C. Taplain, A. Tscheppe, C. R. Tyler, F. P. Tutbill, E. C. Thompson, A. F. Unbehau, A. F. Beeder, C. E. Vermoy, W. C. Vincent, C. J. Bars, R. Wehl, H. B. Winne, W. H. Wilson, M. C. White, R. C. Woodcock, W. H. Ward, G. R. Werner, H. C. Yager, R. H. Zahn, P. J. Schaff, W. H. Zincke.

N. A. R. D. NEWS.

Chicago, Feb. 3, 1900.

The Sulphume Company have notified the national secretary that they have decided to reduce the prices of their Sulphume preparations to conform to the schedule adopted by the N. A. R. D., and are to eliminate from their trade all cut rate and department stores; this to take effect February 15th.

A bill for the repeal of Schedule B of the Internal Revenue Law of 1898 has been introduced in the House by Representative Henry S. Bontell, of Illinois, and referred to the Committee on Ways and Means. It is known as House Bill 7,063, and members of the association are advised to mention this bill by number when writing to their Congressmen.

During the past two weeks the dues of the following associations have been paid in whole or in part: Kenton County, Ky.; St. Louis Apothecaries; Richland County, O.; Rhode Island State Association; Madison, Wis.; Head-of-the-Lakes, Minn.; Rockford, Ills.; Manhattan, New York city.

A druggist in Central Ohio sends sworn affidavit to the Executive Committee that he is now neither an aggressive cutter nor a purchasing agent for an objectionable jobbing house, and he asks that he be no longer considered a trade demoralizer.

The following donations have been received by the treasurer: Fifty dollars from the Walther-Robertson Drug Co., Pittsburg; \$1.52 from the Head of the Lakes R. D. Association (Pabst offer); \$1.00 from A. F. Scheldrup, Stoughton, Wis.

The Vermont Pharmaceutical Association has paid \$71 for annual dues in the N. A. R. D., and made an additional contribution of \$10.

The Rockford, Ills., Druggists' Association, membership sixteen, has paid its 1900 dues to Treasurer Heller.

COLUMBIA DRUG COMPANY INCORPORATED.

The Columbia Drug Company of Savannah, Ga., was recently incorporated and the following board of directors and officers elected: Directors, A. E. Smith, Henry L. Smith, E. Smith, J. G. Smith and N. J. Gillespie. Officers, A. E. Smith, president; J. G. Smith, secretary and treasurer; N. J. Gillespie, manager. The capital stock paid in is \$50,000.

BRITISH PHARMACY NEWS.

London, Jan. 25.

Deaths.

John G. F. Richardson, head of John Richardson & Co., Limited, wholesale druggists and manufacturers of coated pills, of Leicester, died on January 6, aged sixty-five years. Mr. Richardson was for sixteen years a member of the Council of the Pharmaceutical Society. He was also a major in the Leicester Volunteer force.

Mr. Alexander S. Laing, president of the Pharmaceutical Society of Trinidad, died on December 18, aged forty. Mr. Laing, who was of Scottish birth, had flourishing businesses in Port of Spain and San Fernando.

Dr. J. W. Gunning, professor of organic chemistry and pharmacy at the University of Amsterdam, died on January 7, aged seventy-two years.

Daniel Frazer, pharmaceutical chemist of Glasgow, died on January 10 in his eightieth year. Mr. Frazer was head of the firm of Frazer & Green of Glasgow. He was a justice of the peace for the city and was for some years president of the local pharmaceutical association and a member of the Executive Committee of the Pharmaceutical Society of Great Britain.

Alfred Fenning, proprietor of Fenning's powders, died at Cowes, Isle of Wight, on January 7, in his eighty-fifth year.

✽

Pharmaceutical Society of Ireland.

Owing to ill health R. J. Downes has resigned the presidency of the Pharmaceutical Society of Ireland. G. D. Beags, who had previously filled the vice-chair, has been elected president and J. I. Bernard vice-president. At the council meeting recently Professor Tichborne brought forward a motion proposing that the society should institute an additional examination in analytical chemistry, which would, he hoped, be accepted by the local Government Board as sufficient for appointments as analysts to poor-law unions. The matter has been before the council previously, and as much division of opinion was shown on the subject a final decision was postponed. On this occasion the council rejected Prof. Tichborne's motion, the ground of the opposition being that the society was formed to grant qualifications in pharmacy and not in analytical chemistry. The council have done wisely in deciding not to go out of their way to deal with a matter of this class, particularly as a fresh act of Parliament would have been necessary before the examination could have been instituted.

✽

Examinations in Edinburgh.

The report on the quarterly examinations of the Pharmaceutical Society held in Edinburgh (the examinations are held simultaneously in London and Edinburgh) shows that during 1899 three candidates were examined for the "major" (which confers the title of pharmaceutical chemist) and one passed and of 484 candidates for the "minor" (title, chemist and druggist) 175 passed, a percentage of 36.15. One hundred and seventy-five candidates failed in practical work, 50 in botany, 25 in chemistry and physics, 9 in materia medica, 8 in prescription reading, 21 in pharmacy, 17 failed to obtain an aggregate sufficient for a pass and one candidate did not appear for the oral portion of the examination. In all 134 candidates failed in the oral part of the test. A candidate who fails in one subject is immediately dismissed from the examination room. Hence, as far as the oral is concerned, whether a candidate fails in one subject or another is often a matter of chance as to the order in which the various subjects are taken.

✽

Army Compounders.

The Government seems to be getting a certain number of licensed pharmacists to come forward for these posts, even at the modest pay of 3/6 per day. It is worthy of note that during the Crimean war a certain number of pharmacists were engaged. They received 7/6 per day and allowances and they were granted the local rank of ensign. During the Indian Mutiny the pay was 12/6 a day and the local rank of lieutenant was accorded, but the highly trained man of to-day is only enlisted as a

private with the utterly inadequate stipend previously mentioned. It is well, perhaps, that pharmacists are putting patriotism before personal dignity.

✽

Death of Sir James Paget.

Sir James Paget, Bart., F.R.S., F.R.C.S., died on December 30. Sir James, although he had not practiced of recent years, was one of the most eminent of British surgeons. He received his medical education at St. Bartholomew's Hospital and became F.R.C.S. in 1843. He was president of the International Medical Congress in 1881, and of the Royal College of Surgeons in 1875. In 1884 he was elected vice-chancellor of the University of London. Sir James, who was surgeon to the Queen, received his baronetcy in 1871. He was within a few days of completing his 86th year.

✽

Company Trading.

There is nothing to record here of much moment as the Council of the Pharmaceutical Association do not seem able to make up their minds as to a clause which they will endeavor to get inserted in the Companies Bill. Some individual efforts by Mr. Martindale, the president, in writing to the president of the Board of Trade have not met with much success and he has been criticised for acting without the formal approval of the Council.

✽

A Pharmacist Bishop.

The Right Rev. Henry Cheetham, D.D., formerly Bishop of Sierra Leone, who died at Bournemouth on Dec. 22, was brought up as a pharmacist. He was apprenticed to a Leeds chemist (Mr. Thomas Harvey), but subsequently left the pestle for the pulpit. He was Bishop of Sierra Leone from 1870 to 1881.

✽

Pharmacists to the Front.

Among the members of the Honorable Artillery Company who are going to the front as combatants is James Stuart Hills, son of Walter Hills, who was from 1860 to 1869 president of the Pharmaceutical Society.

IMITATION CASTORIA BOTTLES MUST NOT BE USED.

At Trenton, N. J., a few days ago in Chancery Court, Vice-Chancellor Grey granted a temporary injunction to the Centaur Company, of New York, against the Cumberland Glass Manufacturing Company, of Bridgeton, N. J., and the C. W. Link Drug Company, of New York, restraining them from using and selling a bottle similar to that in which "Castoria" has been marketed for the past twenty-seven years.

The company complaining, set forth that they have used and enjoyed the privilege of this particular bottle without interruption since the purchase of the same, until some time ago, when the C. W. Link Drug Company, of New York, the defendants to the present suit, were enjoined in a similar suit in Massachusetts and restricted from the manufacture, sale and use of the bottle in that State, and they then came to New Jersey to operate here. An order was placed with the Cumberland Glass Manufacturing Company, and this firm furnished the bottles, they having manufactured the same bottles for the Centaur Company on a number of different occasions.

A DRUGGIST SUED.

Harry L. Guth, a Carnegie, Pa., druggist, and Louis Reichert, his clerk, have been sued for \$20,000 damages by Mrs. Julia K. Lidgett, who avers that they are responsible for the death of her son on March 26th last. On that date, she claims, her son visited Guth's store and was furnished with liquors until he became intoxicated. While drunk he undertook to help himself to a drink and got a bottle of carboic acid, which, it is declared, was negligently placed among the liquors of the drug store by Reichert, who she says is an incompetent clerk. It is also alleged that Reichert was not a licensed pharmacist, and that as he was unskilled in drugs he was unable to administer a proper antidote, and as a result the son died.

NEW YORK GERMAN APOTHECARIES' ASSOCIATION.

The regular monthly meeting of the New York German Apothecaries' Association was held on Thursday evening, February 1, with President Charles F. Schleusser in the chair and about eighty members present. As an illustrated talk by Dr. Virgil Coblentz, of the New York College of Pharmacy, had been announced for this meeting the routine business was quickly disposed of. The chairman of the Amusements Committee reported that the annual ball had been a great success and thanked his colleagues for their assistance.

Dr. Coblentz gave a talk which delighted the members, and exhibited a set of lantern pictures made from his collection of illustrated post cards. Many of these pictured Munich scenes, the famous "Hof Brau Haus" supplying the incidents for many of the pictures.

During the lecture Dr. Charles F. Chandler came in. His appearance was greeted with applause, and he addressed the meeting in German, telling how he went to Germany in 1854, and of his student days at the University of Goettingen. After his address a "salamander" was given in Dr. Chandler's honor, and he was elected an honorary member of the association.

George Vockroth, of Tenth avenue and Forty-fourth street, was elected a regular member, and Henry E. Lang, of Guttenburg, N. J., was chosen an extraordinary member. The meeting ended with an auction sale of a year's accumulation of papers and journals, the proceeds of which will be used for the purchase of new book cases for the association's library.

AMENDMENTS TO NEW YORK CITY PHARMACY LAW REPORTED FAVORABLY IN ASSEMBLY.

The act to amend the Greater New York charter relating to the practice of pharmacy, which was introduced by Assemblyman Nelson H. Henry at the request of the various pharmaceutical societies of the city, after a hearing before the Committee on Public Health on January 31, was reported favorably in the Assembly with two minor changes. The text of this bill was printed in the Era for January 4, 1900, page 11. The changes made by the Health Committee were the deleting of the sixth provision of section 4, giving the Board of Pharmacy power to "make such rules not inconsistent with the constitution or laws of this State as may be necessary for the further lawful regulation of the practice of pharmacy in the City of New York, and to add to or amend said rules;" and deleting also that clause in section 5 which required pharmacists to re-register every three years.

The bill will now go to the Senate. The prospects for its enactment as a law are considered good by those who have been watching the course of pharmaceutical legislation at Albany.

OMAHA RETAIL DRUGGISTS' ASSOCIATION DISBANDED.

Omaha, Jan. 29.—The local retail druggists' association is no more. For a long time many of the members attempted to maintain a uniform schedule of prices, but it was found impossible to prevent druggists and dealers not in the association from securing all of the supplies they wanted, and the organization has been accordingly disbanded. All of the retailers have now gone to cutting prices and the contest will be a question of who can cut the hardest. The association had a membership of about sixty.

COLORADO SPRINGS DRUGGISTS AND LIQUOR SELLING.

Druggists of Colorado Springs, Col., held a conference with the Mayor and a committee of the City Council Jan. 3 to discuss the ordinances governing the sales of liquor. The Mayor advised the druggists to obey the ordinances, and after the conference the local Druggists' Association held a meeting and adopted a resolution pledging every member to a strict observance of the law, and that hereafter no liquor shall be sold by the drink.

NATIONAL FOOD AND DRUG CONGRESS.

The Executive Committee of the National Pure Food and Drug Congress has issued a call for a meeting of the congress, to be held in the city of Washington on March 7. Albert E. Ebert, member of the Committee on National Legislation of the American Pharmaceutical Association, was asked about the several pure food bills introduced.

He replied that the committee approved of the bill introduced by Senator Mason, of Illinois, except that it recommended that the word "cosmetics" in the section defining what drugs are, and the word "drugs" in that part of the food section relating to the branding of mixed compounds, be both omitted. Otherwise the committee approves of the bill, which is similar to the Brosius bill and to the measures introduced by Senators Hansborough and Allen respectively. Mr. Ebert states that the committee on National Legislation will be represented at the Pure Food and Drug Congress, but that he does not yet know what members of the committee can present.

DRUG STORE FIRES.

The new drug store of Stephen F. Fisk & Co., Pawtucket, R. I., was visited by fire early in the morning of January 28 and the stock and furnishings in the store were damaged to the extent of about \$5,000, fully covered by insurance. It is supposed the fire was started from a defective or poorly insulated electric light wire.

The Central Pharmacy, New Brighton, Pa., purchased about a month ago by William W. Copeland from R. L. Kenah, Sr., sustained a serious loss by fire January 27. The origin of the fire is not positively known, but it is supposed that rats and matches are responsible for the damage. The loss is estimated at about \$2,500, on which there is an equal amount of insurance.

In a disastrous fire at Dayton, O., February 1, the Harter Medicine Co. and the Reynolds & Reynolds Co., druggists' printers, sustained heavy losses, those of the former amounting to \$200,000; Reynolds & Reynolds Co., \$25,000.

A NEW WHOLESALE DRUG HOUSE FOR DES MOINES, IOWA.

Des Moines, Ia., Jan. 25.—W. G. Jordan, for some time manager of the business of the Des Moines Drug Co., and Julian Harlan, for several years credit man of the same company, are at the head of a movement to establish another wholesale drug company in this city. It is reported that they feel assured of success, subscriptions for practically all the stock they care to place with investors having been already received. Both men have had long experience in the jobbing drug trade.

A PAINFUL EXPERIENCE.

William Gladish, an Omaha, Neb., druggist, was the victim of a most peculiar accident on Jan. 14. He was superintending the placing of some telephone wires in his store, and while attempting to get down from a pile of boxes a brass hook projecting from the wall caught him in the ear and pierced it. He was suspended until one of the telephone men could reach him and cut the hook. His ear was badly injured.

RESTRAINED FROM SUBSTITUTING.

In the United States District Court at Denver, Col., a few days ago Judge Riner issued an injunction restraining H. R. Levi, a druggist, from attempting to offer a substitute for Scott's Emulsion. A case for damages had been settled a few days previous by Levi confessing judgment and paying a fine of \$1 and costs.

DRUGGIST DESHONG CONVICTED.

James B. Deshong, a prominent druggist of Hartsburg, Pa., was convicted January 17 of criminal malpractice through which the patient died. The case attracted considerable attention. Deshong was sentenced to pay costs, to pay five dollars' fine and serve four and one-half years' imprisonment.

A KIEFER DRUG CO. BURNED OUT.

Indianapolis, Ind., Feb. 2.—The premises of the A. Kiefer Drug Co., corner of Meridian and Georgia streets, was destroyed by fire last night.

NEW YORK AND VICINITY.

Drug Men at Annual Banquet.

The annual banquet of the New York Board of Trade and Transportation was held on the evening of January 31, at the Waldorf-Astoria. It was one of the most notable feasts held in many years by New York's men of trade, finance and affairs, and among the speakers were several United States Senators and Representatives, a major-general and others of high position in national and in municipal life. The Drug Trade Section of the board had a table to itself, and this table was one of the pleasantest at the banquet. At the head of the table sat John McKesson, the chairman of the Drug Trade Section, who presided, informally. The others at the table were: Thomas F. Main, John B. Ladd, E. W. Fitch, William M. Warren, G. H. Risley, Thomas R. McMann, Lyman W. Parke, M. J. Breitenbach, James F. Hartford, W. W. Hanna, Carl B. Franc, Thomas I. Parker, W. S. Grey, F. S. Stallman, Caswell A. Mayo, George J. Seabury, J. H. Stallman, W. P. Ritchey, Ludwig de Ridder, H. A. Metz, William A. Hamann, Franklin Black, John F. Sprague, Thomas P. Cook, F. L. Upjohn, John Anderson, W. B. Kaufman, S. H. Carragan, Harry H. Barnard, W. D. Paris and E. G. Wells.

Rumored Combine of Jobbers in Sundries Not Confirmed.

The New York daily newspapers last week reported a rumor to the effect that the jobbers in druggists' supplies, glassware and other sundries, had organized a new association for the purpose of manufacturing a number of articles on their own account unless they could obtain concessions from the manufacturers. The report went on to state that a meeting between jobbers and manufacturers had failed to adjust certain difficulties, the jobbers complaining that the sale of single case lots to consumers at the best jobbers' rates was an injustice.

The Era' reporter could obtain no confirmation of this report. Several jobbers who were seen said they knew nothing about it. At the office of the Charles N. Crittenton Company the reporter was told:

"If there was to be such a new organization we would be likely to know all about it, and we have not heard of it. The jobbers cannot make any headway by trying to manufacture staple articles themselves. The only thing they can do is to combine, and decide to drop certain articles which the manufacturers expect them to keep handling. But we have not heard anything about such a combination being formed."

C. A. Tatum, of the firm of Whitall, Tatum & Co., said: "I know nothing about it—nothing for publication."

Business of Appraiser's Laboratory.

The laboratory of the Appraiser at the Port of New York is a busy place. It deals not alone with the importations entered at New York, but is also the consulting laboratory of the principal ports in the United States. The mass of work done is shown by the yearly report, which has just been issued. The chemical samples analyzed during 1899 reached the total of 12,904, an increase of 29 per cent. over 1898. These samples were of the most varied nature, some of them requiring weeks of work, and some demanding only an hour's attention. The greatest number of samples was reached in testing sugar. In 1899 a total of 43,932 samples passed through the laboratory, and each received two separate tests, so that the total number of tests aggregated nearly 90,000, which was an increase of 35 per cent. over 1898.

East Side Druggists Incorporate a Company.

Papers of incorporation were filed last week by the Associated Drug Co., of New York city, with a capital of \$10,000. The directors are Joseph Bakst, Max Bakst, Chomon Bernstein, Benjamin J. Baskchitzky, Samuel Epstein, Alexander Goldman, Julius Hammer, Nicholas Kruskal, Max Mayer, Lazarus Marmor, Jacob Pick and Joseph Weinstein. These are all retail druggists of the lower East Side. They have formed this company for the purpose of buying goods in quantity at wholesale rates for their own and other retailers' needs. A wholesale store will be opened at some convenient place to be decided on

later, and the incorporators say it is possible they may also do some manufacturing after the wholesale business is in running order.

N. Y. Wholesale Bowlers.

Six more games in the tournament of the New York Wholesale Drug Trade Bowling Association were rolled at Feld's Alleys last Saturday. The liveliest game was between the teams of Dodge & Olcott and Colgate & Co., the former winning by one pin. The team scores were: Dodge & Olcott, 796; Colgate & Co., 795. General Chemical Co., 804; Merck & Co., 674. Parke, Davis & Co., 837; Merck & Co., 674. General Chemical Co., 750; Parke, Davis & Co., 708. Colgate & Co., 809; R. W. Robinson & Son, 730. R. W. Robinson & Son, 856; Dodge & Olcott, 748.

Would Legalize City Sale of Antioxicine.

On January 31 Assemblyman Morgan introduced a bill in the New York State Assembly to legalize the sale of antioxicin in Greater New York by the Board of Health. This bill provides that in case the amount of lymph or virus produced shall exceed the amount needed in the proper performance of its duties, the Board of Health may cause such excess to be sold at public auction, but the aggregate net amount of such sales shall not exceed \$5,000 in any one year.

Against Sales of Medicine Containing Cocaine.

In the New York State Senate on January 31, Senator Sullivan, of New York City, introduced a bill to provide that no person or corporation shall sell or offer for sale within this State, any proprietary or patent medicine or tonics, snuff, tobacco, or headache, catarrh or hay-fever remedy containing cocaine. Violation of the act is punishable by a fine of not less than \$200 nor more than \$1,000 for each offence.

NOTES.

—Visitors from out of town to the local wholesale market during the week included Col. J. B. Purcell, head of the wholesale drug firm of Purcell, Ladd & Co., of Richmond, Va.; Louis Emanuel, of Pittsburgh; H. C. Porter, of Towanda, Pa.; H. S. Kirk, of the wholesale firm of Kirk, Geary & Co., of Sacramento, Cal.; Mr. Chandler, of the firm of T. Sisson & Co., of Hartford; F. E. Flint, of Lynn, Mass.; H. C. Guernsey, of the firm of Neale & Guernsey, of Southington, Conn.; George F. Brown, of Rahway, N. J.; M. Beckwith, of Boston; W. L. Mix, of New Haven; and W. J. Jones, of Bath, N. Y.

—Dr. Frederick Humphreys has issued a leaflet on the "War Tax," in which he petitions for the termination of the proprietary stamp tax at the earliest practicable date. He says the makers of medicine get only one-half the sum the consumer pays, and he was one (and is the only survivor) of five manufacturers who made this statement to the Committee on Ways and Means of the House of Representatives of 1861, of which the Hon. Thaddeus Stephens was chairman, with the result that the proposed tax rate of that time was reduced one-half.

—Dr. Gustav Pfingsten, whose drug store at No. 14½ Whitehall street has been for many years a landmark of the lower end of Manhattan Island, has been forced to move by the United States Government's purchase of that block in which his store has been situated for the site of a new custom house. He moved into new quarters last week at No. 27 Pearl street, only a stone's throw from the old shop.

—A. O. Weisenberg, a druggist of West Hoboken, and Joseph Coletti, a druggist of Hoboken, N. J., had a lively tilt a few days ago in the store of the former, and as a result Weisenberg had Coletti arrested on a charge of assault. The prisoner was held for the Grand Jury by Recorder Lederle, before whom he was arraigned, but was paroled in the custody of counsel.

—The drug store of Edward J. Sultan, who disappeared mysteriously on October 15 last, and of whom nothing has been heard since that day, has been acquired by William Roschen, who will continue the business at the old stand, Third avenue and Twenty-third street, Manhattan.

—Incorporation papers have been filed at Albany by

the Alpine Manufacturing Company, of New York City, which has been formed to carry on a drug business on a capital of \$10,000. The incorporators are L. B. Gaylor, F. A. Gaylor, C. S. Haviland and E. H. Haviland.

—Among the guests entertained at the New York Drug Club during the week were the following visitors from out of town: W. H. Mandeville, of Olean, N. Y.; Dr. L. E. Rose, of Rochester, N. Y.; W. A. Beecher, of Youngstown, O.; and R. Crossdale, of Syracuse, N. Y.

—George C. P. Stolzenburg, proprietor of a pharmacy at No. 984 Second avenue, Manhattan, and a well-known member of the German Apothecaries' Association, was married a few days ago, and took his bride to Washington for a wedding trip.

—The Vernal Remedy Company, of Buffalo, has been incorporated under the laws of New York to carry on a drug business on a capital of \$4,000. The incorporators are H. W. Ridout, J. C. Moss and M. D. Wilson, all of Buffalo.

—Samuel Wadham and Charles T. Dill, of the New York staff of William R. Warner & Co., spent a part of last week at Albany, attending the annual meeting of the New York State Medical Association.

—Emil Brunor, whose "Red Cross Pharmacy" at No. 481 Eighth avenue was damaged by fire on January 17, has decided to move to new quarters at the corner of Ninth avenue and Thirtieth street.

—Isaac Meyer, who formerly had a drug store at No. 291 Central avenue, Jersey City Heights, has bought the pharmacy of Siegfried Blumberg, at No. 1140 Lexington avenue, Manhattan.

—William M. Warren, of Detroit, general manager of the firm of Parke, Davis & Co., has been spending several days in the city on business. He called at the Era office on February 1.

—Frederick Bache, formerly in the retail drug business at Amsterdam avenue and Eighty-fifth street, Manhattan, has accepted a position as traveling salesman with Nelson, Eaker & Co.

—Max Weiss, formerly at the head of the retail drug firm of Weiss & Rosenthal, at No. 101 Second avenue, has bought Balluff's Pharmacy, at No. 495 Columbus avenue, Manhattan.

—Charles Schuman, formerly clerking in the pharmacy of Otto Lenz, at No. 498 Second avenue, has bought the drug store of Henry A. Schaefer, at No. 1987 Third avenue, Manhattan.

—Joel Liebhoff, who had a drug store at No. 68 Stanton street, has vacated that place and bought the drug store of A. Rochow, at No. 286 Stanton street, Manhattan.

—H. M. Wassell, who formerly had a drug store at Lexington avenue and Eighty-seventh street, has bought Randall's Pharmacy at No. 394 Third avenue, Manhattan.

—Wilson & Israelson, who conduct several drug stores in Brooklyn, are opening a new one at the corner of Broadway and Moore street, in that borough.

—A new firm to be known as Wood & Murray has bought the drug store of D. Schiemer, at No. 133 Bergen street, corner of Hoyt street, Brooklyn.

—E. Rheinhold, retail druggist of Erie, Pa., after spending a day or two in this city last week, sailed for Europe for a pleasure trip of several weeks.

—H. H. Blomeler has bought the pharmacy of F. G. Werner, at No. 439 Ninth avenue, Manhattan, where he had been clerking for some time.

—H. Rosenthal has succeeded the firm of Weiss & Rosenthal, as proprietor of a drug store at No. 101 Second avenue, Manhattan.

—Delson & Gutchen, a new firm, has opened a new drug store at the corner of Amsterdam avenue and 102d street, Manhattan.

—William Siegelmeister has bought the drug store of O. Gordon, at No. 158 Second street, Manhattan.

—W. Nemser has bought the drug store of Maurice Tenbrink, at No. 88 First avenue, Manhattan.

Cudahy's Pepsin Again in Market.

The Cudahy Pharmaceutical Co., Omaha, will again market their own pepsin, and they have secured the services of Mr. Oscar A. Brown, who will have charge of their digestive ferment department. Mr. Brown had been with the Cudahys for some time, but left them with Dr. Dickinson and joined Parke, Davis & Co.'s forces.

IN AND ABOUT BOSTON.

Proposed Law for Sunday Sales Stirs Up Much Opposition.

Boston, Feb. 3.—Much opposition has been stirred up by the members of the Sabbath Protective League, before the Committee on Judiciary, against the bill proposed by Representative Daly, of Lawrence, to allow the sale of soft drinks, cigars, tobacco and confectionery and newspapers on Sunday, between the hours of 6 A. M. and 10 P. M. One prominent clergyman firmly opposed the bill. He was in favor of allowing people to rest a little. The bill was not good for morals or society, so he said. Another remonstrant questioned the assumption that the publication of the Sunday newspapers is all right. He opposed the sale of tobacco on Sunday. If the tobacco stores were allowed to be open, there was no reason why hardware stores should not be open, so that the boys could buy skates on their way home from church, skating is such a good healthy thing for boys. The president of the Sabbath Protective League opposed the bill, and so did others. The secretary of the Massachusetts Women's Christian Temperance Union hoped it would be adversely reported. The matter was taken under advisement, after objections had been brought forward by the remonstrants.

Prizes Well Worth Winning.

Boston, Feb. 3.—A Boston daily newspaper has started a popular voting contest whereby, by means of coupons found in each paper, the readers may declare who, in their opinion, is the most popular clerk or salesman or woman. The prizes are well worth winning. There are two "first" prizes, which give the fortunate winner a trip next summer to the Paris Exposition with all expenses paid. One of these first prizes is limited to clerks from department stores and the second in the series is for those in any other kind of store. The second prize is a trip to beautiful Jamaica, or, if preferred, a three weeks' trip to Bar Harbor or Saratoga next summer and third prize is a trip to Washington, or, if preferred, a two weeks' trip to the White Mountains next summer. Then there is a special prize of \$50 in gold to the one leading the list of contestants the largest number of days. Among the present contestants are David D. Pillar of Burwell's pharmacy, 369 Washington street, Boston; Frank Folsom of R. H. White Company's store, where he is at the soda fountain, and Charles M. Day of B. R. Day & Company, druggists at Winchendon.

Proposed Statute Which Would Benefit Druggists.

Boston, Feb. 3.—In the House of Representatives, Massachusetts Legislature, the Committee on Towns has given a hearing on the act to authorize towns to regulate by ordinance the sale of certain articles by hawkers and peddlers. This will strike at the class of people who go from door to door in many places to sell combs, court-plaster, perfumes, soaps, cough medicines and simple remedies and many other things which druggists keep and could sell but for this house-to-house selling. Several Representatives also spoke in favor of the act and there were no remonstrants.

NOTES.

—More than one retail drug store in Boston has in its window an exhibition of a young woman showing the virtue of some form or other of inhalant. A Chinaman who recently stopped to gaze on one of these scenes expressed to bystanders his strong disapproval of a "smoke ladee."

—E. S. Dodge's drug store, corner of Salem street and Broadway, in the Maplewood district of Malden, has been purchased by Eugene E. Eaton. This is the store which recently was closed by the State Board of Pharmacy because there was not on the premises a registered pharmacist.

—There is great rejoicing among the large number of employees in the mechanical departments at the laboratory of C. I. Hood & Co., at Lowell, who have announced that after February 1 the working time would be fifty-four hours a week instead of fifty-eight, with no reduction in pay.

—At the annual business meeting and banquet, held at Hotel Brunswick, of the John Elliot Club of Roxbury, Seth A. Fowle was chosen as a member of the Executive Committee. He is of the drug manufacturing firm of Seth W. Fowle & Sons (Seth A. Fowle and Horace S. Fowle.)

—The new North End pharmacy of P. P. Curtin, in the Independence block, Waconah street, Pittsfield, is to be under the management of William Depey, of Northampton.

—Proprietary interest in the McLean drug store, corner of Bay and Silver streets, Cambridgeport, has been gained by Horace S. Chase, lately of Concord and Manchester, N. H.

—The week's exports from the Port of Boston include drugs and chemicals, \$28,780; hops, \$8,762; india rubber manufactures, \$4,200; tobacco, \$1,748; spirits, \$1,820.

—Curtis & Moore (A. R. Curtis and J. W. Moore), Beverly street, have just moved into new quarters at 208 State street. The firm deals in soda water supplies.

—Dr. Lanelle has sold out his share of the business of the Brunelle pharmacy at the corner of South Main and King Philip streets, in Fall River.

—A drug store has been opened at West Medford by Arthur Johnson, of Brockton, with a partner, under the firm name of Twigg & Johnson.

—Augustus Cunningham, the Inman Square druggist, Cambridge, combined business and pleasure satisfactorily on a recent visit to New York.

—N. P. Tobey, druggist, Putnam avenue and Brookline streets, Cambridgeport, has taken a partner in the person of John Fitzgerald.

—H. D. Hildreth, of "Velvet Kiss" fame, has taken out letters patent on a new style of folding box.

PHILADELPHIA.

Philadelphia Association of Retail Druggists.

Philadelphia, Feb. 3.—The February meeting of the Philadelphia Association of Retail Druggists was held in the Philadelphia College of Pharmacy yesterday afternoon. The attendance was good and twenty-five new members were added. The report of the entertainment committee was presented by the chairman, D. M. Harris. Mr. Harris reported the success which had attended the efforts to get up the progressive euchre and dance. The following resolution was adopted:

"Resolved, That we, the Philadelphia Association of Retail Druggists, will recognize any action and will support all measures proposed by the National Executive Committee, providing we have the support of both the Proprietary Association of America and the National Wholesale Druggists' Association."

A list of the local jobbers approved by the association was also presented and a copy was ordered sent to the secretary of the National Association. The list follows (W. & R. means that the jobber does both a wholesale and a retail business):

Aschenbach & Miller, W. and R.
C. H. Butterworth & Co., W. and R.
Lambert & Kline
Philadelphia Wholesale Drug Co., Ltd.
W. H. Pile & Sons.
Pfromm & Kendig, W. and R.
Shoemaker & Busch
Robert Shoemaker & Co., W. and R.
Smith, Kline & French Co.
Valentine H. Smith & Co., W. and R.
Stielman & Archer, W. and R.
W. R. Warner & Co., W. and R.

The subject of prosecutions for violations of the Blue Laws regarding Sunday business was discussed, and it was decided that the association would stand by any member who is prosecuted by the Christian League, which is very active at present in enforcing laws long obsolete. The next meeting will be on March 2.

NOTES.

—The class of 1900 of the P. C. P. visited the glass factories of Whittall, Tatum & Company at Millville, N. J., on Wednesday of this week, under the direction of Prof. Remington. Prof. Ryan and Librarian Wiegand also accompanied the party. The journey was made in two special cars, which were attached to one of the regular passenger trains. The boys saw everything about the place that was worth seeing, and that was no small task, as the factories employ about 2,200 hands. The en-

tertainment afforded by Whittall, Tatum & Co. was fully appreciated by the class, and it was an event of both pleasurable and profitable recollections.

—A careless plumber caused the total destruction of the Lorenz drug store in Scranton, Pa., on Thursday of this week. The water pipes had become frozen and a plumber was summoned to thaw them out. The careless use of a blast lamp set fire to the wood work, and the flames gained headway so that an alarm was sent in. When the fire company responded they could get no water for a time because the plugs were also frozen. The result was the total destruction of the building. Loss \$15,000, partially insured.

—Charles E. Hires has offered to supply unlimited quantities of root beer free of charge to the druggists' euchre party on Wednesday evening of the coming week and a fountain with five faucets and a number of attendants will be a feature of the evening's entertainment.

—Prof. Joseph McFarland, who lectured on "Immunity" at the January Alumni social meeting, is not, as was erroneously stated, from the University of Pennsylvania, but is Professor of Bacteriology and Pathology at the Medico-Chirurgical College of this city.

—W. T. Hankey, a former graduate of the P. C. P., junior member of the firm of Benton, Myers & Company, of Cleveland, Ohio, spent several days in Philadelphia during the latter part of the week.

—Herman Krieger, of Germantown, Pa., is at present managing the store of John W. Langham, at 200 Kensington avenue.

—E. A. Eyer, manager for Frank G. Mumma, at 2500 Jefferson street, is suffering from pink eye.

BALTIMORE.

The Sunday Law Rigidly Enforced.

Baltimore, Feb. 6.—The drastic interpretation given to the Sunday law, which has been on the statute books since the last century, convinced even those who favor a rigid observance of the American Sabbath that eighteenth century ideas are not well adapted to the closing year in the nineteenth century. As a consequence the high barriers set up on January 28 were let down considerably last Sunday. Bootblacks and newsboys were permitted to ply their trade and druggists received permission to sell patent medicines and other articles. A further relaxing of the rigors of the law may be expected. The attempt to enforce the old law, however, has given rise to a movement to secure a modification of the statute, and a bill to accomplish this object is now before the Legislature. The measure is in accord with the modern spirit and received the endorsement of the Baltimore Retail Druggists' Association at a meeting held last Wednesday.

Every striking innovation or startling endeavor brings out hidden talent, and the Sunday law agitation here has been no exception. Among the numerous contributions, satirical and otherwise, to the controversy a short essay composed by Druggist Harry Arnold, of Arnold & Co., corner of Eutaw & Fayette streets, deserves a prominent place. The contribution is as follows:

We sell nothing but medicines, although we protest that it is a grave mistake for law-abiding citizens to fall sick on the Sabbath; as it necessitates the employment of physicians and nurses and diverts the mind of patients and their families from devotional exercises. As, however, we must keep open our store to supply such physical wants on this day, we shall, as far as lies within our power, enter into the spirit of the new order of things, brought about by the truly good people of the community. To this end we will on this day offer spiritual advice and treatment gratis to all who may apply.

Not that we wish to enter into unseemly competition with the clergy during their business hours, but that between whiles the hardened sinner and impious Sabbath-breaker may be thus warned away from evil thoughts and removed from the temptations of idleness to the betterment of his spiritual welfare and to the edification of the truly good, whose tender, unselfish hearts throb with an altruistic ecstasy born of humility and charity. Therefore, we beseech you, be not cast down, but with contrite heart curb your desires.

Ask not for the baneful cigar, nor for the sportive cigarette, lest they bring to you the ashes of repentance.

Avoid the sparkling soda water—Satan lurks within its iridescent bubbles.

Likewise eschew the alluring chewing gum, but instead work thy jaws in pious articulation.

Crave not the festive sedlitz powder, for it sizzeth, and that is suggestive of toil.

For it is decreed that man was made for the Sabbath. And that it may direct you to a spirit of emulation, observe well the moral attitude and seraphic countenance of the elect and truly good, for they walk abroad and are plainly visible to the common herd, and may be known by the gentleness of their demeanor and the length of their faces.

Advocating the Card System.

Baltimore, Feb. 5.—A meeting of the Baltimore Retail Druggists' Association was held last Wednesday to receive reports from the committee which had been appointed to ascertain the views of pharmacists all over the city with respect to the card system in successful operation elsewhere. The canvassing committee, through Chairman Smith, reported that so far 173 retailers had promised to join in the effort to establish the system, under which no one can buy drugs from jobbers or obtain supplies from other druggists unless he has a card showing him to be a pharmacist in good standing. Some sixty proprietors of stores have not yet been seen. A large proportion of these, it is expected, will also give assent, so that the movement will have the support of fully 200 retailers. As the total number of proprietors does not greatly exceed 225, the card plan will have the active support and sympathy of nearly all the members of the trade whose affiliation is considered desirable, and ought to prove successful. As soon as 200 signers have been secured, an attempt will be made to put the arrangement into effect. It is encountering either active or passive opposition on the part of several wholesale houses.

Progress of Pharmacy Legislation.

Baltimore, Feb. 3.—The course of pharmacy legislation in Maryland is strewn with boulders and brambles of opposition. Hostility, furthermore, is not confined to those whose license to deal in articles possessing great potentiality for mischief would be interfered with, but also emanates from sources which, in the opinion of its advocates, should actively aid the enactment of such a law. A Baltimore wholesale house, for instance, has sent out a circular letter calling all country store keepers to rally and defeat the very liberal measure now before the General Assembly. The misleading character of the latter, said the promoters of the bill, can be readily shown. The drug department conducted in connection with a general merchandise business, the circular says, is not only a source of profit, but a positive necessity to the community in which such a store is located. In many instances there is not a drug store or physician within five miles of a general store; "consequently valuable lives of human beings, as well as animals, are often saved, simply because people can go to the general store and purchase a simple remedy, or a common drug, in cases of emergency, that is sufficient at least to last until a physician can be secured and his prescription filled by a regular druggist." This business, it is pointed out, would not be interfered with by the proposed law, which merely provides that drugs shall not be sold in general stores except in original packages bearing the label of a responsible manufacturer, a provision which would constitute a guarantee against the sale of articles not of a standard strength and would serve as a protection to the general public. The appeals to self-interest have had their effect, and, according to the latest information from Annapolis, the bill advocated by the Maryland Pharmaceutical Association and by the Baltimore Retail Druggists' Association is in serious danger of being defeated, even in the Senate, which is more favorably disposed toward such legislation than the House of Delegates.

At the meeting of the B. R. D. A. last Wednesday indignation was expressed at the interference of jobbers with the passage of the proposed pharmacy bill. A large delegation of druggists will go down to Annapolis next Tuesday and present arguments in support of the measure. Although the draft is very liberal in its provisions, further concessions may have to be offered in order to make it acceptable to the country members of the General Assembly.

Among the Bowlers.

Baltimore, Feb. 5.—The members of the Baltimore Drug Trade Bowling Club were treated to the surprise of the season last Friday night, when the team of Sharp & Dohme inflicted three defeats upon the mighty men of the Root & Herb aggregation. The scores were 869, 755 and 790 for Sharp & Dohme, against 745, 772 and 663 for Root & Herb. T. Goldsborough made high score and high average for Sharp & Dohme by 207 and 183 respectively, while Baumgartner was the banner bowler for the Root & Herbs. On Tuesday night Gilpin, Langdon & Co. took three games handily from Muth Bros. & Co., by 690, 713 and 643 against 683, 630 and 612. None of the individual scores were noticeably high.

NOTES.

—Thomas & Thompson, corner of Light and Baltimore streets, are making extensive improvements which will give them facilities long demanded by their business. Several years ago they purchased the building which adjoined their store. The lease of the old tenant has now expired and this circumstance has been taken advantage of to renovate the structure thoroughly from top to bottom. The first floor will be leased again, but the upper portion of the edifice will be fitted up as a laboratory for manufacturing.

—Fire broke out on the morning of January 28 in the drug and spice mill of McCormick & Co., 21 East Lombard street, causing \$10,000 damage to building and stock before it was extinguished. The damage is amply covered by insurance. No interruption in business resulted.

—S. H. Hurst has bought out Druggist Koldewey, at the corner of Hopkins avenue and Townsend street.

—Charles R. Beck has opened his new retail pharmacy at the corner of Gay street and North avenue.

CINCINNATI.

Bowling.

The Druggists' Bowling Club made high scores at the regular weekly meeting, Friday, February 2. Suggestions were made by the members present that the club should challenge some of the other druggists' clubs from other cities for a series of match games, and at the next meeting no doubt some action will be taken, and challenges sent. Comparing the scores of the Chicago and New York bowlers, as published in the Era, the Cincinnati bowlers would have a walk-over. Ralph Freiberg was awarded the pin donated by the Oskamp Nolling Co. for the score for the week. Following are the scores:

	First.	Second.	Third.	Fourth.
Muehberg	233	176	190	185
Nicholas	148	118	185	159
Voss	188	156	159	137
Linneman	182	126	120	131
Rendigs	143	170	180	171
Leuchtenburg	161	179	144	158
Heineman	173	158	198	204
Freiberg	105	206	153	125

Death of Embezzling Clerk.

Cincinnati, Feb. 3.—The death of Frank Gerwe, a former well known drug clerk of Newport, Ky., is reported from Chicago. Gerwe was a clerk for Gustav Holzhauser, at Tenth and Columbia streets, for a long time, when he resigned to accept a position as letter carrier in Newport. After his resignation Mr. Holzhauser discovered that Gerwe was short in his accounts, and caused his arrest on the charge of embezzlement. While awaiting trial, Gerwe escaped from the jail, and nothing was heard from him until the notice of his death. While in Chicago he assumed several aliases, and held several responsible positions.

The Church Protests.

Cincinnati, Feb. 3.—An uptown druggist, whose store is located underneath a prominent church, does not place his chewing gum machine on the sidewalk as formerly. The reason for his action was caused by a visit from the trustees of the church, who informed him that they would raise his rent unless he removed the gum machine. The druggist was surprised, as he has occupied the premises for many years, and demanded an explanation. The

trustees then told him that from the time he put the gum machine in front of his store the contribution box had hardly any pennies donated, as mostly all were spent by the children for chewing gum.

NOTES.

—John H. and H. G. Williams, doing business as Williams Brothers, druggists, at Highland avenue and Fosdick street, made an assignment February 1. They occupied the store vacated by Henry Gradel, who also assigned a few years ago. Walter A. De Camp is the assignee. The assets are about three-fourths of the liabilities.

—A fire in the Hanover Building damaged the stock of George F. Herman's drug store to the extent of \$500 on the evening of January 30. The fire originated on an upper floor, and the damage was caused mostly by water. Mr. Herman's loss was fully covered by insurance.

DETROIT AND MICHIGAN.

The Department Store and Cutter.

Detroit, Feb. 2.—C. A. Shafer has opened his new drug department in his big store, corner Woodward and Michigan avenues,—in the very heart of the business life of Detroit. The entire center circle of the main aisle on the ground floor is devoted to the display of drug goods, while down in the basement are found large quantities of patent medicines and the prescription department. An entire window is devoted to a drug display, and big advertisements appear in the local papers. The prices advertised mark the store as a cut rate, although Mr. Shafer is supposed to stand for regular prices. For instance, Ayer's Cherry Pectoral (new size), costing \$2.40 per dozen he advertises for 23 cents. Counting this new store a cut rate, there is but one regular drug store between Adams avenue and Congress street—a distance of seven long blocks, which cover the main retail business portion of the city—and that one is Fred Todd's "Central Drug Store," which he must vacate in May. The section includes several cut-rate stores, which apparently do an enormous business. Mr. Todd hopes, however, to secure another store in the section, and he will endeavor to make it first-class in every respect.

During the early part of the week J. L. Hudson bought out the Michel stock, which included a department drug store. Mr. Hudson will add the Michel stock of sundries and patent medicines to his own stock, but he will not establish a prescription department. Mr. Hudson is called the cleverest business man in the city, and he is of the opinion that the drug store proper can handle prescriptions better than even a first-class department store. At the present time he has a small drug stock packed up and stored on one of the floors of the big building. He had to take the stock but he has not unpacked it.

Bowling.

Detroit, Feb. 3.—As the season draws to a close, interest in the series of bowling games between the teams of the two wholesale drug houses of this city grows apace. The teams are almost perfectly matched, and it is hard to prophesy which will win out. So far, fifteen games have been played. There will be four more contests before the season closes (March 1), and then the losing team will give the winners a supper. The players are: For Williams, Davis, Brooks, and Hinchman Sons—Charles Carlisle, H. E. Perry, M. Spranger, George J. Jones, and W. L. Hedges. For Farrand, Williams and Clarke—Walter McAdam, W. Teagan, William Moffat, Charles Andres and William Campbell. Individually, George Jones and Walter McAdam have played the best games, each of them scoring 201 points last Wednesday. Although they tied on the number of points, George Jones won the game for his side by his playing. In matter of points for any one game, the Michigan Drug Company's team have a record of 797 for their best against 794 for the Farrand, Williams & Clark men. Aside from the fun and pleasure of the games, a result of the contest has been to increase the friendship existing between the employees of the two houses; large numbers from both

turn out every week to look on, and although considerable rivalry exists the boys are getting better acquainted and old scores are forgiven and forgotten.

NOTES.

—Waldron & Todd, Jackson druggists, suffered a severe loss from fire Sunday morning, January 28. The stock room of the wholesale department and the basement were badly damaged, but the retail department was not scorched to any extent. By hard work everything was in shape to resume business as usual Monday morning.

—By mistake a Lansing druggist used stramonium instead of smartweed in filling a prescription. The victim was George Dorr, a blacksmith, who drank a cupful of the decoction and nearly died, but who is now out of danger.

—Druggists A. F. Martin, of Imlay City, and Mr. Carr, of Carr & Granger, Mt. Pleasant, were among Detroit's visitors during the week, combining business and pleasure.

—Druggists J. S. Haggart, of Owosso, E. J. Shepherd, of Adrian, and J. H. Beckton, of Caro, have all visited Detroit during the week, combining business and Masonic affairs.

—W. J. Wilson & Son have opened a new drug store at the corner of Alfred and Antoine streets, Detroit.

—Mr. Allen, representing John Wyeth & Brother, has been calling on Detroit physicians during the week.

PITTSBURG AND VICINITY.

January 30, 1900.

—George W. Williams, of the Evaline Pharmacy, at No. 5147 Penn avenue, lost his discharge papers some time ago. He read in the papers that they had been found in Fayette street by an Allegheny woman. He served in the hospital corps throughout the Spanish-American war. The papers were sent to the Penn avenue recruiting station, where Mr. Williams got them.

—Louis Emanuel and T. E. Ihrig filed answers in Common Pleas Court No. 1 in the suit of T. Brent Swearingen, assignee of Fleming Bros., against the stockholders of the Semickley Drug Company, to recover 25 per cent. of their stock subscriptions for the benefit of creditors. The defendants deny subscribing for the stock and plead the statute of limitations.

—The Ladies' Auxiliary of the Order of Railway Conductors of McKee's Rocks have decided to furnish medicine chests for cabooses for the benefit of the men employed on the Pittsburg & Lake Erie road. Every caboose on the road will soon be supplied with an outfit of drugs and medical supplies for emergencies.

—Charles M. Kelly, a McKeesport boy, who has been an apothecary on the gunboat Marietta, which made the long voyage around Cape Horn in company with the battleship Oregon at the opening of the Spanish war, has returned to his home in McKeesport, his term of enlistment having expired.

—Pittsburg druggists are dealers in real estate. Charles Walther, of the Walther Drug Company, sold a residence on Fayette street, Allegheny, for \$17,000. George F. Sichelsteil, of W. J. Gilmore & Co., bought a handsome home on Wellesley avenue, East End, for \$12,000, to which he removed his family.

—George H. Rives, with Sharp & Dohme, and later with the Springer Torsion Balance Company, is now representing W. J. Gilmore of this city on the road in sundries. Mr. Rives recently returned from a business trip through England, Ireland, Scotland, Wales and France.

—The co-partnership between J. L. Rankin and L. B. Hughes, 5100 Penn avenue, known as the Winebiddle Pharmacy, has been dissolved. L. B. Hughes purchased the interest of J. L. Rankin and assumed all liabilities of the old firm.

—Dr. Charles Underwood, of Juniataville, was recently found dead in his bed from what is thought to be an overdose of headache powders which he was in the habit of taking from the palm of his hand without measuring.

—C. R. Matchett, a druggist of Beaver, Pa., recently received a present by mail of the pelt of a Rocky Mountain lynx which had been killed by his brother near Laramie, Wyo. It measures four feet from tip to tail.

—S. C. Daugherty, of Daugherty Bros., Jeannette, Pa., is a candidate for the postmastership at that place. S. S. Hamilton, of Punxsutawney, is a candidate for the State Legislature.

—John Graham has succeeded Frank J. Lindeman as manager of the A. E. Bailey Pharmacy at Ford City. Mr. Lindeman has gone into the hotel business at Meadville, Pa.

—Tod Lafferty, of the Easthill Pharmacy, Sharon, Pa., is able to be at the store again after a three weeks' attack of bilious fever.

—The drug store of Philip Anthes, of Ferry street and Fourth avenue, was recently entered and robbed of about \$300 worth of goods.

—L. B. Finley, formerly manager of the Kimmel Pharmacy, Pittsburg, is now managing the City Drug Store at Sharpsburg.

—The Retail Druggists' Association of Butler County, C. N. Boyd president, had its first meeting of the year on January 8.

—E. H. Hyatt, of Johnsonburg, sold out to G. G. Messenger & Son, who were formerly in Ridgway.

—J. F. Neely, of Newcastle, Pa., has placed a handsome new Tufts fountain in his store.

—Charles Davidson has opened a new store in Youngstown, O., on the west side.

—West Burke has started a new store in Edenburg, Pa.

CHICAGO.

Meeting of C. R. D. A.

Chicago, Feb. 3.—In pursuance of the call issued last week and published in the preceding issue of this journal, the Chicago Retail Druggists' Association met in the Masonic Temple on Tuesday afternoon, January 30. There was a fairly good attendance and the questions raised in the call were quite fully discussed. The following resolutions were passed:

"Whereas, The payment by the retail druggists of Illinois of a fee for the renewal of their certificates of registration is not only a hardship but an unnecessary burden; and

"Whereas, It is only justice that pharmacy should receive the same benefits and privileges as other professions and institutions of this State which contribute to the health and welfare of its citizens; therefore, by the Chicago Retail Druggists' Association, be it

"Resolved, that the Legislative Committee of this association be, and is hereby, instructed to use its best efforts to influence the next Legislature so as to amend the present pharmacy law as to make the payment of the annual renewal fee for registration incumbent upon the State instead of the registered pharmacist; and be it

"Resolved, That the Legislative Committee of this association be and is hereby directed to invite co-operation by the Illinois Pharmaceutical Association to the end that this desirable object shall be speedily and certainly accomplished."

This was the first quarterly meeting of the association for 1900. President Thomas V. Wooten presided. The matter of compiling the list of jobbers acceptable to the association, said list to be recommended to the executive officers of the N. A. R. D. for the new approved list, was referred to the executive board of the Chicago Retail Druggists' Association. This board was also instructed to compile a list of aggressive cutters.

A resolution offered by Mr. Gale was passed asking Dr. Eagan of the Illinois State Board of Health to prosecute patent medicine firms for peddling their goods. This practice on the part of patent medicine firms can only be reached through a provision in the medical practice act which imposes a heavy penalty on medicine peddlers.

A resolution of confidence in the Board of Pharmacy was passed, and also a resolution protesting against the continued enforcement of the internal revenue tax on medicinal preparations. The claim was made that inasmuch as the Federal revenue is now in excess of the Government expenses the tax on medicinal preparations should be abolished.

Hyde Park Druggists in Trouble.

Chicago, Feb. 3.—Members of the Hyde Park Druggists' Association met in Drexel Hall, at Thirty-third street and Cottage Grove avenue, on February 2 and ex-

pressed great indignation at having their stores called "blind pigs." The battle of the sightless swine is one which has been waged continuously for several years between the Hyde Park Protective Association on the one hand and on the other hand those citizens who like a nip of liquor once in a while and those so sinful as to sell it by the drink to their brethren of the dry throats. The Hyde Park Protective Association is a body in deadly enmity to liquor "when it showeth its color in the cup." Frequently its methods make up in widespread vigor what they lack in discretion. This vigor sometimes goes off with such energy that it comes back again and hits the association a resounding whack on a proboscis which some real mean people declare is all too long for proper use in the limited area of Hyde Park. Said one Hyde Park druggist who attended the indignation meeting: "There is a difference between 'blind pigs' and drug stores where liquor is not sold by the drink. We don't keep 'blind pigs'; but there are 'blind pigs' in Hyde Park which have not been molested by the police."

The Hyde Park Druggists' Association has sixty-three members, forty-five of whom were arrested one day this week and taken to the police station in patrol wagons, charged with keeping "blind pigs." This, they claim, is an outrage upon respectable men. The association voted money to defray the cost of defending its members in court. The officers of the association are I. W. Blood, president; Wilhelm Bodeman, vice-president; and George A. Graves, secretary.

Sadness in the Suburbs.

This is the way the Chicago Daily News views the Sunday closing movement among the druggists of the west side:

Come all ye men who live at home in suburbs 'round the town,
And hear a message that will make your classic foreheads frown;
The druggist and the pharmacist decide that they must stop
And once a week at least they'd close th' apothecary shop.

At 7 Sunday evenings jalap, calomel and squills
They will purvey no longer, nor the little liver pills,
Nor castor oil, nor senna, nor the aloes' cheery smack,
Nor asafoetida, nor hops, nor ink, nor ipecac!

The envelopes and aconite you must forego awhile,
The Epsom, Rochelle, Glauber's salts, the soap, the chamomile;
Upon the night no more will gleam these festal Sunday lamps
And sad are they who long for almanacs and postage stamps!

Illinois Pharmacy Law Upheld.

Chicago, Feb. 2.—On January 27 in Judge Gibbons' court, the case of The People vs. Theo. Neels and The People vs. Oberland and Jacobson were decided in favor of the Board of Pharmacy, representing the people. In each case a fine of \$20 and costs was imposed. Both cases were appealed from Justice Porter's court in Hyde Park, and the defendants in each case have prayed an appeal to the Supreme Court of Illinois from this recent decision by the Circuit Court.

The defendant in the former case was found guilty of retailing "Vital Ore," a mineral preparation for the cure of various ailments, at his place of business on West Polk street, near Ogden avenue, without a registered pharmacist in charge. He admitted the charge against him, and declares he will fight the Board to a finish. Mr. Noels is the man who recently threatened every member of the Board, its attorney and its secretary, with \$250,000 damage suits.

In the case of The People vs. Oberland and Jacobson the defendants are grocers on Grand avenue. They were found guilty of retailing without a registered pharmacist a preparation called "Kureko," put up by the Dr. Peter Fahrney & Sons Company of Chicago.

Both of the above cases come within the principles laid down by the Supreme Court of Illinois in *Sadtler vs. The People*, recently reported in these columns. Judge Gibbons found according to the law as laid down in the *Sadtler* case and the cases cited in that opinion.

Illinois Drug Clerks Organize.

Chicago, Feb. 3.—The Drug Clerks' Association of Illinois has opened a suite of offices at 167 Dearborn street. The offices are in charge of William F. Eyer, president of the association and editor of "The Drug Clerks' Journal," a National Journal Devoted to the Drug Trade in General and to the Clerks and Retailers in Particular," a publication now on the press and soon to issue. It will appear monthly.

The object of the association is to enable clerks to help one another, to better conditions generally. A flourishing employment bureau for drug clerks out of positions is in operation. Every Saturday a quiz is issued for those who are preparing for board examinations. A well selected library will soon be put in and every facility consistent with the room available will be given those wishing to keep posted in their profession or those wishing to review for examination.

A meeting of the association will be held about February 15, and later on will come a smoker, and perhaps a dance. The association has now about 700 members, 500 of whom are in Chicago.

Bowling.

The score of the Chicago Drug Trade Bowling Club last night was as follows:

Armstrong (sc.)	178	134	163
Bauer (9)	160	178	152
Matthews (10)	168	166	182
Waldron (30)	102	122	163
Medbery (11)	96	123	195
Thomas (6)	156	138	187
Odbert (41)	130	119	120
Storer (23)	165	168	119
Fechter (42)	115	119	118
Blocki (34)	121	96	158
Matthews (24)	122	158	165

Mr. Matthews was the medal winner.

On Wednesday evening, January 31, the "Lobsters," of the Chicago Drug Trade Bowling Club, played three match games with the Fuller & Fuller team. The latter was beaten. Following is the score:

Lobsters	714	775	675
Fuller & Fuller Team	650	653	701

The games were played at Mussey's Bowling Alleys.

Death of Mrs. C. P. Van Schaack.

Chicago, Feb. 2.—Members of the trade were shocked this morning to learn of the sudden and untimely death of Mrs. Cornelius P. Van Schaack, wife of C. P. Van Schaack, of Peter Van Schaack & Sons. Mrs. Van Schaack had not been in the best of health for some time, but was not so ill that any apprehensions were entertained. A few days ago, however, she caught a severe cold which rapidly developed into acute pneumonia. Her system was not strong enough to withstand the disease and she passed away yesterday. The sympathy of a host of friends goes with Mr. Van Schaack and all the family in their great bereavement.

NOTES.

—A. W. Hatch, for some years in the sundry department of Peter Van Schaack & Sons, has resigned to ac-

cept a position with the Crown Perfumery Company, representing them from the Alleghenys west.

—The drug business formerly conducted by W. Burda at 639 Noble street, who died January 24, will be carried on by his widow. Mr. Burda, it is reported, left his affairs in excellent shape.

—Robert H. Van Schaack is now in Florida attending to the welfare of a sick brother, who has sought that climate to avoid the winter at Denver.

—Humphrey D. Brock has succeeded A. J. Foster in the drug business conducted at 8605 Vincennes avenue.

THE NORTHWEST.

Druggists Imposed Upon.

St. Paul, Minn., Feb. 2.—The war between the druggists and the Northwestern Telephone Exchange Company in Minneapolis, is likely to break out afresh. The men of pills resisted the proposition to put pay stations in their places of business, and the company established a temporary peace by withdrawing the obnoxious proposition, and promising that an offer that would be acceptable to all would be made later on. The new proposition is: Each subscriber be given a card, and upon showing it at any place in the city where there is a 'phone he would be allowed to use the instrument. Nickel-in-the-slot machines would be established for the use of non-subscribers.

The druggists do object. They say they would have to employ extra help to watch the telephone and demand the presentation of a card from all who desired to use the telephone. Two telephone men quickly and quietly removed the telephone from a well known drug store on Washington avenue yesterday, much to the surprise and mortification of the proprietors. The telephone officers say they will remove the instruments from all drug stores when the proprietors refuse to accept the card system. General Manager Wainman says any person who will take the trouble to investigate the matter will appreciate the fairness of the card system.

Druggists Dance.

St. Paul, Minn., Feb. 2.—The St. Paul Retail Druggists' Association is more and more inclined to rivet the interest of its members through the means of social functions. Quite an ambitious and wholly successful effort in this line was its first annual ball given by the association at the Litt Opera House Monday night. Fifty druggists and as many ladies took part. Flags and palms made the hall attractive, and the Twin City Mandolin Orchestra made the music. Mr. and Mrs. H. J. Kimball led the grand march, and the committees were: Reception, H. W. Rietzke, S. J. Conger, A. A. Campbell; Floor, F. A. Conger, R. C. Trudgen, W. E. Lowe, H. J. Kimball, Charles Hest; Arrangements, A. W. Bork, L. H. Luenders, F. Yost, J. Jelinek, C. T. Heller. George H. Rehse, the cartoonist of the Pioneer Press, paid his respects to the ball in this wise:

NOTES.

—Successions: Penny & Wood, Logan, Iowa, by I. C. Wood & Co.; Zemlika & Lickel, Merrill, Wis., by F. C. Zemlika; Johnson & Gullickson, West Salem, Wis., by Alex. Johnson; C. A. Gifford & Co., Boone, Iowa, by C. W. Lamer; A. Cowles, Brown's Valley, Minn., by Cowles & Lines; J. W. Bowe, Madison Lake, Minn., by the W. J. Sichter Drug Co.; J. J. Palmer, Gibbon, Minn., by Paul W. Kuske.

—This was a bad week for fires among druggists. The following were burned out, wholly or in part: Hensy & Filz, Seattle, Wash.; George R. Filmer, Morristown, Minn.; Preston & Stuckey, Wasca, Minn.; H. R. Strehlow, Casselton, N. D.; F. O. Weycant, Ada, Minn., and F. S. Locke, Troutdale, Ore.

—J. L. Jacobson, for some time in the employ of Olaf Skauge, at Luverne, Minn., has begun work for W. W. Noble, in St. Paul. Mr. Skauge has sold out and removed to Minneapolis.

—C. E. Nilson, of Runnells, Iowa, formerly well known in this section, will go in a few days to Hayward, Wis., to work for Trowbridge & Tomkins.

—Thomas Thomassen is about to open a drug store in the new town of Ceylon, Martin County, Minn., whence "the spicy breezes blow soft."

—Among the deaths of the week is that of W. N. Stone, of Stone & Hassel, Lancaster, Wis., dealers in drugs and wall paper.

—F. H. Richman, Waterville, Minn.; L. E. Fowler, Lynnville, Iowa, and A. W. Paegel & Co., Mapleton, Minn., have sold.

—James H. Tyrrell, formerly in the Endicott Arcade Pharmacy, of this city, is now working in a drug store in Winona.

—V. E. McDermott, of Summit, S. D., was in the city this week on his way to Mexico, in search of health.

—Stephens Bros., druggists and jewelers, Pomeroy, Wash., have sold their jewelry stock to T. C. Nye.

—Wells & Baldwin, Buena Vista, Ore., and Enckhausen & Ascott, Nellsville, Wis., have dissolved.

—H. Dubbs & Son, Seattle, Wash., have sold their Pike street branch, that city, to L. F. Swift.

—W. H. Ungles, Jr., Lincoln, Neb., and J. F. Snoko, Lorimer, Iowa, have given bills of sale.

—A. O. Thompson, Wapello, Iowa, died this week and the business of his place is closed.

—Charles A. Waldron has gone home to Monticell, Minn., for a little vacation.

—John Hollenish is going to work for Cole & Pierce, Breckenridge, Minn.

ST. LOUIS.

The Alumni Ball.

St. Louis, Feb. 2.—The annual ball of the Alumni Association of the St. Louis College of Pharmacy was given last night at Liederkranz Hall, and was the largest in point of attendance (estimated at 1,500) ever held by the association. The decorations were elaborate, the predominating colors being pink and sea green, and many colored incandescent bulbs added to the beauty of the scene. The grand march was led by Dr. Otto F. Claus, president of the association, and his wife. Supper was served, beginning at 11 o'clock, in the large banquet hall under the ball room. Every lady who took supper was presented with a souvenir in the form of a small silver, gold-lined loving cup, fashioned after a druggists' mortar and bearing the monogram of the association. The chairmen of the committees having charge of the arrangements, etc., were: Arrangements, Theo. F. Hagenow; Reception, Dr. Otto F. Claus; Welcome, A. V. Marquardt; Supper, L. A. Seitz; Floor, R. S. Vitt; Music, Paul Schneider.

Hemm-Hoeffken Laboratory Co.

St. Louis, Feb. 3.—Prof. Francis Hemm, of the faculty of the St. Louis College of Pharmacy, has been looking for a business opening ever since he retired from the chair of chemistry at the Missouri Medical College. For a long time he was negotiating for a drug store, and

figured on about every available store in the city. Now, however, he has gone into the manufacturing end of the business, as shown by the incorporation of the Hemm-Hoeffken Laboratory Co., with a capital of \$12,000. The officers are: President, Francis Hemm, 59 shares; secretary and treasurer, Dr. Wm. D. Hoeffken, 60 shares; vice-president, Mrs. Stephanie Hemm, one share. The company will manufacture a standard line of pharmaceuticals and some chemicals, with laboratory and office at 412-14 South Sixth street, succeeding the W. D. Hoeffken Pharmaco-Chemical Laboratories of the same location.

The Sale of Liquor.

St. Louis, Feb. 3.—The Retail Liquor Dealers' Association have inaugurated a campaign against the alleged sale of liquor in small quantities by druggists and grocers who are not armed with dram shop licenses, and addressed letters to Assistant Prosecuting Attorney Johnson and Excise Commissioner Higgins calling attention to the alleged violation of the excise laws and asking them to take steps to punish the violators. The Liquor Dealers have been employing detectives to visit stores, and on allegations made by them warrants were issued Wednesday for a number of grocers and the following druggists: Theodore Herman, Paul Nake, R. F. Schwelckhardt, O. W. Heyer, J. R. Hunn, Louis F. Abel, John A. Weipert, Arthur Marquardt and R. C. Reilly. All of the defendants were allowed to give bonds in their stores. The cases will come up for trial in March.

NOTES.

—The Hall Drug & Surgical Co., 710 Pine street, formerly the Allen-Hall Drug & Surgical Co., do not seem to have met with the anticipated success since John H. Allen, who founded the business, retired. They announce that they will retire from business, are closing out their stock and will sell remainder of stock and fixtures at auction February 20. Mr. English, who succeeded Mr. Allen as manager, leaves for Colorado, where he has secured a position.

—There is a growing impression that the State has simply dropped the prosecution of the cases against the St. Louis Apothecaries' Association and its members for alleged violation of the Missouri Anti-Trust Laws. The State has filed no brief, although the time given them for that purpose expired early in December. It was expected that Judge Ferris would have rendered a decision ere this.

—The Druggists' Cocked Hat League did not bowl Thursday evening on account of the Alumni Ball. The Meyer Bros. bowled the Bank of Commerce that evening, however, the former winning four of the five games. Helbig, with 55, led the winners.

—Milton Culbertson, formerly representing Nelson, Baker & Co., will cover North St. Louis for the Moffitt-West Drug Co., in the absence of F. M. Norris, who is seeking restoration to health at Asheville, N. C.

—E. W. Pearson, formerly representing Fraser Tablet Triturate Manufacturing Company, has engaged with Manager Gauss of the St. Louis office of Searle & Hereth Co., to represent them.

—The extensive plant of the Aroma Coffee & Spice Co., Fourth and Spruce streets, was gutted by fire Wednesday morning. The total loss is approximately \$100,000, covered by insurance.

—Mr. Ludwig, of the Newstead Avenue Pharmacy, Newstead and St. Louis avenues, has bought the interest of his partner, Mr. Brenner, and will continue the business.

—F. C. Pauley, druggist, Compton and Easton avenues, is confined to his home by illness.

—Judd Q. Lloyd, Mt. Pleasant, Tenn., is opening in the drug business there.

—L. A. Cummings, Bunker Hill, Ills., was here buying goods this week.

—Caldwell & Crosson will open a new drug store at Doniphan, Mo.

—Gastor & Baker will open a drug store at Morrell, Ark.

YOUNG & SMYLIE'S ACME LICORICE PELLETS

A DELICIOUS CONFECTION
DELICATELY FLAVORED AND MOST REFRESHING

SOLD BY
DRUGGISTS
AND **CONFECTIONERS**
THE WORLD OVER.

The business of YOUNG & SMYLIE, Licorice Manufacturers, was established in 1845 and has steadily grown until it has reached its present proportions, necessitating the operation of the large plant now used solely for the manufacture of the popular brands made by the firm above named. Herewith will be found cuts of some of the Y & S preparations, all of which are extracted from choice Spanish root, and manufactured with the utmost care and uniformity: a guarantee of their Purity, Palatability and Wholesomeness:

Y & S Stick Licorice in 5 lb. boxes, 4, 6, 8, 12 and 16 sticks to the pound. Also packed in laurel leaves, bulk, cases of 25, 50, 125 and 250 lbs. net.

Corrugated Y & S Stick Licorice, averaging one ounce each, packed only in boxes containing 80 sticks. Acme Licorice Pellets (as displayed in color on reverse) put up in 5 lb. glass-front tins, and in one ounce packages, 40 to the box.

Licorice Lozenges (cylindrical in shape) in 5 lb. glass-front tins; also packed in 5 lb. glass-jars.

Manhattan Wafers (Pliable Licorice) in boxes of 2½ lbs. each.

Tar, Licorice and Tolu Wafers, in 5 lb. glass-front tins.

Purity Brand, Small Stick Licorice, put up 100 and 200 to box.

The Y & S Licorice Specialties above enumerated have been prominently advertised and their recognized merit, coupled with their quick-selling and remunerative qualities,—has made them staple articles in the retail druggists' stock throughout all sections of the country. Sold by all prominent wholesale drug houses in the United States and Canada. Illustrated catalogues furnished on application to the undersigned.

YOUNG & SMYLIE,

(Borough of Brooklyn,) New York City.

THE NEWS OF THE WORLD.

DOMESTIC.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

SOUTH AFRICA.

A rumor was current in London last week that Gen. Buller was again advancing to the relief of Lady-smith.

There was another rumor that Gen. French had captured 800 Boers, but it was not confirmed.

Admiral S. Hay, United States Consul, has reached Pretoria.

The British War Office will increase the regular army by fifteen more infantry battalions.

About \$37,000 has been raised in Berlin for the Boer Red Cross service.

Ricciotti Garibaldi, son of the famous Italian patriot, has offered to command a corps of Italian volunteers in the British service in South Africa.

The British War Office announces that the losses in Buller's forces at the recent fight at Spion Kop aggregate about 1,400.

A Cape Town dispatch says that 150 American scouts, who arrived there as muleteers, have enlisted in the British forces.

Lord Salisbury said last week in the House of Lords that he did not think they would see compulsory military service in England "in the life of the youngest here present."

Additional casualty lists from Gen. Buller make the total losses since the beginning of the war, 9,568 men; the losses north of the Tugela will exceed 2,000. The Boer loss at Spion Kop on January 25 is officially placed at 53 killed and 120 wounded.

Montagu White, who represents the Boers in an unofficial capacity in this country, said in an interview last week that he is here in the interests of peace.

The government's war policy is being severely criticised in the British House of Commons, and the overthrow of the Salisbury cabinet would not be surprising.

The British have occupied the town of Prieska, on the Orange River, about 100 miles from Kimberley.

The British navy is being prepared for active service, if needed.

THE PHILIPPINES.

A scouting party of the Twenty-fifth Infantry, while operating near Subig, was ambushed by insurgents recently, and a lieutenant and three privates were killed, and two or three privates wounded.

The Philippine Commission, in their report last week, recommended a liberal territorial form of government for the islands. The President has decided to establish a civil government there to succeed the military rule, as soon as the proper men to conduct it can be found.

OTHER FOREIGN NEWS.

The news of a Russian loan to Persia is interpreted in Germany to mean that Persia has virtually become Russian.

The Cuban census shows the population of the island to be 1,572,840, which is between 50,000 and 60,000 less than when the last census was taken by the Spaniards in 1887.

Trouble is said to be brewing in China over the deposition of the Emperor, and a report from Shanghai said that it was possible that his restoration might take place within a year.

Gen. Correa, Spanish Minister of War during the Spanish-American war, died in Madrid last week.

The State Department has ordered an investigation of the report that six Americans have been shot in Mexico.

President McKinley's suggestion of a Pan-American Congress has been favorably received by Central and South American countries.

A treaty arrangement under the Dingley tariff law has been concluded between the governments of the United States and Italy.

The ports of Rio Janeiro and Santos, Brazil, have been officially declared free from the bubonic plague. New cases of the plague and two deaths have occurred at Rosario, Argentina.

Over 10,000 persons attended a meeting in London last week to protest against the use of the mass and confessional in the Church of England.

The negotiations for a parcels post between England and the United States are progressing and are likely to prove successful.

A Berlin paper prints an alleged secret decree of the Dowager Empress of China, exhorting governors of provinces to strong measures against foreigners. A joint note has been sent to the government by the American, British, Italian, French and German Ministers at Peking, demanding protection for all missionaries in the Empire.

KENTUCKY.

Disorder obtains in Kentucky, where William S. Taylor, (Rep.), and William E. Goebel, (Dem.), both claimed the Governorship. Taylor's claim rests on last fall's election returns, which gave him a majority, and Goebel's on the fact that the Legislature decided in his favor on appeal. Taylor is holding the State House grounds with a force of militia, and the Democrats are trying to oust him by legal proceedings. The Democrats consider Taylor's action in barring them from the State House and ordering militia to meet at London, Ky., misadvised and ill-handled act. Goebel was shot while entering the State House grounds last week Tuesday, and died on Saturday. Taylor appealed to President McKinley last Thursday for recognition, but it is not thought likely that the Federal Government will interfere.

CONGRESS.

The River and Harbor Committee has decided not to present a river and harbor bill at the present session of Congress.

Senator Pettigrew was called a traitor in the Senate last week Wednesday, when he tried to have a manifesto of Aguinaldo printed in the Congressional Record. A letter from Admiral Dewey was read by Senator Lodge, saying that Aguinaldo's letter was a tissue of lies, and that he had never promised Philippine independence to Aguinaldo.

The Senate Committee on Commerce has practically decided upon a favorable report upon the bill creating a Department of Commerce.

The House Ways and Means Committee has decided to report a bill establishing a tariff system for Puerto Rico on a basis of 25 per cent. of the rates in the regular tariff law. The committee also decided that the words "United States" in the sections of the Constitution relating to taxation means the Federal States of the Union. The power of Congress to legislate for Puerto Rico and the Philippines is declared to be almost unlimited.

Friends of the Shipping Subsidy bill fear that it may not be passed this session.

The Senate refused last week to reconsider the vote by which it ratified the Samoan treaty.

The Democrats in the Senate and House tried last week to start an investigation of Secretary Gage, but without success.

OTHER DOMESTIC NEWS.

Judge Kohlsaat, in the United States Circuit Court in Chicago, January 29 declared the Illinois Anti-Trust law unconstitutional.

The Lawton fund amounts to nearly \$100,000.

An earthquake was felt at Charleston, Mo., January 30. There has been a total of fifty-two cases of the bubonic plague in Honolulu, with forty-one deaths. All of Chinatown has been burned to stop the spread of the disease.

The receipts of the United States Treasury for January were \$48,012,465, an increase over the same month last year of \$6,000,000 and also an excess of the expenditures for the month of \$9,000,000.

The United States Isthmian Canal Commission has reached Nicaragua.

The Iowa Legislature has passed a law providing for biennial elections, instead of annual.

Thomas K. Bard has been nominated for Senator from California by the Republican caucus of the Legislature and his election is thereby assured.

The public debt at the close of business January 31, less cash in the Treasury, amounted to \$1,215,636,227, a decrease, as compared with the previous month, of \$8,952,750.

The severe cold caused several deaths in Chicago last week.

Charles Franklin Dumbar, professor of political economy at Harvard, died in Chicago last week at the age of seventy.

The Passing Away of the Pessary.

The International Journal of Surgery for December editorially comments on the fact that the use of pessaries by gynecologists is unquestionably diminishing. A good reason for this is that the most modern treatment does not require them. The occasion for using a pessary was usually to act as a support for a displaced uterus caused by being engorged with blood and thus throwing upon the broad ligaments a weight it could not sustain. The modern treatment of this condition is to use a remedy such as Micajah's Medicated Uterine Wafers, which will deplete the congested uterus and the surrounding mucous membranes of their blood supply, add tone to the tissues and thus relieve the broad ligament of its unusual burden. Dr. Wheeler, of Troy, N. Y., says: "For the past five years I have not failed to cure a case of Prolapsus Uteri with Micajah's Medicated Uterine Wafers, and have discarded all pessaries."

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

"Plant Names," a New Book.

Nelson, Baker & Co., of Detroit, announce in this issue a new book by Dr. A. B. Lyons, entitled "Plant Names." A full description of the work is included in the announcement and free copies can be obtained under the terms of a special offer made by the publishers. Druggists are invited to write the firm for a circular fully explaining this offer.

An Important Notice

To the retail trade appears in our columns this issue, C. I. Hood & Co. have reduced the price of their Mammoth Size Tooth Powder to \$3 per dozen, thereby giving the retailer 100 per cent. profit. The Mammoth Size sells readily for 50 cents per bottle because it contains three times as much as the 25 cent size. C. I. Hood & Co.'s preparations, if figured on a dollar basis, now average less than \$7.90 per dozen, and with the 5 per cent. discount on \$20 lots assorted, they average \$7.50 per dozen.

A Popular Ten Cent Cologne.

Druggists who are looking for a popular-priced cologne will do well to investigate Selick's Florentine Cologne, advertised in this paper by its manufacturer, C. H. Selick, New York. The quality of this product is sufficiently above the average to make it a good seller and it is supplied in several sizes, among them one to retail at ten cents, which is packed neatly in bottles of unusually large size. Free samples are supplied the trade by the manufacturers, on request.

Plants for Adornment of Drug Stores.

In the advertisement of Frank Netschert, New York and Chicago, in this issue a number of artificial decorative plants are illustrated and quoted. The use of these plants for adornment of drug stores is increasing, and as Easter approaches, they will add greatly to the attractiveness of the store and soda fountain. They are not expensive, and require little care, and resemble the natural plants so nearly as to serve every purpose. In addition to druggists' own use, there is a good chance to sell these plants at a profit of 300 per cent., so it will pay to write the manufacturer for his "Illustrated catalogue V.," as he suggests.

Had a Fire, But Fill Orders Promptly.

McCormick & Co., manufacturing chemists and spice millers of Baltimore, met with quite a loss through fire January 28, in the upper floors of their spice mills at No. 19 and 21 East Lombard street, and Nos. 20 and 22 East Balderston street. The machinery, which was largely on the first and second floors, was saved, and the damage limited to about \$20,000, fully covered by insurance. They carry stocks of whole spices in the public stores and have large quantities of imported drugs, chemicals, ground spices and sundries in their main building at No. 44 South Charles street. These manufactured goods being ready for shipment and their office and laboratory untouched, the firm will be able to fill all orders without delay.

The "Duplex Carbonator."

Most druggists have discovered that it pays them to use a carbonator rather than buy charged soda water. The attention of these druggists is called to the "Duplex Carbonator" offered by Emil Stahl, No. 143 Center street, New York. It consists of two heavy copper fountains, block tin lined, and guaranteed not to collapse or become leaky; an automatic pressure regulator and a first-class filter. Recent improvements in this machine enable it to furnish perfectly charged water the moment the gas is turned on. It will carbonate mineral waters as well as soda, and is offered at a moderate price for either cash or instalments. The liquid gas to use with it is supplied at \$1.75 per cylinder.

"Y. & S." Licorice Specialties.

A very handsome colored insert in this issue contains illustrations of a number of Young & Smylie's Licorice specialties, which, during the fifty-five years the firm has been established, have become one of the most staple lines carried in stock by druggists in all sections of the United States and in many foreign countries. "Acme Licorice Pellets" have been especially popular in England for several years and large quantities are regularly exported to the British colonies also. "Manhattan Wafers" and "Y. & S. Corrugated" Licorice are comparatively new goods, but backed by their own superior quality and the confidence with which "Y. & S." goods are generally bought, have promptly become popular and are among the best sellers of this season. Any of the firm's products can be obtained through jobbers or direct in packages to suit all classes of buyers.

A New Show Room.

So many changes have shown in the John Matthews showroom, 443 First avenue, New York, that it may practically be called new. An elegant office has been laid out on the First avenue side, fronting Bellevue Hospital, for the accommodation of visitors. The stock of soda fountains shown is completely new. The display of the different varieties of Mexican onyx is a study in itself. Nowhere in the world, probably, can so many varieties of onyx be seen together, each the most choice of its kind. A special display of second-hand fountains is shown in a separate room. These are all renovated and look fully as good as new. There are said to be some unusual bargains among them. They are of all makes. There are other rooms full of second-hand apparatus not repaired, but which will be made as good as new when ordered. The showrooms are worth seeing. Anyone in need of a soda fountain, but uncertain what he wants, can, in a half hour's walk through these aisles, obtain a complete education on the subject.

An Appropriate Sign for Drug Stores.

The most attractive and appropriate day and night sign for a pharmacy is undoubtedly an illuminated mortar such as is here shown. These mortars are now made exclusively by Thomas Hughes, successor to F. McLewee & Sons, 25 Clinton Place, New York, who has very much improved them in attractiveness and very much lowered the cost of lighting them, so they are also the most economical of drug store signs. Druggists are asked to write the manufacturer for illustrated catalogue showing his latest designs and quoting prices.

A Novel Nurser for Window Displays.

This cut illustrates the novelty in nursing bottles recently introduced by W. H. Hamilton Co., Pittsburg. The medallion of "Our Darling" is permanently fixed under the glaze of the bottle and will last as long as the bottle itself. This is decidedly the hand-somest nurser in market, being of clearest flint glass and perfectly made, in addition to the novelty of the medallion, and is one which will quickly catch the eye of buyers of this kind of goods. Three sizes are offered, and the prices are moderate enough to make them very popular. Druggists who wish to make a paying window display will find "Our Darling" nursers well adapted for the purpose. They are supplied by all jobbers.

THERE ARE MANY PHARMACEUTICAL JOURNALS IN AMERICA;
ONLY ONE WEEKLY.

THE PHARMACEUTICAL ERA

EVERY THURSDAY.

VOL. XXIII

NEW YORK, FEBRUARY 15.

No. 7.

Entered at the New York Post Office as Second Class Matter.

ESTABLISHED 1887.

THE PHARMACEUTICAL ERA.

NEW YORK.

BLUE BOOK SHIPMENTS.

To those subscribers who are getting impatient for their copies of the BLUE BOOK, we wish to state that we are now shipping these books as fast as one of the largest binderies in New York can produce them and it cannot be many days before all copies will be in transit.

We wish to assure our subscribers that they will all be served in due time, and our binders assure us that they will use every possible endeavor to increase the present rate of 800 to 1,000 copies per day.

THE PUBLISHERS.

CHANGE SHEET FOR MARCH 1.

On March 1 we will issue a Change Sheet which will include all Price List changes in the Era Blue Book from the first of the year to that date. This will take the place of the weekly change sheets issued during January and February. After March 1, by which date the distribution of the Blue Book will be completed, these Change Sheets will be issued each week, as heretofore, and should be preserved carefully by all Blue Book users.

THE PUBLISHERS.

READ THE ADVERTISEMENTS.

The druggist who does not read the advertising pages of his drug journals makes a great mistake. In almost every issue are some special offers, some announcement of new goods, or some changes in prices which he should know about. The progressive druggist always finds profit and instruction in these manufacturers' announcements, and considers them as important as the reading

THE PUBLISHERS.

WHAT CAN DRUGGISTS DO TO INCREASE THEIR PROFITS?

The thoughtful reader will find much hard common sense and many a hint of value in the numerous communications upon this subject which, according to announcement, are printed in this number. He may perhaps discover an answer to the query, he will, at any rate, learn some or all of the causes for the present condition of the retail drug business. The writers represent all branches of the trade, they look at the question from different view-points, they speak from observation and experience, and what they say must be considered and weighed if we expect to arrive at any just conclusion.

All contributors agree that the retail branch is in a bad way, so far as money-making is concerned, but they differ greatly with regard to causes and remedies. Some of the causes instanced are cutting on patent medicines, department store competition, injudicious buying, crowding of the ranks, faulty business methods, failure to cultivate the physician's favor and patronage, counter-prescribing, etc., and it is obvious that all of these have contributed more or less to the demoralization complained of.

As to remedies, there are as many as there are causes, one for each; make your own preparations; institute proper business methods; work the physicians; don't go into the business, etc. One writer, in particular, believes that the overcrowding is due to the fact that so little capital is required to enter the business, and he advises young men of limited means to keep out of it and direct their energies other where.

But the expressions given are those of level-headed business men, who are able to discern evils, trace their causes and suggest remedial measures. In the symposium can be gleaned many a kernel of practical wisdom, and the retail druggist cannot fail to profit from these recitals from his fellows, his allies and his friends.

The superficial observer may find nothing but pessimism in the views expressed, but it will be disclosed on close examination that a few correspondents incline to look at the brighter side, and see a future and a hope for pharmacy as a profession as well as a trade.

Future instalments of these articles will shed additional light, and in the summing up we may be able to put our finger on the plague spots and discover a panacea.

See Students' Bulletin, Page 178.

WAKE UP.

Some time ago we asked our representatives in several of the larger cities to procure photographs of attractive drug store window displays or interiors to be reproduced in a special supplement soon to be issued by this journal. The replies of a few of these correspondents have brought prominently to notice a condition of affairs which has frequently been observed with surprise by those brought into close contact with the retail drug trade. Druggists are slow, no mistake about it, slower than almost any other class of business men to take advantage of their opportunities. Let us quote from a couple of the letters received:

"It will be worse than up-hill work to get a picture of a drug store window as you request. When I attempted a similar job just before Christmas, I could find only two druggists in town who had any displays in the way of display. Drug stores here are not to be judged by the New York standard. So completely have the department stores knocked them out on all lines where-with they used to make displays, that they attempt nothing of the kind any longer. Furthermore, the owners seem very reluctant to help in such enterprises. They're a queer lot, most of them. They subscribe for and get the Era regularly, and half or four-fifths of the time don't read it. They cannot, in some instances, be awakened to what seem to be their own interests by the biggest gun in the British navy or anything else. They simply float with the tide. I have been at them and at them, but all in vain, except in a few solitary instances. I shall still persevere in the work, but 'it's tough sledding.' Now, if they were so backward—totally wanting, in fact—about their holiday windows what on earth can you expect of their every-day windows? I am willing and more than willing to labor with them, but am positive that nothing could possibly come of it under present conditions."

"I've put in most of my time going from one store to another. All to no purpose! No one has ever had a photograph made of his window, and but few of them gave me any encouragement whatever about getting one. Most of the gentlemen declared they were not artistic enough to care to have their windows photographed, but all said they would be glad of hints on the subject, for they have not time to spend in that way. You know this city well enough to know that there is but little enterprise here along certain lines. They tell me that our druggists have never taken to compete for any of the prizes offered by the patent medicine firms for the best window. I have noticed the windows particularly for the last few days—and there isn't an attractive one among them—save those that have the overturning wheelbarrow of horehound candy drops. It seems that the agent for them suggested the idea, and about every druggist in town has used it. I wanted one of them to give me a picture of his window, and it showed the wheelbarrow particularly well, but he said no, that it was an idea that had been used all over the country, and he didn't want anybody to think he didn't know that fact."

Notwithstanding all this discouragement, however, a goodly number of good photographs has been secured, and the special supplement will be very attractive. We would like more, though, and ask our druggist friends to make an effort and do themselves proud by sending in pictures of their successful, trade-bringing windows. The live, up-to-date druggists, and there are lots of 'em, are the ones we want to hear from. Their example may prove a stimulus to the sleepy ones.

An exchange publishes a letter from a correspondent, two or three sentences of which are well worth reproducing in every drug trade paper. These sentences are the following: "This is my fifty-third year in the drug business and I still retain my interest in everything that may serve to advance the profession I have loved so well. Have made it a rule to keep my clerks well supplied with good reading matter. Honestly, I think it has paid to do so. As a young man I tried to absorb everything of the kind that came my way—now I try and give the boys a chance"

A bill has been introduced into the Iowa Legislature which provides for changing the code so that the Board of Pharmacy must revoke the permit of any druggist proven to have broken the law. The statute now says that the Board "may" revoke the permit, which is a very different thing from "must." Though not authoritatively informed, we take it that this has reference to the statute governing the sale of liquor, a presumption the more reasonable because of the statement that the bill was referred to the committee on the suppression of intemperance.

There are some druggists and drug clerks who do not tamely submit to robbery by hold-up experts. Two burglars were discovered recently in a Chicago drug store by the clerk, who chased them out of the store, pursued them for several blocks, shooting at them continuously, and succeeded in wounding one of them seriously. It may be explained that this clerk was born and reared on an Arizona ranch where, if popular impression is justified, quickness with a shooting iron is a desirable qualification.

A woman sues an Ohio druggist for \$5,300 damages, claiming that he prescribed for her headache a certain proprietary nerve remedy with the result of practically paralyzing her and shattering her health. The moral of this brief tale is that druggists should not be prescribers, that there are some highly dangerous secret medicines which should be kept from the hands of the ignorant, and, last but not least, that those who suffer damage from trying to evade a doctor's bill by seeking the advice of an unqualified man and dosing themselves with unknown articles deserve all they get.

A Michigan druggist announces that after February 1 he will sell only for cash. Good for him! If all druggists were like him there would be very quick amelioration of many of the trade evils which the trade now complains of. The curse of the business of this country is the credit system, and in no line has it a worse effect than in the drug trade.

SOME PROPERTIES OF ARTIFICIAL ICE.—In artificial ice two zones are in most cases noticeable, an outer layer of clear ice, which surrounds an axis more or less turbid. An analysis by Christomanos (Oest. Chem. Ztg.) showed that the clear portion is nearly pure water, from which all except traces of the salts, present in the water originally, have separated. These are found almost quantitatively in the inner, turbid portion, where also the most of the microorganisms are present. In a laboratory experiment the author found in the clear ice, obtained from water containing 71 germs per ccm., only 8 to 10 germs, while the turbid inner section had taken up 45 germs per ccm. (Apoth. Ztg.).

QUINIUM LABARRAQUE.—Quinine, 5 parts; alcohol, 50 parts; Samos wine, 945 parts. Dissolve the quinine in the alcohol, mix with the wine and filter after ten days. (Pharm. Post).

NURAL is a nutritive preparation placed on the market by Klewe & Co., heretofore sold under the name Nutrol.

THE ERA BLUE BOOK.

The appearance of the Era Blue Book signalizes a new era in the drug trade of the United States.

The druggist's occupation is half professional, half business, but like other mortals, he is in business for the money he can make, and anything that will help him to a greater financial success is to his individual profit and beneficial to the trade as a whole.

The Era's plan of handling price lists with the annual Blue Book and the Weekly Change Sheets places in the druggist's hands a means for his greater success. It helps him to make an additional dollar; it saves his time, which is always money; it removes a long-standing source of annoyance, and enables him to better serve his customers.

In other words, as a buyer it keeps him posted, and enables him to find a price, and who makes an article, when he wants it without waste of time and without the loss of sales. When he wants to buy, this book tells him who makes, so that he can get competition in his purchases. When he has an inquiry for a new article not in stock this book tells him who makes it and what it will cost him.

We fully appreciate the fact that there are a great many "don't care druggists." Such druggists order without knowing the price. They don't know how much they make or how much they lose. These "don't care" fellows never take an inventory or strike a balance sheet. Some of them even don't keep books, and pay amount of the statement when they are pressed hard for payment, provided they have the money to pay with.

We are frank to admit we don't expect the "don't care druggist" to entuse over any plan for keeping better posted on where to buy his goods. But the live, up-to-date druggist, who is bound to make a success of his business, and who wants to take advantage of modern methods, is the fellow who will welcome the Era Blue Book and its accompanying weekly service.

A few words as to the contents of the Blue Book:

Part I. is a Directory of the Firms who supply the drug trade, arranged alphabetically by States and towns, with the name, specific address and business of each firm. There are some 7,000 such firms here given, and the convenience of such a directory must be apparent to everyone who wants to buy the goods these firms have for sale.

Part II. is the most complete and correct Price List of Drugs and Chemicals ever published in this country. We make this assertion without fear of correction. It contains all the staple goods, the rare chemicals, the new remedies and synthetic preparations, with the regular price of each to retail druggists. A grand total of some 8,000 different articles.

Part III. is a Price List of some 18,000 Patent Medicines and Proprietary Goods, with the retail and dozen prices of each article. This is by far the most complete list of these goods we have ever seen in print.

Part IV., however, is the most valuable section of the book, and one that offers the greatest possibilities and convenience to drug buyers.

Here will be found the complete Price Lists of some 200 Manufacturers, occupying from one-quarter page to 40, 50, 60 and even 80 pages for an individual list. An Index of these lists by firms will be found inside of the back cover, and preceding this a very complete Index of all the goods mentioned in all of these lists, giving the name of the manufacturer and the page where his price can be found.

Is it possible that any druggist can be found who is so indifferent to his own success, to his own convenience and to the saving of his own time that he cannot appreciate the value of having these lists all bound in one book and all indexed?

Did you ever know of a druggist who kept his Price Lists where he could find them when he wanted them and all indexed? To begin with, it is almost a physical impossibility. These lists are received in all sizes and shapes and colors. He could hardly devise a cabinet for keeping them, and to attempt to file them away and

keep up an index of the goods they contain would probably consume the entire time of a clerk and entail an expense of several hundred dollars per annum.

We feel that we have some good reasons for being a little proud of this Blue Book, and with each successive year, as it grows in size and completeness, it will in time fulfill our expectations and our assertions that **there is no book in a drug store so valuable and so indispensable to the druggist who wants to make a success of his business as this Universal Price List, or Era Blue Book, as we prefer to call it.**

But there is one more essential feature of the service which we must mention; that is the Weekly Change Sheets, issued every Thursday with The Pharmaceutical Era.

The Blue Book gives the prices ruling at the time of its publication, but these lists hardly get on the press before there are some changes, and it is a practical impossibility for all the manufacturers to attempt to keep the trade informed of the changes in their lists. This objection is overcome by the Weekly Change Sheet. The manufacturer notifies us of any changes, and we in turn notify the drug buyers. But these Change Sheets are not limited to the manufacturer's goods; they also notify the trade of all changes in the prices of open market goods, drugs, chemicals, etc.

The intrinsic and immediate value of this information is certainly apparent to every druggist who cares enough about his success to ask the price of an article before he buys it.

Are we not justified in laying especial emphasis upon the completeness of the Price List service which the Era furnishes to its subscribers? With the Annual Blue Book, and the Weekly Change Sheets and our regular Weekly Market Reports from New York and London, are we not giving the drug trade about all they could expect in the way of price list service?

It is for the druggists to answer this question. Our business is to serve the druggists with publications which will be useful to them. We like to be pioneers in our line, constantly endeavoring to discover something new which is an improvement upon the old, and if we are not very much mistaken, in solving this "Price List Problem" the Era will render its greatest and most practical service.

Correspondence.

We are pleased to publish here communications from our readers on topics of interest to the drug trade. Writers are requested to express their views as briefly as possible. Each article must be signed by its writer, but his name will not be published if so requested.

TROUBLED OVER MEDICINE STAMPS.

Linn Grove, Ind., Feb. 7.

Editor Pharmaceutical Era:—Revenue is taken greatly from the users of patent medicine. Bottle is sold under the supposition that it is stamped. Then a revenue collector gets hold of it, finds it is not stamped, and it will go hard with the druggist. The collectors do not take into consideration that many a bottle is stamped twice, once by the manufacturer and once by the retailer. Most patent medicines are stamped on the wrapper, a very few on the bottle. In handling both kinds one does not always know which are stamped. Take Peruna, for instance: we for a long time stamped this article, finally I broke the wrapper and found it stamped. We had been out of ½ cent stamps and had been putting on 2% cents, which added to 2½ equals 5½ cents. The collector never kicks when twice the required amount is put on.

STERLING HOFMANN.

ESSENCE OF PEPSIN.—The Pharm. Post gives the following formula: Three parts of pepsin are dissolved in 75 parts of water and 3 parts of hydrochloric acid, after several days 16 parts of alcohol, 16 parts of glycerin and 1 part of talcum added and the mixture well shaken, filtered and sufficient water added to the filtrate to make 125 parts. The product may be flavored with oil of lemon or other essential oil, dissolved in alcohol.

What Can Druggists Do to Increase Their Profits?

RETAILERS, WHOLESALERS AND MANUFACTURERS DISCUSS THIS
IMPORTANT QUESTION.

THE CAUSES AND THE REMEDY.

Be Careful in Purchasing and Sell for Cash.

This is an age of materialism, when everything is measured by dollars and cents. One century ago the shopkeeper was looked upon as one belonging to the lower class. Even now, in some of the foreign countries, the titled aristocracy and military officers are still looked up to with envious eyes; but in this country the great aim of many is to become a merchant prince.

The druggist, however, is not very apt to reach that enviable position, at least with his legitimate calling as the cause. The drug business is one of the pursuits in life that will, as a rule, give a man a respectable livelihood, which is about all that the more fortunate can get out of this world.

The drug business is tinged with sufficient scientific features to bring it above the simple idea of materialism. No doubt men get into pharmacy who are not adapted to it; and, unfortunately, we are not the best judges of our own shortcomings, while other people are not apt to tell us of our faults; what is more, we do not believe it when we are informed, but think our friend is envious.

In the drug business a man can always employ his time profitably; it is a business of much detail. The arrangement of his store, the neatness and cleanliness of every part is a great feature that should always be studied and kept in view. The show cases should always be in excellent order—not too full and not too empty; the shelf bottles kept in good harmony, being well-filled with faultless, clean and prime material; the wall back of them neat and of a color that makes a pleasant contrast or sets off the shelfware nicely; the ceilings and floors must look neat. All this can be accomplished without great expense.

From a commercial point of view it is important that a druggist concentrate his purchases as much as possible; a man who scatters his purchases among too many houses makes a serious mistake. Another great mistake is made in extending credit too liberally and neglecting to collect promptly at the end of each month.

As the variety of goods is constantly growing, it requires great caution not to buy unsalable goods; but when such mistakes are made, it is necessary to devise means to dispose of them and not let them get soiled on the shelf or in the drawer. It is very important to keep goods so that they will not spoil or deteriorate.

The stock should be gone over at least once each month and an inventory should be taken every six months, and a trial balance sheet made showing assets and liabilities.

Some years ago Bradstreet's Commercial Agency tabulated the failures of several years and they were as follows for one of those years:

Incompetence	2,546
Lack of capital	5,104
Failure of others	446
Neglect	481
Disaster	3,463
Fraud	1,142
Inexperience	910
Unwise credits	726
Extravagance	198
Competition	191
Speculation	181

This is a picture that is full of suggestions.

There has been a great deal of complaint made by the retail druggists on account of the small profits that are being realized. The cutting of prices on proprietary articles has added greatly to this condition. There are three great evils existing to-day from which a great

many druggists suffer. One is the cutting of prices on proprietary goods, the second is the giving of a percentage to physicians for the prescriptions that they send to be dispensed, and the third is that the retail dealer does a credit business.

That all retail business should be done on a cash basis there is not the least doubt, and especially should this be the case with the retail druggist. No one will deny that considerable losses are sustained by charging goods to their customers, and it is not only the losses, but also the expenses involved in keeping the accounts. If you charge an item you require a day book and a ledger. The time required in charging and posting is considerable. It is probable that you forget to charge an item occasionally, especially when you are busy. Very few people who have goods charged will come to you at the end of the month and pay their bills, hence you have to make out a statement and mail it to them or call in person—all of which involves expense and consumes time. While you or your clerk is doing this, your or his services are needed at the store. Then there are many who will have to be dunned repeatedly and some will never pay at all.

These losses give you anxiety and you worry over it, which depresses your mind so that you are not in the proper mood to wait upon your customers, to say nothing as to your health and the happiness of you and your family. When a man is in bad health or in a depressed spirit he cannot treat his wife and children as he should.

Why is the cash system not generally adopted? The reason is that the credit system has been in vogue from time immemorial, that we think it cannot be abolished, but it is a serious mistake. In every large city, and in some smaller ones, there are to-day business firms who have adopted the cash system, and we have yet to learn that any of them has not been very successful. The common argument is that your customers will be offended if refused credit and that they will trade somewhere else. In reality this is not the case, as most people will see the advantage and the justice of it themselves. It is only those that do not expect to pay at all that will feel offended, and these you can well afford to lose as customers.

If you trust a man and he cannot or does not intend to pay, he will, when you commence to ask him for pay, act as if he was offended and will then go where he is not known and pay cash, the same money that you ought to have. Indeed, we all know that when men are indebted to us, whether for goods purchased or even money loaned, they will be apt to avoid us all they can. We will not discuss in this connection how much better it is for every one to keep out of debt. Thousands of druggists have failed in business owing to the fact that they have too much standing out which they are not able to collect.

The National Association of Retail Druggists is becoming well organized; why not bring before the members this important subject? It is easier to enforce a reform of this kind than in cut rates.

The other two subjects above mentioned should not be overlooked or neglected, but if the credit system is abandoned and a strictly cash system adopted, it will do more to prevent failures or bankruptcy than any other movement. If you have not the cash to pay your debts you will have the goods, and if they are properly kept they are worth at least seventy-five cents on the dollar.

Know Your Business Thoroughly.

I have no revelation on this subject, and the question is as old as the business itself. There are some evident requirements and some perhaps that every pharmacist has not thought of. The first requisite to a successful and increasing business is the knowledge and practical mastery of it. Yet a poor location and insufficient means will often pull down a competent pharmacist, while abundant means to employ good assistants and a fine location will ensure success often to one who is a fair business man and not an educated pharmacist. In a general way, attention to business (which here counts for more than in almost any other business), economy and prudent purchasing and profitable selling will do for the druggist what they do for the retailer in any other line of business. Much depends on the reputation of a pharmacy. If a loafing place, cigar shop of the cigar stand kind, and still more if liquor selling facilities are prominent, success as a pharmacy is not attainable.

As to soda water, that depends on the location. A well-kept fountain is, as a rule, desirable in the majority of drug stores, and the profits of a good, well-situated cigar counter few of them can afford to neglect.

As to manufacturing their own pharmaceuticals. I agree with the theory that they ought to be able to do it, and to some extent, with practice, but practically, in any busy pharmacy the pharmacist can well let manufacturing alone and buy the best articles he can get. Usually they will be better than his own. The retailer should never rest in keeping his stock fresh, and the latest and most desirable goods in front, i. e., in full view. "Never let your store or stock look old," is one source of success and of profitable business.

It may not be "good form" for the doctors to advertise. It is decidedly bad policy for the druggist not to do so. I do not mean put one advertisement in the local paper and keep it there. The store, the stock, the advertising—but not the proprietor—should be fresh. Re-paint, rearrange stock. Put out some articles as inducements in a reasonable way. Don't settle down for eternity as you are. Improve. That there will be any very great or radical change in the methods of conducting a drug store, I do not believe. What I recommend is the effort of everyone in it to improve his present store, stock and business, and this doesn't at all shut out improving himself.

A Cutter Says to Increase Profits Increase Business.

As the Irishman said to the doctor in the well-known and slightly risqué story, "Ye flatter me," a pronounced, even aggressive, yea, notorious "cutter," when you ask me to answer within the limits of three hundred words the conundrum: "What can druggists do to increase their profits?"

The druggist's percentage of profit is large enough already, and should not be increased—rather decreased, if anything, especially in the matter of prescriptions.

The only rational way to increase profits is to increase business. This can best be done by attending strictly to one's own business, and not interfering with that of others.

A very large percentage of druggists spend more time in howling about the "wrongs of the drug trade" than in looking after their own business.

Strange that we never hear of grocers, or shoe dealers, or butchers, or hardware men, or dry goods dealers, or hatters, or clothiers, or booksellers appealing to State Legislatures for relief from real or imaginary trade evils. And yet these lines of trade are suffering as much from the modern evolution of business as are the druggists. It is only the druggist who flies to the law makers for paternalistic relief.

Ah! rejoins the registered pharmacist, but ours is a profession, not a trade. Stuff and nonsense; "bloody rot," when applied to business!

But to get down strictly to your question. To increase business: Be scrupulously honest in all things,

down to the minutest. You will in time be "found out," and it will not pay, as a bald business proposition.

You can't be honest to your customer and allow any commission on prescriptions to physicians. No honest doctor will use a cipher code in writing prescriptions. Both druggist and doctor will be found out in time, and it will do neither any good.

If you sell liquor at all, sell it honestly; i. e., in exact compliance with the law under which you are permitted to sell it. Do not violate any law on the subject under any circumstances.

Make and sell your own preparations as much as possible, but don't brutally cram them down the throats of your customers. Hand out just what the customer calls for, with the sales ticket; then, if the customer gives you an opening, as seven out of ten will, sell him your own preparation—not "just as good," but very much better, as you know, because you make it, and put the "patent" nostrum back on your shelf.

Every intelligent druggist knows that with scarcely an exception so-called "patent" medicines are founded in fraud and advertised in iniquity. They are simply "faith cures"—faith in lying advertisements!

Yet the mass of druggists are fighting to sell these nostrums. I fight their sales in every way possible, lose sales thereby, but gain the good will of the public, which is manifested by the largest prescription business in the United States, built up in four years.

Minor points, such as clean stores, polite clerks, attractive window displays, etc., are unnecessary to dwell upon. Let the druggist always remember "there is room at the top."

CHARLES H. MCCONNELL
Mgr. The Economical Drug Co.

Chicago, Ill.

The Jobber Recommends Organization.

"What can the druggists do to increase their profits?" I regret that I cannot give the matter the thought which its importance demands. As there is no royal road to wealth, so also may it be said that the path to success is not strewn with roses, but rocks, and the grade is steep. I have no formula which is a guaranteed panacea for the complaints of the retail druggist. The troubles which confront him are not different from those which men in every other line and department of commerce must face and solve.

The methods which the druggist can adopt depend largely upon location and environment, and no general remedy can be applied. Character, ability, enterprise and intelligence are necessary to-day in any and every department of trade and industry. Those who have these qualifications have the same opportunity to succeed to-day that has ever existed in the past and ever will exist in the future. Those who lack these qualifications will fail under almost any condition.

I have upon many occasions, as you know, advocated organization and co-operation on the part of the retailer. I have never advocated this as an end, but as a means, feeling that organization was the first essential to the betterment of present conditions. Wherever the retailer has organized for better methods and better profits the results have been fairly satisfactory, provided the organization was directed by conservative men, and provided further, that only such things were undertaken as could be reasonably carried out. Locally the condition of the retail druggist has been greatly improved and stimulated by co-operation and organization, and I know of no retail druggist in our field who is not prosperous, although the competition of the department store is as vigorous and injurious here as elsewhere. Through organization and co-operation have come better feeling, a closer connection, a betterment of trade methods and an increase of profit. I would recommend that the druggists in all sections where possible, organize with these ends in view, and invite their local jobbers to join their organization and give them the benefit of their co-operation and advice. The jobber and the retailer must stand together on this proposition. Their interests are identical and the best friend which the retailer has is the local jobber.

While, as stated above, I have no panacea to recom-

ment to the retailer I would make this suggestion. I take it for granted that he is a pharmacist and a competent one, or else it is impossible to help him. These premises taken for granted, he is capable of making his own pharmaceuticals. He should do it as far as possible; by which I do not mean that he should equip himself with an analytical laboratory, but that he should make all those preparations, and the list is a very long one, which can as well be made by a competent and careful man in the pharmacy as in the laboratory. He should also produce his own toilet goods and his own household remedies. He should put into them his skill, his judgment, and his taste. They must be standard and slightly. Having supplied himself as above he must put his energy and push behind these goods; in other words, he must make the business for himself rather than for other people. This does not necessarily imply that he must only sell his own goods, for that is impractical. He must as a merchant handle those goods for which he has a natural outlet, but his energy and push must be behind his own goods and not behind other people's.

There are other suggestions which I could make but I will confine myself to the above and will venture the opinion that this idea conscientiously carried out will prove a winner for all who will give it a trial.

Minneapolis, Minn.

Too Many Stores and Lack of Harmony.

"What can druggists do to increase their profits?" I suppose you have reference to the retail druggist, and as a jobber I can perhaps only theorize on this subject, as the conditions that confront the retail druggist to-day are entirely different from what they were a number of years ago when I was in the retail drug business.

It goes without saying that (1) there are too many retail drug stores to a given number of inhabitants, and (2) the department store has materially cut into the profits of the retail druggist; (3) lack of harmony and unity of the entire retail drug trade; (4) "wolves in sheep's clothing" in the shape of retailers who are furnishing wholesale and retail cut-rate stores with proprietary medicines.

The above gives my opinion why retail druggists do not increase their profits. There are, of course, many other reasons; prominently mentioned would be inattention to business, lack of courtesy to customers, carelessness in making credits, poor collectors, purchasing of too large a stock of goods that have no particular sale, doing business on borrowed capital, building homes and buying stores when not having the money to pay for same, and many other reasons which are obvious to any good business man.

I believe that a drug store can be run at a profit if it is conducted on right principles. If a retail druggist will make himself popular with his customers, gain their confidence, hustle for business, advertise judiciously, and avoid the items I mention above, he is pretty sure to make a showing of good profits.

JAMES E. DAVIS,

Williams, Davis, Brooks & Hinchman Sons,

Detroit, Mich.

Be Aggressive; Cultivate the Doctors' Favor.

Retail druggists can increase their profits when they fully recognize the dual nature of their business, study existing conditions and adopt an aggressive course instead of the negative position in which we find so many of them at the present time. There are two classes of druggists who are making a success of their business. The one, strictly a merchant, handles everything that can be placed to advantage in a drug store and purchases them strictly on commercial lines. The second, and we may add the higher class, recognizing the professional side of his business, seeks to develop it first in the line of prescription work, but incident to it (but by no means secondary) in the direction of furnishing supplies to physicians who buy and dispense their own medicines.

Notice, if you will, the many flourishing business centres where druggists of capital and ability allow physicians' supply houses to take the business of local doctors right out before their eyes, and the only effect is imprecation upon the manufacturer whose goods are thus handled, not realizing that they themselves would be able to control the situation if they would manifest an aggressive spirit. Another business centre a few miles away has his aggressive distributor and he says to his physicians, "We want your business and we will duplicate the prices of any supply house who seeks your patronage." It is true that the margin on such business is less than upon prescriptions or upon patent medicines as formerly sold. We are told also that physicians are poor pay, but the fact remains that proportionate to their number there are as many responsible physicians as there are of any other single class of customers seeking the drug store for supplies. Discrimination is used in trusting the general public—why trust every physician? Our friends in the retail drug trade lose sight of another important fact in this connection. We refer to the influence which every physician exerts in a community. The enterprising druggist secures this influence and with it an addition to his profits. The influence is lost when outside houses are permitted to go into any community and take the business which belongs to and ought to be retained by the local druggist.

GEORGE S. MERRELL,

William S. Merrell Chemical Co.

Cincinnati, Ohio.

Adapt Prices to Demand.

Until full prices are restored, one way the retail druggist can increase his profits is to follow one of the universal laws of trade and make his prices on proprietary articles according to the demand for each article. All staples in trade, be they dry goods, drugs, groceries or hardware, are sold at a slight margin of profit, the volume of business being depended upon to make up for the small profit, vide sugar, flour, etc., while goods in lesser demand yield a better proportionate price.

It is true that the price on most proprietary articles is arbitrarily fixed, or marked, by the maker. This very thing led to cutting, because the smart dealer could demonstrate to his customer—could actually hold the package under his nose and show him that he could sell \$1 worth for 50 cents or less, which is not possible with goods not so marked.

The cutting of prices places proprietary goods in the open market along with other commodities, such as senna, salts, etc., and here is where the universal law of trade is applicable. If an article is in slight demand, get the full marked price, 25 cents or \$1, for that particular article. If an article is in greater demand, make the price less, but do not cut too low. If an article is in constant demand, is a staple in fact, you can afford to take less and meet your competitor if necessary.

If this law is followed you will make a better average profit that may surprise you at the end of the year.

BERRIET H. HARDING,

Humphreys' Medicine Co.

New York.

Too Many Druggists; Seek Other Fields.

I would say in response to the inquiry, "What can druggists do to increase their profits?":

The training and intelligence required, the long hours of labor (all day and often extending into or through the night), the risk and responsibility connected with the retail drug business,—all certainly entitle those engaged therein to a reasonable compensation.

In the large majority of the cities of the United States it is a well known fact that they are not so compensated, unless by some annex in the shape of proprietary articles, active soda fountain trade, or other expedient. With the greater number the profit is *entirely* inadequate. How may this be remedied? This is a difficult problem manifestly, because the remedy has been carefully and wisely sought for, lo! these many years, without satisfactory settlement.

On one point all must be agreed. We should have *no* retail drug stores. The business is largely *overdone*. Young and ambitious men should keep conditions and the future in mind in the light of experience and plain observation, and turn their talents in some *other* direction.

Obviously, one reason the retail drug business is over-crowded is because of the small investment of capital required. The reader would say, "What are these young men with limited capital to do, then, for a calling?"

Note the wonderful expansion of manufacturing in our country, with the open door into foreign lands for American made goods. Let all young men take under consideration in every city the ever-opening prospects or larger things in the way of manufactures. Let them get together and in corporation or co-operative plans *join* their means and enter upon some of these opportunities. It seems almost like frittering valuable lives away to enter upon a largely overdone prescription business, as it is now carried on in most American cities, for a bare livelihood. Leave the field to fewer men, who then can prosper. Let the surplus look for "greener and broader pastures."

R.

Throw Out Patents; Make Your Own Pharmaceuticals.

To the pertinent question, "What can druggists do to increase their profits?" I would say:

1. Let the druggist and doctor work together. Here is the old proverb counts, "United we stand; divided we fall." If the druggist is asked whether Black's, Jones's or Smith's Sure Cure is good, answer you don't know and advise him to consult the doctor; he knows best what is good for the trouble. He makes it a life study to be able to find out what ails people and give appropriate remedies. As an illustration, tell the customer if his watch is out of order he would not think of taking it to a wagon-maker, but to the watchmaker.

2. Next throw out all patent medicines as soon as possible. Put up your own emulsion of cod liver oil or children's laxative and the like. Let them be good.

3. Put up all your own pharmaceutical preparations. Show the doctors that your pharmaceuticals are prepared according to the U. S. Pharmacopoeia and that their therapeutic action can be depended upon. Get your doctors interested, so much so that they will prescribe them. This will satisfy and please the doctors, benefit or cure the patients and prove a source of prestige and profit to the druggists.

CARL G. E. KLEI.

St. Louis, Mo.

Don't Substitute, Be Courteous, Advertise.

In reply to the question, "What can druggists do to increase their profits?" I beg to submit:

First—Exercise diligent care never to acquire the reputation of substituting. Give what is called for by your customer or ordered on prescription. Always sell the real thing. Make as much profit as you can, but make it honestly.

Second—Unfailing and uniform courtesy to the public, especially the ladies and children.

Third—Liberal advertising; a general patronage of trade and lay press according to the nature of your business; in short, a judicious use of printer's ink.

FRANK A. RUF,
Antikamnia Chemical Co.

St. Louis.

The Tri-Partite Agreement.

In discussing this question we must first consider the law of supply and demand, and second that the chief loss of profit comes from the cutter and department store using proprietary articles as an advertisement for their own ends. The large amount of money expended by manufacturers of proprietary goods is taken advantage of by the cutter and department stores in pushing

"Can you tell me where I can get a night-cap?"
"I kin not, but y'd better thry Moriarity's drug store jist beyant the corner. They keeps everything."

their own business. Any losses which accrue by selling at cost, and sometimes less, is charged to advertising. So long as this condition exists it is easy to see what will be the ultimate result. Not only will prices not be restored, but many articles will cease to be profitable to the manufacturer by reason of decreased demand. Dr. Sangrado, in his celebrated theory of blood-letting, gave as the reason for his patients dying that the process was not pushed thoroughly enough. Manufacturers seem to be deriving inspiration from Dr. Sangrado's experience, possibly with the same result.

The only remedy in my humble opinion will be by putting in practice, honestly, the tri-partite agreement; it is worth trying at any rate.

A. J. CORNING.

Baltimore, Md.

Organization the Only Hope.

Greater profits can be secured to retailers by better organization in their respective towns, thus promoting common interests. They should agree upon a basis of prices and adhere strictly to it regardless of the representation of the customer that a competitor is not living up to his agreements.

CHARLES HUBBARD,
Charles Hubbard, Son & Co.

Syracuse, N. Y.

Wants to Know But Doesn't.

I am deeply interested in the subject you are agitating. I have been trying to find out what to do to increase our profits for the past thirty years, but instead the profits decrease. Sorry I cannot throw any light upon the subject.

E. P. GALT.

Selma, Ala.

REMINISCENCES OF BUNSEN AND THE HEIDELBERG LABORATORY, 1863-1865.*

By HENRY CARRINGTON BOLTON.

I first met Bunsen in the lovely, retired valley of Engeler, Switzerland, during the summer of 1863. I had spent the preceding twelve months in Paris, working in Dumas' laboratory at the Sorbonne, and in the Ecole de Médecine under Wurtz, and was expecting to continue my studies in Heidelberg. Learning by accident that Bunsen was at an adjoining *Gasthaus*, I called on him and told him of my plans. He received me graciously, and immediately won my heart by his affability, by the charming smile that lit up his large features, and by his unselfish interest in my personal affairs. Being myself quite ignorant of the German language, we conversed in French, and he gave me useful hints as to the opening of the University laboratory.

My first semester at Heidelberg was devoted almost exclusively to laboratory work, but I attended Bunsen's lectures on general chemistry every morning at nine o'clock in the adjoining auditorium. Bunsen's habit of saying one word when he meant to use another was at first puzzling, particularly as I was very weak in German, but when he exhibited the violet vapor of iodine and called it chlorine, my previous knowledge of chemistry assisted comprehension. After every lecture Bunsen rarely missed spending several hours in the laboratory, going from student to student with inquiries, suggestions and useful hints. Desirous of securing my share of this personal contact, I soon found the best way to induce the Hofrath to linger was to have a supply of clean test-tubes and beakers on an orderly desk, with a query or two requiring experimental answers. Any suggestion as to the use of the spectroscope in connection with a substance under examination was sure to interest the professor, as that famous instrument was a comparatively new adjunct to chemical work, being then about four years old.

When in the laboratory Bunsen habitually carried between his lips a short, unlighted cigar, and he often stopped at a student's desk long enough to light the tobacco at a "Bunsen burner." In a few minutes the cigar was again without a spark, owing to his absent-minded neglect to pull on it. Absent-mindedness was a marked trait in Bunsen's character, and many amusing anecdotes are told of the difficulties it brought him. The statement that he remained a bachelor because he forgot his wedding day is, of course, apocryphal, as is the other about his putting on a suit of garments on the top of others that he had forgotten to take off, but the following came under my personal observation: "Bunsen used to dine every day at a little table reserved for him in a restaurant connected with the hotel in which I lived. One spring he fell into the habit of ordering veal cutlets and asparagus as the chief item for his meal, and without reflection or feeling that a change of diet would be agreeable, he continued to order 'Kalbs-Cotelette und Spargel' daily for several weeks, until one day the *Kellner* gravely informed him that asparagus was no longer in season and could not be supplied. Bunsen seemed to be immensely taken a-back and to realize for the first time that he had been dining on one dish for a long period. He soon recovered himself, however, and asked the waiter for the bill-of-fare, from which, after careful examination, he ordered mutton chops and peas, and this was his daily diet up to the time I changed my hotel.

When the laboratory was closed for the Christmas holidays I tried to get permission to work in the deserted rooms, but in vain, and not wishing to be idle I worked at growing crystals, improving a desk out of a hotel washstand and a heater out of the huge porcelain stove. Some time after I showed to Bunsen a single crystal of ammonium calcium acetate about three inches long, with perfectly regular facets, and of which I was quite proud. He looked at it rather solemnly, as I thought, and enunciated the single word "aussergewöhnlich." This was not in my limited vocabulary, and whether a commendation or a disapproval I could not divine; I nuzzled over the word all day, and on returning home the dictionary explained its meaning to my great satisfaction.

*Reprinted from Science.

As my knowledge of German increased I attended the lectures of Kirchhoff and of Kopp, but never was able to enjoy the latter's interminable sentences and involved style.

Bunsen's assistants in the laboratory at the time of my sojourn were Dr. Bender and Dr. Rose. The latter had the reputation among the students of giving more accurate instruction in mineral analysis than Bunsen himself. Rose is now professor in the University of Strassburg.

Bunsen's methods in mineral analysis were not wholly approved by the students. One day he stopped at my desk for a moment, and picking up a filter containing a moist precipitate, he inquired: "What have you here?" Seeing with consternation a portion of my quantitative precipitate sticking to his thumb, I hastily seized a "spritz-flasche" and washed the substance off his thumb into the filter on the funnel before venturing a reply. Bunsen smiled genially and passed on to my neighbor.

Bunsen showed extraordinary callousness to heat, being able to hold in his fingers metal nearly red hot; on one occasion, when stirring a glowing crucible with a very short spatula, his skin fairly sizzled, and for relief he took hold of the lobe of his ear with his smoking thumb and forefinger, explaining that the ear was the coolest part of the body.

The celebrated Dr. Fresenius, of Wiesbaden, having appropriated some discovery or method of Bunsen without giving credit, was cordially disliked by him, and he once showed it by a significant act. A student accosted the Hofrath as he passed by and put to him some simple question in analytical chemistry; on the desk lay open a copy of Fresenius's "Anleitung," whereupon Bunsen closed the book with a deprecatory gesture, pulled out the drawer of the student's desk to its extreme limit, and thrust into it as far back as possible the objectionable volume, saying: "Nun, mein Herr, we will proceed."

Bunsen was rather sensitive to criticism; one of my American colleagues tells me of an incident illustrating this. The professor proposed to the student the joint preparation of certain cesium and rubidium salts, saying he would secure several barrels of the mineral water rich in the chlorides, and would have the water boiled down to a small volume, ready for the separation of the rare elements. The American felt highly pleased at the flattering proposal, and to show his interest in the matter mentioned that he had studied under Prof. O. D. Allen, of New Haven, who had done work on cesium and rubidium. This was an unfortunate remark, however, for Allen had corrected Bunsen's figures for the atomic weight of Cs, and the Hofrath remembering this never again mentioned the subject to my friend.

In those days students were obliged to prepare some substances now commonly provided and to construct some apparatus with their own hands. Every student had to etch and calibrate his own eudiometer, and some of them wasted much time over the hydrofluoric acid process before getting good results. I remember, too, purifying potassium hydroxid by solution in alcohol (an extra charge), and evaporation in a large silver basin loaned by an assistant. One green Russian student bought at Desaga's potassium cyanid instead of the hydroxid, and was vainly trying to dissolve it, walking about the laboratory shaking the bottle for hours, when Bunsen noted its singular appearance, caused the operation to be suspended, and on ascertaining the nature of the substance cautioned the student against it.

Speaking of Russians reminds me of an amusing occurrence. One of them was instructed to precipitate a substance "mit überschüssigem Kali," and not finding any bottle labelled "überschüssiges Kali" he inquired for it of a neighbor who mischievously sent him to Dr. Bender, telling him the article was kept under lock and key with other costly substances, such as silver nitrate and platinum chlorid. The astonished assistant explained to the Russian that an excess of potash did not require a special bottle. The student was nicknamed "Überschüssiges Kali" for the rest of the semester.

Many nationalities were represented in Heidelberg laboratory; besides Russians there were Bassarabians, Hollanders, Bohemians, Germans (from North and from South), Austrians, one Chilian, one Englishman (the late Dr. Walter Flight), one Scotchman, one Irishman and

several Americans—fifty-nine students in all, of which fifty-eight were incessantly smoking, the fumes of tobacco mingled with the vapors of H_2S , SO_2 , HNO_2 , and NH_3 , making an atmosphere so thick that I regret not having cut off a slice as a souvenir.

The students from time immemorial had a voluntary organization to maintain order in the laboratory; they elected at the beginning of each semester an officer known as "Polizei-Diener," who was authorized to impose small fines for petty offenses, the money thus secured being devoted at the end of the term to the purchase of books for the small library placed on shelves in the balance-room. This custom, I understand, still obtains. At the opening of my third term I was elected "Polizei" and duly instructed in my duties. Being watchful and courageous, I collected more money during my term of office than had been added to the library fund for many years. The misdemeanors for which fines were imposed were leaving an unused gas-burner lighted, failure to resort to the "stink-zimmer" when noxious gases were generated, failure to replace bottles or apparatus used in common, and leaving a balance door open or weights on the pans, which latter was accounted a very heinous offense; the fines ranged from six kreutzers (Baden) to half a gulden. My official life was marked by two events that greatly excited and amused the whole laboratory; one of the events was regarded as an exhibition of unparalleled audacity, of which only an American was capable—I fined Hofrath Bunsen. The professor, after lighting his cigar at the flame of a Bunsen burner, left the gas burning and went out of the room; according to custom, and to the consternation of the students, I chalked on the desk that Bunsen had used the words "G Kr." over my initials, a notice that could not be erased until the fine was paid. Next day, when Bunsen approached the desk, he glanced at the inscription, smiled broadly, and to the amusement of the crowd of students that had gathered to see the result of my daring, opened his purse and handed me the six kreutzers, with a pleasant commendation of the fidelity of the "Polizei."

The other event concerned a very wretched American, whose numerous fines I was unable to collect; when they reached the enormous sum of one and a half gulden (about 60 cents) I consulted some of the older German students, stating the facts and asking for advice. They declared they had never heard of such a case, and they authorized me to confiscate some chemical apparatus belonging to the American and to sell it at auction. I secured a fine beaker glass, the outside one of a large nest, and after due notice, amid the shouts of the fifty-nine students gathered in the lecture-room, the beaker was sold at auction; the competition to secure it was so keen that it brought a very high price, the sum covering the fine plus the value of the glass. The excess had to be paid back to the lucky American, so that the fine did not come out of his pockets after all.

Several times in the course of his life Bunsen was injured by explosions. He was popularly believed to be minus one eye, one ear and one lung, and there is some foundation for this, for he lost an eye when working at cadocyle, and he was slightly deaf. It was related of him that on one occasion a violent explosion threw him to the ground and made him unconscious. On coming to his first words were: "Has any of the substance been saved?"

In 1865 Bunsen was invited to fill a chair in the University of Berlin, and after due consideration he declined the flattering call, to the delight of all educational Heidelberg. In his honor the students organized a torchlight parade; the chemists marched in a body, and, carried away by my enthusiasm, I imprudently joined them, carrying a torch with the crowd. The procession paraded the principal streets, and then assembled in the open square before the Aula, or central hall of the University; there the students, singing the "Studenten Lieder" and forming a ring, gradually closed in towards the center, making the ring smaller, until at a given signal they threw their half-burned torches into the very center, and the pile blazed on high, making an impressive ceremony. I have said I imprudently joined, because I failed to anticipate the disagreeable consequences—the smoke of half a thousand torches, the dripping grease, and the dust of the streets combined with the moist exudation

of my membranous integument to form a black deposit that would have honored a stoker, besides ruining a suit of clothes.

During my residence in Heidelberg a lamentable and terrible affair took place that threw a profound gloom over the University and the entire town. Two German students, having quarreled, decided the earth was not large enough for both of them to live in, and resorted to the diabolical practice called the "American duel." In a darkened room the two young men drew lots, having sworn that he who drew the black ball would commit suicide. The unhappy loser went to his room and discharged a bullet into his breast, but missed his heart and lingered for several days on his deathbed. His parents were summoned by telegraph, and besought him on their knees to disclose the name of his antagonist, but he steadfastly refused, and died with the secret in his heart. The students not only excused his conduct but praised his courage, and when his remains were taken to the railway station to be transported to a distant city they accompanied the funeral cortege with torches and music. The students claimed he was not a suicide, for he was killed in an honorable duel, and they maintained that his opponent was not accessory to his death because he shot himself. I had many arguments with them, and never could convince them of their extraordinary tergiversation.

The whole system of duelling at Heidelberg is an interesting feature of student life that I had good opportunities of observing without taking part, but, as Kipling says, "that is another story."

The intimacy of Bunsen and Kopp is well known. I have often seen them walk through the narrow streets hand-in-hand, like affectionate schoolgirls, Bunsen's large frame and Kopp's diminutive stature making a strong contrast.

Bunsen had great talents and personal attractions, yet he did not succeed in fostering original work on the part of those who studied with him. I think this is partly due to the fact that they were chiefly beginners, and when they had acquired the rudiments of general chemistry they took to the fertile fields of organic chemistry under other masters. Yet his pupils include some men of high rank in the profession—Lothar Meyer, Sir Henry Roscoe, Beilstein, Lieben and Carius.

I last saw Geheimrath Bunsen during a brief visit to Heidelberg in 1891. He had retired from active duty, and complained of the infirmities of advancing years, being subject to rheumatism, but he exhibited the same cordial manner, the charming smile and a willingness to listen to the accounts of Americans who had pursued their studies in the Heidelberg Laboratory. Bunsen died, after a lingering illness, August 16, 1896, at the great age of 88.

Among the Americans contemporary with me may be named:

Eli W. Blake, afterwards professor of physics at Brown University, deceased.

Orren W. Root, afterwards professor of chemistry at Hamilton College, deceased.

Charles Wolf, of Cincinnati, deceased.

George M. Miller, of New York.

Harry McBurney, of Boston.

Lyman Nichols, of Boston.

Arnold Hague, of the United States Geological Survey.

Frank Slingluff, of Baltimore.

There was no club or association among the Americans such as exists in Göttingen, and a full list of Americans who studied under Bunsen could only be made from the official register of the university.

Of the charm of residence in the picturesque little city on the Neckar, with its magnificent ruined castle, its attractive forest-covered hills threaded by enticing paths, its historical associations, and its excellent beer, there can be but one opinion; but in winter we often felt the truth of the old couplet:

Heidelberg ist eine schöne Stadt
Wenn es ausgerechnet hat!

PAGLIANO SYRUP, according to an analysis by Helnze, is composed of water, 65.53 per cent.; alcohol, 14.38 per cent.; extract of licorice, 16.79 per cent.; senna, 2.63 per cent.; resin of scammony, 0.37 per cent., and resin of jalap, 0.3 per cent. (Pharm. Post).

THE CLASSIFICATION OF ESSENTIAL OILS.

By ERNEST J. PARRY, B.Sc.

In the various papers and text-books recently published on the chemistry of essential oils two methods of classification have been adopted, and at times attacks on, or apologies for, the one or the other have been made. That which the author adopts in "The Chemistry of Essential Oils" is that which is followed by most authorities, viz., by grouping the oils according to the natural orders of the plants which produce them. The other method of classification is adopted by Charabot, Dupont, and Pillet in "Les Huiles Essentielles," and may be described in their own words as follows: "Ils classent les essences d'après la fonction chimique du principe qui y domine et les distribuent ainsi en onze familles." Those, then, who follow this system take a definite compound and group together all those oils which contain it as their predominating constituent.

The present note is intended as a criticism of this latter method of classification.

In the first place, assuming that the active constituent is well ascertained and agreed upon, this system will be found to produce many inconveniences; secondly, in those cases where there is any reasonable doubt as to what is the principal constituent, or where the characteristic odor of the oil is modified by a secondary constituent, the confusion becomes much more accentuated, as will be seen in the sequel. In order to illustrate these points, a few specific examples will best serve the purpose.

Charabot's first group is that of the "Terpene alcohols and their esters." Passing by the fact that it is not correct to include geraniol and linalol in this group, we find that under these two alcohols the following oils take their position, a position which must be seen to be very artificial when carefully examined.

Oil of—	LINALOL.	Oil of—	GERANIOL.
Linaloe		Palmarosa	
Coriander		Geranium	
Bergamot		Rose	
Lavender		Citronelle	
Spike			
Sage			
Petitgrain			
Neroli			
Limette			
Ylang-Ylang			
Cananga			

In every way linalol may be regarded as the active and principal constituent of oil of linaloe; it occurs to the extent of 80 to 90 per cent., and certainly dominates the odor. In the case of coriander oil, although the characteristic odor is undoubtedly due to a secondary constituent, linalol is the predominating constituent. Bergamot oil, again, clearly owes its odor to the amount of linalyl acetate it contains, and pure linalyl acetate closely resembles bergamot oil in odor. But when we come to lavender oil a difficulty at once arises. Undoubtedly French lavender oil owes its value chiefly to the presence of say 30 to 40 per cent. of esters, of which a considerable amount is linalyl acetate. But the odors of bergamot and lavender oils are so different that it becomes a mere form of words to ascribe them to the same constituent, viz., linalyl acetate. The bodies which modify the odor of lavender oil into what it is, must be important, and possess some claim to be called principal constituents. Further, English lavender oil contains as a maximum 10 per cent. of linalyl acetate, which certainly is not its principal nor predominating constituent. English and French oils of lavender cannot, therefore, remain together under this system; the former might possibly find a place with the cineol-containing eucalyptus oils. The common, but incorrect practice, of calculating ester percentages to a single identified ester, when several undoubtedly exist, is possibly responsible for the inclusion of neroli oil in this group. It certainly contains a fair amount of linalol, and from 10 to 20 per cent. of esters calculated as linalyl acetate, but neither of these bodies can be regarded as the principal constituent. Methyl-*o*-amidobenzoate, a crystalline body, occurring to a quite small extent, is certainly responsible for the fluorescence, and to a great extent for the characteristic odor of the oil. Has not this a very strong claim to be termed the principal constituent? And so on.

Otto of rose and oil of citronelle are classed next to one another. But how can one regard the two as possessing the same principal constituent because they both contain geraniol?

Under citral and citronellal we find that lemon-grass, orange, lemon, and the sweet-scented eucalyptus oils are grouped. Here the confusion becomes very marked. Lemongrass oil contains, say, 80 per cent. of citral, lemon oil contains 90 per cent. of limonette, and the remaining 10 per cent. consists of citral, citronellal, esters, etc. Chemically, limonene is the principal and predominating constituent, but the odor has been chosen here as the basis of choosing the principal constituent, a principle not followed in the case of lavender and bergamot oils, as shown above. Then orange oil clearly has no place here, as citral is undoubtedly not in any sense its principal constituent. With the citral containing eucalyptus oil, it is only awkward to separate them from the other eucalyptus oils.

And in many other cases the same difficulties arise, and many oils will fall into several different groups, according to the purely conventional way in which their principal constituents are determined upon, whereas by classifying according to natural orders, each oil falls naturally into its place, and the chemical differences between oils from closely allied plants are properly accentuated, whilst their natural relationships are not concealed. From every point of view it appears most rational and scientific to adopt the botanical system as the basis of essential oil classification.—(Br. & Col. Dr.)

HOW TO LEARN.

It is possible to write columns about the degeneracy of apprenticeship. Fifty years ago the master took pleasure in instructing his pupil; that was what he was paid for doing, and it was practically all the instruction the druggist's apprentice got. There is a big change now, but events and times have changed; there are books and schools and schemes for encouraging study which did not exist then. Whether they are better or worse than what our forefathers had the advantage of does not particularly concern those for whom these columns are printed, and who are mainly concerned in taking all advantage of facilities for improvement and study that exist, ultimately securing the hall mark of competence.

Taking the student of pharmacy at the beginning, we assume that he wants to make the most of his apprenticeship. There are many ways in which he can find opportunities for gaining information. Even in bottle-washing (if he has that to do) there is something to be learnt. Why is one bottle washed with alkali and another cleaned with hydrochloric acid? The live apprentice will not rest satisfied till he finds that out for himself, and he need not be surprised if the fact comes in handy in the examination room. In his daily work of dusting the shop bottles he has splendid opportunities of acquiring complete familiarity with the names and general characters of all the galenicals and chemicals in the shop. The very act of washing oil, resin, tar, or varnish from his hands, or cleaning a mortar which has been soiled with one or other of these substances will give him, if he asks the reason why, much valuable instruction as to the action of various solvents. His very mistakes will be helpful, for he will not fail to profit by the knowledge when he learns, e. g., why it was that the glass mortar cracked right across when he dissolved common salt in it to make brine.

Next to personal observation at the daily tasks the thing most important for the apprentice to do is to take advantage of any local facilities for education that there may be. There are now comparatively few towns in the country where facilities for learning elementary chemistry and physics are not available. Where a choice of such classes is to be had we recommend students in their first year to take the first stage of mathematics, if they have not already had this subject at school. The algebra, in particular, they will find of enormous advantage in their future studies, and, as a foundation for a proper acquaintance with physics and chemistry, a knowledge of mathematics as far as the first stage is really essen-

tial. For the second session the student should take up physics and inorganic chemistry; in the third he could continue his chemistry, theoretical and practical, at least to the advanced stage and make a beginning with botany, while in the fourth year he should be able to overtake organic chemistry and advanced botany. A young man who has laid such a foundation as is thus obtained need have no fear of any examiner after he has had a few months' hard reading at a pharmacy school. It appears that there is a lack of opportunity for studying botany in the way we have mentioned. There are usually classes in chemistry in abundance, but either the demand for instruction in botany is too small to be worth supplying, or the standard hitherto set up has been much too high. Fortunately no eager student can be deprived of the opportunity afforded him by nature, and she, after all, is the best teacher.

Pharmacy and materia medica are best studied practically. Where an apprentice has the duty of assisting in the manufacture of ointments, pills, tinctures and the like, he will learn more by intelligent attention to details in the actual work in hand than by weeks of "reading." Similarly with materia medica. Every apprentice ought to be perfectly familiar with the appearance and character of all the commoner drugs long before he is out of his apprenticeship, together with much of the information required in the minor examination. Prescription reading he should be perfectly familiar with.—(Chem. and Drug.)

THE PRESCRIPTION SCALE AND QUANTITATIVE CHEMICAL WORK.*

BY CARL G. HINRICHS.

The druggist being held responsible for the purity and strength of his goods by the specifications in the Pharmacopœia, it is essential that he should be able to satisfy himself, by his own personal work and by the means at his hands, of the purity and strength of the preparations in stock.

The Pharmacopœia throughout implies the use of the analytical balance—a costly instrument, requiring special skill of management and great length of time for each operation.

By an extended series of determinations carried on during the past two years, I have satisfied myself that an ordinary prescription balance—even if without a protecting glass case—is perfectly sufficient for all practical work demanded by the Pharmacopœia in the way of volumetric testing.

Under the preparation of normal oxalic acid the Pharmacopœia implies "when a delicate balance is not at hand," that the druggist is unable to prepare a solution of the exact strength. The two and a half grains on a little over two ounces directed to be weighed out makes a quarter of one per cent. difference in the two standards, and implies that the druggist's prescription balance will turn only when this or a greater quantity be placed on the pans. The total error would thus be one-half of one per cent. As a matter of fact, the druggist buys a good prescription balance and keeps it in fairly good order. The Pharmacopœia does great injustice to the druggist, for I have found the ordinary prescription balances without cover will show less than one-fifteenth the above difference on two ounces.

In all my determinations I added 25 cubic centimeters of water to my weighing flask, bringing the total weight to near 63 grams, the quantity directed by the Pharmacopœia to be weighed off for oxalic acid. The tare was first taken on a prescription balance and then on an analytical balance. The substance to be tested is next added to the weighing flask, about 1 to 2 grams for concentrated acids, and 10 grams for diluted acids. I weighed again, first on the prescription balance, and then on the analytical balance. The difference gave the weight taken by each balance separately. Now I transferred contents to a beaker, rinsed the flask, ran in normal alkali till indicator by change of color showed that all the acid was neutralized. Multiplying the number of cubic centimeters used by the milligram equivalent gave

weight of absolute acid in the sample tested. Reducing this to grams, and dividing by weights taken and pointing off two places to the right, gave me the per cent.

From the large number of double determinations made in this manner, I conclude that for all practical purposes the prescription scale of our drug stores is perfectly sufficient for all volumetric work of the Pharmacopœia. A few examples are appended.

Acidum Sulphuricum.—I took 45 drops; weight on prescription scale, 1.46 grams; on analytical balance, 1.459 grams.

Normal sodium hydrate required was 27.65 cubic centimeters which, at 49 milligrams per unit, amounts to 1354.55 milligrams, or 1.3549 grams of absolute sulphuric acid, or equivalent 49.

Hence the per cent. of acid found is 92.79 by the prescription scale, and 92.36 by the analytical balance, results which are practically identical, say 92.5.

Acidum Lacticum.—The 40 drops taken weighed 1.69 gram on prescription scale, 1.6855 on analytical balance. Required 8.90 cc. of normal hydrate, hence contains 801 milligrams, or 0.801 gram, of absolute lactic acid, the equivalent of which is 90.

The percentage is 73.48 by prescription and 73.52 by analytical balance. Results practically identical, 73.5.

Acidum Hydrochloricum Dilutum.—Four 2-cubic centimeter pipettefuls taken weighed 5.50 grams on the prescription, 8.4985 on the analytical balance.

Of normal hydrate 29.50 cc. were required for neutralization, showing the presence of 1087.7 milligrams, or 1.087 grams, of absolute hydrochloric acid, the equivalent of which is 38.5.

By the prescription balance the per cent. is 12.706, while by the analytical balance it is 12.700. Both results are identical to the hundredth, 12.80 per cent.

PHOSPHORESCENT SULPHIDE OF STRONTIUM.

M. José Mourelle has presented to the Academie des Sciences an account of his method of preparing a phosphorescent sulphide of strontium. The same experimenter has previously shown that certain substances, such as carbonate of manganese and sub-nitrate of bismuth, in small proportions, have the property of exciting the phosphorescence of strontium sulphide. In his recent experiments with sulphate of manganese, he has succeeded in obtaining a brilliant phosphorescence. The method of preparation is as follows: A mixture is made of 100 grammes carbonate of strontium, 30 grammes sulphur and 0.2 gramme sulphate of manganese, pure and anhydrous; these are well mixed and put into an earthen crucible, well closed. The crucible is heated to a bright red for three hours. In this manner a sulphide of strontium is formed which is almost white, hard and possessed of an intense yellow-green phosphorescence, which may be excited by exposure for a few seconds to diffused light. The experimenter describes several other methods of preparation, by which he has progressively arrived at results even more satisfactory. He takes, for instance, 100 grammes carbonate of strontium, adding 50 c.c. of water in which have been dissolved 2 grammes of dry sodium carbonate and 0.5 gramme fused chloride of sodium. After desiccation, the mixture is calcined, and to the impure strontia resulting are added 30 grammes of sulphur and 0.2 gramme sulphate of manganese. By submitting this mixture to an intense heat, a sulphide of strontium is obtained whose phosphorescence is more brilliant than in the former case, and it is excited with less exposure to light. The experiment which has given the best results is the following: With 100 grammes carbonate of strontium is mixed a solution of 0.2 gramme sulphate of manganese in 50 c.c. water; to the mixture are added 30 grammes of sulphur, 0.5 fused sodium chloride and 2 grammes sodium carbonate. This mixture, heated in a crucible to bright redness for three hours, gives a sulphide which is rather white, hard and granular, possessing a very great phosphorescent power, it being excited by the smallest exposure to diffused light.—(Sci. Am.).

*Read before the Missouri Pharmaceutical Association.

PHARMACY.

SUDORAL, a liquid recommended for perspiring feet, has been found to contain benzoic, boric and tartaric acids and alum. (Pharm. Post).

COCA ELIXIR.—Baier gives the following formula: Coca leaves, 60; alcohol, 120; Malaga wine, 500; simple syrup, 850; water to make 1,000 parts. The coca leaves are macerated twelve hours with the alcohol, the wine is then added and the maceration continued a week longer. The liqu'd is then expressed and the residue extracted with sufficient water to bring the final product up to 1,000 parts after addition of the syrup. After several days the liquid is filtered. (Pharm. Post).

RUBBER CAPS FOR MORTARS are recommended by Dr. Scholl (Chem. Ztg.) to overcome the objectionable features of powdering hygroscopic, brittle, poisonous, maledorous or otherwise obnoxious substances in an open mortar. The cover closes the mortar air tight and has an opening in the center for the pestle. To allow ample room for the movement of the pestle, the cover is raised in the center a little above the rim of the mortar. (Apoth. Ztg.).

GUAIASANOL is the trade name given by Einhorn and Huetz to a new deodorant, antiseptic and anaesthetic discovered by them, whose chemical composition is that of a hydrochloride of diethyl-glycol-guaiacol. It crystallizes in white prisms, melting at 184° C. It is readily soluble in water, and has a feeble odor of guaiacol. The compound is readily absorbed and non-toxic. The dose is 3 Gm. (45 grains), given three to four times daily. Addition of alkali carbonate to the aqueous solution precipitates the free base in form of an oil. (Pharm. Post).

FIREPROOF PAINT IN POWDER FORM is prepared by R. Scherer as follows: A solution of silicate of soda is mixed with chloride of zinc solution and the resulting precipitate dried. Fifty parts of this are mixed with 5 parts oxide of zinc, 20 parts sulphate of ammonia, 15 parts sal ammoniac and 10 parts of a mineral paint—for white, zinc white—and the mixture finely powdered. The objects to be painted are covered with a solution of silicate of soda and the powder dusted thickly upon it. After some time the excess is shaken off and another coating of silicate of soda applied. (Drog. Ztg.)

MILK STERILIZATION WITH APPLICATION OF CARBONIC ACID is employed by Bendixen, of Copenhagen. The ordinary method of sterilizing milk by heating to a temperature near the boiling point has the disadvantage of imparting to it a peculiar taste, which is to a considerable extent due to the contact with atmospheric oxygen during the heating. Bendixen saturates the milk before boiling with carbonic acid, boils under pressure at 120° C., and finally removes the carbonic acid by displacing it with sterilized air. Milk treated in this manner forms no skin on the surface, and retains the power of separating cream. (Apoth. Ztg.).

COD LIVER OIL EMULSION WITH CASEIN-SODIUM.—E. Léger, who proposed some years ago casein-sugar as an emulsifying agent, states in Jour. de Pharm. et Chim. that this preparation has on further trial been found unsuited and too expensive for preparing emulsions containing a large proportion of oil, particularly cod liver oil. Instead, the author now recommends a solution of casein-sodium, prepared as follows: To 1 liter of cow's milk, warmed to 40° or 45°, 30 Gm. of ammonia water are added, the mixture transferred to a separating-funnel and kept undisturbed for 24 hours at a temperature of 18° to 20°. The lower, opalescent layer is then drawn off, warmed to 40° and the casein precipitated with acetic acid. This precipitate is washed with cold water by decantation and expressed in a cloth. For preparing 1 liter of cod liver oil emulsion 5 Gm. of sodium bicarbonate are dissolved in a mixture of 100 Gm.

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Heal, Selo, Ohio.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

All students who wish to procure the Era Class Pin are requested to send in their orders promptly. The price of the pin is \$2; the lowest cost consistent with good material and good workmanship. This pin has been illustrated in this column for some time past. It is of ten carat gold, with the letters and design in colored enamels; very attractive and tasty and sold at bare cost of production. Cash must accompany order, and please state what style of pin is desired, whether stick pin, button or safety pin.

Another supply of lectures was sent last week to both junior and senior students; juniors receiving lectures 38 to 45 and seniors 35 to 42. This installment will last until March 8.

Read This Bulletin Each Week.

distilled cherry laurel water and 50 Gm. of distilled water and the casein from a liter of milk added. This swells at first, then dissolves as it forms the sodium salt. The resulting opalescent fluid, measuring about 200 Cc., is poured through a fine sieve and filled into a 2-liter bottle, 500 Gm. of cod liver oil then added in five separate portions, with vigorous shaking after each addition until completely emulsified. Finally 250 Gm. of simple syrup are added and sufficient water to make the product measure 1,000 Cc. The cherry-laurel water serves as flavoring agent and preservative and may be replaced by water if creosote or other antiseptic is added. Moist casein does not keep; it is advisable, therefore, to prepare it as wanted or preserve it in form of the solution in cherry-laurel or creosote water. (Apoth. Ztg.).

PREPARATIONS FOR CLEANING GOLD, SILVER AND OTHER METALLIC ARTICLES.—Gold: Distilled water, 1,500 parts; acetic acid, 15 parts; sulphuric acid, 15 parts; oxalic acid, 7.5 parts; polishing rouge (ferric oxide), 15 parts. The last ingredient is mixed with the clear solution of the others. The articles to be cleaned are rubbed with cotton moistened with the liquid until bright, then rinsed in warm water and dried. Silverware: A thin paste of prepared chalk, hyposulphite of soda and distilled water is rubbed on the surface with a brush. It is then rinsed off in pure water and dried in sawdust. Silver coins: The coins are placed in a bath of 1 part sulphuric acid and 9 parts water, and allowed to remain until the black coating of sulphide is removed, which usually requires five to ten minutes. They are then rinsed in pure water, washed with soap by means of a soft brush, again rinsed off, dried with a soft cloth and carefully polished by rubbing with chamois skin. Silverplated articles are treated with a mixture of 2 parts prepared chalk, 2 parts cream of tartar and 1 part alum. This mixture should be preserved in well stoppered bottles until wanted. For use a little of it is moistened with water and rubbed over the surfaces. The articles are then washed with soap suds, rinsed and dried in sawdust. When the plating is much blackened by sulphide, the objects may first be immersed for a moment in muriatic acid. Goldplated bronze: is cleaned by immersing in a solution of 1 part aluminum sulphate in 10 parts nitric acid and 40 parts water. Any fatty matter must be first removed by washing with a warm solution of caustic potash. Britannia metal may be polished by means of polishing rouge made into a paste with oil, then washing with soap suds, drying and rubbing with chamois skin. (Drogisten Zeitung).

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

More reverses for the British mark the progress of the military campaign in South Africa. Last week the three British forces that are trying to relieve the three beleaguered towns—Ladysmith, Kimberley and Mafeking—each suffered a repulse. Gen. Buller, after a hot fight lasting three days, found that he could not force the Boer position on the Tugela, and retired. Gen. Hector Macdonald, commanding part of Gen. Methuen's force on the Modder River, took an advanced position, but found it too hot to hold and had to withdraw, and Col. Plumer's relief force has been stopped by the Boers eighty miles from Mafeking. Considerable talk is being heard of a new central expedition to push across the Orange River into the Free State, but there is no definite news regarding it yet.

Lord Roberts has notified the War Office that forty Highlanders, who were previously reported killed at Magersfontein, are prisoners at Pretoria.

At a meeting of the British Government at Victoria, British Columbia, a resolution was passed urging the Dominion Government to offer Great Britain 10,000 troops at the expense of Canada.

The British War Office announces that fifteen transports will soon be dispatched with 13,000 troops, including the Fourth Cavalry Brigade, militia battalions and 3,000 voernantry, for South Africa.

An attempt to censure the Government's war policy was defeated in the British House of Commons last week by the decisive vote of 352 to 139.

A Berlin dispatch says that Dr. Leyds leaves there very much dissatisfied because of the refusal of Emperor William to receive him. He expects to go to St. Petersburg.

A peace meeting last week Wednesday, at Northampton, Eng., was broken up by a mob, and Henry Labouchere, M. P., the peace speaker, was assaulted.

With the fresh additions to the British forces in South Africa soon to be made, Lord Roberts will have an army of effective men in the field numbering 194,000. The Transvaal special war tax of 2s. 6d. per acre affects 3,000,000 acres of English-owned land, a part of which is not worth more than the tax.

The Maharajah of Jaipur, India, has made a donation of 100,000 rupees to the British South Africa war fund.

Ninety big guns for the Boers have been dispatched from Pretoria to the front, and Pretoria forts have been practically denuded of artillery.

The Philippines.

Gen. Kobbe's expedition has occupied the islands of Samar and Leyte. In a fight at Tacloban, Leyte, ten insurgents were killed, and the Americans captured five cannon and large quantities of hemp. The two regiments have now occupied nine towns and placed 150,000 bales of hemp on the market.

The President has appointed Circuit Judge Taft, of Cincinnati, chairman of a new Philippine Commission. He will sail from San Francisco some time after March 15. Judge Taft will establish a civil government in the Philippines.

It is said that Gen. Otis will soon resign his post in the Philippines to return to the United States. Gen. MacArthur may succeed him.

Filipino insurgents ambushed an American supply train in Luzon last week Wednesday, killing six Americans of the escort and two native drivers.

Other Foreign News.

The industrial boom throughout the German Empire continues, with rising prices for iron and other commodities.

Emperor William has approved the design of a silver prize to be awarded to the winner of the Brooklyn Musical Festival. Around the base are the arms of Germany and the United States.

Hundreds of deaths from sunstroke occurred in Buenos Aires last week.

The German direct cable from Embden to New York, by way of the Azores, will be laid by a London company. It will cost £985,000. The cable will be 4,335 miles long.

Great indignation is felt by German artists at the announcement that managers of the Crystal Palace exhibition in London will refuse all German paintings.

The mortality from the plague in Bombay last week displayed was unprecedented. There was a total of 408 deaths, and the situation is aggravated by the famine refugees.

A decree has been issued at Lisbon announcing that the bubonic plague has disappeared from Oporto, and that the quarantine of that port has been relaxed.

There is little diminution of the plague in Northern Japan, and numerous deaths occur among the workers of the Medical Brigade.

Fierce agitation has been instituted in Japan against the abolition of Buddhism as the State religion, and also against a proposal that ministers and teachers shall be excluded from politics.

The influenza, which has spread throughout Germany now numbers 60,000 victims in Munich. In Berlin every bed in every hospital is occupied.

The result of the plebiscite in Mexico shows a nearly unanimous vote for the re-election of President Diaz. Bogota, the capital of the Republic of Colombia, has fallen into the hands of the insurgents.

The new armored German cruiser *Furstenst. Bismarck*, to be placed in service April 1, is the first ship of the new type. She is of 10,000 tons displacement, has three propellers, and is capable of 19 knots.

There is excitement in Nicaragua over pressure by Norway to enforce the payment of claims. President Zecaya is disposing troops to resist any forcible attempt to collect.

DOMESTIC.

Diplomatic.

Secretary of State Hay and Ambassador Lord Pauncefote have signed a convention to supersede the Clayton-Bulwer treaty, by which all claims to dual control of the Nicaragua Canal are relinquished by Great Britain, and by which it is agreed that the canal shall be absolutely neutral and open to the ships of all nations both in peace and in war. Friends of the new treaty predict that it will be ratified by the Senate, although there is considerable opposition to the neutrality proviso.

The Senate has ratified the Hague peace treaty and the Extradition treaty with the Argentine Republic without objection or division.

The Senate has ratified the extradition treaty with Peru and the Mexican boundary treaty.

A reciprocity arrangement with Italy has been signed by Commissioner Kasson and Ambassador Fava.

Congress.

The House of Representatives has passed the Indian Appropriation bill. An attempt to revive the policy of making contracts with religious schools for the education of Indian children failed.

The Senate Committee on Elections has decided that no further proceedings be taken in the protest against Senator Scott, of West Virginia, and he will continue to hold his seat.

A number of Democrats in Congress contend that the Constitution extends over the Philippines and that the people of the islands are entitled to all the rights and privileges of citizens of the United States.

The Secretary of the Navy has sent to Congress deficiency estimates of \$88,300 to meet increased expenditures incident to the establishment of naval stations outside of the United States and of \$1,622,000 for the regular naval bill.

Mr. Williams of Mississippi declared in a speech in the House last week that the absorption of the Philippine Islands would be ultimately ruinous to the American producers of cotton, rice, tobacco, hemp and sugar.

Thomas R. Bard was last week elected United States Senator from California to succeed Stephen M. White. The House passed the Diplomatic and Consular Appropriation bill last week.

The House will devote most of its time for the next week to the consideration of the tariff for Porto Rico.

The Substitute bill providing for a Department of Commerce with a Cabinet officer was approved by the Senate Committee last week. The bill amending the law made to take the Patent Office from the Interior Department and include it in the new department.

Kentucky.

The danger of bloodshed in Kentucky has been greatly lessened by the events of the past week. When the Democratic leaders withdrew to Louisville, leaving the Republican governor fortified in the capitol grounds at Frankfort and the Republican members of the Legislature in London, Ky., the distance between the rival parties removed the likelihood of physical conflict. Since then the Republican and Democratic leaders have held a number of conferences, at which a spirit of mutual conciliation has been manifested and an amicable settlement seems probable.

Other Domestic News.

A fish combine has been formed by forty of the wholesale houses of Boston and other points on the New England coast under the title of the Boston Fish Company. The authorized capital is \$5,000,000.

The Mexican Government has granted a concession to Chicago capitalists of one million acres of valuable land fronting on the Gulf of Mexico and lying in the State of Tamaulipas.

Smallpox is killing Indians by the dozen on the Colville reservation, in the State of Washington, as they refuse to submit to medical treatment.

The President has issued a proclamation fixing the tariff duties and taxes for the Island of Guam, based upon the Philippine tariff.

A political movement is on foot to give Governor Roosevelt the Republican vice-presidential nomination, but the Governor is said to prefer his present position.

Charles E. Macrum, who asked to be released as United States Consul at Pretoria, reached this country last week, but he seemed to have no secrets to reveal and the mystery that surrounded his return has mostly evaporated.

Secretary Root has sent to Congress an abstract of the Militia force of the United States. It shows the total number of men available for military duty, but unorganized, as 10,343,150, and an aggregate organized strength of 106,339.

The Chicago Board of Trade has abolished trading in puts and calls.

Captain E. T. Strong has been detached from the Navy Yard, Washington, and ordered to the command of the Monadnock, on the Asiatic station, leaving San Francisco February 27.

Admiral Kautz has transferred his flag from the Philadelphia to the Iowa at San Diego.

The Mississippi Senate has passed a concurrent resolution exempting all cotton and woolen factories hereafter established in Mississippi from taxation for a period of ten years.

It is reported from Cleveland that a movement is on foot looking to a consolidation of the Knights of Labor and the American Federation of Labor.

William F. Miller, the absconding head of the "Franklin Street" Brooklyn concern which promised to pay investors 10 per cent. a week, was brought to New York last Thursday.

Roland E. Molineux was found guilty of murder in the first degree by the jury, Saturday night, February 10.

EXHIBITORS AT THE PARIS EXPOSITION OF 1900.

Ferdinand W. Peck, Commissioner-General of the United States to the Paris Exposition of 1900, has just issued a list containing the names of the "principal commercial exhibitors" (persons, firms or corporations) who, up to December 23, 1899, had accepted space in the Paris Exposition assigned to them by the Commissioner-General of the United States. This list is arranged alphabetically and is not classified. From it the Era is able to pick out the following exhibitors in pharmaceutical, chemical and allied lines of industry. This list does not pretend to be absolutely complete, but it is the first that is available. In a note heading his list the Commissioner-General says:

"This list does not include exhibitors of record in agriculture, mines, literature and periodicals, science, fine arts, religious, charitable and other associations, schools, colleges, etc. Such list would include the names of about 7,000 exhibitors. A complete list, arranged by groups and classes, will appear in the Official Catalogue, now in process of preparation."

THE DRUG NEWS.

NEW YORK AND VICINITY.

FIGHTING ASSEMBLYMAN MAHER AGAIN SHOWS BAD TEMPER.

There was a lively hearing on the two conflicting bills to regulate drug clerks' working hours before the Assembly Committee on Public Health, at Albany, on February 6.

The bill which is favored by clerks and proprietors alike was introduced some time ago by Assemblyman Henry, and is in the hands of the Public Health Committee, of which he is chairman. The rival bill, prepared by the misnamed Druggists' League, had been introduced by Assemblyman Maher. This bill was referred to the Committee on Labor and Industries, which had given one hearing on it, as already reported. On February 6 Dr. Henry succeeded in having this bill transferred to the Public Health Committee, and on that afternoon a hearing on both bills was held. There were present Messrs. Dietz, Feldtman and Puff, of the Pharmaceutical Clerks' Association; William Muir, of the Kings County Pharmaceutical Society; Edward Thimme, Morris Ziflin and Benjamin Alpin, of the Druggists' League.

Mr. Muir and the clerks opposed the Maher bill. Thimme and his cohorts opposed the Henry bill.

Morris Ziflin convulsed the assemblymen by telling how he had to "wash de windows, scrub de floor, sed de soda vater, and make de prescriptions," and how he lost his job because he went into Morningside Park to get some fresh air after 12 o'clock midnight.

Mr. Muir asked him if he was a registered pharmacist at the time he was washing windows and compounding prescriptions. He answered, "No."

"Then you were violating the law, weren't you?" said Mr. Muir.

"He had to do it or lose his job," shouted Assemblyman Maher.

After some further criticism of the Maher bill by Mr. Muir, Mr. Maher became excited and threatened to "lick" Mr. Muir. The lie was passed and for a time things were lively. Chairman Henry said that order must be preserved, and that such scenes could not be tolerated. Mr. Maher retorted:

"I did not expect to receive fair treatment when I came here, and I don't care if you put me out of the room and never give another hearing on the bill."

Dr. Henry ignored Mr. Maher and tried to listen to the discussion, but there was so much confusion little progress was made, and the hearing was adjourned to February 14.

ANOTHER CONFERENCE ON SHORTER HOUR BILLS.

A brief conference was held at the New York College of Pharmacy on February 7, on the proposition of R. Fulton Cutting for a new substitute bill for those to regulate drug clerks' hours now pending in the New York Legislature. Representatives were present from the Pharmaceutical Clerks' Association, the Kings County Pharmaceutical Society and the Manhattan Pharmaceutical Association. President Dietz of the Clerks' Association explained what had been done at the conference held a week previous with certain gentlemen from the City Club and representatives of the Druggists' League. The delegates from the Kings County and Manhattan associations announced themselves as willing to stand by the clerks' bill, as introduced by Assemblyman Henry, but as opposed to any alteration of that measure. A communication to the same effect was received from the German Apothecaries' Association. The clerks were well pleased at this and said they did not want any changes made in the original bill.

NEW YORK CLERKS' ASSOCIATION.

A regular meeting of the New York Pharmaceutical Clerks' Association was held at the New York College

of Pharmacy on Wednesday, February 7, with President Charles W. Dietz in the chair. One new member was taken in, C. W. Wetlin, of No. 110 West 106th street. The Executive Committee reported on its work since the association's last meeting. Mr. Dietz gave a report of the hearing before the Assembly Public Health Committee, at Albany on February 6, on the shorter hour bills. He thought the outlook for the passage of the bill drafted by the Clerks' Association was very good. The secretary announced that another hearing on the same bills would be given at Albany on Wednesday, February 14. It was voted to send a committee of three to represent the association at that hearing. Messrs Dietz, Feldtman and Puff, the men who attended the previous hearing, were selected to serve as such committee.

Mr. Cohn brought to the attention of the association the fact that the "All State Pharmacy bill," creating two classes of pharmacists, had been introduced by Mr. Firth, Mr. Dietz and others spoke against permitting unregistered clerks to put up prescriptions or conduct stores; and there was a long discussion on various bills now pending in the State Legislature, on some of which the speakers were not very clear. In the end the secretary was instructed to procure copies of the various pharmacy bills pending and submit them for the action of the association at its next meeting.

TALK OF NEW ASSOCIATION OF GLASSWARE JOBBERS.

A meeting was held in New York City a few days ago to canvass the subject of forming a new association of jobbers in druggists' sundries for the purpose, among others, of preventing sales by manufacturers to consumers at wholesale rates. Eastern Bottle Glassware Association is the name suggested for such an association. George M. Nichols, of the firm of Hagerly Bros., was the chairman, and C. W. Fox, of Fox, Fox & Co., was the secretary of the meeting. Mr. Nichols said the association had not yet been formed. He added:

"We are waiting to see how many jobbers will come in before we go ahead. The whole matter is still in a tentative state."

Heavy Penalty for Contempt of Court.

In the United States Circuit Court last Friday, Judge Lacombe sentenced W. T. James to serve four months in the penitentiary, and to pay a fine of \$4,000 for contempt of court in selling phenacetine in violation of an injunction issued by the same court last May. When the injunction was issued James, who had an office at No. 79 Broad street, was sentenced to fifteen days' imprisonment and fined \$250 for selling phenacetine which had been smuggled into this country. He was ordered to furnish to Commissioner Shields a list of persons who had bought the drug from him. Recently James opened an office at No. 11 Broadway, and the agents of the owner of the patent on phenacetine found that he was again dealing in the drug. He was at once arrested on the charge of contempt of court.

New York Section American Chemical Society.

The New York Section of the American Chemical Society held its regular monthly meeting at the Chemists' Club, at No. 105 West Fifty-fifth street, on Friday evening, February 9, with Chairman Charles F. McKenna presiding. Dr. McKenna read a letter from E. E. Ewell, of Washington, asking the co-operation of the New York Section in the movement recently started to establish a national bureau to maintain the standards of measures, etc., in scientific instruments of American manufacture. Commenting upon this communication, the chairman said:

"We are now dependent upon manufacturers in foreign countries for our glass instruments of measure simply because our government has not established a standard." The association voted the co-operation asked for. The programme of the evening was then taken up. This

A new advertising medium; how a Fulton street (Brooklyn) dealer does it.—Printer's Ink.

comprised two papers, "The Technical Analysis of Rope and Twine," by Durand Woodman, and "On the History of Photo-Chemical Improvements," by Maximilian Toch. Mr. Toch made some practical demonstrations in the chemistry of photography. Brief discussions followed the reading of the papers.

Against Sale of Drugs in Department Stores.

The Assembly Committee on Public Health, according to advices from Albany last week, has agreed to report favorably the bill offered by Assemblyman Gale, of Jamaica, to prohibit the sale of drugs and medicines in department stores, except by registered pharmacists.

This bill seeks to amend Section 1010 of the Greater New York charter so as to read as follows:

"It shall be unlawful for any person, except a registered pharmacist within the meaning of this title, to open or conduct any pharmacy, or store, or department of any store, for retailing, dispensing or compounding poisons or medicines, whether in the original packages of the manufacturer or otherwise, or those known as 'patent medicines' or 'proprietary medicines,' in the city of New York as constituted by this act, except as hereinafter provided; provided that the widow or legal representative of a deceased person who was a registered pharmacist within the meaning of this title, may continue the business of such deceased pharmacist, provided that the actual retailing, dispensing or compounding of such medicines as poisons be only by a person who is a registered pharmacist within the meaning of this title."

Local drug men rather look with favor upon this bill, but are doubtful of its being passed. It looks too much like a "strike" measure to obtain money from department store merchants. The bill was not drawn at the instance of any body of druggists, nor have pharmacists interested themselves in its welfare.

Brooklyn College Alumni Will Dance.

The eighth annual reception of the Alumni Association of the Brooklyn College of Pharmacy will be held on Thursday evening, February 22, at the Pierpont Assembly Rooms, No. 153 Pierpont street, Brooklyn. A musical programme will be given from 9.30 to 10 o'clock and dancing will begin at the latter hour. The association is in a flourishing condition, and elaborate preparations are being made for the success of this entertainment. The following members compose the Arrangements Committee: F. P. Tutthill, chairman; Wm. C. Anderson, A. H. Brundage, M. D. William Bussenschutt, John F. Crawford, W. F. J. Happ, William L. Morris, G. A. Mulvaney, Alfred Schletter, F. Schroeder, Jr., Fred. H. Weyer, E. Clayton Woodcock.

Thimme Foment Disension in Labor Ranks.

Edward Thimme, factotum of the Druggists' League, who was forced out of the Central Federated Union of New York City some time ago, is now trying to organize a "legislative labor conference" as a rival to the C. F. U. Meetings are to be held every Sunday afternoon at No. 214 East Forty-first street. Thimme says the following unions have joined his new amalgamation: The Tar, Felt and Waterproof Workers' Union, the New York Painters' Union, the Edison Association of Wool Workers, the Bakers' and Confectioners' Association and the Druggists' League.

All Are Invited.

On Thursday evening, February 22d, at 8 o'clock, at the New York College of Pharmacy, Prof. Virgil Coblenz will deliver a specially prepared lecture treating of the valuable collection of physical apparatus recently presented to the college by President Edward Kemp. We are requested to state that all pharmacists, clerks, their relatives, wives, sweethearts and friends are urged to be present upon this occasion, as the lecture will be a most interesting and profitable one.

NOTES.

—The following visitors from out of town had business which brought them to the local drug market during the week: E. R. Sturtevant, of the firm of Henry Thayer & Co., Cambridgeport, Mass.; William Bodeker, of the Bodeker Drug Company, Richmond, Va.; W. M. Byers, Boston; Dr. A. H. Bryant, Denver; G. W. V. Moy, Plainfield; Isaac Hicks, Roslyn, L. I.; Schuyler Rust, New Brunswick, N. J.; J. A. Goodale, Dover, N. J.; S. L. Neier, Dover, N. J.; W. F. Dedrick, Kingston, N. Y.; C. H. Sarles, Mt. Kisco, N. Y., and E. R. Post, Newburg, N. Y.

—Alexander G. Loelkes, a drug clerk living at No. 26 East Seventy-fifth street, died on Wednesday, February 7, from an overdose of morphine taken two days before to induce sleep. Loelkes suffered from sleeplessness, and on Monday night before leaving his work at Madison avenue and Seventy-fifth street, he took a dose of morphine. He slept well and returned to work on Tuesday morning apparently in good health. In the afternoon, twelve hours after taking the morphine, he became sick. His death followed the next morning.

—H. W. Florence and J. H. Slattery are two young Brooklyn pharmacists who have gone into business under the firm name of Florence & Slattery and bought the drug store of James G. Sandford, at Grant Square and Bergen street, Brooklyn.

—J. G. Waters, of Brooklyn, and S. B. Sprague, Jr., of Jersey City, have been engaged as salesmen by the local office of Henry Thayer & Co., at No. 95 Nassau street, which is conducted by F. C. Kinsman.

—George J. Seabury, president of the firm of Seabury & Johnson, has been elected a member of the American Protective Tariff League's Committee on Literature for the next political campaign.

—Peter McCarisk, for several years past in the employ of F. R. Arnold & Co., has left that firm and taken a position as traveling salesman for the sundries department of Bruen, Ritchey & Co.

—George W. Fuller, for eight years past Southern New England salesman for the E. L. Patch Co., of Boston, has severed his connection with that firm. He was in New York last week.

—John C. Smith, for some time past in the pharmacy of Nelson S. Kirk, at No. 450 Third avenue, has accepted a position with J. A. Hetherington, at No. 4 Vanderbilt avenue, Manhattan.

—Edward Kreutzler has bought the drug store of R. H. Rhau, at No. 257 Steiny avenue, Long Island City, Mr. Rhau being forced to retire from business on account of poor health.

—S. C. Dentz, formerly with Sharp & Dohme, has accepted a position as New Jersey representative of Henry Thayer & Co., of Cambridgeport, Mass.

—O. F. Bancroft, proprietor of two drug stores in Brooklyn, has just bought the Thomas Jones Pharmacy, at No. 1060 Fulton street, Brooklyn.

—The drug store of Robert C. Mills, at No. 146 Washington street, Binghamton, N. Y., was sold out by the sheriff last week.

—Drug Clerk G. L. Walker has resigned his position in the store of Benjamin H. Rose, at No. 2519 Broadway, Manhattan.

—A. L. Curtis, wholesale and retail druggist of Atlanta, Ga., called at the Era office while in New York last week.

—Gerkin & Taplin, a new firm, have bought the drug store of Theodore Speth, at No. 1485 Broadway, Brooklyn.

—J. L. Novarine has bought the drug store of H. H. Hoyt, at the corner of Maln and York streets, Brooklyn.

IN AND ABOUT BOSTON.

Worcester Druggists Unite for Defensive Action.

Worcester, Mass., Feb. 10.—Druggists of Worcester are greatly stirred up over a new electric light sign recently erected in front of the Lyon & Hall Company's drug store. This company has caused no little worry to the retail trade since it established a cut-rate drug store here as a branch of its Providence, R. I., pharmacy. Jealousy arose at the first invasion of the enemy, and now that the brilliant sign post, surmounted by a big pestle and mortar in gold finish, has been put up to further attract trade, indignation is great, especially because other retailers seeking similar privileges never have been given them. They have brought out the fact that this sign has no legal right to stand. The company applied at first to the chief of police for permission to erect the sign on the sidewalk, and investigation showed that it would infringe on the ordinances. The firm then applied to the street commissioner, and he issued a permit to open the street for the purpose of putting up the post. He says he declared when the permit was issued that he had no authority to grant permission to erect the post, his jurisdiction ending with the permit to dig up the street. The company took the chance of possible complaint, and soon the mortar and pestle blazed out in electric lights. The sign now has been ordered down by the license board because it is contrary to the ordinances, which provide that no advertising post shall be erected in the streets except for a clock. A petition for permission to put up a clock has been followed by a dozen more applications from other druggists for similar permits, and the board decided to withhold its decision on the Hall & Lyon Co.'s application until it can see where it stands in this matter. The company asked permission to put the mortar and pestle on top of the proposed clock. The board has asked the city solicitor's opinion in this matter, and, according to that authority, the company can determine for itself what sort of an ornament shall decorate the top of the clock.

A Better Druggist than Town Treasurer.

Boston, Feb. 10.—A speedy settlement of the case of the Town of Clinton against William F. Heagney, the druggist who was for several years town treasurer, seems in sight, now that the higher court has reversed the decision of the lower court, which found that the suit brought by the town could not be legally urged because the law committee had no power, in the absence of a vote of the town meeting, to subject the town to a lawsuit. Some of the bondholders think it better to settle than to fight. They have had a meeting at which thirteen of the sixteen bondsmen were present. Nine voted in favor of a settlement, since the town is willing to settle for the face of the apparent shortage on Mr. Heagney's books, without interest. The sum that the bondsmen will be required to pay is \$4,500, including a counsel fee of \$500. It was decided to give the bondsmen two weeks in which to examine the books for themselves, to determine whether they are really responsible for the amount which the law committee alleges is due the town. If at the end of that time there can be no agreement reached, suit will be instituted.

NOTES.

—Among heavy taxpayers in Boston are George C. Goodwin & Co. (former firm) on personal estate valued at \$149,500; Cutler Brothers & Co. (former firm), on personal estate of \$80,000; Andrew J. Weeks, of Weeks & Potter Co., who pays on real estate valued at \$1,484,500 and personal estate to the value of \$300,000; George R. White, president of the Potter Drug Corporation, on real estate valued at \$1,007,500 and personal estate of \$75,000.

—Joel S. Orne, the octogenarian druggist of Massachusetts avenue, Cambridge, attended the last monthly meeting of the Massachusetts Alumni Association of the College of Pharmacy. Mr. Orne is one of the trustees of the organization and takes an active interest in everything connected with it. He probably is the oldest pharmacist in the State.

—Cigar dealers in Boston showed their jealousy of drug-

gists last Saturday when one prominent member of a retail cigar firm visited several of the police stations in the hope of inciting the police to prosecuting druggists who sell tobacco on Sunday. He obtained no satisfaction.

—E. F. Faulkner, a druggist at Lowell, suffered a loss on his stock and fixtures, valued at \$3,500, in a fire which burned the building at the corner of Market and Suffolk streets, known as Suffolk Hall. Mr. Faulkner's loss was covered by insurance.

—At a recent severe fire in Marvin's block, Merrimac street, at Lowell, wherein one life was lost and several firemen injured, the Lowell Pharmacy, one of two stores on the ground floor, was about completely burned out.

—A movement has been projected by Druggist William D. Wheeler, of this city, for legislation requiring the filing of formulas of patent medicines with the State Board of Health.

—Extensive alterations and repairs are being made in what is known as the Lafayette Square drug store at Haverhill, which recently has been purchased by F. A. Lavoie & Co.

—Charles Perry, a Natick druggist, whose store is on West Central street in that town, is planning to take a store in Clarke's block and transfer his business to that location.

—Julius Wittig, formerly clerk for Oscar A. Burdett, a Clinton druggist, now has a position as clerk in Rockwell's drug store in Fitchburg.

—This week's exports at the Port of Boston include among other things drugs and chemicals, \$877; India rubber manufactures, \$278.

—W. C. Middleton's drug store at North Attleboro has been bought by Thomas F. Coady, manager there for two years past.

—Elie La Pierre, who is connected with the drug trade in Cambridge, has just returned from a business trip to New York city.

PHILADELPHIA.

The Great Euchre Party.

Philadelphia, Feb. 10.—On Wednesday evening, February 7th, the Philadelphia Association of Retail Druggists solved the problem which has bothered so many leaders of reform in pharmacy in the past—of how to get the retail pharmacists interested sufficiently to get them all together at one time. It certainly did seem as though every druggist in Philadelphia was present at Horticultural Hall on the occasion of the grand progressive euchre and dance, given by the local branch of the National Association of Retail Druggists. In addition to the members of the retail profession, Master of Ceremonies Daniel M. Harris and his corps of assistants deserve an unlimited amount of credit for the management of such a large number of people. Shortly before 9 o'clock Samuel H. Ashbridge, Mayor of Philadelphia, entered, and after the applause following the remarks of the mayor had ceased the master of ceremonies announced that the game would begin. There were ten games played, allowing six minutes for each game. Immediately after the conclusion of the tenth game the distribution of the prizes was begun. The winner of the ladies' first prize, a handsome mahogany table, value \$100, was Mrs. Robert T. Ross. The winner of the gentlemen's first prize, a cut-glass punch bowl, was Robert D. Coombs. The distribution of prizes lasted until nearly 11:30 P. M. All of the prominent and successful druggists of the city were there, as were many of the members of the faculty of the Philadelphia College of Pharmacy. The wholesale trade was well represented too, and many persons expressed the remark that, had they not seen with their own eyes they never would have believed it possible to create enough interest to bring so many persons together, from a class usually looked upon as slow and hermit-like.

NOTES.

—There will be a meeting of the Philadelphia Section of the American Chemical Society, Thursday, February 15, at the Harrison Chemical Laboratory, University of Pennsylvania. The paper of the evening will be upon

"Some Methods of Determining Carbon in Steel," by Mr. George Auchy.

—Invitations have been issued for the wedding of Elmer G. Brugler and Virginia F. Macdonald, on February 14th. Mr. Brugler is one of Toga's promising young pharmacists, having built up a large trade in the short time he has been in his present location at 202 Toga street.

—A woman in New Jersey has sued a pharmacist to recover damages for alleged injury to her eye as the result of a mistake of the pharmacist. The plaintiff claims to have asked for camphor water, which was to be used as an eye lotion, and that spirits of camphor was given her.

—The "Philadelphia College of Pharmacy Sub-Committee on Research for the Revision of the U. S. Pharmacopœia," held a meeting at the college on last Tuesday afternoon. The subject for discussion was "The Official Recognition of Synthetic Chemicals."

—The third-year class of the Philadelphia College of Pharmacy, assembled in a body on the pavement and steps of the college building on Friday morning of this week, while the photographer risked his valuable camera in obtaining a picture of them.

—The weekly report of clerks wanted and positions wanted shows an increase over last week's ratio. This week twenty-one clerks are wanted and twenty-eight clerks want positions.

—Lucian Scott Kemp, who has been with E. M. Borings, at Tenth street and Fairmount avenue, has accepted a position with Shinn & Baer, at Broad and Spruce streets.

—William S. Stinson, who left the employ of George B. Evans some time ago for an extended vacation, has resumed his position at the Eighth and Arch street store.

—The Philadelphia Botanical Club met on Thursday evening of last week at the Academy of Natural Sciences, Nineteenth and Race streets.

—Albert Crawford, of Nazareth, Pa., is clerking for J. Harry Massholder, at Twenty-eighth and Master streets.

—George F. Royer, one of the leading pharmacists at Ephrata, Pa., was in Philadelphia this week on business.

BALTIMORE.

Progress of Pharmacy Legislation.

Baltimore, Feb. 8.—The prospect that a pharmacy law operative all over the State will be passed at the present session of the Maryland Legislature appears very favorable. Until last week the outlook presented a decidedly dubious aspect, but since the appearance of a large delegation before the House committee on Tuesday and the submission of strong arguments, the situation has changed materially for the better. Owing to the formidable opposition in the counties against a drug law of any kind, the delegation was obliged to make important concessions, which may go far to nullify the purposes of such an act. The delegation was headed by Dr. A. R. L. Dohme, president of the Maryland Pharmaceutical Association, who also acted as spokesman and made a forceful plea in advocacy of a drug law. The delegation included prominent druggists from all over the State. Dr. Dohme, in outlining the attitude of the druggists, said:

"Heretofore and at present any person may open a pharmacy, compound prescriptions and sell poisons in Maryland, because Maryland is the only State without a pharmacy law. Baltimore city has such a law. For fourteen years the pharmacists of the State have tried to get the Legislature to pass a law, but have not succeeded. The opposition has arisen from the general storekeepers of the State and those jobbers who make it a business to sell to these country merchants. The bill, introduced the session by Dr. George W. Truitt, of Baltimore County, himself a pharmacist at Roland Park, has met the same opposition that other bills previously introduced have encountered. The opposition is due to the fact that the measure prevents country merchants from selling any drugs, except such as are used for culinary purposes or in the arts. The bill was framed on the same basis and lines as all the other pharmacy laws of the forty-four States of the Union that have one, and was made less stringent than any of these forty-four because of the past opposition. Rather than sustain defeat again the pharmacists have agreed to amend the bill so that it will only compel the compounding of physicians' prescriptions by a licensed druggist, and will not restrict the sale of household remedies or drugs by the country merchant. He can sell them as he did before, but pre-

scriptions must be compounded by a licensed pharmacist only. This fully meets the objections of the country merchants, and their assent to the bill ought now to be secured. Physicians may by this bill compound and dispense their own prescriptions, but may not open and conduct a drug store without having met the requirements of the bill, i. e., five years of practical experience in compounding prescriptions, or passing the examination before the State Board of Pharmacy created by the bill. Since pharmacists may not practice medicine without a license, it is but just that physicians should not practice pharmacy without a license."

The House committee listened very attentively to the arguments adduced, and the impression prevails that the amended bill will be reported favorably.

The Vogeler Company's Troubles.

Baltimore, Feb. 6.—Christian Devries and his wife, Minnie A. Devries, who conducted the business of the Charles A. Vogeler Company, manufacturers of St. Jacob's Oil and other proprietary articles, were adjudged bankrupts yesterday by Judge Morris, in the United States District Court. John B. Ramsay and Henry S. Dulaney were appointed temporary receivers for the property of Mr. and Mrs. Devries, bonding in the sum of \$50,000. This action was the result of a petition filed on January 19 by two banks and a firm of paper dealers, which hold claims against the company. The petition averred as an act of bankruptcy the execution by Mr. and Mrs. Devries of an assignment for the benefit of creditors on December 18, 1899, to Henry S. Dulaney, trustee. It was set up in defence that Mrs. Devries as a married woman could not be co-partner, and that there was, consequently, no legal partnership between her and her husband, for whose obligations they could be adjudged bankrupts. It was further contended that the deed of trust was not a general assignment constituting an act of bankruptcy, inasmuch as it had been executed in fulfillment of an ante-nuptial agreement of June 13, 1898, between Mr. Devries and his present wife, then Mrs. Minnie A. Vogeler, by which she agreed to devote her separate property to the benefit of her creditors.

Judge Morris decided that under the act of Maryland of 1898, which went into effect January 1, 1899, a married woman could make any contract, including a contract of co-partnership, with her husband, and that when this statute became operative the partnership between Mr. and Mrs. Devries assumed in all respects a lawful status. The receivers are to hold the estate until the selection of a permanent trustee. An appeal to the Circuit Court of Appeals was taken from Judge Morris' ruling.

Among the Howlers.

Baltimore, Feb. 9.—James Baily & Son had an easy victory over Parke, Davis & Co. in the games last Tuesday night; 718, 663 and 817 against 623, 610 and 770 respectively. To-night the Root and Herb men played hobs with Muth Bros. & Co., scoring three straight with 856, 710 and 772 points against 746, 676 and 648. This leaves the several teams in the following positions:

Teams.	Games Played.		Per-centage.
	Won.	Lost.	
Root and Herbs.....	27	6	.818
Sharp & Dohme.....	24	6	.800
Winkelman & Brown Drug Company.....	20	10	.667
James Baily & Son.....	13	17	.443
Gilpin, Langdon & Co.....	10	20	.333
Muth Bros. & Co.....	8	25	.242
Parke, Davis & Co.....	6	24	.200

Maryland College of Pharmacy.

Baltimore, Feb. 10.—A pharmaceutical meeting is to be held at the Maryland College of Pharmacy on Thursday next at 10 o'clock, when the report of the committee on revision of the Pharmacopœia, submitted at the January meeting of the college, and which was made the special order for the February gathering, will be discussed and acted upon. This report practically endorses the recommendations made by a similar committee of the American Pharmaceutical Association, during the annual sessions at Put-in-Bay. An effort will be made to instruct the college delegation to the General Convention touching such topics as will be brought before that body,

among them the introduction of doses; of trade-marked and patented products; standardization (by assay and physiologically), etc. The active part heretofore taken by the college in the work and its acknowledged influence should, in the opinion of the college officers, suffice to bring out a large attendance and participation in the discussion.

The Retailers' Association.

Baltimore, Feb. 9.—The executive committee of the Baltimore Retail Druggists' Association held a meeting to-day and discussed the card system. Some members contended that it would be unfair to limit jobbers in selling only to holders of cards, and the committee finally agreed upon a form of contract which permits the jobber to dispose of druggists' sundries to whomever he pleases, but restricts the sale of drugs and pharmaceutical preparations to regular druggists. The opponents of the card system in this limited sense were advised that if they could induce the houses in whose behalf the plea of greater liberality had been made to sign an agreement based upon the contract conditions set forth at the meeting the signers would be received as co-workers in the cause of fighting cut-rates and other evils.

NOTES.

—The Reid Company, which intends to manufacture ginger ale and other carbonated beverages, has been incorporated by Samuel R. Tregellas, Hilary H. Reid, Leonard B. Nolley, Phillip W. Truehart, James C. Green, John I. Pidgeon and Charles M. Truehart. The capital stock of the company is \$25,000, divided into \$10 shares.

—Henry Croft, of the retail drug firm of Croft & Conlyn, Park avenue and Madison street, will go on a trip to Europe this week. He expects to be absent about two months and will devote himself particularly to Paris and France.

DETROIT.

Retail Prices Raised and all Agree.

Detroit, Feb. 10.—At the regular meeting of the Detroit and Wayne County Druggists' Association yesterday, important action was taken in establishing a scale of prices for retailers, based on jobbing prices. It was agreed, for instance, that articles listed from \$1.50 to \$2 per dozen shall be sold for not less than 20 cents; articles from \$2 to \$2.40, at 23 cents; articles from \$2.40 to \$3, at 30 cents, and so on up the scale. At this rate 10 cent and 15 cent articles will sell for full price and on the cheaper goods generally the advance is considerable. Although the list of articles agreed upon at the meeting is quite extensive, there is a long list of exceptions, which includes all malt preparations, infant foods, ales and porters, wines and liquors and line pharmaceutical goods. The present list will prevail for some time, all feeling that the advance is substantial enough to allow plenty of time to elapse before any other changes are incorporated. Detroit is the first large city of the country to come to such a harmonious agreement—for every drug house here has agreed to live up to it—and all feel that it is a signal victory. Perfect harmony exists, and the druggists are justly proud of the step taken. It has cost an immense amount of hard work, but the result more than compensates. Due credit is given to the moral backing of the N. A. R. D. in the movement. Things look brighter to-day for the Detroit druggists than for several years back.

After Vanilla Sophisticators.

Detroit, Feb. 10.—A campaign against vanilla extract adulterations has been begun by the Michigan pure food commission, and suits against several Detroit manufacturers of the article will be begun in a few days, it is said. There are about twenty-five manufacturers of vanilla in Detroit alone, and many others throughout the State. The commission finds but little adulteration in other flavoring extracts, due, probably, to the fact that the real article which enters into their preparation is so cheap. But with vanilla it is quite different. The adulterators employ sundry materials, such as coal tar pro-

ducts, pine cones, inner bark of pine trees, and cloves, a preparation of brown sugar giving it the required color and consistency.

State Commissioner Grosvenor recently warned the manufacturers and dealers that prosecutions would follow if any of the adulterated stuff were found in the Michigan markets after January 1, 1900. During the month of January purchases made by agents were submitted to examination at Lansing, with the result that war is threatened. Already two cases have been started at Muskegon against Chicago manufacturers. The Michigan law is very clear on the subject, and there is little excuse for the violators.

NOTES.

—Installation of officers of the Detroit Drug Clerks' Association took place at the meeting Friday evening, February 9. The officers are: President, G. W. Stevens; vice-presidents, A. P. Young and J. A. Stewart; recording secretary, A. M. Edwards, Jr.; financial secretary, W. F. E. White; treasurer, W. S. Dupont. A resolution was passed asking the Detroit Druggists' Association to grant clerks one extra evening each month to enable them to attend the meetings of their own association. As the Druggists' Association was in session at the time, a messenger carried the resolution over to their rooms, where it was presented and discussed. Although no definite action was agreed upon the petition was very favorably received.

—The Library and Reading Association of the employees of Parke, Davis & Co. will entertain their friends at the Light Infantry Armory, Thursday evening, February 15. An elaborate programme has been prepared, which will include musical selections, biograph pictures and plenty of dancing.

—Harry T. Carver, with Farrand, Williams & Clark, Detroit, is at home sick with a cold.

—C. M. Smith has sold his Woodmere drug store to M. C. Jesson.

CHICAGO.

Alumni Meeting of Chicago College of Pharmacy.

Chicago, Feb. 8.—A meeting of the Alumni Association of the Chicago College of Pharmacy, professors, physicians and others, was held in the parlors of the Palmer House this evening, to exchange views and observations antecedent the coming meeting of the committee for the revision of the Pharmacopoeia. About twenty-five persons were present, including Profs. Day, Puckner, Hallberg and Hereth; Drs. Patten, Baer and Rogers, and Messrs. A. E. Ebert, Paul Behrens, Adolph Vogeler and others. Mr. Hallberg opened the discussion with a few general observations touching upon the present condition, financial and otherwise, of the Revision Committee and the recommendations of the Pharmacopoeia Committee of the American Pharmaceutical Association. The principal topics touched upon were standardization, doses and the subject of alcoholic liquors in the Pharmacopoeia. Mr. Ebert opposed standardization and placing doses in the Pharmacopoeia, saying that druggists are now bound by too many laws, and had responsibility enough without assuming any of the mantle which ought to be worn by the physicians. Men of honor will employ the best drugs they can obtain. Those not men of honor will dodge the law and the prophets and get the cheapest. On the matter of alcoholic liquor in the Pharmacopoeia the speaker was decided in his opposition. In 100,000 prescriptions examined by him, he found that the proportion of alcoholic liquor prescribed was but one-tenth of one per cent. Eliminate alcoholic liquors from the Pharmacopoeia and the line could be more sharply drawn between druggists and saloon keepers. Dr. Baer suggested that placing doses in the Pharmacopoeia would divide the responsibility between the doctor and the druggist, and the latter would get the brunt of the law suits resulting from alleged overdoses. Dr. Patten presented a very able and thoughtful paper on the coming revision of the Pharmacopoeia from a medical standpoint. Following Dr. Patten's paper a general discussion arose. Resolutions were passed thanking the Palmer House management for the use of the parlors, and Mr. Knoke for ob-

taining the concession. Another meeting will be held on February 15.

Sunday Closing.

Chicago, Feb. 8.—A solution for the problem of how drug stores may close up Sunday evening and not leave the public entirely to the mercy of coughs and toothache is suggested in a system of reliefs which has been practiced recently by a trio of neighboring druggists in Ravenswood, who "take turns" of keeping open. Every Sunday evening two of the stores close at 5 o'clock, and are kept closed while the remaining one is kept open the usual hours. The next week another of the three keeps open, and so on, each druggist being enabled to have two Sunday evenings out of three for himself. The experiment has proved eminently successful, the druggists say, and it will be recommended to the others to form "shifts" with their neighbors. Sunday closing of drug stores will be discussed at a meeting of Lake View druggists to the number of thirty, who have arranged to confer in Jung's Hall, Belmont and Lincoln avenues, tomorrow afternoon, when steps will be taken to organize the "Twenty-sixth Ward Druggists' Association." Every pharmacist in the district bounded by Fullerton avenue, Clark street, Western avenue and Devon avenue, is expected to be in attendance at the meeting. Sentiment in favor of the meeting is being aroused throughout the ward, which is seven miles long and two miles wide, by J. A. Harighausen, Lincoln avenue and Roscoe street, and Bruno Batt, East Ravenswood Park and Sunnyside avenue. J. A. Harighausen said to-day that he would be in favor of closing his store every Sunday evening if his neighbors could be induced to do likewise. A social session of Washington Council No. 17 was held last night in the hall of the organization at Chicago avenue and Wells street. An address by Hugo Lesser, president of the council, was one of the features of the evening, and his report that the efforts of the clerks to get their employers to close had been successful was enthusiastically received. Out of more than 350 stores in the district but five were said to have been open last Sunday.

Marriages.

Miss Mary Foulke, daughter of Mr. and Mrs. William Dudley Foulke, of Richmond, Ind., and James W. Morrison, of the firm of Morrison, Plummer & Co., Chicago, were married in Richmond, February 7. Mr. and Mrs. Morrison will go to Japan upon their wedding journey.

Miss Jeanette Fairburn Blocki, daughter of Mr. and Mrs. John Blocki, No. 829 North Clark street, and Hugo T. Peterson were married at the Germania Club last evening, February 7. A supper and dance followed the ceremony.

NOTES.

—Mrs. J. S. Mattas, wife of Joseph S. Mattas, No. 1540 West Twenty-second street, gave birth to a daughter about ten days ago. The young lady and her parents are receiving the good wishes of their many friends.

—The firm of Kidder & Lewis has opened a new drug store at Fifty-fifth street and Indiana avenue. Mr. Lewis was formerly manager of the Bugg Pharmacy, at West Fifty-second avenue and Lake street.

—C. R. Gruener has bought the drug store of Gustav Fernitz, Jr., No. 850 West North avenue. Mr. Gruener was formerly a member of the firm of Steubenrauch & Gruener, No. 477 West Division street.

—The wife of George Helm, in charge of Dyer's Pharmacy at Waukegan, Ill., the other day presented him with twins. He is passing cigars and receiving the congratulations of friends.

—Richard Truppel, formerly in the drug business at No. 96 Wells street and No. 100 North State street, has opened a new drug store in California, where he has gone to live.

—The wife of S. S. Hutchinson, of the Hutchinson Drug Company, Ravenswood, gave birth to a fine boy week before last. Mr. Hutchinson wears his honors with modesty.

—On February 2 the store of A. C. Stuckey, Sixty-third and Sherman streets, was burglarized of combs, brushes

and other portable articles.

—J. H. Hagey, a druggist, this week filed a voluntary petition in bankruptcy. His liabilities are \$3,017.32; assets, \$302.

—Dr. N. Hansson, formerly in the drug business in South Chicago, is now a practicing physician.

—It is reported that Link & Co., Center and North Clark streets, have sold out.

THE NORTHWEST.

Drug-Telephone War Intensifies.

St. Paul, Minn., Feb. 9.—To say that the battle between the Minneapolis druggists and the Northwestern Telephone Exchange is "on in earnest" is to state the question very mildly. The druggists have been guaranteed the support of the retail grocers and hardware dealers, and still other classes of business men have promised to fall in line. The telephone company's ultimatum was received by the druggists last week. It was in effect that the druggists would have to require that people using their telephones should show a card indicating that they were telephone subscribers. The druggists met and formally declared war. This action was encouraged by a representative of the Mississippi Valley Telephone Company, a new venture. It was resolved that the attitude of the Northwestern company was unfair, unreasonable and simply intolerable. It was also resolved that all druggists who are already equipped with Mississippi Valley telephones should ask the Northwestern people to remove their instruments. The druggists who have not got the Mississippi telephone will get them as soon as the new company can get them in, and then dispense with the older service.

NOTES.

—Successions: Peter C. Jensen, Albert Lea, Minn., by O. Skague; W. W. Smith, Lebanon, Ore., by E. E. Elliott; J. W. Bowe, Madison Lake, Minn., by the W. J. Siebler Drug Co.; W. E. Miller, Montrose, S. D., by Hills & Spencer; Wright Bros., Latimer, Ia., by T. H. Rodemeyer & Co.; W. A. Hare, Red Wing, Minn., by C. J. Bender.

—C. E. Nilson has left Runnells, Ia., and gone to Hayward, Wis., to the pharmacy of Trowbridge & Tomkins, from which A. E. Lofstrom has withdrawn.

—A. J. Johnson, Ada, Minn.; Piggott & Co., Hudson, S. D., and C. A. Rice & Co., Rush City, Minn., have been burned out.

—Ira Lamb & Co., Hudson, S. D.; W. F. Gearing, Melrose, Wis., and N. J. Fisch, Minnesota Lake, Minn., have sold.

—Daniel F. Spiegle, Cosmopolis, Wash., and the I. T. McKenney estate, Olympia, Wash., have given bills of sale.

—Frank W. Hanson, lately in the drug business in Minneapolis, has filed a voluntary petition in bankruptcy.

—William B. Camden has left the firm of Burley & Camden, Wallhalla, N. D., N. R. Burley succeeding.

—John Edling (with N. A. Grasse) is putting a new drug stock into Hawley, Minn.

—Clark & Murphy, druggists of St. Peter, Minn., have entered the bicycle trade also.

—Sam Lucas has sold his interest in the Bitter Root Drug Co., Hamilton, Mont.

—V. A. Hirscher is now running the Palace Pharmacy at Grafton, N. D.

—John E. Hedley, Dubuque, Iowa, has sold his interest in Hedley & Brown.

—Peter J. Schoffer is about to open at St. Peter, Minn.

—E. H. Baker has started up at White Bird, Idaho.

—Jens Jensen is now in Duluth.

—The Westchester Co. (N. Y.) Pharmaceutical Association held its annual meeting and dinner January 11th at Mount Vernon. The election of officers resulted as follows: James T. Lenton, Yonkers, president; James Horton, Peekskill, J. W. Townsend, Sing Sing, vice-presidents; J. B. Sackett, Tarrytown, treasurer; Ulrich Wiesendanger, Yonkers, secretary. Executive Committee, George Gill, Mount Vernon; A. Van Houten, Yonkers; and James A. Hart, Sing Sing.

ST. LOUIS.

Drug Store Robbers.

St. Louis, Feb. 8.—Dr. Ernest Riecker, the druggist of No. 900 South Fourth street, had a hard experience last Sunday night. Three men entered the store about 9 o'clock, and one of them asked for a cigar. When Dr. Riecker opened the show case the fellow grabbed him by the throat and commanded him to throw up his hands. The second drew a knife and ordered the Doctor to keep quiet, and the third hit him a blow in the face, knocking him down. The last assailant rifled the cash drawer of its contents, \$10, while the other two held the plucky Doctor, who was struggling for his liberty. When they finally left him and ran away, he followed them to the door, but was hindered from pursuing by two men who asked for medicine, and kept him talking to them while the others escaped. An attempt was made by the same men to rob a saloon in the neighborhood, but they were frightened away.

Sued for Publishing Formula.

St. Louis, Feb. 10.—The Antikamnia Chemical Co. filed suit in the Circuit Court yesterday against T. M. Griffiths and the Buxton & Skinner Stationery Company, alleging that they have suffered loss, depreciation and damages to the amount of \$10,000 because of a formula published under the name of "Antikamnia" on page 79 of a book entitled "Non-Secret Formulas," compiled, published and circulated by Griffiths, and printed and furnished him by the Buxton & Skinner Stationery Company. The plaintiffs further state that the publication of the formula aforesaid works them great injury by inducing druggists to believe they have the right to make and sell a medicinal preparation under the name Antikamnia, where the right to do so is the exclusive property of the plaintiff. Injunction is asked restraining the defendants from publishing and selling any book or publication containing any formula under the name Antikamnia, and also a decree for damages sustained. Judge Zachritz granted temporary restraining order pending appearance of defendants on February 16 to show cause why permanent injunction should not be granted.

NOTES.

—Ed. F. Burk, president of the Smith Drug Company, Texarkana, Ark., is here buying goods. He says they have had a prosperous year in his section, and as an indication of the general prosperity existing there, cited an increase in their own business of 20 per cent. for January over the corresponding month of last year, and that 1899 was the best they had known in the history of their firm.

—The popular demonstration of the use of the microscope in the sciences, arts and industries, given at the Academy of Science under the direction of Dr. H. M. Whelpley last Monday night, was a decided success. Eighteen different subjects were handled by experts in those particular lines.

—Otto Sasmann, son of the late R. Sasmann, druggist of Nebraska and Lafayette avenues, and himself a graduate of the College of Pharmacy, has deserted pharmacy for the cigar business, and has bought the stand in the rotunda of the Mermod and Jaccard building, Broadway and Locust street.

—In the great fire which on Sunday last swept the North Broadway retail district, causing a loss of about \$1,500,000, the drug store of Johnson Bros., Broadway and Franklin avenue, was badly damaged; loss about \$2,500, fully insured.

—Fire originating in the basement of the Henry Hill Chemical Company, No. 212-14 South Fourth street, Tuesday night, caused damage to stock and fixtures of approximately \$3,500. The total insurance carried on stock was \$46,000.

—Ed. Roberts, formerly with M. C. Huggins, East St. Louis, is preparing to open a drug store corner of Collinsville and Pennsylvania avenues, that city.

—J. M. Brown, of Ashley, Ill., is in the city buying stock for a drug store he will open at Sandoval, Ill.

—The drug store of J. A. Plunder, No. 2824 Marcus avenue, was slightly damaged by fire last week.

ILLUSTRATED TESTIMONIAL.

To the Acme Hair Growing Co.: Gents—I have used your Bitters with striking effect. Yours truly, A. Striker.—(Printer's Ink.)

—The drug store of O. N. Sprague, Pawnee, Ill., was burned out February 7.

—Herwitz & Kallis has opened a new drug store at No. 4600 Page avenue.

KANSAS CITY.

—Nolan and Welch succeed C. L. B. Hines & Co., Tenth street and Broadway. Mr. Nolan has been a member of the firm. Mr. Welch formerly clerked in the store, and later was on the road for John Wyeth & Bro. C. L. B. Hines has been for some time secretary of an insurance company, and will continue in such capacity.

—Dr. W. E. King and wife have the sympathy of their host of friends of the pharmaceutical profession in the affliction that has come to them in the loss of their eldest son, who was killed by a horse's kick.

—H. F. Pitts will open a first class drug store at Thirty-first street and Brooklyn avenue, in a new brick building now in course of construction, and will likely be open by March 1.

—A. Breunert, Fourteenth and Grand, has just finished erecting his new twentieth century soda apparatus. It is a most beautiful and artistic machine, combining many practical features.

—The Indiana Pharmacy, Eighteenth and Indiana, is another new store. Mr. Adams, the proprietor, was formerly located at Lexington and Park avenues.

—E. S. Marshall, the Independence avenue druggist, has purchased the store of Boyd Keith, Twelfth and Tracy avenue.

FANCIERS' HAND BOOKS.

From the Associated Fanciers, of No. 400 North Third street, Philadelphia, have been received copies of six little hand books entitled respectively: "The Practical Book of Cage Birds," "The Practical Poultry Book," "The Poultry Doctor," "The Toy Dog," "The Practical Dog Book," and "The Domestic Cat." Each of these, although small in size, is so concise, terse and lucid as to be of considerable value to the fancier or breeder of poultry or of the kind of pets treated of in each. In each booklet the breeds and varieties of the creatures discussed are described, and the reader is told how to detect their different ailments and how to treat them. The booklets were written by John E. Diehl, a recognized authority on domestic pets of all kinds, and all but two of them are amply illustrated.

—The Denver Pharmaceutical Association held its annual banquet at the Brown Hotel the evening of January 25. About seventy-five members of the association were present and a number of traveling men were guests of honor. Addresses were made by Messrs. Prowitt, Ward, Kline, Levy, A. W. Clark, Bruenert and Bridaham.

—The Oklahoma Pharmaceutical Association will hold its next annual meeting at Shawnee, April 4th.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,

ALABAMA.—Fort Payne.—Quinn & Haralson, succeeded by W. S. Quinn & Co.

ARIZONA.—Phoenix.—George H. Keefe, sold to Arthur Hulet.

ARKANSAS.—Little Rock.—The Paragon Medical Co., incorporated by A. Vaughn, F. M. Scott, H. R. Lindsey and W. H. Jones; capital, \$16,000.

CALIFORNIA.—Healdsburg.—Evans & Kruse, succeeded by Clarence D. Evans.

COLORADO.—Denver.—Kaloform Manufacturing Co., incorporated by F. C. Shaw, C. M. Ford and E. P. Drasseke; capital, \$50,000.

Ward.—C. G. Gregg, burnt out; Huber & Markle, burnt out.

DELAWARE.—Middletown.—Dr. H. Vaughan, deceased. Wilmington.—International Medicine Co., incorporated by R. J. Garber, J. Grayson, C. F. Myers, W. H. McClure and R. R. Fray; capital, \$100,000.

DISTRICT OF COLUMBIA.—Washington.—International Medicine Co., incorporated; capital, \$100,000.

ILLINOIS.—Chicago.—Abbott Alkaloidal Co., incorporated by W. C. Abbott, J. W. Ranson and L. P. Scoville; capital, \$50,000.—Dr. S. B. Collins Co., incorporated to deal in medicines, by S. B. Collins, H. A. Bearup and S. B. Collins, Jr.; capital, \$2,500.—Manley & Simmons, No. 92 State street, damaged by fire; fully insured.

Prophetstown.—E. P. Brown, sold to Frank Cleveland, Waikagan.—A. O. Wright, sold to J. M. MacKenzie.

INDIANA.—Anderson.—Daniels, Bros., Ninth and Main streets, succeeded by E. A. Daniels & Co.

Montpelier.—L. E. Maddox, sold to McDonnell & Jordan.

IOWA.—Atlantic.—Samuel A. Jones, succeeded by J. B. Jones.

Hamburg.—C. S. Gibbs & Co., sold to C. Stoner & Co. Logan.—Penney & Wood, succeeded by I. C. Wood & Co.

Paullina.—J. S. Scott & Co., sold to J. T. Tilton & Co.

KANSAS.—Eldorado.—Mausly & Owens, sold to F. F. Kirby.

Seneca.—Campbell & Jenkins, succeeded by Jenkins & Pool.

KENTUCKY.—Horse Cove.—Munnally & Walthall, succeeded by Walthall & Pemberton.

Louisville.—E. Y. Johnson, Sixth, corner of Oak streets, sold to Rademaker & Boden.

LOUISIANA.—Jennings.—Terry & Melanson, succeeded by M. C. Melanson.

MAINE.—Camden.—Rose & Chandler, succeeded by L. M. Chandler.

Sheldon.—Twentieth Century Chemical Co., incorporated by D. B. Parks and E. L. Barrager; capital, \$2,000.

MARYLAND.—Frostburg.—John T. Meadows, of the firm of L. N. Meadows & Co., deceased.

MASSACHUSETTS.—Hopedale.—L. A. Lamson, succeeded by L. A. Lamson & Son.

Saugerville.—Sylvester Elite Cream Co., incorporated by A. O. Campbell, H. A. Vinyester and J. Dow, Jr.; capital, \$10,000.

MICHIGAN.—Petoskey.—Coburn, Harner & Fallas, succeeded by Charles W. Fallas.

MISSOURI.—Lawson.—W. S. Morgan, removed to St. Joseph, corner of Eleventh and Powell streets.

Hideway.—A. B. Dunagan & Co., sold to T. J. Smith; C. W. Robertson sold to Campbell Bros.; A. J. Robertson, should be added to D. D. List.

NEW JERSEY.—Jersey City.—Curative Co., incorporated by J. D. Push, E. G. Cole and W. H. Carey; capital, \$25,000.

NEW YORK.—Albany.—R. H. Bradley & Son, Eagle and Madison avenue, sold to Edwin C. Hutman & Co.

Buffalo.—Vernal Remedy Co., incorporated by W. W. Ridout, J. C. Moss and M. D. Wilson; capital, \$1,000.

New York City.—Alpine Manufacturing Co., incorporated to manufacture drug specialties, by L. B. Gaylor, F. A. Gaylor, S. C. Haviland and E. H. Haviland; capital, \$100,000.—Veias & Rosenthal, No. 101 Second avenue, succeeded by Hugo Rosenthal.

Elmira.—Mulligan Cyclone Liniment Co., incorporated by E. H. Mulligan, J. B. Stanchfield and G. W. Buck; capital, \$5,000.

Le Roy.—Langham Medicine Co., incorporated by P. B. Wait, W. H. Foster, E. M. Davis, M. M. Wait and J. D. Langham; capital, \$25,000.

Nyack.—Minnchahn Medicine Co., incorporated by W. M. Coles, W. H. Cooke and F. P. Demarest; capital, \$5,000.

Rochester.—Pulver Chemical Co., incorporated by H. H. Fulver, F. F. Fulver and C. V. Case; capital, \$50,000.

NORTH CAROLINA.—Kings Mountain.—Dilling & Hunter, sold to T. W. Kendrick & Co.

OHIO.—Cincinnati.—Ehliman-Fredrick Chemical Co., incorporated by P. E. Bahlman, J. Frederick, H. Siefert, W. H. McKnight and D. D. Woodmansee; capital, \$50,000.

PENNSYLVANIA.—Athens.—Sanford & Copeland, succeeded by John T. Sanford.

Erie.—Erie Pepsin Gum Co., incorporated by F. Schultz, J. A. Tarbell, W. E. Hayes, F. W. Weber, L. Wright, H. W. Spooner and H. C. Yard; capital stock, \$25,000.

Philadelphia.—Valentine H. Smith & Co., manufacturing pharmacists, incorporated by E. Smith, W. V. Smith, H. E. Smith, E. S. Gadschall, R. E. Smith, K. S. Alison and A. Smith; capital, \$150,000.

RHODE ISLAND.—Pawtucket.—Fisk & Co., corner Main and East avenue, damaged by fire; insured.

SOUTH CAROLINA.—Abbeville.—Milford & Du Pre, succeeded by G. A. Milford.

TEXAS.—Houston.—Cuban Tonic Co., incorporated by J. C. Wilson, W. K. Morrow, W. H. Kirkland and T. H. Thompson; capital, \$10,000.

Lufkin.—A. C. Vinson, sold to Johnson Drug Co. San Antonio.—Milburn & Alexander, No. 130 Military Plaza, succeeded by Kerr & Alexander.

White Wright.—Gallaher & Parson, succeeded by Gallaher Bros.

VERMONT.—Burlington.—James E. Maylon, No. 64 North Champlain, sold to W. B. Reeves.

WASHINGTON.—Seattle.—Microbans Medical Co., incorporated by G. W. Carmack and W. F. Paterson; capital, \$20,000.

OBITUARY.

W. DITTMAR, director of the Chemische Fabrik auf Actien (formerly E. Schering), of Berlin, Germany, died rather suddenly on February 1. Mr. Dittmar had been in the employ of the Schering Chemical Works for many years, having been given power of attorney for the concern in 1875, and in 1893 made director, or commercial manager, of this extensive establishment.

DAVID G. KERN, a druggist, and for many years a prominent business man of Indianapolis, Ind., died recently, aged 82. He was born in Pennsylvania and removed to Indianapolis in 1842. In 1893 Mr. Kern and his wife celebrated their golden wedding. His wife died about two years ago and he is survived by several children.

E. WYATT BAKER, a well-known druggist and manufacturing chemist of Winchester, Va., died January 25. He had been in ill health for a number of years, and on the day before he died was stricken with paralysis. Besides his business at Winchester he was also interested in firms at Havre de Grace, Belair and Baltimore.

JOHN RICHARD COSTIN, a young druggist of Barclay, Md., died suddenly January 24. Mr. Costin had filled a number of responsible positions, and during the Spanish war was a member of the hospital corps, with the rank of lieutenant. At one time he resided in Baltimore. He was 33 years old.

EDGAR F. SLINGLUFF, of Upper Marlborough, Md., and for ten years connected with the firm of Slingluff & Co., manufacturing chemists, Baltimore, died on the night of January 23 of appendicitis at the Maryland University Hospital. He was 28 years of age and left a widow and one child.

JOHN B. HALL, a native of West Bradford, Vt., and since 1872 a druggist in Manchester, N. H., died January 15, aged 59 years. He was a veteran of the Civil War, and for a number of years had been colonel of the First New Hampshire Regiment of militia. He had also served in the Legislature.

PATRICK H. CHAPIN, of the firm of T. Sisson & Co., wholesale druggists, Hartford, Conn., is dead. He was born in Lafayette, Ind., 47 years ago. He was a member of the Lafayettian Club, and was prominently known owing to his writings pertaining to travel, both at home and abroad.

BOARDS AND ASSOCIATIONS.

OKLAHOMA PHARMACEUTICAL ASSOCIATION.

The tenth annual meeting will be held at Shawnee on April 4th and 5th, 1900. No pains will be spared by our local secretary, J. M. Remington, and his associates in Shawnee to make this the most profitable and agreeable meeting held in our Territory. There is a number of interesting papers being prepared and the amusement will be equal to the occasion.

Come and bring your ladies. There will be entertainment specially for them. Meet with us; get acquainted; compare our different business methods. We may help you, and you can enlighten us. Your presence is needed, as well as your financial support. Don't be a drone. "Be up and doing." It is a duty you owe the profession to become a member and attend these meetings.

We extend a hearty invitation to our brother druggists of Indian Territory.

Reduced rates of one and one-third fare for round trip will be secured on all railroads in Oklahoma and Indian Territories. Official programme will be published later.

For further information address J. M. Remington, local secretary, Shawnee, O. T., or the undersigned.

F. M. WEAVER, Secretary,
Oklahoma City.

—The Ohio Board of Pharmacy held an examination at Columbus January 9 and 10. Following is a list of those passing the examination: Pharmacists—C. N. Gordon, Hedges; Charles F. Smith, Salineville; Fred P. Dugan, Pleasant Hill; Charles D. Lyons, Conneaut; Charles Ehlers, Cincinnati; Louisa C. Winter, Cincinnati; F. S. Willig, Proctorville; Lloyd T. Seyfried, Kent; Gustave C. Sleckel, Wauseon; Joseph A. Scholl, Toledo; Samuel Berger, Cleveland; Fred L. Oswald, Cincinnati; J. F. McCleary, Osborn; W. O. Shreve, Covington; D. L. Patterson, Bellfontaine; Charles A. Hosey, Portsmouth; Frank C. Hotel, Wellsville; Robert P. Anderson, Archer; Leo Nelson, Cincinnati; John C. Kyle, Jr., Portsmouth; John W. Tuttle, Medina; Edward Heffner, Reading; Morgan J. Jones, Plain City; Otto Lutterman, Cincinnati; Julius Hoffman, Cincinnati; E. B. Anten, Rawson; Henry Mueller, Cincinnati; J. A. Oliver, Irontdale; Alfred A. Barrick, Columbus; William R. Bushwag, Sidney; Charles W. Antony, Canton; F. F. Rakestraw, Sandusky; Claude W. Deem, Norwood; Charles S. Thatcher, Steubenville; William H. Tirre, Cincinnati; Virgil E. Beckley, Lima; W. L. Price, New Straitsville; Clayton M. Day, Blanchester; John W. Darr, Canton; W. J. Woodside, Burton; Frank J. Knabe, Cincinnati; August Phillip, Hamilton; Rollan C. Bowe, Rising Sun; C. H. Nuhn, Vermillion; Frank K. White, Harveysville; Charles Munter, Canton; J. A. Hubbell, Quincy; Arthur Schmidt, Cincinnati; Chas. W. McCarrel, Wellsville; Lyman W. Cox, Chillicothe; Harry L. Messer, Ada; Carl H. Pixley, W. Farmington; Arno H. Bohm, Cleveland; Clarence B. Heil, Columbus; Albert F. Plucker, Cincinnati; E. F. Rinehart, Troy; Grant Hoover, Gratis; Eugene J. Kaderly, New Philadelphia; Benjamin E. Steele, Wilksville; Frank Tschanen, Upper Sandusky; H. R. Wiltbarger, Columbus; J. E. Hochstetter, Doylestown; Dr. E. A. Spencer, Doylestown; R. C. Hobly, Toledo; Charles Madden, Harveysburg. Successful applicants for certificates as assistant pharmacists—Edward King, Delphos; Thos. A. Williams, Delphos; Carl Naither, Cincinnati; Alfred A. Silberman, Miamisburg; A. Klein, Cleveland; Lester J. Page, Coshocton; Frank J. Kapp, Cincinnati; Alvin A. Consteln, Upper Sandusky; J. A. Warfield, Fairview; J. A. Ebert, Elyria; Louis Ernst, Cleveland; Liewellyn Thomas, Akron; W. F. Warning, Blanchester; Ernest A. Newbauer, Akron; W. R. Hower, Doylestown; Leo. A. Lesser, Cleveland; Harry E. Elson, Magnolia; Charles A. Laut, Cleveland; W. J. Mock, Cleveland; Bert W. Hays, Cincinnati; Frank Dunkler, Toledo; John A. Lever, Cleveland; W. A. Beall, Columbus. Applicants whose grades were not sufficient for pharmacists' certificates, but who are permitted to take assistant pharmacist certificates—Warren V. Stoner,

JOHN H. TAPPING, a druggist of Metuchen, N. J., died on February 5. He was over sixty years old, and had been in the retail drug business for many years. He suffered a paralytic stroke about a year ago and had been in frail health ever since that time.

LESLIE SOULE, manager of the Soule drug store at Paducah, Ky., died January 13. The Retail Druggists' Association of that city held a meeting and passed resolutions of sympathy for his family and the members attended the funeral in a body.

EDWIN A. BARTLETT, a druggist in the employ of Allen & Thomas, Cuba, N. Y., died January 21 from pneumonia, aged sixty years. At the time of his death he was supervisor of the town. He leaves a wife, two daughters and three sons.

HENNING A. CHRISTENSEN, druggist, at 800 West North avenue, Chicago, is dead. He had been in the hospital some time, where he had undergone a severe surgical operation, from the effect of which he was unable to recover.

WILLIAM B. BULLINGS, Sr., a prominent druggist and business man of Montreal, Quebec, died January 26 of bronchial pneumonia. He was seventy-four years of age and went to Montreal from New York more than fifty years ago.

A. O. THOMPSON, a Wapello, Ia., druggist, died January 23, aged thirty-eight years. Several years ago he suffered a stroke of paralysis, and his health had been failing ever since. He leaves a wife and three children.

DR. MARTIN TYGART, 50 years old, who was a druggist in Passaic, N. J., fifteen years ago, but who had practiced medicine in Rutherford, N. J., since that time, died at Liberty, N. Y., on January 19.

NELSON S. BLAKE, for several years with the Bristol Drug Co., Ansonia, Conn., and recently engaged in the drug business at New Haven, Conn., died January 22 of acute pneumonia.

ARTHUR BOUCHER, a Cambridge, Mass., druggist, died at Watertown, January 5. His body was sent to Three Rivers, Canada, his birthplace, for burial.

Dr. HENRY C. VAN ZANDT, engaged in the drug business and practice of medicine at Schenectady, N. Y., died January 16. He was 56 years of age.

W. J. BURDA, who owned two stores in Chicago, one at Ashland avenue and Blackhawk street and the other at Noble and Blackhawk streets, died January 24.

A. O. THOMPSON, of Wapello, Ia., died of paralysis on January 23. Mr. Thompson was 38 years of age and highly esteemed by all who knew him.

DANIEL M. BLUE, of D. M. Blue & Co., Merom, Ind., died January 22 of heart trouble. He was about fifty years of age and unmarried.

THOMAS W. FRANKLIN, a druggist of Atlantic City, dropped dead in his store the evening of January 9 from heart failure.

THOMAS W. RUSSELL, a druggist of Millwood, Va., died January 20 of pneumonia. He was forty-six years of age.

J. A. JACKSON, engaged in the drug business at Farmingdale, Me., died January 11. He was born in 1832.

THEODORE H. BEARD, formerly a druggist at Danbury, Conn., died January 28th, aged thirty-eight years.

Sulphur Grove; Pierce L. Graham, Zanesville; A. C. Swinley, Forest; Harry C. Hutchens, Williamsburg; Frank Brannan, Wellsville; Guy P. Jaqua, Toledo; Henry E. Knemochler, Cincinnati; Charles W. Hayes, Columbus; Charles Davis Evans, Cincinnati; Robert E. Davis, Chillicothe; Harry G. Schmullling, Cincinnati; Edward Tscanen, Upper Sandusky; Findley Stewart, Cincinnati; Russell H. Shuey, Dayton.

—The Tennessee Board of Pharmacy held its regular quarterly session at Nashville, January 16 and 18, all members present except J. S. Robinson, who has gone to California for his health. During the last quarter the board has caused samples of Tr. Nux Vomica and Laudanum obtained from druggists throughout the State to be analyzed by Prof. E. A. Riddiman, of Vanderbilt University. The result is very gratifying, as it shows that the samples as a whole more nearly approached the required Pharmacopoeial standard, than those of any previous examination. Incidentally, samples of laudanum were picked up from two wholesale grocers, both of which were so deficient in strength it was necessary for the board to take official cognizance of the fact. The purpose of this analysis was not to prosecute those whose preparations might be deficient in strength, but to let them know that they might take steps to remedy the trouble, and to remind them that all preparations dispensed must come up to the standard required by the U. S. Pharmacopoeia. The examinations were held at the Vanderbilt University, which institution has very generously extended to the board the use of the pharmacy laboratory, specimen cases and lecture room. The board is here well equipped for holding examinations in operative pharmacy. To this branch they attach much importance, and it is their aim to make it thoroughly practical. The candidates are marked both on their product and manipulation. There were twelve candidates. The following received the required grade of registered pharmacists: J. Tate Jenkins Mt. Pleasant; R. M. Stahl, Memphis; G. H. Kyser, Memphis; A. S. Crou, Galatin; assistant pharmacists: A. E. Tanner and F. O. McCulloch. The next examination will be held at Nashville, April 18.

—The Wisconsin Board of Pharmacy held an examination of applicants for registration at its December meeting in Milwaukee. The following were granted certificates as registered pharmacists: W. P. Riessen, J. F. A. C. Wartman, O. B. Olsen, W. H. Towne, H. C. Russell, E. C. Gutenkunst, Milwaukee; C. T. Sacksteder, Appleton; O. C. Glerke, W. A. Kalk, Sheboygan; F. E. Stempel, Eau Claire; D. C. Freolar, Madison; W. A. Inglehart, Pardeeville; A. A. Johnson, Kilbourn; James Upjohn, Portage; L. H. Soik, Berlin; Leon Davreux, Green Bay; W. T. Felkinhire, Tomah; E. P. Higgs, Janesville; F. L. Snyder, De Pere. Assistants: F. H. Guehnel, J. A. Patterson, W. T. Mohrhausen, A. E. Kleuth, Milwaukee; J. M. Ruke, Eau Claire; B. E. Walter, Viola; F. T. Shumacher, Green Bay; J. H. Schroeder, Madison; H. T. Yeomans, Platteville; B. G. Pembleton, Hortonville; A. W. Landwehr, Sheboygan; H. R. Kohorn, Stevens Point; J. P. Baldwin, Oshkosh; H. Kreuthmann, New London; Adolph Woerfl, Sturgeon Bay; R. A. Bechaud, E. G. Gebhart, J. F. Schwartz, Milwaukee. The next meeting will be held at Neenah, February 14.

—Minnesota Board of Pharmacy met January 16. The board as constituted for 1900 is as follows: Ray Humiston, president; H. G. Webster (Minneapolis), secretary; Chas. T. Heller, George H. Goodrich, Truman Griffen, J. B. Atkinson. In the class of sixty-nine candidates certificates as pharmacists were granted to the following: Axel T. E. Backdahl, Fred Kienert, G. E. Brasington, Martin T. Moran, Otto E. Olson, Aulin Rockstad, Peter M. Tautges, Albert W. Wagenhals, all of Minneapolis; John G. Eckhoff, St. Paul; Wm. C. Wendt, Faribault; John E. Malloy, Austin; H. C. Evenson, St. Peter; John Edling, Jr., Moorhead; Harmon C. Brown, Little Falls; John M. Bell, Glencoe; Gustav Bachman, Fulda; Otto E. Rydell, Duluth; Harry E. Buffum, Duluth; John H. Belse, Mapleton. These were granted the certificates as assistant pharmacists: Herman F. Lueders, Frank Lem-

mer, Alois J. Spielman, Herbert D. Truman, Thomas C. Bischoe, Mary V. Douglas, Henry J. Dries, Ernest Eckert, Jr. Next meeting at Minneapolis, April 17.

—The Illinois Board of Pharmacy has issued certificates of registration to the following successful applicants who took the examination at Springfield, January 9-11: Registered pharmacists, C. H. Baum, Danville; H. F. Barbour, Chicago; Wilson Brown, Metropolis; Harry Clark, Carmi; A. E. Clark, East St. Louis; F. L. Carothers, Fairfield; W. C. Demombrun, Shelbyville; R. A. Howard, East St. Louis; E. F. Knauer, Duquoin; A. F. Lesanliner, Redbud; G. A. Ludwig, East St. Louis; G. E. Lester, Hoopesonton; W. E. Mercer, Plainville; Palmer Roseman, Oak Park; T. W. Runde, Kampsville; A. E. Stout, Shawneetown; J. C. Whiteside, Edwardsville. Assistant pharmacists: M. J. Briggs, Chicago; J. C. Krittenbrink, Chicago; E. G. Roth, Highland; Joseph Swanson, Chicago. The following officers were elected: President, William A. Dyche, Evanston; vice-president, William C. Simpson; treasurer, Col. Thomas A. Jewett, Oregon; secretary, Lyman T. Hoy, Woodstock.

—At a meeting of the New Jersey Board of Pharmacy, January 18 and 19, the following were successful as registered pharmacists: William G. Abbott, Ocean City, N. J.; Joseph Oscar Blew, Bridgeton, N. J.; Louis W. Johnson, Trenton, N. J.; Martin Krom, E. Rutherford, N. J.; Lewis Walton Long, Trenton, N. J.; Robert S. Lehman, New York, N. Y.; Julius Luck, Ridgefield Park, N. J.; Frank Joseph Maier, Woodbury, N. J.; Charles Wesley Smith, Lakewood, N. J.; William Stephen Scheck, Coudersport, Pa.; James Herbert Wood, Bloomfield, N. J. The following received certificates as registered assistants: James Francis Dobbin, Newark, N. J.; Arthur H. Goodale, Dover, N. J.; Rupan H. Kazanjian, Moorestown, N. J.; Arthur Ward Williams, Orange, N. J.; George Sigars Spence, Camden, N. J. The next meeting for examination will be held April 19 and 20. Applications must be filed ten days in advance with the secretary, Henry A. Jordan, Bridgeton, N. J.

—The Michigan Board of Pharmacy examined 59 applicants for registration at its meeting held in Detroit, January 9 and 10. The following were granted licenses: Registered pharmacists, J. E. McDonald, G. J. Borckoff, J. L. Chauvin, Detroit; G. F. Bernard, Battle Creek; J. T. Carbery, Big Rapids; E. E. Faulkner, Hastings; Grove Green, Marshall; W. R. Gibbs, Howard City; F. A. Gillett, Pontiac; H. D. Harrington, Ann Arbor; M. E. Hanson, Caro; F. G. Lennon, Yale; F. Munson, Ithaca; Robert Patterson, St. Johns; G. D. De Rosa, Bay City; Fred Smith, Romeo; Alice Stevens, Ann Arbor. Assistant pharmacists, E. A. Benson, C. A. Cassada, D. F. Jones, D. E. Perrin, W. J. Wilson, Detroit; L. O. Cushing, Ann Arbor; L. M. Delavan, Hillsdale; D. N. Gleason, Lansing. The next meeting will be held at Grand Rapids, March 6 and 7.

—The Oklahoma Board of Pharmacy met at Pond Creek on January 10, and examined a class of seventeen. The following received certificates of registration: James D. Carpenter, Garber; E. E. Cowan, Orlando; George K. Crooker, Medford; P. R. Dickerson, Enid; William P. Dilts, Blackwell; James C. Hynds, Pond Creek; J. Allen Perisho, Luther; David P. Richardson, Union City. Clarence H. Madden, Nardin; William H. Wilson, Medford; Rice M. Reavis, Lexington, and Thomas E. Mennen, Pond Creek, received certificates as assistant pharmacists. The board adopted a rule limiting assistant certificates to one year from date of issue, provided the holder at the end of that time has the required four years' experience. The next meeting will be held at Shawnee, April 3.

—The District of Columbia Commission of Pharmacy examined twenty-one applicants for registration as pharmacists at its January examination. Of these the following were successful: J. C. Haley, De Haven Sharp, Chas. E. B. Chamberlin, B. W. Campbell, Frank E. Simpson, Robt. C. Ruddy, W. A. Darling, C. F. Collins, W. H. Bradford.

The second quarterly meeting of the New Hampshire Commission of Pharmacy was held at the State House, Concord, on Wednesday, January 24. The following-named candidates passed a successful examination and will receive certificates as registered pharmacists: John Stephen White, Keene; W. Clement Mutty, Berlin; Miles J. Mullen, Gorham; J. Albert Marshall, Manchester; James Herbert Willey, Salmon Falls. Junior examination: Geo. H. Dupaw, Keene, N. H. The third quarterly meeting will be held at the State House, Concord, on Wednesday, April 25.

GEO. F. UNDERHILL, Secy.

The class of 1900, Albany, N. Y., College of Pharmacy, held a banquet at Keeler's Hotel, January 26. Arthur S. Wardle, of Hudson, N. Y., acted as toast-master, and the list of toasts included a variety of subjects. The following officers were elected: President, Arthur S. Wardle, Hudson; vice-president, Arthur Baldwin, Plattsburg; treasurer, Amos Alden, Cairo; secretary, W. H. Livingston, Hoosic Falls; valedictorian, Walter A. Wright, Malone; salutatorian, Loyal P. Eldridge, Canton; executive committee, Arthur Baldwin, Plattsburg; Augustus A. Farthing, Gloversville; and Fred. Carl, Troy.

The Indiana Board of Pharmacy held a meeting at Columbus, January 11. The following candidates took the examination and obtained the required percentage to register as pharmacists: Charles L. Milheiser, New Albany; John August Hook, Indianapolis, and John H. Jones, Evansville. Assistant pharmacists: Ira C. Willan, Morgantown; J. D. Hendricks and Sol Goldsmith, Indianapolis. The treasurer reported a balance of \$5,539.83. There are 8,865 registered pharmacists and 384 registered assistants enrolled. The next meeting will be held at La Fayette, April 11.

The drug clerks of Quincy, Ill., have organized an association for mutual benefit and social enjoyment. The following officers have been elected: President, Carl Mueller; vice-president, George Dralmeier; recording secretary, August Wertz; treasurer, A. J. Heidebreder. The new association starts out with a membership of twenty-five.

The Cleveland Pharmaceutical Association has elected the following officers for the ensuing year: J. A. Bartlett, president; Joseph Albrecht and William F. Kuder, vice-presidents; H. M. Schlitt, secretary, and George W. Foss, treasurer.

A druggist in one of our large maritime cities evidently imagined that he covered up his delinquencies of stock by saying to customers, "We are just out of that, but etc." It was not long before people began to compare notes, and the thin excuse soon became a bye-word. It came to the ears of a manufacturing chemist of the city, a request for whose goods had elicited this reply. In company with a reporter he called and asked for an imaginary preparation. Promptly the same answer came back. That druggist was astounded next morning to find the whole story given in the paper. As the street arab says, "It did him good—not." The joke became a serious matter with people in the neighborhood, and the druggist has plenty of spare time to wonder how his little subtlety smothered him.

Medal Awarded to John Lucas & Co.

At the recent Export Exposition at Philadelphia, John Lucas & Co., of Philadelphia, were awarded a medal for their exhibit of Lucas paints and paint specialties. Lucas' paints are among the best adapted lines in the country for retail druggists to handle; they are so neatly packed and labeled that, whether or not a regular stock of paints and oils is carried, no sacrifice of neatness in the store is required; they are clean stock and there is a demand for them, which the manufacturers are ready to help increase for any druggist who will co-operate with them. A full explanation of Lucas "Selling Help" plan will prove interesting to those who write for it.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

In its peculiar ability to invigorate the body and give tone to the system, lies the great value of Cook's Imperial Extra Dry Champagne.

Mention the Era.

Druggists who correspond with advertisers in this journal will do us a service if they will mention the Era in their letters. It helps us and pleases the advertiser.

A Name with Something in It.

The firm name of Joseph P. Noyes & Co., Binghamton, N. Y., stamped on metal-back, horn combs means a good deal to experienced buyers of combs; it is a guarantee that the goods are made right, are genuine "J. P. Noyes" combs, and can be relied on by dealers and consumers. Every comb turned out at the factory of the above firm is now so stamped.

Fluid Extract Cascara at 57 1-2 Cents Per Pint.

F. A. Thompson & Co., of Detroit, who make a specialty of preparations of Cascara, have introduced "Soluble Cascara, bitter (dry)," and "Soluble Cascara Aromatic (dry)" for making fluid extracts by the addition of the proper diluents. The cost of the finished fluid extracts thus made is said to be but 57½ cents per pint, and the manufacturers guarantee the quality to be entirely satisfactory. This firm, although comparatively a new one, is composed of men who have had seventeen years' practical experience in the manufacture of pharmaceuticals, and whose abilities are unquestioned. Requests for estimates on "quantity lots" of goods or private formulas from druggists are invited.

A Handsome Fountain Ornament.

This cut shows a handsomely arranged basket of artificial flowers, suitable for decorating the soda fountain. It is offered by Frank Netscher, New York and Chicago, who manufactures a full line of artificial decorative plants. These plants are very true to nature, permanent in color and serve their purpose admirably, being much less expensive and less troublesome than natural plants. Druggists interested in interior decorations should write for a complete catalogue to make selections from.

Special Notice.

The attention of the trade is specially called to the fact that the address of E. Harrison Allison, successor to E. S. Harrison & Co., as manufacturers of Harrison's Peristaltic Lozenges, Iceland Balsam, etc., is No. 788 Mass. avenue, Cambridge, Mass., and not Boston. Harrison's medicines have been sold to the trade for nearly seventy years, and as their efficacy has been amply proven, druggists can recommend them with confidence. Jobbers supply them, or they can be obtained from the manufacturer, at the above address. A rumor that the original preparations of Dr. J. S. Harrison are not obtainable in market is, or should be, effectually silenced by the announcement which appears in this issue.

New "Lippincott" Soda Fountain Styles.

Chas. Lippincott & Co., of Philadelphia, announce some new styles in "Lippincott" soda apparatus for 1900, and some special inducements to buyers. They also have a surplus stock of second-hand apparatus in good, serviceable shape, for which they solicit inquiries. A portfolio of illustrations, in colors, with full details of prices, terms, etc., will be sent on request.

Major's Cement Offer Withdrawn.

The Major Cement Co. is notifying the trade that the inducement of four (4) bottles on order of two dozen Major's Cement is withdrawn. They claim that it is not practical, because so few of the retailers have taken advantage of it, and that it did not pay to send the jobbers a special supply for this limited demand, and when the free bottles were supplied from jobbers' stocks it required too much bookkeeping. Making a long story short, it was asking too much from the jobbers, therefore the offer through jobbers is discontinued. Major's salesmen, however, will continue to make the offer of four (4) bottles on every two dozen, so when they call, and you are extremely nice, and treat them to a cigar or a glass of soda, they may oblige you with the four bottles free.

Endorsement of the Ayer Plan.

Charles H. Adams, a retail druggist of Boston, has written to the J. C. Ayer Co., as follows:

Chelsea Station, Boston, Mass., Jan. 18, 1900.

J. C. Ayer Co., Lowell, Mass.:
Gentlemen—The way that you are conducting your business as regards Ayer's Cherry Pectoral, 25-cent size, should be reciprocated by every retail druggist, and I for one in every way in my power will do all I can to assist you. Would to God that we had more manufacturers like J. C. Ayer Co. Respectfully,
(Signed) C. H. ADAMS.

This letter is believed to voice the sentiment of Boston retailers generally, among whom the plan was recently successfully put in operation. Ayer's Ague Cure has been reconstructed according to latest pharmaceutical methods; its taste has been improved, and it now belongs in the "elegant pharmaceutical" class. The price has also been reduced from \$8.50 to 4.50 per dozen and all old stock in the hands of druggists is to be exchanged dollar for dollar.

Easter Dye Advertising.

April 15 is Easter, and stocks of egg dyes are already receiving attention. After the stock is bought the problem of increasing the number of these small but profitable dye sales confronts the druggist. Children being the customers, their interest must be aroused early and kept alive until the business is over; means for doing this will suggest themselves; a window display a few days before Easter will pay, but in the meantime a circular or advertisement addressed to children

(No. 202.)

in simple, direct language, and accompanied by a suggestive cut similar to the one here shown, will help matters. This cut will serve for circulars, for local newspaper advertisements, or for a page in one of the booklets which many up-to-date druggists issue at intervals. The Era will supply the cut for fifty cents, postpaid; if it is ordered along with two other "Era Cuts for Druggists" the three are supplied for \$1.00. These cuts cover nearly everything druggists sell or advertise, and a proof-sheet (now in preparation) showing the complete assortment will be sent to those who write for it.

State of Trade.

Routine Business, but Good Aggregate Volume.

New York, Feb. 13.—A continued steady undertone is reported, with generally satisfactory conditions in nearly every department, and while business has been mainly of a routine order, the aggregate volume continues to reach fairly liberal proportions. Similar reports are heard regarding other branches of business, and the general outlook is devoid of discouraging features.

The influences tending to strengthen the position of quinine, reference to which was made in this column last week, have continued in evidence, and the firmer feeling has resulted in an advance of 3c. per ounce in the N. Y. Q. brand, and all domestic manufacturers are now quoting on the same basis. Manufacturers of leading German brands have advanced their quotations 2c. per ounce. Additional improvement in prices is looked for, but some are of opinion that no further change will be announced until after the bark sale in Amsterdam on Thursday next. It is conceded that manufacturers are very anxious to secure additional supplies of bark, and as the quantity to be offered at the sale is comparatively small, it is expected that competition among buyers will be very keen, and that prices may be forced to a much higher unit basis. Such a result would undoubtedly enhance values of quinine.

Nothing of interest has developed in opium, and the market for this leading commodity has ruled tame, with the tone somewhat easy. Morphine, codeine and other products have continued in demand at nominally steady prices.

Citric acid has advanced sharply, owing to corresponding conditions abroad and scarcity of crude material. Manufacturers' prices are 3c. per pound higher, with the tendency still upward, and quotations for all citrates have been marked up 2c. per pound. Tannic acid has been advanced 5c. per pound, owing to continued high cost of raw material.

In the department of essential oils, wholesale quotations for both sweet and bitter orange show a wider range, in sympathy with primary markets. Pennyroyal is easier, and a further decline is noted in natural wintergreen, the available stock of which has been increased by rather few arrivals from producing points.

Cacao butter scored a sharp advance at the last monthly sale in Amsterdam, and spot quotations for both bulk and cakes are higher in consequence. Lime juice is very scarce and prices of both ordinary and clarified show material improvement. Tungstate of soda is another article which is held at advanced figures on account of scarcity.

Among the roots, Mexican sarsaparilla is a shade easier, owing to more or less keen competition among the larger holders. *Serpentaria* is in light supply and firmer. There have been no further important developments in ipecac, but the downward tendency abroad is said to have been checked by the withdrawal of the principal bear operator.

Some pressure to sell has caused a slight reduction in quotations for Valencia saffron. Menthol shows a further decline, but the lower quotations have not stimulated demand, and a continued tame market is reported. Russian isinglass is decidedly stronger owing to scarcity, and an active consuming demand, and a good business is reported at the advanced prices.

Gum Elemi also is scarce, and holders of the reduced stock are firmer in their views. Among the balsams, Peru is easier owing to liberal supplies in first hands, and quotations for round lots have been reduced 5c. per pound.

Refined camphor continues very strong, with the demand reported active, and prices are expected to show further improvement in the near future.

Business Is Booming.

Boston, Feb. 10.—Business is simply booming, everybody is working hard, the retailers in particular finding this

o. At some of the retail places night work is being done at present to keep pace with orders. There naturally is a strong feeling of satisfaction with all this good trade. Several chemicals show decided strength this week, and have gone up in price, notably salicylates, bromides and iodides. Oil of wintergreen is also advancing and others of the essential oils show strength. Carbohc acid is strong for the asking price. Quinine has advanced. Acids show no special change. Morphine is advancing and appears to be heading for even higher rates. Opium has not changed. The general list of dyestuffs remains without marked feature, sales being rather good on one or two lines, however. Alcohols are in good demand.

Still Keeping Up.

Philadelphia, Feb. 10.—The trade reports from the wholesale houses in this city indicate that business is still keeping up, the spurt which began several weeks ago. Orders are plentiful and good-sized and collections are slightly better than last reported. The price of quinine has advanced three cents an ounce again, but that as been expected. Citric acid went up three cents a pound this week but no immediate further advance is looked for. The retail trade seems to be picking up steadily.

No Pronounced Change in Baltimore.

Baltimore, Feb. 12.—The various branches of the drug trade have undergone no pronounced change during the last week. Jobbers have found themselves taxed quite heavily at times, and again had considerable leisure, the movement being somewhat uncertain and spasmodic, but upon the whole very satisfactory. The manufacturers of pharmaceuticals report business as steady, with a rising tendency, but devoid of exceptional activity. Heavy chemicals moved freely and the market for botanicals reflected faithfully the conditions which obtain at the centers of trade. Retailers have experienced a falling off in their receipts on account of the strict interpretation of the Sunday law, but the vigilance of the police and of self-constituted prosecutors will relax after a time, and matters will resume their former status.

Quiet in Detroit.

Detroit, Feb. 10.—“Quiet” is the verdict for the week’s business. The health of the entire State seems to be phenomenally good, and retailers are beginning to wonder how they are going to unload their “grip” and “bad old” medicine. Manufacturers report that since inventory was finished they have settled down to doing the same excellent business that they experienced before Christmas. January made a very creditable showing.

Strong Adjectives to Express Satisfaction.

Chicago, Feb. 10.—A prominent jobber to-day, when approached by your correspondent and asked as to the condition of the wholesale drug business in the West, could speak only in strong adjectives conveying thorough satisfaction with business conditions. Sales are better than they were at this time last year, judging from the volume of business done in January, 1899, and that done in January, 1900. Collections are good.

The manufacturers are not complaining. Those who deal in season goods, such as fountains, etc., are looking forward eagerly to the coming of Spring and are preparing diligently for the expected harvest.

Retailers are holding meetings whose tone, while pessimistic enough, partly from general, deep-seated conditions and partly from habit, becomes, nevertheless, less gloomy as the jingle of coin on the counter makes livelier music than the call of the sheriff’s auctioneer. A couple of years ago the drug trade was, according to many, in its lowest depths. Now, everyone says things might be worse.

All They Can Reasonably Expect.

St. Paul and Minneapolis, Minn., Feb. 9.—Something of a “blizzard,” practically the first one of the winter, prevailed the latter part of this week, which caused a slight falling off in the retail trade; but this bad effect

YOU can conscientiously recommend Abbey’s Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

“Abbey’s” is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

“I am glad to say I find Abbey’s Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be.”

We should be glad to have you keep Abbey’s in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade price-list on application.

will have passed away long before this communication has reached the Era readers. The jobbers declare business to be very active, and encouragingly so. Collections are extremely good for the season. Prices of various staples continue advancing. The anti-trust laws in various States seem about to be tested, and the results, no matter what their nature, are bound to be felt materially by the drug trade as much as by any other line. Wholesalers here continue acquiring new territory from competing cities, which enterprise is greatly facilitated by constant railway development. All in all, conditions and outlooks are all that the men of drugs can reasonably expect.

Present Month Will Surpass January.

St. Louis, Feb. 10.—The excellent trade record made in January promises to be more than equalled the present month from all indications. One house states that last month was the largest in their history, and the man making the statement is known for his conservatism. Local retail trade is not brisk but shows some improvement over last week.

Free Samples of Duroy Wine Flavors.

So many successful soda dispensing druggists have ascribed their success, in large measure, to the use of the genuine Duroy Wine Flavors, that the value of these flavors cannot be questioned. To induce druggists who have not dispensed Duroy flavors to add to their own success by adopting them for the season of 1900, the Duroy & Haines Co., of Sandusky, O., now offer to send to druggists only, free sample of Duroy Soda Claret, Champagne Soda Syrup and Native Red Cherry Syrup, by express prepaid, so that tests can be made and stocks ordered before the season opens. Those in quest of "winners" for 1900 cannot do better than write for these samples and judge for themselves.

Dr. Humphreys' Manual.

In every advertisement of Humphreys' Specifics in the Sunday, daily or weekly papers, or monthly magazines, there is always a prominent notice of Dr. Humphreys' Manual, stating that a copy can be had free upon application to any druggist in the United States or Canada. Imagine the disappointment when your customer takes the trouble to go to your store and cannot find the Manual. If this occurs the fault is yours, for the Humphreys' Company, of New York City, send prepaid, a supply of Dr. Humphreys' Manual on application. A postal card will do.

"B. C. & Co." Tablets in Bulk.

Buyers of tablets in bulk will find much of interest in the prices now being quoted by Billings, Clapp & Co., of Boston. Although these prices are low they indicate no reduction in the high quality of goods which the drug trade has for years associated with "B. C. & Co.'s" brand. The firm have recently finished a new and larger laboratory and, with improved facilities, are able to effect economies in manufacture, of which they give their customers the advantage.

Good Capsules at Low Prices.

In quoting their product to druggists the Warren Capsule Co., of Detroit, make this important assertion to buyers: "If you are paying more for capsules than we are asking, you are not buying right," coupled with the statement that Warren's Capsules are made of the best gelatine and are of best quality. To prove both of these assertions buyers are asked to write the company for prices and for samples of their goods for comparison with other higher priced brands in market.

Market Reports.

NEW YORK MARKET.

New York, Feb. 12.—There is a moderate degree of activity throughout the jobbing market, and a continued steady feeling prevails, with all recent important advances in prices well sustained.

OPIMUM.—Foreign markets continue to reflect weakness, but there are no developments in the jobbing situation, and quotations remain unchanged at \$3.30@3.50 for 9 per cent, and \$3.40@3.60 for 11 per cent, the higher figures for single parcels.

POWDERED OPIUM.—Only small retail sales are reported, and jobbing quotations remain nominally unchanged at \$4.50@4.60 for 13 per cent, and \$3.10@3.25 for 10 per cent.

MORPHINE.—Continued activity is a feature of the market, and values are maintained on the basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for smaller quantities.

QUININE.—Quotations have been advanced to 35c. for 100-oz. tins, 37c. for 50-oz. tins and 42c. in ounce vials. There is a continued fair jobbing demand, with the tone of the market strong and further improvement in values is considered imminent.

CACAO BUTTER.—Values are higher in sympathy with improved conditions abroad, and jobbing quotations for cakes show an advance to 48@50c., as to brand and quality.

SAFFRON.—Valencia is a shade lower, and the revised quotations are \$12.50@13.50, as to quantity.

SERPENTARIA ROOT.—A firmer feeling has developed owing to scarcity, and jobbing quotations have been marked up to 50@55c. for whole, 52@57c. for ground and 54@60c. for powdered.

MENTHOL.—The tone of the market is easier, and jobbing prices have declined to \$3.15@3.25 by the pound and 37@39c. per ounce, according to size of order.

RUSSIAN ISINGLASS.—Supplies have been steadily diminishing, and holders of the reduced stock have advanced quotations for jobbing quantities to \$4.50@4.75.

GUM GELATIN.—Owing to scarcity, prices are higher, and the revised jobbing range is 30@35c., as to quantity.

CARDAMOM.—Decorated are in better supply, and jobbing prices have declined to \$1.60@1.70.

LIME JUICE.—Clarified is scarce and firmer, with jobbing quotations advanced to \$141.25, according to size of order.

CITRIC ACID.—Manufacturers' quotations are 3c. per pound higher, and jobbers have advanced prices to 35@38c. by the keg, and 44@50c. for less.

CITRATES.—All varieties are 2c. per pound higher, in sympathy with the advance in citric acid.

TANNIC ACID.—An advance in crude material has caused a general improvement in quotations from both first and second hands, and the revised jobbing figures are 90@95c. for bulk and \$16.10 for pounds.

BALSAM PERU.—Supplies are more abundant, and the market is easier, with jobbing quotations reduced to \$1.85@2.05.

OIL WINTERGREEN.—Natural has been arriving more freely from producing sections, and values are lower, with small parcels obtainable at \$2.50@2.65.

ACONITINE.—Amorphous is higher, and the revised jobbing range is \$1.40@1.50 per ¼ oz.

IODIDE OF COPPER.—Jobbing quotations have been advanced to 50@55c. per oz.

SALICYLIC ACID.—Jobbers have further advanced quotations to 75@80c.

SALICYLATES.—The revised quotations for soda are 80@85c. with ammonia and iron, 82@85c. in pounds and 20@25c. in ounces; zinc, \$2.50@2.75 in pounds and 25@30c. in ounces.

HEMP SEED.—Russian is easier, and quotations in a jobbing way have declined to 3@3½c. by the bag and 5@6c. for less.

CAMPHOR.—Japanese in ounces has been marked up to 54@54½c. by the case and 50@62c. for less, ½ and ¼-oz. packages, 56@55½c. by the case and 60@64c. for less.

OLIVE OIL.—The market is slightly easier, with jobbing quotations reduced to 5½@6c. by the barrel and 8@10c. for less.

TONKA BEANS.—Demand light and unimportant, with a decline in jobbing prices to 50@60c. for Para and 70@80c. for Surinam.

CRAMP BARK.—Scarcity has caused jobbers to advance quotations to 25@30c. for whole and 38@42c. for 8700.

LOBELIA SEED.—Supplies have been reduced, and quotations for jobbing quantities show an advance to 45@50c. for whole and 50@55c. for powdered.

ACETIC ACID.—All grades are firmer, and No. 8 is held at 80@85c. by the carboy and 9@12c. for less; U. S. P., 7½@8c. by the carboy and 12@13c. for less.

Advertising Matter for Ridge's Food.

The manufacturers of Ridge's Food request druggists to apply for free supplies of advertising matter for distribution, and will co-operate with retailers in increasing the demand at all times. Inquiries should be addressed to Woolrich & Co., Palmer, Mass.

ERA BLUE BOOK.

Those subscribers, and there are not many now, who have not yet received their copies of the Era Blue Book, are requested to be a little patient. The task of shipping this large number of books is a great one, and taxes all facilities to the utmost. They are going out at a rapid rate, however, and in a few days everyone will be supplied.

THE PUBLISHERS.

ASK US.

Druggists who have calls for any goods which they cannot find or of which they do not know the maker or the price, are invited to correspond with us and we will supply the information whenever possible. We have perfect facilities for handling such queries and we are always glad to extend this service to our readers.

THE PUBLISHERS.

CHANGE SHEET FOR MARCH 1.

On March 1 we will issue a Change Sheet which will include all Price List changes in the Era Blue Book from the first of the year to that date. This will take the place of the weekly change sheets issued during January and February. After March 1, by which date the distribution of the Blue Book will be completed, these Change Sheets will be issued each week, as heretofore, and should be preserved carefully by all Blue Book users.

THE PUBLISHERS.

WINDOW DISPLAYS.

If you have an attractive window exhibit, or if the interior plan of your store contains some unique feature, photograph it and send us a print. We have in preparation a special supplement which will consist of reproductions of show windows and store interiors, and we want to include in this as many good specimens as possible. Send in your contributions very promptly, that there may be no delay in issuing this sheet.

PHARMACEUTICAL BILLS BAD AND USELESS.

In the bewildering mass of bills piled up by the legislators of New York State are to be found thus early in the session a full dozen or more affecting in some way the practice and the practitioners of pharmacy. There are a few good bills, but for the most part these new measures simply prove anew the dense ignorance of their introducers concerning a profession for which they are too far eager to make restraining and regulating laws, and therefore concerning the public good. Look at a few examples:

Mr. Maher seeks the enactment of a law ostensibly to lessen the number of working hours of drug clerks, but in reality to give absolute control of the drug business in New York City into the hands of the Board of Health, as at present administered, a Tammany tributary, conducted for political gain.

Mr. Wilcox wants a law to compel all the druggists in the State to dispense all medicines containing poisonous drugs in a specially designed "poison bottle," the selection of which is to be left to the State Board of Health. It is notorious that a patent on such a bottle is owned by one of his political friends. The bill, if enacted, would fatten a monopoly, for the Board of Health is said to be "fixed" to require this particular bottle.

Mr. Gale wants to make a law requiring department stores having drug departments to employ only registered pharmacists as managers of such departments. Under the existing law a registered man must be in charge if prescriptions are filled, and this new measure would be of doubtful benefit, if not altogether superfluous.

Mr. Fiske has offered a perfectly absurd bill to require the cleaning of old bottles picked up on public dumps, and permitting the use of such bottles after the prescribed cleansing.

Mr. Morgan would legalize the sale of antitoxin by the New York City Board of Health, and thus create an unfair competition against legitimate manufacturers.

Mr. Sullivan seeks to prohibit absolutely the sale of cocaine in "medicines, tonics, remedies, snuff or tobacco."

Mr. Weeks wants to appropriate \$5,000 of the State's money to found an asylum for habitual drunkards and drug fiends.

And so on. Most of these bills are bad. Most of them are wrong in principle. Such as are not vicious are absolutely useless as framed. Not one of them would bring about the results

its framer pretends (not intends) it is designed to accomplish. Not one of them should be enacted.

There are some other bills, prepared and introduced by the pharmacists themselves, which are designed to work only good. These have been fully presented and discussed in these pages. But most of the proposed legislation, as above stated, is bad, and thorough opposition is developing.

HOW TO INCREASE PROFITS.

The second installment of the views of jobbers, manufacturers and retailers upon the ever-present question before the retail drug trade, how may the retailer increase his profits, is offered in this issue. Very much interest is being taken in this discussion, which is not at all to be wondered at, as it is most surely a vital question. It will be noticed that none of the writers is able to present any absolutely new idea or novel method of relief. All agree that general improvement in already existing features is the line to be followed. In other words, the exercise of good business sense is the remedy. It has often been said, and with a good deal of truth, that the retail druggists are not as good business men as merchants in other lines. The atmosphere in which they are brought up is largely responsible for this, but, farther, is the fact that the majority of young men who enter pharmacy have not had a previous business education either in school or in practical store life. Pharmacy as a profession requires many years of study and preparation, and the boy commences at an early age to acquire this along professional lines, generally to the sacrifice of business training, and in after life he is obliged to correct errors of faulty preparation, and this is always hard and disheartening work.

But the writers of the papers in question, when they do specify some particular cause for present conditions, are able at the same time to point out a remedy for that particular cause or influence. It is not necessary to specify these here, but druggists should carefully read these papers and pick out the pertinent points themselves. There is a grain of wisdom and a hint of assistance in every letter. We trust that many more will feel impelled to contribute to this symposium.

INTEREST IN THE COMMERCIAL ASPECTS OF PHARMACY.

The great interest taken in the market and trade reports in this journal, and in the *Era Blue Book* in particular, confirms the belief in the general awakening in the trade itself to the commercial possibilities within the practice of pharmacy as a profession. Even some of the most ultra "professionalists" are now buying and selling their wares according to modern business methods, and, as a result, their financial affairs have been placed upon a sound and healthy ba-

sis. "Goods well bought are half sold" is a principle which applies to the drug business as it never did before. Business conditions must be considered, market reports studied, and the whole commercial aspect of modern pharmacy be reviewed each week if one is to keep up with those who are forging ahead in the race for success. This advice is the theme of the leaders in pharmacy to-day. The laggard cannot win, and until he changes his tactics there is no hope for him.

PUBLICATION OF EXAMINATION QUESTIONS.

The *Era* has published from time to time specimen sets of questions of the various boards of pharmacy employed in the examination of applicants for registration. No attempt has been made to publish all of the questions asked by any particular board of pharmacy, nor has any effort ever been made to secure these questions surreptitiously or to publish them without the full knowledge of the boards using them. The publication of the questions, we believe, serves a good purpose only as the student and applicant for registration uses them as samples of the character of the work required of him by the board. The study of them to the exclusion of the fundamental and general principles involved in preparing one's self for examination is directly harmful. The information gained thereby is too detached and fragmentary. But, as we have indicated, if the questions are used only as models, their publication can do no harm. Publicity of the deliberations of any board serves to show that its members are alert to the duties required of them and that the questions asked by them are of a character to call forth the student's best effort in preparing for the examination.

The majority of readers are interested in the work of the boards of pharmacy, and we shall from time to time continue to publish sets of questions as they may come to hand.

One of our best medical journals relates the history of an interesting operation upon an insane patient who swallowed a pair of suspenders. We wonder if this is the man whose troubles were described by his mother, an old lady who said Johnny had "ulsters in his throat, two buckles on his lungs, and his pants were dreadful short." If now he has a pair of suspenders he seems fairly well equipped.

Some of the medical journals are poking a lot of fun at the quarantine regulations recently enforced in some Southern states, for instance, the fact that a barrel of carbolic acid that was shipped to an Alabama town had to be thoroughly fumigated before it was allowed to be landed, and that a large load of rocks intended for building harbor defenses was disinfected. We can hardly imagine what method of fumigation or disinfection was applied to the carbolic acid, and would like to be informed.

"I say, Mummer, does God number the hairs of our heads?"
 "Yes, Harold, dear."
 "Then Pa's head must keep God pretty busy, doesn't it?"

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

DENIES THE ALLEGATION.

High Bridge, N. Y., February 11.

Editor Pharmaceutical Era—Please allow me to call attention to a few statements made in a communication published in your esteemed journal, the Era, February 8th inst., signed "Wm. J. Robinson, Ph.G., M. D.," statements which are liable to mislead and create a false impression on your readers and should be corrected under all circumstances. Mr. Sidney Faber, secretary of the Board of Pharmacy, is quoted by the writer of the article as a native of Germany, also as having a special grievance against Russians. Now, as both of these statements are absolutely untrue, I consider it my duty to enter a protest based on an acquaintance of twenty-five years' standing, giving me an intimate knowledge of Mr. Faber's history, a history which is not equalled by any one in devotion to pharmaceutical interests, untiring and persistent in the advance of our loved profession without any selfish motives, a capable and indiscriminating officer. Mr. Faber was born in New York City, and is above all a patriot and a thorough American, loving American institutions, unbiased by any nativistic opinions and tolerant in religious views. What better proof can there be than the fact that his present clerk, with him a number of years, enjoying his fullest confidence, is of Russian parentage. I do not desire to devote space to other parts of

the letter of Mr. Robinson, but when he assumes to publicly make statements let him tell the truth.

FELIX HIRSEMAN.

MORE THAN ONE REASON FOR THE N. A. R. D.

Philadelphia, Feb. 17, 1900.

Editor Pharmaceutical Era:—Your editorial of January 25th, "What About Buying Clubs," and the response thereto in the issue of February 1st, have been read with much interest. In your statement that if it is found impossible to close up these clubs the N. A. R. D. might as well go out of business, have you not exaggerated for the sake of emphasis? Do you honestly believe that the N. A. R. D. has no other reason for existence than the solution of the patent medicine problem? It was, however, the response to the editorial which chiefly prompted this note. There is a vein of doubt running all through the article of our "praying and working" friend, which has a tendency to send doubtful chills along the spinal column of other weak kneed members.

"Never swap horses until you have crossed the stream"—inferentially the horse you ask him to swap for will break down in mid-stream. "Having a vivid recollection of the failure of many other plans," etc., presumably he expects to add another failure to his vivid recollection.

"Thrice armed is he who hath his quarrel just," and our friend surely believes the N. A. R. D. cause just when he contributes liberally of loyalty, work and money to what he fears is a failure. Now, what I and many other Era readers would like to know is, what particular joint of this triple armor does he suspect of weakness? Does he think that the affiliated associations will fall in allegiance to the national organization, or that the members of the local associations will speedily become lukewarm, or does he fear that the proprietary and wholesale associations will refuse their promised support? If his doubts have reference to the retailers

I would respectfully draw his attention to the local association which we "slow Quakers" organized a little over a year ago and which now represents over 75 per cent. of the retail drug stores of this village, and to the fact that over 90 per cent. of the members paid their renewal dues without solicitation. Will this "doubting Thomas" kindly enlighten us as to the wherefore of his doubts?

A PHILADELPHIA MEMBER.

ORGANIZE CITY AND COUNTY DRUG ASSOCIATIONS.

Chilton, Wis., Feb. 9, 1900.

Editor Pharmaceutical Era: The actual and distressing need of universal, thorough and practical organization has never been more apparent and imperative than it is to-day in the retail drug business.

The day of the department store is at hand; our business and profession are in jeopardy, and if we do not organize and protect ourselves now, as we ought to and while we have a chance to, my friends, the time will come when our business shall entirely pass into the hands of the department stores, simply because we have neglected the duty of organization and self-protection.

The drug business is a profession and belongs only to the registered pharmacist of this Republic, but if the department store gets in possession of it nothing short of anarchy will ever cause it to let go again. As our worthy secretary of the National Association of Retail Druggists so forcibly puts it: "We are like a great giant, who, pitifully unmindful of his vast strength, allows himself to be treated as a child."

We have the power to control the situation now, if we would use it. This fact the N. A. R. D. is aptly demonstrating, and it remains for us simply to do our duty individually. "In unity there is strength." Therefore, let us get together, form associations in every section of the country, and transmit the accumulated power to the central station, the N. A. R. D., and try to aid them in the work of the National Association with the vigor and enthusiasm necessary to insure the complete success of its plans. Pharmaceutically yours,

HENRY ROLLMANN,

Secretary Wisconsin Pharmaceutical Association.

"HAND ME DOWN PHARMACY."

West Superior, Wis., Feb. 14.

Editor Pharmaceutical Era: Pharmacy of to-day can be compared to the "hand-me-down" establishments. Formerly it took a man years of training to become an expert tailor; to-day anybody can sell clothes, and the largest stores may have a poor, under-paid tailor stuffed away in a corner for repairing work. Is the pharmacy of the future to be like this? Will all prescriptions be dispensed from ready-made-fill-the-bottle-put-in-the-cork preparations? If so, the legislators may conclude that no special training is necessary except ability to read the labels, and then we may see enormous "pharmacies" employing forty to fifty girls, and the more enterprising may have—like the clothing stores—a dark corner where a poor, underpaid "pharmacist" is employed filling odd prescriptions, written by some old fogey country doctor who still has a smattering knowledge about drugs and whom the "detail men" have overlooked.

Now, brother city pharmacist, look over your prescription file and your shelving "behind the case"; how many "prescriptions" have you on your file, and how many "orders" for somebody's compound?

How many tinctures or powders have you on your shelving and how many "preparations"?

Now take down any "preparation" and see if you could not duplicate it. For instance, a well-known genito-urinary tonic could be made by the merest tyro in pharmacy—so many ounces of this and that fluid extract, elixir simplex, q. s. And still the manufacturers of this compound, whose very existence depends on the good will of the pharmacist, print this legend right on the label: "It has the advantage over extemporaneous prescriptions in that the proportions and vehicle have been so nicely adjusted that what in themselves are disagreeable medicines now become agreeable and acceptable to patients. This desirable result has been obtained at the cost of much ex-

periment, so that the preparation represents more than the ordinary skill of the pharmacist."

This is the merest clap trap, and what's more, we all know it. If the so-called chemical works (I call them kitchen pharmacies) would confine themselves to making coal-tar products and such, what the average pharmacist cannot do on a small scale, it would be well, but when, as the other day, a representative of one of our best houses persuaded the physicians that the ordinary druggists could not make a solution of sodium phosphate, matters have indeed gone pretty far.

It's bad enough to pay \$2.40 a dozen for Ayer's Cherry Pectoral, etc., etc., but when we have to pay fancy prices for the simplest pharmaceutical preparations we may indeed ask ourselves, where is this going to end? I am sure that all pharmacists are not meekly submitting themselves to such high-handed ways, and would like to hear some suggestions as to what we can do. Every order (can't call them prescriptions) for these "preparations" is a direct slap in the face for the druggist, because it shows that the physician believes that the druggist is incapable to compound a simple solution, emulsion, or even to make a pill. And why does he think so? Very seldom from experience, but from representations made by our friends, the manufacturers.

The patent medicine question is easy in comparison with this. If they charge us too much, why we won't handle them (for instance, Cuticura), and the grocery or dry goods stores will sell them. But what are we going to do with this "preparation" question; if they charge us too much, what can we do?

If we refuse to handle them the doctors will carry them in stock. And what's left of our precious pharmacy if dry goods stores carry all the patents and the doctors all the "preparations"? Why, we will cheerfully sell sundries, cigars, soda, have lunch counters and public waiting rooms, art and toilet articles, etc., etc. But will we then be pharmacists?

P. A. LIGNELL.

EXPLOSION OF CHLORATE OF POTASSIUM.

M. Berthelot, in a series of experiments recently made, has succeeded in bringing about the explosion of chlorate of potassium by operating in a special manner.

This compound, although it enters into different explosive mixtures, has not hitherto been considered as an explosive body; when gradually heated, it decomposes into chloride of potassium and oxygen, which latter is given off with disengagement of heat. M. Berthelot finds that he can bring about a detonation under ordinary atmospheric pressure and in an open vessel; it is necessary to introduce it suddenly into a vessel which has been previously brought to a temperature higher than that necessary for the decomposition of the chlorate. The experimenter has already brought about in this way the detonation of picric acid, which burns, under ordinary circumstances, in the open air. He takes a glass tube, closed at one end, of 25 to 30 millimeters diameter; this is fixed vertically in a support and the closed end enveloped by the flame of a Bunsen burner, it being heated over a length of 50 to 60 millimeters until this part of the tube is visibly red. The chlorate of potassium has been prepared in advance by fusing it in a capsule and then cooled until it commences to solidify; a glass rod, drawn out to a long point, is dipped into this repeatedly, so as to accumulate a globule of considerable size at the end of the rod. The tube being kept at a red heat, the rod is introduced into it and the globule brought to within 10 millimeters of the bottom, care being taken not to touch the tube at any point. In a few moments the chlorate becomes liquefied under the influence of the heat and commences to drop upon the bottom of the tube; each drop makes an explosion, at the instant it touches the red hot glass, with a very sharp noise and a white smoke formed of chloride of potassium. This explosion does not, however, affect that part of the globule remaining on the end of the rod. M. Berthelot considers that an explanation may thus be found for the explosions of chlorate of potassium, which has been stored in large quantities in certain chemical works.—(Sci. Am.)

Continued from Feb. 8.

What Can Druggists Do to Increase Their Profits?

RETAILERS, WHOLESALERS AND MANUFACTURERS DISCUSS THIS
IMPORTANT QUESTION.

THE CAUSES AND THE REMEDY.

APPLY THE GOLDEN RULE ACCORDING TO DAVID HARUM.

The question propounded by the Era is one that comes up in the throat, as it were, of the retail druggist, and swallow, swallow all he may, there is a lump there that will not down.

"How to increase his profits."

Were there a fountain whose waters would restore the aged to perpetual youth, and the sick to robust health, its patrons would number few less than would be the admirers of the philosopher and chemist who would, by the deft hand of science, turn loss into profit and point out the way whereby the bank book of pharmacy might be ruled up at the end of the month or year in black ink, and not in a red ink balance upon the wrong side. Profit is that which remains over after paying all expenses of doing business. Whether it shall come, if at all, by the old method of small sales and large profits, or by "large sales and small profits," is a question which is being answered by those who have trenched upon that which the druggist was once wont to denominate his exclusive line. The Era asks for a remedy for the patient without having furnished a diagnosis of the case. In such event, we may be pardoned for emulating the old-time doctor who gives an omnibus prescription, trusting to luck to reach the patient with at least one of the many remedies of his drag net formula.

Closer personal and business relations between those on opposite sides the counter will bring better results, when that relation shall have convinced the patron that he may rely with greater confidence upon the integrity and competency of the druggist to furnish him with a potent and palatable remedy, than upon the proprietary article put up for the use of physicians. Greater profits may be obtained by living nearer to your possibilities, getting that which legitimately belongs to your business. While 70 per cent. of the goods come to you ready made, you are only 30 per cent. pharmacist and 70 per cent. merchant. Now you are entitled to a larger percentage in your profession. When this 30 per cent. is absorbed by pharmaceutical and patent medicine houses, you are out of business. Convince your patron physician that when he prescribes a patent pharmaceutical nostrum once, his patient leaves him and buys direct next time, thus leaving him to incur the penalty of his own evil practices. Since all lines have trenched upon the druggist, I see no way for him except to obey the golden rule as laid down by David Harum, "Do to the other fellow as he does to you, but do it first." As an example of the amplified and expanded drug store, I would relate an incident that came under my personal observation a few days ago in Hot Springs, Ark. A party of excursionists were taking in the city for a day, and were admiring the beautiful windows of Mobbs & Co., druggists, with their wealth of tropical plants, bath robes, confectionery, shoe polish, etc., when a lady of the party said to her friends, with an air of "I know" in her tone, "This is the 'woman's exchange'; let's go in and get something for our lunch." The party entered the store, and presumably got something for lunch, though it may have been "wet."

Beatrice, Neb.

M. E. SCHULTZ,

INCREASE YOUR PRICES.

Answering the question, "What can druggists do to increase their profits?" The following is gathered from observations made as to the methods of certain successful druggists:

The first suggestion is to carry small stocks, and buy for cash discounts. It seems to me that the present is a very favorable time to increase the retail prices, especially those which have been cut to a small margin. The present upward tendency of crude material and cost of production give an opportunity not likely to occur again in many years.

As an example of how this can be done, I call to mind an instance in our line where certain articles had been reduced to a figure where there was no profit left. One of our travelers took a day off and got the leaders in the warfare to agree upon an advanced schedule, which was put into effect to the great satisfaction of all concerned.

It is probable that in many communities the good offices of the traveling salesman can be secured to bring about a similar result.

In a recent investigation by us as to the selling prices of Johnson's Belladonna Plaster the fact was developed that a low price was not always the factor in their sale, and that a good article will always bring a fair price. A thorough canvass revealed the further fact that the places where the higher prices prevail are those showing the largest sale. As an instance, one druggist was found who had cut the price of these plasters to a very low figure in the hope of gaining trade from his more prosperous neighbor, but his shrewd competitor in the same block was selling three times as many at a considerably higher figure.

In our experience in attempting to adjust a warfare of prices upon our own goods, we have found it best to face the situation as it is, and have found that where the druggists were willing to take the cutter into account and acknowledge his existence, better progress was made. Public sentiment is generally in favor of the cutter, and a compromise is often much better than a fight.

Causes which have cut off the retailers' profit surround the manufacturer and wholesaler as well, and there is the same difficulty in maintaining profits. Each factor fears that some one else will gain an advantage, and, animated by sentiment and passion, prices and profits are thoughtlessly sacrificed. A warfare among manufacturers or wholesalers is of no advantage to the retailer; it not only tends to demoralize prices, but is a deteriorator of quality.

To sum it all up—in my judgment the best way for the druggist to increase his profits is to increase the price, and if necessary to accomplish this result, to meet his adversary half way, conceding certain points in order to gain others for himself.

In our line of plasters and surgical dressings, we believe that these can be made the most profitable goods at the present time that can be handled by the druggist, and we are using our best efforts to induce the trade to hold these profits well in hand.

R. W. JOHNSON,
Johnson & Johnson.

New Brunswick, N. J.

STICK TO PHARMACY; MAKE YOUR OWN PREPARATIONS; BE GOOD CITIZENS.

The subject "What can druggists do to increase their profits?" is a broad one, and can be treated in as many ways as there are different sections of the country and different conditions of trade to be met.

My experience has been confined entirely to the West in the drug business, and in my twenty years of business experience, I have observed some of the different methods adopted by successful druggists in Kansas, Nebraska, Missouri, Colorado, California and Oklahoma.

The general desire of Western druggists to accumulate wealth rapidly leads them into all sorts of side lines; so much so that many of our drug stores present more of the character of a racket store than the neat and respectable appearance of what a modern drug store should be. Side lines of every description, such as lamps, coal oil, pocket knives, jewelry, wall paper, paints, oils, books, stationery, toys and endless variety of notions, are carried, with the idea, of course, of increase in profits which to the average Western druggist are always too meagre.

This side line business is carried to such an extent in many instances that the legitimate drug business is lost sight of, and becomes of that sort where you can buy anything, from a pill to a threshing machine, and the proprietor, with the idea that he is increasing his profits, has no time for legitimate pharmacy, and is the machine through which the manufacturing and non-secret pharmaceutical houses grind out their products to the consumer.

The extent to which a man may go in side lines, with a view of increased profits, must be governed entirely by his capacity, energy and ability, and even though he may be a Watnamaker, he might make a far greater success if his talents were confined to a specialty kindred to the drug business.

My idea is that, whatever may be the capacity of a druggist for business, if he will confine himself strictly to his profession and manufacture a line of reliable preparations, which he can push upon their merits, always carrying the best goods obtainable, he will eventually meet with greater success, in the way of increased profits, than is generally the result with the average druggist who makes a merchant of himself.

Many druggists may increase their profits by making themselves generally useful as citizens in the community in which they live and by attending their local and State association meetings.

I often think that the druggist gets the idea that he is exempt from social and civic duties, and by so acting loses largely in profits.

This question is so broad that only a small portion can be covered by any one paper upon the subject, but I hope to see all sides discussed in the Era in the near future.

F. B. LILLIE.

Guthrie, Okla.

ORGANIZATION, EDUCATION AND LEGISLATION.

I am unable to give you a lengthy opinion, but am desirous to comply with your request the best my time affords.

It is a known fact all over this great country that the druggists have not the proper confidence in each other, that they have no special love for associations, that they are a people suffering from several species of cancerous growth, such as selfishness, jealousy, conceit, mistrustfulness and many other "nesses," and unless they will use heroic treatment to accomplish a complete cure the future of the retail druggist will be as miserable as his past. The remedy is at the disposal of every druggist, if he will only show a willingness to make good use of it. As I stated at Albany, organizations of all kinds exist in other lines, and druggists must avail themselves of the same medium if they want protection. We must unite ourselves in city, county, State and national associations, all to work hand in hand, and a financial success cannot fail to be attained. To make an organization successful and protective the membership must not only be composed of all the druggists, but

those druggists must throw aside all boyish actions, all mean and despicable dispositions, they must prove themselves to be men of principle and honor, trustworthy in all their actions, sincere and honest in their dealings. The druggists of New York State are given an opportunity to show their faithfulness and manliness by unanimous support of the All State Pharmacy Bill, which has been introduced by Assemblyman Hill, at the instigation of the Legislative Committee, which was empowered to do so at the last meeting of the State association at Albany. That bill was framed by a committee partly appointed by ex-President Muir, and made up by representatives of colleges, boards of pharmacy and associations, and with one exception introduced as those learned pharmacists prepared it. The passage of this bill is a step in the right direction and leading to the road to success. If it needs amending in a year or two it can be easily accomplished. Do not forget to enroll your name in your city or county association. Attend its meetings; these conferences are of unlimited benefit. Meet your brother druggist on friendly terms, and you will find business much more of a pleasure than a burden. And you will be able to do away with cutting and slashing prices on proprietary or patent medicines, as well as on prescriptions and other goods. Be sure and support the National Association of Retail Druggists, which works faithfully, not for any man or set of men, but for the benefit of *all the druggists*. I trust this humbly-written article will be of some benefit, and am happy to know that you are striving for the benefit of the druggists. Let us all work together.

Syracuse, N. Y.

WM. MUENCH.

BE BETTER BUSINESS MEN.

This being a commercial question, it must be treated from a commercial view-point. Increased sales, decreased expenditures, the sale of more profitable goods—either or all—will increase profits, other things equal. The man who does not advance must necessarily retrograde, and the druggist who does not sell more goods in 1900 than in 1899 is losing ground. New customers must be made; old customers made better ones. How to do this is a question so complicated by local conditions that no general rules can be given except those trite ones familiar to every business man. Increase your business, but study out your own methods.

Curtalement of unnecessary expenditures is just as important. A small leak will soon empty a large till. Economize on help by keeping one good man at good pay rather than two poor ones at half pay; he will do more than both, do it better and cost less in the end. Give what you will to charity, but beware of the advertising man with a scheme. Advertise judiciously, but do not imagine that because a few wealthy men have become heavy advertisers every heavy advertiser will become wealthy; set aside an appropriation and stay well inside of it. Watch current expenses closely and cut them whenever feasible.

Sell no goods at cost except postage stamps—the fewer of these the better. Sell cut-rate goods only when forced to; at all other times push preparations that yield fair profits, remembering always to displace with better goods whenever possible—with inferior goods, *never*. Buy close and exact liberal cash discounts. Take these discounts at every opportunity and thus make your capital earn two profits. Remember that an inferior article is always more expensive than a good one, no matter what the price. Sell for cash as far as possible.

This year another Presidential contest will cast its disturbing influence over business, and business sagacity will again be taxed to keep trade at its normal level. The drug store should not be allowed to become a place for political wrangles, neither should the druggist obtrude his views on patrons, though he should never try to evade the question. No one likes a straddler. Keep cool and remember that whoever is elected your business will have to be run on business principles if it is to be a success.

In brief. Win new business, maintain spotless credit, buy carefully and pay promptly, push profitable goods,

preserve good health, incur no obligation without knowing how you can meet it, and be able to look every man squarely in the eye.

Detroit, Mich.

F. STEARNS & CO.

SEVEN POINTS FOR CONSIDERATION.

In reply to the question as to "what can druggists do to increase their profits?" I respectfully submit the following as my views on the subject:

First.—Be master of your profession.

Second.—Watch carefully your purchases and discount your bills.

Third.—Be very cautious to whom you sell on credit.

Fourth.—Calculate a living profit on your wares, and sell them at those prices, ignoring entirely what the other fellow does. If he (the other fellow) is committing commercial suicide, it certainly is foolish to follow his footsteps. Better quit business and get a job sawing wood.

Fifth.—Watch your expense account, both business and personal.

Sixth.—Live within your income. (This is perhaps the stumbling block of most men, and is the downfall of many a noble and well meaning spirit).

Seventh.—Above all, be satisfied with the results of your best efforts. Don't let an occasional gloomy period drive you to desperation. Remember that the sun may be shining to-morrow, although it is cloudy to-day. After all, the trouble is that our desires for the accumulation of riches and position is what is undermining our whole social system. The profits in our business are good, and the average druggist is succeeding in business, and ought to be satisfied. Too many of us are constantly striving to become the equal if not superior of those more fortunately situated in money matters, and are blaming our business for not giving us the desired lift. We clamor for unreasonable profits, and become unreasonable in our demands.

There is no reason for the question, if we will only be governed by the laws of supply and demand, and cut our cloth accordingly. The time is past when druggists (or any other mercantile business men) can make independent fortunes out of an ordinarily conducted business. There are too many of us to divide the profits. The only way to overcome this arrangement of nature is to have unlimited capital to begin with, and that is impossible.

Boonville, Mo.

WM. MITTELHACH.

DON'T BE A CHEAP MAN.

The question "What can druggists do to increase their profits?" is one of vital importance to at least 75 per cent. of all those now engaged in the business, and as it is a problem that a large majority are trying to solve, it seems presumptuous for any one person to point out a line of action claiming that it would result in producing the desired effect. All classes of side lines and all manner of combinations have been suggested. It would seem as though the business of a druggist should be sufficiently remunerative without being bolstered up by any of these makeshifts, but as it is a fact and not a theory which confronts us, we must admit that it is not. Hence, the true remedy is to look into the causes leading to the shrinkage of profits, which is due chiefly to diminished sales. This results from less demand, owing to decreased use both by the physician and the public. In an effort to make up for the loss of business, the druggist has become the dealer in all kinds of cheap preparations; he has show cases and counters filled with five and ten-cent remedies and, perhaps, in addition, has a window display of these articles. In fact, he has become a cheap man himself; he has become so imbued with the idea of cheapness that he fails to obtain the profits that he is justly entitled to on a large part of the goods he sells. The commercial side has overshadowed the professional.

The druggist who places a proper estimate on the value of the knowledge he has had to acquire in order

"Fadder, vy do you prefer the violet soap?"

"Don't you see, Rebecca? Dere is two more raised letters, enough to vash mine hants twice."

to make himself competent to dispense drugs, who demands proper remuneration for exercising that ability; who realizes that his knowledge is of as much value as is the article he is selling, and who makes the price on that basis will have, at least in part, increased his profits.

New Carlisle, Ind.

F. D. WARNER.

RAISE PATENT MEDICINE PRICES; MAKE YOUR OWN DOMESTIC REMEDIES.

"What can druggists do to increase their profits?" I would say that while the N. A. R. D. is working with success assured, sooner or later, to increase the profit on patent medicines, there is another source often overlooked by the average druggist, and that is in buying articles which he could just as well manufacture and save from 50 to 200 per cent. on. For instance, when "Mr. Smooth" comes along with a furniture polish, a dyspepsia tablet or headache powder that "does not need advertising, is sold entirely on its merits and only one-fifty a dozen," would it not be good business to decline introducing his goods for him, make a similar article, save a dollar a dozen and get the benefit of the advertising that will accrue from a good remedy, put up by yourself and having your own name? Druggists who have never put up a full line of general household remedies can hardly realize the amount of their own preparations they can sell in the course of a year in a legitimate manner, without ever showing them to customers when they ask for something else; as that or any other form of substituting should be, as it generally is, left to the "salesmen" in department stores and advertising cutters. I think the druggist will find his profits greatly increased if he makes it a rule to buy nothing that he can make to advantage himself, always bearing in mind to manufacture nothing that will infringe in any manner on the rights of others.

Detroit, Mich.

HENRY M. MORRIS.

STUDY YOUR TRADE AND PUSH THE PROFIT-ABLE GOODS.

In the present condition of the retail drug trade in this locality, I do not know that I can offer any new suggestions as to how the profits of the business may be increased. Patent medicines are sold at cost; soaps, perfumery and toilet articles are handled in large quantities by department stores and offered at ruinously low prices; traveling salesmen supply physicians with tablets and other medicinal preparations, which they dispense to their patients instead of writing prescriptions. This is the condition of affairs that we have to face. There is certainly not enough profit in the business any longer to support the large number of drug stores with which all our towns are supplied. Some will have to close up, while the surviving ones will have to push the sale of all those articles upon which a profit is made. Some patent medicines can always be sold at full prices; some kinds of perfumery and toilet articles can be sold at a profit; while the prescription trade by proper management can be increased. In addition to these, every druggist puts up a line of preparations which are his own, and the sale of which he can promote. Each one must carefully study his own trade and push the sale of all the goods on which he has a profit.

The retail drug business cannot be carried on as easily as it was twenty-five years ago. The people require more attention to their wants, more cleanliness in the store and in the proprietor and his clerks. Many sales must be made every day without profit, and customers borne with patiently and treated politely. By meeting all these demands of the times and by diligent care and attention to business, the profits will no doubt be very much increased.

Harrisburg, Pa.

J. A. MILLER.

LOCAL UNION AND HARMONY; SPECIAL SIDE LINES.

Most drug stores necessarily have a local or neighborhood patronage, and when the wants of the community have been supplied and all the available business secured by the attraction of a good stock, polite attendants, and other elements that enter into the securing and holding of a business, is it possible to secure further profits or increase present profits?

A large number of retail merchants are struggling with this problem, and many have successfully solved it. If patents are sold below a living profit, a determined effort should be made by the dealers to agree upon uniform selling prices. If unable to have a complete list, start with a few articles and when confidence has been established, increase the number. Any kind of a uniform list is better than an open market, and most dealers are willing to agree upon a list which, in its preparation, must represent mutual concessions and rely upon the good faith of parties interested to maintain it.

A careful study of a particular location may reveal a field for the supply of photographer's goods, and the druggist who has ability in this direction can add this profitable line to advantage. The same suggestion may apply to physicians' supplies and other branches of business for which there may be a special demand.

Care should be exercised in supplying general wants and, as a rule, a stock of sixty to ninety days will be found desirable. The profits of business will be improved by refusing to buy large quantities of proprietary goods for which there is not an established demand, as the extra discount offered is rarely an equivalent for the risk and investment of the capital.

WM. J. WALKER,
Walker & Gibson.

Albany, N. Y.

BE A PHARMACIST, NOT A DISTRIBUTING AGENT.

The successful treatment of a disease presupposes a correct diagnosis of the complaint. The changed and changing conditions of the drug trade demand an adaptation on the part of the druggist to meet these conditions. He who cannot rise equal to the occasion must necessarily suffer the consequence. The retail drug business is at present suffering from congestion, which means hard

lines, thin fare and great anxiety to make ends meet on the part of many who are engaged in it. The chances are that these conditions will continue until the number of drug stores is reduced to the commensurate needs of the people. The pharmacist who is to survive is he who is best qualified in his profession, and his success hinges on his ability, character and willingness to serve. What the people demand is not more drug stores, but better druggists, and his profits can be increased by producing in his own laboratory and selling over his counter all goods in his line for which there is any demand. The mere distributing agent for the manufacturer, whether he be physician or pharmacist, will very quickly reach the limit of his usefulness in the community.

York, Pa.

JOHN F. PATTON.

LEAVE OUTSIDE MATTERS ALONE.

The question "What can druggists do to increase their profits?" is certainly a very important one, and I shall look over the various suggestions with a great deal of interest, for that is what I want to know myself. I can make no suggestion that would either be new or novel.

The drug store of to-day is a department store. The druggist handles everything the public asks for, and has his shelves loaded down and his cases filled with things he ought to leave to the stationer, confectioner or grocer, etc. He has gotten so far away from his real business and profession that he has either forgotten or has not the time to make his own generalities, etc. Let him give his best time and thought to the drug business and those things which are legitimate drug sundries, and then if he has any time or space for other things let him "specialize" on some one or two side lines. I carry no side lines outside toilet articles and rubber goods.

LEO ELIEL.

South Bend, Ind.

ORDINARY INDUSTRY AND COMMERCIAL SENSE.

Ambler, Pa., Feb. 8.

We do not really feel able to answer the question which you propound, as we do not know anything beyond ordinary industry and "commercial sense," which would bring the semi-professional man with a college education into the domain of a merchant, and unless, in our judgment, this could be in some way affixed, the average retail druggist will not be likely to make any more money than he has been making, since it is impossible to get them to fix prices and keep them. We would be extremely glad to see the retail drug trade in better financial condition than it is to-day, but we feel that one trouble is that there are too many druggists to the acre, too large a proportion of stores in relation to the number of inhabitants in our cities. We have thought a good deal upon this matter, but we have not come to any conclusions which we deem practical enough to put upon paper.

M.

THE ANSWER IS EASY.

I am sure the answer is easy, and I shall not be obliged to give the oft-repeated "search me," but can truthfully say to all druggists who wish to increase their profits, advertise and meet competition.

FRANK A. DAVIDSON,
Theodore Metcalf & Co.

Boston.

SAVE YOURSELF.

I regret not being able to handle the subject with enough wisdom to be of any service to the retailer. It looks to me as if each individual had to dig out his future salvation himself.

W. P. RITCHEY,
Bruen, Ritchey & Co.

New York.

DRUGGISTS SHOULD CHARGE MORE.

My advice is: Let every druggist charge more for his goods as well as his services and avoid all unnecessary expenses.

PAUL G. SCHUH,
Schuh Drug Co.

Cairo, Ill.

THE PHARMACIST'S "SPECIALTIES."*

By A. R. OTIS.

Nowadays the alert, progressive pharmacist puts up and energetically "pushes" preparations of his own make. If he uses formulas in which he has confidence, and brings his preparations conspicuously to the attention of people, he has every reason to expect success.

One of the best preparations to push is a "blood purifier." At least, I have found this the most successful. It affords an excellent profit, and brings to my store a number of new customers who no doubt would otherwise have gone elsewhere. It was about a year ago that I put my blood purifier out in an attractive package, and began to advertise it very extensively. I soon found that it was selling very satisfactorily. I have a large sign-board erected on the main street of the town, size about 2x7; this cost, complete, with painting and lettering, about \$15, and it has proven an excellent standing advertisement.

I have been advertising this preparation extensively for the last month or two, and the sales are increasing steadily. The results from its administration have been highly satisfactory in every respect, so that now it is practically the leading sarsaparilla; people are calling for it as they used to call for well-known makes.

A popular formula for a blood purifier, one which you can recommend and which cannot fail to give satisfaction, is composed of:

Sarsaparilla root	8 ounces
Burdock root	4 ounces
Prickly ash bark	1 ounce
Mandrake root	1 ounce
Colombo root	2 ounces
Dandelion root	2 ounces
Sassafras bark	2 ounces
Potassium iodide	1 ounce
Glycerin	24 ounces
Alcohol	24 ounces
Water, q. s., ad	1 gallon

Grind all the drugs to No. 20 powder. Mix the glycerin and alcohol with two quarts of water; macerate twenty-four hours and percolate. When the liquid has ceased to drop, pour in hot water until a gallon altogether has been obtained. Add the potassium iodide and dissolve. If not sufficiently dark to suit the eye, add one fluidounce of caramel.

This preparation, put up in Blake or panel bottles, 12-ounce, will cost complete, with carton, about thirty cents each and should be retailed at seventy-five cents. Do not fail to guarantee every bottle that is sold. During my experience there has been but one bottle returned as unsatisfactory out of about three hundred sales. From my own experience you can readily see how successful one can be in pushing his own preparation when he has a good one and is not afraid to guarantee every bottle, always cheerfully returning money for any bottle brought back.

Another preparation which I have had great success with is a cough syrup. During three months last spring I sold nearly two hundred bottles. I put this up in three-ounce bottles and sell it for twenty-five cents; it costs about twelve cents. A good way to introduce a cough syrup, and one that I have found most successful, is to have special sales once or twice during the winter. I have found it successful to extend the special sales two or three days and to advertise accordingly.

Another article which has proven extremely satisfactory is a cathartic granule. Have forty pills in a bottle, obtaining these from some reputable manufacturer, already put up in neat packages. I find the popular price of ten cents makes a very large difference in the sales; this price not only affords an excellent profit, but brings to your store many new customers.

An article which sells well during the winter is a hand cream; this I find takes little pushing after it is once thoroughly introduced. During the past winter I had distributed from house to house 300 small vials of my lilac cream lotion, which very naturally increased my sales.

Unless you make your own preparations, or have them made after your own formulas by a reliable manufacturer, I do not see how you can successfully push these preparations. The only exception to this may be in larger cities where the pharmacist has not the chance to be person-

ally acquainted with his customers, and who may not be as particular. But in a small place it has been my experience that if you have the confidence of the people and push the remedies you will have no difficulty in establishing a fine trade on them. I have found it so and believe that others will who go about the undertaking on good business principles. I think that four or five preparations are about all one can successfully push, and that new ones should be taken up only as necessity requires to make the list complete.

There are several advantages in having a line of your own preparations. Perhaps the main one is the amount of profit gained over the regular patents, which as a rule are sold at very little profit. Moreover, in handling your own preparations you have absolute control of them; no one else can handle them; people have to come to you for them, and by a little push you are soon having people come to your store not only for them, but for other goods as well. But I do not believe a pharmacist can make and push his own remedies with success unless he has full and explicit faith in his formulas and has the vim and push to bring them before the people. Granting these requisites, I would strongly advise every pharmacist to enter the arena. I am sure he will never regret it.

SOME PHARMACOPOEIAL SYRUPS.

F. W. Haussman has been subjecting to critical examination and experiment several U. S. P. syrups, and contributes the results to *Amer. Jour. Pharm.* He approves of the following modifications:

Acetous Syrup of Wild Cherry.

The following is the formula for syrup prepared with a menstruum containing 1 per cent. of acetic acid:

Wild cherry, in No. 20 powder ..	150 grammes
Sugar	750 grammes
Glycerin	100 Cc.
Diluted acetic acid.	

Water, of each a sufficient quantity to make.....1,000 Cc.

Mix the glycerin with 300 Cc. of a mixture composed of 1 part of diluted acetic acid and 5 parts of water. Moisten the wild cherry with a sufficient quantity of the liquid and macerate for twenty-four hours in a closed vessel, then pack it firmly in a cylindrical percolator and pour on the remainder of the menstruum. When the liquid has disappeared from the surface, follow it by a mixture of diluted acetic acid and water in the same proportion as before, until the percolate measures 450 Cc. Dissolve the sugar in the percolate by agitation without heat, strain and pass a sufficient quantity of the same acid mixture as before through the strainer to make the product measure 1,000 Cc. Mix thoroughly.

Syrupus Aurantii.

Sweet orange peel, taken from the fresh fruit	50 grammes
Precipitated calcium phosphate ..	50 grammes
Sugar	750 grammes
Alcohol,	

Water, of each a sufficient quantity to make.....1,000 Cc.

Macerate the sweet orange peel, which should be as free as possible from the white inner layer, and grated, in 100 Cc. of alcohol during twenty-four hours. Pour the mixture into a narrow percolator, allow the alcoholic extract to drain, and continue the percolation with small portions of alcohol until 100 Cc. of percolate have been obtained. Mix the precipitated calcium phosphate in a mortar with 150 grammes of sugar and add the tincture with constant trituration. Set the mixture aside in a moderately warm place until the greater portion of the alcohol has evaporated. To the residue add 300 Cc. of water, transfer the whole to a filter and return the first portions of the filtrate, if necessary, until it runs clear. In the filtrate dissolve the remainder of the sugar by agitation without heat, and add a sufficient quantity of water to make the product measure 1,000 Cc. Strain if necessary.

Syrupus Rosæ.

Fluid extract of rose	125 Cc.
Diluted sulphuric acid	10 Cc.
Sugar	750 grammes
Water, a sufficient quantity to make	1,000 Cc.

Mix the fluid extract of rose with 300 Cc. of water, previously mixed with the diluted sulphuric acid. Allow

*Reprinted from Bulletin of Pharmacy.

the mixture to stand for two hours, filter, and in the filtrate dissolve the sugar by agitation without heat, and strain. Finally add a sufficient quantity of water through the strainer to make the syrup measure 1,000 Cc. Mix thoroughly. The advantages of adding diluted sulphuric acid are the production of a brighter colored syrup, an agreeable acidulous taste and possibly an increase in astringency. The disadvantage, however, is the liability of the inversion of the sugar and consequent deposit of grape sugar on prolonged standing.

(Written for The Era.)

ANALYTICAL SCHEME FOR TESTING PURITY OF OIL OF TURPENTINE.

By FREDERICK T. GORDON.

The common adulterants of oil of turpentine are gasoline or benzine and rosin oil; sometimes shale, naphtha or rosin spirit are also used to cheapen it. When gasoline is used to adulterate, rosin oil is added to bring up the specific gravity.

Tests.

Take the specific gravity, which should be from 0.855 to 0.870.

In a graduated test-tube put 10 Cc. of turpentine and 10 Cc. of glacial acetic acid, and shake well. It should form a clear solution.

At 70° F. 100 parts of 95 per cent. alcohol should dissolve 13.5 parts of turpentine, which solution should be neutral or slightly acid to litmus.

Put about 25 Cc. of sample in 200 Cc. flask, with about 100 Cc. of water, and distill over about 100 Cc. Pure turpentine will all distill over at about 150° to 156° C.; benzine or gasoline will distill over at much lower temperature.

The flash-point of good turpentine is about 90° to 100° F. If it is adulterated with gasoline or similar substances the flash point will be much lower, even as low as 60° to 70° F.

TABLE OF PROPERTIES.

OIL OF TURPENTINE.	ROSIN SPIRIT.	GASOLINE OR NAPHTHAS.
Smell— Cold—"Piney." Warm—"Piney."	Turpentineous, Turpentineous marked.	Coal Tar or Benzine. Coal Tar or Benzine, strong.
Taste— Hot, pungent, bitterish.	Bitter, terebinthinate.	Strong of Tar or Benzine.
Specific Gravity— 0.867 to 0.855-0.870.	0.853.	0.67 to 0.73.
Fluorescence— None.	Slight.	Marked, bluish.
Rotary Power— Strong (R. or L.)	Slight.	None.
With H ₂ SO ₄ — Equal parts of acid and turpentine, heat up, effervesce and turn black or red-brown.	Slight, less heat.	Slight or none.
With HNO ₃ — Action violent, red fumes.	Action less violent.	Slight, no fumes.
Boiling Point— 148° to 156° C.	High and variable.	50° to 60° C., variable.
Flash Point— 90° to 100° F., usually 96° to 97°.	98.5° to 101° F.	Low, 65° to 70° F.

Oil of turpentine is acted upon strongly by iodine, an alcoholic solution of which can be used to estimate the amount of iodine absorbed by samples. Compare with pure sample.

A rough but close estimation of the amount of turpentine in a suspected sample can be had by passing dry HCl gas through it, and weighing amount of "turpentine-camphor" formed and comparing with pure article as to percentage of "camphor" by weight.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Formula Wanted.—(C. E. L.) wants a formula for "Email Noir."

Elixir of Lactopeptine.—(C. T. E.) We cannot give the formula for this proprietary preparation. A formula for an elixir containing pepsin, pancreatin, diastase, lactic acid, etc., is given in the National Formulary under the title "Compound Elixir of Pepsin."

Materia Medica Cabinets.—(H. S. C.) Cabinets containing specimens of crude drugs for identification are manufactured by Parke, Davis & Co., Detroit, Mich., and Eli Lilly & Co., Indianapolis, Ind. We think Allaire, Woodward & Co., Peoria, Ill., make a similar cabinet.

Books on the Manufacture of Elixirs.—(H. J. F.) The literature on this subject is more or less scattered, though the following may be profitably consulted: Lloyd, "Elixirs and Flavoring Extracts: Their History, Formulas, and Methods of Preparation," New York, 1892; the various volumes constituting the annual proceedings of the American Pharmaceutical Association; The National Formulary, revised edition; The Era Formulary, etc.

Solubility of Ammonium Benzoate.—(C. T. E.) You should have no difficulty in dissolving 2 drams of ammonium benzoate in 4 drams of syrup of acacia and 3½ ounces of distilled water, providing, of course, the ammonium benzoate answers the pharmacopoeial requirements and contains no free benzoic acid. See what the Dispensary has to say upon this point. To compound the prescription first dissolve the ammonium benzoate in the distilled water and then add the syrup.

Glycerite of Hydrastis.—(K. P. S.) The official preparation under this title is frequently dispensed when fluid hydrastis is ordered. See Pharmacopoeia, page 200. Here is another formula: Exhaust 17½ ounces of hydrastis in fine powder with a sufficient quantity of ether, recovering the latter by distillation. To the residue add 8 fluid ounces of water previously mixed with 1 dram of dilute sulphuric acid, let stand 7 days, agitate frequently, decant the aqueous solution and mix it with 8 fluid ounces of glycerin.

Liquid Peptonoids.—(J. J. K.) We cannot give the formula for the proprietary preparation. However, peptonoids are formed by the action of pepsin, or pepsin and pancreatin, on albuminous foods of substances, the result being partially digested foods fitted for assimilation. Upon this line manufacturers have introduced preparations containing peptonoids to aid deficient peptic digestion. Albuminous foods or substances may also be digested by means of some one of the various vegetable ferments, as papayotin, etc. Some formulas may be found in this journal, June 16, 1898, page 913.

Tincture of Aloes and Canelia (Hiera Piera).—(F. R. L.) A formula for "hiera piera" may be found in the National Formulary under the title "Pulvis Aloes et Canelle." A tincture may be readily made with this powder with alcohol by percolation or maceration in the usual manner. About two ounces of the powder to the pint of finished tincture should be employed.

A so-called "tincture" of hiera piera employed forty or fifty years ago as a popular remedy in the treatment of amenorrhoea was made by macerating 1½ ounces of powder of aloes and canella in 1 pint of brandy.

Compound Powder of Bismuth.—(G. C.) This title was formerly applied to the National Formulary preparation "Pulvis Anticatarrahals." It is also known as Ferrier's Snuff. Another preparation sometimes dispensed is the following: Powdered klno, 10 grains; powdered cinnamon, 10 grains; bismuth subnitrate, 10 grains; bismuth subgallate, 5 grains. For one powder.

Marsland's Cancer Paste.—(A. G.) The Medical Times is authority for this formula: Arsenous acid, 2 drams; gum arabic, 1 dram; cocaine muriate, 18 grains. The powder is made into a paste by adding water when it is to be used; the paste should be of a semi-liquid consistency and applied to the wound on a small piece of cloth and left on from 18 to 36 hours. It is stated this operation may be repeated as often as necessary. The above is the formula for the stronger paste. A weaker one may be made by using 1 dram of arsenous acid and 12 grains of cocaine in place of the quantities given.

Cold Water Paint.—(F. H. A.) We cannot give the formulas for the articles you name. The following preparation for wood and stone is said to have been thoroughly tested and found to do excellent service: Slake 20 pounds of burnt lime in a suitable vessel by covering it with water. Dilute the resulting milk of lime and add first 2 pounds of sulphate of zinc and then 1 pound of common salt. A beautiful cream color is obtained by adding 3 pounds of yellow ochre, pearl color by the addition of some lampblack, and stone color by adding 4 pounds of umber and 2 pounds of lampblack. The mixture is applied in the usual manner with a brush.

Books on the Manufacture of Tablets.—(G. F. M. and H. J. F.)—This journal has published many articles and formulas on the manufacture of tablets and tablet triturates which you can easily find by consulting the various indexes. Two valuable little books on the subject are: "Tablets, Tablet Triturates and Compressed Suppositories," by Prof. Virgil Coblentz, published by Whitall, Tatum & Co., this city, and "How to Make Tablets," by Frank Edel. The subject of coating pills and tablets is quite fully discussed in the works on practical pharmacy. See Caspari's Treatise on Pharmacy, page 319.

Phosphorescent Oil for Luminous Bottle.—(C. H.) Place a piece of phosphorus the size of a pea in a long glass phial and pour warm olive oil carefully over it till the phial is one-third full. The phial must be carefully corked and when used should be uncorked a moment to admit the external air and closed again. The empty space of the phial will then appear luminous and give out light sufficient to see the face of a watch. Each time that the light disappears, on removing the stopper it will instantly reappear. In cold weather the bottle should be warmed in the hands before the stopper is removed. It is said a phial thus prepared may be used every night for six months.

Composition for Plaster Moulds.—(W. W. M.) Your query is rather indefinite, but for making small models in plaster, gelatine is generally used. Good glue mixed with treacle or glycerine is said to answer every purpose. Workshop Receipts gives this formula: One pound gelatin (1½ lbs. glue) is soaked in water till it becomes flaccid, after which it is melted on a water-bath with 6 pounds of glycerine, the heat being maintained for a few hours to drive off all excess of water. The model is then immersed in the composition, and, when cool, a cut is made with a sharp knife, and the elastic nature of the composition allows the model to be taken out. The mould should be greased before the plaster is poured in; when set, it is extracted in the same manner.

Lotion for Pimples.—(G. A. S.) Reduce to fine powder 1 ounce crystallized alum, 1 ounce common salt, 1 ounce sublimed sulphur, 2 drams sugar and 2 drams sperm-acet, and rub up with 3 ounces of elder-flower water, 3 ounces of distilled water and 10 ounces of brandy, previously mixed. The lotion to be applied at intervals during the day upon linen rags, which should frequently be changed.

(2) Zinc oxide, 2 drams; resorcin, 1 dram; starch, 1

dram; petrolatum, 2½ drams. Apply a thin coating to the affected parts, allowing it to remain on 12 hours. Rub off with oil. It is best applied at bedtime. Many other formulas have been published in previous volumes of the Era. Consult the indexes.

Headache Powders.—(E. B. W.) The indiscriminate use of acetanilid in the treatment of headaches has been quite generally criticised by medical practitioners. The formulas you submit are types of many in general use, but, as you must be aware, the causes of headache are so many and so extremely divergent in their nature that no single remedy can be satisfactorily employed in the treatment of every case. For a discussion of the various phases of the subject and several formulas recommended by different authors, see July 6, 1896, issue of this journal, page 20. It is said that the administration of acetanilid in the form of "Pulvis Acetanilid Co.," N. F., is much safer than acetanilid alone. We much prefer this combination (compound powder of acetanilid) to either of the formulas you submit.

Excipient for Paste Dentifrices.—(E. L. H.) The following will probably answer your purpose: Dissolve 8 grains of saccharin in 9 ounces of alcohol and add 3 ounces of glycerin and 1 ounce of water in which 2 drams of gelatine have previously been dissolved. This excipient, or any excipient containing glycerin, should not be used with powders of which borax and any carbonate are constituents, because glycerin reacts with borax, liberating boric acid (in presence of water), which in its turn acts upon the carbonate, setting free carbonic acid gas. The paste then becomes spongy. Powders containing soap should be made rather thin at first, because the soap gradually gets into solution, and the paste in consequence stiffens with age. Glycerin diluted with about three times its volume of water is also a very satisfactory excipient.

Mahogany Soda Counter Tops.—(McC. & B.) Chas. Lippincott & Co., manufacturers of soda apparatus, Philadelphia, furnish the following information regarding cleaning and polishing mahogany soda counter tops: Avoid the use of hot water on any article that is not absolutely free from acids, grease, grit and other foreign matter liable to attack or scratch the glass. To clean: To a water pail of lukewarm water is added one-quarter ounce of aqua ammonia; remove the dust from the crevices and wash the top with the prepared water and a clean chamois, then dry with a piece of cheese-cloth. Shake well before each application and apply with a soft sponge an emulsion composed of two parts linseed oil, two parts turpentine, one part alcohol and one part pure cider vinegar; remove, and rub briskly with a soft, smooth cloth until a good finish is obtained.

Druggists' Fire Insurance Companies.—(C. L. S.)—There are at least three companies organized by retail druggists upon the mutual plan for the insurance of drug stocks. Ohio has what is known as the Retail Druggists' Insurance Association, operating under the auspices of the Ohio Pharmaceutical Association and managed and directed by its members, all of whom are retail druggists. F. W. Herbst, Columbus, Ohio, is, we believe, chairman of the association's Committee on Insurance. Wisconsin has a similar organization, called the Druggists' Mutual Fire Insurance Company, whose principal office is in Janesville. The South Dakota Mutual Fire Insurance Company, operating under the direction of the South Dakota Pharmaceutical Association, was organized at Huron in 1895. Lake Preston is the headquarters of the company and I. A. Keith, of the same place, secretary. The company limits insurance to \$5,000. We do not know whether any of these associations operates outside of the territory of the States named.

Administration of Arsenic.—(G. E.) We do not believe in the use of arsenic or other potent substances, except under the advice and watchfulness of a competent physician. For this reason we object to the indiscriminate sale of "skin whiteners" or other preparations containing arsenic, no matter how small the dose may be.

The physiological action and therapy of arsenic are fully discussed in the dispensaries and works on materia medica. Briefly, in small doses it is a stomachic tonic, promoting the appetite and digestion, increasing cardiac action, respiratory power and the secretions of the alimentary canal. In larger doses (not toxic), or when taken continuously, it is irritant to the mucous membrane and has the opposite effect of that just described. Tolerance is established by long usage when large doses are taken with impunity without poisonous effect. Toxic doses produce intense burning in the epigastrium, pain over the abdomen, violent vomiting, great thirst, rapid and feeble heart, oppressed breathing and collapse. A prompt emetic should be at once administered and the arsenical antidote, hydrated oxide of iron, or the hydrated oxide of iron and manganese.

Table Jelly.—(Subscriber). A powder for making table jellies may be made by incorporating with powdered gelatin of a good quality a sufficient amount of oil sugar (sugar flavored with any desired essential oil, see National Formulary), and a very small quantity of tartaric acid, just enough to give the jelly a slightly acid taste. A little fruit coloring may be added if desired. In preparing the jelly directions should be given to soak the jelly powder in cold water until softened before applying heat.

The following formula has been recommended for the preparation of table jellies from gelatine and glucose: Soak 3½ pounds of gelatine until soft in sufficient water to cover it. Boil 16 pounds of white sugar and 4 pounds of glucose in water to a temperature of 245° F. Remove the pan from the fire and gently stir in 4 additional pounds of glucose, the gelatine, 1½ ounces citric acid and ½ ounce salicylic acid. Let the pan remain a short time, then skim off the top; next add 1 ounce oil of lemon, previously mixed with 4 ounces of rectified spirit. Run the mixture into tins and when cold cut to size. Jelly of other flavors may be similarly made by substituting for the oil of lemon oil of orange or other flavoring.

Oleomargarine versus Butter.—(G. A. G.) The analysis of butter and other fats is freely discussed in Bulletin 13, "Foods and their Adulterants," Part I. (Dairy Products), published by the United States Department of Agriculture at Washington. The law as passed by Congress and approved August 2, 1886, defines as oleomargarine "All substances heretofore known as oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, etc.; and all mixtures and compounds of tallow, beef fat, suet, lard, lard oil, vegetable oil, annatto and other coloring matter, intestinal fat and offal fat, made in imitation or semblance of butter, if when so made it is calculated or intended to be sold as butter or for butter." You should secure a copy of this Bulletin. We cannot print the various schemes of analyses here.

Butter fat is made up of the glycerides of oleic, palmitic and stearic acids (so-called insoluble acids) and the glycerides of butyric, caproic, caprylic and capric acids (so-called soluble acids). The proportion in which they exist in butter fat varies within very slight limits only, so that 5 to 6 per cent. may be called the average percentage of the soluble acids, and 88 per cent. the average percentage of the insoluble acids present in butter fat. These percentages afford a very important means of distinguishing between a natural butter and oleomargarine or natural butter adulterated with the imitations. In such butter the glycerides of the insoluble acids (butyric, etc.) are either wanting entirely or, if a little cream was used in the churning with "oleo oil" present, in very much smaller amount than the normal. The following is an analysis of one of several samples of oleomargarine reported by Sadler ("Hand-book of Industrial Organic Chemistry"): Water, 14.50; salt, 3.81; curd, 0.48; fat, 84.41; sp. gr. at 100° F., 0.9384; percentage of fixed acids, 94.34; percentage of soluble acids, —. Melting point, 82° F. A sample analysis of genuine butter is as follows: Water, 7.55; salt, 1.03; curd, 1.15; butter fat, 90.27; sp. gr. at 100° F., 0.9338; percentage of fixed acids in fat, 85.56; percentage of soluble acids, as butyric, 7.41; melting point, 85° F. The difference between the percentages of fixed acids in the above analyses is quite perceptible. A distinc-

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

Send All Recitations to Prof. J. H. Bent, ScD, Ohio.

In sending recitations to the director enclose those upon two or three or more of the lectures in a single envelope. In this way you will save postage and facilitate the work of rating.

All students who wish to procure the Era Class Pin are requested to send in their orders promptly. The price of the pin is \$2; the lowest cost consistent with good material and good workmanship. This pin has been illustrated in this column for some time past. It is of ten carat gold, with the letters and design in colored enamels; very attractive and tasty and sold at bare cost of production. Cash must accompany order, and please state what style of pin is desired, whether stick pin, button or safety pin.

Another supply of lectures was sent February 1 to both junior and senior students; juniors receiving lectures 38 to 45 and seniors 35 to 42. This installment will last until March 8.

Read This Bulletin Each Week.

tion, it is said (Sadler), can always be noted in the taste of imitation butter when it is melted upon hot boiled potatoes, to which it imparts a peculiar taste recognizable as distinct from that of a true butter. Some additional information on this subject may be found in Allen's "Commercial Organic Analysis," Volume II.

Repairing Mirrors.—(A. E. B. A.) The method of repairing a mirror depends entirely upon its character. If it is a silver mirror it is best to remove the entire coating and re-silver it. Here is a process:

Dissolve 1 ounce of silver nitrate in 3 ounces of distilled water, add 1 ounce of water of ammonia and 3 ounces of alcohol. Let the solution stand for about four hours and then filter. When ready to use, add to each ounce of this liquid which is to be employed, ¼ ounce of glucose previously dissolved in a mixture of equal parts of alcohol and water. Having cleaned the glass thoroughly, cover it with the liquid at a temperature of 160° F., which temperature must be maintained until deposition of the silver is complete. When dry, dry, coat the surface with mastic varnish.

If the mirror has a mercury back, you may be successful in a trial of one of the following methods:

(1) Clean the bare portion of the glass by rubbing it gently with fine cotton, taking care to remove any trace of dust and grease. If this cleaning be not done very carefully, defects will appear around the place repaired. With the point of your knife cut upon the back of another looking glass around a portion of the silvering of the required form, but a little larger. Upon it place a small drop of mercury; a drop the size of a pin's head will be sufficient for a surface equal to the size of the nail. The mercury spreads immediately, penetrates the amalgam to where it was cut off with the knife, and the required piece may now be lifted and removed to the place to be repaired. This is the most difficult part of the operation. Then press lightly the renewed portion with cotton; it hardens almost immediately, and the glass presents the same appearance as a new one.

(2) Pour upon a sheet of tinfoil about 3 drams of quicksilver to the square foot of foil. Rub smartly with a piece of buckskin until the foil becomes brilliant. Lay the glass upon a flat table, face downward; place the foil upon the damaged portion of the glass; lay a sheet of paper over the foil, and place upon it a block of wood or piece of marble with a perfectly flat surface; let it remain in sufficient weight to press it down tight; put it upon in this position a few hours. The foil will adhere to the glass.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

The British force under Lord Roberts relieved Kimberley on Thursday last week, after that place had withstood a siege of 123 days. The success was due largely to swift British flanking movements by which the Boers were out-maneuvered. The British lost only twenty men in the operations, and the Boer loss was also light. It is believed that the British force will now invade the Orange Free State.

The Boers have rebuilt their two forts that were demolished by the British at Mafeking.

Another Johannesburg foundry has been commandeered by the Boers to manufacture shells.

Some of the British prisoners have been removed to Irene, south of Pretoria, which is commanded by one of the Pretoria forts.

The British army agents at New Orleans have let another contract for 2,500 mules, to be delivered as fast as possible.

Mr. Chamberlain and Mr. Balfour, in speeches in the House of Commons last week, hinted that the British might encourage a Zulu uprising against the Boers.

The total British casualties up to the relief of Kimberley were 10,315.

A despatch from Mafeking says the garrison there can hold out until June.

The New York General Committee of the Transvaal War Relief Fund has raised so far \$12,000, which will be forwarded to London to be applied to the Lord Mayor's Fund.

Six large diamond grinders at Hanan have shut down work in consequence of the war in South Africa, and many workmen lose employment.

The Boers claim to have 120,000 men fighting, and say they can continue the war indefinitely.

The British Government is preparing to equip a military force of more than a million men to prosecute the South African war and for home defence of the United Kingdom. The navy is said to be in good condition, but if any defects should be found to exist they will be speedily rectified.

Great Britain is said to be placing large orders in Germany for Schwartzkopf torpedoes for the Admiralty. The orders are ostensibly being executed for Italy.

Immigrants arriving at Halifax, Nova Scotia, mostly Russian Jews, say that some of them were offered 200 roubles at Amsterdam to join the Transvaal forces.

Lieut. F. O. Tate, the amateur golf champion, has blown off the wounds he received during General Macdonald's reconnaissance at Koodoosburg.

In a speech in the House of Lords last week, Lord Lansdowne said there were about 170,000 reservists, between the ages of 25 and 45 who had served with the colors, whom the Government proposed to ask to join the army for a year for home service only.

The Philippines.

Three Massachusetts soldiers, members of the Twenty-sixth Infantry, are reported to have been captured by Filipino insurgents and tortured and murdered in the public square at Bolnag.

The American garrison quartered in the convent at Daraga, Province of Albay, was attacked last week by 5,000 insurgents, mostly bolo men. They burned most of the town before being driven off. Only one American was wounded.

The American flag has been raised over the Tatanes and Colagan islands, which were omitted from the Paris Treaty of Peace, because lying north of twenty degrees of latitude. The fleet sent to the Bay Islands to raise the flag found the Japanese flag flying there.

Other Foreign News.

The gripe is still gaining ground in Berlin. The physicians assert that at present there are more than 80,000 persons suffering from the malady, although relatively few cases prove fatal. Ambassador White is still ill. Many ships were lost at shipwrecks along the French coast in the recent gales.

The Prussian Ministry of Commerce is working on a bill providing for the control of trusts and pools.

The coal famine in the Saxon district has become more intense. At Leipzig the price has nearly doubled recently. Many factories lacking coal have been forced to close.

Reverend disorder and incendiarism are reported in the Island of Martinique, and a French warship is on the way to Port de France.

Two British commissioners employed in marking out the Russo-Chinese boundary have been murdered.

The Colombo foreign press is reported to be pressing the Cartagena and Barranquilla for the purpose of cutting off mail communication with Bogota.

The British India office has received a despatch from Lord

Curzon, saying that distress from the famine is increasing, and that those now in receipt of relief number 2,754,000.

Archduke Ferdinand, heir to the Austrian throne, has renounced his claim to rule and married Countess Chotek, lady in waiting to Crown Princess Stephanie.

The natives of the Solomon islands group are murdering white settlers on several of the islands, and a German gunboat has gone to punish the culprits.

DOMESTIC NEWS.

Congress.

The Senate passed the gold standard bill last week Thursday by a vote of 46 to 29.

The House Committee on Foreign Affairs defeated and tabled last week the plan for a reorganization of the Diplomatic and Consular Service on a civil service basis.

The House Committee on Interstate and Foreign Commerce has decided to report a Pacific cable bill along the lines of the Sherman Subsidy bill, defeating the Corliss proposition for Government ownership.

Congressman A. Chickering of Copenhagen, N. Y., either fell or jumped from a fourth-story window of the Grand Union Hotel, in New York, Monday night of last week, and was killed.

The House Committee on Mines and Mining has acted favorably upon a bill to create a new cabinet officer, to be known as the Secretary of Mines and Mining.

Other Domestic News.

The dispute over the Kentucky Governorship is being contested in the courts, and may be settled finally in the United States Supreme Court.

The President has approved the act for the preservation of the old frigate Constitution.

Brig.-Gen. H. C. Merriam, commanding the Department of Colorado, has arrived in Washington to give testimony in regard to the part taken by the Federal troops in the suppression of the labor riots in the

Cour d'Alone mining district in Idaho last spring.

The Supreme Court of Minnesota has declared the Minnesota inheritance tax law to be contrary to the Constitutional provision requiring equal taxation, because it exempted personal property and assessed such a tax only on personal property and for other exemptions.

Major Mills, of the Sixth Artillery, commanding at Honolulu, reports that the plague situation is encouraging, and predicts that the quarantine may be raised before March 1.

Floods in New England and New York destroyed much property and several lives last week. The freshest at Albany and in the Mohawk Valley was the worst since 1857.

Secretary Long has forwarded a letter to the Naval Committees of both Houses strongly urging the allowance of an assistant chief to each of the bureaus of the Navy Department.

The lower house of the Mississippi Legislature has passed an anti-trust bill.

Rolana E. Molinoux was sentenced to death in New York last Friday for the murder of Mrs. Catharine Adams. His execution is set for the week beginning March 20.

Commander Richard Wainwright has been assigned to duty as superintendent of the Naval Academy at Annapolis from March 15.

The President has issued an executive order placing the Island of Tutuila under the control of the Navy Department.

Gov. Roosevelt positively stated last week that he could not consent to become a candidate for the Vice-Presidential nomination.

H. C. Frick, erstwhile manager of the Carnegie Steel Company, disclosed the information in a suit against the company last week, that the concern's net profits in 1899 were over \$21,000,000, and that the estimated profits for 1900 will be about \$40,000,000.

The Anti-Trust Conference in Chicago last week adopted resolutions favoring Government control of railroads, and provided for a national anti-trust organization, with branches throughout the country.

A resolution pending to a constitutional amendment to admit women to vote on the same terms as men has been reported to the Iowa house.

Mr. Macrum, the United States Consul at Pretoria, who left his post and came home at the outbreak of the war, made a long explanatory statement last week, complaining of British interference with his mails and telegrams. The State Department discredits his story.

Secretary Root has determined to continue the policy, begun by Gen. Leonard Wood, of reducing the number of United States troops in Cuba, and during the coming spring there will be a heavy reduction of the existing forces.

The formal ratification of the Sumner treaty took place last Friday in Washington, London and Berlin.

The United States survey steamer Nero, which has just returned from an ocean survey for a trans-Pacific cable, reported to be 100 fathoms deep near Guam island where the ocean was 5,269 fathoms deep, only a trifle short of six statute miles. This is the greatest ocean depth yet discovered.

THE DRUG NEWS.

New York and Vicinity.

N. Y. DRUG TRADE SECTION AFTER CO-OPERATIVE JOBBING CONCERNS.

A regular monthly meeting of the Drug Trade Section of the New York Board of Trade and Transportation was held on Thursday, February 15, with Chairman John McKesson, Jr., presiding. John M. Peters, for the committee on legislation, read the following report:

"Your Committee on Legislation respectfully reports that on January 3d a bill was introduced into the House of Representatives, by Mr. Lewis, of Georgia, to repeal the stamp tax. This bill (H. R. 3651) provides that all stamp taxes levied or increased by the act of June 13, 1898, be repealed.

"That the stamp laws in force immediately prior to the passage of the act of June 13, 1898, be continued in force, and that the Secretary of the Treasury be directed to redeem all stamps that have not been sold and not cancelled without discount. This act is to take effect June 30, 1900.

"This bill was referred to the Ways and Means Committee, and as at present advised your committee believes will be reported unfavorably.

"In the State Legislature, Senator Wilcox, the introducer of what was known as the 'infamous bottle bill' at last session, which bill was withdrawn by him from the hands of the Governor upon the rumor that it would be vetoed, has introduced a similar bill this year which provides that all druggists or dealers in drugs and medicines shall put up articles of a poisonous nature in quantities of less than eight ounces in special boxes or bottles, the form of which is to be determined by the State Board of Health.

"This is the old patent bottle bill disguised and with some modifications, and in regard to it your committee recommends the passage of the following resolution:

"Resolved, That the Drug Trade Section of the New York Board of Trade and Transportation earnestly protests against the passage of Senate Bill No. 420, introduced by Mr. Wilcox, providing for the putting up of poisons or poisonous medicines, drugs, or preparations in bottles, boxes or packages of a special form, shape or design, upon the grounds: first, that the sale of poisons and poisonous substances is already amply regulated by the pharmacy laws of the State of New York; and, second, that the citizens of the State of New York should not be subjected to the useless expense and annoyance that would follow the passage of this act imposing upon them the forced purchasing and using of a patented poison package."

Mr. Peters explained the Wilcox bill briefly, and the assistant secretary explained more fully. He said the Francisco patent bottle was owned by a syndicate of politicians, of whom Senator Wilcox was one; that this syndicate had "fixed" the State Board of Health to require the use of the patented bottle if the bill should become a law, and that it was the same sort of "grab" as the bill of last year. The resolution was adopted, and it was voted to ask for a public hearing on the Wilcox bill before the Committee on Public Health.

Albert Plaut then addressed the meeting, asking the consideration of the section to the formation by retail druggists of jobbing concerns—co-operative buying clubs—which are cutting into the business of the wholesalers. Mr. Plaut did not mention by name any concern of this kind, but his remarks were plainly called forth by the recent action of the Consumers' Drug Co., of New York city, the buying club of the German Apothecaries' Association, in deciding to secure incorporation as the New York Consolidated Drug Co., and embark in the regular jobbing trade.

He thought if allowed to spread these concerns would ultimately do great harm. He believed they were spreading and the time had come to take up the matter seriously. He hoped the section would endeavor "to limit their action to the field where it belongs." He said manufacturing chemists and pharmaceutical houses as well as jobbers were affected and vitally interested by the spread of such concerns. He added:

"I understand one local organization of this kind did a business last year of over \$120,000—which represents just so much trade taken from the local jobbers."

Mr. Peters asked what action Mr. Plaut would suggest.

Mr. McKesson suggested it would be well to bring the matter to the attention of the proper committee of the N. W. D. A., and through it to the proprietors.

Mr. Plaut said that should be done also, but he would not wait for that. He thought the Drug Trade Section was strong enough to prevail upon manufacturers to limit their sales to the legitimate jobbing channels. He said he understood that little help could be expected from the retailers. He was informed that a paid officer of the retailers' national association was advising co-operative buying clubs to incorporate and become regular wholesale dealers. He asked for the appointment of a special committee, composed not alone of jobbers, to look into this matter and report at the next meeting.

Mr. McKesson said it would be difficult to formulate a plan that would effect a remedy.

Mr. Peters moved the appointment of a committee of five—one each from the standing committee of jobbing druggists, manufacturing chemists, manufacturing pharmacists, manufacturing perfumers, and importers. This was carried, and the chair appointed: William S. Mersereau, Henry T. Jarrett, E. W. Fitch, Henry Dalley, Jr., and James Hartford. The meeting was then adjourned.

KINGS COUNTY SOCIETY.

Eager to Uphold N. A. R. D.—The Consumers' Drug Co. to be a Jobbing House.

The regular monthly meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy on Tuesday, February 13, was one of the liveliest sessions that wideawake society has held in some time. President Paradis was in the chair, and a goodly number of members was present. The lively part of the meeting was a discussion of the N. A. R. D., its plans and work, and of the recognition of co-operative buying clubs as legitimate jobbers.

In the regular order of business one new member was elected, William F. Riecker, of 161 Wythe avenue. The treasurer reported a balance of \$324.25 on hand; also having received from the City Chamberlain \$180 for the Brooklyn College of Pharmacy as its share of monies paid in fines by violators of the pharmacy law. He had also received for the college \$480 from the New York City Board of Pharmacy. Wm. Muir, for the Committee on Legislation, reported having attended the hearing at Albany on the Shorter Hour Bills. At that hearing, he said, Assemblyman Maher had stated emphatically that he and his associates were determined to get the Maher bill or nothing, "which proves that they do not care a rap about shorter hours for drug clerks, but their one aim is to give control of pharmacy to the Board of Health." Mr. Muir also referred to the Wilcox Poison Bottle Bill, asking the society to oppose it; he also called attention to House Bill No. 7,093, introduced by Congressman Boutelle, to amend the Stamp Tax law of 1898. By vote of the society the secretary was instructed to communicate to senators and assemblymen from the section the society's opposition to the Wilcox bill and to suggest that this opposition would be withdrawn if the bill were amended so as to forbid the adoption of any patented bottle. On motion of Dr. Ray it was voted to send a memorial to Congress urging the passage of the Boutelle bill.

Dr. F. H. Bartley, dean of the college, then conferred the degree Ph. G. on Edward J. Dobbins, of last year's class, who at the time of the commencement had not

completed all the requirements necessary to obtain the diploma.

A bill for annual dues to the N. A. R. D. was laid on the table until the annual meeting, which will be held in May. The Committee on Trade Matters reported a conference with New York City associations on the list of accredited jobbers and stated that a petition had been received from the Consumers' Drug Company to be recognized as a jobber. This started the discussion.

Wm. C. Anderson said that he believed that question was practically settled. He understood that Mr. Holliday had promised simply to present the claims of the Consumers' Drug Company to the committee on the list of jobbers. His personal opinion was that co-operative associations of retailers should not and would not be recognized as legitimate jobbers. He asked his hearers to remember that this was simply a personal opinion, and he did not state that it would have any weight with the committee, of which he was not a member.

R. C. Werner made a long and vigorous address, which he began by saying that he doubted the advisability and practicability of the plan of the N. A. R. D. He thought it was impossible to carry that plan out. He was against paying profit to the wholesaler. He did not see why the retailer should give up a good thing for a promise which he believed could not be carried out. The retailer should dictate terms to the jobber, not let the jobber dictate to him. Manufacturers should be handled independently of the wholesalers. He was sure the manufacturers would rather keep the friendship of the retailers, and he believed the best and only feasible plan would be to consider only the manufacturers and the retailers. He said: "Every plan heretofore for our betterment has been spoiled by the action of the jobbers, and now the N. A. R. D. is marching to defeat in the same way."

Professor Anderson answered that Mr. Werner's plan had been proposed many times, but that it was impossible to get manufacturers to deal only with retailers. The argument was that of a man who says: "I am doing a good business; let everyone else look out for himself." Such men were not willing to give up 10 and 2 per cent. for 33 1/2 per cent., even for a trial. If after a fair trial the plan of the N. A. R. D. should fail, the retailer would again go back to the old practice of buying direct from the manufacturer and getting quantity discounts. He believed the N. A. R. D. plan was the only feasible one, and he thought the majority of retailers of the United States, believed the same thing. He wanted to see the plan carried out, and urged the association to take radical action and ascertain just how its members stood on the question.

Mr. Werner replied, stating that he was for the retailer first, last and all the time. He then moved "that the secretary be instructed to inform the chairman of the Executive Committee of the N. A. R. D. that the Kings County Pharmaceutical Society is in favor of having the New York Consolidated Drug Company (the changed title of the Consumers' Drug Company, which has just been incorporated), recognized as a legitimate jobber."

Wm. Muir opposed the motion, saying that while he did not believe in asking co-operative concerns to give up their advantages before the N. A. R. D. plan is put into effect in their section, he did not see that the Kings County Society was called upon to pass any such motion. At its last meeting the society had re-affirmed its allegiance to the N. A. R. D.; now it was asked to throw the first obstacle in the way of the national association. Inasmuch as the "parent association across the river" had not taken action on this question, he thought it was cowardly for a member of that parent association and of the Consumers' Drug Company to start thus the agitation of the subject in the Kings County Society.

Prof. Anderson again opposed the motion, which he held was out of order, because the society was on record as being opposed to the recognition of co-operative concerns as jobbers.

Mr. Werner again spoke at length in support of his motion, and concluded by saying that every member of the German Apothecaries' Association had asked the N. A. R. D. for recognition of the Consolidated Drug Company. He was simply asking recognition for a new wholesale firm. By its incorporation and change in scope and plan that was exactly what the New York Consolidated Drug Company was.

"What's good for headache?"
"Take ten grains of caffeine."
"Gimme twenty grains. It's for the two-headed boy in my show."

Mr. Muir again spoke in opposition, and it was finally voted to lay Mr. Werner's motion on the table indefinitely.

Mr. Muir nominated Dr. Golding, Dr. Loines and Prof. Anderson as the society's delegates to the convention for pharmacopoeial revision. This election was made unanimous. The meeting was then adjourned.

THE WILCOX POISON BOTTLE BILL.

A good deal of opposition is manifesting itself in New York drug trade circles against the Wilcox Poison Bottle Bill, which is now in the hands of the Senate Committee on Public Health. This bill was introduced in the New York State Senate by Mr. Wilcox on February 1. The same Senator last year secured the passage of a bill requiring that all poisons or medicines containing poison in any way disposed of in this State, must be put up in a bottle "the design of which shall be octagonal or polygonal with serrated edges." That bill was killed by Governor Roosevelt at once as he learned that there was a patented bottle in the market which answered exactly the description specified in the bill.

Mr. Wilcox's new bill, now pending, which is called "An act to prevent mistakes in the sale and handling of poison," is as follows:

"Section 1.—No pharmacist, druggist, or apothecary or his salesman, agent, clerk or representative, or person otherwise carrying on business as a dealer in drugs and medicines shall put up, sell, offer for sale, give away or dispose of, either on prescription or otherwise, any poison or poisonous medicine, drug or preparation, in quantities of less than eight ounces, except such poison or poisonous medicine, drug or preparation be put up, sold, offered for sale, given away or disposed of in a box, package, vial or bottle the form, shape or design of which shall be determined upon and adopted and approved by the State Board of Health; but the provisions of this act shall not apply to patent or proprietary medicines. Any person violating any of the provisions of this act shall be guilty of a misdemeanor.

"Section 2.—This act shall take effect January 1, 1901."
It will be seen that this is practically the same old bill in disguise. It is not believed to be honestly intended to prevent mistakes in the sale and handling of poisons. If it were, it would defeat its own end, because its pro-

visions are altogether too inclusive. Such sweeping language as "either on prescription or otherwise, any poison or poisonous medicine, drug or preparation, in quantities of less than eight ounces," means practically every medicine that is to be found in the druggist's stock. If such a provision should become law, the people of New York State would have no means whatever of distinguishing a package of the deadliest poison they might buy from any other medicine, which, while containing some poisonous drug in minute quantity, is absolutely non-injurious in ordinary doses.

Wholesalers as well as retail druggists, would be affected by such a sweeping requirement, as they handle many preparations which are put up in packages containing less than eight ounces. The only exceptions are proprietary medicines, which are the preparations the sale of which, many believe, should be regulated in some such way for the benefit of the public.

The bill is being opposed also on the ground that it is designed to compel the use of the same patented bottle that was required by the bill of last year. This patented bottle is owned by a syndicate of politicians, and word comes from Albany that this syndicate has secured pledges from a majority of the members of the State Board of Health and that they will adopt this patented bottle.

TOM FRASER MAKES A NEW STATEMENT.

The Dead Beat Grows Bolder in Asking for Credit from Local Firms.

Tom Fraser, whose name is a familiar synonym for "dead beat" to all readers of this journal, is making the most strenuous effort of his life to secure goods on credit. It has already been narrated in these pages with what a flourish his new concern of "Fraser & Co." embarked in the drug business in November last. At that time A. H. Rosenblat was his backer. It transpires now that this gentleman very soon tired of his association with Fraser, and pulled out; but Tom Fraser is still trying to carry on the business as "Fraser & Co., Wholesale Druggists and Manufacturing Chemists." The pretentious letter-heads of the firm give three addresses, as follows: 81 Amsterdam avenue, corner Sixty-third street; offices, 23 Duane street, and 106 Park Row; laboratory, 2273 Third avenue. Tom still uses the same letter paper, but he runs his pen through the office and laboratory addresses. He says now that his father has set him up in business. Here is a sample of the letters he is sending to the most prominent wholesale druggists, manufacturing pharmacists, etc., begging for credit:

FRASER & CO.,

WHOLESALE DRUGGISTS

And Manufacturing Chemists.

51 Amsterdam Ave., Cor. 63d Street.

New York, Feb. 15, 1900.

Blank Co., New York City, N. Y.:

Gentlemen—About two months ago A. H. Rosenblat purchased this store from Mr. Frasier. Never being in the business before he was disappointed in not finding it all income and no outlay. Therefore he wanted to do a legal, but not honorable act, by letting the former owner foreclose his mortgage and he would remove stock. As I was hired on a salary and part of profits, and not wanting to be a party to such a work, I persuaded my father to buy out Rosenblat, which he did on the 23d of January. The price of the store was \$7,000, and there was only left \$2,500, the balance \$4,500, being paid. I am to run store on power of attorney, so you will confer an act, to be settled monthly. Our rent is \$300 per month, and our sales now average a little over \$20 a day, but will double that amount. There are no judgments or bills due or coming due against my father, whose name is James B. Fraser, and in whose name goods will be bought. Having delayed ordering on account of the lateness of the month, in which we had control, our list of wants must be wiped out, so you will confer a favor by advising us at your earliest convenience whether you are willing to open an account or not, as we must make arrangements. The only thing I can promise is, that your statements will be promptly met when presented. My telephone number is 405 Columbus, and if you desire to ask any questions I am at your command.

Awaiting your answer, I have the honor to be gentlemen, most respectfully yours,

(for James B. Fraser) T. EDWARD FRASER.

T. Edward Fraser is the same old Thomas E. The title "Fraser & Co." was assumed for the purpose of obtaining goods and credit on the good name, and commer-

cial rating of Fraser & Co., of No. 262 Fifth avenue, New York. The establishment which Fraser says cost \$7,000 is a small retail drug store at 81 Amsterdam avenue. Three months ago Fraser was informing his friends that this store was for sale and could be bought "for a cash payment of \$500." That Fraser is no wholesaler is proved by his own statement in the above letter that his sales amount to \$20 a day.

SHORTER HOURS BILL AMENDED.

Reported Favorably by Assembly Committee on Public Health and Likely to Pass.

At Albany, on February 14, the Public Health Committee of the Assembly gave a final hearing on the bills to regulate the working hours for drug clerks. Robert Mazet, as counsel for the Pharmaceutical Clerks' Association; Charles W. Dietz, president of that association; Joseph Feldman, and M. Puff, members of the Clerks' Association; William Muir, of the Kings County Pharmaceutical Society, and George Kleiman, of the New York German Apothecaries' Association, were present to favor the Henry bill, which had been introduced at the request of the clerks. Assemblyman Maher was there to oppose that bill, and to urge his own bill, which emanated from the Druggists' League for Shorter Hours. Mr. Maher raised no specific objection to the Henry bill. The result of the hearing was that the Public Health Committee decided to report the Henry bill favorably with amendment. As amended, the bill is to limit the working hours of drug clerks in cities of over one million inhabitants (which means New York city only), to 140 hours in two weeks, and the clerk is to be allowed one full day off, or its equivalent, in each two weeks. No clerk is to be allowed to sleep in any room connected with a drug store which does not comply with the sanitary regulations of the local board of health. The amendment provides that four sanitary inspectors shall be appointed by the State Factory Inspector. These inspectors shall be licensed drug clerks of five years' experience.

This amendment appears to be a satisfactory solution of the question of providing for the law's enforcement which has so long vexed those most interested in this measure. By placing the inspectorships under the State Factory Inspector the appointments must be made in accordance with civil service rules, and the matter is taken out of the hands of local politicians.

This amendment displeased Assemblyman Maher very much. The real object of his bill was to give absolute regulation of the drug business into the hands of the city Board of Health. When he found that his bill would be killed by the committee, he tried to alter the amendment drawn by Dr. Henry so that a bi-partisan board of inspectors might be appointed.

It is said by those who are in position to know whereof they speak that the Governor is well pleased with the bill in its present form, and there exists a feeling of confidence that it will be passed by the Legislature without further alteration.

NATIONAL PERFUMERS' ASSOCIATION ANNUAL MEETING.

The Manufacturing Perfumers' Association of the United States held its yearly meeting at the Down Town Club, No. 60 Pine street, New York City, on February 14. President Henry Dalley, Jr., occupied the chair and about half of the association's membership was present. The meeting, which was preceded by a luncheon, was an executive session. At its conclusion Mr. Dalley said to the Era's reporter that various matters of interest to the association had been discussed. The general report from the members in attendance was that business during the past year had been uniformly good, and prospects were bright for a good business this year. The president's address detailed the work accomplished by the Executive Committee since the association's last meeting, a year ago. The proposed reciprocity treaty with France had been opposed by that committee, and it was believed that the treaty would not be entered into by the Government. The status of the free alcohol for the arts question was

fully discussed. The bills in Congress, designed to make operative that section of the tariff law of 1894 which exempted from Internal revenue tax all alcohol used in the arts and manufactures, were outlined, and it was stated that many members of Congress had pledged their support to these measures, and there was a fair prospect of securing favorable action this year.

The president was authorized to proceed in securing information on this and other matters of interest to the association. The subject of unequal rates of transportation was discussed and a special committee was appointed to confer with the Traffic Associations.

Before the meeting there had been a rumor abroad that steps might be taken to form a combination or trust of manufacturing perfumers. Mr. Dalley said that subject was not mentioned during the meeting, nor had it been thought of by the perfumers themselves since last spring, when a promoter, who had little knowledge of the industry and its conditions, failed in his attempt to form such a combination.

THE BILL TO STOP DRUG SALES IN DEPARTMENT STORES.

The New York State Assembly last week, by a vote of 65 to 40, advanced to third reading the Gale bill to prohibit the sale of drugs in department stores in New York city, except by registered pharmacists. (The text of this bill was printed in the Era one week ago). Before the vote was taken Assemblyman Green, of New York, attacked the bill, declaring it to be entirely too radical and questioning its constitutionality.

Mr. Gale answered that his bill was designed to protect public health, as the drugs used in department stores in New York city were sold by children. He believed "its constitutionality could not be impeached even by the Hon. Joseph Choate himself."

Plan to Cure Drug Fiends and Drunkards.

Assemblyman Weekes, of New York City, is sponsor for a bill, which has been prepared by the Church Temperance Society of the Protestant Episcopal Church, to establish a reformatory asylum, under State management, for habitual users of alcohol and narcotic drugs. This bill provides for an appropriation of \$5,000 to establish an institution for the treatment of persons of both sexes who are addicted to the use of spirits and drugs.

The bill calls for a board of management, one representative from each judicial district in the State, and an additional member from each of the Counties of New York, Kings and Erie. The managers are to be appointed by the Governor, and are to receive compensation during the time they are engaged in making plans for the institution. After it is ready for the reception of the inmates, the managers are to serve without pay, each for a term of three years.

The institution is to have accommodations for 300 inmates. Each case is to be studied individually and compared with others. Incurables will not be admitted. Persons will be committed for terms of five years, but it is proposed to have a parole system similar to the one now in use at the Elmira Reformatory. A system of labor and discipline for inmates will also be adopted.

Commitments will be made by Magistrates, although persons seeking to enter for the purpose of treatment will be accepted. The cost of maintenance of inmates will be charged against the counties from which the commitments were made.

Temperance workers who advocate the passage of this bill think the plan will lead to increased knowledge of alcoholism and narcotism, and of methods for their prevention.

New York Wholesale Bowlers.

Six games were rolled last Saturday in the tournament of the New York Wholesale Drug Trade Bowling Association, but the scores made were below the average. The team of Parke, Davis & Co. made the best showing and won two games. The team of Seabury & Johnson also scored a double victory. The team scores were: Merck & Co., 697; General Chemical Co., 635. Parke, Davis & Co., 840; General Chemical Co., 694. Parke, Davis & Co., 803; Merck & Co., 712. Seabury & Johnson, 761; National Lead Co., 714. Seabury & Johnson, 705;

Roessler & Hasslacher Chemical Co., 682. National Lead Co., 750; Roessler & Hasslacher Chemical Co., 680.

NOTES.

—J. A. Wellington, who for several years past has represented Sharp & Dohme in Texas and territory adjacent to that State, is spending a few days in this city. He says all business in Texas is better than it has been for years past. The State is unusually prosperous and the people are confident that the "good times" have come to stay. Mr. Wellington is one of the most popular salesmen in the South. Throughout Texas he is known as "the duke." On his return South he is to take the management of a new branch establishment about to be opened by Sharp & Dohme in New Orleans.

—Among out-of-town visitors to the local wholesale and jobbing houses during the week were the following: C. O. Armstrong, Milford, Pa.; C. A. Bye, Lakewood, N. J.; S. I. Vanderbeek, Islip, L. I.; Charles Runker, of the Swift Specific Co., Atlanta, Ga.; J. U. Case, Somerville, N. J.; James A. Miller, Lancaster, Pa.; Frank Henry, Cleveland; C. P. Jaynes, Boston; M. Duryee, of the firm of Duryee & Conover, Freehold, N. J.

—The monthly meeting of the New York Section, Society of Chemical Industry, will be held at the New York College of Pharmacy, on Friday evening, February 23. The programme of the meeting comprises the following papers: "The New Radioactive Elements," by G. F. Baker; "Free Fatty Acids in Olive Oils," by R. W. Moore, and "Process for Sensitizing Paper," by R. C. Schupphaus.

—Notice has been received by the secretary of the New York section of the Society of Chemical Industry that an election of officers and five members of the local committee will be held on April 20. Nominations, which must be signed by ten members of the section, must be sent to the secretary, Dr. H. Schweitzer, not later than April 6.

—Incorporation has been secured in New Jersey by the Ukoma Remedy Co., of Camden, N. J., to conduct a drug business on a capital of \$100,000. The incorporators are U. M. Shappell, A. W. Kahl, M. Le Viness, J. M. Mills and H. V. Kane, all of Camden.

—Magnus & Lauer, dealers in essential oils and perfumers' supplies, at No. 4 Cedar street, will move early in the spring to No. 92 Pearl street, where they have secured larger quarters, taking the whole building of four stories and basement.

—McRae & Co., now at No. 580 Tenth avenue, will remove their drug store about April 1 to the corner of Tenth avenue and Forty-second street, Manhattan, where they have secured a store in a new building now in course of construction.

—Among the guests entertained at the New York Drug Club during the week were the following from out of town: W. W. Hearne, Philadelphia; O. D. Hughes, Cranford, N. J.; George W. Peck, Roselle, N. J.; C. E. Belcher, Boston.

—Druggist C. W. Breed, of Malone, N. Y., visited the local wholesale market last week, and announced that he had taken his clerk, a young man named Dewey, into partnership. The firm name is to be C. W. Breed & Co.

—The pharmacy of E. B. Jones, at Gates and Classon avenues, Brooklyn, has been bought by Charles E. Cawl & Co., a newly formed firm, composed of Mr. Cawl and W. A. Stone, formerly of Linden, N. J.

J. J. Ludwig, who some time ago had a drug store in Long Island City, is opening a new pharmacy in Flushing avenue, Long Island City, a block above his former location.

—The retail drug firm of Gebhardt & Bell, 357 Eighth avenue, Manhattan, dissolved partnership on February 13. The business will be continued by A. E. Gebhardt.

—The drug store of Robert C. Mills, at Binghamton, N. Y., was sold by the sheriff on a foreclosure last week. It was bought by W. S. Smith & Son.

—The Apothecaries' Bicycle Club will hold a meeting and dinner on Thursday, March 1, at 1.30 o'clock, at No. 192 Third avenue, Manhattan.

—Druggist J. W. Ballou, of New Haven, stopped in this city last week on his way South, whither he is going on account of poor health.

IN AND ABOUT BOSTON.

Remonstrance Against Proposed Tax on Department Stores.

Boston, Feb. 17.—The recent proposed legislation to tax department stores at the rate of either \$1,000 or \$2,000 a department has been discussed at a hearing by the Joint Committee on Judiciary at the State House. There was a large attendance of merchants and others interested in the subject. Chairman Charles G. Washburn presided. The only witnesses heard were those for the remonstrants. Charles W. Whittier, real estate broker, said there has been a large increase in the last ten years in the salable and rental value of stores in the immediate vicinity of the department stores. These stores contain the same lines of goods that are carried by the department stores. There are to-day no small stores to be rented in the retail section of Boston. Witness said he came to testify at the request of Mr. Jordan, of Jordan, Marsh & Co. This house, like the R. W. White Company, does a large business in toilet goods, candy, etc., but they do not handle drugs at all. Lawrence Whitcomb, real estate broker, concurred in all that had been said by the previous witness. George D. Tenney, representing Houghton & Dutton, said that there are a number of people in Massachusetts who are each running from six to twenty small stores. About two years ago Houghton & Dutton introduced a meat and fish department. The average number of customers to that department is about five hundred a day. They come from all parts of the State. This house does a large business in patent medicines at cut prices. Their toilet articles department is a large one, too. Several other proprietors of department stores in Boston, Cambridge, South Boston, Chelsea, Lynn, Worcester and other places also were heard, all speaking along the line of those quoted above.

NOTES.

—Efforts are being made by Lowell druggists to stop and prevent future cutting of prices. One recent attempt on their part proved unsuccessful however. The druggists met in conference, but two of the leading ones remained away from the meeting and the plan thus failed. It was planned to form an organization, each druggist belonging to it to put in \$100 at the start and appoint a committee to buy all standard medicines with which to supply all the local druggists in the project. One feature is to shut out department stores by getting patent medicine firms to sell only to the committee. It is said several concerns promised to sell only to the druggists. The cut-rates are still in force.

—Although it is not long since Paul C. Klein, whose store is under Hotel Pelham, at the corner of Tremont and Boylston streets, made extensive alterations and improvements about his place of business, he is to bring about even a greater change in this corner. He has leased the adjoining store on the Tremont street side of the building and will greatly enlarge his present store, making it one of the most prominent and finest of the retail shops in Boston. Mr. Klein's lease of this new part went into force on February 1, and work was at once begun at putting his plans into execution.

—Signs point to Worcester's becoming a city of clocks, so many are the applications for permits to erect posts and timepieces in that city. It all is the outcome of the effort on the part of druggists not to be outtrivalled by the Hall & Lyon Company, which first started what is developing into a sort of craze. One after another the druggists have filed petitions, not that they really care especially for these clocks, to erect which will involve much expense, but they hope to so discourage the city fathers in this avalanche of petitions that a general refusal will follow.

—Lowell is in the throes of a small-pox scare, and among other places Arthur's drug store has been, in a measure, in quarantine. The store has been open right along, but the druggist and clerks are under strict orders regarding intercourse with customers, amounting practically to a quarantine.

—In the Superior Court at Cambridge, Morris J. Bailey, a druggist at the corner of Main and Austin streets, pleaded guilty to the charge of illegally selling liquor and

was fined \$100, which he paid. His case had been appealed from the lower court.

—A new drug store at Dorchester is that of Mills & Nolan, who for many years have been in the drug business in Haverhill. The place they have opened is an attractive store at the corner of Popes Hill street and Neponset avenue.

—After a long illness, beginning with pneumonia, and which kept him housed for about two months, Albert H. Eays, who has a drug store in Green street, Jamaica Plain district of this city, is now out and about again.

—The Broadway pharmacy, one of the prominently situated places at Malden, is now conducted by Charles B. Stevens, a druggist who has had an experience of about twenty years.

—Following a time-honored custom, John I. Brown & Son have made their annual distribution of their Bronchial Troches to the members of the Massachusetts Legislature.

—Among the week's exports at the Port of Boston were, drugs and chemicals, \$4,659; hops, \$190; India rubber manufactures, \$30,226; tobacco, \$135; wax, \$402; spirits, \$3,798.

PHILADELPHIA.

Enchre Prize Winners.

Philadelphia, Feb. 17.—Owing to the fact that about 2,300 persons were present instead of only 1,200 as was anticipated, the Entertainment Committee were unable to make up a complete list of the prize winners and it was only with great difficulty that the accompanying partial list was obtained. Ladies' first prize, Mrs. R. C. Ross; ladies' second prize, Mrs. Meyer; ladies' third prize, Mrs. W. H. Campbell. Other ladies who succeeded in winning prizes were: Mrs. Theodore Campbell, Mrs. J. L. Crothers, Mrs. J. J. Finney, Mrs. C. A. Gill, Mrs. W. B. Jones, Mrs. J. D. McFerran, Mrs. D. G. Potts, Mrs. W. G. Toplis, Mrs. G. Y. Wood.

Gentleman's first prize, R. D. Coombs; gentleman's second prize, Charles Rehfsus; gentleman's third prize, E. R. Gatchell. Other gentlemen who were successful in a lesser degree were as follows: C. F. Chandler, W. W. Chalfant, G. W. Fehr, D. P. Fitch, Wm. Morrison, E. C. Stout, W. H. Jones, D. E. Bransons, J. B. Moore, W. H. Poley, W. J. Pechin, W. A. Rumsey, W. G. Ruff, W. F. Weisner, C. H. La Wall.

The contestant who had the good fortune to carry off the Era prize, two handsomely bound volumes of "One Hundred Years of American Commerce," was G. T. Shannon, an out-of-town druggist, who hails from Chester, Pa. The large number of prize winners caused much complication with regard to the distribution. The talley cards were collected of all the successful persons in each class and as their names were read off by one of the members of the committee they responded and each received a numbered check which entitled him to the prize corresponding to that number. As it often happens that four or five checks were offered simultaneously to the members having charge of the distribution, it was impossible to keep a complete record of the names of the lucky ones.

NOTES.

—Next week will be a busy one at the Philadelphia College of Pharmacy as the Alumni Social Meeting and the Pharmaceutical Meeting both occur on Tuesday, the latter in the afternoon and the former in the evening. The programme for the Pharmaceutical meeting consists of the following features: "Mineral Tannage," illustrated with specimens, by Professor Samuel P. Sadtler; "Soluble Ferric Pyrophosphate," by W. E. Ridenour; "Crocus and Some of Its Adulterants," by William Stair Weakley; exhibition of specimens. Both of these meetings will be well attended no doubt, as this year's series of meetings have been unusually successful thus far. Wednesday, February 15, was the final date for the handing in the "Leses" of the students who expect to graduate. There was some tall hustling done for several days in advance of that date and as usual the time limit was extended to a few who had not yet completed their researches. The second year students are beginning to cram all sorts of miscellaneous information into their

heads in anticipation of the final examinations for that class, which take place about the middle of next month.

—The members of the pharmacy department of the Medico-Chirurgical College have organized a society to be known as the "Ippetias Olmon Society." The following officers were elected: President, C. E. Householder; vice-president, J. Parrish; secretary and treasurer, H. L. Wertzley; editor, V. G. Reynolds. The object of the organization is to promote the harmonious relations of the students and some social event will be held each month. The first of these social meetings consisted of a progressive *cachure*, held in the dental laboratory of the college on Friday evening, February 16. Three prizes were offered, the first being a U. S. Pharmacopoeia. Music was furnished by the Mandolin Club and by the quartette, both composed of members of the class. The master of ceremonies was C. E. Householder, assisted by members of the Entertainment Committee, Messrs. Corbett, Parrish, Leiskler, Minehard, Ryan, Anderson and Fisher. —The wedding of Elmer G. Brugier, pharmacist at 2062 Tioga street, took place on Wednesday at noon in the Tioga Methodist Episcopal Church. The bride was Miss Virginia F. Macdonald, of Tioga. Edward A. Eyer was best man and Charles Kelchner, George Lengert, D. S. Gardner and George G. Sloan were ushers. Mr. Eyer and Mr. Kelchner are both pharmacists, the former being manager for F. G. Mumma at 2500 Jefferson street, while the latter is in charge of one of John P. Frey's downtown stores. The ceremony was performed by Rev. S. W. Gehrett, of Tioga.

—Charles N. Boyd, of Butler, Pa., who was elected president of the Pennsylvania State Pharmaceutical Association last June, has issued a circular letter to the members of the association calling upon them to aid in increasing the membership and submitting a list of questions to which they are expected to reply.

—The trial of one of the employees of the Smith, Kilne & French Company, who was arrested last summer for embezzlement, was to have taken place on Tuesday morning, but was postponed upon application of the defendant's counsel and will probably not occur until next fall.

—The Chemical Section of the Franklin Institute will hold its regular monthly meeting on Tuesday evening, February 20, at 8 o'clock. The paper of the evening will be by E. H. Morrison, of this city, on "The Chemistry of Paper."

—Mr. Poole, of Wilmington, Del., spent a day in this city early in the week in the interest of Z. James Bell, the well-known Wilmington druggist, with whom he is associated in business.

—The advertising columns of the papers this week show an increase in the ratio of clerks to positions; thirty-six clerks want situations, while only twenty-two vacancies are advertised.

—J. F. Powers, formerly with S. W. Strunk at 1800 North Fifteenth street, is now with George E. Evans at the Chestnut street store.

—C. W. Ellsperman, druggist at Eleventh and Susquehanna avenue, is the proud father of a bouncing girl.

—J. H. Redecker, of Lebanon, was in town one day last week on business.

BALTIMORE.

The Wedgewood Club.

Baltimore, Feb. 21.—The second session of the recently organized Wedgewood Club will be held next Friday night at Tierney's restaurant, on North Calvert street. At this meeting the by-laws drawn up are to be voted on, and a poem composed in honor of the occasion by J. Webb Foster, a popular member of the fraternity, will be read. The by-laws provide that membership shall be limited to thirty; that members shall preside in alphabetical order; that absence from three consecutive meetings shall be considered equivalent to resignation; that the monthly dues are \$1.50, which covers the expense of the dinner, and are payable whether a member is present or not; that members have the privilege of inviting a guest by paying \$1.50 and notifying the secretary; that the affairs of the club shall be managed by an executive committee of three members; that the presiding officer is

absolutely in control, there being no appeal from his decision; that meetings shall be held on the last Thursday of each month; that new members shall be proposed at least one evening before election, and that "shop talk" is strictly forbidden. Mr. Foster's poem, which, as can be seen from the subjoined copy, stamps the author as the club's logical laureate, is as follows:

The Wedgewood Club starts out to-night
To stretch its wings and take its flight;
Leaves dull care to earth, to mount in air.
To find its joys and consolation there.

Away with drugs, it finds surcease
With kindred spirits in this feast—
Let graduates graduate, stop measuring to-night.
The spatulas are knives, pestles out of sight.

Mortars are Steins when the beer is within,
To think of pill tiles would be a sin;
Our eyes are open, the scales, they fell.
Friendship is far greater than efforts to sell.

Away with the shop, laboratory and all,
We're not druggists, only friends that come at call
Only brothers that business ties bind,
That meet to-night with feelings kind.

Memories unpleasant we will banish a spell,
And wishing they were all consigned to—h—l,
Cordial good feeling in future we'll cherish,
Leaving all else forever to perish.

So here's to our Club, may its life be long,
As its members spin story, speak of long song;
Here's giving the toast, that I surely should,
It is a happy long life to the Club, Wedgewood.

Maryland College of Pharmacy.

Baltimore, Feb. 16.—The monthly meeting of the Maryland College of Pharmacy yesterday was devoted almost entirely to a consideration of the report of the committee on the revision of the United States Pharmacopoeia. After lengthy discussion the committee was instructed to report in favor of the introduction of doses and to recommend the admission of synthetical products of definite chemical composition and of known medicinal value, whether they be trade-marked and patented or not. It was also resolved to encourage the adoption of standardization of such drugs as are susceptible to tests other than physiological. In the opinion of the meeting physiological tests are not yet well enough established to furnish a reliable indication of value. The consideration of the report was not completed and will be resumed at the next meeting of the college.

Drug Trade Club Bowlers.

Baltimore, Feb. 17.—It is now nip and tuck between the leaders in the race for first honors to be bestowed by the Baltimore Drug Trade Bowling Club. By winning three games last week the Root and Herb men broke the tie with Sharp & Dohme for first place, but the gap was again closed up last night, when Sharp & Dohme made it three straight in the contests with Gilpin, Langdon & Co. by 790, 754 and 741 against 716, 697 and 685 points for the losers. Tuesday night the Winkelmann & Brown Drug Company met Parke, Davis & Co. for three games, and pushed the tail-enders still more securely into last place by taking all three contests. The week's contests leave the several teams in the following positions:

Teams.	Won.	Lost.	centage
Root and Herb.....	27	6	.818
Sharp & Dohme.....	27	6	.818
Winkelmann & Brown Drug Co. 23	10	667	
James Baily & Son.....	13	17	.443
Gilpin, Langdon & Co.....	10	23	.303
Muth Bros. & Co.....	8	25	.242
Parke, Davis & Co.....	6	27	.182

The Card System.

Baltimore, Feb. 16.—The efforts of the special committee appointed by the Baltimore Retail Druggists' Association to ascertain the views of the members of the trade in this city on the card system of purchasing drugs from jobbers are meeting with much encouragement. At an informal gathering this week Chairman O. E. Smith reported that of twenty retailers approached on the subject nineteen had signified their desire to join the movement. The 200 druggists which were regarded as necessary to the success of the project have now been secured, but the committee will not discontinue its efforts until the entire trade

has been thoroughly canvassed and every member has had an opportunity to express his preferences. It is the aim of the retailers to present a solid front when the attempt is made to put the proposition into effect.

NOTES.

—Charles H. Holtzman, druggist of Cumberland, Md., has moved into a new store in the Ladew Building, and now has one of the most attractive establishments in Western Maryland. The fixtures are of cherry, made in accordance with Mr. Holtzman's own ideas, and have fine paneling, together with much plate glass, stained glass and other decorative materials. A large white onyx soda water fountain stands to the left of the entrance. Glass cases of the most attractive design take the place of the customary counters to be found in country stores. There is a desk for the use of patrons and an elevator runs to the second and third floors, where paints, oils and other commodities sold in bulk are stored. Mr. Holtzman has been in the drug business for eighteen years.

—Chairman A. J. Cornish, of the committee appointed by the Maryland Pharmaceutical Association to confer with the medical organizations of the State with a view to bringing about closer relations, feels greatly encouraged by the kindly spirit in which the overtures of the committee have been received on the part of physicians. He expresses himself confident that all the medical associations will return favorable answers.

—Among the visiting druggists in Baltimore last week were Randolph Wehler, New Oxford, Pa.; H. C. Valentine, Belair, Md.; S. S. Van Trump, Trump, Md.; W. R. Rudy, Mt. Airey, Md.; Joseph E. Boyle, Westminster, Md.; J. Gilbert Leber, York, Pa.; Rudolph Wirth, of Fougera & Co., New York; and William Aughlinbaugh, of P. C. Aughlinbaugh & Son, Hagerstown, Md.

—Druggist W. M. Fouch is making extensive improvements in his pharmacy at the southwest corner of Charles street and North avenue. The establishment is being extended and widened. New fixtures will be installed, and an especially ornamental feature will be a magnificent soda water fountain made by Tufts. A handsome tiled floor will also be laid.

—Louis Hammerslough has left the employ of Druggist C. R. Myers, Edmondson avenue and Monroe street, and accepted a position with Charles L. Meyer, Madison avenue and McMechen street.

—Henry Waldschmidt, formerly a clerk in the pharmacy of Harry F. Vogel, Charles and Glement streets, has taken a similar position with D. R. Millard, Baltimore street and Collington avenue.

—George H. Schone, formerly with Arthur Nattans, Howard and Lexington streets, is now clerking for S. L. Robinson, Greene and Franklin streets.

—N. Roth has been succeeded in the proprietorship of the retail drug store at the corner of Light and Randall streets by Russell Talbot & Co.

—J. A. Taylor, of Milton, N. C., has taken a clerkship in the pharmacy of Otto Wreckshagen, 258 West Biddle street.

DETROIT.

Phenacetine Smuggling.

Detroit, Feb. 17.—About every so often one may be reasonably sure that some one will be caught smuggling phenacetine into this city. The latest is a Mrs. Elsie Smith, of Windsor, who was arrested on Wednesday, the 14th, by Special Agents of the Treasury Dowling and Gregory. Mrs. Smith, it is alleged, has been doing the work for her husband, A. C. Smith, who is in business in Windsor.

A few months ago Smith came to this city and entered into an arrangement with a man by the name of Glidden, manager of a storage house on Sycamore street, by which a compartment in the storage rooms was to be at Smith's disposal to place whatever goods he might wish to send there. He also rented a room at 17 Howard street, ostensibly to live in. By mail, Glidden was instructed at different times to deliver the goods stored in his place, sometimes to the Howard street room, sometimes to the U. S. Express offices. He was further instructed to call for "Miss E. Murnen," not for Mrs. Smith, when he went

to Howard street. It is believed that Mrs. Smith carried the consignments of the drug over, piece by piece, concealed about her person. There is also a story alioat that some of it arrived via rowboats and was received by men who delivered it at the Howard street room.

Of late Special Agent Parker has received letters from Chicago, Minneapolis, St. Paul and Cincinnati enclosing low prices on drugs quoted by A. C. Smith, of Windsor, and asking if the duty had been paid on the goods. The suspicion aroused by these letters resulted in a watch being established on the ferryboats. Mrs. Smith, who is a very pretty little woman of less than twenty years, was noticed to be making very regular visits to this city without any apparent reason for it. Wednesday she came over as usual and was followed to the U. S. Express office, where she called for a box which had already been left there and which she opened for the purpose of adding two more packages. She was arrested and taken to United States Marshal Bates' office. It took two officers of the secret service all the afternoon to make her tell where she lived and to answer other questions, but at last she told of the room on Howard street. When the room was searched the officers found about \$200 of phenacetine and other expensive coal tar products packed in soap boxes, collar boxes, candy boxes and so on. In the meantime the officers at work on the case had traced out Glidden, and in his storage house was found enough more to make the total amount carted to the Government building worth \$500. It is probable that this is but a small fraction of the sales of the last few months.

Mrs. Smith declares that she is not guilty. Her story is that her husband was in the business of manufacturing pharmaceutical compounds containing coal tar products at Cleveland, but that he left that city and went to Windsor to evade process in a civil suit commenced against him by Dickerson to enjoin him from using these coal tar products. She claims that the drugs found in the storage house and on Howard street are but the left-over stock of the Cleveland business. She also says that whenever she was unable to fill an order from it she got enough for her wants from L. J. Fulmer, the man who paid a \$250 fine about two years ago for the offence of smuggling coal tar products. The officers would be glad to know more of Mr. Fulmer's business at present.

Mrs. Smith was arraigned before Commissioner Graves and pleaded not guilty. Bail was fixed at \$500. Her attorney, Mr. Davis, of Windsor, stated that if she was released on her personal recognizance he would go bail for her appearance at her hearing, which was set for February 21. An opportunity had been given Mr. Smith to come over and procure bail for his wife, the officers promising not to arrest him, but he refused to try the United States soil and sent his lawyer instead.

This is the first really big phenacetine haul in a long time—about two years. A small lot was smuggled a little over a year ago by an employee of a big Detroit firm, but the matter was pretty well suppressed. The penalty for the offence is a minimum fine of \$50 with a maximum of \$5,000, or two years' imprisonment or both fine and imprisonment at the discretion of the Court.

NOTES.

—Garfield Nutson, a clerk in Fleming's drug store in Windsor, had a narrow escape from death Thursday morning, the result of a natural gas explosion in the basement of the pharmacy. Some of the tenants of the building complaining of the cold, young Nutson took a lighted taper and went down to see about the fires. He found everything all right in two furnaces, but when he opened the third his taper ignited the gas which had been turned on two days before. A terrific explosion followed and flames shot out, burning him severely about his face and neck. Fellow clerks ran to his assistance, but he had the presence of mind to tear off his burning garments and so probably saved his life. The explosion was felt all over the building.

—So many requests from State institutions have come to Ann Arbor for liquid air that Prof. Freer has asked the University authorities to have a machine built in the engineer shops during the coming summer vacation. The liquid air machine recently presented by Charles A. Brush, of Cleveland, and now in full operation at the

University, is not of sufficient capacity to produce any more than is needed to supply the demand for it in demonstrating in the University courses. The request of Prof. Freer will probably be granted.

—George W. Cox, bacteriologist at Parke, Davis & Co.'s, died very suddenly of heart disease Sunday, February 11. Mr. Cox at one time was a prominent physician in Colorado and occupied a position on the Medical Board of that State. He was buried with full Masonic ceremonies.

—John McInerney, a member of the firm of Calahan Bros., druggists at Wyandotte, was married to Miss Florence Girardin, of that city, on St. Valentine's Day. Mr. and Mrs. McInerney left for a wedding trip to the South and will take in the Mardi Gras carnival at New Orleans.

—About 225 couples enjoyed the entertainment and ball given by the employees of Parke, Davis & Co for the benefit of the Library Association. Quite a sum of money was realized.

—The Michigan Drug Co.'s baseball team will play an indoor game next Thursday evening at the Auditorium against the Western High School team.

—John J. Dodds, with Farrand, Williams & Clark, Detroit, is away "curling" in Canada.

CINCINNATI.

The Card System Working.

Cincinnati, Feb. 17.—The Retail Druggists' Association of Hamilton County held an executive meeting yesterday. The meeting was strictly secret and only executive members were present. That the local association is proving a factor in the fight against cut prices is evidenced by the demand for trade cards by some of the largest concerns in the county. Several parties have been denied the privilege of the cards owing to their stand in regard to supplying the aggressive cutters, and in consequence have been unable to sell to the members who ask for them. A representative of a well-known manufacturing concern lost over a week awaiting instructions from his employers regarding their position towards the N. A. R. D. It is not necessary to state that their reply was satisfactory and the card was granted. Cards were issued to the following during the past week and will remain in force until March 31: Albert Schwartz (Parke, Davis & Co., Detroit, Mich.); George H. Drury (Billings, Clapp & Co., Boston, Mass.); Chas. Wood (Eli Lilly & Co., Indianapolis); W. L. Leuchtenburg (The Gray & Huston Co., Cincinnati, O.); C. M. Browning (Benton, Myers & Co., Cleveland, O.); Wm. Hanna (Nelson, Baker & Co., Detroit, Mich.); Jno. McDonnell (San Yak Co., Chicago); S. D. Baldwin (Allen Pfeiffer & Co., St. Louis); G. C. Healy (Johnson & Johnson); Jos. Burdsall (J. & C. Reakert, Cincinnati, O.); C. C. Norton (J. J. Fleck, Tiffin, O.); F. A. Bauer (Duroy & Haines Co., Sandusky, O.); Geo. H. Wright (Phenique Chemical Co., St. Louis); Frank Bugier (E. Bugier & Co., Cincinnati, O.).

NOTES.

—The following scores were made by the Druggists' Bowling Club Friday, February 16:

	1st	2d	3d	4th
Muehlerberg	208	169	190	159
Voss	146	180	144	159
Nicholas	129	147	177	153
Freiberg	168	131	95	144
Linneman	149	159	124	111
Keniga	168	168	191	179
Leuchtenburg	147	157	162	148
Heineman	189	181	133	173
Streihorst	214	157	153	142
Kneiboller	210	154	147	146

—Louis O'Shaughnessy, the veteran journalist of this city, is dead. He died in Boston, where he was stationed as a government immigration inspector. Mr. O'Shaughnessy will be missed by the graduates of the Cincinnati College of Pharmacy, as no graduation banquet was complete without his presence, and his toast, "The Press," was invariably the event of the evening.

—A few Cincinnati druggists are trying to get appointed as delegates to the National Pure Food and Drug Association to be held in Washington, D. C., March 7. Ohio is entitled to twelve delegates, and it is hoped that Governor Nash will see fit to appoint at least two from Cincinnati.

—George Eger, the pioneer druggist at Mohawk street and Central avenue has been confined to his home with a severe attack of sciatic rheumatism. His son George Jr., is conducting the business during his confinement.

—Henry Goetze has sold his pharmacy at Newport to the Misses Scheffner, daughters of Dr. H. F. Scheffner. Mr. Goetze will take charge of his brother's drug store at Lockland, Ohio.

—J. F. Kutchbauch, druggist at Blue Rock avenue, Cumminsville, is convalescing. He underwent a severe surgical operation a few weeks ago which proved successful.

CHICAGO.

Troubles of Hyde Park Druggists.

Chicago, Feb. 17.—The daily papers reported this week that twelve Hyde Park druggists were arrested for keeping blind pigs, and duly recorded the statement that on February 15 the cases against these druggists were nolle prossed by order of City Prosecutor Murray. Several of these reported to have been arrested found it out only through the morning papers. Some of the druggists appeared in court and listened while the city prosecutor moved to quash the whole matter. The case is mysterious, but it has operated to solidify and weld together all the druggists in Hyde Park, Kenwood and Englewood in a very efficient association. The druggists' association of this section has appointed a committee to look after the liquor registers of druggists, and to recommend that the licenses of druggists who keep blind pigs be revoked. Failing in this they will appeal to the Board of Pharmacy to revoke certificates.

It is said that the Hyde Park Protective Association has given the pharmacists a helping hand. Arthur Burago Frawell, secretary of the association, had the following to say regarding the arrests:

"Many people are of the opinion that the Hyde Park Protective Association was instrumental in bringing about the arrest of the druggists. This is a mistake. We recommended to the police twelve druggists who were known to run 'blind pigs' in the prohibition district. It is a strange fact that but five of these were arrested. I am unable to understand the matter and will make no statements antagonistic to the police." The druggists consider that the decision to-day is a decisive victory for them, but the case is still shrouded in mystery and it is not known what further action will be taken. Officer Jesse Gillman would neither deny nor affirm that the druggists would be taken up again, but said everybody could draw his own inferences.

Alumni Association of the Chicago College of Pharmacy.

Chicago, Feb. 17.—The Alumni Association of the Chicago College of Pharmacy will hold the second of the series of meetings for the discussion of pharmacopoeial revision at the Palmer House, Wednesday evening, February 21, 1900, at 8 o'clock. The subject for discussion will be "Standardization," and addresses will be made as follows: "Standardization, from the Physician's Standpoint," George F. Butler, Ph.G., M.D.; "Standardization, from the Pharmacist's Standpoint," Albert T. Thorburn, Ph.G.; "Standardization, from the Manufacturer's Standpoint," Mr. Frank S. Hereth; "Standardization, from the Analytical Chemist's Standpoint," Prof. W. A. Puckner.

Bowling.

The score of the Chicago Drug Trade Bowling Club last night was as follows:

Mathes	161	122	166
Fechter	128	125	160
Stetson	172	182	119
Thomas	192	153	176
Whitson	112	156	146
Blecki	135	141	117
Bauer	162	180	122
McWilliams	149	156	155
Armstrong	158	146	170
Medley	169	148	181
Delbridge	95	5	98

Mr. Mathes won the high average medal for the week. The club entertained a visitor in the person of Henry Fuller of the Fuller & Fuller Company.

Chicago College of Pharmacy.

The Senior Class of the Chicago College of Pharmacy, the School of Pharmacy of the University of Illinois, held a meeting at the college on the evening of February 7th, for the election of class orators. Clarence Lorenzo James was chosen valedictorian and George Arthur Kiedaisch salutatorian. The other class officers are: President, Joseph Matthew Lestina; vice-president, William Rice Graham; secretary, Walter Holderread, and treasurer, George Arthur Kiedaisch.

Chicago Apothecaries' Society.

At a meeting of the Chicago Apothecaries' Society the following officers were elected for the ensuing year: President, George R. Baker; vice-president, Albert E. Ebert; secretary, John Conrad; treasurer, Walter H. Gale. Resolutions were passed calling upon Congress to repeal the stamp tax act.

NOTES.

—At a meeting of a number of First Ward druggists, a committee consisting of L. K. Waldron, Harry Gundling and Walter H. Gale was authorized to call upon all the druggists of that ward for the purpose of organizing a First Ward Retail Druggists' Association. This movement of organizing by wards is being pursued generally all over the city. Hyde Park druggists, South West Side druggists and Ravenswood druggists have organized, and plans for organization are under way in other parts of the city.

—Charles L. Schaer, who achieved some notoriety the other day in connection with a threatened attack on him by a body of angry creditors in the office of Referee in Bankruptcy Frank L. Wean, was formerly a druggist and member of the Chicago College of Pharmacy. He is now a bookkeeper in the employ of a firm of furniture dealers.

—The Chicago Retail Druggists' Association has issued a compilation of the laws of Illinois regarding the sale of poisons, of cocaine, liquor, concerning veterinary medicine, labeling packages, stamps on medicines, etc. This compilation is printed on a large sheet suitable to be put in a conspicuous place for ready reference.

—The Illinois State Board of Pharmacy met in Chicago this week. The applicants came better prepared than usual for examination. Out of a class of 140 all but twelve passed the preliminary educational test and 50 per cent. of the remainder passed the technical examination and were granted certificates.

—The case of the People vs. Richard C. Frencksen and Carl S. N. Hallberg for libel came up February 16 in Judge Baker's court. Neither the defendants nor their counsel appeared and their bonds were therefore declared forfeited and capias were issued to bring the defendants into court.

—Ed. F. Mallory, a Western representative of Lazell, Dalley & Company, says that in all the sections of the West which he has recently visited, the druggists are forming associations to affiliate with the N. A. R. D.

—George Oglesby has bought out Weisenborn's drug store, at Forty-ninth and State streets. Mr. Oglesby was formerly manager of the Keith Pharmacy, at Fifty-fifth street and Wentworth avenue.

—Robert H. Van Schaack returned this week from a two weeks trip to Florida, where he went to accompany his brother, Henry C., of Denver, who is seriously ill.

—The Peters Pharmacy, at Cloud Court and Wentworth avenue, which was closed this week under a chattel mortgage, has been sold to a Mr. Wilson.

—W. A. Brabrook and wife, Ogden avenue and Van Buren street, have gone to California for the benefit of Mrs. Brabrook's health.

—Jones Brothers, 2018 West Lake street, have sold out to A. F. Pierce, who owns another store at 2115 West Van Buren street.

—The Metcalf & Miller store, on North Clark street, was sold Monday, February 12, at auction.

—Carl R. Gruener has bought the store of Richard C. Frencksen, at 954 Armitage avenue.

—Allen & Raber have bought Moore's Pharmacy, at Sixty-first street and Ellis avenue.

—W. J. Knick has bought the store of A. L. Coppock, at 1152 Lincoln avenue.

THE NORTHWEST.

The Drug Telephone War.

St. Paul, Minn., Feb. 16.—At the last moment the Minneapolis druggists have failed to present a united front in their controversy with the Northwestern Telephone Exchange Company. At the regular monthly meeting of the Retail Druggists' Association held at Voegel's Hall, the majority exhibited a reluctance to stand by the independent action of some of their fellow druggists. As a result, the entire controversy was referred to the association's Telephone Committee, which was instructed to wait upon General Manager Walman at his office, when, it is expected, all differences will be adjusted. The druggists held their meeting behind closed doors, out of consideration for those members of the association who preferred to express their opinion in private. It is understood that many of the druggists were adverse to fighting the telephone company to the end, deeming it more politic to meet the company half way in its proposition to instal nickel-in-the-slot machines along side of ordinary telephones. Accordingly, the telephone committee has been instructed in its conference with Mr. Walman to act along conciliatory lines, with a view to an amicable settlement of the controversy to the satisfaction of all parties. It is possible that some druggists who will refuse to allow any nickel-in-the-slot 'phones to be installed in their stores will agree to pay an increased monthly rent for the free telephones. The telephone company is only seeking to inaugurate the same system in Minneapolis that is in vogue in probably all the large cities of the country. If it is successful it will probably extend the system to St. Paul, or at least try to.

NOTES.

—Successions: Mead & Millhouse, Luverne, Minn., by V. C. Mead; Wilson & Chandler, Monroe, Ia., by O. M. Wilson; Irgens Bros., Valley City, N. D., by Proctor & Fish; Homer Frankenfield, Hutchinson, Minn., by F. W. Hart; J. A. Schultz & Co., Uniontown, Wash., by J. L. Phipps; Burley & Camden, Walhalla, N. D., by N. R. Burley; O. L. Cole & Co., Cedar Rapids, Ia., by O. L. Cole; Arthur L. Rogers, Murray, Ia., by H. M. Doolittle & Co.; W. R. K. Johnson, Turtle Lake, Wis., by J. E. Cornwell; J. D. Windell, Bowbells, N. D., by E. C. Kruger.

—C. Bender, who has for some years managed the drug business of Bengel & Goosen in Chicago, has returned home to Red Wing, Minn., where he has bought out the drug store of W. F. Hare.

—And now it is E. Y. Wilson who has joined the ranks of the benedicts, having married Miss Charlotette J. Johnson a few days ago. They will reside at Brewster, Minn.

—William Geysenhymer came down on a brief visit to his friends here this week from Hensel, N. D., where he is in the drug business.

—Bodkin & Williams have started at Silver City, Idaho; C. E. Kenney at Blackfoot, same State, and George H. Woodgate at Iona, Minn.

—J. C. Eliel, the widely-known wholesale druggist of Minneapolis, has just been elected president of the Board of Trade of that city.

—The Finlen-Medin Drug Co., Butte, Mont., contemplates reducing capital stock and changing style to the Finlen Drug Co.

—The style of the Crocker Stock Medicine Co., Milwaukee, Wis., has been changed to the Grant Chemical Co.

—G. R. Filmer, Morrilstown, Minn., and the German Medicine Co., St. Paul, have filed petitions in bankruptcy.

—W. F. Miles & Son, St. Ansgar, Ia., and A. B. Alexander, Osceola, Ia., have given bills of sale.

—C. S. Kendall, of Anaconda, Mont., has left the Kendall Drug Co., and will take a brief vacation.

—The senior member of Mills & Stuart, Colfax, Wash., has sold a five-eighths interest to his partner.

—Fred. J. Fehensen, Silver City, Idaho, and Garletz & Pointer, Blackfoot, Idaho, have sold.

—A. E. Lofstrom, of St. Paul, has gone home to Litchfield for a short vacation.

—A receiver has been applied for in the case of J. H. Kupfer, Butte, Mont.

—John W. Lindmark & Co., North Branch, Minn., contemplate dissolution.
 —Ben McKeon, Clay Center, Neb., has sold out and removed to Fairfield.
 —H. L. Sauters & Co., Cosmopolis, Wash., have dissolved.
 —Joseph Freisinger, of Oxford Junction, Ia., died this week.
 —F. A. Bailey, Hillsboro, Ore., has received sheriff's deed.

ST. LOUIS.

APOTHECARIES' ASSOCIATION WINS.

St. Louis, Feb. 20 (Special).—Judge Ferris has just rendered a decision sustaining the demurrer of the defendants in the case of the State against the members of the St. Louis Apothecaries' Association for alleged violation of the trust laws. He holds that the joinder of the several firms in one cause of action with a prayer for separate judgment against each is fatally defective. The case is thus thrown out of court on a technicality.

The Antikamnia Formula Case.

St. Louis, Feb. 17.—T. M. Griffiths filed his return Friday in the injunction suit filed against him and the Buxton-Skinner Stationery Co., restraining them from issuing a book called "Non-Secret Formulas," and containing an alleged formula of Antikamnia. Mr. Griffiths alleges in his return that the same formula appearing in his publication has been printed in several medical works and trade journals and cites a number of them. He avers that the formula was printed on the outside of the packages in which the medicine was sold at the time it was first put on the market, and that if court grants the injunction and decree asked for all books and trade journals containing it would have to be destroyed and that their publication of the formulas is a common right.

NOTES.

—The Frost-Johnson Drug Co. was incorporated this week with a capital stock of \$20,000 fully paid, with the following stockholders and officers: F. V. Johnson, president and treasurer; L. E. Frost, vice-president; C. P. Johnson, secretary, and V. O. Saunders. They will succeed to the business of the Alexander Drug Store Co., the old M. W. Alexander store, at 518 Olive street, of which F. V. Johnson has been manager since the death of Mr. Alexander.

—Doering Bros. will occupy the new building on the site of the one occupied by Druggist D. A. Byrne, Grand avenue and Lindell boulevard, but recently burned, as an up-to-date pharmacy. Mr. Byrne expects to re-enter the retail business and is looking for a location.

—The Alumni Association of the St. Louis College of Pharmacy will hold its annual meeting and election of officers at the College, Tuesday evening next. The regular monthly meeting of the Board of Trustees of the College will be held Tuesday afternoon.

—At the annual meeting of the J. S. Merrell Drug Co. the old officers were elected as follows: President, C. P. Walbridge; vice-president, Hubert S. Merrell; secretary, Edward Bindschadler, and treasurer, George R. Merrell.

—H. C. Brenner, who sold his interest in the Newstead avenue pharmacy last week to his partner, Mr. Ludwig, has bought the Republic Pharmacy, the old Allen & Geiger store, at 716 Olive street.

—The Portman Drug and Stationery Co. is a new concern to open at East Las Vegas, N. M., and which placed their order for stock and fixtures in St. Louis.

—George B. Moore, for many years a druggist and stationer of California, Mo., died in that city February 15 of pneumonia, aged forty-one years.

—The drug store of Dr. Barger, Neelyville, Mo., was burned in the fire which destroyed a large section of the town Friday night.

J. R. Tatum, whose store was recently destroyed by fire at Glasgow, Mo., has resumed business with new stock and fixtures.

—R. E. Drace, formerly clerk for Fred. H. Swift, 3562 Olive street, has bought Bartlett's pharmacy at 3201 Chestnut street.

—E. W. Maupin and Dr. R. D. Woods will open in the drug business at Clark, Mo., under the name of E. W. Maupin & Co.

—Gottlieb Schmidt, city sundry salesman for Meyer Bros. Drug Co., says it's a boy and it's very happy.

—G. W. Harrison & Son have bought stock for a new drug store for Newtonia, Mo.

—Robinson & Co. have succeeded Canady & Summers at Sturgeon, Mo.

—W. C. Wall, of Lineus, Mo., is here buying an opening stock of drugs.

—R. A. Motley & Co. will open a new drug store at Overton, Tex.

—Campbell & Grayson will open a drug store at El Paso, Texas.

—J. M. Brown will open a drug store at Sandoval, Ill., March 1.

—Ed. C. Jungkind, San Antonio, Tex., was here buying stock.

—Bedier & Co., Kellerton, Ia., will open a drug store.

MONTREAL.

—William B. Bulling, one of the oldest druggists in Montreal, has passed away. His death thins the ranks of our old-established pharmacists who have been practicing their profession long before our present college was incorporated. Mr. Bulling was born in Norfolk, England, seventy-four years ago. After about fifteen years' residence in the States he came to Montreal and shortly afterwards opened a first-class pharmacy which he always managed in a strictly English manner. The fittings, etc., to a casual observer would immediately stamp the owner as being purely English.

—The dinner of the Pharmacy Students Association this year was not like that of any of its predecessors, in fact it narrowed down to an oyster supper at an East End hotel. This is quite a change from former days, when the professors of the college and leading medical men were invited and a first-class menu was in evidence. The trouble is evidently due to some discord prevailing between cliques of the students and it is to be hoped that by next year harmony will once more reign.

—The many friends of Dr. Baker Edwards were deeply shocked when it was learned that he had succumbed to an attack of pneumonia after a few days' illness. He was one of the foremost analysts of the Dominion and had been demonstrator in chemistry in all the colleges of this city at one time or another. He was truly one of the old school, and although seventy-two years of age at his death, it can be said that he died in harness.

—Donald Tully, for many years past traveler for Evans & Sons, Ltd., has retired from the road. On his severing his connection with the firm he was presented by his fellow employees with a handsome onyx clock as a slight token of esteem. The territory heretofore covered by him will for the future become familiar with J. D. Ferguson.

—The drug trade of this city has for the past year felt the benefit of the wave of prosperity which is sweeping over this continent, the proprietors of pharmacies are all contented and happy, while the knights of the grip who travel from Vancouver to Halifax, with headquarters in Montreal, report trade exceptionally good.

—C. C. Brymer, M. D., will open a first-class pharmacy on Wellington street, near the Subway, on or about April 1st. He spent a good many years in the drug business before graduating in medicine, and although blossoming out now as a knight of the pestle and mortar he will still retain his practice.

—The drug trade of Montreal will be well represented this year on the Board of Trade, Henry Miles, of Leeming, Miles & Co., being elected vice-president by a very

large majority, while James Knox, of Lyman, Knox & Co., occupies a seat on the Council.

—C. E. Scarff, St. Catherine street, has purchased E. H. Lawson's pharmacy, corner Victoria avenue and Sherbrooke street. The latter will for the future be known as Scarff's Westmount branch.

—E. H. Lawson proposes starting a drug business at St. Lamberts, one of Montreal's nearest suburbs. If he carries out his proposition he will be the pioneer of pharmacy in that town.

—A. C. Paquette, for some time past manager of W. A. Hendrie's East End branch, is about to start in business for himself at the corner of Congregation and Fafard streets.

—Harold Reynolds, brother of H. E. Reynolds, proprietor of the Wellington Medical Hall, has gone to South Africa as a private in the Second Canadian Contingent of Artillery.

—H. F. Jackson, one of our most successful druggists, long since retired from the active practice of pharmacy, has accepted a lucrative position with Bovril, Ltd.

—Ed. White, formerly at Seneca's pharmacy, has purchased the business formerly carried on by Dr. Leprohon, corner of Laurier avenue and St. James street.

—At the recent preliminary examination held at the College of Pharmacy ten students passed on all subjects out of twenty-three who presented themselves.

—R. W. Williams, Three Rivers, spent a few days in town attending the recent session of Royal Arch Masons.

—J. A. E. Gauvin was a candidate for alderman this month, but unfortunately was completed snowed under.

OBITUARY.

JACOB M. WOOD, general manager and one of the directors of the Van Vleet-Mansfield Drug Co., Memphis, Tenn., died February 3 after a lingering illness due to Bright's disease. He was born in New York City in 1845 and went to Tennessee when thirteen years of age, entering the drug business of Mansfield & Jennings at Memphis. When the war broke out he volunteered his services to the Confederacy and served throughout the contest. After the war he re-entered the drug business and later, in 1866, became the managing director of the Van Vleet-Mansfield Drug Co. Two sons, aged fifteen and twelve years respectively, survive him.

J. A. MILLER, the oldest druggist in Winchester, Va., died there February 13, after a long illness. He was born in Winchester seventy-four years ago and for a long time conducted a pharmacy at Abingdon, Va. About 1857 he formed a partnership with his brother, the late George E. Miller, at Winchester, and there he remained in business uninterrupted until the time of his death. The deceased never married.

JOHN D. MOORE, member of the wholesale and retail drug firm of Owen & Moore, Clarksville, Tenn., died February 2 from catarrhal pneumonia, after an illness of less than a week. He was prominent in commercial, social, church and Masonic circles in Clarksville, where he had lived for more than forty years. A widow survives.

WILLIAM H. READ, for a number of years the proprietor of a cut-rate establishment in Baltimore, died February 16 in Washington. Since his retirement from business over three years ago, when he sold out to Arthur Nattans, he has spent most of his time traveling.

—The Tennessee Board of Pharmacy concluded its January examinations at Nashville January 19. The following applicants were successful: Registered pharmacists, J. T. Jenkins, Mt. Pleasant; R. M. Stahl, Memphis; Geo. H. Kyser, Memphis; A. S. Cron, Gallatin; Flossie Jackson, Memphis. Assistant pharmacists, A. E. Turner, Nashville; F. O. Colloch, McMinnville. The board adjourned to meet at Nashville April 17.

—The Marion County (Indiana) Druggists' Association has filed articles of incorporation. The directors are: Frank H. Carter, Edward Ferger, A. Timberlake, S. Muhl and F. E. Walcott.

N. A. R. D. NEWS.

The Society of Retail Druggists of the Province of Quebec, affiliated with the N. A. R. D., issues bulletins after the manner of the parent organization.

The dues for 1900 of the Waverly (N. Y.), Sayre and Athens (Pa.), and the Hancock County (Ind.) Pharmaceutical Associations have been received by Treasurer Heller.

The Hancock Co. (Ind.) Druggists' Association embraces all of the druggists in the county, twenty in all. There is said to be no cutting and the drug business of the county is in excellent condition.

The Waverly, Sayre and Athens Pharmaceutical Association has passed resolutions affirming that its members "will individually and collectively stand behind the Executive Committee of the N. A. R. D." Joseph Hines, of Athens, Pa., is president, and Edward C. Tracy, of Waverly, N. Y., secretary of the association.

Resolutions and pledges of support of the methods of work followed by the officers of the N. A. R. D. have been received from the Aurora (Ill.) Association of Retail Druggists, Akron (O.), Pennsylvania and Will Co. (Ill.) Pharmaceutical Associations, Philadelphia Association of Retail Druggists, Chattanooga (Tenn.) Branch of the N. A. R. D., and the Jersey City Druggists' Association.

DRUG STORE FIRES.

An explosion in the drug store of A. D. Wright, Chandler, O. T., February 8, caused a fire which completely destroyed the building and stock, entailing a loss of about \$10,000. The insurance carried was small.

The drug store recently built by Carl Lorenz, in the Green Ridge section of the city of Scranton, Pa., was burned down February 1. The fire started from a torch carried by a plumber who was thawing out frozen water pipes. Loss \$9,000; partly covered by insurance.

H. R. Strehlow's drug store, Casselton, N. D., was destroyed in a general conflagration which visited that town January 31.

The drug store of C. M. La Rue, West Bay City, Mich., was badly damaged by fire January 31.

Four buildings were burned in a disastrous fire at Millersport, O., February 7. In one of them was located Samble's drug store.

L. K. Mead, a druggist of Hanover, N. H., located near Dartmouth College Campus, was burned out recently in a fire which caused a total loss of \$36,000, the entire block being burned. Mr. Mead carried \$3,000 insurance.

NESTLE'S FOOD PLANT BEGINS OPERATIONS.

The Nestle's Food Plant, under construction during the past year, began its manufacturing operations at Fulton, N. Y., February 1. About 100 hands are employed and it is expected that all of the milk and farm products within a radius of five miles will be utilized, and the output of the plant will reach two carloads of manufactured foods per day.

—At the recent quarterly meeting of the New Hampshire Commission of Pharmacy, held in Concord, the following-named candidates passed a successful examination: W. Clement Muttly, Berlin; Miles J. Mullen, Gorham; J. Albert Marshall, Manchester; James Herbert Willey, Saimor Falls; John Stephen White, Boston, Mass. In the junior examination George H. Duparr also passed.

—The Cameron County, Pa., Pharmaceutical Association was organized at Johnstown February 1. Secretary Edward C. Garber, of the Western Pennsylvania Retail Druggists' Association, in which the new association will have representation, perfected the arrangements for the meeting.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory. We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

ALABAMA.—Geneva.—Jenkins Eros, sold to A. R. Chapman & Co.

Stevenson.—L. R. Alston and J. D. Champion have consolidated under new firm style Alston & Champion.

ARKANSAS.—Knoxville.—W. H. McPherson, sold to A. B. Williams.

DELAWARE.—Wilmington.—Dr. S. E. Finley. Ninth and Orange streets, sold to Owen C. Spear.

ILLINOIS.—Chicago.—Dr. S. B. Collins Co., incorporated by S. B. Collins, H. A. Bearup and S. B. Collins, Jr.; capital \$2,500; A. J. Foster, Halsted St. and Vincennes avenue, sold to Humphrey S. Brock; Sawyer Square Root Co., incorporated by A. P. Sawyer, W. J. Litchford and W. B. Burr; capital \$10,000.

Dixon.—D. S. Horton, sold to Leake Bros.

Homer.—E. T. Mudge, sold to J. R. Brubaker.

Quincy.—Graham-Yentzer Co., 129 LaSalle St., succeeded by Graham & Harden.

INDIANA.—Anderson.—Walter Sparks, cor. Meridian and Fourteenth Sts., new store.

South Bend.—Fink Eros, succeeded by Reuben Fink.

IOWA.—Kensett.—J. F. Emery, removed to Mason City.

Lynnville.—L. E. Fowler, sold to Wm. Painter.

Shellsburg.—Wirth & Co., sold to J. L. Welch.

KANSAS.—Garnett.—C. S. Pope, sold to W. T. Powell.

Garnett.—W. J. Lane, new store.

Little River.—Scolfield & Co., sold to F. R. Smith.

Paola.—W. H. Gatlin, succeeded by Gatlin-Campbell Drug Co.

KENTUCKY.—Berry.—A. H. Cochrane, sold to L. B. Rosenfield.

Columbia.—Page & Powell, succeeded by J. N. Page.

Louisville.—E. G. Isaacs, Third and St. Catherine Sts., sold to R. C. English.

LOUISIANA.—Arcadia.—W. M. Baker & Co., succeeded by W. M. Baker Drug Co. Ltd.

MAINE.—Biddeford.—Antonio Morin, Alfred St., new store.

MICHIGAN.—Marquette.—Owl Drug Co., succeeded by The People's Drug Co., incorporated.

MINNESOTA.—Luverne.—O. Skaug, sold to W. B. Stone Meyer.

Red Wing.—W. A. Hare, sold to C. J. Bender.

Rush City.—C. A. Rice & Co., damaged by fire; insured.

MISSOURI.—Kansas City.—C. L. B. Hines & Co., Tenth St. and Broadway, sold to Noland & Welsh.

Marshfield.—L. C. Seall, succeeded by Seall & Dickey.

St. Louis.—Hemm-Hoeffken Laboratory Co., incorporated by F. Hemm, W. D. Hoeffken and S. Hemm; capital stock \$12,000; Johnson Bros., cor. Broadway and Franklin St., damaged by fire.

NEW JERSEY.—Carteret.—John M. Randolph, sold to Chas. F. Grant.

NEW MEXICO.—Las Vegas.—F. B. Romero, succeeded by Romero Drug Co.

NEW YORK.—Lyons.—A. F. Sheldon, sold to John N. Norton.

New York City.—Alpine Mfg. Co., incorporated to manufacture drug specialties, by L. B. Gaylor and S. C. Haviland; capital \$10,000; Henry A. Schaefer, 1987 Third Ave., sold to Chas. Schumann.

OHIO.—Akron.—Kaufmann Bros., cor. Howard and Quarry Sts., new store.

Cleveland.—Quirk Remedy Co., incorporated by D. Kensley, S. P. Palmer, T. A. Palmer, R. K. Micky and W. F. Kees; capital \$80,000.

Sherwood.—James H. Miller, sold to W. C. Newman.

OKLAHOMA.—Mullhall.—D. McConnehy, sold to C. A. Fraser.

Noble.—W. J. Reed, sold to Noble Drug Co.

Perry.—L. E. Garnett, sold to James Hutchinson.

Shawnee.—Remington & Pottinger, succeeded by Chas. E. Pottinger.

PENNSYLVANIA.—Danville.—G. S. Hunt, 201 Mill St., sold to J. W. Love.

Newtown.—Walter R. Elliott, sold to Horace H. Cornell.

Philadelphia.—Frank W. Jordan, 3632 Longshore (Tacony), sold to Walter R. Elliott; David G. Potts, 24 So. Second St., removed to 224 Market St.

SOUTH CAROLINA.—Willow Lake.—B. F. Filbert, sold to W. F. Michel.

TEXAS.—Gatesville.—U. M. Glider, sold to Baker & Ham-mack.

Orange.—S. W. Sholars, sold to R. B. Gore.

St. Louis.—J. W. Germany, sold to Wade & Thompson.

San Antonio.—Jungkind & Fischer, 323 E. Houston St., succeeded by Fischer & Davis.

VIRGINIA.—Hampton.—D. W. Mahone, sold to T. S. Howell.

Wytheville.—R. L. Poage, sold to Eureka Pharmacy.

WISCONSIN.—Lancaster.—W. N. Stone, of the firm of Stone & Hissell, deceased.

Merrill.—Zemlika & Lickel, succeeded by F. C. Zemlika.

Muscoda.—M. R. & H. E. Briggs, sold to James M. Lewis.

West Salem.—Johnson & Gulickson, succeeded by Alex. Johnson.

WYOMING.—Kemmerer.—Hoeker & Downs, succeeded by Hoeker & Lauder.

TRADE NOTES.

MANUFACTURERS' ANNOUNCEMENTS, NOTICES OF NEW GOODS, NOVELTIES, SPECIAL OFFERS, ETC.

Cook's Imperial Extra Dry Champagne aids to digest your food, no dinner table should be without it.

Space-Saving Shelf Ladders.

There is no doubt that shelf-ladders afford the most practical means of utilizing every inch of wall space for which rent is paid. Questions as to durability, economy and convenience in ladders seem to be effectually answered by Morley Bros., of Saginaw, Mich., who present testimonials from merchants who have used Morley's "Easy-Rolling" ladders for years without paying a cent for repairs and are entirely satisfied with them. This firm invites inquiries from druggists interested in these fixtures.

Green's "Polar System" Styles for 1900.

In a handsomely printed and illustrated pamphlet Robert M. Green & Sons clearly explain the marked advantages claimed for their "Polar System" soda apparatus and quote some highly flattering testimonials from prominent users. Attention is also called to the fact that a five years' written guarantee goes with every "Polar System" fountain and a two years' guarantee with the firm's large list of "seconds," i. e., fountains taken in trade and put in good condition. For the season of 1900 several large consignments of Mexican onyx have been secured by this firm, such as is not usually sent to this country, and new and striking variety in design will be the result. Copies of the pamphlet and of complete illustrated catalogues for 1900 will prove interesting and can be had for the asking.

Prescription Department Advertising.

Here is a cut which will prove attractive in any advertising referring to the prescription department, in newspaper, booklet or circular. It carries an idea of

Cut No. 229.

carefulness in prescription dispensing which can be emphasized with a few words in regard to the checking or double checking of prescriptions before they are sent out, etc. For advertising druggists, who are frequently the busy kind without much time to devote to "thinking up" advertisements, a suggestion for "copy" to accompany this cut will be found on page 4 of "150 Sample Advertisements for Druggists," published by the Era and supplied at 50 cents per copy, postpaid. Electrotypes of this or other cuts for druggists' advertising are supplied at 50 cents each or three for \$1. The stock of these cuts covers all the requirements of drug store advertising; a proof sheet showing them all is in preparation and will be mailed free on inquiry.

Bohner's Safety Crushed-Fruit Bowls.

Soda dispensers can save a great deal of annoyance and possible loss of trade by starting the season right and using Bohner's "Safety" bowls for crushed fruits, etc. These should be among the first articles put on the "want list" of fountain requisites; their practical utility has been demonstrated and the cleanliness gained by using them is worth all they cost. Illustrations and prices will be found in the advertisement of Robert Stevenson & Co., of Chicago, on another page.

A Handsome Tooth-Wash Bottle.

The "Princeton" tooth-wash bottle illustrated and quoted on another page in the advertisement of the Saltburg Bottle Works Co., Ltd., of Pittsburg, is one which will catch the eye of consumers and add to the selling qualities of any good preparation put into it. Its clear, cut-glass effect is much above the ordinary tooth-wash container, and, nicely labeled, it makes a handsome package. Samples with metal sprinkler tops can be secured from the manufacturers for three two-cent stamps.

Making Plans for the Soda Season.

Druggists who know the fine quality of "Gunther's" candies and the profit there is in handling them, should bear in mind the fact that C. F. Gunther, Chicago, is also an authority on the subject of successful soda dispensing and supplies a line of fountain requisites which possess in themselves the elements of success. In planning for the season of 1900 it will pay druggists to write Gunther for information on doubtful points and arrange for securing a measure of "Gunther" success next season. Such inquiries are invited and replies assured.

Material for Good Window Displays.

There can be no question of the drawing power of automatically moving figures in window displays, etc., and the druggist who wants to attract attention to his windows will do well to write to the Slade & Hicks Co., of Chicago, for their illustrated catalogue of such figures. This company also supply a handsome line of water color facsimiles and other display material which are utilized in the most striking and paying window displays by merchants of all kinds. Many of these goods are specially suited for druggists' purposes and all should know about them.

New Ideas in Drug Fixtures.

M. Winter Lumber Co., of Sheboygan, Wis., with their usual enterprise, have a new "1900 Sectional Drug Outfit," which will interest those opening new stores or thinking of buying new store fixtures. Another "Winter" specialty is the "Cornwell" show case, said to be the most practical display case ever made, and certainly very popular with up-to-date druggists. This company's complete illustrated catalogue, which they mail for twenty-five cents, is said to be really worth more than its cost to any druggist looking for new ideas in store arrangement or fittings, as it describes everything from store stools to complete outfits.

"Oleum Brand" Oiled Silks.

Walter Armitage, of Newark, N. J., manufacturer of "Oleum Brand" oiled silks, etc., calls the trade's attention to the accompanying trade mark, which appears on every package of "Oleum" goods. The factory at which these goods are made is said to be the largest and best equipped in the country; it is also claimed that, while the manufacturer has had an extended experience in this line and guarantees his product to equal any in the market and to stand all climates, there is a saving to druggists of from 10 to 30 per cent. in specifying this brand. Goods are packed in all usual sizes and can be ordered through jobbers or direct; price list is supplied on inquiry.

Points for Paint Buyers.

As the season for ordering spring stocks of paints approaches the inducements offered dealers by the Eagle Paint and Varnish Works, of Pittsburg, will interest all careful buyers. This company supply five different brands covering the requirements of all kinds of trade, and will send price list, color cards, etc., free on request.

A Practical and Pleasant Mouth-Antiseptic.

Thycolol, an antiseptic prepared exclusively for the mouth and teeth, and so well devised and elegantly put up as to meet every requirement of such a preparation, has been highly recommended by prominent dentists in several articles which have appeared in dental and medical journals. The reports of practical tests show a remarkable germicidal power as compared with other mouth antiseptics, and a pleasing absence of unpleasant taste or odor. The Elwin Laboratory, of Poughkeepsie, N. Y., invite requests for Thycolol literature or will send a bottle free to physicians who will pay express charges.

The "Malay Oil" Word Contest.

The Malay Remedy Co., of Baltimore, manufacturers of Malay Oil, a popular remedy for rheumatism, etc., have inaugurated a word contest, offering prizes of \$50 down to \$1 for largest lists of words made from the sentence "Malay Oil Cures Rheumatism." The contest is open to everybody, the time limited to June 1, 1900, and prizes awarded according to priority of receipt of lists. Complete rules governing the contest are sent to all inquirers and druggists who wish to enter themselves or to receive a free supply of circulars for their customers are invited to address the company at 100 West Fayette street, Baltimore.

TORREY BOTANICAL CLUB.

January 9, 1900.

At this, the annual meeting, the following officers were elected: President, Hon. Addison Brown; treasurer, Martin L. DeLafield, Jr.; secretary, Edward S. Burgess, Ph.D.; editor, Lucien M. Underwood, Ph.D.

The secretary, Prof. Edward S. Burgess, reported an average attendance of thirty-one at the fifteen meetings held during the year, one death, a present active membership of 237, corresponding membership 142, honorary membership 3, total membership 382. Among the eighteen scientific papers presented five had been accompanied by lantern views; four papers related to ferns; nine illustrative exhibits of photographs, plates and flower paintings, etc., had been held; brief reports of collections and of botanical progress numbered fifty-five. The editor, Prof. L. M. Underwood, reported the regular monthly issue of the Bulletin, forming the largest volume published to date. Miss Ingersoll, as curator, reported upon the condition of the herbarium of the Torrey Club, suggesting its transfer to the New York Botanical Garden. Miss Marie L. Sanial, as secretary of the Excursion Committee, reported thirty-eight excursions held. The committee appointed to consider a programme for a Torrey Day in connection with the A. A. S. meeting here next summer, reported through the secretary a provisional programme.

The scientific paper of the evening was by Prof. Francis E. Lloyd on "The Relationship of Certain Rubiaceae," forming part of an investigation in the embryology of that order now in course of printing among the Memoirs of the Torrey Club. A discussion followed.

EDWARD S. BURGESS, Sec.

—The Minnesota Pharmaceutical Association will hold its next annual meeting at Owatonna, June 19-21, R. H. G. Netz, local secretary. The officers of the association are: President, John Neilson, Ortonville; vice-presidents, B. O. Kyseth, Lanesboro; Miss E. Williams, Minneapolis; C. A. Jack, Princeton; secretary, E. B. Wilson, Minneapolis; treasurer, H. W. Rietzke, St. Paul.

—The date of the next annual meeting of the Pennsylvania Pharmaceutical Association has been changed from June 13 to June 25.

State of Trade.

Jobbing Activity a Prominent Feature.

New York, Feb. 20.—Jobbing activity continues a prominent feature of the general market, with a fair degree of interest manifested in nearly all leading descriptions and a number of more or less important price changes have occurred. Opium has received very little attention from either consumers or speculative operators, and the tendency of prices has been toward a lower basis, but thus far the actual decline is very slight and of no special consequence.

The quinine situation has developed additional strength and quotations show a further advance under the influences noted in last week's report. The anticipated improvement in values of bark at the monthly sale in Amsterdam on Thursday last was fully realized, the unit price showing an advance of nearly 20 per cent. This, together with the report that the shipments of bark from Java have continued to diminish, has resulted in a generally stronger market for quinine, notwithstanding the fact that the demand has been only moderate. Should the latter develop any material activity it is believed that prices will show further improvement and outside holders are decidedly firm in their views. Cinchonidia also is firmer in sympathy with the raw material and holders are indifferent sellers.

Cocaine is lower owing to a sharp decline abroad and manufacturers have reduced quotations 75 cents per ounce. The decline is due to increased supplies and lower prices of crude material. Citric acid has continued to move upward in price under the influences noted in this column last week, and manufacturers have announced a further advance of 3 cents per pound. Refined camphor also has continued to advance and domestic refiners have added another cent to their quotations. This is wholly due to the strong position of crude. The Japanese Government, which is now in control of the entire output, declines to sell and the stock in outside hands is becoming rapidly depleted.

Vanillin is unsettled and irregular owing to keen competition, and quotations have reached the lowest point ever known. One manufacturer has announced a reduction of 20 cents per ounce and it is not unlikely that others will follow. Developments are awaited with no small degree of interest.

In the department of essential oils a general revision of prices shows a slightly lower range for cassia, citronella, cubeb and natural wintergreen, but none is of sufficient consequence to call for extended comment, and the movement into channels of consumption has been chiefly of a jobbing character. Anise has moved more freely in a large way and holders are somewhat firmer in their views, but former quotations are still current.

Caster oil is again firmer owing to unfavorable reports from India regarding the bean crop, and manufacturers have further advanced their quotations 1/2 cent per pound. Balsam tolu is weaker under increased supplies and quotations show a decline of 2/3 cents per pound. Menthol is easier owing to light demand and more or less keen competition.

Caruba wax has recently attracted considerable attention and values have advanced under a steady consuming demand and reports from Brazil that there is very little stock to come forward from producing sections. It is claimed that for several seasons past prices have been so low that gatherers have turned their attention to other occupations.

In the heavy chemical department chlorate of potash and chlorate of soda have scored substantial advances in sympathy with similar conditions abroad where the demand for explosives is said to have caused a material increase in consumption. Carbonate of ammonia is also higher on account of scarcity and an advance in the import cost.

The only feature of interest in the roots is a partial reaction in quotations for ipecac, due to higher cables from London, where the situation is said to have im-

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of the Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade price-list on application.

proved on account of the withdrawal from the market of bear operators. Among the spices cloves are higher, and it is claimed that the statistical position warrants further improvement.

A Good Week in Boston.

Boston, Feb. 17.—The week has seen a little more than average business. There is still considerable sickness, and this has caused a little more than the usual demand for simple remedies. No complaints are heard, at places visited, of any dullness. There have been advances on some things in the market, alcohols being strong and in pretty good demand; camphor has started upward. Castor oil has advanced materially, as has citric acid, and all the other alcohols show more strength, on a slight advance. Opium and quinine are still holding to the recent higher prices, but show no special change over conditions of last week. Carbolic acid is still a strong feature of the market, but no change of price is recorded. Essential oils are fairly strong. Dyestuffs and tanning materials show a moderate demand only. In waxes there is a fair call for the leading qualities.

In a Very Flourishing Condition.

Philadelphia, Feb. 17.—Business has been in a very flourishing condition during the past week, according to the unanimous reports of the wholesale houses. Orders are plentiful and good-sized and collections have been fair as usual. Citric acid has advanced 3 cents a pound and camphor increased in price slightly, but the market in general showed no change from last week's report. The retail trade is also reported to be booming and the prescription business especially is increasing constantly owing to the prevalence of the grip, which is rapidly approaching the proportions of an epidemic.

Slight Fattening Off Except in Prescriptions.

Baltimore, Feb. 20.—The prescription trade keeps up quite well, but otherwise the retail druggists of this city are not busy. The business in sundries has fallen off, a circumstance in part due to the Sunday closing agitation, and the pharmacists are not oppressed by prosperity. The jobbers experienced a fair movement last week, some days being productive of an extraordinary number of orders. Activity prevails in the local as well as the out-of-town trade. The manufacturers of pharmaceuticals report a satisfactory state of affairs, with the distribution of goods quite up to expectations, and laboratory forces fully employed. The trade in heavy chemicals is rather above the average, and generally speaking a buoyant feeling prevails.

Unusually Good in Chicago.

Chicago, Feb. 17.—Manufacturers report very bright prospects for a continuing and increasing good trade. They say that January and February thus far have recorded a larger trade than in any previous year. Among jobbers this is usually a hibernating period, when trade slacks and waits for spring. For the season, however, business is unusually good, and shows better than for the corresponding period last year. Collections are very good indeed. One jobber reports that his outstanding accounts are \$100,000 less than a year ago on a larger volume of business.

Shows Increase Over Last Year.

St. Louis, Feb. 17.—Wholesalers report country trade excellent and showing a steady increase over the corresponding period of last year. Among the notable advances have been quinine, 2 cents; citric acid, 6 cents; castor oil, ½ cent; camphor, 2 cents. Turpentine has advanced and is salable at 60 cents in barrel lots. Local retail trade is reported on all hands as showing considerable improvement over recent weeks.

Market Reports.

NEW YORK MARKET.

New York, Feb. 20.—Business in a jobbing way continues moderately active, and in the aggregate showing satisfactory proportions. The general market retains a steady undertone, but there are a few important price changes favorable to buyers.

OPIMUM.—There is no improvement in foreign markets, and the tone is rather easy, but jobbers continue to quote the old range of \$3.30@3.50 for 9 per cent, and \$3.40@3.60 for 11 per cent, the higher figures for single pounds.

POWDERED OPIMUM.—Current trading continues of a light retail order, with jobbing quotations nominally unchanged at \$4.50@4.60 for 13 per cent, and \$5.10@5.25 for 16 per cent.

MORPHINE.—The consuming demand shows no abatement, and values are well sustained on the basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for smaller quantities.

QUININE.—Increasing firmness is a feature of the market, but only a moderate trade demand is reported. Quotations have been further advanced to 35¢@37¢. For 100-oz. tins, 37¢@39¢, for 50-oz. tins and 42¢@44¢, in ounce vials, according to brand.

CINCHONIDA.—Values are higher, owing to scarcity and increased cost of raw material, and jobbers have advanced quotations to 32¢, in 100-oz. tins, 34¢@38¢, in 5-oz. tins and 38¢@40¢, in ounce vials, according to quantity.

COCAINE.—Manufacturers have reduced prices 75¢ per oz., and the revised jobbing quotations are \$3@5.25 for small crystals and \$5.25@5.50 for large.

CHLORIDE OF POTASH.—Foreign markets are stronger under an increased demand, and jobbers have advanced quotations to 10¢@10½¢, for American in kegs and 14¢@17¢, for less; powdered 10½¢@11¢, in kegs and 15¢@18¢, for less; English 11½¢@12¢, in kegs, 15¢@18¢, for less; powdered 12¢@12½¢, in kegs and 16¢@20¢, for less.

VANILLIN.—Competition among manufacturers has caused a weaker feeling, and jobbing quotations show a decline to \$1.50@1.75.

BALSAM TOLU.—An easier feeling has developed, and jobbers have reduced quotations to 35¢@36¢, in 10-lb. tins and 40¢@50¢, for less.

OIL CASIA.—A tame and uninteresting market is noted, with quotations showing a decline to \$1.25@1.50, as to quality and quantity.

OIL CITRONELLA.—Market weak, with quotations lower, the revised range being 40¢@65¢, as to quantity.

OIL CUBEBA.—Dull and easier, with jobbing prices reduced to \$1.05@1.20.

OIL WINTERGREEN.—Natural is more plentiful, and quotations for jobbing quantities show a decline to \$2.80@2.90.

CASTOR OIL.—Scarcity of beans has caused an advance in manufacturers' prices, and the revised jobbing figures are 12¢@13¢, in barrels, 13¢@13½¢, in cases and 13½¢@14¢, in casks.

IPEACAC.—The market has partly reacted from the recent depression, and jobbers have marked up quotations to \$3.40@3.65 for whole, \$3.45@3.70 for ground and \$3.50@3.75 for broken in casks.

CARBONATE OF AMMONIA.—Foreign markets are firmer, and spot prices for jobbing parcels have been advanced to 10¢@10½¢, in barrels and 13¢@17¢, in jars.

CITRIC ACID.—Manufacturers' prices are again higher, and jobbers have advanced quotations 42¢@43¢, in kegs and 48¢@50¢, for less.

CAMPHOR.—Crude continues to advance, and prices of refined have been marked up to 54¢@54½¢, in barrels, 54¢@55¢, in cases and 60¢@63¢, for broken lots.

CITRATES.—Jobbers have advanced quotations to 50¢@55¢, for potash and 52¢@57¢, for soda.

GUM THUS.—Stocks are materially reduced, and jobbers have advanced quotations to \$6.25@6.50 per barrel and 70¢@76¢, per pound.

UNION SALAD OIL.—Market firmer, with jobbing prices advanced to 47¢@50¢, in bbis. and 60¢@75¢, for less.

CLOVES.—Crop reports are unfavorable, and jobbing quotations have been advanced to 9¢@9½¢, by the bale and 12¢@13¢, for less; powdered, 18¢@20¢.

General Trade Excellent.

St. Paul and Minneapolis, Feb. 16.—Quite a number of retail men report renewed activity in prescriptions, owing chiefly to the prevalence of colds and rheumatism. In addition, their general trade is excellent in most cases, but collections still fail to be what they should. Jobbers continue with their hands full. The expectation of an increase over previous years' business is being realized right along. They say, discussing the constant price advances, that there are no indications of any change from the course of events last year, when those who stocked up early realized very handsome profits from the higher rates at which they sold. Orders for spring delivery are reaching these cities in encouraging volume. Unlike the retailers, the wholesale houses find collections to be in good shape.

BLUE BOOK CHANGES TO MARCH 1.

The Change Sheet bound in this number presents all the important price changes occurring during January and February in the lists included in the Era Blue Book. Subscribers may therefore destroy the Change Sheets previously received, substituting this one therefor. These sheets will continue to be issued weekly, as heretofore, and should be carefully noted and preserved as presenting latest price quotations and supplementing the information presented in the Blue Book.

THE PUBLISHERS.

SPECIAL WINDOW DISPLAY SUPPLEMENT.

We have gathered a very satisfactory amount and kind of material for preparing a Special Supplement consisting of reproductions of photographs of drug store window exhibits, interiors and exteriors. This sheet will be issued at an early date and will surely prove worthy the labor and expense incurred. We can still accept a few more photographs for this use, however, and subscribers are requested to favor us with anything in this line which is new, novel or trade-bringing. The display will picture stores and windows of various types and kinds in all parts of the country. This is the last call for photographs, so please be prompt.

THE EDITOR.

ASK US.

Druggists who have calls for any goods which they cannot find or of which they do not know the maker or the price, are invited to correspond with us and we will supply the information whenever possible. We have perfect facilities for handling such queries and we are always glad to extend this service to our readers.

THE PUBLISHERS.

OUR LETTER BOX.

Some of our friends have blamed us because the views expressed in some of the letters published in our Correspondence department have not entirely coincided with their opinions. A moment's consideration will convince one that a journal which would attempt to please everyone would very soon be compelled to go out of business.

The Correspondence department of this paper is not intended to reflect our own opinions. It is a forum for discussion placed at the disposal of any member of any branch of the drug trade. The patent medicine manufacturer may not like what a retail druggist may say, and if so, he is at perfect liberty and is invited to present his own side of the case. We accept no responsibility whatsoever for the views expressed by either.

In the drug trade there are many men of many minds, and it is the height of absurdity to expect all of them to think alike, or to bring them into harmony of thought upon even one single proposition. The manufacturer, the jobber, the retailer, have equal rights in this department, and they can say in it what they wish, temperately and properly. We by no means agree with everything that all our correspondents say. The manufacturer who does not like what the retailer says about substitution must remember that there are at least two sides to this subject. The retailer does not always like what the manufacturer says on this subject. Each of them can express his views without fear or favor in this department.

The drug business is a many-sided, varied featured calling. This is very emphatically proven by the numerous papers presented in these pages recently in answer to the question, what can druggists do to increase their profits? In regard to these papers we venture that each one of them contains some expression, some opinion, which will be accepted by someone else.

Expecting us to publish only what will please and to keep out all which will displease some particular set of readers reminds us of an old story, quite pertinent in this connection. In a revival meeting, an old deacon in the course of his remarks took occasion to offer thanks that it had been ordained by divine wisdom that there should be variety and difference of desires and wishes; he thanked God that all people did not wish the same thing, did not strive for the same thing, "for," said he, "if they did, everyone would have wanted my old woman." Another deacon arose, and proceeding along the

See Students' Bulletin, Page 234.

same lines, gave thanks also, but his conclusion was that if everyone should wish and strive for the same thing, no one would have wanted the old woman.

BENEFITS OF CANDID CRITICISM.

Recently one of our good friends objected because, in his opinion, the Era occasionally has been a little severe upon retail druggists. He believes it poor policy to tell the druggists that they are poor business men, that they are not up-to-date, and he showed evidence of great perturbation, if we may judge by the wholesale criticism and reprobation with which we were favored.

An evil cannot be cured unless one can place the finger upon it to point it out. There is nothing so healthy as good, honest criticism, even if sometimes it seems a little severe to those who know themselves to be deserving of it. But if the journals were to proceed day by day covering up and glossing over the faults and errors and evils which are only too apparent to them, the rank and file of the druggists themselves would be the first to complain that these journals had no individuality, no "git up and git," no hustle, and were therefore of no particular value.

Advice giving is always a thankless task. Seldom does the one for whom it is intended recognize that he is meant. We therefore are not very much afraid any particular individual will consider criticisms, suggestions and advice as pointed directly at him, but will believe it designed for the other fellow. The individual is very apt to look at things from his own individual view point. The journal, however, by virtue of the character of its work, is especially favored with opportunities for observing any question from all directions, even diametrically opposite ones. The individual may be unable in his own acquaintance to find a single druggist who is slow, a poor business man, and all that; but could he glance at the entire fraternity he might well be pardoned for exclaiming that the half has not been told. We do not expect to please everyone by everything we present. This would require infallibility and omniscience and omnipotence, but we do believe that no harm is done, but rather good, by pointing out defects with the sole purpose of seeking and applying a remedy.

It is in this spirit only that criticisms are ever offered in this paper. The trade journal, especially the drug trade paper, must, to a large degree, be but a mirror for the reflection of its readers' views, and these readers themselves very freely point out the weaknesses and faults of the trade. Taken as a class, the retail druggists of this country are a fine body of men, of intelligence, ability and attainment higher than the average, of general business sense a very creditable degree, but when the best is said there remains abundant room for improvement, and the journal which does not attempt to lead its readers in the direction of this improvement is false to its highest trust.

FEARFUL AND WONDERFUL.

The New York State Legislature this year is winning a rather unenviable reputation. It is said that its members have introduced more "fool bills" than have ever before appeared before any similar body in this country, and we are inclined to think that this charge is warranted. As a sample of these fool bills is one providing that hereafter hat or shawl pins over three inches in length shall be placed on the list of dangerous weapons, and it is made a misdemeanor for a woman to wear a pin over three inches in length. We venture the prediction that this measure will not be enacted into law. The legislators' wives will have something to say about it. What earthly use would a three-inch hat pin be, anyway? There are a lot more of equally inane bills, and we have heretofore commented upon those affecting pharmacy in particular.

RECOGNITION OF DIPLOMAS.

The New York City Board of Pharmacy has notified the council of the Ontario College of Pharmacy that it will hereafter not recognize diplomas from the latter institution, but that all students therefrom wishing registration in New York City must pass the regular board examination. Our Canadian friends evidently did not like this ultimatum, as they retaliate by establishing a similar ruling directed against New York graduates. We are inclined to think that this action on both sides is eminently just and proper.

There is no reason under the sun why any board of pharmacy should recognize any college diploma. At the present time, when there is so much diversity of requirement on the part of colleges, such a wide difference in the character and extent of the instruction given, there is no parity whatever between diplomas from these teaching institutions. If there is any college of pharmacy in the country whose graduates are so poorly equipped that they are afraid to undergo the ordinary board of pharmacy examination, this is all the more reason why their diplomas should not be recognized and accepted in lieu of such an examination. A diploma from one institution may represent several times as much real attainment as that from another college, and it is nonsense to attempt to put them upon an equal footing.

We have always been opposed to registration upon diplomas. It is the function of the board of pharmacy to find out what the candidate knows. It should not rely upon a diploma, which is no evidence, as things are now, of what its possessor has acquired in the way of professional education. If the colleges all taught the same things and the same quantity thereof and maintained the same standards, so that their diplomas were on a parity of value, the objection to board recognition of them would be largely removed. But this happy state of affairs is not yet reached. So we advise our Canadian brethren and our New York friends as well not

MURDERING THE QUEEN'S ENGLISH.

to feel at all aggrieved over the action announced. If the Ontario students are afraid of the New York examination they had better stay away from here, and vice versa.

In this connection it is cheering to note that the examiners in the Ontario College recommend that its regulations for examinations be made more stringent, and that the standard required for entrance be raised. These propositions meet with favor from the governing body. It seems, however, that students of that institution think the work is already severe enough, for all of them have joined in a petition that the severity in the coming examinations be materially mitigated. They urge that the work demanded is too heavy to be properly assimilated, and they want the college to let up on them a little.

HERE'S A HINT.

Druggist Chalfant, of Philadelphia, writes that he is doing a very profitable business filtering water for customers. In every package of goods delivered is enclosed a slip advertising filtered water, two gallons for five cents, distilled water, 15 cents a gallon. In three days he sold 361 gallons of the former and 112 gallons of the latter, and is kept hustling to supply the demand.

The famous (or infamous) character of the Schuylkill River water, whence comes Philadelphia's supply, undoubtedly makes a good business of this kind possible in that city, but there are other localities where satisfactory success could be attained. St. Louisans would appre-

ciate the opportunity, if their fears prove justified that the Mississippi River is henceforth to be dangerously polluted by the outflow from the Chicago drainage canal, just opened.

In time of epidemic, of unusual sickness, the great public at once asks if the water is good, and welcomes any assurance on this point. Water is a great carrier of contagion, particularly typhoid, but it is not necessary to wait for such a visitation. The wide-awake druggist in any locality, who enjoys the confidence of his patrons, should have little difficulty in working up a mighty nice little trade in drinking water for the table and sick room. There's lots of people willing to pay a little something for it.

WINDOW DISPLAYS.

We publish extracts from two letters received in the same mail from two kinds of druggists:

No. 1 says: "We read your publication with much interest. In looking over the last issue we notice the heading, 'What can druggists do to increase their profits?' We would suggest a disposition to show their enterprise by making attractive window displays. It is not necessary that a window should always appear beautiful to the eye to be attractive. Some of our best and most attractive displays have had no beauty about them, but it was the real suggestiveness that attracted the passer-by. It requires thought, ingenuity and a great deal of hard labor to make good displays, but we know it adds materially to our profits."

No. 2 writes: "After personal inspection of several hundred stores I would consider only about half a dozen window displays worth photographing, and the reluctance with which these druggists met the proposition to have their windows photographed was remarkable. It seems as though the average druggist cares little or nothing about window decorations, so far as originality is concerned. Some of the windows have the same displays that I noted several weeks ago, and that, too, without dusting the goods or washing the windows. The average druggist seems densely ignorant of advertising as a means of increasing trade, and skips that part of his journal as of little or no account. Druggists in residence sections have an idea that people come to them when they want anything, and would not come any oftener on account of attractive windows."

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

OBJECTS TO THE LANOLIN PACKAGE.

Brooklyn, N. Y., Feb. 19, 1900.

Editor Pharmaceutical Era: Please, please give me room to make a remark. If I had the driving idiot who puts solder on the lids of Lanolin cans just handy at my elbow, after I have pried and screwed and twisted the thing off in a hurry by using all the tools in the drawer, I think I should try to pound a grain of sense into his skull with the same tools before I put them away. What possible use it serves I cannot see. Can you?

THOMAS D. MCELHENIE.

A BLUE BOOK SUGGESTION.

Indianapolis, Ind., Feb. 18.

Editor Pharmaceutical Era:

If you would print the Drug and Chemical Price List (Part II.) of the Blue Book on writing paper, with a little more space opposite each name so that it could be used as a price list and cost book, it would make it much more valuable to all careful buyers. With such an arrangement each purchase or quotation could be noted opposite the item in pencil, and when full the prices could be erased to make room for new prices.

Yours very truly,

F. E. WOLCOTT.

This is a good suggestion and we appreciate how it would add to the value of the book, and in another year we hope we may be able to carry it out. With each successive edition we expect to make the Blue Book more complete, and gladly welcome such suggestions from our subscribers.

We have never claimed perfection for this first edition, but we do feel as if we made an excellent showing for our first attempt, and have given druggists a pretty clear idea of what they may expect with the improvements which will naturally come with each new edition.

[Ed. Era.]

LEGISLATION TO MAINTAIN PRICES.

Worcester, Mass., Feb. 23.

Editor Pharmaceutical Era: In your issue of the 15th inst. Mr. Chas. H. McConnell says: "the only way to increase profits is to increase business." He further says, "Be scrupulously honest." He then proceeds to defame proprietary medicines in a very unscrupulous manner. He calls them "faith cures founded in fraud and advertised in iniquity." He says he "fights their sales in every way possible."

In my opinion the law will, ere many years, restrain this unscrupulous advocate of scrupulous honesty. Let him advertise and sell his own preparations at cut rates if he so desires. I claim the right to sell mine to retailers with restrictions and that damages can be recovered if the retailer thereof violates the terms of sale. The statement of Mr. McConnell shows the need of such a judicial decision in the interests of fair competition. One man should not have the license to ruin the business of another by advertising a preparation for the purpose of defaming it and thereby sell "his own preparation."

The retail prices of many things are now protected by the manufacturers thereof. As the Government requires that the retail price of trade-marked medicines be fixed for the purposes of revenue, it is reasonable to assume that the courts will enforce price restrictions when trade-marked medicines are sold with restrictions to the retail trade. On this assumption I am making a test case. If I win I shall be able to deter would-be substitutes from advertising my article at a cut price. The advertising at a cut price does the manufacturer

more harm than the cutting. I consider it incumbent upon me to protect the retail prices of my goods if I can, because in protecting the non-cutting retailer I protect myself. The professional cutter is not only the foe of retailers, he is also the foe of manufacturers. He reaps wheat and sows tares.

JULIUS GARST.

PITTSBURG DRUGGISTS MAKE THEIR OWN SOAP.

Pittsburg Pa., Feb. 17, 1900.

Editor Pharmaceutical Era: Cuticura Soap costs \$2.30 a dozen. The department stores sell it at 19 cents a cake, which is just about what the druggists are obliged to pay for it, hence to meet competition they are obliged to sell without profit.

Druggists can make more profit by selling N. A. R. D. Skin Cure Soap. It costs \$1 a dozen to any druggist belonging to the N. A. R. D., large or small buyer, the price is the same. It retails for 15 cents a cake, netting a profit of 80 per cent., or two cakes for 25 cents, netting a profit of 50 per cent.

Later in the season the retail druggist can increase his profits still more by selling N. A. R. D. Skin Cure Ointment and N. A. R. D. Blood Purifier.

The above preparations are prepared by the Western Pennsylvania Retail Druggists' Association.

LOUIS EMANUEL.

[The following grammatical (?) circular (and a wrapper used on the soap) are supplied by our correspondent.—Ed.]

N-A-R-D

MEDICATED

SKIN CURE AND TOILET SOAP.

THE PUREST AND GREATEST OF ALL SOAPS YET DISCOVERED FOR THE BATH, TOILET AND NURSERY.

It is strictly antiseptic. For a Complexion Soap it has no equal, and is the only Soap that can be used by persons having a delicate skin. Cures Dandruff and stimulates the scalp, thus preventing falling out of the hair. For Infants and children it will be found delightfully pleasant and an antiseptic addition to the bath.

For Ladies it is used to impart that fine velvety softness to the skin so much desired by the fair sex. For all persons having rough skin or scaly eruptions on the face or any part of the body it will be found invaluable.

NARD is a plant, the perfume of which formed one of the most durable aromatic ingredients in the costly Unguents used by the Romans and Eastern Nations. The exact botanical source of the true Indian Nard was long a matter of uncertainty, the descriptions of ancient authors being somewhat vague.

Theophrastus, classes Nard amongst roots, and states it came from India. He also states that it has wonderful healing properties and one of the most durable perfumes. Dioscorides, states that the true Nard was collected on mountains in India, beside which the river Ganges flowed. Sir W. Jones, identifies it as "Nardostachys Jatamansi," a plant with fibrous roots, which collected in the mountains of Ehotan and Nepal and used for healing all skin eruptions. Further evidence is afforded by Lambert, who found the roots in one of the oldest Chemists Shops in London, and also by Dymok, who states that the principle use of the drug was in making ointments and washes for healing and beautifying the skin.

More recent researches have proven the plant to be invaluable in curing diseases of the skin, and the idea was suggested to incorporate the active principle of the drug with some pure saponaceous material, so that it may be used often in a pleasant and agreeable manner, which led to the manufacture of

N-A-R-D

SKIN CURE AND TOILET SOAP.

REMONSTRANCE FROM THE DRUG CLERKS' CIRCLE.

New York, Feb. 14, 1900.

Editor Pharmaceutical Era.—Kindly have the following published in the Era:

We wish to call your attention to the article which appeared in your issue of February 1st, 1900, entitled: "Thimme Tries to Found a New Order." In it, whether through ignorance or malice, or both, you have not only misrepresented us, but you have marred the good name of our Circle with preposterous falsehoods. While we deem you too honest and too fair-minded to be accused of malice, we are nevertheless astounded at your printing an article so full of misstatements and ignorance. Affecting as it does the reputation of our Circle, we feel it our duty to place before you the true facts concerning the Drug Clerks' Circle, trusting to your honor that you

will publish the same and rectify the erroneous impression which that article produced upon the readers of your paper.

On November 1st, 1899, a number of drug clerks came together and organized the present Drug Clerks' Circle, for the purpose of combating the numerous and unbearable evils prevailing in the drug trade. Our organization, like any other labor or professional organization, came into existence as a result of necessity for self-defense. When individuals are helplessly suffering from existing abuses, their combined efforts and united strength have ever proved a powerful check to those abuses, and it was for the same object that the Drug Clerks' Circle was formed. We absolutely and most emphatically deny that Thimme had any hand in the formation of our Circle. Furthermore, of those who originally organized this Circle, not one was acquainted with Thimme.

The statement, therefore, that "Thimme Founds a New Order, the Drug Clerks' Circle," is absolutely false. Our first acquaintance with him was made when the bills now before the Legislature affecting the Drug Clerks' Circle came up for consideration before the Circle, and after considerable discussion on the merits of each, the Circle resolved to support the bill introduced by Assemblyman Maher, or proposed by Thimme. It was on that occasion that we first made our acquaintance with his name.

Secondly, you attribute the authorship of our letter to Thimme, which you state "is eminently characteristic of his style." This is another falsehood—the result of somebody's diseased imagination. The fact is that on December 24, 1899, the Circle instructed its secretary, H. B. Robbins, to write a letter to all drug clerks of Greater New York requesting them to join us, and as a result he produced that able and masterly appeal you published.

In conclusion we wish to state that the Drug Clerks' Circle is not a secret organization. It is to-day a living and active force with a membership of over a hundred active young men, and that all intelligent clerks recognizing the usefulness and necessity of our Circle are constantly flocking to join our ranks. We are fully confident that before long every drug clerk will become aware of it, and that our influence and prestige will be felt not only by the Legislature, but even by the Era.

Hoping that we will publish the same, for published it will be, we remain, respectfully yours,

THE DRUG CLERKS' CIRCLE.
Officers.

CHEMICAL COMPOSITION OF PARIS GREEN.*

There is more or less confusion as to the exact chemical compound that goes under the name of Paris green. Many chemical writers include two different arsenic compounds under this name, but the compound most frequently met in commerce contains copper, arsenic and acetic acid, and is chemically known as copper aceto-arsenite; in the trade this compound, in a form not chemically pure, is known as Paris green, Schweinfurt green, Imperial green, French green, Emerald green, etc.

Paris green, or copper aceto-arsenite, when chemically pure, contains the following amounts of the different elements indicated:

Arsenic	44.44 per cent.
Copper	24.99 " "
Oxygen	25.25 " "
Carbon	4.73 " "
Hydrogen	6.59 " "

Paris green may be regarded as approximately consisting of—

Copper arsenite	82 per cent.
Copper acetate	18 " "

However, it is customary, in speaking of the amount of arsenic contained in Paris green, to refer to it as

arsenious oxide; and, using this form of expression, we would give the composition of pure copper aceto-arsenite as follows:

Arsenious oxide	58.64 per cent.
Copper oxide	31.30 " "
Acetic acid	10.06 " "

Paris green, as found in commerce, rarely, if ever, consists of pure copper aceto-arsenite, but contains this compound as its chief constituent with varying proportions of other substances.

In the compound copper aceto-arsenite, there are, for each pound of copper oxide, 1.87 pounds of arsenious oxide.

1. In twenty-four samples of Paris green examined, the amount of arsenious oxide varied from 53.34 to 60.16 per cent. and averaged 56.48 per cent. This average is only about 2 per cent. below the arsenious oxide contained in pure copper aceto-arsenite and indicates a good quality of Paris green, so far as the arsenic content is concerned. Excepting one or two samples that run high in arsenic, the variation is surprisingly small. The legal requirement is 50 per cent. arsenious oxide.

2. The amount of copper oxide varies from 27.70 to 30.90 per cent. and averages 29.97 per cent. which is one and one-third per cent. below that in pure copper aceto-arsenite. The copper content therefore indicates a good quality of Paris green.

3. In pure copper aceto-arsenite there are 1.87 pounds of arsenious oxide for one pound of copper oxide. Now, this relation is of value in showing whether Paris green contains more arsenious oxide than it ought. The chief adulterant used in Paris green is arsenious oxide, commercially known as white arsenic. This is used because it is cheaper than Paris green and also because it can be safely added without any danger of reducing the amount of arsenious oxide. In fact, a very poor quality of Paris green can be brought up to the legal requirements by addition of arsenious oxide. However, arsenious oxide cannot be added to Paris green without increasing the ratio of arsenious oxide to copper oxide above 1.87. In the samples examined, the ratio of arsenious oxide to copper oxide varies from 1.82 to 2.17 and averages 1.88. In sample No. 14, the arsenious oxide exceeds 60 per cent. and the copper is less than 28 per cent.; hence, the arsenious oxide is present in amounts more than twice exceeding the copper oxide. In other words there is too much arsenious oxide for the copper oxide present and the only possible inference is that white arsenic has either been added purposely or is present as the result of carelessness in manufacture.

4. The solubility of Paris green in strong ammonia is a fair test of purity so far as concerns the addition of white arsenic and insoluble adulterants like barium sulphate, calcium sulphate, etc. In a table prepared we have indicated those samples that dissolved easily and completely in strong ammonia, making a perfectly clear solution without sediment. These samples were free from white arsenic. Fifteen samples dissolved satisfactorily, while nine samples did not dissolve completely at once but only on standing for a considerable time, and even then traces remained undissolved.

5. In general, it may be said that the results of our work indicate a very satisfactory condition as to the purity of the Paris green in the market. They do not justify the widespread belief that Paris green is extensively and seriously adulterated. In every instance the arsenious oxide considerably exceeds the legal requirements. The only material that we have found used as an adulterant is white arsenic and this in only one or two cases. In not a single case have we found such materials as sulphates of barium, calcium, etc.

6. The color of Paris green is changed to such an extent by addition of white arsenic or other similar materials that one can usually detect an adulterated article by its appearance. Paris green of good quality is intensely bright green and uniform. When adulterated, the green loses something of its intensity and is grayish green and is not always uniform.

CRURIN is a trade name for quinoline bismuth phocyanide, recommended as dusting powder in combination with starch for abscesses, etc. (Pharm. Post.)

Three Metropolitan Cities of the Old World. Their Places in History, Pharmacy and Commercial Importance.

A SERIES OF DESCRIPTIVE ARTICLES FOR THE TOURIST AND PHARMACEUTICAL VISITOR TO THE WORLD'S FAIR IN 1900.

SIXTH PAPER

(Written for *The Era*.)

EDUCATIONAL PARIS.

The "Latin Quarter;" Its Schools and Students.

PARIS is divided by the River Seine into two unequal portions, of which the Northern half is the largest and most important, containing the Bourse and commercial world, the wholesale and retail business districts, and the manufacturing and industrial region, as well as the elegant and fashionable avenues described in our opening article, the Champs-Élysées, the Trocadero, the Grand Boulevards, etc.

On the South side, or (as it is invariably styled by Parisians) the "Left Bank" of the Seine, the principal features are the Champ de Mars, the Invalides, and the surrounding wide avenues, the Faubourg St. Germain, where many of the old aristocratic families of France still keep up their town mansions, and the "Quarter Latin." This name,

The Latin Quarter

dates, of course, from those days when Latin was the common language of the studious and educated world. When Oxford and Cambridge were as yet but petty centres of learning, the University of Paris was already celebrated throughout the Western world. The English were one of the "nations" of the French University, William of Champeaux, John of Salisbury, Abelard of Bath, were among their teachers, around them gathered hundreds of young Englishmen; we need only cite two well-known Archbishops of Canterbury, Thomas à Becket (murdered in 1170), and Edmund Rich, both canonized by the Catholic Church. Here, a century ago, Roger Bacon "spent his whole heritage in costly studies and experiments;" Erasmus and an endless list of other famous names might be added did space permit. But it is not our intention to describe the glories of the ancient University, nor the picturesque Bohemian life of the struggling artist or poet fifty years ago. Du Maurier's "Trilby" and Henri Murger's "Vie de Bohème" are two charming books; but refer to a past age and to a limited class, and need by no means be accepted as pictures of real student life. The Latin Quarter may still boast a few Rodolphes and Schauarnds, Taffies and Little Billees, but the real Bohemia of modern Paris is rather to be sought at Montmartre, where our young artists and poets mostly congregate nowadays. A good number of the 950 students of the Fine Arts School live in the Latin Quarter, but two-thirds of them are budding architects; and as to the 1,450 students of the Faculty of Literature they rank (with the law students) among the wealthiest of the Quarter. The typical student is the "carabin" of the Faculty of Medicine, the "potard" of the School of Pharmacy, or the candidate for the P. C. N. (Physical, Chemical and Natural Science) degree at the Sorbonne. The Faculty of

Protestant Theology only numbers a few pupils, and the Catholic seminarist, leading a more or less cloistered life, need not be reckoned in this connection.

The Five Great Faculties.

The Faculty of Medicine numbers nearly 4,000 students, including 129 ladies (29 Frenchwomen, 91 Russians and 9 other foreigners). The Faculty of Law, just opposite the Pantheon, has over 12,500 students. The Faculties of Literature and Sciences are both lodged in the new Sorbonne. The former counts its 1,450 pupils including 206 French and 57 foreign ladies; the latter over 1,100 (35 female students). The School of Pharmacy, a Faculty in all but the mere name, has nearly 1,400 names on its books, including 19 Frenchwomen and 1 foreign lady student.

The buildings of the Faculties of Law and Medicine call for no particular remark, and the School of Pharmacy has been fully described and illustrated in the *Era*. The newest and handsomest school is the Sorbonne, which takes its name from its founder, Robert Sorbon, chaplain to Louis IX., and is one of the historic sights of Paris. From 1252 to 1790 it was principally a theological institution. Here printing was introduced to Paris in 1490, and there is a fine library. The building has just been entirely reconstructed, but the chapel, shown in our engraving, has its historical interest as containing the tomb of Cardinal Richelieu, the great statesman. Here is the chapel of Our Lady of the Students, where a students' mass is held weekly; the walls around are covered with votive tablets commemorating success in examinations.

A Polytechnician.

Some Other Great Schools in the Latin Quarter deserve mention. The celebrated College of France is next door to the Sorbonne, hard by is the Polytechnic, with its 250 students in military uniform. Most of these take commissions in the army (artillery and engineers), but some, like the late President Carnot, become Civil Engineers. The Ponts and Chaussées School forms civil engineers, while the mining and railway engineers are recruited from the Polytechnic. School of Mines (close to the School of Pharmacy), which has 180 pupils. The Ecole de Chartes, 60 pupils, next door to the Sorbonne Chapel, forms librarians and architects, and the Colonial School, shown in our illustration, is next door to the School of Pharmacy. The School of Modern Oriental Languages has 374 pupils, the Political Sciences School 500, the Special School of Architecture 75, and the Decorative Arts School 1,200. The Agricultural Institute occupies

the site of the old School of Pharmacy; there is a School of Naval Engineering and another of Physics and Chemistry in the same neighborhood. The Institute Pasteur is just outside the Latin Quarter, and the Faculty of Sciences has various laboratories in different parts. The Museum (Jardin des Plantes) is frequented by students of Natural History in all its branches. The military doctors and pharmacists pass their "stage" or probation at the Military Hospital of Val-de-Grace; part of the buildings are shown in our illustration.

Most famous of all the schools, perhaps, is the Ecole Normale, where those who wish to become professors, etc., study. Pasteur was a "Normalien," and his medallion portrait and an inscription on the front of one of the buildings celebrate the great discoveries he made in some of the little rooms here.

There are over 14,000 students in this part of Paris, exclusive of the large Catholic seminaries and high schools. We may just mention the Irish College, where 70 young Irishmen, ignorant of a word of French, are trained for the Irish priesthood in Paris. This institution naturally dates from 200 years ago, when Catholicism was persecuted in the United Kingdom.

The Pharmacy Student

and the medical student are, as a class, less wealthy than their comrades in Law and Literature, and their long period of study and "stage" keeps them for five or six years in the Latin Quarter; they are therefore its most characteristic class. Most students can do but little to earn their bread while they pursue their studies. But the pharmacist is luckier in this respect. During his "stage," or three years' probation in a pharmacy, he can at first earn his board and lodging, and at the end of the second year probably ask \$30 a month or so. But when inscribed on the school books as a regular student he must seek a situation where he will be allowed at least three afternoons weekly for school attendance and may consider himself lucky if he can find one at \$18 a month. Home study after 10 p. m. (closing time) may wear out his health; so, his only resource is to find a partial situation, that is, to work one or more days weekly in one or several pharmacies, and to profit by his spare time to attend the classes, etc. The position of "interne" in a hospital is a regular and easy one, but is only to be obtained by severe competition, as the number of vacancies is limited

and the advantages sufficient to attract numerous candidates.

The punning motto of the impecunious but persevering pharmacy student is "soufre and potasse" ("suffer and grind;" sulphur and potash); but he has brilliant examples in French pharmacy, Vauquelin, Thenard and others, that labor sometimes meets its reward.

But let it not be imagined that the average "potard" or "carabin" allows his youthful spirits to be crushed by his lot. On the contrary, it is a curious fact that if there is any little disturbance in the Quartier he is pretty sure to be in the van, ably seconded by his comrades, no doubt, but ever first in the field. Nothing very alarming, as a rule; an unpopular professor hooted out of the lecture room or treated to a chorus under the windows of the school or habitation, a few panes smashed in the window of an offender—a cutting pharmacy came in for this treatment not very long ago—certain series of lectures have had to be suspended at other Faculties from time to time when a professor is notoriously unpopular, and at the School of Pharmacy an excellent but unduly severe director was once obliged to resign his position altogether by a student agitation.

As to street riots, which occur almost everywhere where students are massed in the centres of population—and the French University has nothing of the semi-rural character of Oxford or Harvard—they are seldom or never political, and are usually caused by a vigorous sentiment of confraternity. The whole Quarter rose in 1893 on account of the prosecution of a few art students and the somewhat brutal police repression of a demonstration in their favor.

This spirit of union and mutual help has doubtless been largely fostered by the

General Association of Paris Students

founded in 1883 to band together the pupils of the various Schools and Faculties. Attacks were being made in the public press on the students as a body, so meetings were held and delegates elected to demand satisfaction from the journalists in question. The union thus formed has never been dissolved. The Association now numbers 7,000 members, and has twice had to move into more spacious quarters. President Loubet himself inaugurated the new premises only a few weeks ago. Presidents Faure and Carnot rarely failed to attend the annual ball, the annual banquet is presided over by men of world-wide reputation,

VAL DE GRACE.

SORBONNE CHAPEL.

M. LANCOSME.

ECOLE COLONIALE.

like Renan and Zola, Puvis de Chavannes and Duclaux; Madame Sarah Bernhardt invites the members to a special performance yearly when she returns to her Paris theatre, and savants like Chevreul and Pasteur have accepted the posts of Honorary Presidents of this interesting Association. There is a section for each Faculty; the Pharmacy section has its collection of drugs, minerals and botanical specimens, and a very complete library containing many expensive works on pharmacy and science; an analytical laboratory has just been added. The leading wholesale firms contribute largely to keep up these collections, and often invite the members to visit their factories under competent guidance. Lectures are organized yearly, and the identification of drugs practiced in view of examinations; there is also a registration office for situations as drug clerks.

The whole of the members of the association have the usual other advantages of a similar body—library, lectures, concerts, a fencing room and an athletic club. Athletics, by the way, is still less popular than in Anglo-Saxon countries, have made great progress lately in the French scholastic and student world. Of course, every second student has a bicycle, a residence on the sixth floor being considered no obstacle by the fervents of the wheel.

The Students' Carnival Procession

at Mid-Lent, one of the events of the Parisian year, is organized by the Association, and is usually full of amusing skits on current events, etc. In 1898 a costume group of Parisian students from 1200 to 1850 was one of the features. Our sketch is from a snapshot taken before the procession started.

The Student's Beret.

or velvet Tam O'Shanter cap, also originated with the Association; in fact the pharmacy student shown in our illustration, M. Lancosme, is one of the secretaries of the Association for 1900, and will likely take a leading part in the reception of foreign students during the Exposition. Each faculty is distinguished by the color of the band, light green for Pharmacy, red for Medicine, purple for Science, and so on.

The Parisian student, it should be remarked, has no official cap or gown. The professors, on the contrary, still wear on state occasions the striking costumes which date from Napoleon I.'s time, and a great University function at the Sorbonne is worth attending only to see the costumes.

The Amical Association of Pharmacy Students

is in the Boulevard St. Michel—the grand boulevard of the Latin Quarter—barely five minutes from the School of Pharmacy. Founded in 1896, it has now 500 members and comprises a library, a room for study, a collector of drugs and pharmaceuticals, etc., etc., open from 8 a. m. till midnight. Its monthly magazine, the "Pharmacie Française," is edited by the president (Monsieur Louis Jolly), and frequently contains articles written by the Professors of the School, as well as papers on legal questions connected with Pharmacy.

The Aspect of the Latin Quarter

has largely changed during the last half century. The quaint old streets described in "Trilby" have for the most part disappeared, a few that remain should at once be visited by the 1900 tourist, for yearly new, broad straight thoroughfares, like the rues Gay Lussac and Claude Bernard, cut their way further and further till the Quarter becomes unrecognizable.

The student nowadays is less confined to his own quarter than formerly. Yet the students' district has physiognomy all its own. It has its own garden, the Luxembourg; its own theatres, the Odeon and the Cluny; I

CARNIVAL 1898

own public hall, the venerable but ever youthful Bullier; while the cafes and restaurants along the Boulevard St. Michel the "Boul' Mich," as it is called in student slang) are quite different to those of the rest of Paris, so far as their clientele is concerned. For though a few wealthy students have so far forgotten the ancient traditions of the Quarter as to hire and furnish small flats, the immense majority of the students still live in a furnished room in a hotel, and take their meals and lead their life outside. It is just this lack of home life (which gives such brightness and gaiety to the streets of central Paris) which fills the Boulevard St. Michel daily and nightly with its crowd of youthful promenaders on their way from Faculty to restaurant, from restaurant to cafe, and from cafe to hotel.

EXAMINATION QUESTIONS.

LOUISIANA BOARD OF PHARMACY.

This board examines on six subjects, four written and two oral. The questions for the written examinations follow:

WEIGHTS AND MEASURES.

- 1.—What is the difference between weight, specific gravity and specific volume?
- 2.—I have powdered opium assaying 16½ per cent. morphine; on exposure it absorbs 10 per cent. moisture. If I make tinct. opium with this moist powdered opium, what will be the percentage morphine strength of such a tincture?
- 3.—What quantity of each ingredient should be used in making 30 grammes of ointment to contain 5 per cent. aristol, 2 per cent. cocaine, 10 per cent. lanoline and the balance vaseline.
- 4.—How many grains of pepsin 1-1800 will equal 5i pepsin 1-3000?
- 5.—What is the measure of 18 avoirdupois ounces of glycerin sp. gr. 1.250 in C.c?
- 6.—How many grammes of ether sp. gr. 0.750 will a pint bottle contain?
- 7.—A piece of sugar weighing 150 grains was found to weigh when immersed in oil of turpentine (sp. gr. 0.87) 68.43 grains; what is its specific gravity?
- 8.—I have two ingredients, one 70 per cent. strength and the other 24 per cent. strength. I desire to mix 5 pounds of the 70 per cent. with such a quantity of the 24 per cent. as will make a 40 per cent. mixture. How much of the 24 per cent. should I use?
- 9.—What quantity of solution of atropine sulphate containing 1 grain to one drachm should be used in making a 12 ounce mixture containing 1-64 grain of atropine sulphate to each teaspoonful?
- 10.—What quantity of a 20 per cent. solution should be used in making 200 grammes of a 4 per cent. solution?

MATERIA MEDICA.

- 1.—Define the following terms: (a) anodyne; (b) ant-acid; (c) aperient; (d) cholagogue; (e) demulcent; (f) diaphoretic; (g) emollient; (h) prophylactic; (i) rubefacient; (j) salubagogue.
- 2.—What is aloes? (b) From what part of the plant and how is it obtained? (c) What two varieties are official? What other variety is most used in commerce? What is the dose?
- 3.—What is turpentine? (b) How obtained? (c) What important oil is derived from it? (d) In what manner

- is the oil obtained? (e) What is the residue, and give its official name.
- 4.—What part of rhubarb is official? (b) What special variety does the U. S. P. recognize? (c) What is the botan cal source? (d) What is its important constituent? (e) Give dose as a purgative and laxative.
- 5.—What is asafoetida? (b) How do its constituent does it owe its peculiar odor? (c) Name an official preparation made with water? (d) One with alcohol? (e) What is the dose?
- 6.—What is an alkaloid? (b) Outline a general method for obtaining them from the crude drug. (c) Name five official.
- 7.—What is a glucoside? (b) How do they differ from alkaloids? (c) Name two that are official. (d) How do they differ from alkaloids and glucosides? (c) How are they prepared? (d) Name three that are official.
- 3.—Give common name of the following: (a) Saccharum lactis; (b) sanguinaria; (c) sambucus (d) myristica; (e) matricaria; (f) krameria; (g) juglans; (h) ichthyocolla; (i) hiruda; (j) granatum.
- 10.—Give official name of the following: (a) Sweet flag; (b) male fern; (c) quercuro; (d) Canada hemp; (e) Roman chamomile; (f) starch; (g) lard; (h) bitter apple; (i) castor oil; (j) sava.

PHARMACY.

- 1.—How are the titles of official substances indicated in the nomenclature of the U. S. P.? (b) Illustrate your meaning by describing the following: Alcohol, mistura, glycyrrhiza, composita.
- 2.—Name the two principal solvents used in pharmaceutical operations. (b) When solids dissolve rapidly in liquids without chemical change, how is the temperature of the solution affected? (c) How affected if chemical action takes place?
- 3.—Name ingredients in compound syrup of squills. (b) What is its common name? (c) What syrup contains aqua ammoniac? (d) What syrup contains official vinegar? (e) Should it be made with or without heat?
- 4.—How would you prepare deodorized tincture opium?
- 5.—What is the difference between a natural and an artificial emulsion? (b) Give an example of each. (c) What is the difference between emulsion and saponification?
- 6.—What is styrax? (b) Describe its physical properties. (c) Into what official preparation does it enter as an ingredient?
- 7.—What is the common name of oleum tigli? (b) Is it a fixed or a volatile oil? (c) What is the difference between an ointment and a cerate? (d) What official ointment is made from an alkaloid? (e) What official cerate is used as a vesicant?
- 8.—What is the difference between a precipitate and a sediment? (b) What is a precipitant? (c) What term is applied to a liquid which remains above the precipitate. (d) Name one official mercurial preparation made by precipitation.
- 9.—What tincture is made by dissolving an extract in the menstruum? (b) What percentage of extract should the tincture contain? (c) What percentage of alkaloid should the extract contain?
- 10.—Name tinctures, the active ingredients of which are represented by the following percentages: One 5 per cent. tincture; two 10 per cent. tinctures; two 15 and two 20 per cent. tinctures; one each 30, 40 and 50 per cent. tinctures.

CHEMISTRY.

- 1.—What is an element? b) A compound? (c) How would you distinguish between them?
- 2.—What is a definite chemical compound? (b) What is a stable chemical compound? (c) Are all definite compounds stable?
- 3.—What do you understand by allotropism? (b) Give an example. (c) By isomerism? (d) Give an example.
- 4.—What is latent heat? (b) When is latent heat rendered sensible? (c) When is sensible heat rendered latent? (d) What is the latent heat of water?
- 5.—What is the formula of carbon monoxide? (b) Of carbon dioxide? (c) How would you distinguish one from the other?
- 6.—What is iodine? (b) How met with in nature? (c) To what class of elements does it belong? (d) What is resublimed iodine? (e) How distinguish its compounds?
- 7.—What is sulphur? (b) What is the difference between flowers of sulphur and powdered brimstone? (c) What acid does sublimed sulphur contain? (d) How may it be removed?
- 8.—What two classes of compounds of Iron are there? (b) How can their salts be distinguished physically? (c) How chemical? (d) Write the formula of both chlorides.
- 9.—Write the formula of the following: (a) Ammonium hydrate; (b) Sodium hydrogen phosphate; (c) Magnesium sulphate; (d) Chloroform. (e) Ethyl alcohol.
- 10.—Give tests to distinguish: (a) sulphites; (b) thio-sulphates; (c) nitrates; (d) lead; (e) zinc.

CARBOFORMAL-BRIQUETTES are offered by Krell Eib, of Dresden. They consist essentially of para-formaldehyde and are intended for disinfection. (Pharm. Post.)

PHARMACY.

PARTINIUM is an alloy of aluminum and tungsten intended for various technical uses.

SELENIN is an unctuous preparation for chapped and rough skin, placed on the market in collapsible tubes. The composition is not stated. (Pharm. Post.)

CAMPHOR INJECTIONS AS ANTIDOTE FOR NITROUS GASES are employed by M. Haufe in Russia. Injected hypodermically they have been found unfailing when nitrous fumes have been inhaled. (Apoth. Ztg.)

ZINOL is a new remedy for gonorrhoea, composed of 1 part of acetate of zinc and 4 parts of naphthol-sulphonate of aluminum. It is employed in form of injections in aqueous solution of 0.15 to 0.3 per cent. (L'Union Pharm.)

MONO-IODO-THYMOL is an antiseptic obtained by the action of iodine upon thymol dissolved in a solution of caustic soda. Instead of iodine an iodide, in conjunction with a substance capable of liberating iodine, may be employed. (Apoth. Ztg.)

MENTHOL, BROMOFORM AND FORMOL are employed jointly for laryngeal tuberculosis by Lacroix. The treatment consists in inhaling the hot vapors, the efficacy being due to the analgesic, calmative and antiseptic properties of the agents. (L'Union Pharm.)

CHICLIN is a dermatological preparation placed on the market in form of a hard soap and also in form of an ointment. It contains castile soap, glycerin, birolin, talcum, oxide of zinc, tincture of benzoin, water and an extract of the bulb of *Tulipea Africana*. (Pharm. Post.)

IBIT is a trade name for bismuth oxyiodo-tannate, which is recommended as an iodoform substitute. It is used as dusting powder and for impregnating gauze. It is stated to have the advantages of being odorless, sterilizable and in a high degree non-toxic. (Pharm. Post.)

PICRIC ACID SPARADRAP, which is stated to be effective in the treatment of burns, may be obtained by fusing a mixture of 100 parts of lead plaster, 10 parts of yellow wax and 15 parts of dammar resin, and incorporating with the cooled mass 50 parts of methyl alcohol and 20 parts of picric acid. (Pharm. Post.)

EAU DE L'IMPERATRICE.—The following formula is given in *Zisch. f. Kosmet.*: Sal ammoniac 20 Gm., salts of tartar 30 Gm., cologne water 375 Gm., oil of cedar, oil of bergamot, of each 15 drops, rectified spirit 30 Gm., orange flower water 250 Gm. The mixture is placed in a retort and 450 Gm. distilled off. (Apoth. Ztg.)

BALSAMIC COD LIVER OIL, as prepared by Brismecret (Bull. de Pharm.), is prepared by the admixture of 400 Gm. cod liver oil, 200 Gm. syrup of tolu, 12 drops tincture of tolu and 2 drops essence of cloves. No emulsion is made, but the mixture is vigorously shaken whenever a dose is to be taken. (L'Union Pharm.)

CRYSTALLIN is a colloid prepared with methyl alcohol and amyl acetate instead of ether and alcohol. It is claimed to have the advantage of forming a soft film, the solvent evaporating very slowly. The preparation consists of 5 parts colloid cotton and 20 parts each of methyl alcohol and amyl acetate. (Pharm. Post.)

DETECTION OF CAFFEINE.—The following is stated by Archetti to be a very sensitive qualitative and quantitative reaction for caffeine. A solution of ferricyanide of potassium is heated to boiling with one-half its

volume of nitric acid, then largely diluted with water. This reagent gives with caffeine a precipitate of Prussian blue. (L'Union Pharm.)

DISTINCTION OF PHENACETINE FROM ACETANILID.—According to G. Cohn (Lib. Ann. d. Chem.) this is readily effected by means of concentrated sulphuric acid, which is without action on acetanilid, but decomposes phenacetine with the liberation of ethyl acetate, readily identified by its characteristic odor. (Pharm. Post.)

COLORED GLASS, the advantages of which for bottles to serve as containers for chemicals have been determined photochemically by Mueller, has also been investigated by spectrum analysis, and the results proved that dark brown, dark green and particularly red glass offer the best protection against the action of light. (Pharm. Post.)

SOAP FOR POLISHING METAL may be prepared by incorporating 2 parts of emery dust and 1 part of magnesium carbonate with 10 parts of tallow soap, softened with the smallest possible quantity of water and placing the mass into moulds. A good metal polish in powder form is obtained by mixing 4 parts of chalk, 4 parts of magnesium carbonate and 7 parts of red oxide of iron in fine powder. (Drog. Ztg.)

CACODYLATE OF GUAIACOL is a new compound employed by Barbary (Jour. d'Hygiene) with good results in tuberculosis. It is obtained by combining cacodyl with guaiacol and is a well-defined chemical compound. The author had formerly used successfully a combination of creosote and cacodylate of soda. The new compound is employed hypodermically in doses of 0.03 to 0.05 Gm. ($\frac{1}{2}$ to $\frac{1}{4}$ grain). (Bull. Comm. de Pharm.)

MONOBROMATED CAMPHOR IN EPILEPSY.—Bourneville employs the remedy subcutaneously in form of a solution of 3 Gm. in 25 Gm. alcohol and 22 Gm. Glycerin, Halse (Bull. de Therap.), internally in capsules, in doses of 0.1 to 0.2 Gm. ($\frac{1}{2}$ to 3 grains). It has been found to reduce the number of attacks and in some cases prevents them entirely, but as an unfailing cure for epilepsy it cannot be regarded. (Apoth. Ztg.)

MERCURIOL is a grayish powder containing about 40 per cent. metallic mercury in a finely divided state, associated with aluminum and magnesium in metallic form, and chalk. Through the action of the humidity of the atmosphere oxygen is absorbed by the aluminum and magnesium, converting them into hydrates and the mercury thus gradually liberated from its amalgam, is in a condition readily absorbed by the system. Mercuriol is proposed as a remedy for syphilis. (L'Union Pharm.)

TO DETECT NICOTINE in presence of conine, Schindelmeyer proposes the following reaction: Add to the liquid to be tested a drop of 30 per cent. formaldehyde solution and an hour later a drop of concentrated nitric acid. In presence of nicotine in small quantity a light rose-red color will be produced, in presence of much nicotine, dark red, resinified nicotine causing a blood-red coloration. (Pharm. Post.)

ODORLESS AND TASTELESS ICHTHYOL COMPOUNDS.—A method of preparation, patented by O. Helmers, of Hamburg, consists in the treatment of ichthyol-sulphonic acid with formaldehyde in an acid solution. The method is a general one for preparing odorless and tasteless compounds from substances obtained by the action of sulphuric acid upon mineral oils and similar hydrocarbons containing sulphur. To 8 parts of a 25 per cent. aqueous solution of ichthyol-sulphonic acid 1 part of a 40 per cent. aqueous solution of formaldehyde is added and the mixture heated during ten hours on a waterbath. After cooling, the precipitate formed is separated from the supernatant liquid, washed repeatedly with water and dried at 100° C. The product is insoluble in water and in acids and is but very slowly acted upon by alkalies. (Apoth. Ztg.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Deodorizing Kerosene.—(A. L. H.) See Era, Dec. 7, 1899, page 767.

Hypericum Oil.—(E. S. E.) This article in ounce bottles is listed by Boericke and Tafel, homeopathic pharmacists, Philadelphia.

Naval Apothecaries.—(S. L. J.) See this journal August 24, 1899, page 263, for information regarding enlistment, qualifications, pay, etc., of naval apothecaries.

Manufacture of Wood Alcohol.—(E. S. E.)—See article "Modern Distillation of Wood for the Production of Acetic Acid, Wood Spirit and Acetone in a Pure Form," this journal, October 21, 1897, page 596.

Secretaries of Boards of Pharmacy.—(C. B. W.) The secretaries of the boards of pharmacy you name are: Oregon—R. E. Lee Steiner, Salem; Washington—J. W. McArthur, Spokane; Maine—D. W. Heselting, Portland; Vermont—J. G. Bellrose, Burlington.

"Beveralis."—(R.) In reply to your request (Era, Feb. 8, 1900, page 149), James Barr, Brooklyn, N. Y., and J. E. Phillips, Titusville, Pa., are of the opinion that the name was intended for "bitter aloes." They both think a little questioning of the customer would have confirmed this belief.

Aspirators.—(C. N.) Most all manufacturers of physical and laboratory apparatus make aspirators. Address Bausch & Lomb Optical Co., Rochester, N. Y., or any of the following in this city: Emil Greiner, 62 Center street; H. & J. Berge, No. 95 John street; Elmer & Amend, No. 211 Third avenue.

Emulsion of Linseed Oil (Thomson).—(U. S. K.) Triturate 3% fluid ounces of linseed oil, ½ fluidram oil of wintergreen and ½ fluidram of oil of cinnamon with 2 ounces powdered acacia, add 3 fluid ounces of water, triturate until emulsified, then add 2½ fluid ounces of syrup, 1¼ fluid ounces of glycerine, 40 minims of dilute hydrochloric acid and 3 ounces of water; mix well.

Medicine Chests for Vessels.—(H. R. B.) See "Medicine Chests in the Merchant Marine," Era, June 4, 1896, page 722. S. F. Haddad, 89 Broad street, and Cochran's Pharmacy, 23 Beaver street, both of this city, manufacture and supply this equipment to vessels in this port. Comstock-Hoff Manufacturing Co., 34 Warren street, this city, make "medicine cases," principally for the use of physicians.

"Sing-sa-goo-ga."—(J. H. F.) In reply to your query (this journal, Feb. 8, 1900, page 121), W. W. McAfee, Atlanta, Ga., writes that the Cherokee Indians in the Blue Ridge Mountains of Northern Georgia call ginseng "sing-sa-goo-ga" or "tonic root." He says the Indians gather the root in the early spring, carry it to market or the nearest trading post, and get from 30 to 50 cents per pound for the green root.

Tartarilithine.—(H. J. F.) We cannot give the formula. According to Coblenz, "Newer Remedies," tartarilithine is the lithium analogue of cream of tartar, is an effervescent salt, and contains none of the additional alkaline salts common to the granular effervescent preparations. It is recommended as a uric acid solvent in place of the other salts of lithium, for gout, rheumatism, etc., and is presented in tablet form. We cannot give the formula for the other preparation you name.

Toilet Cream.—(T. E. B.) Try one of these: (1) Mix 2 drams salicylic acid with 16 ounces glycerin and gradually add 120 ounces of water. In this mixture allow 10 drams of finest flake tragacanth to soak for several days until it is thoroughly diffused throughout the liquor. Strain through coarse calico with pressure and add a sufficiency of any kind of handkerchief extract. (2) Triturate 2 drams tragacanth to a paste with 4 ounces of glycerin; dissolve 2 drams borax and 4 drams ammonium chloride in 26 fluid ounces water, incorporate the solution with the paste and 2 fluid ounces of tincture of calendula. Finally add perfume, q. s.

Bismuth Subnitrate and Sodium Bicarbonate.—(L. B.) A satisfactory pill cannot immediately be made from bismuth subnitrate and sodium bicarbonate, as the former reacts with the latter with the liberation of carbonic acid gas, thus:

This action requires several hours for completion and causes the mass to swell to several times its original size, thereby preventing its formation into pills until all effervescence has ceased. This difficulty would have been obviated had the prescriber employed bismuth subcarbonate instead of bismuth subnitrate. Better see him and get him to sanction such a change.

Insolubility of Magnesium Sulphate in a Prescription.—(B. A. C.) submits the following:

Magnesium sulphate.....	6	drams
Fluid extract of rhubarb.....	6	drams
Tincture of nux vomica.....	2	drams
Spirit of chloroform.....	1½	drams
Simple elixir, enough to make.....	3	ounces

Can it be put up without "gelatinizing"? The difficulty is not one of gelatinizing, but of insolubility, there being an insufficient quantity of water in the liquids of the mixture to completely dissolve the magnesium sulphate. This salt is readily soluble in water (1:1.5) but is insoluble in alcohol, which, in this case, is the principal portion of the menstruum or solvent employed in all of the preparations named, simple elixir excepted.

Liquid Dentifrice.—(T. E. B.) We cannot give the formula for the proprietary article. The following formulas may answer your purpose: (1) Dissolve 10 minims oil of cloves and 20 minims of oil of wintergreen in 4 fluid ounces of eau de cologne, add 32 fluid ounces of rose water and in the solution digest 2 ounces of quillaja for two weeks, shaking occasionally. Then add ½ fluid ounce essence of vanilla, 2 fluid ounces of carmine made by rubbing 1 dram carmine with ½ ounce of ammonia water till dissolved, then adding 3½ ounces of water. (2) Add 1 ounce of cloves, 2 ounces of cassia and 2 ounces of castile soap to 16 ounces of alcohol and macerate for a week. Then add ½ dram oil of cloves, 1 dram oil of orange, 2 ounces tincture of benzoin, and 1 ounce tincture of rhaiatany; shake well and filter. Many formulas similar to the foregoing have been published in previous volumes of the Era. Consult the indexes.

Phosphorescent Paint for Match Safes.—(C. F.) Phosphorus is not used in the preparation of phosphorescent paint for match safes, etc., the "luminous" substance generally employed being a freshly prepared sulphide of one of the earthy bases, barium, calcium or strontium. Here are some formulas: (1) Orange—16 parts of varnish are mixed with 17.5 parts prepared barium sulphate, 1 part prepared Indian yellow, 1.5 parts prepared madder lake and 38 parts luminous calcium sulphide. (2) Yellow—48 parts varnish, 10 parts barium sulphate, 8 parts barium chromate, 34 parts luminous calcium sulphide. (3) Yellowish brown—48 parts varnish, 10 parts precipitated barium sulphate, 8 parts auripigment, 34 parts luminous calcium sulphide. All of these paints can be used in the manufacture of colored papers, etc., if the varnish is altogether omitted and the dry mixtures ground to a paste with water. The luminous paints can also be used as wax colors for painting on glass and similar objects by adding instead of the varnish 10 per cent. more of Japan wax and ¼ quantity of the latter of olive oil. The wax colors prepared in this way may also be used for painting on porcelain and are then carefully burned without access to air. Paintings of this kind may also be treated with water glass.

Witch Hazel Jelly.—(T. E. B.) (1) Dissolve 30 grains of borax in 4 fluid ounces of distilled extract of witch hazel, mix with 3 fluid ounces of glycerin and 2 fluid ounces of cologne water, add slowly to 4 ounces mucilage of Irish moss previously mixed with 3 fluid ounces of glycerin. After standing a few hours strain the mixture. (2) Mix in a large mortar 32 parts of glycerin and 20 parts of soft soap and stir until incorporated. Add 10 parts of distilled extract of witch hazel, stir in well, then add in a very thin small stream, under constant agitation, 255 parts oil of sweet almond and 1 part of extract of white rose, keeping up the agitation until complete incorporation is attained. Lastly add a sufficient quantity of tincture of musk to perfume the jelly. (3) Dissolve 108 grains of Russian Isinglass in 6 fluid ounces of distilled water by the aid of a gentle heat, add $5\frac{1}{2}$ ounces of glycerin, 4 fluid ounces of distilled extract of witch hazel and strain. Then add 1 ounce of clarified honey and $\frac{1}{2}$ fluidram of oil of neroli.

Fluid Extract of Bloodroot.—(X. Y. Z.) The following process, in which no acetic acid is used, was formerly official in the United States Pharmacopœia: Sanguinaria, in No. 60 powder, 25 avoirdupois ounces; alcohol, a sufficient quantity to make 24 fluid ounces. Moisten the powder with $5\frac{1}{4}$ fluid ounces of alcohol and pack it firmly in a cylindrical percolator; then add enough alcohol to saturate the powder and leave a stratum above it. When the liquid begins to drop from the percolator close the lower orifice, and having closely covered the percolator, macerate for 24 hours. Then allow the percolation to proceed, gradually adding alcohol until the sanguinaria is exhausted. Reserve the first 20 $\frac{1}{2}$ fluid ounces of the percolate, and evaporate the remainder to a soft extract; dissolve this in the reserved portion and add enough alcohol to make the fluid extract measure 24 ounces. Caspary states that this fluid extract formerly caused much annoyance by copious precipitation on the bottom and sides of the containers. The presence of 5 per cent. of acetic acid and a less alcoholic menstruum (see present official process) have been found to improve the character of the preparation, but precipitation can probably never be entirely prevented.

Colored Fires.—(W. M. L.) By adding certain chemicals and burning the latter in an ordinary spirit lamp a colored flame may be produced which is said to be practically odorless and smokeless. The lights most frequently used are red, blue and green. For light red add strontium chloride to the alcohol; for dark red, lithium chloride; blue, 4 parts sal ammoniac and 8 parts of copper sulphate; light green, boric acid or barium sulphate; dark green, 4 parts verdigris, 2 parts copper sulphate and 1 part boric acid. Other colors that may be useful are: Orange, add sodium nitrate; yellow, boric acid and common salt; apple green, copper sulphate alone or mixed with boric acid. Instead of using a spirit lamp you may saturate a ball of cotton with the alcohol and burn it on a metal plate or saucer. For indoor use the following formulas have been recommended (they contain no sulphur): Blue—(1) shellac, 2 ounces; potassium chlorate, 4 ounces; copper ammonium sulphate, 5 ounces. (2) Potassium chlorate, 10 ounces; ammoniated copper, 7 ounces; dextrin, $2\frac{1}{2}$ ounces; stearin, $\frac{3}{4}$ ounces. Crimson—Potassium chlorate, 2 ounces; strontium nitrate, 13 ounces; charcoal, 1 ounce; shellac, 4 ounces. Red—Lycopodium, 1 ounce; strontium nitrate, 13 ounces; milk sugar, 4 ounces; potassium nitrate, 12 ounces. The ingredients for colored fires should be carefully dried and powdered separately. Potassium chlorate is not to be dried, simply powdered. The ingredients should be sifted and each put into a well-corked wide-mouthed bottle, and so kept ready for mixing. They are mixed with a wooden spatula (not steel), and sifted several times.

SACHET POWDER.—Lavender flowers, 150 parts;orris root, 150 parts; benzoin, 150 parts; tonka beans, 150 parts; cloves, 100 parts; sandalwood, 50 parts; cinnamon, 50 parts; vanilla, 50 parts, and musk, $\frac{1}{2}$ part. The ingredients are reduced to a fine state of division and mixed. (Pharm. Post).

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA COURSE STUDENTS.

Students will save themselves and the Director much unnecessary correspondence by keeping in mind the following rules of the Course:

1. Examination papers are not returned to students, but are preserved as a part of the permanent records of the Director's office.
2. Questions on the lectures are mailed to students as soon as received from the printers. If not received by the student within three weeks after the lectures, they have probably gone astray in the mails, and a card of inquiry may then be addressed to the Director.
3. It is expected that students will thoroughly study the lectures before looking at the questions. The student who confines himself merely to the questions in his study will necessarily narrow the range of his work, and will attain a lower grade than he otherwise would.
4. Communications respecting non-receipt of the lectures, concerning class pins, or regarding financial matters should all be addressed to The Pharmaceutical Era, and not to the Director.

J. H. BEAL, Director.

THE DRUGGIST'S FOOL FRIENDS.

The druggist who follows to the letter the advice of some of his fool friends is likely to wish he hadn't. In a recent contribution to Printer's Ink, reprinted in several drug journals, a writer suggests several cards to hang up in the store. One of them is as follows:

"In some cases we can save you the doctor's fee by recommending a good and sure remedy for your complaint. Tell us your trouble."

If we had an overpowering, burning anxiety to help druggists alienate the custom and influence of the medical profession we would advise them to have such a card as this printed and hung up in a conspicuous place in the store. Of all idiotic ideas suggested to the drug trade by expert suggesters this one deserves the diamond medal.

Here is another one:

"The better class of patent medicines we handle; the known frauds and fakes are banished from our store. We sell nothing we cannot endorse."

The objection to this is that the druggist who hangs it up is practically forcing himself out of the patent medicine business—that is, if he adheres to what he says in the sign. If he is going to quit handling patents he doesn't need the sign; if he is going to keep the patents he ought not to hang up the sign if he has a conscience as much as two millimeters square. No druggist can afford to endorse any secret remedy.

This list of signs is a gem, anyhow. Look at this for example:

"If you don't get the worth of your money here on every purchase it must be a mistake. Better tell us about it so we can rectify the mistake."

This, of course, is what is commonly known as a bluff and is so recognized by the public. But it amounts to much the same as telling people that you are very likely to make mistakes and overcharge them for goods. Do they enjoy such a prospect? Not that anyone ever heard of.—(New Idea.)

CHANGES IN LIQUIDS STERILIZED IN BOTTLES.

—When solutions of medical substances, particularly alkaloids, are sterilized in ordinary glass bottles by heating under pressure at 115° C. it is often noticed that separation of crystals takes place or the liquid becomes turbid, while it acquires an alkaline reaction. This is attributed to the action of the superheated water vapor on the soft glass, a slight quantity of alkali being dissolved from it. The use of Bohemian glass for this purpose would obviate this difficulty to a great extent. (Pharm. Post.)

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

South Africa.

General Cronje's defense against a vastly superior force of British at Koodoosrand, on the Sluider River, about one-third of the distance from Kimberly to Bloemfontein, has been the main feature of the South African war the past week. The British have him surrounded and have beaten off several Boer attempts to relieve him, but their assaults on his trenches have been repulsed. Every day that he can delay the British invasion is an immense aid to the Boer preparations for defense of interior points.

General Buller has been making another attempt to reach Ladysmith, but thus far without success. A despatch from London says a cablegram has been received there instructing Ambassador Choate to protest against the seizure of American cargoes by British warships.

It is believed that all danger of a Dutch rising in Cape Colony is over.

According to a despatch from Rennes, France, a factory there has received an order from the Transvaal Government for 150,000 artillery shells.

The British House of Commons last week rejected a motion to reopen the inquiry into the Jameson raid in the Transvaal by a vote of 206 to 152. The motion was a veiled attack on Secretary Chamberlain, and the vote is considered a personal triumph for him.

The British steamer Sabine from New York was seized by a British gunboat and taken to Delagoa Bay last week, suspected of having contraband of war on board, but she was soon released.

The British House of Commons has passed the supplementary army estimates of £65,000,000 by 213 votes against 52.

The Philippines.

Two islands in the southern part of the Philippine Archipelago found to be outside the boundary fixed by the Peace Treaty will be returned to Spain.

It is expected that the new commission which is to establish civil rule in the Philippines will be completed this week. Judge W. H. Taft, of Cincinnati, is chairman of the Commission.

General Otis will hereafter treat any insurgent guerrilla troops as bandits, and they are liable to be tried before a civil court for murder and be condemned to death. A strong expedition under Generals Bates and Bell left Manila last week to drive the rebels out of the Province of Camarines, Luzon.

Thirty-two deaths from the plague were reported from Manila last week. About half of the plague victims are Chinese.

Other Foreign News.

Some apprehension of Russian unfriendliness has been caused in England by the arrival of a Russian cruiser in the Persian Gulf, and two British warships have been sent there. Russia's recent heavy loan to the Persian treasury is taken to indicate that Russia intends to annex that country.

The Shah of Persia is making a tour of the Courts of Europe.

A mob of Musselmen attacked the British consulate in Beyrout, Syria, last week. Troops have been despatched to the scene.

A British force engaged and routed hostile Chinese on the Burmese border last week, inflicting severe loss.

Princess Cantacuzene, daughter of General Frederick Dent Grant, has been seriously ill with pneumonia at St. Petersburg, but is now recovering.

United States Minister Hart, at Bogota, has cabled the State Department that the Columbian Government is suffering reverses at the hands of the revolutionists.

An interesting series of races between automobiles will be held in Berlin during the spring, lasting four days.

Germany is suffering from a coal famine. In many parts of the empire the price is doubled.

Over \$500,000 has been raised by the Viceroy of India for the famine relief fund.

DOMESTIC NEWS.

Congress.

The Senate agreed last Friday by a vote of 34 to 26 to take up the Quay case. This vote is thought to indicate that he will be seated.

The most important matter before the House this week is the tariff bill for Puerto Rico. The bill provides that one-quarter of the present tariff rates collected

at United States ports shall be collected on goods imported into Puerto Rico and on goods entering the United States from Puerto Rico. If the bill is defeated it seems likely that a measure giving the island free trade with the United States will be passed.

The Senate and House Conference Committee has agreed on a currency measure embodying the best features of the House and Senate bills and it will soon become law. The main feature is the provision directing the Secretary of the Treasury to maintain the gold standard.

The Senate Committee on Commerce has made a favorable report upon the bill for the appointment of a commission to make an investigation of the trade relations between the United States and China and Japan. Chairman Hull of the House Committee on Military Affairs introduced, last week, a bill prepared by the War Department authorities to improve the efficiency of the Army. It practically reorganizes the Army. Senator Clark of Montana, in arguing before the Senate Committee on Privileges and Elections, denies that he secured his election to the Senate by any bribery whatever.

Other Domestic News.

The plague has spread to the smaller islands of the Hawaiian group.

The situation in Kentucky is quiet. Both sides have agreed to accept the decision of the courts.

The Democratic National committee has selected Kansas City as the place and July 4 as the date for the next National Convention. The Populist convention will meet at Sioux Falls, May 9.

The Texas Legislature, after a thirty-day special session, adjourned on Wednesday without having accomplished the object for which it was convened, the passage of a tax adjustment law.

The city of Boston is to be repaired at a cost of about \$400,000.

The new battleship Kearsarge was placed in commission at Newport News, Virginia, last week Tuesday.

Two new dry docks for the Navy are contemplated to cost \$1,250,000 each, one at New York and one at Norfolk, Va.

The Massachusetts House defeated a woman suffrage bill last week by a vote of 124 to 32.

Secretary Root has adopted plans for an Army War College to be located on Governor's Island and conducted on lines similar to those of the Naval War College at Newport.

The Supreme Court of Illinois has rendered a decision against the Associated Press which practically rules that the Associated Press must sell its news to every paper that wishes to buy. Heretofore it has been able to bring newspapers to accept its demands by threatening to cut off their news service.

The Municipal League of Philadelphia, a good government organization, won what it considers a victory in the city election in Philadelphia last week. Four of the twelve magistrates elected were League nominees.

Contracts have been made for vessels to carry 18,500,000 tons of iron ore down the lakes this year, exceeding all previous records.

Leslie E. Keely, of "gold cure" fame, died suddenly at his winter home near Los Angeles last week Wednesday, aged sixty-eight.

Secretary Hay has given out a reply to ex-Consul Macrum's charges. The Secretary says that a secret alliance between the United States and Great Britain is impossible, because contrary to the Constitution.

Miss Olga Nethersole and others interested in the production of a play called "Sapho" in New York were arrested last week Wednesday and may be compelled to withdraw the play as unfit for production.

Most of those who started on a week's diggings for the Cape Nome gold fields are making a detour to the recently discovered diggings on the Koyukuk.

Wu Ting Fang, the Chinese minister at Washington, in a speech in Philadelphia last week Thursday suggested that we extend our Monroe Doctrine to cover China.

BILL TO AMEND CITY PHARMACY LAW PASSED BY ASSEMBLY.

On February 22 the Assembly passed the bill introduced by Dr. Henry at the request of the various pharmaceutical societies of New York City to amend that chapter of the city charter regulating the practice of pharmacy. These amendments were printed in the Era for January 4, 1900 (page 11). They provide, in brief, that only a registered pharmacist may open or conduct a drug store; that the Board of Pharmacy shall examine candidates, issue certificates of registration, and shall be deemed to be a board within the meaning of the Code of Civil Procedure; that the proprietor's name must be displayed on every drug store, and that adulteration or substitution of any drug or medicine shall be deemed a misdemeanor.

THE DRUG NEWS.

New York and Vicinity.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

A regular meeting of the Manhattan Pharmaceutical Association was held at the New York College of Pharmacy on Monday evening, February 19. President Reuben R. Smith occupied the chair, and there was a good attendance of members. The business of chief importance before the meeting was the consideration of some of the bills touching the practice of pharmacy now pending in the New York State Legislature. Clarence O. Bigelow, chairman of the Committee on Legislation, reported the status of the bill to amend the pharmacy sections of the city charter and of the bill to regulate the working hours of drug clerks. He said both these bills had been reported favorably in Assembly, and he believed both would be passed within a week. He also spoke of the Wilcox Poison Bottle bill, urging the association to protest against its passage. The Gale bill to compel department stores to employ registered pharmacists or give up the sale of drugs and medicines he thought was a good measure and should receive the approval of the association. Mr. Bigelow said there was only one department store in New York City to-day which had a prescription department and employed a registered clerk. In the others, medicines were sold by young girls, whose wages were \$4 or \$5 a week. If the Gale bill became a law it would require a registered pharmacist in every department store where drugs or medicines were sold. He thought that would be an improvement over the present condition of things.

William Muir, of the Kings County Pharmaceutical Society, who had spent a deal of time at Albany watching legislation, addressed the meeting, supplementing Mr. Bigelow's report. He said the only opposition to the amendments to the city pharmacy law had come from Assemblyman Maher, and that simply in retaliation for the opposition of druggists to Maher's so-called shorter hour bill. He also spoke against the Wilcox Poison Bottle bill, and in favor of the Gale bill, which he believed had been offered in an honest endeavor to better present conditions.

George Kleinau who had also attended hearings on pharmaceutical bills in Albany, also addressed the meeting on this subject.

The action of the Drug Trade Section of the New York Board of Trade and Transportation in condemning the Wilcox bill was reported. The meeting voted similar action, and instructed the secretary to protest in the association's name to Senators and Assemblymen against the passage of the bill.

The association voted its approval of the Gale bill. The treasurer reported receipts of \$102.18, and expenditures of \$32.89. An appropriation of \$50 for expenses of the Legislative Committee was voted. Louis Berger, of No. 1754 Lexington avenue, was elected a member. The president was authorized to appoint a special committee of three members to devise ways and means of increasing the membership. George H. Hitchcock, of the Committee on Trade Relations, reported that the committee had decided not to prepare a list of aggressive cutters.

Vice-President Joseph Weinstein and Abraham Bakst, of the New York Retail Druggists' Association, were present to express that society's fraternal feeling. They were given the privilege of the floor, and Mr. Bakst spoke, telling of the aims and objects of his association and asking the co-operation of the Manhattan association to improve the conditions of pharmacy on the lower East Side. He was assured of the association's willingness to do so, and Mr. Bigelow, Mr. Muir and Mr.

Faber explained for Mr. Bakst's benefit the powers of the Board of Pharmacy under the present law, and why it could not undertake certain reforms which he thought it should attempt.

BROOKLYN COLLEGE ALUMNI DANCE.

The Alumni Association of the Brooklyn College of Pharmacy held its eighth annual reception at the Pierrepont Assembly Rooms, in Pierrepont street, on Thursday evening, February 22. The association is in a flourishing condition, the Committee of Arrangements prepared for a large attendance, and was not disappointed. Members and friends of the association and of the college came in larger numbers than ever before and the entertainment was the most successful in the organization's history. Everybody interested in the Brooklyn College who could attend was there, and to show their friendship a score or so of the New York College people attended also.

The programme of dancing was interrupted only long enough for a pleasant supper, and the evening was filled with happiness for all who attended. The committees which carried the undertaking through so successfully were the following:

Arrangements—William C. Anderson, A. H. Brundage, William Bussenschutt, John F. Crawford, W. F. J. Happ, William L. Morris, G. A. Mulvaney, Alfred Schletter, E. Schroeder, Jr., Fred. H. Meyer, E. Clayton Woodcock.

Reception—William H. Bussenschutt, E. H. Bartley, M. D., William McIntire, Chas. H. Meyer, Phar. D., Andrew F. Myhr, J. A. Schellings, Phar. D., John Schmitt, Paul Wellenberger, A. P. Lohness, Phar. D., J. L. Mayer, Phar. D., William F. Morgan, A. C. Reinhold, G. Schoenewald, Cornelius Vandersande, Stephen L. Wood.

Floor—F. P. Tuthill, Phar. D., J. F. Crawford, G. A. Mulvaney, George Lawrence, Frederick Schroeder.

Press—William Muir, Phar. D., Henry M. Borchers, A. E. Hegeman, Phar. D., Frank G. Goetz, William S. Schroeder.

Some of the people who were present were: Mr. and Mrs. W. C. Anderson, Mr. and Mrs. E. C. Woodcock, Mr. and Mrs. A. P. Lohness, Mr. and Mrs. Fred. H. Meyer, Mr. and Mrs. F. Crandall, Mr. and Mrs. A. M. Downey, Mr. and Mrs. C. W. Bruun, Mr. and Mrs. R. Gies, Mr. and Mrs. Larkin, Mrs. Coates, Mrs. A. M. Johnson, Miss M. Ackerman, Miss J. Muir, Miss M. E. McGurn, Miss Cheney, Miss Eva Larsen, Miss Minnie Larsen, Miss M. Foley, Miss L. Marman, F. P. Tuthill, William Muir, M. F. Shiebler, L. F. Stevens, E. C. Wilson, C. E. Hegeman, J. Demon, Dr. George C. Dickman, H. B. Ferguson, E. Larkin, J. Larkin, W. F. J. Happ, W. L. Morris.

ARTIFICIAL "FRUIT JUICES" TAXABLE WHEN FERMENTATION BEGINS.

In a letter to the Collector of Internal Revenue at Cincinnati, the Commissioner has ruled that chemically prepared imitations of natural fruit juices, if they contain any perceptible quantity of alcohol, come under the Internal Revenue tax on liquors. The Commissioner says:

"The eight samples of so-called 'fruit juices,' to which you refer in your letter of the 9th ultimo as having been produced by the Ohio Wine and Fruit Company, Cincinnati, Ohio, have been examined by the chemist here, who finds that they do not contain in their present condition any percentage of alcohol sufficient to bring them within the notice of the internal revenue law, but he says:

"These beverages are all made up with acid and sweetening, and flavored to resemble fruit juice. Fermentation has been prevented by the addition of salicylic acid, a chemical preservative. It should be remembered,

however, that they may ferment, under favorable conditions, after they have gone into the hands of retailers, and would then be very likely to be taken by revenue officers for wine, especially as most of the names are suggestive of wines.

"You should so inform the Ohio Wine and Fruit Company, and advise them to warn their trade. For if these so-called fruit juices (which are not fruit juices at all, but, as the chemist finds, are 'all made up with acid and sweetening,' and are made to resemble fruit juices by the addition of some flavoring extract, and are sold under the false and misleading names: Orange, Concord, Raspberry, Peach, Blackberry, Cherry and Catawba) should at any time be found by the revenue agent or the local officers to be different from the samples submitted and to contain any quantity of alcohol, bringing them within the notice of the internal revenue law (even but one per cent.), and whether this percentage of alcohol is present by reason of fermentation or by the addition of spirits or alcoholic liquor of any kind, all such dealers will be reported for assessment of special tax and penalty as liquor dealers, and to the United States District Attorney for prosecution."

The letter still further deprecates the use of such names as orange, raspberry, cherry, Catawba, etc., for beverages, which are not made from the juices of these fruits, and says that, while there is no law for the suppression of their use, "they must not be considered as countenanced by any ruling that special tax under these laws is not required to be paid for their sale."

Prof. Coblentz on Experimental Physics.

At the New York College of Pharmacy, on Thursday evening, February 22, before a large and interested audience, Prof. Virgil Coblentz of the college staff gave a lecture on Experimental Physics. The lecture was rather a series of experiments, and was designed to exhibit to the members and friends of the college the extensive set of physical apparatus recently presented to the institution by its president, Edward Kemp. The exhibition was enjoyed by all who witnessed it.

The collection presented by Mr. Kemp, and for which the Alumni Association has provided a suitable plate-glass case, includes such instruments as Atwood's machine for demonstrating law of falling bodies, gyroscope, reversible pendulum, Pascal's hydrostatic pressure apparatus, glass hydraulic ram, Aneroid barometer, Heron's fountain, baroscope, sonometer, telescope model, thermometers of all kinds, Mellons thermopile, Crookes' radiometer, magnetic needle, electric pistol, 14 Geissler tubes, induction coil, arc lamp model, galvanometer, telephene model, polariscope, Edison phonograph, electric stereopticon, and many others.

Pharmaceutical Clerks' Association.

A regular meeting of the Pharmaceutical Clerks' Association was held on February 21, with Vice-President Firth in the chair. There was little business to come before the association, and the session was a short one. John Schmitt and E. J. Steele, both of Brooklyn, were elected members. Mr. Feldman reported attending the hearing at Albany by the Assembly Public Health Committee on the shorter hours bill, and the action of that committee in reporting favorably with amendment the bill offered by Dr. Henry, at the request of the Clerks' Association. Secretary Deutschberger gave notice of an amendment to the constitution to hold regular meetings monthly instead of fortnightly. This will be voted upon at the next regular meeting.

The Indefatigable Crosher Still at It.

The indefatigable Henry P. Crosher, chief of drug trade swindlers, is still swindling and trying to swindle as industriously as ever. About two weeks ago he sent one of his brazen orders for goods to an out-of-town manufacturer who happened to know the kind of scamp Crosher is. That manufacturer answered never a word to Henry P., but sent the order to this journal. Now Crosher has followed it up with a letter, asking to be informed why he has not heard from his order of such-and-such a date!

If all the manufacturers would read the Era as carefully as this one does, Henry P. Crosher would soon have to quit the drug trade and find a more lucrative field for his operations.

"I have a pain in the small 'o' me back."
"Where is the small 'o' your back?"

Judgment in Favor of Lazell, Dalley & Co.

In the suit of William Sparks Thompson against Lazell, Dalley & Co., brought for trial in the United States Circuit Court for the Southern District of New York, Judge Lacombe has dismissed the action for want of jurisdiction, it appearing that all the parties thereto are citizens of the State of New York. Judgment for the costs of the action was given the defendants.

This suit was begun in December, 1897, when Mr. Thompson, of the Crown Perfumery Company, asked the court for an injunction to restrain Lazell, Dalley & Co. from using the name "Crab Apple Blossoms" on any of their products, and also asked damages in the sum of \$40,000 for alleged infringement of trade mark.

New York Section, Society of Chemical Industry.

The regular monthly meeting of the New York Section, Society of Chemical Industry, was held at the New York College of Pharmacy on Friday evening, February 23. The programme presented comprised the following papers: "The New Radioactive Elements," by G. F. Barker; "Free Fatty Acids in Olive Oils," by R. W. Moore; and "Process for Sensitizing Paper," by R. C. Schupphaus.

Announcement was made that plans were forming for an excursion for members of the society to Paris and London at the time of the Congress on applied chemistry, to be held in Paris July 23 to 31, next. Full information of this projected excursion may be obtained from the secretary of the New York Section.

Nominations for Officers of New York College.

The annual meeting of the New York College of Pharmacy will be held on Tuesday evening, March 26, at which time an election of officers will take place. The Nominating Committee appointed by President Kemp has placed in nomination the following candidates for the various offices to be voted for at that time:

For president, Charles F. Chandler; for first vice-

president, William M. Massey; for second vice-president, Gustavus Rampsberger; for third vice-president, Arthur C. Searles; for treasurer, Clarence O. Bigelow; for secretary, Thomas F. Main; for assistant secretary, O. J. Griffin; for trustees to serve three years, Charles Rice, Herbert D. Robbins, F. W. Carpenter, Arthur H. Elliott, Felix Hirsman.

Poison Bottle Bill Amended.

Senator Wilcox's poison bottle bill, which was printed in this journal one week ago, has been amended so as to provide that the State Board of Health, besides approving and adopting a poison bottle of special design, shall determine what "poison or poisonous medicine, drug or preparation, except patent or proprietary medicines," shall be put up in such special poison bottle.

This change is not regarded of sufficient importance to alter materially the intent of this vicious measure, and the representatives of all branches of the drug trade will continue to fight against it. A public hearing will be given on this bill at Albany, by the Senate Public Health Committee, on Wednesday, March 7.

New York Retail Bowlers Entertain the Ladies.

The New York Retail Druggists' Bowling Association held a special ladies' night on February 24, and had a royal good time. The bowling was swift and exciting. The ladies' prize was taken by Mrs. Gilbert T. Reeder, who rolled a score of 128. George E. Schweinfurth won the gentlemen's prize by a score of 198. Those present were: Mr. and Mrs. Otto Boeddiker, Mr. and Mrs. G. T. Reeder, Mr. and Mrs. G. E. Schweinfurth, Mr. and Mrs. Reuben R. Smith, Misses Androvet, Hitchcock, Colyer, Smith, Sanchez, Rentz; Messrs. C. S. Erb, F. Haddad, G. H. Hitchcock, Wichelns, R. Timmerman, F. N. Pond, L. Geisler, W. Hauenstein and G. H. White.

Another Wilcox Bill.

Senator Wilcox has introduced a bill "to prevent the use of unhealthy chemicals" in food preparations. This provides that "it shall be unlawful for any person or corporation doing business in this state to manufacture, sell or offer to sell any article, compound or preparation for the purpose of being used or which is intended to be used in the preparation of food, in which article, compound or preparation there is any arsenic, calomel, bismuth, ammonia, or alum." Violation of this act is to be punished by a fine of \$100.

New York Wholesale Drug Bowlers.

Six interesting games were rolled last Saturday in the tournament of the New York Wholesale Drug Trade Bowling Association. The teams of Parke, Davis & Co. and Robinson & Son divided the honors. The team scores were: Colgate & Co., 75; Seabury & Johnson, 749; Parke, Davis & Co., 736; Seabury & Johnson, 649; Roessler & Hasslacher Chemical Company, 706; Merck & Co., 656; Robinson & Son, 511; Merck & Co., 735; Robinson & Son, 744; Roessler & Hasslacher Chemical Company, 738.

Notes.

—Among drug buyers from out of town who visited the local wholesale market during the week were the following: Henry Wheeler, London; R. L. Richardson, Boston; A. Snow, Syracuse; C. Lewis, Toronto; R. Galloway, Raleigh, N. C.; Theodore Bristol, Ansonia, Conn.; T. S. Armstrong, Plainfield, N. J.; M. Nordhoff, of Nordhoff & Co., Seattle; M. De Witt, Brattleboro, Vt.; L. A. Miles, of the Canadian Drug Co., St. Johns, N. B.; J. G. Berry, Dallas, Tex.; Charles W. Whittlessey, New Haven; C. K. Brown, Deposit, N. Y.; J. Walker, Freehold, N. J.; E. Fisher, Bridgeport, Conn.; and W. L. Briner, Princeton, N. J.

—The Associated Drug Co., recently incorporated to conduct a co-operative jobbing business in this city, has elected the following officers: President, Nicholas Kruskal; first vice-president, Joseph Weinstein; second vice-president, Jacob Pick; treasurer, Joseph Bakst; secretary,

B. Backshitzky. Messrs. Weinstein and Backshitzky were appointed a committee to find quarters for a store for the company, and Jacob Pick and C. Bernstein were delegated to secure a manager for such store.

—The New York Retail Druggists' Association, whose membership consists mainly of druggists of the "Lower East Side," is preparing to give a "first annual concert and ball" on the evening of Friday, March 2, at the Lenox Lyceum, Madison avenue and Fifty-ninth street. The Arrangements Committee, of which A. Bakst is chairman, is making strenuous effort to make the entertainment a success, and is inviting members of both the pharmaceutical and medical professions.

—H. E. Harding, actuary of the Humphreys' Homeopathic Medicine Co., asks publication of the statement that a man calling himself George W. Andrews has been duping Southern hotel keepers by representing himself as an agent of the above company. He was heard of last from Laurel, Md.

—Incorporation papers have been filed at Albany by the Boussingault Medicine Co., of Rochester, which has been formed to manufacture medicines on a capital of \$20,000. The incorporators are M. E. Brittingham, of New York city; W. M. Jones and W. M. Jones, Jr., both of Rochester.

—Papers of incorporation have been filed at Albany by the Generic Remedy Co., of Morristown, to manufacture medicines on a capital of \$1,000. The incorporators are: E. Kingsland, Miss L. Hooker, J. H. Brown, all of Morristown, and L. Hasbrouck, attorney of Ogdensburg.

—John F. Kehoe, of Newark, N. J., has been elected president of Lister's Agricultural Chemical Works. He has been connected with the concern for thirty years. Harry B. Carpenter, of Philadelphia, has been elected vice-president and treasurer.

—A. R. Bremer, the head of the Chicago firm which makes Coke Dandruff Cure, spent several days in this city last week, after a visit to Baltimore and Washington. He will visit the Toronto office of his firm before returning home.

—Drug Clerk William J. Cremin has resigned his position in the drug store of Hegeman & Co., at No. 200 West One Hundred and Twenty-fifth street, and F. St. John has accepted a position as prescriptionist in the same store.

—Charles Bjorkwall has resigned the editorship of the Journal of Pharmacology, the alumni journal of the New York College of Pharmacy; and Dr. Harry B. Ferguson has assumed the editorial duties.

—R. L. Richardson of Boston, Edward Dexter and Alexander Hill of London, and A. W. Bogert of River Edge, N. J., were among the guests entertained at the New York Drug Club during the week.

—Charles Meizerzheim, who has a pharmacy at No. 567 Central avenue, Brooklyn, has just bought the drug store of A. Steinam, at No. 516 Central avenue, the same borough.

—Gus. Brandus has bought the drug store of Fred H. Plate, at the corner of Classon avenue and St. Marks street, Brooklyn.

—William M. Warren of Detroit, general manager of Parke, Davis & Co., spent the greater part of the past week in this city.

—David Rachelin has bought the drug store of Jacob Seley, at Flushing and Nostrand avenues, Brooklyn.

—Frederick H. Plump has sold his drug store at No. 214 Bridge street, Brooklyn, to F. B. Jacox.

—M. J. Breitenbach and E. G. Wells, of the M. J. Breitenbach Company, have gone to Bermuda.

—The fourteenth annual meeting of the Board of Pharmacy of Virginia will be held at Richmond, March 20, in the Capital building. Applicants for examination must communicate before March 1 with the secretary, E. R. Beckwith, Petersburg.

—At the last meeting, in January, of the Floyd County (Ind.) Pharmaceutical Association it was decided that none of its members should handle the Cuticura preparations. The question of Sunday closing is now being agitated.

—At Dover, Del., on February 17, the wholesale drug store of Wilkinson & Wilkinson was closed by the sheriff on judgments for \$6,000.

IN AND ABOUT BOSTON.

Drug Clerks Witness Highway Robbery.

Boston, Feb. 24.—Two clerks of the Adams House drug store were amazed one evening recently at the boldness of an assault which took place directly in front of the store, which is on a great promenade within a few feet of two leading theaters and only a few yards from still another one. In the glare of the electric light a man was felled to the sidewalk, shortly before nine o'clock, by a blow from a fist or a blackjack, while his assailant slipped away unrecognized in the throng of promenaders. The two clerks in the drug store rushed out and found the victim prostrate, picked him up, carried him into the store and did all possible for his relief. Police headquarters were notified and soon an ambulance arrived and bore the man to the City Hospital. His assailant escaped. At the hospital it was learned that the man's injuries were far less serious than was at first supposed, but the boldness of the assault has been much commented upon.

A Liquor Measure of Vital Interest to Druggists.

Boston, Feb. 24.—A hearing on a proposed measure which is of vital importance to druggists has been heard this week by the Committee on Liquor Law of the Massachusetts Legislature. The measure seeks to save the certificates of druggists who violate the law. The proposition was offered by Representative Daly, of Lawrence, to amend the present law regulating the violations of the liquor law by registered pharmacists, so that no registration as a pharmacist and no certificate thereof shall be revoked or suspended solely on the ground that the person holding such registration or certificate has been convicted of a violation of the law relative to the sale of intoxicating liquors. Mr. Daly thought that a certificate should not be taken away for the first offense, as now allowed. There was considerable opposition to the bill. Mr. Bartlett of the Druggists' Alliance Association believed that the act would let down the bars to more illegal selling of liquor. Miss Eva M. Brown was emphatically against the bill. She represented the Massachusetts Total Abstinence Society, and said that it would result in lowering the standard of pharmacists. She said that the present law was weak enough and that many go into the druggists' business simply for the profits derived from the sale of liquor. Miss Brown cited from the report of the Massachusetts Board of Registration in Pharmacy that only three certificates have been revoked during the past year, whereas there had been eight suspensions for twelve months and seven suspensions for six months. Miss O'Hara, secretary of the Citizens' Law and Order League, also entered her protest in behalf of the organization. The matter is still under advisement.

Charged with Robbing a Drug Store.

On the charge of robbing the money drawer in the drug store of Maurice O'Donnell, Inman Square, Cambridgeport, two men have been arrested by the police inspectors. It was stated that they took about \$165 from the money drawer. During the evening when the loss was discovered, the two men, both of whom have been identified by Mr. O'Donnell, went into the drug store and asked to use the telephone. The instrument was behind the counter and not far from the money drawer. They claimed they could not find the number they wanted, and sent Mr. O'Donnell for another telephone book. When he returned one of the men left the store with the remark that he would see still another man, outside. Soon the other man went out of the store with the excuse that he could not find what he wanted. Mr. O'Donnell, when he went later to his cash drawer, found that \$105 was missing. He furnished the police with a description of the men and on their arrest they were turned over to the Cambridge police.

NOTES.

—The Noxon Manufacturing Company, of Boston, which has just been incorporated, will have a capital stock of \$25,000, the number of shares being 1,000, the par value of which is \$25. James H. Cleaves is president, Annie L.

Wade is the treasurer, and both, with A. M. Nickerson, Jr., form the board of directors. It is proposed to manufacture and sell extracts and patent medicines.

—The Weeks & Potter Co., Boston, wholesale druggists, make through A. G. Weeks, treasurer, this financial showing, in their annual corporation returns: Machinery, \$6,000; cash and debts receivable, \$122,740; manufactures and merchandise, \$183,665; miscellaneous, \$8,175; total, \$318,310. To offset this there is capital stock, \$200,000; debts, \$118,310; total, \$218,310.

—At Pittsfield, P. T. Whiting & Son have a window display of prescription books which is attracting much attention. It consists of all the prescriptions put up, from the first one, on November 1, 1850, up to the prescriptions of 1890, a collection of 34 huge books. They contain 125,487 new prescriptions and 131,600 which have been re-filled.

—A lamp which exploded in the drug store of Mrs. Margaret T. Conner, 212 Congress avenue, Chelsea, one evening this week, caused a blaze which was extinguished by neighbors. The stock and fixtures were slightly damaged.

—Charles Clare is the new manager of the Copley Square drug store, Huntington avenue and Exeter street, where he succeeds Alphonso Sumner, whose wife recently obtained a divorce from him, it may be recalled.

—Palmer's drug store, at Revere Beach, is soon to be opened on Beach street, near the State reservation. In the summer season this place is a mecca for thousands, so the chances for trade are good.

—This week's exports at the Port of Boston include drugs and chemicals, \$42,778; hops, \$12,717; India rubber manufactures, \$1,966; tobacco, \$3,595; wax, \$227; spirits, \$2,969.

—The co-partnership between George W. Walker and D. Wallace Rintels, under the name of Walker-Rintels Drug Co., has been dissolved by mutual consent.

—To succeed his former clerk, George A. Bickford, a Clinton druggist, Henry A. Burdett, has hired C. H. Holland, of Lowell.

—A Roxbury druggist, Alvin George, Jr., of 381 Warren street, is in bankruptcy, with liabilities of \$1,419 and no assets.

—A new retail drug store in the Dorchester district of this city is that of Forbush & Forbush.

PHILADELPHIA.

Philadelphia College of Pharmacy.

Philadelphia, Feb. 24.—The February Pharmaceutical meeting was held in the College Museum on Tuesday afternoon. The attendance was a trifle below the average for this year's series, but when business is very good as it is just now, many druggists cannot spare the time to attend. Professor Sattler's paper on "Mineral Tannage" elicited some discussion, as did also Mr. Ridenour's paper on "Soluble Ferric Pyrophosphate." The character of the papers which have been read during the entire series of meetings thus far has been unusually high, and what is more to the point there are always present members who discuss the papers thoroughly bringing out many valuable points which are lost to those who do not attend the meetings, thinking that the perusal of the article in print is of equal value. The last of this year's series of social meetings held under the auspices of the Alumni Association of the Philadelphia College took place on Tuesday evening in the College building. This one was under the immediate direction of the second year class and every effort had been put forth by the committee in charge and by the class members individually to make it a record breaker. In point of attendance it was, indeed, ahead of all previous efforts, as more than five hundred persons partook of the hospitality afforded them by the class of 1901. The Class Social Committee was as follows: Miss K. W. Harbord, H. M. Highfield, O. S. Kraus, F. O. Lewis, Miss F. A. Fieley, chairman. The Arrangement Committee consisted of Wm. F. Steeva, E. F. W. Garber, L. O. Strathle, C. E. Shafer, chairman. The programme comprised a speech of welcome by R. H. French, president of the class of 1901, and several musical and

elocutionary selections by the talented members of the class. The dances were fourteen in number and followed the programme of entertainment. Many members of the Alumni Association were present, some with their wives. Among these were noticed Mr. M. W. Bamford, Mr. Campbell, Miss De Graffe, Mr. England, Mr. La Wall, Mr. Perry, Mr. Rideour, Mr. Stedem, Mr. Stem, Mr. Stiles and Miss Weston. The faculty was represented by Professors Kraemer, Morison, Moerk and Ryan. The festivities were brought to a close shortly after midnight.

NOTES.

—The Entertainment Committee of the Philadelphia Association of Retail Druggists held a meeting on Monday evening in order to square up all debts and count the profits of the progressive euchre so successfully held on Wednesday evening, February 7, in Horticultural Hall. The total receipts from all sources were \$1,114, and after paying all expenses, amounting to a trifle over \$500, a net profit was left of about \$600. This money will be formally turned over to the association at the next stated meeting on the first Friday in March, at which time a discussion will take place as to what will be attempted next in the line of social features of the association. There is some talk of holding a smoker, to which every druggist in the city will be invited, with a view of bringing out those who have not yet joined so that they may see what a powerful factor the association has become in point of members.

—George B. Evans's Eighth and Arch street store was a very busy place on Friday evening of this week. There was a large fire on Arch street, between Seventh and Eighth, and a number of females employed in the burning building were injured by jumping and by sliding down a rope fire escape. One of the victims died in the store and there were as many as fifteen injured girls receiving attention at one time. The fire was checked several doors below Evans's, though at first it was thought that the entire block was doomed.

—The ratio of positions to clerks has again increased this week, twenty-four positions being vacant to twenty-three clerks desiring situations, according to the advertising columns of the daily papers.

—George Bille, pharmacist at Second and Thompson streets, is having his store re-papered and when the alterations are completed it will be one of the tastiest stores in that section of the city.

—J. R. Smyser, of Fortieth street and Lancaster avenue, is now a member of the Common Council from the Twenty-fourth Ward, having been elected to that honor on Tuesday of this week.

—Dr. Wm. Hargreaves, of 2867 North Front street, will hereafter represent his ward, the Thirty-third, in Common Council, as he was elected to the position on Tuesday, the 20th of February.

—August Hohl, proprietor of the drug store at Fourth street and Girard avenue, was re-elected a member of Common Council from the Seventeenth Ward at the Tuesday election.

—Charles Durnin, of the fluid extract department of Smith, Kline & French Company's laboratory, has had a severe attack of the grip, but is again at work.

—All of the principal wholesale houses closed at 12 o'clock on Thursday, giving their employees a half holiday in honor of Washington's birthday.

—Carl H. Bohn, the well-known pharmacist of Second and Poplar streets, was re-elected as school director from the Sixteenth Ward on Tuesday.

—Dr. C. H. Gibbins, a P. C. P. graduate of the class of '81, is occupying the position of demonstrator in pharmacy at the Medio-Chirurgical College.

—J. C. D. H. Dougherty, of Honeybrook, Chester County, Pa., has accepted a position with Frank G. Mumma, 2500 Jefferson street.

—J. Harry Massholder, of Twenty-eighth and Master streets, visited some friends at Lansdowne on Wednesday with his family.

—Fred Schramme has resigned from his position with Edward H. Finhold at Thirteenth and Morris streets.

—The Phoenix Chemical Company of Philadelphia was chartered this week with a capital stock of \$25,000.

BALTIMORE.

The Vogeler Company's Affairs.

Baltimore, Feb. 24.—The Charles A. Vogeler Company is not to go through bankruptcy proceedings after all, an agreement having been reached between the parties interested in the matter to dismiss the application to have a rehearing of the case. Instead, two co-trustees have been appointed by Judge Stockbridge, of the Circuit Court. They will act as temporary receivers, and the assets of the company will be so managed as to yield the best returns. The new co-trustees are Lawrence B. Kemp, president of the Commercial and Farmers' National Bank, and John B. Ramsay, president of the National Mechanics' Bank of Baltimore. The order of court requires both to bond in the sum of \$300,000. Mr. Dulaney, the other trustee, having given surety in a similar amount. The Vogeler Company has large English assets and steps have recently been taken in that country to bring these assets within the jurisdiction of the British bankrupt courts. It is believed by the parties in interest that the rights of American creditors can be much better protected under the deed of trust than under the bankruptcy proceedings in the United States Courts. The action recently taken was dictated, it is believed, by a desire to obtain uniform action on the part of creditors and for the purpose of avoiding as far as possible the expensive litigation and waste of assets which frequently result from disputes among those who hold claims.

Bowling Teams Change Places.

Baltimore, Feb. 24.—For the first time this season the Root and Herb team of the Baltimore Drug Trade Bowling Club actually finds itself in second place. The quintette from James Baily & Son, which did the trick last Tuesday night by taking two games out of three, has lately developed a marked spurt and has so improved in its work as to become dangerous to the best players. Tuesday night the Baily quintette ran up one score to more than 800, while the opposing team could not do better than 735. Baily & Son's average was 733 1/3 against 774 1/3 for the Root and Herb men. The totals were 176, 832 and 772 against 758, 771 and 795. Last night Muth Bros. & Co. had a disastrous encounter with the Winkelmann & Brown Drug Company, the latter team carrying off all three games by 729, 729 and 674 points against 653, 622 and 611. The standing of the teams is as follows:

Teams.	Games Won.		Percentage.
	Won.	Lost.	
Sharp & Dohme.....	27	6	.818
Root and Herb.....	25	8	.778
Winkelmann & Brown Drug Co.	26	10	.722
James Baily & Son.....	15	18	.455
Gilpin, Langdon & Co.....	10	25	.385
Muth Bros. & Co.....	8	28	.322
Parke, Davis & Co.....	6	27	.182

Wedgewood Club Diners.

Baltimore, Feb. 24.—Wedgewood Club members to the number of twenty-five and several invited guests sat down last night at Tierney's restaurant on North Calvert street, to their second monthly dinner. The menu consisted of all the delicacies for which this city is noted and abundant good cheer prevailed throughout the evening. J. Webb Foster acted as the presiding officer and discharged his duties in a manner to win the unqualified admiration and approval of all the Wedgewoodites. Besides showing fine poetic qualities he developed splendid ability as a raconteur, and his noted sayings will doubtless in course of time appear in the form of a memorial volume. The invited guests were Dr. H. S. Baker, of Boston; F. A. James, of New York, and Dr. N. E. B. Iglehart, of Baltimore. At the meeting the constitution and by-laws outlined in last week's number of the Era were adopted. The fame of the club is steadily expanding and may shortly be expected to equal that attained by the Flint Club.

Retailers and the Card System.

Baltimore, Feb. 26.—The Executive Committee of the Baltimore Retail Druggists' Association, John G. Beck, chairman, held a meeting last Wednesday to receive the report of the Canvassing Committee appointed to cau-

vass the trade in the interest of the card system of purchasing from jobbers and of accommodation among themselves. The situation was described as very encouraging, the committee having found sentiment generally favorable to the plan under consideration. It was resolved to call a mass meeting for Wednesday of the present week to discuss the subject in all its bearings. Every retailer in the city and as many others as can come are expected to be in attendance, and the entire ground will be gone over. There is little doubt that the plan outlined will be endorsed and adopted. The deliberations will not be confined to the card system, but will embrace all the various evils from which the retail drug trade suffers and suggestions as to the remedy needed will be received.

NOTES.

—Hynson, Westcott & Co. have introduced an innovation in their store, at the corner of Franklin and Charles streets, which will doubtless be much appreciated by the customers of this enterprising firm. The latter has employed a stockkeeper woman, whose duty it is to go over the entire stock of medicines, surgical instruments and hospital appliances as often as necessary and keep it in perfect order. Cleanliness and neatness have always been insisted upon in the establishment, and these qualities will be found in evidence hereafter more than ever before.

—Druggist A. T. G. Raiber, who has conducted a pharmacy at the southwest corner of Saratoga street and Park avenue with much success for several years, will shortly remove to the opposite corner, which is being rebuilt especially for his business. The new location will not only afford more space, but is also better adapted to Mr. Raiber's purposes. His success is another illustration to show that energy and attention to detail win recognition.

—The Pepsin-Seltzer Drug Company has been incorporated with a capital stock of \$100,000, divided into shares of \$25 each. The incorporators are Henry G. Fledderman, Maurice Wyman, Leon C. Coblens, Samuel Oberdorff, Benjamin Cohen, John B. Berger, Thomas B. Greenbow, Louis Desinger and Jacob Putzel. It is the intention of the company to manufacture a proprietary article.

—H. T. Thayer & Co., a Philadelphia firm, will shortly establish a retail drug store at 711 North Howard street.

CINCINNATI.

Era News a Guarantee.

Cincinnati, Ohio, Feb. 23.—Charles Diehl, representing the Pictorial Printing Co., is in town and pays a compliment to the Pharmaceutical Era. While visiting a customer in a suburb of Indianapolis, Ind., he was asked to show his card issued by the Indianapolis Association. Mr. Diehl upon his arrival at Indianapolis applied for the card but owing to the absence of the secretary could not get it at the time and concluded to visit his customers meanwhile. While he was explaining the circumstance the postman arrived and among the mail was the Era. The druggist glanced over it and told Mr. Diehl that he need not show any card, for among the Cincinnati news was an item stating that Mr. Diehl was among the first to take a salesman's card in that city, and this was sufficient proof that he was in sympathy with the N. A. R. D.

Druggist in Politics.

Cincinnati, Feb. 24.—A spirited contest is on in the Twenty-first Ward for the nomination for member of the Board of Education, and among the candidates is Joseph Nicholas, the druggist on Neare street. Joe is a strong Democrat and wants the nomination badly, as the ward is considered a Democratic one. He has asked his friends to support him, and among them Dr. L. J. Feid, an ardent Republican, who is assured of the nomination for the same office on the Republican ticket. Nicholas was ignorant of this and a few days ago asked the doctor if he would not go with him and visit the voters in the ward and use his influence in securing the support of the voters in his (Nicholas's) favor. Dr. Feid agreed,

provided Nicholas stood all expenses, and the two started out in the doctor's buggy, but it was late in the day before Joe found out that the doctor was making votes for himself at his expense. Meanwhile the doctor is still sending his prescriptions to Joe's drug store while Joe refuses to recognize him and declares he will defeat him at the election.

Howling.

The following scores were made at the Druggists' Bowling Club Friday afternoon. The visitors were Albert Schwartz (Parke, Davis & Co.), Dr. L. J. Feid, Chas. Diehl, Jr. (Pictorial Printing Co.), Charles Diehl, Sr. (Pictorial Printing Co.):

	First.	Second.	Third.
Rendigs	178	158	170
Kipp	167	168	183
Hickman	162	169	173
Knemoeller	146	119	156
Muehlberg	172	194	182
Yoss	147	159	196
Linneman	123	135	150
Freiberg	135	137	118
Leuchtenburg	175	162	168
Nicholas	114	133	146

NOTES.

—The following traveling men were granted cards by the Hamilton County Druggists' Association the past week: J. B. Horsley (W. S. Merrell Chemical Co.); W. H. Rand (Stevens & Stevens, Urbana, Ohio); W. R. Cummings (Sagine Co., Columbus, Ohio); W. V. Nicum (W. M. Walke & Co., St. Louis, Mo.); C. E. Wilson (Liquid Carbonic Acid Co., Cincinnati, Ohio); Charles Diehl, Jr. (Pictorial Printing Co., Chicago). The regular monthly meeting of the association will be held on Tuesday, February 27, and it is said will result in some very stringent action taken against the wholesalers who have not expressed their support.

—Among the visitors to this city attending the Forty-eighth annual reunion of the Scottish Rite Masons were the following druggists: H. J. Marshall, Aurora, Ind.; Jno. C. Bleher, New Richmond, Ohio; Fred. Grossman, Cleres, Ohio.

CLEVELAND.

Beneficial Activity of the Local Association.

Cleveland, O., Feb. 24.—In one of his beautiful poems Byron tells us that a change came o'er the spirit of his dreams, and this quotation fitly represents the conditions in pharmaceutical circles in this city at present. The Cleveland Pharmaceutical Association since its organization in 1880 has always been a strong and active factor in the life of our druggists, but such efforts as are being made at present to show that N. A. R. D. ideas are practical and beneficial to all are worthy of emulation by similar bodies all over the United States. Many of the methods to be used are still in embryo, but some beginning of a real campaign has been made. There are 203 drug stores here, owned by 260 firms, all of these proprietors, without a single exception, are members of the local association. At the meeting to be held on Friday, March 2, a still wider scope will be given to the work and push of the association. The committee on organization meet every Thursday afternoon at Benton, Myers & Co.'s store and carefully consider all complaints and "errors of judgment," and have done admirable work to date. They freely give their time and thought for the welfare of this and other pharmaceutical communities.

NOTES.

—The Cleveland jobbers have sent the following notice to their customers throughout Ohio, Indiana, Pennsylvania and Michigan:

ANNOUNCEMENT TO OUR RETAIL FRIENDS.

As several articles have appeared in the newspapers falsely reporting the position of the wholesale druggists of Cleveland, stating that they are selling department stores, and a few travelers having taken pleasure in circulating such reports, thinking thereby to gain favor with the retail trade, we, the Organization Committee of the Cleveland Association, feel it our duty therefore to correct such statements, and wish to state in justice to the wholesale druggists in Cleveland that they are not selling department stores, nor is there any antagonism whatever between the retailer and wholesaler in this

city; but on the contrary, most cordial relations exist, the retailers having the hearty co-operation of the wholesalers, and both are working hand in hand to improve the condition of the retail trade on the lines laid down by the N. A. E. D. We must recognize that the proprietor, wholesaler and retailer are all indispensable to each other; proprietary articles can never be kept out of the hands of the cutter without loyal co-operation of all, hence the necessity for harmony of action.

Jan. 12, 1900. Signed by the Committee.

—Prof. W. F. Kuder, sometime Professor of Microscopy and Materia Medica in the Cleveland School of Pharmacy, has been elected a trustee to fill the vacancy caused by the death of Philip Acker. The faculty of the school the coming year will consist of Prof. Joseph Feil, Dean, physics and chemistry; Prof. H. V. Arny, theoretical and practical pharmacy, and Prof. R. A. Hatcher, materia medica and microscopy. The session has been lengthened, beginning September 10th and ending about May 1st. Additional room has also been secured.

—W. C. Drake, of Omaha, Neb., has purchased the fine drug store of Dr. E. B. Lane, corner of Euclid and Willson avenues. Dr. Lane has decided to take a rest after thirty years of conscientious and successful toil. He has built up one of the best drug businesses in the city.

DETROIT AND MICHIGAN.

F. STEARNS & CO.'S NEW LABORATORIES.

Frederick Stearns & Co., manufacturing pharmacists of Detroit, Mich., have completed their new laboratories and general offices at the corner of Jefferson and Bellevue avenues in this city. The new group of buildings, erected at a cost of about \$200,000, is one of the finest in the world for the purposes for which it is intended. The group is built in the form of a rectangle and covers an entire block, 164x328 feet, with a court yard in the centre. Facing on Jefferson avenue, the buildings extend 328 feet on Bellevue avenue and the same distance on the Michigan Central Belt Line on the west. There is a broad vacant space in the rear, thereby affording perfect light on all four sides.

Effort and expense have been lavished to make these buildings absolutely perfect in regard to safety, solidity, comfort and convenience. They are built on the plan of what is known as "mill construction," or slow-burning. The floors are extra heavy, consisting first of heavy planks, then asbestos paper, finished on top with hard maple. No joists are used in supporting the floors, but only heavy timbers (floor beams), which are spaced four feet apart, resting on heavy girders coupled together. The ground floors are of Portland cement concrete. All the elevators and stairways are encased in brick shafts, protected by fireproof doors, thereby making them fireproof, and entirely outside of the working rooms.

The seven different laboratory buildings (containing seventy-one different departments) are connected by a series of external galleries in the inner court, which are also of mill construction, supported by steel columns. This cutting off of interior connection between the departments is an additional safeguard against fire. The roofs of the buildings are of the most modern construction, asphalt being used entirely instead of tar. The brick walls are all finished off with tile coping, undoubtedly the best method of protecting them, those of the office building alone having heavy stone coping. The buildings are thoroughly lighted with electricity and supplied as well with illuminating and natural gas.

The office building, which fronts on Jefferson avenue, is entirely distinct from the laboratories, and is of modern store construction. It is believed that for the purposes for which this office building is used, it will last as long as the laboratory buildings, which should be for a century or more. The office building is divided into thirty private offices, exclusive of the general large main office and the reception room. All the offices are finished in antique oak, with office furniture, such as desks, etc., to correspond. All the floors are of polished oak and the walls appropriately tinted to harmonize with the general color scheme.

Some items regarding material and construction might be of interest. It may be stated that the largest building permit taken out in Detroit during 1899 was for these

buildings; that nearly 3,000,000 bricks were used in their construction, and that the largest shipment of heavy timber that ever came into this city from Georgia was used for floors and columns. The arrangement of the buildings for the proper conduct of the business of the house is almost ideal, one which the house has been planning for years. It is a sort of evolution of ideas, which an experience of forty-five years in the pharmaceutical manufacturing business would justify. The perfection of the plan is such that a car load of crude material that comes in at the stock building may work around in continuous order to the left until it comes out in finished form from the same portals through which it went in as crude material.

Frederick Stearns & Co. is what would be called a close corporation, for while it is a stock company incorporated under the laws of the State of Michigan, none of its stock is held outside of the members of the Stearns family and their immediate business associates. The business, which was established in 1855 by Mr. Stearns, was incorporated in 1882. Mr. Stearns retired from active business life in 1887, and was succeeded as president of the company by his elder son, Frederick Kimball Stearns, who has been connected with the business since 1876, and who has been its president for the last thirteen years.

In addition to this new manufacturing plant at Detroit, F. Stearns & Co. have just erected and are moving into their new Canadian laboratory, situated on the river front at Windsor, Ont., which is the finest and most complete of its kind in the Dominion. They also have two large established branches at New York City, 32 Platt street, and at London, England, 25 Lime street, E. C.

NOTES.

—The examination of Mrs. Elsie Smith, charged with smuggling phenacetin from Windsor into Detroit, was postponed from Wednesday, February 21, to Monday, the 26th.

—Druggists Shad, N. Vincent, of Lapeer, John J. Campbell, of Pigeon, Homer C. Blair, of Albion, and A. H. Webber, of Cadillac, were among the guests at the Michigan Club banquet at Detroit, February 22.

—O. J. Milliken, of Silverwood, is moving his drug stock to Vassar.

—G. H. Stoneburner, formerly clerk for Bird Bros., druggists at the corner of Fourteenth and Warren avenues, Detroit, has opened a new drug store for himself at Ford City. George J. Robinson has taken the clerkship with Bird Bros.

—The Michigan Drug Co. baseball team won the indoor game from the boys of the Western High School by a score of 7 to 4. It is reported as being a very fast, interesting and well played game.

CHICAGO.

Chicago Alumni on Pharmacopoeial Revision.

Chicago, Feb. 24.—The second of the series of meetings of the Alumni Association of the Chicago College of Pharmacy, for the discussion of pharmacopoeial revision, was held at the Palmer House on Wednesday evening, February 21. About twenty-five persons were present. George F. Butler, Ph.G., M.D., read an able paper on "Standardization from the Physician's Standpoint." The subject of "Standardization from the Pharmacist's Standpoint" was presented by Albert D. Thorburn, Ph.G., and Prof. W. A. Puckner, Ph.G., treated the subject of "Standardization from the Analytical Chemist's Standpoint" in his usual thorough and concise manner. Frank S. Hereth, of the Searle & Hereth Company, who was to speak upon the subject of "Standardization from the Manufacturer's Standpoint," was detained by illness and could not attend. Following the addresses a general discussion ensued. Several speakers touched upon the practice of prescribing proprietary preparations, deploring the custom. Dr. Butler declared that conscientious physicians sought the best results, regardless of whose pocket they lined. If the physician believes that the druggist's preparation in a given case can serve the patient best or as well as a manufactured preparation, he would be inclined to favor the druggist, otherwise the manufacturer's remedy would be prescribed.

The next meeting will be held March 7 at the Palmer House and will take up the Introduction of Protected Medicines: (a) Patented Processes. (b) Patented Substances or Products. (c) Proprietary or Trade-Mark Names.

New Pharmaceutical Company Projected.

Chicago, Feb. 24.—A long story appeared in one of the Chicago dailies yesterday to the effect that a chemical trust is in process of organization and that La Salle street was flooded with prospectuses of the proposed company, whose purpose was therein outlined as follows:

"It is the purpose of this company to take up only those classes of chemicals and manufacture them that are known as 'specials' where the cost of production is small and the selling price over the cost price shows a large margin of profit. Some of the great fortunes of America have come out of business of this nature.

"The economical elements that enter into the consolidation of industrial enterprises," says the prospectus, "whereby numbers of branches are operated from a central head, thereby greatly reducing operating expenses, will have full scope in this company, as many different articles will be promoted through the same general office and accounts and records kept by one staff of clerks.

"After exploiting a manufactured or chemical article and transferring it to the company's possession, no new article will be taken up against which additional bonds or stock will be issued until it has been subjected to a thorough test, thus reasonably assuring the success commercially and financially of each new article devised and manufactured by the company. The object of this precaution is to protect the company and those interested in its securities as far as possible against the danger of actually acquiring unprofitable new business and thereby not only causing loss to the company, but injury to the value of its good will.

"The success of future issues will increase not only the revenue but the good will of the company, and, as they successfully extend, so also the assets of the company will proportionately grow and the corporation will be sought for by exploiters of articles, among which the company will select the best. The value of the good will and name will increase as does the confidence of the public in the articles offered by this company.

"It is a well known fact that the failure of such articles as this company will exploit has almost universally been due to inability to bring them properly before the public. Their introduction and pioneering expenses have been so large as to discourage the ordinary promoter before any returns were in sight for his investment. This company will be secured by its advertising facilities the channels of trade and the confidence of the public the exploited new articles should be remunerative from the start."

The capital, it is stated, will depend upon how the public receives the new concern, but the capitalization will be represented by preferred and common stock. The various features of the proposed company as to stock, etc., were fully described. None of the manufacturers or jobbers whom your correspondent has seen knew anything more of the proposed company than that which the newspapers published. One prominent manufacturer declared he had not heard of it and was inclined to doubt the practicability of the suggestions made. The proposed concern could hardly in any case be called a trust, but was simply the suggestion of a new company with a capitalization such as future events might warrant. The proposal is along a line somewhat new. If carried into effect, its success would be a matter for the future to determine.

NOTES.

—Casimir E. Krzeminski, for many years in the drug business at North avenue and Halsted street, was closed this week on a confession of judgment. The store is in the hands of the sheriff, and the sale is advertised to occur on March 5. The failure of Mr. Krzeminski was a painful surprise to his many friends and associates, as it was generally supposed that he was in very good circumstances.

—The libel case against R. C. Freerksen and C. S. N. Hallberg has been dismissed on account of a defect in the indictment. The prosecution has the case before the grand jury now with a view to getting a new indictment.

—P. M. Coombes, former owner of Coombes' Pharmacy, at 2200 State street, has bought the store formerly occupied by Metcalf & Miller, at Huron and North Clark streets.

—C. A. Horton has sold his drug store in Dixon, Ill., to Leak Brothers, one of whom clerked for him for some time. The other has been in the book and stationery business for several years.

—The wife of R. R. Bowers, a druggist at 590 East Fifty-fifth street, gave birth to a son this week.

—The Coombes pharmacy, at 2200 State street, has been sold to A. S. Schmerker.

THE NORTHWEST.

Up Hill Race for Mayor.

St. Paul, Minn., Feb. 23.—S. H. Reeves, one of the best known druggists of St. Paul, and who runs two stores at the Seven Corners, is just now the central figure in municipal politics. He is a member of the Board of Aldermen from the Fifth Ward and a Republican. Mr. Reeves is a candidate for the mayoralty nomination, having been put up by the element of his party which is opposed, "tooth and toenail," to General Kiefer, the Republican incumbent. But the man of drugs finds that several grasses have been tied across his pathway. Not the least of these impediments—which, combined, will probably prevent his securing the nomination—is the refusal of the Republican "bosses" to indorse him. If Mr. Reeves cannot go into the city convention with the united support of the Fifth his success, it seems now, will be not only improbable but impossible.

NOTES.

—The telephone war in Minneapolis has been patched up. The company has agreed to replace the telephones taken out of drug stores during the late unpleasantness, that pay telephones be placed in the drug stores of the city where the private telephones of the Northwestern Company are located, and that patrons of the stores be allowed to use whatever instrument they choose—the free or the paid telephone.

—Successions: Warren Lee, Bozeman, Mont., by the Warren Drug Co.; John A. Sandholm, Des Moines, Ia., by the Sandholm Drug Co.; W. Schupbach & Co., Columbus, Neb., by W. F. Schupbach; W. F. Miles & Son, St. Ausgar, Ia., by H. E. Cross & Co.

—New: Henry Munzer, Minneapolis, Minn.; H. De Jong, Cornelius, Ore.; J. R. Michaels, St. George, Utah. —Charles Quinn, Merrill, Wis., was burned out this week.

—W. B. Camden, late of Burley & Camden, Waihalla, N. D., having seceded from that firm, is buying a new drug stock to start up in the same place next month.

—E. M. Bradseth has taken a position in the Sodegren drug store at Virginia, Minn., and goes there next week.

—A. E. Lofstrom has gone to Norwood, N. D., to take charge of the drug store of S. C. Lough.

—W. A. Kinner, druggist and prominent citizen of Eau Claire, Wis., died this week.

—Jens Jensen is leaving Duluth to take charge of a drug store at Clara City, Minn.

—F. Dawson, Albany, Ore., has admitted D. O. Woodworth to partnership.

—J. J. Tracy, Halley, Idaho, has started a branch at Shoshone.

—L. A. Wright, Union, Ore., has opened a branch at Granite.

—J. E. Lewis' drug store at Chinook, Mont., was burned to-day.

—John W. Robisud, Clarkson, Neb., has removed to Bruno.

—W. T. Heywood, Fremont, Neb., has given a bill of sale.

—The Wheaton, Minn., Drug Co. has been incorporated.

—J. V. Swift, Darlington, Wis., has assigned.

—The Kaysville, Utah, Drug Co. has closed.

—D. M. Aronsohn has returned to the city.

—Six candidates were successful in passing the February examination of the Massachusetts Board of Registration in Pharmacy, out of twenty-eight examined, and they were given certificates of registration. They were: William H. Lyng, William L. Nelson, Frank C. Uebel, Boston; E. Montrose Evans, Ipswich; Edward J. Sweeney, Springfield; William H. McGraw, Lynn.

ST. LOUIS.

St. Louis Apothecaries Win.

St. Louis, Feb. 24.—The action of Judge Ferris on Monday of this week in sustaining all demurrers of the defendant druggists in the proceedings brought by Attorney General Crow for the State of Missouri against a number of the members of the St. Louis Apothecaries' Association for alleged violation of the "anti-trust" laws of the State, has been greeted with general satisfaction by the retailers here. While the demurrers were sustained on technical grounds, namely that there had been a misjoinder of causes of action and of parties in the petition of the attorney general, and while the latter has the right to file an amended petition, the druggists feel that they have gained a victory and say that if it had been the intention of the State to push the case it would have done so long ere this. The only action the State has taken in the matter since the filing of the petition against the druggists was in arguing the demurrers, at which time the assistant attorney appeared. No brief was filed as promised. Judge Ferris notified both sides that unless briefs were filed by December 10, judgment would be rendered. No response was made by the State. A week before the ruling sustaining the demurrers was rendered the attorney general asked for two days longer, but did nothing whatever. Everyone believes that the State's intention has been simply to drop the matter altogether and that the attorney general has long been convinced that there was no ground for action against the druggists. President Jno. H. Allen, of the St. Louis Apothecaries' Association said: "Of course it's a victory. We are certain there will be no further action by the State. Influential druggists all over the State have written the attorney general and I am sure after becoming posted regarding the facts of the case he has simply come to the conclusion that there was nothing illegal in the efforts of the druggists to better their condition." Ex-Chief Justice Shepard Barclay, who has conducted the defence for the St. Louis Apothecaries' Association, was asked by your correspondent for a statement regarding the present status of the case. He said:

The points involved in the decision of Judge Ferris were chiefly those of practice. The defendants, who were members of the St. Louis Apothecaries' Association, were represented by our firm, Messrs. McKelighan, Barclay & Watts. We filed a demurrer, which claimed that there had been an improper joinder of parties defendant, and that different causes of action against the various defendants had also been improperly united in one petition. Other defendants had raised similar questions by demurrers, and the ruling of Judge Ferris sustained all the demurrers. The main question in the petition filed by the attorney-general as to the legality of arrangements regulating the sale of proprietary medicines and patent medicines was not decided by the court, inasmuch as the preliminary question regarding the form of the proceeding was decided in favor of the defendants. The effect of the ruling of Judge Ferris will be to require the plaintiff, the State of Missouri, represented by the Attorney-General, Hon. Edward C. Crow, to file an amended information or petition, setting forth the claim of the State in a manner conforming to the ruling of the court on the demurrers. Unless the State by the Attorney-General amends its pleading within the time allowed by the court, the defendants will be entitled to have the cause disposed of on the demurrers by a final judgment in favor of defendants. But the plaintiff, the State of Missouri, in the present proceeding, to amend the petition and state its claim in a different form if the Attorney-General sees proper to do so. The most important issue in the case is whether the owners of patent and proprietary medicines have the right to make contracts with persons who sell the same, whereby the prices of such articles shall not be cut or reduced below those which the proprietors establish. That is the important issue in the case; but it has not been decided. Every one who made. On that question the defendants, who compose the St. Louis Apothecaries' Association, contend that a proprietor of a patent medicine or a proprietary medicine has the right to determine at what price he will sell it, and that any attempt to restrict his right to make contracts which secure to him the full benefit of his ownership of such property would be in conflict with the constitutional protection to rights of private property, which attempts the courts would not sustain. That position is the substance of the defense which the Apothecaries' Association intend to make if the case ever reaches a form in which it is directly in issue. Every ordinary legal maneuver as to the proper form in which such a proceeding should be instituted are not yet ended, and it cannot yet be known into what form the Attorney-General will put his charge against the defendants in his amended petition, should he file one. The memoran-

dum filed by Judge Ferris on ruling upon the demurrers is very brief, the substance of it being that the demurrers were sustained for improper joinder of causes of action and of parties.

Annual Meeting of the Alumni.

St. Louis, Feb. 24.—The annual meeting of the Alumni Association of the St. Louis College of Pharmacy was held last Tuesday evening at the College. President Otto F. Claus read his annual report which reviewed in detail the work of the association for the year and commended the officers and various standing committees for the rich result of their labors. Various recommendations were also made. The report of Recording Secretary H. J. Tritschler showed the present membership of the association to be 478, of which 335 are resident and 143 non-resident. Twenty-three new members were received during the year. Treasurer Charles Gietner's report revealed a healthy financial condition. Receipts for the year with balance on hand at the beginning aggregated \$774.61. The disbursements amounted to \$236.38, leaving a balance in the treasury of \$538.23. Reports were also received from Corresponding Secretary Carl G. Hinrichs and Registrar Charles W. Stockhausen and the chairmen of the different committees. T. F. Hagenow from the Executive Board reported that the recent ball was a success and the expense fully covered. The annual election of officers resulted as follows: President, R. S. Vitt; first vice-president, Otto A. Wall, Jr.; second vice-president, George R. Merrell; recording secretary, H. A. B. Klippel; corresponding secretary, Oscar H. Elbrecht; Treasurer, Charles Gietner; registrar, C. W. Stockhausen. The Executive Board for the coming year will be as follows: O. C. Claus, Theo. F. Hagenow, Oscar F. Bausch, Charles A. Lips, Lorenz A. Seitz and Martin J. Noll. After the meeting the annual banquet was held as usual.

NOTES.

—The Anti-Monopoly Drug Co. will discontinue its store in the Lindell Hotel, Washington avenue and Sixth street, consolidating the business with that of the Sixth and Market street store. The Anti-Monopoly will thus have only one store in the future, the Franklin avenue establishment having been sold last December. It is reported that another drug store may go into the Lindell, but nothing positive can be learned at present.

—H. P. Kinsolving, the druggist of Malden, Mo., was in attendance at the first annual convention of the postmasters of Missouri held here this week. As far as known he was the only druggist in attendance. He says his previous experience in handling postage stamps probably had much to do with his securing the postmastership at Malden.

—John Guttman, formerly with John H. Allen, and one of the widely-known drug clerks of the city, has bought the Goode Avenue Pharmacy, corner Goode and Easton avenues, and will assume control March 1. Mr. Bunch goes to Bentonville, Ark., where he has bought the drug store of Black & Co.

—Oscar Mallinckrodt, brother of Edward and Emil Mallinckrodt, of the Mallinckrodt Chemical Co., died last Sunday at Espanola, N. M., where he had been for some years on account of his health. The funeral occurred here Friday.

—C. O. Bunch, the East St. Louis druggist, has bought the Atwell pharmacy at Collinsville, Ill., and will conduct it in addition to his East St. Louis store.

—Wm. Tilly, of the office force of the J. S. Merrell Drug Co., has resigned to represent the Detroit White Lead and Color Works in Kansas.

—Edward Mitchell, manager of sales of Meyer Bros. Drug Co., has left for a brief trip to Old Mexico combining business and pleasure.

—F. R. Scharlach, representing the J. S. Merrell Drug Co., in Central Missouri, has moved his family from Moberly to St. Louis.

—The engagement is announced of Thomas Haley, president of the Peacock Chemical Co., to Miss Isabel Chenier.

—A. J. Kidd, the druggist of Taylor and Finney avenues, is very ill with typhoid fever.

—Dr. Bolle's drug store, Marceline, Mo., was burned out February 22.

OBITUARY.

"HARRY" MINER DIES SUDDENLY.

The Druggist Theater Manager Stricken with Apoplexy.

Henry Clay Miner, familiarly known as "Harry" Miner, the druggist-theater manager of New York City, died suddenly on February 22. His death was entirely unexpected by his family and friends, and was a great shock to those who had been with him only a short time before it happened. He had remained in the house that day until about 4 o'clock, when he decided to go for a drive. While waiting for his carriage he fell to the floor, and was dead before medical aid arrived.

The career of "Harry" Miner has been marked with more variations than that of the average successful business man. He began life as a drug clerk, served on the police force, went to Congress, and during the active portion of his business life he is said to have controlled more playhouses than any other individual manager. He was born in New York City, March 23, 1842. His father, who was born here before him, constructed the waterworks at Havana, Cuba; invented one of the first rotary printing presses, and built the first locomotive run on Long Island. His son "Harry" first attended Grammar School No. 7 in Chrystie Street, and later the American Institute School. He decided to learn the drug business, and became a clerk in the store of Riker & Berriean, now Riker & Co., of Sixth Avenue and Twenty-third Street. Later he was employed in the stores of Charles Hutchings and Demas Barnes & Co. He also read medicine under his brother, Dr. Edward Miner, then President of the Brooklyn Medical College.

When the civil war broke out, Mr. Miner was appointed pharmacist of the Mechanics and Artisans' Regiment, stationed on Long Island. In a short time he returned to his occupation as a drug clerk, but ill health caused him to give up the business, and then he became a member of the police force, serving for two years. Part of the time he did patrol duty in the Mercer Street precinct.

His first venture in the line leading to his future career came just after he left the police force, when he became advance agent to Prof. De Courcy, a lecturer on medical subjects. He made a success of this, and in a short time he took the road for Signor Blitz, the magician and bird trainer. His next engagement was with Thayer and Noyes' circus, and then he returned to New York and started upon his career as manager and owner of theaters.

Among the theaters he controlled at one time or another were the London, People's, Miner's Bowery, the present Third Avenue Theater, Miner's Eighth Avenue Theater, the Brooklyn Theater, Miner's Grand of Detroit, Mich.; Miner's Newark, N. J., and the Fifth Avenue Theatre of this city.

Even after his theatrical interests grew to large proportions, Mr. Miner continued his drug business, and at the time of his death he owned two drug stores, one in the Bowery and one in One Hundred and Twenty-fifth Street. The store at No. 203 Bowery he had owned for many years. It is one of the oldest drug stores in the city, having been established in 1804 as "Dr. Church's Dispensary." From Dr. Church the store passed into the hands of James G. Sands, and then to the son of the latter, with whom Mr. Miner formed a partnership. When Mr. Sands died, Mr. Miner obtained full control of the business. His up-town pharmacy was opened last autumn. Both stores are under the management of George W. Hackenburger, who has been in charge of the Bowery store for eight years.

In 1864 Mr. Miner married Julia L. Moore of this city. She died in 1894. Mr. Miner married a second time in April, 1896. His second wife was Annie O'Neill, the actress. Four sons—Henry C., Jr., Edwin D., Thomas W. and George H.—are the surviving children of the first marriage. About six weeks ago a son, John Lansing, was born by his second wife.

ALEXANDER HUDNUT DIES IN ENGLAND.

Alexander Hudnut, who was owner for nearly twenty-five years of one of the most famous pharmacies in New York City, died on February 16, at Brighton, England, of a complication of diseases. He was seventy years old. At the time of his death his six children, all the members of the family who survive him, were all in America. The Rev. William H. Hudnut, pastor of the First Presbyterian Church of Youngstown, Ohio, accompanied by his sister, sailed on the Oceanic for England on February 21 to take charge of their father's body.

Hudnut's pharmacy was established as a modest little store in Court street, Brooklyn, in 1855. A few years later Mr. Hudnut decided that the opportunities for a successful drug business were much greater in lower Manhattan Island, a quarter which was then the very centre of New York's business activity. So when the old New York Herald building was erected on the site of the burned Baraun's Museum at the junction of Broadway, Park Row and Ann street, he leased quarters for a pharmacy therein and removed his business to New York. He was a shrewd business man and kept wide awake as to the public wants, and he soon began to prosper. During the succeeding quarter of a century he built up one of the largest retail drug businesses in the country. He inaugurated the all-night drug store idea, and eventually Hudnut's pharmacy came to be regarded as a resort for night newspaper workers, actors, dramatic critics and intellectual "night hawks" of all kinds. His soda water was the best in the city, and his fountain the largest. Scores of different kinds of drinks were dispensed there, and a huge placard in front of the store enumerated the varieties. Hudnut's chocolate soon became famous.

The fame of the pharmacy was enhanced by the establishment of a public thermometer, from which records of the temperature were taken and furnished to the daily newspapers. For many years Mr. Hudnut was known as the "official unofficial" weather recorder of New York.

After the pharmacy had made a fortune for him his health began to fail, and in 1890 Mr. Hudnut sold his drug business to H. L. Cutter, who had been associated with him in the pharmacy. It is said that the sale was made upon only thirty minutes' consideration and the price paid was over \$200,000. The business was continued under the old name of Hudnut's pharmacy. After a short time Mr. Cutter transferred the store to Frederick F. Anness and George H. Bancroft, who for its control formed a corporation under New Jersey laws. In 1899, after a year of trouble with its creditors, the company went into the hands of receivers, with liabilities of \$34,000.

It was an attack of influenza in 1890 that first warned Mr. Hudnut that his health was failing. After selling his pharmacy he decided to live in Europe. Since then he spent most of his time in France and England. He had a large circle of friends both in America and in England. His life on the continent, however, was secluded, and he was accompanied only occasionally by members of his family or friends.

While he lived in the United States Mr. Hudnut's home was in South Orange, N. J. Of the children who survive him four are sons, Richard, proprietor of a pharmacy at No. 925 Broadway, New York; Frank, a physician in Boston; Paul, who is practicing medicine in Pawtucket, R. I., and William H., the clergyman, of Youngstown, Ohio.

GEORGE C. WRIGHT.

George C. Wright, the general representative of the Mallinckrodt Chemical Works, died in the McMaster Hospital at Wheeling, W. Va., on February 20, of pneumonia, after a sickness of only a few days. He had been making a short trip in Pennsylvania, and was about to start for the Pacific coast. He stopped in Wheeling for a few days, and was stricken with pneumonia there. His friend and business associate, B. S. Buchanan, was with him when he died. The body was taken to the home of his family, Louisville, Ky., for burial.

George C. Wright was born in Louisville 46 years ago, and learned the retail drug business there. After a few years he left the retail business, and, going to Cincinnati,

took a position as salesman with Bart & Hickox. Later he served as traveling salesman for a brief period with Hale, Justin & Co. of Cincinnati, and with Stewart & Morgan of Indianapolis. About seventeen years ago he joined the traveling staff of the Mallinckrodt Works, and had been with that concern ever since.

He was one of the best known traveling men in the West, his territory including all the principal northern cities west of Pittsburgh, and perhaps it is not too much to say that he enjoyed the intimate personal acquaintance of every wholesale druggist in that section. In 1891, in order to select the most popular traveling men in the trade, the Era took a vote of all the jobbers and published the pictures of the twenty men receiving the most votes. Mr. Wright was among this number, and his picture, with the others, still may be seen in drug houses all over the country.

His home was in Chicago, where he shared offices with John Franklin.

Mr. Wright was a genial, whole-souled companion, ever ready to help a friend in trouble, and there is not a drug buyer in the western trade that will not look upon his death as a personal loss.

Besides his father, mother and one sister, Mr. Wright is survived by a widow, formerly Miss Boggs, of Pittsburgh.

J. W. NORCROSS, of Roxbury, Mass., whose death is just announced, was for more than fifty years identified with the commercial life of Boston. Before the war he was an importer of druggists' supplies, with a large Southern trade. Having lost a fortune through reverses in the South, he retired from business life for several years, but he afterward entered the business world and was active in it until within a few days before his death. Mr. Norcross was twice married, and a daughter and son by the first marriage survive him, as do a widow and one daughter by his second marriage.

GEORGE J. GUILFORD, a pioneer druggist of Cincinnati, died February 22 at his home on Dudley street. Although Mr. Guilford did not follow his chosen profession as pharmacist, he was well known among the druggists of the city. He started in the drug business at Seventh and Elm streets in 1846 and conducted the store for many years, after which he entered politics, holding several important city offices. Of late years he has been reporting on various newspapers and acting as press agent for a local circus.

PORTER SIMMS, until recently head prescription clerk at Brown's pharmacy, in Parkersburg, W. Va., died there on February 23, apparently from convulsions, which followed the taking of a dose of Epsom salts. He had been suffering from tonsillitis for several days and was under a physician's treatment. He was to have been married last Sunday to a girl socially prominent in Parkersburg.

WILLIAM BROWN, for 26 years in the drug business at Cohoes, N. Y., died February 16, aged 53 years. He was born in Scotland, but came to the United States when an infant. He served his drug apprenticeship in a store owned by his uncle, in Cohoes, and in 1874 entered the business on his own account. His widow and one son survive.

JOSEPH W. SAUL, a proprietor of several patent medicines, who had lived in retirement during the last ten years, died February 20, at his residence, 919 North Calhoun street, Baltimore, after a lingering illness. He was eighty-six years of age.

HUGH NEALY, druggist at New Albany, Ind., died of Bright's disease, February 13. He had been in business but a short time. The Floyd County Pharmaceutical Association attended the funeral in a body.

—The North Dakota Board of Pharmacy will hold a meeting at Fargo, March 14 and 15. W. S. Parker, secretary.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

- ALABAMA.—Birmingham.—Henry E. Klein, 322 Twentieth street South, succeeded by Klein Bros.
Huntsville.—Kinser & Cantrell, 100 South Jefferson, succeeded by M. Cantrell.
- ARKANSAS.—Argenta.—J. M. White, removed to Little Rock.
Booneville.—C. S. Anderson, succeeded by Anderson & Bear.
- COLORADO.—Anaconda.—B. P. Schoen, removed to Victor.
Durango.—John E. Smith, removed to Victor.
- CONNECTICUT.—Hartford.—Chas. A. Rapelye, 376 Asylum street, succeeded by Rapelye & Palmer.
- GEORGIA.—Wadley.—F. S. Battie & Co., sold to Holmes-Keady Co.
- ILLINOIS.—Ava.—Wagner Bros., succeeded by W. G. Wagner.
Chicago.—Stubenrauch & Greuner, 479 West Division, succeeded by Geo. Stubenrauch.
Jacksonville.—J. H. Williamson, succeeded by J. D. Brewer.
Lanark.—J. H. Allemon, out of business.
Niantic.—C. E. Tandy, sold to B. T. Hickman.
- INDIANA.—Indianapolis.—F. G. Bressell & Co., 1644 Bellefontaine, sold to C. M. Hatfield.
Syracuse.—Miller & Estlick, sold to F. L. Hoch.
Zionville.—W. Y. McNutt, sold to Albert E. Smith.
- INDIAN TERRITORY.—Dougherty.—Chitwood & Brentz, succeeded by J. W. Eriz.
- IOWA.—Cedar Rapids.—Herbert E. Foster, 120 South Third street, sold to Emerson & Hamilton.
Deep River.—J. G. Rogers & Co., new store.
Elion.—Phelps & Shores, succeeded by Phelps & Strickling.
- KENTUCKY.—Louisville.—R. W. Bottomly, 2400 West Chestnut, sold to Scott Bros.
Owensboro.—P. E. Tindall, 220 West Third street, sold to Martin & Veldon.
- MASSACHUSETTS.—Brookton.—H. H. Dudley, has consolidated his two stores, 168 Main street and 79 Center street, continuing at 168 Main street.
Everett.—S. R. King & Co., sold to R. E. Andrews.
Lowell.—E. F. Faulkner, Jr., 408 Suffolk street, damaged by fire.
- MICHIGAN.—Whitehall.—C. G. Pitkin, damaged by fire.
- MONTANA.—Bozeman.—Lee Warren, succeeded by Warren Drug Co., Incorporated.
- NEBRASKA.—Winnsie.—McElrath & Muirhead, succeeded by Frank McElrath.
- NEW HAMPSHIRE.—Hanover.—L. K. Mead, burnt out, partly insured.
- NEW JERSEY.—Paterson.—Silk City Pharmacy, Chas. C. Regenbush proprietor, 68 Lyon street, new store.
- NEW YORK.—Buffalo.—H. J. Diamond & Co., 330 Connecticut street, succeeded by H. J. Diamond.
Delhi.—Wm. Winter, assigned.
Gloversville.—Houck & Patrick, 14 South Main street, succeeded by Charles E. Patrick.
New York City.—Robert B. Wilson, 99 Park street, succeeded by Pio. Mari.
- NORTH CAROLINA.—Dunn.—McKay Bros. & Skinner, succeeded by Wilson & Skinner.
Greeneboro.—J. K. McIlhenny, 504 South Elm, new store.
- OHIO.—New Vienna.—H. D. Edwards, sold to James R. West.
Orwell.—E. W. Naftziger & Co., succeeded by I. C. Grabbil & Co.
Weston.—Hartman & Jones, succeeded by Hartman & White.
Youngstown.—Wm. Breden, 9 West Federal street, sold to Rudolph & Clarke.
- PENNSYLVANIA.—Birdsboro.—H. F. Stine, new store.
Philadelphia.—Henry Schmidt, 1729 South Second street, discontinued.
Shenandoah.—Matthew Stein, 29 West Centre street, new store.
- RHODE ISLAND.—Providence.—W. H. Greene, Jr., 397 Westminster street, discontinued.
- SOUTH CAROLINA.—Newberry.—Robertson & Gilder, succeeded by J. K. Gilder.
- TENNESSEE.—Bellbuckle.—C. W. Booker & Co., sold to Smart & Trolinger.
- TEXAS.—Campbell.—Gaines & Burrows, succeeded by S. G. Gaines.
Eagle Pass.—Geo. S. Harper & Co., sold to W. L. Lyman.
Quitman.—Wood & Robbins, succeeded by I. W. Robbins.
- WISCONSIN.—Merrill.—Charles Quinn, burnt out, insured.

SAFETY IN POISON SALES.

In case of misuse or accident after a sale of poison it is a satisfaction and comfort to the druggist to be able to show a clear, legal record of his connection with the incident. If such a record is inconvenient to keep; if there isn't due provision for keeping it in a business-like way, it is apt to be neglected, and neglected at just the wrong time.

The Era Poison Register makes the registry of poison sales as convenient as possible, and keeping a book for this purpose impresses the customer with the propriety and necessity for registration.

The book has space for 800 entries, providing for record of name and quantity of poison sold, date of sale, price, purpose, names of purchaser and witness, remarks, etc. It also contains a digest of the poison laws of all the states and territories, making it a handy reference work in case of doubt as to the law. The book is bound in stiff board covers with leather back. Price, 60 cents per copy, postpaid.

D. O. HAYNES & CO., Publishers,
396 Broadway, New York.

WINDOW DISPLAYS.

If you have an attractive window exhibit, or if the interior plan of your store contains some unique feature, photograph it and send us a print. We have in preparation a special supplement, which will consist of reproductions of show windows and store interiors, and we want to include in this as many good specimens as possible. Send in your contributions very promptly, that there may be no delay in issuing this sheet.

THE EDITOR.

ASK US.

Druggists who have calls for any goods which they cannot find or of which they do not know the maker or the price, are invited to correspond with us and we will supply the information whenever possible. We have perfect facilities for handling such queries and we are always glad to extend this service to our readers.

THE PUBLISHERS.

PHARMACEUTICAL LEGISLATIVE MUDDLE IN NEW YORK STATE.

As everyone knows, there is a big lot of bills before the New York State Legislature calculated to affect the practice of pharmacy in this State, either beneficially or adversely. As everyone also knows, the majority of these bills come from the territory included in or influenced by Greater New York. There are pharmacy bills, poison bottle bills, pure food bills, shorter hours for clerks bills, etc.

But one bill of particular importance comes from the State Pharmaceutical Association, and this bill is in many respects opposed to one emanating from New York City. The State bill proposes the abolition of the now existing three boards of pharmacy in the State, or rather their combination into one State board, which will have jurisdiction over the entire State and of all the cities therein. The bill from New York City proposes amendments to the charter of Greater New York, whereby pharmaceutical regulations in force in this locality are materially altered. It is easy to see that if the State bill passes, the New York City one must be killed; if the latter is enacted, the former has no show.

All of the measures noted have received careful attention and their progress has been reported in this journal. What will be the outcome, how many will pass and what will be their effect, and how many will be killed, no one can say, but the pot is boiling very vigorously.

A new phase of the problem has just been presented. The Erie County (Buffalo) Pharmaceutical Association a few days ago adopted a resolution whereby that association "goes on record as opposed to every bill pertaining to pharmacy presented to the Senate and Assembly of New York State, unless indorsed by the New York Pharmaceutical Association, which is recognized as the proper channel through which such matters should be presented." This seems like a distinct "def" from "up-the-State" to the New York City brethren.

We have always been of the opinion that it would be far better to have one board of pharmacy, one which should have jurisdiction over the entire State, and have infrequently expressed this opinion as forcibly as we could. There seems to be, however, certain points of difference or friction between what may be termed the two factions in the State and particularly the State Pharmaceutical Association, almost, if not quite, impossible of reconciliation. Politics, pharmaceutical politics especially, is a strange thing.

EDUCATION OF THE APPRENTICE.

In the annual report of the president of the Illinois State Board of Pharmacy to the members of that board, occurs the following paragraph:

"No question has received more thought from the Board, likewise the up-to-date pharmacists of our State, than that of the apprentice. That the foundation for the successful student of pharmacy and the successful business man is embodied in the apprentice none can question. That the many difficult problems likely to arise in future years, in pharmacy, must in most cases be settled by the apprentice of to-day, is another reason why he should have a good, thorough education in the English language. Higher educational qualifications for our apprentices means fewer and better pharmacists, fewer and better drug stores, and will not this meet the approval of every druggist in the State? Our present plan of judging the educational qualifications of the apprentice is a farce and a mockery. The time is now right for us to formulate some plan whereby we may know, and not guess, that the applicant has the necessary educational qualifications to begin the study of pharmacy. The trade and the public demand it, and the pharmacy law does not prevent our saying what the standard shall be."

Whether a result of this plain speaking we do not know, but it is a fact that the Illinois board has adopted much more stringent regulations concerning the educational equipment of candidates appearing before it for examination. The board now requires evidence of a sound preliminary education, as has been fully reported in these columns.

It is one of the greatest obstacles to the satisfactory progress of the pharmaceutical profession in this country that those who adopt it as a calling are so poorly equipped in the preliminaries. Our colleges of pharmacy are very lax in the matter of preliminary education as a requisite to entrance to these institutions, and most of the boards of pharmacy require no evidence on this point whatsoever. It is absurd to matriculate students who know little of common school branches and less of mathematics and the physical sciences upon which pharmacy and chemistry rest. A student who cannot calculate a simple problem in percentage or proportion most certainly is unable to comprehend the scientific lectures which he is to receive in his college course. All who have any familiarity at all with the class of young men who year after year enter drug stores to learn the business, and later expect to go to colleges, agree that until reform is made at the beginning, there is little use trying to better the college curriculum, for students would not be able to understand it. It is in this respect that the departments of pharmacy of the universities are so much superior to the so-styled teaching colleges of pharmacy, and until the latter rise to the level of the former there can be no parity between them.

If pharmacy is to be considered a profession, better education of the boys and young men who enter it must be insisted upon by all who have its control in their hands, boards and colleges alike. If we admit that the drug business is a business only, not a profession, even then the most successful man is he who is well equipped, with a knowledge of general branches of education and of business procedure. This sort of education is something that cannot be obtained in the drug store nor in the college of pharmacy. It must come through institutions devoted entirely to that purpose. The position

taken by the Illinois board is a logical one, which cannot be assailed from any quarter.

WRITE TO YOUR CONGRESSMAN.

If the retail druggists of this country really wish to have the war tax on medicines removed or materially lightened, they can do much themselves to bring about the desired result. The N. A. R. D., through its Legislative Committee, is trying to arouse druggists generally to the importance of prompt action. This committee has sent a special letter to a large number of druggists urging them to appeal to their Congressmen to support House Bill 7093, presented by Hon. Henry S. Boutell, of Illinois, which bill is now in the hands of the Ways and Means Committee of the House. Every druggist is asked to request his Congressman to give his support to this bill and to work upon the Ways and Means Committee in every legitimate way, and druggists are requested also to write directly to each member of the Ways and Means Committee, as the more letters of this nature that can be poured in upon this committee the better prospect there will be for relief.

The chairman of the N. A. R. D. Legislative Committee, who is also an influential member of the Erie County (N. Y.) Pharmaceutical Association, is likewise widely circulating copies of the resolutions passed by that local association recently, and many other local bodies of druggists have complied with the request of the parent body, the N. A. R. D., and are sending in their petitions in large number.

But there are still many who have taken no action, and it is these who are urged to act, and act at once. A strong pull and a pull all together by the 40,000 druggists of the United States ought to exert very strong influence in the direction of securing repeal of the detested tax. The members of the wholesale and manufacturing drug trade are doing their part, and the retailers can help along very materially.

IS THIS TRUE?

The report of the Senate Committee appointed to investigate into the adulteration of food and drug products is printed elsewhere in this issue. The result of the committee's investigations is nothing but what might have been expected, save in one particular. The committee says that nearly every sample of cream of tartar purchased in drug stores was found to be a fraud. Druggists and drug trade journals have always urged that the public should not purchase this article from grocers, on the ground that the grocer's cream of tartar was always adulterated; the people should go to the druggist for a pure grade. Have we been mistaken in this belief? Is it true that the drug store cream of tartar is as bad as all the rest? If there is any doubt on this point every druggist in the country ought to get out his stock of this article and submit it to the closest scrutiny. The charge made by the Senate Committee is a serious one and must be refuted, unless the facts are distinctly against the drug trade.

PHARMACEUTICAL CELEBRITIES.

CLARENCE OTIS BIGELOW.

The above is not a flattering portrait, but it is a good likeness of Clarence Otis Bigelow. This gentleman is a conspicuously successful druggist—one who likes the business and who is content to be a druggist, a good druggist. He is also the president of the New York City Board of Pharmacy and the treasurer of the New York College of Pharmacy.

In Mr. Bigelow's make up an observer will tell you there is a harmonious blending of geniality and shrewdness, a commingling of affable good nature and sound practical sense. And in all manner of intercourse with his fellows these qualities, or traits, or elements, are so nicely balanced that the man who meets him once is always glad to meet him again; and he makes and keeps many friends.

Mr. Bigelow comes of an old Rhode Island family. He is one of the "Sons of the American Revolution." He began his career in the drug business in Springfield, Mass., but while still a mere boy came to New York City. That was in 1867. He soon found and accepted a clerkship in the old-established pharmacy of George L. Hooper, at No. 102 Sixth avenue, and with the exception of a single inconsiderable period he has remained continuously in that pharmacy to the present day. He bought out his employer, Mr. Hooper, in 1880; since which year he has de-

voted his time and energies to the expansion of the business. In 1880 he employed one licensed clerk, one junior clerk and one boy. To-day he employs fifteen persons, among whom are included seven registered pharmacists. He has a large prescription business and a flourishing trade in those articles of which the druggist is the legitimate purveyor. In addition to the business of selling drugs and medicines, Mr. Bigelow conducts a laboratory in which are manufactured all the galenicals and a hundred or more preparations from his own formulas.

Mr. Bigelow attributes his success largely to two facts: he keeps his capital invested in his drug business, and he selects and keeps the best men as clerks and assistants. He has made these practices his business principles. As fast as his capital has increased he has put it into his pharmacy. He carries a large stock, both in variety and in quantities. He selects his clerks with great care, and is proud of the fact that they like to stay. His chief clerk has been with him twenty years. In that time he has helped to start several of his men in business for themselves, but it is his boast that none has ever left him to take a clerkship in some other pharmacy. Among the regular patrons of "Bigelow's Pharmacy" there to be found many families which bought their medicines there when Mr. Bigelow first became its proprietor. His good service, honest dealing and unflinching courtesy have kept their custom through the years.

PLEASED WITH THE BLUE BOOK.

Milwaukee, Wis., February 17, 1900.
The Pharmaceutical Era: I am just in receipt of the Era Blue Book. It is absolutely the best and most complete price list of all price lists, and I shall do all I can to recommend it to my fellow buyers. It's a good thing. Push it along. I thank you many times for your kindness.
SAMUEL A. SCHWANDT.

New Brunswick, N. J., Feb. 9, 1900.
The Pharmaceutical Era: We are in receipt of the Blue Book, and wish to compliment you upon the successful carrying out of your idea. We believe that the Blue Book should be in the office of every druggist throughout this land.

JOHNSON & JOHNSON.

Martin Tenn., Feb. 12, 1900.
The Pharmaceutical Era: I do not wish to express too much impatience, but would be glad to have the Blue Book come forward at once. I am a great admirer of the Era. I regard it by far the best drug journal published. Rush my Blue Book.

J. A. HINTON, M. D.

Baltimore, Feb. 10, 1900.
The Pharmaceutical Era: It seems to me that every druggist ought to possess your Blue Book as it is worth the money without the Era. I wish you success in the future for your great enterprise.

A. C. HUTHWELKER.

New York, Feb. 8, 1900.
The Pharmaceutical Era: You have done extremely well in getting out the first issue of your Blue Book, and we are pleased to enclose our check in settlement of our account in the matter.

H. PLANTEN & SON.

New York, Feb. 14, 1900.
The Pharmaceutical Era: The Pharmaceutical Era and Era Blue Book will make a better business man of every druggist. This is what they need.

JAMES WILSON.

Pullman, Ill., February 19, 1900.
The Pharmaceutical Era: Permit me to thank you for the Blue Book received to-day. I consider it a most valuable reference work.

CHAS. B. WOOD.

New York, Feb. 17, 1900.
The Pharmaceutical Era: Accept thanks for Blue Book received. It is just the thing that the trade has needed for some time.

A. H. MISSILDING.

New York, N. Y., Feb. 10, 1900.
The Pharmaceutical Era: Just received Era Blue Book. Many thanks. It surpasses my anticipations.
SIDNEY FABER.

Philadelphia, Feb. 14, 1900.
The Pharmaceutical Era: The Blue Book is just what we want. It is up-to-date.

W. W. CHALFANT.

Harrisonville, Mo., Feb. 12, 1900.
The Pharmaceutical Era: I think your journal a dandy.

WALTER J. KEMPER.

Continued from Feb. 22.

What Can Druggists Do to Increase Their Profits?

RETAILERS, WHOLESALERS AND MANUFACTURERS DISCUSS THIS IMPORTANT QUESTION.

THE CAUSES AND THE REMEDY.

A TRUST IS THE ONLY SALVATION.

Nothing would give me greater pleasure than to be able to tell your readers what druggists can do to increase their profits. Were I able to give such an answer as your query implies I would not be engaged in competing for the meager profits of the retail drug business. The man who could teach the unsuccessful how to succeed, who could snatch the dismal failure from the slough of despond and start him on the highway to fortune, could command such a colossal sum for imparting his information as would beggar Cæsus by comparison.

Beyond certain rudimentary principles applicable to all the means of livelihood, there is none which will insure universal success or none which failure always follows.

All the roads leading to fame or fortune are strewn with the wrecks of hopes unrealized. Disappointment and drugs are not so inseparably connected as to give the dealer in the latter a monopoly of the former. All lawyers, doctors, preachers, merchants and editors do not succeed, then why should all druggists? Many men fail because of unfitness for their adopted calling. Others for the reason that they are out of joint with their environment. A change of occupation in the one case and of location in the other might fetch happier results.

To come closer to our nuttin:—let us consider the present condition of our own business—the retail druggist. So general is the complaint from all quarters regarding the profits of pharmacy that they are conceded to be well founded. The business is suffering from a combination of causes, either of which must prove disastrous to many of us.

The first and most important is the manufacturing pharmacist. When the making of pills, plasters, extracts and syrups became important enough to employ steam retail pharmacy received a staggering, if not a fatal, blow. The retail druggist's manipulation may be ever so dexterous, but he cannot compete with steam. His laboratory has been contracting, while that of the steam man has been expanding in geometric proportions. About the time the steam pharmacist made his debut, the colleges of pharmacy began to develop and increase in numbers, offering attractions which brought into the ranks of pharmacy many young men who without the college curriculum would have engaged in other occupations.

These two factors, loss of occupation and increased competition, constitute the upper and nether millstones which are grinding the financial life out of the practice of pharmacy.

Both of them, nevertheless, are essential to the progress of our art. The machine lessens the cost of production, and excess of registered pharmacists permits the public to exercise the right of selection, and the fittest survive. Thus is one of the laws of nature which works for the perfection of art and species made to show its "red tooth and nail" in promoting the science of pharmacy. If we would recognize the workings of this law, and when one has been winnowed out with the other chaff remain there, it would be all the better for the wheat.

Among the suggestions for our relief, "expansion" is often named. Add more side lines, they say. Let us see what we keep now in addition to the several thousand legitimate items of a drug store. We have tobacco, liquors, candles, stationery, magazines, newspapers, fishing tackle, garden seeds, paints and window glass, post

offices, telephone and telegraph offices, agencies for laundries and express companies, slot machines for all kinds of purposes, kodaks and bicycles, jewelry, musical instruments and appliances, wall paper, hot drinks, sandwiches, cutlery, optical instruments, and last, our show windows are given to the theatre poster. To my mind, if side lines would fetch the coveted shekel, we should all be bankers here this. What is the remedy? How can the business be made fairly profitable to those giving the best of their lives to it?

For destructive competition such as now afflicts the retail druggist there is but one efficient remedy—the Trust. For other branches of over-burdened trade the "trust" has brought relief. Where is our altruistic friend with executive capacity to organize the retail drug business into a trust that will save us from ourselves. The trust is the only salvation for the weak and incompetent. Let every town have its drug trust, and relief is easy.

W. S. THOMPSON.

Washington, D. C.

WORK, STUDY, ADVERTISE.

What a pharmacist can do to increase business and profits.

First—work.

Go to his business at seven to eight each morning and apply himself closely during the day. Keep his clerks busy as well as himself, and particularly keep himself busy, as clerks follow into the ways of their employer. Spend no time idly—talking to people who come into the store, reading the daily papers during business hours (a few minutes at the noon hour will suffice for them, nor being neighborly. Do not procrastinate, but when something is to be done, do it. Be systematic.

Second—study.

Not only keep the mind refreshed on the old, but be alert to learn of the new. Read thoroughly, advertisements and all, of at least three or four drug journals, which should be carefully selected to get variety. From them get ideas of use in his business for buying, manufacturing, advertising, displaying and selling. Keep memoranda of these ideas and put each down at once, as he would enter an item on the "want list."

Third—buying.

Be conservative in ordering; it is easier to order twice than to dispose of surplus stock.

Be courteous to traveling salesmen, but neither take their time nor his own if nothing is wanted from them. Beware of special offers of proprietary goods.

Fourth—advertise.

Liberally, but judiciously.

Fifth—organize.

The druggists of every community should have a full understanding, and each with entire confidence in the others. Gain the confidence of competitors, and that of the public will follow. There is a town, known to the writer, where these conditions exist—the druggists are cordial and friendly at all times. It is agreed among them not to cut prices on proprietary goods, and on many staples where there might be a tendency to sell too close, a price is made allowing a fair profit. These druggists take no unfair advantages of each other and are careful to take none of the public. An arrangement has existed between them for nineteen years, that only one store be kept open on Sundays, each taking its turn. During the winter all close at 8 p. m., except Saturdays. Other communities can do as well if they will; if all cannot be

accomplished at once then find some point on which all can agree. Make this a stepping stone to others; adhere to it zealously, and when all is going smoothly try to get together on something else—persevere. Have confidence in competitors and be frank with them after an agreement is reached. If one is reported to have broken faith, take no one's word for it, but his own; see him personally at once. It will usually be found the report was false, and even if not, matters can be adjusted and so prevent a war.

Work continually, study how to work, buy with care, advertise judiciously and organize with confidence.

He who talks continually will occasionally say something good.

He who works constantly will surely accomplish something.

Circleville, Ohio.

J. G. WILDER.

MAKE YOUR OWN TOILET SPECIALTIES.

I have just a word or two to say in connection with the agitation now going on in your valued paper on "How to increase profits." My view of why the profits are not increased is because the vast majority of the druggists make no attempt to. That's the whole thing in a nutshell. The day for making good profits on patent medicines and advertised toilet articles has gone by, as the margin of profit has been materially reduced by department stores and other cutters and their success is due mainly to the fact that after the prices have been cut they display them properly.

The druggist must offset this loss in sales and profits. You ask how can this be done? It is very simple.

The toilet department is quite a factor in every well-regulated drug store. The goods in this department can be made by every druggist with only a very small outlay of money and a very little labor, and the products will be equal to any standard goods in the market, the latter now being retailed with a very small profit to the druggist.

Let the druggist make up such goods as extracts, toilet waters, hair tonics, face lotions, tooth washes, etc., etc., put them up in neat packages (for in the present day he can buy bottles, labels, etc., at low figures), color such articles appropriately and attractively, display them with a neat price ticket, recommend them just the same as he would any other preparation he handles and he is bound to sell them.

He must not, however, lose sight of the fact that after these goods are properly put up, the displaying of them is next in importance, which will insure increased sales and consequently increased profits.

I come in contact with many who have adopted this plan and they have solved the mystery of "How to increase the profits in a drug store."

P. A. BABY,
Evergreen Chemical Co.

New York.

GOVERNMENT SHOULD REGULATE PHARMACY AND MEDICINE.

You ask me for an expression of my views as to the methods of increasing the profits of retail druggists. To be perfectly frank, I fear that I am not in a position to offer any advice of value except from an individual standpoint. Until the National Government recognizes the importance of the practice of both medicine and pharmacy by establishing a commission to that effect, how can we expect equitable protection for the public and for the profession? To illustrate in a more practical manner what I mean. In the District of Columbia, at the seat of the Government, this past summer, innocent, honorable and conscientious druggists were made to suffer through newspaper notoriety furnished by the Health Department of the District for an unfortunate condition of affairs caused by the neglect of a few druggists together with the varying conditions of an ethereal compound which is susceptible to a high temperature.

Possibly you may say that this is a theoretical point. Let me make it a little more practical, and tell you that the manager of my retail store informs me that more

than a dozen customers express themselves as apprehensive of making purchases for the reason that they had read in the newspapers that druggists were selling adulterated goods. What more can you expect then under such circumstances?

J. S. FYREE.

Washington, D. C.

SIX RULES TO OBSERVE.

What can druggists do to increase their profits? I can answer the question.

First. Be obliging and pleasant to your customers.

Second. Handle as few patent medicines as possible.

Third. Put up your own sarsaparilla, cough syrup, headache powders, ague cure, corn cures, etc., and recommend them to your patrons.

Fourth. Don't bother your head too much to please the medical fraternity. Prescribe when you have a chance, and you will gain the confidence and good will of your patrons. Over half of the physicians carry their own medicines.

Fifth. Keep your store clean and have everything up-to-date.

Sixth. Keep a good supply of candy on hand to give to the little ones, and always have a pleasant word for the youngsters.

If my fellow druggists will do these things they will have no trouble to pay their bills, and at the end of the month will be able to put a few dollars in the bank.

F. D. NEURO.

Baltimore, Md.

REMOVE THE WAR TAX.

"How to Increase Profits." Write to your Congressman; call special attention to the injustice of Schedule B of the war revenue law, and ask his influence for its repeal.

Ask ten or a dozen other voters to write similar letters.

If every retail druggist will do this and do it at once, schedule B can be repealed at this session of Congress. If not repealed now it will stand for ten years. This is reasonably certain.

Don't expect the committees of the different trade associations to do all the work, and don't rely on petitions but write personal letters, and write promptly. Sign petitions, as a matter of course, and ask your friends to do so.

Pittsburg, Pa.

(For the Era.)

PURE SUGAR.

Pharmacists generally recognize it as a fact that the market does not afford a satisfactory sugar, one suited for all the purposes of our business. The granulated sugar more generally used contains ultramarine blue or other coloring matter which is liable to cause fermentation, even if not otherwise objectionable. The grade known as "Confession's A" is more desirable on account of the absence of this coloring matter, but is rather moist for accurate pharmaceutical work, and on keeping hardens in the barrel.

An article of the dryness of "granulated" and of the same general characteristics, except without coloring matter, would be an acceptable article to pharmacists. The market does not afford such an article because there has been no demand. There are no difficulties in the way of making such a sugar, simply leaving out the coloring matter, and the cost would be no greater than now paid for the colored. Why not then create a demand for such an article as we feel we need? Let requests be made by druggists generally when buying sugar for such a product as described. Ask the jobber to communicate to the factory that such a demand has been made. If such course be generally followed the manufacturers will recognize the existence of a demand and will soon undertake to meet it.

Woodstock, Va.

N. B. SCHMITT.

(For the Era.)

FROM THE FRENCH CAPITAL.

Paris, February 24.

The Senatorial Elections.

took place last month. Senator Poirrier, who was re-elected at Paris, has large chemical works at St. Denis, and his exhibit will be one of the features of the French Chemical Exhibit at the 1900 World's Fair.

The pharmacist Senator, M. Cesar Duval, was also re-elected; he represents a portion of the Savoy department.

The Pelletier-Caventou Statue

represents Caventou (on the left) showing the balloon containing the precious alkaloid to his collaborator Pelletier. Both are draped in their official robes as professors of the Paris School of Pharmacy, and our illustration (photographed from the model which sculptor Lormier has just completed in full size) gives an excellent idea of the monument to which our friends at Philadelphia and New York have subscribed, and at the inauguration of which, it is hoped, many American pharmacists will be present. The inscription on the front of the pedestal will be "To the pharmacists Pelletier and Caventou, professors at the Superior School of Pharmacy at Paris, authors of the discovery of quinine." On the rear of the base one will read:

"Pelletier, born at Paris in 1788, died in 1842.

Caventou, born at St. Omer in 1795, died in 1877.

By their precious discovery and by their disinterestedness they have merited the title of Benefactors of Humanity."

The inscriptions "International Subscription, 1897-1899," and "This monument was erected in 1900 in presence of delegate pharmacists from all nations," will occupy the two remaining faces of the pedestal.

The total sum now subscribed amounts to over \$5,400. The English contributors had hitherto been conspicuous

M. POIRRIER.

by their absence, but the British Pharmaceutical Society has just come handsomely forward.

It is evident that a collective subscription of this kind from abroad, even if small in amount, has the advantage of familiarizing thousands of French pharmacists with the name of a great society and of assuring them of its sympathy.

For the Lavoisier Statue

M. Berthelot recently informed the Academy of Sciences that the United States had been particularly liberal, more than 500 American chemists having subscribed. The site (just behind the Madeleine) is already surrounded by a boarding, and sculptor Barrias has the work well in hand. Nearly \$20,000 has been raised altogether.

Other Monuments.

A committee has been formed to raise a memorial to the late Senator Scheurer-Kestner; \$10,000 has already been subscribed.

Pasteur's statue, by sculptor Falguière, is to be placed in the Champs-Élysées, at the entrance to the new avenue leading to the Exhibition. It is proposed to fix the inauguration for April 15 (the opening day of the Paris Exposition). The monument represents Fame crowning the great chemist.

A committee has been formed at Strasburg to place a medallion on the house inhabited by Pasteur in 1855 (rue des Veaux), when he was professor at the Faculty of Sciences.

The Paris Society of Biology celebrated its centenary at the Sorbonne (faculty of Sciences) six weeks ago, and placed a commemorative slab on the laboratory of Claude Bernard. It may not be generally known that the great savant began life as a drug clerk, and served in a Lyons pharmacy for two years or more.

M. Benjamin Raspail, recently deceased, has left \$40,000 to form a museum of relics of his father, F. V. Raspail (the celebrated pharmacist-politician of half a century ago), almshouses, etc., just outside Paris.

Parmentier at the Pantheon.

M. Barille, announced to the Paris Society of Pharmacy that MM. Klotz, Legrand and Laloue has proposed to the Chamber of Deputies that the ashes of Parmentier, the pharmacist, should be transferred to the Pantheon. The members of the society present warmly approved the project. The portrait of Parmentier, by the way, hangs on the walls of the hall where the society meets monthly. His statue stands in the front garden of the Paris School of Pharmacy, and there is another at Neuilly. This fashionable Anglo-American suburb of Paris was a sandy plain when Parmentier obtained its use from the French King to cultivate and demonstrate the alimentary value of the potato. Potato soup still figures on French menus as "Potage Parmentier."

Cut Prices Discussion Tabooed.

The Committee of the International Pharmacy Congress of 1900 has decided that the question of cutting prices of patent medicines shall not be discussed. One can understand their motive, for the subject is a terribly sore one here, and the "specialistes" and "anti-specialistes" can rarely discuss it calmly. But many are disappointed at the decision, and question whether it will be respected by French and foreign delegates. M. Denizé, writing in the "Bulletin du Sud-Est," quotes Professor Remington's question at the Brussels International Congress as a proof of the lively interest taken in the subject. There is even some talk of organizing a special congress to discuss the matter thoroughly before the foreign delegates all leave Paris.

A Royal Hostelry.

The French government has long been seeking a suitable house in which to lodge the various crowned heads who may visit the 1900 exhibition. It has been finally decided to rent the town mansion of the late Dr. T. W. Evans, American dentist, at the corner of the Avenue du Bois and the Rue de la Pompe. The lease has been drawn up for ten months, and the landlord is the City of Philadelphia, to whom the doctor bequeathed this property. Royal guests will not be a novelty in this house. On the first floor may still be seen the historical room where the dethroned Empress Eugenie was sheltered one night in

PELLETIER-CAVENTOU STATUE.

September, 1870, while the doctor organized her escape to England. The whole of the mansion is being redecorated and refitted; Gobelin's tapestry and art furniture being forthcoming from the national storehouses. The particular room in question is being furnished as a study.

M. Robespierre.

pharmacist at Carvin, was found dead in a ditch by the side of the Northern Railway line. He had spent New Year's day at Lille, and had been seen in a drinking saloon (as well as at a wholesale druggist's) before he took the train home. It is conjectured that he fell from the carriage. He was a collateral descendant of the famous "sea-green incorruptible," who was so conspicuous in French history at the time of the Great Revolution.

PARMENTIER.

AN EXCELLENT HECTOGRAPH MASS is prepared from glue in the following manner, according to Der Drogist: 8 parts of glue, which must be transparent and colorless or only light yellow, is allowed to stand four or five days with 20 parts of strong vinegar (8 to 10 per cent.) when the glue will be thoroughly softened. The mixture is then warmed gently on a waterbath until the glue is completely dissolved, 35 parts of glycerin added and the heat continued at 80° to 90° C. until the liquid is uniform. It is then poured through a cloth into the tin cases, in which it is allowed to cool slowly. If the surface after cooling should be uneven or show air-bubbles, a very little alcohol may be poured upon it and ignited. Not more than just sufficient to moisten the surface thoroughly should be used. This composition has the advantage that it keeps well, yields a great number of very distinct copies and has a bright appearance. Hectograph compositions made from glue have come into discredit for several reasons, and the much more expensive gelatine has been largely used instead, but it is claimed that this formula will yield a product fully as good as those prepared from gelatine at a much lower cost. (Drog. Ztg.)

ADULTERATION OF SCAMMONY with litharge and starch has been observed by M. T. Baucher (Rev. int. fals.) A specimen of this drug aroused suspicion because of the presence of small cavities, which contained well-developed small, blue-gray crystals. The ether-soluble constituents of the sample amounted to only 41.2 per cent., against 75 to 80 per cent. in good products. It yielded 16.6 per cent. of ash of orange color, pure scammony giving 3 to 5 per cent., of a white or grayish-white ash. The residue insoluble in ether contained, in addition to the crystals mentioned, a large proportion of starch, which was identified by the iodine reaction, as also by conversion into glucose by means of dilute sulphuric acid, and treating with Fehling's solution. The crystals were soluble in nitric acid and responded to the reactions for lead. (Ztsch. f. Pharm.)

VANILLIN AS REAGENT.—A solution of 1 part vanillin in 100 parts concentrated sulphuric acid, according to W. Ellram, gives characteristic color reactions with various alkaloids, resins and essential oils. Maracabo balsam of copaiba is colored an intense orange-red, gradually passing to violet. Gurjun balsam gives the same coloration without becoming violet, but after several hours changing to pale brown. Oil of copaiba becomes violet-red, rapidly changing to a dark orange-red. Copalvic acid acts similarly to the Maracabo balsam. Colophonium gives a brownish-red color passing to violet. Camphor gives a rose-red color which changes in about 24 hours to gray, passing through various shades of red and violet. (L'Union Pharm.)

(Special Correspondence.)

BRITISH DRUG NEWS.

London, February 23, 1900.

The Chemical Trade and the War.

A royal proclamation was issued on January 11 forbidding the exportation, and even the coastwise carriage, of picric acid, carbolic acid, cresol and trinitro-cresol, and caused considerable excitement in the trade. The reasons assigned for this action of the British Government were that the Transvaal is receiving most of its ammunition from the Continent, and as England manufactures most of the crude phenols, etc., from which the explosives are made, it was hoped that some check would be placed on the Boer supplies. It was also hinted that in view of possible European complications Great Britain did not desire to place facilities in the way of Continental countries (particularly France) for acquiring large stocks of explosives. It was stated in another quarter that the British stocks of lyddite, etc., are not too large, and that the Government wishes to keep in the country all the material possible. The Chemical Section of the London Chamber of Commerce were not long in taking up the Government decree, as this absolute prohibition was likely to seriously affect the drug trade. For not only by the terms of the decree was the export of the articles named forbidden, but even their transport by sea to places within the United Kingdom like Belfast or Glasgow. The most largely attended meeting of the Chemical Section which we recollect was held on January 22. Thomas Tyrer, the chairman, presided, and among those present were David Howard (Howard & Sons), G. B. Francis (Hearon, Squire & Francis, Limited), Charles Umney (Wright, Layman & Umney, Limited), F. H. Lescher (president of the Drug Club, Evans, Lescher & Webb), W. R. Arnold (Burgoyne, Burbidges & Co.), T. P. Morson (Morson & Sons), T. Christy (Christy & Co.), etc. S. B. Boulton, chairman of the Tar Distillers' Association, was also present. It was recognized that it was useless to expect any alteration which would not entirely prevent these goods reaching the Transvaal. Great Britain is the main producer of carbolic acid, it being largely made from gas residues. Picric acid, however, is made mainly in Germany, and it was also pointed out that carbolic acid could be produced from benzol, and that if British supplies of the acid were cut off, Germany would probably start making for herself. Another aspect of the case was that German salicylic acid, salol and salicylates would be no longer obtainable, or only at much enhanced prices, and that hence it would also probably result that the manufacture of some German synthetic remedies would be seriously impeded, as much of the crude material from which they are made is British and included in the prohibition. The forbidding of coastwise trade is merely a means to an end and shows that the Government intends to make the order effective.

The Isle of Man Pharmacy Bill.

This bill passed the House of Keys, the local House of Commons, on January 16. The pharmacists of the island have secured amendments to the bill which will make it compulsory for every shop owned by a limited liability company to be managed by a qualified person. The qualifications for practice are (a) being in business in the island at the time of the passage of the act; (b) having been at the time of the passage an assistant for ten years in the United Kingdom, including one year in the island; (c) the possession of either the British or the Irish diploma. Carbolic acid and phosphorus will by another amendment be only allowed to be sold by pharmacists. In Great Britain neither of these articles has its sale restricted.

Myrrh.

G. F. Merson, F. C. S., read two practical papers on myrrh before a meeting of the North British branch of the Pharmaceutical Society on January 17. The British Pharmacopoeia gives no ash limit or spirit solubility figures for myrrh, although laying down limits for asa-fetida and kumbege. Mr. Merson found the ash to vary from 15.7 to 2.8 for commercial specimens, and the percentage of the drug soluble in 90 per cent. alcohol to range between 33 and 48. Sand was largely accountable

for the variations. His results show: (1) that myrrh can readily be obtained of good quality; (2) that the ash should not exceed 5 per cent, and that this should be almost entirely soluble in dilute HCl; (3) that not more than 60 per cent. of the gum-resin should be insoluble in 90 per cent. alcohol. The second paper dealt with the tincture of myrrh. In the 1855 B. P. this tincture was made by percolation, 2½ ounces to the pint. In the 1898 volume maceration (4 ounces to the pint) is the process. Merson gives figures to prove that percolation is the most rapid and effective process, using the drug in No. 40 powder and packing carefully. High colored tinctures are made with inferior myrrh.

Pharmacy Act Prosecutions.

Some few months ago the Pharmaceutical Society prosecuted a Worcester florist named White for selling a weed-killer containing arsenic. The facts were that the defendant took orders for the article and sent them to the Boundary Chemical Company, of Liverpool, who forwarded direct to the purchaser, White receiving a commission on the sales. The County Court judge held that in these circumstances White was not the seller, and therefore was not liable under the Pharmacy Act. The Pharmaceutical Society appealed, and on January 16 the Court of Queen's Bench upheld the County Court decision. The Pharmaceutical Society will probably carry the case to the Court of Appeals, as, if the decision stands, an easy loophole will be offered for evading the Act, particularly in the case of companies with several shops in the same town who could take orders for poisons at branches with no qualified assistants and despatch the goods from a branch with a qualified manager.

Society of Public Analysts.

The twenty-fifth anniversary dinner was held on January 24. The president, W. W. Fisher, presided, and among those present were R. T. Prowse, of the Analytical Department of the Customs; Dr. T. E. Thorpe, president of the Chemical Society; Dr. Thomas Stevenson, president of the Institute of Chemistry; W. Martindale, F.L.S., president of the Pharmaceutical Society; Dr. Stocker, master of the Society of Apothecaries; Dr. H. S. Armstrong; E. M. Holmes, F.L.S., president of the British Pharmaceutical Conference; P. W. Squire, B. E. R. Newlands, Otto Hehner, etc.

Strychnine Hydrochloride and Sodium Arsenate.

It has been proved that when solutions of these two salts are mixed, strychnine is set free and crystallizes out. Previous experiments had suggested that this result was due to sodium oxide in the arsenate, or to the action of hydrolysis producing sodium hydroxide. J. R. Hill, at a meeting of the Pharmaceutical Society, held in Edinburgh on January 17, disposed of both these theories and argued by analogy from the interaction of sodium phosphate and HCl that a double decomposition takes place according to the equation:

Chemists' Ball.

The thirty-fourth annual Chemists' Ball was held in London on January 17. It was a very successful function, about 220 ladies and gentlemen indulging in the terpsichorean art to the strains of Dan Godfrey's band. The attendance showed a slight falling off, no doubt due to the war and the prevalence of influenza. W. Martindale, president of the Pharmaceutical Society, presided at the supper and proposed the sole toast, "Success to the Chemists' Ball and the health of the ladies." W. Warren, the honorary secretary of the Ball Committee, replied.

Chemical Society.

The meeting of the Chemical Society on January 25, the first of the new year, was but poorly attended. Dr. T. E. Thorpe, the president, was in the chair. The papers were not very important. The principal one was by Dr. E. C. Szarvasy, on nitrogen hydrides, in which he gave figures for a number of hydrides obtained. It was incidentally mentioned that although from volumetric figures it appeared that a condensed form of nitrogen existed (N₂), all attempts to isolate it had up to the present failed.

The Pharmaceutical Society and Unqualified Assistants.

The Pharmaceutical Society does not hesitate to prosecute the unqualified assistants of qualified pharmacists who infringe the law by selling poisons. At Birmingham recently the society proceeded against a chemist's son, and also an assistant of the same chemist. The case against the son failed, as the evidence of identity was not conclusive, but the assistant was fined.

Borax.

The first annual report of the Amalgamation of Borax Companies, which was founded at the beginning of last year under the title of Borax Consolidated, shows that the company had had a very successful twelve months, the profits amounting to £243,000, over £100,000 more than foreshadowed in the prospectus. Large sums were placed to reserve and payment of preliminary expenses, and a dividend of 12½ per cent. was declared.

Irish Examinations.

The January examination results show that four candidates passed the druggist examination, and six out of sixteen were successful at the license examination for pharmaceutical chemists.

London Examinations.

The January examinations resulted in six out of nineteen candidates passing the Major examination and 7½ out of 314 passing the Minor. The percentage of failures is appreciably higher than usual.

Chemist's Will.

Mr. G. E. Waterall, a Nottingham chemist who died recently, has left property valued at nearly \$100,000.

POST-DATING AND LONG CREDIT.

The retail dealer is very frequently injured by post-dating and long credit. A salesman representing a long-time jobbing house succeeds, by the inducements of post-dating and four months' time, in selling the retailer about twice as much as he ought to buy. Too frequently the retailer does not recognize this fact until he has received the invoice and opened up the goods. Then he becomes alarmed. He is seized with the fear that he will not be able to dispose of enough of the goods to be able to pay the bill by the time it falls due. In his anxiety of mind he takes risks. He sells to his customers on time, even making credit sales that he would not have thought of making had he bought his goods as he needed them from a short-time jobbing house, or for cash. The usual result is that when the post-dated bill falls due, the merchant has neither the money to pay it, nor yet the goods on hand. Accordingly, he is either compelled to ask for an extension or to borrow the money with which to pay the bill.

From experience, I have found that the long-time, post-dating wholesale houses are an actual injury to the trade, and the real enemy of the average retail merchant, while on the other hand the cash houses are his true friends. The retailer who buys for cash and sells for cash never fails. He usually accumulates a handsome fortune. He is a benefactor to mankind, for he can and he does sell to the customer cheaper than would be possible under other conditions of buying. The honest consumer who wants to pay for what he gets is greatly benefited by the cash system.—(H. C. Hargey, in Business.)

SOZOIODOL AS REAGENT FOR ALBUMEN IN URINE is proposed by G. Guerin (Jour. Ph. and Ch.) in form of a 10 per cent. solution. To the filtrate from 8 to 10 Cc. of the sample 10 to 15 drops of reagent are added. Albumen causes a white, flocculent precipitate or, if present in small quantity, a milky turbidity. Alkali urates and uric acid do not interfere, albumoses, peptones and most alkaloids are precipitated, but the precipitates re-dissolve on warming. Only the precipitates formed by nuclein-albumins remain on heating the liquid. The reagent should be kept in amber-colored bottles, as it is decomposed when exposed to the light. (Zisch. f. Pharm.)

HAIR TONIC.—Gessner recommends in Rev. de Therap., the following: Resorcin, 25; chloral hydrate, tannin, of each, 5; tincture of benzoin, 1; castor oil, 4; and alcohol sufficient to make 250 parts. (Apoth. Ztg.)

(Contributed to the Era.)

THE APOTHECARY OF THE TWENTIETH CENTURY*.

Time: 1950.

Place: N. A. R. Dville, formerly called Cincinnati.

Characters:

Hon. Vanderbilt John Pillroller.

Madame Vanderbilt John Pillroller.

Mr. A. Blow, representing Wholesale Druggists' Exchange.

The Hon. V. J. P. is seated in his luxuriously appointed office, busily engaged in making out his check for \$990.-99.00, which he has promised his daughter as a wedding gift for to-morrow.—Enter Mr. A. Blow.

Mr. A. B.—“Ah! Good morning, Mr. V. J. P., you are looking exceedingly happy and prosperous this morning.”

V. J. P.—“Good morning, Mr. Blow, very glad to see you. Just one moment, if you please. Kindly take a seat. Here are the morning papers.” (After he finishes writing his check).—“So, that little business is done, and a mighty agreeable task it was.”

Mr. A. B.—“Why, Mr. Vanderbilt J. Pillroller, you seem to be in excellent spirits this morning; may I inquire the cause of your rejoicing?”

V. J. P.—“Well, Mr. Blow, I don't mind telling you, as we have been so very intimate for so many years, but the fact is, my daughter is to be married to-morrow to the Prince of Wales, a very estimable young man, I can assure you, and I have just written a check for one dollar less than one million as a wedding gift to the young couple.”

Mr. A. B.—“Well! well! Mr. Vanderbilt, you certainly have my heartiest congratulations, and I know the future Princess, with her beauty, grace and talent, and with her father's millions, will certainly be an honor to the Royal Family. I must hasten to congratulate the Prince of Wales on being so lucky and fortunate in obtaining the hand and heart of the charming daughter of one of our multi-millionaire retail druggists.”

V. J. P.—“Yes, I truly thank you for congratulations, and I look forward with great pleasure to the coming winter, as I intend to spend several months in England with my wife, where we have been invited to be the guests of our royal son-in-law. My! my! How times have changed. Why, do you know, Mr. Blow, sometimes I hardly can realize the evolution that has taken place in the retail drug business since I was a boy in the drug store. Why, sir, in those days the average druggist plodded along from early morn till late at night, day in, day out. No Sundays, no recreation; always working between the four walls of his store, afraid to even think beyond those four walls, lest the dear public might take offense and withdraw its meagre patronage, and after working out the 365 days in a year should he be so fortunate as to have obtained enough of the dear public's favors to enable him to pay for the merchandise he bought, and possibly sufficient above to eke out a living for himself he would feel truly grateful and be fully prepared to serve out another sentence of 365 days. Yes, sir, I actually remember when we used to sell those so-called patent medicines, and then try to cut each other's throat by selling them at cost, or even lower, under the mistaken idea that we would gain custom thereby. Yes, I can even recollect when we used to think it was absolutely necessary to curry favor of physicians by presenting them with boxes of cigars, or their wives with bottles of perfume, also supply the physician with costly prescription blanks, under the idea that at least some of our stores with orders for medicines, when, as a matter of fact, the physician would more likely employ these blanks to wrap up some tablets which he happened to have in his office and give same to the patient in order to save himself the trouble of writing a prescription, or, perhaps, save the patient the cost of the medicine. In fact, these

blanks would be used for almost any purpose in place of the one which the poor druggist bought them for.”

Mr. A. Blow.—“Well, the druggists must have had a hard road to travel. I am glad I was not connected with the drug business during those troublesome times. But to what do you ascribe the greatly bettered condition of the drug trade?”

V. J. P.—“Well, Mr. Blow, the first step toward improvement was the formation of the N. A. R. D. a year or two before the close of the last century. That is the same association that to-day wields such a powerful influence in politics that all the national parties will pass almost any law if by so doing they can be assured of the support of the N. A. R. D. at the election. Why, even cities are named after the N. A. R. D., thus we have Nardsburg, Nardstown, and even our own beloved city derives its name, Nardsville, from the same source, very likely because the first annual convention of the N. A. R. D. was held in this city. After about five years' existence the N. A. R. D. succeeded in having a national law passed making it a felony for any proprietary medicine maker to fail to publish on the label the exact working formula of his medicine. After a few years Congress passed a law taxing publishers of newspapers and periodicals the sum of \$1,000 for every page of their publications upon which appeared an advertisement of any medicine, or anything pertaining to medicine. In the year 1921 the N. A. R. D. had the law enacted making it a felony for any physician to dispense. This and various other laws which were enacted through the efforts of the N. A. R. D. brought the drug business to its present prosperous condition. But not alone the apothecary is to be congratulated, but also the physician, for while it is unlawful for the physician to dispense, it is equally unlawful for the druggist to prescribe. And I assure you, Mr. Blow, neither the physician nor the druggist does anything to mar the pleasant relations now existing between these professions. You see, through the combined efforts of the N. A. R. D. and the different medical societies, the legal rate for medical advice was fixed at \$3 per visit, while the legal rate for compounding prescriptions was fixed at \$1 each; no one prescription exceeding two days' treatment. And Mr. Blow, where thirty-five or forty years ago I used to consider an average of fifteen prescriptions per day a fair business, even at demoralized prices, last month I had an average of 150 prescriptions per day, and this is ordinarily a rather healthy season. But, Mr. Blow, here I am busy telling you all about the olden times, when no doubt I am taking up your time unnecessarily, for of course you came after your order.”

Mr. A. Blow.—“Well, Mr. V. J. P., I have been highly entertained by your recital of the woes of the druggists of olden times, and they have my sincere sympathy. I am grateful that we live in a more advanced age. But to the point, what can we send you up this afternoon?”

V. J. P.—“Now, Mr. Blow, of course I know that your firm still subscribes to the principles of the N. A. R. D., but it always gives me a certain amount of satisfaction in seeing the yellow salesman's card. You see I have my blue membership card framed right above my desk.”

Mr. A. B.—“I beg your pardon, Mr. V. for not showing you the card sooner, but you know I could not afford to be without one. Why, sir, I could not sell a dollar's worth of goods in Nardsville in a year.”

V. J. P.—“Well, I am glad of that; it shows we are as strong as ever. Never mind, Mr. Blow, if you do waste an hour or so of your firm's time here, the order I shall give you will make up for it. By the way, will you join me in a small bottle?”

Mr. A. B.—“Why, with pleasure, Mr. V.”

(Mr. V. has a small bottle of Mumm's Extra Dry brought up, nicely packed in ice.)

Mr. V. J. P. (with glass in hand).—“I feel happy this morning. Here I am a rich man; respected by everyone, prospective father-in-law to the Prince of Wales, yes, and I owe it all to the N. A. R. D. Here's to the long life of the N. A. R. D. May you—”

Mrs. John Pillroller.—“John! John! John! Do wake up. The night bell rang three times.”

John.—“Oh, hang that night bell! Yes, yes, I am coming. One minute.” (At door.) “Well, what can I do for you, my little man?”

*A paper read before the Hamilton County (Ohio) Druggists' Association by Chas. H. Apmeyer.

Boy.—"Please, Mr. Drugg'st, mama sent me up to ask you if you sold Dr. Killen's Dyspepsia Tablets for 35 cents."

John.—"Well, I ought to get a little more than that for them, especially as this is a night call."

Boy.—"Because mama said if you did not sell them for 35 cents she would wait till morning and get them down town."

John.—"All right, all right, here you are, 35 cents."

Bo.—"Mama said you could charge it."

John.—"All right, sonny, here is a stick of candy for you. Good night."

Boy.—"Good night."

TREATMENT OF DISEASES BY LIGHT.

Minister Swenson sends from Copenhagen a letter to a Minnesota physician in reply to inquiries as to the treatment of certain diseases by concentrated light rays. The letter reads:

Dr. Finsen's Light Institute was founded in 1896, for the purpose, as expressed in the articles of incorporation, of making and encouraging investigations regarding the effects of light on the living organisms, especially with the view of utilizing light rays in the field of practical medicine.

The corporation numbers among its members men of eminence and recognized authority in the medical profession, such as the professors of the University of Copenhagen in pathological anatomy, anatomy, and common pathology; and the superintendents of the leading hospitals in Copenhagen.

The Institute has gained the confidence and aroused the interest of the public to such an extent that it now receives State as well as municipal aid in the way of appropriations. Its success and growth have been phenomenal. Altogether, some three hundred and fifty cases of lupus vulgaris have been treated, in all of which satisfactory results have been obtained. A large number of cases have been treated experimentally with diseases of the skin, among them erysipelas and alopecia areata. Scarlet fever is to be experimented with. In an interview which I had with Dr. Finsen a few days ago, he told me that the light treatment as now perfected is so effective that there is reason to believe that every case of lupus vulgaris can be cured by means of it. Dr. Finsen's successful treatment of smallpox by means of red light is also very interesting, and ought to be widely known.

Both sunlight and electric light can be used for medicinal purposes. Owing to its latitude, Denmark is not favorably situated for using sunlight; hence the institute makes nearly exclusive use of electric light. The arc lights used are each of 4,000 candle power (ordinary street arc lights are of from 2,000 to 4,000 candlepower). Earlier experiments with this method of treatment have failed because the light used has not been powerful enough.

Dr. Finsen is also experimenting with photo-chemical baths to ascertain how far light is instrumental in supplying the skin with blood. He says that the red color of the exposed parts of the skin is caused principally by light. Heat seems to hinder, and cold to further it. (Consular Reports.)

BLAUD'S PILLS.—V. Passati recommends the following method of preparation: 100 parts of pure carbonate of potash are gently warmed on a waterbath with a mixture of 60 parts each of honey and water, 150 parts of dried sulphate of iron added and the mixture warmed for an hour longer or until it assumes the consistency of honey. Finally a uniform mixture of 3 to 4 parts of powdered tragacanth with 6 parts of glycerin is added. The pills prepared from this mass are stated to have a permanently green color, readily dissolve in diluted hydrochloric acid with effervescence and do not crumble, although they may be crushed into a powder with the thumb. (Pharm. Post.)

DISINFECTING COMBINATIONS OF CHLORAL are prepared by patented processes: (1) Boric acid, milk sugar or salicylic acid is dissolved in anhydrous glycerin, the mixture heated until all water is expelled, cooled to 40° C. and the chloral introduced under vigorous stirring. The product is a clear, thick liquid, soluble in water and non-volatile. (2) An alcohol of the terpene series, e. g., menthol or terpinol, is treated with bromine or iodine and the resulting compound caused to react with chloral. The product is very volatile and soluble in alcohol. A chloral-phenol-menthol compound is obtained in a similar manner. The substances thus prepared are used in powder form by admixture with magnesium carbonate or hydrate, with which they form stable combinations. (Apoth. Ztg.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.—(J. C. & S.) Price and manufacturer of Zicotin. (H. F. R.); formula for Neal's surgical dressing. (D. C. P.); formula for "lung powder," a remedy applied externally.

Powdered Pumice Stone.—(O. W. T.) All jobbers sell finely powdered pumice stone. As you are near this market we suggest you address your inquiry to one of the following jobbing firms of this city: Scheffelin & Co., McKesson & Robbins, Lehu & Fink, Hamill & Gillespie, 244 Front street, this city, are importers of pumice stone.

Chota Harra (Lesser Gall Nut).—(H. H.) We have no information of this article beyond the statement made in one of the medical journals that "Chota Harra (lesser gall nut)" had been successfully employed in the treatment of piles by a physician in Calcutta. Importers of crude drugs in this city inform us they have never heard of the article.

Urotropin.—(C. Z.) Urotropin is a compound produced by the action of formaldehyde on ammonia. A short description of the process is given in the last edition of the U. S. Dispensatory. It is claimed to increase the flow of the urine and to liberate uric acid from its insoluble saline combinations. The usual adult dose is 1 to 1½ grams daily. It is also known as hexamethylene tetramine, formin, aminoform, etc.

Dental Colleges in the U. S.—(H. McP.) We cannot publish a list of all of the reputable dental colleges in the country. Here are the names and addresses of a few of them: Dental Department, Harvard University, Boston, Mass.; Dental Department, University of Michigan, Ann Arbor, Mich.; Dental Department, University of Pennsylvania, Philadelphia, Pa.; Baltimore College of Dental Surgery, Baltimore, Md.; Cincinnati College of Dental Surgery, Cincinnati, O.

Antiseptic Tooth Powder.—(C. E. T.) The author of an English work on dental caries recommends the following: (1) Castile soap, 2 drams; powdered orris, 4 drams; borax, 2 drams; carbolic acid, 30 minims; oil of eucalyptus, ½ to 1 dram. (2) Resorcin, ¼ dram; salol, 1 dram; powdered orris, 1 ounce; precipitated chalk, 2 ounces; carmine, 3 grains; oil of peppermint, 6 minims. (3) Powdered boric acid, 40 grains; powdered potassium chlorate, ½ dram; powdered guaiac, 20 grains; precipitated chalk, 1 dram; oil of rose, 1 minim; magnesium carbonate, enough to make 1 ounce.

Cleaning Shells with Hydrochloric Acid.—(A. B.) asks: When sea shells are cleaned with hydrochloric acid what will precipitate the resulting mixture and leave free hydrochloric acid? There is no practical method of liberating free hydrochloric acid in such a mixture. But supposing there was a method, the expense of manipulation would likely be far in excess of the value of any acid saved by the operation. Shells of the crustaceae, mollusca, etc., contain a large percentage of calcium carbonate, a little calcium phosphate, and some animal matter. When hydrochloric acid is added to the shells, effervescence occurs, and the calcium carbonate is decomposed. If the action be long continued the acid dissolves out the calcium phosphate, etc., leaving only animal matter.

Antibilious Powder.—(D. C. P.) Dr. Beach, in "American Practice," gives the following formula: Jalap, 1 pound; Alexandria senna, 2 pounds; peppermint plant, 1 pound; pulverize the articles separately, mix together and pass through a fine sieve. Dose, a teaspoonful (about a dram) put into a teacup with a lump of loaf sugar, and add 4 ounces of boiling water. When cold give to the patient after fasting or on an empty stomach.

Dr. Hull's Bilious Physic Powder.—Aloes, 8 ounces; mace, myrrh, cinnamon, cloves, saffron, ginger, of each, 1 ounce; dried leaves of the garden sunflower or of the wild sunflower, 4 ounces. Powder the substances separately and mix thoroughly.

Books for Druggists.—(H. V. R. S.) The following books on the subjects named by you are recommended: Veterinary; "Veterinary Counter-prescribing," 315 pages, 12 mo., \$1.50. Dunn's "Veterinary Medicines, their Actions and Uses," 8 vo., 776 pages, \$5.00. Treatment and Cure of Disease, Domestic Medicine, etc.; "Diseases and Remedies," (an English work written for the drug trade by physicians and pharmacists), 12 mo., 228 pages, \$1.50. "Minor Ailments; Their Medical and Surgical Treatment," 12 mo., 190 pages. Gardner's "Household Medicine," \$5.00. Hartshorne's "Manual of Household Medicine," \$4.00. Conwell's "Practical Medical Therapy for the Family, the Physician and the Druggist," 8 vo., 656 pages, \$2.50. Wood's "Household Practice of Medicine, Hygiene and Surgery," 8 vo., 765 pages, \$5.00. The Practice of Medicine; Flint's "Practice of Medicine for the Use of Students and Practitioners," 8 vo., 1143 pages, \$5.00. Pepper's "Theory and Practice of Medicine," two volumes, \$5.00 per volume. Loomis' "Text-Book of Practical Medicine," 8 vo., 1147 pages, \$5.00.

Sodium Iodide, Ammonium Chloride and Codeine Sulphate.—(E. A. V.) asks criticism upon the following prescription:

Sodium iodide.....	2 grains
Ammonium chloride.....	4 grains
Terebene.....	1 minlm
Codeine sulphate.....	1/3 grain

For 1 capsule. Send 18 such capsules.

Sodium iodide will cause trouble here. It is incompatible with codeine sulphate and also likely to form new compounds with terebene. Then, too, codeine with ammonium chloride decomposes the latter with liberation of free ammonia. Just the order in which these reactions may take place depends somewhat upon the order of procedure, the excipient used in making the mass, etc. Our correspondent states that this prescription was brought to him to be compounded, but he criticised it and the prescriber "saw fit to make a change." He does not intimate the character of his criticism, however, nor he tell what change the prescriber made, two things we would like to know. He used glycerite of starch as an excipient.

Florida Pharmacy Law.—(C. B. L.) The present pharmacy law of Florida was passed in May, 1899. It provides a board of pharmacy consisting of five members, and the board has power to create "auxiliary boards." The term of office is four years. Five hundred dollars per year of the receipts are appropriated for expenses, the surplus above this amount being divided equally between the State and the Florida Pharmaceutical Association. Examinations are held whenever ten or more candidates make application. There is but one grade of licentiate. Graduates of colleges of pharmacy which require a practical experience of not less than four years before granting a diploma and qualified physicians are registered without examination. The fee for examination and registration is \$3.00. For registration without examination, \$2.00. A pharmacist is held responsible for the quality of goods he sells, except for those in original packages and proprietary articles. Intentional adulteration is punishable by fine and revocation of certificate. Itinerant vendors of medicines or appliances for the cure of disease are required to pay an annual license of \$500. All suits for the recovery of the several penalties prescribed in the act shall be presented in the name of the State in any court having jurisdiction, and it is incumbent upon the State's attorney to prosecute all persons violating the act upon proper complaint being made.

Glycerole of Wild Cherry.—(W. S. C.) We know of no definite formula under this title. However, some two or three years ago Prof. J. M. Good, of St. Louis, presented to the American Pharmaceutical Association a formula for a fluid extract of wild cherry, the menstruum of which consists of a considerable portion of glycerin, the product therefrom yielding a clear mixture with syrup. The method of moistening the ground bark, and the time allowed for maceration and fermentation are followed as in official process. Carefully selected bark is reduced by grinding to a No. 20 powder. Of the bark so prepared 1000 grams are taken and divided into portions of 250 grams each, and exhausted with a menstruum consisting of a mixture of 200 Cc. of glycerin, 200 Cc. of alcohol and 600 Cc. of water, the process employed being that of repercolation. Each portion of the drug (250 grams) is moistened with a mixture of 25 Cc. of glycerin and 50 Cc. of water, packed firmly in a cylindrical glass percolator, closely covered, and macerated 48 hours. In the initial operation the reserved portions may be, from percolator No. 1, 150 Cc.; from percolator No. 2, 200 Cc.; from percolator No. 3, 250 Cc.; from percolator No. 4, 300 Cc.—a total of 900 Cc. The final weak percolates may be collected in portions and used in subsequent operations as a percolating menstruum, 1000 Cc. of fluid extract being made from 1000 grams of drug. The process of "fractional percolation," the details of which are given in the last edition of the National Formulary, may be adapted to the preparation of this fluid extract. The syrup is made by taking an equivalent of the bark in fluid extract; that is, fluid extract 150 Cc. and syrup sufficient to make 1000 Cc. In this fluid extract the astringency of the tannin and the odor and taste of hydrocyanic acid are said to be very pronounced.

Restoring Faded Writing.—(J. R. K.) The best process for restoring to legibility faded writing must be determined in every case by careful experiment. The materials used in the manufacture of ink differ so widely that the treatment successfully employed in one case may entirely destroy the ink in another. However, the following suggestions are taken from Haldane's "Workshop Receipts": (1) Wash in warm water to remove salt, if the paper has been immersed in sea water, and then soak in a solution of gallic acid 3 grains to the ounce of water. (2) Wash in clean water and soak in solution of ferrous sulphate, 10 grains to the ounce. (3) Apply solution of ferrocyanide with a brush, when the writing will appear in blue, if any iron is left of the original ink. The reaction occurring in the latter procedure is similar to that given in the following process by Lehner: Dip the document in a fluid obtained by mixing 1 part by weight of chemically pure hydrochloric acid with 100 of distilled water. It is only necessary to immerse the document for a moment, so that the surface of the paper becomes moist. The hydrochloric acid used must, however, be absolutely free from iron.

After almost entirely drying the moistened paper in the air, scatter over it, by means of a sand box, a uniform layer of finely-pulverized yellow prussiate of potash and cover it with a glass plate lightly loaded down. After a few hours take off the glass plate, dry the paper entirely and remove the yellow prussiate of potash with a fine brush.

If the paper, when scattering upon it the yellow prussiate of potash, possessed the proper degree of moisture, the writing will appear with a beautiful blue color. This is due to the fact that by the action of the yellow prussiate of potash upon the iron salt, which has been slightly dissolved by the hydrochloric acid, a combination of a blue color—the so-called Berlin or Prussian blue—has been formed.

The hydrochloric acid adhering to the paper must be removed by careful washing, otherwise, even if present only in very small quantity, it would destroy the paper. For this purpose, float the paper for 24 hours upon a solution of 2 parts by weight of crystallized soda in 100 of distilled water, then wash it several times with pure water and finally dry it.

The writing restored by this method is of a beautiful dark-blue color, and permanent if kept in a dark room. By too much exposure to the light it becomes paler.

Chinese Blue.—(W. E. B.) Regarding the identity and manufacture of Chinese blue, Blount and Bloxam (Chemistry for Beginners and Manufacturers) say: The best and purest variety of Prussian blue is known commercially as Chinese blue, and is made by mixing a solution of ferrous sulphate ("copperas"), containing 100 pounds to every 30 gallons of water, and 10 pounds of sulphuric acid with a solution of potassium ferrocyanide of equal strength. This dilution is advantageous as giving a finer precipitate than would be obtained in stronger solutions. The precipitate is white at first, being ferrous ferrocyanide, Fe_2FeC_6 , but on account of dissolved oxygen and of ferric sulphate in commercial copperas it is frequently light blue owing to the formation of some ferric ferrocyanide. The precipitate is allowed to settle, the clear liquor run off, and the precipitate oxidized to ferric ferrocyanide by treating it with any convenient oxidizing agent, bleaching powder (made into a thin cream with water) being the cheapest; nitric acid is preferred on the Continent; air would probably be cheaper than either of these, but it is found that the color of the product is not so good. After the addition of the bleaching powder, dilute hydrochloric acid is added, chlorine is thus evolved, and oxidizes the ferrous ferrocyanide to Prussian blue. Sometimes the bleaching powder is used to oxidize the ferrous sulphate into ferric sulphate previously to precipitation, but the blue thus prepared is not of equally good tint. By substituting potassium ferrocyanide for the ferrocyanide, a blue of redder tint than that produced by the latter is obtained. The blue is washed and pressed into cakes. Common Prussian blues are either prepared by oxidizing ferrous ferrocyanide by air, or by the addition of diluents such as barium sulphate, chalk, etc., to ordinary Prussian blue. In the preparation of Prussian blue, potassium ferrocyanide is kept in excess—e. g., by pouring the iron solution into the solution of ferrocyanide—"soluble" Prussian blue is formed. This substance is only soluble in pure water, so that it does not dissolve until the mother liquor has been removed and the blue washed. Formerly, soluble Prussian blue was much used for making inks, but it is now largely replaced by aniline dyes.

Preserving Cut Flowers.—(J. S. D.) The English method of preserving flowers so as to retain their form and color is to imbue the plants in a mixture of equal quantities of plaster of Paris and lime and gradually heat them to a temperature of 100°. After this the flower looks dusty, but if it is laid aside for an hour so as to absorb sufficient moisture to destroy its brittleness, it can be dusted without injury. To remove the hoary appearance which is often left, even after dusting, a varnish composed of 5 ounces of dammar and 16 ounces of oil of turpentine should be used and a second coat given if necessary. When the gum has been dissolved in the turpentine, 16 ounces of benzolin should be added and the whole should be strained through fine muslin. Another preserving varnish is composed of 500 parts ether, 20 parts transparent copal and 20 parts sand. The flowers should be immersed in the varnish for two minutes, then allowed to dry for ten minutes, and this treatment should be repeated five or six times. Still another method, which is used in the Paris Museum of Natural History, is to place the flowers in a solution of 30 grains of salicylic acid in 1 quart of water.

The following method published some years ago in *Zeitschrift d. oestr. Apoth. Ver.*, Prof. Pfützer declares will preserve flowers so that they retain their natural colors and shape: Moisten 1,000 parts of fine white sand that has been previously well washed and thoroughly dried and sifted, with a solution consisting of 3 parts of stearin, 3 parts of paraffin, 3 parts of salicylic acid and 100 parts of alcohol. Work the sand up thoroughly so that every grain of it is impregnated with the mixture, and then spread it out and let it become perfectly dry. To use, place the flowers in a suitable box, the bottom of which has been covered with a portion of the prepared sand, and then dust the latter over them until all the interstices have been completely filled with it. Close the box lightly and put it in a place where it can be maintained at a temperature of from 30° to 40° C. for two or three days. At the expiration of this time remove the box and let the sand escape. The flowers can then be

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY

NOTICE TO ERA COURSE STUDENTS.

Students will save themselves and the Director much unnecessary correspondence by keeping in mind the following rules of the Course:

1. Examination papers are not returned to students, but are preserved as a part of the permanent records of the Director's office.

2. Questions on the lectures are mailed to students as soon as received from the printers. If not received by the student within three weeks after the lectures, they have probably gone astray in the mails, and a card of inquiry may then be addressed to the Director.

3. It is expected that students will thoroughly study the lectures before looking at the questions. The student who confines himself merely to the questions in his study will necessarily narrow the range of his work, and will attain a lower grade than he otherwise would.

4. Communications respecting non-receipt of the lectures, concerning class pins, or regarding financial matters should all be addressed to The Pharmaceutical Era, and not to the Director.

J. H. BEAL, Director.

We have on hand a supply of pins for Era Course in Pharmacy students. These are made up in attractive styles, 14 karat gold, beautifully enamelled, and bearing a mortar and the letters E. C. P. in special design. The pins are mounted in three styles—safety pin, stick pin and button. The price is \$2 (either style), which is barely sufficient to cover the cost of production. Students who desire these pins are requested to send in their orders (with cash) at once, stating style of pin desired.

In this present issue are sent to Junior students lectures 45 to 51 inclusive, and to senior students lectures 43 to 51 inclusive. This is sufficient to last until April 5, when another set will be forwarded.

It will be noted that a new Junior subject, that of Microscopy, is entered upon. The lectures upon this subject have been very carefully prepared and are complete. They start at the beginning or foundation of the subject, and carry the student by successive graded steps upward. The use of the microscope has now become so important, in fact, essential, to every well-posted druggist, that these lectures cannot fail to be one of the most valuable features in the Course. The senior students likewise take up the subjects of Materia Medica and Organic Chemistry. The lectures on the former subject have been prepared from an entirely new standpoint from preceding years. They are much more extended in scope, and the subject is treated in sufficient fullness for both the student of pharmacy and all who would be posted upon the materia medica of the United States Pharmacopoeia. The lectures can well serve for a classified epitome or synopsis of the U. S. P. in this particular.

Read the Bulletin each week.

put into suitable receptacles or glass cases without fear of deterioration. Flowers that have become wilted or withered before preparation should have their color freshened up by dipping into a suitable anilin solution.

ETHYL SALICYL-CARBONATE.—The ethyl ester of salicyl-carbonic acid is a new product claimed to possess valuable therapeutic properties. It is a white, crystalline powder melting at 90° C., easily soluble in alcohol, ether, chloroform and benzol; also soluble in water. The alcoholic solution is not colored violet by ferric chloride, differing from alcoholic solutions of salicylic acid and salicylates. The substance forms stable alkali salts, which occur in form of white powders, having therapeutic value. (*Zitseh. f. Pharm.*)

Your Grandfather's Clock

Standing placidly in a corner of the old drug shop, looked down on A FEW names that are very familiar in your store—but mighty few. In the front rank of these old-timers came the legions of the Ayer, for even in those days Ayer's Cherry Pectoral, Ayer's Sarsaparilla, Ayer's Hair Vigor, Ayer's Pills, etc., were almost as well known as they are in our own time. Now, mere age means but little—there are lots of trees in the forest that are very old and very rotten—but when you find in old age constantly increasing strength and size and usefulness, you have the best indication in the world of real value, real character, the real backbone of all business, for the meretricious novelty that depends on advertising alone for its popularity doesn't stay to grow old. The character of the goods you sell is of more importance to you than you sometimes think, for you can never prevent your customer from giving you some of the credit for good stuff and some of the blame for bad stuff, so long as you take his money for it. Your only safety lies in selling him what you know to be "good stuff"—like AYER'S.

We shall always be glad to give attention to any matter of mutual interest which you may present. Get our goods from your jobber.

THE J. C. AYER CO., Lowell, Mass.

Ayer's Hair Vigor, \$1.00 size only; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00—25c. size is a very rapid seller; Ayer's Pills, 25c., more for the money now than ever; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of Pills free; Ayer's Ague Cure, 50c. now, new and improved; Ayer's Cherry Pectoral Plasters, 25c., "they take the ache."

A Sure Winner — Ayer's Comatone.

PHILLIPS' FOUNTAIN CHOCOLATE.

AN ABSOLUTELY PURE CONCENTRATED POWDER

For Hot or Cold Soda.

Perfection in AROMA, FLAVOR, RICHNESS and SOLUBILITY. No greasy glasses with "PHILLIPS'" 1, 5, 25, 50 and 100 lb. packages.

SAMPLES FREE.

The Charles H. Phillips Chemical Co.,
77 Pine St., New York.

OUR SPRING OFFER

This Year is  
Causing a Sensation.

It will be to the interest of retailers to lay in a cask of "Best" Tonic, and thus be in a position to get the benefit of our advertising.

Pabst
Malt Extract
The "Best" Tonic

ALL WHOLESALE DRUGGISTS SUPPLY
THE "BEST" TONIC.

POISON LAWS

Have, in most cases, been made after the druggists have unitedly and forcibly asked for them. The public expects the druggist to faithfully and carefully observe both the letter and spirit of such laws. The druggist naturally inclines to the easiest and best way for observing the requirements, and in the matter of registering sales.

THE ERA POISON REGISTER

Furnishes the easiest way. It contains space for 800 entries, providing for the register of name and quantity of poison sold, date, price, purpose for which it is to be used, name of purchaser, witnesses, remarks, etc.

A DIGEST OF THE POISON LAWS of all the States and Territories is included. It presents in condensed form all the essential requirements and is handy for reference whenever there is doubt as to the law. The book is bound in stiff board covers, with leather back. Size of page, 8 x 11 inches.

PRICE, 60 CENTS PER COPY, POSTPAID.

NEW YORK

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

South Africa.

General Dundonald on February 28 found that the Boers had abandoned the siege of Ladysmith, and he entered the town with the Natal Carabineers. He found the garrison greatly weakened by disease and lack of proper food and drinkable water. General White's men had suffered very little from the Boer bombardment, although the Boers had thrown about 12,000 shells into the town. It is thought that General Buller will garrison Ladysmith and the surrounding hills and go with most of his men to reinforce Lord Roberts' army.

A report from a Boer source says that the Boers have also abandoned the siege of Mafeking.

The Boers have abandoned Colesburg, in Cape Colony, where they had been gaining some successes, and were threatening the British line of communications. The Boers are supposed to be concentrating all their forces to stop the invading army of Lord Roberts.

With the addition of 600 Boers made prisoners at Kimberley, it seems that the number of Cronje's men captured by Lord Roberts reaches nearly 5,000.

Military experts declare that General Cronje's ten-days' resistance with rifle fire against the "terrific British bombardment," which seems to have made more noise and smoke than injury, proves that the rifle is becoming superior to artillery in modern warfare.

It is reported that a considerable part of the Dutch in Cape Colony and many of the Free State burghers think the time has come when Kruger and Steyn should ask for terms of peace.

London received the news of the relief of Ladysmith with the wildest demonstrations of joy. Men who remember the rejoicings over Waterloo and the Crimean victories say that they are not equal to the rejoicings of last week. In front of the Mansion House the cheering, shouting and singing continued for over six hours. Similar scenes occurred in all parts of the United Kingdom.

A despatch from Kimberley says its inhabitants have planned to erect a statue to Cecil Rhodes in recognition of his services during the siege.

Lord Lansdowne, in the House of Lords last week, gave the particulars of the contemplated despatch of troops to Africa this month. A total of 28,000 men is to be sent to the front.

It is reported that Lady Roberts, the wife of Field Marshal Lord Roberts, will shortly start to join her husband in South Africa.

In German military circles it is believed the lesson of the Boer war will result in a large increase in the cavalry and lead to a change in cavalry tactics eliminating massed charges.

Other Foreign News.

Astonishment was caused in the German Reichstag last week by a detailed statement respecting a secret decree forbidding answers to the inquiries of the United States consuls wherever a probability existed that German interests might thereby be injured.

Disorder and incendiarism continue on the island of Martinique.

The anti-foreign attitude of the Chinese Government grows more pronounced daily, and is regarded at Peking as extremely menacing to foreign enterprise.

The Russian Ministry of Finance is working out a law to make the petroleum industry a state monopoly.

The independence of Siam is said to be threatened by a proposed French expedition to seize Hainan.

The Japanese Minister to the United States, Kuroto Komura, has been notified from Japan of his appointment as Minister to Russia. He will leave Washington for St. Petersburg about April 15.

As a result of the investigation in connection with the recent insubordination of two battalions of Soudanese troops, five Egyptian officers have been sent as prisoners to Cairo.

The Uganda Railway telegraph line reached the Nile, at Ripon Falls, February 18, and was carried across the river, thus establishing telegraphic communication between London and the sources of the Nile.

The Anglo-Abyssinian Convention has settled the bounds of the latter country; the city of Metemmach is no longer to be in English hands.

The sale of the Danish West Indies to the United States was discussed in the Danish Parliament last week. The majority were opposed to the scheme.

Colonel Schwartzkoppen, who figured in the Dreyfus trial, has been promoted to the rank of major general by the German War Office.

Germany has established post offices in Smyrna, Beyrout and Jerusalem.

DOMESTIC.

Congress.

The Puerto Rico Tariff Bill, amended so as to reduce the tariff on articles passing between the United States and Puerto Rico in either direction, to 15 per cent. of the Dingley tariff rates, and limited to two years, passed the House last week by a vote of 172 to 161. Six Democrats voted against the bill, and four Democrats voted with the Republicans for it. Each side made herculean efforts to get out a roll vote, six members being brought from beds of sickness to vote. The opposition to the measure still continues strong in the press and among commercial bodies, and the bill may be defeated or shelved by the Senate.

The Senate has passed a bill providing a territorial form of government for Hawaii. The bill also excludes the Chinese from entering Hawaii, and extends the United States contract labor law to the islands.

The Senate Committee on Manufactures has reported on the result of its investigation of the adulteration of food products. This adulteration is very extensively practiced, the committee says, and it recommends legislation that will prohibit the sale of deleterious or unhealthy foods, and the regulation of those in which the adulteration merely cheapens the product.

The Senate has confirmed the nomination of Brigadier-General Harrison Gray Otis to be a major-general by brevet.

Representative Richardson, of Tennessee, has introduced joint resolutions against the steel trust and trusts in barbed wire, wire nails, etc., and against the sugar and paper trusts.

Other Domestic News.

The Bureau of Navigation made public last week the report of the commander of the Spanish cruiser Maria Teresa, in which he explains the Spanish defeat off Santiago by saying that as the Spanish vessels came out of the harbor in single file, each one had to engage the whole American fleet, making the odds against the Spanish too heavy to be overcome.

The United States Court of Claims last week decided in the case of Admiral Dewey's claim for prize money that the Spanish fleet at Manila was not superior to the American. The admiral will receive \$9,570 prize money.

The Industrial Commission, in its report last week, recommended publicity as a remedy for trust evils. The commission contemplates sub-commissions to go to Chicago, the South and the Pacific coast, to take testimony in regard to industrial conditions.

The largest fire that Newark ever experienced swept through the retail dry goods district on Tuesday night of last week, destroying a score or more of buildings. The loss is estimated at \$1,000,000.

The Erie Telephone Company, said to be the largest Bell system in the United States, has been absorbed by the Telephone, Telegraph and Cable Company of America.

The Third Avenue Railroad Company of New York went into the hands of a receiver last week. The company's bonds are taken about 200 points in a year. Corrupt management is rumored.

Secretary Root will soon make a tour of Cuba in company with General Wood. It is said that the critical problems of administration are demanding attention.

A receiver has been appointed for the United States Milling Company, otherwise known as the Flour Trust. The floating debt of the company exceeds a million dollars, and it is said to have less than a hundred dollars cash in bank.

The United States Supreme Court has denied the application of Captain Oberlin M. Carter to bring his case into that court.

Howland has been offered to be one of four men to give \$25,000 each to the Dewey Arch Fund, provided \$400,000 is raised before the end of the year.

A report on Pacific cable surveys by Commander Hodges, of the Albatross, shows that a thoroughly practicable route was discovered.

The Idaho Democratic, Silver Republican and Populist Committees have declared for a union of all silver interests in a State.

The total Government receipts during February were \$15,611,265, and the expenditures \$37,738,742, leaving a surplus of \$7,592,790.

An appropriation of \$100,000 was made last week by the Kentucky Legislature to be used in detecting and convicting the assassin of Governor Gobel.

A bill to prohibit the issue of free railway passes to all State officials failed by one vote of passage in the Iowa House last week.

Major General John B. Brooke is to be given command of the Department of the East in June, when Major General Wesley Merritt retires.

A heavy fall of snow in New York State and the Central West last week caused much delay to travel.

A naval expedition in Luzon last week rescued five hundred Spanish and ten American prisoners from the Chinese.

General Otis has purchased from the Spanish Government and turned over to the Navy two small gunboats and a transport.

THE DRUG NEWS.

MANUFACTURERS WILL STAND BY THE N. A. R. D.

Ayer, Greene, Hood, Pinkham and Wells & Richardson Co. Agree to Restrict Their Sales to the List of Recognized Jobbers.

THE REQUEST OF THE N. A. R. D. GRANTED.

The chairman of the Executive Committee of the National Association of Retail Druggists, F. E. Holliday, announces as a result of several weeks' work in New England that five of the most prominent and largest manufacturers of proprietary medicines have finally signed an agreement to limit their sales to the list of recognized jobbers, to be drawn up by the joint committee from the retailers', jobbers' and manufacturers' national associations. These five proprietors are Ayer, Greene, Hood, Pinkham and Wells & Richardson Co. Mr. Holliday authorizes the following statement:

"We are pleased to say to the retail druggists of the United States that at the request of the N. A. R. D., the above-named well-known manufacturers of proprietary medicines have agreed to distribute their goods through the jobbing trade only, and will refuse to include on their sales lists all aggressive cutters. They have also incorporated in their individual contracts a clause declining to sell their preparations to any jobber who supplies their goods to cutters at any price. Therefore, if cutters obtain goods made by them, it will be through the retailers themselves or through a jobber who violates his agreement and takes the risk of not being able to buy such preparations, a risk which few jobbers will care to take.

"Moreover, not satisfied with their efforts to assist the retailer in restricting the sale of their own goods in proper channels, they go further, and join in a request to the jobber, asking him not to sell aggressive cutters any goods whatsoever.

"Thus, they have put themselves on record as giving the full force of their influence in favor of the retail druggist and against the cutter and department store, and in return for it ask the retailer to supply the goods called for, the demand for which has been made by the expenditure of large amounts of money paid for advertising, and not to ask the customer to take something in place of it."

The manufacturers named have also joined in the following statement, which, it is desired, may be given wide publicity.

The Proprietors Say.

First—It is the sentiment of each of the following five proprietors, Ayer, Greene, Hood, Pinkham and Wells & Richardson Company, that to render the agreement effective, all jobbers should agree to stop selling all goods, sundries, pharmaceutical and proprietary, to cutters and department stores, immediately upon the adoption of special list of jobbers by the manufacturers; but for the purpose of carrying this plan into practical working, the proprietors will waive their objection to the selling of druggists' sundries and pharmaceuticals, if the sentiment of the jobbers shall so favor. If jobbers are to continue to sell to cutters for a considerable time while coming to an agreement, the manufacturers should have the same privilege.

Second—Jobbers, through their salesmen, must refrain from running down proprietary goods, and give instructions to sell what is called for without giving preference to any particular article which may happen to pay a higher profit.

Third—The jobbers agree to refrain from asking any further discounts than those at present allowed.

Fourth—Each jobber for himself will agree to discontinue his non-secret department.

Fifth—All manufacturers, as far as practicable, certainly all large manufacturers, must agree upon the same list of distributors.

Sixth—Retailers, in exchange for this concession on the part of the manufacturers, to limit the distribution of goods, and on the part of jobbers to refuse all orders from cutters and department stores, will agree not to substitute when standard proprietary articles are called for, but in each case will give the customer what is asked for without argument.

[The contract proposed between the manufacturers and jobbers is directly along the line of work advocated by the N. A. R. D. It is sweeping in its terms and a practical indorsement of the retailers' contention. We reserve it for editorial comment in our next issue.—Ed.]

SENATE PURE FOOD COMMITTEE REPORT.

The United States Senate Food Investigating Committee submitted its report to the Senate on February 28. Accompanying the report is a great mass of testimony taken by the committee in the leading cities of the country. The committee found, says the report, that

"The adulteration of prepared or manufactured foods is very extensively practiced, and in many cases to the great discredit of our manufacturers. It is only fair to say, however, that a large proportion of the American manufacturers who are engaged in adulterating food products do so in order to meet competition. These gentlemen say, 'We would be glad to get out of the business of adulterating. We would like to quit putting this stuff in coffee, and would be willing to brand our syrups for what they are, but our competitors get a trade advantage which we cannot surrender.'

There have been two general ways suggested as to the matter of regulation. First, to put the important food products under the internal revenue law, as we have in the case of butter, filled cheese, and, at the last Congress, flour.

The other plan to regulate the food products is contained in Senate Bill 2,426, which establishes a department under the Secretary of Agriculture, and provides for the establishment of a board which will fix the standards for foods, drinks, and for drugs based on the American pharmacopoeia. The evidence before the committee shows that all our peppers, cinnamon, cloves, and spices generally, including ginger and mustard, are adulterated. One manufacturer testified that he adulterated these largely with coconut shells, and that the amount of the adulterants put in depended upon the man who ordered it. Sometimes as high as 60 per cent. was put in. It would be difficult, it may seem at a glance, to establish a law for spices, to compel them to stamp as mixed spice every package sold. It may be that such cumbersome legislation will have to be made in order to properly punish those who adulterate their goods, but it is hoped that Senate Bill 2,426 will reach all inter-State trade in manufactured food products.

If it is the policy to restrict our own citizens to the use of pure food, we certainly should apply the same rule to foreigners who manufacture goods to be sold in the United States. There is no doubt in the minds of the committee that large amounts of imported goods are sold in this country, the sale of which goods would be prohibited in the country from which they come.

The committee gives some glaring instances of this unjust competition which reputable American dealers and manufacturers have to meet, and recommends the establishments of standards of purity for various articles and the establishment of ports of entry, of inexpensive examinations and tests to determine whether imports come up to these standards.

New York and Vicinity.

WHAT WILL THE N. A. R. D. DO?

RECOGNITION AS JOBBERS ASKED FOR CONCERNS COMPOSED OF RETAILERS.

New York Consolidated Drug Company Says the Question is a Very Simple One; Others Think it Very Complicated; Not a Buying Club, But a Corporation to Carry on the Jobbing Trade.

The work of the National Association of Retail Druggists in this Eastern section of the United States, or rather the question how the plans of that organization are to be carried into effect here, is the one topic of absorbing interest to all branches of the drug trade at the present time. Manufacturers, jobbers and retailers alike are unanimous in holding that the general plan of the N. A. R. D. is an excellent one—if it can be carried out. But as to the possibility of carrying it out there is no such unanimity of opinion. And as there are different views on the possibility of executing the scheme, so also the many men interested are of many minds concerning the detailed working of the plan, and the best methods for attempting its establishment.

The entire trade is awaiting with breathless interest the action of the executive committee of the N. A. R. D. on the proposed list of accredited jobbers for New York city. Application has been made for inclusion in that list by a concern which has been in existence for several years as a co-operative buying company of retail druggists. The application of this concern on the one hand is being urged by the German Apothecaries' Association (of which its stockholders are members), which is affiliated with the N. A. R. D. On the other hand, it is being opposed by the members of another affiliated local association of retailers, and more vigorously still by the local jobbers. The question to be settled by the executive committee is regarded by all interested as one of great delicacy, and furthermore it is thought that its settlement will establish a precedent for all future action of the national association. In short, the feeling is pretty general in this section that a crisis has been reached in the life and affairs of the N. A. R. D.

THE NEW YORK CONSOLIDATED DRUG COMPANY.

The concern which has asked for recognition as a jobber is the New York Consolidated Drug Company. This concern has been in existence for about six years under the name of the Consumers' Drug Company. It was started by a mere handful of the members of the New York Apothecaries' Association, who tried the experiment of combining in making their purchases of a few proprietary medicines. Sidney Faber, the secretary of the German Apothecaries' Association, was one of the starters of the movement, and at first his store at 1102 Second Avenue was the distributing agency for the goods bought. He demonstrated to his fellow-members at the very start that the scheme of buying gross lots and dividing the purchase among several retailers was both practicable and profitable. In a short time other members of the association were eager to join with their fellows in this informal co-operative buying club, and enjoy the benefits of lower prices and larger discounts. The matter was talked over very thoroughly among the members, and as a result the Consumers' Drug Company was formed. At the start there were eleven members, each of whom invested \$50. The total \$550 was expended for proprietary medicines, and these were sold to the stockholders at an advance over the price paid by the Consumers' Drug Company just sufficient to pay for handling and carting the goods. The advantages of buying in this way were so evident that the Consumers' Drug Company grew rapidly. Each year its membership increased by leaps and bounds, and each year the price of shares was

increased \$25 or \$50. The company was never incorporated, and its sales were always confined to members. Sales were also made at a slight profit, merely sufficient to cover operating expenses. So successful was the operation of this buying club that with a membership of about ninety-five, each of whom had invested \$175, the concern did a business during the past year approximating \$130,000.

Membership in the Consumers' Drug Company was limited to members of the German Apothecaries' Association. This association has been affiliated with the N. A. R. D. ever since the national association was organized. It is thoroughly in sympathy with the objects and aims of the N. A. R. D., and eager for their success. Its members realize fully that if the plan of the N. A. R. D. to secure the perfect co-operation of the entire drug trade (to restrict the sales of manufacturers to legitimate jobbers, and the sales of jobbers to legitimate retailers) is to be carried out, such a buying club as the Consumers' Drug Company must cease to exist. There is no place in that scheme for a co-operative buying association of retail druggists.

Realizing this fact, the officers directing the affairs of the Consumers' Drug Company decided to take what appeared to them to be the only possible step under the circumstances, namely, to reorganize their concern as a stock company to carry on a regular wholesale and jobbing trade in medicines, drugs, chemicals and proprietary articles of all kinds. Counsel has been employed to prepare papers of incorporation and a new constitution and by-laws. The incorporation papers have not yet been filed, but are ready to be placed in the hands of the Secretary of State. The Consolidated Drug Company will be incorporated under the laws of New York. Its charter will permit it to issue 150 shares of stock, each of the value of \$175, thus giving the concern a total capital of \$26,250. According to the by-laws no member will be permitted to own more than one share of stock, and the shares will not be transferable. The newly elected officers of the New York Consolidated Drug Company are the following:

President, George Gregorius, 421 Eighth Avenue; vice-president, Oscar Krause, 349 Seventh Avenue; secretary, Charles F. Schleussner, 644 Bedford Avenue, Brooklyn; treasurer, Albrecht Wortmann, 178 Avenue A. The executive committee, which will act as the board of directors, includes the above officers and in addition, R. C. Werner, 2502 Atlantic Avenue, Brooklyn; Paul Zimmerman, 61 Bowery, and Reinhard Eschmann, 755 Ninth Avenue.

For the past four or five years the business of the Consumers' Drug Company has been carried on at 176 Avenue A. where quarters were secured adjoining the drug store of Albrecht Wortmann, who has been general manager of the concern. For some time past a force of three men has been employed, and a large stock has been carried. For the present, the business of the Consolidated Drug Company will be conducted at the same quarters.

The plans of the reorganized company are to buy druggists' supplies of all kinds for cash at the lowest possible price, and to sell these goods to retail druggists, members and outsiders alike, at the prevailing jobbers' quotations. The only profits accruing to members of the concern will come in the way of dividends declared on the capital stock. It is hoped that the profits of the business will be

sufficient to satisfy the shareholders that the investment is a good one.

Having made this change in the concern, the retail druggists who compose it feel that they are justified in asking for their company recognition as an accredited jobber by the executive committee of the N. A. R. D. They say that the whole plan of the operation of their company has been altered for the express purpose of conforming to the requirements of the N. A. R. D. in its attempt to unify and conciliate all branches of the drug trade, and they do not see any valid reason why such recognition should be refused. Here is their position, as stated by a member of the company:

POSITION AND PLANS OF THE NEW COMPANY.

"Six years ago a number of our members, forced by stress of circumstances, organized a co-operative buying concern for the purpose of improving the condition of our members, each one of whom contributed his share of the capital in the business venture. It proved an unqualified success and a blessing to our members. We are now confronted with a peculiar condition. We are asked to give up that which for the past six years has enabled us to compete successfully with the cutters, and to trust to the future to bring back the good old times. We have been loyal to the N. A. R. D. in every respect, have worked for its success, and shall continue to do so; but we do not think it is hardly right and fair to be asked to give up a proved benefit for an uncertainty. Yet, we have gone more than half way, we have given up the co-operative buying concern. Henceforth our company will be conducted on totally different lines. As now constituted, the concern does not partake in any manner of the co-operative buying club idea. It club idea is now formed for the purpose of conducting a regular and legitimate wholesale and jobbing trade in drugs and druggists' supplies. That its stockholders are retail druggists has nothing whatever to do with the concern, which business is conducted of the kind of business that is done. The retail druggist who has a little money to invest has a perfect right to put it into railroad stocks, or into a manufacturing business, or into a wholesale drug house. It is nobody's business but his own whether he invests his money in any of these ways, or in the business of a retail drug store.

"Probably there would have been no objection raised to the recognition of our company as a legitimate jobber had it not been for the outcry of certain local wholesalers who were alarmed when a report reached them of the Company last year, and they were alarmed because they stepped on, and they made a big noise. For many years the jobbers have been doing as they pleased with the retailers, and have had things pretty much their own way. But when the retailers see a way to better themselves, and proceed to execute it, the jobbers cry, 'unfair competition' and 'illegitimate trade.' The local jobbers who have raised the outcry will find that it will not benefit them; rather, it will send more stockholders to us, and increase our business. If it had not been for them, public attention would not have been called to the Consolidated Drug Company. Our intentions were not to enter into any aggressive competition with these wholesalers. According to our plans, the sales of the company would continue to be mainly to its own shareholders. For, while we are ready to sell to any retail druggist who offers to buy we shall sell only for cash.

George Gregorius, the president of the Consolidated Drug Company, said to the Era reporter:

"We are just as firm in our allegiance to the N. A. R. D. as any other association affiliated with it, and we are ready to stand by it when we find that its purpose (the furthering of the interests of retail druggists) is being carried out. The N. A. R. D. has been in existence now nearly two years, and everyone must be satisfied that the results it has accomplished so far are very small. Under the circumstances, I think we have done the only right thing—the only thing that could be expected of us. The N. A. R. D. has no right to do what it will give us in place of our plan, which has operated successfully for the past six years. But, notwithstanding this, we have given up our co-operative buying concern, but no longer exist. In its place we who held stock in it have invested in a new company to do a regular jobbing business, and in asking for recognition by the N. A. R. D. as an accredited jobber we are not demanding anything unreasonable or at all out of the way.

"The New York Consolidated Drug Company will not sell to its members at special rates, but, like every wholesale house, will sell to all at the regular jobbing prices."

Another of the officers of the company, who did not wish his name to be used, said:

"Our company has been most liberal toward the N. A. R. D. and has been in no way thrown open our business to all comers, and changes from a co-operative company to a regular jobber, in order not to interfere with the plans of the N. A. R. D. Our interest as members of the New York Consolidated Drug Company is now simply the same as an investor in any other kind of business. We are acting entirely within our rights, and it is not our intention to have our methods or policy of doing business interfered with by the wholesale trade. If the wholesalers should attempt to compete with our business, I think it would be an easy matter to bring

them before the courts for conspiracy in restraint of trade."

WHAT THE WHOLESALERS SAY.

The objection of the wholesalers to the petition of the German Apothecaries' Association for recognition of the New York Consolidated Drug Company was brought to a focus at the last meeting of the Drug Trade Section of the New York Board of Trade and Transportation. As reported in this journal on February 22, Albert Plaut, of the wholesale drug house of Lehn & Fink, sprung the mine at that meeting, by asking the section to devise ways and means for the suppression of co-operative buying clubs, or, as Mr. Plaut put it, "to limit their action to the field where it belongs." The speaker said that the fact "that one local organization of this kind did a business last year of over \$120,000 means just so much trade taken from the local jobbers." He thought the time had come for the N. W. D. A. to act, and for the N. A. R. D. to co-operate, and in addition to whatever they might do he wanted the Drug Trade Section to take decisive action also. Mr. Plaut did not say just what action he wished the section to take. He did say he thought the Drug Trade Section was strong enough to prevail upon manufacturers to limit their sales to the "legitimate jobbing channels. At his suggestion, Chairman John McKesson appointed a special committee to look into this matter. That committee comprises Wm. S. Mersereau, Henry T. Jarrett, E. W. Fitch, Henry Dalley, Jr., and James Hartford. This committee has not yet prepared any report, and while its members are not talking about the matter for publication, it is pretty generally understood in the trade that it will not prepare one.

The following interviews give the opinions of some of the jobbers and manufacturers:

Albert Plaut: "If these co-operative buying associations or clubs are permitted to increase in number, they will undoubtedly prove most detrimental to the jobbing and importing druggist. They are even now seriously encroaching on the legitimate field of the jobber, and some action should be taken at once to limit their field of operation. Such clubs are usually under very little expense, but they do a very large business. These clubs will not benefit ultimately any firm that supplies them, and the retailers themselves are not working for their own best interests in belonging to these clubs, and thus they are interfering with the jobbers should not interfere with the jobber. These organizations were started by the German druggists of New York, and have been in existence in other cities for some time, but I do not believe they are legitimate. The business of the retail druggist is to sell drugs at retail, and this is a case where each man should stick to his trade.

"The N. A. R. D. has been formed to assist each member in the proper field of his trade. If the association is to recognize these co-operative clubs, it will interfere with the proper sphere of the jobber, and the jobber, in self-defense, will have to find other outlets for his goods."

John McKesson, Jr., of the wholesale house of McKesson & Robbins: "Manufacturers ought not to sell to small buyers at the same price that they do to large purchasers. The evil is in the cutting down of the quantities at which the wholesale figures prevail. To obtain the wholesale price on a lot of polish, for instance, it would be necessary to buy five gross at least. Now one gross is sufficient, and where they used to hold out for the purchase of one gross, half a gross, or even three dozen, will now obtain the coveted figures. Now the profit to jobbers is very small indeed. It hardly pays to handle certain goods, and when retailers can deal with direct references to them, that small amount does not seem very desirable. The cheaper way, our manufacturers to sell is through the jobber. The jobber carries a great deal. Many of the retailers are carried on his books for the full sixty or ninety days, and they ought to be entitled to something or the other. The manufacturer wants the cream of the trade. He is willing to deal with the cash buyer only, and he turns over the slow pay to the jobber, which is hardly fair. But, as things are, I do not see how we can do anything forming co-operative buying clubs and conducting them as jobbing concerns, if they wish to do so."

John M. Peters, of Wm. J. Matheson & Co., who is a member of the executive and legislative committees of the Drug Trade Section of the New York Board of Trade and Transportation, said that, while he was not directly concerned to the extent that others were, he had taken a great deal of interest in this controversy. He said:

"The question of the manner in which these organizations seems to me to hinge on one point—whether the profits from such clubs are divided among the members in proportion to the amount of stock or shares that each holds, or whether the profits are divided on the basis of the amount of purchases made by individual members. If the division of profits is made on the basis of the stock held by each member, regardless of the amount of purchases, it appears to me that a club or organization operated on that principle is a legitimate jobbing concern in

the commonly accepted definition of the term. A body of retail druggists has just as much right to organize, incorporate and do business on that basis as they would have to form a company or organization to operate a railroad or any other enterprise. But on the other hand, if the division of profits is made on the basis of purchases, so that the larger buyer receives a greater proportion than the small buyer, the club or organization is not a legitimate jobbing concern. It is simply a subterfuge.

VIEW OF A N. A. R. D. OFFICER.

At the last meeting of the Kings County Pharmaceutical Society, R. C. Werner, a member of that society, who is also one of the directors of the New York Consolidated Drug Company, asked that society to indorse the application of this company for recognition by the N. A. R. D. as a jobbing house. After prolonged and animated discussion the society refused to give the endorsement asked. One of the leading members of that society who spoke against Mr. Werner's motion was William C. Anderson, who is vice-president of the N. A. R. D. Mr. Anderson is certain that the national association will not recognize co-operative buying clubs as legitimate jobbers. He said:

"This is simply my own personal opinion, remember, but I feel confident that this is the only consistent course that can be followed by the association. I think the members of the executive committee who are to pass on this question are alive to the situation, and fully appreciate what I contend would be the inevitable result of pursuing any other policy. If the N. A. R. D. through its executive committee should recognize the co-operative buying clubs of retailers as legitimate jobbers, it would unquestionably stimulate the growth and establishment of such clubs throughout the entire country, with the result that present wholesalers would be either wiped out or confined or restricted to a very limited field. This question is one which demands the most careful deliberation. The interests of the manufacturer, the wholesaler and the retailer are all involved. I trust that the executive committee at an early date will take such a decided stand on this issue as to settle the controversy as to whether the N. A. R. D. is going to live up to the agreement entered into or break faith with the retail organization."

"Retail druggists cannot consistently form these organizations whereby they take trade from the wholesaler, and at the same time expect the wholesaler to aid in protecting them from the reduction of prices. I think that the necessity for the formation of co-operative concerns is sure to pass away with the success of the policy of the N. A. R. D. Under that policy prices will be rightly maintained without looking for discounts. The plan of the N. A. R. D. I believe is perfectly feasible, and can be made a success. Its success or failure is entirely in the hands of the retail druggists."

NOT A BUYING CLUB, BUT A JOBBING HOUSE.

After all this has been said, the stockholders in the New York Consolidated Drug Company maintain that their concern is not a co-operative buying club, but a legitimate wholesaler; that its recognition by the N. A. R. D. would not encourage the formation of co-operative buying clubs in other quarters, and that no precedent for the recognition of such clubs as jobbers would be set. President Gregorius goes even further, and says:

"We intend to remain loyal to the N. A. R. D. If the executive committee refuses to recognize our company and put it on the list of accredited jobbers, the time may come when we shall have to give up all trade in proprietary medicines. Very well, when that time comes we shall do so. We shall then continue our business in drugs, chemicals and sundries, concerning which there is no controversy over prices. We have started in the wholesale drug business, and we are going to remain in that business. Ours is a jobbing concern, pure and simple, and if we are forced to give up the sale of proprietary medicines we shall do a jobbing trade in other articles with the N. A. R. D. by its tripartite agreement does not seek to control."

SAMUEL W. WOOLDRIDGE.

Samuel W. Wooldridge, for a number of years a faithful member of the office force of this Journal, died March 5, in this city. Death was due to cerebro-spinal meningitis, following an attack of the "grip." Mr. Wooldridge was a native of Kentucky, where he received a common school education, later attending the Louisville College of Pharmacy. For some years he was engaged in the retail drug business in Louisville, afterward going to Chicago, where he entered the employ of Robert Stevenson & Co., wholesale druggists, and with whom he remained several years. He was about 35 years of age, and leaves a widow.

GERMAN APOTHECARIES' ASSOCIATION.

The regular monthly meeting of the New York German Apothecaries' Association was held on Thursday evening, March 1, with about fifty members present. A visiting committee from the Manhattan Pharmaceutical Association was welcomed fraternally. Most of the evening was taken up by a discussion of the work of the N. A. R. D. and its attitude toward the New York Consolidated Drug Company (composed of members of the German Apothecaries' Association), which has asked for recognition as a legitimate jobber. The members who spoke on the subject said that inasmuch as the whole scope and plan of this concern had been altered and incorporation sought, expressly for the purpose of conforming to the requirements of the N. A. R. D. executive committee, they failed to see how that committee could consistently refuse recognition to the Consolidated Drug Company. The majority of the members are hopeful that such recognition will be accorded at an early day.

In the regular order of business two new members were elected. They were August Volland, Avenue A and Eighteenth street, and Eugene A. Scherph, Broadway and Stewart street, Brooklyn. Money was appropriated for the purchase of a new book case for the association's library. The movement for the elevation in rank of the apothecaries in the service of the State militia received a vote of endorsement. The association's delegates to the conference committee of the three local associations affiliated with the N. A. R. D. appointed to prepare a list of accredited jobbers and of aggressive cutters reported, presenting a list of jobbers. This was approved. The committee decided not to prepare a list of aggressive cutters for the present, but advised urging manufacturers to refuse to sell their goods to department stores, or to the managers of drug departments in such stores.

EAST SIDE DRUGGISTS HAVE A BIG CELEBRATION.

The New York Retail Druggists' Association, a comparatively new society, which is composed of the druggists of the "Lower East Side" of Manhattan Island, gave a concert and ball at Lenox Lyceum, Fifty-ninth street and Madison avenue, on Friday evening, March 2. This was the first entertainment of the kind given by the association, and it was so successful in every way that the plans of its projectors to make the celebration an annual affair will probably be carried out. There were at the lowest estimate 250 people present, the most thorough-going sociability prevailed, and everyone had a good time. The concert which preceded the dance consisted of a musical programme of ten numbers, participated in by the Tschakowsky Symphony Orchestra, under the direction of A. Zaslavsky, and the following soloists: Miss K. I. Pelton, J. Massell, A. Zaslavsky, L. Miller and Dr. M. Puck.

At twelve o'clock the ball was started with a grand march, led by the floor managers, A. Bakst and S. Harkavy.

In the souvenir programme, under the heading, "What We Stand For," the objects of the association are thus stated:

"We deem it our duty to elevate the profession to the highest point attainable, to protect and promote the commercial and legislative interests of the pharmacists of Greater New York, to foster commercial integrity, to discourage unfair and unbusinesslike competition, to abolish existing evils and by co-operative activity prevent the growth of customs that are detrimental to the druggists and to the public interest and to sound business principles."

The officers of the association are: President, J. Weinstein; vice-presidents, B. Mishking, A. Rachow; treasurer, J. Bakst; recording secretary, L. Marmor; financial secretary, B. Bockshitzky; trustees, A. Bakst, A. Goldman and Ch. Bernstein.

The arrangements committee which carried through the plans making this entertainment so successful comprised A. Bakst, chairman; B. Mishking, G. Ginsberg, J. Massel, S. Lifshutz, A. Goldman, S. Harkavy, J. Hammer, A. Hammer, A. Rockow, T. Kahn, G. Pollock.

The following members constituted the reception committee: J. Weinstein, chairman; B. Mishking, assistant chairman; N. Kruskal, N. Khazan, J. Bakst, J. Pick, M.

Bakst, J. Hammer, I. Levin, L. Marmor, G. Ginsberg, A. Goldman.

The floor committee comprised the following: B. Bockshitzky, J. Massell, L. Lurie, S. Lifshutz, B. Kirshstein, V. Altshul, J. Davidoff, M. Meyer, V. Lovenberg, I. Kahn, V. Valerstein, A. Rosenberg, Ch. Bernstein, A. Rockow, L. Schoob.

PROGRESS OF PHARMACEUTICAL LEGISLATION AT ALBANY.

In the Assembly, on February 28, the Henry bill regulating the working hours of drug clerks in New York city was advanced to a third reading. This bill, which is the measure asked for by the drug clerks themselves and approved by the various associations of pharmacists of the city, would have been passed very probably early in the session but for the obstruction of Assemblyman Maher. That Tammany politician had a rival bill intended to give absolute control of the drug business into the hands of the Board of Health; and he fought for it like a tiger. After the clerks' bill had been reported favorably by the Assembly Committee on Public Health, Mr. Maher delayed it as long as he could. And then, on February 28, he moved an amendment requiring the local Board of Health, instead of the State Factory Inspector, to make the sanitary inspections. The Assembly killed the amendment by a vote of 80 to 50, and advanced the Henry bill as it stood.

In the Senate, on March 1, the Health Committee reported favorably Senator Sullivan's bill prohibiting the sale of any patent or proprietary medicine or tonic, snuff, tobacco, or headache, catarrh or hay-fever remedy containing cocaine.

It was announced at Albany last week that the Senate Public Health Committee would give a hearing on the Wilcox poison bottle bill on Monday, March 12.

Ended His Life Because Business Was Slow.

Arkim Kantrowitz, a druggist of No. 60 Bayard street, Manhattan, committed suicide on February 28 by drinking prussic acid. He left a note written in Yiddish on the back of one of his business cards saying that "business was very slow" and asking to be forgiven for "making this trouble."

NOTES.

—George White, of the counting room staff of McKesson & Robbins, with whom he has been for fifteen years past, left that firm on March 1 to take a position in the local office of the Mallinckrodt Chemical Works. Mr. White began his work with McKesson & Robbins as errand boy and worked up to a position of responsibility. He has a wide acquaintance among drug brokers, with whom his work brought him in daily contact. His many friends wish him success in his new position.

—The drug store of Wm. F. Ridgeway, at 172 Sixth avenue, Manhattan, was sold at auction on February 28. Mr. Ridgeway has been in poor health for several weeks past and has been depressed by business troubles. Several days ago his friends prevailed upon him to leave the city for a period of quiet and rest. Before going he placed his store in the hands of a friend, who later turned it over to an auctioneer.

—Administrators of the estate of Emil Huberti, a druggist who was found dead recently in his store at 62 Vernon avenue, Long Island City, have found among his effects stocks, bonds and mortgages aggregating in value \$15,000. Huberti had no relatives in this country, but after considerable investigation it was found that he had a sister living in Germany.

—Bernhard and Frederick Kleinschmidt, who have been conducting an importing and jobbing drug and chemical business under the title of Kleinschmidt & Co., at 122 Fulton street, have dissolved partnership. The business is to be continued, under the old name, by Bernhard Kleinschmidt.

—The corporation of J. N. Hegeman & Co., which conducts several retail drug stores in Manhattan Borough, has just elected the following officers: President, Geo. W. Hopping; treasurer, C. A. Wingert; secretary, Geo. H.

Bancroft. The same men are the directors of the corporation.

—Invitations have been issued for the marriage of L. Louis Frank, for five years past managing clerk of the pharmacy of Wheeler & Guck's successors at No. 426 Pearl street, and Miss Pauline Levy, of Boston. The wedding is to take place at New Haven, Conn., on March 18.

—M. Tanida, chemist and druggist of Klotz, Japan, spent several days in this city during the past week calling on the local manufacturers and jobbers. Mr. Tanida is in this country for an extended visit to learn all about American methods of conducting the drug business.

—Herman Grundhoefer, who has been clerking in the pharmacy of J. Archambault, at Ninth avenue and Twenty-first street, has accepted a position in the drug store of Louis P. Rupp, at 408 Ninth avenue.

—The Montgomery Drug Company has opened a new pharmacy at 530 Court street, Brooklyn. The company is a new one, and is composed of S. Montgomery and George Buchold.

—Julius M. Rosenthal, who has a drug store at 142 Clinton street, has bought the pharmacy of Samuel Fieldman, at the corner of Third street and Avenue B, Manhattan.

—Drug Clerk J. N. Perron, formerly with T. J. Backes, at 1521 Broadway, has left that place to take a position in the pharmacy of J. Archambault, at 178 Ninth avenue.

—G. Wiley Holmes, who formerly owned the Longacre Pharmacy, at 1491 Broadway, has bought the drug store of Walter S. Rockey, at 121 Columbus avenue, Manhattan.

—Wm. Winter, a druggist of Delhi, Delaware County, N. Y., last week made an assignment to Wm. C. Hutson. His liabilities were stated at \$2,000; assets unknown.

—D. Liebe has exchanged his drug store at No. 60 Fulton street, Brooklyn, for the store of Otto Zeitfuss at Union avenue and South Third street, Brooklyn.

—Charles Chauvin has just opened a new drug store at the corner of 158th street and Elton avenue, Bronx Borough, which he calls the "Elton Pharmacy."

—N. D. Lippincott, proprietor of a drug store at 1502 Lexington avenue, has bought the drug store of James C. Ridley, at 2227 Third avenue.

—J. W. Reed has bought the drug store of Davis & James, at No. 1900 Seventh avenue, Manhattan.

—J. Anderson, of Charles Pfizer & Co., sailed for Europe on February 28 for a short business trip.

UP THE STATE.

The retail drug trade of Elmira, N. Y., is reported to be in an uproar. A Philadelphia firm has opened a cut-rate patent medicine store. This is the first time prices have been cut in Elmira. The local association is very strong, and was ready for the fight. All its members cut below the prices of the cutter, and the association keeps a standing advertisement in all the papers bearing all the druggists' names, and a good fight is being put up. A man by the name of Jackson figures as manager of the cut-rate store, but no one knows who he is or where he comes from. Evidence is said to be available that a Philadelphia jobbing house is back of the concern.

At Rochester the local association seems to be making it rather lively for the largest cut-rate store, if one may judge by the quarter page ads, the latter is running in the daily newspapers. These ads. are headed with the word "Conspiracy" in inch long black face letters, and state that "a big conspiracy is on foot by the drug combine of this city to compel the Drug Company to restore high prices on patent medicines and drugs." The body of the ad. is devoted to quoting cut prices on staples and novelties in drugs and sundries. Customers waiting for prescriptions are told that they will be given a check to the amount of five cents for any of the drinks at the soda fountain.

—R. E. Walsh, a druggist in the sixth ward of Altoona, Pa., was a candidate for select councilman on the Republican ticket at the recent election, but was defeated by fourteen votes.

—W. H. Burgoon, Altoona, Pa., has moved his drug store from 1301 Seventh avenue to 613 Twelfth street.

IN AND ABOUT BOSTON.

Want Registration on Diplomats.

Boston, March 3.—Before the Committee on Public Health a hearing has been given on the bill introduced on leave of William D. Wheeler, Boston, against the unlawful practice of pharmacy. William W. Bartlett, president of the Massachusetts Druggists' Alliance, appeared in favor of the bill, which provides that graduates of reputable colleges of pharmacy may be registered without passing an examination. William F. Sawyer, former president of the Massachusetts College of Pharmacy, also spoke in favor of the bill. Opposition to it was shown by James J. Brown, a Lowell druggist, who claimed that the proposed legislation was unjust and discriminated against those who were not graduates.

A Rich Display Attracts Burglars.

Boston, March 5.—An exhibition of 9,000 new pennies in the front window of Frank E. Norris's drug store at the corner of Fairmount avenue and Davison street, Hyde Park, and which were to be given away to those guessing nearest to the correct number, probably attracted burglars to that place. Anyway, they gained an entrance by forcing a rear door and broke into the safe and two cash registers, taking a few dollars in change therefrom in addition to the 9,000 pennies. They smoked cigars and cigarettes and took boxes from the cellar in which to carry away a quantity of cigars and other articles.

NOTES.

—At the annual business meeting and dinner of the Class of '99 of the Massachusetts College of Pharmacy, held at Young's Hotel, the election of officers resulted as follows: President, Dr. S. S. McCully; vice-president, Dr. Arthur H. Tupp; secretary-treasurer, Dr. G. W. Russell, Dr. George Burroughs presided at dinner. Dr. Tupp spoke on "Evolution of Student Life," and Dr. Archibald Ralston, Jr., on "Why Go to College?" Dr. S. S. McCully, Jr., was also a speaker, his subject being "Fraternity."

—The Buffington Pharmacy Company of Worcester makes the following financial statement: Machinery, furnishings and fixtures, \$7,387; cash and debts receivable, \$27,575; manufactures and merchandise, \$23,669; insurance, \$200; total, \$58,831. Against these there is capital stock, \$56,000; debts, \$6,750; depreciation in machinery and fixtures, \$785; depreciation in stock and accounts, \$1,343; total, \$38,831.

—About twenty members of the Boston Druggists' Association attended a dinner of that organization at Young's Hotel on the evening of February 27. G. W. Cobb, the new president, presided. Osborne Howes spoke upon "Trade Relations Between the United States and Canada," and J. Willard Browne talked upon "The Signal Corps in the War of the Rebellion."

—On the charge of practicing medicine without a physician's diploma, Harry R. Foster, a clerk in the drug store of John N. Ames, of Chelsea, has been arrested. The police allege that he has been pretending to be a physician and has been giving medical treatment to people. He was bailed out very soon after his arrest.

—A new corporation is the York Drug Company, which has been formed to compound drugs. The capital will be \$10,000, of which nothing is paid in. E. F. Adams, of Malden, is president, and Waldo March, of Malden, treasurer. F. E. Rowell, of Kittery, is the third incorporator.

—Edward Cantwell, a well-known Fall River pharmacist, and Miss Ellen E. MacDonald were married on February 23. A wedding breakfast and a reception took place at the bride's home. The bridal trip was to New York, Philadelphia and Washington.

—Important changes in the interior of Pearson's drug store at Lowell make especially attractive this popular place. Steel ceilings, well decorated walls, incandescent electric lights and other improvements make the place quite like a new store.

—Walter A. Washburn, a Lynn druggist, has pleaded guilty to violation of the screen law, and, through his counsel, entered a plea of *nolo contendere*. The judge imposed the minimum sentence, a fine of \$50.

—As the result of much petty sneak thieving in Arlington the police have arrested three boys who confess to

being the culprits. One theft was a lot of cigars taken from the drug store of O. W. Whittemore.

—The week's exports at the Port of Boston include, among other things, drugs and chemicals, \$11,447; India rubber manufactures, \$2,391; wax, \$692.

—Abbott & Stubbs are closing out their drug store at Ware preparatory to going out of business.

PHILADELPHIA.

Philadelphia Association of Retail Druggists.

Philadelphia, March 3.—The Philadelphia Association of Retail Druggists held a very interesting meeting on Friday afternoon in the Museum of the Philadelphia College of Pharmacy. In point of attendance this meeting was the most successful one yet held. President McIntyre occupied the chair. The applications of eight new members were received and acted upon favorably. Mr. Harris, chairman of the entertainment committee, submitted a report on the net proceeds from the Progressive Euchre held on February 7th, which were \$580. A resolution was offered by Mr. Harris requesting certain concessions from the Bell Telephone Company toward those members of the association who have public telephones in their stores. The resolution was accepted and a committee of five was appointed to wait on the Bell Telephone Company and report at the next meeting.

A resolution was also adopted requesting Governor Stone to reappoint Charles T. George, of Harrisburg, as Secretary of the State Pharmaceutical Examining Board. A motion was presented and carried, authorizing the association to pay all druggists, who were members of the association, the amounts of the fines they were compelled to pay for violation of the Sunday selling law up to date. The most important feature of the meeting, however, was the adoption of a resolution regarding Sunday closing, which had previously been favorably acted upon by the Executive Committee. The resolution reads as follows:

"Desiring to promote a proper observance of the Sabbath Day and to uphold the laws of the State, therefore be it

Resolved, That we, the members of the Philadelphia Association of Retail Druggists, do abstain from selling soda water, cigars and candy on the Sabbath day, confining our sales to drugs, medicines and such other articles and preparations as are necessary for purposes of health and physical comfort.

"We suggest the lowering of curtains and the extinction of all window lights."

This action was taken by a unanimous vote of all the members present, although the discussion which preceded the vote showed that some of the members, at least, would be acting against their best interests in supporting it, but even those who spoke against the resolution stated that they would abide by whatever the association thought best after full consideration of the subject.

The negotiations which have been carried on during the past month between the Executive Committee and Dr. Mitchell, representing the Philadelphia Sabbath Association, have had much to do with the passing of the resolutions, as it was shown that the Sabbath Association was willing to meet the druggists half way, as the following resolution, passed by that body on February 26th, indicates:

"Resolved, That the Philadelphia Sabbath Association approve the proposition of the executive committee of the Philadelphia Retail Druggists' Association, with reference to the discontinuance on Sundays of the sale of all articles except medicines and such other articles and preparations as are necessary for purposes of health and physical comfort, and hereby agrees, if the Druggists' Association acts favorably on the proposition of the executive committee to follow the outline of the plan as proposed by the executive committee: First, That the Philadelphia Sabbath Association will first refer all complaints of violations of the Sunday Law on the part of the druggist to the executive committee of the Druggists' Association, whereupon, the committee will endeavor to secure observance of the law by such violators. Second—In case where the executive committee's endeavor fails, they will refer such cases back to the Philadelphia Sabbath Association for such further action as the officers of the association deem then advisable."

In the original resolution as first presented, postage stamps were included in the prohibited articles, but as the discussion brought out the fact that those druggists who have sub-postal stations in their stores are required by the Government to sell stamps at all times when the store is open for business, this item was left out of the

resolution as finally presented and adopted. From present indications the time is not far distant when the thirty per cent. of the Philadelphia retailers who have not yet joined the association will have to come in and share in the benefits which are already resulting from membership in this body of earnest, active men.

NOTES.

—A West Philadelphia druggist, speaking about the progressive *euchre* held recently by the Philadelphia Association of Retail Druggists, said that he had sold a ticket to one of his customers, who attended the *euchre* and won a dozen bottles of malt extract as a prize. The next day he brought the malt extract around and said he had no use for it but would like to exchange it for something else if the druggist was willing. The druggist consented and gave the man credit for it at its full retail price, after which the customer took it out in cigars, on which there is very little profit. As it happened to be one of his best customers the druggist could do nothing but submit without a murmur.

—A sensation occurred last week in Philadelphia pharmaceutical circles, when one of the large department stores announced, in their advertising columns in the daily papers, that they were offering bougies for sale, in one of their departments, at 25 and 30 cents each. Several members of the local association of retailers took the matter up and verified the facts, also discovering the name of the manufacturer who had supplied them. It was also learned that catheters were being sold also, and the Druggists will no doubt take active measures to prevent any further encroachment on their rights by the department stores.

—W. A. Rumsey, pharmacist at Forty-first street and Westminster avenue, is one of the enterprising druggists who has taken advantage of the present indescribably filthy condition of the water supply, as furnished by the municipal authorities, to make a little extra profit on the "druggists' old stand-by—water." Mr. Rumsey's store is located near Fairmount Park, where there are many springs from which pure water may be obtained, and he sells spring water in 5-gallon demijohns.

—The "Photographic and Microscopic Branch" of the "Chemical Section" of the "Franklin Institute" will hold a meeting on Tuesday evening, March 6th, in the lecture hall of the Institute. A very instructive program has been announced, in which the subject of "Developing negatives" will be considered from different points of view.

—Professor Joseph P. Remington, dean of the faculty of the Philadelphia College of Pharmacy, was absent for a few days last week on a visit to New Orleans. While there he witnessed the celebration of "Mardi Gras." Since his return he has been confined to his home by a sprained ankle, but expects to be about again in a few days.

—The meeting of the Philadelphia College of Pharmacy, Sub-committee on Research for Revision of the U. S. Pharmacopœia, which was to have been held on Tuesday, February 27th, has been postponed on account of the absence of Prof. Joseph P. Remington, chairman of the committee.

—The proposed new office building which is to be erected at Fifteenth and Market streets is not yet a certainty, but if it goes through C. A. Eckles, pharmacist at 1430 Market street, will probably be compelled to move his store from its present location.

—Out in Germantown the druggists are beginning to realize the value of membership in the local association, as by unanimous agreement they were able this week to restore several preparations to the full retail price.

—H. C. Blair, Jr., proprietor of the well known store at Eighth and Walnut streets, and also the store at Twelfth and Spruce streets, has been unable to attend to business duties on account of illness.

—The announcement of the first year class examinations, which begin next week, is posted up on the bulletin board in the entrance hall of the Philadelphia College of Pharmacy.

—Mahlon N. Kline has sold his house in West Philadelphia where he has resided for so many years, and will move to Germantown with his family in the near future.

—The number of "clerks wanted" last week was twenty-two, while thirty-eight clerks were looking for positions.

BALTIMORE.

The Card System.

Baltimore, March 5.—At a largely attended meeting held last Thursday at the Maryland College of Pharmacy, the Baltimore Retail Druggists' Association decided to put into effect the card system of regulating purchases from jobbers and of accommodation between retailers, and to endeavor by this means to combat the evils from which the trade suffers. As explained in previous numbers of the Era, the card system, which has been successfully inaugurated in various cities, provides that jobbers shall sell goods only to the holders of cards showing the latter to be regular druggists. A pharmacist who permits himself to become a medium through which a cutter obtains goods thereby forfeits the privileges extended under the arrangement. Much enthusiasm was manifested at last Thursday's meeting, and the report submitted by the canvassing committee, which showed the druggists to be almost a unit on the subject of co-operation, was received with expressions of intense gratification. It was decided to have the association incorporated—John G. Beck, president; Owen C. Smith and J. Webb Foster, vice-presidents; R. E. Lee Hall, secretary; Louis Schulze, treasurer; Henry P. Hynson, John H. Hancock, Charles Morgan and August Schrader being the incorporators. President Beck and Secretary Hall were appointed a committee to call on the jobbers in the city, and secure their signatures to the agreement embodying the aims of the association. The following preamble and resolutions were adopted:

Resolved, That the Baltimore Retail Druggists' Association, realizing that sharp competition in the manufacture and sale of drugs and medicines, if often done, result in danger and injury to the community;

That the best is none too good in the treatment of disease, and

That the public should be protected against evils which are the certain results of unhealthy competition; and

Believing that an unremunerative profit tends to, and frequently does, result in substitution, sophistication and degradation of medicinal preparations, and that thereby defeating the objects for which medicinal remedies are employed or prescribed; and

That the use of drugs and medicines for advertising purposes is highly pernicious and detrimental; and

Whereas, a card system has been devised and submitted to this Association, the object of said system being to protect alike the drug trade and the public; and

Whereas, this Association regards said card system as the best practical method so far presented, as a means to attain the desired end; therefore, be it

Resolved, That the Baltimore Retail Druggists' Association hereby adopts the card system above mentioned; and further

Resolved, That the adoption of said system is for the bona fide purpose of conducing to the public good, by confining, so far as it is practicable, the traffic in drugs and medicines within legitimate, competent and reliable channels, as well as for the protection of the interests of the Retail Drug Trade; and, finally,

Resolved, That with these objects in view we invite the active co-operation and cordial support of every retailer and wholesale druggist in the State of Maryland.

A contract setting forth the precise conditions under which jobbers bind themselves to sell medicines and drugs to members of the trade has been drawn up, and will be submitted to all the wholesalers for their signatures.

The Proposed Drug Law.

Baltimore, March 2.—The prospects for the passage of the State pharmacy bill, introduced in the Maryland General Assembly by Delegate Truitt at the instigation of the Maryland Pharmaceutical Association and the Baltimore Retail Druggists' Association, are very encouraging. Much of the opposition which had developed toward the bill as originally drafted, has been withdrawn, in view of the several amendments accepted by the Druggists specially interested in the measure. A delegation of pharmacists—among them Dr. A. R. L. Dohney, president of the Maryland Pharmaceutical Association—and a number of the most prominent druggists of Baltimore, visited Annapolis this week, and offered such strong arguments in support of the bill that the House Committee on Hygiene decided to make a favorable report. In this connection it may be pertinent to mention that, with the single exception of the Sunday laws, the Pharmacy bill has called out more petitions for and against it than any other measure in the House. The first of the amendments offered and accepted by the druggists strikes out the first section, and re-enacts it, leaving out all reference to the

sale of patent medicines by merchants and permitting this branch of the trade to be unaffected by the proposed statute. Section 9 is amended so as to make the restrictions placed upon assistants to pharmacists less stringent. The original bill provided that any person over 18 years of age employed as a clerk or assistant in a pharmacy, and who has been actively engaged for one year in a pharmacy, shall be entitled to registration as assistant pharmacist and to a certificate as such. The amendment changes the age to 17 years, and the term of service to two years. It also allows a youth 16 years, who has had three years' experience, to register under like conditions. This amendment is a concession to a large delegation from Western Maryland, who appeared before the committee yesterday morning. Determined efforts have been made to prevent the enactment of any measure, and petitions have been circulated freely among country store-keepers to rally against the bill under consideration, and to defeat it as being against their interests. The effectiveness of this agitation was recognized in the amendments accepted by the promoters of the proposed law. These amendments deprive it of much force, but half a loaf is better than none, and when an actual demonstration has once convinced the public of the benefits of a state pharmacy act, it will be less difficult to get such supplementary legislation as the circumstances may call for.

Among the Bowlers.

Baltimore, March 2.—The James Baily & Son quintette are adding to their reputation as a stumbling block in the way of the leaders in the race for the Baltimore Drug Trade Bowling Club cup. Last Tuesday night they managed to take two games from Sharp & Dohme, so that this team and the once haughty Root and Herb men are again tied for first honors. This result, however, was due rather to somewhat low scores for Sharp & Dohme, than to high totals for James Baily & Son. The result was: James Baily & Son, 724, 747 and 761; Sharp & Dohme, 766, 759 and 761. The highest score made during the evening was only 181—the distinction falling to Goldsborough, of Sharp & Dohme. Tonight the tail-enders had a battle royal, in which Gilpin, Langdon & Co. came out second best—Parke, Davis & Co. taking two games in three, by 639, 683 and 703, against 664, 586 and 633.

NOTES.

—The W. P. Parker Company, of Baltimore, has been incorporated at Dover, Del., to manufacture medicines and patent compounds, with a capital stock of \$100,000. W. J. Parker, J. R. Parker, James T. Mullikin, Howard Mullikin and J. A. Kemp are the incorporators. The company will succeed W. J. Parker & Co., at 7 South Howard Street.

—Druggist E. L. Allen, of Alexandria, Va., has fitted up his store at Fairfax and King Streets, in handsome style. New furniture and fixtures have been installed, and various other improvements have been introduced. The pharmacy is now one of the most attractive in the town.

—Among those who sustained losses by a fire at Waynesboro, Pa., on last Friday, which destroyed property valued at \$75,000, were Forthman & Miller, druggists. Their damage is estimated at \$1,000.

—James Feldmeyer, of the Annapolis drug firm of Feldmeyer Bros., and a member of the Maryland House of Delegates, was among the visitors in Baltimore last week.

ACCIDENTALLY SHOT HIMSELF.

D. M. Long, a drug clerk of Columbus, Miss., accidentally shot himself, February 24, while examining a new revolver he had recently purchased. The ball entered his left side, causing a dangerous, if not fatal, wound.

SOLD LIQUOR AND WAS FINED.

Nels Buseth, a Deerfield, Wis., druggist, was convicted in the Municipal Court, February 23, of selling liquor without a license and fined \$50 and costs, \$63.95 in all. As soon as this case was disposed of he was arraigned on another complaint, charged with selling to minors. He pleaded guilty and was again fined and had to pay the costs.

DETROIT AND MICHIGAN.

The Phenacetine Smuggling Case.

Detroit, March 3. The examination of Mrs. Elsie Smith, charged with smuggling coal-tar products from Windsor into Detroit, took place before United States Commissioner Graves, on Monday, February 21, and resulted in the woman's being bound over to the grand jury, with bail at \$300. There was no evidence at the examination to show that the duty had ever been paid on the goods Mrs. Smith was handling at the time of her arrest, or upon the goods found in the rooms rented by the Smiths. It transpired, however, that Mrs. Smith's errand at the express office, where she was arrested, was to add some package to a shipment already placed there by Lewis J. Fulmer, who was convicted of smuggling phenacetine two years ago. Mr. Fulmer's share in the shipment mentioned bore no signs of having passed the customs officers, and so the authorities are looking for Mr. Fulmer, to give him a chance to explain. Mr. Fulmer seems to be a hard man to locate just now, but the officers are hopeful. The Grand Jury has been drawn, but no time fixed yet for its sitting. It will, however, be sometime during the present month.

Bowling.

Detroit, March 3. The last games of the series between the bowling teams of the two jobbing houses of this city resulted in a victory for Farrand, Williams & Clark, who have won 14 of the 27 games played. Walter McAdam of the winning team has proved himself the best player of all, having an average for the season's work of 158. Charles Carlisle of the Michigan Drug Company had the best average of his team. The highest individual game played was by Wm. Moffat of F. W. & Co., who made a score of 214. On Monday night, March 12, the losers will entertain the victors at an oyster supper in one of the big hotels here. So much interest has been exhibited in the contest that elaborate plans are in preparation for the formation of a druggists' bowling league, the games to be played next season. Six houses will go into it—Parke, Davis & Co.; Frederick Stearns & Co.; Nelson, Baker & Co.; Fred. Ingram & Co., and the two jobbing houses. The six teams will be paired each week for a season of twenty weeks, thereby giving each team a chance to play twelve games with every other team of the league. Already the boys are enthusiastic over it.

NOTES.

—George N. Whipple, druggist for nearly 20 years at the corner of Orleans and Champlain Streets, Detroit, has been appointed one of the clerks in the local census office. He will have general charge of one of the districts, and will be busy for the next two or three months in field and office work.

—Port Huron druggists are doing their "house-cleaning" early: R. G. Burwell and George Williamson are papering and painting; George S. Sharrard is just about to move into the adjoining store, which is being refitted and refurnished for him.

—While assisting L. M. Hines of Hersey, Mich., in cleaning his drug store, John Palmer accidentally drank an ounce of carbolic acid in place of simple syrup. The young man lived but ten minutes.

—Fire in a hardware store at Davisburg, Michigan, affected the wall of Ely & Son, druggists. Loss covered by insurance. Clerk Street, who lived above the store, lost some of his household goods. No insurance.

—Druggist Andrew M. Farland, corner Greenwood and Reed Place, was one of the many who started a little fire he didn't intend in attempting to thaw out his water pipes after the big storm. Damage slight.

—The Western High School boys took the second game of indoor base ball from the Michigan Drug Company base ball team, by a score of 8 to 3. The "rubber" will be played March 15.

—Mr. Dunlop, of the drug firm of Dunlop & Hovey, Fenton, Michigan, has been laid up for two weeks with rheumatism.

CHICAGO.

Bowling.

Chicago, March 3.—The score of the Chicago Drug Trade Bowling Club this week was as follows:

Fechter	131	105	141
Storer	193	176	156

NOTES.

—B. F. Parnell has sold his drug store at Fowler and North Robey Streets, to G. Fernitz, who, a short time ago, owned a store at Washtenaw and North Avenues. Mr. Parnell was head clerk for L. K. Waldron at Fifth Avenue and Randolph Street for six years. He finally bought Stone's drug store at Madison street and Western Avenue, and in the course of a few months moved it to Fowler and North Robey Streets. Finding that the confinement of the store was injuring his health, Mr. Parnell sold out, as stated above. He expects to secure a position as salesman for some jobbing house or manufacturer, for which occupation his long experience and his wide acquaintance with the city trade have especially fitted him.

—A. Ahrend, one of the old druggists of Chicago, has sold his store at Fifth Avenue and Madison Street, to Adamick Brothers, for a consideration, it is reported, of \$11,000. Mr. Ahrend opened a drug store in Chicago in 1871, at 521 West Madison Street. He subsequently moved to Franklin and Madison Streets, where he remained for a year or two, when he removed to Madison Street and Fifth Avenue. In the latter '50s, Mr. Ahrend was in the liquor business in Philadelphia, where he opened a drug store on Eleventh Street, between Arch and Race Streets. Later, he sold out and came to Chicago.

—Results from the first concerted effort to operate the "relay" Sunday-closing plan in the druggists' trade will be forthcoming Sunday evening, March 4, when throughout Lake View druggists will observe the agreement adopted by the Twenty-Sixth Ward Druggists' Association, whereby ten of the thirty-two pharmacies in the district will remain open, while the remaining ones close after 6 o'clock. The druggists have been arranged in groups of three or four, thus dividing the district into sub-districts, in each of which the local drug stores will alternate in keeping open Sunday evenings.

—The First Ward Druggists' Club, whose proposed organization was mentioned in these columns recently, met and perfected final organization on Tuesday last. The objects of the new club are identical with those of the other ward societies of druggists—to promote good feeling, co-operation in policy, uniformity in prices, and Sunday closing. The following officers were elected: President, Walter H. Gale; secretary, Louis K. Waldron; treasurer, George R. Baker.

—The third of the series of meetings of the Alumni Association of the Chicago College of Pharmacy, for the discussion of pharmacopoeial revision, will be held on Wednesday evening, March 7, at the Palmer House. The subject will be, "The Proposed Introduction of Protected Medicines into the Pharmacopoeia." A. G. Vogeler will present a paper. Dr. D. R. Brower, of Rush Medical College, will lead the discussion.

—Nathan Evans, formerly manager of the Boulevard Pharmacy, at Forty-third Street and Grand Boulevard,

has bought the interest of Mr. Lowman in the firm of Buck & Lowman, at Forty-seventh Street and St. Lawrence Avenue. The new firm will be known as Buck & Evans.

—The following druggists have filed voluntary petitions in bankruptcy during the week: Fred J. Trimble, 1150 Flournoy Street; liabilities, \$3,500; assets, \$200. A. S. Keats, liabilities, \$5058; assets, \$298. J. A. Renner, 2107 West Madison street; liabilities, \$9,461.30; assets, \$365.20.

—Mrs. Marion Scott Stevenson, wife of Robert Stevenson, the wholesale druggist, died suddenly Saturday evening, February 24. She was ill only two hours. She leaves six children—five sons and a daughter.

—Notices have been issued by Walter H. Gale, local secretary of the Illinois Pharmaceutical Association, to the effect that the association will meet this year in Chicago, on July 17, 18 and 19.

—Minnie A. Rausch has filed a bill for divorce against Charles A. Rausch, a Chicago druggist.

THE NORTHWEST.

Drug Clerk's Chill Environment.

St. Paul, Minn., March 2.—Judging from a private letter received in this city from a clerk who not long ago connected himself with a drug store in one of the small towns tributary to St. Paul, he has as hard a row as "The Man with the Hoe" ever tackled. Here is a portion of his melancholy narrative: "This building I am in is a regular ice cooler. One morning it was only 2° above zero, another 4° above; inside, too, and a fire burning all night. So you see I am trying to enjoy my misery as well as possible. If Mr. — (his employer) were home I would simply lock the door and telephone him that I had quit; but I hate to do it now. He . . . will be gone six weeks. . . . I would not stay in this building a whole winter for all the money in — or —, as it has half killed me already. Have got rheumatism and almost everything else. Expect a dose of the hog cholera soon. Well, I guess I must quit, as the lead pencil is freezing. Hope you are warm and in good health."

NOTES.

—With the advent of spring an unusually large number of firm changes in this section is to be noted. In addition to the changes told of in other paragraphs in this column is the following list of successions: Olson & Anderson, Mondak City, S. D., by W. A. McClaren; W. F. Waldhoff, Foreston, Minn., by R. W. Kniffen; E. J. Seykora, South Omaha, Neb., by M. A. Dillon; R. C. Lehman & Co., Johnson Creek, Wis., by Frank Sempeel; Snyder & Shaner, New London, Ia., by R. B. Snyder; Harris Drug Co., Rising City, Neb., by Dr. J. H. East; E. Horsman, Church's Ferry, N. D., by S. E. Pixley; Arnold & Beaver, Kirkman, Ia., by W. B. Arnold; Collins & Tisdal, Winthrop, Ia., by E. E. Collins; W. W. McDJaid, Courney, N. D., by H. J. Murphy; Phelps & Shore, Eldon, Ia., by Phelps & Strickling; Homer Frankenfeld, Hutchinson, Minn., by Fred W. Hart; Helgeson & Stensrud, Lake Mills, Ia., by A. Stensrud; F. A. Mayo, Bemide, Minn., by Mayo & Barker; G. W. Nickels, Wyndmere, N. D., by M. Christianson, M.D.

—"Sid" Reeves, the two-store druggist of St. Paul, whose aspirations for the Republican nomination for the majority were recorded in the last number of the Era, had better luck in his second trial to secure the endorsement of the Republican leaders of his ward, which he has long represented in the city council. Mr. Reeves obtained an indorsement, but it was not unanimous; and his political sky cannot yet be said to boast an "overly" stock of blue.

—On the 15th inst. the students of the College of Pharmacy, University of Minnesota, are to have an extra treat—something like what the printers call a "pick-up"

—In the shape of a lecture by E. A. Warren, chemist of Noyes Bros. & Cutler, St. Paul. Mr. Warren's subject will be "A Medley on Pharmacy," and most entertaining and instructive talk it will no doubt prove to be.

—Richard Gray, a druggist of Volin, S. D., was arrested charged with selling intoxicating liquors without a state

license. Gray's preliminary hearing occurred at Yankton. Pleading not guilty, he was bound over to the circuit court in the sum of \$200.

—Bonnie Oberg has left Alexandria, Minn., and returned to his old place in the dispensary of the City & County Hospital, St. Paul, vice E. A. Davies, resigned.

—The National Chemical Co., which will manufacture drugs, has been incorporated at Portland, Ore.

—C. H. Foss, St. Charles, Minn., and G. W. Bishop, Wauwoc, Wis., have been burned out.

—H. S. Goodard has started at Goldendale, Wash., and R. W. Wilkins at Broken Bow, Neb.

—The Hamilton, Mont., Drug & Jewelry Co. has been incorporated with \$15,000 capital.

—Senator Gausewitz, of Redwing, paid the city a short business visit this week.

—F. G. Danielson, having sold his Princeton drug stock, has gone to Iowa on a visit.

—L. A. Luffield, Mystic, Ia., and E. D. Russell, Clare, Ia., have given bills of sale.

—The New Economical Drug Co., Omaha, Neb., has been sued on an account.

—M. M. Colbert is taking a term in Drew's Pharmacy College, Minneapolis.

—J. C. Wilson is now working in the Ryan Hotel Pharmacy, St. Paul.

—X. L. Gregg has gone to work in Vogell's drug store, Minneapolis.

—J. H. Kiefer, Butte, Mont., will discontinue about May 1.

—Joseph Hammel, Medford, Wis., will remove to Appleton.

—H. F. L. Eckerman, Omaha, Neb., is negotiating to sell.

—William P. Callow, Weisen, Idaho, has discontinued.

—Olmstead & Rosendorf, Ritzville, Wash., have dissolved.

—B. O. Krueger has left the Dreis pharmacy, St. Paul.

—A new drug stock is to be put into Kenmare, N. D.

—J. ns Jensen has gone to work at Clara City, Minn.

—H. E. Palmer has discontinued at Shelley, Idaho.

—M. Gordon & Co., Chewelah, Wash., have sold.

ber goods, etc. They expect to occupy the new store about May 1.

—The drug store of George Polston, 1301 North Broadway, was burned out Thursday. The stock and fixtures are almost a total loss, and were insured for \$2,500. Mr. Polston lived on the second floor and his household furniture was badly damaged. The loss on the building, which is owned by Druggist Thomas Halpin, of Grand and Olive streets, is placed at about \$1,000, insured.

—The State Board of Pharmacy will hold a special meeting at Liederkranz Hall, March 19, for the benefit of members of the graduating class of the College of Pharmacy so that the students will not have to go to the expense of going from their homes to Kansas City, where the next regular meeting will be held.

—Robert Ruckstuhl, formerly in charge of the sundry department of J. S. Merrell Drug Company, will leave in a few days on his first trip as their traveling representative in Southern Illinois.

—A. G. Enderle, the president of the Druggists' Cocked Hat League, and a member of the Burdocks team, holds the record, averaging fifty-nine and four-fifths in five games.

—George Stiehl, clerk for H. F. Griesbach, has the sympathy of his friends in the trade on account of the loss of his father, who died a few days ago.

—Jordan W. Lambert, of the Lambert Pharmaceutical Company, has been seriously ill, but on Saturday an improvement in his condition was reported.

—Edgar Roberts expects to open his new drug store in East St. Louis. It represents an investment of about \$3,500, it is said.

—Wm. Lamont, representing the St. Louis branch of Eli Lilly & Co. in Missouri, is the proud father of a bouncing boy.

—J. W. Peeler has moved his drug store at Jefferson avenue and Gamble street to 4105 Easton avenue.

—Henry Garwood will open a new drug store at Fair Plav, Mo.

WHEELING, W. VA.

—There has been considerable sickness among our druggists and clerks lately. H. C. Stewart, of the south side, who has been ailing for some time, is getting along nicely. J. Schafer, clerk at Waterman's pharmacy, who has been ill with typhoid fever, is recovering. R. T. Devins, of Wm. Hague's pharmacy, is able to be out again after an attack of rheumatism. A. M. Ambuster, of C. Menkemiller's pharmacy, is recovering from a fall, which made him unconscious for several hours, received while decorating for Washington's Birthday celebration.

—The Wheeling Druggists' Association, a member of the N. A. R. D., is in a flourishing condition, nearly every druggist in this city and vicinity within a radius of fifteen miles belonging to it. Some little cutting is going on in this city by several non-members, but a much closer line is being drawn by the association and the outcome will be all right.

—W. W. Irwin, the popular south side druggist, is aspiring to the nomination on the Democratic ticket for sheriff of Ohio County, the best paid office in this State. He is sure of the nomination and has the best of chances of being elected.

—The West Virginia State Board of Pharmacy meets in Parkersburg on April 3d next.

—Wm. Gaus, the Island druggist, now displays daily the U. S. weather signals.

—The card system for drummers will be introduced in this city shortly.

A New Drug Store in El Paso, Tex.

Potter & White have recently opened a handsome new drug store in El Paso, Tex. The members of the firm are Scott C. White and Herbert L. Potter, the former having been engaged for a number of years with the drug trade in El Paso, the latter being a graduate of the Northwestern University School of Pharmacy and also president of the Eddy Drug Co. at Carlsbad, N. M. The fixtures of the new store are done in cherry, mahogany and French plate glass. A handsome soda fountain of Italian onyx forms part of the equipment.

ST. LOUIS.

Mr. Crow is Silent.

St. Louis, March 3.—There are no further developments in the druggists' case. Attorney General Crow has not yet filed an amended petition or signified his intention of doing so. If he does not do so in a reasonable length of time motion will be entered for final judgment on the demurrers after due notice is given him of such intention.

Druggist Fails.

St. Louis, March 1.—George S. Aroid, druggist at 1805 South Broadway, filed a chattel deed of trust on his stock and fixtures for \$2,397.85 to Michael C. H. Arende as trustee for the benefit of the following creditors: J. S. Merrell Drug Co. \$129.55; William A. Stickney Cigar Co., \$8.25; Frank J. Lutz, \$700.00; W. D. Hoeffken Pharmacochemical Laboratories, \$5.25; Mrs. Mary Dill, \$100; F. H. Ameling, \$5.90; Dr. H. W. Kohler, \$57.80. A few minutes prior to the filing of the deed a mortgage for \$1,000 to Mrs. Dill on the fixtures was filed. This last deed was dated October 13, 1899, but as stated above, was not filed until a few minutes before the deed of trust.

NOTES.

—Raboteau & Co., who for thirty years have occupied the same store, 714 North Broadway, have leased for ten years the four story and basement building, 35x45 feet, on the northeast corner of Broadway and Lucas avenue, in the same block as their present location. The building will be altered at once, an electric elevator put in and other changes made. Raboteau & Co. will occupy the first and second floors and basement, sub-letting the upper stores. Mr. Raboteau says that his plans now are to devote the store on the first floor mainly to patent medicines, having the prescription department and drug stock on the second floor, as well as a salesroom for rub-

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Novelties, Special Offers, and General Information for Enterprising Drug Buyers.

Highest quality, exquisite bouquet, delicious taste makes Cook's Imperial Champagne Extra Dry the fad in good society.

Advance in Price of Major's Cement.

The Major Cement Co., of New York, explains that its recent advance in the prices of Major's Cement from \$1 and \$1.50 to \$1.20 and \$1.75 per dozen for the 15 and 25-cent sizes, respectively, was caused by the increase in the cost of glass, material, etc., used in the manufacture.

Window Displays of Cole's Catarrh Cure.

The Cole Medicine Co., 240 Plymouth street, Brooklyn, is putting handsome window displays in the prominent pharmacies of Brooklyn. They are advertising Cole's Catarrh Cure, and in the displays are using an automatically moving figure of an elephant which readily attracts attention. Their plan has been so successful that a large number of the figures are being imported to extend it to other cities.

Fountain Chocolate.

Phillips' Fountain Chocolate is a concentrated powder, free from any admixture, easily soluble, and makes a syrup without grease or sediment, which is much richer and more delicate of flavor than any chocolate now on the market. Cheap chocolates for fountain use contain more or less starch. If you want starch don't pay the price of chocolate for it. Buy Phillips' pure chocolate and add the starch yourself.

Write for 4 ounce sample to the Charles H. Phillips Chemical Co., 77 Pine street, New York.

J. C. Ayer Co.

A very clever advertisement is that of the J. C. Ayer Co. on Page 9. The old clock did indeed look down upon but few of the patent medicines now found on the shelves, and of these old-timers, none was in better repute or in more demand than Ayer's, and none is to-day. Their advertisement bears the mark of sincerity. It is frank and convincing, and seems to say just what they want to say: that they recognize the druggists' interests as their own, and that they feel they can best increase their business by securing his good will and co-operation.

F. A. Thompson & Co. Enlarge Their Plant.

This is the home office and laboratory of F. A. Thompson & Co., Detroit, who manufacture concentrations, such as Aloin, Podophyllin, Cascarin, Hydrastin, &c., and

Powdered and Solid Extracts for the manufacturers of proprietary preparations. Although the business was but recently established in their present location, it has prospered, and they were obliged not long since to build an addition to their plant to be devoted to the preparation of aloin alone. They are now planning further extensions which will double their capacity.

The Druggists' Fruit Tablet Co., of Detroit, Mich., are manufacturing a line of fruit tablets and dainty confections, the latter in 5, 10 and 15 cent packages, exclusively for the drug trade of the United States and Canada, and sold as the Anglo-American Brand.

A Money Maker.

Jones' Excelsior Mixers and Sifters have been very successfully sold in a quiet way for a number of years and hundreds of druggists have used them. Their manufacture has now been placed in the hands of Wilmot Castle & Co., of Rochester, N. Y., the well known makers of Arnold Milk Sterilizers, who have materially improved them in many ways without increasing the price.

They are now made entirely of metal instead of partly wood; the shell is in one piece, thus preventing the escape of any powder between the cylinder and base; the front head of the cylinder can be taken off, the fans removed and the inside thoroughly cleaned in a few moments when a change in powder is to be made.

The machine holds the ingredients in the cylinder and by a few turns of the handle, thoroughly mixes them, rubbing out all lumps with an elastic rubber and stiff brush set on a strong revolving frame. The slide is then removed and the same operation quickly sifts the product to any degree of fineness desired into a drawer in the base.

With one of these machines the druggist can manufacture his own tooth powders, face powders, condition powders, etc., and the finest grade of baking powder at a comparatively small cost, thus greatly increasing his profits. Valuable formulas are supplied to every purchaser. For further particulars write Wilmot Castle & Co., Rochester, N. Y.

Needham's Extract of Red Clover.

The efficacy of Red Clover Blossoms in diseases of the blood has been known for a long time, and to this day Red Clover Tea, as it is called, is administered in country homes where the drug store, with its modern medicines, cannot easily be reached. But it remained for Mr. D. Needham to prepare Red Clover in a form easily taken, after he had been cured of a cancer by its use. He first prepared it for general sale in 1878. His preparation was first sold in Chicago, but it soon became popular; one cure induced other sales, until in a few years, and with but little advertising, it became known all over the country. Mr. Needham retired in 1882, and died six years later, 80 years old. The business is now conducted by his sons, G. S. and E. B. Needham, under the style of D. Needham's Sons.

The Red Clover Blossoms used in the preparation of their extracts are not bought in the open market, but are gathered for them by men who understand their requirements thoroughly, and whose crops are contracted for in advance. The blossoms and extract are exhibited for sale in three forms.

The dry blossoms, pressed into one pound packages, for making the old-fashioned tea.

The fluid extract, a liquid preparation, all ready for use.

The solid extract, evaporated in vacuum and put up in tins containing one pound each. The solid extract is recommended for most cases.

Needham's Red Clover is sold to the retail druggist as follows:

- Dry Blossoms, \$4 per dozen pound packages.
- Fluid Extract, \$8 per dozen pound packages.
- Solid Extract, \$20 per dozen pound packages.

These preparations are well known and in steady demand. They are kept in stock by all wholesalers, or will be sent, tax paid, directly by the manufacturers.

State of Trade.

Little to Report, but Trade is Good.

New York, March 6.—There is very little to report in the way of large transactions in any department of the wholesale market, and most of the fluctuations in prices during the past week are of only ordinary importance. The jobbing trade, however, has continued of satisfactory volume, the demand for small parcels showing no abatement, and values as a rule have had a fairly steady support. Opinion has continued slow and exceed-ingly quiet conditions have prevailed both here and in the foreign markets. The undertone has been weak, and in some instances case lots have sold at a concession from previous inside quotations.

Quinine has ruled but fairly firm, with the situation somewhat peculiar. At the Batavia auction sale on Thursday last, the entire quantity offered, about 275,000 ounces, was reported sold at satisfactory prices. The shipments of bark from Java during February were the smallest for any one month for a long period. Notwithstanding these stimulating influences, the London market for quinine developed weakness and some irregularity. Manufacturers' prices, however, have remained unchanged, and among outside local holders a firm feeling prevailed, together with an opinion that the apparent depression in the London market was wholly the result of manipulation.

Carbolic acid has reacted materially from its former strong position, and, as usual on a declining market, buyers decline to operate in excess of actual current necessities. The restrictions placed upon shipments by the English Government are said to have been considerably modified, and supplies have begun to arrive more freely. Speculative holders have shown more or less anxiety to sell, and in consequence the general market is somewhat demoralized. Salicylic acid also is easier owing to the unsettled condition of carbolic, and outside holders have reduced quotations about 5c. per pound, but manufacturers have not yet announced any change.

Salines are exceedingly scarce, and as the article can be manufactured only during the summer months, the outlook is considered favorable to extreme prices. Manufacturers quote without offer, while dealers have advanced their quotations materially and decline to sell except in a very small way.

Grain alcohol is firmer, and leading distributors have advanced quotations 1c. per gallon owing to a stronger position of crude material. Wood is unchanged but steady, with a fair movement, mainly on orders from large manufacturing consumers.

Nothing of consequence has transpired in essential oils, beyond a further slight reduction in quotations for cassia, and a lower range of prices for cubeb. Rumors are current that exceedingly low figures have been named to out of town buyers of oils produced in China, Japan and East Indies. In some instances the quotations are said to be so far below cost of importation that the question of adulteration is worthy of attention.

Among the roots golden seal continues to reflect weakness, but the spot stock is too small to admit of any radical decline. New crop jalap has begun to arrive, and the tone of the market is a shade easier, with holders of old stock inclined to grant concessions. Culver's root is in much better supply, and with continued free offerings from producing points, spot values are lower. Ipecac has developed improved conditions abroad, and the feeling among local holders is firmer, with quotations showing an advance of about 10c. per pound.

Ergot is unsettled and irregular owing to cables from Europe regarding easier primary markets, but some holders are not disposed to give credence to the reports, and decline to meet the lower prices named by others.

Balsam Peru is slow of sale, with values tending downward, and quotations have been reduced 5c. per pound. There are no new features in any of the other balsams, and the general market has a tame appearance.

Potassium cyanide is firmer owing to a new classification by the Board of Appraisers, which increases the duty. While arsenic is fractionally higher in the large way, but former jobbing quotations are still current. Short bunch leaves are offered more freely and prices are a shade easier.

Good Trade Continues.

Boston, March 3.—Good trade almost everywhere continues. The demand seems to be general, rather than for any special line of goods. There is no prevalence of any special diseases, although there is probably as much sickness as usual. No marked changes in the general market are reported. Lines as a class are a bit quiet. Imports of various lines are now reaching here far more satisfactorily than in the recent past. Alcohol and cologne spirits are fairly a-tive and the call for them is steady. Byestuffs are dull, with no notable activity in any one line.

Slight Easing Off in Baltimore.

Baltimore, March 5.—The jobbing drug trade eased off somewhat during the latter part of last week, having been very active and busy that time. The volume of local orders was of fair proportions, and no abnormal conditions developed. Manufacturers of pharmaceuticals experience a gradual increase in business, and report the outlook as very favorable. Retail druggists are still more or less affected by the stringent manner in which the Sunday

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade price-list on application.

Law is being enforced, their trade being otherwise relatively good. Heavy chemicals are about up to the average as to movement, and the whole situation bears a satisfactory aspect.

Favorable Reports from Philadelphia.

Philadelphia, March 3.—The favorable reports of business conditions which have been received from the wholesale trade for several weeks successively are still applicable to this week's business. The orders are gradually increasing in size as well as in number, and the city delivery wagons are often kept busy until late at night. The retail trade is enjoying a period of unusual business prosperity; at the meeting of the Philadelphia Association of Retail Druggists, held on Friday afternoon of this week, there were not more than two or three druggists who did not seem well satisfied with the present state of affairs. It is hoped by everyone connected with the trade that the existing condition will continue through the Spring months.

Detroit Feels the Storm.

Detroit, March 3.—The big snow storm put every kind of business at a standstill in Michigan, drug business not excepted. Orders and shipments come in nor get out, and the result was the quietest three days ever known in the history of the trade, it is said. All the excitement the retailers experienced was to watch the doors for a possible customer—and to keep up the fires!

Three Days of Enforced Idleness.

Chicago, March 3.—Except for the severe storm, trade would have been good this week. The blizzard inflicted three days of enforced idleness upon most of the jobbers this week, however, retarding shipments, delaying mails, and playing hob generally. Nevertheless, conditions are now very favorable and the demand is good in drug lines. Dealers in paints and oils loaded up their trade for the Spring before January 1, and after that date raised prices. They are now complaining of poor business.

Continues Active and Encouraging.

St. Paul and Minneapolis, Minn., March 2.—As was the case all winter, business continues active and encouraging, according to the reports of those best qualified to know. Country buyers who come in on the excursions not only make cheerful statements concerning trade, but buy freely. The expected rise in linseed oil has not yet materialized, but is looked for daily. Paris green is as yet unchanged here, for all that the manufacturers have put up quotations. The prescription business keeps up amazingly. This is especially the case in Minneapolis, where small pox has been alarmingly prevalent the past ten days or more. Retailers as a rule are giving a fair imitation of the busy bee. Indeed, some of them are amazingly fit time to tell the correspondent how nicely they are thriving. But it would never do to have things "all sugar." Therefore a retailer here and there volunteers the statement that the past week was not quite up to the mark, dull days being altogether too frequent for comfort of mind.

Snow Storms Injure Trade.

St. Louis, March 3.—The terrific snow and sleet storm this week has succeeded in rendering trade, both country and local, decidedly quiet in drug as well as other lines. Trains were belated, shipments delayed, the street car service demoralized for several days and business generally turned topsy-turvy. Bulk acid is moving easier. One house has raised the limit for the number of pounds they will sell to one customer from 25 to 100 pounds. The price on carbolic acid this week is 45 cents in 50 pound bottles, a reduction of five cents. Alcohol has advanced one cent, and oils of cloves and cassia also have advanced five cents.

DRUG STORE FIRES.

The drug store of John Binning, Phoenix, N. Y., was damaged by fire February 19. His stock of drugs was completely ruined by the smoke and water; loss covered by insurance.

In a fire which wiped out seven business buildings at Wauwec, Wis., February 23, entailing a loss of \$30,000, the drug store of G. W. Bishop was destroyed.

The drug store of Dr. Barger, Neelyville, Mo., was burned along with several stores, February 16. The origin of the fire is supposed to have been incendiary.

Fire destroyed the Norway block at Merrill, Wis., February 15, in which was located Charles Quinn, a druggist. Loss, \$7,000; insurance, \$4,000.

Robin's drug store, 1035 Fifth avenue, Pittsburg, Pa., was completely destroyed by fire February 19. Loss \$3,000.

Market Reports.

NEW YORK MARKET.

New York, March 6.—Jobbers report a continued fair degree of activity, but very few new features of more than ordinary importance and only a limited number of price changes.

OPIMUM.—Round lots are dull and neglected, with the tone of the market easy, and in a jobbing way prices are nominally unchanged at \$3.30@3.50 for 9 per cent, and \$3.40@3.60 for 11 per cent, the higher figures for single pounds.

POWDERED OPIUM.—Dealers report the movement slow and unimportant, with quotations unchanged at \$4.05@4.19 for 13 per cent, and \$5.10@5.25 for 16 per cent, according to size of order.

MORPHINE.—There is a continued steady movement into channels of consumption, with jobbers' quotations maintained on the basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for smaller quantities.

QUININE.—The market is somewhat steadier in tone, and leading brands are a shade higher. The quoted range is 35¢@38¢. for 100-oz. tins, 37¢@40¢. for 500z. tins, and 42¢@45¢. for ounce vials, according to brand.

CARBOLIC ACID.—An easier feeling has developed, owing to increased supplies, and quotations for pound-bottles have been reduced to 45¢@55¢. for white and 40¢@50¢. for amber; 5-lb. bottles, 3¢. per lb. less.

SALICYLIC ACID.—Quotations are unchanged at 75¢@85¢. but the tone of the market is easy in sympathy with carbolic.

GOLDEN SEAL ROOT.—The market continues to weaken and increased offers from producing sources, and jobbers have further reduced quotations to 75¢@85¢. for whole, 80¢@90¢. for ground, and 85¢@90¢. for powdered.

CULVER'S ROOT.—Supplies are more abundant, and the market is easier, with quotations showing a decline to 20¢@25¢. for whole, 22¢@27¢. for ground, and 25¢@30¢. for powdered.

SERPENTARIA ROOT.—Holders are firmer in their views, and quotations have been advanced to 45¢@50¢. for whole, 47¢@52¢. for ground, and 50¢@55¢. for powdered.

COCAINE.—Competition is more or less keen, and jobbers have reduced quotations to \$5.25 for large crystals, and \$5 for small.

SALICIN.—Stocks are steadily shrinking, and as there is none offered by manufacturers, the market is firmer, with jobbing prices advanced to \$56.25 per lb. and 40¢@5¢. per oz.

CECAIC.—Conditions abroad are more favorable to holders, and jobbers have advanced quotations to \$3.50@3.75 for whole, \$3.55@3.80 for ground, and \$3.60@3.85 for powdered.

TALAM PERU.—A quiet and easy market is noted, with jobbing prices reduced to \$1.90@2.20.

OIL CASSIA.—Values are slightly lower, and the revised jobbing range is \$1.35@1.60 as to quantity and quality.

OIL CUBEBS.—The demand is slow and values a shade easier, jobbers having reduced quotations to \$1.10@1.25.

—The Board of Examiners of the Nebraska Board of Pharmacy met at Omaha, February 14. There were 35 applicants, of whom the following passed a successful examination: John B. Chadwick, Omaha; Will E. Fowler, Hastings; John Hauptman, Weeping Water; Edward Helsing, Wahoo; Richard C. Houston, Omaha; F. C. Kenzler, Jackson; Frank Kinyon, Fullerton; Christopher Koeh, J. Omaha; James Marlen, Humphrey; C. A. Manning, Omaha; Chas. E. Stout, O'Neill; F. G. Thomas, Omaha; Adolph Zastera, Howell. There were 33 cases of violations of the pharmacy law reported. Niels P. Hanson, chairman of violation committee, prosecuted C. H. Simmons, Gering, Neb., and O. F. Wade, Oconto, Neb. Both paid heavy fines and costs. All violations were prosecuted to the fullest extent of the law. Next meeting of the board will be held at Lincoln, Neb., May 9. Henry H. Barth, Secretary.

Druggist C. H. Foss, St. Charles, Minn., suffered a serious loss by fire February 23. The loss on the building is \$3,000, fully insured; on stock, \$6,500, with insurance of \$4,100.

DRUG CLERKS AND THE ERA BLUE BOOK.

We find that the ERA BLUE BOOK has no warmer friends than those among the drug clerks. Several of these have expressed to us their appreciation of the work. The clerk frequently wants to know, on short notice, who it is that manufactures a certain article, and its price, and the Blue Book is the most complete book in the drug store for furnishing him with such information.

We now have a request to make of our friends, the drug clerks.

We are already at work upon the Blue Book for 1901, and we will esteem it a special favor if every drug clerk will make it a point to notify us of any preparation for which he has a call, and which he cannot find in the Blue Book. We refer to the Drug and Chemical Price List and the Patent Medicine List, as well as among the Manufacturers' Lists.

Also let us know what Manufacturers' Lists you particularly require which you do not find in the Blue Book.

With each successive year this Blue Book will be more complete, and its completeness can be quicker attained through the kindly suggestions of our friends in the trade who use the book, particularly the drug clerks.

THE PUBLISHERS.

ASK US.

Druggists who have calls for any goods which they cannot find or of which they do not know the maker or the price, are invited to correspond with us and we will supply the information whenever possible. We have perfect facilities for handling such queries and we are always glad to extend this service to our readers.

THE PUBLISHERS.

See Students' Bulletin, Page 288.

WHAT THE MANUFACTURERS AGREE AND REQUIRE.

A week ago in our news pages announcement was made that five of the largest patent medicine manufacturers had acceded to the wishes of the N. A. R. D., and would confine their sales to the list of jobbers now in preparation and to be accepted by the joint committees from the national associations of retailers, jobbers and manufacturers. In the few days since elapsing other large manufacturers have signed the same agreement, and the list is growing, and will before long show most satisfactory proportions.

The manufacturers alluded to have drawn up a form of contract with jobbers which contains some provisions directly calculated to further the aims of the National Association of Retail Druggists, and at the same time work very decided benefit to jobbers and manufacturers alike, in confining sales of patent medicines to regular channels and procuring for them prices at which all can make a decent profit. This contract, which the jobber is to agree to, assures him liberal rebates on his purchases of proprietary goods, but only on the condition that he shall not divide with any other party or permit them to be disposed of in any way by salesmen or others at less prices than those named in the contract. The manufacturers assert that these conditions are imperative, and any violation thereof will be regarded as an abandonment of the rebate plan, this being a penalty which the jobber, it is supposed, will be very unwilling to risk.

The manufacturers state also that, believing the sale of their goods to aggressive cutters and brokers (note this) is detrimental not only to their own business but to the retail trade as well, they will decline to sell their preparations to any firms supplying such cutters or brokers, either directly or indirectly, with their goods at any price. If complaint is made that jobbers violate the terms of the agreement, or if the manufacturers have reason to believe that they have done so, they will, when satisfied of such violation, decline absolutely the orders of parties who have refused to maintain the agreement.

While the foregoing is not the wording of the agreement, it presents the substance thereof. Just so soon as the list of accredited jobbers is settled upon, the manufacturers named will put this regulation into immediate effect. The retail trade can judge from this determination how important the effect upon their business will be. The agreement seems to be an iron-bound one, and the manufacturers who have announced their readiness to adopt it should most certainly re-

ceive the unqualified approval of the retailers, for whose direct benefit it is designed. The retail druggists have serious troubles, as we all know, but the manufacturer and the jobber have theirs as well. It is a matter of very serious import for the manufacturer to alter his methods so radically as this, and he should not be denied credit for thus doing his part toward meeting the wishes of the retailer.

It is believed that with the start thus made all of the important proprietary medicine houses will decide it to their advantage to do likewise, and the movement is sure to spread. As soon as the list of jobbers is decided upon (in two or three weeks now, we are told), it will then be "up to" the retailer to keep his promises. As a matter of fact the retail druggists of the United States have the solution of this cut-price problem in their own control. Their salvation lies in the N. A. R. D. If they affiliate with the N. A. R. D. in sufficient numbers to represent the majority sentiment and power of the retail trade, will adhere to its purposes and not be traitors themselves, they can get exactly what they want. If, however, they fail to seize upon this opportunity, we are very sure that no other plan will ever be advanced for their relief. So get together, gentlemen, organize your local branches, pay your dues to the national body, and when you go back to your stores keep the promises you have made in the meeting room, and the prospect is bright.

THE QUESTION BOX DEPARTMENT.

In a general way all our readers know the nature of the Question Box department of this paper. A few words of special explanation, however, are periodically found necessary. The prime object of the Question Box is to furnish subscribers information upon all points pertaining to the professional and practical conduct of their business, such as hints on practical pharmacy, solutions of prescription difficulties, criticisms on dispensing work, etc. To satisfactorily accomplish this object requires the observance of a few rules which experience has demonstrated to be necessary, and which must be enforced by us. The information published in this department is for the benefit of all, not alone of the individual seeking it, and because of this fact it is absolutely impossible, as well as inadvisable, to answer queries by mail. Farther, the use of the facilities of this department must be limited to subscribers to this paper and their clerks or others immediately connected with them. To go outside and attempt to answer all queries would constitute a tax upon the editor's time beyond all reason.

The Question Box is really a department in which druggists may present the results of their own experience and observation for the benefit of their fellows. The querist receiving assistance therein should, in common politeness and justice, feel constrained to impart of his own store when occasion offers. Therefore, all subscribers are cordially invited, not only to make use of

this department, but to contribute to it of their own information, to make it a mutual, co-operative concern.
