ACETUM CONVALLARIE.—The following formula is recommended in Pharm. Post: Convallaria, 10 parts, is macerated eight days with a mixture of 10 parts alcohol, 18 parts dilute acetic acid and 72 parts water, then expressed and filtered. The product is a clear, yellowish liquid having a sour and somewhat bitter taste.

EFFERVESCING CITRATE OF IRON AND MAGNESIA.—Green citrate of iron and ammonia, 5 parts; magnesium carbonate, 2.5 parts; sodium bicarbonate, 50 parts; tartaric acid, 40 parts; citric acid, 7.5 parts; sugar, 40 parts. The mixed powders are granulated with aid of alcohol in the usual manner. (Apoth. Ztg.)

DEODORIZED IODOFORM.—A mixture of equal parts of iodoform and Ceylon cinnamon may be used for various purposes, and may also be made into pills. As a good formula for iodoform ointment, the following is recommended: Iodoform, 1 Gm.; paraffin ointment, 20 Gm.; oil of cinnamon, 5 drops. (Pharm. Post.)

COMPOUND CHALK POWDER.—Calcium phosphate, 12 parts; lactate of iron, 12 parts; bitter orange peel in fine powder, 6 parts; elutriated oyster shells, 24 parts; sugar of milk, 46 parts. (Apoth. Ztg.)

CAYAPONINE is an alkaloid, discovered in Cayapona globulosa, a Cucurbitacea. It has been found to be a powerful purgative, even in very minute doses. (Pharm. Post.)

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

Lord Roberts and his army advanced rapidly northward last week and are now half way from Bloemfontein to Pretoria. The war experts in London expect the war to be over before the end of June.

A British flying column is reported to be moving to the relief of Mafeking and news that the siege is raised is expected every day. The Mafeking garrison was well and comparatively happy on April 27.

The action of the custom authorities at Lorenzo Marquez in closely scrutinizing consignments for the Transvaal is liable to be a serious matter for the Boers, and indirectly for the British prisoners at Pretoria. President Kruger has issued a proclamation calling all the Boers in the Transvaal to arms.

It is reported at Cape Town that General Buller is advancing on the Biggersberg and that the Boers are withdrawing.

No more Boer prisoners, it is announced, will be sent to St. Helena. Arrangements are being made to send a number of them to Ceylon instead.

The Transvaal Raad met last week.

More than 6,000 British troops are now at sea on the way to South Africa.

The Philippines.

A Manila dispatch says that Senor Buencamino, at one time a member of the so-called Filipino Republican Cabinet, who was recently liberated by General Otis, announces that he has become reconciled to American sovereignty and that he will devote his influence to bring about peace. He has sent a proposed peace platform for the National Filipino party to the insurgent leaders in Manila and to the insurgent generals, including Aguinaldo, in the field.

Insurgents made an attack last week on Barotac, in Panay, and the garrison was rescued after four Americans had been killed and three wounded.

General Young reports that Aguinaldo is in Northern Luzon.

Two attacks by natives in the Visayan Islands were repulsed last week.

Recruiting for the army is soon to be resumed, men being wanted to fill vacancies in the regiments serving in the Philippines.

Edwin Wildman, ex-consul of the United States at Hong Kong, declares, from private sources of information, that there exists a reign of terror in most parts of the Philippine Archipelago, within gunshot of our army posts.

F. W. Atkinson, principal of the Springfield, Mass., High School, has been appointed superintendent of Instruction of the Philippines by the New Commission.

Other Foreign News.

Lord Salisbury, in a speech at a public dinner last week, made the astonishing declaration that the British Government has decided that it will be dangerous to give home rule to Ireland as the Irish might accumulate war material as the Boers have done and make a serious revolt.

Serious bread riots are prevalent in Spain, and two provinces have been placed under martial law.

The Ashantees with 50,000 warriors, living on the Gold Coast of Africa, are trying to throw off the British yoke.

Explosions within Vesuvius are now infrequent and the eruption is considered terminated.

The bubonic plague is showing a material decline throughout the East.

The Sultan of Turkey has ordered the formation of a committee to raise a fund for the relief of the Indian famine victims.

A despatch from Bombay says cholera is alarmingly virulent among the natives on the famine relief works, where there are fifty deaths daily.

A report on the famine in India shows that conditions are better in Madras and Mysore and worse in other districts.

Herbert W. Bowen, United States Minister and Consul-General at Teheran, Persia, has had conferred upon him by the Shah of Persia the decoration of the "grand cordon of the lion and sun."

The Sultan of Turkey does not appear to be taking any steps toward paying the indemnity of \$90,000 due this country.

The relief fund being raised in London for the Ottawa fire sufferers now amounts to nearly \$250,000. A fund raised in New Zealand has reached \$25,000.

Advices which have reached Washington from Columbia indicate that the revolution there has extended far beyond its original limits and is now a serious menace to the existence of the Colombian Government.

DOMESTIC.

Congress.

On Friday last week the House broke all records by passing 180 private pension bills. Among them was the Senate bill to pension the widow of General Guy V. Henry, the House reducing the amount from \$100 to \$50 per month.

In the House Representative Crawford, of North Carolina, was unseated last Thursday by the narrow margin of two votes. Twelve Republican members were absent and not paired.

The Senate has confirmed the nomination of Sanford E. Dole to be governor and Henry E. Cooper to be secretary of Hawaii.

Other Domestic News.

The Fusion Populists last week nominated Mr. Bryan for President, and the Middle-of-the-Road Populists nominated Wharton Barker, of Philadelphia, for President.

Two Philadelphia city officials approached John Wanamaker last week and threatened that if his son's newspaper, the North American, did not cease its criticisms of Mayor Ashbridge they would publish attacks on Mr. Wanamaker's character. Mr. Wanamaker ordered them from his office and sent an account of the whole affair to the newspapers.

Serious postal frauds have been unearthed in Cuba. The Senate has confirmed the nomination of John W. Hancock to be postmaster general, but Americans who have gone from this country into the Cuban postal service.

A street car strike has tied up travel in St. Louis.

The Methodist General Conference continued its session in Chicago last week without special incident.

Richard Yates, son of the famous war governor of Illinois, has been nominated for governor by the Republicans.

Jeffries, the champion pugilist, sustained his title on Friday night last week by defeating Corbett, the former champion, in a fight at Coney Island. There is a widespread impression that the result was prearranged.

A relief steamer loaded with corn for the famine sufferers in India left New York for Bombay last week.

A sensation was created in the Long Island Railroad by an armor test at the Indian Head proving grounds a six inch naval shell perforated a fourteen-inch plate of Krupp armor; but it afterwards appeared that there was nothing surprising in the result, the superiority of modern guns over modern armor is well known in military and naval circles.

The Pennsylvania Railroad has bought a controlling interest in the Long Island Railroad and is planning extensive improvements in New York harbor, including a pier two miles long from the New Jersey shore.

Jim Howard, who was named by Culton and other witnesses as the man who probably fired the shot which killed William Goebel, has surrendered at the jail at Lexington, Ky. He says he never was inside the State House square in his life till the afternoon following Goebel's assassination.

John W. Gates, chairman of the Board of Directors of the American Steel and Wire Company, and President Lambert have resigned their positions and their successors have been elected. Mr. Gates has sailed for Europe.

J. P. Morgan & Co. announced last week that they were organizing the American Bridge Company with a capital of \$70,000,000, said to include 90 per cent. of all the bridge concerns in the country.

The receipts of the Port of Havana, Cuba, for the month of April, 1900, were \$1,935,577.

April 1899, were \$289,574.

Indianapolis liverymen have formed a combination, supported by undertakers to discontinue Sunday funerals.

An advance of one-third in price on Sunday is made.

Advices from St. Kitts say the island is in a terrible financial condition owing to the shortage of the sugar crop and want and starvation prevail among the people.

The extortions of the Ice Trust in New York City, which has doubled the rates for ice to retail customers this year is stirring up great indignation, and legal proceedings have been begun against it under the State Anti-Trust law.

New Internal Revenue Ruling, May 10, 1900.

By a recent ruling of the Treasury Department, all the Antikamnia Preparations and similar preparations are required to be stamped with 33c. in Internal Revenue Stamps. This is a matter of particular interest to every druggist. All preparations of this class in the hands of the trade must be stamped by the present owners with an additional 14c. in Revenue Stamps for each ounce package in order to comply with the ruling of the Internal Revenue Department, which went into effect May 10, 1900.

THE DRUG NEWS.

THE WM. S. MERRELL CHEMICAL CO.

VERSUS

THE LYMAN-ELIEL DRUG CO.

FULL TEXT OF PLAINTIFF'S COMPLAINT AND DEFENDANT'S REPLY.

UNITED STATES CIRCUIT COURT, DISTRICT OF MINNESOTA.

Fourth Division.

The Wm. S. Merrell Chemical Company, a corporation, Plaintiff, vs. The Lyman-Eliel Drug Company, a corporation, Defendant.

COMPLAINT.

The plaintiff complains and alleges: That plaintiff is a corporation organized under the laws of the State of Ohio, which said State is a citizen, and has its principal place of business in Cincinnati, in said State. That defendant is a corporation organized under the laws of the State of Minnesota, and is a citizen of said State, and has its principal place of business in Minneapolis, in said State.

That the amount sought to be recovered herein and the subject matter of this action is of the value of more than two thousand dollars, exclusive of interest and costs.

Plaintiff further alleges that at all times hereinafter mentioned and herein set forth, engaged in the business of manufacturing and vending chemical and pharmaceutical preparations, and that at all times hereinafter mentioned the defendant has been, and now is, engaged in the wholesale drug business. That on the 11th day of August, 1897, the plaintiff and defendant entered into a certain contract, a copy of which is hereto attached, marked Exhibit "A," and made a part hereof.

Plaintiff further alleges that the object and purpose of said contract was the development of a trade in the manufactured articles of this plaintiff in the territory mentioned, and that the parties to said contract entered upon the execution thereof, and have continued to do business thereunder until on or about the 10th day of November, 1899, and that plaintiff has kept and performed all the obligations which, by the terms of said contract, it agreed to keep and perform.

Plaintiff further alleges that the defendant has not used every effort to advance the sales of the preparations of this plaintiff, as required and provided by said contract, and has not fulfilled the obligations thereof by giving them the preference in their sales over all other competing lines, in cases where the preferences of the customers have not been otherwise expressed; and has not used any effort whatever, in good faith, to push the sales of the preparations of this plaintiff, but on the contrary has, in repeated instances, urged customers to buy the preparations of other manufacturers, and has recommended the preparations of other manufacturers, and where no preference has been expressed, has not furnished this plaintiff's preparations; and that said defendant is itself engaged in manufacturing certain preparations, and is actively pushing the same into the market to compete with the lines of goods of this plaintiff covered by said contract, and that this plaintiff alleges that it has been damaged in the sum of ten thousand dollars, by reason of the said acts of the defendant and breaches of the contract.

Second. For a further and second cause of action, plaintiff alleges:

That it herein and hereby reiterates and reaffirms as a part hereof the allegations of the first, second and third paragraphs of the first cause of action.

Plaintiff further alleges that on and between the 3d day of April, 1890, and the 27th day of October in the same year, plaintiff sold and delivered to defendant, at his request, and under and by virtue of the terms and conditions of the said contract, Exhibit "A," certain chemical and pharmaceutical preparations of the agreed value of four thousand three hundred six and 10/100 dollars, which said sum defendant promised to pay therefor.

That no part of the same has ever been paid except the sum of three thousand one hundred and thirty-four and 28-100 dollars, leaving an unpaid balance due and owing the plaintiff, which the defendant has refused to pay, of one thousand one hundred seventy-two and 68-100 dollars, with interest thereon from the 15th day of January, 1900.

Third. For a third and further cause of action, plaintiff alleges:

That it herein and hereby reiterates and reaffirms as a part hereof, the allegations of the first and second causes of action as hereinbefore stated, and avers that by the said violations of the said contract, Exhibit "A," and of the fundamental provisions thereof by said de-

fendant, the same has been broken and terminated by the defendant.

That in accordance with the provisions of the said contract, Exhibit "A," plaintiff has heretofore placed, kept and maintained in the hands of the defendant, chemical and pharmaceutical preparations of the value of one thousand dollars, the same being the goods mentioned in said contract, Exhibit "A," and designated as a "carry account."

That on the 12th day of March, 1900, plaintiff demanded from the defendant a return of the said goods, which defendant then and there refused to make, That defendant still refuses to return the said goods, and has converted the same to its own use, to plaintiff's damage in the sum of fifteen hundred dollars.

Wherefore plaintiff demands judgment against defendant for the sum of twelve thousand six hundred seventy-two and 68-100 dollars, with interest on one thousand one hundred seventy-two and 68-100 dollars thereof from the 15th day of January, 1900, together with the costs and disbursements of this action.

WILLIAM A. BARTLETT,

Attorney for Plaintiff.

No. 500 Sykes Block, Minneapolis, Minnesota.

EXHIBIT "A."

Memorandum of agreement entered into this 11th day of August, A. D. 1897, between the Wm. S. Merrell Chemical Company, of Cincinnati, Ohio, party of the first part, and the Lyman-Eliel Drug Company, of Minneapolis, Minnesota, party of the second part, witnesseseth:

That in consideration of the purchase of said second party from said first party of an assorted stock of goods of their manufacture to the amount of six thousand dollars (\$6,000 net after all rebates are deducted, and in further consideration of agreement hereby made by said second party that they will, during the life of this contract, use every effort to advance the sale of the preparations of the said second party distributing agents for the Northwest, embracing the following described territory, to-wit: North Dakota, South Dakota, excepting territory tributary to Sioux City and regularly covered by their agents; Minnesota, Montana, Western Wisconsin, Northern Iowa and such other territory as may be found during the life of this contract to be tributary to Minneapolis.

Second. That they will during the life of this contract keep at their own expense two detail salesmen continuously employed in traveling over the above territory taking orders for their goods, such orders to be filled from the stock of said second party whenever possible, or from Cincinnati stock if necessary.

Third. That they will furnish said second party with a copy of orders, both wholesale and retail, coming from said territory, whether direct orders or orders taken by their salesmen.

Fourth. That they will credit the account of said second party with the difference between the price charged on all such orders as are shipped from stock elsewhere than in the hands of said second party into the above described territory and the special price made said second party for the same private formula work, and will render their credit statements every thirty days, which credits shall be deducted in current statements, it being understood as the basis of this contract that the price to the retail trade is twenty-five (25) per cent, from list on part first and net on part second; that the discount to the jobbing trade is forty (40) off on part first and net on part second, excepting rebate goods when bought in retail quantities.

Fifth. That in case said first party changes its wholesale or retail list, discount or terms of sale during the life of this contract in such a way as to affect the value of the stock in the hands of said second party, or the profits from their sales, the said first party will so adjust the same as to save the second party from any loss on stock or diminution of percentage of profit. Wholesale and retail lists and discounts of February, 1896, being now in force.

Sixth. All goods during the life of this contract to be billed to said second party at the following rates, sub-

ject to condition No. 5: On part first of present price list a discount of forty and sixteen and two-thirds (40 and 16 2-3) per cent., with an additional discount of five (5) per cent. for cash in ten days. On part second a discount of ten (10) per cent. from list price, and an additional discount of five (5) per cent. for cash in ten days. On rebate goods when sold in gross lots to jobbers ten and ten (10 and 10) per cent. All goods to be delivered free in Minneapolis. When the cash discount is not taken by the second party it is understood that all goods held by said second party during the life of this contract shall be billed on four (4) months' time with acceptance.

Seventh. That they will at the expiration of this contract renew the same on terms satisfactory to said second party, or if the contract is not renewed will exchange all goods in the hands of said second party which they may elect to return for such other goods of the manufacture of said party as said second party may elect, including rebate goods. The expense of boxing and transportation in such exchange to be divided equally between the parties hereto.

It is agreed that in addition to the initial purchase of six thousand dollars (\$6,000.00) there shall be shipped and placed in the hands of said second party by said first party goods in addition to the amount of one thousand dollars (\$1,000) which shall be held as a carry account in the hands of said second party and which shall be returned to said first party upon the fulfillment of this contract and at the expiration thereof.

THE WM. S. MERRILL CHEMICAL COMPANY,
George W. Merrill, Pres.
LYMAN-ELIEL DRUG CO.,
J. C. Eliel, V.-P.

If for any reasons either party to this contract desires to terminate it at the end of the five year period noted above, it is agreed that the other party six months before the termination thereof.

Endorsed:

Filed, March 27, 1900.
HENRY D. LANG, Clerk.
By E. Robert C. Mabey, Deputy.

UNITED STATES CIRCUIT COURT, DISTRICT OF MINNESOTA.
Fourth Division.

The Wm. S. Merrill Chemical Company, a corporation, Plaintiff,
vs.
The Lyman-Eliel Drug Company, a corporation, Defendant.

ANSWER.

For its answer to the complaint of the plaintiff in the above entitled action, the defendant admits the allegations of said complaint in reference to the corporate character, citizenship and principal place of business of plaintiff and defendant respectively, and that the subject matter of said contract is of the value of more than two thousand dollars (\$2,000), exclusive of interest and costs.

Defendant admits the allegations of said complaint in reference to the business of said plaintiff and defendant, on August 11, 1897, duly entered into and executed the contract marked "Exhibit A" and attached to said complaint.

Defendant further admits that one of the objects and purposes of said contract was the development of a trade in the manufactured articles of plaintiff in the territory mentioned; and that the parties to said contract entered upon the execution thereof and continued to do business thereunder until the same was rescinded by plaintiff, as hereinafter set forth.

Except as hereinbefore admitted, defendant denies each and every allegation contained in the first cause of action set out in plaintiff's said complaint.

Defendant denies each and every allegation contained in the second cause of action set out in said complaint, except as hereinbefore admitted, and except that defendant admits that said plaintiff sold and delivered to said defendant, at its request and pursuant to the terms of said contract, "Exhibit A," between the third day of April, 1899, and the 27th day of October, 1899, certain goods, wares and merchandise of the agreed price of \$1,306.96; and defendant alleges that it has paid to plaintiff on account of said goods, wares and merchandise, in cash, and in credits due to defendant under the terms of said contract, the sum of \$2,297.30; that defendant did, on or about August 17, 1899, return and deliver to said plaintiff an amount of said goods of the reasonable value of \$1,000; and that said goods were accepted and after since have been retained by said plaintiff, and that by reason thereof this defendant is entitled to a further credit of \$506 on said account.

That by reason of the facts hereinbefore set forth there is due to plaintiff on said second cause of action the sum of \$536.66 and no more.

Defendant denies each and every allegation contained in the third cause of action set out in said complaint, except as hereinbefore admitted, and except that defendant admits that plaintiff did place and keep in the hands of defendant a certain pharmaceutical preparation of the value of one thousand dollars (\$1,000), being designated as a "carry account;" and that plaintiff, on March 12, 1900, demanded from defendant a return of said goods, and that defendant then and there refused to return the same.

Further answering said complaint, and for a counter-

claim herein, defendant alleges that plaintiff and defendant are, and at all times herein stated have been, corporations.

That on or about August 11, 1897, plaintiff and defendant duly entered into and executed and delivered a certain contract which is marked "Exhibit A," and attached to the plaintiff's complaint herein.

That the purpose and intent of the said contract by plaintiff, as hereinafter set forth, defendant duly kept and performed all the terms and conditions of said contract by it to be kept and performed; that plaintiff did not perform any of the terms and conditions of said contract by it to be kept or performed, and did repeatedly and continuously violate said terms and conditions of said contract.

That plaintiff did after August 11, 1899, fail and neglect to cause the orders taken by the two detail salesmen mentioned in said contract to be filled whenever possible from the stock of this defendant; but, on the contrary, the plaintiff did cause said salesmen to solicit and did employ them in soliciting within the territory covered by said contract large amounts of orders for the goods mentioned in said contract, to be filled, and which were actually filled from the stock of persons other than this defendant, and that it was entirely possible to have filled said orders from the stock of this defendant.

That plaintiff did repeatedly fail and neglect to furnish defendant with a copy of the number of orders coming from said territory mentioned in said contract.

That said plaintiff did repeatedly fail and neglect to credit the account of defendant, with the difference between the price charged or charged for the number of orders which, after August 11, 1897, were shipped into the above described territory from stock elsewhere than in the hands of said defendant, and the special price made to dealer in said territory.

That in particular said detail salesmen did, after August 11, 1897, take orders within the territory covered by said contract for goods covered by said contract in behalf of Noyes Brothers & Cutler, and the number of orders to-wit: for an amount of over seven thousand dollars (\$7,000); and did take similar orders for other jobbers to a large amount, to-wit: to an amount of at least five thousand dollars (\$5,000).

That said Noyes Brothers & Cutler were and are jobbers in drugs, located in St. Paul, Minnesota, and competitors of defendant, and that all of said orders to them and to said other dealers could have been filled from the stock of goods in the hands of defendant.

That, in particular, plaintiff did, after August 11, 1897, sell and deliver to said Noyes Brothers & Cutler large amounts of the goods mentioned in said contract to-wit: goods to an amount of \$15,758.89, and did fail to credit defendant with the discounts to which it was entitled under said contract, to an amount of at least two thousand dollars and fifty cents (\$2,150).

The plaintiff did, after August 11, 1897, make other large sales of similar goods to other dealers in the territory covered by said contract, and did fail to credit defendant with the discounts thereon, to which defendant was entitled under said contract; and that defendant is and was under said contract entitled to discounts on said sales not credited to it by plaintiff to a large amount, to-wit: the amount of two thousand dollars (\$2,000).

That by reason of said wrongful acts of plaintiff and its said violations of said contract, as hereinbefore set forth, defendant has been damaged in the sum of five thousand dollars (\$5,000).

Further answering, and for a further counter-claim herein, said defendant alleges that plaintiff and defendant are and have been at all times herein stated, corporations.

That on or about August 11, 1897, plaintiff and defendant duly entered into, executed and delivered that certain contract a copy of which is attached to the complaint herein marked "Exhibit A."

That said contract provided that it should continue for a term of five years from and after said August 11, 1897.

That the object and purpose of said contract was the development in the territory mentioned of a trade in the manufactured articles of said plaintiff for the said term of five years by the joint efforts of said plaintiff and defendant, each for their mutual advantage during the full term of said contract.

That plaintiff and defendant entered upon the execution of said contract at or about the date and the defendant did thereafter and until February 26, 1900, keep and perform all the terms and conditions of said contract by it to be kept and performed.

That said plaintiff did continuously and repeatedly fail and neglect to keep and perform the terms and conditions of said contract by it to be kept and performed, and did on or about February 26, 1900, wrongfully and unlawfully without cause rescind said contract, and did then notify defendant that it would no longer keep or perform any of the terms or conditions of said contract.

That at and prior to the time of the execution of said contract there was and had been but a comparatively small sale of plaintiff's goods in the territory mentioned in said contract; but after the execution of said contract, and by the joint efforts of said plaintiff and defendant in said goods was developed in said territory. And that, between the time of the execution of said contract and the said wrongful rescission of the same by plaintiff, the defendant had purchased of plaintiff the goods of the amount of \$21,344.05, and plaintiff had sold goods described in said contract to Noyes Brothers & Cutler, a jobbing concern located in St. Paul, Minnesota, within the terri-

torry covered by said contract, to a large amount, to-wit: to the amount of \$15,738.83; and had also sold similar goods to other dealers within said territory to a large amount, to-wit: to an amount of over seven thousand dollars (\$7,000).

That by reason of the repeated and continuous violations of said contract by plaintiff, the profits realized by defendant under said contract prior to the said time of its rescission by said plaintiff, were not as great as they would have been if plaintiff had faithfully performed said contract on its part; but that the profits to which defendant was entitled under said contract upon the sales of plaintiff's goods actually made between August 11, 1897, and the said rescission of said contract by plaintiff within the territory covered by said contract was a large amount, to-wit: the amount of \$1,700; and that if the plaintiff had not rescinded said contract, and had performed the same on its part, the profits from the per-

formance of said contract to said defendant during the unexpired term thereof would have been at least a proportionate amount, to-wit: the sum of \$7,000.

That the value of said contract at the time of its said rescission by said plaintiff was the sum of \$7,000, and that defendant has been damaged in said amount by reason of the said wrongful and unlawful acts of the plaintiff.

Wherefore, defendant asks that it have judgment against plaintiff in the sum of twelve thousand dollars (\$12,000), with interest thereon since February 26, 1890, together with its costs and disbursements in this behalf incurred.

DRUGGISTS CAUGHT IN A TRAP.

Deputy Factory Inspector Warns Them That New Law Prohibits Making Soda Water in Dwellings.

A good deal of commotion was stirred up in the retail drug trade in New York City last week by the receipt by many druggists of the following notice:

"Your attention is called to the fact that under the provisions of Chapter 494, Laws of 1900, it is a misdemeanor to sell or dispense liquid soda water (manufacture soda water, mineral waters, sarsaparilla, ginger beer, root beer, etc.) in any building occupied in whole or in part by persons for living purposes, and the punishment for each and every violation is a fine of \$300 to \$1,000 or imprisonment not exceeding one year, or both."

This was marked "First Notice," and was signed by James Jackson, Deputy Factory Inspector, of the Fruit Juice and Carbonator Department.

The new law, to which this notice referred, is an amendment to the Penal Code. It was introduced by Senator John Ford, as Senate Bill No. 809, and was headed "An Act to Amend the Penal Code relative to the manufacture of Gunpowder and other explosives." Section 389 of the Penal Code is amended so as to read as follows:

"A person who manufactures gunpowder, dynamite, nitro-glycerine, liquid or compressed air or gases, except acetylene gas and other gases used for illuminating purposes, naphtha, gasoline, benzine or any explosive articles or compounds or manufactures ammunition, fireworks or other articles of which such substances are component parts in a cellar, room or apartment of a tenement or dwelling house or any building occupied in whole or in part by persons or families for living purposes, is guilty of a misdemeanor."

The law went into effect May 1st. How the bill got through and became a law is a mystery. Various pharmaceutical societies had legislative committees watching the Legislature at Albany during the entire session, but this bill was not detected. The druggists who received the notice from the deputy state factory inspector last week were indignant and denounced the measure as a "strike" of the worst kind. Some of them expressed the opinion freely that the bill was put through solely in the interests of certain manufacturers who would be willing to pay a large sum to prevent the druggists from making their own soda water. Even the legislators who helped to pass the bill expressed surprise at its provisions or the interpretation of them by the deputy factory inspector.

Senator John Ford would not admit that the measure was a strike, but tried to make excuse for his action in the matter by saying that he had been misled. He said the bill had been lying on the table for nearly a year, and added:

"Shortly before the last adjournment I was asked to introduce the bill which I was told was required to protect the lives of our people living in tenements and flats by preventing the manufacture of fireworks and other explosives in dwellings. I did not read it very carefully, and introduced it as requested. The title, 'keeping gunpowder unlawfully,' is most misleading, and it misled me. If I had thought it was intended to prevent aerated drinks being made and sold by druggists I would have had nothing to do with it. I had no idea of its application to druggists until now, and I will see what can be done about it."

Assemblyman Joseph I. Green said he remembered the bill being discussed. He thought it was a bill to apply merely to the manufacture of explosives in tenement houses. He had no idea that its terms could be construed to cover the making of soda water and other summer drinks by druggists. He added that in his opinion the law was inoperative and unconstitutional.

Assemblyman James E. Smith denounced the measure as a gross outrage, and said it would undoubtedly be repealed next session. Meantime he thought that no court bearing in mind the intention of the Legislature in passing the law, would convict any druggist for making soda water.

The manager of one of the large down-town drug stores, who requested that his name should not be used, said: "This is the most idiotic measure that I ever heard of. I defy anyone to point out a single case of accident arising from the carbonating of water in drug stores. Such a thing is impossible, as all the tanks used for the purpose are tested up to four times the pressure they carry. If this law is to be carried out it would be a misdemeanor for me to mix a selditz powder for a customer, as by doing so I manufacture carbonic acid gas. The law is a fool law, and if for one intend to ignore it. I believe this is an attempt to compel us to buy the carbonated water instead of making it up, as I can manufacture it for less than one-quarter the price charged for it."

Several other druggists said they would pay no attention to such an outrageous law, but would continue to make their own soda water. George W. Hopping, president of the firm of J. N. Hegeman & Co., said:

"I received a copy of the law underscored in blue pencil, but whoever sent it will be fooled in thinking he can catch us. There is not even a janitor sleeping in the building we occupy, so this law could not touch us. But what an outrageous law it is. I am sorry for the little fellows who live over their stores and who will be most affected by the measure. There will be test cases, of course, and I suppose they will have to band together for defense. I wonder how the people can stand the government which sends men as the people's representatives who will pass such outlandish laws as this."

The subject of this amendment to the Penal Code was brought to the attention of the Kings County Pharmaceutical Society at its meeting last week by Wm. Muir, chairman of the Society's Committee on Legislation. The Society voted to empower Mr. Muir's committee to employ counsel for the defense of any member against whom a test case might be brought under this measure.

KINGS COUNTY SOCIETY ANNUAL MEETING.

Honors Retiring President Adrian Paradis for His Three Years of Fruitful Service.

The annual meeting of the Kings County Pharmaceutical Society was held at the Brooklyn College of Pharmacy on Tuesday afternoon, May 8. President Adrian Paradis occupied the chair, and there was a large attendance of members. The annual reports of officers and committees were first taken up. The report of the president congratulated the society that the last year had been the most successful in its history. There had been a gain of fifty members and the society now had a

total membership of 278, the largest yet attained. The chief credit for this good showing, President Paradis said, was due to Secretary Tuthill, whose untiring efforts could not be too strongly commended. The dues and fees reached \$600, against \$430 last year. The society had been running like a prosperous business, paying all expenses and having a comfortable balance in the treasury. The report spoke of the good work accomplished by the Committee on Legislation and ended with the statement that ten regular meetings had been held with an average attendance of twenty-eight members. The president's report on the Brooklyn College of Pharmacy stated that the year was most satisfactory. There had been matriculated seventy-one juniors, the largest class the college had yet known; fifty of these finished the course. Diplomas were bestowed on forty-two students, and certificates on twelve students, making a graduating class of fifty-four. The wide-spread interest in the commencement exercises was commented upon. "The financial condition of the college," said the report, "is most satisfactory. We do not owe one dollar; everything has been paid to date and there is a balance in the treasury, besides the reserve fund, of \$1,500. Our share of the moneys of the Board of Pharmacy was \$480, and we received from fines \$370 for the benefit of the library."

Secretary Tuthill reported that the society began the year with 240 members; fifty new members had been added to the rolls. There had been five deaths and five resignations and two members had been dropped. The society now had 278 members.

The treasurer, Dr. Peter W. Ray, reported for the society receipts of \$841, disbursements, \$444, and balance on hand, \$397. His report on the college finances was: Receipts, \$8,916; disbursements, \$8,429; balance in the treasury, \$476, besides the reserve fund of \$1,500 set aside by the trustees last year.

Dr. Wm. Muir, chairman of the Committee on Legislation, read a report on the year's work in which he said: "It has been a matter of pride and satisfaction to the committee that the influence of the society was recognized in the Legislature." He summarized the action taken on the various bills affecting pharmacy—the amendments to the Pharmacy Law under the New York Charter, the All-State Pharmacy bill, the Shorter Hours bill, the Military Pharmacy bill and the Wilcox Patent Poison Bottle bill, and recommended that the society voice the gratitude of its members through the secretary to Senators Davis, Marshall, Elsbeg, Feeter, Johnson and Stranahan, and Assemblymen Cotton, Henry, Costello and Hill. Dr. Muir also reported attending a hearing before the Ways and Means Committee at Washington on the Boutelle bill, and added: "We are encouraged to believe that in the near future pharmacists will be freed from the burden of the War Tax, to some extent, at least."

Librarian Charles H. Meyer reported the expenditure of \$191, and the addition to the library of 290 volumes.

Dr. Muir called the attention of the society to the new amendment to the Penal Code, making it a misdemeanor for any person to manufacture compressed air or gases in a cellar or other part of any building occupied for living purposes. He read the text of the amendment, stated that the bill had been introduced by Senator Ford, and that now a deputy inspector of the State Factory Inspector's Department was notifying druggists that the making of soda water was covered by this new law. He expressed doubt upon the constitutionality of the law and said there were several points in it demanding legal construction. He moved that the Legislative Committee be empowered to employ counsel for the defense of any member against whom a test case might be brought. This motion was carried.

The annual election of officers then took place. This resulted in the choice, by a unanimous vote for each individual, of the following slate:

President, Oscar C. Klein, Jr.; first vice-president, Walter B. Averre; second vice-president, B. V. E. Livingston; third vice-president, E. G. Rave, M. D.; secretary, Frederick P. Tuthill; treasurer, Peter W. Ray, M. D.; Trustees for three years, Thomas J. France, J. H. Drogé, W. J. Hackett; trustee for one year (to fill unexpired term of W. B. Averre), Adrian Paradis; censors, Wm. F. Maas, Benjamin B. Rosenzweig, H. E. McIntyre; librarian, Charles H. Meyer; counsel, Wm. L. Perkins.

The following delegates to other associations were also elected: American Pharmaceutical Association, E. H. Bartley, M. D., W. C. Anderson, E. G. Rave, M. D., P. W. Ray, M. D., Frederick P. Tuthill; New York Pharmaceutical Association, Adrian Paradis, Wm. Muir, R. C. Werner; New Jersey Pharmaceutical Association, A. H. Brundage, M. D., W. C. Anderson, Frederick P. Tuthill.

Before Mr. Paradis was permitted to retire from the chair, Dr. Brundage, on behalf of the society, presented to him a handsome silver loving cup and with it a book of the autographs of the members. On the loving cup is inscribed: "Presented to Adrian Paradis, Ph. G., President

Kings County Pharmaceutical Society and Brooklyn College of Pharmacy, as a tribute of affectionate regard from his associates and friends. May 8, 1900."

Mr. Paradis was visibly surprised, but feelingly expressed his gratitude and appreciation of the esteem shown by the members, and thanked the co-workers who, he said, had taken most of the burdens off his shoulders during the three years of

his incumbency of the office of president.

Mr. Klein was led to the chair by Dr. Muir and Dr. Rave, and thanked the members for his election. The regular order of business was then resumed and the chair appointed Messrs. France, Hegeman and Muir a committee to confer with the German Apothecaries' Association on the enforcement of the Shorter Hour law and on the subject of telephones. The secretary announced the receipt of a letter from Dr. George F. Payne, of Atlanta, asking the society to aid in the petition to Government officials for the advancement of hospital stewards in the Marine Service. The secretary was instructed to send the necessary letters. The society voted to pay \$40 dues to the N. A. R. D. After a discussion of some of the provisions of the new All-State Pharmacy Law the meeting was adjourned.

BILLINGS, CLAPP & CO. ASSIGN.

Said to be only Temporary Embarrassment—Assets Largely Exceed Liabilities.

Boston, May 15.—Billings, Clapp & Co., manufacturing chemists, No. 404 Atlantic avenue, made an assignment Monday to Wallace Wales, an employee of the firm, and W. F. Bacon, attorney, No. 113 Devonshire street.

Mr. Wales said: "The assignment primarily was due to the concern's inability to procure ready cash with which to meet pressing obligations, mostly returns of loans to banks. While the firm had been doing as good a business as at any time in its history, collections have been very slow, and yesterday we found that we would be unable to meet a loan of about \$10,000 from one bank."

"We have had quite a large sum of money tied up in our Fall River plant, which cost last year about \$70,000 to build and equip."

"We are preparing a statement to present to a committee from the banks holding our paper, which we will tender shortly. We have been assured by some of the committeemen, whom we have made acquainted with our actual condition, that in all probability we would be granted an extension."

"We have on our books to-day bills receivable amounting to more than twice our obligations. If we were obliged to sacrifice real estate we would have a large surplus for assets, even if figured at prices which a forced realization would necessitate. We have received a large number of offers of assistance from members of the trade, all of which we have, with assurances of appreciation, declined."

"While I am not prepared at this moment to give a statement of the assets and liabilities for publication, I can assure you that the assets very largely exceed our indebtedness, and that we expect to resume business in a very short time."

GERMAN APOTHECARIES' ASSOCIATION.

The regular monthly meeting of the German Apothecaries' Association was held on Thursday evening, May 3, with President Charles F. Schleussner in the chair and about eighty members present. One member was dropped from the rolls and two new members were elected. They were H. F. Rehse, No. 451 Graham avenue, Brooklyn, and Otto P. Zeitfuss, No. 69 Fulton street. It was voted to distribute 500 copies of the new Shorter Hour law to members of the Association and other druggists, and recommend them to conform to the law. A letter from Edward Timme, secretary of the "Druggists' League for Shorter Hours" requesting the appointment of a committee to confer with the League on the enforcement of this law was laid on the table.

A letter was read from George F. Payne, of Atlanta, Ga., asking the society to co-operate in the petition to Government officials to improve the condition of the Marine Hospital Service. The secretary was instructed to send letters to the President, the Secretary of the Treasury and the Surgeon-General of the Marine Hospital Service, suggesting the institution of three grades of pharmacists to be known as "senior, junior and assistant pharmacists," to receive salaries of \$1,200, \$900 and \$720 respectively.

A resolution was adopted confirming previous action taken by the association to the effect that graduation from a duly recognized college of pharmacy should be made a prerequisite for examination by the Board of Pharmacy in this State. It was also voted to instruct the association's delegates to the annual meeting of the New York State Pharmaceutical Association to vote for the insertion of such a provision in the Pharmacy Law.

The new pharmacy law for the entire State was read and discussed thoroughly. All of the speakers had only words of commendation for its provisions. By a unanimous vote Sidney Faber was nominated for the association's representative on the new State Board of Pharmacy. The election is to be held at the June meeting.

The Committee on Legislation was requested to arrange for a conference with the other associations to demand better concessions from the New York Telephone Company for pay stations in drug stores.

THE END OF LOWENSTEIN.

The business of R. J. Lowenstein, of No. 72 Beekman street, New York City, against whom the readers of this journal have been cautioned heretofore, came to an abrupt end last week. A petition in involuntary bankruptcy was filed against Lowenstein by George Ryall, of the firm of Baggett & Ryall, attorneys for Norman F. Kerr, W. B. Dungan and Richard Sidenberg. The Sheriff had already closed up Lowenstein's place of business, a loft at No. 72 Beekman street, which, by the way, was advertised as the main office and warerooms. His connections were distrusted throughout the West, and numbered several more or less prominent manufacturing concerns in St. Louis, Milwaukee, Detroit, Indianapolis, Richmond, Ind., and a large number of small places.

Lowenstein bought everything manufactured or grown in this country. He apparently did not confine himself to any particular class of goods, and his credit, as given by the agencies, amounted to \$45,000. On the strength of this, goods were purchased as a rule on credit of from thirty days to three months. It was only within the last few weeks, however, that the creditors began to press their claims against him, and it was then that his troubles began.

The Rich Shoe Company, of Milwaukee, which sold Lowenstein a consignment of shoes, was the first to commence litigation. The goods were sold April 18, and on April 24 were received in this city. The terms of sale were spot cash. On arrival of the goods the local representative of the Milwaukee firm was sent to make a collection, but personal application resulted in producing no more headway than written communications. Inquiries for R. J. Lowenstein developed the fact that such an individual was never to be found. His representative, Joseph M. Goldberg, who had charge of the office at No. 72 Beekman street, could not be found when wanted, and after several visits it was decided to place the matter in the hands of Baggett & Ryall.

A writ of replevin was secured, and a search developed that there were no shoes on the premises.

Altogether there were \$400 or \$500 worth of goods in the place. The cartman who was employed by Lowenstein said the goods were brought direct from the car to the steamship docks, and further inquiries showed that it was the custom to send practically all the goods consigned to R. J. Lowenstein to Europe by way of Southampton. An attachment was secured and the Sheriff seized all the goods in the loft.

BROOKLYN DRUGGIST CHARGED WITH IMITATING LABELS.

Walter W. Scott, proprietor of the drug store at No. 725 Fulton street, Brooklyn, was arraigned last week before Magistrate Teale, in the Myrtle Avenue Court on a charge of using spurious trade-marks for a proprietary medicine. The complaint was made for Arthur R. Deacon, Secretary of the Lambert Pharmaceutical Company, of St. Louis, which firm manufactures listerine. The magistrate was informed that over 1400 labels alleged to be made in imitation of that used on its packages of listerine by the Lambert Pharmaceutical Company, had been found in Scott's possession. Scott was held under bail bonds of \$500 for further examination on May 23. The prosecuting attorney said that Scott had also rendered himself liable to the Federal authorities for selling the medicine without revenue stamps.

NOTES.

—Among out-of-town visitors to the local wholesale market during the week were Richard Mierzwa, of Pittsburgh; Frank McLinden, Waterbury, Conn.; J. J. Schinsorth, Hartford, Conn.; W. H. Walter, Philadelphia; Chas. M. Taylor, New London, Conn.; James U. Case, Somerville, N. J.; L. Voorhes, Fort Washington, L. I.; E. B. Post, Newburg, N. Y.; R. C. Tuthill, Middletown, N. Y.; S. Thornhill, Sayville, L. I.; C. W. Race, Bay Shore, L. I.; T. C. Wood, Haverstraw, N. Y., and Leon Plimston, who is in the employ of druggist J. Schott, of Galveston, Texas.

—Harry B. Winne, of this year's class at the New York College of Pharmacy, who won the college prize of \$100 for the best standing in practical pharmacy and also one of the alumni medals, is prescripionist in the drug store of Charles C. Ten Broeck, at Kingston, N. Y. His townsmen are proud of the brilliant record of Mr. Winne at the college.

—Druggist H. K. Miller, of Lacona, N. Y., has moved his stock and fixtures into more commodious quarters in the De Mott block in that town, which were formerly occupied by the general store of G. L. Hydorn, whose stock has been bought in by Mr. Miller.

—Thomas P. Haley, President of the Peacock Chemical Co., of St. Louis, surprised his friends a few days ago by becoming a benedict. Mr. and Mrs. Haley came to New York last week on their wedding journey. While in the city they stayed at the Waldorf-Astoria.

—L. Mannheimer, for the past three years manager of the branch drug store of Dr. A. L. Goldwater, at Willis avenue and 138th street, is preparing to open a new pharmacy at Westchester and Clinton avenues, Borough of the Bronx. The opening is set for to-day.

—J. A. Proben, proprietor of a drug store at No. 298 Amsterdam avenue, has bought the pharmacy of William E. Cramer, at 376 Columbus avenue, which he will conduct under the firm name of Proben & Co.

—Mr. Horgan, head of the retail drug firm of Horgan & Abbott, of Portland, Me., was in the city last week ordering a stock of goods for a new drug store his firm is about to open at Old Orchard Beach, Me.

—The local office of the Harshaw, Fuller and Goodwin Company, the Cleveland and New York importers and manufacturers, has been moved to larger quarters in the Woodbridge building, 100 William street.

—Arthur F. Decker, who was graduated from the New York College of Pharmacy this year, has accepted a position in the pharmacy of McRae & Co., at No. 580 Tenth avenue, Manhattan.

—W. H. Andrews, treasurer of Pratt & Lambert, manufacturers of varnishes, No. 100 William street, this city, will take a trip abroad. He will sail on the Campana, May 19.

—S. L. Chasins, formerly manager of the drug store of Theodore M. Moolton, at 1,632 Avenue A, has opened a new drug store at 804 Jackson avenue, corner of 158th street.

—The drug store of Adolph Engelhardt, at Lawrence, L. I., was damaged by smoke and water as a result of a fire in the adjoining building a few days ago.

—George Hecht has moved his drug store from Tremont avenue and 176th street to No. 1,722 Bathgate avenue, corner of 174th street, Borough of the Bronx.

—C. H. Ludewig, proprietor of a drug store at No. 994 Tremont avenue, will open a new pharmacy at West Farms, Westchester County, about June 1.

—W. Hofert has moved his pharmacy from No. 230 to Nos. 223 and 225 Hamilton avenue, Brooklyn, where he has secured larger and better quarters.

—The New York office of Frederick Stearns & Co., the Detroit manufacturing pharmacists, has been removed to larger quarters, at No. 11 Platt street.

—E. F. Crosher, proprietor of a drug store at 43 Main street, Flushing, has bought the pharmacy of H. W. Niemeier, at Whitestone, L. I.

—J. J. Alexander has moved his drug store from 2,381 Elgth avenue to Dawson street and Leggett avenue, Borough of the Bronx.

—The New York office of Lister's Agricultural Chemical Works has been removed to No. 26 Broadway, Room 608.

—Frank S. Hereth, of the Searle & Hereth Company, manufacturing pharmacists, Chicago, is in the city.

—W. W. White has moved his drug store from No. 2112 Fulton street to No. 2100 Fulton street, Brooklyn.

—C. H. Selick, the perfumer, has moved to more commodious quarters, No. 56 Leonard street.

IN AND ABOUT BOSTON.

This Horse Knows a Good Thing.

Boston, May 12.—In North Adams there is a horse which actually likes soda water as well as his master, a physician, does. When the doctor stops at a drug store for a drink, he takes a dipper full out to the mare which takes it down with a relish even to the last drop. She appears to like any flavor, and also is fond of root beer. It is even thought that if offered lager she probably would drink it. Her liking for these beverages is known to townspeople, who often stand around to see the mare imbibe.

NOTES.

—These druggists in Fall River have been fortunate enough to receive a license: Charles A. Baker, James Aime Barre, C. S. Blake, J. A. W. Bouvier, J. C. Brady, W. J. Briggs, A. Brosseau, S. F. Brow, P. S. Brown & Co., A. J. Brunelle, Bryson & Lowe, Burke Brothers, J. H. Buron, E. W. Cantwell, A. F. Chamberlain, C. A. A. Collet, D. F. Corrigan, A. H. Dailey, W. H. Davis, W. M. Dedrick, J. G. Gaudreau, A. A. Keeley, P. J. Martel, J. C. E. Panneton, L. D. Poirier, E. Reeves, F. B. Riddell, A. Robinson, D. R. Smith, Samuel J. Smith, H. J. Sorrel, J. T. Touhey, E. S. Watts & Co., J. W. Whitaker, I. U. Wood, Worthen & Hicks.

—Frederick & Bower and E. J. Castle, druggists at Methuen, at a recent meeting of the Board of Selectmen, were granted druggists' licenses. Some townspeople have failed to understand why S. H. Harris, Jr., was not granted a similar license. According to a statute of the Acts of 1898 no building or portion of a building shall be designated or used as a voting place in which intoxicating liquor has been sold within thirty days preceding the election. This being the statute law, the selectmen could not grant Mr. Harris a license, as he occupies a store in the town house which is used as a polling precinct.

—Walter E. Day, of Hopkinton, a druggist, has left that town to take up his residence in Des Moines, Ia., where he has a good position with the Chamberlain Medicine Company. His business in Hopkinton will be retained and will be in charge of John J. Kennedy, his clerk, who has been with Mr. Day for more than fifteen years.

—Thomas D. Maloney, a Worcester druggist, at 50 Trumbull street, had an overcoat stolen from the Windsor Hotel in that city one night this week. It was afterwards recovered. It had been pawned for only 80 cents. The thief was not found.

—S. A. D. Sheppard represented the drug trade here at the annual council of the American Pharmaceutical Association at Richmond, Va., where he was elected treasurer of the association.

—Arthur Reycroft, proprietor of Reycroft's Pharmacy, Cambridge, still keeps up his interest in bowling. He is the champion candle-pin bowler of the Cambridge Druggists' Association.

—The drug store of James T. Beaugard, at Holyoke, was recently damaged by fire of a rather suspicious origin. The loss is estimated at \$3,000. An investigation is to be made.

—Augustus McDonough, a clerk at C. W. Donahoe's "Village Drug Store," in the South Boston district, has passed the State Board of Dentistry with high honors.

—Albert Kidder, of Bass's pharmacy in Cambridge, goes to Mr. Bass's Coolidge Corner pharmacy, Brookline, to assume charge of the place.

—Martin F. Sheehan, a Lawrence druggist, has been one of the many victims of the grip. He has now fully recovered.

—Archie George is a new clerk at the Lawrence drug store of William H. Glover.

PHILADELPHIA.

Philadelphia, May 12.

—The Philadelphia daily newspapers are again discussing the ease with which poisonous drugs can be obtained by the laity. A case occurred on Thursday in which a girl died from the effects of a hypodermic injection of morphine which had been administered, at her request, by a friend who was addicted to the habit. The officials, in looking up the details of the case, discovered that the druggist who sold the morphine had neglected to make a record of the sale as is required by law, and the newspapers treat the subject as though such carelessness was general, which is not true.

—The list of members of the "Philadelphia College of Pharmacy Pharmacopoeia and Research Committee" has been announced as follows: Prof. Joseph P. Remington, chairman; Prof. Samuel P. Sadler, Prof. Henry Kraemer, Prof. Clement B. Lowe, Prof. Frank X. Moerk, Prof. J. L. D. Morison, Dr. George Rosengarten, Charles LaWall, Frederick W. Haussman, George M. Beringer, Joseph W. England, Wallace Proctor, Lyman F. Kebler, William E. Ridenour, Josiah C. Peacock.

—Another instance occurred in this city last week illustrating the folly of taking medicine in the dark. A young lady who had been taking chlorate of potash tablets for her throat went to her bureau drawer in the night to get a tablet, but got by mistake a tablet of corrosive sublimate (used for preparing the 1-2000 antiseptic solution). She noticed the difference in time to call help and was taken to the hospital where prompt treatment saved her life.

—Charles B. Markley, a medical student residing at Eleventh and Race streets, was arrested on Friday charged with obtaining morphine and strychnine from Wm. R. Warner & Company, on a forged order purporting to come from Dr. Harry McCarty, of the Medico-Chirurgical Hospital staff. Markley was held in \$500 bail for his appearance at court.

—According to the daily papers, Frank G. Mumma, the druggist of Twenty-fifth and Jefferson Streets, has been slated for the nomination to the State Legislature by the republicans of the Twenty-ninth ward. Mr. Mumma has been active in Brewerytown politics for several years and will be elected without doubt if he gets the nomination.

—The three story building of Stoughton & Chamberlain used as a storage place for crude and lubricating oils, was completely gutted by fire on Sunday night. The origin of the fire is not known; the loss will probably reach several thousand dollars.

—The stated monthly meeting of the chemical section of the Franklin Institute will be held on Tuesday evening, May 15. Prof. Samuel P. Sadler will present "A Review of the Subject of Mineral Tanning."

—The last of this year's series of pharmaceutical meetings will take place at the Philadelphia College of Pharmacy on Tuesday, May 15, at 3 p. m. An interesting programme has been issued.

—Stirling Wilson, has returned to the city after an absence of two years, and will enter the firm of Wm. Wilson Sons, drug brokers, in this city.

—John W. Langham, of 2909 Kensington Avenue, is open for congratulations, as he is now the proud and happy father of a bouncing boy.

—H. L. Shingle, of Eleventh and Green Streets, has sold his store to A. R. Hesselk, who has a store at Thirteenth and Poplar Streets also.

—The drug store of Dr. Julian Fajans, 5107 Ridge Avenue, has been selected as the location of No. 61, Sub-Postal Station of Philadelphia.

—Frank Kline, a P. C. P. graduate of the class of '90, will manage Fahey's new store on Eighth street, opposite the Bijou Theatre.

—Mr. Trochet, who was for many years with Fougera & Company in New York, was a Philadelphia visitor one day this week.

—The ratio of clerks to positions is still increasing, the past week's figures showing forty-seven clerks to thirty-three positions.

—Frank G. Mumma, of Twenty-fifth and Jefferson Streets, is confined to his bed with an affection of the bronchial tubes.

—William L. Sisler, assistant manager of George B. Evans, Eighth and Arch Streets, is laid up with a severe cold.

—W. F. Osterlund has purchased the store of Russett L. Cox, at Forty-sixth street and Baltimore avenue.

BALTIMORE.

Artificial Violet.

Baltimore, May 7.—Among the articles seized by Custom House Officers, which will be sold at public auction, is a bottle of artificial violet confiscated some time ago because, in the opinion of the Custom House authorities, the substance had been undervalued. It was brought here on March 17, 1899, and a valuation of \$150 was put on it by the importer acting as agent. The appraisers finally, after prolonged investigation, put the value of the bottle at \$700. The importer appealed to the Board of General Appraisers in New York, and that body not only sustained the local appraisers, but advanced the valuation to \$945.69. It being the opinion of the authorities that a price approximating the actual worth could not be obtained at auction here, the bottle has been sent to New York and will be disposed of there. Some Baltimore chemists hold the valuation of the appraisers to be grossly excessive, and assert that the amount at which the water was entered in the ship manifest is substantially correct. It is contended that not the list price in the country where the article is patented should determine the invoice, but the sum for which tonone sells everywhere else. Tonone is catalogued by French manufacturers at 1,500 francs, or about \$260 in American money. The patentees are naturally interested in keeping up the listed price, but wherever the substance is not protected by patent it can be bought for considerably less, and the ruling quotations in such countries, persons qualified to discuss such matters contend, should govern the Custom House appraisement. In the opinion of a well-informed member of a widely known Baltimore firm of manufacturing pharmacists the estimate of the appraisers was grossly excessive, and that of the Board of General Appraisers even more so. The experts who testified in the case, it is intimated, may not have been disinterested.

The Drug Trade Howlers.

Baltimore, May 12.—The Baltimore Drug Trade Bowling Club championship for this season was decided last night, when Sharpe & Dohme took two out of the three games from James Baily & Son and clinched their hold upon the silver cup. The successful team needed only one more game to settle the issue beyond peradventure of a doubt, and excitement was at fever heat. Dr. Dohme had several pressing engagements, but declined them all to be with his team and assist it to victory. To Timothy Golisborough, of Sharp & Dohme, will fall the distinction of being high individual average man, he having made a mean of 172 points during the season. Sharp & Dohme have now won the cup for two successive years. An-

other victory will make it their permanent property. Last night's scores were: Sharp & Dohme, 807, 794 and 731; James Baily & Son, 714, 712 and 752. On Tuesday night the Winkelman & Brown Drug Company took all three games from Muth Bros. & Co. by 742, 824 and 672, to 633, 709 and 655. Muller, of the winning team, rolled up the extraordinary total of 225 points in the second game and made an average of 183 1-3 for the series. Coyne was high average man for Muth Bros. & Co., with 157 1-3. The several teams now stand as follows:

Teams.	Games Won.	Games Lost.	Percentage.
Sharp & Dohme.....	44	10	.815
Root and Herbs.....	42	12	.778
Winkelman & Brown Drug Co. 38	16		.704
James Baily & Son.....	24	30	.444
Park, Davis & Co.....	13	38	.255
Gilpin, Langdon & Co.....	12	39	.235
Muth Bros.	10	44	.187

NOTES.

—J. B. Duble, of J. B. Duble & Co., retail druggists of Williamsport, Pa., who learned the drug business years ago with Dr. Osbourn, this city, was in town last week renewing old acquaintances. He is a Grand Army man, and in the course of his stay here visited the headquarters of his former comrades in the field. Mr. Duble served his apprenticeship from 1864 to 1868, and has not been in Baltimore since that time.

—S. S. Claire, at different times in the employ of Druggist David P. Schindel, Hagerstown, Md., as clerk, has leased the corner store room in the Central Hotel at Marion, Pa., and will establish a pharmacy therein. The apartment will be repapered, repainted and otherwise thoroughly equipped for the business.

—John Stillman, who has had an extended experience in the business as manager of his father's store in Northwest Baltimore, has been engaged to take charge of Oscar Ross's pharmacy, No. 108 East Baltimore street, formerly Lilly, Rogers & Co.

—Dr. A. J. Corning, druggist, of No. 1501 Bolton street, this city, has received information of the death of his father, Gilman Corning, at Salem, N. H. The deceased had suffered from paralysis during the past year. He was 85 years of age.

—The petition circulated among Baltimore druggists in favor of the Brosius Pure Food and Drug bill, which has been introduced in the House of Representatives, was signed by practically all the pharmacists here, bearing about 275 names.

—Druggist Henry C. Spetzer has removed from the northwest corner of Druid Hill avenue and Oxford street into the southwest corner, a location far more commodious than the old one, and which has been thoroughly renovated.

—Druggist J. O. Harrison, of Preston street and Greenmount avenue, will open another pharmacy at Twenty second street and York Road, having purchased the property on that corner.

—Lewis E. Galloway, until lately a clerk in the employ of P. C. Hauser, Poppleton and Fayette streets, will open a new store at the corner of Lanvale and Mosher streets in a few days.

A Pitcher, Six Steins and an Ice Tray.

These are included in the offer which Geo. A. Berry & Co., Concord, N. H., make on the Root Beer advertisement in this issue. Many druggists, particularly in New England, make money every summer drawing this Berry's Root Beer, but it is now proposed to extend its fame, and to quench the thirst of those who may not have heard of it. Hence the special offer, on which over \$30 net profit may be made on a twelve dollar investment.

It Drains Every Drop.

This is an important feature of the Charleroi Oval, advertised in this issue. The bottle is made by W. H. Hamilton Co., at Charleroi, Pa., a little town near Pittsburg, and from which the bottle derives its name. It is one of the neatest and most sensible prescription bottles on the market to-day, and the price is no higher than some of the obsolete shapes still sold to the trade. The letter "H" is blown in the bottom of each bottle. It will pay to send for a sample assortment.

DETROIT.

Tablet Workers with P., D. & Co. Strike for Higher Wages.

Detroit, May 12.—So great has been the rush of business at Parke, Davis & Co. of late that it has been necessary to keep two shifts at work in some of the departments. In others the men have been asked to work overtime. The day and the night shifts have been paid the same wages, while overtime work has been paid for at the same rate per hour as for regular labor. Recently the men have been agitating the question of more pay for the extra work and for the night hours, and it was decided to ask the firm for "time and a half" pay for all such work. The firm refused the demand, and so on Wednesday about seventy-five of the men and boys in the tablet department went on a strike. They have not returned as yet, and will have a meeting this evening to decide on further action. The firm say that they have not been at all embarrassed by the strike, nor hindered in putting out their work, for they merely shifted men from the departments where they could be spared to the tablet department and work is going on as usual.

Detroit, May 14.—On Saturday the strikers and other employees of Parke, Davis & Co. held a meeting and effected an organization or trade labor union. Officers were elected and the organization will invite employees of other drug and chemical factories to join.

NOTES.

—Nelson, Baker & Co., manufacturing chemists, of Detroit, will build another large addition to their laboratory on the corner of Lafayette avenue and Seventh street. They have purchased a frontage of 50 feet on Lafayette avenue with a depth of 130 feet, and all of the ground will be covered with a building of four stories and a basement. This move will enable the company to increase their output 30 per cent. and will give employment to about 300 more hands. Work will be begun immediately and it is expected that they will be ready to occupy by the end of the summer. It is not quite a year since a very substantial addition was finished and occupied. The capital stock of the company was recently increased to \$250,000.

—The Michigan Drug Company baseball team will line up for the season as follows: McClure, pitcher; Macoft, first base; Higgins, second base; Brinkman, third base; Sullivan, short stop; Lane, St. Andrew and Henke, catchers, and Perry, Cole, Vick and Burnett, fielders. W. L. Hedges is manager of the team and W. M. Anderson secretary and treasurer.

—Druggist A. S. Parker, of Detroit, attended a meeting of the Executive Committee of the Michigan Pharmaceutical Association held at Grand Rapids, May 4. Arrangements for the coming August meeting at Grand Rapids were perfected. The session this year will be a two days' affair, instead of three, as formerly.

—To-day, May 8, the pay 'phone in the drug stores took effect. A nice batch of complaints and threats from customers are reported already. Druggists have spent the day explaining and mollifying. Not one case of the public taking kindly to the scheme has gone on record as yet.

—C. M. Smith, with Williams, Davis, Brooks and Hinchman Sons, has returned from a two weeks' vacation. Mr. Smith was accompanied by his family and spent part of the time in Washington with his brother, Congressman Samuel W. Smith.

—C. M. Brooks, of Pontiac, is playing in hard luck. He had a double store—drugs and paints, oils and wall papers. Awhile ago he sold out his drug stock to Fred. Graves and this week he has failed in the other part of his business.

—George S. McKay, who left Farrand, Williams & Clark's to go to the Klondike, is calling on Detroit friends. On Mr. McKay's return from the north he accepted a position with a Chicago drug house.

—F. E. Smallidge, druggist, 701 Jefferson avenue, Detroit, has refurbished his store, putting in new show cases and fixtures, all of his own designing. The result is a very handsome store.

—R. C. French, of Clarksville, has sold his drug stock to R. H. Goodfellow, formerly in business at Clio. Mr.

French has taken a position as traveller for H. E. Bucklin, of Chicago.

—Clerk Armstrong, formerly with Ed. J. Rodgers, of Port Huron, has taken a position with Mr. Knill, in the Central drug store of the same place.

—J. Masse, of Ecorse, has moved his drug stock, fixtures, and so forth to Sault Ste. Marie, where he will open a store.

—M. G. Ritchie, formerly traveler for Dabrook's perfumes, has bought a new drug stock and located at Mt. Clemens.

—C. H. Wilber, of St. Ignace, has returned from a long trip in California much improved in health.

—John W. Davis, of Fenton, has sold his drug store to Mr. Curtis, of Toledo.

CHICAGO.

New Drug Club.

Chicago, May 12.—On May 9 a committee of the druggists of the Twenty-fifth Ward sent out the following notice to the other druggists of the Ward:

To the Druggists of the Twenty-fifth Ward:

A meeting will be held at Lincoln Turn Hall, No. 1257 Diversy Boulevard, near Sheffield avenue, Friday afternoon, at 3 o'clock, (May 11), to organize a ward club to co-operate with the Chicago Retail Druggists' Association.

You are cordially invited to be present.
W. T. KLENZE,
MAX GEORGES,
GEORGE HUBER,
C. L. CLANCY.

The summons was liberally responded to. The druggists met, formed an organization and elected the following officers: President, Dr. C. L. Clancy; vice-president, W. T. Klenze, and secretary and treasurer, George Huber. The Price Committee and the Committee on Promotion and the Good of the Order have not yet been appointed. Among those present from other wards were Messrs. Bruno Batt, of the Twenty-sixth; S. C. Yeomans, of the Fourth; John F. Hottinger and Mr. Ladish, of the Twenty-first, and Thomas V. Wooten, of the Twelfth. The entire meeting was a success and the new club starts out with a good strong push and plenty of brains and energy with which to make it a success.

NOTES.

—George R. Baker has leased the room north of his store in the Ashland block at Clark and Randolph streets, and will remove the partition between the two, making one large store. In the new premises he will place a soda water fountain—one of the handsomest and largest in the West. The new fountain is now being built. It will be of onyx, with onyx counter and revolving syrup tanks. Further description will be available later on. Mr. Baker is one of the few druggists in Chicago who have been progressive and successful without incurring the ill will of their fellows. His methods are those of a good business man who can make a reasonable amount of money out of his profession without doing injury to his brethren.

—The firm of L. A. Becker & Company, well-known makers of drug store and general store furniture and fixtures, has moved its factory to the West Side and its offices from their former location on Institute Place, near Wells street, to Market street, near Randolph.

—The first botanical excursion of the season by the Chicago College of Pharmacy students took place on Thursday, May 3. The party went to Hinsdale, Ill., and inspected the flora of hill and dale with scientific scrutiny. The next expedition is announced for Thursday afternoon, May 17, at River Forest.

—The store of H. R. Wallace, at Sixty-third street and Wentworth avenue, was closed recently on a chattel mortgage, and was later bought in by Ezra T. Finney.

—The many friends of C. C. Kehner, a well-known druggist at 557 Sedgwick street, will be deeply grieved to learn of his death, which occurred this week.

—O. E. Amundson has opened a new store at 963 Armitage avenue.

THE NORTHWEST.

North Dakota Sensation.

St. Paul, Minn., May 11.—The greatest sensation ever experienced by North Dakota druggists is now "in their midst." Actions have been started and papers will be served upon nearly every druggist in Walsh county, and also against the bondsmen of the druggists, with the end in view of having the bonds forfeited for violation of the law which makes it unlawful for any person or persons to sell or barter, for medicinal, scientific or mechanical purposes, any intoxicating liquors without first having procured a druggist's permit from the county judge of the county and filing with the county judge, to be approved by him, a bond of \$1,000 conditioned that such applicant and any one in his employ will neither use, sell, barter or give away any intoxicating liquors in violation of law and the provisions of said bond. Actions have been started against the bondsmen of at least seven of the druggists in Walsh county, among whom are Charles S. Stranghan, of Park River; Henry L. Hosman, of Grafton, and Hugh Lemeaux, Gus W. Fogsman, Henry Anderson, John F. Anderson and W. J. Graham, Jr. The proceedings were instigated by the State Enforcement League, and the actions are brought in the name of the State of North Dakota. These actions are radically different from those previously started by the Enforcement League to stop the liquor traffic in the State, inasmuch as the proprietors of the places are not being prosecuted under the statute prohibiting the maintenance of public nuisances, but that the suits are being brought to enforce the forfeiture of the bonds given. The cases will come up for trial at the June term of court in the Seventh Judicial District, before Judge Santer.

NOTES.

—F. M. Parker, one of St. Paul's most progressive druggists, who has for some years conducted a store at East Fifth and Wabasha streets, is opening a branch on Arcade street. There is no other drug store within ten blocks and Arcade street is in a thickly-settled district, so Mr. Parker regards this a promising field. The branch, which will open about June 10, will be run by C. A. Swanson, who for several years has been clerking for Mr. Parker and who has been taken into partnership. Messrs. Parker & Swanson will incorporate. They have not yet decided upon a title for the new company. Mr. Parker is about to completely refurnish his Wabasha street store.

—Successions: George W. Swartz, Delmont, S. D., by C. L. R. Robertson; A. M. Harper, Renville, Minn., by J. H. Sundt; J. Alb. Peterson, Cokato, Minn., by the Eureka Drug Co.; W. E. Nichols & Co., Eagle Grove, Ia., by Anderson, Walters & Co.

—Dr. M. A. Nelson has started at Bricelyn, Minn.; D. L. Evans at Tenhassen, Minn.; T. W. Ayers at Lawton, Ore.; B. E. Webber at Steen, Minn.; Charles Ellis & Son at Holland, Minn.; John A. Kohler at Balfour, N. D., and the Erskine Drug Co. at Leland, Ia.

—Among the country druggists recently visiting the city were Messrs. Gausewitz and Cool, from Owatonna; M. V. Wetzell, from Little Falls; Itlis, from Wadena; Spottiswood, from Hankinson, N. D., and Arms, of Hector, Minn.

—Y. A. Hirscher has left Grafton, N. D., and is about to go into the drug business at Good Thunder, Minn.

—The wife of C. P. Noyes, of Noyes Bros. & Cutler, St. Paul, has gone to New York on a visit.

—R. Bachman, Wakefield, Neb., and T. L. Martin, Wilton, Wis., have sold.

—C. A. Frees has gone to Hudson, Wis., to work for Robert Slater.

—F. W. Krueger has gone to Minto, N. D., to work for J. W. Boeing.

—C. A. Harty has gone to work for C. H. Nunn, Rice Lake, Wis.

—The Franz Etta Co., Sioux City, Ia., has given a bill of sale.

—Henry Prestholdt is now at work at North Branch.

—A. A. Melgard, Warner, S. D., has removed to Bangor.

—John E. Keiser, Table Rock, Neb., has been attached.

ST. LOUIS.

Street Railway Strike.

St. Louis, May 12.—St. Louis is in the throes of a great street railway strike since Tuesday morning of this week. All the motormen and conductors of the St. Louis Transit Company, which embraces every line in the city with the exception of the Suburban Railway, are out. The company claims it has men enough to run the cars if furnished adequate protection, but cars are being run on but few of the lines, and then irregularly. No attempt is made to run cars at night. The Suburban is running about on schedule, but heavily guarded by police. The majority of business men are coming to and from work on foot, on wheel, in private conveyance when they are fortunate enough to possess one, and in all manner of improvised "hacks." The fight is being made strictly on the recognition of the union, and there are threats of a sympathy strike embracing all the labor unions in the city. Business in the downtown retail district drug stores, included, is almost at a standstill. In many instances druggists in the outlying districts of the city report business as greatly improved on account of the people being kept at home instead of going down-town. One West End druggist had a customer ask for a certain patent medicine. When given the price, she said, "Oh, I can get that down-town at —'s cut rate store for 69 cents." "Well," was the pleasant reply, "why don't you take a car and get it?" This story, a true one, is respectfully dedicated to John H. Allen.

THE ANTI-SODA WATER LAW.

Notice to the Trade.

Since the introduction of our Carbonators a large number of druggists and confectioners have found it not only more convenient, but very much cheaper, to manufacture their own soda water instead of buying it from dealers and having it delivered in fountains, as heretofore.

Many of the druggists and confectioners who are now using our Carbonators have recently received a notice signed "James Jackson, Deputy Factory Inspector, Fruit Juice and Carbonator Department," calling their attention to a law passed by the last Legislature, which the circular claims practically prohibits the use of Carbonators.

Recent newspaper articles have claimed that this law was passed in the interest of the American Soda Fountain Company in order to increase the sale of soda water. In justice to ourselves we notify the trade that we are not now, and never have been interested, either directly or indirectly, in the manufacture or sale of soda water; but on the contrary, manufacture and sell a Carbonator which is very largely used by the trade for manufacturing their own soda water. This being the case it is hardly necessary to deny that we instigated or had anything to do with the passage of the law referred to. Senator Ford, who introduced the bill, states that he had no idea that it was expected to apply to the manufacture of soda water, but presumed that it prohibited the manufacture of gunpowder and other explosives in tenement buildings.

Mr. Jackson also states publicly that the circular is a forgery, and entirely unauthorized by him.

It may therefore be taken for granted that no attempt will be made to enforce the pretended application of the law to Carbonators and the manufacture of soda water.

No doubt in a short time the authorship of the infamous circular, as well as of the original bill, will be made known to the public.

AMERICAN SODA FOUNTAIN CO.

Successor to

JOHN MATTHEWS.

First avenue, Twenty-sixth and Twenty-seventh streets, New York.
Office, 449-451 First avenue.

Barker's Cod Liver Oil.

Gloucester, Mass., is the largest fishing port in the United States, and it is here that Barker's Cod Liver Oil is prepared from fresh livers of codfish caught off the coast and brought in by the fishermen each day. Barker's Oil has a light straw color, but little taste, and is as sweet as the best olive oil. It is put up in six ounce flint bottles that retail for 25 cents, and that cost the retail druggist \$2 a dozen.

STATE OF TRADE.

Prevailing Conditions of Seasonable Character.

New York, May 15.—Prevailing conditions continue of a seasonable character in the various departments of the wholesale drug and medicinal chemical markets. Round lots are not receiving much attention, and in a jobbing way the movement is largely restricted to the limited current wants of consumers. There is, however, no inclination on the part of dealers to force goods upon reluctant buyers, and while the demand is only moderate and the volume of business comparatively light, values as a rule have a fairly steady support. Quinine has not changed materially in the local market, mainly on account of a continued slow demand, but there has been no claim of firmness on the part of holders, and it is abated that it would be very difficult to purchase desirable brands in round lots at the full parity of manufacturers' quotations. Foreign markets are firmer, and the statistical position of bark continues strong. There will be a monthly auction of raw material in London today, and the result of the sale may influence the future course of quinine prices, while it is generally believed that an improvement in demand would cause an immediate advance. Opium has remained dull, with the tone of the market easy and very little interest has been manifested by either buyers or sellers, but there has not been any important variation in values. Reports from primary sources of supply are to the effect that weather conditions are favorable to the growing crop, and the minimum estimate of the yield is 600 cases. This is considered sufficient to meet the world's requirements for at least twelve months. There have been no developments in the morphine situation, and the future of prices continues uncertain.

In the department of essential oils Allen's sweet almonds is firmer under the influence of cables from London reporting an advance there of 2d. per pound. Other varieties are correspondingly stronger. Lemon has reacted to the full extent of the decline noted last week, owing to similar conditions at primary sources of supply. Expressed limes is steadily hardening in price on account of diminishing stocks. In general the market is active. Ergot continues easy under a slow demand, and a further decline is noted in quotations for all varieties. Belladonna root is held at slightly higher figures owing to scarcity and stronger markets abroad. The Tahiti variety of vanilla beans continues in exceedingly light supply, and first hands have further advanced quotations. There was an arrival at San Francisco last week of about 80 tons, but reports of local dealers replenish their depleted stocks disclosed the fact that the bulk, if not the entire quantity, had been sold previously for export to Europe.

Short buchu leaves are shrinking in value under the influence of a weaker London market, where supplies have been steadily accumulating in the absence of important demand. Pulsatilla herb is decidedly firmer on account of extreme scarcity, and values show a material advance. An easier feeling has developed among holders of balsam fir owing to a continued light inquiry and a revision of quotations shows a lower range for all varieties. Valencia saffron is easier, and round lots have been sold at about 25 cents per lb. under previous inside quotations. Strophanthus seed of the brown variety is in light supply and decidedly stronger, but there is no quotable change in Kombe green. Citric acid is moving freely, and the market is stronger with the tendency of values upward. Aqua ammonia is unsettled and irregular owing to competition from outside manufacturers.

Only Moderate Transactions Reported.

Boston, May 12.—While last week was far from active, this week has shown a material improvement, and there has been experienced a really good trade. There is far less illness reported this week, and the death rate has been below normal. Only moderate transactions are reported in the general market, and no material change is recorded in prices. There is found a good demand for alcohols, especially grain, and the rates are firm. Wood alcohol is in less demand. Cologne spirits are fairly active. Lyestuffs and tanning materials show little life at this time. The call for gambier is fair.

Slack Up in Business Continues.

Philadelphia, May 12.—The slacking up in trade reported from this city last week was still more noticeable during the past week, and one or two days were very dry, owing to the reports of the wholesale trade. The retail trade reports a marked falling off in the sales for the week, as the disagreeable, chilly weather cut down the soda water business almost to nothing. The bad weather resulted in an increase of sickness, and on Saturday a great many druggists reported a prescription business as having almost doubled in a single day. No price changes are reported in the wholesale markets, and collections remain about the same.

THE DEMAND for ABBEY'S SALT will be continuous, owing to the exceptional character of our steady advertising.

THESE DRUGGISTS SAY:

Brookline,
March 28, 1900.
The Salt sells well and there has been an increase in the sale of same.
(Signed) Wm. H. Butler.

Boston, Mass.
March 28, 1900.
The sale of Abbey's has been very fair during the last few weeks.
(Signed) A. D. Marcy.

Dorchester, Mass.
March 28, 1900.
We are selling a slight increase in the past few weeks.
(Signed) A. M. Baker.

701 Centre Street,
Jamaica Plains, Mass.,
March 28, 1900.
We have noted an increase in the sales of Abbey's Salt recently.
(Signed) Chas. B. Rogers & Co.

40 Water Street,
Newburgh, N. Y.
March 28, 1900.
The demand for Abbey's Salt has increased.
(Signed) Theo. Merritt's Sons.

ABBAY'S SALT is a clean remedy, honestly advertised, prescribed and endorsed by physicians the world over. Abbey's Salt reaches the consumer through the drug trade only.

...THE...

ABBAY EFFERVESCENT SALT Co.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

Less Activity All Along the Line.

Baltimore, May 14.—Business has eased off somewhat all along the line, both wholesalers and manufacturers of pharmaceuticals reporting that there is less activity now than during the past four months of the present year. The retailers, too, state that they have less to do, the prescription business having fallen off, and other lines of articles being without special snap. Health conditions in the city are improving, and the indications are that comparative quiet will prevail in the near future. The market for crude drugs and botanicals shows a tendency toward a lower range of values, although there have been no special developments during the past week. Attention is centered upon ergot, which is proportionately low at the present time, but may be expected to go up again about July. The new crop does not come in before November, and between now and that time decided fluctuations may take place.

Business Almost at a Standstill.

Detroit, May 12.—For the last three days, things have been unusually quiet in the drug circles of this city. The weather has been of the very worst that Michigan is capable of producing. Not only the drug business, but every other line, has been almost at a standstill for part of the week. Retailers have many troubles of their own these days, but even "cutting" fades in importance to the woes arising from the new phone arrangement. The whole story of the week for the trade is as gloomy as the skies have been.

Business Good in Chicago.

Chicago, May 12.—Trade this week has shown some increase over previous weeks, and manufacturers and jobbers have both been very busy. There is a heavy demand for staple goods. Mail orders are numerous, and the country trade is in excellent condition, notwithstanding the fact that these are busy times on the old farm. The demand for heavy chemicals is perhaps not so good as it would be if all Chicago manufacturing enterprises were in full swing, unhampered by the contentions of employees. This is "a condition, not a theory," and as such will, and some say is already wearing itself out. Men must work to eat and eat to live. Druggists are in good demand, and for the last few days the demand for hot weather goods has come on with a rush.

Country Trade Fair; Local Business Disturbed.

St. Louis, May 12.—Trade with the country is fair. Locally, business is considerably disturbed on account of the great street railway strike. Retailers and jobbers are suffering from almost a stagnation of business, but many of the outlying stores are benefiting correspondingly.

Marked Falling Off in Prescription Trade; Collections Good.

St. Paul and Minneapolis, Minn., May 11.—At last, after months of almost unprecedented activity, a breach has been made in the walls of prescription work. A few druggists announce that this branch reveals a marked falling off. A majority, however, claim that they have not as yet noticed the slightest tendency toward slackening. Collections are better than they have been for many months. This is the unanimous report of jobbers and retailers alike. All the miscellaneous departments of trade are being maintained finely, and this promises to be the most prosperous year the drug men of these cities ever knew. Lined oil has taken another rise—two cents this time. On all other Western articles the market has shown no change from last week.

Alhambra Ladies' Syringe.

Of a form preferred by many customers, this syringe may be had with a hard rubber or glass tube, although the bulb is of soft rubber in both styles. This Syringe has no valves to get out of order, and is really one of the cleanest and easiest to use of the many kinds offered to the trade. It is made by the Ideal Rubber Company, No. 28 Rodney street, Brooklyn, N. Y.

Cameras.

The Sunart Photo Co., 18 Aqueduct street, Rochester, N. Y., make Folding and Cycle Cameras from \$5 to \$50 each, and send a handsome catalogue free to any druggist who will write for it. They illustrate in this issue the Sunart Vici Magazine Camera, 4 x 5, at \$8. This Camera is so simple that no experience is required to sell it and very little to use it.

Floral Leaves Breath Perfume is put up in Aluminum and Leatherette boxes at \$9 per gross, less 10 per cent., to retail at 10 cents. Samples will be sent to any druggist on application to the manufacturer, John P. Bender, 206 Centre street, New York.

MARKET REPORT.**NEW YORK MARKET.**

New York, May 15.—General business has continued of only moderate volume, with transactions limited almost exclusively to actual current requirements of consumption, but the tone of the market is fairly steady, and there is no apparent disposition on the part of holders to force goods upon reluctant buyers.

OPIMUM.—There has been no improvement in demand, and the market has remained extremely dull with the undertone easy, but jobbing quotations are nominally unchanged at \$3.35@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPIMUM.—Current business continues of an exceedingly light jobbing character, and the market is tame and featureless with holders quoting the old range of \$4.45@4.65 for 13 per cent., and \$5.15@5.35 for 16 per cent., according to size of order.

MORPHINE.—Nothing has occurred to change the general condition of affairs, and a continued steady business is in progress, with jobbers still quoting on the basis of \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, according to brand.

QUININE.—Continued firmness is a prominent feature of the market, and there is no lack of evidence that outside holders are still looking for an early advance in manufacturers' prices, but the demand is slow and jobbing quotations remain unchanged but steady on the basis of \$1.92c. for bulk in 100-oz. tins, 33@34c. in 50-oz. tins and 38@39c. in ounce vials.

BELLADONNA ROOT.—Foreign markets are called strongest by importers have advanced their views in limitation, but jobbers are yet willing to sell in a limited way at the former range of 24@25c. for whole, and 25@26c. for powdered.

VANILLA BEANS.—Quotations for the Tahiti variety are again higher on account of diminishing stocks, and for jobbing quantities values have been further advanced to \$5.50@4.50. There was an arrival of about 8,000 lbs. at San Francisco, but it was purchased previously for European account.

BUCHU LEAVES.—Short are easier in sympathy with the London market, where values have been declined under heavy receipts and slow demand. Spot quotations have been reduced to 25@35c. for whole, 38@48c. for ground and 40@50c. for powdered.

OIL PENNY ROYAL.—Stocks are comparatively small and with the active consuming season near at hand, the market is stronger, with jobbing quotations advanced to \$1.75@1.85.

OIL ALMONDS.—Sweet is higher owing to an advance abroad, and spot quotations have been marked up to 55@60c., as to grade and quantity.

OIL LEMON.—Primary markets have improved to the full extent of the decline noted last week, and jobbing quotations have reacted to \$1.25@1.50.

PULSATILLA HERB.—The available stock is considerably reduced, and on account of the prevailing scarcity holders have advanced their quotations to 50@60c.

BALSAM FIR.—Lack of important demand has imparted an easier tone to the market and quotations for jobbing parcels show a decline to \$2.25@2.50 for Canada and \$1.10@1.25 for Oregon.

SAPPHRON.—First class quotations are a shade lower and jobbers have reduced their range to \$11@12 for Valencia.

"The Kind That Keeps."

This is pretty good quality for a peroxide of hydrogen, as most druggists can testify to. Each bottle of Oakland Hydrogen Dioxide is guaranteed. Open bottles do not deteriorate, nor do closed bottles explode. Need more be said in its favor?

It is sparkling, it is pure, it is effervescent, Cook's Imperial Champagne Extra Dry. Taste delicious. Bouquet excellent.

Frederick Stearns & Co., Detroit, has a handsome new advertisement of their Diphtheritic Antitoxin on page 3.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

TO HELP THE MARINE HOSPITAL STEWARDS.

We are all posted regarding the work done in the past few years to secure better rank and pay for the pharmacists in the United States Army and Navy and the success which thus far has been attained; but we are not so familiar with the present status and the desires and rights of the Marine Hospital stewards, who constitute another branch of the government service. The special committee of the American Pharmaceutical Association and the members of the marine hospital service believe there is at present an excellent opportunity to win decided material advancement for the hospital stewards. It is not proposed to introduce any bills to secure this advancement, but to create public sentiment, and thereby direct the attention of the President, the Secretary of the Treasury and the Supervising Surgeon General of the United States Marine Hospital Service to the lack of proper recognition of the hospital stewards, in the hope that some legislative steps may be taken for their relief. The movement is an eminently proper one, as is apparent from a consideration of the nature of the service and of the requirements exacted from each steward. Let us briefly state what these requirements are.

A steward of this service is required, on admission, to be a graduate of a reputable college of pharmacy, and to successfully pass a rigid examination physically, and in chemistry, pharmacy, materia medica, bookkeeping and accounts, and general education; besides being a competent executive, clerical and pharmaceutical man, a typewriter and a disciplinarian.

His duties comprise the supervision of the work of attendants and employes, supervision of the buildings, grounds, wards and kitchen, instruction of attendants and employes, the purchase and issue of all subsistence and other supplies, the compounding and dispensing of all medicines, the preparation of all records, accounts, reports and correspondence pertaining to the management of the station, and the record, care and inventory of all public property.

In addition to these, his regular duties, the steward is called upon in times of epidemic to establish camps and act as executive officer, quartermaster, commissary of subsistence, guard officer and disinfector, and as such to face dangers many times more deadly than the bullets of an enemy.

As will be seen from the foregoing, the steward must be a man of education and intelligence, energy, honesty and ability to a degree required of few employes of the government, and yet he receives no recognition professionally, and the

meagre pay of from \$600 to \$864 per annum, the latter only after ten years of service, still further reduced by the expenses of changing station and the necessity for keeping up the three uniforms required by the regulations.

The medical officer, with entrance requirements very little more rigid and duties not nearly so laborious, receives for the first five years, \$1,600; for the second, \$2,200, and from this regularly increasing until \$3,500 is reached, the officer also being allowed the privilege of private practice.

In civil life the physician and the pharmacist labor side by side in the common field of humanity; the government recognizes the latter only as an inferior of the former; a manifest injustice that deserves immediate correction.

The veterinarian of the army, who before occupied a much more enviable position than the pharmacist, has recently been commissioned, leaving the latter standing alone as an example of a government's injustice.

It is desired to change the title Hospital Steward to that of "Senior," "Junior," and "Assistant" pharmacists, with the pay respectively of \$1,200, \$900 and \$720 per annum, with present perquisites, the longevity pay and the present perquisites of the junior medical officer, and that at least twenty-five of the present incumbents be appointed to the Senior grade. One great argument in favor of this proposition is that such a change will not cost the government one cent of additional appropriation, inasmuch as there is now a surplus to the credit of the Marine Hospital Service of over a million dollars. This fund is obtained by direct tonnage tax upon all foreign shipping coming into this country, and is more than sufficient for the expense of maintaining marine hospitals throughout the country and for increasing the salary of the stewards in the manner indicated.

The movement is one which we can heartily commend, and it is to be hoped that druggists very generally will do all in their power to aid in securing for their brothers in the United States service compensation and recognition commensurate with the nature of the position and the ability required.

GIVING RECOMMENDATIONS.

The giving of letters of recommendation to an applicant seeking a position is a matter of very great importance, or should be, but unfortunately one which is treated altogether too carelessly. Frequently the giver of the recommendation does so merely to get rid of an importunate applicant, and writes it in a perfunctory and very general manner. But even such a letter should not be framed without due consideration of its importance and significance. It is, to be sure, much easier to give than to refuse a reference, for the latter is an exceedingly delicate mat-

ter. Something good may be said of everyone, but the case is very different when it comes to certifying that this or that man is competent and reliable in this or that respect; yet how many are not sufficiently careful in this particular. They certify to the fitness for some position of a man of whom they know little or nothing. It does the reference giver no good when the bearer of his recommendation is proved in actual service to fall far below the standard described in his letter of recommendation. If one cannot conscientiously and truthfully give a real recommendation he should refrain from giving any. If the applicant has any great faults which in any way interfere with the proper discharge of his duties it is not honorable to cover these up and mention only his good qualities, as the former may entirely neutralize the latter and make the applicant an altogether undesirable person for a position. The business man in giving a recommendation to a discharged employe makes no mention of his faults, but in a general way says he is a good man, etc., and salves his conscience with the idea that he will give the fellow a chance. He does not realize that in doing this he is injuring some other employer who may accept this applicant on the strength of the letters he carries. In trying to be liberal to one the recommendation giver proves a real enemy to the many. It is not pleasant to refuse a reference, but when it is desirable that such should be refused it must be done regardless of the feelings of the applicant. We all know how this question works and what trouble it often occasions. A story comes to us from a New Hampshire town of a drug clerk who recently lost his position and applied to a druggist in another city, from whom the reply came that there was a position vacant but references were required from applicants. The seeker applied to the man for whom he had worked, but that person refused the desired character. He then applied to a neighboring merchant in another line of goods, and this man wrote a letter in which he described the applicant as "of three years' experience in the business, of affable manners and the best dancer in ——." The clerk sent this letter, and is still waiting to be accepted for the vacant position. Isn't this absurd? Of what value is such a recommendation? And yet this is the kind that too many of us write and think we are rendering a favor by so doing. It cannot be urged too strongly that in recommending others we shall stick closely to the truth in fairness to everyone concerned. On the whole it is better to write no letters, but let the employer seeking a clerk come to us for what real information may be in our possession.

The Wisconsin Pharmacy Board is active in the prosecution of department stores which sell medicines without a license, and has lodged complaint against several of these institutions in the large cities. It is expected that they will be made to suffer for every violation of the law.

"I want a big dose of strychnine."
 "For what purpose?"
 "To kill an old cat."

"If my old mother-in-law can digest this——"
 Clerk (who has overheard).—"Come back! Help! Help! Police!"

A GOOD SUGGESTION.

Lyons, N. Y., May 8, 1900.

Editor Pharmaceutical Era:—I would suggest that the druggists in all parts of the States, together with the New York State Pharmaceutical Association, bring all the influence they can to bear on the State Experiment Stations, and ask them not to publish in the literature they send to farmers that "they ought not to pay over 5 or 6 cents a pound for blue vitriol," and "they ought to get arsenic for 5 cents a pound." If they want to protect the farmers from being overcharged they should say that it could be bought for about 8 or 9 cents in lots of 25 pounds, and cheaper in barrels weighing 400 or 500 pounds, and not tell the farmers that it can be bought in small lots at barrel price. Very truly yours, X. Y. Z.

THERE'S TROUBLE HERE.

Ste. Genevieve, Mo., May 10, 1900.

Editor Pharmaceutical Era:—The druggists of our little city are now in the throes of a cut-rate drug war, brought on us by the vice-president of the Allen-Pfeiffer Chemical Company, of St. Louis, a so-called non-secret concern. We were obtaining straight prices on all patents till the vice-president of the above concern made his debut in our midst as the head of the Carssow Drug Company. The enclosed circular is their first salutation to the public, and all patents are now sold at the same percentage of profit, including those of Allen-Pfeiffer manufacture, which are sold on same percentage, making their dollar size sell at 44 cents, 25-cent size at 10 cents. The non-secret people have ever posed as the retail druggists' friends, asking their patronage on that ground, but in this instance it seems they were not satisfied with the amount of their goods being sold on account of straight prices, and hence their worthy vice-president seems to have thought it might advance the interests of his company to precipitate cutting. Druggists should take warning and have as little to do with these pirates of the drug business as possible, lest when through their support they once gain sufficient financial strength they

will turn and destroy the very author of their being, as in this instance.

That the vice-president of the Allen-Pfeiffer Chemical Company precipitated this cut with the approval of his concern there seems little doubt, and retail druggists wherever that concern does business should take warning and push their goods lest they find themselves battling with the same troubles we are to-day facing. Or, better, take your support from all such hypocritical concerns and see how long they will stand on their own legs when they have to advertise as well as sell their own preparations. Respectfully, MARTIN J. GLASER.

UGHT TO DRAW.

A Michigan druggist uses this unique advertisement in his local papers:

COMMENDED TO CHRISTIAN SCIENTISTS.

The following verses from Ecclesiastics, chapters 18 and 38:

"Learn before thou speak, and use physic or ever thou be sick."—Verse 18, chapter 18.

"Honor a physician with the honor due unto him for the uses which you may have of him, for the Lord hath created him. The skill of the physician shall lift up his head; and in the sight of great men he shall be in admiration. The Lord hath created medicine out of the earth; and he that is wise will not abhor them. And he hath given men skill, that he might be honored in his marvelous works, with such doth he heal men and taketh away their pains.

Of such doth the apothecary make a collection; and of his works there is no end; and from him peace over all the earth. Then give place to the physician, for the Lord hath created him; let him not go from thee, for thou hast need of him. There is a time when in their hands there is good success.

For they shall also pray unto the Lord, that he would prosper that which they give for ease and remedy to prolonged life.

PRELIMINARY EDUCATION FOR STUDENTS OF COLLEGES OF PHARMACY.

BY WILLIAM C. ALPERS, SC. D.

In trying to establish a measure and standard of preliminary education for our pharmaceutical colleges, it is well to first consider the meaning of the word "college." Whoever has watched the development of our great educational institutions during the last decade has noticed the tendency among the larger ones to evolve from a mere academic college to a general university, that is, a combination of schools for special professional training. But wherever this change has been accomplished, great care is taken to put more or less severe restriction on the admission into these special schools. It is not considered a waste of time to spend a number of years in the so-called college proper—the purely academic school without specialization—to train the mind on a broad foundation of general knowledge, and let the student breathe the free atmosphere of professional science and practice, which will secure him in later years against degrading narrowness and total atrophy. The necessity, recognized for centuries in European countries, that the student must be *broadened* before he can *specialize*, is now also recognized by all true educators in our country. Special professional knowledge, be it medicine, law, theology, engineering or any other, following the general academic education, may be compared to a lofty pinnacle over a work of architecture; it matters little whether it rises as a cupola, tower, dome, spire or steeple, it always needs a solid base, a sound foundation to make it secure and permanent. If this broad foundation is lacking when specialization begins, the student is compelled to rely on his memory rather than on logical deduction, and cramming must take the place of reasoning. But nothing is more pernicious in theory and practice than to give a student the impression that higher education is simply a matter of training the memory or has any analogy to a permanent cramming process.

To what extent do our pharmaceutical colleges fulfill these conditions? By reading their announcements we might think that at least some pay due regard to preliminary education, and exclude illiterate applicants. In 6 schools of pharmacy there are, according to the announcements, no entrance requirements; in 4 schools they are indefinite; 24 demand a grammar school education; 11, 6 and 1 require respectively one, two and three years of high school work. In reality, however, an applicant is hardly ever rejected, and the preliminary requirements of the prospectus are little more than *placida desideria*. From the correspondence that the writer had with many members of pharmaceutical colleges, he knows this to be a fact; even teachers of schools that are connected with state universities write that "we try to live up to the requirements," which is only a disguised way of saying, "we do *not* live up to them." This fact is confirmed by members of State Boards of Pharmacy, who again and again complain of the lack of general education of candidates who come before them with diplomas from the most reputable colleges of pharmacy. The excuses for disregarding these fundamental conditions are numerous; but the very fact that the representatives of nearly every college are quick in offering excuses shows that they fully recognize the error of their ways, but lack the courage or ability to institute reforms. Some colleges have lately tried to raise their standard by conferring an additional higher degree on those who will go through a post graduate course. While the addition of new courses of study is always commendable, the conferring of such a degree on young men without academic education can have but one result—namely, the lowering of its value. The root of the evil is not acted by it.

We also know that our pharmaceutical colleges are based on various widely differing methods of manage-

ment and depend for their support on different factors; some are branches of State Universities; others are private institutions of ambitious men; others are stock companies founded for the purpose of making money; others are supported by a large number of members, generally pharmacists, who contribute more or less to their support, without expectation of any return or thanks.

The same diversity exists among the teachers; some are men practically trained in universities abroad or at home for their difficult positions; some devote all their time and work to the advancement of their college and thereby of pharmacy in general; but the larger number are men who without any academic training devote but a few hours a week to teaching and spend the greater part of their time in their own business, where their main interest must naturally lie. In addition to these varying conditions we must not forget that there is no national authority in the United States that can prescribe standards for degree or for licenses to practice the professions. Each State makes its own professional laws. As a result there are almost as many standards as there are political divisions. The desirability of uniform standards throughout the country for admission to professional practice is recognized generally, but varying developments make it impracticable to hope for the attainment of this end for some time to come. (Report of the Regents of New York, 1889.)

It is rather a peculiar phenomenon that the requirements of a preliminary general education, although first in importance for the success and reputation of a college, are latest in development and least in legal recognition; but there can be no doubt that this must be the most important line of future development of every school and particularly of the pharmaceutical schools. In the State of New York, where the beneficial influence of the Regents is felt in all higher educational branches, efforts have been made, not without success, to establish a stable base and a unit of measure for preliminary requirements and to legally define the word "College." It is worth while to quote in this respect from the Regents' report:

"Admission to a high school presupposes at least eight years of common school or preacademic work and the completion of arithmetic, geography, grammar, reading, spelling and writing on examination. Minimum requirements for each high school year are three prepared and one unprepared academic subject forty-five minutes daily, five days a week, forty weeks a year; the maximum four prepared and one unprepared academic subject as above; less than the minimum cannot be recognized, more than the maximum cannot be accomplished; prepared subjects require preparation outside of recitation periods, unprepared during the period."

"The Court of Appeals and the Regents of the University of the State of New York both refuse to recognize as a college or university an institution which, though taking the name, in reality does work of a lower grade. Colleges of medicine, pharmacy, dentistry, business colleges and all similar professional and technical schools are not recognized as colleges. By college is understood a condition of graduation. Institutions with four years of academic or high school preparation, in addition to the pre-academic or grammar school instruction, and which gives four full years of college instruction as a condition of graduation. Institutions with courses equivalent to three years of college work are sometimes registered when they require four full years of academic preparation, as are other institutions that admit after three years of preparation, but that require a minimum of four years of college work. In all cases the total of high school and college work must not be less than seven years in advance of grammar school studies or the institution cannot be registered as a full college course."

If the requirements, which are now legal in New York, should be extended over the whole United States, it is doubtful if any of our so-called pharmaceutical colleges could be recognized, as such, excepting perhaps one or two schools that form branches of State universities; and yet there is nothing in these requirements that is unfair, unjust or exorbitant. If we consider that a number of our pharmaceutical colleges do not even ask for a common school education, that we can daily meet graduates, and even doctors of pharmacy, who cannot write their own language correctly, we must not wonder that our graduates are not recognized by really professional schools, and that so many pharmacists speak disparagingly of our colleges and their graduates. It can be said, without fear of contradiction, that in no line of business or profession, are the preliminary requirements so low as in pharmacy; we accept young men who have not even

passed through the grammar school, and could not think of filling the position of entry clerk or bookkeeper; we subject them to no preliminary test, and turn them out as accomplished pharmacists. They are expected to read and translate Latin prescriptions without having ever seen a Latin reader or grammar; we instruct them in chemical problems, for the understanding of which advanced branches of mathematics are absolutely needed, when they cannot even figure the dose of a complicated prescription, we tell them that the United States Pharmacopoeia must be their guide, and we know that they cannot read one page of this book intelligently. To them the college is simply a means for an end; they do not study for the sake of learning, but for the sake of passing an examination, and never expect to touch a scientific book afterwards. This system has gone on for a generation, and can we wonder that pharmacy is on the down grade, and loses its character as a profession more and more?

The requirements of the Regents of New York, namely a total of high school and college work of not less than seven years in advance of grammar school studies, is, in the opinion of the writer, the only proper foundation on which the future fruitful development of pharmacy should be based. As, however, the practical side of our profession is fully as important as the theoretical, it seems fair that a part of this work might be supplanted by practical experience, so that two of the seven years spent in an approved pharmacy should be counted as so much study. It matters little whether this practical experience is taken before or after the real college work, as long as it becomes a requirement for final registration. As most public schools graduate their pupils at the age of thirteen or fourteen, the end of this seven years' course would find the young man at the age of about twenty-one, which is the legal minimum age for registration in most states. The seven years may be subdivided in a number of ways, and it may be left to the authorities of each locality how to do this, be they Boards of Regents, Boards of Pharmacy, the Pharmaceutical State Association, or the Legislature. The highest proficiency would be reached by four years of high school, two of practical work and three of college, making nine years together. It is not likely that this ideal standard will be reached for a number of years. The next grade, and one that can certainly be attained, comprising eight years, would be four years of high school work, two of practical work and two of college; or three of high school, two of practical work and three of college work, the latter being the preferable one in the writer's opinion. It is true that most pharmaceutical colleges have only a two years' course; but we all know that three years are by no means too long to exhaust the disposable material. If this eight years' course is still considered too high a standard, a seven years' course may be subdivided into three years of high school work, two of practical work and two of college; or two of high school, two of practical work and three of college. A third subdivision, namely, two of high school, three of practical work and two of college, seems to be the least desirable, considering that nearly all college courses extend over little more than six months, so that if the student takes a position during the summer, as most of them do, a "two years' practical experience" really means a three years' experience.

In recommending any of these courses, which are still below that of medicine, but about equal to that of dentistry or veterinary medicine in the State of New York, the writer is well aware that a sudden change from present conditions to this advanced position is impracticable and impossible. Reform in education must not be brought on by sudden bounds, and a gradual scale rising from year to year should be introduced. One objection that will certainly be raised, and the most sweeping one, will be that with such a standard many small colleges will not be able to exist. To this objection there is but one answer, namely, that they should not exist. It would be far better for our young men, and for pharmacy in general, if such schools, that are colleges only by name, could be eradicated; far from forwarding the cause of pharmacy, they generally only deceive themselves, their students and the public, and their only excuse for existing seems to be the tickled ambition of men of mediocrity. The colleges, however, who earnestly desire the advancement of pharmacy, should make the development on

these lines their issue, and spare no efforts to accomplish this end. Their trustees or managers should see that each occurring vacancy be filled by a man of academic education; their teachers should impress on the students and their pharmaceutical friends the necessity of higher requirements, and instead of losing they will gain prestige and reputation, and pharmacy will then be accepted as a peer among the other professions. It seems to the writer that the teachers of our pharmaceutical colleges have the power to institute such reforms in their own hands, if they earnestly desire to do so. An example is set them in this respect by the larger universities in all parts of the United States, who for a number of years have appointed joint committees of professors and teachers of preparatory schools, for the purpose of evolving a scheme whereby a general university examining board shall be established, whose certificate shall admit to any of the colleges agreeing to the regulations. This board will assign a value to each subject, and the requirement in that subject will be fixed; but there will be such a variety of subjects to select from, as the rules of the particular institution or the fancy of the student may demand. This plan is being matured, and it is hoped that all the details will be decided this spring. There is no reason why a similar joint committee could not be appointed by our pharmaceutical colleges. In the entrance examinations the standard of a three years' high school should be the minimum, but by selecting a large series of subjects and assigning a value to each one, the variations in the requirements of different schools and localities could be met. An aggregate of fifteen counts should be required, assigning three counts each to English and elementary Mathematics. For the other nine counts the students may select from a long list of studies, including: Advanced English, English Composition, Rhetoric, English Literature, American Literature, German, French, Latin, Greek, Advanced Arithmetic, Algebra, Advanced Algebra, Plane Geometry, Solid Geometry, Plane Trigonometry, Spherical Trigonometry, Astronomy, Physics, Chemistry, Physical Geography, Geology, Botany, Zoology, Physiology and Hygiene, General History, English History, United States History, Advanced United States History, State History, Civics, Economics, Stenography, Bookkeeping, Drawing. Each study has a fixed number of counts. The term "count" represents ten weeks' work in one of these studies. Nearly all these studies will again admit of further subdivision, for instance: Latin might be divided into

Cesar's Commentaries.
Cesar's De Bello Gallico.
Sallust's Catiline.
Cicero's Orations.
Virgil's Æneid.
Ovid's Metamorphosis.
Latin Composition, etc.

Or German in the following way:

German Grammar.
German Composition.
Grimm's Mahrcben.
Lessing's Nathan der Weise.
Schiller's Wilhelm Tell.
Paul Heyse's Rabbiatea, etc.

A list of approved high schools, whose certificates would admit without examination, would soon be established, and can easily be obtained from other examination boards; the Regents of New York have registered institutions throughout the world if they offer academic work equivalent to one or more years in a registered high school. Courses in about 6,000 high schools, embracing institutions in almost every civilized country in the world, are registered as meeting wholly or in part the statutory requirements for admission to professional schools, while courses of the 750 institutions in the University are registered on a similar basis.

With such reforms in our colleges other reforms will come as a natural sequence. No apprentice will be accepted without proper education, and no candidate admitted to examination before a Board of Pharmacy unless he is a graduate of a pharmaceutical college. This latter requirement, namely, graduation from a college as a pre-requisite for examination before a Board of Pharmacy, is now agitating the pharmacists in more than one state and gains friends every day; it has also been incorporated in the draft of the "Model Pharmacy Law"

that will come for discussion before us. With these two clauses, namely, high school requisite for our colleges, and college graduation requisite for licensing, the future of pharmacy will become brighter from year to year and the illiterate will soon be extinct.

The salvation of pharmacy as a profession rests on these principles; no other method but higher education can free us from the drawbacks under which we now suffer; we older ones may be compelled to plow along the best we can, but let us give the generation that comes after us a broader foundation, and let us prepare them for a wide scientific understanding before we try to teach them the mastery of technical details.

It was the hope of such a future in pharmacy that filled the breast of one of our greatest teachers, Professor Malsch, who in the last conversation that the writer was privileged to have with him, said:

"The root of all evil in pharmacy lies in the lack of preliminary educational requirements of our apprentices as well as students. Not until American pharmacy will recognize the necessity of high school education for all new comers, can we expect to be called professional men, or free ourselves from the commercial misery that now threatens to overcome us."

THE DIPLOMA REQUIREMENT.

DOES NOT WANT IT.

Beneficial, but not fair. College graduation as a prerequisite to board examination is, in the minds of all interested in the profession of pharmacy, very beneficial, both to the pharmacist himself and to the community. I, for myself, think that a college graduation should be required as a prerequisite to a board examination, but at the same time you must consider that all young men who take up the profession are not able to attend college, for one reason or other. Most colleges require that a student shall have at least three and a half or four years' experience in a retail drug store as a prerequisite to the final college examination, thus we get to understand that not only financial circumstances may prevent a young man from taking a college course, but the work or experience he must get in at the same time he is attending college. It is, as you know, very hard for a young man, who has long hours at the store, to study his lectures, especially those who are not as quick at learning as others. This state of affairs may result in his failure at college, and thus he may be prevented from passing his state board should a college graduation be required by the board. Therefore in this instance it would not be fair. A clerk who has had at least four years' experience in a retail drug store ought to be permitted at all times to take a state board examination regardless of college graduation. It is well known that a college graduate has an advantage over such a candidate, as stated before, but it is also deemed fair that a clerk with the required experience, who has for four years labored hard with both hand and mind, should stand as fair a chance before a state board as a college graduate, therefore I hope that no board shall require that a candidate for registration must be a college graduate.

JOSEPH LAZEAR.

Pittsburg, Pa.

LOST FAITH IN GRADUATES.

I have taken great interest in the discussion going on in your columns relative to the college graduates and the practical pharmacist, and I must say that I would be as much afraid to trust a fresh graduate as I would be to trust a man who had scarcely no experience, and yet I'm a college man. In 1898 the Georgia Board held an examination, and among the many who applied for examination were three pharmacists; two were college graduates and the third was a pharmacist of only three years' experience. The latter passed with a good average, while the two college men scarcely made 40 per cent. After then I lost faith in college graduates.

EDWIN J. TURNER, Ph. G.

Columbus, Ga.

METHODS OF ADVERTISING.

By F. W. E. STEDEM.

In addressing you on this subject the writer will ask your kind indulgence for a few minutes for the purpose of reviewing the subject in a general way. To advertise is a necessity. Business is all done in this day through that means and the man who neglects to advertise will surely fall behind in the race for recognition. I do not mean by this that a man may secure trade by means of advertising only, but, granted that one has stock and does follow modern methods, that one will surely outstrip another having an equally good stock but failing to avail himself of his opportunities to advertise.

Druggists have two sides to this business, and can advertise either or both sides to advantage. That from which the influence of physicians is to be gotten is the department of prescriptions or the business of supplying medicines and supplies to physicians direct. The other relates to the means and methods of attracting the attention of the general public.

I have found through experience that physicians are influenced by about the same conditions and circumstances that affect the run of the people in general. Because of this fact I have always made it my business to call their attention persistently to any new condition or circumstance of trade at the earliest moment possible. It has been my plan for some years to address all the physicians of my acquaintance, or all those within a reasonable distance of the store, in a circular letter about twice a year. In this letter we call their attention to some special feature of the establishment, and end up with a general description of the whole institution. At frequent intervals I send out printed postal cards or a small printed circular enclosed in an envelope and sent through the mail. This is used for some one substance only, that is, only one substance or subject is written about at a time, and these should be sent out weekly, or at least not less than once a month. In the general circular I am always careful to call special attention to the laboratory facilities and invite inspection. I have also found it very profitable to supply physicians with the remedies and surgical dressings they use in their offices. Experience has taught me that we can sell to the doctors just as readily as the larger dealers, and the only requisite is to go after their business. If one succeeds in obtaining the trade of the doctor for materials of his own consumption he will surely stand a much better chance of securing his influence among his patients, and most likely get the trade of all or the greater part of them. Once having gotten the doctor in the habit of trading with you it is quite easy to sell him substances and remedies of your own manufacture.

The other side of our business is the one in which we come in direct contact with the people. Next to a well kept store (and all that that means) the best method of advertising among the people is to send them samples of medicinal or other substance. For some years past it has been my custom to monthly select some article of popular demand and prepare several thousand small packages in suitable containers for distribution. These are put in a neat cheap envelope, each containing (besides the sample of medicine) an exhaustive descriptive circular as to the uses, dose and cost of the remedy. These circulars are always made to answer the purpose of a general advertisement of the store, and particularly the prescription department. The remedy under consideration is recommended to be used instead of some patent medicine, and a statement of comparative cost made. We take anything from Epsom Salts, Comp. Licorice Powder and Cathartic Pills to Castile Soap, Borax, Powdered Alum and Boneseet. One of the most profitable advertisements I ever made was with ground black pepper.

If not out of place I would like to direct the attention of all to the advertising pages of our pharmaceutical journals. I venture to suggest that many of our brothers read the wrong side of the journals most carefully. That is, they waste many hours reading long articles on old subjects by writers of so little knowledge that they do not ever know that the subject is old or has long ago been exhausted, and fall entirely to study the advertising pages. Most of us can learn very much out of the advertisements of the journals, and still more through a close

study of the advertising pages of the daily press. It will pay any one many times over to make careful examination of any idea in advertising that can be adapted to his business or that would appeal to the people of his neighborhood.

AMERICAN CONFERENCE OF PHARMACEUTICAL FACULTIES.

As was reported last week, the representatives of schools and colleges of pharmacy met at Richmond, Va., a few days ago and formed an organization under the above title. The constitution and by-laws setting forth the nature and aims of the newly created body are given below.

CONSTITUTION.

Article 1. This body shall be known as the American Conference of Pharmaceutical Faculties.

Article 2. The object of this Conference shall be to promote the interests of pharmaceutical education.

Article 3. This Conference shall consist of the Pharmaceutical Faculties represented by delegates at the meeting held at Richmond, Va., in May, 1900, and of such other faculties as shall hereafter be elected to membership. Provided, however, that the membership of the faculties represented at the meeting in 1900 shall be subject to ratification at the meeting in 1901 by the same vote as is required for the election of new members.

Article 4. Pharmaceutical Faculties not members may, after recommendation of the Executive Committee, be elected to membership by vote of three-fourths of the members of the Conference.

Article 5. Each faculty shall be entitled to one vote in the proceedings of this Conference, but all the properly accredited delegates of any faculty shall have the right to engage in debate upon any question.

Article 6. Representation from ten of the faculties who are members of the Conference shall be necessary to constitute a quorum.

Article 7. The officers of the Conference shall consist of a president, vice-president and a secretary-treasurer, all of whom shall be elected by ballot, and shall hold their respective offices one year and until their successors are elected and qualified.

Article 8. The Executive Committee shall consist of five legally accredited delegates elected by ballot. At the first election the members of the committee shall be elected to serve for one year and two for two years. At all subsequent elections members of the committee shall be elected to serve for two years. The chairman of the Executive Committee shall be designated by the ballot of the Conference and shall hold office for one year.

Article 9. The Conference shall hold one meeting annually at the same place and coincident with the annual meeting of the American Pharmaceutical Association, the time to be arranged by the Executive Committee of this Conference, after consultation with the Council of the said association.

Article 10. Any proposition to alter or amend this constitution shall be submitted in writing to the chairman of the Executive Committee not later than forty days prior to the annual meeting of the Conference, and a copy of such proposed alteration or amendment shall be mailed by the chairman to each member of the Conference not later than thirty days prior to the said annual meeting. Such alteration or amendment shall, upon receiving a three-fourths vote of the membership become a part of this constitution.

BY-LAWS.

1. The Executive Committee shall make all necessary arrangements for the annual meeting of the Conference, and shall, not later than thirty days prior to the date thereof, mail to each member a written programme of the papers to be presented and of the subjects proposed for discussion at such meeting.

2. The faculties holding membership in this Conference shall pay an initiation fee of \$5 and an annual fee of \$2. No faculty shall be considered to be in good standing or entitled to a vote unless all dues are paid.

3. All disbursements of money shall be upon the written order of the chairman of the Executive Committee, and an itemized account of all receipts and disbursements shall be presented at each annual meeting of the Conference.

4. These by-laws may be altered, added to, or suspended at any regular meeting by a two-thirds vote of the members represented at such meeting.

5. Upon receipt of an application from any faculty to be admitted to membership in the Conference, the Executive Committee shall submit to such faculty a schedule of questions touching the qualifications of the school or college which such faculty represents, and shall in other ways investigate the character and standing of such school or college, and shall report the result of its investigations with recommendations to the next succeeding meeting of the Conference.

6. All proceedings and discussions as to the standing and qualifications of schools and colleges, or to the eligibility of faculties to membership in the Conference, shall be conducted in executive session.

PHYSICIANS AND THE PHARMACOPEIA.

In his address as president at the recent decennial Convention for the Revision of the United States Pharmacopoeia, H. C. Wood, M. D., of Philadelphia, spoke as follows concerning the function and popularity of this work:

"There is a probably widespread, and certainly often spoken of, feeling that the medical profession of the United States does not properly appreciate and support the United States Pharmacopoeia. There is some foundation for this feeling, but certainly it is exaggerated. It is true that, owing to the activity of manufacturing pharmacists, and the number and skill of their commercial salesmen (vendors of samples), aided by the deficiencies of medical education and the peculiar childlike credulity which is so common in doctors, all kinds of proprietary mixtures and proprietary articles, and extra pharmacopoeial remedies are largely used in the United States. It is so easy for the lazy doctor to write for Smith's Panacea for human ills, and so easy for the doctor who knows neither materia medica nor therapeutics to order Jones's Consumption Cure or Thomas's Kamiania, that so long as laziness and incompetence remain with us so long will this thing be done. But this is no fault of the Pharmacopoeia, and no perfection of the Pharmacopoeia will greatly influence it. Certainly any attempt to reduce the products of the Pharmacopoeia to the level of the proprietary or patent medicine would be to destroy the dignity of the work, to bring it into contempt, and finally to uproot its influence. Under the influence of state law and of public opinion the average education of the American medical profession is rapidly and steadily rising; in this and not in anything that this Convention or its committee can do lies the hope of the future. Moreover, the intensity of the feeling that the American medical profession is not so thoroughly interested in the Pharmacopoeia as it ought to be rests largely upon a misconception of the intent of the Pharmacopoeia and its relations to the medical profession. A pharmacopoeia is not intended to be a guide to practice, or a working-book to be used by the doctor, but is really a hand-book of the apothecary. I do not believe that at any time or in any country pharmacopoeias ever had much sale among the medical profession; and each year, as the professions differentiate themselves more and more, as the doctor becomes less and less of a pharmacist, the tendency of the doctors to buy pharmacopoeias must grow less rather than more.

The Pharmacopoeia can only be popularized in the medical profession by making it a treatise on therapeutics; in other words, by causing it to cease to be a pharmacopoeia. So long as it is a pharmacopoeia it is the basis upon which text books and dispensatories are to be written; and it becomes through these treatises a guide to the medical profession. It remains the apothecary's vade mecum, with which in hand he does his work, and its sales must be chiefly among the apothecaries.

There may have been a time when the medical horizon was so narrow that the doctor had time to trouble himself as to how the druggist made laudanum, but at present the doctor has as much as he can do to store his mind with purely medical facts; he wants simply to know what laudanum does when he puts it into the patient, and he trusts the apothecary to give him laudanum when he calls for it.

TO REPAIR ENAMEL SIGN LETTERS the N. Erfind. u. Erfahr. gives the following directions: Reduce to a fine powder 5 parts each of copal and dammar resin, mix with 4 parts each of Venetian turpentine and alcohol to form a thick paste and add 6 parts of white oxide of zinc in very fine powder. By further addition of a very little ultramarine or Prussian blue the cement may be rendered perfectly white. This mass is then warmed to expel the alcohol and fused. It is applied while in the fused state. After cooling the surface is polished. (Drog. Ztg.)

COMPOUND POWDER OF QUININE TANNATE.—Quinine tannate, 5 parts; sodium bicarbonate, 30 parts; sugar, in moderately fine powder, 30 parts. (Apoth. Ztg.)

SODA WATER FORMULAS.

Selected from Recent Contributions to Various
Pharmaceutical Journals.

CHOCOLATE MINT SYRUP.

Peppermint cordial	3 drams
Plantain syrup	4 ounces
Chocolate syrup	12 ounces
Mix. Trim with fresh mint.	

KOLA MALT SYRUP.

Extract of malt	6 ounces
Fluid extract of kola	2 drams
Extract of vanilla	2 drams
Pineapple juice	½ ounce
Fruit acid	2 pints
Lemon syrup, enough to make	2 pints

This syrup may be served still or foamed, with or without phosphate, using an 8 or 12-ounce glass, according to the method selected.

FLORIDA FRUIT PUNCH.

Raspberry syrup	8 ounces
Sherry wine	8 ounces
Orange syrup	6 ounces
Lemon syrup	3 ounces
Claret	8 ounces
Grape juice	8 ounces
Simple syrup, enough to make	1 gallon

Color wine red, place in punch bowl and add three lemons and 3 oranges, and one pineapple, each cut in cubes. Serve in 12-oz. glass two-thirds full of ice, using 1½ ounces of the syrup, and serve still.

MAY WINE ESSENCE.

Cumarin	1 grain
Tannic acid	50 grains
Oil bitter orange	5 minims
Oil sweet orange	5 minims
Alcohol (68 per cent.)	2 fl. ounces

ORANGE PEPSIN.

Scale pepsin	20 grains
Caracao cordial	3 fl. ounces
Syrupy phosphoric acid	4 fl. drams
Orange syrup	15 fl. ounces
Trim with sliced orange.	

CINNAMON.

Oil of cinnamon	30 minims
Magnesium carbonate	1 dram
Water	2 pints
Sugar	56 ounces

Rub the oil with the carbonate; then gradually add the water, continuing the trituration; filter through paper, and in the filtrate dissolve the sugar without heat.

ORANGE FERRONE.

Orange syrup (from fruit)	2 pints
Raspberry syrup	1 pint
Vanilla syrup	8 ounces
Elixir phosphate of iron	6 ounces
Elixir gentian	8 ounces

Mix. Serve plain, using two ounces to a twelve-ounce glass.

MAY BIRD.

Blood orange syrup	½ ounce
Catawba syrup	½ ounce
Pineapple syrup	½ ounce
Lemon juice	1 dram

Serve "solid" in an eight-ounce glass with carbonated water.

FROZEN CREAM.

Banana syrup	2 ounces
Cream	8 ounces
Shaved ice	½ glassful

Shake well; strain into a large soda glass, add a few pieces of banana, fill glass with fine stream. Serve with spoon and straws.

COFFEE HOTCHE.

Extract coffee	½ ounce
Powdered sugar	1 tablespoonful
Shaved or cracked ice	½ glassful

Milk to fill glass; shake well, strain and top with whipped cream.

SHAMROCK SYRUP.

Essence of bitter almond (1 to 32)	½ dram
Oil of cognac	2 drops
Extract of vanilla	2 drams
Compound tincture of cardamom	2 drams
Sweet cider	10 ounces
White sugar	14 ounces
Foam	3 drams

Mix. Trim with large sweet grapes.

MARSHMALLOW SYRUP.

Rock candy syrup	7 pints
Powdered gum arabic	10 drams
Orange flower water	4 ounces
Citric acid	4 drams
Water, enough to make	1 gallon

THE DRUGGIST AS AN ADVISER.*

By H. H. ROGERS, M. D., Ph. D.

When Mrs. Jones enters the drug store on a busy morning in a hurry to be waited on and, while buying stamps, wants to know whether it would be better to send her package by mail or express, and then inquires what is best to do for a child with the measles and whooping cough, and concludes to get along with five cents' worth of saffron, the druggist may feel convinced that "advice is cheap." Yet the New York lawyer, William Everts, once received a fee of \$50,000 for telegraphing "Yes" in reply to an inquiry which he had received a few hours before. So the druggist must not conclude that advice is always and everywhere cheap. Perhaps the aphorism means that much of the advice offered is not only obtainable for a small price, but that it is cheap in the sense of being inferior. And if this particular advice of his was really valuable, perhaps a reason may be found why it was not appreciated.

The fact is nothing else marketable is so dear or has such intrinsic worth as good advice. But, as with all other commodities, it takes two to make a bargain. There must be the person who can deliver the goods—who is able to tender really good advice—and the person able and wanting to buy. As for the latter, he is everywhere in evidence. A community of persons is so many interrogation points constantly asking how they shall accomplish this and how they shall avoid that. Let them once come to believe that someone in their midst can reliably answer some of their queries and he will not be wanting patronage.

Now it is true that from the olden time, when the apothecary dried and ground roots and herbs and was his own manufacturing pharmacist, down to the present day the man with the mortar and pestle has been looked upon as having some peculiar knowledge and skill. If some of this glory had not continued to surround him he would ere this have been swept out of existence. For in these days it has been shown that medicines and sundries (an indiscriminate mixture of good and bad) can be sold by automatons known as department-store clerks cheaper than he has sold his more carefully selected stock; and that prescriptions can be compounded from untested drugs at half price by a legally qualified person who is willing to act merely as a skilled laborer. And one of the chief things which, in the face of these conditions, has kept the druggist from being deserted is the fact that many still place much value upon his intelligent suggestions.

Only upon such a basis as this may the druggist expect to survive. Either he must become purely commercial, buying and selling his numerous lines of goods—including medicines—in the same competitive manner that dry goods and groceries are sold, or he must carefully encourage the belief that he deals in something more than material things. And among the latter nothing can take precedence of good advice.

The druggists of any community may be classed among its more intelligent citizens. With exceptions to prove the rule, they are reading, observing, thoughtful persons. Though often kept close to their business by its peculiar duties, their horizon is not limited by the walls of the store. They have a general knowledge of the great questions of the day, and specific knowledge of the conditions and needs of their own state, county and city. With the exception of those in political life, whose business it is to study the matter, they probably know more nearly what public sentiment is on any question than do any other class of persons. These facts about druggists are not unknown to the people. Hence many of them are called upon to take an active part in social, scientific and civic duties, and not a few occupy places of trust and responsibility.

Properly directed, such activity is in every way consistent with the special duties of a druggist and affords him an opportunity to gain respect for his judgment and advice. By being one's self and not acting a part, and by a widening personal acquaintance, one comes to find places in the busy life around him into which he will fit better than anyone else. For such places he will be wanted. The nature of these places will, of course, depend

*Reprinted from Western Druggist.

upon what manner of a man he is. This one will often be called upon to plan for and assist in social entertainments; another will be wanted most in municipal affairs—as a member of the city council, the board of health or the board of education. Making no false pretense to interest in or knowledge of things, let no man refuse to respond to such of these calls as may come to him. Hesitancy from lack of experience, from not having time, from fear of not pleasing everybody is a mistake. One may enter on such duties—coming naturally, as has been suggested, from his fitness for them—with the satisfying feeling that he is rounding out his life to its fuller development and at the same time favoring his personal advancement.

No one would urge that druggists should systematically set about to build up their business by striving for social and political prominence. But it is well to have in mind the fact that these things may very likely come to the man who is worthy of them, and to be prepared in a degree to take the right attitude. The druggist's business remains at the drug store. Remembering that, he may, indeed, he most certainly should, enjoy some of the pleasures of society, and should be ready to do his duty as a citizen.

It requires no intricate line of reasoning for people to conclude that if Mr. A. is so worthy a man in his various relations as a citizen, they may be able to get the benefit of these qualifications when they approach him for advice at his place of business. They are not ignorant of the fact that many men have a standard of commercial morality which falls pitifully below the standard they maintain in all their other actions. They are well aware that it is all too common for men who, when away from business, faithfully practice the golden rule and even on solemn occasions announce their devotion to it, to somehow drive the hardest bargains possible for those who wish to remain clean among law-abiding citizens.

But it is just at this point that a nice distinction may be made. Reference has been made to advice of a nature which is not commercial but is semi, if not wholly, professional. And Mr. A's customer instinctively makes the distinction. Her faith in him (whose honorable outside relations she is acquainted with) asserts itself more readily when she talks with him about the value of a home recipe which a neighbor has given her for her child's fever than it would if she were asking if a certain fabric were all wool. She believes that in so important and serious a matter the conscience will not so readily take on a commercial distortion. And she is right. The fact that some druggists would give advice based upon purely selfish dishonesty proves no more than does the fact that some doctors and some lawyers do the same thing.

And thus, while the various outside relations will not draw customers to the bargain counter, they may be made to help in real pharmaceutical success. They may not give much direct aid in getting a man's trade-mark goods on the market, but they will surely help in getting the man on the market—in a good sense. When a man puts a price on his morality, he is guilty of a base and a disgusting crime; when he puts a price on his knowledge and advice (however such phraseology might sound in the codes of ethics), he is dealing in such wares as are handed in the most honorable avocations, and these are wares that need no trade mark. The protection costs nothing and is absolute. One can afford to work hard and wait long to get such a line on the market.

Who better than a druggist can give advice about doctors? An inquiry of this kind puts him in a delicate position, but with tact he can, without any indiscretion, send the inquirer away feeling that his question has been politely answered. Where several doctors are under consideration the druggist will almost always avoid naming one as the best. And this will be for the sake of justice as well as for policy. For while the druggist may know the doctor as a therapist, or, more definitely, as a prescription writer, he may not know as much as many others do about his being a good diagnostician, about his care in details at the bedside, and about personal interest in his patients. So he will be able in nearly every case to satisfy by stating facts about age, school of practice, college from which graduated, former field of practice, length of residence in the place where he now is, willing-

ness to answer night calls and to take all kinds of practice, etc.

This, of course, assumes that the druggist has no special business relations with any doctor. It does not assume that such relations may not honorably exist. But if they do, the druggist is in no better position to give advice than is one of the doctors themselves.

More positive reserve is called for when a customer expects the opinion of a druggist on a prescription that has just been written for him. Without brusqueness the customer may be reminded that the prescription has been written to meet certain conditions which the doctor alone may know about. He may perhaps add that the prescription contains good remedies.

If local custom and the wish of the doctor are not against reilling prescriptions for the original patient or for his friends this frequently may call for careful advice. Even with the general sanction of the doctor the druggist must not expect to escape blame for catering to a habit-forming taste. In such cases and in disreputable practice his advice may have to take on a firmness that will not directly increase his cash receipts. But, in general, his explanations and suggestions about prescriptions will be kindly received and increase his number of loyal business friends.

Advice along other lines than those already considered may bring more immediate returns. For while the druggist may not expect to charge a separate fee for advice he will, if properly prepared with information and with remedies, be able and ready to give advice that will be best for the customer and also for himself. This brings us to the much discussed question of "counter prescribing." The mere fact that it has been so much discussed proves that there has been a demand for it on the part of the people. There are innumerable cases of emergencies and of slight ailments where people cannot or will not consult a doctor. If there were no druggist to consult they would consult a neighbor or do the best they could alone.

For the druggist the question of legality scarcely arises. It is rather a question of common sense and common honesty. It is rare, unless the druggist has wrongfully encouraged it, for the customer to expect the former to diagnose his case. Right or wrong, the customer is usually quite ready to tell what is the matter and often to indicate in a general way the nature of the remedy wanted. It is quite easy for the druggist to refrain from doing duty as a diagnostician. It is not always so easy for him to decide how far he shall give sanction to the common practice of self-diagnosis. He knows that this is not simply a matter of nice propriety between his profession and that of the physician's. He realizes that it may be a matter of most serious import to the customer. He does not forget that a slight cough, for which he is so often consulted, may be one of the simplest of ailments or may be an early symptom of one of the most serious of maladies. In doubtful cases the druggist can well afford to err on the side that will be safe for his customer. Here as much as anywhere "honesty is the best policy." By putting him or his friends on guard he may secure their constant confidence upon which it would be difficult to place a value.

With careful observation his judgment will become superior and he can exercise it wisely without infringing on the field of technical diagnosis. He should not fail to recognize the value of his own advice in regard to a cough medicine, a laxative or a physic, a relief for sick headache, a lotion for ivy poisoning, and so on. In response to a call for a good physic he at once offers a box of some much-advertised proprietary pills he is both a poor business man and a poor pharmacist. If he knows the difference between a "bilious attack" and chronic constipation and the different actions of magnesium sulphate and cascara sagrada—all of which he should know—he will be able to do that customer a real service and at the same time serve himself. If the call is for "Brown's Indian Daylight Devils" the question is somewhat modified. But it is a new and strange standard of conduct that would say that the druggist is bound in each case to agree with the customer that the particular pill called for is the best among the hundred kinds which he sells. And it is equally strange to assume that if he has something else "just as good," he is guilty of dishonor-

able conduct if he says so. Such standards come only from pure self interest.

It seems necessary to carry quite a full line of "patent medicines," and it often proves convenient and advantageous to carry a line of one's own remedies neatly wrapped and labelled. But whether one of these is sold or something is prepared for the occasion it should be the druggist's constant aim to have his personal advice enter into as many transactions as possible.

A less difficult task is to become an accepted adviser in other lines than medicines. About such accessories of the sickroom as water-bags, syringes, thermometers, bed-pans, breast-pumps, etc., the druggist should be the best informed man in the community. If he will study them carefully and call the attention of physicians to new patterns as they come out he will find that his knowledge is appreciated by them and by their patients.

Physicians usually give but little attention to things used in the care of the teeth, the skin and the hair. And druggists usually know less about them than they should. Let them study these things from a scientific standpoint and feel secure of their practical knowledge as resting on a proper basis and they may expect to have their advice better appreciated. To fully appreciate what constitutes a good tooth brush one should understand the structure and arrangement of the teeth, the causes of decay, the exact purpose for which a brush is used and how and when to use it. With this knowledge he would be prepared to consider the shape of a brush, the style of trimming and setting the bristles, etc.

Who shall say that accurate knowledge about this and kindred subjects is not in great demand? Decaying teeth, roughened skin and bald heads are not pleasant things for their owners. And about a large part of the remaining drug stock the public is very ignorant and would be attracted to a chance to gain information. Among such are the various drugs used as antiseptics, deodorizers, cleaners and insecticides; also the brushes, combs, sponges and chamois skins.

It is true that in the busy routine of the day there is no time to give a private lesson to each customer. But if the druggist takes a genuine interest in these things he will have endless opportunity to communicate that interest by a few well-timed remarks about such articles as he is selling. Thus the customer comes to feel that he is dealing with a person who understands and takes an interest in his business.

And so the best part of the drug business becomes a personal matter. The proprietor will not meet every customer, but he will be accessible within reasonable hours; and his aim will be not to build a trade that shall employ a host of cheap clerks who shall dispose of a vast number of five cent articles, but rather to create a demand for goods of such character and quality that his personal judgment and advice shall be an essential part of the business.

INK AS REMEDY.—Some ten years ago Unna introduced ink, consisting of tannate of iron, as a remedy in the treatment of skin diseases. Recently Dr. Leistikow (Pharm. Centralh.) again recommended solutions of tannate of iron, after a study of its effects under various conditions. It is directed to prepare the ink freely when wanted by mixing a 3 to 10 per cent. solution of tannin with a 2 to 5 per cent. solution of ferrous sulphate. This mixture is employed in form of local baths for inflammations and other skin affections. (Drog. Ztg.)

CALOMEL SOFT SOAP.—Solution of caustic potash (10 per cent.), 50 parts, caustic soda solution (10 per cent.), 100 parts and expressed oil of almond 300 parts are saponified with addition of 30 parts of alcohol. To 100 parts of the resulting soap 20 parts of oil of almond and 50 parts of calomel are added. (Apoth. Ztg.)

DRY DEPLILATORY.—Barium sulphide, 10 parts; zinc oxide, 5 parts, and wheat starch, 5 parts, are mixed and reduced to a very fine powder. For use the powder is formed into a thick paste with water. The application is allowed to remain on the skin for ten minutes. (Pharm. Post.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Loeffer's Solution.—(H. L. V.) See this journal, January 11, 1900, Page 35.

Remedies for Freckles.—(H. H.) See this journal, August 24, last year, page 272.

Bitterless Solution of Epsom Salt.—(J. B.) See this journal, March 22, 1900, page 315.

Frosting Electric Light Globes.—(W. F. B.) See reply to a similar query in another column.

"Liquid Pica."—(K. & B.) See formula under "hiera pica," this journal, February 22, 1900, page 204.

Essence of Pepsin and Essence of Pancreas.—(E. F. A.) See issues of July 6 and August 3, 1899, pages 18 and 178 respectively.

Artificial Butterflies for Decorative Purposes.—(A. E. G.) Address any of the following importers: Sullivan, Drew & Co., 600 Broadway; George Legg, 701-709 Broadway; Louis Metzger Co., 657 Broadway, all of this city.

Swedish Elixir.—("Elixir.") We know of no formula for a solid extract under this title. The name "Swedish Elixir" was formerly applied to "elixir ad longam vitam," a preparation also known under about a dozen other titles. Hager gives the following formula: Aloes, 100 parts; rhubarb, gentian, zedoary, galangal, myrrh, and saffron, each 10 parts; cutsize the whole to a coarse powder; add theriac, 20 parts; sugar, 100 parts, and diluted alcohol, 2,000 parts; macerate for three days with occasional agitation; then express and filter.

Cleaning Wall Paper.—(H. G. B., Jr.) The following has been recommended: Mix together 1 pound each of rye flour and white flour into a dough, which is partially cooked and the crust removed. To this 1 ounce of common salt and $\frac{1}{2}$ ounce of powdered naphthalin are added and finally 1 ounce of corn meal and $\frac{1}{2}$ ounce of burnt umber. The composition is formed into a mass of the proper size to be grasped in the hand. In use it should be drawn in one direction over the surface to be cleaned. Some additional information on this subject may be found in this journal, October 12, 1899, page 506.

Fowler's Pile and Humour Cure.—(M. C. S.) We cannot give the formula for this proprietary preparation. We do give, however, some formulas recommended by various medical authorities in the treatment of piles (hemorrhoids), the first by Bartholow, containing stillingia and possessing alterative properties; Fluid extract of stillingia, 5 fluid drams; tincture belladonna, tincture of nux vomica, tincture of physostigma, of each, 1 fluid dram. Mix. Twenty drops in water 3 times a day before meals.

Compound Pile Ointment: (1) Melt one pound of white wax and $2\frac{1}{2}$ pounds of white petrolatum, then add 1 ounce powdered opium, 1 dram powdered hydrastine sulphate and 1 ounce powdered catechu; stir well and mix thoroughly. (2) Tannin, 2 drams; bismuth subnitrate, $2\frac{1}{2}$ ounces; extract of opium, aqueous, 2 drams; petrolatum, 12 ounces. (3) Powdered nutgall, $2\frac{1}{2}$ drams; powdered lead acetate, $2\frac{1}{2}$ drams; extract of belladonna, 4 grains; camphor ointment, 1 ounce; petrolatum, 1 ounce.

Marble Bleach.—(A. E. P.) Make into a paste with water 2 parts of sodium bicarbonate and 1 part of chlorinated lime. Apply and polish the marble with the mixture, then wash off with water and dry rapidly. Grease spots on marble may be removed by covering them with a mass made of ordinary white clay and benzine and removing the mixture after drying. If the spots be of old standing they are removed only with difficulty, since the fatty acids penetrate deeply into the marble. Some practical suggestions regarding the care of marble around soda fountains may be found in this journal, April 27, last year, page 538.

Oil of Patchouli.—(G. A. S.) This oil is distilled from the leaves of *Pogostemon patchouli*, a plant indigenous to the East Indies and other Oriental countries. It is described as a thickly fluid oil of a brownish-yellow color, and possessing a disagreeable, almost musty odor; sp. gr., 0.955; melting point, 257° C. It is used in perfumery mainly for its property of conferring upon other odors lasting qualities. Its odor is always perceptible, however, and it should be used in very small quantities or much diluted. According to Sawyer ("Odeorographia") commercial oil of patchouli is often adulterated to the extent of 60 per cent. with cheaper oils, generally those of cedar and cubeb.

Tasteless Castor Oil.—(Subscriber). Tasteless or sweetened castor oil is prepared by thoroughly washing the oil with hot water and incorporating sufficient (1 to 1/2 per cent.) saccharine to impart a sweet taste. The oil is then flavored by adding small quantities of oil of cinnamon and extract of vanilla or other suitable flavoring substances.

Castor oil may be satisfactorily administered in the form of an emulsion, the following formula having been recommended: Rub up the yolk of one egg in a mortar and add by degrees 1 ounce of castor oil; if occasionally too thick thin with a little water. Then add 2 fluid drams of syrup, 1 fluid dram of tincture of orange and finally enough water to make 3 fluid ounces.

Malaria Cure.—(H. R.) Try one of the following: (1) Fluid extract of cinchona, 6 fl. ounces; aromatic sulphuric acid, 2 fl. ounces; tincture of ginger, 3 fl. ounces; fluid extract of cloves, 1 fl. ounce; fluid extract of rhubarb, 1/2 fl. ounce; fluid extract of cinnamon, 4 fl. drams; fluid extract of mandrake, 1 fl. dram; alcohol, 16 fl. ounces; simple syrup, enough to make 64 fl. ounces. (2) Quinine sulphate, 128 grains; cinchonidine sulphate, 128 grains; aromatic sulphuric acid, q. s. to dissolve. Then add alcohol, 2 fl. ounces; oil of wintergreen, 10 minims; fluid extract of sarsaparilla compound, 2 fl. ounces; water, 5 fl. ounces; let stand over night and filter. Dissolve by agitation in the filtrate, sugar, 14 ounces, and add simple syrup to make 16 fl. ounces.

Elixir of Lactated Pepsin.—(O. L. H.) The National Formulary affords a formula for a preparation containing pepsin with lactic acid. See that work, page 22 (Compound Digestive Elixir). Here is another: Mix 80 grains pure pepsin, 40 grains pancreatin, 10 grains diastase or ptyalin, 180 grains powdered cubeb, 20 minims dilute hydrochloric acid, 3 drops lactic acid, 3 ounces alcohol and 7 ounces water. Macerate for three days, agitating frequently; filter; to the filtrate add 6 ounces of syrup, and then through the filter enough of a mixture of alcohol and water, in the proportion of 5 to 7 by measure, to make the liquid measure 16 fluid ounces. Formulas for a number of combinations with elixir of lactated pepsin are given in this journal, August 4, 1898, page 150.

Bismuth Subnitrate and Sodium Bicarbonate.—(W. E. B.) asks what can be used as an excipient for making pills composed of bismuth subnitrate and sodium bicarbonate. A satisfactory pill containing these salts cannot be made with any excipient. Bismuth subnitrate reacts with sodium bicarbonate with the liberation of carbonic acid gas, thus:

This action requires several hours for completion and causes the mass to swell to several times its original

size, thereby preventing its formation into pills until all effervescence has ceased. This difficulty would have been obviated had the prescriber employed bismuth subcarbonate instead of bismuth subnitrate. Such a change should not be made without the consent of the prescriber, who should be seen and the difficulty explained to him.

Deodorizing Oil of Bay.—(P. I. M.) There is no practical method of deodorizing oil of bay. Its odor may be somewhat masked by judicious combination with essential oils or other odoriferous substances, but it cannot be entirely removed. If you want a hair wash containing borax, alcohol and water and no oil of bay, try one of the following from the Era Formulary:

(1) Dissolve 1 ounce of borax in 2 quarts of rose water and add 1 quart of glycerin; dissolve 2 drams of petit grain, 2 drams oil of cloves and 4 drams oil of rosemary in 4 ounces of alcohol and add to the solution of borax. The resulting solution should be clear and may be filtered through talcum if necessary. Color yellow, if desired, with tincture of saffron. (2) Mix 2 drams spirit of camphor, 1 ounce spirit of rosemary and 3 drams aromatic spirit of ammonia with 1 ounce glycerite of borax, previously dissolved in 4 ounces distilled water, filter through a wetted filter paper, sprinkled with carbonate of magnesia. Add enough of water through the filter to make the mixture measure 8 fluid ounces. This preparation may be colored if desired.

Liquid Size for Gilding.—(E. E. G.) The following is said to be very good: Bring to a boil in a metal vessel 3 parts of linseed oil, adding to the boiling liquid 1 part of gum anime, little by little, with constant stirring. When needed for use the size is thinned with oil of turpentine.

Another formula particularly recommended for gold bronzing is this one: Dissolve 1 part gum dammar in 4 parts benzol (not benzine). To the solution add 1 part of normal sodium hydrate solution (1 part to 10 of water) and agitate for ten minutes. Let the mixture stand and in a short time it will separate into two layers, that on top being the benzol solution freed of most of its acids, and that below being a watery solution of the acids combined with the sodium. Draw off the benzol solution and again agitate it with a fresh portion of the soda lye, and on standing it will be found to have separated into two clear layers as before. Draw off the upper layer and preserve in small, close-stoppered bottles for use. Purified oil of turpentine may be used instead of benzol, but the latter dries more quickly and gives generally better results.

Gin and Buchu for the Kidneys.—(Carolina.) Try the following: (1) Fluid extract of buchu, 2 fl. ounces; fluid extract of uva ursi, 1 1/2 fl. ounces; fluid extract of juniper berries, 4 fl. drams; potassium acetate, 1 1/2 ounces; gin or compound spirit of juniper, 2 fl. ounces; syrup, 1 fl. ounce, and simple elixir to make 16 fl. ounces. Mix, allow to stand for 24 hours and filter through purified talcum. (2) Fluid extract of buchu, 1 1/2 fl. ounces; fluid extract of juniper berries, 1/2 fl. ounce; potassium acetate, 192 grains; alcohol, 1 ounce; simple syrup, 1 ounce; simple elixir, 12 fl. ounces. Mix; allow to stand 24 hours and filter through talcum. Each fluid dram contains 1 1/2 grains of potassium acetate and represents about 3 1/2 grains of buchu and 2 grains of juniper berries.

Gin Cordial.—An old-time preparation under this name, but which contains no buchu, consists of a solution of 1 dram oil of almonds, 2 drams each oils of cassia, nutmeg and lemons, 3 drams each oils of juniper, caraway and coriander, and 3 or 4 ounces essence of orris root in alcohol, 1 quart added to 90 gallons of good gin. To the mixture is then added 55 or 60 pounds of sugar dissolved in 3 or 4 gallons of water and 1 1/2 pints orange flower water. This "cordial" is seldom used as a medicine, although it possesses diuretic properties.

Imitation Ground Glass.—(C. F. E.) In further reply to your query regarding a process for making lamp chimneys opaque so as to resemble ground glass, this journal, May 3, 1900, page 474, a Philadelphia correspondent writes that you may be able to accomplish

the desired results without having recourse to the troublesome and dangerous process involving the use of hydrofluoric acid, by experimenting with the following formula, which has been used with success for electric light globes, and would doubtless answer satisfactorily in your case: Dissolve 3 grams of pyroxylin and 5 grams of Canada turpentine in 75 C.c. of acetone, and dissolve 1 gram of boric acid in 15 C.c. of alcohol; mix the solutions and add alcohol to make the quantity up to 100 C.c. This is practically a collodion varnish made with acetone instead of ether on account of the cheapness of the former. A sufficient quantity may be made to allow the article which is to be frosted to be dipped therein, or by careful manipulation the varnish may be applied by pouring a sufficient amount on the chimney and flowing it evenly over the surface by tilting it at different angles. This coating when dry is rubbed off easily, but after heating a few times the boric acid forms an insoluble compound, which is so hard as to resist scratching with the finger nail, and may be washed without danger of damage.

Two "Blind" Prescriptions.—(H. G. M.) In farther reply to your query, this journal, May 3, 1900, page 475, a number of correspondents write that the names of the first and fourth ingredients ("fld. ext. *Liriosmæ ovata*," and "fld. ext. *tumarae aph.*") of the second prescription are undoubtedly intended for fluid extracts of "muirapuama" and "damiana." The former, claimed to possess "aphrodisiac and nerve stimulant properties," is obtained from muirapuama, a Brazilian plant. This drug is said to have been introduced to the medical profession in the year 1897 or before by Parke, Davis & Co., who list a fluid extract of muirapuama, and also give the botanical name "*Liriosma ovata*, Miers" (see *Era Blue Book*, page 306). The United States Dispensary, last edition, gives this information concerning "muirapuama": "the wood of a Brazilian tree of unknown botanical affinity, which is said to be an extraordinarily powerful aphrodisiac, and to contain an alkaloid." "Fld. ext. *Tumariae Aph.*" is evidently a misprint "for fluid extract of '*Turnera aphrodisiaca*' and this supposition is strengthened by a consideration of the general character of the prescription. One correspondent in commenting upon these prescriptions states that "there are some physicians who have the habit of writing 'Ext.' and 'Fl. Ext.' in botanical names; they want to show what they don't know." The prescription as it was probably originally written and translation are appended:

B	Fld. Ext. <i>Liriosmæ Ovata</i>	3i.
"	" " <i>Sabal Serretu</i> , aa.....	3i.
"	" " <i>Avenae Sativ</i>	3i.
"	" " <i>Tumarae Aph</i>	3i.
"	" " <i>Scrop</i> , <i>Maril</i> , aa.....	3iv.
	Aquæ (Dist.) q. s. ft.....	3iv.
M. Sig.	Thirty drops before meals.	

M. L. Stehley, M. D.

Translation.

Fluid extract of muirapuama.....	
Fluid extract of saw palmetto, of each.....	1 ounce
Fluid extract of oats.....	
Fluid extract of damiana.....	
Fluid extract of figwort, of each.....	½ ounce
Distilled water, enough to make.....	4 ounces

In discussing the character of these "blind" prescriptions another correspondent writes: "We have often had these prescriptions to deal with. We do not put them up and invariably tell our customer why we do not do so, not necessarily exposing the M. D. We give the customer a gentle hint, however. We were once foolish enough to put up a similar prescription containing 100 pills, and our customer later swore at us for not being right, as he had sent a few of the pills to the doctor who pronounced them worthless and not what the prescription called for. Since that time we have learned our lesson."

Crushed Fruits.—(J. and L.) Strawberry: Remove the calyxes from three small boxes of strawberries, wash with running water, mix with 4 pounds granulated sugar, either leaving the fruit whole or breaking it by trituration, add 2 pints of water, bring the whole to a boil and boil for five minutes, stirring constantly. The boiling may be omitted, the fruit being crushed and stirred into the solution of sugar in water.

This procedure will suffice for most fruits, pineapple

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

We wish to repeat again that all inquiries concerning questions on the lectures should be addressed, not to this office, but to the Director, Prof. J. H. Beal, Scio, Ohio. The distribution of these questions is entirely in his hands, and he will see that they are forwarded promptly to students just as soon as they should have them.

Students are requested to examine very carefully all mail they receive from the Director, as several important announcements are to be made regarding examinations, prizes, etc. Do not throw away the circulars with casual reading only, but give them careful attention.

Are there any more students who wish to secure the *Era Course in Pharmacy*? We have but a few of these left, and will not give an additional order for them, so those who want them should apply at once. The pin is of handsome design in gold and colored enamels, in three styles—safety pin, stick pin, or button—and is furnished at the price of \$2, which is barely sufficient to cover the cost. Students should send in orders at once, otherwise they run the risk of being disappointed.

Read this Bulletin Every Week.

being an exception. The latter should be pared, washed and grated, mixed with syrup and brought to a boil—not boiled.

One of the following formulas may also be employed ("*Manual of Beverages*"): Raspberry or Strawberry—Take a quantity of thoroughly ripe fruit; rub or press it to a pulp through a hair sieve into an earthen or stoneware pan; add 4 ounces of sugar for each pound of fruit, mix thoroughly, put into bottles, heat, bring to boiling, and boil for a few minutes.

Peach.—Select ripe, freestone peaches, wash and slice them up, skin and all; add a little water; place on the fire and stir constantly until reduced to a pulp; rub and press this through a coarse hair sieve into an earthen or stoneware pan, and add 4 av. ounces of sugar for each pound of fruit, and complete as in the foregoing.

Pineapple is to be prepared by peeling and grating, adding sugar and heating as before.

Some of the fruits may be prepared similar to the following: Cranberries, 2 pints; water, 2½ pints; sugar, 2 av. pounds; solution of citric acid, ½ fl. ounce; soda foam, about 1 fl. ounce. Wash the fruit, place in a pan or kettle, add the water, apply heat, allow to boil for 5 minutes, stirring frequently; add the sugar, dissolve, add the solution and soda foam, and finally enough solution of salicylic acid to preserve.

Concentrated Syrups.—The fruits may be converted directly into concentrated syrups. One method consists in mashing or crushing the fruit, allowing it to ferment at a temperature of from 15 to 20° C. until bright, or until a small filtered portion mixes clear with a half volume of alcohol. Then strain and express. For every pint of juice add 1½ pounds of sugar. Apply gentle heat until the latter is dissolved, stirring constantly meanwhile; then bring the whole up to a thick boil, without stirring, skim off the coagulated matter, if necessary; strain quickly, fill at once into stout bottles (preferably champagne bottles) which have previously been heated in a water bath or else rinsed with alcohol; cork quickly, tie over with a stout wire, seal, when cool, with sealing wax, and store the bottles in a cool place on their sides. This concentrated syrup may be diluted, when wanted for use, with water and syrup, and mixed with solution of citric acid and soda foam in the usual manner.

COMPOUND CAPSICUM LINIMENT.—Tincture of capsicum (prepared with 1 part capsicum and 3 parts alcohol), 52½ parts; soap, 3 parts; camphor, 30 parts; oil of rosemary, 10 parts; oil of lavender, 10 parts; oil of thyme, 10 parts; oil of cloves, 10 parts; oil of cinnamon, 2 parts, and ammonia water, 100 parts. (Pharm. Post).

PLANNED IN ADVANCE

That is the way all advertising should be planned. Waiting until the last minute, until the printer calls for "copy" almost always finds the druggist unprepared to "speak his advertising piece."

SAMPLE ADVERTISEMENTS

FOR DRUGGISTS

is a help in such emergencies. It contains 180 sample advertisements—all of them about drug store goods, and it furnishes suggestions as to what to say or advertisements ready for the printer, just as the druggist may choose when he is in a hurry.

It is practically the druggist's advertising planned a year or two in advance.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

South Africa.

The Transvaal authorities permitted the New York Sun's Pretoria correspondent to send a dispatch last Saturday saying that the Boers are discouraged by their recent reverses, and are likely to sue for peace soon. Last Friday London received news that Mafeking had been relieved, after an heroic defense of seven months. The wildest enthusiasm reigned for hours in the London streets after the news came.

The Boers are reported to have retired entirely from Natal.

The Boer envoys in this country are receiving many expressions of sympathy, but there seems to be no likelihood that they will receive any practical assistance.

Michael Davitt, the Irish agitator, is said to have advised the Boers, while he was in Pretoria, that if they could hold out until the Presidential election in the United States they might feel "pretty sure of intervention."

At Johannesburg the Boer women are forming a police corps, so as to release every man for fighting purposes at the front.

Cecil Rhodes has decided to retire altogether from Cape Colony politics.

Lord Roberts telegraphs in reply to a question as to when the war will end by saying: "I regret that I cannot give any reply to your question, as it is impossible at present to predict when the campaign may end."

The New York Herald prints a report that the Boer peace envoys in this country are empowered to ask our government to assume a protectorate over the two republics, with a view to ultimate annexation. It has been suggested that the Boers, in case their country is seized by England, might emigrate to the United States.

At the British hospitals in Blomfontein, the deaths from enteric fever average from eight to ten daily.

Rudyard Kipling advocates a stern policy in dealing with the two republics after the war.

The Philippines.

Aguinaldo has issued a proclamation advising the natives not to accept the proposals of the new Philippine Commission.

The American officials in Manila unearthed a native plot to rise against American authority in the city last week, and the leaders of the affair were arrested. Governor-General MacArthur's new policy will involve considerable decentralization, transferring considerable power from the governor in Manila to local authorities.

The American troops have occupied two towns in the island of Leyte, inflicting heavy losses on the natives.

At the instance of Rear-Admiral Remy, in command of the naval forces on the Asiatic station, the Navy Department has receded from its decision to recall to the United States the gunboats Concord and Bennington.

Other Foreign News.

The Russian Council has decided not to exile any more persons to Siberia without judicial inquiry.

Two hundred and thirty-five cases of the bubonic plague have been reported at Sydney, N. S. W., of which 79 have proved fatal.

Tolstoy's drama, "The Power of Darkness," has been forbidden performances simultaneously by the censor in Leipzig, Stuttgart and Carlsruhe.

The dispute over territory in the Congo Free State between Germany and Belgium will probably be submitted to arbitration.

Americans in London on the Queen's birthday will present a gold loving cup to Sir Thomas Lipton.

The disturbances in the Italian Chamber of Deputies have resulted in a royal decree proroguing Parliament.

Stephen Crane, the American novelist, who has been critically ill, has been removed to Dover, England, and his health is improving.

Lord Curzon has cabled to the India Famine Fund Committee in New York: "Every dollar is of service in saving life. We have 5,750,000 on relief. Many in extreme destitution. All help gladly received." Many Mahometans in Benares are protesting against plague rules as a violation of the laws of Mahomet.

DOMESTIC.

Congress.

The House has passed a bill introduced by Mr. Cox, of Tennessee, to pay the Confederate soldiers who surrendered at Appomattox for the loss of horses and other personal effects taken from them in violation of the terms of Lee's capitulation to Grants, by which officers and men of Lee's army were allowed to retain their baggage, side arms and horses. Many other claim bills were passed.

The Senate Committee on Military Affairs has made a favorable report on the House bill appropriating annually \$1,000,000 to provide arms and equipment for the militia of the various States.

Congress passed and the President signed last week the "Free Homes" bill, providing for the free gift of large tracts of public land to settlers.

Senator Clark, of Montana, executed a curious political maneuver last week. The Senate was about to declare his seat vacant on Tuesday of last week on account of the bribery scandals in connection with his election, when he forestalled their action by resigning. That same evening, however, the Lieutenant-Governor of Montana, in the Governor's absence, appointed Mr. Clark to fill the vacancy. The Governor of Montana then hurried back and appointed Martin Maginnis Senator to fill the same vacancy. It seems likely that the Senate will reject both appointments and await a new election by the Montana Legislature.

The House Committee on Judiciary adopted last week by a party vote a form of amendment to the Constitution, giving Congress power to define, regulate, control, prohibit or dissolve trusts, monopolies or combinations, whether of persons or of corporations, or otherwise. This is generally believed, however, to be a political move for display purposes only, and it is not expected that it will ever become law.

The Senate last week passed the Naval Appropriation bill which provides that if the Government cannot obtain armor plate at satisfactory prices it shall build a government armor plant.

The Senate Committee on Interocceanic Canals last week ordered a favorable report on the Nicaragua Canal bill as it passed the House.

Other Domestic News.

The postal scandal in Cuba is being gradually cleared up, and it seems likely that the criminals will be brought to justice. It is reported that Reeves and Thompson have made incriminating confessions, and that Reeves has refunded about \$4,500. Neely and the others are awaiting trial.

The ice trust in New York continues charging 60 cents a hundred pounds, and the popular indignation against the trust has not abated. The legal proceedings against the company under the State Anti-trust law are in progress. It is charged that the corporation and other Tammany leaders hold large blocks of the trust's stocks. Comptroller Coler has suggested the erection of a municipal ice plant.

The United States Supreme Court decided last week that the inheritance tax law is constitutional, and that legacies of government bonds can be taxed.

The convention of the Western Federation of Miners, at Denver, has adopted a resolution to call a convention of all organized labor bodies to take action looking toward uniting in one organization.

The Standard Oil Company, of Kentucky, has advanced the wages of all employees 10 per cent. This will affect 14,000 employees, and will increase the pay rolls \$32,000 per week.

The Presbyterian General Assembly is holding its annual meeting in St. Louis. Rev. Charles A. Dickey, of Philadelphia, has been elected Moderator.

The Methodist General Conference in Chicago has decided to discontinue or consolidate a large number of religious weeklies now published at a loss. Most of last week was devoted to balloting for two new bishops.

Immigration at New York reached the high water mark last week, with during the three days immigrants arrived, 40 per cent. of them being Italians.

By the narrow margin of two votes, the Massachusetts House of Representatives has decided against abolishing the death penalty.

The Secretary of the Interior has received information that the Indians on Tongue river in Montana are becoming restless, and that an incipient "Messiah Craze" has made its appearance there.

The Democrats of Georgia have renominated Governor Candler.

The Republicans of Kansas have renominated Governor Stanley.

By a referendum vote of 1,313 to 931, Social Democrats have defeated the proposed amalgamation with the so-called "Kangaroo" branch of the Social Labor party, and this result will force Job Harrington off the Social Democratic ticket for Vice-President.

Mayors of Cuban towns are accused of resorting to illegal practices in order to secure their re-election. The street car strike in St. Louis continues.

THE DRUG BEVS.

New York and Vicinity.

LAW BELIEVED TO BE UNCONSTITUTIONAL.

An Opinion Rendered to that Effect on the Measure Prohibiting the Manufacture of Soda Water in Dwelling Houses.

Perkins & Butler, attorneys for the Kings County Pharmaceutical Society, have rendered the following opinion on solicitation of their clients:

Chairman Legislative Committee of the Kings County Pharmaceutical Society.

Dear Sir: You have requested our opinion as to whether, since the taking effect of chapter 494 of the laws of 1890 on May 1st, it is unlawful to manufacture soda water in buildings occupied wholly or partly as dwelling houses, &c.

After as full research and consideration as have been practicable in the limited time given, we beg to state our opinion briefly as follows:

The law in question is an amendment to Section 359 of the Penal Code, which, as amended by that law, reads thus, the matter underscored being the amendment: Section 359. Keeping gunpowder, unlawfully. A person who makes or keeps gunpowder, nitro-glycerine, or any other explosive or combustible material, within a city or village, or carries such materials through the streets thereof, in a quantity or manner prohibited by law or by ordinance of the city or village, is guilty of a misdemeanor. A person who manufactures gunpowder, dynamite, nitro-glycerine, liquid or compressed air or gases, except acetylene gas and other gases used for illuminating purposes, naphtha, gasoline, benzine or any explosive articles or compounds or manufactures ammunition, fireworks or other articles of which such substances are component parts in a cellar, room or apartment of a tenement or dwelling house or any building occupied in whole or in part by persons or families for living purposes, is guilty of a misdemeanor. And a person who, by the careless, negligent or unauthorized use or management of gunpowder or other explosive substance, injures or occasions the injury of the person or property of another, is punishable by imprisonment for not more than two years. Any person or persons who shall knowingly present, attempt to present, or cause to be presented or offered for shipment to any railroad, steamship, or other express or other company engaged as common carrier of passengers or freight, dynamite, nitro-glycerine, powder or other explosives dangerous to life or limb, without revealing the true nature of said explosives or substance carried to which it shall be presented, shall be guilty of a felony, and upon conviction, shall be fined in any sum not exceeding one thousand dollars and not less than three hundred dollars, or imprisonment in a state prison for not less than one nor more than five years, or be subject to both such fine and imprisonment.

This section is part of Article 1, which relates to "Crimes against the Public Health and Safety."

Upon the face of the law, and for the reason that the making of soda water involves the manufacture of a gas, viz., carbonic acid gas, it is unlawful to manufacture soda water "in a cellar, room or apartment of a tenement or dwelling house or any building occupied in whole or in part by persons or families for living purposes." In passing, note the curious result. It is unlawful to manufacture buildings in the city wholly devoted to the drug business there carried on, excepting one or two rooms occupied by two or three clerks "for living purposes," that is they sleep there. The manufacture of soda water in such a building is unlawful, and yet all day long the building is occupied by the proprietors and employes, and customers go in and out. But to do the same thing, make carbonic acid gas, in the same building, and not occupied by the clerks is lawful. The lives of the clerks are no more valuable at night while they are asleep than during the waking hours of the day while they are at work; but if the manufacture of the gas be ongoing, the danger exists during the working hours of the day. Observe again at this point that this is a law concerning the public health and safety. Furthermore, if the prohibition against the manufacture of gases extends by the letter of the law to carbonic acid gas, a druggist who with his family lives in the building in which he keeps his store, must not manufacture soda water therein; or, if he wishes to make soda water therein, he must not occupy any part of the building with his family.

The right of the Legislature to pass laws and ordinances relating to the comfort, health, convenience, good order, safety and general welfare of the community, is commonly known as the police power. What laws are

needed to protect the public health and secure public safety, the Legislature must judge; but every law passed by the Legislature is subject to the review of the courts. Concerning laws passed to secure the public safety and health, the Court of Appeals has said in substance that the exercise of the discretion of the Legislature is not subject to review by the courts so long as the legislative measures are calculated and appropriate to accomplish the protection of the public health and the security of the public safety; but that the measures must have some relation to these ends and under the mere guise of police regulations, personal rights and private property cannot be arbitrarily invaded and the determination of the Legislature is not final or conclusive. If the Legislature "passes an act ostensibly for the public health and thereby destroys or takes away the property of a citizen or interferes with his personal liberty, then it is for the relates to and is convenient and appropriate to promote the public health."

A law enacted in the exercise of police power must in fact be a police law. If it be a law for the promotion of the public health it must be a health law, having some relation to the public health." And if it is a law to secure the public safety, it must have some relation to the public safety.

We are not aware that the manufacture of carbonic acid gas and the making of soda water have ever been regarded as dangerous. Are the makers of soda water to be punished for the use of gas or its careless or negligent "use or management" as to require safe guarding the public? From what we have been able to learn, the making of soda water upon the premises of a druggist or confectioner is an immemorial custom.

It seems to us that if the Legislature contemplated the manufacture of carbonic acid gas as well as the other gases implied and mentioned in the law, then there is a similarity between this law and the act of 1887 whereby it was declared to be a misdemeanor to make cigars in any tenement house occupied by more than three families, except on the first floor of the houses in which there is a store for the sale of cigars and tobacco. The Court of Appeals declared the latter law to be unconstitutional. In the course of the decision, Judge Earle, speaking for the court, used this language: "The justification for this law would not be sufficient that the use of tobacco may be injurious to some persons, or that its manufacture may be injurious to those who are engaged in its preparation and manufacture; but it would have to be injurious to the public health. This law was not intended to protect the health of those engaged in cigar making, as they are allowed to manufacture cigars everywhere except in the forbidden tenement houses. It cannot be perceived how the cigar maker is to be improved by his health or morals by forcing him from his home and its hallowed associations and beneficent influences, to apply his trade elsewhere. It is not intended to protect the health of that portion of the public not residing in the forbidden tenement houses, as cigars are allowed to be manufactured in private houses, in large factories and shops in the two crowded cities (New York and Brooklyn) and in other parts of the state. What possible relation can cigar making in any building have to the health of the general public?"

That was a law to protect the public health, whereas this is a law apparently to secure the public safety for there certainly cannot be anything unhealthful in the manufacture of carbonic acid gas. It seems fair to apply the same line of reasoning to this law.

If carbonic acid gas can be proved to be dangerous in its manufacture or use, to the general public, then this law must be obeyed.

If, on the other hand carbonic acid gas in its manufacture and use is harmless, and our understanding is that it is harmless, then we think we are justified in expressing the opinion that the courts will not sustain this law.

It is not for attorneys to say that it is unconstitutional. If carbonic acid gas can be proved to be dangerous in its manufacture or use, to the general public, then this law must be obeyed.

TELEPHONES AND SHORTER HOURS.

Druggists' Associations of Greater New York Discuss These Important Questions in Conference.

The Manhattan Pharmaceutical Association, the German Apothecaries Society, the Retail Druggists' Association and the Kings County Pharmaceutical Society have declared war on the New York Telephone Company because of its many alleged abuses of the trade. The action taken was the appointment of a committee to consult with the opposition company, the Knickerbocker, for

a proposed plan of relief satisfactory to the druggists, at a conference held in the New York College of Pharmacy last Friday afternoon. The druggists proposed to present a plan to the Knickerbocker Company whereby telephone rates in Greater New York may be reduced at least 50 per cent. At the conference it was the unanimous opinion that if the Knickerbocker Company will promulgate such a schedule it would receive the support of each association as a body and the hearty co-operation of every telephone user in the boroughs affected. While the Knickerbocker Company is new it is understood that it has 15,000 certified subscribers, and should it agree to the plan proposed this number will be more than doubled, thus assuring an unqualified success. It was not the purpose of the conference to demonstrate an antagonism toward the telephone company, but the subject was mentioned as one favorable to discussion and when the members learned of the actions of the New York Company and that there was an outlet for relief they warmed up to the argument in a manner that admitted of no retreat. The movement was of such magnitude that the speakers themselves were in a measure not prepared to offer much in the way of practical argument regarding the status of the two companies, with the possible exception of Thomas J. France, of the Kings County Association, who introduced the matter. As it became apparent that summary measures must be adopted the interest was quickened and a decisive plan of attack was formed. Mr. France said that the New York Telephone Company had misused the drug trade in cutting down rates, fracturing contracts, renting telephones to private parties cheaper, and otherwise. He then stated the idea that forms the initiative to the coming conflict when he said that he believed if the rates were fixed at five cents for borough connections and ten cents for inter-borough connections it would not only meet the approval of the druggists, but would be for the public good. If the druggists would combine he believed the new company, the Knickerbocker, would not turn a deaf ear to the proposition. Felix Hirschman expressed doubts of the success of the new company. He said there was not a sufficient number of subscribers so that connections could be made with anyone when desired.

Mr. France said he thought perhaps the Knickerbocker company would put free telephones in drug stores now using the New York Company's machine, and in this way a thorough test would be made.

William Muir said he agreed with Mr. France's proposition in every respect. The retail druggists of Greater New York have undoubtedly been the means of making the New York Telephone Company a success. Many pharmacists have paid for telephone service in Greater New York when the New York Company had less subscribers than are now held by the Knickerbocker people. The druggist is compelled to pay a certain rate on the message, while his next door neighbor, a real estate man, or any business corporation may secure the service at a certain cost for the year. Mr. Muir suggested that a delegate from each organization represented should be named a committee to wait upon the Knickerbocker Telephone Company with an idea to forming some agreement whereby the druggists could support the corporation—preferably the 50 per cent. scheme above mentioned.

Julius Hammer thought the idea such a good one that he put it before the meeting in form of a motion, which Mr. Muir seconded, and which was unanimously carried. Chairman Kleinau then named the following committee: Thomas France, William H. Poor, Julius Hammer and G. Kleinau.

Before the telephone discussion came up G. Kleinau was chosen chairman of the conference, and L. W. Geisler, Jr., secretary. The prime object of the meeting, stated by Chairman Kleinau, was the discussion of early closing. The general opinion was that ten o'clock was the most suitable hour, and it was learned that most of those present had been ceasing business at this time for some months back. Mr. Muir said it was hard to get the druggists to hold to an agreement to close at a certain hour; they would promise to do it and would turn out the lights in the front of the store at ten o'clock, but would then tarry an hour figuring up the cash, and incidentally waiting on any customers who came in, thus violating the agreement. Mr. Hammer suggested that

a most potent way of enforcing an agreement would be for the four associations to combine into one and then make a practicable agreement to close at a certain hour. He also suggested that a test case be made of the new law governing working hours of drug clerks.

Mr. Faber stated that he thought the case might be made on the word "permit" in the law. He did not believe any law could restrict a man from working as long as he wished, provided the man agreed.

A. Bakst was of a different mind. S. V. B. Swann came in at this point, and he was asked to say something regarding early closing. He said that along the lower parts of two very busy streets, Seventh and Eighth avenues, many druggists were closing at ten o'clock. The practice was extending.

Mr. Faber reiterated the sentiment of his previous remarks by saying that nothing could be gained through discussion, because he was not sure the law was constitutional and a test case would be required to establish its validity. Mr. Muir believed that such a proceeding should come as a natural consequence of the enforcement of the law, thus relieving the proprietor of any question of antagonism. Any case that might arise in this way would receive the support of the Kings County Pharmaceutical Society. This he announced unofficially, but he declared that he felt sure that the organization would back him up. He then made a formal motion that should a test case arise from natural causes it be the sentiment of the conference to secure the moral and financial support of each organization represented, and that this should be given. Mr. Hirschman was second to the motion. Mr. Goldman thought a case should be begun at once. This was not deemed advisable, and after Mr. Muir had stated that his motion included and applied only to druggists belonging to the associations present, it was unanimously carried.

ANNUAL MEETING OF BROOKLYN ALUMNI.

One of the most enjoyable events of the season in Brooklyn occurred Thursday evening last in the reception given by the Alumni Association of the Brooklyn College of Pharmacy to the members of the class of 1900. The gathering was in Wee's Hall, corner of Hancock street and Bedford avenue. Incidental to the opening of the festivities, the annual meeting of the Alumni Association was held, President E. Clayton Woodcock calling the session to order. The meeting was conducted in the presence of the guests of the Association and was productive of much good natured argument and humorous sayings. The report of the treasurer, Prof. William C. Anderson was read by himself. It showed a balance on hand of \$73.72 which is very creditable considering the many receptions and entertainments the association had held during the year. This encouraging report was supplemented by an equally buoyant one from F. P. Tutthill, treasurer and chairman of the Executive Board. Mr. Tutthill prefaced his report with a few cogent remarks tending to augment the interest in the association. He declared the members of the body "did not seem to 'get around' as often as he would like and he closed with an appeal to those present to urge their brother men to enter in the work of the association with a more liberal spirit. That Mr. Tutthill's advice was appreciated was evidenced by the hearty applause which was accorded him. He stated that the executive board had found the work pursued during the year to have been most successful and the financial support had been just as creditable. The election of officers then took place. Andrew Myhr, a member of the 1900 class was the unanimous choice of the body for president. The other officers chosen follow: first vice-president, Fred Schroeder, Jr.; second vice-president, John M. Buckley; recording secretary, George A. Mulvaney; financial secretary, Fred H. Weyer; treasurer, Prof. William C. Anderson; registrar, Dr. Albert H. Brundage; Executive Committee: Fred P. Tutthill, chairman; John F. Crawford, William H. Bussenschutt, William L. Morris, Stephen L. Wood. Auditing Board: E. Clayton Woodcock, William Schroeder, Jr., L. B. Campbell. Delegates to Convention of American Pharmaceutical Association: Dr. John F. Golding, Dr. A. H. Brundage, Dr. F. P. Tutthill, Dr. E. H. Bartley, Dr. William C. Anderson. Delegates to New York State Pharmaceutical Association Convention: Andrew Myhr, W. H. Bussenschutt.

schutt, Dr. F. P. Tutthill. Delegates to New Jersey State Pharmaceutical Association Convention: Prof. William C. Anderson, Dr. F. P. Tutthill; Dr. A. H. Brundage.

President Myr is escorted to the chair by Messrs. Tutthill and Schroeder, and after congratulating the retiring president on his successful administration, he made a short speech thanking the members for the honor conferred on him and assuring them of his intention of bringing about a successful year's work which could only be realized by earnest co-operation on the part of the members. He said he felt sure this would be accorded him and he was answered by a burst of applause that bore with it the pl-ke.

Subsequent to the meeting dancing was indulged in and during a respite refreshments were served. The credit of arranging the pleasant programme belongs to the committee consisting of F. P. Tutthill, chairman; William Bussenschutt, John F. Crawford, G. A. Mulvaney and F. Schroeder, Jr. Among the ladies present were: Mrs. J. F. Golding, Mrs. A. H. Slead, Mrs. T. J. MacFarland, Mrs. William C. Anderson, Mrs. Schletter and Misses M. Foley, V. McGoey, L. Woeffle, Lillian Schubert, Jennie Muir, L. Garvey and E. Von Seyfried.

GREATER NEW YORK PHARMACEUTICAL SOCIETY.

The first annual meeting of the Greater New York Pharmaceutical Society was held on Wednesday, May 9, at 66 East 112th street, Richard McCullon presiding. Fifty-four members present. A. L. Goldwater was elected president; first vice-president, Thomas Stevenson; second vice-president, D. Kantor; secretary, L. E. Block; treasurer, Oliver S. Donaldson; executive board, Guy E. Currie, Frederick W. Brown, William Eisenberg, and Richard G. Todd, in addition to the above officers. The constitution was adopted with a few slight amendments. The following chairmen of standing committees were appointed: Committee on Membership, Felix Krumbholz; on ethics, Arthur Baselow; on papers and publication, Wm. J. Robinson; on legislation, Albert Pirmin; on legal defense, Henry Coogan; on entertainment, Sophie Norwalk. Delegates to the New York State Pharmaceutical Association: Dr. R. G. Eccles and Dr. Wm. J. Robinson.

Seventeen active and eight associate members were elected.

The president appointed a committee of seven to report at the following meeting on the advisability of organizing a benefit society among the members of the G. N. Y. P. S. and a committee of five on adulteration and substitution. It was decided to engage a permanent meeting hall for the society that would be accessible from all parts of Greater New York. Mott Memorial Hall, 64 Madison avenue, and the Academy of Medicine were suggested; one of these will probably be selected. The law firm of Friend, Grossman & Vorhaus of the World building, were selected to act as counsel for the society.

A motion to publish the names of the members brought out a lively discussion and it was decided not to print the names of members, except those of officers and chairmen of committees. A paper entitled "A Sermon to Pharmacists, or How Pharmacists May Become Better, Higher and Happier Men," was read by Wm. J. Robinson. After the reading of the paper a general debate took place on pharmaceutical education and after a heated discussion the society went on record as favoring a college of pharmacy diploma as a prerequisite to Board of Pharmacy examination, and also as recommending a regents' certificate of at least twenty-four counts as a requirement for admission to a college of pharmacy. The Hill All-State Pharmacy bill was then taken up for consideration, some points in it were vigorously criticised.

A HANDSOME STORE AND WINDOW DISPLAY.

One of the most up-to-date drug stores in the city is that recently opened by Reed, Yeomans & Cubit, at 140 Nassau street. It represents studied ideas taken from stores both in this country and Europe. The floor is of mosaic tile work, bordered for a few inches up the walls and the cases resting on the floor with four-inch slabs of marble, to keep the surfaces protected from being smirched while the store is cleaning. The show cases are air-tight. Opening the lid it falls into position and forms a counter for the sales, and no matter how much force is used to close the door it will not slam, because of air pressure.

Bicycle ladders are used. The sponge receptacles are all air-tight. In the prescription department a slate slab twenty-eight feet long forms the compounding table. The graduates are fitted with rubber bottoms, and when not in use are racked close by the slate slab. The label drawers are conveniently near, and each kind of label is placed in a separate compartment with a wire spring so arranged that only one label can be taken out at a time. The herbs are kept in galvanized zinc drawers, where they are free from the attacks of bugs and rodents. One feature, and an important one, is the laboratory, located in a spacious well-kept cellar. Two young women are employed in this department putting up the eighty preparations compounded by the firm. A machine for mixing cod liver oil, with a capacity of fifteen gallons, is used, also a tooth powder mixer, making a hundred pounds at a time, is in use. The soda fountain is one of the most elaborate in the city and was erected at a cost of \$6,000. It rests on a lead floor, twenty-three feet long. The counter is of marble, and the fountain itself is of solid onyx. Sixty syrups are at the disposal of the four clerks. The fountain is filled from the rear, which is a new idea. A crushed ice machine and an arrangement for shaving ice are used in a room back of the fountain, where the syrups are also made. During the last week the firm has had an exhibition a \$7,000 display of perfume and cut glass, the cut glass being shaped in thirteen bottles, the property of Lazell, Dalley & Co., and exhibited for the first time publicly since the World's Fair, where they were awarded first premium. The cost of the bottles was \$5,000. The display attracted much attention.

MEETING OF THE DRUG TRADE SECTION.

At the regular monthly meeting of the Drug Trade Section of the Board of Trade and Transportation last Thursday afternoon, there was adopted a set of resolutions proposed by Dr. E. T. Whitmore, of Parke, Davis & Company, asking that the commission for revision of the city charter be requested to investigate sections 1225 of the charter and that the commission rectify abuses that exist and furthermore repeal the law. The whole affair hinges on the production and sale of vaccine virus and anti-toxine by the City Board of Health. The resolution in full follows:

"Whereas, The present charter of the city of New York, in section 1226, authorizes the Department of Health to sell in competition with the drug trade certain so-called surplus laboratory products of its bacteriological laboratory, namely, vaccine virus and various anti-toxines; and

"Whereas, Instead of being the sale of a reasonable surplus, this has become a commercial industry which has reached as high as \$28,000 in a single year, and has proved a derangement to legitimate commerce; and

"Whereas, The said section 1226 creates special funds, namely, the fund for gratuitous vaccination and the anti-toxine fund, which may be expended without the check or control of the accounting officers of the city; therefore

"Resolved, By the Drug Trade Section of the Board of Trade and Transportation, that the commission for the revision of the charter of the city of New York be, and they hereby are, memorialized to include this section 1226 in the purview of their inquiry, and we urge upon said commission the rectification of abuses which now exist, and we suggest to said commission the repeal of section 1226."

OPUM OR CABPAGE?

The agents of the Custom House have a peculiarly interesting case on their hands just now which developed on Tuesday of last week, when a quantity of opium such as is used for smoking was discovered under a false invoice in a consignment of goods to Wing Wo Chong, a Chinese merchant of 24 Pell street. The drug, which was appraised at about \$700 Mexican money, has been seized by the Government officials to await developments in the case.

The goods came to the appraiser's stores last Wednesday, forty-three cases in all of miscellaneous Chinese groceries, and owing to the mixed quantity each package was examined separately and two were found to contain goods contrary to the invoice and marking on the boxes. In one labeled "green seed" were 196 half-pound tins of opium, dutiable at the rate of \$6 the pound, while the other marked "medicine" revealed a 25-pound parcel of tapioca flour, which is admitted free. Wing Wo Chong was sent for to explain the presence of the "foreign" goods in the shipment. He came to the Custom House Thursday morning and before seeing the opium explained to the officials that he thought they had made an error

In the opium, as he had none ordered in the consignment, but there was a package of Chinese cabbage seed and this Wing thought had probably become wet, as when it gets damp it swells into a mass very much resembling raw opium. He was shown the opium and admitted that it was correctly designated. He could not account for its presence in the shipment nor could he give an excuse for the tapioca flour. He stated that his bill of goods was two cases short and this may give a clue to the officials. Wing is the largest importer of Chinese groceries in the United States and has always enjoyed the respect and confidence of the Customs House officials.

NEW YORK JOBBERS AND THE N. A. R. D. PLAN.

Four of the leading houses in this city have attached their names in favor of the N. A. R. D. plan and one other firm has signified a willingness to do so. The firms which have already filled out the blank application sent out by Frank A. Faxon, chairman, Kansas City, Mo., are: C. N. Crittendon Co., Lehn & Fink, Scheffelin & Co. and Bruen, Ritchey & Co. McKesson & Robbins have also declared their willingness to become parties to the agreement. One of a firm which has signed the agreement said recently that the sympathies of the jobber were with the retailer, who was a very much misused man.

NOTES.

"Druggists are the most patient set of men I know of," remarked a hard working pharmacist on Bleeker street one day last week, after he had endeavor'ed for fully ten minutes, first by deduction, then by practical demonstration, to solve the desire, expressed in jargon that sounded more like Volapük than anything else, of an excited woman who had come into his store. His auditor quite agreed with him, for really the language sounded more like the moanings of a "sick" wheel in the Broadway cable line than anything human. She had come into the store—whether it was the place she wanted or not—and made her utterance, then waited for the Ph. G. to trot out the desired article, of whose identity he had no more idea than of the personality of a straw hat. In vain endeavor to be accommodating he tried on the woman the half dozen languages at his command, but to no purpose. The ejaculation she made sounded somewhat like citrate of magnesia said in rag-time, so the druggist showed a bottle of this, which was not what she wanted. He then displayed various other wares until the counter looked like a bargain day show in a department store, but she would have none of them and left. This is but one of many such experiences that come into the daily round of the life of the retailer, and yet some people are so unkind as to say he "enjoys a life of ease with nothing to do but count his profits."

—Work is progressing rapidly on the new building of Lehn & Fink at No. 120 William street and No. 79 John street, and when completed will add to the architectural adornment of its surroundings. It will be eight stories high, with cellar and sub-cellar, absolutely fireproof and will furnish about 70,000 square feet of floor area. The actual work of construction cannot be commenced until the debris from the building razed on the site shall have been cleared away. The new building will be ready for occupancy in about one year. Another innovation in the down town "middlin' tall" buildings will be the proposed structure of the Mallinckrodt Chemical Works, which will stand on the site of the present quarters of the firm, at 90 William street, with an "L" facing on Platt street. The "L" will be erected first and will be ready to move into about November 1. The building which formerly stood on the site has been torn down and excavations for the foundation of the new structure are already being made. Like the Lehn & Fink structure the building will be eight stories high and have a floor space of nearly 70,000 feet. The William street building will not be completed before May 1, 1901. The plans of the Lehn & Fink building were drawn by Robert Maynicke, and Mr. De Lemos is the architect for the Mallinckrodt firm.

—Visitors during the week have been: Walker Smith, of England; Charles A. West, of Boston; Mr. Marvin, Roanoke, Va.; S. H. Sarles, Mt. Kisco, N. Y.; J. T. Higby, Milford, Conn.; J. Timson, London; Walter Fox, Alexandria Bay, N. Y.; C. A. Rucker, Atlanta, Ga.; Mr. Funnell, of Huntington, L. I.; Dr. E. R. Voorhes, Somerville, N. J.; Charles N. Crittendon made a

short trip to the city; A. E. Pickhardt, Sag Harbor, L. I.; Mr. Lourie, of the firm of Russell & Lourie, Tarrytown; John Marlen, Cranford, N. J.; John P. Carney, Mount Vernon; William R. Warner, of W. R. Warner & Co., Philadelphia, Pa.; William Harding, Boston; Dr. T. B. Aldrich, Detroit, Mich.; C. B. Smith, Freeport, L. I.; J. B. Campbell, Suffern, N. Y.; A. L. Dutcher, St. Albans, Vt.; George E. Burrows, New York and Eastern Pennsylvania salesman of Scheffelin & Co.; J. D. Blauvelt, Nyack, N. Y.; C. H. Kramer, Youngstown, O.; T. S. Armstrong, Plainfield, N. J.; J. H. Barr, Irvington-on-the-Hudson; Joseph Jacobs, Atlanta, Ga.

—A good story is going the rounds of the trade on Chas. West, of Boston, Mass., who, with two refiners in this city, represents the whole of the camphor refining industry in the United States. Mr. West was a visitor at the Drug Club one day during the week and while seated at the dinner table with a party of friends someone remarked that "camphor will rise now West's in town." Sure enough next day the price went up one cent on the pound. This may or may not have had any direct connection with Mr. West's visit, but it certainly is a strange coincidence and is more strikingly so when it is known that every time Mr. West has come to the city during the current year the price on the staple article has taken an upward flight shortly after his departure. His friends here are always glad to see him however, and are sure to anticipate the rise when he comes to town.

—The assignment of Billings, Clapp & Co., the well-known firm of Boston, Mass., announced in these columns last week, came as a great surprise to the trade here, as well as a severe shock. The establishment has been maintained for years occupying a high position throughout the country, which, however, has not been relinquished by the embarrassment which is stated to be but temporary, and it is positively asserted that the company will continue as soon as the present difficulty is bridged. It is gratifying to know that any orders sent to the house will be promptly filled and immediate shipment guaranteed, as announcement is made by the members of the company that they have a large amount of finished goods on hand that will enable them to carry on the business without interference or delay.

—The annual field day of the Alumni Association of the New York College of Pharmacy will occur June 13 this year at Donnelly's, College Point, and the boys are anticipating a repetition of the "jolly good times" of former years. One of the "star" features of the athletic part of the interesting programme now in course of preparation will be a game of base ball between the Alumni nine and a team from Charity Lodge, F. and A. M. Last year the Masons gave the drug mixers a sound drubbing, which here but little consolation, and this was gained from the assertion made by the druggists that the F. A. M.'s introduced outside "expert" players. Care will be taken that such an operation (?) is not repeated this year. Nelson S. Kirk is chairman of the Committee of Arrangements.

—An interesting meeting of the Pharmaceutical Clerks' Association was held Wednesday afternoon, May 17, at the College of Pharmacy. Henry L. Kessler was elected to membership and the proposition to amend a certain part of the constitution was carried. Officers for the annual election to be held Wednesday, June 29, were nominated as follows: President, C. W. Detz; first vice-president, C. F. Dyna, H. F. Malarky; second vice-president, M. Rafter, M. Richards; secretary, N. Gohn, J. Feldman; treasurer, Dave Costello, A. Deutscherberger; Executive Committee, A. W. Firth, M. Rafter, J. Feldman, E. Schulhof, F. Traus, M. Zucker, William Puff, A. Deutscherberger, C. W. Wendler, H. F. Malarky, H. F. Koenig, C. F. Dyna, M. Richards, F. Bourgive.

—The next meeting of the New York Section of the Society of Chemical Industry will be held in the New York College of Pharmacy to-morrow evening, May 25, opening at 8.30 o'clock. Papers will be read as follows: O. H. Klein and S. A. Tucker and H. B. Moody, "The Electrolysis of Calcium Chloride Solutions with Reference to the Formation of Chlorate"; A. H. White, "The Composition of Some American Gas Works' Tars"; A. P. Van Gelder, "Notes on the Analysis of Nitric Acid and Mixed Acid"; H. Endemann, "The Berkefeld Filter," with exhibition. The members will hold the usual informal dinner before

the meeting at Hotel St. Andrew, corner Broadway and Seventy-second street, at 6.30 o'clock.

—It is announced on excellent authority that a resolution is to be introduced shortly in the House of Representatives authorizing the Committee on Ways and Means to hold sessions during the recess of Congress and to frame a bill to be introduced at the next session for the repeal of the war taxes on certain articles and pledging the Republican party to a reduction of the tariff. This resolution will be hailed with delight by the drug trade as it is stated that the "certain articles" referred to are medicines. If the resolution is passed and the bill is also passed it will be a victory that the trade has labored indefatigably to accomplish.

—During last week Dr. E. H. Gingrich, of Lebanon, Pa., visited Wm. R. Warner & Co., 52 Maiden Lane. Dr. Gingrich is editor of Warner & Co.'s paper, "Retrospect," and under his directorate it has met with encouraging success. The doctor left during the latter end of the week for Atlantic City, N. J., where he will attend the convention of the American Medical Association as representative of the Warner firm. Dr. Gingrich is a man who has the happy faculty of retaining his personality while yet upholding the dignity of his chosen profession, and he makes friends wherever he goes.

—"The Druggists" and "The Doctors" of Brooklyn represented in two base ball nines composed of players from the Alumni Association of the Brooklyn College of Pharmacy and the faculty of the Long Island College Hospital, crossed bats on the diamond at Prospect Park yesterday afternoon. It is not possible to give the details of the game nor yet the winning team in the current issue of the Era, but next week's number will contain a full report from one of the "grand stand players."

—June 23 and 26 the twenty-first general meeting of the American Chemical Society will be held in this city, and from the present outlook promises to be an event of much interest. The programme has not yet been completed, but will contain some excellent papers. This meeting will be held in connection with that of the American Association for the Advancement of Science.

—Bruen, Ritchey & Co. have found business increasing so rapidly of late that it is deemed necessary to secure larger quarters, which was done by leasing the building at 212 Fulton street, adjoining their present establishment. This will increase the working space about 50 per cent, and facilitate the handling or "rush" orders, of which the firm make a specialty.

—Mrs. Lance, wife of Peter R. Lance, the veteran representative of W. R. Warner & Co., of Philadelphia, under the nom de plume of Momus, Jr., has a satire, "The Charge of the 'Four Hundred'" in the May number of "The Smart Set," a magazine devoted to the ultra fashionable.

—William R. Warner & Co., 52 Maiden Lane, have recently issued for dissemination in the trade a neat book of pocket size, containing a lot of valuable as well as interesting information relative to the Paris Exposition. The pamphlet is well worth preserving.

—McKesson & Robbins, 91 Fulton street, have secured a new salesman in Charles Wetmore, formerly with the John H. Sheehan Company, of Utica. Mr. Wetmore will attend to the wants of customers in the northern part of this State.

—J. F. Brookfield, the Southern States salesman of McKesson & Robbins, who has been ill at his home in Newark, N. J., for some time past, is somewhat improved. It is hoped that he will soon be able to resume his duties.

—Druggist D. E. Stretch, Trenton, N. J., was a delegate to the recent annual convention of the New Jersey Diocese of the Episcopal Church. He has been a delegate at every convention of the body for the past five years.

—Some little comment has been caused among members of the trade during the last week over the unusual quietness of the market and the stationary prices. Druggists attribute the cause to heavy buying last week.

—E. A. Heiser, proprietor of the Eagle Pharmacy, Butte, Montana, accompanied by Mrs. Heiser, is making a combined pleasure and business visit to this city. He will be here about two weeks.

—An agitation for early closing has been begun by the retail drug clerks and is being met favorably. The hour

asked is 10 o'clock. A large number of stores are complying with the request.

—Holcomb Bros., State and Prospect streets, Trenton, N. J., have recently made many improvements in their store and it is now one of the finest in the city.

—A new drug store is to be opened in Huntington, L. I., about June 1 by S. V. Tuthill. Mr. Tuthill has located his place of business opposite the post office.

—The New York City Board of Pharmacy examined over sixty candidates at Brooklyn, Monday afternoon, it being the regular monthly session.

—Charles F. Scott, the Pacific Coast salesman of McKesson & Robbins, paid his semi-annual visit to the firm last week.

—W. A. Spalding, a druggist of New Haven, Conn., was a visitor in this city May 15.

IN AND ABOUT BOSTON.

THE COLLEGE COMMENCEMENT.

Boston, May 19.—Of special interest were the class day and commencement exercises of the senior class of the Massachusetts College of Pharmacy, held at the college building, corner of St. Botolph and Garrison streets, Thursday afternoon, May 17. Many friends and relatives of the class members gathered to witness their participation in the programme. Soon after the invitation hour the class filed in, headed by their president, A. George Gigger, of Boston, by whom the opening address was delivered. Miss B. M. Haynes, the historian, gave a brief account of the achievements of the class since entering the college. The class oration was delivered by F. W. Goodwin, and the class prophecy by L. A. O. Goddu. The valedictory, prepared by Miss Mary Elizabeth Collins, of Westery, R. I., was given, because of her illness, by Alfred P. Cook. This concluded the class day programme and a short time afterward the commencement exercises took place. An address was delivered by Rev. T. Irving Reese, of Milton. It was followed by the calling of the roll by the secretary, William D. Wheeler, Ph. G., and President W. H. Puffer, of the Massachusetts College of Pharmacy, delivered a short address before the students, after which the diplomas were presented by him to the following graduates: For the degree of Ph. C.—Mary Elizabeth Collins, A. P. Cook, A. B., V. M. Usher, Lowell T. Clapp and Forest Gurney Stanford. For the degree of Ph. G.—Miss B. M. Haynes, P. F. Burke, A. George Gigger, L. A. O. Goddu, F. W. Goodwin, Gustavus A. Kelley, J. R. Moore, Peter J. Moran, J. T. Murphy, C. I. Pendleton, G. L. Pierce, C. A. Wells, Henry Ward Berry and Ernest Sydney Bisbee.

In the evening there was an alumni dinner at Young's Hotel, with eighty-five present. President William H. Glover, '92, presided. Addresses were made by Professor Dolbear, of Tufts College; Speaker Myers, of the House of Representatives; Dr. Ernst, of Harvard Medical School; Miss M. S. Ewing, President William H. Puffer, of the College of Pharmacy; Dr. R. W. Greenleaf, who spoke for the faculty, and President A. G. Gigger, of the class of 1900. Mr. Morris gave readings from "David Harum."

On the night preceding class day there was a reception and dance at Pierce Hall, which was attended by almost five hundred persons. Guests were received by a committee composed of G. Gigger, John W. Cuff, Gustavus A. Kelley, Peter J. Moran and Charles A. Wells. The dancing was under the charge of Mr. Cuff, assisted by F. C. Bartlett, G. S. Chipman, L. H. Porter, R. T. Small, F. C. Stanford and G. S. Pierce. Mrs. W. H. Puffer, Mrs. W. L. Scoville, Mrs. L. H. Leavitt, Mrs. C. A. Stover and Mrs. W. W. Bartlett presided over the refreshment tables when the supper was served. The affair was a marked social success.

Malden Druggists Now Happy.

Boston, May 19.—After considerable anxiety on the part of Malden druggists, their fate as to licenses has been settled satisfactorily to them. The licenses expired May 1, and at a meeting of the aldermen on that date they

took no action, so none of the druggists would thereafter sell any liquor under any circumstances. The License Committee was not in favor of granting the application for licenses and so notified the Board of Aldermen, which body at a meeting, May 13, voted to grant to twenty-five or thirty druggists sixth class licenses, against the recommendation of the License Committee that the druggists "be given leave to withdraw." One reason for deliberation was the recent opening there of Malden's first "wine shop." The Board of Aldermen adopted an order asking that the city solicitor be requested to give his opinion regarding the legality of the proprietor of the wine shop doing business in a no-license city. To the great surprise of the temperance people and others in Malden, this store was opened and the proprietors are doing business publicly, claiming to sell only "home-made," non-intoxicating wines.

BILLINGS, CLAPP & CO.'S ASSIGNMENT.

Boston, May 19.—The assignment of Billings, Clapp & Company, manufacturing chemists with offices at 404 Atlantic avenue, this city, and a manufacturing plant at Fall River, reported last Thursday in this paper, has caused but little excitement among the trade, because there is no fear, apparently, that the firm cannot pay dollar for dollar of its indebtedness. The business really belongs to E. T. Billings, as the sole surviving member. He assigned to W. F. Bacon, a lawyer, and Wallace Wales, his "right-hand man." The embarrassment was caused by the stringency of the money market and the failure of one of the banks to extend its accommodation. Mr. Wales states that the firm has assets which are to the liabilities as two to one. He also said that, while probably no statement would be made as to the amount owed by the concern, it could be asserted that if a settlement of its affairs be insisted upon, every bill could be paid in full. The banks holding the paper of the firm are now disposed to give a reasonable time in which to arrange its affairs, and the assignment is expected to be of only brief duration.

Mr. Wales is preparing a statement at this time especially to show to the banks interested, and from this it is confidently expected that they will be ready to give the help needed just at this time, thus taking care of merchandise accounts. The firm has more or less in the way of bills receivable, and from these there will be money realized a little later on, but they are not available as cash at a moment's warning. It is thought that there will be no doubt about the banks coming to the rescue, and thus the assignment could be at once withdrawn. The other creditors in that case would be amply protected, with the banks behind the firm, and therefore no statement of the condition of affairs need be sent them at all and matters could go on smoothly just as before the assignment. Should the banks, however, not come to the rescue for any reason not now apparent or probable, then a general statement in detail will be drawn up and sent to each creditor of the firm.

There will be no interruption or delay in the filling of orders by the firm.

NOTES.

—By a decision of the full bench of the Supreme Court of Massachusetts sitting at Boston on Wednesday of last week, the drug stores of the Hub were restrained from the ordinary selling of tobacco on Sunday, the credit of the court being that it could not be dispensed except as a medicine. The decision was in the case of the Commonwealth vs. Isaac Goldman and had been appealed. For some time the druggists had enjoyed the exclusive privilege of selling tobacco on Sunday. It is expected the police will adopt stringent measures for the rigid enforcement of the law.

—Burton Whitcomb, for many years the head clerk at Miner's West End drug store, Summer street, Malden, has resigned his position there in order to go to a warmer climate, which he feels will benefit his health. He already has started for Manila and before leaving was given by his friends a farewell complimentary banquet at the Parker House, Boston. Mr. Whitcomb has made many friends at Malden and drew much trade to the drug store there.

—Some interior improvements have been made by Frederick & Bower, the Lawrence druggists, at the Broadway pharmacy. The soda fountain has been changed and much improved. The automatic new light system, which has been in service for many years in this pharmacy, has been removed and a new set of gas jets instituted.

—Henry J. Pushard, from the prescription department of the Theodore Metcalf Company, Boston, has entered the employ of the Taylor Drug Company, Wakefield. William T. Reagan also has been given a position with the same company.

—Earl Coombs, of Coombs' Cambridge Street Pharmacy, Cambridge, recently spent a few days and incidentally a lot of money at Manchester-by-the-Sea. Mr. Coombs is thinking of opening a summer store at that fashionable watering place.

—The Salem police raided the drug store of Powers, Donovan & Co., on the upper part of Boston street, on Saturday evening, May 12, and seized nineteen gallons of liquors, about seventeen gallons of which were whisky.

—Four druggists at Brockton were among the men arrested by the Brockton liquor squad on a recent trip through that city. Seven grocers and a barber also were arrested and all were charged with illegal selling of liquor.

—John C. Keane, who for some time has been a clerk at the drug store of Charles H. Collins, at Milford, has gone to Waukesha, Wis., to visit his sister.

—William F. Bingham, a clerk at Glover's pharmacy at Lawrence, has taken a position in the Manchester office of the International Correspondence School.

—Albert Graves, clerk at the Linden pharmacy, in the Linden district of Malden, has returned from a week's visit to his old home in New Hampshire.

—Ernest M. Johnson, a prominent druggist of Maynard, who has been ill for some weeks, is now in a dangerous condition, suffering from peritonitis.

—E. L. Patch, who was one of the delegates to the annual convention of the American Pharmaceutical Association, is back at his business.

—After four years' service as prescription clerk at Morse's drug store in Milford, A. Starr Bassett has resigned his position.

—Chester Cobb, of Franklin, formerly a clerk for Albert C. Mason, has been given a similar position at a Malden drug store.

ELSEWHERE IN NEW ENGLAND.

—Trading stamps may be used in Rhode Island, in the opinion of the members of the Rhode Island Supreme Court, which holds that the law prohibiting the use of trading stamps is unconstitutional and should not be on the statute books of the State. The court comes to the conclusion that the act cannot be sustained as being a valid exercise of the police power. The court has had the case under consideration for several months and has now decided that the trading stamps can return to use.

—While suffering from the effects of illness, George G. Sawyer, a Keene, N. H., druggist, more than seventy years old, wandered away and was found in a semi-conscious condition in a bog late one night. His cries were heard by a neighbor who summoned the police and assisted them to rescue the man. Mr. Sawyer had fallen into the water.

—Owing to increased trade, D. J. Hallisey's drug store, which for the past eight years has been conducted at 241 Main street, Nashua, N. H., is to be moved from the present location to a more commodious store. The store will be ready for occupancy by June 1.

—At Knowlton's drug store in Concord, N. H., a young lady, an authority on birds and their care, has established herself temporarily. She treats all birds free, gives advice, etc., all bringing many people into the drug store.

—Irving Lake, clerk in the drug store of his father, H. W. Lake, at Waterbury, Conn., has taken a position in E. W. Thompson & Co.'s store in New Britain.

—White's drug store at Richford, N. H., has been moved from the Adams block on Park Square to the Sears store, opposite the Union Church.

—P. J. Noyes, a druggist at Lancaster, N. H., has had his store renovated and decorated.

PHILADELPHIA.

Philadelphia, May 19.

—Arthur Bartholomew, the head clerk at Robert S. Doak's store at Fifty-first and Master streets, had an exciting experience one night this week with a thief who had gained entrance and who had already opened the door of the safe. The peculiar part was that the intruder lived next door and was attired only in his night gown and shoes, and when discovered commenced to snore and act like a somnambulist. Bartholomew was awakened by a noise in the store below and crept softly down stairs and turned up the gas which was burning low. At first he saw nobody, but the open safe door led him to make a search and the trespasser was found crouching in a corner. As the clerk approached him he commenced snoring loudly and when spoken to said, "Sh, I'm asleep; don't wake me." Bartholomew did wake him, however, in a forcible manner and his plea of somnambulism was a little too thin for the magistrate before whom he was heard the next morning, so he was held for court.

—The annual meeting of the Philadelphia Section of the American Chemical Society was held in the Harrison Chemical Laboratory of the University of Pennsylvania on Thursday evening, May 17. The papers read were as follows: "The Theoretically Possible Production of Steel or Semi-Steel in the Blast Furnace," by G. L. Mecker; "Notes on the Change in Raw Sugar Samples from a Commercial Standpoint," by Charles C. Roberts; "The Present Condition of the Coal Tar Industry," by H. W. Jayne.

—The botanical field trips of the Philadelphia College of Pharmacy Botanical Class, have been announced for June as follows: June 6, Haddington, West Philadelphia; take Haddington car on Market street and meet at terminus at 2.30 p. m. June 13, Philadelphia Commercial Museums; meet at Museums at 2.30 p. m. June 20, Kaighn's Point, N. J.; take Chestnut Street Ferry at 2 p. m. June 27, Crescentville, Pa.; meet in front of Bourse at 1.30 and take car marked "Fox Chase."

—Mahlon N. Kline went to Chattanooga, Tenn., on Monday of this week as a member of the Philadelphia Trades League to the Southern Industrial Convention now being held in that city. Mr. Kline made the opening speech of the Philadelphia delegation and introduced the other delegates from this city, one of whom was Dr. Wm. P. Wilson, the director of the Philadelphia Commercial Museums.

—Dr. George H. Markley, of Harrisburg, died on Monday, May 14, at that place. Dr. Markley was in the drug business in Harrisburg from 1866 until 1897, when he retired on account of his many outside business matters. He was prominent in all local affairs and was one of the managers of the Harrisburg Opera House at the time of his death.

—The Smith, Kline & French Company's baseball team played a second game with the Laurel A. C. last Saturday, which resulted in another victory for the former team, the score being 9 to 2. The schedule for June includes games with teams from Shoemaker & Busch, Keasbey & Mattison and the Philadelphia North American.

—The fire which destroyed several blocks in the centre of Camden, N. J., on Sunday, May 13, completely gutted the drug store of Wm. Cowgill, at 418 Federal street, the loss approximating \$10,000. George M. Beringer's store, at Fifth and Federal streets, was just on the edge of the burned district and the damage was only slight.

—W. E. Ritter, who has held the position of assistant in the Chemical Laboratory at the Medico-Chirurgical College during the past winter, has passed the New Jersey State Pharmaceutical Examining Board and has accepted a position for the summer with George R. Souder, 1000 Atlantic avenue, Atlantic City, N. J.

—Mrs. Charles A. Weidemann, the wife of Dr. Charles A. Weidemann, secretary of the College of Pharmacy and druggist at Twenty-second and Green streets, was quite seriously injured in the wreck of the Royal Blue Line express, which occurred at Jenkintown on Friday afternoon.

—J. V. Slaughter's pharmacy at 7205 Germantown avenue, Mt. Airy, was the scene of a slight fire on Tuesday morning, caused by an oil stove exploding. The flames

were extinguished with a loss of about \$75, covered by insurance.

—August Hohl, pharmacist at Fourth street and Girard avenue, and member of Common Councils of Philadelphia, is at present enjoying a trip to Florida in company with several friends.

—J. William Landis, superintendent of Smith, Kline & French Company's chemical and pharmaceutical laboratories, went to Baltimore on Friday night of this week to stay a few days.

—George W. Febr has purchased the store at Twenty-second and Jefferson streets, known as Young's Pharmacy, from Frank Schrack, who has been the proprietor for some time past.

—Harry Todd, a young pharmacy student of Trenton, N. J., became mentally unsound from overwork and study and created a scene on Sunday evening by undressing himself in church.

—The ratio of positions to clerks is still about the same, there being twenty-one positions advertised this week as compared with thirty-four clerks seeking employment.

—C. E. R. Smith, formerly with Shoemaker & Busch, is managing Finchback's pharmacy at Thirty-fourth and Walnut streets, West Philadelphia.

—F. Jordan has opened a pharmacy at the corner of Germantown avenue and Jefferson street.

BALTIMORE.

Drug Trade Bowlers.

Baltimore, May 21.—The contesting for prizes by the Baltimore Drug Trade Bowling Club came to an end last Wednesday. Only the trophies remain to be awarded now and this will be done to-morrow evening at the Diamond, when the members of the club will join in a smoker with the customary liquid accompaniments. Last week's contests were of more than ordinary interest because they decided fifth place, the honor going to Parke, Davis & Co., who won two out of the three games by 630, 723 and 741, against 670, 732 and 720 points. The games were lively, and the close scores held the attention of players as well as of the spectators to the end. The winners have every reason to congratulate themselves. At the beginning of the season they made a rather poor showing, and for some time afterward they remained in last place. By degrees, however, they developed more skill, passing Muth Bros & Co., and eventually overtaking Gilpin, Langdon & Co., who showed up quite strong at first and gave promise of landing much higher in the race. The Parke, Davis & Co. quintette is composed of some good material and another season of conscientious endeavor should place it in a position to give the best teams a hard run. Of a disappointing character was the work of the Root and Herb men, who started out with a rush, threatening to leave rivals so far behind as to make the contest a walk-over. As the season advanced, however, they fell off in their work and latterly did not get much above a fair average record. The silver cup, which must be won three times to become the property of any particular team, again goes to Sharp & Dohme, this aggregation having landed in first place last year. It was won by the Winkelmann & Brown Drug Company the first year and went to Gilpin, Langdon & Co. at the end of the next season. Should Sharp & Dohme lead next year, the trophy will remain permanently in the office of that firm. It was purchased with contributions from each of the drug houses represented in the club by teams and will be formally presented next Tuesday evening, together with the other prizes. M. T. Goldsborough, of Sharp & Dohme, has won the high average prize. Colonel Brent Waters, of the Root and Herbs, will get the high spare prize. Dr. A. R. L. Dohme, of Sharp & Dohme, and Andrew Baumgartner, of the Root and Herbs, are tied for the split spare prize and will roll off at splits Tuesday evening before the opening of the festivities. The different teams close the season in the following positions:

Teams.	Games Games Per		
	Won.	Lost.	Cent.
Sharp & Dohme.....	44	10	815
Root and Herbs.....	42	12	778
Winkelmann & Brown Drug Co.	38	16	704
James Bailly & Son.....	24	30	444
Parke, Davis & Co.....	15	29	278
Gilpin, Langdon & Co.....	13	41	241
Muth Bros. & Co.....	10	44	187

NOTES.

—Dr. C. W. Truitt, the well-known retail druggist at Roland Park, near Baltimore, who served with credit to himself and with benefit to his constituents in the last Legislature, has been appointed chief clerk to the State Insurance Commissioner, a position which has attached to it a salary of \$2,000 a year. The appointment is for two years, but incumbents usually serve during the term of the Governor who names them.

—A decree dissolving the Royal Drug Company of Baltimore was signed by Judge Sharp in Circuit Court No. 2 last week. The company had applied for dissolution April 11. The company is one of those recently incorporated, and the termination of its existence is held to be beneficial to the stockholders.

—Baltimore is shortly to have a colored druggist. A store in the northwestern part of the city is being fitted up. The vicinity is inhabited by a large colored population, and if racial ties outweigh other considerations the sable druggist ought not to lack custom.

—The wholesale and manufacturing drug houses of this city last week began to close their respective establishments at 5 p. m., with the exception of Saturdays, when the closing hour is 2 p. m. The arrangement will continue until the middle of September.

—Among the visiting druggists in Baltimore last week were Mr. Hodges, of Greenwood, S. C., who has been spending some days with relatives; J. N. Simonson, of Crisfield, Md., and J. S. Richardson, of Belair, Md.

—The Delmar Drug Company, of Baltimore, has been chartered at Dover, Del., with a capital stock of \$100,000. No other particulars are given.

CINCINNATI.

Druggists' Outing.

Cincinnati, May 19.—The first monthly outing of the Druggists' Bowling Club took place yesterday and the attendance proved that the club is the most popular organization of druggists that has ever existed in Cincinnati. As early as eight o'clock druggists and their friends were on their way to Macke's Grove at Bond Hill, where they found everything in good shape for a solid day's enjoyment. After a morning of practicing, the base ball teams and others present enjoyed a good, old-fashioned dinner. Then came the event of the day, the ball game. Although the teams were evenly matched, the Pill Pounders under Captain Rendigs won by the score of 20 to 14 from Captain Nicholas' Rollers. The one hundred yards race between Edward Kipp and Vic. Muehlberg was won by the former easily. The winner was presented with a box of "good" cigars and a bottle of Balsam whiskey. Peter Heister, an ex-druggist, umpired the contests and gave entire satisfaction. The next outing will be held at the same place on June 15, and all druggists and physicians are cordially invited to partake in the pleasure.

Ex-Druggist Suicides.

Cincinnati, May 19.—By firing two bullets into his heart early on the morning of May 16, Dr. S. B. Howard, the health officer of the village of St. Bernard, ended his life. Dr. Howard formerly conducted a drug store at Ghent, Ky., and was well known among the local druggists. A few years ago he sold his business and opened an office at St. Bernard and has since practiced medicine in that village. Dr. Howard was a Ph. G., also a graduate of the Ohio Medical College and a prominent Mason.

NOTES.

—Andrew E. Diebold has sold his Walnut Hills store to John Baner, who was in business at Milton and Sycamore streets. The latter immediately sold his store at that corner to Charles Schall, a well-known clerk. Both transactions were satisfactory to all the principals and will prove good investments for them. Mr. Diebold has not yet decided what to do, but may go to Washington, D. C., and enter business there.

—John Ruppert, the well-known druggist and one of the largest property owners on Price's Hill, was unanimously

elected treasurer of the Price Hill Improvement Club, organized a few days ago. Although the other officers elected were required to furnish bonds none was exacted from John.

—Mrs. Hanna Hollenbeck, the aged mother of E. F. Hollenbeck, druggist at Eighth and Baymiller streets, died Wednesday, May 16. She was seventy-seven years old.

—N. E. Smith is arranging to occupy his new store in Avondale about June 1. When completed the store will be one of the handsomest in this city.

—J. S. Greenwood, former clerk for H. H. Koenken, is now with Ralph Fre'berg as head clerk.

DETROIT.

The Strike is Over.

Detroit, May 19.—The "strike" at Parke, Davis & Co's is over and all the trouble at an end. All the men and boys who went out have been taken back by the firm.

As reported in the Era of the 17th inst., a meeting of the strikers and other employees was held last Saturday evening. The meeting was addressed by labor union leaders, and it was voted to form a labor union and apply for a charter. Temporary officers were elected and another meeting planned for Wednesday evening. In the meantime Alderman Tossey, prominent in labor union affairs of the city, arranged an interview on Wednesday morning between J. H. Smedley, treasurer of the firm, and a committee of the strikers. The result of the conference was satisfactory all around, so much so that the proposed meeting for the evening did not take place. The embryo organization of last Saturday night will die a natural death and nothing more will be done for the present, at least, towards forming a union.

Alderman Tossey says that Mr. Smedley agreed to give the men a nine-hour day and "time and a half" pay for all overtime work.

NOTES.

—Parke, Davis & Co, to-day entertained about one hundred and fifty members of the Delta Sigma Delta fraternity, in attendance at the Dental Convention here. Cigars and light refreshments were served at the plant and at the close of the survey street cars were placed at the disposal of the guests for a trolley ride about the city.

—Jas. E. Simpson, druggist, on Third avenue, had a bicycle accident on Thursday last. Obligated to turn out for a bad bit of pavement he collided with a horse and buggy and came out of the scrape with three ribs broken, his head cut and his nose smashed.

—George McDonald, druggist, at 284 Field avenue, is at present dividing his time between his own store and that of G. S. Purvis, Jefferson avenue. Mr. Purvis has recently married and the pair have gone to Europe on a wedding journey.

—Major James T. Vincent, of Shad N. Vincent & Son, druggists, of Lapeer, was married on Wednesday, May 16, to Miss Carrie E. Watkins, eldest daughter of ex-Mayor Hiram Watkins. The affair was the society event of the season.

—R. W. Young, of the sundry department of the Michigan Drug Company, has gone on the road for the firm. His territory will be Southern Michigan and Northern Ohio and Indiana.

—Dr. J. Lamoreaux, an old time druggist of Lansing and Detroit, after being out of business for some years, has opened a drug store at Delray, near Detroit.

—The dates for the N. A. R. D. meeting in Detroit have been definitely fixed—September 12, 13 and 14. Headquarters will be at the Russell House.

—Fred. J. Todd, of the Central Drug Store, is in the throes of setting in his new store, but it will be several days before the work will be done.

—Paul Bronner has given up his position in M. C. Pendleton's drug store and will go to Texas to engage in the dental manufacturing business.

—J. E. McDonald has opened a new store on the corner of Canfield and Beaubien streets.

CHICAGO.

Travelers Entertain.

Chicago, May 19.—The fifth annual meeting of the Illinois Grand Council of the United Commercial Travelers of America was held in Chicago last week, on May 11 and 12. The programme was handsomely gotten up and is somewhat of an entertainment in itself. Some of the bon mots contained in it are as follows: "The general 'glad hand' promenade and dance will be given in the ball room of the hotel, together with the midnight indigestion sideboard sortie." "Cab service from any depot to the Leland is fifty cents for one or two persons, including ordinary baggage. If you prefer to walk and see the town, 'ask a policeman.'"

The programme was as follows:

Friday, 9.30 a. m.—Business meeting. 1.30 p. m.—Business meeting. Friday, 2 p. m.—Ladies' reception, in charge of professional entertainers. 7.45 p. m.—Theatre party Saturday, 9.30 a. m.—Business Session to a finish. 2 p. m.—Tally-ho ride over the boulevards and through the parks of the South Side. Saturday, 7.30 p. m.—General admiration and social session. 9.30 p. m.—Dancing in the ball room of the hotel. Every feature of the entertainment was thoroughly enjoyed by the 160 guests and others present.

The tally-ho party started from the Leland at 2.30 p. m., Saturday. There were four tally-ho coaches and 160 passengers. Luncheon was taken in the German building in Jackson Park. All the principal parks were visited. Among the drug trade drummers who participated in the gaieties of the occasion were Messrs. Ed. F. Mallory, Harry G. McCracken, Louis Robie, George A. Showers, Charles Koebel, Eli J. Carpenter, James A. Davidson, Clarence Davidson, Mark L. Landeker, I. W. Blood, W. W. Hinckley, F. W. Hurlburt, J. Meyerfeld, and Edwin S. Brown. The ball was also a most enjoyable affair. No wall flowers, male or female, were present. The grand march was led by Silver King, of Springfield and Mrs. W. W. Hinckley, of Chicago.

Bohemian Druggists Entertain.

Chicago, May 19.—The Bohemian Pharmacists' Association met on May 15 at Pilsner Hall, Ashland avenue and Eighteenth street. The meeting was social and an entertainment and dance were given. Included in the programme were many vocal and instrumental numbers, after the rendition of which a reception was tendered the guests, following which came the dance. The committees were as follows: Arrangements—J. Stuchlik, L. L. Mrazek, J. F. Dushek, B. Lauber, T. J. Pelikan. Auxiliary—E. E. Pick, S. M. Zich and J. J. Zak. Reception—W. A. Stuchlik, C. G. Foucek, T. V. Vilum, J. J. Boehm, K. Kvitik, E. Patera, J. S. Mattos, V. L. Blahnik, M. J. Mastina, J. S. Mattas. Floor—H. Goldberger, M. J. Aulehla, O. S. Pavlik.

NOTES.

—John Nechvatal, the young drug clerk on Milwaukee avenue who was recently arrested on complaint on a charge from which the coroner's jury had already exonerated him, has been again released from arrest. The grand jury and the State's attorney found no evidence sufficient to warrant an indictment. Mr. Nechvatal some time ago shot a man who assaulted his crippled brother. The man was drunk and quarrelsome and attacked the Nechvatal brothers one evening as they were returning home from an entertainment. Seeing that his brother was in danger, John Nechvatal placed himself between him and the man who made the attack, when the latter, stepping back, made a motion as if to draw a weapon, whereupon John Nechvatal fired, killing his adversary. Mr. Nechvatal is a man of peace and has been greatly distressed over the affair. Although sure that he took the only course then possible to protect his brother and himself, he feels that to take the life of a fellow mortal under any circumstances is not a thing that can be done without profound discomfort and sorrow. While he has the sympathy of all his friends, they are glad that he has been so completely exonerated from all blame in the matter.

—It is reported that the Chicago Telephone Company

and some of the Englewood druggists have locked horns on the slot telephone problem. The company wants to put in slot 'phones and the objectors are kicking. Among those who have declared themselves "agin" the slot 'phone are Charles M. Kennedy & Company, C. M. Forbes, Engel's Pharmacy, Emil Thiele, W. T. Adams, F. D. Peirce, Charles Rice & Company, Wm. Mehl, Brumund's Pharmacy, G. Kravatsky, Frank C. Bush and H. G. Hartman & Company. The same old arguments are being threshed over. The objectors have secured legal advice and declare that they will fight to a finish. The reporter approached a druggist to-day who has a slot 'phone and loves it, and told him about the Englewood contest. "Well," he rather irreverently replied, "there are three men down that way who have formed a new trinity, made up of the father, the son and the holy terror. They'd fight anything."

—R. M. Wilson, 254 Ashland Boulevard, is the proprietor of the only parlor pharmacy in Chicago. He was formerly at Marshfield avenue and West Van Buren street and was obliged to move on May 1. Pending the completion of a new building at Ashland avenue and West Van Buren street, Mr. Wilson is conducting his drug store in the parlors of his residence. Here he has set up shelves and a soda fountain, where he dispenses drugs and soda water ad lib. The innovation is so popular that he has been compelled to employ an extra clerk.

—The Central Scientific Company of Chicago was incorporated last week with a capital stock of \$15,000, to manufacture scientific apparatus and chemicals. The incorporators are F. A. Lorenz, C. A. Bengston and T. L. Harris.

—The Lassen Manufacturing Company, of Chicago, has been incorporated to manufacture store and office fixtures. The capital is \$5,000 and the incorporators are V. Lassen, Walter Mankowsky and S. Mankowsky.

—Mr. and Mrs. Walter A. Brabrook have returned to Chicago after an extended trip through California and New Mexico. The health of Mrs. Brabrook, on whose behalf the journey was taken, is much improved.

—Albert E. Ebert returned last Sunday from Richmond and Washington where he had been in attendance at the meetings of the A. Ph. A. and the convention for the Revision of the Pharmacopœia.

—Fred P. Kennedy, who formerly owned a drug store at Fifty-fifth and State streets, is recovering from a prolonged siege of typhoid fever.

—The wife of Charles M. Kennedy, a well-known druggist at Fifty-ninth and State streets, presented him with a fine boy last Tuesday night.

—The capital stock of the College of Physicians and Surgeons of Chicago has been increased from \$100,000 to \$217,000.

THE NORTHWEST.

Poisonous Flavoring.

St. Paul, May 18.—Quite a hullabaloo was created here this week by the State Food and Dairy Department, which took a fall out of ice cream and ice cream soda. Some of these it pronounces dangerous. It is a bright red of the most appetizing appearance—that strawberry flavor analyzed in the State Chemist's laboratory—but the chemist says the color is caused by a harmful aniline dye. The same or similar flavors, it is suspected, have been sold to a number of druggists, fruit vendors and other dispensers of soda water in this city. More than one case of illness supposedly resulting from the poisoned ice cream was reported, and Assistant Commissioner White of the Food Department proceeded at once to collect samples of fruit juices and flavors used at drug stores. They will all be carefully examined and the further sale of any deleterious substances will be strictly prohibited. The druggists are not considered culpable, but the prosecution of the factory or factories producing the poisoned stuff may follow. How much of the adulterated fruit juice has found its way into St. Paul stomachs the authorities are as yet unable to state. State Chemist Hummel said that the aniline dye used in this instance was quite dangerous, and was found in liberal quantities. He described it as "azo-red." Pure fruit juices, he said, were nearly always brownish, and the beautiful red should be sufficient to arouse suspicion.

Department Store Overtures.

St. Paul, May 18.—The department stores of this city this week made a proposition to the retail druggists that they unite with these stores in making a slight reduction in the prices of certain standard proprietary medicines. The drug men held a meeting and refused to accept the proposition. It seems that the department stores have, like the druggists, been side-tracking patents and pushing their own preparations—those which are made for them. Meanwhile the manufacturers are becoming tired of the way in which their goods are consigned to the back shelves by the retailers and seem inclined to go back to them, their "first loves," and help them out in their competition with the octopus stores, if, indeed, in view of the results of the drug selling by these stores, competition, or anything approaching it, is possible. The manufacturers are in many cases so marking their goods that when they are found in the possession of department stores and being sold at cut rates, they can be identified, showing by the marks where and of whom they were bought. The department stores of Minneapolis made a similar price agreement proposal to the druggists there and with more success, for an understanding in the shape of a compromise was effected under which these stores and the druggists will hereafter operate in harmony. St. Paul druggists frown upon this action of the Minneapolis retailers, which is tantamount to the admission and recognition of the department stores as drug dealers.

NOTES.

—Emil Bull, who for the last five years had been running a drug store at Grand avenue and St. Albans street, died at the City Hospital last week from appendicitis, for which he was twice operated upon. He apparently rallied from the effect of the second operation and seemed to gain strength, when he suffered a relapse and had to return to the hospital. He continued to sink rapidly. Kidney complications appeared and added to the hopelessness of his case. Mr. Bull was born in Flekkefjord, Norway, thirty-three years ago. He came to this country a very young man, and had lived in St. Paul for the last ten years. He was successful in business and gained many friends through his genial disposition and sterling qualities. He had no relatives in this country. In his will Mr. Bull left legacies to thirteen people, including his clerks, Richard Butner and George Eckstad, and directed that his body be cremated.

—Successions: A. P. Dean, Minneapolis, by George S. Burch; John Kullmer, Jr., Dysart, Ia., by Matt Hummel; L. E. Brown, Parnell, Ia., by Coakley & Co.; Hoard & Hoard, Marion, S. D., by Hofer & Towle; D. F. Rae, Pelican Rapids, Minn., by Donovan Bros.; P. J. Johnson, Benson, Minn., by Meyer & Hunge; P. S. Ware, Warren, Minn., by the Johnson Drug Co.

—Dr. Andrew Tate, of Bayfield, Wis., died this week at the age of seventy-seven years. He was not only a druggist, but a physician, lawyer and merchant and established the first drug store at Bayfield.

—The Calkins Drug Co. has started at Hot Springs, S. D.; Allen & Watson at St. Anthony, Idaho; L. B. Harvey, at Colville, Wash.; and L. W. Kock at Lidgerwood, N. D.

—J. H. Wells, who some years ago used to keep a drug store at Merriam Park, has returned to Minneapolis, after several years' absence from the State.

—W. T. Gilmore, who has been running a drug store for some time past at Iona for Mr. Woodgate, has returned to this city.

—E. F. Tabler, Colfax, Ia., has been succeeded by Tabler, Marquis & Co. and not by T. Marquis & Co., as noted in the Era of May 3.

—Val. A. Hirschler has left Grafton, N. D., and gone to Good Thunder, Minn., where he expects to engage in the drug business.

—Daniel R. Noyes, St. Paul, is attending the Presbyterian General Assembly Convention at St. Louis.

—B. W. Boyd, druggist and jeweler of La Moure, N. D., has opened a branch at Monango.

—F. I. Johnson, Drayton, N. D., has filed an involuntary petition in bankruptcy.

—D. L. Eddy & Son, Brigham City, Utah, have opened a branch at Victor.

—MacGregor & Goodrich will start in at Detroit, Minn., June 1.

—The St. Anthony Drug Co., St. Anthony, Idaho, has sold.

—W. H. Finn, Medford, Minn., has removed to Foley.

—Buchanan & Quible, Burr, Neb., have dissolved.

ST. LOUIS.**The Strike and Its Effect on Trade.**

St. Louis, May 19.—The great street railway strike is still on, and of an estimated 800 cars ordinarily run by the lines of the St. Louis Transit Co. only about 150 are running and those under strong police protection. No cars are running on Broadway. Conferences are off between the company and the men, the latter have asked for a general sympathetic strike of all local labor unions and before this letter reaches its destination a general industrial tie-up may take effect. The effect already on business has been decidedly severe. Business with the down town drug stores has probably not been 40 per cent. of a normal average the past two weeks. While a little impetus may have been given to the outlying druggists along the line of patent medicines, sundries, etc., prescription business with many druggists has suffered greatly. Physicians with a large practice have had astonishingly few office calls, as patients have been unable to get to them, and this of course has had a direct effect on the prescription business. One druggist who has a number of specialists in the neighborhood says that where he has been getting an average of ten prescriptions a day from one doctor, he has not been getting much more than that a week since the strike. The novelty of riding in ash carts improvised into busses or of hanging on to a suburban line car by the eyebrows is wearing off and St. Louis is heartily sick of the strike and all that pertains thereto.

J. M. Good Assaulted and Robbed.

St. Louis, May 19.—Prof. J. M. Good, Dean of the St. Louis College of Pharmacy, was robbed and severely beaten by footpads about 11 o'clock Monday night within a few feet of his residence, 3834 Westminster place.

Prof. Good closed his drug store, corner of Jefferson and Olive streets, shortly after 11 o'clock and started home. Just south of Olive, on Spring avenue, he noticed two men approaching him, but at first paid no attention to them. As the men neared him they separated in such a manner as to force Prof. Good to walk between them. He did so and received a stunning blow in the face. A second blow felled him, and while one man proceeded to beat him the other rifled his pockets.

Fortunately for Mr. Good he had left his money at the store, and had nothing but a gold watch, valued at \$150. This the thieves secured, and after satisfying themselves that he had nothing more of value about him they fled. Prof. Good, dazed by the blows of his assailants, staggered home. A physician was summoned and found him in a serious condition. He could give no description of his assailants. Prof. Good is suffering principally from a scalp wound and the nervous shock. He has been confined to his home all the week as the result of the assault, but is expected to be able to come down to the store early next week.

Wholesalers and Manufacturers' Excursion.

St. Louis, May 17.—The second excursion of the St. Louis Wholesalers and Manufacturers, to enable the "heads of houses" to come into personal contact with their trade, was held April 25 and 26, to Chillicothe, Mo., and return, stopping at practically all the towns on the route. About seventy-five business men were on board, besides a band, and members of the press. The drug and allied trades were well represented this time, although there was not a single drug man on the first excursion to Terre Haute in January. The Meyer Bros. Drug Company was represented by J. W. Estes and C. E. Cochran, the J. S. Merrell Drug Company by George R. Merrell, the Kent & Purdy Paint Company by Mr. Kent, and the Mound City Paint & Color Company by Ed. G. O'Rear, the Murphy Varnish Company by John M. V. Flesh and the Standard Varnish Works by O. T. Wilson.

To Wholesale Drugs.

St. Louis, May 19.—The Mound City Paint & Color Company, one of the largest manufacturing concerns in their line in the West, are to enter the drug trade in a wholesale way. They will handle, it is said, only chemicals and pharmaceuticals for the present. The immediate incentive for this departure, it is said, is the incursion into the paint trade by a large wholesale drug house, who are now grinding their own mixed paints. Mr. Morris Gregg, president of the Mound City Paint & Color Company, when seen to-day, said that it was true that they intended handling some specialties in the drug line, but had no stock on hand as yet, and was not prepared at this time to go into details in the matter, especially as they had not yet decided what the scope of their drug business would be.

NOTES.

—Fred. E. Whitcomb, who, after fourteen years as head clerk for the late M. W. Alexander, opened in business for himself at the corner of Garrison and Washington avenues a year ago this month, says his records show that the store has filled 14,577 prescriptions in that time—from May 6, 1899, to May 6, 1900. He uses these figures in a neat card he has just issued and which is quite a model in the way of a dignified exploitation of the prescription end of a retail drug business. "Your prescription," it says, "is checked by two prescription men before it leaves the dispensing room, thereby rendering mistakes impossible. My force of five prescription men allows every prescription to receive the thought and necessary time required for its proper compounding."

—E. F. Klein, of the Klein Pharmacy Co., Hot Springs, Ark., and president of the Arkansas Association of Pharmacists and a member of the Board of Pharmacy of that State, was in the city to-day on his return from the A. Ph. A. Mr. Klein says that the drug trade in his State is in a healthy condition. There is little cutting and the agreement reached among the Hot Springs druggists two years ago is being strictly adhered to.

—A. E. Suppliger, proprietor of the Arcade Pharmacy, Arcade and Vernon avenues, has bought the Bayard Avenue Pharmacy, corner of Bayard avenue and the Suburban tracks, from Dr. W. W. Deatherage, and will run it as a branch store. Mr. Suppliger will remodel the store, white enamel the fixtures, etc. Erwin G. Roth will manage the store. Dr. Deatherage retires from the drug business to devote his entire time to his practice.

—Hiller Waldener, the genial old "general factotum" around the store of L. A. Seitz, is no more. He died at the Alexian Bros. Hospital last Tuesday. He had been in the employ of the Seitz family for years and there were few men occupying so humble a position so well known to the drug trade here. Mr. Seitz feels quite lost without his faithful old employee.

—The firm of Noll & Christman, proprietors of the Good-fellow avenue pharmacy, has been dissolved, Mr. Christman retiring and Martin J. Noll continuing the business. A change has also occurred in the Academy Pharmacy, owned by Noll, Collins & Christman, Messrs. Noll & Christman retiring and John P. Collins continuing the business.

—Burkard Brothers have bought the drug store of the late G. F. Seidlitz, at No. 4300 St. Ferdinand street. Jacob Burkard will manage the store, while Ed. Burkard continues as manager of the Market Street Drug Company.

—The annual meeting of the St. Louis Apothecaries' Association, which was to have been held Wednesday afternoon of this week, has been postponed on account of the street railway strike until Thursday, May 24.

—Major A. G. Anderson, the J. S. Merrell Drug Company's veteran representative in Southeast Missouri and Arkansas, is critically ill at his home in this city, and fears for the worst are entertained by his friends.

—C. W. Thomas, buyer and manager of the sundry department at the Moffitt-West Drug Company, wears the traditional happy smile incident upon the arrival of a ten-pound drug man at his home this week.

—G. B. Self, of the local branch of Ell Lilly & Co., has the sympathy of his friends throughout the city and State in the death of Mrs. Self, nee Lillian Jameson, which occurred May 3 at San Antonio, Tex.

—Steve Kohlenbeck, of Schultz & Kohlenbeck, druggists, Eleventh and Chestnut streets, has resumed the management of the store since his medical studies for the season are over with the closing of the colleges.

—Mr. Barnard, a drug clerk of Aurora, Mo., has bought the Suggett drug stock at Flora, Ill., and will move it to Aurora and run the business under the name of the Barnard Drug Company.

—S. J. Kiefer has sold his drug store, St. Ann's and Lafayette avenues, to Dr. T. L. Rives, formerly in the drug business in St. Louis, but of late a practicing physician at Floersant, Mo.

—Dr. Ed. C. Shannahan, proprietor of the Marion Simms Pharmacy, has returned from Denver, where he has been for the past nine months. He now owns an interest in a Denver drug store.

—John H. Allen will be home this week from his extended Iowa trip in order to attend the annual meeting of the St. Louis Apothecaries Association, which occurs Wednesday afternoon.

—Ed. Bauer, who has been representing the Luyties Homeopathic Pharmacy Company in Ohio, is here, and when he goes out again it will probably be to more Eastern territory.

—The Alumni Association of the St. Louis College of Pharmacy will give its first boat excursion of the season the evening of May 24, on the steamer City of Providence.

—The Druggists' Cocked Hat League bowled the final games of the season Thursday night, and the results of the series and prize winners will soon be announced.

—Claud Ferguson, of Victor & Ferguson, Moberly, Mo., was in the city one day this week on his way to Hot Springs, where he will spend two or three weeks.

—Frank L. E. Gauss, manager of the St. Louis house of the Searle & Hereth Company, returned Tuesday from a visit to headquarters at Chicago.

—F. M. Norris, formerly city salesman for Moffitt-West Drug Co., returned last Monday after an extended Southern trip much recruited in health.

—W. S. Wright, an old druggist of Centerville, Ia., but who has been in Manitou, Col., since 1891, will open a drug store at the latter place.

—Ed. T. Brown, formerly with Bruce & Co., Omaha, will represent the Moffitt-West Drug Co. in Northern Missouri and Southern Iowa.

—H. F. A. Spilker and family sail for Europe to-morrow. W. Guericke will be in charge of the store in his absence, assisted by Henry Huegel.

—The Hoo Hoo Drug Company, Patterson, La., has been incorporated with a capital stock of \$5,000, and will open a new drug store.

—Theo. Ruckersfeldt, the pharmacist of Spring and Laclade avenues, is moving his store to No. 220 North Taylor avenue.

—There will be a "S. & H." ball team in the field shortly. Frank L. E. Gauss is now organizing it among the retail druggists.

—Edward Bindschadler, secretary of the J. S. Merrell Drug Co., has been ill and confined to his home for several days past.

—Wm. Fahrengrogh, now with Brown & Harris, East St. Louis, will manage the new Albright pharmacy at Kirkwood.

—Dr. E. C. McCormick, of Farmington, Mo., and L. H. Thomas, of Bonne Terre, Mo., were visitors this week.

—J. F. Queeney, drug buyer for the Meyer Bros. Drug Company, has gone to Hot Springs for a little rest.

—T. D. West, of the Wm. S. Merrell Chemical Co., Cincinnati, was in St. Louis several days this week.

—S. C. Hall, of Garland, Tex., is moving into a new brick building and putting in new fixtures.

—M. E. Cadenhead, of Carthage, Miss., will open a new drug store at Hattiesburg, in the same State.

—J. W. Vance, Rockwall, Tex., is putting in new fixtures and remodeling his store generally.

—G. A. Ludwigs will open his new drug store at East St. Louis in about two weeks.

—Sam C. Hall, a well-known merchant of Garland, Tex., will open a drug store there.

—Theo. J. O. Engelskind, Ph. G., has accepted a position with J. M. Good.

- L. E. Griffith, druggist of Terrell, Tex., is here consulting an aurist.
- Mr. Maples, of Maples & Co., Longmont, Col., was a visitor this week.
- J. T. Crysup, of Maples, Tex., is opening a new store at Crockett.
- J. M. Remington will open a drug store at Oklahoma City, Okla.
- McCurnin & Henry will open a drug store at Des Moines, Ia.
- J. W. Hine will shortly open his new store at Fort Dodge, Ia.
- J. M. Stephenson will open a new drug store at Morton, Miss.
- Adams & Cooper will open a drug store at Marshall, Mo.

MONTREAL.

—The Major and Minor Board of Examiners held their semi-annual examinations the last week in April at the Montreal College of Pharmacy. Twenty-seven candidates presented themselves for the Major and sixteen for the Minor examinations. Of these the following passed in order of merit: As licentiates in pharmacy—J. N. Farley, Henri St. Georges, Gaston St. Jacques, O. H. Jansey, J. M. McFarlane, J. O. Quenneville, H. A. Genereux, J. A. A. Drouin, J. Ritchie, S. A. Lamoureux, E. J. Nadeau, R. Pasgrain, J. Pinsonnault, L. E. B. Brown, J. B. Bisailion, J. W. Bernard and G. P. Plamondon; as certified clerks—J. Y. Murray, E. O. Lortie, J. P. H. Massicotte, J. A. Drarden, S. Moisan, J. E. Hillman, J. O. Mathieu, W. J. Shea and J. C. Denault. The written and oral examinations included chemistry (theoretical and practical); materia medica, pharmacy, botany, practical dispensing, reading of prescriptions, physics, weights and measures, etc. The examiners were R. W. Williams, J. E. Ray, W. H. Chapman, A. J. Laurence, J. R. Parkin and Henri Lanctot. It is a long time since such a large percentage of students have been so successful in getting through, but a great number considered the papers given at the examinations not nearly as difficult as of former years. At the preliminary examinations, eight students passed out in order of merit as follows: J. P. Gagnon, G. H. Gadois, L. Chaurat, A. A. Lebevre, J. Belanger, J. B. Lavoie, Charles Lippins and J. Lafontaine.

—Evans & Sons, Limited, have won an important case in Toronto against S. B. Chandler & Co., of that city. The former sued the latter for \$300, being a balance of account due. The defendants claimed a contra account, contending that Evans & Sons had made an agreement to purchase a certain line of goods from them. The judge in summing up remarked that neither in the correspondence which passed between the two firms nor in the evidence adduced at the trial was there any proof of an agreement. He therefore gave judgment in full, with costs for the plaintiff.

—The action in the Court of Appeals taken by the Pharmaceutical Association against J. E. Livernois, of Quebec, has been dismissed with costs. It is the intention of the association to push this case, and they have already entered it for hearing in a higher court, and if necessary will bring it to the Privy Council of England. The association feels that there is a gross miscarriage of justice, the case being that of an unqualified man selling drugs and chemicals without a license, and evading the pharmaceutical law in a most flagrant manner.

—The many friends of P. Oscar Anderson, corner of St. Antoine street and Atwater avenue, will hear with pleasure of the success which he has attained at Bishops College. He has just graduated as M. D., and not satisfied with the ordinary run of honors, has walked away with the gold medal.

—Fagnette's new pharmacy at the corner of Fafard and Congregation streets, is one of the most stylish at the "Point." It is finished with white enamel relieved with gold, while the number of plate glass mirrors tends to make it even brighter than it already looked.

—J. E. Roy, Quebec, who is giving up business, has sent in his resignation as examiner in materia medica for the Pharmaceutical Association, also his position as mem-

ber of the council. His successor will be appointed in June.

—O. Brault, corner of St. Antoine and Guy streets, has purchased the pharmacy of C. M. Desilets, on St. Denis street. His former stand he still keeps running but has advertised it for sale.

—Herbert Reynolds, Wellington Medical Hall, will open a branch store next month in one of our western suburbs.

—P. O. Giroux has bought John I. Lyons' branch store, corner of Inspector and St. Antoine streets.

ACTIVE IN WEST VIRGINIA.

—What we would like to see:—
More active general work by the N. A. R. I.
That all organizations and druggists join this association.

—More effort on the part of manufacturers and wholesalers to keep their goods out of the hands of cutters and department stores.

—Upholding of fair and honest prices on all of our goods and prescriptions.

—More brotherly feeling among the members of our profession and last, but not least, the early

Repeal of the war tax.

—At the next State election this Fall one of our fraternity, W. W. Irwin, Democrat, and Dr. D. H. Taylor, Republican, will be rival candidates for the office of sheriff of this county, the best paying office in the State. The members of our association are looking for good times between now and the election.

—The Wheeling, W. Va., Druggists Association will meet Wednesday, June 6, when the following elected officers will be duly installed: President, John Klari; vice-president, L. A. Lallams; secretary, W. C. Gordon; treasurer, John Coleman. An outing of the association will be determined on at this meeting.

—Business has been very good with most of our druggists this year. Several new soda fountains have been put in this spring by some of our druggists, but five cent ice cream soda is being discouraged by the leading druggists and confectioners.

—J. T. Handlan, of the South Side, has returned from a wedding tour and is receiving hearty congratulations from his many friends.

—Wm. Schupp, a former clerk at Geo. Ebeling's pharmacy, has returned from Asheville, N. C., much improved, in health.

—The card system for drummers has been adopted by our association and will be in full force in a very short time.

—Fred. Gulker, the clerk at John Coleman's pharmacy, expects to visit the Paris Exposition this summer.

—H. C. Stewart, of the South Side is improving, after a long illness.

There is Money in It.

A druggist often has an opportunity to increase his profits by looking after the wants of the physicians who send their prescriptions to his store. If doctors knew that

they could purchase anything needed in the shape of furniture or instruments of their druggists they probably would do so, and the druggist can get the profit by simply acting as a middleman and without handling the goods at all. A case in point is the matter of physicians' chairs and cabinets, of which W. D. Allison Co., Indianapolis, are leading manufacturers. Get their catalogue, and see if you cannot sell your

doctor what he wants just as cheaply as he can get it by ordering direct.

Bickmore's Gall Cure.

Few veterinary remedies are better known throughout the country or have a more general sale than Bickmore's Gall Cure, made at Old Town, Me. Retail druggists only are invited to write for samples and trial offer.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

ALABAMA.—Eufaula.—Beauchamp & Milton, succeeded by Beauchamp & Hill.

ARKANSAS.—Arkadelphia.—C. P. Thomasson, succeeded by R. L. Thomasson.

CALIFORNIA.—Colfax.—W. W. McCormick, new store.

Hanford.—J. W. Rhoads & Co., sold to W. M. Helton & Co.

Needles.—Needles Drug Co., new store.

San Anacraos.—H. E. Lewis, sold to Peters & Wall.

COLORADO.—Colorado Springs.—Smith-Wilson Drug Co., damaged by fire.

CONNECTICUT.—Rockville.—W. A. Metcalf, No. 5 Union street, sold to J. F. McGann.

GEORGIA.—Quitman.—J. R. Avera, succeeded by Avera & Burgers.

Rome.—C. A. Trevitt, sold to J. E. Witherspoon.

M. D., and William Clare; store known as Opera House Drug Store.

Washington.—J. F. Jones, deceased.

ILLINOIS.—Knoxville.—J. S. Brewer, succeeded by C. W. Brewer.

Tampico.—F. E. Glassburn, succeeded by Theo. W. Steck.

INDIANA.—Bloomington.—G. W. Norman, sold to Wiles Drug Company.

Frankfort.—Ashman & Gard, succeeded by Ashman & Calem.

Indianapolis.—W. F. Reynolds & Co., No. 931 North West street, receiver appointed.

Plymouth.—G. Blain & Co., sold to J. Shadel.

INDIAN TERRITORY.—Bristow.—Samuel Ellis, succeeded by McElhinney & Ellis.

IOWA.—Bade.—S. M. Gangestad, succeeded by Watson, Gangestad & Co.

IOWA.—Stacyville.—A. J. Amos & Co., sold to W. O. Sengers.

KANSAS.—Webber.—A. L. Dunning & Co., sold to H. C. Hawler & Co.

MAINE.—Biddeford.—F. G. Warren's drug store, No. 153 Main street, sold to Charles F. Traylor & Co.

Mechanic Falls.—Mrs. J. C. Walker, sold to W. G. Pulsifer.

MASSACHUSETTS.—Boston.—Albert H. Eayrs, No. 119 Green street (Jamaica Plain), deceased.

Haverhill.—J. B. Simas & Co., corner of Main and White streets, damaged by fire.

MICHIGAN.—Keeler.—Konklin & Son, sold to Claude Sykes.

Midland.—A. D. Salisbury, sold to Smith & Smith.

MISSOURI.—Buckner.—E. C. Roth, sold to Wilson Drug Co.

Fair Grove.—Cowden & Bryan, sold to J. M. Butts.

St. Louis.—Chas. Breidenmeyr, 326 S. Broadway, sold to B. J. Otto.

Salisbury.—Wilhite & Tindal, succeeded by Collins & Tindal.

Sedalia.—Servant-Harker Drug Co., now The Arlington Pharmacy.

MONTANA.—Dupuyer.—C. M. Lanning & Co., sold to Thomas E. Major.

NEBRASKA.—Peru.—W. D. Abbott, sold to E. L. Uptegrove.

OHIO.—Bethel.—Town & McCall, succeeded by John McCall.

Canal Dover.—G. C. Goodrel & Co., sold to Frank E. Le Page.

Jeffersonville.—C. W. Davis, deceased, succeeded by J. E. Davis.

Wauson.—C. J. Nachtrieb, sold to Fink & Haumesser.

OKLAHOMA.—Chandler.—Samuel Ellis, succeeded by McEl Hinney & Ellis.

PENNSYLVANIA.—Beaver Falls.—B. E. Todd, 1128 7th avenue, sold to John A. Corman.

Butler.—Jonesboro Crystal Pharmacy in D. D. List is an error; should read Johnston's Crystal Pharmacy.

Indiana.—E. W. Allison & Co., succeeded by E. W. Allison.

New Haven.—Gaddis & Belghy, corner 1st and Main streets, succeeded by W. A. Belghy.

Philadelphia.—Emil T. Haenchen, 2844 Havenford avenue, damaged by fire; insured.

Pittsburg.—W. D. Kearns, of Kearns' Pharmacy, 161 5th avenue, deceased.

Wyoming.—Edward Wilson, sold to N. Netherton.

RHODE ISLAND.—Newport.—W. H. Stratford, 137 Bellevue avenue, sold to J. R. Lorah.

TENNESSEE.—Lewisburg.—W. G. Patterson, succeeded by Patterson & Burt.

VIRGINIA.—Alexandria.—Wm. T. Smith, corner Columbus and Princess, deceased.

Berryville.—W. Richardson, sold to J. C. Avis.

UTAH.—Cedar City.—Cedar City Drug Company, sold to B. F. Knell.

WASHINGTON.—Fairhaven.—D. Alverson, sold to Fred. P. Offerman.

Colton's New Gelatin Pill Coating Machine.

Arthur Colton, Detroit, probably the leading manufacturer in this country of general pharmaceutical machinery, has designed and made a new gelatin pill coating machine especially for manufacturers just engaging in the pill business, or where only a small capacity is required. On this machine 25,000 pills can be made by one operator in a ten hour day; it does the work precisely the same as on his larger machine, and plates can be furnished for coating any size pill or for different sizes as required. It is very simple in construction and only requires to be belted from the main shaft to be ready for use. Send for an illustration of it.

Five Drops.

All wholesale druggists sell Five Drops, the new specific for rheumatism, neuralgia, asthma and catarrh. The attractive trade mark adopted for it is shown herewith. It is an internal and external remedy, and is claimed by the proprietors to be an absolute specific for the above ailments. The Swanson Rheumatic Cure Co., 160 Lake street, Chicago, make it, and will send advertising matter to any druggists that want it.

(TRADE MARK.)

Foamaline.

Ice cream made with Foamaline has that smooth pasty appearance so much admired by lovers of good cream, and it is bulkier and will keep longer with less ice and less labor than cream made in the old-fashioned way. No eggs nor heat are required, the Foamaline is simply mixed with the dry sugar, the cream or milk added, and it is ready for the freezer. A full half pound package will be sent for 25 cents to any druggist who wants to try it, and who will mention the Era.

Fenatone.

Fenatone is made in Copenhagen, Denmark, and the sole agency for the United States and Canada is the Fenatone Co., 165 William street, New York. It is an antipyretic and analgesic, and is dispensed in powders, pills, capsules or tablets. It is administered in doses of from 2 to 12 grains. It is liberally advertised to the medical profession, and should be kept in stock by the druggist. Price lists and printed matter will be furnished by the United States agents.

Clarke's Pure Rye.

For a pure rye whiskey and one that will sell because it is known from one end of the country to the other, we confidently recommend Clarke's Pure Rye. The druggist is not making an experiment when he puts this brand on his shelves, for the name sells it without any urging on the part of the salesman. It is sold in bulk in ten gallon casks, eight years old, and in bottles, six years old, bottled under government supervision.

Gordon's Glycerin.

The standard for nearly fifty years and on the market still longer, Gordon's Chemically Pure Glycerin is still in the front rank of pure glycerins. All jobbers carry it in stock, and it can be easily obtained from them in any quantity and at prices no higher than brands not so well known are sold for.

—The class of 1906 Massachusetts College of Pharmacy, held its class day exercises and reception May 16. The latter took place in Pierce Hall, Copley Hall, Boston, and was followed by dancing.

STATE OF TRADE.

Nothing Doing in New York.

New York, May 22.—There has been very little inquiry for round lots of the various drugs and medicinal chemicals during the past week, and routine jobbing transactions have comprised the bulk of the business reported. The general market, however, has retained a fairly steady undertone, and there is no indication of weakness or disturbing influences in any department. The expected improvement in quinine has not yet materialized, but there is no abatement of firmness on the part of outside holders, and it is evident that dealers are still of opinion that manufacturers' prices will be advanced in the near future. The shipments of bark from Java during the first half of May show a material increase over those of the previous corresponding period, but coming to a practically bare market, they are not expected to have any unfavorable influence on values, as the stock of raw material in the hands of manufacturing consumers is only normal. Opium has moved only moderately, and the tone of the market has continued easy, with more or less competition among dealers anxious to secure orders from the consuming trade. Powdered from first hands is a shade easier.

Domestic refiners of camphor announce a further advance of 1c. per pound in their quotations, owing to a continued strong position of crude and an improvement in prices of foreign refined. Castor oil is another article which is moving upward under similar influences. Advancing with the current, the market for turpentine, the yield will be unusually small and values correspondingly higher, and consequently manufacturers of all grades of oil are firmer in their views. In the department of essential oils the only feature of interest is a firmer market for Turkish geranium, due to a scarcity and higher prices abroad. Menthol continues to reflect an easy undertone, and quotations show a decline as a result of keen competition among dealers and a lower import cost. There is no demand of consequence, and purchases have been limited mainly to broken lots. The market in consequence presents a decidedly tame appearance.

Lower quotations for corn have caused a decline of 1c. per gallon in prices of grain alcohol by leading distillers, but there is no material improvement in demand, and the movement into channels of consumption continues of a routine character. Balsam of Peru has continued easy, and quotations have been further reduced 5c. per pound owing to fairly liberal stocks and lack of important demand. Other balsams are without new features of noteworthy interest. Liquid strax is decidedly firmer on account of steadily diminishing stocks both here and abroad, together with reports from primary sources of supply that the Government has prohibited further operations by gatherers for a period of three years. It is claimed that the interference on the part of the Government was found necessary, the devastation of the trees by collectors having reached a point where the output was likely to be exhausted.

Among the roots Mexican sarsaparilla is in more abundant supply owing to further arrivals, and values are fractionally lower. Jalap is firmer. The stock in first hands has been taken out of the market by large consumers, and with the available supply considerably reduced, dealers have advanced quotations fully 1c. per pound. Lily of the valley root is very scarce and decidedly higher.

Bad Weather Affects Trade.

Boston, Mass., May 19.—The disagreeable weather conditions have more or less interfered with trade. In the general market dulness has ruled the week, and there has been practically no change in prices. There are some signs of an advance in quinine, and if manufacturers bring this about it will occasion no surprise. Morphine and opium are very quiet. With the exception of lower quotations on English bleaching powder, there has been but very little activity in the general list of chemicals, only a fair trade being reported. Grain alcohol is fairly active in point of demand, while there is a tendency to quiet conditions on the wood. Most of the raffia has had only small dealings, with no new features in the market. Waxes hold steady on fair sales.

Still Dull in Quakerdom.

Philadelphia, May 19.—Business is still dull in Philadelphia and the reports of a drop are general from both wholesalers and retailers. The market is still quite firm, however, unusually so for this time of year and in consideration of the slacking up in business, according to several large dealers. Camphor has advanced a cent a pound, but that is the only change of importance this week.

The retail trade is not very heavy in the summer in most city stores, but the dull season usually commences in July, so that the present condition is viewed with sorrow by most of the members of the trade.

Trade of Satisfactory Proportions.

Baltimore, May 21.—Business during the past week has been of satisfactory proportions. In the out-of-town

THE DEMAND for ABBEY'S SALT will be continuous, owing to the exceptional character of our steady advertising.

THESE DRUGGISTS SAY:

Brookline,
March 28, 1900.
The Salt sells well and there has been an increase in the sale of same.
(Signed) Wm. H. Butler.

Boston, Mass.
March 28, 1900.
The sale of Abbey's has been very fair during the last few weeks.
(Signed) A. D. Marcy.

Dorchester, Mass.
March 28, 1900.
We are selling a slight increase in the past few weeks.
(Signed) A. M. Baker.

701 Centre Street,
Jamaica Plains, Mass.,
March 28, 1900.
We have noted an increase in the sales of Abbey's Salt recently.
(Signed) Chas. B. Rogers & Co.

40 Water Street,
Newburgh, N. Y.,
March 28, 1900.
The demand for Abbey's Salt has increased.
(Signed) Theo. Merritt's Sons.

ABBEY'S SALT is a clean remedy, honestly advertised, prescribed and endorsed by physicians the world over. Abbey's Salt reaches the consumer through the drug trade only.

...THE...

ABBEY EFFERVESCENT SALT CO.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

jobbing trade several dull days were experienced, but the local movement appears to have been fairly brisk. At any rate, it shows a decided improvement over the previous week and seems to possess all the elements of permanency. The manufacturers of pharmaceuticals, though not quite so crowded with orders as during the first four months of the year, continue to enjoy a prosperous trade, and work after hours in the laboratories frequently becomes necessary. Retailers note a falling off in prescriptions and comparative quiet in other departments. The market for botanicals and crude drugs exhibits no extraordinary features, while the business in heavy chemicals keeps up quite well.

Very Good in Detroit.

Detroit, May 19.—Business here has been very good, especially during the last three days. There has been a big demand for carboric acid, probably because it is housecleaning season. Retailers report a big prescription trade.

Business Remains Good in Chicago.

Chicago, May 19.—Among manufacturers country orders are coming in in good volume and collections, both city and country, are good. Jobbers report business in about the same volume as during the last two weeks. Conditions appear to be right for a very satisfactory trade during the summer and fall. Labor troubles are now the only clouds on the horizon. Money is easy and collections good.

Trade Again Satisfactory.

St. Paul and Minneapolis, Minn., May 18.—Retailers who were last week complaining that their prescription work was undergoing a lull, now report—most of them—that this branch of their business is again quite satisfactory. These and all others unite in expressing gratification with the general conditions. The only exception is found in the soda water work, which has been partially vetoed by four or five days of unseasonably cold weather. It is hardly possible that prescriptions will be very numerous two weeks hence, because June is always so healthy—the healthiest month of the year in the Northwest, in fact—that the doctor business almost goes begging. Among jobbers the situation continues all that can be desired and considerably better than in any previous spring. Local trade is interfered with to an extent by the great street railway strike.

Country Trade Good; Local Bad.

St. Louis, May 19.—Country trade keeps up well for the season. A noticeable feature is the number of opening stocks being sold. Local trade is interfered with to an extent by the great street railway strike.

N. W. D. A. CHANGE OF DATE.

At a meeting of the Committee on Arrangements and Entertainment of the National Wholesale Druggists' Association, held at the Auditorium Hotel, Chicago, on May 15, it was decided to change the date for holding the convention from the week beginning September 10 to the week beginning September 17.

Those who have engaged accommodations at the Auditorium for the week of the 16th will have their bookings advanced by the management of the hotel to the week of September 17.

Among the entertainment features being arranged for will be a trip by steamer on Lake Michigan to the city of Milwaukee or some other point of interest.

J. R. KATHRENS,
Chairman Press Committee.

—At the meetings of the Erie County, N. Y., Board of Pharmacy, held May 5 and 12, the following were granted licenses: Assistant Pharmacists—Leland James Waldock, Walter Erwin Strong, Jesse Monroe Parker. Pharmacists—Roscoe Henry Bard, John C. Peterson, Clarence Newton Reese, Arthur Gerton Sortore, Lee William Miller, Frank H. Smith, George Burgess Jenkins, William Lawson Milne, Chas. Forrest Larzelere. The Erie County Pharmaceutical Association will hold a meeting June 6 to elect five members of the new State Board.

—The North Carolina Pharmaceutical Association will hold its annual meeting at Wilmington, July 18-19. The Board of Pharmacy will meet at the same place July 17.

—The Tennessee Druggists' Association meets at Kingsport Springs, July 18.

—The Wisconsin Board of Pharmacy meets at Marinette, June 13.

MARKET REPORT.

NEW YORK MARKET.

New York, May 22.—Business in a general way has continued of a staid character, and the tame condition of affairs is shown in the exceedingly limited number of price changes and the absence of developments of more than ordinary consequence. The market, however, retains a fairly steady tone, and dealers show no inclination to force business through the medium of concessions.

OPPIUM.—Small parcels have received rather more attention, but there is only a light demand, and the market retains a tame appearance, with quotations nominally unchanged at \$3.50@3.50 for 9 per cent. and \$3.45@3.60 for 11 per cent. the outside figures for single pounds.

POWDERED OPIUM.—A continued quiet featureless market is reported, with transactions limited to the light current wants of consumers, and jobbers are still quoting \$4.45@4.65 for 13 per cent. and \$5.15@5.35 for 16 per cent. according to size of order.

MORPHINE.—There is a continued satisfactory movement into channels of consumption, and the market has ruled steady, with quotations unchanged on the basis of \$1.65@1.65 in ounces and \$2.50@2.50 in eighths, according to brand.

QUININE.—The expected advance in manufacturers' prices has not yet materialized, but holders continue firm in their views, and there is an entire absence of discouraging features. There seems to be very little doubt that an improvement in demand would result in an immediate advance in values, and for that reason outside holders are not anxious sellers. Meanwhile quotations remain steady at 31¢@32¢ for bulk in 100-oz. tins, 33¢@34¢ in 50-oz. tins, and 88¢@90¢ in ounce vials.

ALCOHOL.—Grain is easier from first hands, owing to lower prices of corn, and jobbers have reduced quotations to \$2.45@2.46 in barrels and \$2.54@2.75 for small parcels, according to quantity. Odorous is correspondingly easier, and its revised figures are \$2.47@2.48 in barrels and \$2.50@2.75 for less.

CASTOR OIL.—Manufacturers' prices are higher on account of a poor outlook for the current bean crop, and jobbers have advanced their quotations on the basis of 14¢@15¢ in cases and 15¢@16¢ in cans. Crystal 1c. higher.

CAMPHER.—Values continue to harden under the influence of primary market for crude, and domestic prices for foreign refined. Domestic refiners have further advanced their quotations 1c. per lb., and the revised jobbing range is 60¢@61c. in bids, 61¢@62c. In cases for brokers, 61¢@62¢, according to quantity.

MENTHOL.—Foreign markets are easier, and with the demand here light and unimportant, jobbers' quotations have been reduced to \$3.10@3.20.

BALSAM PERU.—Continued weakness has prevailed throughout the markets, and quotations in a jobbing way have been further reduced to \$1.50@1.75, as to quantity.

OLIGERANUM.—Turkish is firmer on account of scarcity, and jobbing quotations have been marked up to \$4.75@5.25, as to quantity.

SARSAPARILLA.—Further arrivals of Mexican from primary sources have materially increased the available spot supply, and with the demand slow, the market is easier, with quotations for jobbing quantities showing a decline to 19¢@20c. for whole, 21¢@22c. for cut and crushed, and 23¢@24c. for powdered.

JALAP.—The stock in first hands has all been taken for consumption, and the tone of the market is firmer, with quotations for jobbing quantities advanced to 20¢@25c. for whole, and 27¢@30c. for powdered.

LILLY OF THE VALLEY ROOT.—Stocks are very much depleted, and owing to scarcity, holders have marked up quotations for small lots to 40¢@50c.

CALIFORNIA COLLEGE OF PHARMACY.

The commencement exercises of the Department of Pharmacy, University of California, were held at Berkeley, May 16. The graduating class numbered thirty-five, as follows: L. M. Aguirre, G. W. Beck, W. D. Burton, N. A. Cahn, F. M. Carter, S. W. Cartwright, W. S. Cherington, W. H. Cole, I. H. Cory, P. G. Dorsey, W. C. Eppenheimer, R. H. Evelevh, R. M. Fernald, E. M. Fowler, O. G. Freyermuth, W. P. Geary, A. R. Gustave, G. A. Hutaff, R. B. Heath, Elsie B. Higgins, W. E. Jackson, A. B. Jacobs, F. S. Klinkner, G. O. Klotz, J. J. Mahony, P. J. McGarry, D. N. McMillan, G. Oliva, M. A. Sawrie, L. A. Schmitz, H. C. Stauffer, F. M. Teass, J. S. Torrence, Alice C. Ward and John Witmer.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

THE DRUGGIST AND THE PHONE.

Almost as certain as the annual return of the seasons is the appearance in the newspapers of reports of troubles in this or that city between druggists and the telephone companies. The telephone has been a bone of contention everywhere. The monopoly enjoyed by the companies has been used for the oppression and arbitrary treatment of those forced to patronize them. When forbearance has ceased to be a virtue the telephone users have in some cases succeeded by united protests and vigorous action in securing greater or less alleviation of their woes. Ask any business man what he thinks of the telephone, and he immediately becomes "hot under the collar." Talking about monopolies and trusts; there has been no other monopoly so arbitrary and burdensome in its operation. The litigation over telephone patents has for many years afforded lawyers rich picking, but apparently without any great effect upon the holders of these patent rights. But all things, good or bad, come to an end, and the end of the telephone abuse seems to be in sight, though not close at hand. Opposition has sprung up in many localities; competing companies have been formed, and being able to secure some patents and some legal rights have established businesses which will eventually bring to the public telephone service at reasonable cost and under reasonable privileges.

The druggists in this city have of late become greatly interested in a telephone proposition which bids fair to bring them some measure of sorrow. In no other city of the country has the telephone trust been so overbearing as in New York, and it is felt to be about time that something was done to relieve the public from the imposition. The news of the druggists' conference and plans with a new telephone company will be read with interest. The druggist has always been a sufferer from the esteem in which he is held by the public generally, as being the provider of free telephone service, post office accommodations, directory information, and the like. In New York City, however, for some years past he has been relieved from the free telephone burden, and it is now the exception, rather than the rule, for a customer to expect to use the drug store telephone without paying. Greater relief, however, and that in the direction of smaller charge for service, better accommodations and more liberal treatment generally is imperatively demanded, and the outcome of this new discussion will be awaited with eager anticipation.

A DANGEROUS FOOD PRESERVATIVE.

Formaldehyde is a very powerful antiseptic and preservative. It has a legitimate and valuable field of employment. For disinfecting purposes, for the preservation of anatomical material, and for medical uses it is in many respects unsurpassed. Its high value and great efficiency in these respects, however, make it all the more objectionable as a preservative of products used as food. Any substance which exerts a truly antiseptic power is just in the proportion of this power effective in the arrest of digestion. Formaldehyde, a most energetic antiseptic, should under no circumstances whatever be allowed as a preservative agent in food material. It has, however, been largely employed, and we wish we could believe it has been used in ignorance of its true nature, as a preservative for milk and cream.

These substances find their greatest value as food for infants, and any one who would use formaldehyde for the preservation of milk, knowing its nature and effects, is to our mind guilty of most atrocious wrong-doing, and should be made to suffer severely. Even ignorance of the character of formaldehyde is no excuse, for any one who traffics in foods should be required to have some knowledge of their character, composition, and what may or may not be safely incorporated with them. In milk especially it is inadmissible to use any chemical preservative, even though such preservative may under other circumstances prove unobjectionable. If milk cannot be delivered fresh, pure and safe to the customer it should not be allowed delivery at all.

It is with particular satisfaction that we note boards of health in various localities and other authoritative official bodies are proceeding vigorously against milk dealers who have been using formaldehyde as a preservative. The Ohio State Board of Pharmacy in particular, in conjunction with the Board of Health, is after the dairymen on this account, and some of the cities in that State are considering the advisability of enacting ordinances prohibiting the use of any preservatives, and especially formaldehyde, in milk, and giving the health department authority to prosecute violators thereof.

THE CULTIVATION OF GINSENG.

A brief but valuable contribution upon the subject of ginseng cultivation is presented on another page in this issue. There has been much said in a general way in the trade journals and the lay press relative to the possibility of the profitable cultivation of ginseng to meet the large demand that exists for this drug. But in all this mass of printed material there has been little of fact and detailed information. We are now able to quote the results of the experience of those who have made a practical trial, and have found that the cultivation of ginseng is not only easy but is immensely profitable. It cannot be doubted that the example of these experimenters

will be followed with equally satisfactory results by many others, as, if the statement can be credited, there is room for many more, the field being large and the market unlimited.

What has been and may be done with ginseng is possible also in the case of many other drug plants, though perhaps in but few instances can such enormous demand be anticipated. The profitable cultivation of medicinal plants in this country is yet in its infancy, but the industry is sure to grow and assume proportions of importance and economic significance.

NEW JERSEY AND THE N. A. R. D.

It will be interesting news to the druggists generally, and particularly disturbing to the officers and membership of the National Association of Retail Druggists, to learn that the New Jersey State Pharmaceutical Association has formally withdrawn from membership in the national body. This step is not entirely unanticipated, as the New Jersey association entered the N. A. R. D. in a lukewarm and half-hearted manner, and in opposition to the wishes of many of its members. But the formal withdrawal is a matter of some significance, and its depressing effect will not be entirely neutralized by the association's expression of confidence and belief in the N. A. R. D. plans and principles. The grounds asserted for the resignation are several, perhaps the real reason is, as was asserted by one of the members, economy. The association is too poor to pay dues. Of other reasons of interest most important is the belief that membership in the N. A. R. D. is unconstitutional for the State association in New Jersey. The New Jersey body has a membership composed not only of retail druggists, but of manufacturers, college professors, travelling men and many others not actively engaged in the retail drug business, and it is argued that because of this condition of affairs the N. A. R. D. cannot logically accept the New Jersey association as a delegate member. The State association therefore withdraws. It recommends, but it recommends as a sort of sop to the disappointed, that local associations throughout the State be formed, and that they shall become members of the national body. The attempt to prevent the withdrawal of the New Jersey association was an earnest one, but it failed very signally.

BETTER GENERAL EDUCATION FOR DRUGGISTS.

During the past ten years a very observable change has come over the spirit of our dreams in the matter of educational requirements for pharmacists. Ten years ago few would listen to him so rash as to advocate high school and college training for drug clerks; now the pendulum has swung to the other extreme of its arc, and the majority are insisting upon better educational qualifications all around. The so-called model pharmacy law adopted by the American Pharmaceutical Association this month embodies the requirement that every candidate for ex-

amination by a board of pharmacy must be a graduate of a recognized college of pharmacy, and some States have gone on record to the same effect. But even farther than this, the model law would, so far as possible, require that the apprentice entering upon the study of pharmacy shall first show that he is the possessor of sufficient preliminary general education; this is not insisted upon, but is recommended. The president of one of the State pharmaceutical associations, however, recommended recently that the State pharmacy law shall require a certain specified degree of attainment from every young man who wishes to study for the calling of pharmacist. All these facts and suggestions are straws which indicate the direction of the wind, and it is a safe prediction that before another ten years has passed sections embodying these views will exist on our statute books as portions of our State pharmacy laws. It seems to be pretty well recognized that the salvation of pharmacy in the future will require better pharmacists, and to make better pharmacists education alone is effective.

HOW TO INDEX PATENT MEDICINES.

Our retail druggist readers are showing a very gratifying interest in the matter of the proper manner of indexing patent medicines in the Era Blue Book, and are replying liberally to the questions on our editorial page last week. One letter, received within a few hours of the mailing of the Era, reads thus:

New York, May 24, 1900.

Editor Pharmaceutical Era: (A) Paine's Celery Compound is decidedly the best; (C) Compound, Paine's Celery, the worst.

The customer more frequently knows the name of the maker than of the article. Thus, you are asked for "Smith's Rheumatic Cure." It is very likely to be "Smith's," but it is just as likely to be "Remedy," "Antidote," "Chaser," "Discovery," "Prescription" or some other old thing as it is to be "Cure."

This also applies, in a slightly less degree, to the "middle name." The customer is very apt to be right as to its being Smith's Rheumatic something or other. Unquestionably, in my opinion, the place to send a man in the price list is to Smith for everything made by that popular individual. Yours respectfully,

F. O. COLLINS.

What do others think? Let us have the views of every druggist who wants the most complete and convenient price list that can be prepared.

WHAT DO YOU PAY FOR RENT?

A very important question to the druggist is what percentage of his sales should his rent be? Some say a man ought not to pay more than twenty-five per cent. of his income for rent. Do druggists pay more or less than this? We would like especially to have this question liberally discussed by our readers, and invite them to give us for publication the results of their experience, an expression of their ideas and views upon this very important subject. Many a failure of a druggist who apparently was doing a most prosperous business has been found to be the direct result of unnecessarily large expenses, the prin-

"Say, mister, mix me up a glass of sumpin' ter alleviate the after effects of too much strong drink."

cipal item of which was the rent. Corner stores in expensive property demand large rents. What is the proportion a druggist may safely pay?

CANNOT SELL CLARET PHOSPHATE.

The Dow liquor tax law of Ohio is again causing trouble to druggists. Quite a popular soda fountain drink in that State is claret phosphate, a beverage which uses a small amount of claret merely as a flavor. Under the law, however, it is ruled that this is an intoxicating drink, and if sold by the druggist the Dow license tax must be paid. In consequence, the druggists very generally announce that they will not handle the beverage, though they complain that the law in this respect is a bitter injustice.

Several barrels of whisky were found in an Iowa drug store and seized by the authorities. The druggist will be charged with keeping the liquor for illegal sale, as it is argued that no druggist has a legitimate use for such a quantity.

RESALDOL is a new intestinal antiseptic obtained by a reaction between saloform and resorcin. It is an amorphous, very light, yellow powder, insoluble in dilute acids and water, readily soluble in alkaline solutions. It has a somewhat astringent taste. The remedy is non-toxic in doses up to 10 Gm. It is recommended by Dr. Hermann (Therap. Monatsh.) in doses of 3 to 5 Gm. (45 to 75 grains) daily, for catarrh and abscesses in the intestines, and particularly for intestinal tuberculosis. (Apoth. Ztg.).

QUEBRACHO FLUID EXTRACT.—Macerate 100 parts of quebracho with 400 parts of water for three days, then boil 1 hour. After cooling add 100 parts of alcohol, place aside for two days, express and filter. Then evaporate filtrate to 90 parts, add 10 parts of alcohol, allow to settle and filter. (Pharm. Post).

(Special Correspondence).

FROM THE FRENCH CAPITAL.

Paris, May 11, 1900.

Death has been busy among our scientists of late. Profs. Planchon, Beaugerard and Milne-Edwards, of the School of Pharmacy, and M. Bertrand, perpetual secretary of the Academy of Sciences, have now been followed into the grave by

M. Edouard Grimaux,

the distinguished chemist, who died on May 3 from hemorrhage of the brain. Born in 1835 at Rochefort, one of the principal naval stations of France, it was not unnatural that his ideas should have turned seawards. At the age of 16 he entered the French navy as a pharmacist, and remained in the service till his marriage in 1857. His wife was Midlle. Boutet,

of Sainte-Honorine, (Vendee), and it was in this little place that he opened a pharmacy. His attention was drawn about this time to the serious study of chemistry and other sciences. He took his Paris pharmaceutical degree in 1861, and his M. D. degree in 1865. A year later he obtained a post at Paris as assistant professor of chemistry, and left Ste. Honorine. He was working in Wurtz's laboratory at this time.

EDOUARD GRIMAUX.

When the war broke out in 1870, Grimaux shouldered his rifle and served as a private in the National Guards, varying the monotony of outpost duty by caring for the wounded and giving advice and assistance in the casting of cannon; he thus came into contact with Gambetta, and was his personal friend. In 1870 he was appointed Chemistry Professor at the Agronomic Institute, and in 1881 obtained a similar post at the Polytechnic School. He had held this post for seventeen years, and might have been cited as a brilliant example of the position which can be attained by a humble and hard working provincial pharmacist, when the great blow came.

At the time when the excitement over the Dreyfus case was at its hottest, Grimaux had become one of the leaders of the "League for the Rights of Men and Citizens," (the great association in favor of Dreyfus), and had entered actively into the discussion. The Polytechnic School, from whence the French artillery and engineer officers are largely recruited, is under military discipline, and subject to the Minister of War. Gen. Billot dismissed Grimaux from his professorship. Thus deprived of his laboratory and the means of continuing his researches, the savant only lingered on for a year or two longer. Among his works we may mention those on "Indian Hemp," (1865); Equivalents, Atoms and Molecules, (1866); "Organic Chemistry," 1872-6, and "Elementary Inorganic Chemistry," 1874-9. His "Life of Lavoisier" is a remarkable biography; we may mention in this connection that Grimaux was charged by the French Government to edit Lavoisier's works.

M. Henri Sibour,

who died on March 6, at the age of 43, was a provincial pharmacist of Livron (Drome) who did much to organize the pharmacists of his region in an association, and was one of the principal founders of the "Southeastern Federation" of Pharmacists.

The New Pharmacy Law,

the text of which was presented to the Chamber of Deputies last year by MM. Astier, Bachimont, Ch. Bertrand and Morel, is still being studied by the Committee

of Commerce and Industry. It is worthy of remark that this is a body of thirty-two members, principally drawn from the manufacturing and commercial classes, and not a small committee of medical men and pharmacists such as was appointed to examine the last project. Under these circumstances, it is possible that the committee may pay more attention to the arguments in favor of the proprietary medicine trade, as presented to them by the Syndicate of Pharmaceutical Manufacturers last March, than to the protests of the Association of French Pharmacists, whose delegates have been received on two occasions. But it would evidently be premature to insist on this point; their official report on the subject will appear when they have duly considered the matter. In the meantime a certain number of manufacturers have put into practice a scheme by which the pharmacists who handle their goods are at least assured of a minimum profit.

A Corpse in a Pharmacy

is unfortunately not an uncommon occurrence here, persons injured in street accidents being conveyed to the nearest drug store. M. Bertrand, a Paris pharmacist, had an individual thus brought to his office (by the police) in a dying state, the patient expiring immediately on his arrival. Obligated to keep the body for some time, M. Bertrand thought he was justified in marking on his bill the sum of 80 cents for this service. The police authorities first objected, but the Paris Syndicate of Pharmacists took up the matter, and it is now understood that this is to be a fixed charge in future. The total yearly expense to the public under this head, it is stated, will be about \$25.

A Pharmacist Fires on His Judges.

M. Bardin, pharmacist, No. 185 Avenue Daumesnil, had a law suit regarding a right of way across some of his property, which was heard by the Paris Court of Appeals on March 21. Judgment being given against him, he drew a revolver from his pocket and fired three shots in the direction of the judges. He was at once disarmed by the lawyers around, and is now in prison awaiting examination.

A Coiner Caught.

M. Delage, pharmacist, Rue Dauphine, Paris, noticed something peculiar about a five-franc piece offered him in payment for a few cents' worth of bismuth. He called in a policeman, who found the purchaser's pockets full of packets of bismuth, and though no other false money was found upon him, a search at the man's lodgings showed that he was in possession of a complete coining apparatus, and that his illicit profits during the last ten years would probably make a total of \$40,000!

Eau de Botot,

the well known toilet preparation, was put up at auction here on April 26—plant and exclusive rights—and sold for \$120,000. At present the business is let out for \$10,000 per annum, so the purchaser will have a clear 5 per cent. investment till 1907, when he is free to make a new bargain. The affair appears to have passed into the hands of Mme. Charcot, wife of the famous doctor, and this sale was held for the purpose of dividing the property among her three heirs, one of whom is Mme. Waldeck-Rousseau, wife of our present Prime Minister.

Pinaud's Perfumery,

of which Mr. Victor Klotz is the present proprietor, has moved into new premises on the Place Vendome, following the example already set by other leading houses of removing their wholesale and retail establishments westwards, into the heart of the fashionable part of the city. Needless to add, the new establishment is a model of quiet elegance inside and outside. It is noticeable as being the first shop in this handsome square, hitherto exclusively devoted to high class hotels and private dwellings. Though whether the aristocratic and wealthy shoppers of the Rue de la Paix could not be induced, by a few smart stores, to lounge round the sidewalk of the Place Vendome, instead of cutting across the roadway, as at present, is one of those questions which must suggest itself to many.

M. Guignard,

Professor of Botany at the Paris Superior School of

Pharmacy, was elected director of the school by his fellow professors yesterday afternoon, the 10th inst. Prof. Henri Moissan is to take Prof. Troost's place at the Faculty of Sciences, the latter having reached the age of 75 years, when retirement is compulsory.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

PHARMACY.

- 1.—Give the unabbreviated official title of each of the following: (a) Lugol's Solution; (b) Griffith's Mixture; (c) Tartarated Antimony; (d) Monsell's Solution.
- 2.—Give the official strength of each of the following: (a) Vinum Antiodini; (b) Alcohol; (c) Extractum Opii; (d) Glycerin; (e) Liquor Sodii Arsenatis; (f) Acidum Sulphuricum.
- 3.—Name an official medicated water which contains a poisonous acid. Why does the strength of this in the finished preparation vary?
- 4.—State how an infusion whose strength is not directed by the physician should be prepared. Name the official Infusions.
- 5.—How many grammes of Extract of Nux Vomica will be required to prepare 1,000 Cc. of Tincture of Nux Vomica? How many grammes of total alkaloids are contained in 100 Cc. of this tincture?
- 6.—Opium Deodoratum: (a) State how it is prepared; (b) State what percent of Morphin it should contain; (c) State how it differs from powdered opium.
- 7.—Write a working formula for 4 fluid ounces of a 25 per cent. emulsion of Oil of Turpentine. State what materials you employed and what quantities.
- 8.—How is Resin of Opium prepared? What purpose does the Hydrochloric Acid which is used in its manufacture, serve?
- 9.—A pharmacist has four lots of powdered opium containing respectively 12, 14, 12 and 18 per cent. of morphine. From these he wishes to obtain one kilogramme of a product which will contain 14 per cent. of morphine. How many grammes of each kind must he employ?
- 10.—Ferris Sulphas Exsiccatus: (a) State how it is prepared; (b) state why it should be kept in a dry, well-stoppered bottle; (c) name its official preparation.
- 11.—Give the official title of Blue Mass and name all of its constituents.
- 12.—How are tinctures of fresh herbs prepared? State whether or not they are potent preparations. Give reasons for your opinion.
- 13.—How does Pearson's Solution differ from Liquor Sodii Arsenatis?
- 14.—Pancreatinum: From what source is it obtained? For what purpose is it used?
- 15.—Is there any difference in the chemical composition and activity of commercial Digitalis? If so explain the causes.

MATERIA MEDICA.

- 1.—Describe (a) Iodine, (b) Mercury, (c) Sulphur, (d) Antimony. How are they obtained?
- 2.—What is Phenol? From what is it derived?
- 3.—To what natural orders do the following drugs belong: (a) Hemlock, (b) Colchicum Root, (c) Hops.
- 4.—Give the botanical name and habitat of the following: (a) Sarsaparilla, (b) Sillingia, (c) Henbane.
- 5.—Name three drugs belonging to the Natural Order Rutaceae.
- 6.—From what are the following obtained: (a) Gallic Acid, (b) Iodoform, (c) Manganese, (d) Menthol.
- 7.—Name two official drugs belonging to the following classes and give their official titles: (a) Gum Resins, (b) Glucosides, (c) Alkaloids, (d) Fruit.
- 8.—Podophyllum, (a) Give its common name, habitat, part of plant used. Name its active principle and official preparations.
- 9.—Name two official drugs belonging to each of the following classes: (a) Alteratives, (b) Diuretics, (c) Antiseptics, (d) Astringents.
- 10.—What is a Balsam? Name two official drugs that are Balsams. How do balsams differ from resins?
- 11.—Give the official title of: (a) Three Volatile Oils; (b) Three Fixed Oils; (c) Three Oleoresins.
- 12.—State the composition of the following: (a) Dover's Powder; (b) Tully's Powder; (c) Compound Jalap Powder; (d) Aromatic Powder.
- 13.—What is Viburnum Prunifolium? What part of the plant is official? Name the official preparations.
- 14.—Define: (a) Botany; (b) Materia Medica; (c) Natural Order; (d) Habitat; (e) Indigenis.
- 15.—Give the Latin titles of the following: Gray Powder, Turpeth Mineral, Kermes Mineral, Queen's Root, Arbor Vitæ, Bitter Apple.

CHEMISTRY.

- 1.—What colors do salts of the following metals impart to a Bunsen flame? (a) Calcium; (b) Potassium; (c) Barium; (d) Lithium.
- 2.—Hydrogen: (a) State how it may be prepared from water; (b) State in what it is most active.
- 3.—How many grammes of Sulphur dioxide can be obtained from one kilogramme of Sulphur, the Sulphur being 90 per cent. pure?
- 4.—Show by equations how Potassium Chlorate can be obtained from Potassium Hydroxide.

5.—Give a characteristic test for each of the following: (a) Antimony; (b) Nitrous Acid; (c) Phenol; (d) Salicylic Acid.

6.—Give the chemical title of each of the following: (a) K₂AlO₄; (b) Pt(NH₄)₂; (c) K₂P₂O₇; (d) NaHS₂O₄.

7.—Write the chemical formula for each of the following: (a) Glauber's Salt; (b) Ethyl Nitrite; (c) Green Vitriol; (d) Glyceryl Trinitrate.

8.—Name a poisonous impurity which is sometimes present in salts of Bismuth. How would you detect the same?

9.—Give tests by means of which you would show the presence of Sodium and Ammonium in a white mixture.

10.—What kind of a salt is Turpeth Mineral? Define this kind of a salt.

11.—How would you determine the presence of Sulphur in an organic body?

12.—Write the chemical formula of Formaldehyde. State how it is prepared.

13.—Into what two series are Organic Compounds divided? Give two examples under each series.

14.—Chloroform: (a) State how it is prepared; (b) What impurities may it contain? (c) How is it purified?

15.—Complete the following equations: (a) BiCl₃+H₂O=

(b) SbCl₃+3H= (c) C₂H₅OH+HNO₃= (d) Hg₂Cl₂+2NH₄OH=

TOXICOLOGY AND POISOLOGY.

- 1.—State the best antidote for each of the following: Oil of Vitrol, Phenol, Paris Green, Salts of Lemon.
- 2.—What antidotes are as a rule appropriate for the mineral acids? For the caustic alkalies?
- 3.—For what poisons is Epsom Salt a suitable antidote? How is it used?
- 4.—In poisoning by an unknown substance, what emergency treatment should be employed? Why?
- 5.—What emergency treatment should be employed for poisoning by Atropine? By coal gas?
- 6.—What emergency treatment should be employed for poisoning by Antipyrine? By Cocaine?
- 7.—Name a common narcotic and a common corrosive poison; state the maximum safe dose and the emergency treatment for poisonous dose of each.
- 8.—Give a characteristic chemical test for the identification of Arsenic, of Morphine.
- 9.—What precautions should the pharmacist observe in selling poisons and what poisons should he register in the Poison Book?
- 10.—State the emetic dose of each of the following: Cupric Sulphate, Mustard, Syrup of Ipecac, Zinc Sulphate.
- 11.—What is the dose of Aconitine, Ammonium Carbonate, Mercuric Chloride, Monobromated Camphor, Morphine Sulphate?
- 12.—What is the dose of Antimonial Powder, Chloral, Lithium Bromide, Potassium Iodide, Sulphonal?
- 13.—What is the dose of Citrated Caffeine, Gallic Acid, Paraldehyde, Red Mercuric Iodide, Infusion of Digitalis?
- 14.—What is the dose of Extract of Hyoscyamus, Extract of Nux Vomica, Fluid Extract of Belladonna, Fluid Extract of Ergot, Fluid Extract of Veratrum Viride.
- 15.—What is the dose of Compound Spirit of Ether, Spirit of Chloroform, Tincture of Colchicum-Seed, Tincture of Gelsemium, Vinegar of Squill?

DOOLEY ON THE "ANTIS."

"Do ye go down, thin, to Doctor Casey at the drug store an' git him to give ye a bottle av that mixture he gave me las' year. 'Tis not pleasant to take, but it goes at a col' like an Irish lan'lord avyictin' a tenant. Strong med'cine f'r strong men. I was three weeks thryin' to stave off noomony iv th' lungs with th' shavin's of slate pencils that th' good doctor down de Halsted street calls an'ny pyreen, an' an'ny cammyoo, an' an'ny this-an'-that-an'-the-ther-thin', when with th' las' breath in me body I crawled to see Casey. He was a horseshoeer wanst, an' he mixes his med'cines in an anvil. He says, says he, 'I'll fix ye in a minyvet,' he says; 'I've something here that cured Mullaney's horse,' he says, an' 'twill make ye r-right in no time if ye have the stren'th to take it.' I took wan dose iv it an' whin I come to I was cured. An'ny disease that's pow'rful enough to get hold on Terence needs to be treated like a fire in a furniture factory. Don't waste time on thin' an'ny med'cines. Git Casey's mixture to make sickness a perm'n'd luxury. Git Casey's mixture f'r man an' balst, put him to bed, slap a mustard plaster on him that'll keep his mind employed, an' lave him to fight it out. May th' best man win. If Terence's alive in th' mornin' he'll not have stren'th to cough. If he ain't, do ye let me know."—Ladies' Home Journal.

BISMUTH SUBGALLATE DUSTING POWDER.—Bismuth subgallate, 2 parts; talc, in fine powder, 7 parts; wheat starch, in fine powder, 1 part. (Apoth. Ztg.).

CHLOROSIOLIN is a compound of chloral hydrate and hydroxylamin, having a hypnotic action similar to that of chloral hydrate. (Ph. Post).

URINALYSIS BY THE PHARMACIST.*

By G. W. PARISEN, PERTH AMBOY, N. J.

The analysis of urine by the pharmacist is a field of labor he can enter with the assurance of becoming competent to do the work satisfactorily.

We are looking every way in these times of close competition to attract trade to our places of business and increase the sales legitimately in our line. Many of the side lines we have been persuaded to put in, seem out of place in business devoted to the Science of Pharmacy, and a small income is derived from their sale considering the time used and the space they occupy, but where to draw the line in this respect is very hard to define. Many pharmacists, especially in smaller towns and cities, have made some examinations of urine for physicians, qualitatively, as to the presence of albumen or sugar, and are not altogether strangers to the method of applying the tests; but to go farther and apply other tests intelligently and be sure of every step of the way, requires a more extended knowledge and experience, especially when is added to the qualitative tests, quantitative analysis and microscopical examination for all the sediments in the urine, which are of so much importance to the physician in his diagnosis.

It will be a great saving of time to any one desirous of doing this work, if he is not a graduate of pharmacy, to attend a special course in some college of pharmacy and receive instruction in qualitative and quantitative analysis of urine, and careful instruction in the use of the microscope so he may be able to determine accurately all the different sediments in the urine.

My experience has been similar to many others, I think, in this respect, for many years having examined specimens for physicians in my city, to determine the presence of albumen or sugar, but when a more extended examination was required, the specimen was sent to New York for examination. This became of such frequent occurrence that I determined to equip myself for the work and keep the trade at home. I found, on inquiry, that the New York College of Pharmacy, in their Post Graduate Course, embraced urine analysis with microscopical examination; so I entered the course for that study, realizing by so doing how little I knew about it before, but I had the satisfaction of knowing when the course was completed that the instruction that I had received fitted me to do the work intelligently. I called the attention of the physicians in our city and those within a radius of thirty miles, to the fact that I had added urinalysis to my other work and was prepared at all times to give the work my personal attention, enclosing them a circular letter with the prices charged, and also a copy of the report sheet showing the different tests employed in the work, and the nature of the report they would receive.

The result cannot be told in direct added income, which in itself has more than paid for the money expended to do the work correctly; the professional standing it gives one and the store is very marked and gratifying, and has been the means of added business in many ways. It is also a means of direct advertisement for you, from the physician to the patient, for often some one from the sick room, or the patients themselves will bring you a specimen for examination, and either wait or call for report to take to the physician, and if a prescription is written they will naturally select you to prepare it for them.

The tests that I use are easily prepared, and with a little experience one may become proficient in their use. For albumen I find the ferrocyanic test the best, and use Heller's or Purdy's test as a balance test. For sugar, I use Haines' test, as it is very sensitive. Fehling's test to verify if it is necessary.

For the centrifuge to determine the percentage amount of albumen I use the ferrocyanic test, and while making this test, I employ another tube to sediment a specimen for the microscope.

I would advise the use of a centrifuge, as it saves a great deal of time, and enables you to get the percentage amount of albumen, chlorides, phosphates, and sediments, casts, uric acid, calcium oxalate and foreign bodies quickly.

As a reference book in the work, I prefer Purdy's

Urinalysis, but I have several others to consult, if necessary; but Purdy's to me seems the most comprehensive. I have a space in the laboratory reserved for the work, and find many uses for the test solutions in every-day work.

The Diazo test suggested by Ehrlich for typhoid fever has proved of great value to the physicians in our city. I have made a great number of tests for them to determine whether the case was typhoid or malarial.

The fact of your being competent to do such work will bring other analytical work to you, and will give you a reputation and professional standing far above the ordinary pharmacist or druggist. There is certainly room for advancement in the professional side of our work, and it will help in a large measure to solve the problem of what shall we do to help ourselves in these days of cutting prices.

Pharmacy to-day is certainly making larger demands than ever before for scientific ability and training, and our large colleges of pharmacy are keeping pace with the demand, by extended courses of instruction and requirements for more thorough work from their students.

Boards of Pharmacy are asked to keep the standard high, and make the qualifications for examination nothing short of being a graduate of some college of pharmacy. With all these calls for a higher education sounding through the pharmaceutical circles, every one should try to add as individuals to bring up the standard of pharmacy in our land.

DEATH OF PROF. MILNE EDWARDS.

M. Alphonse Milne-Edwards, professor of zoology at the Paris School of Pharmacy, died a short time ago, at the age of sixty-four.

Son of the great zoologist, Henri Milne-Edwards, he was born at Paris in 1835, and after taking his M. D. degree in 1859 entered his father's laboratory. In 1862 he took his diploma as pharmacist, presenting an essay on the musk deer family. At his examination for the post of assistant professor his paper was on the Solanaceæ. It was in 1865 that he commenced his duties as professor of zoology at the Paris Superior School of Pharmacy. He had thus been connected with this institution for thirty-five years and his face was well known to past and present students, by whom he was alike respected for his high scientific attainments and much liked for his courtesy and amiability.

In 1876 he succeeded to his father's post as professor of zoology at the Paris Natural History Museum (Jardin des Plantes), of which he became director nine years ago. Of his great work of the reorganization of these scientific collections we have spoken before. It was at his official residence there that his death took place.

At the School of Pharmacy he likewise interested himself in making the collection of zoological specimens as complete and well arranged as possible, and pursued his duties as teacher and examiner with conscientiousness and activity. He was elected a member of the Academy of Sciences in 1877, and of the Academy of Medicine in 1885. He has published works on the fossil birds of France (1866) and Madagascar (1888), also an account of the scientific missions (deep sea dredging) in which he took part in 1881, 1882 and 1888.

This is the third gap made by death in the ranks of the titular professors of the School of Pharmacy in three short weeks. M. Beaugreard, professor of Cryptogamy; M. Planchon, director of the School and professor of materia medica, and M. Milne-Edwards have quickly followed each other, suddenly and unexpectedly, into the grave. The fact is all the more startling when it is remembered that for the last ten years only one titular professor (and he had practically, though not nominally, resigned his post several years previously) had been thus lost to the school.

PUSINELLI'S TOOTH POWDER.—Precipitated chalk, 25 Gm.; finely powdered sepla, 5 Gm.; finely powdered orris root, 5 Gm.; finely powdered myrrh, 2.5 Gm.; potassium chlorate, 12.5 Gm.; oil of peppermint, 6 drops. (Apoth. Ztg.).

TANNOFORM DUSTING POWDER.—Tannoform 1 part, finely powdered talcum 2 parts. (Apoth. Ztg.).

*Read at the annual meeting of the American Pharmaceutical Association, May, 1900.

(For the Era.)

AMERICAN GINSENG.

During the past few years considerable has been said by the press about ginseng, and that the demand for the root is increasing each year. All those who are now cultivating are beset with questions bearing upon its cultivation, use, etc., and it should and must become a common cultivated crop.

The writer has been interested in this plant a number of years, has carefully studied its habits, and has now quite a large quantity under cultivation.

This root is perfectly hardy in any part of the United States and Canada. It is a perennial, but the growth of the plant above ground is annual. It makes its appearance in New York State in the early part of May. The seedlings at first look something like sprouting beans, and have three leaves at the top of a stem rising one or two inches above the ground.

The third year's growth is much different from that of the first and second years. From the last week in April until the first week in May this plant will shoot up its stem, which is about the size of a pencil, and the whole stem will be from ten to fourteen inches high, with three branches and five leaves in a whorl on each branch. This makes on each plant fifteen leaves, which somewhat resemble the horse chestnut. The two leaflets at the base of the branch are about two inches long, while the other three are from five to eight inches. A plant of this description will bear seed in July. It produces a cluster of from fourteen to fifteen small, yellowish-green flowers in an umbel. These flowers are afterwards followed by fruits somewhat resembling flattened berries, green in color until near August, when they change to a bright scarlet and ripen in September and produce from two to three seeds in each berry.

The root, which is the part of commercial importance, consists of two portions, the root stalk and the root proper. The former not more than one-third of an inch in diameter, shows scars which indicate each year's growth. When young the roots resemble little parsnips, but as they grow older become more or less forked and darker in color. The cultivated roots usually weigh from one-half to three-quarters of a pound when from four to five years old, while some have reached the weight of one pound.

I do not believe that there is a crop that is produced from the soil that will yield such large returns as ginseng if properly taken care of. On one acre from 130,000 to 150,000 roots can be grown, and experts in the business claim that at six years old one acre will be worth in market \$50,000 at the present price of seeds and plants. There is always a good market for the root in New York, Cincinnati and several other cities, where it is immediately shipped to Chinese markets. It still remains a mystery as to the uses it is put to in China, but it is claimed that there is a market for \$20,000,000 worth annually.

There are several growers throughout the country who are making a great success of it, and others should begin growing it at once.

The American Ginseng Gardens at Rosehill, N. Y., are large dealers in both seeds and plants and dry roots, and also furnish a great deal of information on the plant.

B. L. HART,

Gen'l Sup't., American Ginseng Gardens.

THE DIPLOMA REQUIREMENT.

"Should graduation from a reputable college of pharmacy be made a prerequisite to examination by Boards of Pharmacy?"

This question, like many other practical questions, cannot be answered categorically "yes" or "no." Prima facie, almost any one would suppose that a graduate from a college of pharmacy was a better qualified pharmacist than one who had not had the college education and, other things being equal, the conclusion would be a just one. But my experience as a member of the Virginia Board of Pharmacy for five years warrants me in saying that the number of failures to pass the State Board was as great among college graduates as among those who had not been to college, in proportion to the number

applying. This, however, should by no means be construed as a reflection on the colleges, because, in the first place, of the difference in the scope of college and board examinations, the former covering only a *section* of chemistry, pharmacy, materia medica, pharmacognosy and what not at each examination, while the latter is free to strike anywhere in the whole range of pharmaceutical knowledge; and, second, because often students are defective in preliminary education, which the college of pharmacy cannot undertake to supply and which its examinations do not develop. Right here, in the opinion of the writer, lies the weak point not only of colleges of pharmacy but of many other colleges, *entrance examinations are not rigid enough*. Multiplication of colleges of pharmacy makes competition sharp, and the temptation to lower entrance grade in order to increase the number of students is great, but it is a mistake to do so. The college which insists most rigidly on entrance examinations will ultimately reap its reward in the increased value of its diplomas.

Again, who shall determine which are "reputable" colleges of pharmacy? Under the first law enacted in this state our board had to face this question a number of times, and could never answer it. Consequently, when the law was amended no diplomas were recognized. Take a case in point. A young man who had had only seven months' experience in drug stores (and that not consecutively) attended a college of pharmacy of good reputation and got his diploma in two years. A condition of entrance to that college was three years previous experience in drug stores. Of course the fellow lied about it, and got his diploma by cramming or possibly by cheating. While the college was not to blame under existing conditions, would a board cognizant of the facts be likely to recognize it as a "reputable college?"

To leave out the serious matter of debarring worthy young men who cannot afford a college course, I conclude that, while exceedingly desirable for the student to have a diploma, it should not be made a prerequisite to examinations by Boards of Pharmacy, until the colleges themselves make high school graduation a prerequisite to entrance upon the college course. This will surely come some day, but is not a present condition.

C. B. FLEET.

Lynchburg, Va.

(Special Correspondence).

PHARMACY NOTES FROM ENGLAND.

London, May 20, 1900.

The Pharmaceutical Society.—The last evening meeting of the Society for the session was held in Edinburgh on April 18. Mr. Peter Boa, chairman of the Scottish Executive, presided. A number of practical papers were read. A. Currie showed—(1) That iron wine containing ferrous iron deposited ferrous arsenite when dispensed with liquor arsenicalls (an alkaline solution of As_2O_3) and recommends that the alkali solution (liquor arseni hydrochloric) should alone be prescribed with iron wine, (2) That glycerine and hydrochloric acid when mixed develop a yellow color and an offensive odor. J. R. Hill read three papers: (1) A mixture containing Tinct. Nucis Vom. and Spt. Ammonii Arom. was found to develop a greenish blue tint on keeping. This was traced to copper in the tincture, and finally back to copper in the underground nux vomica seeds. Whether, however, the metal exists naturally in the seeds, or is due to the method of preparing them, for the market, was not known. (2) With regard to gelatinization of tincture of kino, Mr. Hill suggests that the action of glycerine in preventing or retarding gelatinization is due to the fact that it lubricates the stopper, and so keeps the bottle air-tight, thus preventing evaporation of the menstruum. (3) The third paper dealt with acetate of quinine, to which Mr. Hill assigns the formula $C_{20}H_{24}N_2O_6 \cdot H_2O$. He also supports the view that the precipitate in mixtures of quinine sulphate and solution of acetate of ammonia (Mindererus spirit) is due to hydrate, and not acetate, of the alkaloid.

Naval Dispensers.—The pay of dispensers (who must be qualified chemists) in British Naval hospitals has been somewhat improved. The entrance pay is now £110 per annum, rising to £230 after twenty-eight years' service, with free quarters, allowances of £20 to £40, if in

charge of stores, and additional remuneration of from £35 to £70 when on foreign service. Dispensers are entitled to twenty-eight days leave of absence per year, exclusive of Sundays, and are pensioned on retirement. The old salary started at £100 and rose to £190, with similar allowances to those now in force. There are sixteen dispensers in all engaged in naval hospitals.

Deserting the Helm.—Mr. William Martindale, the president of the Pharmaceutical Society of Great Britain, has left England for Durban, and will therefore not be present at either the annual meeting or dinner of the Society, which are held each year about the middle of May. The cause of the voyage is ill-health, but in view of the crisis through which the trade is now passing, and the fact that the Companies bill, with its pharmacy clause, is still before the House of Commons, to say nothing of the meetings of the Society above referred to, only urgent necessity can, we should think, have induced his departure at the present juncture. Some critics suggest that he fancied even the Boers to be easier to fight than the pharmacy companies.

The British Pharmaceutical Conference.—The arrangements in connection with the meeting in London this year are being pushed rapidly on. The president is E. M. Holmes, F. L. S., curator of the Pharmaceutical Society's museums, and the chairman of the local committee is William Martindale, F. L. S., F. C. S., president of the Pharmaceutical Society. The meetings will commence on Monday, July 23d, with a reception at the Hotel Metropole, which will be the Conference headquarters. On Tuesday there will be the first business session, followed by the reading of papers, and afterwards a garden party in the Royal Botanic Gardens, Regents Park. On Wednesday further papers will be read, officers for the ensuing year elected and the official business concluded, and in the evening a concert and dance will take place at the Metropole. Thursday will be devoted to a river excursion from Henley, famed for its regatta, down to Maidenhead, where dinner will be partaken of. This trip embraces the most beautiful portions of the River Thames. On the whole, the arrangements promise a very attractive program.

Downes.—The Pharmaceutical Society of Ireland has sustained a severe loss by the death on April 7 of Mr. R. J. Downes, at the age of 58. Mr. Downes had long been a prominent member of the Council of the Irish Society. Under Mr. Wells he filled the office of vice-president, and in 1897 he succeeded that gentleman in the presidency, a position he held until the beginning of the present year, when the state of his health compelled his resignation. Mr. Downes threw his whole energies into the work of the Society, and this tended to undermine a constitution never strong. His efforts against company trading, and his success in obtaining recognition of the Society in the preparation of the B. P. are perhaps the most notable features in his presidency. The esteem in which he was held was shown by the large number of friends, public and private, including the principal officers and a large number of members of the Pharmaceutical Society of Ireland, who attended the funeral on April 9. Mr. Downes carried on business in Lower Baggot street, Dublin.

Sallinigrin.—At the meeting of the Chemical Society on April 5, Dr. H. A. D. Jowett, of the Wellcome Research Laboratory, announced the discovery of a new glucoside in black willow bark. This body, which he terms sallinigrin, is crystalline, less bitter than salicin and has a lower melting point and different color reactions than that body.

Solid Hydrogen.—There was a crowded meeting in the theatre of the Royal Institution, London, on April 6, to hear Prof. Dewar, F. R. S., lecture on "Solid Hydrogen." Sir Frederick Bramwell presided, and those present included Lord Lister, Lord Rayleigh, Sir Frederick Abel, Sir W. Crookes, Prof. Odling, Dr. Ludwig Mond and Prof. Hellmann. Prof. Dewar opened with some remarks on the nature of hydrogen, stating that up to recent years it had been regarded as a metal, and that to Prof. Odling was due the disproof of that belief. He then proceeded with a long series of most interesting experiments, in the course of which he showed that liquid hydrogen had a temperature some 70° C. below that of liquid air. He also illustrated the difference between the

behavior of liquid oxygen and liquid nitrogen when made to boil under reduced pressure. The temperature of both was reduced, but while the liquid nitrogen became viscid and ultimately solid, the oxygen refused to solidify, the reason being that at the lowest temperatures oxygen had an inappreciable vapor pressure, whereas that of nitrogen was considerable.

GATHERED FORMULAS.

For Falling of the Hair.

Tincture of rosemary.....	1 part
Tincture of cinchona.....	1 part
Tincture of jaborandi.....	1 part
Castor oil.....	2 parts
Rum.....	10 parts

Elixir of Terpin Hydrate.

Terpin hydrate.....	2 parts
Alcohol, 90 per cent.....	30 parts
Glycerin.....	67 parts
Tincture of vanilla.....	1 part

Syrup of Terpin Hydrate.

Terpin hydrate.....	2 parts
Alcohol, 90 per cent.....	30 parts
Glycerin.....	67 parts
Tincture of vanilla.....	1 part
Simple syrup.....	100 parts

Antiseptic Mouthwash.

I.

Oil of eucalyptol.....	1.5 parts
Thymol.....	1 part
Oil of peppermint.....	1 part
Oil of lemon.....	2 parts
Chloroform.....	5 parts
Glycerin.....	10 parts
Alcohol.....	100 parts

II.

Eucalyptol.....	20 parts
Menthol.....	20 parts
Oil of cloves.....	5 parts
Oil of wintergreen.....	5 parts
Acetic ether.....	10 parts
Alcohol, 90 per cent.....	1000 parts

Antiseptic Powder.

Alum, powdered.....	50 grams
Borax, powdered.....	50 grams
Lithic acid, cryst.....	50 grams
Oil of eucalyptol.....	10 parts
Oil of wintergreen.....	10 parts
Menthol.....	10 parts
Thymol, of each.....	5 grams

Compound Syrup of Iron (Swiss).

Ferrated extract of apples.....	1 part
Cinnamon water.....	1 part
Syrup of orange peel.....	2 parts
Syrup.....	20 parts
Syrup rhuibarb.....	24 parts
Tincture of cinnamon.....	50 parts
.....	1 part

Elixir of Frangula.

Tincture of orange peel.....	10 parts
Cinnamon water.....	20 parts
Simple syrup.....	30 parts
Fluid extract frangula.....	40 parts

Stomachic Troches (Magenpastillen).

Galangal, powdered.....	7.5 grams
Aromatic powder.....	2.5 grams
Vanillin-sugar.....	2.5 grams
Red sanders, powdered.....	1.0 gram
White sugar.....	60.0 grams
Cacao, mass.....	26.0 grams
Powdered tragacanth.....	0.5 grams

Mix, form into a mass with orange flower water, and divide into 100 pastilles.

Peach Essence.

Acetic ether.....	1.0 gram
Amyl-acetic ether.....	10.0 grams
Oil of wintergreen.....	5 drops
Dilute alcohol.....	80.0 grams

Cement for Leather (Hager).

I.

Guttapercha.....	15 grams
Oil of turpentine.....	10 grams
Carbon bisulphide.....	10 grams

II.

Guttapercha.....	20 grams
Oil of turpentine.....	20 grams
Carbon bisulphide.....	50 grams
Asphaltum (Syrian).....	20 grams

Yellow Ink.

Gamboge.....	5 grams
Alum.....	1 gram
Gum arabic.....	4 grams
Acetic acid, 30 per cent.....	4 grams
Oil of cloves.....	5 drops
Distilled water.....	86 grams

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Percentage Solutions.—(J. T. M.) This journal has many times printed rules and examples illustrating the calculation of problems in percentage. See August 31, 1899, page 303.

Syrup of Codeine Compound.—(R. C.) The following formula has been published; codeine bromate, 5 grains; vinegar of squill, 2½ fl. ounces; sodium bromide, 3½ drams; chloroform, 16 minims; menthol, ½ grain; glycerin, 2 fl. ounces; syrup of tolu, enough to make 8 fl. ounces.

Solvent for Acetanilid.—(R. L. D. Co.) A satisfactory aqueous solution containing a considerable portion of acetanilid cannot be made, owing to the comparative insolubility of acetanilid in water (1:194). An elixir containing 1 grain to the fluidram may be made by dissolving 128 grains of acetanilid in 16 fluid ounces of simple elixir.

Lump Bluing.—(McC. & Co.) (1) Best ultramarine, 4 ounces; ordinary ultramarine, 2 ounces; sodium carbonate, 4 ounces; glucose, 9 drams; mix and make into a stiff paste by the aid of water, roll out into a thick sheet, and cut into cubes, which dry at a gentle heat. Ultramarine is said to be the fastest of the blues used for laundry purposes, because it is not affected by the hot iron. (2) Ultramarine, second quality, 25 ounces; sodium carbonate, 25 ounces; glucose, 6 ounces. Still cheaper bluing may be made by using less ultramarine and more sodium carbonate, or by using cheaper coloring material. In the manufacture of these tablets the glucose is diluted with water, and if the tablets are to be made quite hard, either gum arabic, gelatin or dextrin should be added. As tablets made without any addition very easily attract moisture, an admixture of some one of these substances is usually recommended.

Coloring Powders Purple.—(N. C. H.) A knowledge of the composition of the powders is necessary in order to designate a suitable coloring agent. As you have given no information upon this point, we can only indicate in a general way a few of the agents used for this purpose. A purple tint may be produced by mixing red and blue until the desired shade is obtained, or by using tincture of litmus or ammoniated cochineal coloring. A similar tinge may also be imparted by the use of Paris violet or methyl aniline. Just the method of procedure depends wholly upon the character and composition of the powders. Thus, if they contain calomel or any substance decomposed by ammonia, you cannot, of course, use ammoniated solution of cochineal as a coloring agent. If the powders be compatible with the coloring substance, the latter may be incorporated by first triturating it with a little sugar before adding it to the powders. After all, some experimenting is necessary to determine the most suitable substance to employ.

Tests for Cocaine Hydrochlorate.—(H. C. M.) The Pharmacopœia, a work you should consult, prescribes the official tests for identity and quantitative estimation. The possible impurities enumerated by the Pharmacopœia are water of crystallization, cinnamyl-cocaine and some other bases derived from coca. The absence of water of crystallization is determined by heating a small quantity of the powdered salt for twenty minutes, at a temperature of 100° C.; it should not suffer any material

loss. Test for cinnamyl-cocaine and other bases derived from coca; if one drop of a mixture of one volume of decolorized potassium permanganate V. S. and two volumes of water be added to 5 Cc. of a 2 per cent. solution of cocaine hydrochlorate, mixed with 3 drops of diluted sulphuric acid, and contained in a small, clean, glass-stoppered vial, the pink tint produced by the permanganate should not entirely disappear within half an hour. Some information regarding the so-called "chromic acid" test and "McLagan's test" may be found in this journal July 13 and 27, last year, Pages 51 and 140 respectively.

Syrup of Sarsaparilla for the Fountain.—(C. H.) Here are several formulas: (1) Fluid extract of sarsaparilla, 1 fl. ounce; fluid extract of licorice, 4 fl. drams; oil of wintergreen, 10 drops; oil of sassafras, 6 drops; syrup, enough to make 6 fl. ounces. (2) Digest one-half pound each of sarsaparilla and licorice root, in coarse powder, with four pints of warm water, and then put into a percolator and obtain four pints of percolate by adding sufficient water. In the percolate dissolve six pounds of sugar by the aid of a gentle heat. When the syrup is cold, add 10 drops each of oils of anise and wintergreen, and two drops of oil of cinnamon, previously rubbed up with a little sugar. (3) Sarsaparilla essence, 4 fl. drams; syrup, 64 fl. ounces; caramel, soda foam, of each, sufficient. The last formula contains no sarsaparilla, the "essence," so-called, for making the syrup, may be prepared as follows: Oil of wintergreen, oil of sassafras, of each, 4 fl. drams; alcohol, enough to make 16 fl. ounces.

Oilcloth Coats, Waterproof Coating for Cloth, Flexible Varnish, Etc.—(E. C. W.) Oilcloth coats or seamen's "slickers" are made ("Workshop Receipts") by first dipping the material, preferably fine twilled calico, in bullock's blood. The material is then dried in a current of air and two or three coats of raw linseed oil, containing a little gold size or litharge, applied. After each application the cloth should be allowed to dry thoroughly before the next one is applied, the drying operation being conducted in a current of air, and in a place protecting the cloth from both sun and rain. "Oil-skins" made in this way have stood the wear, both here and in the tropics, for years. (2) Isinglass, alum, soap, equal parts; water, sufficient. Dissolve each separately; mix the solutions and apply to the cloth on the wrong side. Dry, and brush the cloth well, first with a dry brush and then lightly with a brush dipped in water.

Oiled Muslin is made by stretching suitable pieces of colorless muslin upon frames and applying to it a varnish made from 6 parts of boiled linseed oil, ½ part rosin, and ½ part turpentine. Another varnish for the same purpose is said to be made by boiling 6 parts of oil with ½ parts of litharge and ½ part oxide of lead. The glossiness of the fabric is produced by passing the cloth between heated rollers, a piece of the damp but very smooth fabric being placed on either side of the oiled muslin. It is said, too, that the composition of the mixture with which the muslin is coated requires alteration, according as the finished fabric is to be used in a cold or warm climate, or in winter or summer. The manufacture of these articles is not without some risk, as the rapid drying of fatty oils in contact with combustible material may cause spontaneous ignition.

Flexible Varnish for Cloth.—(1) Linseed oil, 1 gal.; dried zinc sulphate and sugar of lead, of each, 3 ounces; litharge, 8 ounces; boil, with constant agitation, until the mixture "strings" well, then cool slowly, and decant the clear portion. If too thick, thin down with quick-drying linseed oil. Apply with a brush. (2) A varnish for preparing "oiled muslin" may be made from 6 parts of boiled linseed oil, ¼ part rosin and ¼th part turpentine, or by boiling 6 parts of linseed oil with ½ parts of litharge and ½ part oxide of lead. The varnish is applied to the muslin stretched on suitable frames. The glossiness of the fabric is produced by passing the fabric between heated rollers, a piece of damp but very smooth fabric being placed on either side of the oiled muslin.

LIQUID GLYCERIN SOAP.—Dissolve 4 parts of white potash soap in 5 parts of glycerin and add 1 part of alcohol. (Apoth. Ztg.).

FRANK G. RYAN.

Messrs. Parke, Davis & Co., of Detroit, Mich., have just secured the services of Prof. Frank G. Ryan, of the Philadelphia College of Pharmacy, who will hereafter make Detroit his home, and devote his entire time to the discharge of his new duties as head pharmacist in

the manufacturing department of this firm. Prof. Ryan has for a number of years been connected with the Philadelphia College, from which institution he graduated in 1884, when he was twenty-three years of age. Later he was appointed assistant to Prof. Joseph P. Remington, and acted in this capacity until a year ago, when he was elected to take charge of the newly created department of the college to give a course in commercial training. Besides his work in the College of Pharmacy, he was for some time lecturer on pharmacy in the Woman's Medical College, Philadelphia. He now leaves these positions to remove to Detroit, where he will have jurisdiction of all technical pharmaceutical questions relating to formulas and pharmaceutical manipulations, and providing for the strict maintenance of quality standards in the various lines of pharmaceutical products manufactured by Parke, Davis & Co. Prof. Ryan is well known to pharmacists, and especially to the members of the American Pharmaceutical Association, in which body he has long served as chairman of the Committee on Weights and Measures, and at the recent meeting in Richmond terminated a year of service as chairman of the Scientific Section. The good wishes of his hosts of friends attend him to his new position.

A BIT OF CHICAGO HISTORY.

One of the handsomest drug stores Chicago ever possessed, and one of the best known in the early days, was that of J. H. Reed & Company, at 142-144 Lake street. The house was both wholesale and retail, and the firm was composed of J. H. Reed, Horace H. Hurlbut and S. S. Bliss. In 1863 Mr. Bliss and a Mr. Sharpe bought out the retail part and ran it under the name of Bliss & Sharpe. The store was the most elegant one in the West. The interior was finished in white enamel, somewhat after the fashion of the De Luxe store on Broadway in New York. The very finest toilet goods and druggists' sundries were kept. Ivory hair brushes and combs worth \$50 a pair, imported from Paris, were on sale. Fine vases were sold, and the best of imported cutlery as well as drugs. It was an all around drug store, and everything was of the best.

When J. H. Reed first came to Chicago in the early days, he called on L. M. Boyce, a prominent druggist at that time, and asked what chance there was for a young man to come to Chicago and go into the drug business. Mr. Boyce declared the opening was a splendid one if the young man had some means and a good store of knowledge and energy. Mr. Boyce promised to render Mr. Reed any assistance in his power, and later did so right royally, which kindness on the part of a competitor Mr. Reed never forgot.

In 1860 the firm caused a huge slab of stone to be quarried and sent up the canal to Polk street, where it was put on rollers and started for its destination in front of the store on Lake street, where it was to be used as a pavement. It was taken part of the way the first day after landing, and then left over night in the street, to be hauled to its final resting place next day. This was during the time of the Republican Convention of 1860. The next morning it was found that some one had painted on all four sides of the stone in big black letters: "Republican Platform." People came to see this stone from all over the city, and for years it was known as the Republican platform.

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

IMPORTANT NOTICE TO ERA STUDENTS.

Students of the Era Course should note the fact that the year ends June 14. All recitations and examination papers should be mailed to the Director's office by that date.

Recitations and examination papers mailed subsequently will be examined and recorded, but will not be considered in the award of prizes.

J. H. BEAL, Director,
Seio, O.

Read this Bulletin Every Week.

The first gas burned in Chicago was tried in this store in 1850.

E. H. Sargent, an intimate friend of J. H. Reed, has given the writer a personal description of that gentleman. Mr. Reed was six feet tall and well developed, though not heavy. He was a gentleman in every sense. He commanded the respect of every one. He noticed and insisted upon the so-called small amenities from all his employes, and himself set the example. He would tolerate no rudeness nor slovenliness of person in any of his clerks.

On another occasion the writer hopes to give a further account of the personnel and equipment of J. H. Reed & Co., made up from the recollections of several more of the men now living who knew the firm.

LUNCH FOR EMPLOYEES.

The Smith, Kline & French Co.'s laboratory buildings, at Poplar and Canal streets, Philadelphia, are in a section where it is almost impossible to obtain a satisfactory lunch. Heretofore the employes have had cold lunches brought from home, or have risked the unseen dangers which lurk in the "full roast dinner for 15 cents" dining houses.

There being over 100 employes whose comfort was concerned, the firm decided to build an annex which might be divided into a lunch room, reading room and smoking room. The building was completed several weeks ago and a committee of ten employes was elected to take charge of the department, the firm appointing an eleventh employe as chairman of the committee. Five of the members are females, the other five being males, all elected by their fellow employes.

The firm generously supplied all of the necessary apparatus, utensils and fixtures, such as steam boilers and roasters, gas range, coffee urns, culinary utensils, china and glassware, silverware, etc. The dining room is about 50 feet in length and 20 feet in width with a kitchen and smoking and reading room, both attached. The tables are each 14 feet in length, of polished cypress, the chairs being comfortable dining room chairs.

The employes contribute 50 cents each per week to pay for the lunches served to them. This fund is taken care of by the committee and all expenses are paid and supplies purchased under the direction of one or more sub-committees. A competent chef prepares the food, with the assistance of a woman, who has also had experience in restaurant work. The waiters are chosen every week from among the employes, each serving in turn for one week.

The amount of lunch which can be given for 50 cents a week, or a trifle over eight cents a day, is surprisingly large when an experienced person is in charge. The average bill of fare for one day is soup or stew, croquettes, fish or roast meat and vegetables, coffee, tea or milk and bread ad libitum.

The neighboring manufacturing establishments are also interested in the experiment, and one proprietor even went so far as to apply for the privilege of sending his employes over for lunch, which favor was not granted.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

Lord Roberts and his army crossed the Vaal River on Saturday of last week without opposition, thus beginning the invasion of the Transvaal Republic. The indications are that the final battles of the war may take place near Johannesburg and at Laing's Nek. The Boers have crossed to the north side of the Vaal, and hundreds of the Free Staters are said to be surrendering.

The railway south of Mafeking is being rapidly repaired and the bridge at Taungs can now be used. Refugees from Mafeking are passing through Taungs, bound for Cape Town.

Lieutenant Roberts, a nephew of Lord Roberts, was accidentally shot through the right knee by a servant at Modder River camp on Wednesday of last week. His condition is not dangerous.

President Kruger has issued a proclamation saying he will defend Johannesburg, and calling upon all the Boers to fight to the bitter end.

It is said that a general election will be ordered in England as soon as Lord Roberts obtains an additional success, and the Government will ask the country what it wishes to do with the conquered Republics.

A fatal case of the bubonic plague has occurred in Durban, South Africa. The local authorities are strictly enforcing precaution.

It is reported in Cape Town that President Kruger has received a communication from Abraham Fischer, one of the Boer delegates now in the United States, advising him to surrender on the best terms obtainable from Lord Roberts.

A squadron of mounted infantry of General Bethune's forces were ambushed in Natal Colony last week by the Boers. The casualties number sixty-six, including the Earl of Roberts, who was wounded. The Transvaal Government has informed the correspondents at Pretoria that it does not intend to consider unconditional surrender, but will fight to a finish.

Twenty-one war correspondents have been killed or have died of disease during the war. The London Daily Mail has had ten of its representatives put out of service by death or illness.

The Philippines.

Manila advices say that a force of American troops are on the trail of a party of Filipinos in the Mountains north of Benguer who are believed to be escorting Aguinaldo.

Senator Pettigrew has introduced a resolution in Congress calling upon the Secretary of War for information as to the number of Filipinos who have been killed in the Philippines since February 3, 1898, when the present hostilities began.

General MacArthur reports the arrival of the transport Sumner at Manila fifty-three days out from New York. The Sumner carried over 1,000 recruits and a large number of officers, including Colonel Wert Davis, Eighth Cavalry.

Gen. Schwan says, in a letter made public last week, that the majority of the Filipinos would prefer American rule to independence.

Two companies of insurgents, comprising eight officers and 165 men, surrendered at Tariae last week, giving up their rifles and ammunition.

Admiral Remy, commanding the Pacific Station, has cabled the Navy Department a request for more engineers officers for the American fleet there.

A Manila despatch says that 200 insurgents, half of whom were armed with rifles, recently ambushed eighty scouts of the Fortieth Volunteer Infantry on the hills in Northern Mindanao. The Americans routed the natives, killing fifty-one. The American casualties were two killed and three wounded.

Owing to the disturbed conditions in Southern Luzon, the order municipal government will not be put in force in those districts.

Other Foreign News.

Advices from the Hu Peh Province, China, say that more converts have been massacred by "Boxers," and that Chinese troops sent to the scene of trouble have been ambushed, and twenty-six killed. The widow of W. E. Gladstone is seriously ill in London. Dullman, Nolin and Walsh, who were accused of trying to blow up one of the Grand Central locks with dynamite, were convicted last week and sentenced to prison for life. The German Reichstag adopted the Meat Inspection Bill

last week by 163 to 123 votes. This is a blow at American meat exports to Germany.

The Queen Regent of Spain has signed the postal convention with the United States.

There were 187 arrests during the recent street car strike in Berlin. Fifteen policemen were severely injured and several are dying. Traffic is now restored.

Secretary Long has ordered the re-establishment of the European Squadron and Albatraz will be assigned to represent the Navy there. Other vessels will be added as they become available.

The Colombian rebels are harassing Panama; President San Clemente claims a victory in a desperate fight near Cartagena.

The Liverpool School of Tropical Diseases will shortly dispatch an expedition to the Amazon to study yellow fever.

Mr. Griscum, United States Charge d'Affaires at Constantinople, has presented another and more peremptory note to the Porte, demanding prompt settlement of the American missionary claims.

DOMESTIC.

CONGRESS.

Congress has decided to adjourn on Wednesday of next week.

Secretary Root's Army Reorganization bill has been abandoned to the present session of Congress. The Senate has not yet decided upon the claim of Mr. Clark, of Montana, to a seat.

The Senate refused last week, by a vote of 36 to 21, to exempt the Boer envoys from extradition.

The House last week passed an extradition bill to cover the case of Charles F. W. Neely, who is under arrest in the United States charged with committing postal frauds in Cuba. As Congress has no extradition treaty with the United States, special legislation was necessary to provide for transferring Neely to Cuba for trial.

A bill has been introduced in the Senate to give the Supreme Court of the District of Columbia jurisdiction in such cases as the Neely case.

Other Domestic News.

The Boer envoys called on Secretary Hay and President McKinley in Washington last week, and were informed that the United States Government feels that no course is open to it except to persist in the policy of impartial neutrality between the Boers and the South African republics that has hitherto been observed. The envoys will visit various American cities and address pro-Boer meetings.

The United States Supreme Court refused last week to interfere in the Kentucky governorship contest on the ground of want of jurisdiction, thus giving the office to Beckham, the Democratic claimant, who has the decision of the State Legislature and a large majority in his favor. Taylor, the Republican claimant, has acquiesced in the decision and will look to the people of the State for vindication in the election next Fall, when he will run for governor again. It is feared that the Democratic leaders intend to cause his arrest for complicity in the murder of Goebel, his former opponent, and he is staying in Indiana, where Gov. Mount is refusing to honor Gov. Beckham's requisitions.

The New York ice trust is the cause of considerable litigation. The Attorney General of the State has announced that he will proceed against the company under the State Anti-Trust law; the directors of the company have been held for the Grand Jury for conspiracy, and Mayor Van Hook and other city officials who are said to hold large blocks of trust stock, are to be asked to explain in court whether their official acts have been influenced thereby. Meanwhile the high price for ice continues. The St. Louis strike developed several riotous disturbances last week which resulted in the killing of a policeman and the serious injury of a number of other persons.

The Methodist General Conference in Chicago last week elected J. W. Hamilton and D. H. Moore bishops. Rev. Drs. Warner and Parker were elected missionary bishops. The conference decided by a large majority to remove the time limit from the pastoral term.

It seems likely that the Presbyterian General Assembly now meeting in St. Louis will revise the Presbyterian creed.

The President has nominated William H. Hunt, of Montana to be Secretary of State for Porto Rico.

During the three months of the year there were 257 vessels, with a tonnage of 294,064, entered the several ports of Porto Rico. Of these 114 sailed under the American flag.

The large cotton broking firm of Price, McCormick & Co. made an assignment last week. The liabilities are estimated at \$15,000,000.

The examination of the books of the San Juan post office shows that no shortage exists and that everything is in excellent order.

Grand Chief Engineer P. M. Arthur, of the Brotherhood of Locomotive Engineers, was re-elected at Milwaukee last week by a four-fifths vote. This labor organization is considered one of the most successfully conducted in the country.

THE DRUG NEWS.

New York and Vicinity.

TELEPHONES, SHORTER HOURS AND EARLY CLOSING.

Two very important steps were taken at the monthly meeting of the Manhattan Pharmaceutical Association held in the New York College of Pharmacy on Monday evening, May 21, when the members present, of whom there were nearly fifty, decided to lend their united aid to the movement inaugurated against the Bell Telephone Company, and also to use their best endeavors in the interests of early closing. The meeting was characterized by much debating, which was of course absorbing, but the address of the evening was given by R. M. Dougal, contract agent of the Knickerbocker Telephone Company, the rival of the New York company, and the corporation which the druggists are inclined to aid in every way possible. Mr. Dougal explained the details concerning his company and what it proposed doing, as follows:

"The Knickerbocker Company was organized in 1899, and received a franchise from the city to operate its lines here. We expect to have our system completed by the middle of January next. Some service is used at present, but we will not give a general service until the plant has been completed. We have a uniform system of contracts to offer. We include Greater New York with its five boroughs as a telephone district.

"The rate for unlimited service is \$120 the year. This will not apply to druggists selling messages at pay stations, as this subject has not yet been settled. We offer you a minimum service of 700 messages for \$60 and 6 cents for excess messages, and a maximum of 2,500 messages for \$110, with a charge of 4 cents for excess messages.

"We have a special residence rate of \$60, which we believe is destined to become popular, and we make concessions to doctors and dentists. We have secured 5,200 contracts with business men. We intend to give you superior service, which we can accomplish with the use of the most modern equipment, and this service will reach every place in the country. We need your support and would appreciate your endorsement."

When he had finished he was closely questioned. Each answer, which revealed some new phase of the company's policy, strengthened, or seemed to, the sentiment in favor of it. President Smith proved the safety valve for the opinion of the members when he thanked Mr. Dougal for his explanation, and assured him the committee would continue the work already planned for it. This was satisfactory to all.

Before all this took place President Reuben R. Smith called the meeting to order at about 8:50 o'clock, and the minutes of the previous meeting were read by Secretary S. V. B. Swann, and approved. Treasurer George H. Hitchcock reported a balance on hand since the previous meeting of \$262.04, with receipts of \$125 and expenditures of \$135.35, leaving a balance of \$351.69. The report was adopted. An excellent report was then given by C. O. Bigelow of his visit to Washington to attend the hearing before the Ways and Means Committee upon the proposition to repeal the stamp tax. Mr. Bigelow stated that he was of the opinion the bill would be repealed at the next session of Congress.

Mr. Porr then asked about the shorter hour question. President Smith stated he did not think the association had a right to openly violate the law. Mr. Faber said he thought there was some doubt as to its constitutionality, and the association should take action on the motion made at the conference of the four associations on Friday, May 18. A. Bakst, of the Retail Druggists' Association, told the members that his organization had decided to support with a pro rata share any test case that might come up. Mr. Keenan wanted the matter referred to the Legislative Committee, but the members ruled otherwise

by unanimously adopting Mr. Faber's motion. Chairman W. H. Ebbitt, of the Entertainment Committee, reported from the Committee on Counsel that Roche and Steiner had been interviewed and were acceptable. The firm was retained. Mr. Pringle made a motion that the attorneys defend each and every action brought against the association, and this was adopted. President Smith then asked William Muir, of the Kings County Pharmaceutical Association, a visitor, to say a few words, and Mr. Muir hit upon the subject that is interesting just now, the telephone. He said Brooklyn had suffered more abuse and misuse than New York, and especially from "cut rates," which he feared would be a bad feature of the new company, unless a uniform rate was adopted. Mr. Dougal spoke briefly in reply to Mr. Muir, assuring him that the matter would receive attention. Prof. George C. Diekman gave a comprehensive report on the gathering of the American Pharmaceutical Association at Richmond, Va.

The question of early closing then occupied the attention of the session for some little time, during which about every one had something to say, and it was finally all summed up in a motion that the secretary send out notices to all druggists requesting that they close at 10 o'clock. This was unanimously adopted, as was also the suggestion that each member constitute himself a committee of one to aid the movement. During the evening forty-four applications for membership were received.

DRUGGISTS HOLD CONFERENCE.

A Committee Waits on President of New Telephone Company, and Submits Proposition to be Considered.

The druggists of Greater New York are not allowing the movement for securing relief from present telephone abuses to remain quiet. On Friday afternoon of last week the committee appointed at the conference of the four pharmaceutical associations a week previous, comprising Thomas J. France, Chairman, Kings County Pharmaceutical Association; William H. Porr, the Manhattan Pharmaceutical Association; Julius Hammer, Retail Druggists' Association; A. Kleinan, German Apothecaries' Society, with William Muir, of the Kings County Society, held an interesting conference with President W. H. Eckert, of the Knickerbocker Telephone Company, at the company's offices, 418 Broome street. The purpose of the committee was to give the new company an idea of a plan whereby the telephone service in the city would not only be a benefit to the druggists and general consumers, but to the company as well. There are certain features in the present system of the New York company that the druggists deem objectionable. President Eckert received the committee in a manner that betokened warm friendship, and explained briefly to them the reasons for the company's locating at Broome and Elm streets. He was given a typewritten copy setting forth the ideas of the druggists, in the form of certain requests they were to use in advancing their argument. It follows:

We ask that a uniform pay station system at a uniform rate be established. We make this request in order that all druggists may be treated alike and that there may be no inducement to a druggist who holds a preferred situation and who has correspondingly low rates to cut the price of telephone messages.

We object to the guarantee system on the ground that this is more than is required by the old companies, which have adopted the policy of putting in instruments and requiring no guarantee.

We suggest that charges at pay stations for borough connections be 5 cents per message, and 10 cents for interborough calls; in this same connection, we ask that a druggist be allowed 25 per cent. of such business transacted in return for his attention, etc., while really acting as an agent of the telephone company.

We furthermore ask that there be no time limit set upon borough and interborough messages, and that a

system which requires the druggist to stand, watch in hand, timing each user of his telephone, by done away with.

We make these requests and suggestions, believing that if you introduce your system in a majority of the drug stores of Greater New York, you will have taken a long step forward in furthering the interests of your company. Respectfully submitted,

THOMAS J. FRANCE,
WILLIAM H. PORR,
JULIUS HAMMER,
A. KLEINAU.

Mr. Muir wanted it understood that the plan submitted was not in the form of a resolution, but simply an expression from the committee. He further stated that it was the desire of the druggists to secure a proposition from the new company, and he urged the adoption of a uniform system of rates. Chairman France echoed this sentiment. He thought that one rate to all would benefit not only the druggists, but also the company.

President Eckert gave a short history of his experience in the telephone business, which was begun in 1878. He said he had established the first pay station in New York City in 1882, with the Metropolitan Telephone Company. He had constantly urged this company, as well as others he had been with, to look to the interests of the people, and he assured the committee that this would be his aim in managing the affairs of the Knickerbocker Company. He said that the cut in prices the new company had made had never before been attempted in this or any other country. "We give you the advantage of 786 square miles of territory to talk over for the sum of ten cents. We have an unlimited service for \$120 a year, while the New York company charges \$240 for the same service. We have adopted this unlimited rate price after much study, and we believe we will do considerable business with it and get a fair return for our money." Mr. Muir said that the chief point of difference with druggists was in the indiscriminate use of rates by the New York company. "A man who is paying 8 cents for a message may be doing just as much business as a man who has one of your 2,500 message contracts at a fraction over 4 cents. He may be receiving more calls than the other fellow is sending out, and he is always ready to transact your business for you." W. A. Eckert, son of President Eckert, asked if the man who is doing a larger business is not compelled to pay a larger rent, as he thought the location favorable to a large amount of business demanded a high rent. Mr. Muir replied that a man might be doing a good telephone business and not a good drug business. President Eckert then asked how the druggists would feel if one of their number should purchase a large number of messages and give them away. Chairman France replied that a druggist would regard a little better a man who gave the messages away, than one who cut rates. Mr. Muir again argued in favor of the uniform rate of ten cents, with no cutting. He said the plan of different rate messages had been tried in Buffalo, with the result that the drug trade had been almost demoralized, and it was necessary to discontinue the system.

President Eckert said that the schedule of charges of the Knickerbocker Company had been made only after careful study, so that the company would be open to as little criticism as possible. W. A. Eckert asked if the druggists would favor an automatic telephone, and as a unit the committee replied in favor of such a device if it would work satisfactorily. Mr. Eckert said he thought the arguments presented by the druggists should receive careful consideration. President Eckert then declared it was his desire to favor the druggists all he could. He said that at the meeting of each of the associations a representative of the Knickerbocker Company would be present to explain the position and plan of the company, and possibly at that time to define the result of the deliberations on the proposition offered at the conference. The committee was then taken through the quarters of the company and shown where the different offices would be located.

During the last week a Mr. Walker, a representative of the New York Telephone Company, has called on two of the members of the committee with reference to securing a visit from the committee to the president of the New York Company. It is possible that the committee will confer with the company some time this week.

THE AMERICAN MEDICAL ASSOCIATION AND DOMESTIC AND FOREIGN PROPRIETARY PREPARATIONS.

The New York Medical Journal, in its last issue, publishes the following editorial under the above caption:

We have information which we believe to be trustworthy to the effect that certain European manufacturers of proprietary drugs, or their representatives in this country, have combined in an effort to enhance the demand for their products by belittling the value of American preparations with which they would come in competition. We believe in fair rivalry in business, but we consider it poor policy to decry the goods of one's rival. That, however, is a commercial matter with which we have nothing to do. To say of a certain product that it is "a definite chemical compound," and to seek thereby to raise it above the plane of some other product, is spoken of as "only a mixture." We have always looked upon as nothing but an ad captandium argument. More scientific research may or may not have been brought to bear in a chemical synthesis or a fractional distillation than in a nice and careful adjustment of the proportions of a mixture, but that, we conceive, does not affect the practical value of either product. Specious as it is, this line of argument has met with no objection, so far as we know, perhaps for the reason that it has been recognized as sure not to take deep root in the minds of American physicians. It was futile, but there was not apparent in it the taint of underhanded dealing.

But when it comes to an attempt to cast discredit upon American products by getting control of the Section in Materia Medica of the American Medical Association—and we are assured that such an attempt is likely to be made at the approaching Atlantic City meeting by securing the choice for officers of the section of only such men as sympathize with the aggressive movement in question—it is time to warn the association to be on its guard. We feel sure that nothing more is needed. American pharmacy is not a thing to be ashamed of; witness, the frequent calls in European prescriptions for American vaseline, American fluid extracts, etc. We are in favor of granting a fair field and no favor to foreign manufacturers, but we will not stand by and see our own producers muzzled. Let all pharmaceutical products stand on their merits; let none be under-mind by "diplomacy."

The foregoing editorial has occasioned no little comment in the chemical trade, and the Era prints the following interviews with the two persons most directly connected with the work of the Section on Pharmacy, Materia Medica and Therapeutics of the American Medical Association.

Said one of these concerning the rumor that at the next session of the American Medical Association, an attempt would be made in the section on Materia Medica and Therapeutics by the German trade to secure control of that body with a view to establish German medicines in a preeminent position to that held by American products, that some time ago a well known proprietary house sent out a circular letter stating this intention and giving as authority "a well known and firmly established drug house of New York." The letter was circulated broadcast throughout the country, and as a natural result caused much apprehension. "I have never been approached by anyone," said he, "on this subject, nor has it even so much as been suggested to me. I can positively say that it is absolutely without foundation.

As a matter of fact, such a plan would be preposterous on the face of it, and is in my opinion entirely unworthy of consideration. In the first place the secretary exercises the sole right of selecting all papers to be read at the convention, and he certainly would not appoint any subject that would tend to boom either a German or an American product, the preparation of which and composition are not known to the profession. And in the second place, it would be the height of absurdity to attempt such a thing, for there is a committee in the Section that passes on all papers read before the convention, for publication, and any article treating upon a product that is not known as a definite chemical compound, would not be referred favorably. It is a question of ethics.

The situation is clear, and the only deduction to be drawn from it is that all pharmaceutical products be classified on their merits. A compound the preparation of which is a secret cannot be recommended by a physician, to fulfill all the claims set up for it by the manufacturer. For instance, suppose a doctor has three patients with typhoid fever, what will prove effective treatment to one, perhaps would not meet the require-

ments of another, and the third person mayhap would not improve under the treatment applied to the other two. Ofttimes, a physician has cases of common disorders that will respond to a similarly applied treatment.

There are fifteen thousand physicians in the Section on *Materia Medica* and Therapeutics of the American Medical Association, and anyone who knows them must hold to the opinion that they would not under any circumstances permit such chicanery as the letter referred to would imply. This is not the first time I have stated my position in a matter of this kind. I have been requested for opinions for some days past, and at various times during the last few years I have written articles touching on ethics in medicine. I believe that this circulated story is not an attempt on the part of the Germans to boom their products, but is a plan of certain manufacturers, or a manufacturer, I might say—I do not implicate or suspect any particular one—to rather call the attention of the trade journals to the American products. There are certain compounders of patent medicines who are continually crying out the virtues of their nostrum to the detriment of a proprietary article. To sum the whole matter up, the story circulated hasn't a leg to stand upon, and I think the less said about it the better."

The other party said that frequent attempts of the character set forth in the rumor had been made, but none had ever borne fruit, nor was it possible for them to do so in the section on *Materia Medica*.

"Some people," he said, "have even sent to me to get me to propose a paper on some certain article they had which they thought superior to all others, and I have always refused. They have told me then that they would get someone else, and where they have succeeded the paper has been introduced, but immediately referred to committee, where it died without gaining the publicity desired. Such is the inevitable course of all propositions of this character. However, if a number of papers were to be prepared on any one product, treating it in its scientific sense, and not endeavoring to demonstrate a superiority, the articles would undoubtedly be published. It is beyond the scope of the Section on *Materia Medica* to assist in advertising any product with an idea to exciting a sentiment in its favor over other articles. I do not believe there is a grain of truth in the circulated statements of proposed control by German manufacturers, but rather hold to the opinion that the articles already published have a tenor that means to boom American products."

THE EARLY CLOSING MOVEMENT.

The early closing movement was given a material boost during the last week. In the district from Canal street to Fourteenth street and from Broadway west to the North River, through persistent work, C. O. Bigelow and Charles Osmun have secured the signatures of fifty druggists agreeing to close at ten o'clock, out of fifty-four drug stores in the district, and of the four who did not sign two have changed their mind. As this is one of the thickly populated districts of the city, and one where the drug store has always been regarded as an all-night or a late hour institution, the almost unanimous consent to curtail the business hours secured by the gentlemen above mentioned is highly commendable. While the movement is at present a local one, the agreement used by Mr. Bigelow states that the signers "agree to act in harmony in all matters relating to our profession, cultivate friendly relations by acts of reciprocity," and to extend the movement throughout the State. If any of the signers wish to be released from the agreement they are required to give a thirty day's notice to the Manhattan Pharmaceutical Association, which in turn will notify all parties to the agreement. The new closing movement will take effect June 1st.

—The South Dakota Board of Pharmacy secured two convictions for violations of the pharmacy law in that State at Wessington Springs, March 31. The convicted parties were M. A. Schaefer and Albert & Bessey, who sold poisons without being registered pharmacists. Each pleaded guilty and was fined \$50 and costs. The board held a meeting for the examination of candidates at Aberdeen, April 11.

LAWYER ACCUSED OF EMBEZZLEMENT BY DRUG COMPANY.

David N. Neuberger, a New York City attorney, is in bad odor with the Keasbey & Mattison Company, of Ambler, Pa., the members of which, through their New York manager, E. H. Hammer, accuse the attorney of embezzling \$2,200 of the firm's money. If the details of the case, as given by Messrs. Jones & Govin, counsel for the plaintiff, be true, the result of the trial may have a weighty effect in the suit of the Keasbey & Mattison Company against the Emerson Drug Company. Neuberger became tangled up in the litigation in a peculiar way. In the suit of the Keasbey & Mattison Company the claim is set up that the Emerson Company has not only illegally made use of the word "bromo," but that the preparation known as Bromo-Seltzer is dangerous. Lawyer Neuberger, it is said, went to Messrs. Jones & Govin about a year and a-half ago and informed Mr. Jones, upon whose statements this information is given, that he knew of a young woman who had suffered ill effects after taking Bromo-Seltzer, and whose mother was about to begin an action against the Emerson people for \$50,000 damages. Mr. Neuberger stated that it was his intention to prosecute the action, which on the face of it looked like a sure case against the Emerson concern. He was doing this, he said, for Mrs. Halpon, the girl's mother, whom he described as poor and unable to continue the case. Lawyer Neuberger desired the Keasbey & Mattison Company to advance \$1,500, and he would secure a judgment against the Emerson Company. The money was given him and presumably the case went on. April 2, of this year, was the day set for the trial. Some time in March, it is said, Lawyer Neuberger presented himself before Mr. Jones the second time, with the request that \$500 be given him for distribution among the experts he had engaged, and who were conducting experiments with the drug. This was also advanced. It is alleged that on the morning of the trial Mr. Neuberger transferred his interests to a lawyer named Du Gueldia, and that Mrs. Halpon received \$6,000 to discontinue the suit, of which sum Neuberger is said to have been given \$2,000. Upon learning of this state of affairs Jones & Govin demanded an explanation from Neuberger, and this not being forthcoming he was requested to return the money already advanced. Jones & Govin declare that Mrs. Halpon is not poor, but has nearly \$50,000, and was able to pay for legal advice in the case. The law firm also state that the experts retained had only received \$50. Mr. Neuberger, when seen regarding the charge against him said it was all a "pipe dream," and this was the only explanation he would give in the case.

M. D'S DEFEAT PH. G'S AT BASEBALL.

A nine composed of the faculty and attending physicians of the Long Island College Hospital played a game of baseball with a team from the Alumni Association at Prospect Park, Brooklyn, Wednesday afternoon, May 23, and were successful in winning the contest by a score of 25 to 10. About 500 of the friends of the players witnessed the game, which was as interesting as it was exciting. The Doctors had a comparatively easy victory, making 23 of their runs in the third and fourth innings, and then playing hard to keep their adversaries from scoring enough to win the game.

The teams were made up as follows:

Doctors.	Druggists.
Gillan	Catcher
Fogarty	Pitcher
Smith	First Base
Finley	Second Base
Fitzgerald	Third Base
Fields	Short Stop
Brosnan	Left Field
Hirseman	Centre Field
Lyons	Right Field
	Cooper

Fields, Gillan, Finley and Fogarty did the best work for the doctors; the last mentioned player making a home run and a three-base hit. For the drug men Welton, Crawford, Myhr, Pflug and Lillinchiald took the honors of the game. Messrs. Rogers and Meister umpired the contest. Seven innings were played. The druggists have arranged a return game to be played on the same field June 6, when it is expected they will win.

NOTES.

—The falling off in the consumption of candles throughout the world is assigned as a direct cause of the continued scarcity of crude glycerine, the price of which, it is anticipated, will be strongly advanced within the next few months. This decrease has not been sudden, but has gone on for the last two years, regulating itself to the exacting law of supply and demand. The price, which was six cents a few years ago, has risen to 9¢ and 11½, and the consumption of glycerin has been as steadily augmented, as it is the only substance that has been found to fit all conditions in the manufacture of high explosives. The reason there has not been a greater fluctuation in its market may be traced to the present war in Africa, where the mines in which extensive blasting is carried on and large quantities of glycerine used, have been and are now inactive. It is anticipated that soon after peace is declared the work will be resumed once more with greater facilities for rapid operations, and that crude glycerin, as well as refined, will be sold at much better prices. The crude product was once rated in this city as high as 22 cents.

—The following visitors have been in town during the week: A. R. Deacon, St. Louis; A. L. Longfield, San Francisco; Mr. Grant, San Francisco; Joseph Jacobs, Atlanta, Ga.; C. T. Dill, Western New York salesman for W. R. Warner & Co., Max Hoencke, Houston, Texas; Dr. H. W. Wiley, Washington, D. C.; Major Anderson, Wheeling, W. Va.; W. W. Wilcox, Pennsylvania representative of Lehn & Fink; H. H. Sinnige, of Nabor, Morrow & Sinnige, Birmingham, Ala.; Frank C. Moore, Western salesman of R. Hillier Sons Co.; Frank McGlenon, Waterbury, Conn.; H. W. Ayer, Montreal; J. A. Goodale, Dover, N. J.; Edwin N. McGill, of Billings, Clapp & Co., Boston; Mr. Hicks, Great Neck, L. I.; F. N. Mason, Port Jervis, N. Y.; G. C. Ganon, Carmel, N. Y., and A. Snouder, Oyster Bay, L. I.; Prof. F. G. Ryan, formerly of the Philadelphia College of Pharmacy, now of Detroit, N. Newlin, Philadelphia; C. A. Fowler, Bangor, Me.; Mr. Sweet, of L. B. Sweet & Co., Bath, Me.; J. W. Vallou, New Haven, Conn.; H. N. Clark, Cornwall-on-the-Hudson; G. N. Carslake, Bordentown, N. J.

—By a recent classification of the Customs House officials, peach kernel almond oil has been put on the dutiable list, and the tax is 25 per cent. ad valorem. Importers are protesting against the decision, which they believe will not be sustained should an appeal be taken. The oil has always been known as almond oil, and has been sold as such; in fact the Government, by recent opinions, has virtually declared it such, for the authorities have classified peach kernels as almonds, and the importers declare that if peach kernels are almonds, then peach kernel oil must be almond oil. The consumption in this country is large each year, reaching an average of 500,000 pounds, which is considerably more than that sustained by the true article; consequently the revenue derived will be a considerable sum. One firm in this city disposes of about 50,000 pounds in a year. The shipments received during the last week and bearing the duty have been protested, but the revenue paid. It is possible that an opinion may be asked from the Secretary of the Treasury.

—Death removed from the ranks of the salesmen of this city one of its most prominent members last week in J. Fletcher Brookfield, who died at his home in Newark, N. J., Thursday afternoon. Mr. Brookfield had been connected with the firm of McKesson & Robbins for the last twenty-one years as Southern salesman, and his friends were legion. He had been ailing for some time with heart trouble, and although his death was not entirely unexpected, it came as a sudden shock. He was fifty-two years of age, and is survived by a wife and family. The funeral was held last Friday afternoon, and was attended by a large number of the employes of McKesson & Robbins, including John J. Molloy, Horace G. Shaw, F. W. Norris, J. M. Chisolm, A. E. Hopping, C. E. Cornell and many others. Handsome floral tributes were sent by the employes of the fancy goods department in a gates ajar, and the firm in a broken column. A full Masonic service was observed at the grave. Interment was in Mount Pleasant Cemetery.

—During the last week it has developed that there will

be a scarcity of Norwegian cod liver oil this year, the reason being a deficiency in the catch. The Norwegian cod is a fish of which comparatively little is known. At various intervals the cod shows a disposition to remain in the deep water where the fishermen cannot get him. The cod this year has sought seclusion in the lower depths of the ocean, and the most seductive efforts on the part of the fishermen have failed to bring him forth. Knowing this condition of affairs the dealer in the oil has quietly raised the price, causing a depression in the market. Importations, however, are said to be quite large, at from \$25 to \$28 a barrel, and the deduction to be made is that dealers are at this time preparing for the fall trade, and the price will be high and the oil scarce. Some persons anticipate that it may get to \$40 a barrel; one of the older members of the trade said he had known it to reach as high as \$110 a barrel.

—The Society of Chemical Industry held an entertaining meeting in the New York College of Pharmacy last Friday evening. Nearly forty members and friends were present, and listened with much interest to the following papers: O. H. Klein and S. F. Peckham, "Cement Testing," with illustrations; S. A. Tucker and H. B. Moody, "The Electrolysis of Calcium Chloride Solutions with Reference to the Formation of Chlorate;" A. H. White, "The Composition of Some American Gas Works' Tars;" A. P. Van Gelder, "Notes on the Analysis of Nitric Acid and Mixed Acid;" H. Endemann, "The Berkfeld Filter," with exhibition. Prior to the meeting the usual informal dinner of the society was held at the Hotel St. Andrew, Broadway and Seventy-second street, and about seventy-five members sat down to the table. The next meeting will be held in October.

—June 14 will be a gala day for the members of the German Apothecaries' Association, as on that day the annual excursion is to be held, the objective point being Greenwood Lake, where the party will stop at Weber's Hotel and Park, Warwick Highlands. Dancing will be one of the pleasant amusements of the outing, and bowling will also attract many, there being special prizes for women members of the party. A special train over the Erie Railroad will convey the gathering. Boats for this train will leave Chambers street at 9:37 a. m., and West Twenty-third street at 9:25 a. m.

—Trade is reported almost at a standstill in the Middle Western States, especially in the large cities, where salesmen say no buying of any importance is going on. This has caused somewhat of a depression, with the result that but small quantities of goods are being taken, the dealers hoping in this way to cause a further drop in prices. The condition has been caused by the buyer "stocking up" well last year. A salesman who visited Chicago last week said his sales there were the poorest they ever had been.

—The annual meeting of the Association of Military Surgeons of the United States begins at the Academy of Medicine, 17 West Forty-second street, to-day, and continues till Saturday night. Dr. W. F. Southard, editor of the Pacific Medical Journal, of San Francisco, who is a delegate to the meeting, arrived in the city during the middle of last week. Dr. Southard is anxious that the convention shall be held in his native city next year.

—Florentine orris root is receiving much attention in Italy from a number of capitalists who have formed a syndicate and are endeavoring to corner the drug. It is said that a large amount has already been obtained, and for this reason the price here has been slightly advanced, although importations continue firm. It is said that the price may ascend later on.

—During the last two weeks a ladies' dining parlor has been an added feature at the Drug Club, and that it is appreciated is evidenced by the liberal patronage it receives. The quarters of the club are among the most commodious in the city, and the innovation for the benefit of the ladies adds much to the convenience of the rooms.

—It is proposed by the local wholesale druggists to begin the Saturday half holiday closing movement with the month of June this year, and the idea is meeting favor. Last year it was agreed to close at one o'clock Saturday afternoons, beginning with June, but many of the firms did not begin to close until July.

—Some of the goods that were secured by the swindling

firm of Gregg, Stevens & Co., of Newark, N. J., and which were sold under receiver, have been offered to the trade during the last week. It is reported that large quantities of Crab Orchard Salt were offered at ridiculous prices.

—Active work is going on among the members of the Alumni Association of the Brooklyn College of Pharmacy for building up the organization with new material and at the next meeting, Thursday, June 21, a large number of applications for membership will be acted upon.

—H. B. Harding, actuary of Humphreys' Homeopathic Medicine Company, is enjoying a two weeks' visit in his former home, New Brunswick, Canada, having left on Friday of last week. Mr. Harding will return by way of Montreal, where he will spend a few days.

—A slight depression is noted in the sale of caustic soda and other heavy chemicals due to the closing down for the summer of a large number of glass blowing plants, whose consumption of the articles mentioned is large.

—Herman A. Metz, president of Victor Kocch & Co., leaves to-day for Hamburg, on the steamer Fuerst Bismarck, for a business trip of several weeks. On the way home Mr. Metz will visit the Paris Exposition.

—Employees of McKesson & Robbins have organized a base ball team for the season, and will be pleased to hear from other drug firms. Stephen Costar, of the spice department, is manager.

—At the meeting of the American Medical Association, at Atlantic City, N. J., next week, handsome exhibits will be shown by W. R. Warner & Co., McKesson & Robbins and Schieffelin & Co.

—The store of A. C. Behrens & Co., at Forty-first street and Eighth avenue, has been lately purchased by Martin Arneam, druggist, at Thirty-eighth street and Eighth avenue.

—Oil of peppermint is likely to be quite cheap when the peppermint plant harvest is made, as it is reported that an unusually large crop is anticipated.

—Henry Diedel & Son, for many years located at Twenty-seventh street and Third avenue, have disposed of the business to A. & R. S. Lehman.

—Lehn & Fink will have an elaborate exhibit at the annual meeting of the American Medical Association, at Atlantic City, N. J., June 3 to 5.

—Quite large importations of sulphate of ammonia have been noted during the last week, but this is not considered unusual.

IN AND ABOUT BOSTON.

Supreme Court Decides That Cigars and Tobacco Are Not Drugs.

Boston, May 26.—The full bench of the Supreme Court has ruled that the sale of cigars on the Sabbath Day is a violation of the law. The decision was given in the case of Isaac H. Goldsmith, of the South End. The complaint against Mr. Goldsmith was that he made a sale of cigars and tobacco to a police officer, who upon making the purchase informed Mr. Goldsmith that he intended to use the fact against him as evidence. Mr. Goldsmith stated that he as a druggist would sell them to the officer as a "drug."

The court, in overruling his exceptions, states that "there is no doubt that selling cigars and tobacco is doing business within the prohibition of the statute, unless it is protected by the words 'but nothing in this statute shall be held to prohibit . . . the retail sale of drugs and medicines.' Like many other things, cigars and tobacco may be medicinal because they contain an ingredient or element that in a broad sense may be called a drug. It may be that with or without a prescription from a physician one may lawfully purchase tobacco or cigars as a medicine at a drug store on the Lord's Day. A sale made in good faith upon an application for tobacco to be used as a medicine may be within the above-quoted language of the statute. In the present case there was no offer to show such sale, but only that the defendant sold the articles as drugs. The evidence offered and excluded had no tendency to show that the sale was within the protection of the statute."

The police have given no intimation of intended effort to enforce the law. The Jewish cigar stores will be closed,

but they have been closed for some time past on Sundays. In the drug shops and in the hotels cigars will be sold freely. Few druggists fear that the police commissioners will forbid them to violate the law any longer, but if this is done, later, the druggists must comply with the law or suffer punishment. But even if this blue law should really be enforced smokers will have no difficulty in buying cigars on Sunday. Every well-established hotel will continue to sell them as in the past, even if druggists are prevented from doing so.

Revved Old Memories.

Boston, May 26.—Fifty-seven years ago R. C. Howe, who is Haverhill's veteran druggist, entered the employ of James M. Nichols, whose drug store was then located where C. B. Emerson's is now situated. Mr. Howe began as a boy of all work, and on the first morning of his new position opened the store at an early hour and began his duties of sweeping the floor and the front sidewalk. On the morning of the fifty-seventh anniversary of his initiation into the drug business, Mr. Howe arose early and at 6.30 swept the floor of his own drug store on the corner of White and Cedar streets, and the sidewalk too, a task that has not been included in his functions as proprietor for several years.

NOTES.

—Because in the court at Brockton a grocer was fined \$50 for selling a certain malt extract contrary to license restrictions the authorities at Fall River are on the war path and it has been decided there that malt extracts must not be sold. The various extracts which have come within the police inspection contain more than 3 per cent. of alcohol, a percentage forbidden by law. Nearly every drug and grocery store in the city has sold one or more brands of malt extracts, but notice will be sent to each dealer that he must discontinue the sale under chance of prosecution for keeping and exposing liquors for sale.

—The affairs of Billings, Clapp & Co., of Boston, are rapidly assuming shape, when the difficulties with which they are at present handicapped will be removed. Mr. Billings, of the firm, is enthusiastic in his praise of the kindness of the merchandise creditors, and he is anxious to have them know their friendliness is reciprocated. The banks in charge of the affairs of the firm have stated that no case has come under their view where an assignment has been followed with such prompt and complete assent on the part of the creditors.

—William A. Houghton, who has conducted a drug store on Main street, Chicopee, for the past fifteen years, has sold his interest to Alfred E. Booth, of Leicester, and will retire from business. Mr. Houghton, when taken ill last Fall, was compelled to undergo an operation from which he has never fully recovered, and his retirement from the business is prompted by his ill health. He will remain with Mr. Booth until the new owner gets acquainted with the trade.

—Northampton druggists who have been granted licenses of the sixth class are: H. A. Wiswell, Lucius S. Davis, C. E. Bushee, William A. Coburn, C. B. Kingsley and Louis F. Ruder, all on Main street, and Thomas Roche, Maple street, Florence district, and Nelson A. Davis, Main street, in the same district.

—H. H. Hovey, a Brockton druggist, has for ten years or more kept a daily record of the thermometer at his store, the correctness of which the people of that city swear by. One day this month his glass registered 95 degrees, the highest he ever has recorded in the month of May.

—Maurice O'Donnell, a Cambridge druggist, and the State Board of Pharmacy are still at odds. A much-desired permit for a liquor license has not yet dropped into Mr. O'Donnell's hands, expectantly outstretched to receive it.

—Druggists of Fall River have formed a base ball nine and Albert Pelouquin, in their behalf, would like to receive challenges. They seem specially desirous of "doing up" a nine from the police force of that city.

—Hon. E. C. Marshall has returned to the active management of his Charlestown drug store since his retirement from the position of Penal Institutions Commissioner in the City of Boston.

—This week's exports from the Port of Boston include drugs and chemicals, \$8,154; hops, \$37; india rubber manufactures, \$340; wax, \$824; spirits, \$18,412.

—The druggists are reported to be a bit slow in paying for their licenses in New Bedford, where the city treasurer has received \$77,016 from license fees.

—C. I. Hood, Lowell, was among the passengers sailing from Boston for Europe on the steamship New England on Thursday, May 24.

—Among business men recently in Boston has been Curtis Jordan, prescription clerk at Folsom & Co.'s drug store in Bangor, Me.

—Charles E. Coombs, a popular Cambridge druggist, has just been elected trustee of the Citizens' Trade Association of that city.

BALTIMORE.

The Drug Trade Bowlers.

Baltimore, May 23.—The Baltimore Drug Trade Bowling Club's season came to a close last night with a jollification at the Diamond, and prizes were bestowed upon the successful contestants. The championship trophy, the handsome silver cup donated by the different firms, was awarded to Sharp & Dohme, the team of this firm having won it twice in succession. The Root and Herb experts received the \$25 prize given by Robinson & McGraw, of the Diamond for the highest team average, this quintette standing second in point of the number of games won, but having to its credit larger margins than the champions. There were cash prizes for the first and second highest total men, for first and second high average men, first and second high spare men, first and second high individual scores, first and second high strike men, the man winning the largest number of games with a score of 200 and over, the man scoring most full games, the most split spares and the highest individual score. The winners of prizes were as follows:

Championship—Sharp & Dohme.

High team score—Root and Herbs.

High team average—Root and Herbs.

First individual high average—T. Goldsborough.

Second individual high average—Andrew Baumgartner.

Third individual high average—Dr. A. R. L. Dohme.

First high spare percentage—Brent Waters.

Second high spare percentage—Davis.

First high strike percentage—Smuck.

Second high strike percentage—Sattler.

First high score—Waters.

Second high score—Covey.

Most honor games—Waters.

Full house games—Waters.

Split spares—Dohme.

Sharp & Dohme, collectively and as individuals, therefore, captured five prizes, the Root and Herbs taking not less than seven, while the remainder fell to Gilpin, Langdon & Co. and to James Ealy & Son.

Matrimonial.

Baltimore, May 24.—After having been a widower for several weeks, Emil Krebs, a young drug clerk, took unto himself another bride last night, the second Mrs. Krebs being Miss Amella Welke. Mr. Krebs' first matrimonial experience had a tragic termination. He had been paying court to a young lady in opposition to the wishes of a relative with whom she lived. When Mrs. Krebs went there after the wedding to get her belongings, the groom and the aforementioned relative became involved in a dispute. The bride, who happened to be in an upper story room, heard the quarrel, and it so excited her that she took poison and died soon afterward.

Maryland College of Pharmacy.

Baltimore, May 25.—The monthly meeting of the Maryland College of Pharmacy was held yesterday at the Institution on Aisquith street. Quite a large number of the members attended and much interest was manifested in the proceedings. The delegates to the annual meeting of the American Pharmaceutical Association and those who had been present at the conference of representatives of colleges of pharmacy from all over the country, submitted reports. While the delegates to the college meeting had nothing more to state than that an organization had been effected, the progress of the movement, which had emanated from the Baltimore institution, el-

cited considerable satisfaction. Arrangement were made for the opening of the college next fall and Dr. R. E. Lee Hall, secretary of the Baltimore Retail Druggists' Association, was elected to membership.

NOTES.

—A new drug store has been opened at York, Pa., by Westerholt & Semple. Mr. Westerholt was formerly in the employ of Dale & Co., and Mr. Semple served in a similar capacity in the pharmacy of Wm. Smith & Co., of York. Both are well acquainted in the town and have many friends.

—Among the out-of-town druggists on a visit here last week were Spottswood Bird, of King and Queen Court House, Va.; C. J. W. Summers, of Alexandria, and Ollie Valentine, manager of Forwood & Co., Belair, Md.

—Dr. Enno Sander, of St. Louis, was in Baltimore last week on his way to Philadelphia and while here was entertained by Prof. Charles Caspari, Jr., Charles E. Dohme and H. P. Hynson, who took particular pains to make his brief stay agreeable.

—The pharmacy to be opened by a colored man at the corner of Druid Hill avenue and Hoffman street, this city, is about ready for business. It will be known as Young's Pharmacy.

PHILADELPHIA.

Philadelphia, May 26.

—The Smith, Kilne & French Company's base ball team are having such unlooked-for success in arranging a schedule of games for Saturday afternoons during the summer that the firm has equipped them with suits. The personnel of the team is as follows: Catcher, Charles Hamilton; pitchers, John McCaffrey and James McCaffrey; first base, John Ahert; second base, James Collins; third base, Oscar Schuenemann; short stop and captain, John Chism; left field, Howard Davis; centre field, Willard Graham; right field, Melvin W. Bamford. The uniforms are of light gray trimmed with maroon.

—The commencement exercises of the Department of Pharmacy, Medicine and Dentistry of the Medico-Chirurgical College of Philadelphia, were held in the Academy of Music, Saturday, May 19. Eighteen received the degree Graduate of Pharmacy, forty received the degree Doctor of Medicine, twenty-one received the degree Doctor of Dentistry. Geo. Edw. Reed, L. D. D. President of Dickinson College delivered the oration. The exercises were witnessed by a large, appreciative and enthusiastic audience. An elaborate banquet was tendered the graduates at the Stratford Hotel, Friday evening, May 18.

—Robert A. Brown, a druggist of Newcastle, Del., was held in \$500 bail this week to answer a charge of obtaining goods under false pretenses. Brown had sent an order to Wm. Lentz, a dealer in microscopes, for an instrument worth \$35. The order purported to come from Dr. Hammond, a member of the hospital staff of the Samaritan Hospital of this city and the messenger who was to deliver the microscope was intercepted by Brown, who took the instrument and pawned it, the dealer recovering it afterward from the pawnbroker.

—The Moro-Phillips Chemical Works, located on Cooper's Creek, Camden, N. J., is again under fire on account of maintaining a nuisance, the fumes proving deleterious to the health of the residents of that section of the city. About two years ago a similar prosecution was brought and the company paid a fine of \$500. Now the works are being operated by a chemical trust, and there is no doubt that a similar verdict will be rendered.

—Lars Christianson, a druggist from Fargo, N. D., was a visitor in Philadelphia for several days this week and spent some time in visiting the local wholesale and manufacturing houses. Mr. Christianson is on his way to Europe, where he expects to visit for several months.

—Frank Edwards, who has been with J. Harry Massholder, of Twenty-eighth and Master streets, is going to take a vacation next week and visit his folks at Nazareth, Pa.

—A meeting of the Philadelphia Botanical Club was held on Thursday evening, May 24, at 8 o'clock, at the Academy of Natural Sciences, Nineteenth and Race streets.

—There are twenty-eight clerks looking for employment this week and twenty-one positions to be filled, according to the advertising columns of the daily papers.

CINCINNATI.

Refilled Empty Patent Medicine Bottles.

Cincinnati, May 26.—E. A. Deane and Wm. Vasche were arrested Saturday afternoon, May 19, on the charge of substituting patent medicines. The arrests were made on information received from the Wells & Richardson Drug Co., who claim the prisoners have been fraudulently using the stamp, brand, imprint and bottle of the manufacturers of Paine's Celery Compound with intent to sell a mixture or compound which was not manufactured by the persons to whom it was attributed. Vasche is well known in town, having clerked for several stores in the past few years. Deane is not so well known, but has been putting several of his specialties, among them an inhaler, with the retail drug trade. It is claimed that both of them have followed the practice of purchasing any empty patent medicine bottles for some time past and had a good thing. They were bound over to the Grand Jury in the sum of \$1,000 each.

NOTES.

—Carl Zwick is remodeling the drug store at Eleventh and Madison streets, Covington, Ky., which, when completed, will be as handsome as any store in this locality. The store has been established over fifty years, during which time very few changes were made. Mr. Zwick has put in a complete new front and removed the partition which separated the drug store proper from the paint and heavy drug department. The store will have tile flooring, steel ceiling, and will be furnished with new fixtures, shelf ware, soda fountain, etc.

—An effort will be made to establish a complete physiological laboratory at the University of Cincinnati. In the event of the success of the movement, Dr. Wm. Muehlberg, the youngest son of William Muehlberg, deceased, and brother of Edward and Victor Muehlberg, the druggists, at Elder and Race streets, will receive the appointment. Mr. Muehlberg is at present assistant to Dr. Porter in the physiological laboratory at Harvard College.

—The meeting of the Hamilton County Pharmacists, Tuesday, May 22, was well attended. Nothing of importance was transacted, as the Executive Committee had received no reply from the local drug jobbers. The members of the association were disappointed at not hearing from the wholesalers, and a special meeting may be called, when ways and means will be discussed to buy drugs out of town to the exclusion of the local jobbers.

—The commencement exercises of the Cincinnati College of Pharmacy will take place at the Zoological Garden on June 6. After the exercises the Alumni will tender the graduates a banquet in the Club House at the Zoo.

—George Broft, for some years clerk at Hall's pharmacy, has accepted a position with John Bauer in his Walnut Hills store, recently purchased from A. E. Diebold.

—A. Bingel, the druggist at Liberty and Sycamore streets, left a few days ago to visit his brother in Chicago, who is also in the drug business.

—The Smith Drug Co., Hillsboro, Ohio, incorporated May 22, for \$10,000.

DETROIT.

Who Is The Lady?

Detroit, May 24.—A telegram from San Francisco was received by the Michigan Drug Co., yesterday which is causing them to ask every druggist coming in what his wife's maiden name was. The dispatch stated that a man had died in a hospital in that city, of whom their only knowledge was that his name was Williams and that he had said that "his only relative in the world was a sister who was the wife of a prominent druggist in Detroit." There are only about 200 "prominent druggists" in Detroit, and it may take some time to locate the lady.

Manufacturing Druggists' Club.

Detroit, May 26.—A new club has been formed among the employes of the manufacturing chemists and wholesale drug houses of Detroit, called the Manufacturing Druggists' Club. Its officers are: President, H. E. Perry, of the Michigan Drug Co.; first vice-president, J. A. Stewart, of Parke, Davis & Co.; second vice-president,

A. H. Ludwig, of Nelson, Baker & Co.; treasurer, C. R. Carlisle, of the Michigan Drug Co.; secretary, M. C. Teagan, of Farrand, Williams & Clark. It is of a purely social nature, and will give a series of moonlight excursions during the summer months, with a grand ball at the Light Infantry Armory in the early fall. The object of the club is to get the employes of the various establishments more interested in bowling. It is intended to form a bowling league, and the games will begin early next season. Some of the money raised by the excursions and so on will be spent in buying a trophy to be played for, and it is hoped that there will be enough left in the exchequer to send the best team down to New York for the next meeting of the National Druggists' Bowling League. The first "moonlight" will be given on the evening of June 6.

Students Visit F. Stevens & Co.

Detroit, May 24.—About 100 students of the U. of M. have spent to-day in Detroit, the guests of Frederick Stevens & Co. A special coach took them to the very door of the company's new laboratories, where several hours were spent in inspecting the plant. After luncheon, served in the handsome general offices, the party were given a tally-ho ride around Belle Isle and to other points of interest. Dr. Prescott, the dean, and Professors Stevens and Schlotterbeck, of the department of pharmacy, were in charge of the party, which included several "co-eds," pharmacy students.

NOTES.

—Grant Stevens, for a long time with Alvin E. Holt, on Woodward avenue, Detroit, has taken the position of manager for the M. J. Hollister drug store, on the corner of Lincoln and Kirby avenues. Louis Ruchty will take Mr. Stevens' place at Holt's.

—The baseball team of the Michigan Drug Company defeated the Walkerville team by a score of 6 to 4 in the opening game of the season. The druggists will try to shut out the Polish Seminary boys on Saturday next.

—Dr. J. E. Clark, dean of the Department of Pharmacy, Detroit College of Medicine, was called to his home in Canada by the wholesale illness of his family—father, mother and sister all being ill.

—Druggist F. J. Henning, of Detroit, has been spending an early vacation with his parents at Coldwater.

—The Department of Pharmacy, Detroit College of Medicine, will hold its graduating exercises June 14.

CHICAGO.

Drug Clerks' Dance.

Chicago, May 24.—The ball of the Illinois Drug Clerks' Association last evening at the Masonic Temple was a pronounced success. About 200 persons were present and dancing was indulged in to a late hour. The music was excellent. Refreshments were served, not the least delicious of which was the ice cream soda furnished by the L. H. Becker Company from one of their "Twentieth Century" fountains set up in the ball room especially for this occasion.

The committees in charge of the entertainment were as follows: Entertainment Committee—W. R. Phillips, chairman; W. F. Egler, G. G. Fox, A. Lofstrom, C. A. Ullman, W. E. Kutz, J. N. Clark and C. A. Anderson; Floor Committee: F. Kemper, chairman; W. L. Dyche, G. H. Hodges, C. Windmueller, Al. Jans and Robert Koch.

Parke, Davis & Co. Prepare Another Excursion.

Chicago, May 26.—Parke, Davis & Co. are preparing an elaborate entertainment for such of their Chicago friends as find it convenient to accept the invitation they extend to join the special party which is being organized to visit Detroit. The party will leave Chicago by special sold Pullman train over the Michigan Central Railroad from depot foot of Twelfth street, at 10 p. m. sharp, Wednesday evening, June 6. For this occasion the railroad company has extended the rate of \$6.80 for the round trip, Chicago to Detroit and return. Refreshments will be served on the train. The entire party are invited to be the guests of Parke, Davis & Co during their stay in Detroit, which will be from Thursday morning, June 7,

to Friday evening, June 8. The special train returning will leave Detroit late Friday evening, arriving in Chicago early Saturday morning, June 9. The first day in Detroit will be devoted to a ride around the city, through its parks, and to an inspection of Parke, Davis & Co.'s manufacturing plant. Hotel accommodations will be furnished at the Russell House, where all meals for the party will be served in a special dining room. Weather permitting, a moonlight excursion on the Detroit River will be given. The entire second day will be devoted to a water trip by special steamer. Music and refreshments will be served on the boat, and a stop will be made at one of the delightful resorts along the St. Clair river for dinner.

Searle & Hereth Entertain.

Chicago, May 24.—Yesterday the Searle & Hereth Company gave a luncheon and reception to the graduating class of the Rush Medical College and others. The guests were shown over the extensive laboratories of the company and the various methods employed in the manufacture of pharmaceutical products were explained. About 200 persons were present. The company now occupies the whole of the building at 73 and 75 Wells street, having taken possession of the corner room on the first floor formerly occupied by a bicycle firm. In this room, which faces on Illinois and Wells streets, are the offices of the firm.

NOTES.

—It is reported that a controlling interest in the drug store of the Colbert Chemical Company at Dearborn and Monroe streets, and the People's Drug Store at Monroe and Clark streets, has been sold to Joseph Trienens and A. A. Wert, who manage and control the Buck & Rayner stores and the Auditorium Pharmacy.

—The Public Drug Company, whose incorporation was announced some time ago, will open a new drug store at 154 State street in a week or so. The store will be one of the finest in the West. S. Hexter, who for many years represented the Arlington Chemical Company in Chicago, will have charge of the store.

—R. H. Traill, of the well-known drug firm of Traill & Cooling, Austin, had both hands severely burned on Monday, May 21, by an explosion in the firm's laboratory. He will be unable to attend to business for some time.

—It is reported that the drug store at Twelfth street and Blue Island avenue has been closed, the stock sold off and that the former owner has retired from the drug business.

—F. L. Cooke, of Milwaukee, representing Sharp & Dohme in Wisconsin, was in Chicago the other day. He reports an excellent business.

—Charles L. Gleason, representing Parke, Davis & Company's importing department, New York, was in Chicago this week.

—G. D. Searle, of the Searle & Hereth Company, is spending a few days this week at his old home in Anderson, Ind.

—The drug store formerly owned by the late C. C. Kehner at 557 Sedgwick street has been sold to J. M. Zindt.

—J. A. Johnson, the West Madison street druggist, has gone to Indianapolis, Ind., for a few weeks' vacation.

—The Taylor-Gardner Drug Company has succeeded C. E. Joslin & Company at Nora Springs, Ia.

—M. C. Smucker has sold his store at Ashland avenue and Madison street to L. L. Merriman.

THE NORTHWEST.

Department Store Druggists.

St. Paul, Minn., May 25.—It is, apparently, a "slick" game the managers of department stores in the Twin Cities are trying to play in their efforts to get the retail druggists to join them in slightly advancing prices, as related in this correspondence last week. So far as St. Paul drug dealers, at least, are concerned—to employ a little Hibernicism—the more they think of it the less they think of it. They recognize that the department store people, after next to totally ruining a large part of the business of retailers, are now seeking to become full-fledged members of the drug associations, which

would enable them to do the druggists "dirty" to a greater extent than ever, in case they were so disposed. They hope to use the druggists as cat's paws to pull their own chestnuts out of the fire; for should these two classes of business men unite for higher prices, the department stores would be gainers, while the drug men would not, probably, reap much benefit from such trifling price advances as are proposed. The St. Paul druggists have as yet no reason to regret having "turned down" the department people's proposition and are watching with interest the outcome of affairs in Minneapolis, where the retail druggists listened to the siren voice of the octopus outfits.

NOTES.

—Successions: Carter & Flickenger, Collins, Ia., by Carter & Hemstock; Dorman & Westveer, Lake City, Ia., by A. M. Westveer; Clark & Houghton, Portsmouth, Ia., by Downs & Roberts; J. S. Thurston & Co., Pavette, Idaho, by J. S. Thurston; F. H. Eggleston and A. H. Cordiver (separate stores), Laramie, Wyo., by Eggleston Drug Co.; Jones & Co., Montrose, Ia., by C. R. & M. E. Sanderson; P. J. Schaefer, Good Thunder, Minn., by V. A. Hirschler; Luetscher & Walker, Mondivo, Wis., by George A. Luetscher.

—One of the reporters of the St. Paul Daily News noticed something the other day and must needs go and do this:

Hear the soda water fountain's
Gentle fizz.
How it agitates your thirst
With its sizz.
How it gurgles, sozzles, sizzles,
How it sputters, spits and drizzles,
How it foams and drips and mizzles—
What a biz!

—C. R. Foss has started at Sand Point, Idaho; Axness & Co. at Pelican Rapids, Minn.; Schaefer Bros. at St. Peter, Minn., and C. F. Slate at Platt, S. D.

—Joseph Kerwin, who was for some years in the wholesale house of Noyes Bros. & Cutler, of this city, is now with Wangler Bros., Waterloo, Ia.

—J. N. Oliver, late of New Rockford, is talking of going to Skaguay, Alaska, to go into the drug business or practice medicine.

—S. H. Brownlee, of Sandstone, was in the city this week on business. He has now running a thriving drug store at Mackley also.

—Charles Bird, who used to be in the drug business at Morristown, and who has lately been in Alaska, has returned.

—Messrs. Shanley & Shealds have retired from H. Phillips & Co., Rutland, N. D.

—E. J. Anderson is at home at Wadena suffering from an attack of the grip.

—C. H. Orth is working in the store of G. A. Bingenheimer, Minneapolis.

—Whitcomb Bros., Tacoma, Wash., are negotiating to sell to Michael Bros.

—Philip Schleiger, Grand Meadow, Minn., has been burned out.

—F. P. Offerman, Fairhaven, Wash., has sold a half interest.

—W. T. Gilmore is now with Crocker & Hawley, Fairhaven.

—Ezra C. Lawrence, Des Moines, Ia., has sold.

ST. LOUIS.

Apothecaries' Association Meeting.

St. Louis, May 24.—On account of the great street railway strike barely a quorum were present at the meeting of the St. Louis Apothecaries' Association this afternoon. President Allen called the meeting to order and Secretary H. F. Hasselbrock read the minutes of the last annual meeting which were duly approved. Owing to the small attendance it was thought best to postpone the hearing of reports and election of officers and other important business until a representative gathering of members could be obtained and a motion prevailed adjourning the meeting until the third Tuesday in July or sooner, subject to the call of the chair. Secretary Hasselbrock distributed copies of Bulletin 8 of the N. A. R. D., giving the names of sixty-one proprietors who will distribute

their goods only to jobbers who will refrain from supplying aggressive cutters and brokers. Those present were highly gratified with the excellent work being done by the N. A. R. D., and seemed to think that the outlook for a solution of the cutting problem was brighter than it had ever been.

The Iowa Situation.

St. Louis, May 26.—John H. Allen, president of the St. Louis Apothecaries' Association, and a member of the Executive Committee of the N. A. R. D., has just returned from a seven months' trip through Iowa. He says that there is practically no price cutting throughout the State. In Marshalltown a department store opened up a few months ago and started to cut, but the druggists got together, bought its stock of patents and distributed them among themselves. Mason City has organized in affiliation with the N. A. R. D., as have many other towns. Where cutting on patents does not exist, other evils are being handled and the druggists are making a strong and successful fight to keep the department stores from taking the sundry business out of their hands. Des Moines is well organized and is fast eliminating what cutting has been indulged in. Mr. Allen says the druggists throughout the State are enthusiastic regarding the N. A. R. D. and regard it as the only preventive and curative of the commercial evils which beset the trade.

NOTES.

—C. F. G. Meyer, president of the Meyer Bros. Drug Co., has received a most interesting letter from his son, Henry J. Meyer, who is in South Africa and attached to Lord Roberts' column as agent of the Cold Storage Co., which has the contract for supplying the English Army with meat. He relates some thrilling experiences and has been with a single companion over a large part of the country south of Bloemfontein buying cattle for the company.

—Clifford Hemm, the fourteen-year-old son of Druggist Louis P. Hemm, of Kirkwood, and nephew of Prof. Francis Hemm, died Tuesday of diphtheria after an illness of only three days. His twin brother is down with the same disease.

—W. S. Fleming, of Fleming & Hoch, Washington avenue and Seventeenth street, got the nomination for State Treasurer on the Republican ticket.

—Ernest L. Harris, who has been clerking for prominent local druggists for years, has opened the "Palace Pharmacy" at 2326 Market street.

—George P. Higgins, clerk at the Marion Sims Pharmacy, will go with the Garrison avenue pharmacy.

—G. B. Grover, druggist of Natchez, Miss., will move into a larger building and put in new fixtures.

—G. A. Ludwigs, a well-known drug clerk of East St. Louis, will open a drug store there.

—A. M. Pachter, clerk for F. T. McAuliffe, has a fine ten pound baby boy at his house.

—Mrs. Wolf, wife of Edward Wolf, of the Wolf-Wilson Drug Co., is seriously ill.

THE INTERNATIONAL MEDICAL ANNUAL AND PRACTITIONERS' INDEX, 1900. Eighteenth year; 8vo., cloth, 748 pages, illustrated; \$3. New York, E. B. Treat & Co.

This annual is a most handy work of reference for the busy medical practitioner, as it contains a resumé of the advances made in the study of disease, diagnosis, treatment, etc., reported during the year 1899. The articles by various contributors are comprehensive and extend into nearly all of the special fields of medical research. Part I. of the work, "Therapeutics," contains sixty-two pages, fifty-nine of which are devoted to a review of therapeutic progress for 1899, by Dr. Wm. Murrell. Part II., "New Treatment," constitutes the greater portion of the volume and is, as its title indicates, a "Dictionary of New Treatment in Medicine and Surgery, 1900." To these reports are added "Notes on Legal Decisions of Interest to Physicians, Dentists and Pharmacists," by W. A. Furrington, A. B., LL. M.; "Sanitary Science," by Joseph Priestley, B. A., M. D., of London, and a list of the principal medical works published during the past year. The volume is uniform in style and binding with those of previous years and it will make a valuable addition to the library of any physician or pharmacist.

OBITUARY.

CHARLES K. WHIPPLE, one of the "Old Guard" abolitionists, a scholar and writer, has just died at Newburyport, Mass., at the age of ninety-one. He was the last survivor of a remarkable group of men who gathered around William Lloyd Garrison in his abolition movement. Born in Newburyport, November 17, 1808, Mr. Whipple resided for some time in Boston, for several years being the pharmacist at the Massachusetts General Hospital. Upon leaving this position he became actively engaged in the work of the Massachusetts Anti-Slavery Society. He was interested in combating the attitude of the American pro-slavery churches and tract societies and the American Board of Commissioners of Foreign Missions, and wrote a searching volume in exposure of their complicity with slave-holders. He was a friend of John G. Whittier, the poet; Theodore Parker, with whom he held close intimacy in friendship, and had many notable friends. His body was cremated at Forest Hills Cemetery.

ALBERT H. ERAYS, a druggist, has just died at his home on Gordon street, Jamaica Plain, Mass. He was born in Merrimac, N. H., about forty-eight years ago. At the age of eighteen he was apprenticed to a druggist in Lowell, under whom he served three years. When he was twenty-one he went to Jamaica Plain and established a drug store at the corner of Gordon street and Woolsey square. At the time of his death he had a drug store on Gordon street, Jamaica Plain. He also went into real estate extensively, most of his investments being in the Jamaica Plain part of the city, where he devoted his building operations to the erection of apartment houses exclusively, building the first one ever erected there, situated on Green street. This was in 1885. Mr. Erays was a member of Elliot Lodge, F. A. M., the National Lancers and the "Old Tigers." In his time he has been a wealthy man, but he met with reverses during the latter part of his life.

ABRAHAM EDMANDS CUTTER, who has just died, was born in Newburyport, Mass., in 1822 and was educated in the public schools of Saco, Maine. He entered a store in Saco where the drug business was combined with book selling. This business he followed for some years with the exception of a year spent in two voyages to Europe in a sailing vessel and another term of study in the academy. He came to Boston in 1843 and was employed in the drug store of the late William Brown and remained there and in the same business in another place for about ten years, when he removed to Charlestown and opened business as a bookseller. Mr. Cutter was elected to the school board of Charlestown in 1857, serving twenty-five years in all. He was twice married. Mr. Cutter had always been identified with, and interested in, various local charities and institutions of the city.

T. S. WATERMAN, formerly of Lynn, Mass., but who made his home for a long time in New Orleans, La., died in that city on May 9, at the age of 81. He was a native of Lynn, and was a descendant of Capt. Miles Standish. He went to New Orleans in 1840. Mr. Waterman was one of the first manufacturers of soda water and other carbonated beverages in this country, inventing an apparatus used in their manufacture.

FRANK M. WILSON, prominent druggist of Williamantic, Conn., dropped dead May 1. He was fifty years of age and for thirty years had been in the drug business first as a clerk then as a proprietor, in partnership and singly. He was a member of the State Legislature in 1895 and had satisfactorily filled several local offices of trust and honor. A widow and three children survive.

CHARLES A. MASON.—After an illness of less than a fortnight, Charles A. Mason, an expert accountant and for many years a trusted bookkeeper for Apothecaries Hall Company, Waterbury, Conn., died of pneumonia.

His acquaintance was widespread and he was much liked. Lately he had been in the insurance business.

PAUL ZIMMERMANN, proprietor of a pharmacy at No. 61 Bowers, New York City, died on May 3 of heart failure. He was a graduate of the New York College of Pharmacy, and a member of the German Apothecaries' Association. He was 32 years old, and left a wife and two children.

HARRY HALL, during the past five years a clerk in the pharmacy of Thomas & Thompson, Baltimore, Md., died May 7 of consumption. He had been confined to his house only a comparatively short time. He enjoyed a wide acquaintance, and made numerous friends. His wife and one child survive.

DR. JOHN F. TRUE, one of the most widely known men of Maine, has just died at his home in Auburn. Dr. True was born in Deerfield, in 1817. He lived in Auburn more than forty years, and had built up an extensive business in proprietary medicines. He was twice married, and his second wife survives him.

DR. L. M. WILLIAMS, of Chelsea, Mass., died in the City of Mexico April 25. The deceased was commonly addressed as "Doctor" because of his long activity as the proprietor of a drug store in Chelsea and his close acquaintance with chemistry and other branches of science. He leaves a family in Chelsea.

MYRON A. CLARK, who for nearly fifteen years was foreman of the wholesale drug department of George C. Goodwin & Company, Boston (lately merged into the Eastern Drug Company), has just died very suddenly at his home in Wenham. He was forty-two years of age.

DAVID HEATH, engaged in the drug business for many years at Victor, N. Y., died in Buffalo, April 17. He settled in Victor in 1835 and was the senior partner of D. Heath & Son until he retired a few years ago. He was eighty-three years of age.

JAMES A. BROWN, prominent druggist of Ensley, Ala., died May 6. He graduated from the University of Virginia in 1870, and since 1884 had been in business in Ensley. He stood high in the esteem of his associates and his death is greatly deplored.

ORGANIC CHEMISTRY OR CHEMISTRY OF THE CARBON COMPOUNDS. By Victor von Richter. Edited by Prof. R. Anshutz, University of Bonn, assisted by Dr. G. Schroeter. Authorized translation by Edgar F. Smith, professor of Chemistry, University of Pennsylvania. Third American from the Eighth German edition. Volume II. Carbocyclic and Heterocyclic Series. Cloth, 671 pages; \$9. Philadelphia, P. Blakiston's Son & Co.

The student of twenty years ago who has not kept pace with the great advances made in the study of the constitution of carbon compounds will find himself unable to grasp many of the principles laid down in this work, but he who is "up to it" will find it an admirable and most complete exposition of the subject of organic chemistry. Volume I, reviewed in this journal May 25 last year (page 712) covered that part of the subject under the "Aliphatic Series." Volume II, now before us, continues the study beginning with the "Carbocyclic Compounds," or compounds containing carbon rings, and carries it through a consideration of the constitution of those complex substances denominated by chemists as "heterocyclic compounds." This work as a whole is entitled to a prominent place among text books on organic chemistry and in the hands of an experienced teacher it will be found to be a most useful and reliable guide to the student, and for the practical chemist and advanced student a most valuable work of reference. As an exposition of the printing art the typography is particularly commendable and the display of graphic formulas in rings and chains is sure to call forth the admiration of any one interested in the resources of the "art preservative."

ASSOCIATIONS.

NEW JERSEY PHARMACEUTICAL ASSOCIATION.

The New Jersey Pharmaceutical Association held its thirtieth annual meeting at Asbury Park, May 23 and 24. The various sessions were held in the ballroom of the West End Hotel and a large number of members accompanied by their wives were in attendance. The meeting was called to order by President W. C. Alpers, who, after a prayer by Rev. Dr. Marvin, introduced Hon. F. T. Appleby of Asbury Park. Mr. Appleby explained that he represented the Mayor who was detained from attending the meeting by illness, and closed his address of welcome by offering the freedom of the city to the visitors. C. P. Smith of Newark made a short reply.

The president then read his annual address, in which he said the business outlook was brighter than for many years past. He said he had experienced the greatest difficulty in getting members of the Association to serve on the Query Committee. To overcome this difficulty a more vigorous policy was needed. Provision should be made for this committee to send out questions early to members of the Association and to keep at it. The committee should also collect facts bearing on the progress of pharmacy, adulteration and methods of analysis for their determination, etc. He reported that the association had to its credit \$2,300, with an annual income from dues amounting to \$375. The annual expenditures amount to \$475, and he urged greater economy in the matter of expenses.

The proposition of the Pabst Brewing Company, of Milwaukee, to allow an additional discount or rebate to associations on goods sold to their members was denounced as an "advertising scheme," and he advised the association to authorize the return of the check sent by that corporation to the society. The work of the New Jersey Board of Pharmacy was heartily endorsed. He believed a thorough general education should be required of applicants, and the legal establishment of such educational requirements was more necessary than anything else in the development of pharmacy. He endorsed the "model law" adopted by the American Pharmaceutical Association at its last meeting, and said that the New Jersey pharmacy law came nearer to this draft than that of any other State. The recommendation that hospital stewards in the National Guard be registered pharmacists and be accorded commissions, as recently authorized in New York, he also endorsed. The following members had died during the past year: J. H. Deursen, New Brunswick; E. H. Plath, Englewood; A. E. White, Ocean Grove; S. W. White, Elizabeth; and William H. Goodale, Dover. The local secretary should be made an officer of the association, and the order of business prescribed by the constitution should be changed.

In closing his address the president recommended the association to sever its connection with the National Association of Retail Druggists. The experiences of the past year had not verified the predictions made by the national organization. "The N. A. R. D. gives nothing but promises," he said. "It is the retailer who is called upon to make all of the sacrifices, while the jobber gets all the profits and the manufacturer risks but little." Then, too, he thought the membership of the association in the N. A. R. D. was unconstitutional.

The address was referred to a committee consisting of Messrs. Holzhauser, Bye and Merritt.

The secretary and treasurer then read their annual reports, showing a net membership of 364, with a cash balance on hand of \$2,414.46. Henry A. Jorden, of Bridgeton, read his report as secretary of the New Jersey Board of Pharmacy. The board held fifteen meetings during the year, and he was glad to report that applicants taking the examination showed better preparation for the work than ever before. Out of 107 who had taken the examination, fifty-three were college graduates. There were 1,539 registered pharmacists and 97 assistant pharmacists in the State.

After a Nominating Committee was appointed, the credentials of delegates from other pharmaceutical organizations were read. A motion to receive them and to grant the delegates the privilege of the floor was followed by a sharp discussion over the latter clause of the motion, and the "privileges of the floor" were not granted. It was a cold reception for the visiting delegates, and when they were asked if any of them had anything to say and the association would listen to them, not one responded. Dr. Brundage, a delegate from Brooklyn, and also a member of the New Jersey Association, protested against this action, but his protest did no good. The opponents to granting the privileges of the floor to visiting delegates did not want the latter, among whom was Prof. W. C. Anderson, vice-president of the N. A. R. D., to debate the plan of the national organization. After the appointment of some other committees and the reading of communications, the association adjourned.

SECOND SESSION.

The second session began at 2.30 p. m., the Committee on Membership reporting the names of twenty-five new members. Reports from delegates to the American Pharmaceutical Association, the National Wholesale Druggists' Association, Pure Food and Drug Congress, U. S. Pharmacopoeial Convention and other associations were read and referred to the Publication Committee. A resolution growing out of the discussion over the action of the New Jersey Board of Pharmacy in attempting to secure legislation last winter without "consulting the association," was passed "that the association considers it inadvisable for any of its members to attempt to introduce any legislation affecting pharmacy without the sanction of the association."

Then followed a report from the delegate to the meeting of the N. A. R. D., J. C. Gallagher, of Jersey City. Here the fight over the N. A. R. D. began again, the opposition being led by Charles Holzhauer, of Newark. By a vote of 22 to 14, the report was laid on the table, and another motion was passed making the question of remaining in the N. A. R. D. the first order of business for the following day. The association then adjourned to allow the members to go on an excursion to Shark River, where they were served to a clam bake provided by the local committee.

THIRD SESSION.

By consent of the members present, Mr. Holzhauer read the committee's report on the president's address, and then the hall was started rolling by J. C. Gallagher, who moved "that the dues of this association to the N. A. R. D. be paid." The resolution was violently opposed by Charles Holzhauer, White, Ryerson and the retiring president, W. C. Alpers, and most eloquently defended by Messrs. J. C. Gallagher and Frank O. Cole.

The resolution was lost, and by a vote of 14 to 29 the association decided to withdraw from the National Association of Retail Druggists. It, however, passed another resolution favoring the plan of the National Association of Retail Druggists, and authorized the incoming president to appoint a committee of three members for each county to form local associations to co-operate with the national organization. The secretary was authorized to ascertain the present indebtedness of the New Jersey Pharmaceutical Association to the N. A. R. D., and if any such there be, the association shall pay the amount.

The officers elected were Stephen D. Woolley, Ocean Grove, president; D. L. Cameron, Rutherford, and James Faulke, Jersey City, vice-presidents; Frank C. Stutzler, Elizabeth, secretary; James C. Field, Somerville, treasurer, and H. P. Thorn, Medford, and G. T. Fitzgeorge, Trenton, as new members of the Legislative Committee.

Executive Committee: D. L. Cameron, W. C. Alpers, Geo. H. Whipple, C. R. Priest and J. W. Merritt. Names from which to select a member of the Board of Pharmacy: H. A. Jordan, Charles Holzhauer, C. A. Bye, W. F. Fox and R. Killgore.

Resolutions thanking the local authorities and the Entertainment Committee were passed, after which the association adjourned to meet at such time and place next year as the Executive Committee may decide.

ASSOCIATED RETAIL DRUGGISTS OF SAN FRANCISCO.

Members and friends of this association, to the number of two hundred, enjoyed an elaborate banquet and the many customary pleasures attending it on the night of April 17. The menu was up-to-date, the cigars good and the speeches better. The programme included numerous musical selections, an address by the president, J. S. Potts, and the following toasts: "San Francisco; Its Present and Future," Wm. H. Jordan; "Fraternal Relations," Leon Guggenheim; "Unity of Purpose," Jas. M. Gleaves; "Pharmacy," Prof. W. M. Seabury; "A Better Feeling," H. F. Wynne; "Review of the Trade," G. E. Bacon. Prior to introducing the speakers, Toastmaster Edward Baldwin delivered a short address, in which he said:

No business conducted by man is more important than that of a druggist. He is blindly trusted—his mistakes seldom can be corrected; he gives no bond except his honor. It is, or ought to be, a profession into which none should enter not competent to follow it, and the standard of preliminary training ought to be high enough to inspire in those who engage in it a recognition of its dignity and importance. The druggist is the instrument of the physician, not his substitute, and the two professions ought to dwell together in harmony, neither to the disadvantage of the other, and it is a mistake in either to underestimate the work of the other. Our association seeks to foster and engender the best of citizenship, self-fellowship, professional and business advancement and to raise the standard of our association.

It is in my judgment a great error to place the druggist on the plane of a fakir by making him the vehicle for the distribution of humbug nostrums bearing his personal guaranty, and thus impose upon the public by reason of their confidence in the business or calling of the druggist.

It is a serious wrong to seek to undermine the public confidence in the profession of medicine by assuming that the physician and druggist are silent partners in the miserable business of substituting quackery for professions, and thus creating as much distrust in the one as in the other.

The druggist who advertises that he is independent of the physician is as much of a humbug as the physician, who states that for safety he compounds his own medicines. The humbug doctor and the fakir druggist must move on; they are easily discovered, and the world, belted by public journals, is telling the truth, and the druggist getting too small for them. The retail druggist follows an honorable employment, and does not need to support himself by dishonorable methods, and I am happy to state that but a very few have emerged from the ranks; the druggist should not assume the functions of a physician, unless he is a graduate in medicine. It tends to lower the dignity of the profession by indulging in rate wars, in attempting to cut standard and well recognized prices. This style of business tends towards generalization and would have the effect, if followed, of closing out the weaker fellow while not increasing the demands of the public. No man buys drugs simply because they may be cheaper. Such work also tends to tempt some to the dishonest practice of attempting to counterfeit the article desired, and in the end is disastrous to the one who inaugurates the war, for usually no man can patent brain or business sagacity, and as misery is said to love company, the rate cutter generally is met and disaster follows as the price of his folly.

TEXAS PHARMACISTS IN SESSION.

The Texas Pharmaceutical Association held its annual meeting at Dallas May 15-17. President Hazlett delivered the annual address and urged the association to greater effort towards securing the passage of a pharmacy law which will meet all of the requirements of the drug trade. He thought much good would come from the work of the National Association of Retail Druggists, and suggested the organization of local associations in every city and county to help the work along. The repeal of the stamp tax was also urged.

The secretary and treasurer, R. H. Walker, reported a cash balance of \$314.00. The Committee on President's Address approved the various recommendations made and suggested that a committee be appointed to draft a law which will follow the bill drafted by the association in 1898, and embodying the following points: That no certificate shall be issued to any person upon presentation of a diploma; that no one shall be allowed to present him or herself for examination before the Board of Pharmacy except he or she shall have four years' experience, at least two of which shall have been spent in the compounding and dispensing of prescriptions under the supervision of a "registered pharmacist," or in lieu thereof upon presentation of a diploma from a school of pharmacy.

Evidence of experience as hereinbefore defined shall be certified by a notary public.

The committee's report was adopted by the association.

Reports of delegates to other associations were read, and a draft of the proposed amended pharmacy law was presented. The latter was fully discussed and finally referred to the Legislative Committee, with instructions to secure its passage by the Legislature. The proposed amendments to the present law governing the sale of liquor also came in for much discussion, and the matter was left in the hands of a committee to take such action as it thought proper to get the relief it believed the druggists should have.

The following officers were elected: President, J. L. Hazlett; Vice-Presidents, J. J. Schott, J. J. Thames and W. S. Kirby; Secretary, R. H. Walker; Trustee, George J. F. Schmidt. C. E. Craycroft, Sherman, was appointed local secretary for the next meeting. Seventy-eight new members were elected. The association decided to hold its next meeting at Sherman on the third Tuesday in May, 1901.

TORREY BOTANICAL CLUB.

The evening of March 28 was devoted to a popular lecture on the "Autumn Wild Flowers" native to the vicinity of New York City, by Mr. C. Van Brunt, with lantern slides. These were colored by Mrs. Van Brunt in her usual happy manner, and included not only wild flowers, but also marsh views, autumnal foliage, tracts of reddish sapphire and the fishing villages, old houses and farms among which the flowers selected grew.

On April 10 the paper of the evening was by Prof. F. E. Lloyd, "Studies in the Genus *Lycopodium*." Prof. Lloyd discussed the distinguishing characters of the North American species with reference to habit, sporangial leaves and their arrangement, leaf sections and other modifications. Two new species were recognized in this review of the genus. Dr. Underwood followed, remarking on the general distribution of *Lycopodium*, about ninety-four species or perhaps properly about 120, of which twelve are North American; perhaps twenty-one are peculiar to the Andes, and with them grow many others which extend into Mexico or Guiana; about eight are peculiar to Madagascar, four to India, etc.; mostly in mountain regions. *L. cernuum* probably encircles the world in the tropics.

Miscellaneous notes followed. Dr. Underwood reported word just received from a club member working in Jamaica who has already collected 200 species. Dr. Britton referred to a Japanese withazel flowering April 1 at the Botanical Garden, Hamamells arborea, with thorny, pinkish-yellow flowers with dark central eye formed by the claret-colored calyx. It has been cultivated at Kew since 1875.

Dr. McDougal reported a large number of pictures and documents relating to Dr. John Torrey which are accumulating preparatory to the proposed Torrey Day at the A. A. S. meeting, with letters to Torrey from Engelmann, Herbert Spencer, etc. Edward S. Burgess, secretary.

SOUTH CAROLINA ASSOCIATION.

The twenty-fourth annual meeting of the Pharmaceutical Association of South Carolina was held on May 17 at Charleston. The attendance was unusually large, and decided interest in the proceedings was evinced. Letters of application were read from seven druggists, all of whom were duly elected. Reports were read by the president, the secretary and the chairman of the Examining Board, in all of which the forward movement in pharmacy in this State was clearly shown. Memorial resolutions on the death of the late President, Peter Robertson, of Newberry, were read, and a touching tribute was paid to his memory as a pharmacist and a man. After routine business, the following officers were elected for the ensuing year: President, O. Y. Owings, of Columbia; first vice-president, John B. Johnson, of Rock Hill; second vice-president, A. A. Kroeg, of Charleston; secretary and treasurer, Frank M. Smith, of Charleston; solicitor, Hon. J. E. Burke, of Charleston; members of the State Board, O. Y. Owings, of Columbia; O. E. Thomas, of Columbia; J. G. De Lorme, of Sumter; Julian

A. Barbot, of Charleston; Edward S. Burnham, of Charleston, chairman; M. H. Sandifer, of Rock Hill, secretary.

At the conclusion of the meeting the members of the association with the ladies partook of a lunch, after which they dispersed to reassemble at 3.30 p. m. at the Calhoun Hotel. From this point they were conveyed by special cars to Chicora Park, where they were entertained by Von Moltke Lodge, Knights of Pythias, who were holding their annual picnic on that day. At 10 p. m. a banquet was served to the association, at which addresses were made by Profs. Burnham and Forest, of the South Carolina Pharmaceutical College; Ex-President O. E. Thomas and others, thus closing the session.

OKLAHOMA ASSOCIATION.

The Oklahoma Pharmaceutical Association held its tenth annual meeting at Shawnee, April 4 and 5. President W. R. McGeorge was absent on account of sickness, and, by the unanimous voice of the members present, F. B. Lillie, of Guthrie, occupied the chair. The meeting was well attended, and no pains were spared to make it a success. That the efforts were appreciated is vouched for by every one present.

Among the interesting papers read were: "What Our Association Does for the Druggist," by F. B. Lillie, of Guthrie; "How Are We to Increase Our Trade and Profit?" by J. C. Burton, of Stroud; "Keeping Stock," by W. E. Wheeler, of Guthrie; "Some Preparations Profitable for Oklahoma Druggists to Make," by C. R. Miller, of El Reno; "Notes from the N. A. R. D; What It Has Done and What It is Doing for the Retail Druggists."

The contests were participated in by everybody, and all had a general good time. Much credit is due to the ladies for the social side of the meeting, and for the active part they took to make it a success.

The following officers were elected for the ensuing year: President, C. A. Dow, Pond Creek; first vice-president, J. C. Burton, Stroud; second vice-president, Fred Reed, Norman; secretary, F. M. Weaver, Oklahoma City; assistant secretary, C. C. Pottenger, Shawnee; treasurer, L. J. Hord, Ponca City; local secretary, J. W. Pryor, Oklahoma City. Oklahoma City was selected as next meeting place, and the date for the meeting fixed on the second Wednesday of May, 1901.

ALABAMA PHARMACEUTICAL ASSOCIATION.

The Alabama Pharmaceutical Association held its nineteenth annual session at Mobile, May 15 and 16. Much routine business was transacted and ten new members were elected. President P. C. Candidus recommended that the association should co-operate with the N. A. R. D., and also that the members should work to secure the repeal of the stamp tax on medicines. The president's address, which also contained other recommendations, was referred to a committee for consideration and at the last session the association decided to re-enter the National Association of Retail Druggists and the secretary was authorized to telegraph the information to the headquarters of the national association. The co-operation of the association was pledged to the movement to secure more recognition and better pay for the pharmacists in the Marine Hospital Service. A committee, consisting of Messrs. McVay, Brigham and Braun, was appointed to consider the feasibility of adopting a formulary for use throughout the State. The committee reported favorably and the president, secretary and executive committee were instructed to issue during the coming year such a work. The following officers were elected: President, G. B. McVay, of Birmingham; vice-presidents, Thomas W. Peagler, of Greenville; R. H. Stickney, Jr., of Anniston; secretary, L. S. Brigham, of Montgomery; treasurer, E. E. Elam, of Anniston; local secretary, J. D. Burke, of Montgomery; Executive Committee, W. E. Bingham, Tuscaloosa, A. E. Brown, Mobile, and C. B. Goldthwaite, of Troy. A motion to increase the dues to \$1.50 per member was lost. Montgomery was selected as the place for holding the next meeting.

—The twenty-fourth annual meeting of the Connecticut Pharmaceutical Association will be held at the Allyn House, Hartford, June 12 and 13. The opening session of the Association will convene at 11 a. m., June 12, for the transaction of business, to be followed by sessions at such time as the Association may determine. The headquarters of the Association will be at the Allyn House, where special rates have been secured. The entertainment features of the meeting are in the hands of a committee of the Hartford Druggists' Association.

—The Board of Examiners to the Nebraska State Board of Pharmacy, met in regular session at the Lindell Hotel in Lincoln, May 9. There presented themselves for examination thirty-six applicants of whom the following passed a successful examination: Rudolph Balaban, Schuyler; J. H. Christensen, Craig; J. R. Easley, Alexandria; Wesley C. Fick, Falls City; Mary D. Lip-pincott, Tobias; Rudolph L. Meier, Lincoln; Edward H. Polley, Seward; Louis Schreiber, McCook; E. W. Schirmer, Nebraska City; Bert W. Shryock, Plattsmouth; Otto H. Zaceck, Howells. The next meeting of the board will be at Beatrice, June 5th Henry H. Barth, secretary.

—At the regular meeting of the Floyd County Druggists' Association, held at New Albany, Indiana, the following officers were elected for the ensuing year: C. E. Crecelius, president; Bruno Knoefel, vice-president; J. A. Ziegelbauer, secretary, and Henry F. Eader, treasurer. The only business of any importance was the naming of May 21 as a day set apart for their picnic. The Floyd County druggists are in accordance with the N. A. R. D., and are very much enthused with the progress they have made. The membership includes every druggist in the county.

—The nineteenth annual meeting of the Indiana Pharmaceutical Association will be held in South Bend, June 13, 14 and 15. The committee is arranging an attractive business and social programme and it is hoped that you will contribute to its success by your presence and participation. Official headquarters will be at the Commercial Athletic Club. Special railroad rates of one and one-third fare have been secured from any point in Indiana and also from Chicago. Certificate good for returning to June 19 inclusive. M. M. Meyer, local secretary.

—The Erie County (N. Y.) Pharmaceutical Association has called a meeting of the druggists residing in the western section of New York State for Wednesday, June 6, at 3 p. m., at the Buffalo College of Pharmacy, to elect their representatives on the State Board of Pharmacy provided for by the new law.

—The Alumni Association of the College of Pharmacy of the University of Minnesota will hold its sixth annual meeting June 6 at 3 p. m., elect officers and transact the usual routine business. The annual banquet of the Alumni will occur the same evening.

—The Wisconsin Board of Pharmacy has secured conviction, with \$50 fine and costs, of Wilbur & Son, general merchants of Packwaukee, for selling bug poison and carbolic acid in violation of the pharmacy law. Similar suits will be instituted against other general merchants.

W. B. Saunders, medical book publisher, Philadelphia, has associated with himself in business, under the firm name of W. B. Saunders & Company, F. L. Hopkins, manager of the subscription department, and T. F. Dagny, manager of the publication department. These gentlemen have been connected with the establishment almost from its inception, and to their capable management of their respective departments Mr. Saunders attributes much of the success that has attended his efforts. The subscription and publication departments will be conducted as heretofore. The trade book department will be under the management of W. D. Watson, whose connection with the house has extended over the past eight years and who has demonstrated his ability to manage that department with efficiency and success.

Boards of Pharmacy.

HOMEOPATHIC PHARMACY BOARD IN THE DISTRICT OF COLUMBIA.

On April 25 Senator McMillan, of Michigan, introduced into the Senate of the United States a bill to regulate the practice of homeopathic pharmacy in the District of Columbia. The measure, which was read twice and referred to the Senate Committee on the District, provides for a Board of Commissioners, the members of which shall consist of three homeopathic physicians, to be appointed by the Commissioners of the District, who shall examine all applicants for registration. The fee for registration is \$20. The applicant must be twenty-one years of age, served not less than four years in some homeopathic pharmacy, or be a graduate of some legally chartered homeopathic college or university. The duties and liabilities imposed upon homeopathic pharmacists are to be the same as those provided for registered pharmacists under the regulations governing the practice of pharmacy in the District of Columbia. The licensees of the board are allowed to compound and dispense physicians' prescriptions only in accordance with the principles of homeopathy and the requirements of homeopathic physicians.

PENNSYLVANIA BOARD.

The spring examinations of the Pennsylvania State Pharmaceutical Examining Board were held at Pittsburg and Harrisburg recently. The total number examined was 902; total number passed, 164, 82 for registered pharmacists and 82 for qualified assistants.

Successful candidates who will receive certificates are: Registered pharmacists—C. M. Beales, York Springs; Edward S. Johnson, Frank L. Seaman, Athens; Harry L. Eichelberger, Baltimore; C. A. Sexton, Perth Amboy, N. J.; Archie W. Campbell, Wellsboro; H. J. Hostetter, O. J. Thompson, Reading; J. B. Davis, York; Morris Gerbstine, Wilkesbarre; Harry M. Dorman, Phoenixville; John W. Houston, Washington; Samuel G. Witmeyer, Lebanon; Charles H. Austin, Palmyra; George E. Heinze, Ashland; Frank H. Cormoney, Lancaster; Alex. Young, Jenkintown; S. M. Lehman, Shippensburg; Thos. A. Duffy, Carbondale; Willard Ohlinger, Wooster, O.; John J. Dooley, Plymouth; F. H. Cappen, Wilmington; William H. Andrews, Woodstown, N. J.; John L. Wertz, Renovo; William T. McElwain, Chamoersburg; George C. Smith, Pottstown; Harry R. Goldswoorthy, Centralia; R. E. B. Seybert, J. A. Heintzelman, J. E. Jalliffe, Milton T. Putt, Harry Wilkinson, W. B. McCaffrey, Edward F. Harmony, Asa Fabian, David H. Cookroft, William G. Hillebrand, Eugene H. Eddy, Alex. S. Besore, John B. Littlejohn, T. L. Unangst, George V. Clecone, H. G. Winch, R. S. L. Anderson, all of Philadelphia; A. E. Lewis, West Middlesex; Charles Sayre, Sharon; John W. Mullin, Monongahela; William K. McMullen, Connotville; C. Edward Beacon, New Brighton; John G. Faner, Erie; Esther C. Hamilton, Wilkingsburg; John C. McMillen, New Castle; William V. Wertz, Jamestown; Latimer H. Studebaker, Erie; Rollin Larue Snyder, Shippensburg; James K. Love, New Castle; William A. Cubbin, New Castle; Charles C. Sweeney, Freeport; Edgar H. Miller, Duquesne; Ira C. Harris, Braddock; James A. Baird, Brownsville; J. M. Goldsmith, Tarentum; George E. Little, Franklin; Charles C. Stanton, Sharpsburg; W. J. McGill, Oakdale; James E. Barr, Esplerboro; Joseph R. Site, Clark T. McCutchen, John H. Phillips, William T. Piper, all of Allegheny; Paul J. Pfaff, George H. Brackman, Dovage E. Lewis, Joseph D. Mercer, Oscar N. Oehsenhute, Norman I. Schiller, Sada C. McClintock, Charles A. Thatcher, Edward C. M. Berg, R. P. Rauch, Pittsburg.

Qualified Assistant Pharmacists—A. B. Armstrong, Chester; Francis C. Handwork, Birdsboro; H. L. Quickle, Middletown; Charles M. J. Malley, Dubois; E. W. Gilles, Columbia; Lulu A. Morgan, Scranton; John L. Mallory, H. W. Kimmel, Altoona; C. J. McHale, Shenandoah; T. F. Hursh, Ashland; G. B. Knight, Gloucester, N. J.; T. A. Shannon, Carbondale; Eliza V. Lamb, Galeton; C. Croft, Chambersburg; J. M. Touison, Chestertown; K. W. Smith, Marietta; Charles A. Light, Lebanon; H.

A. F. Seabold, Annyville; C. E. Hoeffel, Lancaster; W. L. Swartz, Carlisle; William C. Swartz, Milton; C. S. Haine, Reading; R. H. Thomas, Taylor; L. H. Gage, H. R. Alden, C. A. Jeffries, H. J. Knauss, Julia P. Hughes, L. C. Anderson, R. J. McDermott, Charles Wagner, H. E. Mabenlg, William T. Ryan, all of Philadelphia; J. P. Dwell, Steubenville; J. B. Allison, Conneautville; A. B. Croul, Beaver; E. A. Smith, Seawickley; E. H. Poulke, Monongahela; R. S. Brosious, Johnstown; F. W. Jones, Homestead; W. H. Gamble, East Liverpool; W. C. Ball, Bradford; M. Culler, Monessen; J. G. Struble, Irwin; H. O. Hornbake, California; F. B. Aldenhefer, Greenville; C. G. Dixon, Butler; M. J. Cassidy, Braddock; Charles B. Hines, Stoneboro; R. E. Thompson, Carnegie; J. M. Hines, Johnstown.

TENNESSEE BOARD.

The Tennessee Board of Pharmacy held its annual session at Nashville, April 17, 18 and 19. The members present were: J. F. Voigt, president, Chattanooga; J. S. Robinson, vice-president, Memphis; B. H. Owen, Clarksville; Al. A. Yeager, Knoxville; and A. B. Rains, Columbia. Examination of candidates for assistant and registered pharmacists was held at Vanderbilt University, April 18 and 19. Of the twenty-five candidates the following received the grade and had the necessary experience, entitling them to certificates as registered pharmacists: Alfred T. West, James E. Fuller, R. M. Moers, G. Emil Chauquit, F. G. Weiss, of Memphis; L. A. Mitchell Harriman. The following received certificates as assistant pharmacists, but having attained the required grade for registered pharmacists are entitled to certificates as such, when they shall have had the required experience in a retail drug store: C. C. Rogers, Paris; Miss Clara Francis Alcorn, Columbia; Miss Martha Emily Hunnicut, Atlanta, Ga.; L. H. Sexton, Pulaski; L. E. Mayfield, Tupelo, Miss.; T. J. Vance, Nashville; E. T. Heard, Brownsville; E. Gwin, McKenzie. Assistant pharmacists: Thomas Roach, Atwood; D. Hardin Nell, Nashville; Harry Mayer, Memphis; George F. St. John, Knoxville; H. T. Jackson, Jackson.

President Voigt, in his annual report, gave a summary of the products analyzed during the year, and compared it with the work done the year previous. This comparison showed a very marked improvement in the quality and strength of pharmaceutical preparations to be found throughout the State, demonstrating the good results attending the enforcement of the adulteration section of the law. It also shows that the druggists are earnest in their desire to comply strictly with the laws and regulations. The matter of uniform interstate registration is being considered by this board. What it desires is an arrangement with other States for the interchange of registration certificates on a basis of uniformity in examination and requirements. The board was reorganized. The following officers will serve the ensuing year: J. F. Voigt, president; B. H. Owen, vice-president; Lee Brock, attorney; Robert L. Eves, secretary. The next meeting of the board will be at Kingston Springs, Tenn., July 17. Robert L. Eves, secretary.

—At the examination held by the Illinois State Board of Pharmacy, in Chicago, April 17-19, the following passed as registered pharmacists: A. C. Arnold, F. C. Aumann, G. Anderson, W. H. Bierman, L. M. Berg, A. J. Blake, W. H. Daley, H. R. Hertzberg, V. G. Hoke, J. C. Hutzler, O. A. A. Hupfeld, J. A. Johnson, E. Janowski, H. Kretschmer, W. S. Lawson, J. M. Lestina, F. M. Moss, F. J. Pokorney, O. A. Rieman, C. Tonnesen, A. R. Utt, A. F. Warhank, W. H. Wellman, C. Windmueller, C. F. Yergler, all of Chicago; W. J. Anicker, Peoria; W. F. A. Fahrrenkrog, East St. Louis; F. S. Grotjan, Rock Island; C. A. Kaysing, Belleville; V. N. Swan, Maywood. Assistant pharmacists: C. C. Bedford, C. B. Black, W. R. Clough, W. D. Dunlap, E. J. Daneak, A. A. Elvaston, G. G. Fox, C. Howk, S. S. Hutchinson, R. L. Halsted, C. Hoffman, T. J. Knaak, F. W. Kraemer, M. Lewis, C. J. Morton, C. W. Robinson, J. A. Rolfe, H. I. Sanford, P. A. Schroeter, C. H. Schwerm, E. L. Semsrott, A. M. Thatcher, all of Chicago; F. T. Baumgart, Danville; J. D. Barnes, Morgan Park; G. S. Duntley, Bushnell; G. A. Eversole, Onarga; J. B. Galloway, Rockford; W. G. Glese,

Bloomington; H. A. Goddard, Hebron; P. D. Vincent, Moline; C. W. Watson, Springfield. The Board of Pharmacy desires to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores will be examined or given an interview until after being regularly registered as an apprentice. The next meeting of the board for examination will be held in Room 3, State House, Springfield, June 19, at 9 a. m. New applications must be on file at Springfield at least ten days previous to the above date, those having applications already on file must also give a like notice should they desire to appear for this examination. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. Address all communications to L. T. Hoy, secretary, Springfield, Ill.

—The New Jersey Board of Pharmacy has granted certificates of registration to the following applicants, who successfully passed the examination held at Trenton in April: Registered Pharmacists—William Hall Andrews, Woodstown; Charles Howard Austin, Palmyra; Manly Lewis Brannin, Millville; Matteo Bonanno, Hammoncton; Frederick W. L. Cunz, Fort Lee; Henry Curtis, Beverly; Percy De Stanley, Elizabeth; Benjamin Franklin Davis, Elizabeth; William R. Dawes, Trenton; Wilbert Hillman Guest, Philadelphia, Pa.; Thomas J. Graham, Jersey City; Anna M. Griffing, Butler; Arthur H. Goodale, Dover; Moreland R. Irby, Gloucester; George Washington James, New York, N. Y.; Harry Edward Kilgus, Atlantic City; Arthur Eugene King, Richmond Hill, N. Y.; Rupen H. Kazanlian, Moorestown; Phillip Louis Langhelz, Elizabeth; Claude Ruoff Middleton, Lambertville; Wesley Shaw Munger, Morristown; Joseph Daniel Moury, Asbury Park; Ernest Henry Maier, Newark; Fred W. A. Mayer, Jersey City; George Wesley Pegg, Jersey City; Harry T. Peck, Boonton; William J. Ritter, Philadelphia, Pa.; William E. H. Schneider, Englewood; Aloysius F. Seery, Englewood; Edward B. Stone, Jr., Camden; Levi Scott, Camden; Mary L. M. Shippee, Butler; Leon Taylor, Madison; Albert P. Unhehaun, Morristown; John E. L. Van Selver, Camden; Albert Foster Veeder, Lyons, N. Y.; Westley R. Wales, Cape May City; David Westhelmer, New York; Harry B. Winne, Kingston. Registered Assistants—George T. Eppler, Philadelphia, Pa.; Edward F. Fitzpatrick, Newark; Anderson B. Gee, Madison; James Edward Nickel, Camden; John Austin Roberts, Beverly; Phillip Reiser, Philadelphia, Pa.; John Berlay Regan, West End; William D. H. Smith, Mount Holly; Charles Henry Texter, Camden.

Henry O. Ryerson, of Trenton, has been appointed a member of the board. The next regular meeting for examination will be held in Trenton July 19 and 20. Henry A. Jorden, secretary.

—The Oklahoma Board of Pharmacy held its regular quarterly meeting at Shawnee, Okla., on April 13. A class of twenty-four applicants took the examination, of whom the following passed and received certificates of registration: R. D. Alexander, Norman, Okla.; Edwin Adams, Kingfisher; J. D. Ballard, Weatherford; J. F. Corry, Norman; A. C. Davis, Woodward; L. L. Fees, Parkland; F. G. Jones, Enid; C. F. Kohler, Shawnee; Ralph E. Morrison, Ponca City; Rice M. Reavis, Lexington; M. M. Smith, Fairview; Martin Taft, Garber; J. S. Wallace, Hawley; Wm. Wilson, Medford. Mrs. Ella Mooney, of McLoud, received a certificate as assistant pharmacist. John H. Asbury, of Burnet, and Alvin Snapp, of Woodward, registered upon diplomas from the Pharmacy Department of the Oklahoma University, having had the required two years' of experience. The secretary was instructed to publish, in connection with the proceedings of the Oklahoma Pharmaceutical Association, the proceedings of the Board of Pharmacy during the last year. The report of the secretary shows 203 registered pharmacists in good standing and 58 Class "A" permits issued to physicians and those studying pharmacy in small country towns and 154 Class "B" permits issued to merchants, authorizing them to sell patent medicines and grocers' drugs. The next meeting of the board is set for July 10 at Guthrie. F. B. Lillie, secretary.

—At the April meeting of the Minnesota Board of Pharmacy, 120 applicants were examined. The following passed as registered pharmacists: Charles C. Crosby, Oscar E. Dahly, Charles O. Donaldson, Henry H. Legel, Albert H. Bell, Henry Prestholdt, August Peterson, Andrew M. Rette, Christopher Rygh, J. Olivet Taft, William H. Zeigler, George A. Cowin, William G. Hanson, Arthur E. Dinsmore, Fred Soderberg, of Minneapolis; Carl H. Frees, Fred W. Kreuger, Herman F. Leuders, John E. McCarthy, John W. Nelson, William F. Tullar, Henry J. Dreis, of St. Paul; Charles L. Arbes, New Ulm; Dayton E. Billington, Lyle; Carl W. Bremner, Stillwater; Louis J. Christensen, Albert Lea; Russell F. Clark, Hector; John C. Dills, Albert Lea; George E. Foster, Fairmont; H. Odin Hanson, Rushford; Charles J. Moos, St. Cloud; Adolph G. Meile, New Ulm; Jacob P. Soes, Crookston; John W. Shanks, Jackson; Albert J. Schilling, Fergus Falls; Earl B. Stoddard, Stewartville; Eva A. Taylor, St. Charles; Oscar K. Weimann, Duluth. The following were granted the certificate of assistant pharmacist: Irvin R. Anderson, Peter J. Arbes, Frank S. Brandt, Edward D. Collins, Rudolph Ehrenberg, George A. Hallman, Harold W. Jones, Victor E. Lofstrom, Walter P. Meyer, Charles J. O'Connell, Edwin F. Stewart, Gustave H. Sommer, Carl J. Nelson, Clyde L. Aiken, George W. Blasing, William E. Burke, Westwood D. Case, Charles E. Haggarty, August Hlke, W. A. Hargesheimer, Emil W. Haase, Charles J. Hartmann, Jacob J. Jacobsen, Olof Johnson, Otto A. Kubat, Gunder M. Larsen, Allen R. McGuire, Peter J. Runberg, Alois J. Spellman, Joseph A. Cox and Adolph W. Johnson. The next meeting will be held in Minneapolis, June 17.

—At the April meeting of the Wisconsin Board of Pharmacy, held at Wausau, first grade certificates were granted to L. C. Schmidt, Manitowoc; G. G. Babb, Oregon; G. E. Atkinson, Markesan; A. J. Van Ells, Milwaukee; J. W. Schleyer, Fond du Lac; B. A. Klenart, Milwaukee. Assistant or second grade certificates: A. S. Wilterding, Antigo; M. Becker, Winneconne; T. S. Williams, Green Bay; F. G. E. Drozelnakiewiz, Milwaukee; G. N. Rostad, Spring Valley; W. D. L. Utter, Stevens Point; Bessie M. La Selle, Hancock; T. J. Watt, Milwaukee; E. G. Phelps, Milwaukee; R. C. Silvernail, Milwaukee; A. C. Wilke, Milwaukee; J. S. Peterson, Marinette; R. W. Jennings, Tomah; P. W. Gullard, Black River Falls; W. A. Bade, Plymouth; O. D. Wheeler, Beloit; O. G. Raiche, Marinette; R. W. Keim, Racine. Twenty-eight were rejected. At the annual meeting of the board the following officers were elected for the ensuing year: President, D. A. Taylor, Stevens Point; secretary and treasurer, E. B. Heimstreet, Jamesville. The meetings for this year are June 13, Marinette; September 7, Wausau; October 24, Madison; December 5, Milwaukee; February 8, Milwaukee; April 17, 1901, Sparta.

—The following were the successful candidates at the meeting of the Indiana Board of Pharmacy at La Fayette, Ind., April 12: Pharmacists—H. H. Carter, Charleston, Ill.; W. Paul Westfall, Montmorenci, Ind.; J. Wilbur Tudor, Homer, Ill.; Gustave Furger, Indianapolis, Ind.; G. F. Davis, Browns Valley, Ind.; Clyde Smith, La Fayette, Ind.; E. A. Geyer, South Bend, Ind.; W. W. Johnson, Greensburg, Ind.; E. W. Rawlings, New Harmony, Ind.; Roy McKennan, Connersville, Ind.; W. L. McClain, Scottsburg, Ind.; Charles Shroyer, Warsaw, Ind.; Eliza O. Ringwalt, Halls Crossen, Ind.; A. M. Becka, Newburg, Ind.; Ashton Stamen, Chicago, Ill.; C. Button, Zionsville, Ind.; C. S. Miller, La Fayette, Ind.

Assistants—J. E. Streckler, Logansport, Ind.; J. E. Haney, Mexico, Ind.; Charles Smoak, La Fayette, Ind.; Riley J. Drew, Macy, Ind.; W. B. Hopkins, New Albany, Ind.

We are in receipt of the May supplement of Robert Stevenson & Co.'s catalogue. It is devoted almost exclusively to drug sundries, and in that department of the wholesale drug business it is extremely complete. The absence of advertisements is particularly noticeable, and in this respect at least it seems to mark a new departure. It will be found very useful to any drug buyer, and we have no doubt they will be glad to send a copy to any druggist who is interested.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

A Novel Advertisement.

Those who lived in the larger Eastern cities two years ago will remember the sensation caused by the startling advertising of Royal Headache Tablets. The advertising was done by six young and good looking girls, who plodded through the principal business streets, paying no attention to the commotion they raised. Each was arrayed in a striking costume, which consisted principally of a sun bonnet, a huge coil scuttle affair, on which were painted in big letters the name and virtues of the tablets they were exploiting. Over their shoulders were big capes similarly illuminated, while beneath showed heavy Scotch plaid skirts, of a color to dazzle the eye. As a work of art the advertisement could hardly be called a success, but as a means of impressing upon the beholder the fact that there was a new headache cure in town, it did the business. Royal Headache Tablets have come to the front very rapidly; this is due to their merit as well as to the efficient advertising that has been done. The proprietors are now preparing a special offer which they will have ready in a few weeks, and which will again startle the trade. Their advertisement in this issue is on Page 8.

A. P. W. Brand.

This new brand of toilet paper ought to sell well. The sheets are large, and there are 3,000 to the roll; the paper is good, and it can be sold for less than poor stock and at a better margin. Write for sample and prices.

We advertise on another page the Window Display furnished by the Lightning Medicine Company, Muscatine, Iowa. A handsome window attraction is one of the essentials of business success nowadays, and any merchant who has given this his attention will agree that the show window makes at least half his trade. The Lightning Medicine Company's Show Window Display is an old man of paper mache, which they call their "Old Pioneer." This figure stands 40 inches high, it is painted in four colors, has a commanding attitude and cannot help to engage the attention of the passers-by. It is a work of art, making, with the handsome accessories, an extremely desirable window attraction. It will call attention to your store, create talk and is really good advertising. The whole outfit is sent on receipt of a bona fide order for goods amounting only to \$5.51, and goods which pay a profit of nearly 75 per cent. Full particulars will be given by corresponding with the Lightning Medicine Company, Muscatine, Iowa.

Schering's Formalin Disinfection method is distinguished from all others as the only process by which Compressed Formalin Pastils containing 100 per cent. of pure Formaldehyde are vaporized in such a way that the gases of Formaldehyde and of combustion are thoroughly mixed. Their Formalin Lamp, which holds 50 one gram pastils, is an ideal apparatus for the disinfection of disease germs in the sick room and death chamber. The course of the infection is made shorter and milder, the danger of transmission to others is diminished, and the tax upon the patient's strength is smaller. Their Formalin Disinfectant is designed for the disinfection of larger rooms and entire buildings. There is no method of disinfection which gives results so reliable nor which requires so little attention. The lamps and disinfectants may be obtained of any jobber, or by ordering direct of Schering & Glatz, 58 Maiden Lane, New York.

STATE OF TRADE.

A Somewhat Better Business.

New York, May 29.—A somewhat better business was reported from the various departments of the wholesale market, but transactions have been mainly of a combining order, with fluctuations in prices chiefly within a narrow range, and for the most part unimportant. Dealers, however, appear satisfied with existing conditions, and the outlook is without discouraging features. Quinine has remained steady, with leading brands in second hands held at the full parity of manufacturers' quotations, but pressure to sell one or two outside lots of the less popular varieties resulted in sales of several thousand ounces at a concession from quoted figures. The consuming demand has continued light, and unless there should be a material improvement, no important variation in the condition of affairs is looked for until after the Amsterdam bark sale, which is scheduled for Thursday of next week, and then only in the event of a radical change in values of bark. Opium has continued to move only moderately, with the tone of the market easy, under the influence of more favorable crop reports and a weaker feeling among holders at primary sources of supply.

The principal change in prices during the week was a reduction of 4 cents per gallon in quotations for grain alcohol by leading distributors, acting under instructions from the distillers they represent. The decline is accounted to an easier market for raw material, but some are of opinion that the reduction was made to discourage outside competition. Another important feature of the week was the receipt of advices from London to the effect that the agreement among manufacturers of iodine had been renewed. This information stimulated a warmer tone to the market for the various preparations, and the outlook is encouraging to continued steadiness. Menthol has been somewhat unsettled, with values very irregular, owing to keen competition, which is characterized by some in the trade as "a tempest in a teapot." Some holders report an advance in prices and others a decline, the result being a like range, according to seller.

In the essential oil department, sweet almonds shows an advance in sympathy with a corresponding improvement abroad. The peach kernel variety is higher on account of the imposition of a 25 per cent ad valorem duty by the appraisers. Anise and lemon were advanced owing to cable reports of stronger primary markets. Expressed limes is in reduced supply and decidedly firmer. Among the roots ipecac has advanced 10c. per pound and Florentine orris is slightly higher, both due to improved conditions in foreign markets.

There has been a general revision of quotations for vanilla beans and nearly all varieties show a lower range, the easier feeling among dealers being due to lack of important demand. Short buchu leaves are easier owing to abundant supplies and a slow movement into channels of consumption. Sassafras has offered more freely from producing sections and the spot market in consequence is weaker, with sellers at materially reduced quotations. Calceynth apples are firmer under reduced stocks and an improved consuming demand. Peesewick is held more firmly at primary sources, and spot quotations for both ordinary pure and selected are a shade higher, but there is no change in bleached. The available supply of egg albumen has continued to increase and holders have modified their views to the extent of reducing quotations fully 3 cents per pound.

Boston Reports Dullness.

Boston, May 26.—This week has developed no marked features in trade. There are not any startling features in the market. Business has been only a dullness, has shown nothing of marked interest. Alcohols are prominently before the trade because of the drop of four or five cents a gallon on grain. This follows the decline of a fortnight or so in wood alcohol. Waxes are comparatively quiet.

Nothing Doing.

Philadelphia, May 26.—Trade is still in the condition of quiet which was reported last week, and there is very little doing worth mentioning. Prices are still at about the same figures also, and no changes have occurred worthy of recording.

Some retailers take a more hopeful view of the matter than do others, but on the whole business is very dull.

Fair Trade in Baltimore.

Baltimore, May 28.—Trade has been fair among the jobbers during the past week. A number of orders were received from local druggists and the demand from out-of-town was also of satisfactory proportions. The business from outside the city, however, came in spots and tested the endurance of clerks at certain times only. The manufacturers of pharmaceuticals, though not greatly rushed, are kept quite busy and work in the laboratories is brisk. Some houses state that unless there should be a slump later on they will be in a position to record the largest volume of transactions ever disposed of. Among the retailers considerable com-

THE DEMAND for ABBEY'S SALT will be continuous, owing to the exceptional character of our steady advertising.

THESE DRUGGISTS SAY:

- Brookline, March 28, 1900.
The Salt sells well and there has been an increase in the sale of same.
(Signed) Wm. H. Butler.
- Boston, Mass. March 28, 1900.
The sale of Abbey's Salt has been very fair during the last few weeks.
(Signed) A. D. Marcy.
- Dorchester, Mass. March 28, 1900.
We are selling a slight increase in the past few weeks.
(Signed) A. M. Baker.
- 701 Centre Street, Jamaica Plains, Mass., March 28, 1900.
We have noted an increase in the sales of Abbey's Salt recently.
(Signed) Chas. B. Rogers & Co.
- 40 Water Street, Newburgh, N. Y. March 28, 1900.
The demand for Abbey's Salt has increased.
(Signed) Theo. Merritt's Sons.

ABBAY'S SALT is a clean remedy, honestly advertised, prescribed and endorsed by physicians the world over. Abbey's Salt reaches the consumer through the drug trade only.

...THE...

ABBAY EFFERVESCENT SALT CO.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

plant is heard, but there are also druggists who report doing well. The market for botanicals is fairly good and heavy chemicals are moving in acceptable quantities.

Very Quiet in Detroit.

Detroit, May 24.—It is hard to assign any particular reason for it, but something is keeping things very quiet in the drug business just now. The weather is too fine to breed much disease, and not warm enough to keep the soda fountains busy.

Business Continues Good in Chicago.

Chicago, May 26.—Manufacturers and jobbers both report a very prosperous season in general drugs and pharmaceutical preparations. There is a strong demand for all staple goods and sundries. Seasonable goods are in great demand. The long continued lock out and strike in the building trades has affected local business to some extent, but even this is better than could be expected. Collections are good and most of the wholesale houses are working their full capacity.

Very Few Complaints.

St. Paul and Minneapolis, Minn., May 25.—While trade in these cities has developed no special features this week, it has continued in quite satisfactory condition, and very few complaints are to be heard. There have been one or two dull days which, however, were amply compensated for in succeeding days of activity. The occupant of one of the best drug corners in St. Paul says his business is fully 25 per cent. in advance of last year, which was the most prosperous that up to that time it had known. Jobbers say that their work is as lively as at any time this year and the number of orders coming in from the country and all parts of the Northwest, even to the Pacific coast, is all but phenomenal. Not a price change of note has taken place since last report.

The Strike Still Affects Trade.

St. Louis, May 26.—Retail trade continues to be disturbed locally on account of the street railway strike. Country trade is reported as fair by the wholesalers.

DRUGGIST MURDERED.

At Wilton, Mo., on May 18, druggist George Dennis was murdered in front of his own door by a young farmer named Paris Sapp. There was a dispute over family matters, and Sapp seized a stick and striking Dennis on the back of the head crushed his skull. The murderer was promptly arrested.

—Dent & Butler, druggists at Lewiston, Idaho, are now located in a new three-story brick building which was erected especially to meet their needs. They have a most handsome store, fitted up in all modern elegance and details. The arrangements for prescription work and the rapid conduct of business are particularly convenient. The firm has been in business, with various changes in its personnel, since 1882, and enjoys a large trade.

—At Manchester, Conn., April 29, a man died from the effects, it is said, of some poison dispensed in mistake for rochele salt by a local druggist. If this suspicion is verified by the investigation now under way suit against the drug firm will be instituted, it is reported.

—The Montana Board of Pharmacy held an examination at Butte, April 6. Twelve applicants for registration were examined and the following were successful: L. Churchill, E. G. High, V. H. Wood, F. M. Osborne, A. H. Donan, S. A. Belanger, V. E. Washington, John H. Mulkey, P. B. Snelson, F. C. Brendel, and D. Loreau. A re-organization of the board was effected, the following officers being elected: C. J. Coffey, of Missoula, president; J. B. Lockwood, of Helena, secretary, and B. E. Mathews, of Townsend, treasurer.

—The New Hampshire Board of Pharmacy, at its quarterly meeting, turned out seven new pharmacists, as follows: George N. Morse, Concord; George A. Gilmore, Exeter; Albert E. Bellise, Concord; Frank H. Reed, Concord; John B. Morin, Manchester; Albert H. Selfert, Manchester; William R. Murdock, Manchester. Junior examination—Assistant Pharmacists: Warner Hayes, Exeter; Frank McGuire, Concord. The fourth quarterly meeting will be held at the State House, Concord, on Wednesday, July 25. George F. Underhill, secretary.

MARKET REPORT.

NEW YORK MARKET.

New York, May 29.—A fair jobbing business is reported and values have ruled steady, with a few exceptions, in which declines have resulted from natural causes.

OPIUM.—A continued tame market is noted, with quotations unchanged at \$3.35@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPIUM.—Only small parcels have received attention and a quiet feeling prevails, with jobbers quoting the old range of \$1.45@1.65 for 13 per cent, and \$5.15@5.35 for 16 per cent., according to size of order.

MORPHINE.—Manufacturers' prices remain unchanged and jobbers report a good consuming business at \$1.90@2.05 in ounces, and \$2.20@2.30 in eights, according to brand.

QUININE.—There is no change in the general condition of affairs and jobbing quotations are steadily maintained at 31@32c, for bulk in 100-oz. tins, 33@34c. in 50-oz. tins, and 32@33c. in ounce tins.

ALCOHOL.—Distillers have reduced their prices for grain, and jobbing quotations show a decline to \$2.41@2.42 by the barrel, and \$2.50@2.70 for less, as to quantity. Colorless is obtainable at \$3.49@3.74 by the barrel and \$2.55@2.75 for less. Wood has declined to 80@85c. by the barrel and 90c.@\$1 for less.

SASSAPARILLA.—Supplies are more abundant and the market is easier with quotations reduced to 10@19c. for whole and 21@24c. for powdered.

IPECAC.—Foreign markets are stronger and in consequence jobbing prices have been advanced to \$3.50@3.90 for whole, \$3.55@3.80 for ground and \$3.65@4 for powdered.

ORRIS ROOT.—Florentine is firmer in sympathy with producing markets and jobbing quotations have been marked up to 23@28c. for whole and 28@33c. for powdered.

COLOCYNTH APPLES.—The market is slightly firmer and jobbing quotations have been advanced to 60@70c. for selected, 55@65c. for broken, and 65@75c. for powdered.

OIL ALMONDS.—All varieties of sweet are higher and the revised quotations are 60@70c. for true and 45@55c. for peach kernel.

OIL BERGAMOT.—Jobbing prices are a shade easier, best grades being quoted \$2.25@2.50 and No. 2, \$2@2.25.

VANILLA BEANS.—A generally easier market is noted for all kinds and jobbers are quoting Mexican at \$12@13 for No. 1, and \$14.00@15.50 for extra; Bourbon, \$9@10.50, and Tahiti, \$2.75@3.75.

BEESWAX.—Jobbing quotations have been reduced to 40@45c. for city and 32@35c. for country.

PYROGALLIC ACID.—Jobbers have reduced quotations to \$2.00@2.25 per lb. and 23@28c. by the ounce.

NAPHTHALINE.—Quotations for 100 lb. balls have been marked up to 34@34½c. in bbls. and 5@7c. for less.

GOLDEN SEAL ROOT.—The market is easier on account of offers of new crop and jobbing parcels of old are obtainable at 75@85c. for whole, 85@90c. for ground, and 90c.@\$1 for powdered.

PULSATILLA HERB.—Owing to scarcity jobbers have advanced quotations to 40@50c., as to quantity.

CARBOLIC ACID.—Market easier, with pound bottles offered at 40@45c. and 5-pound bottles 37@42c.; amber, 3c. less.

ROCK CANDY SYRUP.—Jobbers have advanced quotations to 36½c. in barrels, 59½c. in half barrels, 61½c. in 10-gallon tins and 67½c. in 5-gallon tins.

—The Louisiana Board of Pharmacy met in New Orleans April 23 and approved the work done by the Committee on Examinations, and also that of the secretary of the board for the last ten months. After accepting the resignation of A. C. de Monsabert as a member of the board, an adjournment was made to attend the meeting of the Louisiana Pharmaceutical Association.

—The West Virginia Board of Pharmacy has elected H. L. Boggs, of Charleston, president; Geo. H. Ebeling, of Wheeling, vice-president, and W. S. Hamilton, of Fairmont, secretary and treasurer. The next meeting for the examination of applicants for registration will be held at Fairmont, July 19.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

THE N. A. R. D.

The last regular bulletin, No. 8, of the National Association of Retail Druggists brings to date the news of the work of this association through its officers and executive committee, the story of the conferences and their results with the proprietary interests being given in detail. Notes supplementary to this bulletin state that a large majority of the drug jobbers of the country have signed the agreement sent out by the proprietors, indicating thereby their wish to act as agents for the several proprietors. Those not heard from are as a rule the small concerns. To these latter has been sent a second letter asking their signatures, and it is expected that within a very short time the plan in its entirety will be ready to put into operation.

The N. A. R. D. during the months since the last annual meeting has accomplished a good deal, and shows healthful, progressive growth. The next annual meeting will be held in Detroit, September 12, 13 and 14. The association has at heart the interests of the drug trade of the entire country. As all druggists in large and small cities and in the smallest villages are alike its beneficiaries, each and every one of them should be helping to increase the association's power by adding to the efficiency of some local or State association. To accept its benefits without helping to do its work is not a commendable attitude. If druggists will all become members of some association of their fellows, and all these associations in turn affiliate with the national organization, the plans of the latter body for the relief of the trade at large from the varied abuses under which it suffers would be of quick realization.

Besides its work in relation to the cut rate problem the N. A. R. D. has done good service in other directions. For instance, its influence exerted in the direction of the removal of the stamp tax on medicinal articles has been great, and relief from this burden is in sight at the next session of Congress. Another, and perhaps a more professional, work is being done by various of the affiliated organizations in the matter of coming into closer touch with physicians. A few of these local associations will distribute among the physicians in their respective territories the very handy Epitome of the National Formulary, prepared by the American Pharmaceutical Association for this purpose at so low a cost as to make it available to all druggists. In various ways the national organization is exerting a healthy influence, and druggists, though a little slow, are gradually awaking to the desirability of representation, as they see what benefits are

already bestowed and what may be expected from more extended organization. Cutters, too, are not showing that determination to oppose the movement which at first was so outspoken. The general tendency throughout the trade is toward union, harmony and mutual relief. If it had done nothing more, the cultivation of this kindly feeling would be sufficient excuse for the creation of the national body. But more is hoped for and more is fast being attained. At the Detroit meeting in September it is expected that nothing but optimistic reports will be received.

A NEW COLLEGE OF PHARMACY.

For many years New Orleans has had a college of pharmacy, existing as the Pharmacy Department of Tulane Medical College. In some years the attendance has been good, but at other times hardly sufficient to warrant the continuation of the department. It has been thought by the prominent pharmacists in the State and by the members of the Medical College faculty that a separate institution devoted entirely to the teaching of pharmacy would be advisable and meet with success. Accordingly the announcement is now made that a college of pharmacy has been chartered in New Orleans under the name of the New Orleans College of Pharmacy. Its officers have been selected and their names are given, though the announcement of the members of the faculty is as yet withheld. It is stated that the college will have good financial backing, and will be ready for the receipt of pupils at the opening of the regular fall session.

There is a very widespread territory tributary to New Orleans, and the right sort of college at that point should attract a very large attendance of students. The State Pharmaceutical Association has the project close at heart, several members of the State Board of Pharmacy appear as officers of the new institution, and the prospects are bright.

THE APPRENTICE.

The drug store apprentice is a much more important individual than he is customarily considered. He it is who after a few years is to become the druggist, and it is important that his needs and the characteristic features of his position and function receive more consideration than is accorded by the majority of employers. The debt and the responsibility are not all on one side. The apprentice, to be sure, must learn in every way possible how to discharge the duties which are later to fall upon him, but the druggist who employs him has an equal responsibility, which, however, he is only too prone to evade. In the future the apprentice must be a more thoroughly educated and well prepared individual than he has been in the past. The trend of pharmacy is toward better, higher education. The pharmacy laws are being improved in this direction. Educational requirements will be enforced, and it is essential that the young man intending to enter the

drug business shall be well grounded in those essentials upon which must be based the best kind of preparation.

The relation of the apprentice to his employer is, therefore, an important problem, one whose discussion from all view points is most desirable, and one which we would like to see thoroughly considered in the pages of this journal. There are many questions connected with the main one which can profitably be debated. For instance, what is an equitable arrangement to make with a boy who goes to work in a drug store to learn the business? How much should be paid the first year, how much the second and how much the third? The establishment of the apprenticeship system upon the right basis would be a great benefit, not only to the boys themselves, but to the employers as well. Let us have the views of those who find in this subject somewhat of direct interest to themselves.

HOW THEY WANT THE PRICE LIST.

As anticipated, the opinions of druggists relative to the most desirable system of indexing proprietary medicines in the Era Blue Book are very varied.

C. H. Murray, Macon, Ga., writes:

"I would suggest that you list proprietary goods in this manner:

Compound, Paine's Celery.
Sarsaparilla, Hoot's.
Aves.
Cream, Hinds' Honey and Almond.
Emulsion, Scott's.
Angier's Petroleum.

Thos. M. Davies, New York, says:

"List your book by name of the goods mentioned; if syrup, under "Syrup," if compound, under "Compound." How often is it we know the name of the maker or the person's name connected with a preparation? Seidem.

We want to know the wishes of all druggists interested in receiving the most complete and serviceable price list that can be prepared.

ITS MATHEMATICS ARE OFF.

A contemporary local journal very earnestly reproves certain writers for their inaccuracies in discussing the percentage solution problem, and then attempts to straighten out the thing itself, but in so doing falls into laughable error. The weight of a fluid ounce of water is given as 437.5 grains, and upon this value are based the succeeding calculations given as an example. A little revision of equivalents is advisable.

A particularly obnoxious variety of druggist exists in Louisville in a person who has recently been charged with illegal selling of cocaine. This druggist's colored porter sold the drug from a rear window of the store, a majority of the purchasers being negroes, and an average of fifteen packages per night at 5 cents per package being disposed of. If the charges made are true this so-called druggist ought to be in State's prison for a long term or for life. It is the few individuals of this stamp who have no conscience who bring discredit and ill repute to an honorable profession. They should be weeded out remorselessly.

Translated for the Era.

MODERN PHARMACY.

The Present Position of the Profession Throughout the World, Reviewed by an Eminent European Authority.

[The following comparison of the laws which regulate the practice of pharmacy in various countries appeared in the "Grand Encyclopædia"—an important French publication which appears in periodical parts—a few months ago. It was written by the late Gustave Blanchon, Director of the Paris Superior School of Pharmacy, and the fact that he was President-elect of the International Pharmacy Congress of 1900, and that this was one of the last, if not the very last, effort of his pen, gives a peculiar interest and a distinct authority to the article. We have omitted, for brevity's sake, various allusions to the historical evolution of French and English pharmacy.]

FRANCE.

At the present time, three years of "stage" (apprenticeship) and three years of college study are required of candidates for the pharmaceutical diplomas, and the tendency is rather to diminish the length of the "stage." To give real value to this part of pharmaceutical education (which ought still to be of great importance) it would be necessary that employers should take their educational duties more seriously than most of them do nowadays.

The instruction thus received at the school and in the drug store prepares the candidate for his examinations (1) in physico-chemical, (2) in natural science, and (3) on the specially technical portions, *materia medica* and pharmacy. This brings us to the preparation of the "chef d'œuvre" of bygone days, now confined to the compounding of five galenic or chemical medicaments.

A higher diploma, for those who propose to become professors, is that of "superior pharmacist." For this the degree of Licentiate in Sciences (or an equivalent examination) is necessary, together with a thesis based on personal research. But the candidates for this grade are but few.

In conclusion, the French pharmacist can now take the title of "Doctor" of the University of Paris and other scientific centres. This title (although purely scientific, and conferring no special privilege either for teaching or practising pharmacy) will be much sought after, and will certainly help to keep up the studies in our schools to a high standard. Candidates are required to present the results of a personal scientific research.

Outside France we find two contrasting systems, that of complete liberty and that of rigorous government control, combined with limitation of the number of pharmacies. Since fifty years ago, one must go outside Europe to find a country where the exercise of pharmacy is absolutely free.

IN CHINA

every one has the right to sell medicaments, either in the street or in suitable premises; the only conditions exacted being the possession of the necessary capital and the ability to write in the official language. The drug stores and pharmacies in the principal towns are well fitted up, well kept, and very clean; and the medicaments delivered to customers are carefully labelled. The Chinese *materia medica* is very complicated in its character, and has been handed down for many generations.

JAPAN.

which long followed the lead of China, has now gone ahead in every respect, and has copied European models so far as pharmacy is concerned. A Pharmacopœia, which was published not long ago, serves as a base for official preparations.

THE UNITED STATES OF AMERICA

long left the exercise of pharmacy completely free. The doctors themselves prepared their remedies, and there was no distinction between the two professions. The pharmacy was a kind of general store where medicaments, as well as other goods of all other kinds, were sold. Little by little custom changed in these matters, and pharmacists

grouped themselves. A college was established and diplomas granted in Philadelphia in 1820, and in New York in 1831. A law of the State of New York provided that after January 1, 1835, no one should exercise pharmacy without having passed an examination. One by one the other States followed suit, and now almost everywhere the exercise of the profession and the sale of poisons are restricted by regulations which are not perhaps invariably strictly observed, but which, legally at least, limit a dangerous license.

GREAT BRITAIN.

The English are enemies of preventive or restrictive measures. If they have admitted, for the exercise of pharmacy, the guarantee of diplomas which inspire public confidence, they have always objected to any regular system of inspection of pharmacies. The practitioner is legally responsible for his errors, but his action is unfettered by any protective measures against chance of accidents.

We may here at once contrast this system with that of some of the countries of Northern Europe.

To become the proprietor of a pharmacy

IN GERMANY.

for instance, one has not only to pass the necessary examination, but to wait till a vacant pharmacy presents itself, and until the Government authorization to take it over is granted. The number of pharmacies is limited by the population. Besides this the State compels the pharmacist to accept an official tariff for medicaments; and finally all pharmacies are subject to a very severe and minute inspection.

To obtain a pharmacy it is necessary to pass through a high school and serve an apprenticeship of three years, which is followed by a stiff probationary examination. The successful candidate then serves three years more as assistant, and finishes by studying at one of the German universities (or at the polytechnic schools of Brunswick, Carlsruhe or Stuttgart) for his final examination. After this he usually takes a situation as assistant until such time as the State appoints him proprietor of a pharmacy.

IN SCANDINAVIA.

where the educational standard is also high, the privilege system is even more developed than in Germany. The "real" pharmacy or privilege, which the pharmacist can bequeath to his heirs, tends to diminish in number and to disappear. It is replaced by the "personal" privilege, which is really a State appointment. Under these conditions the pharmacies are severely inspected and rigorously kept to a certain tariff.

IN RUSSIA

the number of pharmacies is limited as in Germany. There are two grades, one giving the title of Candidate and the right to possess a pharmacy; the second is that of Magister, or Doctor of Pharmacy. The State usually gives preference to those holding the latter diploma when a pharmacy becomes vacant. Legal tariffs and severe inspection exist.

We may also cite, among the nations where limitation exists, Roumania, Bulgaria and Greece.

IN ROUMANIA

pharmacy is first practically studied in a drug store for four years (three as apprentice and one as assistant), and then at the School of Pharmacy or the University, where the Licentiate degree is taken. All Licentiates have to sit for a competitive examination, and the vacant pharmacies are distributed according to the results of this test.

IN BULGARIA

the "mag'ster" or "doctor" diploma is taken in another

country, but the pharmacist must pass before the State Board or "colloquium" before he can take a vacant pharmacy.

IN SERVIA

the same state of things exists, and "Magisters" from foreign universities pass the Servian Government examination.

GREECE

has had a special school at Athens since 1858. Here students pass three years; the "stage" or probation is partly before and partly after the college course. The number of pharmacies is limited, the price of medicaments fixed by tariff, and an annual inspection takes place at an uncertain date.

While certain countries have thus adopted the system of limitation, others have abandoned it after a period of experiment. Among these countries is

ITALY

where the number of pharmacies is now unlimited by law. After three years of college study the assistant passes a year in a pharmacy duly authorized for this purpose by the Minister of Public Instruction, and presents himself for the qualifying examination. By working a year extra in the laboratories of pharmacy and toxicology, he can obtain the title of Doctor.

SWITZERLAND

has also abandoned the system of limitation in favor of the free system which prevails in France. The studies effected both in the pharmacy and at the university (where the student must pass at least four semesters) are thorough, and tested by serious examinations.

In certain countries the exercise of pharmacy is carried on under conditions which more or less resemble those existing in France.

IN HOLLAND

the studies are much the same as in Germany. Besides the fully qualified pharmacists (and working under their supervision), there exists also a class of assistant-pharmacists, who have passed a practical examination. The number of pharmacists is not limited, and the legal obligations are much the same as in France. Pharmacists who present a thesis may obtain the title of Doctor. There are also Doctors "artis pharmaceuticæ," who have nothing in common with those just mentioned, but who are M. D.'s who have passed a special examination which gives them the right of practising pharmacy in rural districts.

BELGIUM

has a system of studies partially carried on in special schools annexed to the Universities of Brussels, Ghent, Louvain and Liege. The University diploma is countersigned by an Administrative Committee which informs itself whether the conditions prescribed by the law have been fulfilled. Pharmacy is exercised under much the same conditions as in France.

IN SPAIN

things are much the same. Pharmacies are kept by Licentiate who have passed two years in a pharmacy and five years at one of the five Faculties of Pharmacy. By another year of study and the presentation of a thesis the title of Doctor—conferred with solemn ceremony—may be obtained.

TURKEY

gave complete freedom to pharmacy until 1862. As many accidents occurred restrictions were imposed. At present the conditions of probation and study at the Constantinople School of Medicine run mostly on French lines. The same may be said of the conditions under which pharmacy is exercised,* but in the pharmacies kept by foreigners of various nationalities the observation of regulations leaves much to be desired.

*The French system, we may remind our readers, imposes no limitation on the number of pharmacies, but exacts long and thorough study and shop probation. Doctors are not allowed to dispense, and no one but pharmacists can retail compound medicaments. Pharmacies are periodically inspected (nominally at least); prescriptions are written in the language of the people. The diploma is granted by the university where studies are pursued.

NATIONAL AND INTERNATIONAL PHARMACOPŒIAS.

All these countries, and others not mentioned (Mexico, the East Indies, Venezuela, Chili), have their National Pharmacopœias. These works differ one from the other in form, wealth of documents and strength of medicaments. Preoccupations of a scientific nature are much more conspicuous in the French and Spanish Pharmacopœia than in those of northern nations.

However, all these works tend towards uniformity. The logical idea that a Pharmacopœia should be a practical work, easy of reference, is generally accepted; and the alphabetical arrangement used in dictionaries is becoming the rule everywhere.

What is more important is the widespread wish to give the same strength to preparations of the same substance in all the various Pharmacopœias. Probably we shall never have an international Pharmacopœia, which could be used for every preparation in every country, but it may be hoped that as communications between nations increase, a number of identical formulas may be admitted for such medicaments as are particularly active in their nature and liable to become dangerous in certain doses. This idea has been put forward by International Congresses for many years past, and its approaching realization may be legitimately expected.

THE NATURE AND PRODUCTION OF ANTI-DIPHTHERITIC SERUM.*

THE PRODUCTION OF ANTITOXIN.

During all the ages that have passed since the dawn of creation, man, until recent years, has been vainly endeavoring to explain the mystery of disease. Countless theories have been promulgated to account for the loathsome leprosy; the insidious arch enemy of the human race—tuberculosis; the murderer of children, diphtheria; and the numerous other bacterial affections that afflict mankind.

Now, through the perfection of the microscope and improved technique, we can begin to see our enemies face to face. We have learned how to cultivate and handle with impunity bacteria, the unicellular microscopic plants which so long eluded our vision.

I would impress upon you at the beginning that all life, whether animal or vegetable, is composed of isolated bits of protoplasm, or large aggregates of these units, which we call cells. The human body is composed of a great variety of specialized cells working in harmony in large communities. The cells of the individual organs, besides the general properties possessed by all protoplasms, have special functions to perform, which if not properly attended to result in harm to the body as a whole. The cells of the parotid gland must secrete saliva. The renal epithelium must do its work properly, otherwise the whole organism suffers and may soon die.

In many respects we may think of the anatomical structure and physiological action of the animal body as resembling an intricate machine, each part working in harmony with every other part. The nerve cells of the brain, spinal cord and sympathetic system which control the action of all the other parts of the body have undergone specialization to the greatest extent. When the digestive system is overloaded with substances difficult to digest, the assimilative tissues become exhausted with their task and an attack of biliousness results from the local irritation on the cells of the intestines and the harmful effects on the nervous system of the partly digested food.

Now I wish, however, to speak not of the internal causes of disease but of those external agents, isolated microscopic plants, which we now recognize as the cause of the various infectious diseases. Bacteria, as you will notice from these tubes of cultures, possess the property of forming various colored pigments. Nearly all the colors of the rainbow are here represented. Dur-

*An address delivered by E. M. Houghton, Ph. C. M. D., lecturer on Experimental Pharmacology in the Detroit College of Medicine; Member of the American Medical Association; Member of the American Pharmaceutical Association; Director of the Pharmacological Laboratory of Parke, Davis & Co., etc.

ing the dark ages of superstition that enveloped Europe the shewbread, when exposed in the damp old cathedrals, frequently became infected by the dripping moisture, and on the following day red drops appeared on the surface, the priests claiming it had been miraculously sprinkled with blood during the night. We have the explanation of this phenomenon in the belliar on the table before us, which is an instance of accidental infection by the bacillus prodigijsus of some pealed lemons during the damp weather that prevailed a few weeks since.

As already stated, bacteria are single-celled microscopic plants. Each germ is an individual by itself, having the ability to digest and assimilate food, form new substances, excrete waste products and reproduce its kind. In fact they are endowed with all the functions of life possessed by ordinary plants, and in some instances, as the bacillus of typhoid fever, are well supplied with motile appendages which enable the organism to move about from place to place. The smallness of these plants may be judged from the fact that half a billion may find a comfortable home in a single drop of liquid; that the fine dust floating in the air, only observable in a sunbeam, may and does carry myriads of germs into our lungs with every breath, or into our stomachs with every morsel of food eaten.

Bacteria are of various forms. The spherical ones are called cocci and may occur singly, in pairs (diplococci), in long chains (streptococci), etc. A more important group are the bacilli (little rods) which resemble under the microscope a small section of a lead pencil or other small cylinder. The various kinds of bacilli differ largely in detail as to appearance. In some instances the ends are round and in others nearly square. Some forms, as the bacillus prodigijsus, approach so nearly the spherical type that they have been mistaken for cocci. Occasionally certain bacilli are bent, so they resemble a comma. The best illustration we have of a germ of this type is that of Asiatic cholera. Frequently several of these bent rods grow out in a single thread, forming a spiral, hence the name, Spirillum.

The most important division of bacteria, from our point of view, is into those that do not produce disease in man and animals, the non-pathogenic, and the disease-producing, or pathogenic. We shall have time to consider only the pathogenic. The contest between this class of bacteria and the cells composing our bodies is truly a battle royal. The external surface of animals is well protected from invasion by having layers of hardened epithelial cells, while the gastric juice of the stomach, in the normal state, is an efficient germ destroyer, so that bacteria entering with food usually do little harm. The respiratory tract, and especially the lungs, is the most accessible and vulnerable point of attack, as the air, especially in our large cities, is constantly laden with disease-infected dust.

Bacteria, like other forms of protoplasm, must have food in order to complete their cycle of life. The various organic substances employed in the laboratory for growing germs artificially are called culture media. Careful attention must be paid to the requirements of each organism. We cannot grow all varieties of pathogenic bacteria successfully in the laboratory, as we have not yet discovered the particular food necessary. In nature the secretory and excretory products and remnants of food found on the surface in and about the body cavities serve as culture media for the pathogenic bacteria that attack animals and human beings; hence the importance of personal hygiene. The products formed by bacteria depend upon the food and environment present. Organic substances generally are split up into compounds having smaller molecules. Many of the intermediate products formed by bacteria before the decaying organic matter about us is broken down into the simple compounds, as CO_2 , etc., that support plant life, are of the greatest interest to humanity. The most important of these products are not the ptomaines, toxalbumins, etc., that have been so extensively studied, but the deadly toxins, of which we know almost nothing chemically. The toxin formed by the tetanus germ is hundreds of times more fatal to animals than prussic acid or strychnine. Two drops of the fluid in this flask contains suf-

ficient diphtheria toxin to kill a horse weighing over half a ton. When we remember that less than 1 per cent. of these two drops of fluid is diphtheria toxin we can realize something of the virulence of the poisons produced by the disease organisms that attack man. This diphtheria toxin was produced in the laboratory under artificial conditions. Is it any wonder that the diphtheria toxin formed in the throats of children by bacteria growing in their natural habitat (which toxin has the property when absorbed into the circulation of attacking the central nervous system which controls the action of the heart and other vital organs) should prove so quickly fatal? The diphtheria germs, like other pathogenic bacteria, most successfully attack individuals whose bodily vigor is below normal, as in health the organism can more readily resist the foreign invaders that attempt to destroy the citadel of life. The importance of keeping every part of the body in the best physical condition by proper food, pure air, exercise and attention to its functions, cannot be over-estimated.

In a given case of diphtheria death may result from the shutting off of air from the lungs, by the forming membrane in the trachea; this accident may be usually avoided by intubating through the mouth or by opening into the trachea from the outside. More cases of diphtheria die, however, from the action of the toxins formed by the rapidly-multiplying mass of bacteria in the throat.

We have just seen that bacteria possess in their ability to produce toxin mighty powers of offense; the cells of the body do not supinely wait to be stricken low by the shafts of the invader, as they, too, possess powerful resources at their disposal for defense. The white blood corpuscles, which have often been called the police of the body since they possess the property of devouring bacteria, hurry to the scene of action; but the defensive efforts of the white blood cells are puny as compared with the marvellous properties possessed by a substance formed by the tissues of the body when they are stimulated by the toxin absorbed into the circulation. No one has yet been able to show where this substance is elaborated or to demonstrate its chemie or physical properties. This substance about which we have so little exact knowledge, because it is able, when contained in the body, to render harmless the toxins formed by bacteria, we have come to call antitoxin. The weakling or improperly nursed child suffering from diphtheria dies more readily than his hearty playfellow because the cells of his body have less ability to form antitoxin. Let me impress upon you the importance of remembering that diphtheria antitoxin is *nature's* specific for curing a case of diphtheria. If a child can form an adequate quantity of antitoxin it survives, provided the lungs are supplied with sufficient air and normal vitality; otherwise the invading diphtheria cells are victors and death claims his victim. We aim in the injection of artificially produced antitoxin to increase the defensive properties of the body by increasing the stock of toxin-destroying antitoxin. After a person has had an attack of an infectious disease he is not liable to contract the disease for some time, since more antitoxin is usually produced during the attack than is necessary to produce a cure. Diphtheria can be prevented by injecting antitoxin just after exposure to infection, before the germs have sufficiently developed to produce the disease. The body, when thus protected, is said to be immune or possesses immunity. We produce immunity against smallpox by vaccination. In this case, however, we spur the body to produce its own antitoxin, while with diphtheria we inject the antitoxin already formed. In the preparation of anti-diphtheric serum in the laboratory it is first necessary to obtain from patients suffering from the disease a supply of virulent germs. A swab is rubbed over the membrane in the throat, then on the surface of the culture media in one of these tubes, which is then placed in an incubator, kept at the body temperature for about twenty-four hours, at the end of which time the surface of the culture medium will be found covered with a whitish layer, or perhaps studded with minute droplets which are called colonies. After staining and mounting a portion of this material we examine it under the microscope and find many small rods, which in cross section remind us of bricks, and the heaps of them in portions of the field contain as countless numbers as

the sands of the seashore. Perhaps many other germs are present besides the diphtheria bacilli, in which case, by appropriate methods of cultivation, we must purify our culture in order to obtain proper seed for planting the large flasks of sterile beef bouillon in which the toxins are grown. The sowing must be done with great care, else a single particle of dust may gain access and destroy the entire flask of culture. After these flasks of planted beef bouillon have remained in the incubator away from the light for about two weeks they are examined microscopically, and if found to contain only pure cultures of diphtheria germs trikresol or carbolic acid is added to the flask and the contents thoroughly shaken. The germs as they multiply in the bouillon form the diphtheria toxin, which remains in solution, in the clear transparent liquid, after the bacteria have been removed by filtering the culture with several hundred pounds of air pressure through one of these unglazed porcelain filters which has meshes so small between the clay particles that the most minute bacteria will not pass. We usually speak of this clear fluid as a toxin, but it is really beef tea with the toxin dissolved in it, in the same way as we might prepare a solution of strychnine.

So far the several steps in the production of the antitoxin have been accomplished in the laboratory, but from this point we must resort to animals and allow nature a chance to complete the process. The killing power of the toxin is carefully determined on guinea pigs before it is injected into the animals to be immunized. The horse, because of his size and gentle disposition, has proved to be the most suitable for this purpose. Only young animals possessed of the best physical health, which have been tested with tuberculin and mallein, as an extra precaution to eliminate the possibility of glanders or tuberculosis being present, should be employed. At least two weeks should be taken to study the animal before it is allowed to go into the stable where the producing horses are kept. Usually about one drop of the beef bouillon solution of the toxin is diluted with sterile salt solution to one Cc. and injected subcutaneously, with aseptic and antiseptic precautions, as the initial dose. A tumor forms where the toxin was injected, the temperature rises considerably above normal, the pulse becomes rapid, food may be refused, in fact the animal presents all the constitutional symptoms of diphtheria. As soon as the normal condition is regained a slightly larger dose is injected, with the same result. Gradually more and more of the toxin can be administered, until several thousands of times the fatal dose of toxin fails to produce more than mild symptoms of poisoning. When this point in the treatment has been attained we know that the horse must possess considerable antitoxin. One of these large sterile test tubes is drawn, with a sterile trocar, nearly full of blood, with the greatest care, from the jugular vein. The wound is closed with a suitable dressing, the tube of blood is set away in a clean cool place for a day or two. Shortly after blood is shed you remember that it clots in a solid mass. You will observe that this tube is nearly filled with such a clot, on the top of which appears a whitish layer. This is an excellent illustration of what is known as the buffy coat. If you look more closely you will note that the clot is surrounded, especially near the upper end, with a yellowish fluid, which has been squeezed out by the contraction of the clot. This fluid is the liquid portion of the blood or blood-serum and contains in solution, together with numerous organic substances and salts, the undiscovered substance, antitoxin. This blood-serum itself, when obtained from the blood of an immunized animal, is generally called antitoxin.

Some preservative, 0.4 per cent. trikresol, generally, is added to the serum, shaken thoroughly, set aside, and then filtered through sterile filters into sterile bottles. The process of manufacture is now completed, all but the testing. Small quantities of the serum are withdrawn and planted on culture media to see if it is sterile. If this condition is fulfilled the difficult problem presents itself of estimating the strength of the antitoxin. After long and careful research it was found possible to standardize the serum by determining its immunizing properties by injecting it, with diphtheria toxin, into guinea pigs or other animals. The unit of value is an antitoxin

unit, an antitoxin unit being ten times the amount of serum necessary to protect a medium-sized guinea pig against ten times the minimum fatal dose of diphtheria toxin. In other words enough diphtheria poison is measured out into a small sterile capsule, to kill ten pigs; into this is dropped a small quantity of diluted antitoxin, say $\frac{1}{2000}$ Cc. Another pig receives the same amount of toxin and a smaller amount of serum, etc. After six days, from the data obtained, if half a dozen or more pigs are injected, we can determine the smallest amount of serum that will protect the animals. Ten times this quantity of serum is an antitoxin unit. Thus if $\frac{1}{2000}$ Cc. protects, the serum possesses 200 units to the Cc. This is about as weak a serum as should be employed in practice. Sometimes the blood-serum may contain so much antitoxin that one Cc. may save 20,000 guinea pigs, really five tons of animals, from ten times enough poison to kill them. This certainly is a marvellous property. The tested serum is now drawn from the large sterile containers into sterile bulbs, each holding one dose. The necks of the bulbs are at once melted in the blow-pipe. The amount of serum placed in each bulb depends upon the strength of the serum and the size of the dose required. Usually two or more grades of serum are put out, as Standard X, which contains 200 to 500 units per Cc.; Special XX, 500 or more units per Cc. The dose of anti-diphtheritic serum runs all the way from 500 units for prophylactic purposes to 3,000 units for very severe cases.

The various anti-serums are all prepared in much the same manner as above outlined for the manufacture of anti-diphtheritic serum. Anti-streptococcic serum, which is produced from the streptococcus pyogenes, is coming into quite general use and is giving somewhat conflicting, but on the whole, very encouraging, results in genuine cases of purpural fever, erysipelas, surgical septicemia, in fact in all cases where infection is due to streptococcus pyogenes, the most common pus organism attacking human beings.

One final word as to the keeping qualities of antitoxins and other biological products. You remember that the more complex the molecules of a substance and the greater the variations in temperature at which it is kept the more readily does the substance break up into other products having a smaller number of atoms to the molecule; consequently since antitoxins, etc., probably belong to the most highly organized organic bodies, special care should be exercised to keep them in a cool, dark place. The slight turbidity sometimes noticed is due to a chemical change and is not harmful. In outline the process of manufacturing antitoxins is somewhat simple, but the details are most intricate and perplexing, as we are dealing with the dynamics of living organic life.

Briefly recapitulating: Antitoxin is an unknown substance formed by the tissues of the animal body when they are stimulated by the poisonous products formed by pathogenic bacteria (certain vegetable and animal products also produce antitoxins). It is nature's own method of curing disease, as it is through the production of antitoxin in the body of a child, by the stimulation of its tissues by the toxin formed by the mass of diphtheria germs lodged in the throat, that the child finally recovers. The attack of diphtheria is prevented or cured by the subcutaneous injection of anti-diphtheritic serum artificially prepared in the laboratory. In the manufacture of anti-diphtheritic serum seed cultures of diphtheria are obtained from the throats of patients, planted in large flasks of bouillon, which are kept in the incubator for two weeks, then examined microscopically, filtered through porcelain, leaving a clear transparent solution of diphtheria toxin, which, after being tested on guinea pigs, is injected in small, gradually increasing doses, into horses, until they are able to withstand several thousand times the fatal dose of poison. Blood is then drawn from the immunized animals in large sterile test tubes, allowed to clot, when from the contraction of the clot the fluid portion of the blood, containing a large percentage of antitoxin, is squeezed out. This blood-serum has added to it 0.4 per cent. trikresol, is filtered through sterile filters, and finally, before being placed in suitable containers for marketing, is bacteriologically and physiologically tested.

A CENTURY OF ALKALOIDAL CHEMISTRY.

By A. R. L. DOHME, Ph. D.

At the advent of this century chemistry in general was quite chaotic and the alchemical notions and theories still prevailed largely. Dalton had in 1802 announced the theory of oxidation and upset the so-called phlogiston theory of the eighteenth century. While Priestley and all other earlier workers had assumed that when a substance burns it loses phlogiston, which is lighter than air, and thereby becomes heavier, Lavoisier proved that the phenomenon was an absorption of oxygen from the air, resulting in an increased weight of the substance by the amount of this oxygen. This is at the bottom of our chemical theories of to-day, and especially d d Lavoisier point out the great value of the balance, viz., that to weigh was the criterion of chemical reactions as to their existence. At the close of the eighteenth century chemical substances were classified into mineral, vegetable and animal, corresponding to the three kingdoms of nature. Lavoisier maintained that organic acids were the oxides of complex radicals, while mineral acids were the oxides of elements. Berzelius extended this idea by distinguishing the whole class of organic substances from inorganic substances by assuming that while both are binary compounds, the former contained complex radicals where the latter contained elementary substances.

The "radical" theory was the next development and it took root from the beautiful work of Gay-Lussac on cyanogen, which, though made up of two elements, acts as a unit like a metal, and occurs in a long series of different compounds, lending its characteristics more or less to each. The beautiful works of Liebig and Woehler on "Benzoyl, the radical of Benzoic Acid," greatly encouraged this development and radicals became the talk and topics of the day. Berzelius had, however, carried his so-called dualistic theory into organic chemistry, and chemists believed with him that all chemical compounds were made up of an electro-positive part or radical and an electro-negative part or radical. This theory was also called the conjugated theory of Berzelius, inasmuch as the two parts or radicals were conjugated together and could by the proper methods be separated. It was Dumas who first brought out the idea of substitution and upset Berzelius' theory; it was that a substance enters a compound, and instead of conjugating itself to it, drives some element or radical out and substitutes itself for it. This was, then, the unitarian theory in place of the dualistic theory of Berzelius, for in it the compound was a unit and when another entered into chemical action with it, displaced part of it and took its place.

The above outlined development of chemical theories was, of course, of a general nature, applying to all classes of chemical compounds. But little speculation or theorizing had been done on the class of bases except their general classification

stances as opposed to the acidic or electro-negative substances. Prior to 1800 alkalies were considered simple undecomposed substances, but Sir Humphry Davy dispelled this notion by showing the wonderful power of the galvanic current, first converting water into hydrogen and oxygen and then salts into acid and base, and, finally, acids into electro-negative and electro-positive constituents and bases into metals and oxygen. He noticed that the galvanic current eliminated at the negative pole hydrogen, alkalies and metals, and at the positive pole oxygen and acids. In particular he showed that the inorganic bases or alkalies, when treated with the galvanic current, yielded their metal at the negative pole and oxygen at the positive pole. Hence they were metallic oxides of certain elements which possessed distinctly basic character.

The dawn of organic bases is to be assigned to the year 1815, when Sertürner discovered the basic constituents of opium, or, rather, that the "sel essentielle opii" possessed basic properties. This dawn marked an epoch in chemistry, for it not only paved the way for the great number of alkaloids that we know to-day, but it offered an opportunity for the study of a class of complex substances that has elucidated many knotty problems in chemical theory. Be it not forgotten that it also

He noticed that the galvanic current eliminated at the negative pole hydrogen, alkalies and metals, and at the positive pole oxygen and acids. In particular he showed that the inorganic bases or alkalies, when treated with the galvanic current, yielded their metal at the negative pole and oxygen at the positive pole. Hence they were metallic oxides of certain elements which possessed distinctly basic character.

The dawn of organic bases is to be assigned to the year 1815, when Sertürner discovered the basic constituents of opium, or, rather, that the "sel essentielle opii" possessed basic properties. This dawn marked an epoch in chemistry, for it not only paved the way for the great number of alkaloids that we know to-day, but it offered an opportunity for the study of a class of complex substances that has elucidated many knotty problems in chemical theory. Be it not forgotten that it also

HE: Don't you think Mrs. X— has improved in appearance of late?
SHE: Decidedly; ever since her husband bought that drug store.

as electro-positive sub-

was the source of the standardization of drugs, for when Sertürner and Baume spoke of "sel essentielle opii" they stated in so many words that morphine was the essence, i. e., active principle, of opium, a complex and unsightly drug.

Gay-Lussac and Claude Bernard both saw the full bearing and importance of the discovery, and the latter at once prophesied the advent of the day when potent medicines would be graduated in strength by their chemical analysis for the active principle they contain. When Sertürner found that morphine would unite with acids to form salts, would throw other basic substances out of combination with acids and replace them, he demonstrated the existence of organic bases that were as characteristic as the well known alkalies. The sequel was that from 1817 to 1835 the alkaloid, or vegetable base, as well as active principle era set in and prospered, resulting in the discovery and study of the following alkaloids, and active principles, for they were recognized as both by their discoverers:

	Discoverer.
1817. Morphine.....	Sertürner.
Emetine.....	Pelletier and Magendie.
Narcotine.....	Robiquet.
1818. Verarine.....	Meissner, Pelletier and Caventou.
Strychnine.....	Pelletier and Caventou.
1819. Brucine.....	Pelletier and Caventou.
Piperine.....	Brandes.
Delphinine.....	Brandes.
1820. Cinchonine.....	Pelletier and Caventou.
Quinine.....	Pelletier and Caventou.
Solamine.....	Brandes.
Chelidonium.....	Godfrey.
1824. Corydalline.....	Wackenroden.
Berberine.....	Chevalier and Pelletier.
1827. Conine.....	Gercke.
1828. Nicotine.....	Posselt and Reimann.
1829. Aricine.....	Pelletier and Corriol.
Sanguinarine.....	Dana.
1832. Codeine.....	Reich.
Narcaine.....	Pelletier.
1833. Quinidine.....	Henry and Delondre.
Atropine.....	Geiger and Hesse.
Hyoscyamine.....	Geiger and Hesse.
Aconitine.....	Geiger and Hesse.
Colchicine.....	Geiger and Hesse.
1835. Thebaine.....	Pelletier and Laboureyre.

As the great and limitless fields of chemical research of this recent decades were then untrodden wildernesses the percentage of work done upon alkaloids was greater than it is to-day, and this work being newer and more unknown, as well as unknowable, was entered into with more zest. The dawn of these millions in it had not set in, for Colonel Mulberry Sellers was scarcely yet in trousers, and for science's sake alone did the faithful disciples of Liebig, Wochler, Berzelius, Dumas and Gay-Lussac apply their brains and devote their energies. So eager were those tillers of the early chemical soil and heavers of the primitive chemical forests, where milestones and guide posts there were none, that they forgot all about the practical application of their newly discovered alkaloids, both as to medicinal and pharmaceutical uses. While some of them were applied by some physicians, this was the exception, and certainly but little, if any, chemical analysis for active principles is known to have been done in those days. This was very likely a refinement which the log-rolling and border warfare of the times did not justify or require.

After the many alkaloids of this period had been isolated, named and analyzed to determine their formulas, chemists began to speculate as to their constitution. Berzelius said they were made up of a radical ammonia, with which two radicals were conjugated. Liebig begged to differ, and won out in the end, although originally he was a second in Berzelius's corner of the arena. Thus Berzelius thought they were made up as follows:

NH ₃	Ammonia.
NH ₂ CH ₂	Methylamine.
NH ₂ C ₆ H ₅	Aniline.
NH ₂ C ₇ H ₉ O ₂	Morphine, etc.

Liebig and Wuerz, independently of one another, however, showed that dualism prevailed over dualism, and that there was no conjugation in this genus rerum, but that they contained various radicals which were themselves the products of substitution, though all primarily derived from the typical base ammonia. Alkaloids were units and not Slamese twins. The parent of them all was ammonia, and their decided difference in properties and effects was due to the difference in the nature of the radicals that had substituted themselves in nature's bosom for one or more of the ammonia's hydrogen atoms. Hence Berzelius's table should rather be written, they said, as follows:

NH ₃	Ammonia.
NH ₂ CH ₂	Methylamine.
NH ₂ C ₆ H ₅	Aniline.
NH C ₇ H ₉ O ₂	Morphine, etc.

In the early sixties the substances pyridine and quinoline came to life as the result of the distillation of bone oil. They were basic oils and interesting enough to many chemists to justify their close study. The result of this extended study of these two substances is that a volume alone has been since dedicated to each of them. A great mass of derivatives of each has been discovered, made and studied—not that they possessed great value per se, but that they became milestones and guide posts in the alkaloidal border life which was by their means to sooner or later develop a rather high state of civilization, alkaloidically speaking. To find out what these alkaloids were, for their complexity and intricacy were self-evident upon a mere perusal of their molecular formulas, required a finger-end acquaintance with the many nitrogenous products that would certainly develop as a result of splitting up of their molecules. This was the next stage of the alkaloidal development, viz., a yearning to know what they were derivatives of and just what was their blood relation to their ancestors in molecular life. This problem, this yearning, differed from that of the original pioneers in alkaloidal research, for there was, in the eighties and nineties, when this took place, besides the desire to know the unknown and unknowable, the additional stimulus of Colonel Mulberry Sellers. People had learned of the millions in antipyrines, phenacetines and the like, and many of them, being human and living in a more rapid geological epoch, hoped to kill two birds with one stone by getting the scientific laurel from the scientific world, and at the same time the auriferous or argenterous laurel, as their convictions might prefer, from the financial world. We have reached now the stage when most of the alkaloids were known empirically, i. e., molecularly speaking, and the effort was to get at their atomical structure, or, roughly speaking, their anatomy.

Synthesis here entered into the problem and aided the good work. Alkaloids were split up until they had been reduced to simpler substances which chemists knew, partially at least, if not wholly. If indeed not wholly, then at least as completely as the mile stones and guide posts of the pyridine and quinoline names aforesaid would allow. If from these parts it were possible to reconstruct the whole, the fact would be established that the theory, upon which the constitution or anatomy of the alkaloidal molecule had been planned as a result of the study of these split up parts, was correct. In this manner, for instance, the constitution of the alkaloids conine, piperine, atropine, pilocarpine, et alera, was determined. It was always held that the efficacy of alkaloids was in some remote and indefinite way connected with the so-called life process, i. e., that only natural alkaloids or those made by nature in the plant or animal were therapeutically active. Ladenburg dispelled this medieval dream, for he not only split up atropine into tropine and tropic acid, but then made these two substances artificially and combined them again by heating them with dilute hydrochloric acid on a water bath. The result was atropine identical chemically and physically with that obtained from atropa belladonna, and to the infinite amazement and delectation of all, also fully as active therapeutically.

The result of the work of the last three decades of this century has been to show that alkaloids are as a rule derivatives of pyridine and quinoline, and their more complex sisters, phenanthrene, isoquinoline, etc., rather than of ammonia, as was held in the fifties and sixties. Since the general acceptance of this fact the work on alkaloids has been developing along two lines mainly, viz., the study, both chemical and physiological, of lesser known or unknown alkaloids, and the elucidation of the constitution of those alkaloids whose atomic arrangement is as yet enshrouded in darkness.

It is rather curious that the three most commonly used alkaloids—morphine, strychnine and quinine—should be among the last of this class of substances to have their constitution laid bare, and further, that the work, as it has progressed continuously for several decades in the skilled hands respectively of Professors Knorr, Tafel and Koenigs, has proved to be the most complex and difficult yet encountered in alkaloid chemistry. That these gentlemen will finally each be able to set out for us in good sized quarto volumes the exact constitution of these three giants of medicine hardly any of us doubt; but think of the patience of a man who can plod and toil along for

half a lifetime for the satisfaction of knowing and having it known that his pet alkaloid is thusly constructed, and not thusly as originally maintained thirty-five years ago by the late Professor Soandso.

Alkaloids are being used more and more every day, as one would naturally expect, for they, being chemical entities, always act alike and can be depended upon, while their parent drug may not only vary between the widest limits in its content of the same, but may at times contain other ingredients that cannot but cause a different effect upon the human system. The advent of hypodermic medication has also greatly enhanced the use of alkaloids. The problem of assaying drugs for alkaloids is one of great importance, and it seems hardly a debatable question at this day that the U. S. Pharmacopœia should or should not adopt a standard content of alkaloid or other active principle, for practically every drug that grows owes its effect to such active principle. Personally it seems to me that the next revised edition of the U. S. Pharmacopœia should unquestionably contain not only standard requirements as to content of alkaloid or other active principle for all drugs that contain such, but besides methods of assay that are simple and reliable. It is in this line principally that the next revision should busy itself, and the United States can well undertake to be the pioneer in this respect, as the number of workers that can be drawn upon for the work is ample to meet the demand. The development of alkaloidal chemistry in the next century will, I think, be in the line of synthetic and pharmacologic improvements upon existing products as nature produces them for us. It is to this end that the constitutional development of alkaloidal chemistry is working and aiming. When we know the exact constitution of morphine it will become the duty and the desire to so alter this molecule that the altered product will produce the desired effects of the drug and none of its undesired effects. To do this the science of pharmacology, i. e., of the study of the physiological effects of drugs upon all the organs of the human body, must be developed sufficiently to have tabulated for us the exact nature and extent of all these effects. Then synthesis and chemical change will be enabled to so alter the drug that the resulting product will affect those organs that we desire to affect, and not those we do not desire to have affected. When this condition of affairs shall have been consummated we will indeed have reached a stage of development that will justify us in saying that chemistry has been of inestimable value to medicine, and that the advent of scientific medicine may be chronicled. Then medicine will not have to depend upon complexly formulated mixtures for producing desired effects, but it will simply have to call on chemists for the preparation of a substance that we know from our knowledge of the pharmacology and chemistry of chemical groupings of atoms, i. e., what we call radicals, will produce the desired effect and no other effects that would be deleterious. The report hence of the writer of the alkaloidal chemistry of the twentieth century will be one of unusual interest and importance. Would that we could live to read it!—(Am. Drug.)

Ink for Writing on Glass.

Resin	20 parts
Alcohol	150 parts
Borax	35 parts
Methylene blue	1 part
Water	250 parts

Dissolve the resin and the methylene blue in the alcohol and mix with the water in which the borax has previously been dissolved.

The Wayside Missionary—Why do you drink that vile stuff?

Dismal Dawson—"Cause it's the easiest way to git it down; I can't breathe it, kin I?"—Indianapolis Press.

Eva—Mother, Tillie gets a dime every time she takes cod liver oil.

Mother—And what does she do with the money?

Eva—Well, she puts it in a box until she gets fifty cents, then her mother buys more cod liver oil.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOT'S COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.—The name and address of the manufacturer of "dentola."

Dehorne or Horn Killer.—(P. S. C.) See this journal April 12, 1900, page 383.

Emulsion of Lincseed Oil (Thompson).—(J. L. L.) See this journal March 1, 1900, page 233.

White Ink.—(J. H. J.) See this journal March 29 and April 5, 1900, pages 342 and 370, respectively.

Fairechild's Essence of Pepsine; Fellows' Compound Syrup of Hypophosphites.—(Era.) We cannot give the formulas for proprietary preparations.

Banana Oil.—(F. M. B.) This is a proprietary specialty and said to be an alcoholic solution of a gum resin, scented with "banana ether." We cannot give the formula. It is used by gilders.

Wholesale Druggists in Denver, Col.—(J. Q. R.) The Era Druggists' Directory gives the names of the following jobbers in Denver: The Bridaham-Quereau Drug Co., 1509 Blake street, and W. A. Hoyer & Co., 1433 Lawrence street.

Remedies for Venereal Diseases.—(H. S. W.) It is not the province of a pharmaceutical journal to give formulas and outline the treatment for venereal diseases. This duty belongs to the reputable physician, who should be consulted.

Preston's Headache Cure; Febriline.—(J. A. H.) We cannot give the formulas for either of these proprietary articles. Some formulas for headache remedies in general use are given in this journal November 16, 1899, page 674, and February 22, 1900, page 205. For "tasteless syrup of quinine" see April 12, 1900, Era, page 394.

Elixir of Terpin Hydrate and Codeine.—(F. R. F.) Try the following formula: Terpin hydrate, 64 grains; saccharin, 1 grain; alcohol, 3 fluid ounces; glycerin, 1 fluid ounce. Dissolve by the aid of heat, then add: codeine sulphate, 8 grains, and aromatic elixir, 4 fluid ounces. Another formula is given in the February 5, 1900, issue of this journal, page 149.

Ferrated Cod Liver Oil.—(C. O. F.) Wanting a formula for making this preparation "without submitting the oil to the effects of heat and without impairing its brightness and clearness."

Some years ago Weber, of Zurich, contributed the following to *Moniteur de la Pharmacie*: Dissolve 3 parts of sublimed perchloride of iron with 907 parts of cod liver oil. The solution is made in the cold by the aid of trituration. This preparation should be filtered if not absolutely limpid. The resulting product is a clear limpid liquid of a reddish brown color and contains one part of metallic iron to 1,000 of oil.

Iodo-Ferrated Cod Liver Oil.—Take 2 parts of porphyzised scale iron, 4 parts of iodine, 40 parts of cod liver oil, and a little ether, and triturate in the mortar until the iodine has disappeared and a black product is formed. To this add with trituration, in successive charges, sufficient cod liver oil to make 1,000 parts. Filter. The product has a clear red-brown color and incloses 5 parts of iodide of iron to 1,000 of oil.

Emulsion of Oil of Eucalyptus.—(E. L.) Oil of eucalyptus is generally prescribed in capsules, the usual dose being 2 to 5 minims. However, a satisfactory emulsion may be made after the general process of the National Formulary for the emulsification of volatile oils. Or try the following formula: Oil of eucalyptus, 160 minims; expressed oil of almond, 1½ drams; acacia, 2 drams; syrup, 1 fluid ounce; cinnamon or other aromatic water, enough to make 4 fluid ounces. Each fluidram of the emulsion will contain 5 minims of oil of eucalyptus. For a further consideration of the administration of this oil see recent editions of the dispensaries or some good work on therapeutics.

Dyeing Straw Hats Black.—(B. and S.) A common method of dyeing straw hats is to apply a shellac or resin spirit varnish colored with a black aniline dye. The following process is given for dyeing straw hats on a large scale: First steep the hats in a bath of soda at 5° Baumé and 122° F. for three hours, rinse and soak overnight in a sumac bath containing 24 pounds sumac per 5 pounds hats. In the morning take out and drain and soak for three hours in a cold "beck" of black liquor (pyrolignite of iron) at 2° B. Take out, drain, and expose the hats separately to air for six hours; rinse and dye at 144° F. with 24 pounds logwood per pound of hats till the shade is reached. Lift, drain, dip singly in a lukewarm beck containing 8¼ ounces glue per 17 pints of water; dry and rub with a hard brush.

Show Globe Colors.—(I. C. O.) Amethyst: Dissolve 15 grains of sodium salicylate in 2 gallons distilled water and slowly add tincture of ferric chloride until the proper tint is obtained. Blue: Dissolve 4 ounces of sulphate of copper in 2 pints of water and add ammonia water with constant stirring until the precipitate first formed is re-dissolved, then add enough water to make 2 gallons. Orange: Potassium bichromate, 1 pound; dissolve in 2 gallons of water and add 8 ounces of nitric acid. Grass Green (Fluorescent): Fluorescein, 2 grains; ammonia water, 2 fluidrams; distilled water, 2 gallons. Red: Dissolve 3 drams each of iodine and potassium iodide in 8 fluid ounces of water and dilute with water to which 10 ounces of hydrochloric acid has been added, to make 2 gallons. Many other formulas may be found in previous volumes of the Era. Consult the indexes.

Cleansing Fluid or Cream.—(E. F. M.) The following we think is the formula to which you refer: Mix 2 ounces ammonia water with 2 ounces oleate of ammonia; shake well and add 1 ounce of ether; shake and add 5 ounces of benzine; agitate thoroughly. Then add 1 ounce of chloroform and shake well. Allow to stand a few minutes and shake at intervals, when a mixture having the consistency of cream and showing but little tendency to separate will result.

Oleate of ammonia is prepared by introducing into a bottle 1 ounce of oleic acid and then pouring upon it 1 ounce of alcohol and 7 ounces of ammonia water previously mixed, and enough distilled water to make 1 pint. Cork tightly and allow to stand a week or more until saponification is complete.

To Pickle Cucumbers.—(M. and D.) The following processes are taken from various sources: (1) Wash and wipe six hundred small cucumbers and two quarts of peppers. Put them in a tub with one and a half cupsful of salt and a piece of alum as large as an egg. Heat to boiling three gallons of cider vinegar and three pints of water. Add a quarter of a pound each of whole cloves, whole allspice and stick cinnamon and two ounces of white mustard seed and pour over the pickles. (2) The cucumbers should be cut from the vines, a part of the stem left on; do not bruise them. Select such as are of good quality, cover them with boiling water, allowing the cucumbers to remain until the water is cool; if for vinegar pickles, add a small quantity of salt before scalding. When cold drain thoroughly and cover with boiling vinegar with an addition of spice if preferred. If for brine, put a layer of dry salt in the bottom of a barrel and after thoroughly draining the pickles put them into dry salt. Add no water. Put a weight upon them, the cucumbers furnishing enough moisture for brine. (3) For gherkins

or very small cucumbers soak them in a brine of six ounces of salt to the quart of water for 24 hours; then drain or dry in a cloth, place them in jars and pour in the pickle, composed of vinegar to which has been added salt, peppercorns, ginger, mace, etc. After soaking two days the pickles are set over the fire until they simmer and then replaced in the jars, which must be well corked to exclude the air.

White Ink for Stamping on Glass Bottles.—(E. P. K. & Co.) want a formula for a white stamping ink to be used with a rubber stamp to mark glass bottles. The bottles are filled with a dark liquid. An ink is wanted that will not come off when the bottle is placed in water, but which will come off by rubbing with a scrubbing brush five or six times.

A little experimenting is necessary to produce a satisfactory marking ink which will work well with a rubber stamp and at the same time possess all of the other qualifications required of it. It is quite probable that a stamping liquid or ink made with copal varnish in which some white pigment like zinc oxide, white lead, barytes, or bismuth subnitrate has been triturated will answer the purpose. It may be necessary to apply a thin coating of varnish to the ink after it has had time to dry. If any of our readers have had any practical experience with an ink of this character we should be glad to have them give their fellow pharmacists the benefit of it through these columns.

After-Shave Containing No Bay Rum.—(A. F.) Bay rum is without doubt the best "after-shave" and there is nothing we know of which will take its place. We give some formulas, however: Quince seed, 3 ounces; boric acid, 1½ drams; carbolic acid, 1 fluid dram; distilled extract of witch hazel, 2 fluid ounces; glycerin, 6 fluid ounces; perfume extract, 2 fluid ounces; water, enough to make 4 pints. Pour 32 fluid ounces of boiling water upon the quince seed, add the acids, macerate for several hours, stirring occasionally, decant the liquid, upon the residue pour 16 fluid ounces of boiling water, macerate again and decant as before, mix and strain the two liquids, add the glycerin, distilled witch hazel and perfume and finally the remainder of the water. The quantity of distilled extract of witch hazel may be increased if desired, omitting, of course, a corresponding quantity of the water.

Menthol, 5 grains; tragacanth, powdered, ¼ dram; alcohol, ½ ounce; glycerin, 2 drams; distilled extract of witch hazel, 4 ounces; water, 2 ounces. Dissolve the menthol in the alcohol and add to the tragacanth contained in a dry bottle; add the witch hazel, water and glycerin and thoroughly shake.

Liquid Glue or Cement.—(H. W. T.) wants a tried formula for a liquid glue or cement which will stick labels to tin boxes or cans. Most any good glue or flour paste with a little acetic acid added will stick labels to tinned surfaces if the latter be first roughened with sand or emery paper. Here is a formula published in a recent issue of the Western Druggist for a "Mechanics' Liquid Glue, Dark:" Dissolve 11 av. ounces sodium bicarbonate in 3½ pints of water and pour the solution over 2 pounds of brown glue, No. 2. Allow to stand overnight or till very thoroughly soaked and swelled, then heat carefully (best in a water bath) till thoroughly dissolved. When nearly cold stir in thoroughly 160 minims oil of clove. Bottle and keep tightly corked.

Regarding this glue the author of the formula says: "I sell this in so-called pint beer bottles (12 fluid ounces) holding just 1 pound, at 25 cents. These bottles I chose simply because I can buy as many as I need of them from children at one-half cent apiece, paying in candy or anything else they may choose. A gay label and bright-red gelatin or wax cap makes the bottle look well enough. A quarter-pound jar or w. m. bottle (3 fluid ounces) I sell for 10 cents (cost 3¼ cents).

"While Liquid Glue for fancy work is made in the same way from white glue, to sell at the same price, but I give only half the quantity.

"This glue will not gelatinize till the temperature is below 50° F., but is promptly restored to liquidity by immersion in warm water or setting near a fire. No cheap

glue will do better. None of the other cheap formulas that I have tried did as well.

"I believe the addition of some stronger alkali would increase the liquidity, or rather diminish the tendency to gelatinization at low temperature."

Bromide and Muriate of Quinine.—(J. T. M.) writes: "Please tell me what bromide of quinine and muriate of quinine are. I have been unable to find either mentioned in the dispensatory or other works on pharmacy."

Both these titles are the older synonyms for quinine hydrobromate and quinine hydrochlorate of the Pharmacopœia. Both titles are still used to some extent in the trade (muriate of quinine appears as a synonym for quinine hydrochlorate in the National Dispensatory), but they are not generally employed by scientists and chemists, for they are not in accord with the modern method of nomenclature as applied to alkaloidal salts. By this method the names of the salts of the alkaloids are given on the assumption that the acid unites with the alkaloid without decomposition. Thus morphine hydrochlorate is regarded as morphine with added hydrochloric acid. All acids uniting with alkaloids form additive salts having similar names. The reactions expressing the formation of quinine hydrobromate and quinine hydrochlorate may be thus expressed:

In this reply we have purposely employed the terms "hydrobromate" and "hydrochlorate" instead of the seemingly more logical names "hydrobromide" and "hydrochloride" because they are so used in the Pharmacopœia. In the nomenclature of these salts, however, the weight of authority seems to be in favor of the use of "hydrobromide" and "hydrochloride" and the British Pharmacopœia so employs the latter term in its title for "quinine hydrochloride."

Tests for Bismuth Subnitrate.—(J. C. C.) writes: "I am using P. & W.'s subn. trate of bismuth. One of the local physicians says that it has no effect, not coloring the feces of patients. He claims it should color the stools dark. Is this necessarily so? Please give me a reliable test for the pure article; also some points relative to the doctor's complaint."

The application of the official tests to a sample of bismuth subnitrate should enable you to tell whether it answers the description given for that substance in the Pharmacopœia. The impurities which may be present are the carbonate, insoluble foreign salts, alkalis and alkaline earths, ammonia, arsenic, etc., and the Pharmacopœia provides tests to detect the presence of each of them.

Regarding the therapeutic and systemic effect of bismuth subnitrate, most authorities agree that its use produces a dark green or blackish discoloration of the stools, which is generally believed to be due to the formation of the sulphide of bismuth, but which Quincke ascribes to the reduction of the subnitrate in the intestine (Cushny). Hare ("Practical Therapeutics," fourth edition) states that "the stools are apt to become black and the tongue, if furred, may also be black about the centre when bismuth is used." Butler ("Text Book of Materia Medica") records his observations thus: "It (bismuth) coats the mucous membrane, lessening secretions and absorbing excess of free acids, at the same time acting as a sedative and feeble astringent. The tongue and stools are tinged a dark clay color, due to conversion into the sulphide. . . . The salts of bismuth are absorbed into the circulation and are eliminated by the urine, liver and feces." As pharmacists we cannot be expected to discuss the therapeutic effect of a given remedy upon a particular individual. People are not all alike and some of them may possess idiosyncrasies which even physicians can determine only after long continued observation and study. The most the pharmacist can do is to determine the character and purity of the medicines he sells. This he should and may do if he follows

out the instructions of his official guide. The medicinal value of this or any other remedy remains for the physician to determine.

PHARMACEUTICAL SOCIETY.

London, May 17.

The annual dinner of the Pharmaceutical Society of Great Britain was held on Tuesday, May 15, in the Whitehall Rooms of the Hôtel Métropole, one of the best appointed and best known of London hotels. In the absence of the president, Mr. Martindale, who has taken a voyage

G. T. W. NEWSHOLME.

to South Africa for the benefit of his health, the vice-president, Mr. G. T. W. Newsholme, occupied the chair. The members and guests numbered about 220, and as usual included a considerable number of the leading lights of medicine, surgery and science generally, as well as a fair sprinkling of legislators. Among the best known of those who sat down were: Sir Wde. W. Abney, K. C. B., Sir J. Crichton Browne; Dr. Selby Church, President of the Royal College of Physicians; Sir Dyce Duckworth, Dr. Farquharson, M. P.; E. M. Holmes, President British Pharmaceutical Conference;

Hon. G. Waldegrave Leslie, J. F. Remnant, M. P.; Prof. J. Millar Thomson, Prof. H. G. Greenish, Prof. J. N. Collie, Dr. John Attfield, Dr. T. E. Thorpe, Sir Howard Vincent, K. C. M. G., M. P.; Lord Welby, G. C. B., and a large number of well known pharmacists. Of course, as in every assembly of Englishmen at the present time, the war occupied a large share of attention, to the subordination of really pharmaceutical topics. After the company had duly honored "the Queen" at the instance of the Chairman, Mr. Walter Hills, ex-President of the society, proposed "the Imperial Forces," which was replied to by Colonel Sir Howard Vincent, who in the course of his speech mentioned that Mr. Hills had a son now serving with Lord Roberts's forces. This toast was received with great enthusiasm, and was followed by that of the "Houses of Parliament," the response being given by Lord Welby for the House of Lords and Mr. Remnant for the House of Commons, both gentlemen alluding but in somewhat vague terms to the prospects of the Companies Bill becoming law, and the effect of pharmacists' opposition to the clause dealing with their calling. "The Medical Profession" was proposed by Mr. S. R. Atkins, the treasurer of the society, who occupied the vice chair, and responded to by the President of the Royal College of Physicians. Mr. Michael Cartidge proposed, and Sir W. Abney responded for, "Science." "The Pharmaceutical Society" was introduced by Mr. Bailey Saunders, secretary of the London University Commission, who alluded to the fact that the reorganized university would recognize the professors of the Pharmaceutical Society's school, who would all be members of the Faculty of Science. A degree in science would also probably be granted for pharmaceutical research. The Chairman gave the response, and then proposed the last toast, that of "Our Guests." The replies were given by Hon. G. W. Leslie, Sir J. Crichton Browne and Dr. T. E. Thorpe. All the speakers were received with great cordiality, and a most successful gathering broke up shortly before midnight. A capital musical programme was gone through during the evening.

The fifty-ninth annual meeting was held on May 16 at the society's headquarters in Bloomsbury Square, London. The vice-president, Mr. Newsholme, occupied the chair. He was supported by most of the other councillors, and several of the new council candidates were present. The Chairman, in moving the adoption of the annual report, spoke of the financial progress which the society had made during the past year and the large addition in

number of members. He had every reason to believe that at the next annual meeting an even more satisfactory statement would be submitted. He believed that at last the Privy Council would sanction the addition of carbolic acid to the poison schedule, and the consequent restriction of its sale to chemists. Mr. Atkins, the treasurer, seconded the motion and defended the Council's action in the past. The motion was carried. A motion urging that the news department of the Pharmaceutical Journal should be printed as a supplement was, after discussion, withdrawn, as also was one dealing with the society's Research Laboratory, which was brought forward by Mr. E. N. Butt, one of the auditors, at a special meeting following the annual one.

The result of the election of seven members (one-third) of the Council was declared on May 17, the following being successful in the order named: Walter Hills, Charles Symes, A. C. Wooton, D. Storrar, A. Cooper, W. G. Cross and J. Taylor. W. Gibbons was only one vote behind Taylor. Wooton, Cooper and Taylor are new men and take the places of W. Warren, N. M. Grose and T. Bateson, who are among the defeated candidates. The assistants' candidate was last but one out of the whole number (seventeen) of candidates.

MANUFACTURERS' RIGHT TO CONTROL RETAIL PRICE.

The following is self-explanatory:

Worcester, Mass.

To the Retail Drug Trade:
The validity of the contract on the reverse side hereof was contested in the Superior Court of Massachusetts, May 15, 1900. A local dealer had bought some of the goods from a local jobber and received with the invoice a copy of the contract. The dealer cut the price, contending that the acceptance of the goods without his signature to the contract did not bind him. The court held otherwise and awarded the stipulated damages to us. If the Supreme Court of Massachusetts sustains the decision of the Superior Court, we shall probably institute proceedings against other cutters, especially in Massachusetts, and if the trade reciprocates our efforts to establish uniform prices we shall expect to see other manufacturers of proprietary medicines adopt protective measures.

PHENYO-CAFFEIN CO.

CONTRACT.

For and in consideration of the per cent. deducted from the full retail price, allowance of the Phenyo-Caffein Company, the vendee or retailer hereby agrees that he will not sell nor allow anyone in his employ to sell, directly or indirectly, Phenyo-Caffein, 25 cent size, for less than 25 cents a single box, five boxes for one dollar, twelve boxes for two dollars and twenty-five cents, nor the 10 cent size for less than the face price.

The vendee, or retailer, further agrees that if he violates the terms of this contract he will pay to the Phenyo-Caffein Company the sum of \$21, that sum being the agreed amount that the Phenyo-Caffein Company would be damaged by a breach of this agreement. This clause, as to the amount of damages, is inserted because it is recognized and agreed that a breach of this agreement would cause the Phenyo-Caffein Company to suffer a material loss, and also that it would be very difficult and usually impossible to prove the exact amount of such loss.

The vendee, or retailer, further agrees that the acceptance of said goods, with the notice of the conditions of sale, shall be held to be an assent on his part to the foregoing terms, and an agreement with the Phenyo-Caffein Company, to sell subject to the price restrictions fixed by it.

This agreement is made subject to the stipulation that in case the vendee, or retailer, should desire to discontinue the sale of Phenyo-Caffein and notifies the Phenyo-Caffein Company of that fact, in writing, said Company agrees to buy from the vendee, or retailer, any of the said Phenyo-Caffein at the net cost price at which it was sold to him.

WELL PLEASED WITH THE ERA COURSE.

Editor the Pharmaceutical Era: I have just finished the final examination questions, and can say I am well pleased with the benefits derived from the Era Course in Pharmacy. I graduated from the Northwestern University College of Pharmacy in June, 1899, and as I intended to pass the Illinois State Board of Pharmacy examination, I thought it would be a good plan to take the Era Course for a review and to help me in passing the State Board. I am glad to state that I passed the examination for Registered Pharmacist, held in Springfield last January, and recommend the Era Course to any student who wishes to pass a State Board examination and who cannot take a course in a good college of pharmacy, or as a review after going through college.

S.

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

IMPORTANT NOTICE TO ERA STUDENTS.

Students of the Era Course should note the fact that the year ends June 14. All recitations and examination papers should be mailed to the Director's office by that date.

Recitations and examination papers mailed subsequently will be examined and recorded, but will not be considered in the award of prizes.

HOWARD UNIVERSITY.

The commencement exercises of Howard University were held in the First Congregational Church, Washington, D. C., Tuesday evening, May 8. There were eighteen graduates in medicine, seven in dentistry and twelve in pharmacy. The address to the graduating classes was given by Hon. J. H. Gallinger, United States Senator. The graduates in pharmacy were: Carroll J. Beaman, M. D., Washington, D. C.; Mauricio Flores y Fernandez, Havana, Cuba; Ernest G. Barnes, Circleville, Ohio; C. Albert Hall, Frederick L. Hazard and John W. Mitchell, M. D., Washington, D. C.; John W. Morse, Culpeper, Va.; Nathaniel T. Pannell, Lynchburg, Va.; James Roy Pipes, Cameron, West Va.; James U. Van Senden, Maud, Ill.; James T. Walker and Rodger Winter, Washington, D. C. The class officers were: J. T. Walker, president; C. J. Beaman, M. D., vice-president; C. Albert Hall, secretary, and M. Flores, treasurer. James Roy Pipes, of West Virginia, received the alumni prize.

CLEVELAND SCHOOL OF PHARMACY COMMENCEMENT.

The graduating exercises of the Cleveland School of Pharmacy were held April 25, the degree of pharmaceutical chemist being conferred upon the following: L. V. Warren, M. J. Cramer, Hugh H. McKenzie, Fred A. Priede, D. Lesser, E. A. Lesser, C. Schwartzwalder, Fred Bader, Michael Salzer, Ed. Meyer, Frank A. Hinst, William Schweitzer, Simon Davis and Carl Pfandermeier. The invocation and address of welcome were delivered by Rev. Dr. William Gaston, and the roll of graduates was read and the class presented to the president by Professor Joseph Fell. President Schellenbrenner then conferred the degrees, and Professor Robert A. Hatcher delivered an address to the graduating class in which he told of the history and aims of the institution. After the exercises the members of the graduating class, accompanied by an equal number of young ladies, attended a banquet at the Hollenden, the class president, Hugh H. McKenzie, presiding as toastmaster.

MRS. CHARLOTTE BYRD, the mother of Lym C. Byrd, with James Baily & Son, wholesale druggists, Baltimore, Md., died suddenly May 6, at the age of 60 years, in Onancock, on the eastern shore of Virginia.

DELOS B. NORTHRUP, a pioneer citizen and druggist of Oswego, N. Y., died, April 26, aged seventy-one years. He located in Oswego in 1850. A widow and one son, Delos A., survive him.

A SAVING THAT PAYS.

It pays to keep the current formulas, processes, valuable papers and history of the drug trade bound in volumes for future and ready reference. Each number of The Pharmaceutical Era contains material of this kind which should go into the pharmacist's library in "book" shape.

The Era Binder

Will hold copies of the Era, without advertisements, for an entire year (two volumes with index) or copies for six months (1 volume) with advertisements.

Price, 75 Cents Each, Postpaid.

Registration of Poison Sales

is a requirement made by the laws of nearly all the States and Territories. It is a requirement which every druggist should observe for his own interest. It is unpleasant to have anything but a clear, clean record, when the unexpected happens. This kind of a record is most convincing to judge or jury. It is the kind you can keep with

THE ERA POISON REGISTER.

It contains space for 800 entries, providing for the register of the name and quantity of poison sold, date, price, purpose for which it is to be used, name of purchaser, witness, remarks, etc.

A DIGEST OF THE POISON LAWS of all the States and Territories is included. It presents in condensed form all the essential requirements and is handy for reference whenever there is doubt as to the law. The book is bound in stiff board covers, with leather back. Size of page, 8 x 11 inches.

PRICE, 60 CENTS PER COPY, POSTPAID.

FOREIGN.

South Africa.

The war seems to be practically over. Lord Roberts has the two Boer republics in his grasp, and although there may be a little more fighting there is no longer any doubt that the end has arrived. He has occupied Johannesburg almost without opposition, and dispatches from correspondents in Pretoria say that that city has also been abandoned by the Boers. Conflicting rumors as to President Kruger are afloat, saying that he is captured, that he is dead, and that he has escaped from Pretoria and will take refuge in Holland. Premier Salisburys declaration in a public speech in London last week that "no shred of independence" would be left to the two Boer republics.

The Boers did no harm to the gold mines in Johannesburg or the coal mines in other parts of the Transvaal.

Several projects are on foot looking to an invitation to the Boers to emigrate to Arkansas or Colorado, where millions of acres of land in a public speech in London, Congress will be asked to extend an official invitation to them. It is reported that the Boers would consider such an invitation with great favor.

Lady Georgiana Curzon has cabled \$85,000 to provide comforts and luxuries at Mafeking.

The besieged British garrison at Kumassi, on the West African Gold Coast, has either been relieved or abandoned and fears have been expressed that the Governor's party may be cut off.

Emperor William, according to the Berlin correspondent of the London Daily Telegraph, has sent a telegram to the Queen congratulating her upon the success of Lord Roberts.

By the release of the British prisoners at Waterval a full brigade will be added to the army of Lord Roberts, and there were 177 officers and 4,182 privates among them.

The Orange Free State was annexed to the British Empire May 28 by Lord Roberts under proclamation, and it is to be known as the Orange River State.

A despatch from Mafeking says the casualties since the commencement of the siege were 803. Out of 44 officers, 23 were killed, wounded or missing, and 190 men out of 475 privates were killed, wounded or missing. The other casualties were among the non-combatants.

The Philippines.

A column of the Thirty-third Volunteer Infantry while pursuing a party of Filipinos in Northern Luzon last week killed a Filipino officer whose body was carried off by the natives. From papers found in the saddlebags, however, they think that the officer who was killed may have been Aguinaldo.

Last week a band of insurgents rushed through the town of San Miguel de Mayoyoy, killing five Americans and capturing Captain Roberts and two privates. An expedition has been sent in pursuit. Captain Roberts, it is reported, is being well treated and it is thought that he is being held for ransom.

In Luzon, Corino, Governor of Benguet Province, an active partisan of Aguinaldo, has been captured by American troops.

The transport Warren has arrived at Manila from San Francisco with sixteen officers and 407 enlisted men, mainly recruits for the signal and hospital corps. The total receipts of the Philippine treasury for the month of March, 1898, were \$29,773. Of the total amount of customs receipts for the month (\$532,595) the port of Manila contributed \$474,453.

General MacArthur cables from Manila that three officers and 100 privates, with forty-six rifles, were surrendered unconditionally at Cayapo last week and three officers and forty-six men, with fifty-five rifles, surrendered at Tarlac.

A Manila despatch says that operations in Northern Luzon the last week in May resulted in the killing of forty-six of the enemy, the taking of 180 prisoners and the capture of 300 rifles and a quantity of ammunition.

Palonog, on Masbate Island, south of Luzon, was captured by a military and naval expedition on May 20. The islanders were found suffering from lack of food owing to the blockade and the American authorities are endeavoring to relieve them.

Other Foreign News.

The Chinese question has been brought sharply to the front during the past week by the outbreak of the Chinese anti-foreign society of "Boxers" who have

killed a number of missionaries and hundreds of Chinese Christians and made a hostile demonstration toward Peking. Troops were landed, however, from American, British, Russian, German, Italian, Japanese and French warships, who went to Peking and guarded the consulates there. The presence and salutary influence on the Boxers and the situation is reported to be more quiet. There is a strong suspicion that Russia stirred up the Boxers in the hope of intervening by force and taking some Chinese territory for the trouble.

The First Chamber at the Hague has rejected the Government bill to insure workmen against accidents. It is expected the Ministry will resign.

The Hamburg-American Line announces that on October 1 next it will establish a service from New York to Hayti, the United States of Columbia, Port Limon and Jamaica, despatching a steamer every ten days. The State of New York has been awarded first prize at the Paris Exposition for its exhibit of fresh apples. The Free Church Assembly in session at Edinburgh has approved, by 92 votes to 29, the union with the United Presbyterian Church. The union will be effected in October.

The citizens of Venezuela are rejoicing over the capture of Hernandez, the rebel leader, and French bankers have offered to advance \$10,000,000 to the Venezuelan Government.

A fresh outbreak of the bubonic plague is reported at Alexandria.

The general elections in Belgium have resulted in a reduction of the Catholic majority from 102 to 85. The Socialists are the gainers by the change.

Mr. Gladstone is gradually growing weaker. The University of Cambridge will confer honorary degrees next Tuesday on Joseph H. Choate, United States Ambassador, Professor White, of Harvard, and Mr. George S. P. Langley, of the union with the United States. The Marquis de Gallifet, French Minister of War, has resigned and General Andree has been appointed to his place.

The Viceroy of India reports that rains have fallen in Mysore, but that cholera is still prevalent in Bombay and Rajputana.

For the first time on record the Czar invited the members of the British Embassy and French bankers to dinner on the occasion of the Queen's birthday. The innovation is regarded as a great political significance.

DOMESTIC.

Congress.

In the House the resolution proposing an amendment to the Constitution giving power to Congress to regulate the trusts was defeated last week by 157 to 131, the requisite two-thirds not voting for it. Five Democrats voted for the resolution and two Republicans voted against it. Each party the other of posing for political effect on the trust question.

The Senate Committee on Privileges and Elections has agreed by a party vote to report a resolution directing the committee to investigate whether disqualification from the franchise because of race is antagonistic to the Constitution. The resolution is predicated upon conditions in North Carolina.

The President's nomination of John R. Hazel, of Buffalo, for district judge of the new United States District Court of Western New York has been made the subject of a protest by the New York Bar Association, which considers his ability too low for such a position and the Senate may refuse to confirm the nomination.

The Senate has passed the Sundry Civil Appropriation bill. It carries, among other things, \$5,000,000 for the St. Louis Fair and \$200,000 for beginning the Memorial bridge across the Potomac.

The Senate Committee on Privileges and Elections has reached an agreement to allow the Clark case to rest where it is with the understanding that no further steps shall be taken as to either Mr. Clark or Mr. Maginnis's credentials, nor as to the resolution concerning Clark's original election. This will leave the Montana seat vacant until further action by the Montana Legislature.

In the Senate last week the resolution of sympathy for the Boers was referred to the Foreign Relations Committee by a vote of 36 to 26. It is not likely to be heard from again.

The Senate Committee on Privileges and Elections has reported adversely upon the House resolution providing for the election of United States Senators by direct vote of the people.

The passage of the German Meat Inspection bill by the Reichstag excluding large quantities of American canned meats and pork products from Germany has aroused some resentment in this country, and last week Representative Bailey, of Kansas, introduced a bill providing for a retaliatory import tax upon certain German goods because of the German meat inspection measure.

Other Domestic News.

It is reported that the battleship Kearsarge, now in the Brooklyn Navy Yard will be sent to the other side

of the Atlantic to be the flagship of a European squadron soon to be established. The squadron may be used to influence Turkey to settle our indemnity claims. Lieutenant-Colonel Webb C. Hayes, Thirty-first Volunteer Infantry, son of ex-President Hayes, has resigned his commission in the army.

The Navy Department is taking steps to carry out its project conceived last summer of sending the old Reina Mercedes, now at Norfolk, up to the Navy Yard at Portsmouth, N. H., to be laid up in ordinary.

The Democrats of the Hawaiian Islands will hold a convention on June 11 to select a delegate to the National Convention at Kansas City.

President Diaz has designated 100 picked rurales to attend the Pan-American Exposition at Buffalo as a complimentary body-guard to the President of the United States.

The St. Louis street car strike continues to be marked by scenes of rioting and violence with no prospect of an early settlement.

The ice trust proceedings in New York gained in interest last week by the discovery that the city charter makes it a misdemeanor for a city official to hold stock in a concern that sells supplies to the City. If it is true that Mayor Van Wyck and other city officials hold large blocks of stock in the American Ice Company, which supplies large quantities of ice to various departments of the city government, this would seem to make them liable to impeachment.

It is reported that the largest steel works in the United States will soon be built near Salt Lake City.

The capital stock of the Pan-American Exposition Company will be supplemented by the issuance of bonds to the amount of \$2,500,000. This will increase the capital stock to \$5,000,000.

The receipts of the Porto Rican treasurer for the month of April were \$105,823.18. The total payments for the month were \$186,519.77, which shows a deficit for the month of \$80,614.59.

The monthly statement of the receipts and expenditures of the United States shows that during May, 1900, the receipts aggregated \$45,166,653 and the expenditures \$40,351,525, leaving a surplus for the month of \$4,815,128. The surplus for the eleven months of the fiscal year is \$63,353,000.

Senator Hanford's reports that he had determined to give up the chairmanship of the Republican National Committee.

Hereafter locomotive firemen when promoted to the position of engineer must drop their membership in the Brotherhood of Locomotive Firemen if they want to become members of the Brotherhood of Locomotive Engineers.

Judge Conrill in the Circuit Court at Frankfort, Ky., has issued a bench warrant for the arrest of ex-Governor Taylor, based up on an indictment charging him with being accessory to the assassination of William Goebel. Mr. Taylor has taken refuge in Indiana, where Governor Mount refuses to honor the requisitions of Governor Beckham of Kentucky.

It is reported that ex-Queen Liliuokalani has decided to bring suit against the United States Government for the restoration of the crown lands and revenues. She is reported to be seriously ill.

Sweeping reductions in salaries and offices have been made in the Postal Department of Cuba.

General Otis reached San Francisco last week on the transport Meade.

A monument erected to the valor of the soldiers of both the Union and Confederate armies was unveiled on Decoration Day in the presence of a throng of distinguished men, including President McKinley, senators and congressmen.

The United States Supreme Court has decided Admiral Dewey's bounty claim against the admiral's contention. The effect is to deprive the men engaged at Manila of half the amount claimed by them.

THE DRUG NEWS.

New York and Vicinity.

CONFERENCE WITH THE NEW YORK TELEPHONE COMPANY.

The committee appointed at the conference of delegations from the four pharmaceutical associations of the city, Manhattan, German Apothecaries', Retail Druggists and Kings County, held some time ago, had been invited to hold a conference with General Manager U. N. Bethell, of the New York Telephone Company, and it accepted. The visit was made Friday morning of last week, and the following were in attendance: A. Kleinau, of the German Apothecaries' Association; Julius Hammer, of the Retail Druggists' Association; Wm. H. Porr, of the Manhattan Pharmaceutical Association, the three being members of the committee which held a conference with President Eckert, of the Knickerbocker Telephone Company recently; William Muir, of the Kings County Pharmaceutical Society; Reuben R. Smith, president, and William A. Schaff, of the Manhattan Pharmaceutical Association, and A. Bakst, of the Retail Druggists' Association.

Manager Bethell asked what the druggists had to complain about. This was intended only for the New York druggists, as the Brooklyn members of the committee had not been invited to the gathering. Chairman Kleinau stated that he considered the first and most important complaint was regarding compensation, which neither he nor the majority considered had been properly or fairly adjusted by the New York company. Mr. Bethell did not attempt to answer Mr. Kleinau, but made a note of the complaint, saying he would consider it as complaint No. 1, and would treat it with the other grievances in order.

Mr. Muir called attention to the large amount of incoming calls, for which the druggist received nothing, and which he was frequently put to much inconvenience to handle, at the same time losing his time and contributing his labor with no return. This was also noted.

Mr. Schaff complained of poor service. He stated that much valuable time was consumed in making connections by the apparent neglect of the central office to attend to the call. Mr. Bethell said he would answer this in its turn.

Mr. Muir wanted information regarding the discrimina-

tion made against the drug trade. He asked why a real estate dealer or any one else could get a cheaper rate than the proprietor of a drug store located next door. Mr. Bethell replied that such was not the case, but he noted the complaint and volunteered to answer it later. Other grievances brought forth were double-charged messages, five-minute talking limit and the borough rate.

Mr. Bethell began his argument against the complaint of compensation first, and it was nothing more than a plain statement of the company's position as it has been maintained during the last two years. He went back as far as 1898, when the message rate was 15 cents and before the war tax became a law, and when the percentage to the druggist was 33 1/3 per cent., as against 20 per cent. received at present. He defined the changes made in the operation of the company's system up to the present time, and stated the improvements made in the service. His argument was flatly against the druggists. He stated that he considered 20 per cent. a fair return where there was no outlay, and it represented a 100 per cent. gain, as the druggist was getting a return for something that had cost nothing. Some one suggested that the druggist made a large outlay in time and labor, and that the amount now given was not sufficient. Mr. Bethell said there were 2710 pay stations in New York City, and of this number 500 were in drug stores. He said that an average of the business had been taken in the month of March, 1898, and it was found that the profits of the stations averaged a trifling over \$5 a month to each patron having a pay station. This was before the price of messages was reduced to 10 cents. In March, this year, another average had been taken, and it was found that on an average a little less than \$1 was received by each patron as his profit. However, there had been 600 pay stations added, and this may have distributed the business somewhat. In April of this year another average was taken, this time of the pay stations in drug stores only, and it was found that each proprietor received about \$5.52 for the month. "This means," said Mr. Bethell, "that the average business done by the druggist is more than the combined business of the entire system, and I am of the opinion that he is receiving ample compensation."

Mr. Smith protested, and Mr. Bethell asked him what he thought ought to be the percent, given the druggist, and he received the reply that the druggists should be given five cents on every message.

Mr. Bethell said this was 50 per cent., and that the company could not afford any such amount. He then caused some surprise by remarking that the pay station system, to speak of it collectively, was not a paying institution, but it was maintained more for an advertisement than anything else and to educate the people to the use of the telephone. Mr. Bakst thought if the company was adopting this method of advertising it should be willing to pay for it. Mr. Bakst also called attention to the small amount paid for long distance calls, and Mr. Bethell was forced to admit that this was wrong. He said he should give that particular matter his consideration. He hoped something could be done.

The subject of incoming messages was next taken up, and Mr. Bethell offered a plan for its relief which he said was practical, but which Mr. Hammer openly opposed as unfair. Mr. Bethell's plan was to have the druggist's name taken out of the telephone book. This proposition called forth a storm of protest, and resulted in much argument, until the subject of compensation was again taken up and argued for some time. Mr. Bethell lingered on the benefit the druggist derived from having the 'phone in his store, and turning to Mr. Bakst, who had said he lost money on the telephone every month, said:

"Supposing the New York Telephone Company, knowing as it does that the telephone pay station system is not profitable, should suddenly decide to cut down the number of drug store pay stations to 300. You would be one of the first to want to get in that 300."

Mr. Bethell assured the committee that the company had no such notion, but to illustrate the point he had used the argument as a hypothetical case. As it was nearly noon, Mr. Bethell remarked that he would like to show the committee the central office, and the invitation was accepted. On the return to the office the committee decided to take its departure. Although only two of the counts in the complaint had been taken up, the committee was unanimous in the belief that no promise of relief had been or would be accorded them.

"SMOKER" OF THE SOCIETY OF CHEMICAL INDUSTRY.

An enjoyable evening was passed Saturday by about 200 members and friends of the New York Section of the Society of Chemical Industry at the German Liederkrantz, No. 111 East Fifty-eighth street, it being the first of what are to be annual events. At the fifth anniversary of the society last year, it was suggested by Dr. Charles F. Chandler, president, that the New York Section commemorate the closing of each year of its work with an informal gathering; Saturday night's "smoker" was the realization of the idea. Chairman Thomas J. Parker, of the local section, presided at the gathering. Four long tables, running at right angles to a fifth table, at which were seated the chairman and many officers of the section, constituted the banquet board. Chairman Parker formally opened the programme by a brief speech, in which he referred to the past six years' work of the Section, and expressed the belief that the coming year gave promise of still greater success. Letters of regret were read from Dr. Charles F. Chandler, of Columbia College, president of the society; Francis G. Du Pont, Wilmington, Del.; Dr. J. W. Wainwright, New York. Toasts were responded to by William H. Nichols, "The President of the United States"; Clifford Richardson, "Our Society"; Dr. Durand R. Woodman, "The American Chemical Society"; Jacob Hasslach, "The German Liederkrantz," and R. C. Woodcock, treasurer of the Section, "Our Success." An entertaining vaudeville performance was given during the evening, following which a luncheon of German dishes was enjoyed, and as a fitting finale to the evening, a collection of songs arranged to fit the occasion, was sung. The

following verse of one of the songs is a fair sample of the make-up of the others:

BEILSTEIN (set to music).
Tune: "The Watch on the Rhine."
Dinitrobromanthraquinon,
Alphaphenylacrosazon,
Benzol, Tolual, Xylol, Naphthol,
Phloroglucin, Guajacol,
:: Propylamin, Butylamin ::
:: Sodiunisophtalal, Trichlorhydrin, ::

Among those present were: H. C. Aspinwall, a former captain in the United States army, detailed to the Ordnance Department at Sandy Hook, and M. Taniva, chemist and druggist of Kioto, Japan, who is on a visit to this country. The success of the affair was due to the efforts of the Committee of Arrangements, composed of James Hartford, J. Hasslach and R. W. Moore.

EAST SIDE DRUGGISTS MEET.

A meeting of the Retail Druggists' Association was held in the rooms at No. 98 Forsyth street, Friday evening, June 1, at which matters of much importance to the East Side trade were discussed. Julius Hammer presided as chairman, President Weinstein being indisposed. The privilege of the floor was given to Dr. E. K. Browd, of the Eastern Medical Society, and he spoke at length on the subject of medical insurance societies, which he said were the greatest evils the druggists and doctors of the East Side had to contend with. He had come before the organization to ask its co-operation in an endeavor to blot out these societies, which effort he thought could only be accomplished by combined action on the part of the druggist and doctor. A lengthy debate followed. The societies mentioned insure against doctors' bills by the payment of a small sum weekly. If sickness comes to the family of the insured, a doctor is furnished the family, and it is said that he receives a fee of two cents for each call. A motion was made to appoint a committee to confer with a committee from the Eastern Medical Society, and Chairman Hammer named N. Khazan, J. Weinstein, Dr. Tulchinsky, C. H. Bernstein and A. Bakst. Nominations for officers for the coming six months were made as follows:

President, J. Weinstein, Dr. Tulchinsky; first and second vice-presidents, A. Goldman, A. Hammer, L. Lurie; recording secretary, L. Marmor; financial secretary, A. Bakst, A. H. Solstaroff; treasurer, J. Bakst; sergeant-at-arms, H. Glassman; trustees, of which three are to be elected, A. Flax, J. Massell, B. Mishking, M. Nisselson.

A DRUGGIST SUICIDES.

Walter W. Scott, who conducted a store at No. 725 Fulton street, Brooklyn, committed suicide Tuesday, May 29. Scott was under indictment for counterfeiting labels of the Lambert Pharmaceutical Co., of St. Louis, manufacturer of Listerine. He was arrested some time ago on complaint of Arthur R. Deacon, secretary of the St. Louis concern, and it was stated that over 1,400 spurious labels were found in his possession. He was arraigned before Magistrate Peale in the Myrtle Avenue Court and held in \$500 bail for examination. The evidence was so strong against him that it is thought he worried so over the matter that his mind weakened. It was said that the Federal authorities might have begun an action against him, as he sold medicine without the requisite revenue stamps.

THE LAST OF "TOM" FRASER.

"Tom" Fraser, the notorious drug swindler, who transacted an ostensible wholesale and retail business in this city under various titles, the most prominent of which was Fraser & Company, has disappeared from his old haunts as completely as though the earth had opened and swallowed him up. Even his former friends cannot or will not tell where he has gone, but the opinion is current that the drugs he was a slave to have him fast in their power never to release him. Some say he is in the insane pavilion at Bellevue Hospital. He is being sought by the Manhattan Typewriter Company, which has a bench warrant for him for disobeying a summons in supplementary proceedings brought to show cause why he did not settle for six machines purchased of the firm.

The last store that Fraser occupied, in fact the one

where most of the goods he ordered were consigned, at 81 Amsterdam avenue, has been leased by J. J. Kayser, a reputable druggist who has conducted a store at 78 Amsterdam avenue for a number of years, and was opened by him on Monday last. Before leaving, however, Fraser sold what little stock he had in the place to Dreyfus & Young, auctioneers, for \$150 and the staff was disposed of by them. Fraser added a number of victims to his string recently and among these were a reputable silver firm in Connecticut, a manufacturing concern at Fall River, another in Chicago, one in Philadelphia, and lastly a well-known house in this city. Rosenblat, Fraser's partner, is also reported missing.

NOTES.

—Much interest is manifested in the coming meeting of the New York State Pharmaceutical Association at Newburg, and members of the trade in Greater New York are exerting their best efforts to make the affair a success. As an evidence of this enthusiasm A. C. Searles, chairman of the Executive Committee of the New York State Pharmaceutical Association, Felix Hirsman and William Muir went to Newburg on Thursday of last week for the purpose of offering their aid to the local Entertainment Committee, and to ascertain the progress of the committee's work in arranging for the gathering. The New Yorkers visited Mr. Bain, proprietor of the Palatine Hotel, and found that of the 200 rooms for rental, sixty had already been engaged for the meeting. The committee considered this a fore-runner of a successful convention, and on their return to New York advised all their friends to write for rooms as soon as possible. Other members of the local committee seen were Chairman I. C. Chapman, Secretary Clarence Miller, Joel A. Joslyn and Arthur Du Bois. Each reported the work progressing finely, with an encouraging outlook.

—Inspectors from the Board of Health will examine the apartments occupied by clerks who sleep in the stores. As far as can be learned, the duty of these inspectors is unlimited, and in a measure the interpretation of the law is left to the common sense of the Health Office officials. The only law governing the point in question is the sanitary one, and this leads the druggist to believe that the inspector may cause many changes to be made in the appointment of the clerk's room. A Kleinau and Sidney Faber have been investigating, but the only information they obtained was that there were no regulations for the druggist to comply with, and that the matter would rest with the inspector, who is supposed to exercise common sense in his investigations. The two gentlemen mentioned visited Col. Murphy, president of the Board of Health, who referred them to Dr. Roberts, chief sanitary inspector for Manhattan. The druggists are anxious to know how their clerks' sleeping rooms shall be furnished, and how many visits the inspector will make to convince himself that the law is being obeyed.

—An exhibit in the windows of the drug store of Reed, Yeomans & Cubit at 140 Nassau street, was the source of annoyance to a lawyer in the American Tract Society building last week and one afternoon he visited Mr. Cubit. He threatened all sorts of trouble and finally left saying he would notify the police, but refused to give his name. Mr. Cubit consulted the firm's lawyers and was advised that the exhibit was perfectly legitimate and not contrary to the law, as it was a simple illustration of the manufacture of a hair insole to cure sweating feet. The lawyer's objection was that the sidewalk in front of the window became blocked with persons looking at the display, thereby causing him much inconvenience in passing along the street. The lawyer failed to make good his threat.

—In the class of fifty examined at the last meeting of the Board of Pharmacy in Brooklyn, on May 21, the following were successful: Charles H. Bellin, Leo Bigotti, Minnie E. Boyle, Arthur Bragg, Marie E. Fincke, Alexander Kamenetzky, John McGargie, Adolph Reich, Frederick W. Schlagenhauf, George T. Butcher, John F. Harrison, Karl Isachsen, Benjamin Machlin, Alonzo L. Robinson and George Watan. A summary of the class shows the following: Passed at first examination, 2; at second, 5; at third, 2; at fourth, 2; at fifth, 2; at seventh, 1; total passed, 15; rejected at first examina-

tion, 9; at second, 4; at third, 10; at fourth, 4; at fifth, 2; at sixth, 2; at seventh, 2; at tenth, 2. Total rejected, 35. The nationalities represented were: United States, 29; Russia, 11; Germany, 3; Austria, 2; Scandinavia, 2; Great Britain, 3.

—The marriage of Miss Kate Hamilton Good and Charles Clark Orcutt took place on Tuesday night at the residence of the bride's father, Brent Good, No. 130 West Fifty-seventh street. The wedding ceremony was a private one to which only the immediate relatives were invited, but a large reception followed, for which Mr. Good's handsome residence was beautifully decorated. The young couple received many elegant presents from their large circle of friends. Mr. Brent Good's gift to his daughter was a house at No. 12 Jumel Terrace, on Washington Heights. It is just opposite the Jumel mansion and the ground upon which this stands was once the property of Mrs. Orcutt's ancestor, Alexander Hamilton. After their summer vacation Mr. and Mrs. Orcutt will reside there.

—The C. C. Chemical Company, whose office is at 261 Broadway, this city, and factory at Bound Brook, N. J., is alleged to be insolvent and a petition in involuntary bankruptcy proceedings has been filed against it by the creditors. It is said that in February the firm transferred by mortgage certain lands and buildings at Bound Brook, also the personal property of the concern consisting of machinery, tools, patents and patterns, to Stephen R. Branch for an antecedent indebtedness, to give him a preference, and further has allowed judgments to be entered against it. The company organized in 1890 with a capital stock of \$10,000. The sheriffs, a few weeks ago, received two executions against the firm for \$300.

—A secret nostrum has been recently brought to the notice of the trade by a seedy-looking man, who visited a number of the large wholesale houses during the last week in an attempt to unload job lots of the preparation. The price he asked was ridiculous, and it is not recorded that he made any sales. He presented a neat pamphlet declaiming the qualities of the preparation, and giving the manufacturer's name and address at a number on Pine street. It was said by the janitor in charge of the building at the number given that no such firm was in the building. There is every indication that the firm is a fraudulent one, and the trade is therefore warned against it.

—Charles H. Coe, who for many years was proprietor of a drug store at No. 211 Main street, Derby, Conn., died at his home in that place last Friday morning, aged fifty-three years. He was one of the best known citizens of the town, and was a well known pharmacist in the State, having been engaged in the drug business since childhood. He began as a clerk, and later formed a partnership with George W. Peck, which was continued until Mr. Peck's death, about eight years ago. Mr. Coe came of an old family, his ancestors having settled in Gifford, Mass., over 200 years ago. He is survived by one daughter. The funeral was held Monday afternoon.

—The Norwegian steamship Earnford from Macri arrived at Philadelphia during last week with a highly interesting cargo aboard consisting of purple ore dug from the ancient city of Telemus. The ore, which will be used in making paint, was dug from the centre of a huge amphitheatre which historians say had a seating capacity of 20,000 people. It is said that volcanic eruptions destroyed the town and the earth in the vicinity was changed into a mass of ore for which there is a demand from all parts of the world. The Earnford was loaded at a small place in the Gulf of Macri, fifty-two miles northeast of Rhodes.

—The following have visited the city during the week: G. F. Brown, Rahway, N. J.; Fred Cannon, manager for J. L. G. Cannon, Westport, Conn.; S. Thornhill, Sayville, L. I.; A. Bellerue, La Crosse, Wis.; O. N. Waterhouse, Pittsburg; Dr. La Bar, Stroudsburg, Pa.; A. F. Fellows, Newton, N. J.; W. R. Golden, Freeport, L. I.; E. C. Frisbie, president of the N. W. D. A.; Allan Tooker, Butler, N. J.; A. F. Fellows, Newton, N. J.; S. M. Allen, Eastern salesman for R. W. Robinson & Son, and R. F. Vogel, of R. F. Vogel & Co., Los Angeles, Cal., Mr. Daboid, of Nichols & Harris, New London, Conn.

—The Lactoid Company has been formed in this city for the purpose of manufacturing articles of the nature

of hard rubber and celluloid out of skimmed milk, under the patents and processes of W. A. Hall. Dr. Peter T. Austin, of the Austen Chemical Research Company, did the testing of the processes and products, in securing the patents. The new organization is capitalized at \$1,000,000, and is offered as follows: President, Isaac L. Hice; vice-president, Peter T. Austin; treasurer, August Belmont; secretary, Lawrence L. Mott.

—About two weeks ago a three-foot alligator strayed away from the store of A. H. Solotaroff at 71 Broome street and left no traces. People in the neighborhood were badly frightened, but Sunday morning their fears were alleviated when the animal was found dead in the cellar of a bicycle store adjoining the drug store. The 'gator's back was broken with a heavy table resting on it and it is supposed the animal tipped the table over in trying to crawl under it.

—In consequence of the continued strife among dealers in bicarbonate of potash, the price of the article was reduced last week a quarter of a cent per pound by the Baltimore Chrome Works. A number of new companies have engaged in selling the chemical, and this competition has caused a continued decrease in the price from 12 cents some time ago to 8½ cents at present, which is the lowest figure ever reached.

—J. P. Primley, of Chicago, Ill., was the guest of Col. E. W. Fitch, of Parke, Davis & Co., at the Drug Club on Monday. Mr. Primley had just returned from a trip around the world. He had some business to transact, after which he will return to Switzerland, where he left his wife and children and the family will remain there until the children complete their education.

—The E. D. Taylor Company, organized to engage in the manufacture of chemicals, has incorporated under the laws of New Jersey. The main offices of the company are located at No. 150 Somerset street, New Brunswick, N. J. The capital stock is given as \$100,000, and the incorporators are Richard N. Doyer, William Telzer and John R. Taylor.

—Mr. and Mrs. John Oehler left Saturday on the Hamburg-American liner Pennsylvania for Europe, where they will visit the Paris Exposition and make a tour of Germany, Switzerland and Italy. They will return here about the middle of September. Mr. Oehler is adjunct professor in chemistry at the New York College of Pharmacy.

—A new apartment house called the "Brunswick" will be opened shortly at the corner of Bushwick avenue and Hart street, Brooklyn, by Lorenz A. Behn, who conducted a drug store until recently at Avenue A and Thirteenth street. Mr. Behn is a graduate of the Munich College of Pharmacy and has been a clerk in this city for some time. —Warren S. Kissam, a negro, died a few days ago in Brooklyn, without leaving any clue to his kith or kin. As a result, the drug store he conducted at No. 511 Broadway is without a proprietor. The police have taken charge of the place, and are guarding it until some relative shall establish a right to ownership in it.

—August Ad. Strauss, Jr., foreign correspondence clerk for Schieffelin & Co., left last week for Mosbach, Baden, in Southern Germany, where his parents reside. Mr. Strauss had been employed with Schieffelin & Co. for some time, but was forced to resign owing to failing health.

—The upward tendency of sugar has caused a like condition in rock candy syrup and during the last week the price of the latter article has advanced from 5½¢, in barrel lots and 59¼¢, in half-barrel lots to 57¼¢, in barrel lots and 69¼¢, in half-barrel consignments.

—The Associated Drug Company of New York has rented the store at No. 146 East Broadway. The company is composed of retail dealers of the East Side, and its plan is to conduct business on the co-operative plan.

—The outcome of the Porto Rican tariff bill is awaited with interest by members of the trade, as it is thought its enforcement will affect the prices of many drugs. The trade will be prepared to make the necessary changes.

—Worden B. Potter, who for the last three years has been in the pharmaceutical department of McKesson & Robbins, has resigned to accept a place as first assistant in the laboratory of Bristol, Myers Co., in Brooklyn.

—The Botanical Garden in Bronx Park attracts a large number of persons daily, an excellent opportunity being

offered for study of which many members of the trade avail themselves.

—An auction sale was held of the stock and furnishings in the drug store of J. N. Hageman & Co., at Ninth street and Broadway, last Friday afternoon. The reason for the sale was that the store did not pay.

—It is announced that Charles Perry has secured a renewal of his drug store lease in the World Building for a period of ten and a half years at an annual rental of \$15,000.

—W. E. Woodard, secretary and treasurer of Woodard, Clarke & Co., wholesale druggists of Portland, Ore., enjoyed a few days' visit with friends in town last week.

—William T. Bruce, of Hugh Wallace & Co., Ltd., London, who had been in this city during the last two weeks, sailed for England on the City of Rome Saturday.

—A. Bakst disposed of his drug store at No. 243 Broome street on Friday of last week to Henry Walner and David Aiesman, who will continue the business.

—E. J. Griffith has gone to Oil City, Pa., to take charge of interests he has there. Mr. Griffith was forced to give up his store at Third avenue and 122d street.

—William McConnell, secretary of the Drug Trade Section of the New York Board of Trade, has arrived home from a two weeks' business trip at Buffalo.

—Henry F. Sasse, proprietor of the drug store corner of First avenue and Ffty-eighth street, will leave for Europe about the middle of the month.

—J. C. Carey, of Tuckahoe, N. Y., has sold his drug store at that place and opened a handsome store at Mt. Vernon, N. Y.

—John Anderson, of the firm of Charles Pfizer & Co., has arrived home after a pleasant two months' trip in Europe.

—Treasurer T. E. Delano, of the C. N. Crittenton Co., is enjoying a two weeks' vacation at Southampton, L. I.

—The value of imports of drugs, oils, etc., at this port for the week ending Saturday, June 2, reached \$861,784.

—"The Union Pharmacy" was opened at the corner of Bleecker and Jones streets last week.

IN AND ABOUT BOSTON.

The Liquor Question at Beverly.

Boston, June 2.—There has been active opposition to the number of licenses to druggists at Beverly and emphatic protests have been made before the Board of Aldermen which, if true, would make the druggists blush! Fortunately for the trade, many statements went wide of the true state of things. One man said that out of liquor the druggists wish to make money, and that liquor for medicine can be obtained easily on a physician's prescription. Another claimed the liquor traffic was the greatest enemy to the city and doubted if the business interests of Beverly could be enhanced by the sale of liquors. A delegate of the Y. M. C. A. asked the board to make it as hard as possible for a young man to get something to ruin his character. A former alderman said that when druggists had licenses they abused the privileges and an investigation showed that an unreasonable amount of liquor was sold. Another man wanted the "no license" vote carried out, and it was said that a young man of good family who would not go into a low saloon would enter a respectable drug store for liquor. One man mentioned the great profits, saying that liquor which costs \$1.25 per gallon retails at \$6. One speaker protested from the standpoint that druggists' licenses are a temptation to reformed men. In this way, one after another spoke, leaving the druggists little character on which to stand. However, there are all kinds of people in the world and there will be found many allies of the trade who will refute these sweeping declarations.

Downfall of the Novelty Toilet and Remedy Co.

Boston, June 2.—The Novelty Toilet and Remedy Company is now a thing of past history. Its demise was brought about by the arrest, on June 1, of Albert L. Derby, twenty-eight years old, who for about two years has been a salesman for the Weeks & Potter Drug Company, Washington street. Previous to that he had worked for several drug firms in this city. He was trusted in his position and no suspicion fell upon him until the Weeks

& Potter Company began to miss rapidly chemicals of high value. Derby was trapped into making a sale of stolen chemicals in the presence of inspectors who were on hand at a Back Bay drug store, where he was decoyed by an order for some of his goods which he advertised most reasonably as compared with prices elsewhere. Derby organized the Novelty Toilet and Remedy Company and sent broadcast in New England circulars offering expensive goods at prices which were most alluring. One of the circulars fell into the hands of the drug company for which Derby worked, and as the goods offered were of the kind which they were missing they communicated with the police inspectors. This brought about the downfall of Derby who, when taken to headquarters, made a part confession saying that his Novelty Company first dealt in toothache medicine which required a great quantity of chemicals and drugs. It was found that the medicine would be so expensive that there would be no profit in it and the manufacture was given up. Derby said that there really was no such thing as the Novelty Toilet and Remedy Company and that he used the name simply to further his own purposes. He appears to have stolen the goods from the counter at which he worked and then sold them. There was no one else concerned in the thefts. Derby told the police that he had about \$200 worth of chemicals and drugs at his home. Inspectors were sent there and found the goods. The police charge the young prisoner with the larceny of property valued at \$200. He was arraigned on this charge in the Municipal Court where he waived examination and furnished \$300 bonds for reappearance later before the Superior Court.

NOTES.

—Dr. Cabana's drug store at Fall River was the scene of a lively little "scrap" one afternoon this week, attracting quite a crowd of onlookers. It is said that a customer who wished to purchase some indigo for his child, which is sick, was by some mistake given blue vitriol. Upon reaching his home with his purchase the customer returned to the drug store and made known the error, at the same time demanding his money back. Some words were exchanged between Dr. Cabana and the purchaser. The latter claims that Dr. Cabana struck him and that he defended himself. The trouble was kept up until the two men reached the door, and the doctor, so it is alleged, attempted to put the customer out by force. The man was finally ejected from the store.

—To settle some misunderstanding about the sale of alcohol in Taunton Mayor Alger declares that, under the law, a druggist may sell pure alcohol for medicinal, mechanical and chemical purposes, but the law demands that all sales must be certified and recorded. No license is required for this purpose. Dealers in paints and chemicals may sell pure alcohol for mechanical, chemical and manufacturing purposes by taking out a special license, for which the fee is \$1, and by them also sales must be recorded. Before June 1 the license commissioners were empowered to grant such licenses, but since then the power has rested with the aldermen.

—Charles Coleman and his brother, George F. Coleman, well-known druggists in this city, are once more back in Boston after a most enjoyable European trip occupying several months. The brothers have been in the retail drug business for more than twenty-nine years and now have sold out their store in Cambridge street. They feel that they have made money enough to have earned the right to retire from business. Hereafter they mean simply to enjoy life quietly and rationally.

—The license commissioners at Waltham have granted sixth-class licenses to these druggists in that city: E. M. Smith, H. C. Hall, F. W. Bacon, E. E. Butman, E. E. Jenison, Chester E. Sawyer, John J. Kingsley, E. J. Williams. Several other applications from druggists were held in abeyance until the commissioners receive notice that the druggists possess certificates from the State Board of Pharmacy.

—For reasons best known to themselves, liquor officers of Worcester recently paid a visit to the drug stores of Frederick W. Boulton and C. B. Carpenter, both on Main street, that city. They took an inventory of the amounts of liquor found in each store. At each place the officers were shown every courtesy and freedom by the proprietors.

—E. H. Raymond, a drug clerk at Everett, has been arrested charged with the alleged forgery of a \$5 order on the druggist for whom he worked, and there is a further charge of the forgery of an order for two dollars' worth of perfume. He has been held for the grand jury.

—Clerks at Currier & Frost's drug store, corner of Jackson and Berkeley streets, at Lawrence, took into that place and cared for a young man by the name of Frank Conlon, who was thrown from his horse and injured when the saddle girth broke while he was riding.

—Special police officers this week made a raid for liquor, which they expected to find at the drug store of Charles C. McArdie, River street, Haverhill, but they found nothing in the way of contraband goods.

—Among fires of the week was one at the drug store of A. L. Wyman, 70 Berkeley street, Boston, where a quantity of alcohol took fire while being poured into a bottle. The fire caused damage of about \$300.

—Albert W. Poland, a druggist at North Brookfield, has been refused by the selectmen of the town a license of the sixth class. Inn-holders' and victuallers' licenses were, however, granted.

—F. B. Winslow, a druggist at Campello, Mass., met with a loss amounting to \$1,200 (on which there was an insurance of \$1,000) in the fire which burnt the Keith Block in that place.

—This week's exports at the Port of Boston include among other things drugs and chemicals, \$11,748; india rubber manufactures, \$7,847; tobacco, \$4,974; wax, \$415; spirits, \$14,106.

—The Board of Selectmen of Greenfield has granted sixth class liquor licenses to all the druggists of that town who filed applications.

—Ferguson's drug store at Haverhill has been removed to the store until recently occupied by C. C. Collins.

OTHER NEW ENGLAND ITEMS.

—By the terms of the will of the late Dr. John F. True, manufacturer of medicines at Auburn, Me., his widow receives the homestead and the two sons, Edward C. and James Roscoe True, who have always lived at home, receive the stock and interest in the extensive medicine business left by their father, whose personal property is divided among his widow and his five children, three of whom are married. The sons have been connected with this medicine business for fully ten years.

—George W. Temple has instituted proceedings to close up the drug store of A. E. Lemerise & Co. at Burlington, Vt. George W. Deberville has been appointed receiver. An inventory of stock is to be taken at once. Mr. Temple, who brought a bill in equity, asking that a receiver be appointed to clear up the business, had more money in the business than A. E. Lemerise, so it is said.

—C. C. Talcott's new drug store at Glastonbury, Conn., has been opened with marked success. Each lady visitor was presented with a souvenir on the first day and clerks were kept busy dispensing ice cream soda as a compliment to all visitors. The store, with its handsome fixtures and soda fountain, presents an attractive appearance.

—J. Bert Brook, clerk at I. A. Clercy's drug store at Dover, N. H., while at work about the store stepped on a nail, receiving a very painful injury.

—At C. H. Harvey's East Side drug store, Manchester, N. H., a curious window display is that of a hen with eight ducklings—her own brood.

—J. W. Bowdoin's drug store on Main street, at Kennebunk, has been destroyed, with other places, by fire.

—Fire visited the wholesale and retail drug house of N. F. Ames & Co., at Corry, Pa., Tuesday, May 28, doing about \$15,000 worth of damage. It is said the fire started from exploded chemicals.

—Nearly the entire stock of Nabers, Morrow & Sinnige, of Birmingham, Ala., was destroyed by a fire which started in the basement of the drug house on Thursday last. The building would undoubtedly have been ruined also had it not been for the patent steel ceiling used in the first floor and the excellent work of the firemen. The basement and first story were badly burned.

PHILADELPHIA.

DENOUNCED TREATMENT FROM THE NEW JERSEY ASSOCIATION.

Philadelphia, June 2.—The regular monthly meeting of the Philadelphia Association of Retail Druggists was held in the museum of the Philadelphia College of Pharmacy, on Friday, June 1st. President McIntyre presiding, a very good number in attendance. The recording secretary reported the sending out of notices to the retail druggists of the city, notifying them of the decision of the Mercantile Tax Appraisers that druggists need not pay a tax on articles of their own manufacture, also that copies of the 1900 constitution and by-laws and the latest bulletin of the N. A. R. D. had been sent out.

The financial secretary reported the receipt of \$20 membership dues, and that there was a balance on hand of \$701.43, deposited.

The Executive Committee, J. C. Perry chairman, reported as follows: new members received in past month, 5; withdrawals, none; changes had been made in the chairmanship of several wards, owing to the inability of past incumbents to devote the necessary time to their duties. Bills to the amount of \$36.80 were passed on and approved; Mr. Perry stated that his attention having been called to an advertisement of the Sovereign Remedy Company, in which were statements derogatory to the druggists handling these remedies, he visited the office of this company, and called the notice of the manager to the advertisement. All intention of reflecting on the druggist was disclaimed, and the objectionable matter was promised to be withdrawn from circulation.

New members: N. O. Harris, 601 Pine street; H. R. Nolte, 12th and Christian streets; L. Gerhardt, Front and Susquehanna avenue; O. W. Osterhund, 4090 Baltimore avenue; W. H. Milliken, 23d and Spruce streets.

President McIntyre reported that he and W. L. Cliffe had visited Harrisburg recently to urge the reappointment of C. T. George, as secretary of the State Pharmaceutical Examining Board, and that their reception seemed to have been favorable.

The committee on by-laws, W. A. Rumsey chairman, reported the following changes made by the committee in the constitution and by-laws: Constitution, Art. III, change so as to read "Any registered pharmacist in the retail drug business, either as owner or manager." By-law No. 13, "Retail drug stores conducted by a registered manager, on becoming members of the P. A. R. D., must be recorded both under the name of the store and of the manager in charge; the latter to be accorded all privileges of this association so long as he represents the said store." Dr. Gubbins moved an amendment to include the Hospital Stewards of the Army and Navy on duty here. After some discussion, this amendment was refused, it being the sense of the meeting that such membership was contrary to the spirit of the Philadelphia Association of Retail Druggists. Report of by-laws committee then adopted.

Delegates to the New Jersey State Pharmaceutical Association Meeting, Mr. Perry chairman, reported as follows: "Arriving at West End Hotel, Asbury Park, about 11:30 A. M. on May 23d, we found the New Jersey Pharmaceutical Association convened and in session in the parlor of the hotel; on entering the rooms, we found the president delivering his annual address. The only item of any particular interest to your delegates was the relation of New Jersey to the N. A. R. D. In a very short time the president came to this very important subject, on which he dwelt earnestly and long. It was quite apparent that he was using every means at his command to influence the minds of any members that were not firmly pledged before the call of the meeting. As your delegates had, on a previous occasion, listened to almost the self-same words and misleading statements, we were not surprised at the treatment that all delegates received from the hands of this gentleman.

"Very soon thereafter, the secretary was called on to read communications and the credentials of the delegates. The action taken by the president in regard to the delegates was unprecedented. Besides your delegates, the Brooklyn College of Pharmacy, Pennsylvania State,

Burlington County Association and others had delegates there, and all were refused the privileges of the floor. In fact, the president had not enough courtesy to call upon any of the delegates for a greeting, nor did he offer them a word of welcome! Compare this reception to the one given to the delegates who attended the Pennsylvania State Association meeting last year. These are the words of the president (Mahlon N. Kline) after the credentials had been read, calling every delegate to the floor: 'We are very glad to have with us these delegates from Pharmacy Colleges, Alumni Associations and State Associations, and it is understood of course that the privileges of the floor are extended to them, and we shall be very glad to have them participate in the discussions from time to time as the various questions come up.'

"The debate on the question of withdrawing from the N. A. R. D. was made the first order of business on Thursday morning. The principal argument, used by those in favor of withdrawal, was a financial standpoint and that the N. A. R. D. had not yet given the full prices. The speakers also expressed a lack of confidence in the plan as has been outlined and accepted by the three associations, Wholesalers, Proprietary and Retailers. The earnest appeal of Messrs. Cole and Gallagher and others to retain the membership was defeated by a close vote. Immediately thereafter there was proposed the following resolution, it being adopted: 'Resolved, that the New Jersey Pharmaceutical Association hereby withdraws from the N. A. R. D., as they feel that the interests of the retail trade can best be advanced by local organizations throughout the State, and that the secretary notify the N. A. R. D.'"

"This was followed by another resolution, which was adopted: 'That the president appoint three members in every county of the State to form County Associations, to affiliate with the N. A. R. D.' This in the end, will be to the advantage of the National Association. However, it appears to me that a state association that depends entirely on the retail druggists for support is taking a rather short-sighted action at this time, as the "Plan" that has been in course of preparation is about ready to be put in action, and it is conceded on all sides as being the most feasible plan that has yet been advanced, and that the retail druggists throughout the country have never before been so well organized."

"This meeting was devoid of any scientific papers or discussions. The social part of the programme consisted of trolley rides, a 'clam bake' and a musical and literary entertainment. One item deserving of special mention was the selections rendered by Miss Grenelle, a popular elocutionist, the daughter of one of the leading druggists of Asbury Park, Mr. L. O. Grenelle."

"The delegates returned on Thursday evening and recommend that in future no appointment of delegates to the New Jersey State Pharmaceutical Association should be made. It is useless to send delegates to any association where they are not recognized."

Messrs. Theo. Campbell and Stiles, the other members of this delegation, reported in a similar vein. The report was accepted.

There was no "Unfinished Business" and the meeting passed to the consideration of "New Business." Under this head, H. C. Blair, Jr. reported that he had been informed of the purpose of the forthcoming meeting of the American Medical Association to send out a circular letter and a list of questions, relating to trademarks, copyrighted names of remedies, patented synthetics, laws on the above and the admission of patented synthetics to the U. S. Pharmacopoeia, to the medical profession at large. The chair suggested that a committee be appointed to confer with the American Medical Association, this being an important question. Mr. Perry moved that this committee be authorized to act in the name of this association and to incur all necessary expenses; motion carried, and Messrs. H. C. Blair, Jr., Cliffe and Stiles appointed.

The Executive Committee stated that henceforth resolutions would be presented a month in advance.

The election of delegates to the N. A. R. D. meeting then followed, Messrs. Perry, Rumsey, McIntyre, Stiles and Cliffe were elected delegates; Messrs. Leedom, C. H. Campbell, Howard, Kratz and Harris were elected

alternates. Messrs. H. C. Blair, Jr. and Eberly acted as tellers. The secretary was instructed to notify these gentlemen of the election.

Adjourned to meet Friday, July 6th, at 2:30 P. M.

NOTES.

—The prizes awarded at the commencement of the Medico-Chi Pharmacy class last week were as follows: Gold medal for the highest average obtained by a student of the graduating class, won by Joseph T. Fischer, with honorable mention of Stuart L. Unangst and Herbert G. Lilly. Gold medal for the highest average in the junior class, awarded to Harry G. Voorhees, with honorable mention of Harry E. Kendig and William J. Ritter.

—The baseball team of Smith, Kline & French Company's laboratory suffered its first defeat of the season on Decoration Day at the hands of the Welcome B. B. C. The game proved to be a slugging match, and the score ran up rapidly, being 38 to 18 at the conclusion of the game. The S. K. & F. team plays the team of Keesbey & Mattison at Ambler, Pa., to-day, Saturday, June 2.

—J. R. Matheson's place on South Front street, below Chestnut street was the scene of some energetic hustling one day this week when a carboy of acid burst and almost caused a fire. By prompt action the carboy was removed from the building in time to avert serious trouble.

—Dr. J. C. Edwards has sold his store at Lock Haven, Pa., and has purchased the drug store at Fifth street and Fairmount avenue, owned by George Hiltzhauser. Dr. Edwards was head clerk in this store while attending the course at the College of Pharmacy some years ago.

—John P. Frey, the down-town druggist, whose stores are almost as numerous as the yellow painted establishments of the cut-rate grocery syndicate, was summoned to Indianapolis for a few days last week on account of the illness of his mother.

—Edgar Blue has returned from his home at Bloomsburg, Pa., where he went for a vacation after college closed, and is now with Dr. A. L. Butz, Forty-second and Aspen streets, West Philadelphia.

—A movement was started among the drug clerks of Reading, Pa., this week to close all drug stores in that place on Sunday, excepting for a few hours during which nothing but medicines will be sold.

—B. Manley Edwards, with D. F. Shull & Co., at No. 302 1/2 Market street, West Philadelphia, has resigned, and will manage the Mumma Pharmacy, at Twenty-fifth and Jefferson streets.

—Lane B. Collins spent last week in New York seeing the sights and enjoying a vacation. Mr. Lane is manager of John P. Frey's Sixteenth and Lasker street store.

—J. M. Longshore is fitting up a new pharmacy at the corner of Thirty-second street and Euclid avenue, and expects to be ready for business in a few weeks.

—Professor Joseph P. Remington has closed his Philadelphia residence at 832 Pine street, and has gone to his summer residence at Longport, New Jersey.

—The ratio of clerks wanted to positions wanted this week in Philadelphia is twenty-seven of the former to twenty-eight of the latter.

—Wm. H. Lantz is fitting up a new drug store at the corner of Lehigh avenue and Sixteenth street.

—M. A. Davis' Pharmacy at 4750 Frankfort avenue, has been purchased by John P. Shaw.

A LONG LITIGATION SETTLED.

Some time ago the California Fig Syrup Company began an action against the firm of Clinton E. Worden & Company, of San Francisco, to restrain them from the use of the name "Syrup of Figs" or "Fig Syrup" and from manufacturing any preparation that would be of the nature of the product of the California Fig Syrup Company. The case was argued through several courts until it finally reached the United States Circuit Court, where a decree in favor of the California Company was given and the Court of Appeals now affirms this opinion. By the decision the complainant is allowed to recover damages accruing from the profits, gains and advantages set forth in the complaint, the amount of such to be determined by the master in chancery. The injunction against the defendants in the case is permanent.

BALTIMORE.

Wedgewoodites at Dinner.

Baltimore, June 1.—The members of the Wedgewood Club made a change in the usual order of things and transferred themselves from Tierney's, on North Calvert street, to Electric Park last evening, there to enjoy their monthly dinner, surrounded by spreading fields, woodland and other rural scenery. They occupied seats around the festal board in the club house, and had a most enjoyable time. The menu was elaborate and prepared in excellent style. J. Emory Bond presided, acting also as toastmaster. Twenty-six members were present, the guests of the evening being Dr. Wessels, Dr. Gleason and Capt. Mathias Kieffer. Charles Morgan was elected to membership. A feature of the evening was Dr. R. E. Lee Hall's efforts to make a speech. Being newly enrolled among the elect, he felt that the occasion demanded of him some formal remarks. Accordingly he proceeded to address the diners, who were not less determined that he should have a great deal more applause than he bargained for. Remarkable persistency was displayed on either side in this contest. Secretary Foster's stimulating invitation to the festivities read as follows:

Come one, come Wedgewoods all,
Bringing stories, great and tall;
Dull moments we'll forget a bit,
Submerging "ennui" in a flow of wit.

Maryland Pharmaceutical Association.

Baltimore, June 2.—The next event of interest to druggists throughout the State is the annual meeting of the Maryland Pharmaceutical Association, which will be held June 19-23 at Hagerstown. Among the more important matters to come up for consideration is of course the failure of the effort to secure the enactment of a State pharmacy law at the last session of the Legislature, and a discussion of the reasons to which this failure should be attributed. The elimination of trade abuses and the raising of professional standards will also come up for discussion. Dr. A. R. L. Dohme, the president of the association, and J. Webb Foster went to Hagerstown this week to confer with the local committee as to the arrangements for the annual meeting. They report that the committee has shown commendable diligence in the pursuit of its labors and that the preparations are well under way. A highly successful gathering is expected.

An Old Tooth Powder Formula.

Baltimore, June 4.—Among the prescriptions received at the pharmacy of Hynson, Westcott & Co., Charles and Franklin streets, last week was one which bore every indication of a venerable age. The paper upon which it was written appeared yellow and discolored, the ink presenting that faded look common to writing on documents of venerable antiquity. The word "oil" was spelled "Oyl," and there were other marks suggestive of our forefather. Mr. Hynson estimated that the formula was a century old. Strangely enough, it showed no extraordinary variations from those now in use. The ingredients it called for continue to be employed in the composition of tooth powders.

Partnership Troubles.

Baltimore, May 28.—Lorman E. Roberts, of 1424 Madison avenue, appeared before Police Justice Goldman last Saturday to answer the charge of having feloniously entered the drug store on the corner of Mount Royal avenue and Dolphin street on May 18 and removed therefrom one soda fountain, valued at \$500, one set of adjustable drug fixtures valued at \$250 and one pair of prescription scales valued at \$20, the alleged property of E. J. McGraw, 402 North Carrollton avenue. Both sides were represented by attorneys. Mr. Roberts claims that in consideration of a chattel mortgage which he held on the goods in the store at the location mentioned for a debt of \$354.60 the place had been entered on a writ of replevin and the articles in question taken out. Mr. McGraw contended that the case had been amicably settled and the writ of replevin dismissed prior to the time the store was entered. The case was dismissed, as in the opinion of the justice the evidence adduced did not prove intent of felony. Messrs. Roberts and McGraw were

former business partners in the retail business at the corner of Mount Royal avenue and Dolphin street, and the dispute grew out of this relation. The goods in the store are now for sale. It is reported that they will be purchased by a North Carolinian and removed to that State.

NOTES.

—The Maryland Homeopathic Pharmacy Company, of North Howard street, this city, has been incorporated by Roscoe L. Coffin, of Baltimore county, and Herman L. Frenz, George W. Neal, John Krommiller and Webster Mills Strayer, of Baltimore. The company has a capital stock of \$20,000, divided into \$10 shares. It will conduct the pharmacy on Howard street hitherto under the management of Mr. Coffin.

—Among the visiting druggists in Baltimore last week were Dr. J. P. Bishop, of Charlestown, W. Va.; Dr. T. R. Rogers and wife, of Moundville, W. Va.; J. B. Dasher, of Peru, W. Va., who is also a minister; Frank Henry, of the Williams Manufacturing Company, Cleveland, and P. A. Tschiffely, a wholesale druggist of Washington.

—Charles Edward Caspari, a son of Prof. Charles Caspari, Jr., of the Maryland College of Pharmacy, who will take his doctor's degree this month at the Johns Hopkins University, has been appointed assistant professor in organic chemistry at Columbia University, New York. Mr. Caspari took his A. B. at the same institution in 1896.

—Among the vast concourse of Grand Army veterans in attendance at the dedication of the memorial erected at Antietam, Allegany County, Md., to the Maryland soldiers who fell in the battle there on the Union side, was C. C. Walz, a well-known retail druggist at Hagers-town.

—A joint meeting of the trustees and the faculty of the Maryland College of Pharmacy was held at the college on A South street last Thursday, the object being to consider the curriculum and arrange other matters for the commencement of the Fall sessions at the college.

—The Sharp & Dohme howling team are resolved not to get rusty by "inactivity and lack of practice during the summer. They played a local quintette at Clarke's alleys last Friday night and lost all three games, two of them by rather close scores.

—Henry S. Kendall, representing Eauer & Black, of Chicago, reached Baltimore last week on his travels. He reports that trade has been very good in the sections visited by him.

CINCINNATI.

A Victory for the N. A. R. D.

Cincinnati, June 2.—The following letter from one of the most prominent wholesale drug houses explains itself. The letter was addressed to all the local retailers, and has caused much gratification among the members of the Hamilton County Druggists' Association. It proves that the local organizations are being rewarded for their efforts to establish prices in this city. It is hoped that the other jobbers here will assume the same stand and help eradicate the cut-rate system. The letter is as follows:

Cincinnati, May 31, 1900.
We beg to advise that the policy of our firm in future will be to sell no druggist that makes a feature of advertising "cut rates." We will consider a newspaper advertisement, or a sign on the premises as a sufficient reason to decline business. We will consider it a favor if we should through oversight sell any who openly advertise if the matter is brought to our attention.
LLOYD BROTHERS.

NOTES.

—The Iroquois Club, an organization of druggists and their friends, have completed arrangements for the annual vacation. They will have a special car on the Vandalla Railroad, and will leave on July 5 for Lake Maxinkuckee, situated between Logansport, Ind., and Chicago. The club will camp there for two weeks, and any druggist who desires to visit them while in camp can secure half-rate tickets from the president of the club, Harry Freund. The following druggists and friends are members, and will leave on the special car: Ralph Frisberg, Dr. A. M. Goldberg, Samuel Joseph, Harry Freund, Dr. Henry Bamberger, John Myers, M. Wohlbe, Dr. Pierce, William Schuckart, William Trost, the Nus-

baum, I. Sothern, Edward Heinemann, Edward Klipp, August Rendigs, Vic. Muehlberg and Peter Nussbaum.

—Local druggists are complaining of the price of ice, which is 40 per cent. higher this year than last. Ice was delivered to the stores last year at from 15 to 20 cents per hundred pounds. The recent combine has raised the price to 30 cents per hundred, hence the kick. The result may be that the druggists may start an organization and purchase their ice from the National Ice Company, which is composed of members of the Royal Arch, an order of saloon keepers. This company has just started, and have their ice shipped from Indianapolis. The treasurer, E. C. Pistner, has promised to supply any of the retail druggists at 20 cents per hundred pounds if they sign contracts for the season.

—The twenty-eighth annual meeting of the Alumni Association of the Cincinnati College of Pharmacy on Wednesday, June 6, promises to be well attended. The meeting will be held at Zoological Garden at 2:30 p. m. At 4 p. m. the graduation exercises of the college will take place, followed by a banquet at 8 p. m. Louis Klayer is at the head of the committee in charge.

—The force of traveling men of the Gray & Huston Company are in the city preparing their fall line of holiday goods. They expect to start out again by June 15.

—M. Blumenthal, prescription clerk at Serodino Bros., has been confined for the past three weeks, suffering with muscular rheumatism.

DETROIT.

The New Cut-Rate Store.

Detroit, June 2.—The Central Drug Store of Detroit is doing business in its new quarters, although things are not in perfect ship-shape. Much to the surprise of everybody, it has come out as a strong cut-rate store. The Central Drug Store has long been recognized, not only as the leading drug store of the city, but as the most conservative of the large stores. Patent medicines were kept in the background, and great stress was laid upon the prescription department. The change from such methods to the most aggressive kind of cutting, already launched upon by the new management, has created a great deal of comment. Mr. Moreland, the new member of the firm, himself an old-time druggist, but latterly Commissioner of Board of Public Works, is not recognized as the most easy-going man of Detroit, and many people think they see his handwriting in this move. Almost across the street is the firm of Hurd & Gray, the most successful—apparently—cutters in the city. These two stores, the Central Drug Store and the Hurd & Gray store, are the only drug stores in a space of seven or eight blocks on the main thoroughfare of the city. Some of the druggists who have the N. A. R. D. interests near their hearts, are surprised and grieved to see the Central Drug Store become a cut-rate, especially with the meeting of the N. A. R. D. in Detroit so soon to take place. They seem to think that it will be a little discouraging to the N. A. R. D. to find such a state of affairs existing in the recognized leading drug store of the town. Mr. Todd, when interviewed on the subject, said: "We have no idea whatever that we will harm the N. A. R. D. It is the best thing the druggists ever had, and we know it. It is the only thing in existence that will stop cutting. We have not the slightest intention of demoralizing business. It is simply a matter of selling as low as our competitors, our only competitor—and by a competitor we mean a man who does business so near to us that his trade threatens ours and ours threatens him—the firm across the street, for years recognized as aggressive cutters. Why should we place our prices at such a figure that our customers will walk across the street to buy lower? If we were in a neighborhood where there was no cutting, we certainly would not undertake to try and lose money by establishing a cut-rate. We do it here simply because competition forces us to it."

It is the intention of the new management to keep open all night, a move that will vastly please the downtown population of Detroit, who have been without night service for over a year.

NOTES.

—Druggist Archibald McIntyre and his clerk, Daniel Jones, and Druggist Charles E. Hollister, all of Detroit, appeared for examination at the police court on Tuesday, charged with violating the liquor laws by selling beer without a license. Much to the surprise of many other druggists who were interested in the trial, it was shown by their attorney that under the statute, druggists have a right to sell bottled beer without a license, provided it is for medicinal purposes and the sale registered. The druggists were discharged.

—The drug store of R. J. Pinkerton, corner of Baggs and National avenues, Detroit, was damaged to the amount of \$1,000 by fire on Thursday morning. It caught from a fire in a bakeshop adjoining. Mr. Pinkerton has been ill for some time, and the store has been run by Mrs. Pinkerton. That morning Mrs. Pinkerton was called to the bedside of a dying neighbor, and it was while she was away that the fire began. She says the loss is partially covered by insurance.

—The Drug Clerks' Association will give their annual moonlight excursion on the steamer Pleasure, on the evening of June 12. The association is in a very flourishing condition, and thoroughly enjoying its new quarters. Candidates for membership "ride the goat" to better advantage in the large rooms, and not a clerk in the city is willing to miss the fun of seeing the others get mixed up with the harness of the creature.

—Maurice O. Williams, son of W. C. Williams, senior member of the Michigan Drug Company, will be married on Wednesday, June 6, to Miss Ethel Gregory, a well-known belle of Detroit. Mr. Williams is at the head of the sundry department of the Michigan Drug Company, and is recognized as a rising business man.

CHICAGO.

A New Treasury Decision.

* Chicago, June 2.—J. Scherman & Company, makers of toilet preparations at 7 East Polk street, have a treasury decision right from headquarters that may be useful for other people to know about. The label on one of their preparations is as follows:

SCHERMAN'S

EGG SHAMPOO

REMOVES DANDRUFF.

Cleanses the Hair and prevents Itching of the Scalp. Contains no Ammonia, Soda or Borax to burn the Scalp or Hair.

DIRECTIONS.—Wet the hair thoroughly with warm water, then apply the shampoo freely to the scalp and rub well until a lather is formed. Rinse thoroughly with warm water and dry with a towel. By following these directions, your Hair will become soft and glossy. Never use Soap on the Scalp as it causes falling out of the Hair.

SHAKE THE BOTTLE BEFORE USING.

PRICE 25 CENTS.

Prepared only by J. SCHERMAN, & CO.,

NEW YORK. CHICAGO.

This letter from the Treasury Department is self explanatory:

TREASURY DEPARTMENT.

Office of Commissioner of Internal Revenue,
Washington, May 25, 1900.

J. Scherman & Co.,
7 East Polk street, Chicago, Ill.

Sir: I have to acknowledge the receipt of your letter of the 22d inst in which you enclose a label under which you put up "Scherman's Egg Shampoo," and you ask if this article is taxable under the War Revenue Act. In reply you are informed that it is not.

Respectfully,

G. W. WILSON,
Commissioner.

The above decision, in view of other decisions, seems peculiar. The question quite naturally bobs up again, "Where do they draw the line?"

C. R. D. A. GIVES ADVICE.

Chicago, June 2.—The following circular was sent out yesterday to all members of the Chicago Retail Druggists' Association:

To Members of the Association:

The Lakeside Company is now taking orders for its

1900 Directory in accordance with an entirely new plan. The Executive Board believes you will do yourself a good turn by declining, for the time being, to sign an order for a new directory.

The board will do all that lies in its power to relieve the druggists of Chicago of the necessity of giving away to the public every year a book costing \$7.50 that at no time belongs to the man who puts up the money; it hopes to be able to place a Lakeside Directory in your store without its costing you anything. With the proper assistance from Chicago druggists there is little doubt of its success. You can afford to await developments.

The board finds that very few druggists are making regularly the monthly report to the collector required by the Internal Revenue Law of 1898. Warning on this point has been given before. Druggists who are prosecuted in United States courts and compelled to pay large and heavy costs, \$10 per month for each failure to file their reports will have only themselves to blame.

A copy of the laws pertaining to the adulteration of food, drink and medicine which the State Food Commissioner is expected to enforce rigidly after July 1, 1900, is sent you herewith. Assurances have been received from Commissioner Jones that his duties will be confined to carrying out the instructions laid down in section 4, page 13, of the pamphlet submitted.

Druggists will be amenable for selling impure or adulterated articles that enter into the composition of food, such as flavoring extracts, cream of tartar, baking soda, etc.; also for vending impure or adulterated ice cream, soda water or other beverages, bottled or otherwise. Under this arrangement with the Commissioner (you will be notified in another should be adopted) those sections of the law of special interest to druggists are to be found in section 14, page 15; sections 22 and 23, page 17, and all the paragraphs on page 20, except the second, third and fourth.

Druggists are in a position to take advantage of their competitors in the grocery trade by having on hand July 1 a supply of extracts made in conformity with the law and in accordance with the fact.

The Executive Board meets two or three times each month to discuss matters of importance to the trade. If you are aware of anything of general interest that ought to have attention, write to one of the officers or trustees from your part of the city. It will have prompt attention.

If your dues for the current year have not been sent in the enclosed blank and envelope may be found useful. We are sure your sense of fairness will prevent your accepting from the association the benefits it is able to give without doing your part toward its maintenance.

GEO. A. GRAVES, Pres.
THOS V. WOOPEN, Secy.

NOTES.

—The Merriman Drug Company, of Chicago, has been incorporated with a capital stock of \$6,000 to manufacture and deal in drugs and patent medicines. The incorporators are L. Lee Merriman, Minnie B. Merriman and Harry B. Ridley. The company has bought the drug store formerly owned by Milton C. Smucker, at Ashland avenue and West Madison street.

—W. T. Hill has opened a new drug store at Lake Villa, Ill., the popular summer resort near Fox Lake. Mr. Hill formerly owned a drug store in Evanston. He also had a store at N. 5722 Wentworth avenue, Chicago, but sold it. He is now the proprietor of another drug store at Antioch, Ill.

—A company, independent of the Lakeside Directory Company, will in the near future, it is said, place a directory in every drug store in Chicago free of charge. The book will be placed in a penny-in-the-slot device, the druggist getting 40 per cent. of the amount collected.

—Peter Van Schaack, of the firm of Peter Van Schaack & Sons, left Chicago on Tuesday afternoon for an extended European trip. He will visit Holland, the Paris Exposition and travel over the continent to various other interesting places before his return.

—W. H. Downing, a well-known druggist of Aurora, Ill., died last week. Mr. Downing was a man much esteemed by all who knew him, and his death is a loss not only to the community in which he lived, but to his profession as well.

—V. H. Chantler, who owns a drug store at Thirty-fifth and Paulina streets, left about 10 days ago to visit the Paris Exposition and other places of interest in Europe. He will be gone about two months.

—Oscar Leistner, who represents William L. Strauss & Co., drug sundries importers, New York, in the West, left on June 3 for New York for a new line of goods and novelties for the fall trade.

—Otto G. Hottinger, an old druggist of Chicago, has

week filed a petition in bankruptcy. Mr. Hottinger was one of the many who got caught in the receding Works Fair wave.

—John J. Boehm, who owns a drug store at South Halsted and Nineteenth streets, will leave in a few days to visit the Paris Exposition.

—Victor Bardonski, a druggist at No. 638 Noble street, with a party of friends, left recently to take in the sights of the Paris Exposition.

—C. E. Kezliniski, whose store at No. 161 North avenue, was recently sold for the benefit of creditors, has filed a petition in bankruptcy.

—Dr. D'Arcy, of South Chicago, has purchased the drug store of the Hyde Park Drug Company, at No. 100 East Fifty-third street.

—C. B. Haering, owner of the Haering Pharmacy, at No. 79 West Madison street, is spending a week or two in Pittsburg, Pa.

—W. S. Gardner has sold the drug store at Roboy and West Lake streets to C. E. Slayter, formerly of Plymouth, Ind.

—It is reported that J. S. Matthei will open a new drug store at West Adams street and Western avenue about June 10.

—The 1 o'clock p. m. Saturday closing rule was inaugurated by the wholesale drug houses of Chicago on June 2.

—It is reported that I. W. Blood will soon open a new drug store at thirty-first street and Cottage Grove avenue.

—R. L. Leffenwell will soon open a new drug store at No. 606 Davis street, Evanston, Ill.

—L. A. Ellisburg has succeeded A. E. Thompson at No. 682 West Division street.

THE NORTHWEST.

St. Paul, Minn., June 2.

—Successions: J. W. Clark, Centerville, Ia., by C. S. Johnson & Co.; Lee S. Wilson, Akron, Ia., by R. L. Hardy; D. C. Campbell, Martinsburg, Ia., by A. A. Peters; J. F. Gould, Minneapolis, Minn., by F. W. Crowell; W. L. Nichols & Co., Cadet, Wis., by W. L. Nichols; H. E. Payne & Co., Inkster, N. D., by J. R. Anderson & Co.; Jarvis & Jarvis, Faulkton, S. D., by F. Oulton & Son; N. P. Nelson & Co., Winthrop, Minn., by J. S. Griffin; S. C. Lucy & Son, Aberdeen, S. D., by M. Bennett.

—New: V. A. Hirscher, Good Thunder, Minn.; George Wians, White Rock, S. D.; H. E. Strathy, Koskia, Idaho; C. H. Longstaff, Huron, S. D.; Lark & Co., De Smet, S. D.; Fred Soderberg, Braham, Minn.; M. M. Barry & Co., Gray Eagle, Minn.

—J. W. Conolly has gone to Missoula, Mont., having been engaged by the Northern Pacific Railroad Co. as pharmacist in its hospital at that place.

—W. A. Dewey (no relation to George claimed) is now at Amery, Wis., running the pharmacy department for E. J. Schneider.

—Whitcomb Bros., Tacoma Wash., have sold to W. H. Michael, and the style is now the Novelty Drug Co.

—C. D. Searle has gone to Stillwater to relieve the pharmacist of Alex. Richard, who was taken sick.

—E. J. Anderson was taken sick a few days ago and is resting at his home in Wadena, Minn.

—R. L. Whitehead, a druggist at Mercur, Utah, has opened a restaurant in Salt Lake City.

—Verney McCoy was in the city this week undergoing treatment for disease of the eyes.

—Mr. Swan, of Quale & Swan, Madison, Minn., was in the city on business Tuesday.

—L. A. Smith and Harris Bros., Wardner, Idaho, have opened branches at Kellogg.

—W. S. Ware, Warren, Minn., and J. H. Hanson, Lamoni, Ia., have sold.

—N. B. (Mrs. G. W.) Beckman, Kimball, Minn., has gone out of business.

—The A. W. Noble Drug Co., Butte, Mont., has been damaged by fire.

—E. A. Richardson, of F. A. Richardson & Co., Clarks, Neb., is dead.

—Mrs. N. H. St. John has discontinued at Richfield, Utah.

—R. C. Trudgeon, St. Paul, has moved to Dassel, Minn.

—G. W. Cluster, Clayton, Neb., contemplates selling.

—J. M. Blake, Newport, Ia., has moved to Milford.

ST. LOUIS.

Druggists as Deputy Sheriffs.

St. Louis, June 2.—The past two days hundreds of prominent business men have been sworn in as deputy sheriffs to aid in preserving order, the police department having admitted they were incapable of coping with the disturbances incident to the great railway strike. Among the druggists so far summoned are Henry Fischer, Dr. E. H. Frelingsdorf, J. C. Thumser, A. Wittman and George C. Paulus, and they may have the pleasure of leaving their business and serving the city with all their soul and a rifle at \$2 per diem and meals. If a detail man as a drug salesman wants to call on a druggist or salesman in North or South St. Louis he has to walk or go in a buggy. If he is seen going into his customer's store after leaving a transit car, the druggist or doctor is likely to find himself the subject of a boycott in a jiffy. St. Louis is suffering from a case of unionism gone mad. With one exception, wholesale drug houses say the strike has very materially hurt their city business, some salesmen saying that their trade has been reduced from 25 to 50 per cent. since the strike.

Drug Clerk Famine in "Egypt."

St. Louis, June 2.—There seems to be a scarcity of registered drug clerks across the river in Illinois. Charles Witt, manager of the employment bureau of the St. Lou's Retail Drug Clerks' Society, says he has several applications for good clerks from Cairo, East St. Louis and other points, and the positions pay \$60 a month, but he can find no one to fill them. Wholesalers tell the same story. The reason given is that the examinations of the Illinois Board of Pharmacy are considered exceptionally rigid.

NOTES.

—The Meyer Bros.' Bowling Club has closed a successful season. F. G. Meyer, late of the New York office, offered a prize of a handsome gold watch charm for the high man, who proved to be C. A. Witzel, with an average for the series of 44 44-50. E. F. Helbig came next, with an average of 43 28-40, and secured the second prize, a diamond scarf pin, offered by Will L. Meyer.

—W. C. Irwin, of Salem, Ill., is remodeling his store and putting in new front and fixtures. Schwartz Bros., of the same city, have bought the building adjoining their present one, and will throw the two rooms into one, doubling their store. Mr. Ben Schwartz, of the firm, is a member of the Illinois State Board of Pharmacy.

—August Finke, the druggist of No. 1366 North Twenty-first street, had a desperate fight with highwaymen early Friday morning of last week. Two negroes attacked him on the street. He was felled, but managed to get out his knife and cut one of the men. They fled, and the damaged negro was afterwards caught.

—The river excursion of the Alumni Association of the College of Pharmacy on Thursday night of last week was a big success, in spite of the street railway strike, about 1,500 people being on board. The next excursion of the Alumni will be given next month.

—Lou's Brey, head clerk at A. E. Suppiger's Arcade Pharmacy, has resigned and will go into the poultry business at his old home near Waterloo, Ill. Herbert Markwart succeeds Mr. Brey at the Arcade.

—F. H. Ameling has bought the branch drug store of C. D. Merrem at Shenandoah and California avenues. Mr. Merrem will continue his store at Shenandoah and Finney avenues as usual.

—C. G. Harris, who formerly traveled for Meyer Bros.' Drug Company, but has been for several years past with Billings, Clapp & Co., Boston, has returned to the M. B. D. Co.

—The first river excursion of the season of the St. Lou's Drug Clerks' Society will be held Thursday evening, June 7.

—The Bayard Avenue Pharmacy, recently bought by A. E. Suppiger, will be run under the name of Roth & Suppiger, Mr. Erwin Roth having been admitted into partnership.

—Mrs. Eva Sassman, widow of the late R. Sassman, who was one of the oldest druggists in St. Louis, died Thursday evening of this week at the family residence.

—George Jacobs, formerly proprietor of a drug store at Ironton, Mo., is now clerking for Druggist E. J. Ludwig, of Lee and Clay avenues.

—J. M. Gable will open a drug store at Mays, Ind., and bought his stock in St. Louis.

—J. H. Aycock & Co. will open a new drug store at Morton, Miss.

—W. R. Scott will open a drug store at Brownsville, Tenn.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Belleville.—G. C. Parker, succeeded by Parker & Hyatt.
Booneville.—Anderson & Bear, succeeded by C. S. Anderson.

Paris.—J. A. Ingle, sold to J. B. Smith & Co.
COLORADO.—Denver.—H. Von Heimberg, 2301 Champa, sold to L. J. Ketzler.

DISTRICT OF COLUMBIA.—Washington.—Acker & Affleck, 1429 Penna. avenue, N. W., succeeded by J. F. Affleck, Jr.

FLORIDA.—Jacksonville.—E. K. Norwood, 417 W. Bay street, removed to Adams and Cleveland streets.

GEORGIA.—Bainbridge.—R. L. Bruce, deceased.

IDAHO.—St. Anthony.—St. Anthony Drug Co., succeeded by Allen & Watson.

ILLINOIS.—Carlinville.—A. M. Boring, sold to W. D. Graham & Son.

Chicago.—The following firms being department stores should be omitted from D. D. List: Kings Bros, 755

Second Halsted street; Lange & Engelm, 95 Ninety-second street; J. C. Lutz & Co, 1000 Milwaukee avenue; A. M. Rothschild & Co., State & Van Buren streets; E. F. Ryan, Peoria & W. Madison streets.

—Coulon & Co., 11st South Halsted street, succeeded by J. L. Copelin.

Dixon.—Parker & Winders, succeeded by W. R. Parker.

Greenfield.—Hugh Clardy, sold to Harvey Valentine, Melrose Park.—P. C. Walraven, sold to T. E. Burgoyne.

Indianapolis.—U. J. Overman, sold to John H. Hall.

INDIANA.—Flora.—Flora & Knapp, damaged by fire, fully insured.

Frankfort.—R. E. Stehle, sold to Hammond Bros.

Greenfield.—T. H. Seiman, 12 W. Main street, damaged by fire.

TOWA.—Holmes.—McAdams & Olson, sold to W. E. Brazelton & Co.

Jewell.—Geo. N. Gardner, sold to P. R. Carver & Co. Lake City.—Dornan & Westerv, succeeded by A. M. Westveer.

Mount Vernon.—T. J. Baird, sold to A. I. Berryman.

Ogden.—E. H. Graves & Co., sold to C. E. & O. W. Clark.

KANSAS.—Bushton.—James G. Cuddy, new store.

Clear Water.—S. T. Macdonald, sold to J. R. Gardner.

Eureka.—E. J. Norman, sold to W. C. Greene.

Marion.—Marion Pharmacy, S. S. Ott, proprietor, succeeded by R. Williams, proprietor.

Olathe.—Whitney & Armsby, succeeded by Geo. D. Whitney.

Wichita.—C. J. Mackey & Co., 331 E. Douglas, sold to H. C. Kendrick.

KENTUCKY.—Fresno.—Shaver & Woodburn, succeeded by E. G. Shaver.

Greensburg.—J. M. Howell, damaged by fire.

LOUISIANA.—Jennings.—L. M. Valdiviero, succeeded by Valdiviero & Burke.

MASSACHUSETTS.—Haverhill.—F. C. Ingersoll, 87 Merrimack, sold to W. W. Swatt.

Waltham.—L. J. Hutchinson, 591 Main street, succeeded by H. Johnson & Harrington.—Bus. P. Rogers, 665 Main street, sold to C. E. Harrington.

Waverly.—B. N. Holmes, succeeded by Holmes & Blake.

Wellesley.—Story & Stevens, succeeded by E. C. Stevens.

Woburn.—H. A. Wilcox, 15 Pleasant street, sold to A. W. Whitchee.

MICHIGAN.—Pontiac.—C. M. Brooks, succeeded by Frank R. Graves.

Rapid City.—W. A. Seyer, burned out.

St. Charles.—Dolson & Moore, succeeded by Harry Dolson.

Saugus.—D. A. Heath, sold to J. Bright.

MINNESOTA.—Brainerd.—Johnson's Pharmacy, Seventh street, succeeded by C. D. Johnson.

Verdule.—W. N. Morell, damaged by fire.

MISSISSIPPI.—Bolton.—J. H. Powell, sold to S. W. Trotter.

Meridian.—J. M. Howard, deceased.

Miss.—G. E. Ellis, damaged by fire.

MISSOURI.—Luray.—C. T. Coffrin, sold to E. P. Jones.

Memphis.—G. D. Dawson, succeeded by G. M. Brown.

St. Louis.—G. W. Polston, 1391 N. Broadway, deceased.

NEBRASKA.—Lincoln.—Neill's Pharmacy, should be added to D. D. list.

NEW JERSEY.—Plainfield.—Barker Horsley, Front & Grove streets, sold to Clayton M. Nagle.

NEW YORK.—Gallop.—Waring & Johnson, succeeded by Waring & Bowie.

NEW YORK.—Brooklyn.—W. S. Kissam, 514 Broadway, deceased.—The Adolph Levy Co., 145 Grand street, removed to 323 Bedford avenue.

Croton Falls.—G. W. Abrams, sold to Elbert C. Purdy.

Fulton.—Briggs & Gayer, new store.

Schenectady.—Van Zandt & Rector, succeeded by Wm. Rector.

Troy.—C. S. Stoddard, 70 Congress, succeeded by M. & A. Stoddard.

NORTH CAROLINA.—Charlotte.—Atkinson & Stowe, succeeded by John M. Atkinson.

OHIO.—Akron.—The Allen-Clark Drug Co., 135 South Howard, assigned.

Dayton.—H. L. Weis, S. E. corner Xenia & Vlot street, new store.

Mansfield.—M. P. Mason, 230 N. Main street, sold to F. A. Wheeler, Jr.

OKLAHOMA.—Pawnee.—A. B. Webber, sold to Vandervoort & Jay.

OREGON.—Portland.—Love & Bushong, 302 E. Burnside, succeeded by W. S. Love.

PENNSYLVANIA.—Penn Run.—S. J. Glassford, sold to J. M. & C. Starnes.

Pittsburg.—J. C. Panly, corner Trenton avenue and Franklin street, (Wilkinsburg) new store.

Reading.—S. S. Stevens, 723 Penna, deceased.

RHODE ISLAND.—Providence.—G. A. Streeter, 116 Broadway, sold to Fred. D. Baker.

SOUTH CAROLINA.—Piedmont.—N. T. Richardson, sold to D. L. Doumail.

SOUTH DAKOTA.—Roswell, Miner County.—George R. Sagar, should be added to D. D. list.

TENNESSEE.—Tracy City.—E. O. Nathurst, sold to L. Hines.

TEXAS.—Center.—J. W. Rogers, deceased.

Kopperl.—Thos. K. Lillard, sold to Davis & Holmes.

Richardson.—J. E. Bryant, sold to C. E. McWhorter.

Tiga.—Bradley & Mershon, succeeded by L. A. Mershon.

Walnut Springs.—Cox & Olson, succeeded by Jos. J. Olson.

WASHINGTON.—Index.—Korn Drug Co., new store.

WEST VIRGINIA.—Keyser.—J. B. Criser, sold to J. H. Rex.

WISCONSIN.—Racine.—A. E. Olle, 435 Main street, succeeded by Olle-Smith Drug Co.

WANT U. S. TO EXPORT SULPHATE OF AMMONIA.

J. B. Carles & Company, bankers of Valencia, Spain, sent a letter to the Spanish Consul at Washington recently in which they suggested that the United States should engage in the export trade with Spain, the particular line desired being sulphate of ammonia. The bankers asked that samples and prices be sent from reputable firms in this country. They further stated that they could use large quantities of superphosphate of lime and nitrate of soda. The letter said that 50,000, 50,000 and 20,000 tons of each of the articles desired in the order named were used in Spain in a year, and an export trade would prove profitable to firms in the United States. This could be done, they thought, at the present price of coal and notwithstanding the higher transport rates. They said that many ships from this country stopped at Italy and Marseilles, France, that would be willing to stop at Valencia. Inquiry among the firms handling heavy chemicals in this city revealed the fact that more sulphate of ammonia is brought to this country than is exported, hence the proposition of Carles & Co. cannot be considered. However, a number of importers evidenced an interest in the matter and it is just possible that something may develop.

Three New Creosote and Guinecol Derivatives.

Among the new remedies marking a further advance step in medico-chemical research are those known as the "Sulpho-acid Salts of the Aliphatic Creosote Esters." These are, respectively, Eosolate of Calcium (Calcium Eosolium), Eosolate of Silver (Argentum Eosolium), and Eosolate of Quinine (Chininum Eosolium). Eosolate of Calcium ($C_{12}H_{18}S_2O_{12}Ca_2$) contains 25 per cent. of creosote, is an odorless and tasteless powder, and is said to be free from the corrosive effects of creosote. It is recommended in the treatment of phthisis, nephritis, diabetes, cystitis, and as an intestinal antiseptic. The dose is from 5 to 15 grains three times a day. Eosolate of Silver is the neutral silver salt of trisulpho-acetyl-creosote, has the formula $C_9H_7Ag_3S_3O_6$, and contains about 50 per cent. of silver. It is employed in the powder form, as an ointment and in solution. It is claimed to be the most powerful antiseptic known, does not coagulate albumin, and is especially indicated in the treatment of wounds and skin diseases due to microorganisms. Eosolate of Quinine $C_{24}H_{32}O_{12}(C_{20}H_{24}N_2O_2)_2$, is composed of about 70 per cent. of alkaloid quinine and 10 per cent. creosote, and is recommended in the treatment of malaria with "mixed infections." The dose ranges from 2 to 10 grains three or four times per day. These new remedies are being introduced to the medical and pharmaceutical professions by the Fischer Chemical Importing Company, 14 Platt St., this city.

From City to Country.

Now is the time when the people move from the city to the country, and hence the time is ripe for the country druggist to refurbish up his store and his stock, and as most people who go to the country are well-to-do, it follows that they are users of Humphreys' Specifics, so that a nice, fresh sign in the window and some clean, well printed Manuals on the counter will prove attractive and assure your store the trade of the best people. We send these express prepaid, without any expense whatever to you. Address Humphreys' Homeo. Medicine Company, corner William and John streets, New York.

Foamaline.

Druggists who have to dispense ice cream soda at five cents a glass ought to know about Foamaline. Ice cream made with it is cheaper, bulkier and will keep longer with less ice than that made in the old-fashioned way. Neither eggs nor heat is required; it is simply necessary to mix the Foamaline with the sugar, add the cream or milk, and it is ready for the freezer. A half pound package will be sent for 25 cents to any druggist who wants to try it. Write to the manufacturer, William Rippey, No. 56 Walnut street, Cincinnati, Ohio.

The Silent Salesman Cigar Case.

The cigar cases made by John Phillips & Co., Detroit, are known all over the country, and their trade mark, "Silent Salesman," is not only a guarantee that the cases are the best made, but it expresses exactly what they are. One druggist who has bought several of them says he considers goods displayed in them as half sold, and it is a fact that such goods almost sell themselves. There are several designs to select from, and at prices as low as good cases can be made and sold. Messrs. Phillips & Co. also make other styles of show the cases, as well as drug fixtures and fountain tops.

M. L. Wallau, Nos. 2 and 4 Stone street, New York, is the United States agent for Fer Cheynet, a Concentrated Glycerophosphate of Iron and Manganese; Pantauberge's Solution and Capsules, a Chlorhydro-Phosphate of Lime and Creosote; Syrup Teyssedre; Dragees and Syrup Gelineau and Carabana and Serre-Rubinat Mineral Waters. Full information regarding discounts, samples, etc., is furnished on application.

KANSAS PHARMACISTS MEET.

The Kansas Pharmaceutical Association held its twenty-first annual meeting at Hutchinson May 22-24. About one hundred druggists were in attendance, and there was more than usual interest manifested in the work of the association. Thirty-two new members were elected, making a total of 218 on the rolls in good standing at the present time. The annual address was made by the retiring president, R. F. Bryant, of Lincoln. F. E. Holliday, of Topeka, chairman of the Executive Committee of the N. A. R. D., was present and made a report on the work of that organization. He was highly complimented by the members present, and a resolution was passed strongly endorsing the National Association of Retail Druggists. Reports were received from the various officers, and the report of the work of the Kansas Board of Pharmacy for the past year was read by the secretary, W. C. Johnson, of Manhattan. The names of the following persons were selected as a list from which the Governor may make the appointments to fill the vacancies in the Board of Pharmacy: John T. Moore, Lawrence; W. C. Johnson, Manhattan; W. J. Evans, Iola; Charles Ryder, Emporia; W. S. Amos, Dodge City; Charles L. Becker, Ottawa; W. S. Miller, Topeka; J. M. Gleissner, Abilene; W. W. Morris, Eureka, and E. D. Eddy, Arkansas City.

The following officers were elected: President, Henry W. Mehl, Leavenworth; first vice-president, Mrs. M. O. Miner, Hiawatha; second vice-president, F. A. Snow, Topeka; secretary, E. E. Lair, Topeka; assistant secretary, R. S. Treat, Hutchinson; treasurer, G. Gehring, Wichita; librarian, L. E. Sayre, Lawrence; Executive Committee, J. W. Cookson, Kingman, chairman; W. E. Sheriff, Ellsworth; M. S. Ingalls, Halstead; E. H. Ward, Junction City, and A. E. Copping, Overbrook.

The entertainment features included a ball at the Auditorium, a carriage drive to the salt plants and the State Industrial Reformatory, and a programme of field sports. Prizes were awarded to the successful contestants in the various races, feats of strength, etc., which were witnessed by several hundred people. It was decided to hold the next annual meeting at Topeka.

The twenty-third annual meeting of the Pennsylvania Pharmaceutical Association will be held in the Maple Park Springs Hotel, Ebensburg, June 26-29. This town, a popular resort during the summer months, is situated on the crest of the Allegheny Mountains and is reached by the Pennsylvania Railroad via Cresson. Members intending to be present at the meeting should write to the secretary, J. A. Miller, Harrisburg, for railroad excursion tickets. The rate is two cents per mile, and the tickets will be good to return until July 2. On June 29 the members of the association will spend the day in Johnstown as guests of the Cambria County Pharmaceutical Association. The Entertainment Committee is arranging an interesting programme, and the local secretary, C. H. Marcy, Altoona, will be pleased to secure accommodations for members or attend to any other matters connected with the place of meeting.

The Maine Pharmaceutical Association announces a delightful programme for its thirty-third annual meeting, to be held at Portland, July 11-13. Half fares on all railroads have been secured, and the officers and members of the various committees are hard at work to make the meeting a success. Prizes amounting to \$50 will be awarded to the persons presenting the best four papers on a series of seven subjects submitted by the committee having the matter in charge.

The Arkansas Association of Pharmacists will hold its eighteenth annual meeting at Little Rock, June 12-14. Railroad rates of one and one-third fares have been secured for visiting members, who are admonished to drop everything and attend the meeting. Good papers are promised.

CORRECTION.—In the list of applicants recently granted certificates of registration by the New Jersey Board of Pharmacy, this journal, May 31, 1900, page 599, the address of Anna M. Griffing is given as "Butler." It should read "South Orange."

OHIO BOARD OF PHARMACY.

The Ohio Board of Pharmacy has issued certificates to the following applicants who took the recent examination held in Columbus. Pharmacists—John E. Longnecker, Youngstown; John B. Tracy, Circleville; Bolt-hoser Fries, Cincinnati; Frank P. Kerr, Jr., Columbus; Fred. A. Johnson, Lima; Frank Rusk, Cincinnati; F. R. Witte, Cleveland; Julius M. Rogoff, Cleveland; Joseph Jamison, Bryan; John M. Fulkerson, Piqua; Raymond Beard, Gibsonburg; Clark T. Elder, Bryan; Charles W. Brayton, Fostoria; Harley H. Balliett, Nevada; Forest E. Slater, Kenton; Roy E. Radabaugh, McComb; Frank Hetz, Ada; William Home, Hamilton; C. R. Burnette, Ada; Charles T. Barman, Chillicothe; John A. Davis, Alliance; James C. Bowman, Canton; Otto Krebs, Cleveland; Fred A. Knowlton, Columbus; Clarence W. Squire, Ashville; Mary H. Welch, Youngstown; Charles M. J. Naddy, Columbus; Stanley E. Douglass, Kent; Charles H. Kimberley, North Fairfield; W. A. Beall, Columbus; William S. Schweitzer, Cleveland; A. J. Preisendorfer, Defiance; Frank E. Miller, Cleveland; John B. Tingle, Dayton; Charles E. Eastman, Ada; A. L. Flandermeier, Cleveland; S. V. Stewart, Beallsville; A. J. White, Ada; Frank Templin, Dayton; Frank Cowdrey, Ithaca, Mich.; Hugo Weiss, Cincinnati; Harry C. Corn, Cincinnati; Conrad Schwartzwalder, Cleveland; Eugene H. Eddy, Loraine; Elmer E. Reed, Martin's Ferry; Frank P. Lehr, Cleveland; Hugh H. McKenzie, Cleveland; Norma L. Stoner, Cincinnati; George B. Williams, Granville; William C. Francis, Bridgeport; J. J. Trauter, Covington, Ky.; Wm. McK. Reed, Urbana; Paul E. Hemberger, Dayton; Harry T. Fox, Zanesville; Henry James Garrett, Huron; French A. Epps, Bellefontaine; Willard Ehlinger, Wooster; Roy L. Sanford, Cleveland.

The following candidates were examined for pharmacists' licenses, but did not pass sufficiently high to receive certificates. They, however, have the privilege of accepting certificates as assistant pharmacists. They are: George F. Reiser, Toledo; Lulu M. Hutt, Waverly; Harley A. Frazier, Chagrin Falls; Herman L. Dunathan, Ada; William E. Morgan, Ravenna; William E. Ludwig, Toledo; A. J. Tracy, Kent; D. W. Canfield, Jr., Chardon; Albert L. Moore, Canton; Frank H. Mayer, Williamsburg; C. A. Bachman, Akron; F. L. Riegel, North Hampton; H. J. Wittenberg, Cincinnati.

Assistant Pharmacists—Marshall Beymer, Zanesville; Robert D. Hamilton, Wooster; Benjamin J. Nettis, Springfield; Merton E. Greenawalt, Hicksville; O. A. Shroock, Ashtabula; J. D. Ferrall, Columbiana; Lucy M. Harvey, Lemery; Charles A. Gardner, Danville; Homer Young, North Lawrence; James T. Campbell, Van Wert; Eiden B. Frase, Barberton; Fred M. Hodson, Pioneer; Jacob C. Ranber, Cincinnati; Edward A. Ohm, Cincinnati; G. H. Stansbury, Middleport; George S. Austin, Painesville; Harry L. Frevent, Dayton; Charles H. Lefferson, Middletown; Herman H. Horst, Marysville; Reuben F. Best, Zanesville; Harry J. Seutker, Cincinnati; William H. Gamble, East Liverpool; Charles A. Arnold, Cincinnati; Otto Rehberg, Cleveland; Chalmers D. Maxwell, Franklin; Curtis Laughlin, Steubenville; Walter E. Hoover, Ashville.

—The Kentucky Board of Pharmacy, with all its members present, held the regular quarterly meeting in the council chamber of the city hall, Louisville, April 10th. Of 51 applicants for registration by examination, the following passed: L. P. Baker, Louisville; P. A. Blane, Louisville; J. R. Crume, Louisville; L. E. Gillim, Owensboro; H. G. Hartman, Louisville; T. A. Holcombe, Louisville; R. V. Miersch, Louisville; P. M. Read, Woodburn; J. A. S. Wright, Louisville; Henry Bass, Louisville; D. P. Crawford, Decatur, Ills.; W. M. Ernst, Louisville; B. J. Hagan, Louisville; J. T. Hulsam, Louisville; J. M. Johnson, Henderson; C. H. Nash, Jr., Hopkinsville; A. A. Oppelt, Louisville; J. F. Vogel, Henderson. Various successful prosecutions for violations of the pharmacy law were reported by the Executive Committee. The next meeting will be held at Maysville, July 10th. Applications for examination should reach the secretary of the board, J. W. Gayle, at least ten days before that time.

A STORY WITHOUT WORDS.

BUFFALO COLLEGE OF PHARMACY.

The Buffalo College of Pharmacy held its commencement exercises in the Central Presbyterian Church, Buffalo, April 27. The degree of graduate in pharmacy was conferred upon the following: Merritt L. Albright, John Ballagh, Roscoe Henry Bard, Louis A. Bradley, Francis Maxom Brimmer, Marion Frank Brzezicki, Roland Andrew Chandler, Lee H. Cotton, Edward Marvix Cummings, Allen Corbin Day, Charles Nathan Dear, George Francis Feries, Erwin L. Fish, Fannie L. Fish, Willis Bryan Fitch, William V. Gale, William J. Gram, Jr., Reynold A. Janke, George Burgess Jenkins, Charles Leo Keenan, Jasper Kobler, Howard E. Lane, Charles Porrest Larzelere, Charles Lawrence McLouth, Austin Charles Marble, Lee William Miller, Jesse Monroe Parker, Clarence Newton Reese, James Clark Spaulding, Jr., Walter Erwin Strong, Arthur Gordon Sortore, Cyrus Eugene Sunderlin, Wells Damon Walrath, Jesse P. Wetmore, Paul Skinner Whedon, Lauren Pettibone Young. Master in Pharmacy: Harry F. Harrington and Willet F. Mosher. The graduating class also included the names of Harley E. Dowman, James H. McAdam and Willis L. Merkeley, who had completed the course, but their diplomas were withheld because they had not reached the age limit prescribed for graduation. Class honors were awarded to Merritt L. Albright, who also received the \$50 William H. Peabody prize; Harley E. Dowman, Jesse P. Wetmore, Fannie L. Fish and Charles L. McLauth. On the honor roll of the junior class were the names of Ernest C. Holt, Rudolf C. Miller, William C. Achilles, Harry L. Rider and George Stoll. Mr. Holt was awarded the faculty junior prize of \$25. The address to the graduates was made by Dr. Charles A. L. Reed of Cincinnati, after which a banquet took place. Speeches were made by R. K. Smither, Adelbert Moot, Joseph Helfman, Dr. H. R. Hopkins, J. A. Lockie and Col. John A. Weber. In the afternoon the Alumni Association held its annual meeting.

—The Georgia Board of Pharmacy examined twelve applicants for registration at a meeting held in Savannah May 22. The following were successful: H. S. Redding, Waycross, pharmacist; D. L. Brown, Culberton, apothecary; C. A. Francis, Augusta, apothecary; P. H. Croghan, Savannah, druggist; B. F. Chapman, Augusta, druggist; J. B. Black, Augusta, druggist; and E. K. Sanderson, Augusta, druggist. The terms pharmacist, apothecary, druggist all indicate various degrees of efficiency. Those candidates passing with marks ranging from 65 to 75 per cent. are classed as druggists; those with marks ranging from 75 to 85 per cent. as apothecaries; and those with marks from 85 to 100 per cent. as pharmacists.

ARCHIBALD D. McINTYRE, a well-known druggist and a leading citizen of Oswego, N. Y., died May 14. He was 64 years of age and is said to have been a cousin of the Duke of Argyll of the British peerage.

JOHN W. SHEA, a druggist of Mason City, Ia., died at Des Moines, May 11. He had been ill for some time with heart trouble and had gone to Des Moines for treatment. He was 31 years of age. A widow and daughter survive.

STATE OF TRADE.

Slight Shrinkage in Wholesale Business.

New York, June 5.—Transactions have continued almost exclusively of a jobbing character, and the general volume of business in a wholesale way has shown a slight shrinkage, but the demand is fully up to the normal average for this season of the year, and there is no apparent uneasiness on the part of dealers concerning the future. On the contrary, the conservative policy pursued by buyers is looked upon with favor, and it is expected that when the next regular consuming season begins, the depleted condition of stocks at the various interior distributing points will cause a healthy revival of activity and a steady improvement in business all along the line. Opium has not improved, and the market for this leading commodity has continued to reflect more or less weakness under the influence of a slow demand and favorable crop reports. It is contended in some quarters, however, that there is more or less manipulation going on for the purpose of depressing the market and securing supplies at inside figures, while others claim that prevailing conditions are entirely natural.

The quinine situation has undergone no important variation. In the London speculative market values were advanced on account of a falling off in bark shipments from Java, but there is no quotable change here, although a continued steady feeling is manifested on the part of both manufacturers and outside holders, the latter expecting an improvement in prices of bark at the monthly sale in Amsterdam on Thursday next. Manufacturers of citric acid have advanced quotations 2c. per pound, and the market is very strong, with an active seasonable consuming demand. Foreign markets also are strong and prices of raw materials are higher, the latter being given as the chief cause of the advance in citric.

In the department of essential oils, general business has been fair in a jobbing way, but no large sales have transpired. Both anise and cassia are firmer, partly under the influence of improved conditions abroad, but chiefly on account of a cessation of the keen competition among dealers, which has been an important factor for some time. Bergamot is decidedly firmer, in response to higher cables from Messina, and spot quotations for leading brands have been advanced fully 10c. per pound. Among the roots, ipecac is easier, although strong and in large demand in Europe, the decline here is attributed to a desire to stimulate demand. Serpentina is weaker owing to increased offers from producing sections, and quotations are decidedly lower. Spanish colomby apples have followed the recent improvement in Trieste varieties, and show a higher range of quotations. Grains of paradise have declined owing to lack of demand and free offers of small lots of low priced stocks in the hands of out of town holders. Civet is in better supply and easier.

Among the leaves, lower quotations are named for belladonna, short buchú and henbane, but the causes which have brought about the revised figures are wholly natural and occasion no uneasiness in the seed line. Dutch caraway is fractionally higher in sympathy with primary markets, where values have advanced on reports of a short crop. Whole cleaned flaxseed has been advanced 50c. per barrel, and the outlook is favorable to a continued strong market. Rock candy syrup continues to move upward in price, in sympathy with the stronger market for sugar.

Freshening Up.

Boston, June 2.—After three or more weeks of comparatively dull business trade has this week sprung up with some show of liveliness. The holiday of the week (Memorial Day) made things seem busy with the wholesale places. Orders have come in from retailers in good amount and the druggists report better business, due to the fact that hot weather seems to have come upon this community "for keeps," thereby promoting the soda fountain trade with a rush.

In the general market some houses appear to have experienced a good trade, while with others it has been only of fair proportion. There is a slight reaction on nitrate of soda, other than which no marked change in prices of chemicals is noted. Citric acid shows a small advance. Other drugs are practically without change. The recent arrival of a vessel from the producing fields with a full cargo of gambier has been a feature of this market, although the entire cargo, almost, had been sold due to arrive. Quotations on most dye stuffs show a fair portion of prices. Alcohols are quiet. Waxes are selling moderately with no special life to the trade.

The Usual Summer Dullness.

Philadelphia, June 2.—Business seems to have arrived at a point which may be called the summer level. It is neither better nor worse than it has been for several weeks now and there is not much likelihood of its picking up to any great extent for several months. This condition applies particularly to the city trade, for the reports from up the State show that trade is still very good and that is what keeps the wholesale houses going at present. A druggist who wants to buy a store and has

ABBEEY'S EFFERVESCENT SALT.

It is to your advantage to handle a preparation that sells, and that affords you a good profit. We have arranged the prices on Abbey's Effervescent Salt so as to yield all druggists a living profit. No other manufacturer so effectively co-operates with you in creating a demand for his product. Our advertising campaign for 1900 will be of much greater magnitude than that of last

year. Co-operation with us in pushing sales will be mutually advantageous.

YOUR WHOLESALE WILL FILL YOUR ORDER.

- - THE - -

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

OLD IN THREE SIZES RETAILING AT 25c., 50c. AND \$1.00
PER BOTTLE.

TRADE LIST ON APPLICATION.

been looking around for a favorable location reports that there are more drug stores for sale just now in Philadelphia than anybody would suppose, and that he has been deluged with offers of good paying stores (2) whose owners always have some plausible excuse for wishing to sell a lucrative business.

Quiet in Baltimore.

Baltimore, June 2.—Jobbing druggists of this city report that business has been decidedly quiet here during the current week, a condition no doubt largely due to the circumstance that the past seven days constituted the end of the month, when the retailers hold back with their orders so as to keep down the bills sent out on the first. Both the local and out-of-town trade were affected by the inactivity. The manufacturers of pharmaceuticals continue to be quiet, but they are less diligently occupied than in the past, the entire situation having undergone a re-arranging and reinspiring influence. The market for botanicals corresponds to these conditions. Heavy chemicals are moving in fair quantities.

May Shows Goods Business.

Detroit, June 2.—To the honest surprise of the wholesalers' totals for the May business showed an appreciable increase over last May. The week closing to-day, however, has been only fair. Prescription business, so good a week or two ago among the retailers, has fallen off perceptibly. Manufacturing chemists say they know that June is here by other means than their almanacs, for their dull season is usually from about June 20 to July 20. Already they begin to notice their summer lull, but it is not what they expected. They report a magnificent total since January 1.

Trade Good in Chicago.

Chicago, June 2.—Business conditions among the manufacturers and jobbers of this city remain very favorable. May has been a good month with them all. Sales have been rather above the average and the prices have allowed a good margin of profit. The market has held up well. Failures have been few and little has been lost on account of the various tricks to which men in financial distress sometimes resort. Collections have been good, and the demand for staple and seasonal goods continues active and healthy.

Considerable Falling Off in the Northwest.

St. Paul and Minneapolis, Minn., June 1.—The past week in these cities has witnessed something of a falling off in trade. The bottom has not dipped out in any means, but the situation has become less brisk in many months past. To the retailers in the wealthy residence districts of the cities the difference is due in large measure to the fact that so many people have made their regular summer exodus to the neighboring lakes, giving the druggists there a "show for their white alibi"—at least for once in the year. Again, most of the last seven days have been quite cool and the effect upon the soda water business, which had become quite brisk, is disastrous. The jobbers say that while they are about holding their own, business has eased off appreciably. But the general situation in the Northwest is more than satisfactory. D. R. Noyes, of Noyes Bros. & Cutler, St. Paul, who has traveled extensively in the last two months, pronounces business conditions in the Northwest better than in any other section of the country. No changes in prices are reported, and he has observed except that ground linsed oil cake has advanced \$1 per ton.

Trade Greatly Affected by Strike.

St. Louis, June 2.—Country trade is reported good for the season by wholesalers, and collections are satisfactory. The number of new stores opening the last few weeks in territory tributary to St. Louis has been large. Local retail trade continues to suffer greatly on account of the street railway strike.

TAYLOR BLOW, a well-known drug salesman, died at St. Vincent Hospital, St. Louis, Tuesday, May 29. Mr. Blow traveled for the Richardson Drug Co. in Missouri, and when they retired went with the Moffett-West Drug Co., continuing on the road until a year ago, when, on account of his failing health, he was given a house position. About five months ago he was compelled to give up entirely and go to the hospital. As a man in the trade, said, "When Taylor Blow was in his prime he was known as one of the most successful salesmen who ever traveled out of St. Louis." The funeral occurred May 31, from the residence of his brother, C. W. Blow.

MARKET REPORT.

NEW YORK MARKET.

New York, June 5.—Business in a jobbing way has been mainly of a routine order, and the market has ruled tame, with few developments of interest, and only a limited number of fluctuations in values, chief among which is an advance in citric acid, due to a corresponding improvement in manufacturers' prices.

OPIMUM.—There is no material change in the condition of affairs in this leading commodity, and with only small parcels receiving attention, quotations remain nominally steady at \$3.50-3.50 for 9 per cent, and \$3.45-3.40 for 10 per cent, the higher figures being for choice pounds.

POWDERED OPIMUM.—A continued quiet feeling prevails throughout the market, and in the absence of new features, jobbers are quoting the old range of \$4.45-4.65 for 15 per cent, and \$5.15-5.35 for 16 per cent, according to size of order.

MORPHINE.—There is a continued good consuming demand, and the tone of the market is steady, but quotations remain unchanged at \$1.05-1.05 in ounces and \$2.20-2.30 in tins, according to brand.

QUININE.—Neither round lots nor jobbing parcels have received much attention, and the market has had a decidedly tame appearance, but the bark situation is favorable to holders and the undertone continues firm, with quotations well sustained at 31-32c. for bulk in 100-oz. tins, 33-34c. in 50-oz. tins and 38-39c. in ounce vials, according to brand.

GRAINS OF PARADISE.—The market is better supplied, and the tone is easier, with quotations for small lots reduced to 52-60c. as to quality and quantity.

GELATINA LEAVES.—Supplies are offered more freely from producing markets, and spot holders have modified their views to the extent of reducing quotations to 27-32c. for whole and 32-37c. for powdered.

EUCALYPTUS LEAVES.—Foreign markets for short continue to reflect more or less weakness, and the local market is easy in tone, with jobbing quotations showing a further decline to 25-30c. for whole, 28-32c. for ground and 33-35c. for powdered.

HENBANE LEAVES.—The market is inactive and easier, with quotations for jobbing parcels reduced to 20-25c. for whole and 25-30c. for powdered.

TOBACCO ACIDS.—Manufacturers have advanced prices 2c. per lb., owing to stronger foreign markets and increased cost of crude material, and jobbing quotations are correspondingly higher, the revised figures being 40-44c. by the keg and 46-47c. for smaller quantities. Powdered, 5c. per lb. additional.

CIVET.—Stocks are more abundant, and the market is a shade easier, with jobbing quotations reduced to \$3.50-4.00, as to quality.

OIL ANISE.—There is less competition among importers, and a better feeling has developed, partly on account of former primary market weakness, and jobbers have advanced quotations to \$1.80-1.90.

OIL CASSIA.—This article also is firmer under similar influences, and quotations for jobbing parcels have been marked up to \$1.15-1.40, as to grade and quantity.

OIL BERGAMOT.—Primary markets are cabled decidedly stronger, and spot quotations for jobbing quantities show an advance to \$2.45-2.50 for good and \$2.30-2.55 for finest, according to size of order.

IPECAC.—Efforts to sell, on the part of importers, have caused a reaction in prices, and the revised range for jobbing parcels is \$3.40-3.60 for whole, \$3.45-3.70 for ground and \$3.00-3.75 for powdered.

SERPENTARIA ROOT.—The market is weaker, owing to liberal offers of new to arrive, and quotations have been reduced to 43-48c. for whole, 45-50c. for ground and 45-50c. for powdered, according to quality and quantity.

FLAXSEED.—Whole cleaned is firmer, and jobbers have advanced quotations to \$6.75-7 for the barrel and 44-46c. per lb. for less.

CARAWAY SEED.—Dutch is stronger abroad, owing to reports of short crop, and spot jobbing quotations have been advanced to 9-12c. for whole and 15-20c. for powdered.

ROCK CANDY SYRUP.—Values are again higher, and the revised figures are 50-52c. in barrels, 62-64c. in half barrels, 65-67c. in 10-gallon tins and 67-69c. in 5-gallon tins.

Dr. JOHN C. BERRY, for a number of years proprietor of a drug store at Albuquerque, N. M., died May 1, after a brief illness, of congestion of the brain. He was a native of Fern Creek, Ky., was 43 years of age, and had accumulated a comfortable fortune. He left a widow.

PHARMACEUTICAL POLITICS.

As all know, New York State has a new pharmacy law, and is to have a new board of pharmacy which shall have jurisdiction over the entire State, doing away with the three boards heretofore and now existing. The new board is to be composed of fifteen members; five representing the Western portion of the State, practically Buffalo and its immediate surroundings; another five serving Greater New York, the remaining five for the State at large outside of the two sections mentioned. The Western section has selected its members, as related elsewhere in the news columns. In the New York City section the German Apothecaries Society has selected its one representative; Kings County Society has its election for two members this week, and the Manhattan Pharmaceutical Association will choose two at its next meeting. There has been no particular trouble over the elections in these two sections, though, of course, there has been the usual amount of political jockeying. But an interesting situation has developed with reference to the election of the five members representing the State at large. The law reads:

The election of the members of the State Board of Pharmacy for the middle section shall occur at the annual meeting of the State Pharmaceutical Association, at which meeting all licensed pharmacists and druggists residing in such middle section are entitled to vote, and such election shall be by ballot.

The question has been raised over the proper interpretation of this section of the law. It plainly reads that all registered pharmacists residing in the middle section shall be entitled to vote, but it does not make plain whether all the members of the State Pharmaceutical Association shall have such privilege. There has been considerable conference with legal authorities for an interpretation of the law in this particular, and the general consensus of opinion seems to be that members of the State Association cannot vote unless they are duly licensed pharmacists in the middle section of the State. The law says very plainly that the election shall "occur" at the meeting of the State Association, which takes place this month, but avoids all mention of members of the association having the privilege of voting; hence Buffalo and New York City members of the New York State Pharmaceutical Association will, in the opinion of competent legal authority, have no right to vote for members of the State board from the middle section. This ruling would seem to be a just one, inasmuch as the New York City and Buffalo members have already had the opportunity of selecting board members to represent their respective localities, and it would be simply granting them a double privilege if they could in addition vote for board members for the State at large.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

It is therefore likely that there will be considerable interest at the Newburg meeting with reference to the matter, and we may expect flights of oratory ad libitum. It must be remembered, however, that the interpretation of the law as cited above is an opinion merely, and must not be taken as final judgment. Nothing but a test case can accurately settle the matter. It is a question of constitutionality, and there are a number of rather delicate problems which are involved in either interpretation. For instance, there is a firm of druggists doing business in New York City, but the members of which firm hold residence and are registered in the country outside of New York City and included in the counties forming the so-called "middle section." These druggists can obviously vote in the middle section but not in the New York City section, although doing business in the latter.

It makes little difference, however, for the druggists of the Buffalo section and the New York City section are taking great pains to see that they shall be competently represented on the new board and no fears need be entertained for the remaining middle section. We wish to emphasize the fact, however, that every licensed pharmacist and druggist in such middle section can come to Newburg and cast his vote, irrespective of membership in the State Pharmaceutical Association, and for this reason if for no other there is already assurance that the attendance at Newburg will be a record breaker.

EXTRACTION.

In this issue appears the first portion of a paper on the subject of Extraction, by Prof. E. L. Patch. This paper was prepared as one of the lectures in the Era Course in Pharmacy. It contains so much information of value to pharmacists in general, however, that it has been deemed best to print it in the Era, thus giving it a wider circulation than if limited to Era students only; the latter will all receive it, as they are all Era subscribers, but beyond this all subscribers who are not matriculated students will profit from it. The paper contains a great deal of practical information of value in the druggist's working laboratory, and the statistics presented will prove serviceable to all manufacturers of fluid extracts. In the case of every fluid extract it is very essential that the proper menstruum be employed, appropriate manipulations be followed, to give the best results, and these menstrua and these manipulations vary with each individual drug, as may be easily seen in the table given.

The proprietor of a New Jersey drug store has been arrested charged with violation of the poison law in not registering and properly labeling poisons sold, and what is a worse offense, with allowing a fourteen-year-old boy to dispense medicines. Here is a case where the Board of Pharmacy could well demonstrate the reasons for its existence by a vigorous prosecution.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors. Please be brief and always sign your name.

ALLAN-PFEIFFER CHEMICAL CO. SAY NO. DRUGGISTS SAY YES.

St. Louis Concern Denies that One of Its Officers is Backer of the Cut-Rate Store at Ste. Genevieve, Mo.—Local Druggists Contradict.

St. Louis, May 30, 1900.

Editor Pharmaceutical Era:

Our attention has been called to a letter published in May 24 issue Pharmaceutical Era, on page 549, written by M. J. Glazer. We understand that Mr. Glazer is a drug clerk and is not financially responsible for the letter. The only recourse we have is through the Pharmaceutical Era. We wish to say the Allan-Pfeiffer Chemical Co., its officers or stockholders, are in no way connected with the Carsow Drug Co. at Ste. Genevieve. Mr. R. E. Carsow, of our firm, was at one time connected with the Carsow Drug Co., but disposed of his interest long before the cut rate war was inaugurated in Ste. Genevieve.

It is not our wish or desire to cause you any trouble. However, we shall hold you financially responsible for the damages done us, and unless you make the proper correction through your journal we will be compelled to take action in some way, and we trust that you will give this matter your immediate attention. R. G. Dun & Co. and Pradstreet can no doubt inform you the names of the owners of the Carsow Drug Co. We hope to hear from you by return mail. We remain,

Very respectfully,

ALLAN-PFEIFFER CHEMICAL CO.

J. E. Allan, Pres.

[In reply to the above a letter was written to the Allan-Pfeiffer Chemical Co. stating that a full investigation would be made, and asking them for a plain statement of their side of the case for publication. This is their answer:]

Editor Pharmaceutical Era: Your favor of June 1 to hand and contents carefully noted. We trust that you will look into the matter of your publication of May 24 at once and advise us by return mail. We presume the Carsow Drug Co., of Ste. Genevieve can give the best information as to the owners of their business.

We wish to again repeat that the Allan-Pfeiffer Chemical Co. nor any of its stockholders have any connection or interest in the Carsow Drug Co. or any other drug company. We think from the above and our letter of May 30 and with other information that you have no doubt obtained you can prepare a proper statement to the readers of the Era, vindicating us of the wrong charges made in your journal. At this time we have no statement which we wish to publish and we will leave it to you to make the corrections that you no doubt intend to make. We must insist that this matter be promptly attended to. We remain,

Very respectfully,

ALLAN-PFEIFFER CHEMICAL CO.,

J. E. Allan, President.

At the same time letters were sent to druggists in Ste. Genevieve, Mo., requesting full information. The following statements in reply are at hand.—Ed. Era.]

Ste. Genevieve, Mo., June 1, 1900.

Editor Pharmaceutical Era: Your letter of June 1 was received this evening and I am pleased to corroborate what Mr. Glaser has written you. He states the case exactly as I understand it. About two months ago the Carsow Drug Company, with a Mr. Feibelman as manager, and Rudolph Carsow, vice-president Allan-Pfeiffer

Chemical Co., as proprietor, instituted a cut on patent medicines.

The question which you wish to elucidate and which we recently would be led to disbelieve, is whether Rudolph Carssow, vice-president of the Allan-Pfeiffer Chemical Company, is owner of the pharmacy conducted under the above name. I will give you my reasons for believing that he is, then you can judge for yourself. The cut was first proclaimed by one of our newspapers, published on Thursday evening. By accident I learned of their intention just before the paper was distributed and called at their pharmacy. I did not see either the manager or Rudolph Carssow, vice-president of Allan-Pfeiffer Chemical Company, but saw Dr. Oscar Carssow, who I thought was a partner in the business, and tried to dissuade him from cutting. He promptly told me that he had nothing to do or say about the store; that his brother Rudolph Carssow, vice-president Allan-Pfeiffer Chemical Company, would have to be consulted.

He told me just before my leaving that he would send the manager down to talk it over with us after six o'clock that evening. He came, and in his talk did not seem to favor the idea of cutting, but said that it would be necessary to place it before Rudolph Carssow, vice-president Allan-Pfeiffer Co., ere he could announce anything definite as to calling off the cut or not, and also stated that Dr. Oscar Carssow had nothing to say or do about the business. Before leaving he promised not to cut until he heard from Rudolph Carssow, vice-president Allan-Pfeiffer Co. Mr. Carssow came down from St. Louis on Sunday and returned that night. He left word to commence "cutting" Monday morning, and also telegraphed from St. Louis Monday morning "Don't forget to cut." This was told me by his manager when I called Monday morning to learn their intentions. The manager followed instructions, and the "cut" has been and is still on. Before the cut Rudolph Carssow, vice-president Allan-Pfeiffer Chemical Co., very seldom visited here; since the cut he has been down about once a week. It is their boast that they can buy goods for less than we can, presumably through the Allan-Pfeiffer Chemical Company house, and therefore sell them cheap and still make a good profit. The "gist" of my last sentence appeared in one of their ads., as any of my brother druggists will corroborate. After considering what I have written you in the preceding pages, I cannot but believe that Rudolph Carssow, vice-president of the Allan-Pfeiffer Chemical Company, St. Louis, Mo., is proprietor, or at least part owner, in this retail drug store and that he has the "whole say" as to the direction of its affairs. Prior to the cut instituted by them patents were selling at the prices printed on the wrappers, and there was no complaint. We had handled a few of Allan-Pfeiffer Chemical Co.'s goods before this, and although there was little demand for them we were willing to supply them when called for; now we will leave them severely alone. I am satisfied that the Allan-Pfeiffer Chemical Co. is cognizant of these facts and the fact that they allow their vice-president to continue his practices against reputable trade is sufficient for me to cease handling their goods.

I have stated things just as I know them. If there is anything that you would like to know further would be glad to serve you as best I can. In closing, I want to congratulate you for your stand against firms of such stripe. I am,

Very truly yours,
ROBT. W. LANNING.

St. Genevieve, Mo., June 4, 1900.

Editor Pharmaceutical Era: Yours of June 1 at hand and noted. It gives me great satisfaction to be able to substantiate what Mr. Glaser wrote you in every particular. Mr. Carssow told me personally that he was connected with the Carssow Drug Company, and when I went to the manager, Feibelman, and O. C. Carssow, brother of the vice-president of the Allan-Pfeiffer Chemical Company, to get them to reconsider their cutting move, but Feibelman and Carssow, Jr., said they had strict instructions from Rudolph Carssow, vice-president of the A.-P. C. Co., to cut. In fact, young Carssow said Rudolph Carssow, of the A.-P. C. Co., was sole owner. Furthermore, I wrote Mr. Allan, of the A.-P. C.

Co., of what Carssow, his vice-president, was doing down here, and he ignored my letter entirely. It was intimated to Carssow that this company would be placed in a bad light were the matter taken up in the drug journals, and he said it would give them free advertising and expressed more determination than ever to cut prices.

Would suggest that you write Dr. R. W. Lanning and Hinch & Douglas, also druggists of this place, for further confirmation of Mr. Glaser's article. There is abundance of other evidence to prove that Carssow, of A.-P. C. Co., is backing Carssow Drug Company. Will state that Carssow, of A.-P. C. Co., is in this town about once a week since Carssow Drug Company opened, we presume looking after the business. I think the shortest way for the A.-P. C. Co. out of this would be to disconnect Mr. Carssow with their concern, for they can rest assured that the Carssow Drug Co. will stick to him like the "little old man of the sea."

Respectfully,
G. M. RUTLEDGE,
Of Rutledge & Co.

St. Louis, Mo., June 6.

Editor Pharmaceutical Era: Yours of the 1st received. I will say that I was informed through one of Carssow Drug Co.'s clerks that Mr. Rudolph Carssow, vice-president of the Allan-Pfeiffer Chemical Co., is president of the Carssow Drug Co., of Ste. Genevieve. You can get full information by corresponding with Rutledge & Co., R. W. Lanning, or Hinch & Douglas, all of Ste. Genevieve, Mo.

I can safely say that Mr. Carssow, A.-P. C. Co., was connected with the cut-rate store at Ste. Genevieve when I left there, and am still under the opinion that he is with them yet, or at least he makes a flying trip there each Sunday.

MARTIN J. GLASER.

HOW TO INDEX PATENT MEDICINES.

I would list Paine's Celery Compound three times:

- (a) Celery Compound, Paine's.
- (b) Compound, Paine's Celery.
- (c) Paine's Celery Compound.

Articles like Castoria, Maltine, Laxol, Tiko, etc., need only be listed once.

The above is the only correct way to get up a price list that will be of use to a druggist.

C. KUEHNE.

Jersey City Heights, N. J.

Editor Pharmaceutical Era:—The matter of indexing patent medicines is very perplexing. (A) Paine's Celery Compound, is the best in most cases, but in this vast country there may be several more celery compounds that are sold, at least locally, and a person moves from one place to another. The party goes to his druggist in the new place and asks for Celery Compound. The druggist puts out Paine's. The customer says "No, I don't want that." The druggist says, "Who makes it?" Customer says, "I do not know." Now you have a task before you. Get out your list and begin trying to find somebody else who makes Celery Compound. If the Celery Compounds were together you would run down the list and read:

Celery Compound,	Paines.
" "	Smith's.
" "	Jones'.
" "	Stearns'.
" "	Woods'.

Woods? Yes, that's the one. Of course celery compound is something that no one is liable to have any trouble with, but there are lots of others that we only have an occasional call for. A case in point. Some seven or eight months ago a customer came and asked for Oil of Gladness. That was before we had your Blue Book, and we had quite a time finding it.

We have written a lot and are no better off than when we began. The Blue Book is the best of its kind we have ever seen, and you cannot suit everybody if you had a book three times as big. Respectfully,

Meadow Grove, Neb., June 5. MORRIS & CO.

Would list it as "A" style. You are right.
 H. F. HASSEBROCK.
 St. Louis, Mo.

In the issue of May 24, 1900, of the Pharmaceutical Era I notice an article, "How Would You Do It?" I would list Paine's Celery Compound according to "A." This gives you "Paine," five letters as in index and you may expect to find it near the beginning of the letter "P" list. "B" and "C" arrangements both have serious objections, according to my idea of the value of time to a hard-worked druggist.

Albertville, Ala.

JOHN L. RAY.

CHARGES OF JEALOUSY AND ILL WILL.

New York, June 4.

Editor Pharmaceutical Era:

It is a pity that jealousy and ill-will should play such an important role in the activity of some societies. This world would be a better place to live in if societies, as well as individuals, observed the Golden Rule a little more religiously. Here, for instance, members, or rather the officers, of a certain society, which shall remain unnamed (but whose name can be easily surmised), jealous of our phenomenal growth, are going about and making statements which they cannot but know are absolutely false. This society is not dominated or dictated to by any individual or set of individuals. There is absolute freedom of speech as there is freedom of thought. No greater proof could be brought in support of the above statements than the fact that at the very first annual meeting the society passed a resolution, endorsing the college diploma prerequisite clause, which must have been extremely distasteful to some of the original organizers and incorporators of the society. No, in this society everything is not cut and dried beforehand as it is done in some other societies we have heard of.

The Greater New York Pharmaceutical Society was not organized for the purpose of antagonizing anything or anybody in particular. Should any of the other societies introduce a bill or propose a measure for the benefit of the profession of the city or the State as a whole, this society will give it its full influence and its unqualified support, and it will expect the same courtesy in return. But should there be introduced a bill for the selfish benefit of a clique, then this society will fight it relentlessly. It will also combat in general all shams, humbugs, racial prejudices and despotism. To do this it possesses not only the numerical strength and the capital, but what is more important, it possesses the brains.

Fraternally,

THE GREATER NEW YORK
 PHARMACEUTICAL SOCIETY.

L. BLOCK, Secretary.

RELATIVE EFFICIENCY OF GRADUATES AND NON-GRADUATES.

Muncie, Ind.

Editor Pharmaceutical Era:—Noticing the article in the Era under the heading "Lost Confidence in Graduates," by some gentleman from Georgia, I want to discuss the opposite view in a few words.

We find drug clerks whom we have no confidence in, regardless of their being graduates of pharmacy or not. We should view this in a fair way, giving the graduate and non-graduate the same natural ability. Then we can see whether the college training is beneficial and profitable or not. Two years will complete an average course in pharmacy (nine months a year). Take two young men of the same ability. Place one in an ordinary drug store for two years; the other in a school of pharmacy for two years, and the comparison will certainly show which is the better. Put them before a board of pharmacy like the New York City Board, and if (other pass it, it will be the graduate. The young man with his two years' practical experience has no show to pass the examination on materia medica, toxicology and posology. It is a common thing to hear a druggist say: "A graduate is all right with his prescriptions and manufacturing work, but is a poor salesman." That is not necessarily a fact. He can be a good all-round man just as well as if he had never seen the walls of the labora-

tory. I would be pleased to hear from others. Why not have a friendly discussion, showing advantages and disadvantages of being a graduate. Sum them up and decide to our own satisfaction which is the greater.

FRANK W. MILLER, P. G.

CHECK ON COUNTERFEIT GOODS.

Cleveland, O., June 5.

Editor Pharmaceutical Era: Two arrests were reported to have been made in Cleveland last week for counterfeiting Peruna and Pinkham's Compound. The parties operating here, we have been informed, have been followed from different States. Their last stand, we believe, was Pittsburg, where they succeeded in throwing upon the market quite a quantity of their imitated patents, and as their efforts were frustrated in this town, we believe that the enclosed item might be of some interest to your readers.

Very truly yours,

E. R. COOPER,

Organizer Northern Ohio Druggist Association.

A Protection to Manufacturers.

In this day of imitators and counterfeiters no caution should be neglected to protect trade marks and copyrights. It is only a few weeks ago that a complete counterfeiting outfit was secured by detectives that had been used for placing upon the market several of our most widely-known and advertised preparations.

The exterior package, label and bottle were so complete as to deceive even the manufacturers themselves, and of course it goes without saying that the innocent public were defrauded into buying absolutely worthless compounds.

No means should be neglected by druggists to protect the public and manufacturer. The excellent system adopted by the druggists of Northern Ohio, although they are unable to remove worthless imitations and spurious counterfeits from the shelves of the department and cut rate drug stores, enables them to detect within a few hours any counterfeiter who may seek to foist his goods upon them. This is their system:

Messrs. _____ Cleveland, O., _____ 1900.

Gentlemen:—

A salesman's card has this day been issued to your representative upon the enclosed conditions. If not accepted by your firm, please telegraph us immediately at our expense.

Very truly yours,

NORTHERN OHIO DRUGGIST ASSOCIATION.

By E. R. Cooper, Organizer.

Each manufacturer is fully informed upon the whereabouts of his representatives, and by this means has a complete check upon persons who by falsely representing his firm may seek to travel on his good name.

PARIS GREEN AS AN INSECTICIDE.—A recent bulletin issued by the Michigan State Agricultural Experiment Station gives the following formulas and directions for the use of Paris green as an insecticide: For spraying, shake 1 pound well burnt quick lime in hot water, shake 1 pound of Paris green. Allow this mixture to stand over night. Strain and then stir it into from 150 to 250 gallons of water. Keep the liquid well stirred while spraying. For most insects 1 pound to 200 gallons of water is sufficient, and at this rate it will not injure the plant. Stone fruits, such as peach, plum and cherry, should not receive a spray much stronger than this, but apples and pears, etc., may be sprayed with a mixture considerably stronger; namely, 1 pound to 150 gallons of water. Potatoes may be sprayed with 1 pound to 100 gallons of water. Dry method.—While ordinarily it is most economical to use Paris green in the form of a spray, in some instances where only a few plants are to be treated, or where no pump is available, it is expedient to use it as a dry powder. It should then be mixed at the rate of 1 pound to 100 pounds of plaster, flour or air-slaked lime, and dusted on the plants through a sack of burlaps, or some loose, coarse stuff. It is best to make the application in the morning when the dew is on the plant. Never apply dry poison where the wind can blow the powder into pastures or places where horses or cattle are feeding. Paris green is perhaps the safest and surest remedy for destroying "chewing" insects.

A STUDY IN EXTRACTION.

By PROF. EDGAR L. PATCH.

EXTRACTION AS RELATED TO ORGANIC MATERIA MEDICA.

The Organic Materia Medica, consisting of organized material of vegetable or animal derivation, is built up of a great variety of substances, but for study in relation to extraction by solvents we may classify them as follows:

Class 1—Acids.

In combination with alkaloïds, with inorganic bases, free or associated with coloring matters and resins:

Acetic Acid. Benzoic Acid. Lactic Acid.
Formic Acid. Gallic Acid. Tannic Acid.
Malic Acid. Oxalic Acid. Citric Acid.
Tartaric Acid, and other carbon acids.

Most of the combinations are soluble to some extent in water, and more soluble in hot water, but the gallic and tannic acid combinations are more freely soluble in alcohol or mixtures of alcohol and glycerin or of alcohol, water and glycerin.

Solutions of gallic and tannic acid combinations are liable to oxidation and continuous slow precipitation occurs in consequence.

In some cases the therapeutical activity is entirely changed, as well as the physical properties, as in kinin-tannic acid.

No satisfactory method of deoxidation or restoration has been discovered, but the presence of glycerin aids in retarding the change, and storing in small, filled bottles to exclude access of air is desirable.

Class 2—Albumens.

Indefinite compounds represented approximately by $C_{12}H_{12}N_{12}O_{2}E$, soluble or partly soluble in cold water, hardened or coagulated by hot water, soluble in acetic acid and dilute mineral acid solutions and in weak alkaline solutions, but insoluble in strong alcohol, ether, chloroform, benzene and petroleum ether. Separated from other principles they form a yellow solution with nitric acid (Xanthoproteic acid), changed to orange red by ammonia. They are precipitated from solution by mercuric nitrate (Millon's reagent), leaving a red mother liquor. As a rule, the presence of albuminoids in a preparation is objectionable, as they induce decomposition. Boiling and fermentation are sometimes resorted to to remove them.

Class 3—Alkaloids.

Bodies alkaline in character—from alkali and eidos-form. Their alkalinity varies greatly, but under proper conditions they will all unite with acids to form salts. As found in drugs, they are frequently in combination with native organic acids, in which shape they may be soluble in water, but usually are more soluble in alcohol, or in mixtures of alcohol and water. They are freed from their native acid combinations by alkalies, and then are largely insoluble in water, more soluble in alcohol, in amylic alcohol and still more in ether, chloroform, ether-chloroform mixture, benzene and petroleum ether.

In the case of volatile alkaloids, the addition of an acid to the solvent prevents loss of the alkaloid in process.

Types of non-volatile Alkaloids.—Aconitine, Atropine, Morphine, Quinine, etc., etc.
Types of Volatile Alkaloids.—Nicotine, Coniine, Loheline.

Class 4—Carbohydrates, or Compounds of Carbon and Water.

Carbon, six, with five of water, $(C_6H_{10}O_5)_x$, soluble starches and dextrans, soluble in cold or hot water, insoluble in alcohol, ether, chloroform, benzene and petroleum ether.

Insoluble starches and inulins, not acted on by cold water, unless ground with it, and only partially dissolved by boiling water, insoluble in alcohol, ether, chloroform and petroleum ether.

Cellulins and lignins, $(C_{10}H_{16}O_2)_x$, insoluble in water cold or hot.

Glucoses—or Hexoses—monosaccharides or simple sugars, Carbon, six, and six of water, $C_6H_{12}O_6$, existing as dextrose (right rotatory glucose) and as fruit sugar, fructose or levulose (left rotatory glucose), soluble in water cold or hot, not very soluble in alcohol, and insoluble in ether, chloroform, benzene and petroleum ether.

Saccharoses, polysaccharides or complex sugars, as Cane sugar—Carbon, twelve, and eleven of water, $C_{12}H_{22}O_{11}$. (Lactose, or milk sugar, $C_{12}H_{22}O_{11}+H_2O$, found in milk.) Maltose, $C_{12}H_{22}O_{11}$, soluble in water cold or hot, slightly soluble in alcohol, and insoluble in ether, chloroform, benzene and petroleum ether.

Gums resembling Arabin, $2(C_6H_{10}O_5)+H_2O$, or $C_{12}H_{20}O_{11}$, soluble in cold or hot water, insoluble in alcohol, ether, chloroform, benzene, and petroleum ether.

Insoluble gums, resembling bassorin, $2(C_6H_{10}O_5)$ or $C_{12}H_{20}O_{10}$, only partly soluble in water cold or hot, and insoluble in alcohol, ether, chloroform, benzene and petroleum ether.

Class 5—Chlorophyll, or Leaf Green.

A composite substance, occurring in green grains or particles, resinous in character, said to contain iron and to perform the functions of decomposing CO_2 in presence of sunlight, liberating O_2 and fixing the carbon with water to form the carbohydrates, and also forming the albumens, the hydrocarbons, etc., making up vegetable structure. Very slightly soluble in water, soluble in alcohol, ether and chloroform.

Class 6—Coloring Matters and Extractive.

Consisting of indeterminate material, soluble in water, alcohol and water and alcohol, altered by age, by heat and exposure, becoming insoluble in the original menstruum, producing precipitates that must be removed by filtration. As produced in the process of preparing solid extracts by evaporation it is called apotheme, and explains the non-solubility of solid extracts in the menstrua employed in preparing them.

Class 7—Gluconides.

Organic principles that yield glucose and some other body when acted upon by ferments and diluted acids. Some are soluble in water, others in alcohol and water and more in alcohol; often insoluble in ether.

Types: Achillein, from milfoil; Adonin from Adonis vernalis; Esculin from horse chestnut; Amygdalin from almond, etc., etc.

Class 8—Neutral Principles.

Active, organic principles that will not form salts with acids, and will not yield glucose on decomposition. Some soluble in water, others in alcohol. As a rule they are not freely soluble in ether.

Types: Absinthin, Anemonin, Quassin, Santonin, Smilacin.

Class 9—Fixed Oils, Wax and Fat.

Insoluble in water. Partly soluble in strong alcohol, more so if the drug contains a volatile oil to aid in solution. Soluble in ether, benzene, chloroform and petroleum ether.

Class 10—Volatile Oils, Oleoresins, Resins and Camphors.

Insoluble in water, soluble in alcohol, and in some cases soluble in ether, chloroform, benzene and petroleum ether.

Class 11—Pectous Compounds and Humors.

Pectin, allied to the sugars on one hand, being soluble in water, and to starch on the other, being precipitated by alcohol. Pectin is gradually acted upon by the ferment pectase and oxidized to insoluble pectous acid, causing gelatinization. This oxidation or change is hindered by alkalies, as they form soluble compounds with the pectous acid, hence ammonia is used in Syrup of Senega, Fluid Extract of Senega, etc. Pectin is yielded

by Columbo, Dandelion, Gentian, Rhubarb, Senega and other drugs.

Recapitulation.

Cold water dissolves in whole or part, Albumens, organic acids and their combinations; some alkaloidal combinations, coloring matters, extractive, some glucosides, gums, some neutral principles, pectous bodies, sugars.

Hot water coagulates albumens and otherwise acts same as cold water on above.

Alcohol dissolves organic acids and their combinations, alkaloidal combinations, coloring matters, extractive, some glucosides, some neutral principles, volatile oils, oleoresins, resins, chlorophyll.

Ether dissolves alkaloids, fixed oils, some glucosides, solid fats sparingly, waxes sparingly, hard resins sparingly, volatile oils, oleoresins, soft resins, chlorophyll.

Chloroform dissolves alkaloids, fixed oils, some glucosides, solid fats sparingly, waxes sparingly, hard resins sparingly, volatile oils, oleoresins, soft resins, chlorophyll.

Benzene dissolves some alkaloids, fixed oils, some glucosides, some solid fats, waxes, hard resins sparingly, volatile oils, oleoresins, soft resins, chlorophyll.

Petroleum ether dissolves some alkaloids, fixed oils, some glucosides, solid fats sparingly, waxes very little, some hard resins, volatile oils, oleoresin, soft resins, chlorophyll sparingly.

EXTRACTION.

Extraction is performed by maceration, digestion or percolation. Maceration, derived from the Latin, *macerare*, to make thin (from *macer*, thin or meagre) implies that a body, subjected to its action, is diminished in bulk or volume.

Maceration consists in exposing a substance to the action of a solvent for a lengthened time, at ordinary temperatures. It is usually accomplished by mixing the substance, in a suitable state of comminution, with the solvent, and allowing them to remain together in some vessel, which permits exclusion of dust and an access of air.

Digestion, derived from the Latin, *digestio*, a separating into parts, is a term applied to maceration at elevated temperatures, yet under the boiling point of the menstruum. It is nearly synonymous with simmering. After the process of maceration or digestion the drugs are usually saturated with the strongest portion of the liquid, which is wasted unless by some means it is expressed, or unless the drugs are allowed to drain, and then are washed with a fresh portion of the solvent.

Absorbent material in coarse pieces, like squill, garlic, etc., cannot be so treated, but must be expressed, and the drugs washed by moistening with fresh solvents and again expressed.

Maceration is officially used in making syrup of garlic and the tinctures of balsams and gum resins that contain an excess of soluble matter interfering with percolation. Such are asafetida, benzoin, guaiac resin, tolu, etc.

It is also employed when it is difficult to reduce the drug to a suitable condition of powder, as castor, raisins, tonca bean, vanilla bean, etc.

Maceration in many cases involves the application of dialysis. The hardened cell walls of the dried drugs are first moistened and softened by the action of the menstruum. Then the encrusting matter of the cell interiors, consisting of the soluble active and extractive portions of the drug that have been left in a dry condition by the driving off of the water of the plant juices in drying the drug, are softened and then dissolved.

The menstruum, loaded with extractive, sinks by gravitation to the bottom of the mass. If maceration is too long continued, this dissolved matter diffuses itself in the menstruum, and ultimately the cells are filled with menstruum containing extracted matter.

Hence too long maceration is a disadvantage, and it is an advantage in extensive operations to draw off the liquid from the bottom of the container rather than to dip it from the top.

Percolation, derived from the Latin, *colare*, to strain, and *per*, through, consists in passing a liquid, termed a menstruum, through a drug in suitable condition of fineness, packed in a proper vessel, with the intention of removing from it its soluble matter.

For its successful application the drug should be uniformly moistened and allowed to swell before being firmly packed, and should be then saturated with the menstruum and allowed to macerate for a time, permitting dialysis and gravity to carry to the bottom of the percolator the supersaturated liquid that properly forms the first portion of the percolate.

To insure uniform moistening of large quantities of drug, after mixing with the menstruum it should be passed through a coarse sieve, removing all lumps and bringing all portions into contact with the menstruum. After packing in the percolator, when the menstruum is poured upon the drug, provision should be made for the escape of air from the interstices of the drug, (Fig. 1). Otherwise, the descent of the liquid is hindered, or the air compressed by a large mass of liquid may form cavities in the drug mass that hinder proper extraction. This is illustrated in the accompanying cut. If the percolator is allowed to stand with open outlet, the moment it commences to drop may not be observed, and a portion of the liquid may pass out. This is guarded against by having the outlet connected with a glass tube whose top is higher than the surface of the liquid in the percolator. When maceration is complete, this side tube is removed and the flow started by immersing the outlet tube as in Fig. 2. If too small portions of the powder are packed in the percolator, the descent of the liquid is intermittent, and if unequally packed the descent is uneven. In small operations it is best to put the entire quantity of moistened powder into the percolator and press it down by means of a flat-bottomed bottle that covers a large portion of the surface of the powder. (Fig. 3). Following this plan, the upper portion is compressed firmer than the lower, but coming in contact with fresh unsaturated portions of the menstruum, the flow is uniform with that of the lower portion acted upon by a liquid increasingly saturated and of increasing density. The surface of the drug should not be allowed to become dry during percolation. This would permit the entrance of air to the interstices of the mass and hinder extraction by the fresh portion of menstruum supplied. (Fig. 6). The glass valve shown in the accompanying cut, (Fig. 7), has been in use by the writer for a score of years for regulating the flow and controlling maceration. Passed through the cork so as to allow a proper rate of flow during the day, at proper temperature, it is drawn into the cork at night, the flow stopped and maceration allowed to proceed until morning. Or, if continuous percolation is desired, it is so placed as to reduce the rate of flow during the night, when the temperature is lower than in the day time. In fitting a cork to some glass percolators with unfavorable shaped outlets it is well to roughen the cork with a coarse file or rasp. It will then retain its position much better.

Legitimate objection is made to the use of rubber tubing because of the difficulty of securing cleanliness, liability to rupture, cost and the solution of the rubber in percolates containing volatile oil. (Fig. 8).

We remember making this suggestion to a manufacturer some eighteen years since, to be met with the observation that theory was one thing and practice another. When a few nights afterward he lost three or four gallons each of fluid extract of buchu and fluid extract of cubeb and met a contingent loss from their flowing on to other goods, he was convinced that theory and practice may be united.

Hot percolation is sometimes advisable. It is conducted in a jacketed percolator arranged with a disk condenser fixed to its top, and a condenser to cool the percolate. Care should be exercised in regulating the heat so as not to volatilize the menstruum and prevent percolation. (See Fig. 9.)

Other details and principles of this important process must be considered. The percolate obtained may be of such strength as to constitute a tincture, or be concentrated enough to form a fluid extract, each cubic centimeter of which represents a gramme of drug, or it may be obtained for the purpose of producing a solid extract or a powdered extract. There is great lack of uniformity in these preparations, due primarily to great diversity in the character of the drug used, and second-

arily, to the difference in the character of the menstruum employed.

The indiscriminate use of glycerin in fluid extracts may yield products of greater density and appearing to be stronger, while actually weaker in characteristic activity. The greater weakness in extractive and the greater density of the product secure greater permanence on account of less likelihood to precipitation, while at the same time an economy results in substituting glycerin for the more costly alcohol.

Manufacturers of refined wood alcohol and some investigators assert that this product is largely used as a pharmaceutical solvent, but we have no personal knowledge of such being the case.

The greater toxic action ascribed to wood alcohol should make its use objectionable in all internal preparations, and its use in soap liniment and similar preparations is against the adulteration law of many States.

It is difficult to adopt any single method for standardizing fluid extracts. Specific gravity is not conclusive, as it can be altered by addition of glycerin, is altered by unequal loss of alcohol during the process, and is affected by the different amounts of extractive yielded by the same drug obtained from different sources. We have found a range of difference of 100 per cent. in the extractive yielded by different samples of the same drug to the same menstruum at the same temperature. Again, the extractive is not uniform in its composition. One sample of drug may give 15 per cent. of extractive and another sample of the same drug yield 25 per cent. of extractive, and yet the quantity of volatile oil, or resin or of bitter principle be the same in each. Hence the best that can be done is to adopt a menstruum that will hold in solution a proper proportion of the active extractive matter of an average drug, remembering that a drug much above the average in extractive or in resinous matter will necessarily precipitate much worse than the normal product. To guard against such variation it is sometimes the custom to store for some months and allow complete precipitation. An objection to this is the uncertain weakening of the preparation. We have examined the precipitates in such storage tanks and found them three or four times as active as the original drug, although some authorities state they are inert extractive only.

In using the process of reprecipitation the reserves must be occasionally tested to ascertain if their proper alcoholic strength is maintained. In the case of alkaloidal drugs, a uniform alkaloidal strength can be advocated as soon as reliable methods of assay are determined upon.

PHARMACY IN AUSTRALASIA.

Sydney, N. S. W., May 9, 1900.

The wholesale and retail chemists and druggists of Sydney, and in fact the whole colony of New South Wales, have found in the bubonic plague the best friend they have ever known. From the moment it broke out in Sydney, in the rear of the wharf from which the A. & A. line steamers used to take their departure for San Francisco, the scare drove every householder to the drug store for one or other disinfectant, and the trade thus begun went on at an alarming rate for months. The wholesale houses bought all the stocks of chloride of lime, carbolic acid, and other disinfecting fluids, as well as permanganate of potash, that were carried in Victoria, South Australia and Queensland, and prices naturally went up. The Government of the N. S. W. and the city corporation gave the wholesale drug stores their own prices for all that could be supplied, principally chloride of lime, and many retailers having sold out could not obtain further stocks.

The profits made were enormous, and the druggmen don't care how long the plague lasts, for they are gathering in the richest harvest of their business lives. In addition to scattering tons and tons of disinfectants about the wharves and places where filth had accumulated for the best part of a century, thousands of bags of chloride of lime were emptied into the drains and

sewers of Sydney, and the Government and city corporation distributed disinfectants among the people free of cost. The object of buying up the stocks of permanganate of potash in the three colonies named in the foregoing paragraph has been to partly stop gold mining operations, for the mines cannot obtain permanganate for the chlorination process.

The gallop of the early closing act, as it was intended to apply to pharmacists, has been rudely cut short. The act provided that all pharmacies should close at 9 p. m. on five days of the week, and 11 p. m. Saturdays, allowing them to open to serve a customer after 9 p. m. for the purpose of supplying drugs, medicines, patent and proprietary medicines, and surgical appliances. Three pharmacists, of whom Mr. Bellemey was leader, refused to close their doors at 9 p. m., and Mr. Bellemey was prosecuted. He won the case in the lower court, and the crown appealed to the Supreme Court. The appeal was heard on the 21 inst. by the Chief Justice and two other Judges, and Mr. Bellemey was again victorious, the Full Court deciding there was nothing in the act to compel any shopkeeper to close his door. The Legislature defined the word "close" to mean: "Closed against the public for the purposes of trade." These last five words, read in conjunction with other sections of the act, proved fatal to it. The Judges spoke very strongly against the law denouncing it as a drastic measure—apart from the attempt to make it close and fasten up a man's door—and totally opposed to the rights of citizenship and the liberty of the people.

The Victorian Legislature passed the "Indecent Advertisements Act," otherwise named "The Crimes Act, 1900," in February last. Its provisions are far-reaching and the penalties heavy. It behooves firms in the United States who put up patent and proprietary medicines and pills to note that "no picture, advertisement or any printed or written matter in the nature of an advertisement . . . which refers or relates to syphilis, gonorrhoea, nervous debility, or other complaint or infirmity relating to sexual intercourse, abuse, pregnancy, or to any irregularity or obstruction of the female system, etc., etc." will be allowed as a label or wrapper advertisement. Any pharmacist selling a bottle of stuff or box of pills with a label or wrapper bearing any of the words above is liable to a fine of \$50 for the first offence and \$250 for a second offence. The pharmacists wish this information made known in America—it has already been published in Great Britain—as they urge that if they are obliged to examine the labels on patent medicines and pills, the appearances and "get-up" will suffer so much that the trade will be lost altogether. Similar acts are in force in New Zealand and South Australia, and convictions have already been obtained in New Zealand for the sale of pills with an obscured inner wrapper held to be indecent.

The Customs authorities in New Zealand have gazetted the following: Albo-carbon (identical with naphthalene), oz disinfectants, free; formalin, formalith and formalin streupivier, as disinfectants, free. Health foods, namely, Granola, Granose, Nuttose, Nutt-Butter, Bromose, as provisions, n. o. e., 20 per cent.

K-mphrone, Prosser & Co., wholesale druggists, New Zealand, had \$200,710 profits to be divided among the shareholders at the March annual meeting.

The pharmacists of New South Wales are pleased to hear that Charles W. Mills, M. D., D. D. S., who is a registered pharmacist of Sydney, is on the Executive Committee of the College of Surgeons, San Francisco, and is also assistant professor to the chair of Dental Pathology and Therapeutics.

Elliott Bros., wholesale druggists of Sydney, are extending their mammoth business to Tasmania by opening a wholesale branch at Hobart.

"Thialion," manufactured by the Voss Chemical Company, of Danbury, Conn., U. S. A., has been registered under the trade marks in New Zealand. This preparation is in much demand in Sydney and Melbourne.

At the time of writing the bubonic plague has reached Brisbane, and is rapidly spreading in Sydney. We have had over 200 cases in Sydney proper, with 70 deaths.

Chloride of lime has gone up in price from \$67 to \$130 per ton, the present price. Rat catching at sixpence per rat is now quite a lucrative industry.

(Special Correspondence.)

THE PARIS EXPOSITION OF 1900.

THE UNITED STATES EXHIBIT.

THE Paris Universal Exposition of 1900 was formally inaugurated on April 14 last. Foreign tourists and provincial visitors came in their thousands during the Easter vacation, and the hotels, etc., reaped a golden harvest. The dull wintery weather which had prevailed up to the eve of opening changed on April 14 to glorious sunshine, which has, with but few intervals, favored the Exposition up to the present. This reconciled the crowd to the inspection of the outside of the buildings only, for until quite recently the interior portion

Was Not Ready.

and we have accordingly been unable to publish any detailed description. In fact, the opening would have to have been delayed until mid-May or early June had it been absolutely necessary to present the Exposition to the public in a complete state.

Our illustrations represent some of the principal features—the new bridge with the two Art Palaces, the buildings on the Esplanade des Invalides in which the Section of Applied Art, Decoration, etc., is located (in the foreground may be noticed the captured cannon that ornament the fore court of the home of France's veterans); the Champ de Mars industrial exhibit and the Street of Nations, or

Foreign Pavilions

along the Seine. The front building in the engraving belongs to Turkey, the white-domed United States Pavilion is the second, Austria, Bosnia, Hungary, Great Britain (practically invisible in the photo) follow, Belgium, Norway, the spire of Germany and the towers of Spain and Monaco may be distinguished on the right; the other pavilions are beyond or behind those shown. The contents of these pavilions are as varied and characteristic as their architecture. In the wooden chalet of Norway are model boats, fishing nets, furs, etc., the great attraction being the model of Nansen's "Fram" with the great explorer's outfit; Sweden shows her peasants at work, and a couple of charming dioramas of Stockholm and Lapland; Italy's pavilion is full of glassware, porcelain and art work; Germany's of printed books, illustrations, etc.; Bosnia's and Turkey's of Oriental ware and curios. Other nations prefer to treat their pavilions as reception halls; Spain hangs her walls with wonderful old tapestry, shows some fine specimens of armor and leaves the rest as a comfortable lounge; Austria's stately hall is adorned by a small collection of choice works of art; Great Britain's pavilion is designed for the Prince of Wales' use. This was formally opened on May 23.

The United States Pavilion

in the same way, does not contain exhibits, but is fitted up as a resting place and rendezvous for American visitors to the Exhibition. The whole of the centre of the building forms a vast hall surrounded by galleries, on the balustrades of which are fixed shields, each bearing the name of a State of the Union, and all decorated with the stars and stripes. Here is a United States postoffice, wondrously new to French visitors. Marble busts of McKinley and Lincoln are placed at the foot of the staircases. The first floor contains three reception rooms, partitioned off. These are the California, Massachusetts and the New York State rooms, simply yet richly furnished, supplied with American newspapers, etc., just the place to rest half an hour after a tiring day at the Exhibition.

Above are the offices allotted to the various commis-

sioners and their general meeting room, with its official green cloth table and leather-backed armchairs. On the top floor is a dainty little Louis XVI. salon furnished in white and soft grey-green, devoted to the Woman's Organization; next door is a business-like apartment with plain comfortable chairs. American roll-front bureaux and revolving bookcases full of plithoric directories and encyclopedias heavy with useful information—the room of the American Chamber of Commerce. A few good paintings adorn the walls of the various rooms, a portrait of Elihu Root, a painting of the "Oregon" off Santiago, various landscapes and portraits, studies, etc. A smoking room has not been forgotten, and there is an American bar in the basement.

The Formal Opening

of the pavilion took place on May 12, and it is calculated that some 5,000 or 4,000 Americans assisted at this ceremony, including a goodly portion of the fairer sex. In fact, Parisian connoisseurs discuss whether this United States inauguration or the Spanish function, a few days previous, was the prettier; the respective claims of the rival nations being still further complicated by the personal preferences for the blonde or brunette style of beauty.

Among the sterner sex present were Monsieur Picard, Chief Commissioner of the 1900 Exhibition; General Horace Porter, United States Ambassador at Paris; Messrs. Peck, Woodward, Louis Stern, Peter Jansen, A. E. Valois, O. H. Fethers, H. de Young and A. H. Sanders; Sir Edward Monson, British Ambassador at Paris; the Duke of Sesto, Spanish Commissioner; M. Delyannis, Greek Minister; Munir Bey, representing Turkey, etc., etc.

The two architects, Messrs. Charles Coolidge and Morin Goustiaux, formally handed the pavilion over to Mr. Peck, and Mr. Peck, in his turn, officially delivered it to M. Picard, to whom he handed an elegant golden key made by Tiffany. The French Commissioner suitably replied, referring to the friendship of the two great republics, and concluded by asking all present to salute the Stars and Stripes and give three cheers for the United States, its President and Mr. Peck himself. Then Sousa's band struck up "The Star Spangled Banner" and the "Marseillaise" and the handshaking began. It is estimated that nearly 6,000 people passed through the pavilion, at least half of whom saluted the Commissioners. A long list of well-known names might be given if space permitted.

M. PICARD.

and the handshaking began. It is estimated that nearly 6,000 people passed through the pavilion, at least half of whom saluted the Commissioners. A long list of well-known names might be given if space permitted.

The United States Machinery Palace

in the Vincennes annex of the Exhibition was formally inaugurated by Mr. Peck three days later; Sousa's band again enlivened the ceremony by its cheerful and patriotic strains.

We do not propose to describe in detail the United States exhibits, but merely to refer to the one or two groups most likely to interest our readers.

The Educational Group

in the Champ de Mars is an interesting one; but, in this as in other cases, the United States have been cramped for space. In a general way we may remark the principle has evidently been to divide the available ground

STREET OF NATIONS, SHOWING U. S. PAVILION. CHAMP DE MARS, SHOWING CHEMICAL INDUSTRIES BLDG.

into two halves, one half being monopolized by French exhibits and the other allotted among foreign countries, often a dozen or more in number.

The purely educational part of the American exhibit is installed on the first floor in a handsome court decorated in white and terra cotta, about 50 feet by 40. The United States system of primary and secondary education is illustrated as fully as space permits by diagrams, text books, photos of schools, etc. The right hand portion is devoted to the great universities, a few choice specimens of scientific or historical research are shown and much interesting information given by books and illustrations. It is greatly to be regretted that it was not possible to put the details of these remarkable institutions before the French public in general and the educational world in particular, on a more complete scale. Possibly what is shown will arouse sufficient interest to secure a larger allotment on other similar occasions. The picturesque buildings, trees and greensward of Princeton, etc., strike the eye as being so very different to the barrack-like city buildings of French universities, while the attention of the Parisian visitor is sure to be attracted by the curious playbills of the Harvard "Cercle Francais."

The Commercial Portion

of the American scientific exhibit is on the ground floor in another appropriately decorated court. Additional space has been secured by the simple but ingenious expedient of adding a gallery over the back portion of the court; here the exhibit of various United States publishing firms and magazines has been lodged.

Downstairs we find Lippincott's books, several photographers, some steel engravers, Warner & Swasey's (Cleveland, O.), telescope, etc., and musical instruments

by various makers. There are two or three American articles shown here which are already familiar to most Parisians—Eastman's Kodaks, the Remington and other typewriters, and the National Cash Registers; these latter may be seen nowadays in many of the busier Paris pharmacies. Dentistry is another art in which the Frenchman knows the American is a past master. Gideon Sibley (Philadelphia, Chicago and Wilmington) has a large show of dental instruments and the Ritter Dental Manufacturing Company, of Rochester, N. Y., is also represented. The Kny-Scheerer Co. show a complete surgical equipment suitable for a medium-sized hospital, and distribute printed matter in four languages; we mention this because the polyglot character of a European exhibition is not always realized by Anglo-Saxon exhibitors. Rorick, of Washington, shows air cushions and trusses, and A. A. Marks, of Broadway, New York, artificial limbs.

The Chemical Industries Exhibit

is at the right hand end of the Champ de Mars; the corner dome which forms the entrance may be noticed in our illustration. The United States exhibit is limited in extent (about 3,500 square feet) and it is located on the first floor. In this instance, as in some others, Mr. Peck has not been able to carry out his idea of uniform show-cases. The entrance to the American section is, however, suitably indicated by the handsome white and gold erection which houses the exhibit of the J. B. Williams Company, of Glastonbury, Conn., surmounted by the usual eagles and trophies of flags. This stand, devoted to shaving soap, etc., is one of the largest and most striking in the United States section. Passing by the exhibits of the Michigan Carbon Works, Detroit; Leonard & Ellis, New York; Valvoline; A. R. Bremer Co.'s, Chicago, Coke Dandruff Cure and Hair Tonic, and Marchand's Hydro-

THE INVALIDES BUILDING, APPLIED ARTS.

FINE ART PALACE, VIEWED FROM THE NEW BRIDGE.

zone, Eye Balsam, etc., we come to Wm. R. Warner & Co.'s large stand. The Philadelphia firm of manufacturing pharmacists have a handsome trophy of their various specialties in suitable glass receptacles, bromo-soda being kept well to the fore. A collection of prize medals shows they are no novices at international exhibitions.

The address of "Habana, Cuba" has not been included in the United States section at previous exhibitions, and at once draws the eye to a four-fold white case where Henry Clay and Bock & Co., the important tobacco firms, show the "smokes" so much appreciated in France as elsewhere.

Paints, colors and stains are exhibited by the Murillo Co., New Brighton; and Muzzy Bros., New Jersey, show samples of cold water paint "Aqualine."

Listerine, a standard antiseptic well known on both sides of the Atlantic, has a plain but effective trophy of one dozen boxes. Hard by Seabury & Johnson, of New York and London, show a very large choice of plasters in a white and gold case decorated with the red Geneva cross. Very elegant with its colored glass roof and copper sign and fittings is the show case of Colgate & Co., New York, full of dainty perfumery, while another New York firm, Matheson & Co., Ltd., exhibit white lead samples in barrels and tins. Next to LePage's glue comes one of the most conspicuous features of the United States Chemical Section, B. T. Babbitt's thirty-foot pillar of packages of "Best Soap," surmounted by a globe with American and French flags and flanked by tins of baking powder. On a double stand in white relieved with gold the inscription "Sun-Sen" in gold letters on a dark blue ground draws attention to the superior chewing gum familiar to all Era readers. Kutnow's Improved Effervescent Powder is close by. The next case contains Reger's Californian Perfumes, Mrs. Webb's Medical Healing Soap, Californian Cream of Lemon, etc., while Burney & Smith's (New York) lampblacks, etc., are in close proximity.

Leather is exhibited by Osear Scherer & Brother, of New York, and three Philadelphia firms—Jacobs & Wolters, Duncan Hood & Co. and Leas & McNulty.

A white and gold stand, not altogether dissimilar to the one at the opposite end of the section, closes the United States Chemical Exhibit. It belongs to the Standard Oil Company. One case is devoted to samples of oil-bearing limestone, sandstone, etc., a second to crude petroleum and the other two to the finished product.

The French and Foreign Chemical Exhibits

must be described in a separate article. Several are important and interesting, but all are not yet ready. The same remark applies to the United States Agricultural Section, where many articles handled by druggists are probably to be found, but which has not been opened to the public up to the present as it is still incompletely arranged.

ENGLISH NEWS.

Mr. T. W. Robinson, a well-known pharmacist of Dublin, is among those gentlemen knighted in connection with the honors distributed on the Queen's birthday this year. Sir Thomas Robinson is chairman of the Kings-town District Council and as such was the first official to receive the Queen when she landed in Ireland for her recent visit. He is also a justice of the peace. Although Sir Thomas is an ex-member of the Council and an examiner of the Pharmaceutical Society of Ireland and a director of Hayes, Conyngham & Robinson, Ltd., of Dublin, there is no doubt that the knighthood has come to him in recognition of his public position, and especially in connection with the Queen's tour. Another birthday honor is the companionship of the Order of the Bath (C. B.) conferred on Prof. T. E. Thorpe, LL. D., head of the Government laboratories and president of the Chemical Society.

Arthur Oglesby, of Barnsley, a chemist and also a registered dentist, has been struck off the dentists' register by the General Medical Council, which controls dental as well as medical practice in the United Kingdom. The charge against him was one of advertising to attract practice.

The annual meeting of the Society of Chemical Indus-

try will be held in London on July 18, 19 and 20. Prof. C. F. Chandler, of New York, who is this year's president, will deliver the presidential address at the general meeting, to be held in the Royal Institution on the first day. Visits will be paid to the Davy-Paraday laboratories, the Government laboratories and a number of industrial concerns, and in the evening the annual dinner will take place at the Hotel Cecil. On the second day numerous factors will be seen, and in the evening the Lord Mayor and Lady Mayoress of London, Sir Alfred and Lady Newton, will receive the members of the society at the Mansion House. The concluding day will be devoted to a visit to Oxford University.

A Dover chemist (J. F. Brown) had his premises badly damaged on May 19 during the Mafeking celebrations, owing to his alleged Boer sympathies. His windows were smashed and much injury done in general. He was also followed by a howling crowd on leaving church on the next day (Sunday) and had to seek police protection. Mr. Brown denies the allegations of Pro-Boerism, and any way such excesses are not in keeping with Anglo-Saxon love of justice.

Mr. E. P. Greenhalgh, a young Bolton pharmacist, committed suicide on May 17 by taking prussic acid.

The Export of Carbolic Acid.—On January 11 a proclamation was issued forbidding the export of or coastwise trade in picric acid, trinitro-cresol, carbolic acid and cresylic acid. We have detailed the relaxations of the proclamation which were accorded to wholesale druggists, and we have now to record that by a proclamation dated May 15 the prohibition has been taken off altogether. This is a sign that the Government are so satisfied with the progress of events in South Africa that they consider the restriction no longer necessary.

LET COMPETENCY RULE.

By JAMES H. MILLS, Whitesboro, Texas.

I have observed for some time with interest the agitation of the question in the columns of the Era as to whether college graduation should be legally made a prerequisite in the obtaining of a certificate of practice in pharmacy.

By all means I think that it should not be for many reasons. Yes, let competency be measured with the same standard, whether it be acquired in the lecture room and laboratories of colleges of pharmacy, or by the less fortunate young man who possibly has the care of widowed mother and cannot possibly spare the time and money to obtain his education at a college, but who has the stamina and manhood about him to serve the required apprenticeship time in a retail drug store on barely enough salary for a living, and burn the midnight oil in mastering the theoretical part of his business sufficiently to go before a board of pharmacy composed of thoroughly practical and theoretical gentlemen, and they pronounce him competent for his business. Then, I say, may that man flourish as a green bay tree in the fields of practical pharmacy.

I ask some of these absolute college-requisite defendants if they don't think it would be rather a hard blow or restraint upon self-culture to say, "Young man, you must not aspire to the profession of a druggist until you have blown in what money you have in some college of pharmacy, and if you haven't got the cash to help the college out, you shan't take the text books and learn it yourself, but, unfortunate wretch, farm, press bricks, or go to the Philippines."

I believe in druggists thoroughly learning their business in some way or other. If they haven't the money to attend a college of pharmacy, then they should take a course by mail. It will help them out wonderfully. The Era Course is a good one, as it is thorough and practical.

COUGH BALSAM.—Rothrock (Wis. Med. Rec.) is authority for the following formula: Fluid extract collinsonia, fluid extract asclepias tuberosa, of each 3 drams; glycerine, syrup of tolu, of each, 6 drams. Twenty to 25 drops every 2 or 3 hours. To be swallowed slowly in affections of the throat.

Pharmaceutical Celebrities.

FELIX HIRSEMAN.

It was necessary, in a way, to place under this picture the name of the man it represents, not that he is not well known all over this State, but that the great army of Era readers might, as it were, speak with one of the foremost men in pharmaceutical affairs in this section of the country. Thus is this international introduction of Felix Hirseman made, not only in the likeness but aimed at in this sketch, which is but poor apology for his goodness. Before going further, it might be well to assure those readers who acknowledge this informal introduction, that the body to which the finely-drawn head is attached is not patterned strictly after that of Mr. Hirseman's, but grew in the mind of the artist. Yet it serves a purpose, for it discloses a characteristic of the man not shown in the face—that of humor. It is of little consequence that Mr. Hirseman lives aloof from the crater of his volcano of labor, for his stores (he has two) are located at High Bridge toward the northern edge of this city, but it is of importance, strange as the paradox may seem, to know he lives very near—in the hearts of his fellows—to the maelstrom of the great organizations of the retail drug trade in New York State and that he is thoroughly well informed on affairs in the United States. It would seem almost absurd to say that he

possesses a facetious nature, when the even contour of his face speaks so strongly of force and determination; but he does, and a generously abundant one; in fact he has often been heard to say "I never am serious in my life." But his friends know different. He also holds the rare quality of an evenly balanced nature that listens with a sympathetic ear to the woes of the friend and weighs the faults of those who would oppose in a balance tempered with kindness. His voice is often heard in public and is listened to in the arguments for the protection of his fellow men and against those who would defame the profession he has chosen, always with a silence that betokens the respect paid to superior intellect. Shakespeare made Antony say "The evil that men do lives after them, the good is oft interred with the bones." His philosophy falls in Mr. Hirseman, who, though not without blemish, has so many contrary talents that the faults are insignificant. To describe him as has been done in this sketch is not eulogy in the strictest meaning of the word, but is the true story his face presents. As once he is met so will he be found to the end of the friendship formed; few men have met him who have not found it so, and surely this introduction ought to increase the circle until the whole trade might say: "We are glad we know Felix Hirseman."

Mr. Hirseman is an efficient member of the local associations of pharmacy in New York City, is an active worker in the N. A. R. D., and escaped by only a few votes being elected president of the New York State Association last year. To this last-named position it is expected he will have easy access at the annual meeting this month, as he is the only candidate of prominence yet presenting.

Mr. Hirseman's stores bear on their fronts his name only, but he really has a partner, and not a silent one either. This is Mrs. Hirseman, to whom he was married eight years ago. Mrs. Hirseman is almost as well known in New York pharmaceutical affairs as is her husband, for she is a full registered pharmacist and holds the record for having attained the highest percentage standing in the examinations by the New York City Board of Pharmacy, securing her registration in June, 1898. Mrs. Hirseman has beaten her husband in the race for official recognition by the State Association, for she was elected third vice-president of that body at its meeting in Rochester in 1898. Mrs. Hirseman is a successful practitioner of pharmacy. She presides over the destinies of the branch store, and takes especial delight in book-keeping, making it her privilege and duty to attend to this work for both establishments. If Mr. Hirseman alone cannot succeed to the presidency of the State Association, the aid of his wife and her legion of friends and admirers ought to put him there in a unanimous manner.

THE CULTIVATION OF TONKA BEANS IN VENEZUELA is the subject of an article in a recent issue of the Jour. de Pharm. The trees upon which the beans are grown are of a considerable size, having a dark green foliage. The fruits are oblong, resembling medium sized mangoes in form. The flesh of the fruit is yellow, and has an unpleasant odor. An adult tree will yield 100 pounds of the brownish violet, long flattened seeds. The ripening of the fruit takes place in August, but the harvest is prolonged for a considerable period, as both flowers and fruit occur on the same tree. In view of the ready demand for the "beans" it is thought more extended cultivation of them would be remunerative.

INFLUENZA—A favorite prescription which has been very largely used by the medical profession is the following: Acetanilid, 2 grains; caffeine, $\frac{1}{2}$ grain; camphor-monobromide, 1 grain; capsicum, $\frac{1}{2}$ grain. For 1 pill. One of these repeated every hour for two or three times, is said to give almost complete relief of suffering in ordinary cases. Another prescription to be used in the cases of adults is a capsule containing quinine, 1 grain; cinchonidine, 1 grain; pyrophosphate of iron, 2 grains; strychnine-sulphate, 1.40 grain. One of these is given four times a day.—Journ. Am. Med. Assn.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Manufacturer of Metal Syringes.—(P. and O.) Address A. H. Wirz, 913 Cherry street, Philadelphia, Pa.

Coloring Globes for Incandescence Lights.—(G. H. B.) The process generally recommended for coloring incandescence lamp globes is to coat them with a thin solution of colloid in which has been dissolved aniline of the required shade. To "frost," omit the dye. For further information on this subject see the following issues of the Era of this year: March 29, page 344; May 3, page 474; May 24, page 557.

Egg Shampoo.—("Incidental.") Many of the "egg shampoos" are so called from their appearance. They usually contain no egg and are merely preparations of perfumed soft soap. Here are some formulas: (1) White castile soap, 4 ounces; powdered curd soap, 2 ounces; potassium carbonate, 1 ounce; honey, 1 ounce. Make a homogeneous paste by heating with water. (2) Melt 3½ pounds lard over a salt-water bath and run into a lye formed by dissolving 8 ounces of caustic potassa in 1½ pints of water. Stir well until saponification is effected and perfume as desired. Many other formulas have been published in previous volumes of this journal. Consult the indexes.

Preservative; Chloro-Naphtroleum.—("Incidental.") We cannot give the formulas for either of these preparations. Several analyses of the former have been reported, but just how close any of them is to the actual composition we are unable to state. Here are the results obtained by two investigators: (1) Sodium bichlorate, 44.18 parts; sodium chloride, 45.50 parts; moisture, impurities, etc., 10.62 parts; rosaniline, a small quantity. (2) Borax, 35 parts; boric acid, 32 parts; saltpetre, 25 parts; common salt, 9 parts (Pharm. Cent.). According to the statement of the manufacturer chloro-naphtroleum is a "carbolyzed bark powder" and was patented in the United States November 20, 1888.

Tar Shampoo Paste.—(R. S.) A shampoo mixture containing tar may be made as follows: (1) Castile soap, in shavings, 2 ounces; ammonia water, 2 ounces; bay rum or cologne water, 1 ounce; glycerite of tar, N. F., 1 ounce; water, a sufficient quantity. Dissolve the soap in about 11 ounces of water by means of heat. When cold stir it in the other ingredients. (2) Cocoanut oil soap, 2 drams; white castile soap, 4 drams; caustic soda, ½ dram; rectified spirit, 10 ounces. Digest until the soap is dissolved, then add: wood tar, 10 drams; oil of lavender, ½ dram. Continue the digestion for 15 minutes, filter and wash the filter with rectified spirit to 12½ ounces by weight. Other formulas may be easily devised, and it is suggested you try in your experiments one of the formulas for egg shampoo given elsewhere in this department, substituting for part of the soap employed an equal quantity of some good tar soap.

Women's Vegetable Relief.—(E. S.) We cannot give the formulas for the preparations you name. Compound elixir of viburnum opulus of the National Formulary has been recommended in the treatment of diseases peculiar to women and it may answer your purpose. It is said to be very useful in hysteria, dysmenorrhoea, irritable condition of the uterus and nervous disorders accompanying these complaints. The following have also been recommended: Fluid extract of squaw vine, 4 fluid

ounces; fluid extract of cramp bark, 2 fluid ounces; fluid extract of blue cohosh, 2 fluid ounces; fluid extract of damiana, 2 fluid ounces; fluid extract of helonias, 2 fluid ounces; fluid extract of cinchona, 2 fluid ounces; sherry wine, 50 fluid ounces. (2) Reduce to powder: Cramp bark and partridge berry, of each, 4 ounces; poplar bark, unicorn root and cassia, of each, 4 ounces, and both root, 1½ ounces; add boiling water enough to cover, let stand till cold and then percolate with water until 5 pints of liquid are obtained. To the percolate add 24 ounces of sugar, bring to a boil, remove from the fire, strain, and when cold add 16 ounces of alcohol.

Oil of Cade with Glycerite of Starch.—(R. H. W.) wants to know "how the following prescription may be made into a mixture of the same consistency as if made with vaseline?"

Oil of cade..... 1 dram
Glycerite of starch..... 1 ounce

Make a mixture and apply twice a day.

He made the glycerite fresh, using corn starch. He added the oil in small quantities at a time and after it was all added "the mixture looked like a wet chamomils skin or a mixture of gum acacia with solution of lead acetate."

Glycerite of starch is not a satisfactory vehicle for any of the oils and a desirable mixture cannot be made from this formula. The introduction of soap might help matters a little but the best method of application is to dilute the oil of cade with a bland oil and apply directly to the skin, or else prepare an ointment in the regular manner, using lanolin or some other suitable substance as a vehicle. A mixture of oil of cade with soft potash soap has been recommended and considerably used in the treatment of various diseases of the skin.

Is It a Wise Undertaking?—(H. M.) writes: "Will you advise me on the following: I can borrow sufficient money, amounting to \$3,000 to \$4,000, to buy or open a pharmacy. I will have to pay interest at the rate of 6 per cent. per annum. Do you think such an arrangement is a safe undertaking?"

The undertaking may be safe enough where the conditions are most favorable, but under ordinary circumstances and in a general way the consensus of opinion among successful druggists seems to be against the policy of beginning a drug business with an indebtedness of this character. Of course, the proposition might be highly successful in some localities and under some conditions, but before assuming such a responsibility the individual should consider well the chances for success and the difficulties in the way of obtaining it. The man in business with a large indebtedness hanging over his head is handicapped to a burdensome degree, and the average individual would think long and hard before deciding to assume in this day of small profits and sharp competition the proprietorship of a drug store on any such terms. But this question is a many-sided one and can be answered in many different ways. Our readers are cordially invited to present their views on the subject through these columns.

Elixir or Solution of Succinate of Iron.—(R. N. H.)

We know of no specific formula for an elixir of succinate of iron. Ferric succinate in the hydrated state or dried is a cinnamon brown substance, quite insoluble in water. In making a liquid preparation therefore, recourse is generally had to its solubility in ammonium citrate, by the aid of which solution is readily effected and the resulting preparation is quite permanent. The following formula for a solution was proposed some years ago by Wenzell, under the title "Liquor Ferri et Ammonii Succinatis": Dissolve 50 grains of succinic acid in 3 fluid ounces of water, neutralize nearly with ammonia and dilute to 6 fluid ounces. Transfer the solution to an 8 ounce bottle, add ½ fluid ounce of the official liquor ferri persulphatis and agitate well. Transfer the mixture to a filter and wash the precipitated ferric succinate thoroughly with distilled water. Next take 89 grains of citric acid, put it into a beaker, and add with stirring a sufficient quantity of water of ammonia until the acid is dis-

solved and the solution neutral. Finally transfer the moist ferric succinate to a porcelain capsule, add the solution of ammonium citrate and dissolve, assisted by a gentle heat. This solution, when diluted, to measure 6 fluid ounces, will contain to the fluid dram two grains of the ferric succinate, $Fe_2O_3 \cdot 3H_2O$, or 5 grains of the double salt.

Medicated Beer.—(J. J. D.) Preparations of this kind are now seldom ordered and their use is wholly confined to domestic medicine. At one time they were employed to a very considerable extent. Here are some formulas from the older pharmacopoeias:

Anti-Scorbutic Beer.—Scurvy grass and buds of the spruce fr, of each, 1 ounce; horse radish root, 2 ounces (all fresh and bruised or sliced); new ale or beer, 3½ pints. Macerate 4 days, press and strain for use.

Cinchona Beer.—Bruised cinchona bark, 1 ounce; diluted alcohol or brandy, 2 ounces. Mix. The next day add of new beer 1 quart and in 3 days decant or filter. Dose, two to three wineglassfuls. Administer during the intermission of ague.

Pipsissewa Beer.—Pipsissewa, ½ pound; water, 1 gallon; boil, strain, add of sugar, 1 pound; powdered ginger, ¼ ounce, yeast, q. s.; and ferment, strain and bottle. Dose, ½ tumblerful. Used in scrofulous affections, especially of the joints.

Stomachic Beer.—Century tops and Roman wormwood, of each, 4 handfuls; gentian root, bruised, 2 ounces. The yellow peel of 6 Seville oranges; Spanish angelica root and Winter's bark, of each (bruised), 1 ounce. New ale or beer, 1 gallon. Digest for a few days. Express and strain for use. One or two wineglassfuls early in the morning and an hour before a meal.

Floating Soap.—(M. W. E.) Floating soap may be prepared directly from fresh materials or from ordinary soap by agitating it with water in a vessel containing suitable wheels or machinery until it is impregnated with bubbles of air. It is these air bubbles which give the soap its buoyant properties. The following is a formula for preparing a white floating soap from fresh materials. The color of the soap will of course depend largely on the quality of the oil used:

(1) Coconut oil, 88 pounds; soda lye, 38° B., 46.2 pounds; potash lye, 25° B., 2.2 pounds. Melt the coconut oil in the usual manner, filter into capacious jacketed kettle, or one placed in a water bath and heat to about 122° F. Then add the lye, stir well for about ten minutes, and then cover the kettle. Allow to saponify and then thoroughly stir again. The soap will now have the appearance of fine woolly grains. In the foregoing process but little fire or steam is necessary. Twenty-two pounds of well warmed calcium chloride solution of 20° B. and 88 pounds of hot water are now gradually added, with constant stirring to the curd in the kettle. The soap is worked up thoroughly to complete solution, but very little heat is required, as it is not necessary to make the soap boil. After obtaining complete solution take a lye cylinder full of the soap solution from the kettle, allow it to cool to 77° F., and sink a lye hydrometer in the liquid, when this will indicate a density of 50° B. This particular degree will yield a floating soap having a medium weight. The soap solution is then allowed to cool to 77° F., and a stirring kettle filled about one-third full with the cooled soap. This aqueous fluid mass is then stirred vigorously until transformed to a stiff foam and is then put into the frames at once. The prescribed temperature of 77° F. must be carefully adhered to, for if heated to a higher temperature, say 100° F., or over, much more time will be required to work up the liquid into a permanent foam, and through the long stirring the foam would be so puffed out that the resulting soap would be too light. On the contrary, if allowed to cool too much, the soap obtained will be too heavy, because the formation of the foam takes place too rapidly and the soap is not allowed sufficient time to swell in the kettle.

Floating soap should not be dried in a warm room nor in a drying oven, as, if this is done, the soap will shrink a great deal and become fissured. It is better to allow the entire block as it comes out of the form to stand for several weeks in an airy, light place, then cut into tablets,

allow them to dry for several days and then cut up into bars or cakes.

(2) Olive oil or almond oil soap, 5 pounds; soft water, 1½ pints. Expose them, in a bright copper pan, to a steam or water bath heat, and assiduously beat and agitate the mixture until it has more than double its volume, then pour it into a cold frame, cool it quickly, and when hard, cut into bars or cakes. It may be colored and scented at will. Floats on water and lathers freely, but will not bear soaking or much wet, as it rapidly softens.

Root Beer for Carbonating.—(J. J. D.) Try one of the following:

- | | |
|---|---------------|
| (1) Fluid extract of American sarsaparilla..... | 10 fl. drams |
| Fluid extract pipsissewa..... | 10 fl. drams |
| Fluid extract wintergreen..... | 4 fl. drams |
| Fluid extract licorice..... | 4 fl. drams |
| Oil of wintergreen..... | 4 minims |
| Oil of sassafras..... | 24 minims |
| Oil of cloves..... | 12 minims |
| Alcohol..... | 10 fl. ounces |

Mix 9 gallons of warm water, 1 gallon of refined molasses and 1 quart of yeast; add the above "extract" and set aside in a warm place to ferment. The yeast and fermentation may be omitted, the extract being mixed with 10 gallons of water charged with gas and drawn from an ordinary soda fountain.

Here is another formula, taken from the Era Formulary:

- | | |
|---------------------------------|------------|
| (2) Oil wintergreen..... | 4 ounces |
| Oil sassafras..... | 4 ounces |
| Oil anise..... | 2 ounces |
| Oil orange..... | 2 ounces |
| Oil nutmeg..... | 1 ounce |
| Oil cloves..... | 4 drams |
| Tincture vanilla..... | 1 pint |
| Fluid extract sarsaparilla..... | 4 pints |
| Fluid extract licorice..... | 4 pints |
| Fluid extract ginger..... | 2 pints |
| Fluid extract althaea..... | 2 pints |
| Fluid extract ang. lica..... | 8 ounces |
| Fluid extract soap bark..... | 8 ounces |
| Caramel..... | 3 gallons |
| Syrup..... | 20 gallons |
- Prepare and use in a similar manner to No. 1.
- | | |
|-----------------------|---------|
| (3) Sassafras..... | 1 ounce |
| Wild cherry bark..... | ½ ounce |
| Emento..... | 1 ounce |
| Wintergreen..... | 1 ounce |
| Hops..... | 1 ounce |
| Coriander seed..... | ½ ounce |

Percolate with diluted alcohol until 10 ounces of tincture are obtained. The percolate is added to plain carbonated water when drawn in the proportion of half a teaspoonful, more or less, to an ordinary glass. Or it may be mixed with the water in the fountain before carbonating. "Body" may be given to the drink, if desired, by the addition of a little syrup preferably made from "raw" sugar.

Compound Tincture of Guarana.

Guarana, in powder.....	40 parts
Diluted alcohol.....	200 parts
Coffee.....	1 part

Sugar-Coloring Tincture.

Burnt sugar.....	2 parts
Alcohol.....	1 part
Water.....	1 part

Formaldehyde Mouth Wash.

Solution formaldehyde, 40 per cent.....	50 grams
Tincture benzoin.....	200 grams
Tincture myrrh.....	50 grams
Oil peppermint.....	3 grams
Oil anise.....	2 grams
Oil cinnamon cassia.....	1 gram
Oil cinnamon, Ceylon.....	15 grams
Coehchal.....	2 grams
Alcohol.....	1000 grams

Wine of Cascara Sagrada.

Fluid extract cascara sagrada, bitterless.....	30 parts
Malaga wine.....	65 parts
Tincture orange peel.....	5 parts

Diuretic Wine (Vinum Diureticum).

Squill, in coarse powder.....	3 parts
Digitalis leaves.....	6 parts
Juniper berries.....	30 parts
Potassium acetate.....	9 parts
Alcohol.....	50 parts
White wine.....	400 parts

Mix, and allow to macerate 4 days, express and filter

Wyeth's Soluble Powder=Capsules

or, Capsuled-Powders are a new and novel form for administering medicines. They contain the various substances in a perfectly powdered condition, which is certainly the most efficient form for administration; thus a desideratum of utmost importance to the physician has been attained. There is no previous preparation made necessary, as in other forms of medicine—notably **gelatine-and sugar-coated pills**—no cohesive or excipient is required or used. The materials or medicines are simply enclosed in a pliant, soft, soluble gelatine capsule, quickly dissolved in the warmth and fluids of the stomach, presenting no such objectionable resistance as the ordinary double-cased, **hard**, gelatine capsules. In addition to this brief description, an inspection will at once impress the judgment. Physicians and pharmacists are urged to examine these products.

INCORPORATED,
PHILADELPHIA, PENNA.

Ideal Combination Fountain Syringe and Water Bottle.

Fountain Syringe ready for use.

Water Bottle ready for use.

PATENTED,
OUR 1898 STYLE MADE IN SLATE COLOR.

This instrument serves a double purpose, and is, in its construction, the simplest of its kind on the market. The stopper is a decided novelty of workmanship and construction. On top it is provided with a nozzle in which there is a small screw which serves to open the nozzle just as wanted, either as a fountain or water bottle. The screw cannot be lost, as it is fastened to the handle of the stopper which moves on hinges and is adjustable.

PACKED IN ELEGANT WOOD OR PAPER BOXES.

Catalogue and Prices on Application.

Manufactured by **IDEAL RUBBER CO.**

stock of doubtful freshness with fresh stock at our expense.

Examine bottom of outside wrapper and if not stamped with a star (*), report to us, and we will at once arrange to exchange the Food direct or through your wholesaler.

Liberal Samples and Handsome Advertising
Matter Cheerfully Supplied.

Smith, Kline & French Co.,
PHILADELPHIA, Pa.

IN order to maintain regular prices we adhere to the "rebate contract plan."

We pay the war tax first, last and all the time.

We manufacture an excellent laxative remedy and advertise extensively to make business for the drug trade and ourselves.

We do not claim to excel in other things, but we endeavor to do one thing well and to give satisfaction to the trade.

We appreciate the friendly interest which druggists generally have taken in the sales of our remedy and we thank them most cordially.

We are,

Yours truly,

California Fig Syrup Co.,

SAN FRANCISCO, CAL.

LOUISVILLE, KY.

NEW YORK, N. Y.

Registration of Poison Sales

is a requirement made by the laws of nearly all the States and Territories. It is a requirement which every druggist should observe for his own interest. It is unpleasant to have anything but a clear, clean record, when the unexpected happens. This kind of a record is most convincing to judge or jury. It is the kind you can keep with

THE ERA POISON REGISTER.

It contains space for 800 entries, providing for the register of the name and quantity of poison sold, date, price, purpose for which it is to be used, name of purchaser, witness, remarks, etc.

A DIGEST OF THE POISON LAWS of all the States and Territories is included. It presents in condensed form all the essential requirements and is handy for reference whenever there is doubt as to the law. The book is bound in stiff board covers, with leather back. Size of page, 8 x 11 inches.

PRICE, 60 CENTS PER COPY, POSTPAID.

FOREIGN. China.

The Chinese anti-foreign society of "Boxers" is killing missionaries and native converts at Peking and Tien Tsin, tearing up railroads and wrecking the residences and business houses of foreigners. Russia, England, the United States and other powers have headed troops and may take a hand in suppressing the disturbance.

Chinese troops have been sent against the Boxers, and it is reported that in a fight last week 500 Boxers were killed. In other engagements however, it is said that the Chinese troops were worsted. Large numbers of Chinese troops have deserted and joined the rioters.

The Chinese government has issued an edict against the Boxers, but it is couched in such apologetic terms that it is plain the government sympathizes with them.

Gen. Wei, who defeated the Boxers in battle, has been reprimanded and relegated to another province. The United States gunboat Nashville with a force of marines has left Manila for Taku, near Peking.

The United States gunboat Albatross now at Shanghai has also been ordered to join Rear Admiral Kempff at Taku.

Grave apprehensions are expressed in financial circles that the complications in China may lead to war between Japan and Russia.

South Africa.

It is believed that the Boers may make their next stand near Lydenburg, in the Transvaal. General Buller expects the Boer force at Laing's Nek to surrender to him in a few days.

The Boer capital is now in a railroad car that is taken from place to place. President Kruger was interviewed in this car last week; he said the war was far from being over, and that the Boers will resist as long as a regiment of them is left. He denied that he was intending to hold.

A movement is on foot to ask the Boers to come to this country after they are conquered by the British. It is believed that about 400 British soldiers and officers were released when Pretoria was taken.

The organization of a British administration for the Transvaal is under way. Part of Sir Alfred Milner's staff has gone to Pretoria to start the machinery of government.

The Boers in the western part of the Transvaal are giving up their rifles to General Hunter.

Mrs. Kruger is still occupying the Presidency. Boer officials removed \$200,000 in gold from the National Bank June 4, but did not touch the cash holdings of the other banks.

Three British Earls and other members of the English nobility were among the prisoners taken by the Boers, when they captured the Imperial Yeomanry Battalion a few days ago.

The Boers succeeded in removing their big guns and nearly all the military stores from Pretoria before it was occupied by the British.

Dr. Beitz, the Transvaal State Secretary says that England will require a permanent garrison of 50,000 soldiers in the Transvaal and that "rebellion may be expected for centuries." He believes that many Boers will trek to German South Africa.

The Philippines.

General Pio del Pilar, the Philippine leader, next to Aguinaldo in rank, has been captured near Manila. It was reported last year that del Pilar offered to betray his army into American hands for a large sum of money.

The Katipunan society, which is back of the rebel army, issued a manifesto last week, reiterating its demand for independence and declaring the determination of its members to fight American rule to the death.

Two Battalions of the Sixth Cavalry are to be sent to Manila to relieve the first of the volunteer troops to be brought home for discharge in June of next year.

General Funston discovered on May 2, in a forest in Luzon almost all the archives of the Aguinaldo government, and a quantity of war material.

Other Foreign News.

The jury on painting of the Paris Exposition have conferred medals of honor upon James McNeill Whistler and John Singer Sargent, American painters. Serious fighting has broken out in North Borneo where an uprising against the British Chartered Company

has taken place; several British have been killed and the environs of Labuan have been destroyed.

The Japanese Cabinet has resigned and the Marquis Ito is endeavoring to form a coalition Ministry. Marquis Ito is believed to favor war with Russia, over Russia's encroachments on Korea.

The Turkish government has signed a contract with the Ansaldo company of Genoa for the renovation of eight Turkish ironclads and is negotiating with the Krupp company for rearming them.

Count Leo Tolstoy, the Russian novelist has written a work depicting the life of railway laborers. It is entitled the "New Slavery."

Stephen Crane, the well known American author, died at Bodenvler, in Germany, last week. Ravages of cholera in the Bombay district of India continue, the situation in the native states has improved. The important discovery has been made at the Hygienic Institute of the University of Wurzburg that bacteria can be destroyed with electric currents.

DOMESTIC.

Congress.

Congress adjourned on Thursday of last week. It will meet again the first Monday in December. Its most important acts in the session just closed are the following: The enactment of the gold standard law; the enactment of the Federal Reserve bill; the civil government law; the establishment of a territorial form of government for Hawaii; provision for schools and civil government in Alaska; the enactment of the "Free Homes" law; provision for the addition of two battleships, three armored cruisers and five submarine boats to the navy; provision for a government armor plant in case the secretary of the navy cannot buy armor at a reasonable price; the enactment of a law providing for the extradition of prisoners to territory under United States rule; the exclusion of Brigham H. Roberts from the House and W. A. Clark and M. S. Quay from the Senate, the promotion of Nelson A. Miles, commanding the army, to be a lieutenant-general, and adjutant-general Corbin and Brigadier-Generals Otis and Wheeler to be major-generals; the confirmation of John R. Hazel of Buffalo to be a federal judge; the passage of about 900 pension bills, and appropriations of over \$500,000,000.

Some of the matters which caused considerable discussion, but did not pass, were: The shipping subsidy bill; the Nicaragua Canal bill; the Hay-Pauncefote treaty; provision for civil government in the Philippines; the reduction of the tariff on the Pacific cable bill; resolutions of sympathy with the Boers; reciprocity treaties with France and other countries; reform of the consular service; reorganization of the army.

Other Domestic News.

Vouchers of Mr. Rathbone, former Director of Posts in Cuba, to the amount of \$15,000, have been thrown out by the auditors at Havana, having been paid twice.

The New York ice trust is reducing the price of ice. Mayor Van Wyck admitted last week that he owned over 4,000 shares of the trust's stock and said that he borrowed the money with which to buy the stock.

A wild storm almost destroyed the village of Faulknor, Kansas, last week.

The Connecticut, Indiana and New York State Democratic conventions, declared in favor of W. J. Bryan, last week.

The Socialist labor party at their convention in New York last week nominated for President, Jos. F. Malony, of Lynn, Mass.; for vice-president, Valentine G. Smith, of Pittsburg.

Oregon went Republican at the election last week. This result is considered by both parties to be of great significance. Democratic leaders admit that the Republicans are likely to carry all the Pacific coast states and declare that Bryan will have to carry New York or several other eastern states in order to win.

Bloodshed and mob violence continue to mark the progress of the street railroad strike in St. Louis. Fifty prominent citizens of St. Louis united last week in a telegram to the Governor of Missouri asking him to call out the militia for protection of life and property, but he did not do so. The police seem powerless to cope with the situation.

Sound money Democrats led by Senator Gorman, controlled the Maryland Democratic Convention last week and prevented instruction of the delegates for Bryan.

The Rev. Dr. Richard Salter Storrs died at his home in Brooklyn, last week.

Mrs. John Sherman, wife of ex-Secretary Sherman, has suffered another stroke of paralysis at Mansfield, Ohio, and physicians express little hope of her recovery.

The government has concluded extradition treaties with Switzerland and the Argentine Republic.

The New York and Cuba, It is estimated, will amount to over \$500,000.

THE DRUG NEWS.

New York and Vicinity.

GERMAN APOTHECARIES AROUSED.

The members of the German Apothecaries Society held a spirited meeting Thursday evening at which the principal subject of discussion was a letter that had been circulating among the trade accusing the society of an attempt to secure the offices of president, secretary and treasurer of the New York State Pharmaceutical Association, at the annual meeting at Newburg. The letter was typewritten, as was also the signature, which was that of George H. Harper, of 125 East 123d street. The letter read: "Traacherous conspiracy exposed. The German Apothecaries Society, not content to rule the pharmacists of the city, have conspired to rule the State Association also. They will send 200 of their members to Newburg and have it all out and tried to elect as president, Felix Hirsman; secretary, Sidney Faber, and for treasurer, Arthur C. Searles." The letter then implores all members of the trade to stop the scheme by voting against these men. When this letter was spoken of at the meeting it was unanimously declared to be a base attempt to injure the society. A number of the members had investigated the address of the Mr. Harper given and found that no such person lived at the number, which was a private house, while the letter stated Mr. Harper to be a druggist. It was found that H. Halper lived at the number and that he had three sons, Samuel and John M., both of whom are employed in this city, though the father could not tell where, and Charles, who is a drug clerk at Newburg. When this condition of affairs was made known the members attributed the letter to a man whom they had supposed to be friendly to the organization. One member introduced the subject and after explaining the situation, said he believed he could name the perpetrator; when he did name a certain man he seemed to have struck the opinion of all present for there was a murmur of approval. Another said he had always considered this man a friend, but now knows he is an enemy. Others voiced the same sentiments. Mr. Hirsman said that the letter must have reached the president of the association, for he had a letter from him in which reference was made to it. Mr. Hirsman was very positive in his position regarding the presidency of the association, for which office he has been urged to become a candidate, and stated that he wanted it distinctly understood that "I will not accept the nomination for president of the New York State Pharmaceutical Association unless it shall be made by a well-known member from the State, and I will not accept the office unless I am elected by the State. I will not have it said that I was put in office by a clique. I would be willing to see Mr. Muench run for president again and if he will consent to do so I will second his nomination. I want it understood that there is no scheme to put me in office." A number of other members spoke against the supposed writer of the letter and it was unanimously decided that his action should be condemned.

Report of the action taken by the New Jersey Pharmaceutical Association in withdrawing from the N. A. R. D. was read by Sidney Faber, as were also letters from the secretary of the N. A. R. D. in which it was stated that the Consolidated Drug Company would not be included in the recognized list of jobbers. Gustav Pfingsten read a report of his visit to Washington, to the Pharmacopoeia Convention, and A. Kleinau gave a report of the recent conferences of the committee, of which he is chairman, with the telephone companies. The following were elected members: L. G. B. Erb, George E. Schweinfurth, Bruno Dauscha, Robert S. Lehman and Paul G. Wolff. Sidney Faber was unanimously chosen a member of the newly created New York Board of Pharmacy and after the result was announced he

made a brief speech thanking the members. The guests present were William Muir, of Brooklyn, and F. W. Fouke, of Gilpin, Langdon & Co., of Baltimore, Md.

TELEPHONES.

The telephone question continues to be an absorbing one with the druggists. Friday of last week the conference committee appointed several weeks ago met and discussed the matter anew. Mr. Muir surprised the members when he said he had changed his mind somewhat in relation to the Knickbocker Company, as it had made promises that it had not kept, and he was inclined to the opinion that the druggists should not sign any agreement with the company until it had made some definite proposition regarding the plan submitted by the druggists. Mr. Muir embodied this thought in a motion that the different committees present should report back to their organizations that it was the sentiment of the conference committee that the societies, individually, should refrain from entering into any agreement with any telephone company until the company should present an agreement satisfactory to the druggists. This was adopted.

Mr. Muir stated that he was one of a committee to secure counsel to defend any case or cases that might arise from a natural cause and applying to the word "permit" in the shorter hours law, and he wished to say that Robert Mazet was willing to act as attorney for the druggists. He would charge them \$50 in each of the three courts. The report of the committee was accepted. The matter was then left to the different societies for approval, and Messrs. Muir and France, acting for the King's County Pharmaceutical Association, gave approval; the German Apothecaries Society approved the action at a recent meeting.

A discussion arose over a motion that the chairman of the conference committee be vested with power to confer with counsel on any case that might arise from natural causes and make a test case of it. Mr. Goldman thought the chairman should have at least two other members to share the responsibility of selecting a case with him. Some argument followed as to what sort of a case the druggists should make the test on, and it was finally decided that a committee of four should be named and that whatever case should come up they should consult with the counsel and be vested with power to proceed if such case hinged on the constitutionality of the law. Mr. Faber signified a willingness to offer himself for the first test case. Chairman Kleinau named the following committee: William Muir, W. H. Porr, A. Bakst and A. Kleinau.

WESTERN NEW YORK ELECTS BOARD MEMBERS.

The five members of the new Board of Pharmacy under the All-State Pharmacy Act from the Western Section were chosen at a meeting in the Buffalo College of Pharmacy Wednesday afternoon, June 6. As the new law gives the right to all licensed pharmacists in the district to vote for the members of the board, the Erie County Board of Pharmacy experienced some difficulty in obtaining the names of all the licensed pharmacists in the Western District. The law required that all pharmacists must register every year and many who attended the meeting were obliged to register before they could vote. The contest was a lively one, several tickets being in the field. Two members of the retiring Board of Pharmacy of Erie County were chosen. They were R. K. Smither and George Reiman, both from Buffalo. The others elected were Dr. Willis G. Gregory, also of Buffalo; E. M. Jewell, of Batavia, and Mr. Palmer, of Olean, who was the last member chosen, and then after four ballots in which a number of others figured, but none received a majority until the fifth ballot.

N. Y. S. P. A.

The twenty-second annual meeting of the N. Y. S. P. A. will be held at Newburgh, N. Y., June 26, 27, 28 and 29, 1900. At this meeting there will be many important committees to report and much other business will be transacted that deeply concerns the association. The All-State Pharmacy Law is now a fact, having been passed by the last Legislature and signed by the Governor. The new Pharmacy Board will begin its work January, 1901. The new board will consist of fifteen members, five to be chosen from each of the three sections, and to hold office for from one to five years, a new one to be elected every year thereafter. The three sections are designated as follows: The Eastern (New York) will consist of the counties of New York, Kings, Queens, Nassau, Suffolk, Richmond and Westchester. The Western (Erie-Buffalo) will consist of Erie, Niagara, Orleans, Genesee, Wyoming, Allegheny, Cattaraugus and Chautauque counties. The Middle Section (Albany) consists of all the other counties not enumerated above. The members from the latter section will be elected at the Newburgh meeting and it should be well understood that any and every licensed pharmacist living in the same is entitled to a vote upon this particular question, whether he or she be a member of the State Association or not. Let this latter fact be well advertised by all members of the Middle Section.

The headquarters of the Association will be located at The Palatine Hotel, rates,\$2.00 per day.
 Other hotels have offered rates as follows:
 The United States Hotel,..... 2.00 " "
 The Dell House,..... 1.50 " "

The meeting will convene in the Court Room, across the street from the Palatine.

The Entertainment Committee is composed of the following: Isaac C. Chapman, chairman; John H. Chapman, Arthur Dubois, George Merritt, J. A. Joslin, Richard Ennis. They have prepared a seductive programme, viz.; President's reception, a trolley ride to Walden, stopping at Orange Lake for lunch; a visit to General Washington's headquarters, a progressive enchanre party; a boat ride down the Hudson to West Point, a banquet, a bowling contest, and a lecture on cotton, etc.

ROUTES AND RATES TO THE MEETING.

The Committee on Transportation announces that arrangements have been made with the Trunk Line Association whereby a uniform rate of a fare and a third has been established for the round trip on roads in the Trunk Line Association from all points in the State of New York to Newburgh by rail, where the fare exceeds 75 cents. This rate is granted on the certificate plan in use at previous annual meetings.

Members will buy a single trip ticket to Newburgh, paying full fare therefor, and secure a certificate from the ticket agent. The certificate on being presented to Secretary Judson B. Todd, on or before Thursday noon, June 28, at our headquarters at Newburgh, will be countersigned by him and by the agent of the Trunk Line Association and on presentation of the same at the railroad ticket office a return ticket will be issued at one third the regular fare.

In localities where difficulty has been experienced formerly in obtaining such certificates, the agent in some cases not having any in his possession, it is well to notify the agent in advance of your intention to apply for such certificate; if he cannot furnish you with one, he will inform you of the nearest station where they can be obtained; buy a ticket to that station only and there obtain the certificate. No reduction of fare can be obtained without a certificate. Be sure that when purchasing your going ticket you request a certificate. Do not make the mistake of asking for a receipt.

The time within which certificates when countersigned must be presented to the local ticket agent to secure the reduced rate is limited to three days after adjournment.

ROUTES.

Newburgh is accessible by the following railroad and steamboat lines: Erie Railroad, New York Central and Hudson River Railroad, West Shore Railroad, Albany

Day Line steamers, Central Hudson Steamboat Co., Mary Powell Steamboat Co.

For the information of members in Brooklyn, New York and vicinity, Rondout and Poughkeepsie, the following schedule of the steamboat lines is appended:

Mary Powell Steamboat Co.—Going North—Leave Desbrosses street pier, 3.15 P. M., West Twenty-second street, 3.30 P. M. Arrive at Newburgh, 6.45 P. M. Going South—Leave Newburgh, 7.30 A. M. Arrive in New York, West Twenty-second street, 10.45 A. M., Desbrosses street pier, 11.10 A. M. Going South—Leave Rondout, 5.30 A. M.; Poughkeepsie, 6.30 A. M. Arrive at Newburgh, 7.30 A. M. Going North—Leave Newburgh, 6.45 P. M. Arrive Poughkeepsie, 7.45 P. M., and Rondout 8.25 P. M.

Albany Day Line.—Going North—Leave Brooklyn by Annex, 8 A. M.; New York, Desbrosses street, 8.40; West Twenty-second street, 9. Arrive at Newburgh, 12.25 P. M. Going South—Leave Newburgh, 2.15 P. M. Arrive at New York, West Twenty-second street, 5.30; Desbrosses street, 6.00; Brooklyn, by Annex, 6.20 P. M.

Central Hudson Steamboat Co. (Ramsdell and Kingstort Lines).—Going North—Leave New York, Pier 46, West Tenth street, 4.00 P. M. Arrive at Newburgh, 7.30 P. M. Also from foot of Franklin street, 5.00 P. M. Arrive at Newburgh 9.30 P. M. Going South—Leave Newburgh 9.00 P. M.; arrive in New York, West Tenth street, at 1.00 A. M. Also leave Newburgh at 7.00 P. M., arrive in New York, foot Franklin street, at 11.50 P. M. Going South—Leave Rondout 6.00 P. M.; Poughkeepsie, 7.15 P. M. Arrive Newburgh 9.00 P. M. Going North—Leave Newburgh 7.30 P. M. Arrive Poughkeepsie 9.15 A. M.; Rondout, 10.15 P. M.

JUDSON B. TODD, Secy.
 Ithaca, N. Y., June 5, 1900.
 CLARENCE MILLER, Local Secretary.
 Newburgh, N. Y.

DR. PAUL GIBIER.

Dr. Paul Gibier, head of the Pasteur Institute in this city and well known to physicians and pharmacists for his investigations and application of serum therapy to the treatment of various diseases, was killed in a runaway accident at his country place, Suffern, N. Y., June 9. He was born in France in 1851 and graduated from the Medical University of Paris, later becoming professor of comparative medicine in the Museum of Paris. For his studies in the causation and treatment of cholera he was made a chevalier of the Legion of Honor. In 1890 he started the Pasteur Institute in this city, the speciality of which originally was the treatment of hydrophobia, but later engaged in the manufacture of antitoxins generally. Following Dr. Gibier's expressed wish, his remains were cremated.

NOTES.

--Miss Ethel Culbert Harding, daughter of Mr. and Mrs. Herbert B. Harding, of 326 West Seventy-seventh street, will be united in marriage to Charles Stuart Mott, of Utica, by Canon Knolles, of Trinity Church, at All Angels Church, West End Avenue and Eighty-first street, this evening. Miss Harding is a well-known social figure and is considered an artist of marked ability. She has studied under Twachtman, Cox and others, and when graduated from college was known as the artist of her class. Miss Harding also enjoys an expert knowledge of horse-manship and she is a brilliant linguist. Her grandfather on her father's side was Hon. James A. Harding, Speaker of the House of Assembly of New Brunswick and High Sheriff of the City and County of St. Johns, N. B., while her mother's father was James W. Culbert, one of New York's most successful merchants, scholar and well known writer. The bridegroom is a young man of excellent character. He served as a gunner's mate on the auxiliary cruiser Yankee during the Spanish-American war with much credit. He participated in the many scrimmages the Yankee was subjected to and at the close of the war, besides receiving an honorable discharge, was given a medal for service. He is a graduate of Stevens. The maid of honor at the wedding will be Miss Mathilde Harding, and those who will attend the bride are to be Miss Thiele, of Riverside Drive; Miss Eggers, of Brooklyn; Miss Cooke, of New York, granddaughter of Henry B. Cooke, the first governor of the District of

Columbia, and Miss Laura Barney, of Ognotz, New York, granddaughter of Jay Cooke. The father of the bride, Herbert B. Harding, is actuary of Humphreys' Homeopathic Medicine Company.

—Employees of Elmer & Amend entering the store at Eighteenth street and Third avenue early Tuesday morning were surprised to find the dead body of one of the clerks lying in the basement. Examination showed it to be Christian H. Magenheimer, who had been an employe of the firm for the last nineteen years. It was evident that he had suicided by drinking carbolic acid. Mr. Magenheimer had complained of late of acute attacks of insomnia, and it is thought that his mind had weakened. He was born in this city May 21, 1867, and received his education in Grammar School 22. In November, 1881, he began work for Elmer & Amend, where he continued to the time of his death. In 1889 he was graduated from the New York College of Pharmacy. He was a young man of excellent character and was well thought of by his employers and his associates. Beside his parents he is survived by two brothers and one sister. The funeral was held Thursday afternoon from the late residence, 80 East Eighth street, and was largely attended, among those present being E. B. Amend, E. Lindemann, J. L. Young and E. O. Weiss, from the Elmer & Amend store. The employes sent a beautiful floral piece representing a pestle and mortar and also presented the family with a suitable set of resolutions.

—In the United States of Brazil there is a law which prohibits the importation of all goods bearing a Portuguese label, name or mark on the package, parcel or box, and as the native tongue of the country is Portuguese there can readily be seen the complications this law has caused in the trade. Several have protested to the Secretary of State. In a recent letter from the State Department to H. B. Harding, actuary of Humphreys' Homeopathic Medicine Company, the department declares it has not been informed of the existence of such a statute, but it has communicated with the United States consul at Rio, and upon his report will adopt such measures as shall be deemed necessary for the absolute protection of American rights. The Humphreys' Company protested because it had spent large sums of money in placing its remedies in the South American markets, and as the law prohibits anything but English printing on the packages, trade has been somewhat deadened. The firm sets up the claim that its remedies cannot be classified under the law, as they are already protected by treaty stipulation between the United States and Brazil. It is asserted that the law will be suspended July 1, but the opinion of the Minister is anxiously awaited.

—Harry C. Yager, the city representative of William R. Warner & Co., will sail for Europe on "The Era Trip" on July 14, and with him will go the following: A. B. Baltzly, druggist, Eighty-fifth street and Amsterdam avenue and 134th street and Seventh avenue; G. S. Reeder, of Reeder Bros., Thirty-first street and Park avenue, druggist; William Hauenstein, Seventy-eighth street and Amsterdam avenue; A. C. Ayer, Princeton College. The party will stop first at Scotland, and from there will go to England, thence to the Paris Exposition. They also expect to spend some time on "The Rhine." It is thought the whole journey can be made so the party will arrive back here by the latter part of August on the North German Lloyd steamship Saale.

—Eugene Walluhn, a druggist whose store was at 700 Second avenue, committed suicide at Niagara Falls sometime during last Friday night or early Saturday morning. His body was found in a coal bin Saturday. His friends in this city could not account for Walluhn's act. He was unmarried. He came to this country about 10 years ago and last March had saved enough to buy the store of Hans Rabenstein, where he had been managing clerk. Mr. Rabenstein, who resides at 31 First street, and Hans Millaret, who resides at 53 Second avenue, said that as Walluhn had no friends here they would care for the body, and it was taken to Rabenstein's home when it reached this city.

—Pinkus Winter, proprietor of Winter's Barber Supply Company, has been accused by Emil Utard, acting for Victor Klotz, who succeeded to the business of Ed. Pinaud, of counterfeiting Pinaud's Eau de Quinine, after having been enjoined by court some time ago, when he was

found guilty of imitating it. Judge Lacombe issued an order against him, compelling him to appear in court on Friday of last week to show cause why he should not be adjudged in contempt. Winter appeared, but his counsel begged adjournment for a week on the plea that Winter was not ready for trial, and this was granted.

—Among those who visited the local trade last week were Dr. March, Willett Drug Company, Augusta, Ga.; Charles C. Woodman, Boston; George E. Pierson, Howell, N. J.; J. C. Snellings, Manchester, Va.; Dr. W. C. Wile, Danbury, Conn.; Joshua Wood, Boston; I. C. Chapman, Newburgh; Frank S. Henry, Cleveland; George W. McDonald, Chicago; F. P. McKay, Des Moines, Ia.; Frank McQueen, East Norwich, N. J.; A. C. Bayles, Fort Washington, N. Y.; T. M. Benjamin, Riverhead, N. Y.; F. L. Fieger, East Orange, N. J.; E. Farrington, Tarrytown; F. N. Mason, Port Jervis; H. F. Cody, Plattsburg.

—Col. E. W. Fitch, manager of Parke, Davis & Company's branch in this city has received from Mr. Fiske, the London manager of the firm, a souvenir of the existing trouble in South Africa. It is a large linen kerchief on which are printed pictures of Queen Victoria and Lord Roberts, also a map of South Africa, presenting the field of military operations and as a forceful reminder of the British soldier, Rudyard Kipling's famous poem, "The Absent Minded Beggar" is printed in full with musical accompaniment. Col. Fitch values the kerchief as a keepsake and is showing it to his friends.

—The steamer Cymric, for the past few months engaged in the transport service of the English Government between England and South Africa, had two consignments of heavy chemicals aboard when she reached this port Monday, June 4, for the first time since the beginning of the Boer War. The consignments were to J. L. & D. S. Biker, 150 drums and 25 boxes caustic soda, 25 boxes and 17 casks of bleaching powder and 225 kegs of chlorate of potash; to Schoelkopf, Hartford & Hanna, 40 casks of solid carbolic acid.

—The "Committee of One Hundred on India Famine Relief," which was formed in this city about three weeks ago, is making strenuous effort to fulfill the purpose of its organization which is to secure, acknowledge and distribute moneys for relief of the starving in the far off Eastern country. The treasurers of the committee are Brown Bros. & Co., 59 Wall street, where any contribution may be sent or information obtained of the committee's plan.

—Parke, Davis & Co. have recently completed a sample room in the offices of the company at 92 Maiden Lane in this city, where all varieties of gums, such as gum arabic, tragacanth, senega, ghatti, etc., will be kept in stock. It is the idea of the firm to establish a trade in these articles, and A. P. Hamilton, an expert in this branch, has been engaged for this department.

—Albert B. Baltzly has purchased the interest of his partner, Mr. Toennies, in the well-known store at Eighty-fifth street and Amsterdam avenue and will personally conduct the business hereafter. Mr. Baltzly also owns the store at Seventh avenue and 134th street. Herman A. Ehrens will manage the latter store.

—The item which appeared in the Era of last week, stating that the drug store of J. N. Hegeman & Co., at Ninth and Broadway, was sold because it did not pay, was incorrect. Some fixtures were sold at auction in the Ninth street store, the location of which was changed a short while ago.

—At the Marine Hospital headquarters, 378 Washington street, Tuesday, June 5, bids for drugs and hospital supplies for the year were opened, but announcements of awards will not be made for some time. It is estimated that the supplies needed will cost in the neighborhood of \$30,000.

—Dr. G. Potts and J. B. Moore, two well known druggists of Philadelphia, were in this city last week and paid a visit to the store of Reed, Youmans and Cubit, at 140 Nassau street, the notice of whose attractiveness they informed Mr. Cubit they had read in the "Era."

—Victor I. Altshul, the well-known druggist of 330 Henderson street, Jersey City, called at the Era office Monday. Besides holding the title of "Graduate in Pharmacy" he is both a "Deutscher Apotheker" and a "Folskie Aptechar."

—Announcement is made by Fritzsche Bros. that Johan-

IN AND ABOUT BOSTON.

nes Paul Fritzsche, second son of the senior partner of the firm, Herman Traugott Fritzsche, has been given full power of attorney and will sign for the firm per prouration.

—The store at 725 Fulton street, Brooklyn, formerly owned by W. W. Scott, who committed suicide some time ago, has been purchased by Bragin Brothers, who also own a store at 826 Fulton street, and one in this city.

—The prohibitory order issued by Queen Victoria at the beginning of the war in South Africa against exportation out of the United Kingdom or the carrying coastwise of picric or carbolic acid has been rescinded.

—A. L. Palmer, manager of the Cleveland office for Parke, Davis & Co., was in the city last week. Accompanied by Mrs. Palmer, he left on Tuesday, June 5, on the St. Paul for a visit to the Paris Exposition.

—The Chisco Chemical Company has been incorporated in New Jersey, with offices at Camden, to manufacture chemicals. The capital stock is \$100,000. Incorporators, J. O. Wilson, E. Tomlinson and W. Early.

—Paul Schelling, a representative of the L. M. Carter Drug Company, of Shreveport, La., was in town last week. He left Saturday for Switzerland, where he will spend about four months with his parents.

—W. H. Whitney, New York City manager for the Empire State Drug Company, is preparing an exhibit to be shown at the State Pharmaceutical Association meeting at Newburgh, which begins June 26.

—The store of H. E. McIntire, at the corner of Pennsylvania and Liberty avenues, Brooklyn, has been purchased by Ramine & Cole, and they will continue the business.

—Samuel Palitz has purchased the store at 302 Stanton street, owned by I. Schlossberg, and the latter has opened a new store at the corner of Grand and Suffolk streets.

—Miss Carrie Carslake, daughter of George A. Carslake, druggist of Bordentown, N. J. was married to Paul Traub; of Philadelphia, Wednesday evening, June 6.

—Intelligence has been received of the death last week of John E. Chapman, president of Chapman, White, Lyons Co., wholesale druggists of Knoxville, Tenn.

—C. A. Pettenger, at Englishtown, N. J., whose store was burned to the ground some weeks ago, has rebuilt and was in town last week purchasing stock.

—Henry Glassman has opened a store at No. 305 Broome street. He was formerly connected with Emanuel Witt, at No. 1815 Madison avenue.

—Five cases of plants from Cuba and Central America were received at this port last week consigned to the Botanic Garden in Bronx Park.

—F. W. Granthom, of Hamilton, Bermuda, was in town last week purchasing drugs. Mr. Granthom visits the United States annually.

—The Empire State Drug Company has recently sent R. E. Bandman to New Jersey to represent it in that State.

—C. L. Gesell has changed his store from 256 Franklin street, to 769 Manhattan avenue, Brooklyn.

—The German Apothecaries are holding their annual outing at Greenwood Lake, N. J., to-day.

—At the monthly meeting of the Drug Trade Club last week ten new members were admitted.

VAN SCHAACK'S PRICE CURRENT 1900.—This well-bound volume is No. 29 of the series of illustrated catalogues or price lists annually issued by Peter Van Schaack & Sons, wholesale druggists, Chicago. Like preceding volumes it contains a very complete and systematic classification of all the goods and requisites employed by the drug trade, and is well indexed and arranged for convenient reference. It contains more than 1,300 pages.

—John Turner, who has been running the Trenton Drug and Chemical Co., of Trenton, Tenn., for the last two years on the "cut rate" plan, made an assignment last week; liabilities, \$4,000.

Sale of Cigars and Tobacco on Sunday Still a Burning Question.

Boston, June 9.—Another step in advancement has been made on the "Saunders' Bill," in which Representative Charles R. Saunders has tried to make legal the sale of cigars and tobacco on Sunday by common victrolans, druggists and newsdealers. Druggists heretofore have been unrestricted in their sales of these things on the Sabbath, until attention was called to the fact that these sales really were illegal. Druggists were defended on the score that cigars and tobacco in any form are a drug, and therefore rightly could be sold. But, since the ruling of the Supreme Court, recently, changing this supposition and showing that cigars and tobacco are not drugs and not necessities, druggists have been liable when making sales, which they have continued to make, nevertheless. The bill has been passed by the House to be engrossed and its favorable reception by the Senate will be eagerly hoped for. Mr. Saunders wrote to Senator Hoar, who is president of the New England Sabbath Protective League, the secretary of which, Dr. Kneeland, is vigorously opposing the bill, enclosing a copy of his bill and asking his opinion regarding it. In reply Senator Hoar wrote: "While I do not think the smoking of tobacco is a good practice, or to be encouraged, it is a matter about which every grown man must be permitted to judge for himself, and undoubtedly the cigar and the pipe are great comforts to many poor men who have very few comforts in the world. I quite agree with you that it is unwise to interfere with their freedom by preventing the purchase of a cigar or tobacco on Sunday at places where persons buy a meal or a newspaper."

Drug Clerk Takes His Own Life.

Boston, June 9.—On the night of June 7, at Lowell, Harry Ballard Gray, twenty years of age, committed suicide by taking a dose of cyanide of potassium. Gray had lately been living in Lynn, where he was a clerk in the pharmacy of the Harrington-Rintels Company. He went to the Edison Cemetery, Lowell, and, while beside the grave of the young woman who was to have been his wife, took the dose. Gray was to have been married last March to Miss Maud H. Howard, who died about the time the wedding was to take place. Her death affected Gray noticeably for many weeks, and all who have known him intimately have been much shocked by his bereavement. He had frequently said he could not bear the thought that Miss Howard had gone from him for ever. It was probably about 10 o'clock at night, directly after a visit by Gray to the home of Mrs. Howard, that he ended his life. When the cemetery employes went to work the following morning, they found his body. When Gray called on Mrs. Howard he spoke tenderly of the girl to her mother, and gave her an engagement ring which, since her death, he had been wearing himself. Then he bade her "Good-by." He was very popular in Lowell, and was everywhere known as a bright, promising young fellow of excellent character. By his employers in Lynn he was much liked.

NOTES.

—Two clerks in a Blue Hill avenue drug store in the Roxbury district, after closing up the store last Saturday night, returned for something they had forgotten. They found it, after which they sat down in a back room for a few moments. Soon they heard a noise in the front part of the store. One of the clerks got a revolver and peered out through a window in the prescription desk. He saw a man entering the store through the transom. The clerks then beat a hasty retreat to the basement and fired the revolver at the wall, in hope that the burglar would leave. This he did immediately, and now these young men in telling the story of their supposed cleverness are much gayed for their fright.

—On the night of June 6, Henry C. Goodwin, druggist in Meiden, was the host at a large wedding reception which he and his wife gave in honor of the marriage of their daughter, Miss Elizabeth Goodwin, to Frederic

R. Perry, of the Canadian Pacific Railway office, Boston. The ceremony took place at the First Congregational Church, and it was witnessed by many friends. The maid of honor was Miss Jessie McGregor, a classmate of the bride, and the best man was Frank L. Perry, brother of the groom. Upon their return from a wedding tour, Mr. and Mrs. Perry will reside in Malden.

—A Main street druggist at Worcester has made a big hit recently by a clever window display of six lively tortoise shell kittens, which have attracted an audience at times that blocked the sidewalk for a few minutes. The kittens are all double-toed, with a single exception. They are surrounded by mirrors, which multiply the six into twice that number when looked at from the sidewalk. The motter cat has a record of twenty-nine kittens in two years!

—Twenty-seven candidates were examined by the Massachusetts Board of Registration in Pharmacy, which held meetings on June 5 and 6. Of these twenty-seven, only three were granted certificates, the successful ones being Howard B. Foster, Gloucester; Charles A. Wells, Lowell, and Karl T. Small, Somerville. There will be one more examination this month, but no meetings will take place during July and August.

—With about twenty-five members present, the class of '95 of the Massachusetts College of Pharmacy held its annual meeting and dinner at the Hotel Thorndike this week. H. E. Bowman was chosen president of the class for the coming year. The other officers elected were: Vice-president, P. A. Dolan; secretary, C. E. Harriman. Dr. Balch, of Harvard, addressed the class at the close of the dinner.

—To the George F. Ropes Company, of Salem, has been awarded the \$500 prize offered to the retail drug firm or company in places having less than 50,000 inhabitants, which sold the largest quantity of Hyomel remedies.

—The New York Drug and Chemical Company, No. 233 Cambridge street, suffered a loss of about \$50 from a fire which broke out early on the morning of June 7 in the three-story frame building there, the ground floor of which is the pharmacy.

—This week's exports at the Port of Boston include drugs and chemicals, \$8,438; hops, 435; india rubber manufactures, \$7,854; soap, \$100; tobacco, \$14,082; spirits, \$2,750.

—After three years' service as clerk at Clarke's drug store at Lawrence, Archie E. Picken has returned to his home in Fitchburg.

PHILADELPHIA.

Philadelphia, June 9.

—The game of baseball at Ambler, Pa., last Saturday between the Keasbey & Mattison nine and the Smith, Kline & French Company's Laboratory Club, resulted in a victory for the K. & M. club by the score of 12 to 3 after five innings had been played, the game then being interrupted by rain. This is the second defeat for the S., K. & F. team in a total of five games. The schedule for the remainder of June is as follows: June 9, Acorn Salve Club; June 16, Neill Burgess Club; June 23, North American Club; June 30, Abe Kirschbaum Club.

—The Philadelphia College of Pharmacy still shows a little activity in spite of the warm weather. Professor Moerk has a few students in special chemistry; Professor Kraemer visits the institution every day to attend to the work on the Journal; Thomas S. Wiegand, the librarian, is at his post as usual, and W. Nelson Stem, the actuary, has recovered from his long illness sufficiently to be able to take up his duties again.

—H. N. Cox, of Schuylkill Haven, Pa., one of the most prominent pharmacists in the State, died last week after a short illness. He was one of the founders of the Pennsylvania State Pharmaceutical Association and served as its president in 1896. Mr. Cox was a worker in the American Pharmaceutical Association and was always identified with matters involving the progress of pharmacy.

—W. D. Elliott, who has occupied a responsible position with the Smith, Kline & French Company during the past sixteen years, died at his home, 1743 North Fifteenth street, aged sixty-eight years, after a few days' illness.

Mr. Elliott was formerly engaged in the wholesale drug business on Fourth street, in this city, in the firm of White & Elliott, afterward changed to Elliott & Company.

—An examination will be held by the Philadelphia Civil Service Examining Board on Friday, June 15, to determine the fitness of applicants for the position of chief apothecary of the Philadelphia Bureau of Charities and Corrections at the Philadelphia Almshouse. This position was left vacant by the resignation of Joseph W. England.

—Charles Durnin, who is foreman of the fluid extract department of the Smith, Kline & French Company's Laboratory, has started on a trip to Montana which will last three or four weeks.

—Ed Eberley, of Eberley Bros., Twenty-fifth and Oxford streets, and A. C. Schofield, of 2200 North Fifteenth street, were away together on a trip to Wilkesbarre last week.

—Mulford Ludlow, a pharmacist of Millville, N. J., and M. Sonntag, of 3338 Germantown avenue, spent a few days in Washington recently on a pleasure excursion.

—J. W. Harrigan, who is the proprietor of five successful down-town drug stores, is away on a vacation down in New Jersey somewhere.

—R. S. Doake, proprietor of the drug store at Fifteenth and South streets, has fitted out his colored errand boy in a blue uniform.

BALTIMORE.

Maryland Pharmaceutical Association.

Baltimore, June 2.—The arrangements for the annual meeting of the Maryland Pharmaceutical Association, which will be held at Hagerstown, Washington County, on June 19-23, have been completed. The railroads have made a rate of one and one-third fare for the round trip, and a large attendance is expected. An interesting programme has been prepared by the local committee, the business of the meeting being admirably interspersed with diversions. It is proposed to spend an entire day going over the battlefield of Antietam, nearby, where the only big battle on Maryland soil was fought during the Civil War. The history of the fight between McClellan and Lee will be fully explained to visitors by competent guides. A number of interesting papers will be presented and prize contests in bowling, pool, etc., for ladies and gentlemen will be among the social features. Prof. Wm. Simon, of the Maryland College of Pharmacy, will deliver a lecture on wireless telegraphy, and the Hagerstown druggists have in addition gotten up a banquet and musicale for the members. A trolley ride to Williamsport and Funkstown will enable the excursionists to see the remarkably small crossing which made it possible for Lee to get out of harm's way after the battle of Gettysburg. The headquarters of the association will be at the Hotel Hamilton.

Maryland College of Pharmacy.

Baltimore, June 4.—The plan of increasing the usefulness and efficiency of the Maryland College of Pharmacy at the next session includes the addition of a course in pharmaceutical assay work, to which end the laboratory will need to be supplied with special equipment. The principal innovation, however, is the establishment of a dispensary, so that the students can profit by instruction in practical dispensing and in all the details of drug store routine. The faculty is to be augmented by a chair of dispensing and commercial pharmacy, and according to report will be filled by Dr. H. P. Hynson, the secretary of the college. The trustees have decided to confer the degree of Doctor of Pharmacy upon graduates who take the full course.

A Controversy Over an Estate Settled.

Baltimore, June 9.—The controversy over the estate of the late Dr. Louis C. Horn, Sr., a physician and druggist at the corner of Mulberry street and Myrtle avenue, has been amicably settled out of court and the litigation growing out of it has been dismissed. The two suits were instituted by Dr. Horn's son, Dr. Lou C. Horn, Jr., one of them being a caveat to the father's will and the other asking for the appointment of receivers for the real estate and the annulment of certain conveyances made by him during his life time. The interested persons, it is

said, are satisfied with the terms of the agreement reached. The estate is estimated to be worth about \$15,000.

NOTES.

—Dr. Oscar Ross, a popular Baltimore druggist, has extensively improved his pharmacy at 6 West North avenue. All the wood work has been decorated white and gold, the walls have been handsomely papered and frescoed, a new onyx soda water fountain has been installed, and the establishment now must be numbered among the handsomest in the city. It has a particularly chaste and rich appearance. Dr. Ross's enterprise is greatly appreciated by his patrons.

—A. M. Lichtenstein has purchased the drug store of Hervey Laney, on Baltimore street, Cumberland, Md. Mr. Laney is in bad health and intends to place himself under the care of a Washington specialist. There is every prospect that he will be fully restored by a proper course of treatment.

—Among the visiting druggists in Baltimore last week were Dr. J. S. Hetrick, of New Freedom, Pa.; Joseph A. Jeffries, of Warrenton, Va., and Dr. J. W. Hodges, of Washington, D. C.

—Mr. Moore, of the Norfolk, Va., drug firm of Wallace & Moore, will shortly open a new store in that city, to be known as the Moore Pharmacy. He was in Baltimore on a visit last week.

—Druggist C. H. Michaels, of Reisterstown, Md., who was for some time on the sick list, has recovered sufficiently to be out again. He took a trip to Baltimore last week.

DETROIT.

PARKE, DAVIS & CO. ENTERTAIN.

DETROIT, June 9.—During the last two days—Thursday and Friday—a party of 199 pharmacists, physicians and dentists from Chicago and Northern Illinois have been most royally entertained by Parke, Davis & Co. All day yesterday was spent in a boat trip to the famous "St. Clair Flats." The water is so shallow in the St. Clair River that a long series of small islands has been artificially constructed right out in the centre of this wide body of water. These islands are separated from one another by narrow channels, sometimes crossed by rustic bridges, and the resemblance to the famous Italian city is so great that the spot has been appropriately called the "Venice of America."

The party reached Hotel Mervue, situated on one of the first islands, about 1 o'clock and just in time for dinner. The meal had not been completed when calls for "Bodemann" began to be heard, and finally the Chauncey Dewey of the Chicago drug trade arose and delivered one of his epigrammatic and interesting speeches. "Parke, Davis & Co.," he said, "combine American energy and progressiveness with European thoroughness and Oriental hospitality." After dinner the trip was continued on up the river by the rest of these unique islands, and then a turn about was made and Detroit reached about eight o'clock after supper had been had on the boat.

The day before, Thursday, was spent in going through the laboratory and in viewing the city. In the morning were visited the biological stables, where nearly 5,000 animals of various kinds are kept for the manufacture and testing of serums, antitoxins and vaccines, and the pharmacological rooms, where certain drugs not amenable to chemical assay are tested physiologically upon living animals. In the afternoon the various other departments of the laboratory were visited—the places where the myriads of pharmaceutical products and specialties put out by the house are manufactured. Afterward a trolley ride was had around the city and over to Detroit's incomparable island park, and this was followed by a special dinner at the Russell House. The day was finally ended by a moonlight ride down the river.

Many prominent men were in the party, among whom may be mentioned William Bodemann, Henry Birch, R. E. Rhode, Geo. R. Baker, George Stanbury, Charles Stevenson, Mr. Hart, all of Chicago; Homer Porter of

Rockford; Mr. Mozark, of Bloomington; George C. Lischer, of Galesburg; and E. S. Tanner, of Los Angeles, Cal., and Drs. Reilly, Johnson and Pletz, of Chicago.

Dewey Day.

DETROIT, June 9.—Detroit is to-day celebrating a visit from Admiral Dewey and everything is in holiday attire. The local druggists are keeping up with the procession and many of their windows are looking unusually gay and attractive. At the Detroit Pharmaceutical Company's store the big window attracted a crowd all day. The entire space was given up to a display of chemical glassware and scientific apparatus, backed by a lot of old files of prescriptions. In the foreground an apparatus was arranged consisting of six Florence flasks connected by glass and rubber tubing, the flasks being filled with red, white and blue water, through which was made to flow a dense white vapor caused by the reaction of fumes of muriatic acid passing through a solution of concentrated ammonia.

At the Central Drug Store Mr. Todd advertised a special soft drink for the day, called "Manila punch," which proved to be about as popular as the hero himself. Everywhere the druggists got out their flags and bunting and were kept busy handling the thirsty crowds.

NOTES.

—W. A. Rudell, formerly of the firm of Rudell & Conway, Sault Ste. Marie, will soon open a new drug store in that city. The store will be fitted out in birch and the fixtures will be unusually fine. Mr. Rudell is now in Detroit buying stock.

—The Michigan Drug Co. baseball team defeated the team of the Malleable Iron Co. with a score of 7 to 0, June 2. To-day, June 9, the team went to Wyandotte to play the Michigan Alkali Co.

—Dr. L. H. Hallock is about to open a new drug store at Marine City.

CINCINNATI.

Cincinnati College of Pharmacy Commencement.

Cincinnati, June 9.—The twenty-eighth annual commencement exercises of the Cincinnati College of Pharmacy were held Wednesday afternoon, June 6, at the Zoological Gardens. The attendance was large. The exercises opened with music, followed with a prayer by Dr. Louis Grossmann. Prof. A. O. Zwick spoke on behalf of the faculty. Prof. Chas. A. Apmeyer and the president of the college, John Ruppert, made addresses on behalf of the college, after which diplomas were awarded to the following graduates: Robert E. De Jarrette, Robert A. Dudley, Chas. S. Elliott, Porter Y. Ewag, J. W. Henderson, Merton Jackson, J. P. Jennie, H. W. Kress, Edward F. Lutz, J. W. Miller, Frank H. Moyer, Aden C. Nash, Anna Owen, J. H. Ratje, Harry Schmuelling, Harry J. Senter, A. Q. Taylor, J. E. Timmerman, C. J. Tranter, Jacob T. Haas, J. H. Hook, Miss Norma L. Clerc Stoner and Frank O. Taylor.

Eight medals were awarded for high averages in the different branches, to the following students: Robert A. Dudley, chemistry; Merton Jackson, best general average; Jacob T. Haas, chemistry, second prize; Aug. Hook, three prizes, materia medica, practical chemistry, general average, second prize; Miss Stoner, chemistry; Frank O. Taylor, chemistry.

The banquet in the evening was a fitting climax to the programme of the day, and afforded everything to delight the inner man, both liquid and solid. The tables were spread on the balcony of the new club house, where the atmosphere was laden with the smell of flowers. About 150 plates were spread. The toasts responded to sparkled with wit and humor, and everyone present went home praising the committee for their efforts.

Druggists Ruled for Selling Whisky.

Cincinnati, June 9.—Detective John T. Norris and several assistants during the past week have been going among the drug stores in this city attempting to purchase whisky. Norris, who is

CHICAGO.

DIPLOMA MILL MEN ARRESTED.

Chicago, June 7.—Postal officials on Monday arrested the proprietors of the Metropolitan Medical College, No. 866 West Van Buren street, charging them with issuing medical and other diplomas at stipulated prices and without regard to the fitness and ability of the persons to whom they are awarded.

Those arrested were James Armstrong, president; J. H. Randall, vice-president; Theodore Armstrong, secretary, and Charles M. Hovey, attorney. Their arrest was made by Guy T. Gould, United States post office inspector, the specific charge against them being fraudulent use of the mails. United States Commissioner Humphrey held the men for a hearing June 14 in \$2,000 bonds for the Armstrongs and \$1,000 for each of the others.

While the State Board of Health of Illinois has for several years tried to close the institution, the immediate cause of the action Monday was the swearing out of warrants by Joseph De Barthe, Baker City, Ore., who declares that at one time he was employed by the institution to dispose of diplomas ranging from a few dollars to several hundred dollars each, according to the customer. This is denied by the men under arrest, who say that De Barthe is simply angered and spiteful after having a controversy with them.

Inspector Gould, however, is in possession of several other cases of purchased diplomas, and feels certain that two of the men at least will be convicted of fraudulent use of the mails, even if the entire quartet is not found guilty and punished.

The college has also been known as the Independent Medical College. Still another it has gone by is the National Law School. Diplomas of all kinds, it is charged, were furnished on short notice at prices to suit the purse.

The officers of the "diploma mill" secured their release from the county jail yesterday after giving bonds which were approved by United States Commissioner Humphrey and Assistant District Attorney Clark.

Inspector Gould has in his possession a diploma issued to Daniel Wellington Mott, of Fort Worth, Tex., and also an affidavit from W. D. McVean, clerk of the District Court of Tarrant County, to the effect that "Dr." Mott was duly registered under this diploma, which was issued November 22, 1890.

The diploma is a very elaborate piece of sheepskin. The "doctor's" name is printed across the document in bold type, and he is called "Medicinae Doctorum," all of which Inspector Gould says is an attraction for the young men, who come all the way from Texas and other States to get a sheepskin upon the strength of which they hope to wear sideburns and silk hats.

The following signatures are attached to the diploma issued to "Dr." Mott: J. Armstrong, M. D.; Joe De Barthe, M. D.; H. Packard, M. D.; M. L. Reed, M. D.; James Monroe McDonald, Ph. D., A. M.; A. B. Opicka, M. D.; J. H. Randall, D. D., S. M. D.; Thomas Armstrong, Ph. D., Sec.; J. T. Cook, M. D., and J. E. Rullison, M. D. The cases are set for hearing on June 14.

NOTES.

—J. C. Borchardt has sold his store at No. 735 West Madison street to Dr. C. W. Jacobs, of New Orleans, La. Dr. Jacobs has lived some two years at the Sherman house in Chicago, and has recently figured in the newspapers in connection with his brother, F. B. Jacobs, and the latter's wife's relatives. The trouble is exclusively a family affair, and concerns a will which it is alleged Mrs. Jacobs made in favor of her husband. The lady is ill, and has been pursued from hospital to residence and residence to sanitarium by solicitous relations, who allege undue influence has been exerted, and that Mr. Jacobs, her husband, is himself on the brink of the grave with consumption. The merits of the matter appear to be somewhat mixed. Capt. Borchardt will from now on devote himself exclusively to the manufacture of Borchardt's Malt Extract.

—Robert Stevenson, Jr., has been made famous in a

a private detective, is taking advantage of a law in force in this State, which makes it an offense for a druggist to sell liquor except when the consumer has a prescription for it. The fine for the offense is \$300, and the informer is entitled to half of the fine imposed. Owing to the warnings in the daily press, the druggists are on their guard, and it is difficult for anybody to purchase. The detective has an underhand method of catching his victims. Either he or one of his assistants rushes into a drug store seemingly suffering great pain and asks for whiskey and ginger to allay the cramps. The unsuspecting druggist accommodates him. As the detectives travel in pairs, they tabulate each purchase and take evidence which will be used in prosecuting the seller. As the local druggists have all been warned, it may be best for Detective Norris to change his method, as he is liable to get a dose of Tr. Aloes or Tr. Capsicum instead of the Kentucky product.

NOTES.

—The "meanest" man has been found. He is a resident in the aristocratic suburb of Walnut Hills. About 2 a. m. one day not very long ago, Robert Ferguson, the clerk at Rendigs Bros., was awakened by the violent ringing of the night bell. He hurriedly dressed himself, lit the gas, opened the door and admitted a man who wanted ten cents' worth of ipecac, apologizing at the same time for disturbing Mr. Ferguson's slumbers. While Mr. Ferguson was behind the counter, the "meanest" man saw the penny-in-the-slot machine, and reaching in his pocket produced a penny and deposited the coin. When the wheels quit revolving, Ferguson was startled by an exclamation of delight from the customer. What was Bob's surprise when he saw that the "meanest man" had four dimes and was entitled to 50 cents in merchandise. After receiving the ipecac the "meanest man" calmly walked over to the cigar case, and taking eight five-cent cigars, thanked Bob for his trouble and departed. Ferguson is now arranging to get even.

—Prof. C. G. Lloyd, of the firm of Lloyd Bros., wholesale druggists, is at Mammoth Cave, Ky., experimenting on the culture of mushrooms. He has made a test of the soil and climate in the cave, and says that enough of the delicacy can be raised in the caves to supply the entire world. He is gathering material for a book on the subject, and when he makes his report it is not improbable that a company will be organized to test the experiment.

—The Druggists' Bowling Club enjoyed the second outing of the season at Bond Hill, Friday, June 8. The ball players, captained by Aug. Rendigs, defeated those under Joseph Nicholas by the score of 37 to 8. The club has received a challenge from the Covington druggists for a game, and on June 22 will journey into Kentucky and teach the pill puffers there how to play the game.

—William L. Ritter, formerly at Fifth and Broadway, will leave June 12 for Memphis, Tenn., where he will take charge of Renkert & Co.'s store.

—Theo. Konzelman will clerk for N. E. Smith when the new store is opened at Avondale.

WILLIAM H. KNIGHT, for twenty years identified with the retail drug business in Boston, died June 1. He was a native of South Paris, Me., and came to Boston as a boy, learning the business with the late F. T. Church, an old-time druggist, whose store finally gave way, a year or so ago, to a retail shoe store. Mr. Knight eventually became a partner of Mr. Church, and separated from him about fifteen years ago, to establish the business which he has since conducted, corner of Hanover and Court streets. He was a thirty-second degree Mason. The funeral service was held at the family residence on Wednesday afternoon. There were delegations present from Boston Commandery, K. T., Joseph Warren Lodge, of which Mr. Knight was a member, St. Paul's Chapter, and from various Scottish bodies. A large number of Mr. Knight's employes were at the funeral, and a floral piece was sent by the boys of his employ. The Eastern Drug Company, the Druggists' Association and the Beacon Whist Club also were represented. The burial was at Forest Hills Cemetery.

night. He was voted by his classmates the "handsomest man in Yale, 1900." The Yale student is 21 years old, and will graduate with honors this year. He has won several essay prizes at the university, and is identified with a number of societies at New Haven. He is a younger son of Robert Stevenson, president of the Robert Stevenson Drug Company, of this city.

—A gentleman connected with the manufacturing business said to your correspondent to-day: "Retail druggists should stay in the front part of their stores and keep themselves in readiness to wait on customers. They lose more than they make by being up to their elbows in making their own proprietaries during the busy part of the day."

—Clark Bros., of No. 493 State street, have been incorporated as the Clark Brothers Company. They will increase their manufacturing interests to a large extent. In addition to operating a retail drug store, the company makes a general line of pharmaceuticals.

—The annual meeting of the Chicago Veterinarian Druggists' Association has been postponed until Thursday, June 28, on account of the fact that Hon. T. N. Jamieson will be absent on the 21st in attendance at the National Republican Convention in Philadelphia.

—Leflingwell & Smith will soon open a new drug store in Evanston. This was given last week as R. L. Leflingwell's new store. The reporter spelled the name by guess, and if apologies are due, cheerfully extends them to both Mr. Leflingwell and Mr. Smith.

—Hugh W. Matthews has put in a new drug store at Western avenue and Adams street. New stock and fixtures are now being placed, and a Twentieth Century soda fountain installed. The store will be opened in about two weeks.

—C. H. Wagner has moved his store from Colorado and Albany avenues, to Madison street and Albany avenue, a much better location, and has put in a fine onyx soda fountain.

—Lewis F. Stuebe, secretary of the Vermillion County Pharmaceutical Association and proprietor of the Danville (Ill.) Pharmacy, was in Chicago this week.

—The Indiana Pharmaceutical Association will meet on Wednesday, Thursday and Friday of this week (June 13, 14 and 15), at South Bend, Ind.

—A. Bower, of Danville, Ill., a representative of Morrison, Plummer & Co. in the central part of the State, was in Chicago this week.

—Frank K. Jones has bought the drug store formerly owned by M. F. Dattelzweig, at No. 1122 Southport avenue.

—It is reported that a new drug store will be opened on State street, between Lake and Randolph streets.

—S. T. Hurst, a well known druggist at No. 351 North Clark street, is seriously ill with appendicitis.

THE NORTHWEST.

St. Paul, Minn., June 8.

These are the days that the druggist complains of the weight of his calling's implacable chains.

The summer is here, and beyond all compare.

The charms of its landscapes, the balm of its air.

The slave of the pestle and mortar is wishing

To be outside golfing or yachting or fishing.

But here he must stay, soda-vending, pill-mixing,

Cigar selling, men-trusting and stick-plaster-fixing.

With but one crumb of comfort for his spirit to cheer:

"I may come out even the end of the year!"

—Successions: C. M. Fronee & Co., Iowa Falls, Ia., by De Ford & Marshall; J. T. Van Ness, Neola, Ia., by Helen G. Van Ness; G. W. Clutter, Clatonia, Neb., by E. J. Blood; Mayo & Berker, Bemidji, Minn., by F. A. Mayo; William M. James, Breckenridge, Minn., by W. V. Pasko; M. B. Myers, Stanton, Neb., by J. J. England; Lynch & Childs, Yillisca, Ia., by K. J. Lynch; T. Neimann, Newall, Ia., by E. A. Vogel & Co.; D. R. Rhynsburger, Pella, Ia., by F. Maurer; U. Slate, Pendleton, Ore., by H. J. Jackson; Duckworth & Co., Crystal Lake, Ia., by Mulligan & Flo.

—W. W. Noble, West Fourth and St. Peter streets, St. Paul, has made some improvements in his store, including new wall paper and a particularly handsome frieze, while the front has been painted.

—New: Saratoga Pharmacy, Omaha, Neb.; Whitehall,

Baker & Co., Ramona, S. D.; Hove & Anderson, Kelster, Minn.; F. J. Gressler, Dougherty, Ia.

—George Hobs, of George Hobs & Co., Marion, Ia., and Bigelow & Brokaw, Charter Oak, Ia., have given bills of sale.

—A St. Paul paper has made the stunning discovery that "the soda fountain clerk is recognized by his phiz."

—Phil. Adams was visiting friends in the city a few days ago. He is now clerking at Hinckley, Minn.

—Henry J. George, late in the drug business in Chicago, is in this State seeking a location.

—A new stock is to be put into Walnut Grove, Minn., by J. F. Hesnault.

—Frank A. Danielson has returned to the State from a trip to Wyoming.

—H. Phillipp & Co., Rutland, S. D., have removed to Veblen.

—Charles P. Parish, Stanton, Neb., is negotiating to sell.

—J. B. Carrels is with E. D. Merrell at Superior, Wis.
—S. C. Lacy & Son, Aberdeen, S. D., have sold.

ST. LOUIS.

F. G. Meyer a Deputy.

St. Louis, June 9.—The army of citizens, now fast approaching the 2,500 mark, and which is engaged under the orders of the sheriff in preserving order in strike-ridden St. Louis, received an important addition last week from the drug trade in the person of F. G. Meyer, of Meyer Bros. Drug Company, and late of the New York office of the company. He didn't wait to be summoned, but volunteered. He is no new hand at such work and helped to put down the rioting in St. Louis incident to the great railway strike in 1877.

Cocked Hat.

St. Louis, June 9.—To-night at the Crescent alleys the distribution of the prizes by the Druggists' Cockeyed Hat League will take place. The six highest averages for the series of 150 games were: Enderite, 48.82; Kahre, 46.52; Neu, 46.47; Aszman, 46.17; Niemann, 45.90; and Beltz, 45.15. Pange made the highest record, 78, for a single game, and Aszman was the highest for five games, 314.

Goes With S. & H.

St. Louis, June 9.—Fred C. Carter, for six years manager of the St. Loui's office of Parke, Davis & Co. until the first of the year, has connected himself with the Searle & Hereth Company, Chicago, and will make his headquarters in Kansas City, having charge of the company's interests in that section.

Violated Trade Mark Law.

St. Louis, June 9.—Michael Mara, a barber, pleaded guilty in the Court of Criminal Correction, Tuesday of this week, to the charge of violating the trade mark law of Missouri and was fined \$100 and costs.

Mara's offense consisted in using for a preparation of his own manufacture labeled bottles which had contained "Coke Dandruff Cure," manufactured by the A. R. Bremer Co., of Chicago. Charles Napton was counsel for the A. R. Bremer Co., which prosecuted Mara. A representative of the company stated that other prosecutions would be begun at once.

NOTES.

—The river excursion of the Retail Drug Clerks' Society Thursday night was a peculiarly delightful one. While the crowd on board the boat was not as large as usual, the number of druggists and drug clerks was larger. The West End pharmacists were especially in evidence, as they were able to get home by the suburban railway, while the cars to other sections of the city are all controlled by the Transit Company and make no attempt to run at night.

—Wm. H. Young, formerly representing Dabrook's perfumes locally, is second lieutenant of Company 16 of the "Pompeii Comitatius" and is out with his gun squelching the hoary head of disorder wherever it appears.

—Mrs. S. J. Keiffer, wife of S. J. Keiffer, who recently

sold his drug store at La Salle and St. Ange avenues, was burned by a gasolene explos on at her home last Sunday, but luckily escaped serious injury.

—Dr. John J. Harris, who for nearly twenty years conducted a drug store at Lafayette and Jefferson avenues, was married this week to Mrs. Sarah M. Butten.

—The Cass Avenue Drug Co. has succeeded Dr. Paul Weeke at S xteenth street and Cass avenue, Dr. Weeke confining his entire time to his practice.

—Ike Jones, formerly clerk for E. M. Pirner and more recently with Eli Lilly & Co., is clerking at the Frost-Johnson Drug Co.

—Mr. Hoover, formerly with the Crowdis Drug Co., Dallas, Tex., will represent the Meyer Bros. Drug Co. in Central Texas.

—Max Schneider, of the firm of Schneider & Grove, and in charge of their store at Pendleton and Finney avenues, is quite ill.

—E. C. Bauer, formerly on the road for Luyties Homeopathic Pharmacy Co., is now head clerk for Martin J. Noll.

—F. W. Lucke, pharmacist, of Prairie and Lee avenues, was married Monday of this week to Miss Lulu Weisman.

—Wm. V. Whittier is now proprietor of the Ryan pharmacy at Ninth and Destrahan streets.

—John Carey, of the Carey Bros. Drug Co., is spending the summer in California.

—J. W. Clover has opened a drug store at Knoxville, Iowa.

UNIVERSITY OF MINNESOTA.

The University of Minnesota, College of Pharmacy, held its graduating exercises at the University Armory, Minneapolis, June 7. The commencement address was delivered by the president of the University, Cyrus Norcross, his subject being the "Dissemination of Educated Men." The degree of doctor of pharmacy was conferred on Thomas Escobe and the degree of pharmaceutical chemist on the following: Gustave Bachman, Avoca; J. M. Bell, Glencoe; Roy Carter, Norfolk, Neb.; G. A. Cowin, Minneapolis; C. O. Danielson, Minneapolis; E. T. Dillner, Henning; Henry J. Dreis, St. Paul; E. E. Haskell, Minneapolis; J. E. Hynes, Winnabago City; C. G. Lyon, Elgin; M. T. Moran, Minneapolis; Albert Moskop, Arlington; Mae Nesbit, Rochester; C. E. Peterson, Litchfield; E. T. Schmidt, Minneapolis; Alois J. Spielman, Shakopee.

The Alumni Association held its annual meeting June 6 and elected the following officers: President, J. E. Hynes; vice-president, M. P. Moran; secretary, Miss Mae Nesbit; treasurer, S. F. Sanderson; marshal, E. E. Haskell; toastmaster, A. H. Fjeldstad. After the election a banquet was held at the Nicollet Hotel, Norman McCloud, '95, acting as toastmaster. Responses were made by various members, and Prof. F. J. Wulling delivered an address.

—At the meeting for the second quarter, held by the Kansas Board of Pharmacy, at Hutchinson, May 25, the following were elected officers for the ensuing year: President, W. C. Johnston, Manhattan; secretary, W. E. Sherriff, Ellsworth; treasurer, W. W. Naylor, Holton. Thirty-two applicants were present and took the examination. The following were successful: Registered pharmacists—John M. Brunt, Abilene; Henry M. Beckley, Emporia; B. E. Haskins, Kingman; C. J. Halm, Uniontown; C. B. Kinne, Moran; W. P. Mosher, Axell; J. P. Miller, Ottawa; H. H. Reed, Ottawa; L. A. Cummers, Lyons; Robert G. Spradling, Frankfort; George C. Schellack, Galena; Miss Doris K. Strauss, Leavenworth; J. P. Wermeling, Lucas. Registered Assistants—W. C. Daugherty, La Cross; V. D. Zeleis, Empora. There were registered without examination, by virtue of being graduates from recognized colleges of pharmacy: John Chandler, Stockton; John C. Boyd, Hutchinson; J. E. Elliott, Wichita; C. M. Berthoff, Cherokee; C. M. Palmer, Lawrence; L. G. Reeves, Cherokee; Wm. M. Swentzell, Wichita. The next meeting of the board will be held at Pittsburg, September 5, 1900, and those who desire to take the examination should notify the secretary at least five days prior to the date of the meeting. W. E. Sherriff, Secretary, Ellsworth, Kansas.

Business Record.

كامل بيان في كل شيء

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by replying promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record and the term "D. L." used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Birmingham.—Nabers, Morrow & Sinnige, 169-171 North Twentieth street, damaged by fire; insured.

ARKANSAS.—Cabot.—Young & Sanderlin, succeeded by S. R. Young.

CONNECTICUT.—Derby.—Charles H. Cog, deceased. Hartford.—J. O. Leonis, Lawrence and Grand streets, new store.—George Rapport, Maple avenue, corner Congress, new store.—J. J. Seinstorf, Maple avenue, corner Congress, removed to 15 Main street.

FLORIDA.—Jacksonville.—B. Genovay, East Bay and Newman, sold to M. B. Craig.

GEORGIA.—Marietta.—C. M. Crosby, deceased.

ILLINOIS.—Chicago.—M. C. Schmucker, 382 West Madison, sold to L. L. Merriman.—A. E. Thompson, 682 West Division, sold to L. A. Ellsburg.

INDIANA.—Atlanta.—D. C. Hebbis, sold to Morris & Seully.

Indianapolis.—W. R. Bannon, 401 South Noble street, sold to John W. Smith.—John M. Scott & Son, Illinois and Sixteenth, in D. D. List is an error; should read J. M. Scott & Son.

Kentstown.—Goble & Johnson, succeeded by E. M. Johnson & Co.

Shirley.—A. S. Houck, succeeded by Houck & Wiggin.

INDIAN TERRITORY.—McAlester.—J. H. Mann, succeeded by Mann & Springer.

IOWA.—Adair.—McAvoy & Muihern, sold to Woodward & Davidson.

Iowa Falls.—C. M. Forney & Co., sold to De Ford & Marshall.

Lime Springs.—Love Bros., succeeded by John G. Love.

Nora Springs.—G. E. Joslin & Co. sold to the Taylor-Gardner Drug Co.

LOUISIANA.—Jackson.—S. C. Schwing, deceased.

MAINE.—Rockland.—W. C. Pooler, damaged by fire; insured.

MASSACHUSETTS.—Bedford.—E. E. Hamblen, sold to A. C. Loewe.

Boston.—W. H. Knight, 97 Court street, deceased.

MINNESOTA.—St. Minneapolis.—F. J. Gould, 365 Syndicate Arcade, sold to Frank W. Crowell.

MISSISSIPPI.—Hattiesburg.—Bufkin, Carter & Co., succeeded by Bufkin, Cadenhead & Tucker.

NEBRASKA.—Elba.—W. H. C. Chinn, sold to P. G. Frandsen.

NEW JERSEY.—Weehawken.—H. H. Wouters, sold to Wm. Kyvitz.

New York.—Brooklyn.—Walter W. Scott, 725 Fulton street, deceased.

Cohocton.—F. E. Russell, sold to E. Sutfin.

Le Roy.—F. S. Coburn, assigned.

New York City.—A. W. Stevia & Co., Broadway and Thirty-eighth street, sold to Knickerbocker Pharmacy.

NORTH CAROLINA.—North Wilkesboro.—Horton & Wilburn, succeeded by W. P. Horton.

PENNSYLVANIA.—Bradford.—O'Connell & D. wey, sold to Delos Armstrong; C. V. Cottrell, Mgr.

Irwin.—R. E. Humphrey, assigned.

Schuykill Haven.—H. N. Cox, deceased.

SOUTH DAKOTA.—Deadwood.—N. E. Franklin, sold to W. L. Frost.

Egan.—Taylor, Bros. & Co., sold to H. H. Maupin.

Westington Springs.—Jewell & Schaefer, succeeded by M. A. Schaefer.

TENNESSEE.—Nashville.—D. S. Page, 1423 Church street, sold to W. W. Taylor.

TEXAS.—Lorena.—W. L. Harper & Co., sold to C. B. Zachary & Co.

—The Ohio Medical University held its eighth annual commencement exercises recently at the Great Southern Theatre, Columbus. There were fifty-two graduates in medicine, forty in dentistry and seven in pharmacy. The graduates of the department of pharmacy were: Charles Thomas Barman, William Albyn Beall, Alton Plexer Conrad, Charles R. Emmons, Benjamin Louis Netts, Lazell Lawrence White, Charles Leonard Worrall.

Iron Glue.

On the theory that people will part with their nickels and hold to their dimes, Iron Glue, which retails at five cents, ought to be the best selling article of its kind on the market. It is good glue, is in a large bottle with cap and brush, always ready for use, and every box of two dozen bottles contains a handsome show card. Iron Glue is not an experiment. Some firms sell hundreds of gross every year. It has been made and sold for years by McCormick & Co., Baltimore, who also put up many other attractive goods for the drug trade. They want every retail druggist to know about their goods, all of which carry a good profit.

Conviction for Refilling Genuine Hunyadi Janos Bottles.

At the New York Court of Special Sessions, June 6, 1900, before Justices Holbrook, Hinsdale and Jerome, a druggist by the name of Henry A. Steinach, at No. 870 Second avenue, New York City, was convicted of a violation of Section 389 of the Penal Code for unlawfully using and refilling genuine Hunyadi Janos Water bottles with an artificial product put up by him. A fine of \$250 was imposed, with the alternative of sixty days in jail. The proprietor of the genuine Hunyadi Janos Water intends to prosecute to the full extent of the law all other unlawful practices similar to the above case.

Grape Juice.

Dr. Felix Oswald, in the Chautauquan, says: "Grapes, it is true, are chiefly sweet water, with a subtle flavoring from nature's own laboratory, but in no other form can the human organism absorb so large a quantity of blood purifying liquids with such a minimum of disagreeing after effects." In Welch's Grape Juice the juice of choice Concord grapes is found unchanged in the transformation from grape to grape juice. Embodying all the food properties of the grape, Welch's Grape Juice is food and drink in one. A sustaining diet for those unable to take solid food, a healthful invigorating drink for young and old.

An Apt Comparison.

Speaking editorially of the grasping propensity of every nation, a leading daily newspaper says: "Territory once in hand seems to be as hard to lay down as a piece of tanglefoot fly paper." This allusion to the sticky quality of "Tanglefoot" sealed sticky fly paper demonstrates how well known are its merits. There is as little chance of a weak power escaping the big national grabbers as of a fly and the germs it carries getting away from "Tanglefoot." An article so well appreciated is a good thing to carry in stock.

Highest Honors for Ed. Pinaud's Perfumes at the Paris Exposition.

Ed. Pinaud's perfumes have awarded the highest distinction that could be bestowed upon any exhibit. They are placed "hors concours," that is, "above competition." As a consequence of this distinction, Mr. Victor Klotz, the head of the Parfumerie Ed. Pinaud, has been selected as a member of the Jury of Awards at the Exposition.

At Hartford, Conn., J. J. Seinsoth has moved from his old store on Maple avenue, corner Congress street, to 16 Main street. His old store will be occupied shortly by George Rapport, who is now fitting it up. Both Mr. Rapport and Mr. Seinsoth are putting in onyx soda fountains, furnished by the Liquid Carbonic Acid Manufacturing Co. J. O. Loomis is also opening a new store, corner of Lawrence and Grand streets.

Manheimer & Eben, 28 Gold street, New York, are sole agents for the United States for Warrick Freres, Grasse, France, pomades, floral waters, essential oils and virgin olive oil. The latter, especially, is guaranteed absolutely pure and a sample will be sent to any druggist who will take the trouble to write for it.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.**Issued January 23, 1900.**

- 641,684.—Harvey S. Ferry, Mount Vernon, N. Y. Means for carbonating liquids.
 641,692.—Charles X. Gutzeit, P. M. and M. L. Owen, San Antonio, Tex. Non-refillable bottle.
 641,703.—John J. Kizler, Hillsborough, Kans. Lemon squeezer.
 641,745.—James A. Merritt, Boston, Mass., assignor by mesne assignments, to G. L. Storrs, Willimantic, Conn. Antiseptic apparatus.
 641,811.—Albert P. Tschirner, St. Louis, Mo. Polishing paste.
 641,820.—Wilfred Barnes, Lynn, Mass. Electrolyzing apparatus.
 641,840.—William M. Cline, assignor of one-half to J. N. and C. H. Alexander, Lansing, Mich. Acetylene gas generator.
 641,862.—Joseph Jauch, assignor to Bradley & Hubbard Mfg. Co., Meriden, Conn. Acetylene gas lamp.
 641,870.—Ludwig Knorr, Jena, assignor to Farbwerke, vormals Meister, Lucius & Bruning, Höchst-on-the-Main, Germany. Naphthalenmorpholin.
 641,910.—Frederick W. A. Wieschbrock, New York, N. Y. Making maltose and dextrose.
 641,962.—Bernhard Hoffmann, Paris, France. Solidifying petroleum.
 641,967.—George T. Huff, Mill Green, Md. Tellurium.
 642,003.—Robert Reid, assignor to J. Condon, Philadelphia, Pa. Acetylene gas generator.
 641,004.—Alonso F. Richardson, New York, N. Y. Comb.

Issued January 30, 1900.

- 642,063.—Frank E. Averill, Buffalo, N. Y. Formaldehyde lamp.
 642,100.—Rudolph Federroll, New York, N. Y. Acetylene gas generator.
 642,115.—Charles L. Hall, Oconto, Wis. Tooth brush.
 642,211.—Frank C. Dormet, assignor of one-third to H. G. Colman, Kalamazoo, Mich. Atomizer.
 642,222.—August E. Gulick, P. M. Galloup, and C. H. Gulick, Lodi, N. Y. Acetylene gas generator.
 642,246.—Cornelius Moor and C. H. Mayer, Hammond, Ind. Device for corking bottles.
 642,256.—Bernhard Priebis and O. Kaltwasser, assignors to Actien-Gesellschaft fur Anilin Fabrikation, Berlin, Germany. Blue sulfur dye.
 642,280.—Hans R. Berger, Berlin, Germany. Acetylene generator.
 642,298.—Hippolyte M. Cooper, Bath, assignor of one-half to J. W. Borst, Erwin, N. Y. Acetylene generator.
 642,320.—Charles M. Higgins, New York, N. Y. Making adhesive plaster.
 642,330.—Charles M. Higgins, New York, N. Y. Digesting starch.
 642,331.—Charles M. Higgins, New York, N. Y. Adhesive compound.
 642,368.—Edward P. Reister, assignor of one-half to G. F. Severs, Centerville, Iowa. Insecticide.
 642,381.—Alexander Speirs, Westbrook, Me. Truss.
 642,390.—Frank P. Van Denberg, Buffalo, N. Y. Making sulfure acid.
 642,478.—John W. Paine and C. B. Doudna, Bayard, Iowa. Acetylene gas generator.
 642,491.—Charles C. Richmond, Boston, Mass. Non-refillable bottle.
 642,535.—Daniel R. Snyder, Stonersville, assignor of three-fourths to H. E. and J. S. Ahrens, Reading, and C. M. Richardson, Bernville, Pa. Apparatus for pasteurizing liquids.
 642,550.—David M. Newcomer, assignor to H. S. Ehrhart, Hanover, Pa. Kidney protector.

46 1-2 Per Cent. Profit.

The Castle Soap included in the Introductory Assortment offered by the Home Soap Co., New York, in their advertisement, retails for \$22.60 and costs \$10.50, a clear profit of 46½ per cent. The soaps are all good sellers, and are guaranteed to be pure olive oil soaps. Have you had a sample of Tarpo, their pure olive oil tar castle?

Old Hats Must New.

The Hat Bleach Co., whose address is Dept. E, Xenia, O., make a preparation for renovating old straw hats so that they can be made as good as new for three cents. It can be used by any child and will do the business in five minutes. It sells at sight and retails at 25 cents and 10 cents, the latter package containing enough to clean three hats.

STATE OF TRADE.

Only Routine Business.

New York, June 12.—Business in a wholesale way has been almost wholly routine, but the movement is about of the proportions incident to this season of the year and dealers appear satisfied with existing conditions. The outcome of the bark sale in Amsterdam on Thursday last had a stimulating effect on the quinine situation, but continued lack of important demand for the latter article has checked any tendency to advance, and former quotations are still current. Bark prices were cabled $2\frac{1}{2}$ to 5 per cent. higher, and while holders of quinine are decidedly firm in their views, a material improvement in demand appears to be necessary to cause a marking up of quotations by manufacturers.

There has been a continued slow inquiry for opium, but the market is stronger under the influence of cables from Smyrna reporting similar conditions there, due to less favorable weather in producing districts, incessant rains having threatened more or less serious damage. Spot holders have advanced quotations about 2½c. per pound and apparently to indifferent sellers at the higher figures. One of the leading features of the week was a settlement of the differences which have existed for some time among manufacturers of acetanilid and a consequent general improvement in prices—spot quotations showing an advance of fully 5c. per pound. Red arsenic is fractionally lower, but the reduction in price has not stimulated demand and the market remains quiet.

Among the essential oils, wormwood and clove are both easier in price, the former the result of freer offers from producing points and the latter due to lower quotations for the spice. Vanilla beans continue to reflect weakness and also show inquiry for cologne and indigo. Indigo quotations shows a further decline in nearly all varieties. Dutch caraway seed is again stronger and fractionally higher owing to reports of crop shortage. Strophanthus seed also is firmer. The stock of prime green is practically exhausted and holders of the limited supply of brown have marked up their quotations.

At the monthly auction sale of cacao butter in Amsterdam the week prices showed a substantial decline, not to the extent anticipated, and as the decline had been discounted by spot holders the market was not unfavorably affected. Among the indigenous roots, further weakness is shown in golden seal, serpentaria and senega, and wholesale prices for new crop are lower. Dealers, however, are not anxious buyers at current figures and additional concessions are generally expected. Short buchii leaves also show more or less weakness in sympathy with foreign markets and quotations are again slightly lower. All varieties of senna show increasing steadiness and the outlook is favorable to improved prices, especially for intermediate grades of Tinnevely.

Among the acids, carbolic is easy on account of a slow consuming demand and more or less pressure to sell on the part of outside speculative holders. Stearic is fractionally lower in sympathy with an easier market for tallow. Picric is very dull and somewhat nominal at unchanged quotations.

There has been an arrival of ambrette seed, but coming on a bare market the limited stock is held at firm prices.

Only Fair in Boston.

Boston, June 9.—Trade has been only fair this week. The wholesale houses have begun their Saturday half-holiday closing. The retailers vary in their reports of trade, some saying it is very good, while others do not speak encouragingly. Certain it is that the places where there are well-kept soda fountains attract many customers at this season. Alcohols are reported a trifle lower. Opium seems firmer, though the whole line of drugs remain inactive. A drop in the price of caustic soda is noted, as is a decline in English bleaching powder. Most of the chemicals are quiet. Prices on waxes are firm and hold well, with but little activity.

Quiet in Philadelphia.

Philadelphia, June 9.—Trade is still quiet in Philadelphia and will probably remain in that condition for some time to come. There is nothing doing in the market for heavy chemicals and no price changes to record this week. Many druggists are going away on vacation trips and taking a little relaxation.

Somewhat Better.

Baltimore, June 11.—The past week has been somewhat better for the jobbers of this city than the latter part of May. Both local and out-of-town trade were of acceptable proportions and orders somewhat larger. The manufacturers of pharmaceuticals continue to be busy, without having to meet extraordinary demands. Competition among the various houses is very keen, and traveling salesmen urge concessions in order to meet the terms of rivals. In the main, however, business is in very satisfactory condition and the outlook promising. Retailers appear to be in a better condition. Soda water is having a good run, and sundries appear to be in fair request. Heavy chemicals are moving in some-

ABBAY'S EFFERVESCENT SALT.

It is to your advantage to handle a preparation that sells, and that affords

you a good profit.

We have arranged the prices on Abbey's Effervescent Salt so

as to yield all druggists a living profit.

No other manufacturer

so effectively co-operates with you in creating a demand for his product.

Our advertising campaign for 1900 will be of much greater magnitude

than that of last year.

Co-operation with us in pushing sales will be mutually advantageous.

YOUR WHOLESALE WILL FILL YOUR ORDER.

Co-operation with us in pushing sales will be mutually advantageous.

YOUR WHOLESALE WILL FILL YOUR ORDER.

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

SOLD IN THREE SIZES RETAILING AT 25c., 50c. AND \$1.00 PER BOTTLE.

TRADE LIST ON APPLICATION.

what lessened quantities, the trade being to a certain extent influenced by the general trade conditions.

Conflicting Reports: Spasmodic Business.

Detroit, June 9.—"Last Monday was the biggest day we have ever known in our business," said one of the Detroit wholesalers this morning, and "one or two other days of the year, but we never reached the 'quietest day—we have ever experienced' mark. So there you are!" Conflicting reports were received from other quarters, so that "spasmodic" would probably be a good word to describe affairs. A great many druggists from the surrounding towns kept back their orders evidently until they could give them in person to-day—Dewey Day. The result was a rush of business this morning.

Chicago Trade Good.

Chicago, June 9.—Business has preserved a fair average this week. No very decided things have occurred to affect conditions and the demand remains normal. The call for goods from the country has perhaps increased a little with the advent of the mild days of later Spring. The cold weather in Chicago, has, however, retarded the city trade somewhat. Orders for staple and seasonable goods are fairly active. The manufacturers of drugs and pharmaceutical goods are busy and find no time to complain. Sundries are in fairly good demand.

Satisfactory Trade, but Poor Collections.

St. Paul and Minneapolis, Minn., June 8.—There is a general complaint among retailers of poor collections, which are reported to be slower than for a long time past. The general trade, however, remains quite satisfactory in volume. Contrary to the usual conditions of June, prescriptions show no signs of falling off, and are partially accounted for by the prevalence of diphtheria and a number of less serious ailments in St. Paul. One of the retail drug men of the capital city has a weakness for horse flesh. His clerk, on being asked by the Era man for a statement of the condition of affairs, vouchsafed this information: "Oh, the drug business is all right, but horse-trading is 'bum'!" The market on all distinctly Western products is very firm, not one change in price having taken place.

Strike Demoralizes Local Trade.

St. Louis, June 9.—Country trade with the wholesalers keeps up surprisingly well. There has been a healthy increase over last year from 12 to 15 per cent., as reported by different houses. Of local trade, the least said is the better, owing to the demoralized conditions resulting from the street railway strike which seems as far from settlement as ever. North and South St. Louis are the worst sufferers. In several instances druggists have been boycotted because they were seen riding on a transit car.

AN APPEAL FOR COUNTY ORGANIZATION

FROM THE COMMITTEE ON COUNTY ORGANIZATION, PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

In order to assist the N. A. R. D. in the work of benefiting the trade generally and also that their locality may receive some immediate benefits that are in view, it will be necessary for the druggists in each county to organize.

A number of proprietors are ready to insist that any price that is agreed upon as the limit below which their goods must not be sold in your county will be maintained. Retailers violating will not be supplied by jobbers, jobbers violating by selling to these retailers will be refused goods by the proprietors.

Other work of equal importance and benefit to the trade is being blocked out, all the success of which depends upon the assistance of the entire trade. We ask every druggist personally not to let this opportunity pass. Never before has there been such an organization and awakening of the trade to the necessity of standing together. Let every druggist put his shoulder to the wheel and help. Let there be enthusiasm in the work. Neighbors should consult, select a convenient time and place and ask every druggist in their county to meet them and form an organization; make every effort to get all and keep all in the ranks.

Every local city, town or county association will be found to be of good service in helping the druggists thereof to obtain and maintain better prices; every association will bring those together who must work in harmony to succeed.

For further information address J. C. Perry, Chairman Executive Committee, Philadelphia Association of Retail Druggists, No. 4154 Lancaster avenue, Philadelphia, Pa.; or Thos. V. Wooten, National Secretary, No. 153 La Salle street, Chicago, Ill.

MARKET REPORT.

NEW YORK MARKET.

New York, June 12.—Routine trading has been the extent of the business reported, but the aggregate volume has continued of reasonable proportions and the general jobbing market retains a fairly steady undertone.

OPIMUM.—A firmer feeling has developed under the influence of cable reports of less favorable weather in producing districts, and the import cost is slightly higher, but jobbing parcels on the spot are still available at the old range of \$3.35-3.50 for 9 per cent, and \$2.45-3.00 for 11 per cent, the outside figures for single pounds.

POWDERED OPIMUM.—The undertone of the market is steady but the current demand is light and quotations remain unchanged at \$4.50-4.65 for 15 per cent and \$5.15-5.35 for 16 per cent, according to size of order.

MORPHINE.—There is a moderately active movement into channels of consumption and jobbing quotations are well sustained at \$1,950-2,045 in ounces and \$2,290-2,310 in eighths, according to brand.

QUININE.—The market has retained a decidedly tame appearance, but holders show no disposition to force business as they look for a more favorable market to improve conditions in the near future and values have a firm support. The jobbing quotations are 31-32c, for bulk in 100-oz. tins, 33-34c, in 50-oz. tins, and 38-39c, in ounce vials, according to brand.

ACETANILID.—Manufacturers have settled their differences and the market in consequence is decidedly stronger, quotations showing an advance of fully 5c, per pound. The revised range for jobbing quantities is 35-40c.

OIL WORMWOOD.—The market is easier and quotations in a jobbing way have been reduced to \$6.75-7.50 for best and \$6-6.25 for good.

OIL CLOVES.—An easier market for the spice has caused a weaker feeling among holders and jobbing quotations show a decline to 70-85c, as to size of order.

ESSENTIAL ALMOND.—Foreign markets are decidedly stronger and spot jobbing quotations have been advanced to 55-65c, for English and 35-50c, for French.

ALCOHOL.—Values are lower in sympathy with primary markets and jobbers have reduced their quotations to \$2.41-2.42 by the barrel and \$2.55-2.75 for less. Odorless is held at \$2.43-2.44 by the barrel and \$2.60-2.75 for less.

COCAINE.—There is no change in manufacturers' prices, but jobbers have modified their views to the extent of reducing quotations to 85-95.25 for large crystals and \$4.75-5 for small.

ETRIC ACID.—Since the marking up of prices by manufacturers, jobbers have revised their quotations and quote 40-40.5c, by the barrel, 40-41c, by the keg, and 45-46c, for smaller quantities.

CARBOLIC ACID.—An unsettled and easy market is reported and jobbers have reduced quotations for pound bottles to 30-44c, for white and 34-38c, for amber.

VANILLA BEANS.—The market is quiet and easy with quotations lower for nearly all varieties. The jobbing range is \$11.50-15 for whole Mexican, \$9.50-10.50 for cut and \$3.10-4.00 for Tahiti.

BUCHU LEAVES.—Short are again easier and jobbing quotations show a further decline to 25-35c, for whole, 25-28c, for ground and 30-40c, for powdered.

GOLDEN SEAL ROOT.—Jobbers have reduced quotations to 75-85c, for whole, 75-85c, for ground and 80-90c, for powdered.

SERPENTARIA.—There is only a limited inquiry and values are lower, the quoted figures for small lots being 40-45c, for whole, 42-44c, for ground and 45-50c, for powdered.

SENEGAL ROOT.—The tone of the market is easier and prices for jobbing quantities have declined to 52-58c, for whole and 54-62c, for powdered.

AMBRETTA SEED.—Supplies are light and jobbers have advanced quotations to 70-80c.

—The Iowa Board of Pharmacy held an examination at Des Moines recently and examined a class of applicants for registration. The following persons were successful: Edward Schmalzried, Des Moines; Wm. L. Bortwell, Dubuque; J. A. Williams, Bloomfield; H. A. Schieber, Carroll; Charles F. Schneider, Kingsley; Frank L. Marcy, Dayton; W. L. Lamsden, Iowa City; V. W. Byrnes, Durant; O. H. Bryan, Des Moines. Four hundred and eighteen dollars excess fees accumulated by the board during the past year was turned into the State treasury.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

NEXT WEEK AT NEWBURG.

The meeting of the New York State Pharmaceutical Association at Newburg next week promises to be very interesting and pleasurable in its many features. Some exceedingly important business is to be presented, perhaps the most important being the selection of members of the State Board of Pharmacy from the Middle Section, referred to more at detail under another heading.

The election of officers for the new year also promises to stir up a little interest. But everyone hopes that it will pass off amicably, in all good feeling, and that the best men will be selected. Unfortunately, some underhand political work has been undertaken in this city and throughout the State of late, which has stirred up acrimony and ill feeling, and which can in no event tend to good result. But all the sober and clean-minded men in the entire association will not allow tactics of this sort to influence them. There is no occasion for the existence of what we frequently hear spoken of as "cliques" in the New York State Association, and we do not believe they exist, certainly not to the extent that some would have us believe. Cliques are always a detriment to organization, and if there are any such in the New York State Association the sooner they are broken up and the members get together upon a footing of good feeling, and all working to the same ends, the more satisfactory it will be all around. There should be no fight, in an opprobrious sense, and those who are all the time trying to stir up one will, this time at least, have their labor for their pains.

A third matter of interest at Newburg will probably be the discussion of the question of graduation from a college of pharmacy as a prerequisite to examination by the board of pharmacy. It is to be hoped that this discussion also will be amicable, in good feeling. Every man is entitled to his own opinion, and he should be allowed opportunity to express it upon this question. Mere difference of opinion is no justification for wrangling and discourtesy. Some of the scenes at last year's meeting were disgraceful to those concerned in them, but we are sure that there will be no repetition this year, and whatever be the result, it will express the true opinion of the majority, and not be the outcome of wire pulling or underbanded tactics. We speak plainly upon this question, as

dissension is always the first sign of disruption, and if the New York State Pharmaceutical Association is to continue and prosper and do good work, it cannot afford to have a lot of inter-membership wrangles. Get together, gentlemen, if you cannot agree in opinions you can at least in harmony of behavior. Let everyone come to Newburg prepared to talk and to be talked to, but in the spirit of cordiality, good will and the earnest wish that nothing but the best result shall be aimed for.

ENJOY YOURSELVES.

One thing very noticeable recently has been the large number of outings of druggists, pharmaceutical students, etc. This is not only noticeable, but exceedingly cheering. A few years ago it was the exception rather than the rule for druggists to take any vacation pleasures, but they seem now becoming addicted to the habit. This is as it should be. There is no class of business or professional man who is so confined the year round as is the druggist. He if any one needs a period of recreation at least once a year, and the longer this period the better in results all around. Our only complaint is that the druggist does not "vacate" long enough. But even a day or so occasionally is better than nothing, and so we are very glad to hear that this and that local pharmaceutical society, druggists' club, alumni association, drug clerks' baseball team, etc., have for a time forgotten the cares of business and indulged in health-giving recreation. It may be said right here that, though druggists do not get out enough, yet when they do they enjoy things to the fullest extent. At these very infrequent outings they become boys again, and are very playful in their demeanor. To some it is at first startling to see an ordinarily staid and dignified druggist try to see how fast he can run in a foot race, or how quickly he can pick up a given number of potatoes, or how nearly he is successful in "swatting" the base ball. This, however, is just the kind of thing he needs. In this connection we would again urge upon druggists and clerks to belong to as many good organizations in their line of work as they can attend to, and, what is more, be present at all the gatherings of the associations. If druggists would become members of the State pharmaceutical associations and attend the meetings they would find not only that they would have a mighty good time, but it would always be money in their pockets. They would return to business with the refreshment that comes from temporary release from cares, with more quickly coursing blood, with improved health, and with a lot of new ideas that would make money for them in their business. We know of no way in which

a druggist can have as good a time for as little money as he can at the State pharmaceutical association meeting. A special programme of entertainment is always arranged at a price so low as to hardly merit mention, and there is a happy combination or alternation of business and pleasure which gives the best results. So get out, druggists, to these summer outings. Go to as many as you can yourself, and let your clerks off whenever possible. It will do you all a lot of good, and bring good results in a business and professional way.

EVERY REGISTERED PHARMACIST CAN VOTE.

At the meeting of the New York State Pharmaceutical Association at Newburg next week will be held the election of five members to constitute the middle or Albany Section of the newly created State Board of Pharmacy. It should be definitely understood that every licensed pharmacist and druggist in the counties enumerated below is entitled to a vote at this election, whether or not he be a member of the State Association. The election will be held on the first day of the meeting, June 26, in the meeting room in the town hall, and all entitled to vote are earnestly requested to be present and voice their desires. The counties constituting the Middle Section are the following:

Albany,	Herkimer,	Rockland,
Broome,	Jefferson,	Saratoga,
Cayuga,	Lewis,	Schenectady,
Chemung,	Livingston,	Schoharie,
Chenango,	Madison,	Schuyler,
Clinton,	Monroe,	Seneca,
Columbia,	Montgomery,	Steuben,
Cortland,	Oneida,	St. Lawrence,
Delaware,	Onondago,	Sullivan,
Dutchess,	Ontario,	Tioga,
Essex,	Orange,	Tompkins,
Franklin,	Oswego,	Ulster,
Fulton,	Putnam,	Warren,
Greene,	Rensselaer,	Washington,
Hamilton,		

ODD FELLOWS BAR OUT DRUGGISTS.

The Grand Lodge of Odd Fellows of Minnesota has decided to exclude hereafter from membership in that order all persons who sell liquor in any form, and druggists are particularly mentioned in the order. The decision has attracted considerable attention and some very vigorous protests, but it must be remembered that up in that part of the country there are a few law-breaking, liquor-selling druggists who have brought ill repute upon the profession they follow. If all druggists would observe strictly and honorably the liquor laws applied to their business; if none of them took advantage of technicalities to do a saloon business, there would be no necessity for such a ruling as this just instanced. It is a case where the evil acts of a few bring discredit upon the many.

OUR LETTER BOX.

پایان کار

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

HOW TO INDEX PATENT MEDICINES.

Referring to the listing of proprietary medicines in the new Blue Book, I would give as my opinion that "A" would be unquestionably the best. There are few druggists that cannot give the maker's name of any "Compound," "Prescription," "Discovery," "Oil," etc., etc., that there is any demand for in the retail trade.

Although the issue of the Blue Book is very complete and a creditable publication in every way, I wish to say that I feel the absence of John Wyeth's price list very much. Out here there is a large sale of their goods and I have to refer to it quite often. Still, I suppose you cannot put them all in; however, it seems strange to me that you should have left them out.

Everett, Wash.

DWIGHT DARLING.

Patent medicines which are universally known may be called for either under the name of the maker or under the trade name; hence index thus:

Smith's Bile Beans.
Bile Beans, Smith's.

in two separate places. Do not refer from one heading to the other, but place all information that it is proposed to give after each title. This is the only feasible plan. More than half of the manufacturers are unknown to the drug trade in connection with the name of a patent medicine. Take such preparations as Pyrozone, Glycozone, Hydrozone, Formalin, Celerina, Bromidia, etc., etc., if listed under their trade names as well as under the manufacturers' name, it would be immaterial whether Formalin or Schering's Formalin were called for, it could be found. But if the plan of indexing as Schering's Formalin were followed, then if Formalin were called for it would be necessary to know that Schering is the manufacturer to find it at all. If only one title is to be used, then by all means let it be the trade name first and not the manufacturer's; thus: Formalin, Schering's; or Celery Compound, Paine's.

San Antonio, Texas.

J. PFEIFFER.

A price list would suit me if I could in my haste find what I am looking for. In these days of push and hustle one does not have time to think; we act mechanically. Today I might remember to look for Paine's Celery Compound on the A plan; to-morrow I may forget whether to look for it on the A, B or C plan. So give me a price list which will not make me think; it will include all, A, B, C and D plans, and no matter what end I start I will find what I want quick. "Time is money, and system saves time."

Pittsburg, Pa.

LOUIS EMANUEL.

In regard to listing patent medicines, especially the plan mentioned in the May 31 Era, I simply would not list them at all. Any firm that will gouge the druggist out of the stamp tax and take advantage to add as much more also, is not entitled to a place in any reputable journal. I believe that 99 per cent. of the trade will agree with the above.

Stockton, Cal.

J. D. GRAY.

I suggest that proprietary goods be listed thus:

Emulsion, then name of manufacturer.
Syrup, " " "
Cure, " " "

This I believe to be the most systematic, especially when, as is often the case, we do not know the manufacturer's name.

Kingston, Pa.

W. F. CHURCH.

"By gad, I forgot all about Mrs. Bullion's prescription, and she has been waiting outside half an hour."
"Well, charge her double, and she will think it was hard to put up."

I wish to make a suggestion, which I think will be a good thing for you as well as your subscribers for the Blue Book and the Era, i. e., in making your new book for next year to leave a margin after all prices in Parts II. and III. so a man can make the new prices each week as you send them, thus saving lots of time in going through all the Price Change Sheets for each drug that you may wish to find the latest price on. It would surely save many a long look, as all a man would have to do when he wished to know the price would be to look for the article in the Blue Book and the latest price would be there copied from the Change Sheet. No doubt many druggists would not take the time to make the changes, but any buyer who wishes to keep posted on the markets and be able to know how to buy would do so, it seems to me. I trust to see the next Blue Book with that improvement. The Change Sheets are a great help and much used by me.

Phoenix, Arizona.

ARTHUR HULETT.

Editor Pharmaceutical Era: Writing in response to your advertisement in the Era concerning suggestions as to a Price Book which you are now revising and re-compiling, we beg to offer the following suggestions: First, we have found that your book is deficient in the matter of galenicals, not being nearly complete enough in this particular, although upon referring to the list at the present time it certainly looks like a complete list, and yet the writer remembers to have referred to it upon a number of occasions and unsuccessfully looked for some article that he wished to price. It is our opinion that the classification of articles should be made by using the most common and most used name for the article. There can be no doubt that Paine's Celery Compound should be under the classification "P," as 99 out of 100 calls are designated simply "Paine's Celery Compound." On the other hand we should say that Bromidia should be under "B" (for Bromid-a) rather than Battle & Co., and Abolene under "A" rather than McCosson & Robbins. We appreciate the fact that there is no exact criterion as to the method of classifying a list, but we cannot but think that a book to be of the greatest utility should adopt the vernacular, if need be, of the trade in some instances.

Your book is by far the best one which has ever been published and with careful revision will become a sine qua non.

Yours very truly,
SHERMAN & McCONNELL DRUG CO.,
Omaha, Neb.

(Concluded from page 638, June 14)

A STUDY IN EXTRACTION.

*Glycerin.

CHERRY OR PINEAPPLE CIDER OR WINE.

Ripe selected fruit..... 2 parts
 Sugar, granulated..... 1 part
 Water..... 1½ parts
 Alcohol, pure (Cologne spirit), sufficient.

The fruit, perfectly ripe and sound, free from decayed parts and extraneous matter, is crushed and placed in an earthen or wooden open vessel or tub, the water added and well beaten together, then allowed to stand for forty-eight hours, with occasional stirring, after which, by means of a press or a coarsely meshed cloth strainer, the liquid portion is separated from the mass or pulp. To the expressed liquid is added the sugar, and, when dissolved, placed in a container of such capacity as nearly to fill the same. An old wine, brandy or whisky package, when free from mustiness, is preferable to a new one or one that has never been used, as these frequently impart an objectionable woody taste to the finished product. However, when such wine or liquor

packages are not obtainable, the new containers should be first filled with water, allowed to soak for a day or two, then emptied and well sulphured by burning sulphur in the same. The expressed juice is then placed in the barrel and allowed to ferment, the rapidity of the fermentation depending largely upon the maintenance of the proper temperature (which is from 70° to 80° Fahr.) and, if favorable, four or five days will suffice. It is then racked off into a clean barrel, filling nearly up to the bung-hole, leaving the same open and from day to day adding small portions of the alcohol, so that one gallon of the spirit is used to 50 gallons of finished product. When the last of the spirit has been added, drive in the bung and allow to mature, and when it has become clear and bright it may be drawn off in bottles.

In making cherry wine some of the seeds should be crushed, as they aid in imparting the delicacy of taste and flavor of the fruit.—A. E. Ebert, Meyer Bros. Drug.

(Written for *The Era*.)

THE DRUGGIST AND POISON CASES.

By E. F. L. J.

Some years ago, say twenty or twenty-five, a most delightful little book made its appearance, entitled "Helen's Babies." Many of my readers have no doubt read it, and those who have not done so should procure a copy of it without delay. Towards the end of the volume one of the heroes (aged four) takes a couple of ounces of par goric at a dose. The story goes on as follows: "In a second I had snatched a shawl, wrapped Toddie in it, tucked him under my arm, and was on my way to the barn. In a moment more I was on one of the horses, and galloping furiously to the village. . . . In front of the apothecary's I brought the horse suddenly upon his haunches and dashed in exclaiming, 'Give this child a strong emetic, quick; he's swallowed poison.' . . . We rode quickly back to the house, and while I was asking Maggie to try and coax Toddie into taking a nap, I heard the patient remark to his brother, 'Budge, down to the village I was a whale. I didn't frow up Djonah, but I frowned up a whole flock full of uvver fins.'"

History doesn't relate whether that apothecary got a "calling down" for undue interference with a physician's work, or praise for his prompt action in administering the emetic. My lot has usually been a pleasant one as far as physicians were concerned, but I have one or two acquaintances who would be in fear of their lives if they acceded to such a request without spending half an hour in ascertaining the doctor's whereabouts.

There is, perhaps, no time in a druggist's life when his reputation is made or marred so quickly as the occasion when his services are required to render first aid in a case of poisoning. There is no class of druggist who is so likely to be called in as the apothecary of a village or small town. In the larger cities and towns where there is a doctor's office in every block the physician usually has, and invariably ought to have, the "first call." In the rural districts, however, the doctor is frequently not at home, and nobody knows when he will return. A human life is possibly hanging in the balance, and the druggist is very much in the position of a spectator who sees a man drowning. Under such circumstances it becomes an imperative moral duty to render any aid and assistance which is possible, until the arrival of a physician.

Cases of poisoning may be roughly divided into three classes, Homicidal, Suicidal and Accidental. With the first and second classes the apothecary has very little to do. Murderers are, as a rule, either highly skilled in, or ignorant of, toxicology. If they understand their business they go about it in a methodical way which often baffles the skilled physician; if ignorant they administer a dose which places their victim beyond human aid in a very short time. "Skilled" poisoners seem to rely on the alkaloids, but fortunately for society such people are few and far between. Arsenic has been a favorite poison for upwards of two thousand years, but the extreme ease with which it is detected at the present day has relegated its use to the comparatively ignorant class of society. It is still used, however, and I believe the cases of homicidal poisoning by arsenic and its compounds stand in about the same ratio per cent. of the total homicides by poisoning, in the United States and Canada, as the instances of carbolic acid poisoning in suicidal cases. Curiously enough, the very professions which should know better are addicted to the use of carbolic acid for suicidal purposes. I have been personally acquainted with a doctor, a dentist and a druggist who deliberately terminated their existence with this, the most horrible and agonizing poison procurable. In each case the dose taken was so enormous that no medical aid, no matter how promptly rendered, would have availed. The doctor was a confirmed dipsomaniac, the druggist was dying with cancer, and the dentist preferred to face the unknown to standing his trial for a criminal offence. Why the druggist selected carbolic instead of hydrocyanic acid or some powerful alkaloid I cannot say. Among the dentist's belongings was a Colt's revolver and a box of cartridges, and they were both in reach when he made away with himself. The only case of attempted suicide I have encountered was that of a mulatto servant girl,

who drank off a bottle of hair wash containing sugar of lead and cantharides. Her mistress administered hot mustard and water before I arrived on the scene, and she surrendered the preparation without injury to herself.

On the other hand I have had several cases of accidental poisoning in the past ten years. In one case a child drank two ounces of cough mixture containing two drachms of tincture of opium B. P. to the ounce. The second was where my next door neighbor took a tablespoonful of belladonna liniment; luckily for him he found out his mistake at once; and another, and most amusing case in spite of its serious effects, was one in which a negro woman nearly killed herself with an overdose of morphine. The colored lady was threatened with an ischiorectal abscess, and as she suffered excruciating pain, the doctor ordered four suppositories for her, each containing one grain of morphine sulphate; directions "use as directed." Her husband gave the suppositories to his daughter, and about six hours after I had dispensed them he returned to my store and informed me that his wife had taken two of the "pills" at once, and they at first set her crazy, and afterwards she had gone to sleep, and they couldn't wake her up to take the other medicine. Both doctors were out of town. The lady's doctor would not be back for some hours, so I put a hypodermic syringe in my pocket and went over to the negro's shanty. I found the patient had swallowed three No. 2 Gibbs suppositories in one hour, and was in consequence in a very bad condition. The pupils were contracted to "pin point" size, and there was every sign of acute morphine poisoning.

I administered an emetic at once, and she responded to it generously. After a couple of hours hard work I restored her to a semi-conscious condition, and plied her with fluid extract of coffee and stimulants. The doctor arrived and took over the case, and next day she was all right. All the thanks I got for my services were a "calling down" from the doctor for not putting a "poison" label on the suppository box, and the ill will of the entire negro population of the town and vicinity for nearly poisoning a "colored lady."

Not more than a month after this occurrence I was called in to see a small boy who had been suddenly taken ill. His parents were by far the most wealthy people in the country, and I took the case with fear and trembling. No doctor was available at the time, one of the medical men being out of town at a confinement, and the other one incapably drunk. The child was suffering terribly, and he was neither vomiting nor purging. I managed to administer an emetic after giving the patient half a pint of warm milk. There were two fine laburnum trees in front of the house, and I ascertained that the little fellow had gathered a large bunch of the bright yellow blossoms, and that his nurse had actually seen him chewing some of them. Vomiting set in and I recognized some of the flowers in the ejected matter. I gave the child stimulants (a teaspoonful of brandy and one minim of liquor strychnine every hour for three hours). My treatment may have been wrong, but the child lived until the doctor arrived. As neither the doctor nor myself had any book of reference bearing on laburnum poisoning other than my U. S. Dispensary, my treatment was continued, and the boy "pulled through." I neither expected nor received any remuneration for my services at the time, but the parents have repaid me in full long since in unsolicited letters of recommendation both social and financial.

Now, while the city druggist has to face the possibility of a poisoning accident at any time, he usually has a doctor within reach, and in nine cases out of ten the poison is easily recognized, and there is a standard antidote at hand. In the rural and suburban districts there are usually a number of natural poisons ready at hand during the spring, summer and fall; to say nothing of Paris green, London purple, hellebore and other various compounds. In many gardens the aconite, foxglove (*Digitalis*) laburnum, and poke root are either cultivated or grow as weeds. The fences and hedges contain bryony, hemlock and belladonna, and the ditches abound in water hemlock (*Cicuta maculatum*). The "summer boarder" in his or her peripatations through the fields may take a fancy to experiment on the edible properties of fungi

of the amanita and kindred species, and the children of the house in which the "summer boarder" resides may possibly test the nutritive qualities of his photographic chemicals, or sample the medicine bottles left on his bureau or mantelpiece. A young gentleman of my acquaintance made his way (via the piazza roof and window) into the bedroom of a well known clergyman. Finding a box of sandalwood oil capsules in the reverend gentleman's valise, he sampled one or two of them. I was called in and assured the precocious youngster's mother that the capsules were harmless—used for allaying irritation, etc., etc.—and the boy was the richer by one well deserved spanking, one vile tasting dose of medicine—he chewed the capsules instead of swallowing them—and I gained the minister's good will—though I can't say I respected him very much—for my reticence in the matter.

Now in regard to treatment in emergency cases. When the patient is able and willing to take an antidote, the old homely remedy of mustard and water, which is always at hand, perfectly safe and easy of administration, is in my mind better than any other in the following cases:

Oxalic Acid.—Use after whitening or olive oil.
Acetate of Lead.—Use after Epsom or Glauber's salts.

Arsenic and Compounds.—Use after dialysed iron.
Opium and Compounds.—Follow with strong coffee.
Aconite, Digitalis, Tobacco, Belladonna.—Follow with stimulants if necessary. Strong tea or coffee, pulv. carbo lig., hot bricks to feet, artificial respiration, also hypodermic of morphine $\frac{1}{4}$ grain.

In a case of poisoning by phosphorus, such as a child sucking match heads, never give oil in any form. Give from two to four grains sulphate of copper every five minutes, or half an ounce of magnesium sulphate or a teaspoonful of turpentine in water.

Never give an emetic in poisoning with mineral acids.

Use whitening, chalk or demulcents, also morphine if in much pain.

Mushroom Poisoning.—Emetics and cathartics.

Snake Bite.—Carbolic acid or permanganate of potash injection if possible, cautery if necessary, and stimulants.

I invariably insist that in every case in which my services are required, the nearest physician shall be called in immediately. The druggist may render valuable aid in time of need, but he is at best only a stop-gap, and in ninety-nine cases out of a hundred he is not competent to deal with the sequelae to a poisoning case. He may assist the physician in determining the kind of poison the patient has taken, and if required to render any further assistance he can.

Now, one of the most troublesome things the rural druggist has to deal with is the question when the poison label should or should not be placed on a package of medicine. A verbal caution will be sufficient in many cases, in others it will be actually resented. The placing of a poison label on—let us say belladonna liniment or chlorodyne—will sometimes make trouble between the doctor and the druggist, and its absence may justify a coroner's jury in a verdict of "gross negligence." Verily the druggist is between the devil and the deep sea.

Some years ago I was out on a fishing trip. I may have used too much river water, or eaten too much fruit, but I somehow managed to contract one of the most excruciating attacks of gastralgia I ever suffered from. The care-taker on the river assured me that he had a bottle of medicine "le meilleure chose pour toutes les douleurs" and wouldn't I take a dose of it. I inspected the medicine and decided I would rather not, as I thought it contained aconite. The directions ran merely "use as directed." On coming out of the woods I sought out the druggist who had prepared it, and asked him to let me see Rx. no —. It consisted of alcohol and linimentum aconite, aa $\frac{5}{8}$ i. sig. "use as directed." It had been prescribed for rheumatism, and the druggist told me he had already had one "calling down" for putting a poison label on a bottle when the Rx. did not call for it. The prescribing physician was a "smart" young fellow who had recently graduated on a three years' course, and suffered from a chronic condition of "swelled head." One of the members of our fishing party happened to be a doctor whose standing in the State was, and is, of the

highest. He sought out his professional brother with the swelled head, and gently, but forcibly, pointed out to him the error of his ways in sending a powerful poison to an illiterate French Canadian without a caution as to its deadly nature.

In conclusion I would again emphasize the fact that a druggist should, in my humble opinion, never have anything to do with a poisoning case if a doctor can be obtained; and if he finds himself driven into handling one, it should be treated as an act of mercy pure and simple. "without the hope of fee or reward." The hypodermic syringe and apomorphine should be a last resort, and the poison label or "caution" should be on every bottle or package where the contents are powerful enough to destroy or jeopardize human life.

(For the Era.)

COMPULSORY EDUCATION OF PHARMACISTS.

By WM. B. THOMPSON, Philadelphia, Pa.

Reports of proceedings of deliberative bodies, as for instance the American Pharmaceutical Association (its last session) when read between the lines, as it were, often disclose a truthfulness in expression of personal opinion which is instructive. The chairman of the Section on Education and Legislation referred, among other topics, to the supposed need of enacting laws which shall require boards of pharmacy to receive for examinations those only who are graduates of incorporated colleges. The effect of such partial and discriminating laws would, it is quite obvious, inure directly to the pecuniary advantage of those administering colleges of pharmacy. This, too, without any assured equivalent to the community at large of advancing the present status of education. The over-numerous colleges of pharmacy, especially the faculties, have long chafed under the fact that the various boards of pharmacy have very wisely refused to discriminate in favor of graduates. The experience of the gentlemen composing these boards has confirmed the wisdom of this course because the attainments of the colleges graduates were not exceptionally higher or more markedly proficient than those of the average applicant. And for another most excellent reason, namely, that such discrimination would open a very wide door to the creation of irresponsible colleges, thus inevitably lowering even the present standard of qualification.

The chairman of the section to which we have referred goes on in the same connection to state that the late Prof. Maisch some years ago, in conversation remarked that if he (Maisch) were not then a professor in a college of pharmacy he would advocate such a measure as is contemplated in securing a discriminating law. Here the question naturally presents, why should Prof. Maisch have hesitated at all to take a pronounced position on a subject involving a principle of action even though he were affiliated with a college? Surely it must have been because it would certainly have exposed its advocates to the reasonable inference that they were seeking to promote corporate and individual interests by compulsion. Or, that Prof. Maisch, who was an instinctively modest, most consistent and honest man, would not compromise himself by inviting suspicion and comment; an act, ostensibly of principle, contained so large an element of self interest as to render its advocacy repugnant to the delicacy of self respect. In how very different a light, by contrast, do those now stand who are urging this measure. The virtue of an instinctive modesty is not discoverable.

To probe this subject more deeply it will be found that the fifty and more colleges of pharmacy of this country are struggling hard in competition with each other for patronage and existence. An assured future maintenance grows more dim with each recurring year. The area of available clientele is narrowing down to the States of respective location. Viewing the radically changed character of the retail drug business as now prosecuted, there are many of the more eminent pharmacists of the United States (not those in the counsels of the colleges, however) who are of opinion, that to educate commercial

druggists does not require the expensive equipment of colleges nor the maintenance of highly remunerative faculty chairs. But a failure to coax must be followed by an attempt to drive! This intention to secure legislative action should be opposed, if it be really worth while to oppose it, for various reasons. There is a very probable doubt whether any alert body of legislators can be found to favor partial and discriminating legislation. Especially may this be the case when a court of jurisdiction would probably pronounce such enactment a contravention of constitutional law. If there would be given any responsible or reliant assurance that the standards of education would be elevated and advanced by the colleges as a condition to being thus favored, opposition might be modified to the extent that an experimental test be allowed. When boards of pharmacy shrink in desperate appeal to the colleges to "shut out illiterate incompetents," upon what encouraging ground can a hope for improvement be based?

SELECTED FORMULAS.

Tincture of Rhatany with Salol.

Salol	5 parts
Alcohol	120 parts
Tincture of rhatany.....	15 parts
Oil of peppermint.....	10 drops

Menthol-Chloral.

Menthol	30 parts
Chloral hydrate	30 parts

To be melted together.

Menthol Cholera Drops.

Menthol	6 parts
Tincture of ginger.....	8 parts
Tincture of opium.....	10 parts
Spirit of ether.....	76 parts

Take 10 to 15 drops each half hour.

Menthol Ice.

Spermaceti	10 parts
Melted with	
Liquid paraffin	10 parts

Add

Menthol	10 parts
---------------	----------

To be applied to the nostrils for cold in the head.

Menthol Vinegar.

Menthol	8 parts
Vinegar	97 parts

To be added to gargles.

Mentholin.

Menthol	10 parts
Dissolved in	
Alcohol (95 per cent.).....	77 parts

Add

Solution of ammonia	12 parts
---------------------------	----------

Menthol Oil.

Menthol	16 parts
Dissolved on the water-bath in	
Olive oil	14 parts

Menthol Ointment.

Lanolin	85 parts
Paraffin	5 parts

Melt together, and add

Menthol	10 parts
---------------	----------

To be applied to the forehead for headache.

Menthol Snuff.

Menthol	15 parts
Boric acid	30 parts
Ammonium chloride	55 parts

Menthol Wine.

Menthol	2 parts
Dissolved in	
Cognac	6 parts

To this add

Glycerin	6 parts
Tokay wine	86 parts

Menthol Toothache Drops.

Menthol	8 parts
Chloroform	8 parts
Alcohol (95 per cent.).....	84 parts

To be applied on wool to the decayed tooth.

—(Pharm. Post).

Flaxseed Species (Tea).

Flaxseed	8 parts
Fennel	1 part
Anise	1 part
Licorice root	2 parts

Reduce all to a coarse powder, and mix uniformly.

Compound Tincture of Orange.

Fresh green rind of orange.....	60 grams
Curacao orange peel.....	80 grams
Malaga orange peel.....	90 grams
Ceylon cinnamon	2 grams
Cloves	7.5 grams
Vanilla	11 grams
Orange flower oil.....	4 drops
Alcohol	1500 grams
Wine	720 grams

A dark brown tincture, possessing a characteristic taste and odor.

Compound Spirit of Myrcia (Bay Rum).

Oil of bay.....	16 parts
Oil of clove.....	1 part
Oil of pimenta.....	1 part
Essence of Jamaica rum.....	75 parts
Alcohol	2650 parts
Water	1850 parts

Mix and filter.

Spirit of Menthol.

Menthol	5 parts
Alcohol	95 parts

Syrup of Chestnut.

Fluid extract of chestnut leaves.....	1 part
Syrup	1 part

Syrup of Codeine.

Codeine phosphate	0.10 grams
Syrup	100 grams

Syrup of Creosote.

Creosote	10 grams
Magnesia	3.5 grams
Syrup	70 grams
Peppermint water	16.5 grams

Solutio Boro-Salicylic (Solution of Boro-Salicylic acid).

Boric acid	6 parts
Salicylic acid	1 part
Water	203 parts

Resolvent Species.

Peppermint leaves	2 parts
Melissa leaves	2 parts
Sweet marjoram	2 parts
Wild marjoram	2 parts
Chamomile	1 part
Lavender flowers	1 part
Elder flowers	1 part

Reduce to a coarse powder and mix.

Tincture of Kola.

Roasted and powdered kola nut.....	1 part
Diluted alcohol	5 parts

Prepare a tincture.

Borated Tincture of Rhatany.

Boric acid	5 parts
Alcohol	120 parts
Tincture of rhatany.....	15 parts
Oil of peppermint.....	10 drops

A tincture of rhatany containing salicylic acid may be made in a similar manner by substituting salicylic acid for the boric acid in the above.

Compound Tincture of Birch.

Birch tar	20 parts
Alcohol	30 parts
Ether	30 parts
Oil of lavender.....	1 part
Oil rosemary	1 part
Oil of rue.....	1 part

Mix. Allow the mixture to stand one day in a cool place and filter.

Eau de Cologne (Febr.)

Lemon oil.....	350 grams
Bergamot oil.....	270 grams
Lavender oil.....	20 grams
Peppermint oil (Mitcham).....	12 grams
Acetic ether	12 grams
Neroli oil.....	120 drops
White thyme oil.....	100 drops
Rosemary oil.....	110 drops
Attar of rose.....	20 drops
Cologne spirit, 95 per cent.....	23 kilos

Mix and let stand for several days, then add

Orange flower water, triple.....	1100 grams
Rose water, French, triple.....	300 grams

This combination gives an excellent preparation which approaches very closely to the ancient original product (Drog. Zig.) The cologne should be left to stand for three months, at the expiration of which time add from 5 to 7½ kilos of alcohol and let stand another three months before placing it on sale.

Glycerin Jelly.

Isinglass	1 dram
Boiling water	4 ounces
Glycerin	1 ounce
Perfume	q. s.

Dissolve the isinglass in the water, add the glycerin and lastly the perfume. Pour into bottles while warm.

PHARMACY.

LEVURINE is the name given to a dried concentrated extract of beer yeast, in powder form. The dose is a teaspoonful, to be given before food three times a day if necessary. The extract is said to be useful in the arrest of suppurative and reduction of temperature in various diseases.

HUCHARD'S PILLS.—The New York Medical Journal gives the following formula for these pills, used in the treatment of jaundice: Resin of podophyllum, extract of hyoscyamus, medicinal soap, of each, 4½ grains; extract of rhubarb, 15 grains. Divide into 15 pills. One or two daily.

RESAZURIN INDICATOR FOR ALKALIMETRY is obtained by adding 45 drops of nitric acid, sp. gr. 1.25, saturated with nitrous acid, to a solution of resorcin 4 drams, in anhydrous ether, 200 Cc. After standing for two days the crystals which have formed are separated and washed with ether until the washings are colored blue with ammonia. This indicator, known as Crismer's, gives a red color with acids and blue with alkalies and alkali carbonates.

ARTIFICIAL NAUHEIM BATHS.—Mayer describes (Med. Record) his method of making artificial Nauehm baths with acid sulphate of sodium and bicarbonate of sodium. He uses six or eight cakes, two ounces each, of the former and two pounds of the latter to the bath; or the saline mixture of sodium chloride, 30 pounds, potassium chloride, 10 ounces; granular calcium chloride, 30 ounces; magnesium chloride, 8 ounces, thoroughly mixed and kept in a moist-proof tin box until needed. He first uses 3 pounds of the above with bicarbonate until it is thoroughly effervescing. He relates his own experience with the baths and thinks the artificial like the natural ones, together with the resisting exercises, are the most efficacious and lasting remedy for chronic disease of the heart.

REMOVING SILVER STAINS.—(1) Immerse the articles for five minutes in a mixture of corrosive sublimate and sodium chloride solution, then wash two or three times with clean water.

(2) Add enough tincture of iodine to a 20 per cent. ammonium chloride solution to color the latter yellow or brown. Immerse the stained articles in this solution for five minutes, then place a few crystals of sodium thiosulphate on the stains, or moisten them with a little ammonia, and finally wash well with water. If the stains are not completely removed, the process must be repeated.

(3) Moisten the spots with javelle water, and after five minutes wash with water containing 5 grams hydrochloric acid per liter. These methods are suggested by Prof. Crede, of Dresden (Pharm. Cent.), in lieu of the method in which poisonous potassium cyanide is used.

ESTIMATING GLUCOSE IN BLOOD.—Chassaigne recommends the following method: 25 Cc. of a solution of sodium metaphosphate in 100 Cc. of water are added, together with 5 Cc. of hydrochloric acid, to 100 Cc. of blood, and the mixture heated for two minutes, whereby complete coagulation is effected. The serum is then filtered off, the coagulation collected, washed with boiling water to remove all the sugar present, expressed, the acid in the filtrate neutralized and the latter evaporated to the original volume of the blood taken. In this liquid the sugar is then estimated by means of Bonnan's reagent. This consists of three solutions, made as follows:

- A.—Copper sulphate 35 grams
Sulphuric acid 1 Cc.
Water.....to make 1 liter
- B.—Rochelle salt.....250 grams
Soda lye (36° Bé.).....300 Cc.
Water.....to make 1 liter
- C.—Potassium ferrocyanide.....50 grams
Water.....to make 1 liter
- To use the test, 10 Cc. each of solutions (A) and (B) and

5 Cc. of solution (C) are mixed and heated to boiling. The liquid to be tested is then dropped in, when the blue color gradually disappears, a greenish color developing and changing soon to yellow and finally reddish-brown, which indicates the end of the reaction. On cooling a grayish-green precipitate deposits.—Pharm. Post.

AUSTRUM, A NEW ELEMENT (?).—In 1886 Linnemann (Chem. and Drug.) claimed that he had detected in the mineral orihite a new metal characterized by two violet rays in spectrum, of wave length 4105 and 4030 respectively. Boisbaudran, in the same year, urged that this was nothing else than the well-recognized metal gallium, whose characteristic violet rays possessed the wave lengths 4075.5 and 4052, numbers practically identical with those quoted above. Pribram has now re-examined a portion of the same sample which Linnemann worked with, and after eliminating every element except gallium and something else, as yet uncharacterized, claims that there is an unknown element present, which, however, does not yield the lines found by Linnemann, and which were certainly due to gallium, but which gives no fewer than twenty-four hitherto unknown lines. He proposes to retain the name austrum for it and is now endeavoring to isolate it in a pure condition.

THE ANTI-ALCOHOLIC SERUM QUESTION was again discussed at the last meeting of the Paris Academy of Medicine. Dr. Sapelier, in collaboration with M. Brocq, pharmacien, and Dr. Thebault, made a first communication to the Academy last December, showing that they had established, by experiments, that "a horse to which had been administered moderate doses of alcohol daily supplied at the end of a comparatively short time a serum which, when injected into animals accustomed to take alcohol regularly in fairly large doses, caused such animals to refuse it in future." In support of the original experiment, Dr. Sapelier has now given the Academy the result of a series of observations made on alcoholic subjects treated by this method, the great majority being men. The experiments cover fifty-seven cases, of which thirty-two have been cured, eight have improved and seventeen showed no benefit. Of these seventeen bad cases four patients did not follow the treatment and thirteen were found to be physically unfit for it. The doctor concludes that the action of anti-alcoholic serum or antiethyline cannot be attributed either to imagination or suggestion, because among the successes certain of the patients ignored the reason and nature of their treatment, while hysterical and highly impressionable subjects figure only in the lists of failures or, at most, improvements. The action of the anti-alcoholic serum is purely physiological, and it is supposed to consist in a re-awakening of the instinctive disgust of man for alcohol. The serum acts on the economy of the system and excites the various organs to act against the injurious effects of alcohol, as well as on the circulation and nutrition. It is noteworthy that these conclusions apply only to spirit drinkers. The same results are produced, but less rapidly and with greater difficulty, in wine drinkers, which is explained by the relatively small amount of alcohol contained in wine and the injury to the digestive organs caused by wine. Such are the conclusions of Dr. Sapelier and his colleagues, and it remains to be seen if, in permanent practice, the results obtained by them will be maintained. (Chem. and Drug.)

Shampoo Jelly.

White castile soap.....	4 ounces
Potassium carbonate.....	1 ounce
Water.....	6 ounces
Glycerin.....	2 ounces
Oil of lavender.....	5 drops
Oil of bergamot.....	10 drops

Shave the soap to ribbons, melt with the water on a water bath, adding the potassium carbonate; allow to become nearly cold and then stir in the remaining ingredients, using more water if required.

Hair Lotion.

Castor oil.....	7.5 parts
Eau de Cologne.....	18 parts
Alcohol (90 per cent.).....	18 parts
Tincture of capsicum.....	0.4 parts
Tincture of cantharides.....	0.4 parts
Tincture of galls.....	8 parts

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Atrocuria Food.—(Inquirer.) This preparation was formerly made by the Altruria Pharmaceutical Co., Brooklyn, N. Y., a concern now no longer in existence. We understand that the C. N. Crittenton Co., 115 Fulton street, this city, hold all the goods there are in the market for sale, although they do not own the trade mark.

Violet Syrup for the Soda Fountain.—(C. and W.) Here are formulas for two so-called "violet syrups": (1) Extract of orris, 3 ounces; extract of vanilla, 1 ounce; liquid foam, 1 ounce; vegetable green coloring, 1 dram; simple syrup, 1 gallon. Mix and strain. (2) Triturate 2 fl. ounces stronger tincture of orris with $\frac{1}{2}$ ounce magnesium carbonate until well mixed; add 16 fl. ounces of water, agitate thoroughly mix, filter, in the filtrate dissolve 24 ounces of sugar by agitation or percolation, finally adding soda foam q.s. The syrup may be colored grass green with chlorophyll, or bluish with litmus solution. If the syrup be left uncolored it may be called "syrup of white violet."

Paint for Black Eye.—(Hartford.) The following formula has been recommended: Mix 2 drams of bismuth subcarbonate with 1 dram of French chalk, color with carmine, armenian bole or calamine to skin tint, and apply after washing the parts with a mixture of glycerin, 1 dram, and water, 5 drams. Here are some other applications: (1) Potassium nitrate, 15 grains; ammonium chloride, 30 grains; aromatic vinegar, 4 fl. drams; water, enough to make 8 fl. ounces. (2) For prevention of black eye or bruises generally, nothing is better than a mixture, in equal parts, of tincture of capsicum and mucilage of gum arabic. Paint over the bruised spot, let dry, and put on another coating. A few drops of glycerin prevent the coating thus made from becoming brittle. If this is applied to a bruise shortly after it is received no discoloration follows. For eye bruises raw beef and fresh Solomon's seal are also said to be satisfactory remedies. When the skin is not broken dilute solution of lead subacetate, with a little tincture of arnica (1 dram in 1 ounce) often acts very quickly.

Emulsion of Oil of Wintergreen.—(A. D.) A satisfactory emulsion of oil of wintergreen may be made after the general process of the National Formulary for the emulsification of volatile oils, or the process for the emulsification of oil of turpentine, as proposed by Forbes, may be used. In this process the oil to be emulsified is poured into a perfectly dry bottle, and the powdered acacia added, after which the bottle is well shaken, so that the acacia may become saturated with the oil. Water is then added until a homogeneous emulsion results, which can be further diluted by the gradual addition of water. Of course, volatile oils will never form such perfect emulsions as fixed oils, and the separation of the mixture takes place more readily. As a rule, too, volatile oils require more gum than fixed oils, and not less than 30 grains of powdered acacia should be used for each fluid dram of oil. The amount of water first added should always be equal to twice the acacia used. This emulsion may then be diluted as required. All emulsions of volatile oils are more permanent if made with the aid of some fixed oil previously added to the volatile oil. Such emulsions are preferably made in a mortar. A formula of this character, "emulsification of oil of eucalyptus," was given in the Era of June 7, Page 612. A little experimenting should enable you to make a satisfactory emulsion.

Egg Shampoo.—(G. A. K.) See last week's Era, page 643. Here are some other formulas: (1) Ammonia water, 3 fluid drams; cologne water, 3 fluid drams; alcohol, 5 fluid ounces; water, 5 fluid ounces; whites of egg, as many as desired. The whites of egg (about 2) are thoroughly beaten up previous to being mixed with the water and water of ammonia; the remaining ingredients are added in their order and the whole stirred briskly. (2) Incorporate 2 av. ounces of borax in fine powder with 1 fluid ounce of glycerin and add gradually with constant stirring 10 fluid ounces each of bay rum and rum. Then add the previously well beaten whites of 2 eggs and stir thoroughly until an even mixture results.

The following formula, while containing no white of egg, is said to furnish an ideal shampoo fluid: Pine tar, 20 grams; linseed oil, 200 grams; caustic potash, 45 grams; alcohol, 20 grams; water, 225 grams. Heat the tar and oil to 60° C., dissolve the potash in the water, add the alcohol and gradually add to the oil and tar mixture, constantly stirring. Continue the heat until thoroughly saponified and make up to a pint with water. Perfume (or not) to suit.

Manufacture of Alcohol.—(T. E. B.) submits the following questions:

(a) In the manufacture of grain alcohol, can any druggist use the apparatus of still, column, condenser, worm, etc., without infringing on any patent rights?

Yes, any person may manufacture alcohol with the apparatus named without infringing on any patent rights, but such manufacture must be under the rules and regulations prescribed by the United States statutes. These regulations are very exacting, and among other things require the distillery to be registered and in charge of Government officials. (See Regulations and Instructions for Internal Revenue officials, issued by the Treasury Department, Washington, D. C.)

(b) Have you ever published an explanation of Atwood's patent process for the manufacture of the above spirit?

Yes, in outline. In this process distillation with manganic acid or potassium or sodium permanganate is employed to destroy the fusel oil and other foreign substances.

(c) Is there a trust on this article?

A price agreement among manufacturers is said to exist.

(d) What would be the cost (a fair estimate) to make a gallon of this spirit on a small scale, say about five barrels per day?

About 30 cents per gallon, upon which there must be paid the internal revenue tax of \$2.07 (\$1.10 per proof gallon).

Tooth Paste for Collapsible Tubes.—(C. and W.) In the preparation of these pastes the essentials are, first, a good insoluble powder as a base, such as constitutes the ordinary tooth powders; second, the excipient or liquid to form a paste, and last, the flavors and colors. Within these requirements wide variety is possible. The excipient must be chosen with care, avoiding all that will either dry out, crystallize, separate or ferment. The substances most used as excipients are glycerin, syrup, glucose, honey, etc. Syrup and honey are liable to dry out, glucose is prone to fermentation, but a good combination free from these objections consists of glycerin, 1 part; glucose, 8 parts; water, 1 part. With this as an excipient and a good tooth powder, a paste of any degree of consistence may be produced. Some special formulas, said to be excellent, are: (1) Precipitated chalk, 2 ounces; castile soap, 1 ounce; orris root, 1 ounce; oil of sassafras, 10 minims; oil of bay, 20 minims; excipient, q. s. (2) Precipitated chalk, 6 ounces; magnesium carbonate, heavy, $\frac{1}{2}$ ounce; powdered white soap, 80 grains; oil of cloves, 2 minims; oil of cassia 2 minims; oil of orange, 2 minims; oil of rose geranium, 6 minims. Mix thoroughly and sift, then make into a paste with the above excipient, or use glycerin, 1 ounce, with rose water, q. s. (3) Carmine, 20 grains; ammonia water, $\frac{1}{4}$ dram. Triturate in a mortar and gradually add: Precipitated chalk, 12 ounces; prepared chalk, 6 ounces; orris powder, 6 ounces; sift twice and add the following mixture: vanillin, 2 grains; coumarin, 1 grain; otto of rose, 12 minims; oil of cloves, 12 minims; tincture of benzoin, 3 drams. Mass with glycerin, 2 ounces and rose water, a sufficiency.

Notice to Students of the Era Course.

EXAMINATIONS.

As all students of the Era Course know, the examinations are now in full swing. The quiz master is actively engaged in grading and comparing the papers received, and the prizes will be announced to the successful candidates from time to time as the awards are made. The work of grading will require from two to three weeks.

As heretofore, the prizes will be divided into General and Special, or prizes for general excellence in all subjects and for special excellence in particular subjects, since this arrangement gives the greatest number of chances to the greatest number of students.

In deciding upon the names to which awards of prizes will be made, the same rules will govern as heretofore.

RULES.

- (1) Every student of the Era Course will be considered a contestant unless he expressly advises us to the contrary.
- (2) Students not able to send in the required number of recitations and examinations before the close of the Spring term may forward them any time during the Summer vacation. They will not, however, be graded or returned to the student until after the opening of the next Fall term.
- (3) Satisfactory recitations and examinations are those upon which the student receives a grade of not less than seventy-five per cent.
- (4) The ratings will be taken from the quiz master's official records, on file in the office of the Director, and from the examination papers received from students.
- (5) In determining the general average ratings, the first and most important factor will be the accuracy and excellence of the answers.
- (6) In the event that two or more students shall receive the same rating as determined by the preceding rules, then the following additional factors shall be taken into consideration in order to determine which shall be entitled to precedence: Spelling, composition and correct use of English, penmanship and use of capitals.

HONORABLE MENTION.

In addition to the prizes granted, the names of the fifty students in each class, Junior and Senior, whose grades are highest for the year will be included in the list of Honorable Mention.

GRADING RECITATIONS.

Students should remember that in determining standing the work of the entire year is taken into consideration, so that the members who have been most attentive to their studies throughout the term and have been the most regular in sending in their recitations and examinations will have the best counts in their favor as against those who have been irregular, inattentive and careless in their work.

It should also be remembered that not every student who thinks he should have a prize will receive one. As long as there is not a prize for every member of the class, some will always feel disappointed.

Past experience has shown that the earnest student who works from pure love of study and a desire to become a master of his subject is more frequently found among the prize winners than the one who works with no other end in view than the attainment of the honor and distinction connected with the award of a prize.

Sometimes students complain that since they have answered questions in the exact words of the lectures, they certainly should have a grade of 100 per cent. As a matter of fact the use of the exact language of the lectures is the best evidence that the student is not deserving of high grade. The highest evidence of sound scholarship is that afforded by the recitations which show upon their face that the student is so thoroughly imbued with his subject that he is able to give an intelligent account of it in his own language. Recitations of this character deserve and receive the highest grades.

THE "TRIP PRIZES."

Some weeks ago a vote of the students was taken to determine whether the two trip prizes offered to students should be to Paris or to some of the great natural scenic portions of the United States. This vote showed a preference of over three to one in favor of the home trip. Nevertheless, to avoid disappointment, it has been decided that in case these prizes or either of them should fall to those who selected the Paris trip, their wish will be gratified, as it is a matter of indifference to the publishers which be taken, the cost being practically the same in each case.

VACATION.

While the summer vacation properly begins June 14, in order to accommodate belated students, the quiz master will remain at his desk until the close of the second week in July.

BELATED STUDENTS.

Remember that students who are in arrears either in recitations or examinations can send them in any time during the summer and they will be examined and graded after the quiz master's return to his duties at the beginning of the Fall term.

By keeping the foregoing facts in mind, students may save themselves and the Director much needless correspondence.

PASSING GRADES.

In order to be entitled to a diploma, members of the Senior Class must make satisfactory recitations upon forty-five Senior Lectures and pass a satisfactory examination.

Junior students to be advanced to the Senior Class must make satisfactory recitations upon forty-five lectures and pass a satisfactory examination upon the work of the Junior year.

As previously stated, both Juniors and Seniors may send in recitations and examination papers until the opening of the Fall term.

THE REVISED ERA COURSE.

During the summer the Director and his assistants will give the Era Course a complete revision. The changes will be the most important of any that have been made since the Course was organized and will doubtless add greatly to its popularity and usefulness.

Watch the Era for announcements.

The prizes so far as they have been determined upon are as follows:

GENERAL PRIZES.

Awarded for excellence in all subjects.

SENIOR CLASS.

First Prize.—"The Pharmacist's Library," consisting of one copy each of the United States Dispensary, Remington's Organic of Pharmacy, Lippincott's Medical Dictionary, and Sadtler & Trimble's Chemistry. Presented by the J. B. Lippincott Co., Philadelphia.

Second Prize.—Handsomely engraved silver medal. Presented by The Pharmaceutical Era.

Third Prize.—Coblenz's Handbook of Pharmacy. Presented by P. Blakiston's Son & Co.

Fourth Prize.—One copy of Lyons' New Synonym Book. Presented by Nelson, Baker & Co., Detroit.

JUNIOR CLASS.

First Prize.—Handsomely engraved gold medal. Presented by The Pharmaceutical Era.

Second Prize.—National Dispensary. Presented by Lea Bros. & Co., Philadelphia.

Third Prize.—Caspari's Treatise on Pharmacy. Presented by Lea Bros. & Co., Philadelphia.

Fourth Prize.—Lyons' Assay of Drugs. Presented by Nelson, Baker & Co., Detroit.

SPECIAL PRIZES.

Awarded for excellence in particular subjects.

PHARMACEUTICAL PHYSICS.

First Prize.—Handsomely engraved "Loving Cup." Presented by James W. Tuxis, Boston.

INORGANIC CHEMISTRY.

First Prize.—Prescription Scales. Presented by Whitall, Tatum & Co., New York.

OPERATIVE PHARMACY.

First Prize.—Finely engraved gold medal. Presented by William R. Warner & Co., Philadelphia.

MATERIA MEDICA.

First Prize.—Cabinet of Materia Medica. Presented by Parke, Davis & Co., Detroit, Mich.

OFFICIAL PREPARATIONS.

First Prize.—Hoffman & Power's Analysis of Medicinal Chemicals. Presented by Lea Bros. & Co., Philadelphia.

ORGANIC CHEMISTRY.

First Prize.—One copy of Prof. J. U. Lloyd's celebrated literary work, "Etidorpha." Presented by the author.

PHARMACEUTICAL BOTANY.

First Prize.—One copy of "The Art of Compounding." Presented by the author, Prof. Wilbur L. Scoville, Boston.

PHARMACEUTICAL MICROSCOPY.

First Prize.—One copy of "The Era Formulary." Presented by The Pharmaceutical Era.

THE DIRECTOR.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

Cable advices from China state that the City of Peking is closely guarded by imperial troops and that armed opposition will be made to the advancing relief column which is halted on the road. A perilous condition of affairs prevails in the Chinese capital and the anti-foreign sentiment is intense.

Disorder and attacks on foreigners are breaking out in widely separated points in China and it is feared that the revolt will become very difficult to handle. The British Government is considering whether a substantial force should not be sent to China from South Africa. It is thought that Lord Roberts could spare a brigade or two, and the necessary transports are now in South African waters. The commander of the expedition, it is said, would probably be Gen. Sir William Nicholson.

The murder of the Japanese Chancellor of Legation at Peking by the Chinese Imperial troops has aroused keen feeling in Japan. The press urges the Government to exact ample reparation. Eight warships are to be sent to Taku.

The opposition press in Japan is impatient over the inactivity of the Government. The Emperor has summoned Marquis Ito to consult with him in reference to the situation in China.

Advices from Shanghai state that a move is in progress there to restore the Chinese Emperor to power, and the United States Government in Britain and Japan, it is said, may support the project. This report has aroused considerable interest, but it is not believed that anything will materialize from it.

Considerable ill feeling exists between the French and British marines in Tien Tsin, and it is feared that it will be hard to keep them on peaceable terms.

The international force that is on the way to Peking is made up of 2,400 marines of various nations, with the British Rear-Admiral Seymour in command, and Capt. McCalla, of the United States cruiser Newark, second in command.

Advices from Shanghai tell of the murder of the Chinese Gen. Yong Loh while parleying with the Boxers near Ting Fu. He was cut down from behind.

The French Consul at Yarrun has been found to be supplying arms to the rebels in South China, and the Chinese Government has asked for his removal.

South Africa.

A sharp battle was fought east of Pretoria last week. The Boers occupied a strong position, but were compelled to withdraw. They succeeded, however, in getting away with all their men, guns and supplies. The British report a loss of about 100 killed and wounded. The Earl of Airlie was among the killed.

By the peaceful occupation of Klerksdorp, announced by Lord Roberts, the British have gained a strategic position of some importance. Cronje, who surrendered the place, is a son of Gen. Cronje, now a prisoner at St. Helena.

The Boer force which Lord Methuen reported last week that he had utterly routed, recovered sufficiently three days later to make another spirited attack on the British line of communications, but they were compelled to retire.

Premier Schreiner and the rest of the Cape Colony cabinet have resigned. They are Dutch, and feel that they cannot enforce discipline against the Dutch rebels in the Cape Colony.

The pacification of the whole of the Transvaal, especially the wide spaces far from the railways, is looked upon as a business requiring months rather than weeks.

The British War Office casualty returns up to June 9 aggregate 23,694, besides 792 officers and 12,355 men sent home as invalids, but not including the sick in South African hospitals.

Machadorp has been officially proclaimed the capital of the Transvaal. The village has swollen into a small city, the majority of the inhabitants living in tents.

The Philippines.

The transport Hancock sailed from Manila last week with a returning battalion of the Eighteenth Infantry. Gen. Macabulos, the most important and the last of the insurgent leaders in Tarlac and Pangasinan Provinces, surrendered at Tarlac last week with eight officers, 124 men and 124 files.

Gen. Grant has captured the rebel stronghold in the mountains east of Samiguil, after a sharp fight lasting four hours. The natives were routed. Gen. Grant had 100 casualties.

Gen. MacArthur reports the capture of the Filipino Gen. Hizon and Covestany, the latter being an important leader of the natives in Pangasinan Province.

The transport Grant from Manila has reached San Francisco with a number of military passengers, including Gen. Graham, retired, 17 insane soldiers; 125 general prisoners and 108 sick soldiers.

Other Foreign News.

News received in Jamaica by way of Venezuela and Trinidad confirms the report of the signal defeat of the Colombian revolutionists. The rebel Gen. Uribe escaped alone, and is now a fugitive. The same source announces an outbreak of revolution in Ecuador against President Lasso.

The Ashanti uprising against British rule on the Gold Coast of Africa has not yet been put down. The British War Office has cabled to the Jamaican Government accepting or compact volunteer military contingent from Jamaica, Trinidad and Demerara for service in Ashanti. The West Indian Regiment has been also ordered to Ashanti.

American artists have received seven gold medals at the Paris Exposition. American explorers in Abyssinia report finding kraals full of skeletons near Lake Rudolf.

Twenty-three persons were precipitated over the falls of the Cayuni River, in British Guiana last week and dashed to pieces.

The Porte, no longer replied to his notes, Mr. Griscom, United States Chargé d'Affaires at Constantinople, is making oral representations regarding the American claims.

The widow of W. E. Gladstone died in England on Thursday last week.

The second Pan-American Congress is to be held in the City of Mexico some time between April and June of next year.

The condition of the Jamaican finances is so bad that a law was passed last week authorizing the Government to borrow \$750,000 from the British Imperial treasury to meet the deficit.

The German Reichstag and Bundesrath have passed the Emperor's navy bill, which he has been trying to push through the Reichstag Parliament for several years. It authorizes a large increase in the navy.

United States Minister Nelson, at Santiago de Chili, cables to the State Department that President Errazuriz is suffering from a mild stroke of paralysis, and that death is only a question of time. Prime Minister Albans has assumed the executive functions, as provided by law.

Out of a total of seventy-five plague cases since the outbreak of the disease at Cairo, thirty-four of them have resulted fatally.

Twenty-three deaths from the bubonic plague are officially reported from Gorkharaton, Guadeloupe. In a letter to the Lord Mayor of London, Lord Curzon says: "Fifteen per cent. of the population of India are now supported by the Government. If the famine continues until December, it is estimated that the Government will have spent \$9,250,000."

DOMESTIC.

Politics.

Advices from Honolulu say that the native Hawaiians have decided to organize an independent party to oppose the white Democratic and Republican parties. Enough delegates to the National Republican Convention to be held in Kansas City July 4, have been instructed for W. J. Bryan to insure his nomination on the first ballot.

Allegations against Comptroller Coler of New York charging him with "gross breach of trust" in connection with the sale of city bonds, were presented to Gov. Roosevelt last week, with a request for the removal of the Comptroller. This is regarded as a political move, instigated by the Comptroller's enemies, and not likely to have any serious results.

The Rhode Island General Assembly has re-elected George Peabody Wetmore as United States Senator.

Other Domestic News.

The striking street car men in St. Louis have adopted a proposition advanced by President Gompers looking to a settlement of the strike. The union strikers empowered the committee to offer to arbitrate the question of reinstatement of the former employees. Riots and disorder are not so frequent as they have been. Since the beginning of the strike, thirteen persons have been killed and sixty-six injured by shooting, besides nearly a hundred minor casualties received in other ways.

Gen. Otis was honored with a parade and dinner in Rhode Island on Friday last week. The Rhode Island House voted last week to submit to the people an amendment to the Constitution pro-

viding for the abolishment of Newport as one of the State capitals.

The big coal strike in the Southwest is practically at an end. The strike was begun over a year ago. The men will receive an advance of 5 cents per ton on mine run coal.

Judge Townsend, of the Federal District Court, New York, handed down a decision last week upholding the treaty of Paris, and declaring that the inhabitants of Porto Rico are foreigners to the Constitution and the laws of the United States until their status is determined by Congress.

The transport Burnside, which left New York last week for San Juan de Porto Rico, carried 1,000,000 in American gold, silver and paper money, which is to be put into circulation in Porto Rico as rapidly as it can be exchanged for old Spanish money.

The Manufacturers' Woodworkers' Association in Chicago has decided unanimously to refuse the demand of the Amalgamated Woodworkers' Council for a 10

per cent. increase in wages over the scale now paid under the local contract, expiring on July 1. About 3,000 workmen will probably strike.

Belle Boyd, the famous spy of Southern Confederate fame, died suddenly last week of heart disease at Kilbourne, Wisconsin, where she had gone to lecture. She was 87 years old.

It is announced that the elevated railroads in New York will be equipped with electricity by February next. There is said to be an alarmingly short crop of wheat in the Northwest this year.

Plans for the construction of warships to cost over \$100,000,000 are completed and under consideration by the Navy Department.

Five hundred inmates of the penitentiary in San Juan Porto Rico, mutinied on Monday, last week, and tried to kill the guards. The mutiny was suppressed, however, after the guards had fired over the heads of the prisoners.

NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION.

OFFICE OF COMMITTEE ON PROPRIETARY GOODS.

Kansas City, Mo., June 14, 1900.

Important and Confidential.

To Proprietors:

Gentlemen: I take pleasure in advising you that the wholesale drug trade of the United States has almost unanimously accepted the terms and conditions of the new plan for the distribution of proprietary goods, as fully set forth in the attached circular of May 5, which explains itself.

I enclose a list of the jobbing druggists in the United States selected by you to act as your wholesale agents, all of whom have signified their acceptance of the new plan, except those marked *. Most of the latter have not expressed themselves on the question, although earnestly requested to do so. You will observe that, numerically speaking, over 85 per cent. of those on the list have expressed their desire to act as your wholesale agents under the terms proposed, and it is safe to say that these houses represent more than 95 per cent. of the distributing power of the entire wholesale drug trade of the country.

Everything is now prepared for you to go ahead and put the plan into effect, and this should be done as soon as practicable. In order that I may inform the trade of the date when the plan will go into operation generally, will you kindly advise me by airt mail if you will supply the trade with your new term sheet and schedule to take effect July 1? The circular of May 5 contains the form of terms and conditions which you stated you would send to your wholesale agents upon the adoption of this plan.

Anticipating the favor of an early reply, I am,

Yours very truly,

FRANK A. FAXON,

Chairman.

FOR HIGHER BAKK AND PAY.

At a meeting of the Executive Committee of the Louisiana State Pharmaceutical Association, held at New Orleans, June 6, 1900, the following resolutions were unanimously adopted:

"Be it resolved, that the Louisiana State Pharmaceutical Association, recognizing the injustice of the attitude of the United States Government towards the pharmacists in the Government services, indorse the action of the American Pharmaceutical Association in its efforts to obtain recognition of the profession in the Army, Navy and Marine Hospital Service of the United States, and a fair compensation for the duties performed by the pharmacist in the services; and

"Be it further resolved, that the Association indorse the present movement to obtain for the hospital stewards of the Marine Hospital Service, the change in title from that of 'Hospital Steward' to 'Senior,' 'Junior' and 'Assistant Pharmacist,' with the respective pay of \$1,200, \$800 and \$720 per annum, with the present perquisites, and the concessions now granted junior medical officers.

"Be it further resolved, that the secretary of this association be instructed to forward copies of this resolution to the President of the United States, the Secretary of the Treasury and the Supervising Surgeon-General, Marine Hospital Service; and it is the desire of the Louisiana State Pharmaceutical Association that the Senators and Congressmen of the State of Louisiana exert their influence in obtaining the adoption of the sense of the foregoing resolution."

M. BERNSTEIN,

W. P. DUPLANTIS, President, Shreveport, La.
Recording Secretary, New Orleans, La.

COUNTERFEITING PROPRIETARY MEDICINES.

In further information concerning the arrests made in Cleveland recently, and noted last week in this journal, Page 635, the following letters have been received:

Lynn, Mass., June 13, 1900.
Editor Pharmaceutical Era: There was an arrest made in Cleveland, May 25, for counterfeiting our Vegetable Compound, and the parties are now in jail under \$1,700 bonds for the October court. We were very fortunate in having this discovered before there, and it has been put out. In almost every instance where it was offered to the trade, their methods of doing business excited suspicion, and very few purchased from them. Those that did soon found out that the goods were not genuine.

Yours truly,

THE LYDIA E. PINKHAM MEDICINE CO.,
L. C. Hunt.

Columbus, O., June 13, 1900.

Editor Pharmaceutical Era: We have had considerable trouble for some months from spurious goods manufactured and sold by a couple of parties from Pennsylvania. They operated first in eastern Pennsylvania. Their names are N. H. Howells and E. M. Quackenbush. Before we had time to arrest these parties in Pennsylvania, they disappeared from that point and afterwards traced them to Cleveland, Ohio, and there discovered where they had sold some goods and found them in the act of manufacturing and filling the bottles. We had them arrested, and on trial before Justice Crawford they were bound over to the Common Pleas Court, and we are just informed by our attorney that the Grand Jury, being now in session, has returned indictments against these parties. As a manufacturer and operator, and his excuse to the druggists for having these goods for sale was that in traveling through country districts in the interests of his own preparations, he would find places sometimes at which there was no sale to speak of for Feruna, and where druggists were overstocked with these goods, and he would offer to sell them at 10 and 10 off. We have found none of the spurious goods of ours in the hands of any druggists who make their purchases from regular wholesale drug houses, and if druggists would confine their purchases to regular wholesale drug jobbers, we believe that no one would be able to dispose of counterfeit goods. We beg to say that the two parties mentioned above were also engaged in counterfeiting goods of the Lydia Pinkham Co., and are under indictment at Cleveland also on behalf of this firm.

Yours very truly,

THE PERUNA DRUG MFG. CO.,

Per S. B. Hartman, Pres.

JOHN E. CHAPMAN, head of the Chapman, White, Lyons Co., wholesale and manufacturing druggists, Knoxville, Tenn., died June 9. He was born in Claiborne County, in that State, in 1847, and located in Knoxville in 1873. He was a public spirited citizen and had held a number of official positions in various organizations, including the Commercial Club, Chamber of Commerce and the presidency of the Centennial Board. He was also an active member of the M. E. Church, South, a Mason and Knight Templar, the members of the last named organization attending the funeral exercises in a body. Two daughters and one son, David C., survive.

—The Illinois Pharmaceutical Association will hold its twenty-first annual meeting at Chicago July 17, 18 and 19. The Chicago Beach Hotel has been chosen as headquarters and the Committee on Arrangements announces it will spare no expense and effort to make the meeting most profitable and enjoyable. Special hotel and railroad rates have been secured, the latter being on the certificate plan, one and one-third fare for the round trip from all points in Illinois and from St. Louis, Mo. Every druggist in the State, whether a member of the association or not, is invited to be present and participate in the business and social features of the meeting.

THE DRUG NEWS.

New York and Vicinity.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

Elects Board Members and Denounces American Druggist.

With but one dissenting voice, the members of the Manhattan Pharmaceutical Association, at the regular monthly meeting in the New York College of Pharmacy, Monday evening, June 18, passed the following resolution:

Whereas, The pharmaceutical journal known as the American Druggist in its issue of June 11, 1900, printed a communication bearing the signature, "George H. Harper, Ph. G., 123 East 128th street, N. Y. City," which communication contains a scurrilous attack falsely and maliciously assailing the German Apothecaries' Society of the City of New York, and

Whereas, No person named George H. Harper resides at or is known at the address given, nor is a person by that name either a registered pharmacist in the City of New York or a member of the New York State Pharmaceutical Association; therefore be it

Resolved, That the Manhattan Pharmaceutical Association officially condemns the action of the management of the American Druggist for publishing said letter.

This action was inaugurated when A. C. Searles stated he wished to read a letter published in a drug paper in which he thought the Manhattan Association was concerned. Thomas J. Keenan objected, as he said the name of the association was not mentioned. Sidney Faber said the Manhattan Association might not be mentioned in the letter, but a sister organization was, and as this began an argument there were calls to have the letter read. Mr. Faber added to his remarks a motion that the letter be read, which was seconded by George E. Schweinfurth. Mr. Keenan defended his position by saying he thought the association was doing wrong in taking up the affairs of other organizations, but Mr. Searles answered that while the name of the Manhattan Pharmaceutical Association was not mentioned a reference was made to New York pharmacists and that affected all the members present. The motion was then put and carried. Mr. Searles read the letter, the purport of which was the recital of a proposed conspiracy on the part of the German Apothecaries' Society to secure control of the State organization. Mr. Searles stated that an investigation had been made and it was found that no such person as the one given as writing the letter could be found. Mr. Keenan, who is a representative of the American Druggist, asked that the remainder of the article be read and Mr. Searles complied. When he reached the printed interview with Sidney Faber that gentleman said he wished it known that all he had asked the reporter from the American Druggist to state had not been printed. Mr. Keenan again objected by saying that everyone had been given an opportunity in the article to make statements. Mr. Faber suggested that those whose interviews were published were present and could speak for themselves. Mr. Hirseman said he wished to refute Mr. Keenan for he had not had opportunity to be heard. No one had come to him for an opinion, and he wished to say that he had a letter in his possession from President Muench, of Syracuse, of the State Association, dated June 5, in which reference was made to the published letter which was dated June 9. Mr. Hirseman denounced the letter as "a base fabrication that was originated in the office of the American Druggist." He said he wished it understood that the position given him in the letter was utterly false. Charles S. Erb, whose interview was printed, said that it was correct but did not include the statement he had made to the reporter that the printing of the letter would have a bad effect throughout the State. Mr. Goldman, another one who had been interviewed, said he had not been reported in full. Mr. Searles remarked that he had brought the matter to the attention of the association to have it pass its judgment on such an affair and he made a motion to the effect that the action of the editor of the publication be censured. Mr. Keenan asked that he be permitted to make an explanation which

was to the effect that three typewritten copies of the letter had been made, one for President Muench, one for Mr. Stoddard in Buffalo and one for a reporter of the American Druggist. He stated the original copy of the letter could be had if necessary, also that Mr. Harper, the writer, could be produced and that he could be reached through the United States mails. Mr. Faber said he had been sceptical concerning the genuineness of the reporter and had written to the American Druggist inquiring if he were a legitimate representative of the paper, but had received no reply. W. C. Alpers thought the article was taken too seriously, as he did not believe anyone who read the paper considered it seriously. Mr. Faber stated he had received many letters from friends in the State asking the situation. Mr. Keenan referred to the remarks Mr. Hirseman had made, especially the one relating to the origin of the letter and stated that he "threw the lie back." Cries of order from all parts of the hall greeted this remark and President Smith pounded the desk with his gavel. Mr. Keenan stopped for a moment but began again and succeeded in reiterating the statement. A number of members arose to a point of order, which was finally reached. President Smith told Mr. Keenan he could not make such remarks in the meeting and Mr. Keenan apologized. Mr. Bigelow wanted to know if the reporter for the paper had called on those interviewed before or after the letter was published, and was told before. Mr. Searles then presented Mr. Faber's resolution in the form given above and it was carried.

This entire matter was left to the latter part of the meeting. The election of two members of the State Board of Pharmacy was held after the regular business had been disposed of and resulted in the unanimous choice of Prof. George C. Diekman and Clarence O. Bigelow. Secretary Swann's report was read and accepted favorably. Action was taken on the amendment to the constitution to allow all licensed pharmacists in the Eastern District, as defined by the All-State Pharmacy law, to become members. President Smith reported that the counsel for the committee had given the opinion that the adoption of the amendment would not affect the association's incorporation. The report was then adopted. Thirty-four new members were elected and as many propositions received for consideration. Secretary Swann stated that sixty-eight members had been received in two months, which he thought had not been equalled by any other society. Treasurer Hitchcock reported \$55 collected in dues during the month, \$51.00 expended and a balance on hand of \$354.73. William H. Porr gave a comprehensive report of the doings of the Conference Committee in relation to the telephone question. He stated Robert Mazet had been retained by the committee to defend a test case that might be made on the shorter hour law. The report was adopted and subsequently the action of the committee in retaining Mr. Mazet was approved. The association also agreed to meet its pro rata share in defending a test case.

OUTING OF THE GERMAN APOTHECARIES.

The members of the German Apothecaries' Association enjoyed their annual outing Thursday, June 14, at Warwick Woodlands, Greenwood Lake, a delightful resort in a picturesque part of the woodlands of New Jersey. Fully 350 persons availed themselves of the opportunity to attend the outing, as a good time had been promised, and it was realized in the fullest sense of the term. The delightful resort offered many natural sources of enjoyment, which with those furnished by the Committee of Arrangements, made the day one long to be remembered. The prize bowling contest attracted the men folks, and the prizes were won by Reinhard Eschman, George Riefflin and Mr. Davis. The ladies of the party also bowled, as did the children. An excellent dinner was served, following which dancing was indulged in until a late hour.

FRIVOLOUS ALUMNI.

The Alumni Association of the New York College of Pharmacy, with a large number of friends, celebrated its annual outing Wednesday, June 13, at Donnelly's Grove, College Point. More than the usual importance was attached to the event, as it marked one of the closing features of the twenty-ninth year of the life of the association. The game of baseball between the Alumni team and a nine from Charity Lodge, F. and A. M., was the main attraction and occupied so much attention that an excellent card of athletic sports could not be given, except one number, a 100-yards dash for ladies which was won by Miss K. C. Owens. The baseball contest was continued through seven innings of good natured protests that greatly pleased the spectators who circled the field and urged the different players on in a mirth-provoking way. The game was especially interesting to the opposing teams, as the Masons defeated the Ph. G.'s a year ago and were as anxious to repeat the drubbing as the pharmacists were they should not. Thanks to the excellent team work of the alumni men, they scored a complete victory by a score of 10 to 5 and were consequently happy.

Dinner was served at six o'clock. Nearly 200 occupied seats at four long tables. When the meal was finished the usual routine of speech making was gone over, those participating being President of the Alumni Association, Charles S. Erb; George E. Schweinfurth and William Owens. But the feature that pleased the assemblage most was the presentation of a handsome silver loving cup by Charles H. Jeffras, representative of the William S. Merrell Chemical Co., of Cincinnati, whose office in this city is at 96 Maiden Lane. It came as a complete surprise, but when the graduates recovered themselves pandemonium reigned for several minutes. Mr. Jeffras was introduced by President Erb and made the following speech:

"As representative of the William S. Merrell Chemical Company, it gives me great pleasure to present to you, the Alumni of the College of Pharmacy of the City of

New York, this loving cup. If it shall appear in years to come that it has happily been the means of promoting good will among classes, good will to ourselves, we shall consider ourselves fortunate as having been its sponsor. The College of Pharmacy of New York City stands second to none in this great country of ours as an educational factor in pharmacy. Its graduates should be proud to call it their

Alma Mater and to look up to it as the fountain of their success, and back to their college days as among the best and happiest of their lives. Next to these college days should come the annual fraternal meetings—the reunion of good fellowship—when ties are re-strengthened by the rivalry of athletic contest. May the cup be an aid toward the binding of class to class in good fellowship and each individual to his alma mater. Your president, Mr. Erb, will doubtless be able to say his little say in a vein happier than mine. Into his hands then and into yours we place the cup. With the annual meetings in the times to come may the old song be as a remembrance of the present: 'We'll take a cup and drink it up in remembrance of "Old Lang Syne."

President Erb made a fitting response. The gift is to be contested for by the different classes in bowling, the class making the best score to retain the cup until another

class scores higher. The cup is a beautiful piece of work. It bears the following inscription: "Presented to the Alumni Association of the College of Pharmacy of the City of New York by the William S. Merrell Chemical Company of Cincinnati, O. June, 1900." An alumni badge is mounted in the inscription.

Following the dinner, dancing, bowling and prize shooting were enjoyed. The ladies bowled for prizes, the successful ones being Miss May Molloy, Miss Angrovett and Mrs. George E. Schweinfurth. The men rolled in the afternoon, the contest resulting in a tie among George Hitchcock, R. H. Timmermann and C. H. White. Three medals are offered and these will be awarded when the "roll-off" is made. Adolph Tsheppe won the shooting contest, L. W. De Zeller was second and Harry C. Yager third. During the afternoon a group photograph was taken. Those responsible for the success of the affair are: Outing Committee—Nelson S. Kirk, '94, chairman; Fred. Borggreve, '92; Thos. M. Davies, '94; Carl O. Grube, '94; Geo. E. Schweinfurth, '95. Officials: Master of Games, Thos. M. Davies, '94; referee, Chas. H. Bjorkwall, '95; starter, L. G. B. Erb, '94; judges, Bruno F. R. Dauscha, '94, T. B. Farnival, '98; scorer, Fred. W. Linnig, '95; timer, Frank N. Pond, '94. Gene Leonard, Alumni mascot.

KINGS COUNTY SOCIETY ELECTS BOARD MEMBERS.

The members of the Kings County Pharmaceutical Society, at its monthly meeting in Brooklyn, Tuesday afternoon, June 12, voted that the delegates to the meeting of the New York State Pharmaceutical Association in Newburg next week, be instructed to vote, unqualifiedly, for Felix Hrseman for president of the State body. This action grew out of a speech made by Wm. Muir, calling attention to a letter circulated throughout the State, which charged the German Apothecaries' Society with an attempt at conspiracy by flooding the State convention with 200 delegates in favor of Mr. Hrseman for president, Sidney Faber for secretary and A. C. Searles for treasurer. Mr. Muir denounced the statements in the letter as absolutely false, and concluded his speech by eulogizing Mr. Hrseman. Then Dr. P. W. Ray made the motion which resulted in the action as stated being taken.

Another matter of business, equal in value, was the election of two members to the State Board of Pharmacy, required by the All-State Pharmacy law. An informal ballot was taken on the two names placed in nomination by Dr. Ray, those of William Muir, Pharm. D., and Dr. Albert H. Brundage, and the vote resulted as follows: William Muir, 52; Dr. Albert H. Brundage, 50. Thomas J. France, 1; Adrian Paradis, 1. The first two were declared elected. Mr. Muir thanked the members for the honor conferred, promising to reciprocate it by the same active attention to duty that had characterized his efforts in the Kings County Association and elsewhere, and promising that Kings County would not be forgotten in the discharge of the business of the new office. Dr. Brundage echoed Mr. Muir's declarations in accepting his election.

Still another decisive step was taken by the association relative to the reception of its delegates at the meeting of the New Jersey State Pharmaceutical Association. Dr. Brundage made a lengthy report of the meeting, but said he felt that the Jerseyites had not accorded the Kings County men proper courtesy, for they had refused to grant them the privileges of the floor. Dr. Brundage stated this action was taken on the first day of the meeting, and he considered it so unfair that he and Prof. W. C. Anderson decided not to attend the subsequent sessions. Prof. Anderson and E. P. Tuthill, the other delegates, also agreed. A motion was then made by Dr. E. G. Rave that the association hereafter refrain from sending any delegates to the New Jersey organization meeting, and this was unanimously adopted.

President O. C. Kleine, Jr., convened the meeting promptly at 2.30. Secretary Tuthill read the minutes of the previous meeting. Treasurer P. W. Ray reported amount on hand, \$155.95 from last month, and this was augmented by a collection of \$244 in dues, swelling

the sum to \$30,000, with no disbursements. Treasurer Kay said the \$244 collected in dues was the largest sum received at an annual meeting since he assumed office. H. L. Schilling and J. F. Doerschler were elected to membership. Chairman Muir, of the Legislative Committee, presented a copy of an opinion from the association's counsel, Messrs. Perkins and Butler, on the law preventing the manufacture of explosives in dwelling houses. Mr. Muir also described the doings of the Conference Committee of the four pharmaceutical associations in regard to the telephone question and early closing law. He said he had pledged the Kings County organization at a meeting of the Conference Committee, to sustain one-fourth of the amount required in defending a test case. This action was substantiated by the society.

Mr. Muir reported as chairman of the Board of Supervision that \$83.08 profit had come from the issuance of the prospectus, the largest surplus ever received from this source.

F. P. Tuthill, Committee of One to meet with the Bottlers' Association, reported in shape of a card, on which the principal points of the bottle law were printed, and which card was to be sent to every druggist in Brooklyn. Secretary Tuthill also stated that he had written to President McKimley in relation to the advancement of the rank of Hospital Steward, and had received a reply saying the matter would be given attention.

President Kleiné announced his committees for the year. Prof. W. C. Anderson was elected a delegate to the next annual meeting of the N. A. R. D. Dr. Brundage read a recently published military order from the State Department, in which, with the composition of a regiment, the rank of military pharmacist was mentioned. William Schroeder, Jr., of the class of '97 of the Brooklyn College of Pharmacy, having complied with the requirements as to age and experience, had conferred upon him by Dr. Bartley the degrees of Ph. G. and F. ar. D. The closing business of the meeting included the resignation of Dr. T. C. Chagnon, which was accepted; auditing a bill of \$25 of Perkins and Butler for advice given, and voting a loan of \$150 to the Brooklyn College of Pharmacy.

NOTES.

—Among the out-of-town guests last week were J. A. Hart, Sing Sing; C. T. Hill, State salesman for William R. Warner & Co.; E. C. Fowell, Western salesman for Schieffelin & Co.; Dr. J. M. Love, St. Louis; Mr. Cramer, of Allentown, Pa.; A. G. Smalley, Boston; Dr. M. S. Iseman, Georgetown, S. C.; L. P. Lawrence, Orlando, Fla.; H. Baer, Charleston, S. C.; L. F. Curtis, Bridgeport, Conn.; D. H. Hills, Spring Lake, N. J.; George H. Currier, Chicago; Clarence Miller, Newburg; E. W. Thompson, Britain, Conn.; R. A. Brown, Florence, N. C.; D. E. Slater, Hunter, N. Y.; L. O. Johnson, London; D. A. Williams, East Hampton, Conn.; G. Arthur Gordon, Savannah, Ga.; E. B. Smith, Washington, D. C.; Arthur Kronkysty, San Antonio, Texas; Henry Schneider, Troy, N. Y.; George E. Burroughs, New York State salesman for Schieffelin & Co.; John S. Lane, Connecticut and Massachusetts salesman for the same firm. George P. Brown, of Rahway, N. J.; Dr. Martin, who has been engaged in the chemical works on a large coffee plantation in the Isthmus of Tehuantepec, in Central America; B. B. Galvin, Silverton, Col.; D. H. Mudgett, Dexter, Mo.; J. R. Johnson, analytical chemist for the Government of Jamaica, at Kingston; C. E. Bowman, Kansas City; J. J. Mitchell, of Detroit, Mich.; Mr. Lowe, of Lowe Bros., Far Rockaway.

—The employes of the former firm of Schoelkopf, Hartford & MacLagan, and who are now the employes of the new firm of Schoelkopf, Hartford & Hanna, presented George MacLagan, retiring treasurer of the former company, with a solid silver tea set, Tuesday afternoon, June 12. Mr. MacLagan formally left the firm the first of the year, but his official duties did not cease until the afternoon mentioned, when he was called into the office of his successor, William W. Hanna, and there presented with the gift, James Hartford, vice-president of the firm, making the speech, Mr. MacLagan accepted in a graceful manner. He has been treasurer of the concern since it was organized fifteen years ago. He

retires from the firm to seek rest from a life of long continued activity, and will not engage in any other business. The tea set consists of five pieces. It was in a handsome oak case, on which was an engraved plate bearing the name of the recipient, the purpose of the gift and its donors. The president of the concern, J. P. Schoelkopf, Jr., came from Buffalo to witness the presentation.

—A game of baseball was played at Prospect Park on Friday afternoon, June 11, between teams from the Alumni Association of the Brooklyn College of Pharmacy and the doctors of the Long Island College Hospital, it being the second meeting of these teams this season, the doctors winning the first game. Seven innings were played, and the druggists were successful by a score of 22 to 21. It is possible that another game will be arranged. The teams lined up as follows:

M. D.'S.	Ph. G.'S.
Gillen, c.	Prlug, 1st b.
Fogarty, p.	Weldon, c.
Flitzerald, s. s.	Faulson, p.
Smith, 1. f.	McNally, 2d b.
Kemney, c. f.	Wood, s. s.
Prlug, 2d b.	Middleton, 3d b.
Murray, 3d b.	Myles, c. f.
Bacon, 1st b.	Goeltz, 1. f.
Finley, r. f.	Ahlborn, r. f.

—The Federal authorities have begun suit for the forfeiture of the invoice of 63 pounds of smoking opium which came into this port a few weeks ago, billed to Wing Wo Chong, a reputable Chinese merchant on Pell street, but marked "green seed." This attempt to disguise the opium led the authorities to believe that an effort was being made on the part of smugglers to get the goods in duty free, and a subsequent examination of a consignment of groceries to the Chinaman showed this theory to be correct. With the opium was found another case marked "medicine," which contained tapioca flour. The duty on the opium would have amounted to about \$300.

—Nicolas Tauszig died at his home, No. 3 East Eighty-fourth street, Tuesday, June 12, after a short illness with heart disease. He was a well known member of the trade. The deceased has been a resident of this country for the last twenty-six years, coming from Hungary, where he was born fifty-two years ago. His first effort was a drug store at Long Island City, and to this he added a store at Second avenue and Fifty-second streets, and another at Clinton and Houston streets, this city. A wife and two children survive him.

—Henry C. Fick, who has been the representative of Lehn & Fink in the Northwest for the past ten years, and his wife, were in New York for a few days prior to their departure for Europe on the steamship Lahn. They will take in London, part of England, Paris and the exposition, then by way of Brussels and Cologne, will enjoy a trip up the Rhine and through Switzerland, returning by way of Munich, Vienna, Berlin and Hamburg. Mr. and Mrs. Fick were the guests of Albert Plant at luncheon at the Drug Club.

—Several forged orders bearing the name of Walter S. Rockey, who owns drug stores in this city, at Nos. 121-123 Columbus avenue, 503 Eighth avenue and 581 12th avenue, have been presented to the trade during the last week by a stranger, who in several instances secured the goods. One firm was swindled out of \$50 worth of drugs in this way. The stranger had evidently worked at the game before, as he seemed successful in satisfying the members of the trade of his honesty, and goods were delivered to him.

—An interesting game of baseball was played at Prospect Park Saturday afternoon between teams from McKesson & Robbins and the Kranz Electric Company, the former winning by a score of 21 to 18. The winning team is anxious to arrange games with teams from other drug houses, and a challenge sent to S. Costar, of McKesson & Robbins will receive a prompt reply.

—Letters of incorporation were issued last Saturday in New Jersey to the Antiseptic Powder Company, for the manufacture and sale of antiseptic powders. The firm is located in Jersey City, and is capitalized at \$100,000. The incorporators are P. Whitney, R. Doughert and G. Willis. Mr. Whitney, who lives in this city, is attorney for the firm.

—Mr. and Mrs. H. D. Annable, of Brooklyn, left last

IN AND ABOUT BOSTON.

week for a tour of the world. The first place to be visited will be the Paris Exposition, where they will remain for a short time. It is expected the entire trip will consume about six months. Mr. Annable conducts a drug store at the corner of Tompkins and Putnam avenues.

—An addition was made to the drug interests of New Jersey Saturday by the incorporation of the Woodward Chemical Company, of Jersey City, which begins business with a capital of \$500,000. The firm will manufacture and sell proprietary medicines. Its promoters are F. U., Mary L. and F. L. Kahle.

—H. B. Harding, actuary of Humphreys' Homeopathic Company, received an invitation last Saturday morning from the Chamber of Commerce, Paris, France, of which he is a member, to assist at a reception to be given in the United States Pavilion at the Paris Exposition, July 7.

—Edward V. Zoeller, of Tarboro, N. C., was in town during last week. He left Saturday on the Campania for a European trip, which will consume some time, and during which he will visit London and other points in the British Isles, Berlin and the Paris Exposition.

—Lehn & Fink have changed the territory of A. C. Randall, one of their representatives, from Long Island and a part of Massachusetts to the central and western sections of this city. Mr. Randall will begin in his new territory the first of the month.

—Dr. George F. Gaumer, of the town of Izamal, Yucatan, Mexico, is visiting friends in town. Dr. Gaumer is also a druggist, but he does not devote a great amount of his time to pharmaceutical work, preferring biology, botany and other scientific themes.

—The five-story building on Exchange street, Syracuse, N. Y., occupied by the Medico-Malt Company, was almost entirely destroyed by fire on the morning of June 5. Part of the machinery and most of the books and papers were saved.

—The Bristol-Myers Company, of Brooklyn, has incorporated. The capital stock is fixed at \$150,000, and the directors are: George H. Myers, Washington, D. C.; William M. Bristol, Brooklyn, and P. C. J. De Angeles, Utica, N. Y.

—Edwin Magill, who has represented Billings, Clapp & Co., of Boston, in the New England States for the last nineteen years, has left the employ of that firm to cover the same territory for Lehn & Fink, of this city.

—R. E. Vanderveer, president of the Home Soap Company, No. 54 Franklin street, died Wednesday after a short illness. He was well known throughout the United States, where he traveled for many years.

—McKesson & Robbins have named Thomas G. Maddox as salesman in the Southern States, to fill the vacancy caused by the death of J. F. Brookfield. Mr. Maddox left for his new territory last Friday.

—A. Katz has purchased the store of Carl Wuest & Son, of No. 58 Manhattan avenue, Brooklyn, and will continue the business there. Mr. Katz owns another store in Brooklyn, at No. 99 Moore street.

—Drugs to the amount of nearly a million dollars were brought into this port during the week that closed June 16. The importations consisted of 73,642 packages, at a total valuation of \$821,478.

—T. D. McElhenie, No. 259 Ryerson street, Brooklyn, has left for Twilight Park, in the Catskill Mountains, where he owns a store which is open for business during the summer months.

—Samuel E. Strong, of Strong, Cobb & Co., and treasurer of the N. W. D. A., and A. H. Von Gorder, of Benton, Myers & Co., Cleveland, were in the city last week.

—Charles F. Rieker, a druggist of Piermont, Rockland County, has filed a petition in bankruptcy. He has outstanding debts of \$581.76; assets, \$337.15.

—A drug store has been opened at the corner of Ninth street and Second avenue by the Manhattan Drug Company.

—E. C. Fowell, salesman for Schieffelin & Co. in the Western States, leaves next week for the Paris Exposition.

—Max Zagat has recently purchased a drug store at the corner of Ninety-sixth street and Fourth avenue.

—George Hughes, of Mamaroneck, L. I., has sold his drug store to Fred G. Koch.

"Molasses Kisses" Not a Medicinal Remedy.

Boston, June 16.—In the United States District Court this week a novel case has been heard before Judge Brown. It involved the legality of levying a war tax upon the molasses "Velvet Kisses" manufactured by H. L. Hildreth. The government authorities alleged that the "Kisses" were a medicinal compound and therefore subject to the special war tax. This allegation was based on the fact that the "Kisses" were advertised as being beneficial to the throat. Accordingly, J. D. Gill, collector of internal revenue in Boston, ordered Mr. Hildreth to render a statement of sales of "Kisses" from July, 1898, until December, 1899, and upon these sales a tax of \$5,269 was levied and paid under protest. A verdict of \$5,269 with interest from December, 1899, was returned for the plaintiff, Mr. Hildreth, who contended that the article was a confection and not a medicinal compound and therefore was not subject to tax.

A Wise Judge Aids the Temperance Cause.

Boston, June 16.—Boston druggists have been interested in the case of A. P. Fitch, a Concord, N. H., druggist, through his clerk, Walter R. Davis, who was arrested on Sunday, June 10, charged with a violation of the laws in selling soda. Davis had been in Concord only three weeks and this was his first Sunday experience, for the Fitch drug store has been closed on recent Sundays until the present month. The arrest was by order of Mayor Martin, who instructed City Marshal Locke to arrest all druggists selling soda water, etc. The complaint was founded upon section 5, chapter 271, of the public statutes, which states that "no person shall keep his shop, warehouse, cellar, restaurant or workshop open for the reception of company, or shall sell or expose for sale any merchandise whatsoever on the Lord's Day; but this section shall not be construed to prevent the entertainment of boarders, nor the sale of milk, bread and other necessities of life, nor drugs and medicines." Judge Badger declared that soda water should be included among the necessities of life and he discharged the defendant. The judge stated that the legal meaning of the word "necessities" defined by the courts is "such things as are proper and requisite for the sustenance of man, as a glass of milk or a cup of tea or coffee, which is sold openly every Sunday in the City of Concord; and as laudable efforts are being made by the authorities there to suppress the sale of intoxicating liquors, the courts feel it their duty to encourage the sale and use of all temperance beverages."

NOTES.

—Albert D. Mowry, of A. D. Mowry & Co., druggists on Blue Hill avenue, Roxbury district, and Mrs. Mowry have just celebrated the twentieth anniversary of their wedding day. Fifty guests were summoned to play whist and otherwise enjoy an evening. After the award of prizes, Mrs. E. B. Wadsworth presented the hostess, on behalf of all present, a polished oak case containing sixteen pieces of silver. A fine supper was served and there were recitations and piano solos.

—George R. White, president of the Potter Drug and Chemical Company, has opened for the summer season his fine mansion on Smith's Point at Manchester-by-the-Sea, which place was finished by his architect last year. Mr. White has been entertaining R. J. Wilson, of Sydney, Australia, a nephew of the late Sir Alexander Stuart, premier of the colony, New South Wales.

—In the court at Newburyport, Joseph I. Moulton, a Salem druggist, has been a defendant on a complaint alleging that he has kept spirituous liquors for sale contrary to law. A general denial was made for the defence, and the court took the matter under advisement.

—William H. Wheldon, of the Boston office of the American Soda Fountain Company, has invented a draft tube for effervescent drinks. The rights on this have been assigned the company.

—The trustees of the Malden Public Library, in looking about for a branch book delivery for the Maplewood Ward, chose Mr. Sutherland's drug store, corner of Salem and Maplewood streets.

—Mrs. W. B. Heath, wife of William B. Heath, druggist at the corner of West Springfield and Tremont streets, th's city, has gone to Cleveland to visit relatives.

—This week's exports at the Port of Boston include drugs and chemicals, \$19,492; india rubber manufactures, \$1,411; tobacco, \$1,851; spirits, \$117,754.

—At a loss of about 86,000 a large building belonging to the Massachusetts Chemical Company, in Walpole, was almost destroyed by fire this week.

—Edward Callahan, of Kelly & Callahan, druggists at Woburn, has bought out his partner, Daniel Kelly, and will continue the business.

—The Eastern Drug Company has become associated with the Boston Merchant's Association.

PHILADELPHIA.

Philadelphia, June 16.

—A party of about thirty Philadelphians will leave Broad Street Station, Monday, June 25, for Ebensburg, Pa., where the annual meeting of the Pennsylvania Pharmaceutical Association will be held. Messrs. Myers Busch and D. E. Bransone, members of the Entertainment Committee, have arranged a very entertaining programme.

—A movement is on foot among the drug clerks of Reading to secure the closing of the drug stores on Sunday. A petition has been drawn up and a committee is now circulating it among the owners of the various pharmacies.

—The regular meeting of the Philadelphia Section of the American Chemical Society will be held in the Harrison Laboratory of the University of Pennsylvania, on Thursday, June 21.

—Frank G. Mumma, of Twenty-fifth and Jefferson streets, is seeking legislative honors, and is busily "going the rounds" with a view of getting his friends in line for the primaries.

—A meeting of the Executive Board of the Alumni Association of the Philadelphia College of Pharmacy held a meeting last week at which important business was transacted.

—James C. Roller, assistant general manager of the Smith, Kline & French Company, has been in ill health for some time, and has gone to the country for an extended rest.

—E. L. Reading, who at one time conducted the store at Second and Federal streets, but was obliged to give up the drug business on account of failing health, died last week.

—Harry La Wall, a member of the firm of Cyrus La Wall & Sons, of Easton, Pa., wholesale and retail druggists, was a Philadelphia visitor this week.

—A. D. Keim, manager of John P. Frey's Fifteenth and Moore streets store, is again at his post, having recovered from an attack of tonsillitis.

—Mr. Elcheberger, manager of the Standard Chemical Company, Camden, N. J., visited several of the chemical laboratories of this city last week.

—William T. Myers, of Fourth street and Susquehanna avenue, is making extensive improvements to his store.

—Josiah C. Peacock, of Tenth and Emily streets, is contemplating enlarging his store.

—Jefferson Miller, of Reading, has accepted a position in a Tioga, Pa., pharmacy.

Apollinaris Company in Court.

The Apollinaris Company, Ltd., by virtue of prior adoption and long continued use, claims the exclusive right to use on mineral water an oval orange or yellow body label in connection with an oblong neck label of the same color. It has brought numerous successful suits to enforce this claim, the latest being one in the United States Circuit Court for the Eastern District of Wisconsin, against Andrew C. Powers and others, of Chicago (the American Mineral Water Co.) who used yellow labels on their "Almanar's" water. After a preliminary hearing on June 4, at Milwaukee, Judge William H. Seaman granted an injunction against the use of defendant's labels on the ground that "in color and form" they so closely resembled Apollinaris labels as to be liable to be mistaken therefor, though the printed matter thereon was entirely different.

BALTIMORE.

Maryland Board of Pharmacy

Baltimore, June 15.—A peculiar state of affairs exists in this city at the present time owing to an oversight on the part of the Governor in the appointment of a board of pharmacy. It is the duty of the board to examine applicants who desire to practice pharmacy in Baltimore and issue certificates of competency to those who pass. Incidentally they are also morally responsible for the enforcement of the pharmacy law. Since the death of J. H. Hancock, several months ago, however, there has been virtually no board, Louis Schulze having resigned before the expiration of his term, and the remaining member, J. Webb Foster, feeling that it did not behoove him to act single-handed. Recently, Governor Smith appointed a new board, naming Mr. Foster for another term and including in the list the late Mr. Hancock, concerning whose demise he appears to have been in ignorance, the third member being D. R. Millard. Immediately after the appointments had been announced, Messrs. Foster and Millard notified his excellency that Mr. Hancock is dead, but although this occurred several weeks ago no steps have so far been taken to fill the vacancy, and owing to the peculiar condition of affairs which exists the two members named are disinclined to take action of any kind. All matters which require the attention of the board are, consequently, in a rather confused state. There is no one to issue certificates to applicants and no examinations are being held. Until there is a board to pass upon their qualifications the members of this year's graduating class of the Maryland College of Pharmacy who desire to locate in Baltimore cannot engage in business without an infraction of the law, while the absence of authority to give weight to existing provisions weakens respect for the statute.

Soda Water and the Sunday Law.

Baltimore, June 14.—Within the past week the question of selling soda water on Sunday has been passed upon by two justices of Washington County, Md., with results so widely divergent as to knock out consistency in one round. Walter K. Davis, a drug clerk in Concord, had been arrested for selling soda water on Sunday. He was tried before Justice Benjamin, of that place, who decided that soda water is one of the "necessities of life" and therefore exempt from the operation of the Sunday law. Another druggist, who had been arrested about the same time, was brought before Justice Adams, in Hagerstown, and fined \$20 and costs. It was at first the intention of the druggist to take an appeal and have the matter tested in the higher courts, but on second thought he abandoned this purpose and accepted the judgment of the magistrate. The case was held to come under the statute of 1867, which prohibits the sale of candy, soda water, ice cream and cigars and other articles on Sunday. A test case several years ago was taken as a precedent by Magistrate Adams.

NOTES.

—The annual meeting in Baltimore of the Maryland Volunteer Firemen's Association last week was the means of bringing to this city a number of druggists from the counties. Among the most conspicuous was R. S. McKinney, ex-president of the Maryland Pharmaceutical Association and president of the Firemen's Association. Mr. McKinney wore the uniform of the ladies and seemed half-fellow-well-met with everybody. He is located at Taneytown, Carroll County. Other out-of-town visitors included Thomas K. Shaw, of Westminster; Dr. Thomas H. Williams, of Cambridge, Md.; John F. Patton, of York, Pa., president of the American Pharmaceutical Association; T. E. Ogram, of Washington, and Mr. Westerholt, of Westerholt & Sample, York, Pa.

—The attractive store and dwelling which Druggist F. W. Schanze is having erected at the southwest corner of Pennsylvania and North avenues, are almost ready for occupancy. The building is of brick, with galvanized iron cornices. Artistic mosaic work covers the floor of the store, which, when completed, will be an ornament

to the neighborhood. Mr. Schanze now occupies temporary quarters on North avenue, diagonally across from his new location.

—The Sal-Veget Chemical Company, which was incorporated on October 13, of last year, to manufacture veterinary medicines with a capital stock of \$10,000, has become involved in difficulties. An advertising concern which supplied metal signs applied for an injunction and the appointment of a receiver on the ground that the company owes the petitioner \$325 and is insolvent. An order was signed requiring the company to file its answer by June 29.

—J. G. Jung, a druggist at the corner of Lancaster street and Canton avenue, announced by advertisement in the daily papers last week that he would not be responsible for debts contracted by his wife, she having left him. It appears that she eloped with some other fellow.

—O. C. Smith, the well-known druggist at 1100 Pennsylvania avenue, has greatly improved his pharmacy by installing new oak fixtures and electric lights and otherwise rendering the establishment more attractive.

—J. Fuller Frames, a well-known East Baltimore druggist, has been elected a director of the Northeastern Dispensary for the ensuing year.

—M. Galloway, a young druggist who will shortly open a pharmacy at Harlem avenue and Monroe street, was married two weeks ago.

—E. H. Barlett, Jr., of Oakland, Md., has reopened for the summer his drug store at Mountain Lake Park, Garrett County, Md.

—George D. Eader has accepted a clerkship in the pharmacy of Thomas & Thompson, Light and Baltimore streets.

DETROIT.

DETROIT, June 16.

—Parke, Davis & Co. gave their tenth annual picnic and outing to their employes on Friday, June 15. The big new steamer, The Tashmoov, was chartered for the day and took the 2,000 employes and their friends up the river to Tashmoov Park. In the afternoon those who wished took the steamer for a further ride up the river. The firm hired Schremser's band, the Metropolitan band and Tinnetts' orchestra to accompany the party, with instructions to provide dance music by turns all day. As further entertainment the company invited the Michigan Drug Co. baseball team and the Deltas, of Detroit, to be their guests and to play a game of ball. An excellent game was played which resulted in a score of 6 to 3 in favor of the Michigan Drug Co.'s team. Other games and contests made the afternoon pass very quickly. Parke, Davis & Co. paid all expenses of transportation and entertainment and gave a full day's pay in addition.

—Twenty-one young men were graduated from the pharmacy department of the Detroit College of Medicine on Thursday evening, June 14. Exercises were held in the Detroit Opera House, which was filled to overflowing. The members of the pharmacy class were W. H. Anderson, G. J. Backoff, J. A. Berchard, J. C. Berridge, J. B. Cannon, C. A. Cassada, C. W. Courville, Chas. Davey, E. J. Donoghue, C. H. Forrest, H. E. Fox, A. F. Gowman, Wm. Harron, H. P. Johnson, A. E. Lambert, J. E. McDonald, J. J. Nalhardt, E. D. Perrin, F. F. Stephenson, T. M. Taylor, C. R. Will.

—At a meeting of the Detroit and Wayne County Retail Druggists' Association, A. S. Parker and W. H. Burke were elected delegates to the coming meeting of the N. A. R. D. Both are retail druggists of Detroit. President Seely will announce the names of the Committee on Entertainment in a few days.

—A. S. Webster, traveler for Farrand, Williams & Clark, gave a dinner at the Ste. Clair Hotel to some of his fellow employes on Saturday. The guests were Charles Howard, Walter McAdam, Louis Wolff, John F. Smith and Harry T. Carver.

—The Michigan Drug Co. baseball team defeated the team of the Michigan Alkali Co. by a score of 3 to 1 at Wyandotte last Saturday. To-day they play the Ireland & Matthews Manufacturing Co. on the Fort street grounds.

—J. S. Farrand, Jr., of Farrand, Williams & Clark, Detroit, has been in Chicago during the week attending

the commencement exercises of the Northwestern University, from which institution his nephew was graduated.

—Dr. E. E. Sherrard has retired from the firm of Sherrard & Webb, corner of Greenwood and Canfield avenues, Detroit, and R. W. Webb will continue the business alone. J. W. Shultz will be manager.

—Omar Nichols, formerly in the drug business in Detroit, but more recently out in the State, has returned to Detroit to take a position with Nelson, Baker & Co.

—The moonlight excursion of the Detroit Retail Drug Clerks' Association on Tuesday evening, June 12, was a great success, financially as well as socially.

CHICAGO.

DIPLOMA MILL MEN ARE HELD.

Chicago, June 16.—After a hearing in which Clara J. Tisdal, attorney for the Government, denounced the Metropolitan Medical College, at 866 West Van Buren street, as a "bogus doctor shop" and a "fraud on the public," the four officers of that "diploma mill" were held Thursday to the Federal Grand Jury on charges of using the United States mails in promoting a scheme to defraud. The hearing was before United States Commissioner Humphrey and the four men held are: James Armstrong, president of the college; J. H. Randall, vice-president; Charles M. Hovey, attorney; Thomas Armstrong, secretary.

For four years the officials of the so-called college had defied the local authorities, owing to the inadequacy of the State health laws, and continued to send out "diplomas" at the rate of 1,000 or more a year to "any one having a superior knowledge of medicine," it is charged, without competent examination, and in consideration of fees ranging all the way from \$10 to \$200 or more. The charge now made by the Federal authorities is that the sale of these "diplomas" constituted a fraud not only on the purchasers, but on the general public.

The hearing lasted all day, and the commissioner's office was crowded with "graduates" of the institution and "professors," who were less anxious to have the officials come to grief. Three "graduates" of the institution were the principal prosecuting witnesses.

John Murdock, a carpenter and medical student of Louisville, Ky., said he had been studying medicine many years, and saw an attractive advertisement of "Dr." Armstrong's institution in May, 1898; that he entered into correspondence and found that a diploma was to be had for \$200, but finally induced the "faculty" to make him an offer of a diploma for \$21.50. This was paid and the degree received in January, 1899. "Dr." Murdock also received a certificate of practice for the State of Texas, but found this to be worthless. His efforts to practice medicine in Kentucky met with the same results.

The "graduate" then wanted to return his bit of parchment, but the faculty whose names appeared thereon refused, he said, to send back his money.

Daniel W. Mott, of Maquoketa, Ia., told a similar story, supplementing it by saying he was sent to jail for trying to practice in Chicago with an "Armstrong

BUCK & RAYNER'S SHOW WINDOWS.

WINDOW DISPLAY OF LESCHER DRUG CO., GALESBURG, ILL.

diploma." He said the officers of the institution furnished his bail and persuaded him to leave the State. Mott's experience cost him \$128.

George A. Larkin of the same town in Iowa, another "graduate," said he paid \$100 to learn, after several attempts, that the degree of the Independent, or Metropolitan, Medical College was not recognized by boards of health.

Olga Jurgens, 893 North Washtenaw avenue, and Lillie Alston, 1232 West Adams street, testified that they had been employed at the West Side school and were paid to sign names of the "faculty" of the college to diplomas. They said they were kept busy, and that papers bearing their handwriting have been sent to all parts of the United States and England.

When the prosecution had rested its case, Attorney Milchrist called Postoffice Inspector Gould to the stand and he said the numerous complaints from "graduates" of the school induced him to try a "course in medicine" there. He called on the president of the faculty, he said, and arranged to secure a diploma for \$25, but persuaded the president that he was too busy to take the five days' course, produced his money, and was about to receive a degree when "Dr." Armstrong became suspicious and told him to call again.

Postoffice Inspector Guy Gould, who has been engaged in the prosecution of the faculty of the Metropolitan Medical College, has received word from Washington to withhold all mail addressed to any of the four defendants and to the institution with which they are connected. As soon as these instructions were received the inspector seized a lot of mail found in "lock box No. 590" at the postoffice to which most of the mail of the West Side institution was addressed.

Alumni Association Elects Officers.

Chicago, June 16.—The annual meeting of the Alumni Association of the School of Pharmacy of the Northwestern University was held this week. Thomas V. Wooten presided. The by-laws of the association were revised and the following officers were elected: President, Thomas V. Wooten; first vice-president, F. J. Gerner; second vice-president, W. F. Egler; secretary, J. M. Scott; treasurer, M. A. Miner; trustees, F. H. Elsner, C. A. Storer and Gustav Frank.

NOTES.

—Porter B. Fitz Gerald, of Morrison, Plummer & Company, went to South Bend, Ind., to attend the meeting of the Indiana Pharmaceutical Association. W. M. Colwell, Gay Osborne, T. C. Ballard and A. Kloster, from the same firm were also in attendance, exhibiting the display of sundries which the company made at the meeting.

—C. A. Weckler will in a few days open a new drug store at Thirty-first and Cottage Grove avenue. Mr. Weckler is proprietor of the Alhambra Pharmacy at State street and Archer avenue, and of the Annex Pharmacy at Wabash avenue and Twentieth street.

—Druggists and others who went on the recent excursion given by Parke, Davis & Company are now getting a movement on foot to draw and engross an appropriate resolution of thanks to be presented to that firm.

—L. A. Ellesburg has bought the E. A. Thompson pharmacy on West Division street. Mr. Thompson will retire from the drug business and give his attention to the manufacture of ice cream.

—August Wiedinger, the North Side salesman for Peter Van Schaack & Sons, is now in a hospital where he has undergone a surgical operation. His early recovery is expected.

—The wife of Druggist A. W. Stabelmann, Sixty-ninth street and Ashland avenue, gave birth to a fine baby girl last Wednesday. Congratulations are extended.

—A. V. Lane, the well-known druggist at Twelfth street and Wabash avenue, is spending a few days in Wisconsin on a fishing trip.

—E. M. Warhanik, Twenty-second and Leavitt streets, has gone to Lake Minnetonka, Minn., for a couple of weeks' outing.

THE NORTHWEST.

St. Paul, Minn., June 15.

—Fire of mysterious origin broke out on a large shelf floor in the top story of Noyes Bros. & Cutler's establishment, Sibley and Sixth streets, St. Paul, early yesterday morning. The fire had gained good headway before its heat affected the solder on the automatic sprinklers, and for a time the entire plant was threatened. However, as sprinkler after sprinkler opened, the floor was deluged with water, and, by the time the fire department arrived, the task of extinguishing the blaze had been partially accomplished. The alarm was turned in by the automatic system. The loss was more by water than by fire and aggregated \$2,500.

—As a result of downright stupidity, George Balfour, for two years clerk for Joseph J. Conger, St. Paul, is under arrest on a charge of robbery. The cashier of a brewing company was held up at noon and robbed, and young Balfour was arrested simply because he happened to be near the scene. It was an outrageous act. Balfour, who is only 17 years old, will certainly be exonerated on his examination.

—When the divorce suit of Richard C. Trudgeon against Effie Trudgeon was called in the St. Paul District Court on Thursday there was no response from either party. It is a simple desertion case, the plaintiff claiming that he was married April 20, 1898, at Shell Lake, Wis., when he was 23 and his wife 22. More than a year ago, he says, his wife deserted him. Mr. Trudgeon was for many years a druggist in St. Paul.

—Successions: Swea City Drug Co., Swea City, Iowa, by the Simpson Drug Co.; A. C. Armitage, Ellston, Iowa, by the Ellston Drug Co.; A. A. Woodward, Clark, S. D., by W. A. Jones; J. E. Joslin & Co., Nora Springs, Iowa, by the Taylor & Gardner Drug Co.

—R. F. C. Blis paid this city and Stillwater a flying visit on Thursday. He reports great injury to crops around Wadena from want of rain.

—Fred Krueger has gone to Dassel, Minn., to relieve Verna McCoy, who is in the city under treatment for trouble with his eyes.

—Frank Danielson has returned from Wyoming, and is reported about to buy a drug store in Southern Minnesota.

—Simmons & Heppner, Portland, Ore., have sold their Williams avenue store to William Bolton.

—The Driver-Bradley Drug Company, Great Falls, Mont., has sold its branch at Stockett.

—John P. Uri, a druggist at Steinauer, Neb., has sold the restaurant he has been running.

—L. W. Warren is to sell his interest in the Warren Drug Company, Bozeman, Mont.

—J. Lamm, of Spring Valley, Minn., is now working in Allen's drug store, St. Paul.

—E. J. Anderson has returned temporarily to Hector, Minn.

—O. C. Tibbitts, Armour, S. D., has moved to Geddes.

—J. W. Ransom, Sumpter, Ore., has been burned out.

—Cummins & Adams, La Porte, Iowa, have sold.

WINDOW DISPLAY OF W. F. MICHEL, WILLOW LAKES, S. D.

ST. LOUIS.

STATEMENT FROM ALLAN-PFEIFFER CHEMICAL COMPANY.

St. Louis, June 16.—A call was made at the office of the Allan-Pfeiffer Chemical Company to-day in order to secure statements from the company and its vice-president, R. B. Carssow, regarding the cut-rate war at Ste. Genevieve, Mo., referred to in letters from druggists in that city, printed in the Era of June 14.

Mr. Carssow, J. E. Allan, president of the company, and Dr. A. H. Friedel were seen. R. B. Carssow, vice-president of the company, said: "My father, C. F. Carssow, opened a drug store in Ste. Genevieve about thirty years ago. Last fall he left and went West, and my brother, Dr. O. C. Carssow and myself bought the estate, including the drug store. We continued the drug business under the name of the Carssow Drug Company. In the middle of February I sold my share in the drug store to Dr. A. H. Friedel, formerly of Chicago, who took charge at the time of purchase, as far as the management of the business was concerned. He left the active management of the store in charge of Dr. O. C. Carssow, with the understanding that he was to consult him (Dr. Friedel) in all matters pertaining to the conduct of the business. During the month of March a cut was inaugurated by the Carssow Drug Company on the authority of Dr. Friedel, who assumes all the responsibility therefor."

Dr. Friedel, who was present during the interview and heard Mr. Carssow's statement, corroborated it. He further stated that the telegram instructing the Carssow Drug Company to cut was sent by himself and not by R. B. Carssow. Dr. Friedel stated he wished it distinctly understood that he alone was responsible for the cut by the Carssow Drug Company.

In reply to a question, Dr. Friedel stated he was not connected in any way with the Allan-Pfeiffer Chemical Company. He came here from Chicago, he said, and expects to practice medicine here.

J. E. Allan, president of the Allan-Pfeiffer Chemical Company, said: "The only stockholders of the Allan-Pfeiffer Chemical Company are R. B. Carssow, H. Pfeiffer and myself. We will all make affidavits if necessary that the Allan-Pfeiffer Drug Company neither has nor has had anything to do with the Carssow Drug Company, nor the Carssow Drug Company with the Allan-Pfeiffer Chemical Company.

"In regard to Mr. R. W. Lanning, of Ste. Genevieve, who claims to be a customer of the Allan-Pfeiffer Drug Company, and who says in the Era that he will discontinue the sale of our goods, I have referred to our books, and find that Mr. Lanning on May 19, 1896, purchased \$9 worth of goods from us, and on September 10, 1896, \$8.15. This is the extent of the business on which he has gone back on us."

St. Louis Jobbers in Line.

St. Louis, June 16.—The St. Louis jobbers, the J. S. Merrell Drug Company, the Meyer Bros. Drug Company and the Moffitt-West Drug Company, have all signed the circulars sent to wholesale drug houses over the country, by which they agree to enter into contracts with each of a large number of leading manufacturers of proprietary medicines to become their wholesale distributing agents. Thus another step toward the attainment of the ends of the N. A. R. D. has been taken in St. Louis, and to the officers of the St. Louis Apothecaries Association it appears the most rational and effective measure yet devised.

Cutter Invades a Full Price Paradise.

St. Louis, June 16.—East St. Louis has a cut rate store at last. The Drs. O'Brien, two brothers, and Dr. Lilly, all of East St. Louis, have bought the drug store of Clark & Mead, No. 351 Broadway, and will conduct it under the name of the Anti-Monopoly Drug Company. There is no connection, so far as known, with the Anti-Monopoly Drug Company, of this city. The East St. Louis druggists held several conferences on the matter, but have decided on no aggressive step for the present. There is no one central business district in East St. Louis, each large factory or cluster of factories, being surrounded by a colony of stores in different lines, depending for trade on the immediate locality. The store is not located favorably for transient trade, and the former proprietors, who had the store for about ten months, are understood to have played to a very small business. These and other reasons make the other druggists feel there is little likelihood of the competition amounting to anything, and they will wait developments before taking any active measures.

NOTES.

—Dr. A. H. Bartmer has purchased the drug store of E. H. Koeberlin, Grand avenue and Suburban Tracks. Dr. Bartmer for many years owned the drug store at No. 2801 Easton avenue, and which he sold ten months ago to F. B. Vogt. He has since been in California, returning but two weeks ago. It is understood that Mr. Koeberlin has not given up the idea of seeking his fortune in the gold fields, and is now turning his eyes towards Cape Nome. Dr. Bartmer retains Walter Cross as head clerk, and has also employed Harry Sallinger, who was with him on Easton avenue.

—G. W. Smith has moved his drug store from Fourteenth and St. Louis avenue, to Fourteenth, between St. Louis avenue and Montgomery street.

—H. S. Merrell, vice-president of the J. S. Merrell Drug Company, has gone North with his family for a six weeks' vacation.

—Dr. Otto A. Wall, Jr., returned from Hot Springs, Ark., and left immediately for a trip to Mackinac Island.

—Gus Ludwigs is about ready to open his new drug store in East St. Louis.

Outside of the larger cities, most druggists sell spectacles and other optical goods. The profit is large and the goods are easy to sell, and it would pay every retailer to give this side line some attention. The sales can be increased largely, if the salesman knows how to fit glasses, and it is with this in view that the Northern Illinois College of Ophthalmology was established in Chicago. It is really a correspondence school, and a full optical course is given by mail for \$25. Full particulars may be obtained of George W. McPatrick, M. D., No. 1015 Masonic Temple.

If a pleased customer is the best advertisement, the most effective advertising which James W. Tufts, Boston, has done is a 16-page pamphlet devoted entirely to recent testimonials from druggists and others who are using Tufts' Fountains. There are 266 testimonials in the pamphlet, covering all parts of the country and referring to almost every apparatus of Tufts' make.

MISSOURI ASSOCIATION.

The Missouri State Pharmaceutical Association held its annual meeting at Pertle Springs, Mo., June 12-15. The convention was a comparatively uneventful one, but was full of interest to the large number of pharmacists in attendance.

The convention was opened Tuesday morning, June 12, with prayer by Dr. Bushnell, of Warrensburg, followed by an address of welcome by C. E. Morrow, of Warrensburg, to which Prof. Francis Hemm, of St. Louis, responded.

Vice-President Paul L. Hess, Kansas City, took the chair, while the president, Dr. H. M. Pettit, of Carrollton, read his annual address. Dr. Pettit reviewed the work of the association for the year, and highly commended the labors of the N. A. R. D. He recommended, among other things, that a member of the association be appointed in each county to report violations of the Missouri pharmacy law. At a later session this was taken up and discussed. The idea was generally indorsed, but on account of the board having no funds for the enforcement of the law, deemed it useless to adopt the suggestion at present. The report of Treasurer William Mittelbach, of Booneville, showed a balance on hand of \$214.65.

A communication was read from the Louisiana Pharmaceutical Association, recommending the improvement of the condition of pharmacists in the United States army, navy and marine hospital service, in regard to rank and social standing. It was indorsed, and similar resolutions adopted by the Missouri Association to be sent to President McKinley.

The Legislative Committee was instructed to endeavor to get the next Legislature to pass a measure improving the condition of the pharmacists in the State militia.

Carl Heinrichs, St. Louis, read a paper on "Hydrargyrum cum creta." It was referred to the Committee on U. S. P.

Wednesday morning, Dr. H. M. Whelpley read his report as secretary of the association. It showed a membership of 377 in good standing. As the funds of the association were rather low, and they desired to subscribe more liberally to the N. A. R. D., he recommended that the salary of the secretary be reduced from \$100 to \$50 per year, and stated that the services of a stenographer had also been dispensed with. The recommendation was adopted and Dr. Whelpley thanked for his generosity.

A report by Chairman C. F. G. Meyer, of the association's delegation to the Pure Food and Drug Congress, at Washington, was read. It reviewed the work of the congress, and favored the pending Brosius bill. An effort was made to get the association to indorse this bill, but as no copy was at hand, and many of the members were ignorant of its exact provisions, they passed a resolution declaring in favor of good, substantial pure food and drug laws.

F. E. Holliday, Topeka, Kan., chairman of the Executive Committee of the N. A. R. D., was present by invitation and addressed the association, reviewing and explaining at length the work of the N. A. R. D. He particularly dwelt on the agency contract plan, as set forth in Bulletin No. 8. He referred to St. Louis as being one of the chief battle grounds of the N. A. R. D. fight, commended the druggists of the Mound City for their work and sympathized with them in their hard task. The discussion at the close of Mr. Holliday's address showed the greatest enthusiasm and interest in the cause of the N. A. R. D. on the part of the members, and he was kept busy for an hour or more answering the many questions which were put to him.

One of the most important papers of the convention was that written by Wm. Mittelbach, on the "Coming Revision of the U. S. P.," in which he criticised the recent U. S. P. convention at Washington for instructing the committee to introduce only average doses, excluding maximum and minimum doses. The discussion on the paper showed the members a unit in supporting Mr. Mittelbach's views. Prof. Hemm spoke with particular force, maintaining that by all means a maximum dose should be given as a matter of protection to the pharmacist.

H. H. Barth reported as a delegate from the Nebraska Association, and made a short address.

Thursday morning, A. T. Fleischmann, of Sedalia, secretary of the State Board of Pharmacy, read his report. Five meetings of the board have been held the past year, at which 246 applicants were examined, of whom 169 passed and 137 failed. The secretary's books showed that since the organization of the board, 10,000 certificates had been granted. A careful estimate puts the number of registered pharmacists in the State at the present time at 3,500. The board received \$650 during the year. Out of this all expenses were paid, leaving little for the salary of the members. The association decided to ask for no new pharmacy legislation at the next Legislature.

Dr. J. T. Lewellyn, of Mexico, Mo., read a very interesting paper on "Muscale Buttons."

Prof. Francis Hemm read a paper on "Practical Pharmaceutical Notes and Observations," "Photography, Its Early History and Place in Pharmacy" was the title of a paper by Ambrose Miller, of Webster Groves.

The rule of the association was to award medals on papers deemed of sufficient merit, but it was decided by all the authors of papers not to enter their efforts for prizes, simply contributing them in the interests of pharmacy.

Prof. Hemm gave "Comments on Assay Processes of the U. S. P.," and Dr. Whelpley read a paper on "The Use of the Microscope in the Drug Store," illustrating it with the microscope. The report of the Committee on Drug Adulteration was read by the chairman, C. M. T. K'ie, St. Louis, and referred to the incoming committee.

Dr. Lewellyn read his paper on the "Artificial Manufacture of Diamonds."

Friday morning was the general wind-up, including the announcement of the committees, and a regular tornado of thanks to every one and everything in sight. The new officers of the association are as follows:

President, Paul A. Hess, Kansas City; first vice-president, A. L. Seltz, St. Louis; second vice-president, O. W. Smith, Sedalia; third vice-president, St. John Umbright, Liberal; secretary, Dr. H. M. Whelpley, St. Louis; treasurer, Wm. Mittelbach, Booneville; assistant secretary, Ambrose Miller, Webster Groves.

The new council consists of Dr. H. M. Pettit, Carrollton; J. M. Love, Kansas City; C. L. Wright, Webb City; A. Brandenburger, Jefferson City; R. L. Hope, Centralia.

The chairmen of the committees for the ensuing year were announced as follows:

Membership and Attendance, F. R. Scharlach, Moberly; Papers and Queries, J. M. Love, Kansas City; National Formulary, F. L. Crampton, Kansas City; Trade Interests, E. R. Schroers, St. Louis; Exhibits, Henry Riddle, Kansas City; Deceased Members, O. H. Franklin, Marshall, Mo.; Drug Adulterations, Ambrose Miller, Webster Groves; Transportation, H. W. Servant, Sedalia.

It was decided to hold next year's meeting at Pertle Springs in June, the exact date being left to the council. J. V. Murray, of Warrensburg, was elected local secretary.

During the convention fifteen new members were elected. Among them were four from Warrensburg, that city having had none in the past.

The Entertainment Committees did their best, and the result was most gratifying to the members. There were all sorts of contests, which were freely participated in by the members and their ladies. Mrs. Otto C. Claus, of St. Louis, won the prize for catching the largest fish. It took her an hour to land it, and it proved a 2¼ pound bass.

Premiums with staple goods are generally scarce, and therefore when a handsome show case is offered with so quick-selling an article as Stearns' Headache Cure in three-dozen lots, it is to be expected that the druggist who knows a good thing will proceed to take advantage of it. This is certainly a liberal offer.

—The Tennessee State Druggists' Association will hold its fifteenth annual meeting July 18 at Kingston Springs. Many important matters will come up, a good programme has been arranged, and a large attendance is expected.

INDIANA PHARMACEUTICAL ASSOCIATION.

The Indiana Pharmaceutical Association held its annual meeting at South Bend, June 13-15, about one hundred members being in attendance. After addresses of welcome by Mayor Colfax, on behalf of the city, and S. T. Applegate, for the St. Joseph County Drug Association, President Frank D. Warner, of New Carlisle, delivered the annual address. He spoke of the conditions imposed by the stamp tax on proprietary medicines and recommended that the association take proper action to show its appreciation of the work of the N. A. R. D. He referred to the unsatisfactory and impracticable features of the present liquor law in so far as it relates to pharmacy, and recommended that an amendment to the pharmacy law be secured which would place the sale of liquor for strictly medicinal purposes under the control of the Board of Pharmacy and provide for the forfeiture of the certificate of registration for wilful violation of the law. He thought an effort should be made to reestablish more friendly relations with physicians, and also to enlist a larger number of the younger pharmacists in the work of the association.

The address was followed by reports of officers and committees, and papers by Leo Eliel, South Bend; Frank R. Eldred, Ligonier; Prof. J. W. Sturmer, Lafayette; Chas. C. Deam, Bluffton; N. R. Gibson and I. V. S. Stanislaus, South Bend.

At the evening session papers were read by Edmund A. Geyer, South Bend, and Dr. Otto Gross, Fort Wayne.

Thursday morning papers were presented by Leo Eliel and Philip Holler on the "Peppermint Industry," these being followed by an address on the N. A. R. D. by T. V. Wooten, the secretary of that organization. The Committee on Membership reported the names of eighty-six applicants, who were all elected.

The officers elected are: President, F. W. Meissner, Laporte; vice-presidents, Otto Bastian, South Bend; D. H. Lohman, Lafayette, and Ernest Stahlhuth, Columbus; secretary, A. Timberlake, Indianapolis; treasurer, Frank H. Carter, Indianapolis; Executive Committee, F. H. Burton, Evansville; Dr. W. O. Gross, Fort Wayne, and F. E. Wolcott, Indianapolis; local secretary, D. E. Silberberg, Muncie, at which place the next annual meeting will be held. The secretary reported the election of eighty-seven new members and the organization of twenty-one local associations during the past year. Treasurer Carter reported a balance on hand of \$357.53. In order to meet the per capita tax assessed by the N. A. R. D. a resolution was passed increasing the annual dues from \$1 to \$2. After the installation of officers the local secretary, M. M. Meyer, was presented with a silver and gold berry set of four pieces. The meeting then adjourned.

An interesting "annex" to the regular programme of the association were the exhibits shown by a number of manufacturers and others. Among these were Eli Lilly & Co., Indianapolis; Morrison, Plummer & Co., Chicago; Peter Van Schaack & Sons, Chicago; Prof. A. L. Green, Purdue University; Lazell, Dailey & Co., New York; American Malt Cream Co., Milwaukee, and the A. Kiefer Drug Co., Indianapolis. The entertainment programme included a drive about the city and visits to the plants of the various manufacturing industries located at South Bend, to Notre Dame University and an excursion to Elkhart, where the members were the guests of the Dr. Miles Medical Company.

CONNECTICUT PHARMACISTS.

The twenty-fourth annual meeting of the Connecticut Pharmaceutical Association was held at the Allyn House, Hartford, June 12 and 13. The session opened with the annual address of the president, who reviewed the results of the year. A membership of 290 was reported. Reports from various committees and delegates were received, including the report of John W. Lowe, of New Haven, delegate of the association to the N. A. R. D. At the suggestion of Mr. Lowe the association re-indorsed the N. A. R. D. and voted to contribute a per capita assessment to that association. The treasurer's report showed total receipts for the year of \$1,288.78, with a cash balance on hand of \$466.33. Officers were elected as follows: Presi-

dent, Charles S. Finch, of Stamford; first vice-president, Charles Fleischner, of New Haven; second vice-president, Nathaniel K. Morgan, of Hartford; secretary, Charles A. Rapelye, of Hartford; treasurer, John B. Ebbs, of Waterbury. List of names from which to select the Board of Pharmacy Commissioners: John K. Williams, Hartford; John W. Lowe, New Haven; A. L. Dickinson, Danbury; James Duggan, Norwich; C. H. Dougal, Torrington; Samuel Chesbro, Willimantic; H. A. Dupe, Bridgeport; D. G. Stoughton, Hartford.

New members: Edward F. Nolan, of Torrington; Clark H. W. Newton, of Torrington; James P. Doan, Thomas P. Ryan and Fred E. Shepard, of Danbury; William E. Greeley, of Stratford; A. H. Embree, of Stamford; Sumuel M. Aller, of South Norwalk; Edward P. Weed, of Norwalk; Patrick J. Garry, of Bethel; John P. Smith, of Manchester; Oliver L. Wickes, of South Manchester; John H. Hartwell, of Shelton; Joseph T. Daly, of Hartford; Allen B. Judd, of West Hartford; A. C. Prince, of New Haven; W. H. van Buren, Jr., of New Haven; Arthur Clifford Fowler, of Hartford, and John J. Cardana, of Hartford.

Two interesting papers were read by John K. Williams. On the second day the members of the association and visitors to the number of 250 went on an excursion to Lake Compounce, where a genuine Southern barbecue, or "sheep-bake," had been prepared. After dinner speeches were made by President Finch, Hon. A. Harbinson, Mayor of Hartford, Col. John W. Lowe and others. The meeting then adjourned, the association deciding to hold its next convention in June, 1904, the exact date and place of meeting to be decided by the Executive Committee.

NEBRASKA PHARMACEUTICAL ASSOCIATION.

The Nebraska Pharmaceutical Association held its nineteenth annual meeting at Beatrice, June 5, 6 and 7. In his annual address President H. A. Small reported the association to be in a highly prosperous condition and that its membership was increasing. He recommended the organization of county associations and advocated that kindred associations should meet at the same time and place with the Nebraska association. This suggestion was endorsed by the association and arrangements will be made to hold a meeting at Lincoln May 9-11 next year with the physicians, all of the different medical societies having been invited to hold their meetings at that place at the same time. F. E. Holliday, a member of the Executive Committee of the N. A. R. D., was present and delivered an address on the objects of that organization. He was accorded the closest attention and cleared up many points not generally understood by druggists. J. P. Raymond of Kansas City, delivered a lecture on Japan and also exhibited some 100 stereopticon views of that country. A paper on "Liquors" by Mr. Hoagland was read, its excellence winning for the writer the prize of \$15 offered by the association. The secretary's report showed the finances of the association to be in excellent condition, there being nearly \$300 in the treasury and no indebtedness. The following officers were elected: President, A. W. Buchheit, Grand Island; vice-presidents, William Schultz, Atkinson; J. J. Frater, David City; E. H. Dart, North Auburn; C. E. Hopping, Beaver City, and P. Strasbaugh, Omaha; secretary, W. M. Tonner, Randolph, and treasurer, B. O. Kostka, Lincoln. Names from which to select a member of the board of pharmacy, H. G. Day, Beatrice; E. L. Wilson, St. Paul, and George B. Moore, York. Among the many entertainment features was a "fantastic parade" by druggists and traveling men and a picnic where there were miscellaneous field sports, many prizes being awarded to the successful contestants in the various games.

—The Jasper County, Ill., Retail Drug Association was organized at Newton recently. Officers were elected as follows: S. C. Andrews, president; Walter McTaggart, vice-president; F. J. C. Schackmann, secretary, and Peter Franke, treasurer. The object of the association is to protect and retain the present pharmacy laws in the State and to report and prosecute all violators.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued June 5, 1900.

- 450,983.—James H. Redfern, Bay Mills, Mich. Manicure implements.
- 450,933.—Eugene Fournier, Paris, France. Disinfectant composition.
- 451,023.—Stephen H. Emmens, New York, N. Y. Apparatus for conveying and utilizing liquid air or oxygen.
- 451,045.—Jan Lagutt, Assignor to Chemical Works, formerly Sandoz, Basle, Switzerland. Making saccharin.
- 451,061.—Arthur Weinburg, Frankfort-on-the-Main, Germany. Diamido-naphthol.
- 451,077.—Oscar Kaltwasser, assignor to Actien-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Green-black sulfur dye.
- 451,122.—Carl Schlenker, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-Main, Germany. Naphthazarin sulfy dye and making same.
- 451,132.—George H. Davis, Portland, Me. Producing acetylene gas.
- 451,150.—James H. Valentine, Chatham, N. J., assignor to Vapo Cresolene Company, Stanley, N. J., and New York, N. Y. Vaporizer.
- 451,167.—James E. Hewes, Baltimore, Md., assignor to Provident Life & Trust Company, trustee, Philadelphia, Pa. Manufacture of candles.
- 451,176.—Jan F. Beins, Rotterdam, Netherlands. Apparatus for saturating liquids with gases.
- 451,180.—Robert Ilges, Cologne, Germany. Rectifier.
- 451,223.—John S. Wrightman, Oil City, Pa. Liquid-air container.
- 451,247.—Henry K. Hess, Syracuse, N. Y., assignor to H. J. Dercurm, trustee, Philadelphia, Pa. Chemical electric generator.
- 451,250.—Charles H. Howland-Sherman and A. M. Bennett, assignors of three-fourths to A. S. Adam, Washington, D. C. Antiseptic food-cooler.

TRADE-MARKS.

Registered June 5, 1900.

- 34,738.—Sweetening Agent, Henry S. Wellcome, London, England. The word "Saxin."
- 34,741.—Metabolic Product of Tubercle Bacilli. The firm of E. Merck, Darmstadt, Germany. The word "Tuberculin."
- 34,742.—Hæmoglobin Preparations. Friedrich Gustav Sauer, Berlin, Germany. The word "Siccoc."
- 34,743.—Certain Named Medical Compounds. John Stromberg, Denver, Col. The word "Analgedyne."
- 34,744.—Remedy for Certain Named Diseases. The Drevet Manufacturing Company, New York, N. Y. The letters "U. S. P."
- 34,745.—Remedy for Rheumatism. S. T. V. Remedy Co., Rochester, N. Y. The letters "S. T. V."
- 34,746.—Remedies for Certain Named Diseases. Charles Onesime Thibault, Fall River, Mass. The representation of a circle in which is inclosed an interior circle surrounded by two round borders divided at the centre by a straight line into two semicircles, each one consisting of three parts and each part being of a different color from its corresponding part in the opposite semicircle.
- 34,747.—Hair-Tonic. Rilas Gathright, Richmond, Va. The word "Ozono."
- 34,748.—Toilet Preparation. James F. Wood, New York, N. Y. The word "Cassandre."
- 34,749.—Toilet Soap. The Weaver Brothers & Mott Company of Baltimore City, Baltimore, Md. The word "Miracle."
- 34,750.—Medicinal Soap. David J. Doherty, Chicago, Ill. The word "Sudorine."

LABELS.

- 7,590.—Title: "Sharpsteen's Lavender Ointment." (For an Ointment). H. Sharpsteen, Marshall, Mich. Application filed May 14, 1900.
- 7,600.—Title: "Erb's Health Capsules." (For a Medicine). Ludwig G. B. Erb, New York, N. Y. Application filed May 14, 1900.
- 7,601.—Title: "Peptonized Port." (For Medicinal Preparations). Charles L. Walthers, Pittsburg, Pa. Application filed May 1, 1900.

General Medical Council.—The General Medical Council which meets twice a year, recently held its Spring session. The council is the official body which controls the practice of dentistry as well as surgery and medicine in the United Kingdom, and it has power to strike from the Dental and Medical Registers the names of persons whom it considers guilty of infamous conduct in a professional respect. Up to the present it has not exercised that power with regard to dentists who were registered as having been in practice before the passing of the Dental Act in 1878, and who therefore have not gone through the cur-

riculum and passed the examinations which are now necessary before registration. A case, however, which has just been before them, and which is probably the forerunner of many others, shows that these unexamined dentists will no longer be able to claim immunity from the disciplinary powers of the council. These men, who constitute nearly one-half of the registered dentists in the kingdom, are, many of them, chemists, who carry on a dental practice in conjunction with their pharmaceutical business. Advertising has always been regarded by the council as infamous professional conduct, and while the unexamined dentist has been precluded from seeking practice by advertising himself, the registered but unexamined man has hitherto been able to do so. This privilege, however, is now apparently at an end, as Mr. Arthur Oglesby, a chemist and dentist of Barnsley, has been struck off the Register for systematic public advertising.

Another question which has occupied the attention of the council has been the question of medical men practicing their profession in Italy. They have hitherto been able to attend non-Italians without interference, but by a new Italian law this privilege is taken away, unless Great Britain accords similar privileges to Italian doctors. The stoppage of their right to practice, besides, of course, being a great blow to the British medicos in Italy, would entail considerable inconveniences on the large number of English subjects who annually visit Italy. There is no power in the Medical Act to accord to foreign doctors the limited privilege of attending their own compatriots in the British Isles, but the Privy Council has power to apply a section of the Medical Act to the practitioners of any country which accords just privileges to British medical men. This section, which will probably be brought into force for the first time, will allow the registration of Italian practitioners with approved qualifications with full rights to practice in this country, the British practitioners in Italy having secured the powerful advocacy of Lord Currie, our ambassador at Rome.

Morphine and Its Salts.

It is interesting to note how certain names or abbreviations, in the course of time, become practically trade-marks, and are invested, by the use of custom, with considerable value, but when two or three popular terms are used to designate one thing, it can certainly be taken to indicate a widespread preference for the product in question. This is particularly pertinent to an item of such importance as morphine.

There is scarcely a druggist in the land, either wholesale or retail, but has heard of "Cube Morphine," and he understands that it is made exclusively by the New York Quinine & Chemical Works, so when his customers ask for "New York Morphine" he knows what is wanted just as well as when his physician affixes the magic letters "N. Y. Q." on his prescription.

So far as morphine is concerned, these three terms—viz., "New York," "Cube" and "N. Y. Q."—all indicate a specially prepared and absolutely pure and neutral salt, therefore the careful and painstaking druggist is justified in choosing a brand that he believes will give the best results.

The distinctive form, the Cube, at once rivets the attention of the dispenser, so that whether it be sulphate or muriate, the little Cubes proclaim the character of the contents of the bottle and preclude the possibility of mistake.

Morphine acetate is rapidly going out of use; it is not a stable salt, and has been eliminated from the German Pharmacopœia, and it is hoped that at the next revision of the United States Pharmacopœia some such action will be taken by our committee. The rapid changes that this salt undergoes have led to some serious results, both here and abroad; therefore physicians and manufacturers are, as far as possible, confining themselves to the use of sulphate and muriate. Some two years ago the New York Quinine and Chemical Works ceased to manufacture morphine acetate.—Therapeutic Gazette.

—The Indian Territory Pharmaceutical Association held its annual meeting at Muskogee May 24 and 25. The officers elected for the ensuing year were: President, J. C. Johnson, South McAlester; vice-presidents, L. Mathews, L. V. Officer and J. R. Kingsley; secretary, H. D. Kinsley, Checotah. The next annual meeting will be held at South McAlester in May, 1901.

THE THOMSEN CHEMICAL CO.

The chemical and drug industries of Baltimore, Md., have long typified in the highest degree the creative results of genius employed in the sphere of the useful arts. Her development and progress along these lines have been and are characteristic of the American nation in the battle royal for commercial supremacy. Many noted names and firms have taken part in this competition for trade and the results they have accomplished have been the admiration of the world. It is not the purpose, however, to present here the rounded story of an era in the commercial life of a great city, but rather to relate something of the work and success of a concern which has taken an advanced position in this great development.

We refer to the Thomsen Chemical Company, manufacturing chemists, Baltimore, well known to the trade as the largest makers in the world of phosphate of soda and kindred productions.

Starting in 1881, this firm recognized the part chemicals were to play in the rapidly multiplying industries of the world, and adopted a vigorous, liberal and far-reaching policy which brought to it the patronage and support of some of the largest concerns of the country in various branches of industry. The experience of the past has verified the wisdom of this policy. The products of the Thomsen Chemical Company have always borne an enviable reputation and its chemicals have been furnished to universities throughout the country and to the various scientific departments of the United States Government to be used in laboratory work. Physicians and pharmacists too have depended upon the purity and excellence of these products and have widely commended them.

An idea of the magnitude of the operations of the Thomsen Chemical Company may be gained from the statement that its plant extends over an area of fifteen acres of land, advantageously located in the city of Baltimore. To this already extensive property a new office building, with a working and research laboratory of the most complete type, has just been added. And the end is not yet. The characteristic policy of the company for

the rapid development of its business is being closely followed, more capital is being invested, and plans are already under way for the erection of four new plants for the manufacture of various chemicals. The company buys all of its crude material for manufacturing in large quantities for cash and pays strict attention to the production of high test goods. A business conducted upon these lines is sure to prosper and success presupposes reliability and actual worth in the products manufactured.

The acid works operated by this company are modern in every way and large quantities of sulphuric, hydrochloric, nitric and other acids of all grades are manufactured. Other chemicals are made, the whole embracing a list too long and well known to be enumerated here. A display of some of these is now on exhibition at the Paris Exposition, illustrations of which are presented herewith. This is the largest chemical exhibit from this country to Paris, and the company has entered its list of products sent there under direct competition with any European maker. The officers of the company are Angus Cameron, president and treasurer, and O. H. Dorsey, secretary. The factory, laboratory and general offices are located upon the property bounded by Hanover, Winder, Leadenhall and Sharp streets, in Baltimore.

STATE OF TRADE.

The Market is Seasonably Quiet.

New York, June 19.—While the general wholesale market has remained seasonably quiet, with business more or less routine, the interest manifested in a number of commodities indicates that dealers are confidently looking forward to improved conditions. Fluctuations in prices have continued within a narrow range and are chiefly the result of natural causes, there being very little of a speculative character in any department. Quinine has continued to move rather slowly, although several round lots have found their way into channels of consumption. The market, however, has retained a firm under-tone and developments during the past week have stimulated holders in their belief that the long expected improvement in values will materialize shortly. The London market has already gained in strength under the influence of an improved position of raw material, the shipments of bark from Java during the first half of the current month having been very light.

Opium has reacted from the better position noted last week, notwithstanding the fact that several fair sized parcels have been taken for manufacturing consumption and some for export. The reaction is due to the discovery by regular dealers that several small parcels have arrived recently consigned to new outside holders and quotations have been reduced for the purpose of discouraging this kind of competition. There is no material change in the condition of affairs at primary sources of supply, although it is intimated that the extent of damage to the current crop in producing districts is considerably less than previously estimated. Menthol has improved materially during the past week and the inside quotation is decidedly higher, but the market is still somewhat irregular owing to competition and there is yet a wide difference in the views of holders. The chief cause of the improvement was increased activity and a better feeling in the London market. A seasonably slow demand and the decline in prices at the monthly sales in Amsterdam and London have caused a slight modification in the views of holders of cacao and the inside quotations for both bulk and cakes are about 1c. per pound lower. Gum kino is in better supply and recent arrivals of intermediate grades have influenced importers to reduce quotations for these varieties about 10c. per pound.

There has been a decided improvement in the position of ergot. Cables from Hamburg reported that "market excited, with dealers unable to give firm quotations," and the local situation immediately responded, holders advancing prices fully 5c. per pound and some withdrawing entirely from the market awaiting further developments. The statistical position of the article is consequently very strong and it is believed by some that prices will again reach the high level prevailing several weeks ago.

In the department of essential oils business in seasonable descriptions has been of fair volume, but transactions have rarely exceeded jobbing proportions and the only important change in values was a reduction of 5c. per pound in quotations for lemon and orange. Xeroli is firmer in sympathy with corresponding conditions abroad, where prices have been marked up on account of crop shortage.

Among the minor commodities those showing improvement in value are Chinese cantharides, Dutch caraway seed, Pulsatilla herb, grains of paradise and Roman chamomile flowers, nearly all due to crop conditions and consequent scarcity. Sassafras is again slightly easier under free offers of new crop from producing markets. Manufacturers of tin crystals have reduced quotations 2c. per pound on all styles of packages.

Not Hazy, But Not Dull.

Boston, June 16.—Although this has been a week of exceptionally good weather, yet none are complaining of dullness. Retailers are buying in fairly good quantities. Hand-to-mouth orders on both drugs and chemicals seem to be quite the thing just now. With steady prices and little activity, the condition of druggists and tanning materials may be summed up. Waxes are in fairly good demand with little change in quotations. Alcohol's and cologne spirits develop no new feature of interest.

Business Still Improving.

Baltimore, June 17.—Reports received from the jobbing druggists as to the state of trade during the past week are decidedly encouraging. They are that orders were more numerous and that the movement of goods assumed larger proportions. The opinion is expressed that ergot will continue to rule high, because it can now be prevented from spoiling by keeping it in cold storage. The market may therefore be expected to rule strong until the new crop reaches the dealer. The manufacturers of pharmaceuticals continue to be busy, while heavy chemicals move with sufficient freedom to keep factories fairly well employed. No pronounced change has taken place of late in the retail trade conditions.

**ABBHEY'S
EFFERVESCENT
SALT.**

It is to your advantage to handle a preparation that sells, and that affords you a good profit.

We have arranged the prices on Abbey's Effervescent Salt so as to yield all druggists a living profit.

No other manufacturer so effectively co-operates with you in creating a demand for his product. Our advertising campaign for 1900 will be of much greater magnitude than that of last year.

Co-operation with us in pushing sales will be mutually advantageous.

YOUR WHOLESALE WILL FILL YOUR ORDER.

- - THE - -

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

SOLD IN THREE SIZES RETAILING AT 25c., 50c. AND \$1.00 PER BOTTLE.

TRADE LIST ON APPLICATION.

No Better in Philadelphia.

Philadelphia, June 16.—Trade in Philadelphia does not appear to get any better. In some parts of the city druggists report that business is better now than at this time last year, while others say, "I wish I was out of the drug business." Several of the wholesale houses are busy on Government orders, and the chemical and pharmaceutical laboratories are fairly busy getting a stock ahead for the Fall trade. This has even been a poor week for soda water, notwithstanding the fact that the business up the State, however, is still keeping up. Salesmen coming from off their trips report plenty of orders. Prices remain the same. Several of the firms have received an order for 100,000 pounds of sodium phosphate, to be used in the silk industry.

Pretty Quiet in Detroit.

Detroit, June 16.—There is no denying that things are pretty quiet in the drug line in Detroit. There are losses to the trade attendant upon the exodus of so many families at this time of the year, and then the unusual weather, which is playing the very mischief with the city business. It is not enough in the middle of the year to sell soda water, but people are too busy then to drink it. Along in the evening, when the druggist might reasonably expect to have a big demand for soda, the thermometer takes a drop of 20 or 30 degrees, and Win-ter coats feel good. A change is looked for soon, however. Detroit never fails on her heat totals.

Trade Only Fair.

Chicago, June 1.—Jobbers report a fair business this week with little marked changes anywhere. The demand is fairly good, notwithstanding the fact that the weather has been unseasonably cool. Manufacturers state that the usual summer lull is beginning. This is the season for vacations and conventions, when firms are planning for Fall business and the traveling men go fishing. Demand for sundries is fair, but for fountain goods is lighter than it should be at this season. Collections, however, are good and failures are few.

Fair to Middling.

St. Paul and Minneapolis, Minn., June 15.—Trade in these cities has been only "fair to middlin'" the past week. However, the prescription portion of it, contrary to previous experience, has been held out in this correspondence a week ago wonderfully maintained. Retailers complain of poor collections in many cases, but jobbers say they have nothing better to ask in this matter. All evidence tends to show that the promise of the year of 1900 proving the "banner" year will be realized amply. As an example, the largest drug house in St. Paul, whose sales in 1899 amounted to \$2,500,000, found itself on the first of the present month \$100,000 ahead of the first five months of last year, and is counting upon sales of fully \$2,800,000 in 1900. As the weather continues rather cool—very comfortable summer temperature and not sweating—the soda water sales have been rather slow.

Trade Some as Last Week.

St. Louis, June 17.—Trade continues about the same pace as at last report; country trade being of a healthy volume, with a good increase over last year, while local trade is still suffering severely from the effects of the great street railway strike. St. Louisians were again disappointed yesterday in the announcement that negotiations between the Transit Company and its former employees had again come to naught. A willingness is expressed by the company to take back men who have not injured its property as far as their services are needed, but will not discharge its present employees to make room for the strikers, and refuse to arbitrate this point. Threats are made by the union leaders to organize a wholesale and systematic boycott on all business houses whose members of employees are seen riding on the transit cars.

One of the oldest and the best known proprietary disinfectant is Bromo Chloralum. It is perfectly odorless, is non-poisonous, and is safe and efficient. It renders the air pure and wholesome, and arrests and prevents putrefaction and contagion. For household use it is unequalled, as it is as harmless as table salt, and can be used for all purposes requiring a disinfectant or deodorizer. Bromo Chloralum is made in Pittsfield, Mass., but the general offices are at No. 31 Fulton street, New York. Some handsome show cards and persuasive booklets have just been issued, both of which will increase sales, and which should be sent for by every retailer who has the goods in stock.

The powdered drugs for percolation sent out by Gilpin, Langdon & Co., Baltimore, are sold on their guarantee that each is botanically correct, and that those that depend on alkaloids for medicinal value are assayed and required to come up to standard strength. They want to send their price list and formulae free to every druggist.

MARKET REPORT.

NEW YORK MARKET.

New York, June 19.—Business has continued of a routine order, but the aggregate volume shows reasonable proportions and a steady feeling prevails with no inclination on the part of holders to force goods upon reluctant buyers.

OPILUM—Jobbing prices have undergone no change and the market is quiet. The ruling quotations are \$3.25/3.50 for 9 per cent, and \$2.45/3.60 for 11 per cent, the outside figures for single orders.

POWDERED OPILUM—The consuming demand has continued light, but the tone of the market is steady with jobbers quoting \$4.45/4.65 for 13 per cent, and \$5.15/5.35 for 16 per cent, according to size of order.

MORPHINE—A continued active jobbing business is in progress and values are steadily maintained at \$1.95/2.05 in ounces and \$2.20/2.30 in eighths, as to brand.

QUININE—Continued quiet conditions are noted throughout the market, but there is an undercurrent of firmness and jobbing quotations are steadily maintained at 37/32c. for bulk in 100-oz. tins, 35/34c. in 50-oz. tins and 34/33c. in ounce vials, according to brand.

OIL LEMON—Manufacturers have reduced quotations and jobbing prices show a decline to \$12.20/11.45, as to brand.

CALATHARIDES—The Chinese variety is in reduced supply and jobbing quotations have been advanced to 60/70c. for whole and 70/80c. for powdered.

CARAWAY SEED—Dutch is higher and owing to reports of crop shortage and jobbers have advanced prices to 10/12c. for whole and 17/22c. for powdered.

PLAINSEED—Primary markets have continued to harden and the local situation is consequently stronger. Jobbing prices for whole have been advanced to \$7.25/7.50 by the bbl. and 41/40c. per lb. for smaller quantities. Ground 4c. by the bbl. and 57/46c. for less.

CUM KIN—Owing to recent arrivals the market is better supplied and the tone is easier, with jobbing quotations reduced to \$1.50/1.65 for whole and \$1.00/1.15 for powdered.

PULSATILLA HERB.—Values are again higher owing to scarcity and the revised jobbing range is 50/40c., as to quality.

GRAINS OF PARADISE—This is another very scarce article and jobbers are glad to receive a normally high range of 70/80c. for whole and 80/60c. for powdered.

SENEGA ROOT—Primary markets continue to reflect an easy undertone and jobbing quotations have been further reduced to 52/57c. for whole and 57/42c. for powdered.

CHAMOMILE FLOWERS—Roman are higher abroad and local holders of this variety have advanced quotations to 22/22c.

MANNA—The jobbing market is a shade firmer and the revised quotations are 60/6c. for large flake, 40/45c. for small and 35/40c. for sorts.

STEARIC ACID—Raw material is somewhat lower and jobbers have reduced quotations to 16/20c., as to quality and quantity.

BUCHU LEAVES—A continued easy market is reported for short with quotations in a jobbing way showing a further decline to 25/30c. for whole and 30/35c. for powdered.

BIURIAL PREPARATIONS—Jobbers have advanced quotations to 73/60c. for bisulphate, 94/65/1 for calomel, 55/30c. for corrosive sublimate and 5c./6c. for powdered, \$1.45/1.10 for red precipitate and \$1.00/1.20 for white.

SPANISH SAFFRON—A slightly easier feeling has developed and jobbers have reduced quotations to \$11/12 for Valencia and 8/9/10 for Alicante.

LILA OR THE VALLEY—Extreme scarcity has resulted in marking jobbing prices up to 40/50c.

NITRO-MURIATIC ACID—Quotations for pure have been reduced by jobbers to 30/40c. and for diluted to 20/30c.

OIL ANISE—Jobbing quotations show a decline to \$1.00/1.10, as to grade and quantity.

CACAO BITTER—The market is slightly easier and jobbers have reduced their quotations to the Mallard's and Huyler's to 45/46c. by the box and 50/55c. for less.

PERLIN HYDRATE—Quotations for jobbing quantity are a shade lower and the revised figures are 60/6c. per lb. and 70/1c. per oz.

BICHRONATE—Manufacturers' prices are fractionally lower and jobbers now quote 12/15c. for potash and 14/15c. for soda.

CARBOLIC ACID—The market continues weak in tone and jobbers have further reduced quotations to 23/24c. in drums, 35/40c. for pound bottles, white, and 30/35c. for amber; 5-lb. bottles, 3c. less.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

AMERICAN MEDICAL ASSOCIATION.

The annual meeting of the American Medical Association, held early in the month at Atlantic City, was very largely attended, and much important business transacted, and in all respects the occasion was a notable success. There are just a few features of the meeting which it is desirable to allude to especially.

The American Medical Association is perhaps the only organization which complains of having too many papers presented to it. At this meeting 492 were on the programme, of which number only 231 had accompanying abstracts presented. There are thirteen sections of the association, and the lowest number of papers presented to any section was eleven, the highest sixty. The income the past year from members alone was nearly \$30,000, and there is kept on hand a working balance of from \$12,000 to \$15,000. It was reported that there are very flattering prospects for the creation of a Department of Public Health in the national government.

A resolution stating that the receiving or giving of commissions or the division of fees, under whatever guise it may be made, be considered unethical and any member guilty thereof be expelled from the association was rejected, on the ground that it would be very difficult to adjust the matter with justice toward all, though the general sentiment of the association seemed to be that such practices were highly demoralizing.

The association passed a formal resolution commending the action of the editor and trustees of the Journal of the American Medical Association in excluding from the columns of their paper the advertisements of nostrums and secret preparations, and it was voted to uphold this course of action in every possible manner. The Legislative Committee was instructed to prepare a bill providing for adequate instruction in hygiene and sanitation in the national military and naval academies, and strive to push it through Congress as speedily as possible. Five hundred dollars annually was set aside for the encouragement of scientific research. Hereafter delegates will not be accepted from any medical body which shall receive into its membership any one who has secured the degree of Doctor of Medicine on less than four years of graded instruction or an equivalent requirement. This regulation to take effect next year.

Next year's meeting of the association will be held at St. Paul the first Tuesday in June, under the presidency of C. A. L. Reed, M. D., of Cincinnati.

THOUSAND DOLLAR TAX ON PATENT MEDICINES.

A bill was introduced to introduce at the next session of the Ontario Legislature is attracting a great deal of attention among proprietary medicine manufacturers. It is aimed against the fraudulent or improper advertisement of drugs, medicines or cures, and against the sale of such of these as contain hurtful ingredients, and to license the advertisement or sale of patent or proprietary medicines, and in order to accomplish that purpose, will seek the appointment of an inspector, and further provide for the payment of a license tax in respect of such licenses. "Medicine" is defined as including all substances intended to be administered internally or applied externally to the human body with a view to the prevention, cure or alleviation of any disorder in its functions. "Advertisement" or "Advertise" shall include all things or proceedings intended to attract the attention of the public to any medicine. "Registrar" shall mean the registrar of proprietary medicines appointed under this act for the purpose of carrying into effect any of its provisions. "License" shall mean a license granted under this act, and "Licensee" shall mean the holder of any such license. The proposed registrar shall be appointed by the lieutenant-governor, and shall be attached to the provincial secretary's department. It will be provided that such officer shall be a member of the Ontario College of Pharmacy, and a regular qualified pharmaceutical chemist of at least seven years' standing. His duties are very explicitly set forth. All licenses must be renewed yearly; and the license tax will be \$1,000 per annum. Article "10" of this act reads: "No person shall advertise or sell or offer for sale any medicine unless the manufacturer or proprietor of same is a licensee." The bill further provides for fines and penalties under the act, and the machinery for putting such legislation into force, when it becomes law.

It is not believed that this bill will be enacted. It certainly is not well devised, though its intent may be good.

SOME DRUG TRADE EVENTS.

In a Southern town a prominent druggist shot himself fatally on the day of the recent eclipse of the sun. The constant talk of his townspeople concerning the great event had caused much perturbation of mind to him, the strain proved too great and he committed the fatal act in a moment of mental aberration.

In a Pennsylvania town a well-known druggist lost his life from blood poisoning, resulting from the application of a corn cure.

In Memphis, Tenn., the sanitary officers and the Board of Health have been inquiring carefully into the sale of cocain to the negro popu-

lation, and the report made shows an alarming condition of affairs. It is that at least 80 per cent. of all the adult negroes in that city are more or less addicted to the use of the drug. There are some all-night drug stores in the tough parts of the city which deal out cocain in great quantities in ten-cent packages. Because of this abuse the city council has passed an ordinance prohibiting the sale of the article except on prescriptions, and only a very small quantity will be allowed to be sold even then. It is expected that this ordinance with its severe penalties for violation will have a very healthful restrictive effect upon the traffic in this drug.

DANGEROUS FIREWORKS.

The "Glorious Fourth" is close upon us. Let every one have a good time, but in a reasonable way. Make as much noise as you wish, but make it with materials and appliances which do not put in jeopardy the life and property of yourself and neighbors. We expect that the usual crop of disasters will be reported, but druggists can do something toward lessening the casualties by preparing safe red fire and other illuminants rather than the highly dangerous kind. A new toy is on the market this year, and is proving very attractive to the younger generation. It is a dangerous one, however, and we understand that orders have been issued in Philadelphia for the arrest of persons selling it. It is in the shape of a marble coated with a mixture of phosphorus, chlorate of potash and sugar, and when thrown on a hard surface produces a loud noise.

A GOOD THING.

The American Pharmaceutical Association has now ready a large supply of the Epitome of the National Formulary. This is gotten out in a very attractive form, and is sold at 10 cents a copy in numbers of twenty-five or more; the larger orders having farther special discount. The idea of this little work is that druggists may use it for free circulation among their physicians, to acquaint the doctors more thoroughly with the many desirable and valuable preparations to be found in the National Formulary. Already many orders have been received, and we venture the prediction that the secretary of the American Pharmaceutical Association will be hard pushed to supply the demand. Certainly if druggists know how valuable to them will prove this little work they will not be slow in ordering a good supply.

The North Carolina Medical Association of Colored Physicians, Surgeons and Pharmacists held its annual meeting June 13 and 14. We mention this merely to point out that our colored brother is fast becoming a factor in professional affairs not to be disregarded.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

SHALL HE RUN IN DEBT: ONE MAN'S EXPERIENCE.

Coal Creek, Tenn., June 15, 1900.

Editor Pharmaceutical Era:—I was interested in the communication of H. M. in last week's Era, who desired to know whether or not he should borrow \$3,000 or \$4,000 with which to buy or open a pharmacy. If H. M. does not know that this depends entirely upon circumstances he should most assuredly not do it. I have known pharmacists who would not succeed anywhere under almost any conditions. I have known others who positively forced success under what appeared to be conditions most discouraging. I have in mind a young man associated in business with me a few years ago, who decided to open a pharmacy in the leading city of Eastern Tennessee, whose only assets were \$700 cash and an unlimited quantity of assurance and energy.

The field appeared to be well covered, rents and other expenses high, and a good location at that time impossible to obtain. He purchased a run-down store barely paying running expenses. This store was on the principal business street, but too far removed from the business centre. In a few months he moved closer up, repeating this performance three times in a year, when he found himself in the midst of the business district, with a moderate stock only and considerably in debt. He now carefully surveyed the field, in order that he might intelligently direct his course. His sales were averaging \$18 per day, rent, \$100, with light, water, license, insurance, etc., added. There were several fine stores within a stone's throw of his, unhampered by debt and enjoying a lucrative business, long established.

Here was a condition of affairs well calculated to discourage an older and more experienced man, but it appeared only to stimulate this young fellow and make him more determined than ever to overcome all obstacles. He had not embarked in this venture to illustrate a theory or to show how a modern pharmacy should be run on a high "professional" plane, but his object was simply to make money in an honorable way, and make it in the drug business.

One bright morning the city was covered with circulars proclaiming in bold type that Jones had "cut the price"—cut the price in two! Here followed a list of the leading patent medicines advertised at wholesale prices. The leading retail druggists of the city at once called a meeting, adopted resolutions denouncing Jones, and served notice on the wholesale drug houses to sell Jones no drugs under penalty of losing their patronage. Jones now began a crusade against Jones, and openly predicted his failure in ninety days. All this, as a matter of course, advertised Jones—just what he expected and wanted. Jones occupied considerable space in the city papers advertising his business, calling attention to the hostility of the "old time" druggists and their prophecy of his failure. His sales at once rose from \$18 to \$80 per day. He had previously shrewdly calculated all the difficulties he would have to encounter, and had laid his entire plans before a young and rich banker of the town, who promised to stand by him in case of a money crisis, which Jones plainly foresaw. This banker would not have made this agreement had he not been impressed by the frankness, honesty and business ability of Jones, who, so to speak, had a map and a diagram of all the events to follow, showing approximately the date of his unquestioned triumph.

It is needless to give a history in detail of what followed, but the obstacles and lack of cash had long before been discounted by Jones—he knew just when this and when that was due to happen, and had everything arranged accordingly. His rivals in business gradually

"Say, Maude, don't you wisht you was a giraffe?"

"Why, Willie?"

"If your neck was ten feet long ice cream soda would taste good all the way down."

went down, some of them succumbed outright, as Jones went up, for go up he did, in spite of everything and everybody. That was only six years ago, and now Jones' Pharmacy is one of the finest in the South, and his stock will inventory not under \$20,000, and his business is increasing month by month, and is by far greater than any of his competitors.

A large factor in the success of Jones was the attention given to the purchase of his stock. And no druggist can well succeed who does not do this, as well as manufacture every article that can be made in a drug store.

I have devoted much time to the investigation of prices, and I find some houses sell one or more articles lower than other houses. I select these low-priced articles of each house and find the saving considerable. Take the one article of F. E. Cascara Sag., and we find no two houses quoting it alike. I can buy this preparation in 5-pt. bottles at 50 cents per pint, and I know from my own experience and that of others competent to judge that it is as good as any on the market. Only last week I bought 2 gallons of F. E. Golden Seal (Aqueous) at 84 cents per pint, of a brand I have been selling for two years, and I know it is first-class.

Success as a pharmacist depends upon many things, and the right man will understand what they are. If you have a business that cannot be made to succeed or are in a place that will not properly support a drug store, quit it. Put in a full line of non-secret preparations and push their sale. Your 25-cent preparations can be bought for \$1 a dozen, 50-cent at \$2, and the \$1 sizes for from \$2.75 to \$3.50. Sell everything you can sell, bearing always in mind that your object is to make money, and not simply to be the spectacled proprietor of a dodo drug store. If H. M. has the right kind of stuff in him, I say by all means borrow that money and sail in.

A. M. R.

INDEXING PATENT MEDICINES.

Editor Pharmaceutical Era: In answer to the question, "How to index patent medicines," would say the following way of indexing would suit me perfectly:

- Aperient, A's, B's, C's, etc.
- Balm, " " "
- Balsam, " " "
- Bitters, " " "
- Compound, " " " Pain's, etc.
- Cure, " " "
- Emulsion, " " "
- Expectorant, " " "
- Etc., etc.

I would continue this alphabetically to the end of the whole list, to Z.

I claim this way of indexing would be understood by the great majority.

N. P. FORCIER.

Meriden, Conn.

Editor Pharmaceutical Era: I would do it:

Have the Cures by themselves,
Have the Compounds by themselves,
Have the Plasters by themselves,
Have the Pills by themselves,

with the name of manufacturer after each, as per form "C."

C. C. CHANDLER.

Enfield, N. H.

THE CUT-RATE STORE AT STE. GENEVEVE.

Editor Pharmaceutical Era:—In reference to a letter written by a Mr. Glazer of this city, will say that I have had the active management of this concern from February to May, at which time I had associated with Dr. H. Freidel, who severed his connection with this company about the middle of May. I am at present sole owner of this company.

CARSSOW DRUG CO.,
Per Oscar C. Carssow.

Ste. Geneveve, Mo., June 20, 1900.

Editor Pharmaceutical Era: We have read with interest the several letters published in your issue of June 14 concerning the cut rate war in Ste. Geneveve, Mo., and in view of the fact that we are in a position to substantiate every word contained in the letters written by Drs. Rutledge and Lanning we are surprised at the position taken by Allan-Pfeiffer Co. In our opinion Mr. Allan was cognizant of the fact that Mr. R. B. Carssow was interested in the Carssow Drug Co., of Ste. Geneveve, from the fact that Dr. O. C. Carssow, of Ste. Geneveve, said to us prior to March 1 and at a time when it was not known that we were going to engage in the retail drug business, that he was going to put in a full line of Allan-Pfeiffer's products and that he could sell to physicians at jobbers' prices. R. B. Carssow cannot disprove his connection with the Carssow Drug Co., for in addition to the proofs set forth in the letters above referred to, we have a card handed us by R. B. Carssow in the left hand corner of which in bold type appears "Vice-President A.-P. Chem. Co.," and in the opposite corner the legend, "Secretary Carssow Drug Co., Ste. Geneveve, Mo." The card was handed us about a week before they advertised their cut rates. Mr. R. B. Carssow remarked to a prominent attorney of this place, and who is willing and ready to testify to the fact, "Oh, I had as soon sink five dollars a day in the drug fight as not." This after the cut had been on for several weeks. During our May term of court we went before the grand jury and had them find a true bill against the Carssow Drug Co. because of the fact that neither their manager, Mr. Feibleman, nor Dr. O. C. Carssow were registered pharmacists. In view of the facts that have transpired prior to and since the cut we can come at but these conclusions, viz.: That R. B. Carssow was and in all probability is now interested in the Ste. Geneveve store; that Mr. Allan is perfectly well aware of the fact, and that he is guilty of a deliberate falsehood when he denies it and that Mr. Allan is trying to run a bluff on the Era when he intimates that he will institute proceedings for damages, from the fact that Hinch & Douglass, Rutledge & Co. and R. W. Lanning are individually and collectively financially responsible for any damage they may do Mr. Allan or anybody else.

We are pleased to note the stand you have taken in this matter; it will strengthen your position with drug-gists.

Very truly,

HINCH & DOUGLASS.

Patent Leather Varnish.

Resin	1 ounce
Gum thus	1 ounce
Turpentine	1 ounce
Sandarac	2 ounces
Shellac	1 ounce
Methylated spirit	20 ounces
Lampblack	¼ ounce

Dissolve the resins in the spirit and finally add the lampblack.

UNAMES THE BOARD.

Cerro Gordo, Ill., June 6.

Editor Pharmaceutical Era: In your publication of June 7 I find in St. Louis items an article headed "Drug Clerk Famine in Egypt," which states that they can get no registered men in that part of Illinois. I have been a registered pharmacist in Illinois since 1889 and now have charge of the store of W. H. Bland in Cerro Gordo. There is another store here conducted by a man registered only as an assistant pharmacist, who has been reported to the secretary of the State Board of Pharmacy, to the State Attorney of this county, even to Governor Tanner himself, but nothing has been done and it is all of three months since that was done. If things go that way in Egypt, what difference does it make whether you have a R. P. or not?

This store has been run this way for nearly a year now and been reported time and again. Is there any pharmacy law in Illinois or not? I would like to know.

M. J. DAVIS.

SOME MALT SODA DRINKS.

Pure Malt.

In this form any of the leading malts may be served in small four-ounce minerals. A tall, slender glass is preferable for this purpose. Malt thus served should be ice cold. By serving in this quantity you only get three glasses from one bottle and cannot, therefore, afford to dispense for a sum less than ten cents.

Malt and Vichy.

This may be prepared by mixing three ounces of malt with an equal amount of Vichy in a six-ounce mineral tumbler. In the same manner malt may be served with any of the other leading mineral waters, such as Apollinaris, Kissingen, Seltzer, star, congress, lithia, etc., and makes a rather pleasant drink if a heavy malt be used. This should be dispensed at ten cents.

Malt Cocoa Syrup.

This is sometimes called malted chocolate. Extract of malt, eight ounces; extract of vanilla, one dram (the vanilla may be left out and replaced by two drams of essence of cinnamon); chocolate syrup, sufficient to make two pints. This may be served as cocoa malt phosphate by the addition of a few dashes of phosphate to a glass; otherwise served foamed in twelve-ounce same as any soda.

Malt and Milk.

Malt may be served with milk. Place two ounces of malt in an eight-ounce mineral glass and fill with ice cold milk, and serve at ten cents.

Malt Bitters.

Use two or three dashes of Angostura bitters to a four-ounce glass of malt and serve for ten cents.

Malt Phosphate.

This may be made by using two to three ounces of pure malt and a few dashes of phosphate to an eight-ounce glass of soda, or by using one ounce of the following syrup and making same as other phosphates:

Malt Phosphate Syrup.

Malt extract, twelve ounces or one bottle; vanilla syrup, one pint; almond syrup, sufficient to make two pints.

Malted Moxie.

Serve in regular moxie glass, using about one ounce of extract of malt and filling the glass with moxie and mix. Serve for five or ten cents, according to your trade.

—From The Spatula.

LIQUID BRONZE.—Dissolve in an earthen vessel by the aid of gentle heat, applied in the water bath, 10 parts of aniline red and five parts of aniline purple in 100 parts of 95 per cent. alcohol. When solution is complete, add 5 parts of benzoic acid, raise the heat, and let boil from five to ten minutes, or until the greenish color passes over to a clear bronze brown. For "marbling" or bronzing paper articles, this formula answers particularly well.

(For the Era.)

THE INCOMPATIBILITY OF COMMERCIALISM AND PROFESSIONALISM.

By D. KANTOR, New York.

A great quantity of ink has lately been spilled over the question, "What is to be done with the druggist of the future; how shall he be elevated from his present position to his rightful station?" It would seem that a flood wave of virtue has swept over those who are "in the swim," and that in their virtuous state they are so unselfish as to forget their own interests and that they are moved by kindly spirit to help their fellow man. Many remedies have been advocated, but the chief one and on which the majority of druggists are agreed, is the requirement of a higher standard of education and particularly a diploma of a college of pharmacy.

Plausible as it may seem at first, it acquires a different color when looked upon from the standpoint of the struggle for existence. I heard a prominent preacher say in the course of his sermon that in order that certain reforms should appeal to those in whose favor they are intended, it is necessary that not only should the beneficiary have his full confidence in the measure, but that the advocate of the reform should be enthusiastically imbued with a spirit of kindly feeling and that selfish interests should play absolutely no part in his advocacy of the reform.

There are, however, two kinds of reformers—the idealistic reformer who is eager to benefit his fellow man and is willing to sacrifice his own social position, personal material advantages, willing also to be ridiculed by a class of people who cannot or will not understand him.

There is the other reformer, who, under the mask of benefactor hides his real motive—personal gain. Yes, personal gain and nothing else. To this class belongs the druggist-reformer. I do not, however, disapprove of reformers. I do not even blame the druggist for being selfish. I merely wish to state what is already a fact—that self-interest is the prime mover in the agitation and the ardent "reformers" might as well come out from under their masks and declare in loud voice: "Give us a law that will protect us; put a barrier around our occupation that will keep out all new comers." Sacred ground; keep off!

Now let us see if a profession in general and the druggist's "profession" in particular is so sacred, so valuable, is of so much importance to the druggist himself as to justify all the talk and agitation. Aside from the well-known fact that conditions always point a road and that the necessity of systematic training will lead to such, whether it be in a college of pharmacy or by private individual effort, the sacredness of the profession does not warrant the seeking of legislation to this end. Let us take the medical profession as an example. Time was when a young man who made up his mind to study medicine had something better, higher, nobler, to look forward to. The struggle to make a living was not so keen as it is to-day. He could hope, if he was an ambitious man, to some day become a useful member of society; he could even hope to have enough leisure and the means to advance scientifically, and he perhaps hoped to be able to help suffering humanity. Then the butcher, the baker, the blacksmith, the shoe maker had not and could not have such ambition. Therein lay the difference between a common occupation and a professional calling. As time advanced and as the economic condition of society gradually changed, due to competition, this marked difference between a common and a professional occupation was gradually obliterated. Competition is the rule, and it is no more the competition for professional merit, it is for material advantages and material success. Two physicians meet, and their first question after the conventional greetings and hand shake, is "how is business?" There are, of course, exceptions, but they are only for those who are well advanced materially. It is not a question of how high did you advance in knowledge; it is not a question of how much good have you done your suffering patient; it is only a question of how much money did you make last month, and if the conversation is not a direct one on this line it will come up in an indirect way. The money thought is the foremost in their minds. We thus see that profession and busi-

ness have become synonymous. The difference between the two is only nominal, not actual.

I took the physican as an example simply because he has the most claim on the term "profession." In an ideal state of society his calling would be a truly professional one. His case lucidly illustrates the difference, or, as I stated before, the absence of difference, to-day between business and profession. Now, then, if the physician has lost his professional standing and has descended to the level of business, what, then, shall we say about the druggist?

Allow that it is the desire of the reform yellers, legislature sockers, to make the druggist a professional man, or, as they would say, to gain back the station he has lost. As far as knowledge is concerned the druggist of to-day is incomparably ahead of the druggist of twenty years back. He is brighter, more intelligent, knows more, and takes more interest in affairs pharmaceutical. All this was accomplished by the regular course of events, by the law of evolution, without legislative interference, without compulsion. You find colleges of pharmacy extending their curriculums and at the same time more and more young men are knocking at their doors for admission; you find private schools instructing in pharmacy filled with students eager to learn; you find a number of correspondence lectures such as the Era Course and others with thousands of enrolled students. Now tell me, reformers, did these results come about through your efforts? Did it come through legislative compulsion? Was your politician law maker the cause of this advance? Poor but brave brethren! In spite of all our difficulties, in spite of our utter enslavement, we still manage to keep our heads above water. Our degradation is not due to our present lack of shining diplomas with the brilliant signatures of our great shining lights—the aristocracy of pharmacy. Our degradation is due to other causes and mainly the economic conditions of society of which we are part and parcel. Let me mention at least one. The essential duty of a pharmacist is to correctly compound medicines according to the doctor's written order, otherwise called a prescription. He is thus made subservient to the physician. This in itself would not have been such an evil had the duties of each been strictly defined. Let us see, however, what there is to encourage the druggist to limit himself to this branch of truly professional occupation. Doctor Brown prescribes Peter's Compound Bitters; Doctor Black prescribes Gude's Peptomangan and emphasizes his prescription by under-scoring the word "Gude" with two pretty heavy lines. Such a prescription reminds me of the stern judge reminding the thief brought before him of "Thou shalt not steal." Dr. White tells his patient to be sure and get Scott's Emulsion or Fellows' Hypophosphites. The druggist's emulsion is not good enough for his patient. Is this the kind of compensation that will encourage the druggist to be better, higher, nobler than he is to-day? The druggist must live no less than the doctor. In order to live and support his family he cannot confine himself to his professional part of the business. It is the business that absorbs all his time, his energy and his thoughts. It is the business part of his occupation that gives him the means of making a living. He must sell articles; he must be cunning enough to sell such things as will afford him a decent profit. He must get up medicinal preparations with a view to profit and not professional glory. He must talk in order to sell them; in a word, he must be a merchant. The druggist to-day who is not a live merchant is only a cat's paw for the patent medicine man. The most successful druggist to-day is the one who can cunningly convince the public that he sells cheaper than the next fellow. All this is commercialism and in the struggle professionalism is lost from view. In a word the druggist is as much a slave to social economic conditions as the shoe store keeper or the clothing man. His profession and with him all other professions are gradually dropping into all the tricks of business. No amount of artificial reform and tinkering will improve matters. The thing is running its course. There is one hope for professional men and women—the coming of the time when society will be so constituted that an occupation that requires intelligence, education and scientific knowledge will be free from material cares and commercialism will have no place alongside of a profession. Then and only then will there be true professional people.

(Specially Prepared for the Era).

SCIENTIFIC PARIS.

The scientific world of Paris is mostly to be found on the left bank of the Seine, in the neighborhood of the Faculties of the University.

The Institute of France.

Just opposite the Louvre, is the home of the five Academies which ever since the days of Louis XIV. have grouped the majority of Frenchmen famous in science, art and literature. The Academie Francaise (with its forty members "Immortels") and the Academy of Sciences are known throughout the civilized world; the other three are devoted to the Fine Arts, Inscriptions and Belles-Lettres (languages, history, antiquities), and Moral and Political Science (jurisprudence, philosophy, statistics, etc.)

The Academy of Sciences

comprises eleven sections, five of which are classed as "Mathematical Sciences" (Geometry, Mechanics, Astronomy, Geography and Physics), and six as "Physical Sciences" (Anatomy and Zoology, Botany, Chemistry, Mineralogy, Medicine and Surgery, and Rural Economy). Each section consists of six members and there are two permanent secretaries (M. Berthelot for the Physical, and M. Bertrand for the Mathematical Group). Ten "free" academicians, unattached to any special section, bring up the Parisian total to seventy-eight. There are a hundred French corresponding members and eight foreign associates.

The History of the Academy of Sciences

is practically the history of French science itself. Its origin is very similar to that of the great sister body, the Royal Society of London, a little knot of scientists meeting periodically at a private house, noticed and patronized by the King and formed by him into an official body. Gassendi, Descartes and Blaise Pascal were among these pioneers of the modern institute, and the royal recognition took place in 1666. In 1669 Louis XIV. granted them the use of rooms in his own palace (the Louvre), three noble apartments that may easily be inspected by the amateur of history, as they now form part of the public Art Galleries. In 1801 Napoleon removed the Institute to its present premises, and gave the Academicians the special dress—cocked hat, small sword and costume embroidered with green palms—which they still wear at official ceremonies.

Among the Members

of the Academy of Sciences in the days before the Revolution we need only mention the zoologist Buffon and the chemist Lavoisier. The latter gallantly but unsuccessfully opposed the suppression of the Academy during the Reign of Terror. When the Institute was re-established Berthollet, Fourcroy, Chaptal, Vauquelin, Parmentier and many other famous names were among the scientific Academicians; while many among us can remember the centenarian chemist Chevreul, Dr. Brown-Sequard, Dr. Charcot, Pasteur, etc., as attendants at the periodical meetings.

The Academy of Sciences of To-Day

Includes its fair share of scientists well known throughout the civilized world. M. Berthelot, already mentioned, is an ex-professor of the Paris School of Pharmacy, also M. A. Chatin, who sits in the Botany Section. Three of the professors actually occupying chairs at the same school are Academicians—MM. Guignard (Botany), Moissan (Chemistry), and Milne-Edwards (Zoology). The Chemical Section likewise includes Prof. Ditte, Grimaux and Troost; MM. Lippman and Violle sit in the Physical Section. M. Carnot, brother of the murdered president, is, like Dr. Brouardel, a "free" Academician. Other well-known names are MM. Duclaux and Roux, of the Pasteur Institute; MM. Filhol, Freycinet, Dr. Lannelongue, MM. Mascart and Schloesing, the botanist Van Tieghem. Among the foreign associates are Lord Kelvin and Lord Lister, also Mr. Newcome, of Washington.

A Meeting of the Academy of Sciences

is interesting as an occasion to see a certain number of men whose names are known throughout the civilized world; otherwise it is a quiet, not to say dull, affair. The roomy, well-lighted hall contains tables covered with green baize and chairs upholstered in green velvet; at one side is a line of seats for the reporters and general public. At 3 P. M., every Monday, the Academicians stroll in and form chatty groups. They seat themselves when the tinkle of the president's bell announces the proceedings are opened, and M. Berthelot or his colleague reads, or rather summarizes, the correspondence without any undue striving after elocutionary effect. Then such of the members as have communications to make read their papers, usually of a very technical character, and confined to some minute point of one particular science. That a buzz of private conversation should go on almost persistently is not perhaps surprising when one reflects upon the mixed character of the assemblage. M. Moissan's description of some new wonder of the electric

INSTITUTE OF FRANCE.

furnace has possibly but a relative interest for the mathematicians and astronomers; nor is M. Duclaux, of the Pasteur Institute, or the famous surgeon just opposite necessarily deeply absorbed by M. Janusen's astronomical observations on the summit of Mont Blanc.

When there is an election that is another matter, and all are alike interested. But in spite of the advanced age of many members this excitement is comparatively rare. The impatient and the envious declare that election to the Academy is a guarantee of longevity and that life insurance companies might safely lower the premium when one becomes a member.

Many Valuable Money Prizes

for scientific work are in the gift of the Academy of Sciences; they total probably over \$60,000 a year. None of the other four academies disposes of such a large sum.

Some account of the annual awards will usually be found in our Paris correspondence in December or January of each year.

The Academy of Medicine

ranks next to the Academy of Sciences as one of the most important scientific bodies of Paris. Founded in 1820, it continues the work of several previous societies which had special relations to medicine, surgery, remedies, mineral waters, vaccination, etc. A public meeting is held every Tuesday afternoon in the old chapel on the Rue Saints Peres, an antiquated and entirely unsuitable building which the Academy will very shortly quit, upon the completion of its new and handsome premises in the Rue Bonaparte. The collections of the Academy—600 portraits of medical men, a handsome library containing

many rare and curious medical works, a museum of instruments, etc., etc.—will here be fully installed. The vaccination services and the laboratory for chemical analysis will also be suitably lodged. Analytical work forms an important branch of the Academy's duties. Theoretically, every patent medicine should be submitted to and approved by this body before it is allowed to be sold in France. As a matter of fact, the Government always awaits the Academy's report on new remedies, treatments and hygienic precautions before they are adopted in hospitals and other public institutions. The committee of six members specially devoted to this work includes two professors of the School of Pharmacy. Another committee of seven reports on mineral waters before they are allowed to be bottled and sold in France or imported from abroad (Prof. Jungfleisch sits on this

tology, midwifery, surgery, legal medicine, hospital doctors, laryngology, etc., etc., etc.

The Society of Pharmacy

of Paris is nowadays a strictly scientific body and its monthly meetings are mostly frequented by the professors of the Paris School of Pharmacy and the head pharmacists of hospitals, although there is a very fair sprinkling of leading pharmacists who are in business. It meets in the large hall of the School of Pharmacy on the first Wednesday of each month, except during the vacation, at 2 P. M., and a couple of hours are usually occupied in reading papers on pharmaceutical science, with an occasional historical contribution from M. Planchon. It has recently given much assistance in the revision of the French Pharmacopœia or Codex, now nearly completed.

Its origin may be traced to the days when the apothecaries formed a guild or corporation more than 200 years ago and opened classes for apprentices, etc. The Revolution abolished the guilds, but the apothecaries turned the difficulty by forming themselves into a "Free Society of Pharmacy" and were the only body who safely traversed these troublous times, carrying on their periodical meetings and scheme of instruction with scarcely a break. But now, for nearly a century, the scholastic work has been under Government control and professional interests are looked after by the National Association, which, as we have explained in the Era, fulfils the same purpose in France as the N. A. R. D. is intended to do in America. The meetings of the Paris Society of Pharmacy are pleasant friendly meetings for mutual improvement and scientific intercourse, rarely ruffled by the storms of discussion, save when a young and active member galvanizes his audience by some all too new and quite insufficiently proved scientific statement.

The Chemical Society of Paris.

founded in 1857, has its headquarters in the Rue de Rennes. M. Grimaux, of the Academy of Sciences, is president; the four vice-presidents include MM. Moissan and

TOMBE OF PASTEUR.

committee). The two hundred members of the Academy are divided into eleven sections, varying from seven to thirteen members. We may just cite the Therapeutics and *Materia Medica* section, which includes the names of MM. Chatin and Milne-Edwards; the Chemistry Section including MM. Berthelot, Gautier and Bouchardat; the Pharmacy Section, M. Cavenot, son of the discoverer of quinine; M. Marty, military pharmacist, and eight professors of the Paris School, MM. Planchon, Riche, Jungfleisch, J. Chatin, Prunier, Moissan, Guignard and Bourquelet. M. Cadet de Gassicourt, of the Section of Pathology, is a descendant of the family of apothecaries so well known in Paris a century ago.

The prizes at the disposal of the Academy of Medicine, though as a rule less valuable than those of the Academy of Sciences, are numerous and important. Several of them—the Henri Bugnet, Demerle and Nativelle prizes for instance—are for researches in chemistry and pharmacy.

The papers read at the public meetings are usually on subjects connected with medicine and hygiene. The chemists and pharmacists usually content themselves with the silent but useful work of analysis and reports to the government on matters affecting the welfare of the public. But they take turns with their medical associates in occupying the presidential chair. Vauquelin was president in 1825, and Joseph Cavenot in 1845. The foreign associates are eight in number, five Englishmen, a Belgian and two Germans (Nirchow and Koch); and only one American name, that of Dr. Stiles, of Washington, appears among the list of thirty-seven foreign correspondents. But there are thirteen foreign vacancies for correspondents and twelve for associates which will likely be filled this year, five of these openings are in the fourth division (Pharmacy, Chemistry and Physics).

Having treated at some length these two important bodies, we can only briefly enumerate

The Other Scientific Societies

which are numerous in Paris as in all capitals. There are societies devoted to botany, mycology (the botany of fungi), mineralogy, zoology and anatomy, chemistry, pharmacy, photography and dentistry, besides the numerous associations of a medical or semi-medical character, the societies of hygiene, therapeutics, biology, derma-

TOWER OF ST. JACQUES.

Gautier. It has 350 members at Paris and 500 in the provinces and abroad. All countries are represented, from California and the far West to India and Java in the far East. The bulk are pharmacists, professors and chemists. Prof. Doremus, Prof. Witthaus, Mr. Marston F. Bogert, of Columbia University, and Miss Ida Welt, of New York; Prof. J. M. Crafts and Dr. Whitney, of Boston; Prof. Stokes, of Washington, and other names from Chicago, Philadelphia and the principal American cities figure on the list of members.

The Society of Botany

was founded in 1854. Some thirty pharmacists actually in business, besides a number of the professors and preparators at the School of Pharmacy, are included among its 500 members; in fact one of the preparators, M. Paul Guerin, is assistant secretary of the society. Its headquarters are in the Rue de Grenelle. A special annual meeting is usually held in some spot of botanical interest; last year the botanists gathered in the islands near Hyères, the well-known winter resort on the Riviera.

The Society of Therapeutics

consists of seventy-four doctors, six "vets" and twenty pharmacists. The latter take a very active part in the proceedings; M. Portes, head pharmacist at the St. Louis Hospital, occupied the presidential chair last year. Besides the "titulary" members, there are French and foreign "correspondents," and many honorary members abroad; this last section includes Mr. Welch, of the Johns Hopkins University, and a large number of Scandinavians.

These three societies (Chemistry, Botany and Therapeutics) hold two meetings monthly. They usually allow themselves a vacation during the months of July, August and September, but doubtless the Exposition will bring about certain modifications in this respect during 1900. A monthly "bulletin" or account of proceedings is issued by each of these three societies; the Academies of Science and of Medicine also publish their proceedings in periodical form.

A Few Scientific Institutions

must just be mentioned. Of the great schools and faculties we have spoken in previous articles; the Pasteur Institute and the School of Pharmacy have already been specially described in the Era, and the interesting municipal laboratories of analysis and toxicology may possibly be treated later on. The Bureau of Longitudes (astronomy and navigation) has its quarters at the Institute of France; the International Bureau of Metric Weights and Measures is just outside Paris; not far away is M. Berthelot's Station of Vegetable Chemistry; his neighbor is M. Janssen, of the Meudon Astronomical Observatory. The Paris Observatory is close to the School of Pharmacy; here M. Loewy is Director. There is some talk of removing it to a quieter and less busy spot. The Central Meteorological Observatory (M. Mascart, director) is in the Rue de Grenelle. The Paris Municipality has two weather stations, the best known is lodged in the Tour St. Jacques, a picturesque remnant of a medieval church, near the Hotel de Ville. At the College of France and the Sorbonne some of the laboratories of our leading chemists and scientists are worth a visit.

The Hospitals of Paris

are mostly still installed in convents confiscated by the Government at the time of the great Revolution; needless to say that these buildings, 150 and 200 years old, do not fulfill the dreams of the up-to-date practitioner and hygienist. The new hospitals are few; we may just cite the recently opened Hospital Boucicault at Grenelle, not far from the Exposition.

INFUSORIAL EARTH.—The abrasives included under this head consist of those porous siliceous earths of organic origin known as tripoli, diatomaceous earth, and infusorial earth. They are used to some extent in the manufacture of polishing powders and soaps, for which reason they are included among the abrasive materials. Their field is not limited to that use, however. Owing to the porous nature of infusorial earth it has been found to make an excellent absorbent for the manufacture of dynamite from nitroglycerine, and its non-conductivity to heat recommends it as a packing for boilers, steam pipes and safes. The production in 1898 amounted to 2,733 short tons, which was 1,100 tons less than in 1897. The value of the product was \$16,691, about 25 per cent. less than that of the preceding year. This amount does not represent its final value in manufactured articles. Of the total product in 1898, 2,528 tons represents the material in its crude state, or without other preparation than drying and grinding. The total value of this portion of the product was \$9,691, an average of \$3.73 per ton.

PERUVIAN BARK.*

With Special Reference to those Kinds Found at Present in the New York Market.

By J. H. STALLMAN.

It is not my purpose to present to you an exhaustive treatise in this very important subject on which, you know, volumes can be written without exhausting it. I will present this subject only briefly in a commercial way, without going too much into details, for which we merchants have so little time to spare.

There are almost endless varieties of Peruvian or Cinchona barks, which may be divided into two distinct classes, viz.: the wild growing bark and the cultivated bark. The wild growing bark was the only kind known to commerce to within about twenty years. I need not go into the history of this article, where and how it was discovered; this is pretty generally known and can be read in medical books. The trade was at first supplied with bark exclusively from South America, the northern and western part, Venezuela, Columbia, Bolivia, Peru, Ecuador, etc. From the coast expeditions with supplies for an extended period would be sent into the interior, generally in boats up the river; forests of Cinchona trees would be searched for and when found work would be commenced; the bark taken off the trees, dried, baled and sent down to the coast, until the supply was exhausted and new forests would have to be looked for. The trees were destroyed by denuding them of the bark and naturally supplies would often become scarce, partly through destruction of the trees and partly through political revolutions interfering with the collection.

The percentage in these barks would vary between ½ per cent. or less to about 2 per cent. and prices would range from, say, 20 cents to \$1.

The barks were usually sent to this market on consignment from South American ports and the quinine manufacturers would pay for them according to the intrinsic value for manufacturing. Larger quantities were consigned to London and sold there to the European quinine manufacturers. After a season of short supplies a London speculator in 1882 bought up nearly all the available bark, expecting that the quinine manufacturers would be compelled to buy of him at greatly enhanced prices, but one great factor was left out in his calculations, because it was not known at the time. Large forests of a new species of trees were discovered in South America, the bark of which, the so-called Cuprea bark, was shipped in large quantities to the London and New York markets and completely broke the back of the speculation, which had looked so well on paper but turned out so disastrously to the operator.

Soon after this, in about the year 1883, the cultivated barks from Ceylon made their appearance in increasing quantities on the London market, sending the prices further and further down. This was the cause of a decline in quinine from a normal price of about \$2.50 per ounce to as low as 16 cents per ounce. The extremely low prices, however, made the cultivation of barks in Ceylon unprofitable; the cultivation was gradually abandoned, plantations uprooted and other products, such as tea, cardamoms, etc., substituted, and the shipments of barks consequently fell from a maximum of about fifteen million pounds to about half a million, approximately the present yield.

In the meantime the cultivation of cinchona trees was proceeded with in a more rational way on the island of Java, the planters employing only the better grades, rich in quinine and thus succeeding in marketing bark yielding an average of 5 per cent. sulphate quinine against an average of not over 2 per cent. for Ceylon bark. While the shipments of bark from Ceylon decreased, the shipments from Java increased and brought prices down to the lowest level of, say, one cent per unit. For the benefit of those not familiar with this term (unit) I will here state that the yield of 1 per cent. of sulphate quinine in bark is called a unit; for instance, 100 pounds of 1 per cent. bark yields 1 pound, or 16 ounces, sulphate of quinine, the higher percentage bark of course in proportion, and this 1 per cent. or unit is the basis of all calculations of the value of the bark.

*A paper prepared for a regular meeting of the New York College of Pharmacy.

I stated at the beginning that we have to distinguish between wild growing and cultivated barks; among the former I will mention the Maracabo, often called the Puerto Cabello bark, which is employed more for its color and appearance, but is very deficient in quinine; Rubingosa, a reddish soft bark; Loxa, which comes mostly in thin quills; red bark flat pieces; South American high test tree, Cuprea bark, so called on account of its coppery appearance, a very hard bark.

There are other wild growing barks, such as Pitayo, Carthagena, Cochabamba, etc., which are seldom found in this market.

Among the cultivated barks are Calisaya, flat pieces, from Bolivia; Java quill barks, in pieces of three feet down to a very few inches; Calisaya chips, high test bark; Calisaya chips, ordinary or low test; true red chips; East India red quills; Java yellow ordinary; Red bark chips, ordinary; Java siftings.

Some of these barks are taken off the trunks of the trees, some off the branches and others off the roots.

The samples submitted represent only grades usually found in this market and bought by druggists for their preparations, and they are not meant to represent any large proportion of barks found in other markets, such as London, Amsterdam, etc.

Among the producing countries of bark I have mentioned only South America, Ceylon and Java. Considerable quantities are, however, sent to market from India, the Malabar Coast, etc., Africa and other countries; but pre-eminently the Island of Java is now the great producing district on which the quinine manufacturers and the trade in general have to rely for their supplies.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

PHARMACY.

- 1.—State (a) How many grains there are in one kilogramme; (b) How many kilogrammes there are in three avoirdupois pounds.
- 2.—Convert (a) 92° F. into ° C.; (b) 432° C. into ° F.
- 3.—How many grams of corrosive sublimate are required to make one gallon of 1:500 solution?
- 4.—Name three official wines, giving official title of each. State what menstruum is employed.
- 5.—How many grammes of butyl alcohol can be prepared from 1005 grammes of official alcohol?
- 6.—Name all the components of Tinctura Cinchonæ Composita and describe the process of its manufacture.
- 7.—Donovan's Solution: (a) Give its official title; (b) Name its active constituents and state what per cent. of each is present.
- 8.—Citrine Ointment: (a) Give its official title; (b) State how it is prepared.
- 9.—When chiral hydrate and lime water are dispensed in the same mixture what new compounds are formed?
- 10.—Name a good solvent for each of the following: (a) an Oleo-resin; (b) a resin; (c) an alkaloid; (d) a gum.
- 11.—Oleate of Mercury: (a) State how it is prepared; (b) state what changes it undergoes upon standing.
- 12.—Give the official titles of three preparations containing ammonia gas, stating the per cent. present in each case.
- 13.—Name two official tinctures which are prepared by maceration. State why they are prepared in this manner.
- 14.—In what official preparations is ethereal oil employed? State how you would determine its absence from this preparation.
- 15.—Give the unabbreviated official title of each of the following: (a) Brown Mixture; (b) James' Powder; (c) Arsenic Antidote; (d) Lunar Caustic.

CHEMISTRY.

- 1.—Define the following terms: (a) Per; (b) Triad; (c) Bin; (d) Super.
- 2.—Name the compound which forms when two atoms of Iodine combine with one atom of Iron, and give its molecular weight.
- 3.—Name an official silver salt which may be fused without undergoing decomposition.
- 4.—How may the following be accomplished: (a) The conversion of a ferrous into a ferric salt; (b) the conversion of a ferric into a ferrous salt.
- 5.—What is an Amido-acid? How does it differ from an Acid-amide?
- 6.—What is an acid salt? Name two official ones, giving their formulae.
- 7.—What happens when a solution of Potassium Permanganate is brought into contact with organic matter?
- 8.—Name two non-metallic elements which readily form compounds with oxygen.
- 9.—When a solution of Potassium Iodide is added to a solution of Mercuric Chloride in excess, what compounds are formed?
- 10.—Give the chemical title of each of the following: (a) $KClO_3$; (b) $NaHSO_3$; (c) $Mg_3(PO_4)_2$; (d) PbO .

11.—Write the chemical formula for each of the following: (a) Mercurous Oxide; (b) Ferric Nitrate; (c) Cupric Oxide; (d) Manganous Chloride.

12.—How would you differentiate between Morphine Sulphate and Quinine Sulphate by chemical means?

13.—How many grammes of sodium Hydrate will be required to make one liter of deci-normal volumetric solution of Sodium Hydrate?

14.—Phosphorus:—(a) State how it is obtained; (b) name three solvents; (c) name three of its acids.

15.—Complete the following equations: (a) $MnO_2 + 4HCl =$; (b) $Pb(C_2H_3O_2)_2 + 2NaI =$; (c) $BaO + H_2O + 2HCl =$; (d) $Pb(C_2H_3O_2)_2 + heat =$.

MATERIA MEDICA.

- 1.—What alkaloids are obtained from the following: (a) Foxglove; (b) Broom; (c) Wormseed; (d) Stramonium; (e) Ipæacac.
- 2.—Name three official drugs that are hypnotics, and tell what you know about them.
- 3.—Name five drugs containing a fixed oil, five containing volatile oil. How do volatile oils differ from fixed oils.
- 4.—State the difference between the following: (a) Root; (b) Rhizome; (c) Stem; (d) Bulb.
- 5.—Describe Digitalis, common name, Habitat, Blood Root, giving habitat, appearance, and medicinal properties of each.
- 6.—Name two official drugs that belong to the natural order Cucurbitaceæ.
- 7.—Give the botanical name and habitat of the following: (a) Senega; (b) Culver's Root; (c) Blue Flag; (d) Black Snakeroot; (e) Corn Silk.
- 8.—Coccyth: Give common name, habitat, part of plant used, and official preparations.
- 9.—To what natural order do the following belong: (a) Wild Cherry; (b) Aloes; (c) Wormwood.
- 10.—From what are the following obtained: (a) Acetanilid; (b) Bromine; (c) Salicin; (d) Pyrogallol.
- 11.—Give the official titles of five vegetable drugs that are astringent. Three that are demulcent.
- 12.—Narcotic: Give common name, part of plant used, habitat, and official preparations.
- 13.—To what classes do the following drugs belong: Turpentine, Gamboge, Tolu, Acacia, Copaiba, Asafetida; Castoreum.
- 14.—Name the official salts of zinc. Give the official title of each in full, not abbreviated.
- 15.—Give the common names of the following: Rhus Toxicodendron, Pix Liquida, Mennispermum, Dulcamara, Cypripedium, Chimaphila.

TOXICOLOGY AND POISOLGY.

- 1.—Name one narcotic and three corrosive poisons. To what class of poisons does Oxalic Acid belong.
- 2.—Would you use potash, soda or lime in the treatment of Oxalic Acid poisoning? Why?
- 3.—What emergency treatment should be employed for poisoning by Veratrum Albidum by Iodine?
- 4.—In poisoning by silver nitrate, what chemical antidote should be given and how does it act?
- 5.—When should artificial respiration be resorted to and how is it performed?
- 6.—Name the antidote for lead acetate and state if its action is chemical or physiological?
- 7.—What antidote should be employed for poisoning by the copper salts? Does it act chemically or physiologically?
- 8.—What is the proper antidote for poisoning by corrosive sublimate? And how should it be given?
- 9.—What emergency treatment should be employed for poisoning by carbolic acid? By tyrotoxin (in milk, ice cream, etc.)?
- 10.—What symptoms would lead you to suspect strychnine poisoning? What would you give for strychnine poisoning?
- 11.—What does the law require the pharmacist to ascertain a dose when selling carbolic acid, laudanum or strychnine.
- 12.—What is the dose of Aconitine, Antipyrine, Chlorodyne, Salicin, Strychnine?
- 13.—What is the dose of Arsenous Acid, Extract of Digitalis, Ferrous Sulphate, Sodium Salicylate, Zinc Valerianate?
- 14.—What is the dose of Corrosive Mercuric Chloride, Fluid Extract of Aconite, Tincture of Colchicum, S-sed, Tincture of Indian Cannabis, Tincture of Ipecac and Opium.
- 15.—What is the dose of Creosote, Diluted Hydrocyanic Acid, Tincture of Opium, Tincture of Veratrum Viride, Wine of Antimony.

ETHERAL SOLUTION OF SOAP.—Skinner (British Journal of Dermatology) presents the following which can be made extempore: Oleic acid $\frac{1}{2}$ ounce, methylated alcohol $\frac{1}{2}$ ounce, strong liquor ammoniac q. s.; methylated ether to 2 ounces. The oleic acid and methylated alcohol are mixed and the ammonia added in order to neutralize the acid, care being taken not to add an excess. Then add the ether, which may be increased to 3 ounces, if a weaker solution is required. For an antiseptic, ether-soluble oils, etc., may be added. Petroleum spirit or benzine may replace the ether if necessary. The preparation is said to be superior to ordinary soap for cleansing ointment-laden surfaces.

PRACTICAL POINTS ON ADVERTISING.*

By CHARLES C. DEAM, Bluffton, Ind.

By advertising I mean every influence, effort or method employed to call people's attention to the merchandise you have to sell. The means and effects of advertising must vary in different localities and at different times. It is this factor of variability that is often ignored and to which many a failure can be attributed. Nothing can live or at best thrive unless it adapts itself to its environment. If we should conduct a drug store in the United States like they do in some foreign countries we would fail. If a man should do business in the city like he would in a village he would surely fail. Be receptive to suggestions, but adopt no man's business policy, suggestions, schemes, sure things, etc., until you have thoroughly assimilated them and can adapt them to your business with profit.

My twelve years' experience in the drug store has been in a city of 5,000 and it is to my advertising experience and general principle of advertising that I beg to call your attention.

The most successful advertising is that which sells the most goods at a good profit. I have never been in favor of spending money in advertising and labor in selling goods at cost. Such methods are not only ethically wrong, but vicious. Cutting prices is war in business. It usually results in permanent cut prices, inferior goods and still worse substitution, loss of public confidence and the degradation of the dealer. The method of making a special sale on good goods to get people into your store and then depend upon selling them something else on which to make your profit is wrong. When you make a special sale of an article that is worth twenty-five cents for thirteen cents you not only supply the demand at cost and lose the profit you should have, but you show the customers your per cent. profit and subsequent purchases will be more or less reluctant. Cutting prices is often done to get new people into your store. Don't pay a man ten cents to come to your store to-day; he will expect it to-morrow. Don't buy your business. If you can get a man into your store only on bargain day you don't want him.

I admit we all want and need new customers, but don't resort to cut prices to get them. I am a great believer in trying to please and hold what trade I do have. It is an easy thing to lose a customer. You can do it by misrepresenting your goods, by short weight, inattention, by refusing to adjust grievances and in many other ways. A well pleased customer is the best advertisement you can have. Don't you know they tell their friends and relatives their confidence in you, your merchandise and prices and will take pride in bringing their friends to you? Let us note a few things that will help establish this confidence among your old customers and be the greatest inducement to new people to trade with you. First, the proprietor. He should first of all attend to his own business, but this should not exclude an interest in public affairs. He should be interested in public improvements. He should assist at all times by a liberal donation to have attractions in his town, such as Decoration Day, Fourth of July, Labor Day, etc. Don't be known to be stingy or a kicker. Don't be an active politician. In the church don't try to do all the work yourself; let the brethren help. You can't manage a base ball club or race track without neglecting your business. Be sociable with your business neighbors. Occasionally drop in a few minutes and see them. There should be a more friendly feeling among all the business men and when combined effort is needed, it is easy to accomplish what is desired. Then this community of feeling among business men greatly neutralizes the antipathy the country people have for the town people.

Always meet people when they come into the store. Not with that sarsaparilla feeling; they may lose confidence in your remedies. Bid them the time of day pleasantly when they leave; ask them to call again. If they are to wait for purchases provide them with a seat and some sort of entertainment, such as a daily paper, magazine or something. Never keep a customer waiting longer than necessary. When a customer bands

you a bottle in the morning and asks you to have it filled when he calls for it at noon, why, have it filled, his name and price on the package. Don't forget or neglect it. These are small things, but they are some of the things that go to advertise you as having a store where there are gentlemanly clerks, efficient and prompt service. Always keep your shelf bottles well filled. Many of the public judge your stock by the amount your shelf bottles contain. When you dispense from a salt mouth bottle, always shake the contents of the bottle to the front when you replace it on the shelf. This gives uniformity and a fuller appearance.

It is a good idea to have a special label printed to put on filled prescriptions with a wording similar to this: "This prescription was filled and checked by a registered pharmacist. The quality of the ingredients is guaranteed." Mr. Blank, Pharmacist."

It is a good idea to have a special envelope to put family recipes in when you return them. On this envelope may be two blank lines. On the first may be written the name of the cure and on the second the name of the owner. Then follow with something like this: "This was filled last at Blank's drug store and we would like to fill it again." Usually the customer keeps this heirloom recipe in the envelope and when he wants it refilled your name suggests the place to get it filled.

Keep your window clean and well filled. Study the show window. Be original if you can in dressing it. Don't be afraid to spend time and money in window decoration. Always display seasonal goods. Advertise one idea at a time and change the display at least once a week. I find it profitable to correspond with progressive druggists and exchange ideas on window displays and other advertising. Always bear in mind the psychological law that first impressions are strongest and most lasting. The public can judge you and your store from your window displays.

Until the city council compelled me to remove it I used a black board in front of the store. This is a splendid thing. Like everything else, it must be a good one and well kept. The one I used was two boards thirty inches wide and five feet long fastened at the top with strap hinges. This was slatted with the best slating and renewed every two weeks. On this board appeared every morning by seven o'clock the date, weather indications and a seasonal advertisement. It is a good ad. and I advise all to try it where they will allow you to have a board on the sidewalk. It takes a good deal of work and time to do it right, and do not attempt it unless you can do it right. If changed every day people will always read it.

Always speak well of your competitor and his goods if you say anything. Better be friendly. Be charitable to him to the extent that you let him have the advertising space on programmes, hotel registers, city directories and the advertisement on the elephant.

Then I am addicted to one mean advertisement, namely: When I open my mail I save my envelopes and when I go to the country I drop them along the road with some advertisement in them. I have seen people jump out of buggies, roll off their bicycles, etc., to pick them up. Can't say what kind of an impression it makes.

I have furnished bakeries and dairy men with bread and milk checks. I have furnished the paper caps for milk bottles on which I stamp my advertisement. I have a receipt for sugar curing meat which I give the farmers at the proper season of the year, on which I advise them the success of the formula depends a great deal on the quality of the black pepper and salt petre used and that I had provided myself with the purest. This brings a good demand for black pepper and salt petre. I have a chart or folder that tells when, how and what to use to spray fruit trees, rose bushes, etc., which I distribute in season. I find the farmers retain them and my trade on insecticides increases.

I have put board signs in the country, painted signs on fences and buildings, but have abandoned this the last few years because it is too expensive for a druggist. I have used the metallic signs, men and darkies, and I regard these poor and expensive. I have used the muslin sign, 13x17 inches, with best of results. They are cheap, can be tacked on trees, fences and buildings and they can be put up cheaply. Fortunately in my county I am the only one who uses cloth signs.

*Portion of a paper read at the nineteenth annual meeting of the Indiana Pharmaceutical Association, South Bend, June 13-15.

I have bought some from novelty advertising companies, but doubt if it pays. My experience has been confined to fans, knife sharpeners, formulaary hooks, horse blankets and paper napkins. The paper napkins did me the most good. The free distribution of these articles creates some talk and a great number of callers to your store for them, but we must not lose sight of the fact that we want them to call to buy something I believe the public as a whole does not appreciate gifts. This I think is best exemplified in the distribution of calendars which I consider the most extravagant form of advertising. Then there is the newspaper advertising. This is so thoroughly discussed in our drug journals that I will only briefly mention it. The most essential thing in newspaper advertising is change. Never have the same thing appear twice, be it in daily or weekly papers. Some can use locals to best advantage and others display. One year I used display advertisements with illustrated cuts. Then I used plain display and now I use locals only with an occasional display. For me, locals are the best for either daily or weekly.

Be persistent in your advertisements. In writing an advertisement write essentials. Select an article to advertise and tell all about it, its price and where it is for sale in as simple language as you can. Don't try to display your learning, wit or poetry. Be natural. Talk to the people through the newspaper like you would from behind the counter. Always be truthful. Don't deceive. A special edition of a daily newspaper is a good thing. It has always paid me. This is the way it is done: A dry goods, clothing, shoeman and druggist go together and have a special edition of your daily paper run and exclude all advertisements except that of the four. Allot so many columns for advertisements and each pay in proportion to columns used. In our town we get 5,000 special papers for \$30 and this number will reach the head of every family in the county. You can get a list of names from the postmasters or from the assessor's sheets. Divide the papers among the four stores and you can address them as fast as they come from the press. To conform to postal regulations you are required to mark them sample copy. This way you reach every family in the county, and then your readers do not have your competitor's advertisements with which to compare yours. Always take all the standard patent medicine advertisements you can get, provided you do not have to overstock yourself on their remedies.

THE INTRODUCTION OF PARIS GREEN AS AN INSECTICIDE.—At the time this substance was introduced the best insecticides in use were the various forms of soap, tobacco, quassia chips, carbolic acid and hellebore, although the last was a comparatively new remedy and came into general use at about the time of the imported currant worm in the late fifties. The spread of the Colorado potato beetle into the Eastern States between the years 1850 and 1872 started a great deal of experimental work in regard to remedies, and Paris green was first used at some time early in the sixties. The name of the first man to use it is not known, but by 1868 it was being used by several persons. The editors of the American Entomologist (July, 1869) recommended it confidently as a result of experiments tried both in 1868 and 1869, and in the former year Mr. J. P. Wilson, of Illinois, took out a patent for one part Paris green and two parts mineral paint, to be used to kill potato bugs. The use of Paris green against the cotton caterpillar seems to have been first suggested by C. V. Riley at the St. Louis meeting of the National Agricultural Congress in 1872, although in January, 1871, T. W. Mitchell, of Texas, secured a patent for the use of a solution of arsenic against this insect. Its extensive use against the cotton caterpillar has been a great boon to the cotton planters of the South. In 1872 Dr. Le Baron recommended the use of Paris green against the Spring cankerworm, which was abundant that year. This was the first recommendation for its application to fruit trees.

Shaving Cream.

Naples soft soap.....	4 ounces
Lanolin	½ ounce
Alcohol (90 per cent.).....	½ ounce
Perfume	q. s.

Mix the soap and lanolin with the alcohol in a mortar, then add the perfume.

(Special Correspondence).

ENGLISH PHARMACEUTICAL NEWS.

London, June 15.

Doctors' Shops.—More or less over the United Kingdom but especially in Scotland, the practice prevails of doctors keeping chemists' shops which they often leave in charge of unqualified persons. In Lintnathow Sheriff Court on May 25, Kate Robertson, an unqualified person in charge of the shop of a Dr. Scott, was fined 47s. for illegally selling tincture of opium.

A Curious Will.—On May 30, in the Chancery Court, the will of the late Mr. Alfred Fenning, the proprietor of Fenning's Powders and other proprietary medicines, was the subject of legal consideration. Mr. Fenning left a considerable fortune, and at his death 126 envelopes were found addressed to various persons, some sealed and some unsealed. The unsealed packages contained checks in favor of the persons to whom the envelopes were addressed and the sealed packages were supposed to contain similar documents. The executors asked, for their own protection, for directions as to the disposal of these envelopes and their contents. The court declared that the contents of the open envelopes must go into the testator's estate, as the act of gift had not been completed, and it was also decided that the sealed envelopes should be opened by the executors. Power was also given to the executors to carry on the various proprietary medicine businesses.

Brunner, Mond & Co., Limited.—Sir John T. Brunner presided over the annual meeting of this company on May 30. A most successful year's trading was reported and a dividend of 35 per cent., 5 per cent. more than last year, was declared on the ordinary shares. The reserve fund now stands at £56,100. The business of Bowman, Thompson & Co., has been taken over. The retiring directors were re-elected. Brunner, Mond & Co. are the largest alkali manufacturers in the world.

The Chemists' Defence Association.—On May 31 the first case taken up by the Chemists' Defence Association was heard in the Court of Queen's Bench. It was a case under the Sale of Food and Drugs Act and was taken up because of its importance to the trade, although the defendant was not a chemist and druggist. It appeared that an inspector under the act had purchased from a small shopkeeper at Linton six twopenny bottles of camphorated oil. The act enjoins that every article so purchased should be divided into three parts, one part to be left with the seller, one part to be given to the public analyst for analysis and one part kept for reference. The inspector, however, performed the division by leaving two bottles with the seller and so on. The magistrates who first heard the case declared that this did not comply with the act. The inspector appealed and the C. D. A. took up the respondent's case. The High Court has upheld the magistrate's decision, saying that each bottle was an article and must be separately divided into three parts.

Pharmacopœia matters also came in for a large share of attention, the Pharmacopœia Committee reporting that 31,500 copies of the B. P. 1898 had been printed and 28,782 sold. The Belgian Minister had approached the British authorities with a view to a conference to consider the question of an International Pharmacopœia limited to powerful drugs. It was suggested that delegates be appointed to such conference. The United States authorities had also been approached with a view to bringing about greater uniformity in regard to the preparations of the B. P. and the U. S. P., and it was hoped that by mutual concessions important approximations in the contents of the two works might ultimately be secured. It was hoped that a draft of the Indian and Colonial addendum to the Pharmacopœia would be ready for presentation at the next meeting of the Council in November. A valuable collection of British and foreign works dealing with Pharmacopœia construction had been got together, mainly through the efforts of Dr. Leech, Mr. Bryant, Mr. Ekin and Mr. Walter Hills, (the two last named are prominent pharmacists). An important report from Dr. John Attfield, the editor of the Pharmacopœia, dealing with the progress of the work in connection with the Indian and Colonial addendum was attached to the main report, and the report as a whole was adopted by the Council.

PHARMACEUTICAL CELEBRITIES.

THE BIG FOUR.

The principal reason for having this illustration made in two parts is that we might jump at once into the middle of the subject. This is a literary expression, and not to be construed literally. These four men look anxious. That is because they are "havin' their pickers took," and because they preside severally over the fortunes of the four important organizations of retail druggists in Greater New York, which is enough to make anyone look anxious. But this facial expression of perturbation is really only a bluff, the four associations being so successful and harmonious that official positions in them are veritable sinecures.

The gentleman on the left is Charles F. Schlessner, president of the German Apothecaries' Society, called for short Der New Yorker Deutschen Apotheker Verein. He is a German, his name indicates that.

The gentleman in black, in attitude of studied coyness, is J. Weinstein, president of the New York Retail Druggists' Association. His name has a Teutonic flavor; the artist evidently thought he was a German, also; at any rate, he is the next thing to one. The Rhine wine supports this supposition; but, adopting this reasoning, the other two individuals evidently have leanings in the same direction.

Number Three, he in the effulgent raiment, is Reuben R. Smith, president of the Manhattan Pharmaceutical Association. He may be of shorter stature, physically, than the others, but mentally, oh, my! The cigar is drawn large, not because Mr. Smith uniformly smokes weeds of such

obesity, but to indicate one of his leading characteristics; he knows a good thing when he sees it, and wants as much of it as he can get.

Oscar C. Kleine, Jr., at the extreme right, is new to official honors, but recently having been elected to the presidency of the Kings County Pharmaceutical Society. But he doesn't look worried, does he? He has apparently one German trait, his affection for the leaf *Nicotiana tabacum*, though the artist possibly has unintentionally libeled him in this particular.

This "Big Four" is the "real thing." The four associations have an aggregate membership of nearly a thousand of the best druggists in this city. They are fraternal in feeling and action, exerting a not-to-be-underestimated (Germanism) influence in pharmaceutical politics, a healthy and progressive influence. The interests of pharmacists are well safe-guarded and furthered in all that works for professional and commercial advancement. There is no rivalry but healthy rivalry between them. The gentlemen here greeting you are mighty good fellows professionally and socially, and the conference in which they are depicted is not mere artistic license, but pictures things as they are. There are only one bottle and three glasses on the table, (the artist was stingy), but if you will join the presidents in mutual health and prosperity toasting, there will be forthcoming an elegant sufficiency of both bottles and glasses.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Liquor Ferri et Ammonii Succinatis.—(G. P. H.) See this journal, June 14, 1900, page 643.

Tared Capsule.—(W. S. A.) A "tared capsule" is a capsule whose weight has been previously ascertained. In connection with the operation of weighing the term "tare" is used to indicate the weight of the empty vessel (dish, bottle, box, jar, etc.) in which the substance is to be weighed. For the derivation of the word see one of the larger dictionaries.

Elixir Terpin Hydrate with Heroin.—(U. M. F.) Try the following: Terpin hydrate, 128 grains; saccharin, 2 grains; alcohol, 6 fl. ounces; glycerin, 2 fl. ounces. Dissolve by the aid of heat, then add heroin, 5 1/2 grains, previously dissolved in 8 fl. ounces of simple elixir. Solution of the heroin is readily effected by the addition of a few drops of acetic acid. Each fluid dram of this elixir contains 1 grain of terpin hydrate and 1/24 grain of heroin.

Testing Baking Powder.—(F. R. D.) There is no simple test for baking powder. The methods of analysis usually followed are directed toward determining the "strength" of the powder or its yield of carbonic acid gas, and its composition so far as to indicate the nature of the chief active constituents, etc. For an outline of these methods, tests, etc., see Bulletin No. 13 (Part V., Baking Powders), published by the United States Department of Agriculture, Washington, D. C.

Subjects Covered by New Jersey Board of Pharmacy.—(Dr. M.) The examination embraces pharmacy, materia medica, chemistry, toxicology, pharmacognosy and practical exercises. An average of seventy-five per cent. is required for passing. Every applicant, whether a graduate of a college of pharmacy or not, must pass the examination in order to become registered. The next regular meeting for examination will be held in Trenton July 19 and 20. For more specific information address the secretary, Henry A. Jordan, Bridgeton.

Toilet Ammonia.—(K. P. S.) Some formulas for "violet" ammonia are given in the Era of May 3, 1900, page 474. Similar formulas may be constructed for perfuming ammonia with heliotrope essence or a solution of heliotropin. Here are two formulas: (1) Oil of bergamot, 20 minims; coumarin, 1 grain; heliotropin, 1 grain; cologne spirit, 1 dram; stronger water of ammonia, 2 fluid ounces. (2) Extract heliotrope, 2 fluid ounces; extract cassia, 1 fluid ounce; cologne spirit, 14 fluid ounces; spirit of ammonia, enough to make 16 fluid ounces.

Spotting Cigar Wrappers.—(Maduro.) See this journal April 13, 1899, page 477. Here is a formula for a process published some time ago in "Meyer Brothers Druggist": Place two ounces of finely powdered ammonium carbonate in a shallow dish and pour upon it 16 fluid ounces of solution of hydrogen peroxide; effect a solution of the salt by stirring, and by the use of a small whisk broom scatter the mixture upon the leaf and let dry.

When the above is put up for sale, place the ammonium salt in a glass bottle well stoppered, bearing a label with directions to mix with the solution which is in a separate bottle. Care must be taken that the hydrogen peroxide solution is of full strength.

Furniture Polish.—(Scrant.) We cannot give the formula of the furniture polish, a sample of which you submit. It contains gasoline, linseed oil and some other substances. Here are some formulas which have been recommended: (1) Linseed oil, 2 pints; vinegar, 6 ounces; benzine, 3 ounces; muriatic acid, 1 ounce; alcohol, 2 ounces. Mix in the order given. (2) Raw linseed oil, 32 fluid ounces; alcohol, 8 fluid ounces; dilute acetic acid, 8 fluid ounces; spirits turpentine, 8 fluid ounces; solution of chloride of antimony, 2 fluid ounces. (3) Resin of guaiac, 1 ounce; benzoin, 1 ounce; shellac, 1/4 ounce; raw linseed oil, 1 1/4 fluid ounces; benzine, 1/2 fluid ounce; alcohol or wood alcohol, 24 fluid ounces. Mix and dissolve. The polish is applied with a sponge or brush where it is allowed to remain a half hour. A linen cloth moistened with oil is then used as a rubber and a brilliant polish is obtained which is said to be very lasting and to be unaffected by water or any substances which usually injure varnish.

LATIN NAME FOR CORN SMUT.—Arthur and Stuart (Report Ind. Agri. Exp. Station), in a study of the causation of corn smut state that the earliest mention of this fungus in European literature is at least 150 years subsequent to the introduction of corn into Europe, and in American literature it is three-quarters of a century later. In order to settle the question of the correct name of the fungus, and to find the earliest Latin name used in connection with a description identifying it, which by rights, and in accordance with rules now generally followed by botanists, should be recognized as the correct name, search was made through the early literature, especially in the universities of Bonn and Berlin, and more successfully in that of the British Museum. The name, as it should now stand, is, *Ustilago Zeæ* (Beckmann) Ung. The form heretofore most often used is *Ustilago Maydis*, which has usually been credited to Corda, but not infrequently to De Candolle, Tulane or Leveille, all botanists of note, who made important contributions to the subject. The following list of Latin names applied at various times to corn smut, together with the citation of the works in which they were first published is submitted. The list may not be complete.

Ustilago Zeæ (Beckmann) Ung.

Synonyms:

- 1708.—Lycopodon Zeæ, Beckm., Hannover, Mag. 6:1390.
- 1815.—Uredo segetum Mays-Zeæ DC. Fl. France 3:596.
- 1818.—Uredo Zeæ-Mays DC. Encyc. Meth. BoBt. 8:227.
- 1815.—Uredo Maydis DC. Fl. France 6:77.
- 1822.—Uredo Zeæ Schw. Schriften d. nat. Ges. 1:71.
- 1825.—Caeoma Zeæ Link, Linne Sp. Plant. 2:2.
- 1823.—Erysis Maydis Waalr. Fl. Germ. :215.
- 1836.—Ustilago Zeæ Ung. Einfl. d. Bodens. :211.
- 1842.—Ustilago Maydis Cda. Icon. Fung. 5:3.
- 1847.—Ustilago Schweinitzi Tul. Ann. Sci. Nat. III. 7:83.
- 1881.—Ustilago Zeæ-Mays Wint. Rabh. Krypt. Fl. 1:67.
- 1895.—Ustilago Mays-Zeæ Magn. Deutsch. Bot. Mon. 13:50.

Drugs stores have been sometimes very numerous in places where the saloon has been "put down." This must be admitted. In such a New England town a gentleman wished to get some burnt alum. He went to a drug store whose proprietor was once a saloon-keeper, but who gained possession of a druggist's license by employing a registered man as clerk. When the gentleman dropped in to get the burnt alum the registered man was out and the ex-saloon-keeper stood behind the counter. The customer walked up to the counter and told him he wanted 25 cents worth of burnt alum. "I haven't any," replied the proprietor of the drug store. The customer was about to leave when he spied a bottle on the top shelf of a case. He turned to the drug store keeper and said, "Why, yes, you have. There is a bottle full on the top shelf." "Well, if there is a bottle full on the top shelf it is going to stay there," retorted the drug man. "Sure, if I sell that I'll have to get some more."—(N. E. Drug.)

The German Patent Office has truck out the words "Lanolin" and "Lanolinum" from the register of trademarks. The words will for the future be free to use in Germany.

Notice to Students of the Era Course.

EXAMINATIONS.

As all students of the Era Course know, the examinations are now in full swing. The quiz master is actively engaged in grading and comparing the papers received, and the prizes will be announced to the successful candidates from time to time as the awards are made. The work of grading will require from two to three weeks.

As heretofore, the prizes will be divided into General and Special, or prizes for general excellence in all subjects and for special excellence in particular subjects, since this arrangement gives the greatest number of chances to the greatest number of students.

In deciding upon the names to which awards of prizes will be made, the same rules will govern as heretofore.

RULES.

- (1) Every student of the Era Course will be considered a contestant unless he expressly advises us to the contrary.
- (2) Students not able to send in the required number of recitations and examinations before the close of the Spring term may forward them any time during the Summer vacation. They will not, however, be graded or returned to the student until after the opening of the next Fall term.
- (3) Satisfactory recitations and examinations are those upon which the student receives a grade of not less than seventy-five per cent.
- (4) The ratings will be taken from the quiz master's official records, on file in the office of the Director, and from the examination papers received from students.
- (5) In determining the general average ratings, the first and most important factor will be the accuracy and excellence of the answers.
- (6) In the event that two or more students shall receive the same rating as determined by the preceding rules, then the following additional factors shall be taken into consideration in order to determine which shall be entitled to precedence: Spelling, composition and correct use of English, penmanship and use of capitals.

HONORABLE MENTION.

In addition to the prizes granted, the names of the fifty students in each class, Junior and Senior, whose grades are highest for the year will be included in the list of Honorable Mention.

GRADING RECITATIONS.

Students should remember that in determining standing the work of the entire year is taken into consideration, so that the members who have been most attentive to their studies throughout the term and have been the most regular in sending in their recitations and examinations will have these counts in their favor as against those who have been irregular, inattentive and careless in their work.

It should also be remembered that not every student who thinks he should have a prize will receive one. As long as there is not a prize for every member of the class, some will always feel disappointed.

Past experience has shown that the earnest student who works from pure love of study and a desire to become a master of his subject is more frequently found among the prize winners than the one who works with no other end in view than the attainment of the honor and distinction conferred by the award of a prize. Oftentimes students complain that since they have answered questions in the exact words of the lectures, they certainly should have a grade of 100 per cent. As a matter of fact, the use of the exact language of the lectures is the best evidence that the student is not deserv- ing of high grade. The highest evidence of sound scholarship is that afforded by the recitations which show upon their face that the student is so thoroughly imbued with his subject that he is able to give an intelligent account of it in his own language. Recitations of this character deserve and receive the highest grades.

THE "TRIP PRIZES."

Some weeks ago a vote of the students was taken to determine whether the two trip prizes offered to students should be to Paris or to some of the great natural scenic portions of the United States. The vote showed a preference of over three to one in favor of the home trip. Nevertheless, to avoid disappointment, it has been decided that in case these prizes or either of them should fall to those who selected the Paris trip, their wish will be gratified, as it is a matter of indifference to the publishers which be taken, the cost being practically the same in each case.

VACATION.

While the summer vacation properly begins June 14, in order to accommodate belated students, the quiz master will remain at his desk until the close of the second week in July.

DELATED STUDENTS.

Remember that students who are in arrears either in recitations or examinations can send them in any time during the summer and they will be examined and graded after the quiz master's return to his duties at the beginning of the Fall term.

By keeping the foregoing facts in mind, students may save themselves and the Director much needless correspondence.

PASSING GRADES.

In order to be entitled to a diploma, members of the Senior Class must make satisfactory recitations upon forty-five Senior Lectures and pass a satisfactory examination.

Junior students to be advanced to the Senior Class must make satisfactory recitations upon forty-five lectures and pass a satisfactory examination upon the work of the Junior year.

As previously stated, both Juniors and Seniors may send in recitations and examination papers until the opening of the Fall term.

THE REVISED ERA COURSE.

During the summer the Director and his assistants will give the Era Course a complete revision. The changes will be the most important of any that have been made since the Course was organized and will doubtless add greatly to its popularity and usefulness.

Watch the Era for announcements.

The prizes so far as they have been determined upon are as follows:

GENERAL PRIZES.

Awarded for excellence in all subjects.

SENIOR CLASS.

First Prize.—"The Pharmacist's Library," consisting of one copy each of the United States Dispensatory, Remington's Practice of Pharmacy, Lippincott's Medical Dictionary, and Sadtler & Trumble's Chemistry. Presented by the J. B. Lippincott Co., Philadelphia.

Second Prize.—Handsomely engraved silver medal. Presented by The Pharmaceutical Era.

Third Prize.—Coblenz's Handbook of Pharmacy. Presented by P. Blakiston's Son & Co.

Fourth Prize.—One copy of Lyons' New Synonym Book. Presented by Nelson, Baker & Co., Detroit.

JUNIOR CLASS.

First Prize.—Handsomely engraved gold medal. Presented by The Pharmaceutical Era.

Second Prize.—National Dispensatory. Presented by Lea Bros. & Co., Philadelphia.

Third Prize.—Caspari's Treatise on Pharmacy. Presented by Lea Bros. & Co., Philadelphia.

Fourth Prize.—Lyons' Assay of Drugs. Presented by Nelson, Baker & Co., Detroit.

SPECIAL PRIZES.

Awarded for excellence in particular subjects.

PHARMACEUTICAL PHYSICS.

First Prize.—Handsomely engraved "Loving Cup." Presented by James W. Tufts, Boston.

INORGANIC CHEMISTRY.

First Prize.—Prescription Scales. Presented by Whitall, Tatum & Co., New York.

OPERATIVE PHARMACY.

First Prize.—Finely engraved gold medal. Presented by William R. Warner & Co., Philadelphia.

MATERIA MEDICA.

First Prize.—Cabinet of Materia Medica. Presented by Parke, Davis & Co., Detroit, Mich.

OFFICIAL PREPARATIONS.

First Prize.—Hoffman & Power's Analysis of Medicinal Chemicals. Presented by Lea Bros. & Co., Philadelphia.

ORGANIC CHEMISTRY.

First Prize.—One copy of Prof. J. U. Lloyd's celebrated literary work, "Etidiorpha." Presented by the author.

PHARMACEUTICAL BOTANY.

First Prize.—One copy of "The Art of Compounding." Presented by the author, Prof. Wilbur L. Scoville, Boston.

PHARMACEUTICAL MICROSCOPY.

First Prize.—One copy of "The Era Formulary." Presented by The Pharmaceutical Era.

THE DIRECTOR.

Grand Old Staples.

The preparations of the J. C. Ayer Co. have been before the American people for more than an average lifetime. If your father and grandfather were druggists, it is more than probable that the names "Ayer's Cherry Pectoral," "Ayer's Hair Vigor," "Ayer's Sarsaparilla" were as familiar to them as they are to you. Think for a moment of the wrecks that line the pathway of even the past ten years. Then consider what it means to have attained the age of these fine old remedies.

It means, first, intrinsic value of the highest order—articles the value of which depends solely on the way in which they are advertised do not live to grow old.

It means a strong and steadfast purpose to do always the best thing that can be done—honesty is the best policy, besides being the decent thing.

You want to sell goods that will build up your business instead of tearing it down. Two classes of goods work distinctly and positively in these two ways. To sell a man something that he can feel is of full value for his money and that does for him what he wants done is to tie a string to him that will pull him back to you when he wants the same thing again—or another thing that he knows you keep. We want to help you to build your house, and we invite correspondence on any matter of mutual interest.

Our goods are so widely known and advertised that they are very easy to sell. Your jobbers will always be glad to supply them.

THE J. C. AYER CO., Lowell, Mass.

Ayer's Hair Vigor, \$1.00 size only; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00, 25c. size is a very rapid seller; Ayer's Pills, 25c., more for the money now than ever; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of Pills free; Ayer's Ague Cure, 50c. now, new and improved; Ayer's Cherry Pectoral Plasters, 25c., "they take the ache."

A new world-beater coming soon — Ayer's Comatone

THE

'ALLENBURYS' FOODS.

A PROGRESSIVE DIETARY.

Adapted to the growing digestive powers of the Infant.

- The "Allenburys" Milk Food No. 1. For the first three months of life.
- The "Allenburys" Milk Food No. 2. For the 3d three months of life.
- The "Allenburys" Malted Food No. 3. For Infants over six months of age.

Other SPECIAL PREPARATIONS of
Allen & Hanburys Ltd.:

BYNO-HYPOPHOSPHITES.

An analogue of the Compound Syrup of the Hypophosphites, in which Bynin, an active digestive Malt Extract, replaces inert sugar.

BYNOL, the "Perfected" Malt and Oil.

Free from taste or odour of Cod Liver Oil.

BYNIN, Liquid Malt.

The Perfection of Malt Extracts.

Price List and Literature from U. S. A. branch.

CASTOR OIL, A. & H.

Quite odorless and free from nauseous taste. Of full medicinal activity.

COD-LIVER OIL, the "Perfected."

By Special Process. The only oil which does not "repeat."

THROAT PASTILLES.

In over 20 formulae. Soft, demulcent, and palatable.

Allen & Hanburys, Ltd., London, Eng.

ESTABLISHED A. D. 1715.

U. S. A. Branch—82 Warren St., New York.
Canada—W. Lloyd Wood, Toronto.

Keep Your Stock Fresh.

This can be done without any expense or loss to yourself, as we stand ready to replace all

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

China.

The disturbances in China are still most serious in Peking, Tien-Tsin and the region between. Nearly all of last week Peking and Tien-Tsin were cut off from communication with the rest of the world and the most alarming reports of the massacre of foreigners by the Boxers prevailed. Tien-Tsin was bombarded by the Chinese and the American consulate and other foreign buildings were destroyed. The Taku forts fired on the foreign warships after the foreign admirals had ordered them vacated last week, and the foreign warships bombarded them and took them by assault.

Many vague reports of the death of the Chinese emperor, the suicide of the Empress Dowager, the overturn of the Manchu dynasty and other rumors were current last week, but could not be confirmed.

Among other rumors discredited in London is one that Admiral Seymour, commanding the international relief column, has been killed at the Chinese capital. The Chinese minister at Washington continues his confident declaration that there is no state of war existing. The State Department holds to the same view, basing its position on the absence of authentic information showing that the Chinese Government has directed or been party to any of the overt acts so far committed against the foreign interests in China.

The Ninth Regiment has been ordered from Manila to Taku and General MacArthur has been asked how many more troops he can spare in case the Chinese imbroglio becomes more serious.

The American minister at Tokio telegraphs that two transports with 1,300 men and 300 horses have sailed from Japan for Taku; that 400 Japanese troops have already landed and that five Japanese war vessels are at Taku. The Japanese Government is prepared to send more forces if necessary.

Under orders from the United States authorities, the American fleet in the Far East, when reinforced by war ships ordered to Taku will have a force nearly equal to that of any of the great powers already there, and Admiral Kempf has discretionary authority to act conjointly with the other nations in the protection of all American interests that may be involved.

Secretary Hay has been notified by the Russian Embassy at Washington that 4,000 Russian troops have been dispatched from Port Arthur to Taku.

The French Government will dispatch a cruiser division and 4,200 troops to China.

The fitting out of the Japanese battleship Asahi, of 15,200 tons, at Clyde Bank, Scotland, is being hurried and she is under orders to sail within a week.

The Netherlands Government has instructed the Governor General of the Dutch East Indies to dispatch a war ship with troops to China.

South Africa.

General Buller's forces are advancing westward along the railway from Laining-Nek to Johannesburg, many burghers surrendering rifles and horses on the way.

Despatches from Lorenzo Marquez reiterate the statement that Secretary of State Ritzel, of the Transvaal Republic, sailed for Europe recently on a Dutch warship.

Lord Roberts reports to London that General Hunter has occupied Kruger's (west of Johannesburg) without opposition, and that General Methuen, June 19, routed a Boer force which was opposing his entry into Heilbron, in the Orange River Colony.

Lord Kitchener may have been notified from capture by the Boers last week by fleeing on horseback for a relief train.

Lord Roberts reports that all is quiet in Pretoria and Johannesburg, with business resuming its normal state.

A steamer cleared last week from New Orleans for Cape Town with 1,000 horses for the British Government.

A proclamation has been issued by the Governor of St. Helena forbidding, during the continuance of the war in South Africa, persons to land on the island.

It is reported that President Kruger is in a feeble condition.

The Philippines.

The President has caused General MacArthur to issue a proclamation to the Filipinos offering them complete amnesty if they surrender and recognize American rule. Each one will receive free transportation to any part of the islands and will be paid \$27 for his rifle.

The same day that the amnesty proclamation was given out 200 Filipinos who have been active in leading and aiding the insurrection met in Manila to devise honorable methods for securing peace. Their main requisites are that the insurgent leaders be given good positions and that the friars be expelled from the island.

Commander F. P. Gilmore has been detached from command of the Luzon at Cavite and ordered home for retirement.

Fifteen hundred recruits for the regular army in the Philippines are now being enlisted at two points in New York harbor and Columbus barracks, Ohio, to sail on the transports Buford and Kilpatrick about the first of November to take the places of enlisted men whose terms of service will expire this year.

The transport Thomas has sailed from San Francisco for Manila with 400 recruits and officers and a large cargo of supplies.

Other Foreign Affairs.

Gold has been discovered in Jamaica. The sudden death of Count Muraviev, Russian Minister of Foreign Affairs, occurred last week at St. Petersburg.

The Khedive of Egypt is visiting England.

Imperial circles at Berlin are greatly displeased by the course of Bavaria in increasing, instead of diminishing, her special treaty rights with the empire. The latest illustration of this disposition is the appointment of a Portuguese minister at Munich.

Reports from the native rebellion against British rule in Comassie say that Sir Frederic Hodgson, the Governor, was wounded and eight officers killed in recent fighting; the place is closely invested and there is no prospect of relief.

The British Government has approved a movement of German manufacturers for an exhibition of agricultural machinery in Russia as a rival to the American exhibition.

The South Polar expedition promoted by ex-Captain Oscar von Baendhal of Berlin, will sail at an early date from Hamburg.

The Irish Nationalist convention in Dublin last week adopted a resolution condemning the war in South Africa and hoping that the republics would maintain their independence.

The King of Denmark is visiting the Emperor of Germany.

The insurrection in Bulgaria is spreading. Fifty peasants have been killed by the military at Duran-Lekah. The wine jury at the Paris Exposition threatens to bar the American wine brands. Abbe Mareux, the Paris astronomer, has discovered a new spot on the sun and predicts great heat during the months of July, August and September.

DOMESTIC.

Politics.

William McKinley and Theodore Roosevelt were unanimously nominated for president and vice-president by the Republican Convention in Philadelphia; Senator Hanna was re-elected chairman of the National Committee.

The platform adopted by the Republican National Convention declares for the gold standard, for aid to American shipping, for legislation against criminal trusts, for the establishment of law and order in our new lands and the extension of civil government to them as soon as possible. Cuba is promised independence.

Governor Beckham has issued a statement formally announcing his candidacy for the Democratic nomination in Kentucky.

The fight between the Clark and Daly wings of the Democratic party in Montana resulted in two conventions being held last week. Contesting delegations will be sent to the Kansas City Convention.

Other Domestic News.

It is expected that Estes G. Rathbone, the suspended Cuban Director of Ports, will be arrested soon, charged with being implicated in the Neely frauds. Extradition will also be asked for the head of the printing house in Muncie, Ind., accused of sending fictitious bills.

There is now \$3,000,000 in the Cuban treasury. The appeal which was taken in the case of Fitzharris and Mullet, the Poncey Park murderers, detained in New York by the immigration officials, has been decided against them and the men sailed last week for England.

A constitutional convention will be held in Cuba shortly to prepare the way for independence.

The strike situation in St. Louis seems to be more quiet. The strikers intend to resort to a boycott. A conference of the authorities last week in regard to discharging the sheriff's posse resulted in a decision to keep it on duty until after the Fourth of July at least.

President Henry Wade Rogers, of Northwestern University, has been forced to resign on account of his anti-expansion views.

The amount of bonds exchanged to date at the Treasury for the new 2 per cents. of 1930 is \$300,000,000, of which \$73,218,550 were received from individuals and institutions other than the national banks.

Fire at Bloomington, Ill., last week, destroyed the County Court House and five blocks of business buildings. The loss is estimated at from \$1,500,000 to \$2,000,000.

A statement from the Division of Customs and Consular Affairs of the War Department shows a decrease of \$855,027 in the exports from the port of Havana, Cuba, for the first five months of 1900, as compared with the same period of 1899.

The gas trust in New York City has advanced the price of gas to \$1.05 per thousand feet.

Brigadier-General Joseph Wheeler received his commission last week from the President and was assigned to the command of the Department of the Lakes with headquarters at Chicago.

N. A. R. D. NOTES.

Chicago, June 23.

Preparations for entertaining the delegates to the Detroit Convention of the N. A. R. D. are receiving attention. The following, extracted from a letter of Secretary Charles F. Mann, of the Detroit and Wayne County Retail Druggists' Association, will be of interest: "Our local association met a week ago to-day, and selected delegates to the N. A. R. D., and also appointed a committee on entertainment. Our plans to be offered to you will be about as follows: The D. and W. R. D. A. will tender the N. A. R. D. a boat ride in the afternoon; Messrs. Parke, Davis & Co. will tender a banquet to the N. A. R. D., and the local druggists in the evening. Arrangements will also be made to allow the delegates an opportunity to see P. D. & Co.'s laboratory in the afternoon. We would like to work this in on the second day. We don't propose to take 'No' for an answer on this question, and hope the Executive Committee can see its way clear to peacefully accept our terms. This I realize takes away from the work can be so arranged that you may still get through with your time, but realize that there is not much to spare. I assure you the delegates will be well pleased with what we can do for them if they will only give us the chance."

The Connecticut Pharmaceutical Association at its twenty-fourth annual convention, enthusiastically endorsed the N. A. R. D. The sentiment of Capt. J. K. Williams, of Hartford, that "the Connecticut Association is determined to support loyally the National Association in any policy it might adopt" was heartily applauded. The following resolutions were adopted:

Whereas, the N. A. R. D. has satisfactorily demonstrated its ability to advance the business interests of the retail drug trade and thereby improve its financial interests; therefore, be it

Resolved, That the Connecticut Pharmaceutical Association pledges anew its support of the principles and policies of the N. A. R. D.

Resolved, That the treasurer of this association is hereby directed to pay to the treasurer of the N. A. R. D. the amount of the per capita assessment levied on affiliated bodies for the fiscal year ending December 31, 1900.

Resolved, That the president of this association be directed to appoint delegates to the annual convention of the N. A. R. D. at Detroit, September 12 to 14, 1900.

JOHN W. LOWE,
CHAS. FLEISCHNER,
JAMES DUGGAN,
Committee.

The treasurer will, it is expected, forward the dues of the association at once.

Mr. E. B. Heinstrat, secretary of the Wisconsin Board of Pharmacy, writes, with reference to the formation of a number of new county associations in his State, as follows: "It was always my idea that we should have: First, a good State association; second, district associations; third, county associations. The county sends delegates to the district associations, and they to the State association. In this way we could draw them all in. Already the work I have done has more than repaid, for as soon as a county society is organized they commence to look out, both to see that the pharmacy law is enforced and that legitimate prices are maintained. These county societies I have organized myself, and I shall continue the work as far as I can. If there is

The commerce of the United States for the fiscal year closing this month will be the heaviest on record. The exports will probably amount to \$1,400,000,000. Imports have also been heavy.

General Rodriguez, Nationalist, was elected Mayor of Havana in the recent Cuban election, polling 15,073 votes against 4,331 for Senor Mora, present mayor. Perfect order prevailed at the polls throughout the island and the people seemed to be indifferent to the result.

Governor General Wood telegraphs from Havana: "Reports from all over the island show that the elections were orderly and peaceful. Not a single disturbance was reported. Nearly the entire registration voted. All reports indicate satisfaction. Major-General Wesley Merritt has reached the age limit and will be retired."

anything you wish to bring before our State association at its meeting in September, I will help all I can, as I shall have plenty of time to look after these matters, and my heart is in the work just as much as when I was an officer in the association."

The following account of the meeting of the Missouri Pharmaceutical Association, held last week, was sent by Chairman Holliday, who was present, to the N. A. R. D. Executive Committee: "The Missouri State meeting was the largest and best for several years. They are with us heartily. The council ordered the treasurer to pay the N. A. R. D. dues, and as they have the money in the treasury, it ought to be sent in promptly. Four members were present who attended the St. Louis meeting—Love, of Kansas City; Fleischman, of Sedalia; White, of Webb City, and Brandenberger, of Jefferson City, and we should have a number of new local organizations as a result of the meeting."

Ex-Secretary Carl Brenner, of the Mahoning Valley, Ohio, Druggists' Association, writes under date of June 13: "Last Thursday our association held a meeting, and we had present with us organizer E. R. Cooper and Mr. L. C. Hopp, of the Northern Ohio Druggists' Association, also Mr. Harper, of Akron. The meeting was held at Warren, Ohio, and was preceded by a banquet. Our association, both as a body and individually, joined the N. O. D. A. The following officers for the ensuing year were elected by the Mahoning Valley Association: President, C. H. Krauter; vice-president, D. G. Lewis; secretary and treasurer, L. H. Thayer."

Chairman Thomas Stoddart, of the National Legislative Committee, writes: "I am very grateful to learn that the Chicago druggists are using their best efforts to have Hon. H. S. Boutelle returned to Congress. He made a grand plea in our behalf." The committee will take steps to see that the interests of the N. A. R. D. are cared for when the Ways and Means Committee meets during vacation, as has been authorized by Congress.

The Florida Pharmaceutical Association held no meeting this year, and it has held none for three or four years. The N. A. R. D. has an active subordinate association in Jacksonville, and, using this as a nucleus, the National Association hopes to rehabilitate the Florida Association next year. There is little price cutting in the State, and the drug trade is in a fairly prosperous condition.

Six State pharmaceutical associations will hold their meetings in July. The dates and places of meeting are as follows: Iowa, 10-12, Clear Lake; Maine, 11-13, Portland; Virginia, 17, Ocean View; Illinois, 17-19, Chicago; Tennessee, 18, Kingston Springs; North Carolina, 18-19, Wilmington.

Treasurer Heller has received donations from each of the following members of the Pharmaceutical Association of South Carolina: Frank M. Smith, Charleston; W. R. Zemp, Camden; Edward S. Burnham, Charleston, and W. L. De Pass, Camden.

The most recent additions to the membership of the N. A. R. D. are the Fort Wayne (Ind.) Retail Druggists' Association, the Medford (Mass.) Retail Druggists' Association, and the Elmira (N. Y.) Retail Druggists' Association.

THE DRUG NEWS.

New York and Vicinity.

DRUG CLERKS ELECT OFFICERS.

An interesting meeting of the Pharmaceutical Clerks' Association of Greater New York was held in the New York College of Pharmacy Wednesday evening, June 20, when officers for the year were chosen as follows: President, C. W. Dietz; vice-president, C. F. Dyna; treasurer, Alexander Deutschberger; secretary, N. Cohn; registrar, E. P. Wendler. There were several candidates in the field for some of the offices, but the contest was pleasant and the best spirit prevailed. The amendment to the by-laws, proposed at the meeting in May, to reduce the number of vice-presidents from five to two, was brought up and carried. One new member was elected, Adolph Werner, of No. 1247 Third avenue. The association unanimously endorsed the proposition to have an amendment made to the pharmacy law of the State requiring graduation from a college of pharmacy as a prerequisite for registration by the State Board of Pharmacy. A copy of the resolution was ordered sent to the secretary of the State Association.

NOTES.

—Two friends came together in a peculiar way last week, it being the first time they had seen each other in twenty-five years. One was Commodore Tompkins, of the firm of Schieffelin & Co., and the other a former acquaintance, Edward Hall, a wealthy merchant of San Francisco. The way it all happened was simple, yet it was proof of good memory on the part of each. The "Commodore" was walking along the street when some one suddenly slapped him on the shoulder and earnestly inquired, "Where are you going Fourth of July?" Without turning round Commodore Tompkins said: "Hello, Ed., I haven't seen you for quarter of a century, but I know it's you from that old saying." Then he turned around, and the greetings that followed were lengthened into reminiscences exchanged in a more advantageous spot than the busy thoroughfare on which the two friends met.

—Owing to the small attendance at the meeting of the New York College of Pharmacy, Tuesday evening, June 19, the paper, "The Present Cinchona Barks of the New York Market," to have been read by J. H. Stallman, of Stallman & Fulton, was held over until the October meeting. The small number of persons at the meeting was due, undoubtedly, to the session of the Manhattan Pharmaceutical Association the night previous. An interesting report from Prof. Diekman was read on the meeting of the American Pharmaceutical Association, and Prof. Rusby gave an entertaining account of the workings of the convention for the revision of the Pharmacopoeia at its recent meeting.

—Among those who visited the trade last week were: S. E. Finley, Wilmington, Del.; S. I. Vanderveck, Islip, L. I.; Dr. T. C. Wood, Haverstraw, N. Y.; John Baer, Charleston, S. C.; O. F. Fuller, of Fuller & Fuller Co., Chicago; P. S. Armstrong, Plainfield, N. J.; W. N. Purdon, Pennsylvania representative of Schieffelin & Co.; O. J. Katz, Rochester, N. Y.; A. Lavino, Philadelphia; J. C. Miller, Pennsylvania salesman for McKesson & Robbins; G. B. Alexander, Greenville, Miss.; John W. Phillips, of L. L. Lyon & Co., New Orleans; E. T. Vance, Ansonia, Conn.; W. H. Sheldon, Middlebury, Vt.; George T. Meyer, St. Louis, Mo.; Whitton Evans, Philadelphia.

—Charles Brenner, formerly a drug clerk at Asbury Park, N. J., and now residing there, returned last week from Cuba, where he had just completed a sentence of five months in prison for attempting to fool the Customs House officers of Havana. Mr. Brenner, realizing the value of quinine pills in the island, concealed 3,000 of them in the tires and framework of his bicycle, and then endeavored to take the machine with him to Cuba. The Customs officers at Havana were suspicious when they

lifted Brenner's bicycle and on examination they found the pills.

—Correction of a couple of items published here last week is necessary. The resolution adopted at the Manhattan Pharmaceutical Association meeting condemning the action of a local drug journal was amended to read: "The pharmacists of the City of New York," in place of the words "German Apothecaries' Society." The second error was in the item referring to W. S. Rockey, giving the address of his old store and not the new one, the latter at Broadway and Forty-second street, to which location he removed some time since.

—Schedules of the C. C. Chemical Company were filed by the secretary and treasurer, William P. Ferguson, last week. This action was precipitated by the filing of a petition in involuntary bankruptcy against the firm some time ago. The schedules show liabilities of \$20,629.12; assets, \$15,535.83. Real estate, the value of which cannot be estimated, is also included in the papers. A mortgage on the entire property of the company for \$10,000 is held by Stephen R. Brant, of Brooklyn.

—An auspicious event which about forty members of the drug trade in and about Malden Lane attended Tuesday evening, June 19, and, from all accounts, seemed to have enjoyed, was the wedding of Jacob Friedland, which took place at Webster Hall, in East Eleventh street. Mr. Friedland has served the down town trade with papers and periodicals for the last five years. He has saved nearly \$5,000, and intends going into the manufacturing business.

—The police of Syracuse have rounded up a number of thieves who had been systematically robbing the wholesale drug house of Charles Hubbard, Son & Co., of that city, recovering over \$300 worth of goods. The robberies had been going on some time, until suspicion fell on a number of the employes last week, the arrests quickly following. The firm estimates a large loss.

—Some of the members of the trade have circulated a good story to the effect that while McK. and R. may stand for the Republican party candidates for President and Vice-President, they also stand for McKesson and Robbins. The firm expects it will have a direct connection with McKinley and Roosevelt as far as initials go for some time.

—John Kimpel, Jr., druggist, of No. 1641 Summit avenue, Jersey City Heights, N. J., left with Mrs. Kempel, on the steamship Kaiser Wilhelm der Grosse last Thursday for a three months' tour of Europe. They will visit England, France, Holland, Switzerland and Germany, and will stop two weeks at the Paris Exposition.

—Oxford University, England, has conferred the honorary degree of Doctor of Science upon Prof. Charles F. Chandler, of the Columbia College School of Mines, this city. Prof. Chandler is president of the Society of Chemical Industry and will preside at its annual meeting this year.

—William Muir, of Brooklyn, one of the recently elected members of the All-State Board of Pharmacy, was in attendance at the Republican National Convention at Philadelphia last week. Mr. Muir went to lend his voice and strength to boom Hon. Timothy M. Woodruff for Vice-President.

—The Century Chemical Company has been incorporated under the laws of New Jersey to manufacture chemical compounds. The factory is located at Maywood, N. J. The capital is \$700,000, and the directors are Fred. W. Van Balcarun, Wilbur G. Manson and Harris J. Westerholt.

—The second annual outing of the Retail Druggists' Bowling Association will be held Saturday, July 7, the objective point being Coney Island, where dinner will be served. The party will leave Pier 1, North River, at 10 o'clock in the morning.

—Mrs. W. K. West, proprietor of a large drug store in the Boody House, Toledo, O., was in the city making purchases and visiting former friends last week. Mrs. West took up the management of the store when her husband died, some time ago.

—Parke, Davis & Co. announce the receipt of the first shipment of new crop chamomile flowers, for which they are asking 22c. It has been the custom of the firm to be the first to make this announcement for several years back.

—Wm. R. Warner, president of Wm. R. Warner & Co., and A. D. Roche, representative of that firm in Ohio and Kentucky, will sail Saturday on the City of Rome for Paris, where they will spend some time at the Paris Exposition.

—The Revenue Department will extend the laws of the United States into the Hawaiian Islands, which are now recognized as a part of the United States. A notice was communicated to members of the trade in this city last Thursday.

—Miss Sophie Norwalk, of the class of '98 of the New York College of Pharmacy, was operated on for appendicitis Wednesday, June 13. The operation was successful, and the patient is convalescing rapidly.

—Horace Yeomans, of Toronto, Canada, brother of A. G. Yeomans, of Reid, Yeomans & Cubit, 140 Nassau street, this city, has accepted a position in the store of Reid & Yeomans on Sixth avenue, Brooklyn.

—Exports of drugs last week amounted to \$73,511. Included in this was one shipment of \$26 worth of cassia to the British West Indies. This is viewed as rather an extraordinary exportation.

—James C. Kehoe is now engaged in detail work in the city for W. C. Alpers, proprietor of the drug store on Thirty-first street, near Broadway. Mr. Kehoe was formerly with R. Hudnut.

—H. N. Bain, proprietor of the Palatine Hotel, at Newburg, spent a few hours in this city last week, while en route for the Republican National Convention at Philadelphia.

—A. Cressy Morrison, secretary-treasurer of the American Baking Powder Company, was married last week at Plymouth Church, Brooklyn, to Miss Emma Webster Conway.

—At the recent destructive fire in Moscow, N. Y., the drug store of Botsford & Curtis was completely burned down. The loss was estimated at \$12,000; insurance, \$8,000.

—Col. J. W. Lowe, of New Haven, Conn., stopped in this city one day last week while on his way to Philadelphia to attend the Republican National Convention.

—Richard Reid, clerk with Reid & Yeomans, Union street and Sixth avenue, Brooklyn, is enjoying a two weeks' vacation in Northern New York and Canada.

—Percy E. Anderson, of the firm of A. V. Andrus & Co., of this city, spent a few days in Bordentown, N. J., during last week.

—J. Van De Leyster, with G. R. Baker, of Chicago, was a guest of Mr. Cubit, of the firm of Reid, Yeomans & Cubit, of this city.

Needham's Red Clover.

One of the oldest and best known proprietary preparations sold by druggists is Needham's Red Clover. They advertise it as the best blood purifier known. It has been on the market for many years, and its merit seems to be attested by thousands of testimonials, which the proprietors have on file at their office. Counter advertising with the dealer's imprint is supplied on demand.

Mayer's Magnetic Catarrh Cure.

Among the new advertisements in this issue is one which calls attention to Mayer's Magnetic Catarrh Cure, made by the Mountain City Drug Company, Pittsburg, Pa. Mayer's Catarrh Cure sells for \$8 per dozen, and can be had from any wholesale druggist. The manufacturers are creating a demand for it by selling it under a positive guarantee to cure if used according to directions. They will give the dealer credit for it or replace every bottle returned by a dissatisfied customer, and they say that not one in a thousand is returned. They want at least one druggist in every town to handle their goods, and are advertising for salesmen.

IN AND ABOUT BOSTON.

PHARMACISTS IN ANNUAL CONVENTION.

Boston, June 23.—There was a fair attendance at the nineteenth annual meeting of the Massachusetts state Pharmaceutical Association, in Newburyport on June 19, 20 and 21. The chairman of the Board of Aldermen of Newburyport welcomed the delegates and the vice-president, Fred. A. Hubbard, of Newton, responded on behalf of the association.

Reports were read by the Committee on the Revision of the Pharmacopoeia, on National Pharmacy Law, on the National Association of Retail Druggists and by the delegates to the American Pharmaceutical Association. The president's annual address dealt mainly with legislation affecting pharmacy. It was shown that forty-nine bills affecting druggists had been reported to the present Legislature. The address contained many practical suggestions, and later a committee, consisting of George M. Hoyt, of Weymouth; Fred A. Hubbard, of Newton, and Thomas B. Nichols, of Salem, was appointed to consider the suggestions. They then made the following recommendations, which were adopted:

"That the association continue its membership in the National Association of Retail Druggists; that it urge the raising of hospital stewards in the army to the rank of commissioned officers; that a committee be appointed to modify the pharmaceutical laws; that the laws be so amended that the State board can no longer revoke certificates in pharmacy, but may suspend them; and that a committee recommend to the Governor a proper person to fill the vacancy on the State Board of Pharmacy in 1901, when the term of John Larrabee, chairman, expires (in October); also that \$100 be appropriated for the Legislative Committee."

Secretary Guerin, of Worcester, reported a present membership of about 600, with twenty-one applications to be considered. Prof. Julian W. Baird and Robert Greenleaf, of the Massachusetts College of Pharmacy, were elected honorary members.

The election of officers resulted as follows: President, F. A. Hubbard, Newton; vice-presidents, L. G. Heinitz, Holyoke; W. J. Bullock, New Bedford; Charles L. Davis, Newburyport; secretary, J. F. Guerin, Worcester; treasurer, Thomas B. Nichols, Salem.

Several interesting papers were read. F. T. Drake's was on "Drugs and Chemicals That Vary from the Standard Strength and Purity." C. B. Emerson, of Haverhill; Charles Wheeler, of Lawrence, and Amos Tilden, the veteran druggist of Boston, gave pleasant reminiscences of the drug business as they had found it within the last twenty-five years.

There were many social times, including a reception, a trolley ride to old, historic Newbury and to Merrimack, and a dinner at the Cushing, at Salisbury Beach. There were no exercises after dinner, but the pharmacists enjoyed themselves by witnessing a vaudeville performance and many indulged in surf bathing. Previous to the banquet the delegates were called to order and the newly-elected officers were installed. President Hubbard announced his committees and appointed delegates to the national and pharmaceutical meetings in other States. Amos K. Tilden, who for so long was a pharmacist at the corner of School street and City Hall avenue, Boston, was formally requested to become the historian of the association and to prepare biographies of the past presidents of the association and also other matters of historical and pharmaceutical interest.

"Brandy" Drops Cause Much Trouble.

Boston, June 23.—Because a ten-year-old boy in Haverhill became the worse for a mild "jag" resulting, so it was alleged, from his eating drug store "brandy" drops, the State Board of Health has taken up the matter and prohibits the sale of these candies to anybody under sixteen years of age! As a result, a State inspector this week brought 'nto court in Malden, E. L. Pinkham and his employer, J. A. Morgan, who keeps a drug store in Medford; H. E. Brier, druggist, and Angelo Mollico, fruit and confectionery dealer and his clerk, John Cusolito, and C. E. Jackson, of Malden. They all claimed that the brandy drops are non-alcoholic and asked for a

continuance of the case. This was granted them. The inspector claims that "brandy" drops have been sold in large quantities during the past few weeks to children. He has had a small boy assisting him, and in this way obtained his evidence. The same inspector also entered a complaint against three Lynn men for selling to minors "brandy" drops containing liquor with more than 1 per cent. of alcohol. The accused are William L. Young and S. O. Jenkins, employed by Dav's & Young, and Arthur C. Hodgkin, 12 Central Square.

NOTES.

—Many a glass of free soda has been dispensed, or a clear given, recently by Frank Decker, a well-known Beverly druggist, upon his receiving congratulations because of the birth of a daughter on June 14. This particular day plays a remarkable part in the history of the Decker family. Mr. Decker's parents were married on June 14; Mr. Decker himself was born on June 14, was married on June 14, and now comes this daughter on June 14.

—The inventor of "Epsom Salts," Dr. H. S. Lucas, a native of Blandford, and who lived for a long time at Chester, Mass., died on June 20, at Franklin, N. C. He was 83 years of age, and was prominently known as a scientist of note and, as the first discoverer of Epsom Salts, became famous. He it was who discovered also the large deposits of emery in Chester.

—W. S. Thurlow, of Boston, is president, and H. A. True, of Somerville, the treasurer, of the United States Chemical Company, recently organized at Portland, Me., under the laws of that State, with a capital of \$350,000, of which nothing has yet been paid in. The company is to manufacture and deal in chemicals of various kinds, cement, plasters, fertilizers, etc.

—The drug store of C. H. & J. Price, at No. 226 Essex street, Salem, is the rendezvous of many sight-seers and visitors from afar to the old "Witch City." The store is the headquarters of C. H. Hayward, a professional guide who is a life-long resident of that city, and much interested in its early history.

—Garfield's drug store, in the Linden district of Malden, was made an emergency hospital, when a fifteen-year-old boy was recently injured by being thrown from his horse when the animal shied at an electric car. The druggists cared for him until a physician could reach the scene.

—Burwell's Adams House Pharmacy has been a busy place this week, as it was selected as the down-town office from which to sell reserved seats for the Buffalo Bill Wild West Show. This brought many people into the drug store, and the soda fountain profited largely thereby.

—A woman druggist—Mrs. W. J. Gearon—is to conduct the drug store at No. 124 Boston street, in Salem. She has begun well by having the place refitted and made over, and has put in a new stock of fresh goods. She intends to personally look after the store's welfare, too.

—McVey Bros., druggists at the corner of Cottage and Summer streets, East Boston, where they have been open for from two to three months, have petitioned to have their store made a sub-station for the First Section of the Boston Post Office Department.

—Henry G. Young, a prominent druggist of Winchester, has sailed with his wife on the Kensington, of the Red Star Line, for Europe, for two months' travel in the Old World. They will visit London, Paris and spend some time in Germany.

—Among the delegates to the Republican Convention at Philadelphia was Alfred E. Rose, of Lowell, treasurer of the J. C. Ayer Company.

—The "Gardner Drug Store," corner of Derby and Daniels streets, in Salem, has been bought by William E. Hagney, of Boston.

—The Maine Commissioners of Pharmacy examined twenty-five applicants for registration at Augusta, June 13. Secretary Heseltine reported that stores which displayed "a pharmaceutical front with a bar attachment in the rear" had either closed up shop or the proprietors have hired registered pharmacists.

PHILADELPHIA.

Philadelphia, June 23.

—S. C. Blair, proprietor of a drug store on the corner of Tenth and Ogden streets, will never again attempt heroic measures in order to rid his store of flies, since his experience on Friday of this week. The gay and blithesome members of the family "Musa domestica" have been making life burdensome for the druggist and his clerks recently, and it seemed as though this store had been selected as a rendezvous for all of the members of the family residing within a radius of several blocks. On Wednesday evening at closing time the flies seemed to be having a political convention, probably for the purpose of nominating officers for the approaching election. Happy thought! Why not shut the doors and exterminate the whole lot? Accordingly, the doors were closed and after discussing ways and means, it was decided to burn a sulphur candle in the store all night and sweep out the remains in the morning. The candle was lighted, and the druggist and his clerks left the building. About two hours past midnight, one of the tenants of the house over the store awoke, and his first impression was that he was in that section of Hades where the furnaces are located. The air was blue almost to phosphorescence with sulphur dioxide fumes. Staggering to a window he attracted the attention of passers-by, who summoned a policeman. A glance at the situation and the policeman's club smashed in the front door of the store, and he removed the offending candle to the gutter. The next step was to call the remaining tenants, and it proved none too soon, for several were unconscious, and required medical assistance for resuscitation. There was trouble in store for the druggist when he arrived in the morning, and he will let the flies eat up the store fixtures now before he lifts a hand against them.

—Martin A. Chestney, a graduate of the law school of the University of Pennsylvania, entered the drug store of F. S. McCartney, at Ninth and Spring Garden streets, on Friday, and asked for some prussic acid for photographic purposes, tendering a bottle of the acid which he claimed had become discolored. Upon receiving a fresh bottle of the acid, he immediately pulled out the cork and drank the poisonous liquid. Medical aid was immediately summoned, but without avail, as he died in a few moments. The bottle which he had returned did not contain prussic acid, but was part of a well played trick to obtain the poison.

—George Freshell has sold his West Philadelphia pharmacy, at No. 3526 Haverford avenue, to Edward A. Eyer, formerly manager of Mumma's pharmacy, at Twenty-fifth and Jefferson streets. Mr. Freshell has lately purchased a store in Jenkintown, Pa., and sold his West Philadelphia store in order that he might devote all of his attention to the one at Jenkintown.

—John B. Raser, one of Reading's most prominent pharmacists, recently sailed for Europe with his family. While abroad he will visit the Paris Exposition, and also make a tour of Italy, Germany and Switzerland.

—T. S. Nagle, a well known Allentown druggist, was in Philadelphia this week attending the convention.

—E. M. Wallington, of Vineland, N. J., visited his Philadelphia friends one day this week.

—J. W. Agrellius, of Youngsville, Pa., was seen in one of the wholesale drug houses one day this week, and it is supposed that he came to the city to help nominate McKinley.

—James Gayley, an alumnus of Lafayette College, class of '76, has presented the institution with \$30,000 for the purpose of erecting a new chemical laboratory.

—Steward M. Hohl, a well known Easton druggist, spent several days in the City of Brotherly Love attending the Republican convention this week.

—B. E. Staples came down from Jersey Shore, Pa., to help shout for McKinley and Roosevelt this week, and called on the wholesale trade while here.

—Alexander Shreeve Moore, a Delaware County, Pa., druggist visited Philadelphia last week and called on several of the manufacturing firms.

—N. P. Clayton, pharmacist of Cranberry, N. J., escaped from his store long enough to spend a day or so in Philadelphia a few days ago.

—W. C. Thompson, of Cotesville, Pa., found time to run down to Philadelphia a day or so ago, and called on his friends while here.

—J. H. Redsecker, the well known Lebanon pharmacist, was one of the Pennsylvania delegates to the National Convention this week.

—Dr. A. D. Cuskaden, of Atlantic City, N. J., took a short vacation this week and came up to Philadelphia to see the sights.

—The quarterly meeting of the members of the Philadelphia College of Pharmacy was held at the college on June 23 at 4 p. m.

—William Webb, with W. S. Rishton, at Bloomsburg, Pa., was in Philadelphia this week seeing the convention sights.

—E. S. Powers is fitting up a new drug store at No. 52 North Twelfth street, between Market and Arch streets.

—Dr. C. E. Quail, of Auburn, Pa., was in this city for a few days to see McKinley nominated.

—Renben Moyer, a druggist of Reading, Pa., has been nominated for the office of Coroner of that city.

—Cyrus Laubach, a well known Easton druggist, was a visitor to the city during the convention.

—C. F. Dare, the well known pharmacist of Bridgeton, N. J., was in Philadelphia a few days ago.

—The employees of the H. K. Mulford Company, manufacturing pharmacists of this city, had their annual picnic Saturday, June 23, at Glenolden, Pa. A special train was chartered to carry the merry crowd, and the entertainments provided were of such a character as to make the event long remembered by the participants. The committee having the arrangements in charge was composed of Joseph W. England, Agnes G. Carr, Benjamin P. Duffield, Charles E. Hayward and Charles H. Walters.

A NEW JOB FOR PROF. REMINGTON.

To the Editor of the Pharmaceutical Era: From the daily press I learn that on Wednesday last a lunatic leaped from the pier in Atlantic City, bent upon committing suicide. The unfortunate man would never have been foolish enough to make this attempt had he noticed that Prof. Joseph P. Remington, of Philadelphia, was hard by, seated upon a coil of ship's cable. Bystanders afterward remarked that the Professor was looking fixedly across the water, and it is assumed that he was seeking light upon the Eastern situation. Whether he heard the splash is not known, but his vision was evidently refracted by the ripple, and he at once sought the cause, and observed the struggling man. Seizing the end of the cable, he quickly made a running noose and, advancing to the end of the pier, sent it, seething, in serpentine whirls, etc., straight at the man's head. He had no fear of knocking out the man's brains with the heavy cable, for the man evidently possessed none. Still, the latter saw the missile coming, and had sense enough to dive to escape it. But the Professor was expecting this, and was prepared for it. With a dexterous twitch of his left wrist, he depressed the shooting noose, so that, as the man dove, his head went directly into it, a thing which, it is said, has often happened to the Professor's students at Philadelphia. Surprised, the man dodged again to the surface, and was quickly hauled in, the largest fish landed upon the pier that day, though not so large as some which have been hooked by some Camden fishermen out in the boat, but which had "got away."

This incident certainly shows a rare ability in the handling of the lassoo, and leads me to offer a new opening to the Professor, through the medium of your valuable journal.

I have some friends in Texas engaged in the cattle business, who find great difficulty in securing good lassooists, this art having declined greatly since the good old days when the Comanches and Arapahoes supplied the material for our juvenile literature. Good lassooing is in demand, not only for catching cattle, but for subduing unruly cowboys and others when they show a disposition to paint the town or to coerce the ranchmen. The latter do not wish to kill them, as they require their services, hence the use of the lassoo. Now I have always appreciated and greatly admired Prof. Remington's skill in "rounding up" unruly members at the various conventions, but never, until I read yesterday's papers, did

I know that he was so accomplished in the actual use of the lariat. His persistence in staying at a memorable bull fight in the City of Mexico, "whence all but he had fled," is now explained. He evidently made good use of the afternoon's opportunities.

Now, I am writing to say that I think I could secure for him some very wholesome occupation with my friends. It is perhaps not so lucrative as research work, but it offers lots of fun. Unfortunately, the Professor could not practice water-lassoing in Texas, for the inhabitants of that wide-awake State are careful never to get near enough to water to fall into it. But then, Texas sand is almost as good a thing to flounder in as water, and it takes some sand, of which J. P. R. has a plenty, to do it. An early reply from the Professor will be greatly appreciated by

AN ADMIRING WHARF-RAT.

DETROIT.

Arrested for Drug Smuggling.

Detroit, June 23.—Another arrest has been made at Detroit for smuggling coal tar products, other drugs and rubber goods into the States. The alleged transgressor this time is Jesse A. Buel, who claims Springfield, O., as his home, and who has there a wife and child.

It is so comparatively easy to bring goods over from Windsor to Detroit that the risk is frequently run. The express offices of this city are, however, watched for outgoing packages. Drug packages, especially, are quite apt to be under suspicion, as several important seizures of such goods have been made through the agency of the express office. A short time ago a man presented himself at the National Express Co. office with three packages. They were properly directed, but a clerk noticed that the name of the sender was not on the boxes and suggested that it had better be put there as a precautionary measure in case the package went astray. The man agreed and immediately wrote on two of the packages the name of a Detroit firm, address, Detroit, Mich. On the third, however, he wrote the same firm, but evidently forgot himself and wrote address, Windsor, Ont. The discrepancy was noticed by the express company and it was decided to hold the packages awhile, on the supposition that the sender would be notified that they had not been received and would call to find out why. All happened as anticipated and the man was kept at the express office until Special Agent of the Treasury Parker could send a deputy over there to arrest him.

The man gave his name readily, but would not tell any more for a long time. At last he gave his boarding place and officers were sent to search his room. Three trunks and several satchels were found filled with the drugs and rubber goods and in a cupboard were found still more. In all, about \$1,000 worth were found. The rubber goods include surgical devices, gloves, toys and so on. Embalming fluids and other undertakers' supplies filled one of the satchels. Significant circulars were found in great bundles. These were headed "Ontario Rubber Co., Importers and Wholesale Dealers, Windsor, Ontario." Then a long list of articles with prices follows and then these words: "For your own personal use, and we ask that you show it to no one else. Correspondence strictly confidential and all letters destroyed." The circular closes with a cipher code for ordering chemicals.

Buel was arraigned before U. S. Commissioner Graves. He claims to be the American agent for the Ontario Rubber Co., and that he received the goods at Canton and sold them in the United States. He claims that his business in Detroit was merely to confer with the Windsor parties. His bail was fixed at \$500 and was procured on Wednesday. He will have his examination on Friday, June 24.

NOTES.

—There is a great deal of complaint among the Detroit wholesalers that the big manufacturing chemists of the city are soliciting trade direct from the retailers and physicians, instead of through the jobbers. It is claimed that this is being done largely out of the State as well as in Detroit. The retailers, too, are complaining about the direct sales to the physicians. The jobbers think

the manufacturers are making a mistake and that it will be recognized as such some day.

—The boys of the city department of the Michigan Drug Company had their annual outing on Wednesday, June 19. It consisted of a lunch at the Detroit Boat Club, a ride down the river in a steam launch, with a wind-up at Wonderland for the evening. The weather was perfect and everybody enjoyed himself.

—The Michigan Drug Company baseball team are so victorious as to be almost monotonous. Last Saturday they defeated the Ireland & Matthews Manufacturing Co. team in a score of 14 to 0. To-day they play the Delatas, the second of the D. A. C. teams.

—Maxwell W. Benjamin, clerk for Druggist Lacajewski, Detroit, has been graduated from the Law College and will abandon the drug business for the legal profession.

—Frank Gendanalik, head order clerk of the city department, Farrand, Williams & Clark, was married on June 19 to Miss Dueweke, a Detroit young lady.

—John McKerrow, of Farrand, Williams & Clark, is home, sick, threatened with fever.

CHICAGO.

Illinois Board Meets.

Chicago, June 25.—The Illinois State Board of Pharmacy met this week in Springfield. Eighty-five applicants for registration were examined, twenty-two of whom were given certificates as registered pharmacists and seventeen as assistant pharmacists. Five men in addition to these were registered under the time clause. The next meeting of the board will occur on October 8 in Chicago. W. C. Simpson, the member from Vienna, Ill., was called away from the meeting by the sudden and serious illness of his wife. Col. Jewett was severely ill during the session, but manfully stuck to his post.

Mr. Bodemann, of the Committee on Complaints and Prosecutions, reported in part as follows:

In several prosecutions we had the opportunity to see letters from the jobbers who had sold patent medicines to non-druggists for retail purposes, informing the retailers that no legal restriction could hinder them from retailing these medicines.

I would recommend to address a circular letter to all wholesale druggists and such other wholesale merchants who handle patent medicines in this State, asking them not to get their customers into trouble.

Jobbers should not sell medicines to consumers, and should not sell medicines to non-druggists, who in turn want to sell them, for the very reason that the retailing of medicines by non-druggists is prohibited by the Pharmacy Act in Illinois.

NOTES.

—The Searle & Hereth Company yesterday entertained the members of the North Side Druggists' Association. The druggists were shown through the manufacturing plant of the company on Wells street, after which they were served with a neat and elegant luncheon.

—John T. Plummer, formerly treasurer and credit manager of Morrissou, Plummer & Company, was in Chicago this week visiting his relative and friends. Mr. Plummer is now located in Denver, Col., where he is engaged in the manufacture of ore cars.

—The new catalogue of the Chicago College of Pharmacy, the School of Pharmacy of the University of Illinois, is now ready for distribution. It is a neat pamphlet of thirty-five pages, profusely illustrated.

—The A. R. Bremer Company, manufacturers of Coke Dandruff Cure, have purchased the trade mark and manufacturing rights of J. Schirman & Company's Egg Shampoo.

—A. V. Lane, the well-known druggist at Twelfth street and Wabash avenue, returned this week from a very enjoyable fishing trip to Fox Lake.

—R. H. Trull, of Austin; Otto J. Hartwig and E. M. Warhanik have gone to Lake Minnetonka, Minn., on a fishing excursion.

—C. G. McClure has added a new soda fountain to his drug store at Twenty-sixth street and Lawndale avenue.

—R. Moreau, a North Chicago druggist, accompanied by his daughter, was in Chicago this week buying goods.

—Dr. H. F. Darcy has bought the Hyde Park Drug Company's store at 108 East Fifty-third street.

—C. F. McLean has bought the drug store formerly owned by W. J. Lumley at 3255 State street.

—Golden Brothers are reported to have opened a new drug store at 5617 West Madison street.

—It is reported that U. G. McClure has bought the Douglas Park Pharmacy on Ogden avenue.

—It is reported that Michael J. Welch has sold his drug store in Maywood.

THE NORTHWEST.

MINNESOTA ASSOCIATION.

St. Paul, Minn., June 22.—The Minnesota Pharmaceutical Association held its annual meeting at Owatonna on Tuesday, Wednesday and Thursday of this week. The first day some seventy-five members listened to an address of welcome by Albert Sperry, who, because of the absence of the Mayor, delivered the keys of the city into the hands of the visitors. President Nielson gave his yearly address, which was followed by the reports of Secretary Wilson and Treasurer Reitzke. A paper on the use of the metric system aroused considerable discussion, but a motion favoring the use of the system was passed.

An open air band concert in the evening was followed by a lecture on "The Evolution of the Earth," by Dean Wullung, of the College of Pharmacy, State University.

Wednesday morning, H. G. Webster, of the State Board of Pharmacy, made the annual report on the work of that board. His report was adopted. Resolutions were passed asking that the pay and rank of army and navy druggists be raised from steward to that of first lieutenant. The Committee on Pure Goods reported in favor of legislation along that line, and appointed a committee to look over legislation now pending and that which may come up during the year, and report to the association. The following names were proposed as eligible to be elected to the State Board of Pharmacy: R. H. G. Netz, of Owatonna; John Nelson, of Ortonville; Ray Humiston, of Worthington; L. Trautmann, of Wabasha, and Robert Lamm, of Mankato. A. J. Eckstein submitted the report of the Committee on Trade Interests. The report was adopted. Steward Gamble, of Minneapolis, read a paper on "Short Hours and Early Closing."

The visitors were given a carriage drive during the afternoon to all points of interest about the city, while in the evening they listened to a most interesting entertainment by the children of the State public schools at Assembly Hall, State Public School Building. The day ended with a ball and cake walk, the winners of which were awarded elegant prizes.

Thursday, the last day, the following officers were elected: President, B. F. Kyseth, Sleepy Eye; first vice-president, C. A. Jack, Princeton; second vice-president, Miss E. Williams, Minneapolis; third vice-president, W. G. Alvin, New Ulm; secretary, E. B. Wilson, Minneapolis; treasurer, H. W. Reitzke, St. Paul; Executive Committee, John Danek and Stewart Gamble, of Minneapolis, and H. G. Hall, of St. Paul. The place of the next meeting was left to the Executive Committee. It will probably be Minnetonka. It was voted to organize a traveling men's auxiliary to the association, which shall be in the nature of an entertainment committee. In the afternoon the members indulged in games and athletic contests of various kinds.

State Chemist Hunting for Alum.

St. Paul, Minn., June 22.—State Chemist Hummel is engaged in an extensive analysis of baking powders, including all brands supposed to contain deleterious substances. He will make a report on his investigations to the State Food and Dairy Department, and prosecutions will follow. Every doubtful case will be brought before the courts so that the questions at issue may be finally settled. For some time there has been a dispute as to whether alum was a "deleterious" substance. The old law requires the manufacturers of baking powder to put the list of ingredients on every can, and the new law further provides that no "deleterious" substance shall be used. The law does not state, however, which are dele-

ST. LOUIS.

Big "Arcade" Rumored.

terious substances, and hence prosecution has been brought only where the State Department felt sure. Some firms have put such ingredients in as glauber salts on their labels without being prosecuted, and, as a rule, only those who used deceptive labels were liable. The State Dairy and Food Department will proceed on the theory that alum is a deleterious substance, and that certain other ingredients come under the same head. After the courts have decided each specific instance the State chemist will keep a sharp lookout for all powders containing condemned substances.

NOTES.

—There are indications that the druggists of Fargo, N. D., are to have the same experience as those of Grafton, that State. A. Lindele, the secretary of the North Dakota Enforcement League, is in the city, and is spending some time in conference with the members of the league at Fargo, and in the inspection of the reports of the druggists of the monthly sales, as filed with the county court. The investigation shows that in some cases the same individual has made frequent purchases from the same druggist on the same day, and assigned different complaints as a reason why he should have whisky for medicinal purposes.

—O. A. Sleeper, the North St. Paul druggist, was fairly certain Wednesday night that he was awakened by a noise in the store room below where he lives. It was three o'clock in the morning and his regard for his stock of goods was such that he arose to investigate. As he reached the store room he saw two men running away. Although an alarm was given and a thorough search made of the neighborhood, the burglars escaped, carrying with them a lot of plunder. They took a pair of glass enclosed drug scales, a lot of strychnine in bottles, a lot of cuff and collar buttons, a dozen each of silver-plated knives and forks.

—George Mock, formerly of this locality, but now owning a drug store (with Mr. Hanke) at Bristol, S. D., was visiting in the city this week, looking prosperous, and says the crop outlook is good enough in that locality.

—The wholesale houses had calls from Max Wirth, of Duluth; D. Shesgren, of the same place; J. M. Lindmark and others, this week.

—A. A. Toffe, an old time druggist of Fisher, Minn., who recently sold out, is looking around with a view to another start in the business.

—H. R. Strehlow, Casselton, N. D., who was completely burned out in January, will have a new store in operation July 1.

—Bert Barker, having sold out his interest in Bemidji, Minn., is looking up locations in the Southern counties.

—George Walstrom, who has been absent on sick leave, has returned to his old post at Warren, Minn.

—J. W. Peterson, Garfield, Iowa, has filed a voluntary petition in bankruptcy.

—C. W. Tyler & Co. have succeeded Charles W. Tyler at Mellen, Wis.

—New: C. A. Rice, St. Paul, Minn.; Fred Foderberg, Braham, Minn.

—E. O. Bartlett, St. Paul, Neb., has sustained a fire loss.

—A. Lofgren, West Duluth, Minn., has sold.

There is some good horse sense in the following paragraph, which we quote from J. C. Ayer Company's advertisement in this issue:

"You want to sell goods that will build up your business instead of tearing it down. Two classes of goods work distinctly and positively in these two ways. To sell a man something that he can feel is of full value for his money and that does for him what he wants done is to tie a string to him that will pull him back to you when he wants the same thing again—or another thing that he knows you keep."

It is well to remember in this connection that the preparations of the J. C. Ayer Company have been sold by American druggists for more than an average lifetime, and they are just as staple to-day as they were thirty years ago. There certainly must be merit in goods which can stand the test of time like this, and it pays to sell such goods.

St. Louis, June 23.—A bill has passed the City Council and is now pending in the House of Delegates authorizing the sale of the Union Market, which covers the square bounded by Broadway, Sixth street, Lucas avenue and Morgan street. It is stated that the ground is to be purchased by a syndicate composed of retail dealers in all lines, who will combine in operating the largest general store west of the Mississippi River. It will not be a department store in the usually accepted sense, it is declared, but will be conducted along the lines of an arcade, each dealer conducting his business independently of the others.

Will Not Sell the "East Side" Cutter.

St. Louis, June 23.—As far as can be learned, every one of the St. Louis wholesale drug houses has individually instructed its East St. Louis salesmen not to sell the new cut rate firm, which has started up in East St. Louis under the name of the Anti-Monopoly Drug Company, as stated in last week's Era. It is reported that a quantity of goods were shipped to them from a certain West End (St. Louis) drug store this week.

NOTES.

—The Missouri Pharmaceutical Travelers' Association held their annual election of officers at Fertle Springs during the recent Mo. Ph. A. meeting. It resulted as follows: President, W. E. Leach; first vice-president, George L. Parsons; second vice-president, George W. Krebs; third vice-president, J. C. McKeown; secretary, Ed. G. O'Rear; treasurer, J. H. Stolle; council, F. V. Perry, C. H. Jenner, O. H. Swift, O. H. Ott and Dr. J. B. Woods.

—Druggist N. H. Allen, of Kirkwood, Mo., has been awarded a verdict for \$250 against the Missouri Pacific Railroad Company for damages caused by sparks from a locomotive, which ignited the grass on the lawn of Mr. Allen's home, and destroyed a number of fruit trees and a section of hedge fence.

—J. J. Hoischer, who recently sold his drug store at Twenty-ninth street and Manchester avenue, to J. C. Hoffner, has bought the Kings Highway Pharmacy, northeast corner of Kings Highway and Suburban tracks, and will move it into the building on the southeast corner of the same streets.

—Henry Barth, of Lincoln, Neb., is in St. Louis visiting relatives. Fifteen years ago, Mr. Barth went from St. Louis to Lincoln as a drug clerk. Now he owns one of the largest drug stores there, is a member of the State Board of Pharmacy and an officer of the Nebraska Pharmaceutical Association.

—Tony Doherty, who for years represented the Collins Bros.' Drug Company up to the time of their retirement from business, and who has a prosperous pharmacy of his own at Clay City, Ill., will represent the Meyer Brothers Drug Company in southern Illinois, and is now at headquarters "posting up."

—Carl F. G. Meyer, of the drug buying department of Meyer Brothers Drug Company, and son of C. F. G. Meyer, president of the company, was married Wednesday evening at St. Mark's Lutheran Church, to Miss Eleanor Newell. After the reception they left for a bridal tour of several weeks.

—Virgil Dillon, the well-known traveler for the Moffitt-West Drug Company, is at Geneva Beach, Alexandria, Minn., his usual summer resort. He is keeping the wires hot advising his friends of remarkable fishing exploits.

—Peter and Jacob Gain, prominent druggists of East St. Louis, have the sympathy of the trade in the death of their mother, which occurred this week.

—The Missouri Pharmaceutical Association, at its meeting last week, voted unanimously to pay its assessment of 50c. per member to the N. A. R. D.

—T. C. Westmoreland, who represents Meyer Brothers' Drug Company in South Carolina and Georgia, is at headquarters this week.

—Dr. William Grebe, of the Grebe Drug Company, East St. Louis, will open his new branch drug store there in a day or two.

—Price & Co., Clarksdale, Miss., who were recently

burned out, have resumed business with a new stock and fixtures.

—H. D. Meyer, of H. D. Meyer & Son, druggists, St. Charles, Mo., was recently married to Miss Broeker, of that city.

—Will Bryant, formerly clerk for E. A. Bernius, has bought the drug store of L. C. Haagen, No. 1401 Belt avenue.

—Mr. Lincoln, junior member of the Lincoln Drug Company, Little Rock, Ark., was here two days this week.

—Tony Vinke, the druggist of St. Charles, Mo., leaves on July 7 on a visit to his aged mother in Germany.

—C. W. Hahn, the well-known druggist, is on a three weeks' vacation in Canada with his family.

—Dr. F. L. James, editor of the National Druggist, has gone to Mobile, Ala., for the summer.

—At the examination held by the Illinois State Board of Pharmacy, in Springfield, June 19-21, the following passed as Registered Pharmacists: E. D. Allen, Marseilles; A. F. Barth, North Altou; H. D. Biden, Chicago; A. Brandenburg, Rock Island; L. N. Benton, St. Charles; G. W. Case, Peoria; W. R. Coynor, Galesburg; R. W. Dentler, Oak Park; E. W. Elliott, Jr., Riverside; C. T. Flacheneker, Jerseyville; E. Freeman, Auburn; J. T. Griest, Peoria; W. E. Ham, Urbana; D. Hayes, Bloomington; G. J. Houseman, Chicago; J. Heald, La Grange; C. F. Lewis, Belvidere; J. F. McGlone, Chicago; I. A. McNichols, Carmi; W. H. O'Brien, Chicago; E. W. Rose, Chicago; W. H. Roberts, Piper City; H. C. Siegle, Peoria; B. W. Strickland, Bloomington; S. Sucherman, Chicago, and B. Zaleski, Chicago, Assistant Pharmacists: J. L. Bonnett, Bloomington; W. H. L. Booth, Chicago; F. B. Clarke, Chicago; H. Diffenderfer, Chicago; F. H. Drallmeier, Quincy; I. Geerlings, Chicago; A. J. Leonard, Chicago; V. C. Michels, Alton; C. W. Morton, Mattoon; J. D. McDougall, Chicago; Z. G. Oldham, Urbana; W. R. Phillips, Chicago; P. A. Pfeffer, Columbia; A. H. Schulze, Chicago; H. E. Shawvan, Chicago; M. A. Shapiro, Chicago; P. G. Stahlfeld, Chicago; G. E. Steyer, Chicago; J. W. Tudor, Homer. The Board of Pharmacy desire to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores will be examined or given an interview until after being regularly registered as an apprentice. The next meeting of the board for examination will be held in Room No. 144, Thirty-ninth street, Chicago, Ill., October 9, at 9 a. m. New applications must be on file in the office at Springfield at least ten days previous to the above date, those having applications already on file must also give a like notice should they desire to appear for this examination. This requirement is necessary in order that the secretary may make suitable arrangements for the class, and will be strictly enforced. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. Address all communications to L. T. Hoy, secretary, Springfield, Ill.

—The Missouri Board of Pharmacy held a meeting at Sedalia, June 11. Thirty-one applicants were examined, seventeen of whom passed, as follows: George F. Ballew, Hale; Guy Bolton, Clinton; W. M. Bunch, Brookfield; Roy Cable, Kansas City; J. U. De Golla, Gilmore City; Stewart C. Edle, Kansas City; J. S. English, Paris; A. V. Fore, Brookfield; Emmett Harrah, Kansas City; C. D. Hunter, Versailles; J. M. Jackson, Appleton City; J. L. Kantzmann, Sedalia; C. E. Kummacher, St. Louis; W. W. Martin, Doniphan; G. A. Pelsue, Sarcoxie; N. G. Witcher, Sweet Springs; R. E. Walsh, St. Louis. The next meeting will be held in Le-derkranz Hall, Thirtieth and Chateau avenue, St. Louis, October 8. Aug. T. Fleischmann, secretary, Sedalia.

Ross's Lime Juice.

One of the most popular lime juices now on the market is Ross's, made by William A. Ross & Brother, New York City. It is unexcelled for purity of flavor.

Business Record.

+++++

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among the houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Birmingham.—Amzi Godden Co., 2027 Second avenue, sold to Nabers, Morrow & Binige.
ARKANSAS.—Mount Vernon.—J. H. Warden, deceased.
COLORADO.—Denver.—Louis N. Depeyre, 2341 Clear Creek avenue, removed to corner West Forty-first avenue and Goss street.
Longmont.—M. F. Maples & Co., succeeded by M. F. Maples.
FLORIDA.—Greenwood.—R. A. Willis, succeeded by Willis & Blow.
ILLINOIS.—Maywood.—M. J. Welch, sold to V. N. Swan.
INDIANA.—New Albany.—D. A. S. Warner, East Fifteenth and Vincennes, discontinued.
Terre Haute.—Oscar Rhoads, Thirtieth and Poplar streets, sold to R. H. Burns & Son.
IOWA.—Des Moines.—Ezra Lawrence, Ninth and Grand streets, sold to George Mahnke.
Grundy Center.—Ladage & Co., sold to H. C. Ady Drug Co.
Luverne.—George Lacy, succeeded by Luverne Drug Co.
Villisca.—Lynch & Childs, succeeded by K. J. Lynch.
MAINE.—Lewiston.—D. W. Wiggins & Co., 213 Lisbon, sold to D. P. Moulton.
MARYLAND.—Baltimore.—The Crystal Glass Works, 902 Ridgely street, name changed to The Ridgely Glass Works, same address.
MASSACHUSETTS.—Boston.—Joseph L. Parker, 232 Tremont, assigned.
Conway.—Estate of H. W. Hopkins, sold to Edward Affhäuser.
MISSOURI.—Gilman City.—P. F. Honan, sold to W. D. Haines.
Palmyra.—Moore & Jameson, succeeded by Moore & Bates.
NEW HAMPSHIRE.—G. W. Shaw, sold to Beaudoin & Purington.
NEW YORK.—Windsor.—L. H. English should be added to D. D. List.
OHIO.—Tremont.—Simon Wolf, 806 Croghan street, deceased.
PENNSYLVANIA.—Hoytville.—M. E. Sine should be added to D. D. List.
Philadelphia.—H. F. Voshage, 2800 Lehigh avenue, sold to John E. Stanton.
South Williamsport.—The Holmes Drug Co., new store.
SOUTH DAKOTA.—Aberdeen.—S. C. Lacey & Son, sold to M. Bennett.
Faulkton.—Jarvis & Jarvis, sold to F. Outton & Son.
TEXAS.—Abilene.—Bass Bros., succeeded by Bass Bros. Drug Co., inc.

—The Wisconsin Board of Pharmacy held a meeting at Marinette, June 13. Certificates were granted to the following licentiates from other boards: C. H. Frees, Hudson, from Minnesota; J. A. Meller, Madison, from Illinois; A. N. Gunz, West Superior, from Minnesota. Twenty-two candidates were examined for registration; the following received first grade certificates: E. S. Thacher, Milwaukee; W. W. Beebe, New Richmond, and E. T. Lowe, Milwaukee. Guy Leonard, of Racine, was granted an assistant's certificate. Secretary Heimstreet reported that many general dealers, particularly in the middle and northern parts of the State, were selling goods in violation of the pharmacy law. One case was tried in Marquette County in April, in which general dealers were fined \$50 and costs. Three cases are now in the court, two in Clark County and one in Iowa County. After the examination the members of the board made a trip to Sturgeon Bay. The next meeting for examination will be held at Waupaca, September 7, at the same time as the annual meeting of the Wisconsin Pharmaceutical Association.

ASSOCIATIONS.

NEW YORK STATE PHARMACEUTICAL ASSOCIATION.

ANNUAL MEETING NOW BEING HELD AT NEWBURG.

Newburg, N. Y., June 26.—At 10.45 this forenoon President William Muench, of Syracuse, called the twenty-second annual meeting of the New York State Pharmaceutical Association to order. The attendance was very large. Mayor Wilson welcomed the visitors in an eloquent speech, in which he spoke of the beauties and historic associations of Newburg, and hoped the visiting delegates would have a most enjoyable time. He closed by presenting President William Muench with a golden key, signifying the freedom of the city. C. W. Holmes, of Elmira, on behalf of the association, responded to the Mayor's address. After a speech by W. H. Rogers, of Middletown, Vice-President Felix Hirseman was called to the chair while the president, Mr. Muench, read his annual address. In this address the president favored the formation of local societies, commended the National Association of Retail Druggists, and said that if the latter was properly sustained it would certainly better the condition of the retailers throughout the entire country. He thought the Stamp Tax Law was not only obnoxious, but a very expensive luxury for druggists, and he advised the association to work hard to secure its repeal. He reviewed the work of the Legislative Committee which secured the All-State Pharmacy Law, and advised the members not to resort to pharmaceutical politics in the election of members to the State Board of Pharmacy, which was soon to take place. He thanked the out-going Board of Pharmacy, and said that members who had closely followed the excellent work which had been done were unanimous in the verdict that it had accomplished much to elevate the standard of pharmacy. On the subject of education he had much to say. He thought the time had come when more decisive action should be taken and when the qualifications of the future pharmacists should be more accurately defined. He thought the right to dispense medicines was the natural privilege of the pharmacist, and that, as such, it should be secured to him by law. He favored the holding of a college diploma as a prerequisite to examination by the Board of Pharmacy, and recommended that January, 1905, should be the time set for such a law to take effect.

The address was referred to a committee, consisting of Oscar Goldman, New York; A. Paradis, Brooklyn; W. G. Gregory, Buffalo; C. W. Holmes, Elmira, and A. B. Huested, Albany.

Forty applications for membership were received. Secretary J. B. Todd, of Ithaca, reported a total membership of 749. Treasurer T. W. Dalton, Syracuse, reported receipts \$2,219, and expenses \$1,152, leaving a balance of \$1,067. Previous to adjournment a motion was passed to call a preliminary meeting of the pharmacists of the Middle Section of the State to select five members for the new State Board of Pharmacy. At this meeting a large number were in attendance. S. S. Van Saun, of Warwick, was chosen chairman, and J. B. Todd, of Ithaca, secretary. An attempt was made to defer till to-morrow the election of the new board, but the motion was defeated by a vote of 44 to 18. C. F. Brown, of Portland, placed in nomination the names of G. P. Merritt, of Newburg; W. L. Bradt, Albany; J. C. Smith, Plattsburg; C. E. Sears, Auburn, and B. M. Hyde, of Rochester. The members of the retiring board, consisting of A. B. Huested, Albany; C. H. Haskin, Rochester; F. L. Norton, Delhi; J. C. Smith, Plattsburg, and E. S. Dawson, Syracuse, were also re-nominated, with C. C. Tenbroeck, of Kingston running as an independent candidate. The speeches favoring the various nominees came thick and fast from both factions. After an hour of balloting the following nominees were elected: G. P. Merritt, Newburg; W. L. Bradt, Albany; J. C. Smith, Plattsburg; C. E. Sears, Auburn, and B. M. Hyde, Rochester.

At four o'clock the regular session of the association

was resumed. After reading of the minutes ten new applications for membership were presented. R. G. Eccles, of New York, precipitated a hot fight by offering a resolution which stated that no new members shall be elected until after the officers of the association were elected. He charged New York members with attempting to pack the convention to control the election. The discussion was long and acrimonious, and the president ruled the resolution out of order. Dr. Eccles finally withdrew his motion, and the new members were unanimously elected. The credentials of delegates from other organizations were presented, and these were followed by speeches from the various delegates. Felix Hirseman read his report as a delegate to the meeting of the N. A. R. D. at Cincinnati last September. After the transaction of some routine business, the association adjourned. In the evening the president was tendered a reception at the Palatine Hotel, which was followed by music, refreshments and dancing. To-morrow the guests will take a trolley ride and visit Washington's headquarters. In the evening they will be entertained with progressive euchre.

A detailed account of the meeting will appear in the Era next week.

MARYLAND PHARMACEUTICAL ASSOCIATION.

Baltimore, June 23.—The annual meeting of the Maryland Pharmaceutical Association at Hagerstown came to a close last evening after four days of profitable and delightful intercourse. Guessing, bowling and pool contests, supplemented by a trip to the battlefield at Antietam, the scene of the only great fight on Maryland soil during the Civil War; by a reception, and by a musicale and ball banquet, provided most agreeable diversion, and the visitors were also the recipients of special attention on the part of the town authorities.

Many matters of importance to the pharmacist were discussed. One vital subject considered concerned the relations between physician and druggist, the action taken being calculated to bring about a better understanding and lessen the antagonism which makes itself felt in counter prescribing by the druggist, and in the dispensing of medicines by the doctor. The backwardness of Maryland in the matter of pharmacy legislation also elicited discussion.

The sessions were opened with an address of welcome by Mayor E. M. Schindel, a prominent druggist of Hagerstown, to which Henry P. Hynson replied in a happy vein. He said among other things that the State of Maryland had not shown appreciation of pharmacy by throwing around it laws for its protection, such as had been enacted in other States. After the transaction of routine business, Dr. A. R. L. Dohme, the retiring president, read his annual report. It covered a wide range of subjects, and was listened to with the closest attention.

He said the membership had been increased from 132 to 167, and that the unsuccessful efforts to secure a pharmacy law for Maryland was not work done in vain, and its good effects would be shown in the future.

Concerning further increasing the membership of the association Dr. Dohme said: "If we could only get our membership up to a fair proportion of the total number of pharmacists in the State, we would have a much better opportunity and standing before the Legislature, when we appear before it in behalf of a bill we are offering." During the past year an effort was made by the local branch of the N. A. R. D. to bring about more friendly relations between the retail and wholesale druggists of Baltimore. It was not entirely successful. The so-called card system of the N. A. R. D. has been inaugurated in Baltimore, but also without success, and justly so. Until all the jobbers of Baltimore and the neighboring large cities can be brought into line, and until at least ninety per cent. of the retailers can be induced to agree to the system, it is unreasonable to expect either side to subscribe to it. Until the organization of the N. A. R. D. becomes more general all over the land, it is useless to expect it to succeed in a large city. It is absolutely impossible to expect to attain a perfect system of checking the cutting of prices. * * * I believe that there are to-day among the professed friends of the rebate system in the wholesale and retail drug trade, and especially among those who are working for its success, and condemn its violation in speech and in print, persons and

firms who are making considerable money by surreptitiously supplying cutters all over the land with goods of all descriptions. This is nefarious, but how it can be prevented by law is beyond my ability to suggest."

He advised a continuation of the agitation in favor of repealing the war-revenue law and commended the action taken by the National Pure Food and Drug Congress. He also suggested a change in the manner of selecting meeting places, that instead of going from place to place it would be better to select Ocean City for the Eastern shore and Blue Mountain House for the Western shore, meeting at these places alternately.

The address was referred to a special committee. It was decided to extend an invitation to the physicians of Hagerstown to meet with the association on the following afternoon, to listen to the reading of a paper and of a special report on the relations between physicians and pharmacists.

Secretary Charles H. Ware's report stated that the association had 153 members, with a number of applications to be acted upon. D. C. Aughinbaugh, Hagerstown, chairman; Prof. William Simon, Henry P. Hynson, of Baltimore, and Capt. C. C. Walton, of Hagerstown, were named a committee to select the time and place for the next meeting.

An interesting report on trade interests was submitted by H. P. Hynson. He recommended the formation of a commercial league, to be a part of the Maryland Pharmaceutical Association. Mr. Hynson said there were three branches of the trade represented in the association—the retailer, wholesaler and manufacturer—and argued that each of these three branches should be brought into closer touch with every other branch through the proposed committee, with the result that a larger measure of co-operation could be secured. The matter was referred to the committee on laws.

The report of the committee on adulterations was made through Dr. Daniel Base, who submitted several samples of adulterated drugs, after which Dr. Church, of Church Falls, Va., was introduced and made an address on the Virginia Pharmaceutical Association.

Mr. Hynson, acting for a committee of six, three members representing the Maryland Medical and Chirurgical Faculty and three the Maryland Pharmaceutical Association, submitted a set of rules to govern the relations between the two professions. They provided that pharmacists shall refuse to prescribe for customers, except in emergency cases, and that physicians shall carry emergency remedies only; that substitution shall not be resorted to; that physicians shall regulate their charges and pharmacists shall do likewise; that pharmacists shall not refill prescriptions when directed by physicians not to do so; that druggists shall see physicians before filling prescriptions supposed to contain errors, and that pharmacists shall not disclose the contents of prescriptions to customers. These regulations were approved, the only one rejected being the requirement that druggists need not put caution labels on bottles unless directed to do so by physicians.

Lou's Schulze read a paper on free dispensaries. He said that these institutions were abused by the well-to-do, and recommended the appointment of State physicians to visit the indigent sick. This paper was referred to the joint committee of physicians and pharmacists. J. C. Muth, of Muth Bros. & Co., reported that statistics gathered in the State showed that the sale of patent medicines had undergone a slight decrease. Thursday a trip was taken to the Antietam battlefield. On Friday the proceedings opened with the reading of the report from the committee on pure food and drugs, which encouraged support of the efforts to secure national legislation on the subject. Dr. Dohme read a paper on "What Have Been the Causes Preventing the Enactment of a Pharmacy Law for Maryland." "Are Headache Remedies Containing Acetanillid Dangerous?" was a subject discussed by J. Emory Bond. It brought out some remarks by W. C. Aughinbaugh and others, who advised that these remedies be used with caution.

At the afternoon session the committee on trade interests made its report. It recommended that the Maryland Association continue to support the N. A. R. D. Robert S.-McKinney, Taneytown, chairman; W. C. Powell,

Snow Hill, and H. P. Hynson and J. G. Beck, Baltimore; were appointed a board of directors of the Retail Druggists' League, to be formed as an adjunct to the Maryland Pharmaceutical Association. Non-members as well as members of the State association may belong to the new league, which has for its object the organization of all the retail druggists in Maryland.

J. M. Kenney read a paper in reply to the query, "What is the Best Preservative for Fruit Juices?" He said that formaldehyde was as good as anything.

The following officers were elected: President, W. E. Turner, Cumberland; vice-presidents, L. H. Mobley, Hagerstown; J. F. Leary, Rock Hall; W. E. Brown, Baltimore; secretary, Louis Schulze, Baltimore; treasurer, William M. Fouch, Baltimore; Executive Committee, H. R. Rudy, Hagerstown; and O. C. Smith and J. Emory Bond, Baltimore.

The time and place of the next meeting were left to the Executive Committee with the stipulation that all future meetings shall be held at summer resorts.

The gathering closed with a musicale and banquet at the Hotel Hamilton in the evening. Covers were laid for nearly 400 persons. Dr. Dohme presided and General H. Kyd Douglas acted as toastmaster. The toasts were: "Hagerstown and the Ladies," Gen. H. Kyd Douglas; "The Maryland Pharmaceutical Association," Dr. Dohme; "Medicine," Dr. J. McP. Scott; "Our Retiring Officers," W. C. Aughinbaugh; "Our New Officers," W. E. Mobley; "College of Pharmacy," H. P. Hynson; "Our Hosts," R. S. McKinney. On Wednesday evening Prof. William Simon delivered a lecture on "Wireless Telegraphy." Prizes donated by the Baltimore jobbing and manufacturing houses, Parke, Davis & Co. and others were awarded to the various successful contestants who took part in the games and sports provided for by the committee.

COLORADO PHARMACAL ASSOCIATION.

The Colorado Pharmacal Association held its annual meeting at Manitou, July 13 and 14. Several business sessions were held, the annual address being delivered by C. L. Provitt, of Denver. The following officers were elected: President, Charles E. Barnes, Denver; vice-presidents, W. L. Shockey, Cripple Creek; Daniel Y. Wheeler, Denver; treasurer, J. F. Fezer, Greeley; secretary, Charles E. Ward, Denver; local secretary, P. B. Fox, Manitou. Fred J. Mill, of Salt Lake, was elected an honorary member. Manitou was chosen as the place for the next annual meeting, and the dates June 18, 19 and 20 selected as the time. The auxiliary association, comprising the ladies of the association, and known as the "Silent Partners" elected the following officers: President, Mrs. Charles Ford, Denver; vice-presidents, Mrs. Charles Ward, Denver; Mrs. Harry Canfield, Leadville, and Mrs. Hatfield, Colorado Springs; corresponding secretary, Mrs. L. Bridgman, Denver; recording secretary, Mrs. J. J. Cronin, Denver. Mrs. Ford, who was elected as president, was presented by the ladies of the association with a beautiful cut glass bowl and mirror. About seventy members were in attendance.

ARKANSAS ASSOCIATION OF PHARMACISTS.

The Arkansas Association of Pharmacists held its annual meeting at Little Rock, June 11 and 13. Twenty-six new members were elected. Interesting papers were read by J. H. Chestnutt, Hot Springs; W. W. Kerr and J. W. Feidelman, Little Rock. Resolutions were adopted for a closer affiliation with the National Association of Retail Druggists, and memorializing Congress to abolish the stamp tax on patent medicines. The following officers were elected: President, E. F. Klein, Hot Springs; vice-presidents, W. L. Dewody, Pine Bluff, and M. A. Eisele, Hot Springs; secretary, James A. Gnocchio, Little Rock; treasurer, John A. Jungkind, Little Rock; Executive Committee: Charles K. Lincoln, J. B. Bond, Jr., and J. F. Dowdy, Little Rock. The official stenographer, Miss Mary Fein, was presented by the association with a handsome silver-mounted umbrella. The association then adjourned to meet May 21, 1901, in Little Rock. On June 12 the Arkansas Board of Pharmacy examined a class of seventeen applicants for registration. The names of the successful candidates are to be announced.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

AMERICAN ENTERPRISE IN LONDON.

On Monday morning I had a walk over Messrs. Parke, Davis & Co.'s New Premises in Queen Victoria street (No. 111), the widest street in the city of London, and which intersects Cannon street opposite the C. & D. office. The premises are the third office and warehouse which the world-known American firm have had since Mr. F. M. Fisk came to establish a European branch of the business in London. This third establishment is a five-floor-and-basement building which the G. P. O. occupies as a headquarters branch of the Savings Bank, and to Messrs. Parke, Davis & Co. it was peculiarly well adapted because the floors were practically undivided, thus enabling them to put in the fixtures without the expensive preliminary structural alterations so common to London. The artistic

SKETCH OF NO. 111 QUEEN VICTORIA STREET, E. C.

tone of the office is the first thing that strikes one on entering No. 111. The regulation heavy outer door is here replaced with a handsome hammered-iron gate, and the "glass door" is of light oak with metal scroll-work in front of the glass. The light oak is seen to be a feature of the fittings as one proceeds. Let me say before going further that the basement is used as the receiving and despatching department, and the ground floor as the principal warehouse where town and country orders are attended to. There is a lighting idea in the basement which is worth inspection by those who have to borrow light from street gratings. In this case the gratings are filled with familiar prism glass, but an essential part of the scheme is a pair of glass doors with small squares of glass pressed into slanted lines. On moving these doors to a certain angle the glass catches the light from the prism overhead and deflects it from the 45 degree angle into horizontal lines. It is a much better arrangement than the silvered-mirror idea that prevails in the city. The first floor is the office,

towards which a handsome oak staircase leads. The floor of the office is in oak parquet, all the fittings are of oak, with bronze and brass scroll work screens or obscured glass screens, according to the location. The street frontage is divided into a series of rooms occupied by Mr. Fisk and others, while several private rooms on the floor have been arranged for the medical adviser of the firm, the head of the correspondence department, head of the advertising department, and the like. The front rooms overlook the College of Heralds, behind which the dome of St. Paul's looms gigantic. A bevy of fair maidens have abundance of light and room here for typing, and that all-important personage, the cashier, catches the eye of the visitor as soon as the top of the stair is reached. The second floor is the invoicing department, the third is devoted to stock, the fourth to stock and a long showroom, which is destined to contain examples of American sundries, and on the fifth floor are the printing and sample department. I have not attempted to go into detail regarding the place, for I hope to visit it and the new factory and laboratories of the firm at Hounslow another day. To Hounslow the laboratory-equipment which the firm had in North Row has been removed, and it has, I understand, been considerably augmented, for it is intended to manufacture a more varied series of products than hitherto, the object being to meet British requirements. In this connection I may mention that the firm's laboratories in Detroit have recently been greatly extended, a new block of buildings for what are known as physiological products (serums and the like) having been erected to the right of the old pharmaceutical laboratories facing the Detroit River.—The Chemist and Druggist, April 28, 1900.

Soda Water Checks.

Every druggist who has a soda fountain should establish the check system. Brass and aluminum soda checks are made by C. L. Safford, No. 181 East Madison street, Chicago. He makes hundreds of other time, money and labor-saving devices, all of which are fully set forth in his 50-page catalogue, which is sent free to any druggist who is willing to send for it. See his advertisement on Page 10 of this issue.

Wire Corkscrews.

Every manufacturer of a proprietary preparation should attach to each bottle a wire corkscrew. The Clough Corkscrew Company, Alton, N. H., are the original patentees of this device, and they will send a free sample to any manufacturer who is interested. Their advertisement is on Page 10 of the current issue.

A-Corn Salve.

A-Corn Salve gives the retailer more profit than any other corn remedy on the market. The manufacturers of this preparation, the Giant Chemical Company, Philadelphia, make an offer by which a druggist can get a gross for nothing and make \$21.00 besides. It would not be a bad idea to see what this offer is.

Trefoil Corks.

The Trefoil brand of corks, "M" and "B," are the well known brands made by the R. W. McCreedy Cork Company, Chicago. "M" is their best quality, and "B" their next best. Either is good enough for prescription use. The quality of each is guaranteed, and all jobbers keep them.

French Chalk.

One of the leading dealers in talc and French chalk in this country is E. S. Jackson & Co., Cincinnati, Ohio. They are first hands, and solicit correspondence with all large buyers, and will send samples on application.

The Lightning Medicine Company, Muscatine, Iowa, known in the trade as the "Dollar Draft Remedy Co.," are making an exceptional offer this month in our advertising pages. The progressive druggist who appreciates good advertising will not allow the opportunity to escape him, especially since he can get the advertising free and make 91 per cent. profit on the business end of the operation. They certainly have a unique proposition which seems to be taking well everywhere.

STATE OF TRADE.

Business Steady and Generally Satisfactory.

New York, June 26.—Business in a routine way has continued of satisfactory volume for this season of the year and in nearly all departments of the wholesale market a steady feeling is manifested on the part of holders. Prices with very few exceptions have a firm support, and in the few instances where declines are recorded the causes are wholly natural, and consequently not of a disturbing character. Opium is one of the leading commodities which is an exception to the general steadiness, lack of important demand and easier foreign markets having a more or less depressing influence. In a jobbing way former quotations are still current, but it is evident that concessions would be necessary to attract attention from large buyers.

Quinine shows continued steadiness under the influences heretofore noted, but there is no change in manufacturers' quotations. Outside holders, however, are much firmer in their views, and for German brands they have advanced their quotations fully 1c. per oz. above those of manufacturers. The movement has continued slow, but the aggregate volume of business has been of fair proportions for this usually quiet period. The bark situation continues favorable to firm prices and at the monthly auction in London last week the average unit value was fully on a parity with that of the last Amsterdam sale.

Cocaine is somewhat steadier owing to a good consuming demand, light stocks and stronger primary markets for raw material. Competition among manufacturers has ceased and the tendency of values is toward a higher basis. Permanganate of potash is 1c. per pound lower from first hands, the decline being attributed to lower markets abroad and keen competition among manufacturers. Carbolic acid is decidedly firmer, but there is very little demand for consumption and the market has a quiet appearance. The firmer feeling is wholly due to corresponding improvement at primary sources of supply, but outside stocks have been reduced and principal holders, which adds to the generally improved conditions. The position of ergot continues strong, but the advancing tendency of prices has been checked by a slight demand from consumers and efforts on the part of interested parties to depress the market for the purpose of covering short sales.

In the department of essential oils, cubeb is higher in sympathy with a marked improvement in prices of the berries. Caraway also is higher owing to increased cost of seed, the crop of which this year promises to be very short. Anise is stronger on account of favorable reports from Europe where stocks are said to be light and prices tending upward. Another stimulating influence is the unsettled condition of affairs in the far East, which is affecting all China products to a varying extent.

For the change statistical position of the article, stocks being materially reduced both here and in Europe, while cables from Singapore report that the new crop will be only 40 per cent. of the usual average. Russian isinglass is again higher owing to reduced stocks and reports that no fresh supplies will be available at primary sources for several months. Red rose leaves are firmer on poor prospects for the new crop of French. Grains of paradise are again offered more freely and prices are said to be light and prices advanced noted last week. Poppy seed is firmer both here and abroad and first hand spot prices are 3/4c. per pound higher. Silver label gelatine is in reduced supply and a shade higher. Blue Aleppo Bergalls are stronger on account of an advance in the import cost.

Enthusiastic Over Good Trade.

Boston, Mass., June 23.—Everyone is enthusiastic over the good trade, which has been experienced this week in this city. Unlike other places, Boston has enjoyed a holiday, Monday being celebrated in observance of the 17th of June, "Bunker Hill Day." In nearby places like Cambridge, Chelsea, Malden, Everett, Medford, Lynn and elsewhere the day was also celebrated and thousands of people from these cities hit Boston and Charlestown for the day. This all made much extra business for the soda departments in every drug store hereabouts and the receipts that day, which was perfect as regards weather, were enormous. With the wholesalers and jobbers the week has been a busy one and considerable business has been transacted in the remainder of the week after the holiday. The jobbers all report the retail trade pretty good just now. There is no material change in the general market. Chemicals show little variation, except that caustic soda is lower. Oxalic acid also is reported lower. English bleaching powder is less firm than recently. No feature is found in the general list of drugs. Only moderate demands are made for alcohols and cologne spirits. There are simply fair sales of Brazilian waxes at fair rates.

**ABBEY'S
EFFERVESCENT
SALT.**

It is to your advantage to handle a preparation that sells, and that affords you a good profit.

We have arranged the prices on Abbey's Effervescent Salt so as to yield all druggists a living profit.

No other manufacturer so effectively co-operates with you in creating a demand for his product. Our advertising campaign for 1900 will be of much greater magnitude than that of last year.

Co-operation with us in pushing sales will be mutually advantageous.

YOUR WHOLESALER WILL FILL YOUR ORDER.

- - THE - -

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

SOLD IN THREE SIZES RETAILING AT 25c., 50c. AND \$1.00 PER BOTTLE.

TRADE LIST ON APPLICATION.

Improvement in Baltimore.

Baltimore, June 26.—Business among the jobbers has an indication that the supplies have been decreasing and that a large number of articles must be replenished. Sanitary conditions in the city are very satisfactory and there is little sickness, so that ordinarily the sales would be moderate. The manufacturers of pharmaceuticals continue very active in the laboratories and while competition reduces profits to a rather low margin, large quantities of goods are being disposed of. Retailers and their soda water trade are an increasing factor in the receipts, and their condition is correspondingly improved. The movement of heavy chemicals is normal for this season of the year.

Very, Very Dull.

Detroit, June 23.—"The usual midsummer quiet" is hardly stronger in this city to express the sort of stesta the wholesalers of this city are now enjoying, especially in the city departments. Prices are remarkably regular, about the only change worth speaking of being the drop of ½c. a pound on lead yesterday. If "miscellaneous company" the drug merchants have plenty. All lines are complaining. Travelers for hardware and dry goods say they hardly dare put in an appearance at their headquarters. Things are dull. The Employers all over are speaking of their firms in a very respectful manner these days, handling each other, even, very carefully. A change is longed for.

Not Very brisk.

Chicago, June 23.—The jobbers this week have been quite busy during a part of the week. The last few days, however, have been rainy, cold and not very agreeable and business has in consequence fallen off. This is the coldest June in many years, and this condition has perhaps affected the trade. The newspapers gravely attribute this climatic change to the influence of the Chicago Drainage Canal.

Manufacturers of pharmaceuticals, considering the season, are quite busy. While they are doing more business each year, each year the competition becomes keener, so that everyone is compelled to exert himself strenuously to keep in sight of the procession. Collections are good and dealers in sundries, fountains and glassware are fairly busy.

Slight Falling Off.

St. Paul and Minneapolis, Minn., June 22.—As compared with a month ago the jobbers of these cities notice a slight falling off in their trade. They have nothing to complain of, to be sure, for business is still satisfactory and ahead of last year at this time, but they are not obliged just now to regularly break their necks every day in filling orders as was the case last month and indeed for many months prior to this one. The markets remain very steady. Conflicting reports are made by the retail men, most of whom have found this week rather a dull one. In St. Paul this is due largely to the fact that a two weeks' carnival is being held by the Elks, and the festivities attract most of the people in the evening who are wont to haunt the drug stores and buy something. This loss of trade is not offset to any marked degree by the presence in the city of an unusual number of visitors from the country. Collections continue almost "aunt for publication." There is no apparent excuse for this. It is simply because so many are not yet quite ready to settle that little bill.

Trade Keeping Up Well.

St. Louis, June 23.—This is always the dulllest month in the year for a business of this character, but wholesalers say that business is keeping up well to the standard for the month and shows an increase over the corresponding month of last year. City trade continues to suffer greatly from the effects of the great street railway strike and the network of boycotts which have bothered other lines is catching the drug trade to some extent. An officer of one of the wholesale houses was seen riding on a trolley car. If it started, and since then several druggists in districts where unionism waxeth strong have notified salesmen that they will have to forego the pleasure of buying from them for the present. Of course, this is absurd and unjust, but facts are facts.

There is a steady, if not large, demand for Teething Necklaces. The idea that to wear one keeps the child 'n a healthy condition is an imported one, but it finds ready acceptance in Germany, Switzerland, France and Belgium, and has been transplanted in this country. Many persons believe that they correct acidity, prevent and cure convulsions and give tone to the whole system. Many druggists have had orders on this simple appliance that could not be filled, and to such dealers we call attention to the advertisement of the Swiss-American Company, Detroit, on another page.

MARKET REPORT.

NEW YORK MARKET.

New York, June 26.—There is an average seasonable demand from consumers and business in the aggregate continues of satisfactory volume, with fluctuations in prices wholly the result of natural causes.

OPILUM.—Quiet and unchanged. Retail jobbers quoting the old grade at \$3.35@3.40 for 9 per cent. and \$4.35@4.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPILUM.—A continued quiet feeling has prevailed and in the absence of new features jobbing quotations are unchanged at \$4.45@4.65 for 13 per cent. and \$5.15@5.35 for 16 per cent., according to size of order.

MORPHINE.—The consuming demand continues active and jobbing prices are steadily maintained at \$2.95@3.05 in ounces and \$2.40@2.50 in eighths according to brand.

QUININE.—There is no material improvement in demand, but conditions continue favorable to holders and the market has a firm undertone with quotations for jobbing quantities firmly maintained at \$19.62c. for bulk in 100-oz. tins, 33@34c. in 50-oz. tins and 38@39c. in ounce vials, as to brand.

COCAINE.—Values are firmer in sympathy with a stronger position of raw material and jobbers have advanced quotations to \$5.25@5.50 for large crystals and \$5@5.25 for small.

ISINGLASS.—The Russian variety is very scarce and higher quotations for jobbing quantities showing an advance to \$4.90@4.75.

CUBE BERRIES.—Foreign markets are stronger and jobbers have advanced their prices to 15@20c. for whole and 20@25c. for powdered.

OIL CUBEBS.—Firm in sympathy with the berries, and quotations have been advanced to \$1.15@1.30.

OIL ANISE.—A stronger feeling has developed owing to the unsettled condition of affairs in China and prices have been marked up to \$1.87@2.05, as to quality and quantity.

OIL CARAWAY.—Increased cost of seed due to crop shortage has caused an increase in jobbing quotations to \$1.85@2.10 for pure and \$1.35@1.60 for ordinary.

GRAINS OF PARADISE.—The market is again better supplied and prices have reacted to 9@70c. for whole and 7@60c. for powdered.

ROSE LEAVES.—Red are firmer owing to prospective scarcity due to drought in producing districts and jobbers have advanced quotations to \$1.15@1.30.

CARBOLEIC ACID.—Primary markets are stronger and holders here are firmer in their views but the demand continues light. The revised quotations are 20@27c. in drums, 30@45c. in pound bottles white, and 35@40c. in amber 5-lb. bottles 3c. less.

POPEY SEED.—Owing to scarcity and higher foreign markets jobbers have advanced quotations to 12@15c. as to quantity.

NUTRALS.—Conditions abroad are favorable to holders of blue Aleppo, and jobbing quotations show an advance to 35@40c. for whole, 37@42c. for bruised and 40@45c. for powdered.

TIN CRYSTALS.—Manufacturers have reduced quotations 2c. per pound and in consequence prices for jobbing quantities show a decline to 55@40c.

SENEGAL ROOT.—New crop has begun to offer and the market is easier with prices in a jobbing way reduced to 50@60c. for whole and 55@65c. for powdered.

SPICES.—Among the changes of noteworthy importance are a decline in cloves to 12@15c. for whole and 16@20c. for powdered; decline in allspice to 16@12c. for whole and 16@20c. for powdered, and an advance in red pepper to 18@22c. for whole and 21@25c. for powdered.

CASTOR OIL.—Quotations for No. 3 have been advanced by jobbers to 11@12c. in barrels, 12@12½c. in cases and 12½@13c. in 40-lb. cans.

GOLDEN SEAL ROOT.—The market is easier in tone and jobbers have reduced quotations to 70@80c. for whole, 75@85c. for ground and 90@85c. for powdered.

NAPHTHALINE.—Manufacturers' prices are lower and jobbers have reduced quotations to 2½@3c. for balls and 2½@2½c. for flake in barrel lots; smaller parcels of either 4@6c.

AQUA AMMONIA.—Quotations for concentrated have declined to 74@73c. in carboys, 9@10c. in jugs and demi-johns and 12@15c. in bottles.

FLAXSEED.—Primary markets continue to harden and jobbing prices show a further advance to \$6.75@7 for whole by the barrel and 4½@6c. per lb. for less; ground, 3½@4c. in barrels and 5@7c. for less.

SHELLAC.—The import cost is a shade lower and jobbers have reduced quotations to 32@35c. for D. C.; 22@27c. for native and 27@30c. for orange.
