A word or two concerning the nature of the queries sent in. Please make these as direct as possible, and be sure that they are of an appropriate nature. Do not make unnecessary or unreasonable demands, but, on the other hand, feel at perfect liberty to call upon us at any and at all times for any legitimate assistance which we may be able to render. Do not ask the printing of a formula or process which may easily be found in the Pharmacopoeia or the National Formulary. Consult your reference works before writing, and particularly look over the indexes of this and other trade papers which you have on file. In many instances exactly the information wanted has been published in this paper, and you can find and make use of it at once if you will but go to the trouble of looking it up.

Make your queries as explicit, clear and pointed as possible. Don't force the editor to guess at your meaning. Assist him by giving all the collateral information you can. Explain the intended employment of the compound you desire to make. Describe the difficulties you have experienced in manipulating an untractable prescription. Give the history as far as you know it of a given subject. Oftentimes it is just this additional information which querists omit, but which is absolutely essential if the editor is to correctly frame the desired reply.

A considerable proportion of queries received is for information concerning the composition of patent, proprietary or secret preparations. It must be understood that queries of this sort are not answered. The formulas of such articles are the property rights of their owners, and we have no justification, even did we possess the desire for divulging their secrets. This reason is, or should be, alone sufficient for a declination to publish answers to queries of this character. But farther than this, should we attempt to give formulas, it would be merely an attempt, a guess, nothing more. These formulas are secret. No one but their owners knows definitely about them; others could only guess, and we prefer not to guess. A moment's thought will convince any one that the manufacturer will not make his trade secrets public, for they are part of his stock in trade, his principal asset. If the druggist wishes to make preparations in any particular line, there are plenty of formula books at his service, and beside this, the "Question Box" of this paper is at his command, and in it we will always do our best to give formulas and processes requested. When it comes to bare-faced imitations and infringements, however, we respectfully announce that "we pass" on this proposition.

Subscribers are requested, in using the Question Box, to carefully consider its purpose, the rights of meum and tuum, and act accordingly. Use the Question Box legitimately and as freely as you wish.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

ONE DRUGGIST'S METHODS.

Jersey City Heights, N. J., March 7, 1900.

Editor *The Pharmaceutical Era*: In March 1 issue I noticed that the Pittsburg druggists make their own skin soap. I think this is a good idea, but I do not like the style in which the wrapper and circular are gotten up—too much on the nostrum style.

On my way back from Cincinnati last fall, where I had been as a delegate to the N. A. R. D., I had the pleasure of meeting a member of a firm of prominent soap makers in one of our Eastern cities. He was making inquiries as to what had been done by the N. A. R. D. on the soap question. After giving him what information I thought was proper, I suggested that I thought it would be a good chance for some one to get up a soap to sell to the drug trade, and if possible to get the endorsement of the Executive Committee of the N. A. R. D. After my return I had some correspondence with him, but his firm, being engaged quite extensively in the manufacturing of another line of soap, thought they would not have the time to devote to this. I then concluded to have a soap of my own made, the sale of which I have been pushing lately. I now have none of the Cuticura preparations in my store. I have also had made for me a tablet to take the place of Ripans, which I have met with wonderful success in selling, and now sell more of them than I do of Ripans, and if the manufacturers persist in placing them in the groceries, etc., in my vicinity, I am in a position to drop them entirely.

I have had some circulars printed giving a list of all my preparations, which I have distributed quite freely in my neighborhood, and also used as counter wrappers.

I have now concluded to try the value of printer's ink by advertising in our local paper. My first ad. is the circular referred to above, which I shall follow with other smaller ads. from time to time, giving one or two of the preparations.

Some time ago you had considerable discussion in reference to the selling of naphtha indiscriminately, without cautioning the buyer as to the dangerous nature of the article. I have used for several years a caution label, which is placed on naphtha and all inflammable articles which are sent out. With this I send you one of the labels, also circular and advertisement. I simply offer this to show what can be done.

JAMES FOULKE.

MORE WHO LIKE THE BLUE BOOK.

Minneapolis, Minn., March 5, 1900.

The Pharmaceutical Era: We have received your Blue Book and have very carefully looked it over. We want to congratulate you upon your enterprise and thought in getting up such a combined price list; it certainly fills a long felt want. For over twenty years the writer has had the price lists to contend with, and has spent many minutes at times hunting for a certain price list, and nine-tenths out of ten could not find the one wanted. Havertek & Co. We have occasion to look this up often. There are others we shall mention later. The articles published in the *Era* by leading druggists and also by yourselves, are good and ought to be read by all retail drug dealers. We are never too old to learn.

GAMBLE & LUDWIG.

Philadelphia, Pa., February 7, 1900.

The Pharmaceutical Era: Enclosed please find check for *Era* Blue Book. Am pleased with the investment. Druggists need a reliable list of drugs and proprietary medicines, if possible giving the prices on 2 dozen lots where special discounts are offered, and leave out such lists as —, —, etc. Such lists are easily

gotten, and usually are at hand in all drug stores doing any business. Your offer is as I say worth a great deal more than the cash, with weekly Change Sheets. It could contain less and be of great advantage, but I presume there is a business feature in including the lists I mention, which makes it possible for you to issue the book.

E. C. WARG.

Syracuse, N. Y., February 23, 1900.

The Pharmaceutical Era: I wish to congratulate you on the *Era* Blue Book. It is all that could be asked for, and is the most complete of any work of its kind I know of. I hope if you publish another edition more Eastern manufacturers will be in your list. This is the only criticism I can offer, and it is not mentioned in a fault-finding spirit at all, because if I was not highly pleased with the Blue Book I should return it.

W. B. BISSELL.

Roanoke, Ala., February 27, 1900.

The Pharmaceutical Era: We are just in receipt of the Blue Book and to say we are well pleased does not express it. We could not do without it and your weekly change sheets, and it would be impossible for us to say what they have already been worth to us. We wish you much success, and you may always depend upon our being regular subscribers.

P. G. TRENT & SON.

Ashland, Ala., February 22, 1900.

The Pharmaceutical Era: Enclosed find check to balance my account with you. I have received the Blue Book, and am sure I am making a good investment. I have felt for some time the need of just such a book. I hope you will meet with all the encouragement you deserve.

CHAS. S. NORTHEM.

Dunn, N. C., March 3, 1900.

The Pharmaceutical Era: We have for a long time thought much of the *Era*. We feel that we could not do business without a good drug journal. The *Era* is good enough for us. We thank you very much indeed for the Blue Book. It is just the thing we have needed for years.

HOOD & GRANTHAM.

Washington, Ark., February 26, 1900.

The Pharmaceutical Era: The Blue Book reached me in safety. It supplies a long felt want. I used to be a subscriber to your journal. It is superior to all others, and—like the prodigal—I have returned after several years wandering.

S. M. CARRIGAN.

Milwaukee, Wis., March 2, 1900.

The Pharmaceutical Era: I must congratulate you upon getting out so complete a price list as the *Era* Blue Book. It is handsomely bound and well arranged. I thank you many times for the copy sent me.

SAMUEL A. SCHWANDT.

Jersey City Heights, N. J., March 4, 1900.

The Pharmaceutical Era: The Blue Book to hand several days ago. Must congratulate you on its general get up. No doubt it will be a great convenience and value to the retail druggist.

JAMES FOULKE.

Cincinnati, Ohio, February 27, 1900.

The Pharmaceutical Era: Money invested in the *Pharmaceutical Era* may be considered well spent. Have already saved more than subscription price through weekly Change Sheet.

M. Wm. HAMILTON.

Memphis, Mo., March 1, 1900.

The Pharmaceutical Era: I received the Blue Book yesterday, and was glad to get it. It is surely a fine book, also a very convenient one, and I thank you for it.

HENRY T. SWIFT.

Milford, Del., February 27, 1900.

The Pharmaceutical Era: We have received your Blue Book, and find it very comprehensive and complete, really covering more ground than our needs require.

T. F. HAMMERSLEY.

Liverpool, Pa., March 6, 1900.

The Pharmaceutical Era: The Blue Book came to hand O. K. on the 3d inst. I appreciate it very much. Accept my thanks for same.

H. A. S. SHULER.

Flint, Mich., February 26, 1900.

The Pharmaceutical Era: Enclosed find draft for subscription for *Era* for one year, and the *Era* Blue Book. The latter is very fine.

ORRIN P. SAFFORD.

Decorah, Ia., February 24, 1900.

The Pharmaceutical Era: We are highly pleased with the Blue Book. We hope that all manufacturers will see the value of the publication.

WANGLER BROS.

P. S.

The Pharmaceutical Era: Blue Book to hand this morning. Am much pleased with it.

THOS. V. HANNAH.

A SAD ADVENTURE

1.—The night clerk had just fallen into sweet slumber when—

2.—The alarm rang. A common drunk demanded alcohol.

3.—The C. D. was gently ushered out.

PATENTED SYNTHETICS AND THE U. S. PHARMACOPOEIA.

BY S. W. WILLISTON, M. S.

Shall medicines of established value and wide use be barred from the United States Pharmacopœia because they are patented? In other words, must remedies remain unofficial so long as their manufacture is a monopoly? Is the question one of policy, utility, or of ethics? The medical profession has long looked with disfavor upon the patenting of any device, instrument or medicine intended to alleviate human suffering. The motive is an ideal one, doubtless, but it is a very serious question whether humanity has been the better for such a system of ethics. So long as man is selfish so long will he require something more than philanthropy to spur him on to his best efforts.

The patenting of a newly-discovered synthetic compound, if under proper safeguards, is, I believe, for the best interest of mankind, and the question of its advisability is not and should not be one of ethics. Is the official recognition of such compounds then a question of utility?

The pharmacopœia is a work prepared primarily for the physician, and secondarily for his agent, the pharmacist. A physician is criminally culpable who does not use those remedies which his own and the experience of others have proven to be most desirable in the treatment of disease. If nothing will take the place of phenacetin, and phenacetin is positively indicated, the physician must use it or be guilty of neglect. The manufacture of phenacetin is a monopoly he deprecates, even as he deprecates the monopoly of petroleum. But that fact will not excuse him from the use of either when the interests of his patients are concerned. He may be willing to pay ten times their actual cost rather than not have them for use at all, when the question of suffering or comfort, or life or death, is involved.

The physician does rightfully insist that he shall have the opportunity of knowing, in an unprejudiced way, all that there is to be known about such medicines. He insists that these remedies shall be as pure as possible, and that they shall be uniform in strength. Where is he to get the assurance of this purity and uniformity if not in the pharmacopœia? Supposing that some compound is discovered which vies with or outranks quinine or opium in its usefulness and value. Is there to be no place where one can find an impartial and honest statement of the medicine, because, forsooth, its manufacture is a monopoly? With this information the pharmacist stands between him and fraud and adulteration. Without it he is absolutely at the mercy of the manufacturer. It seems to me to be beyond all reasonable dispute that a remedy widely used and of proved value must find admittance to

the pharmacopœia, no matter where it is made, or by whom, or what it costs.

Is it good policy to admit such synthetic remedies to the pages of the pharmacopœia? It is claimed by the editor of the *New Idea* that the trade name will practically give a perpetual monopoly to all patented synthetics. If his contention is true that such remedies will be superseded in the future by newer preparations, then, of course, the trade names will die with the medicines. If, on the other hand, they remain as indispensable additions to the physician's stock, then nothing will more quickly break up the monopoly of their manufacture—after their patent has expired—than their recognition by the pharmacopœia under their true scientific names. With the pharmacopœia's treating phenacetin under any other name, and its manufacture unrestricted, it is idle to insist that the monopoly would continue under its trade name.

An objection of some validity is the free advertising that such recognition by the pharmacopœia will give to the patented compounds. But, so long as they are used generally by physicians and spoken of in the medical journals, the additional advertisement will be slight indeed. The committee of revision will be culpable indeed if it admits to the pages of the pharmacopœia every candidate for public favor that is presented to it. Their duty is to admit such as have stood the test of experience. What would be thought of an independent journal of photography if it refused to mention in its pages all developing agents that are patented? Hydroquinone and *ikonogen* are synthetic compounds of established value that have been patented. To refuse to include them in a manual of photography would be childish indeed.

The argument that any standard of purity established by the pharmacopœia would not avail with the manufacturers is untrue. If a standard is given by the pharmacopœia the manufacturer would be the last one to change that standard, knowing that by so doing he would lose the confidence of the pharmacists and physicians, and consequently largely or wholly destroy the sale of the medicine—at least until he could demonstrate satisfactorily that any change in the composition or mode of manufacture had been for the better. (W. Dr.)

ANTI-ETHYLIN is a serum against alcoholism, discovered by Eroca, Sabeller and Thibault, who have communicated the results of their researches to the Paris Academy of Medicine. The serum was obtained from a horse that had been caused to become habituated to a voluntary consumption of alcohol. The blood serum of the animal was injected into other animals that had acquired a taste for alcoholic liquids, with the effect that it induced such a strong antipathy to alcohol that the animals would refuse all food, that contained any alcohol whatever. (Pharm. Post.)

OF A NIGHT CLERK.

4.—The N. C. received a few bouquets.

5.—The N. C. bravely defended his koppe.

6.—Next morning explanations were of no avail. The N. C. was paid off and entered the millinery business.

A NEW ELECTROLYTIC PROCESS OF MANUFACTURING CHEMICALS.

For some months past there has been an increasing activity in the chemical trade of this district—the largest and most important of its kind in Great Britain—and quite recently an added impetus has been given by the establishment of works using a new electrolytic process. Up to a few years ago, the chemical trade of this district was exceptionally prosperous; but now it has to meet German competition, and since the going into active operation of the present tariff, the exportations to the United States have tremendously decreased. During the fiscal year ended June 30, 1899, there were exported to the United States from this district alone chemicals to the value of \$4,567,260. During the fiscal year ended June 30, 1898, the value was only \$1,982,536. The trade appears to recognize that it can never recover the American market—at least not to the extent heretofore existing. The endeavor is to create new markets and to meet competition by more economical methods of manufacture.

There has just been started at Farnworth, near Liverpool, a new process of separating chlorine and sodium by the direct decomposition of salt by electrolysis, without the introduction of any other ingredient. It is called the Hargreaves-Bord process. The Liverpool Post gives the following explanation of the method:

Salt is submitted to a suitable current of electricity, and both the substances are produced unmixed and pure. The salt used is in its cheapest form, being that of brine pumped up from its native bed, the salt of which—delivered into the actual apparatus of the factory—costs no more than about 3d (6 cents) per ton, as against 7s. (\$1.70), the usual price for the rough salt used in the other alkali works. The apparatus, or cell, in which this is effected is a narrow tank, the walls of which are porous. Brine is pumped into it, and on the passage of electricity a solution of soda flows slowly down from the outside of these wet walls, yielding at once soda crystals; while the chlorine, in like automatic manner, passes away for the production of bleaching powder, chlorate of potash, or such other chlorine compounds as may be required.

No raging furnace, no sulphur kilns, nor the noxious fumes rising from such are present. No waste materials are produced, unless as such reckoned the ashes from under the steam boilers which produce the motive power for the generation of the electric current. Even the smoke from the boiler fires and the waste steam from the engine are used in carbonating and dissolving the soda thus formed. In the actual production scarcely any hand labor is required. All moves on in silent regularity, and it is only in the necessary handling and packing of the materials produced that labor comes in.

One distinction of the cell is the peculiar diaphragm used. It is a sheet of asbestos composition, non-porous in the ordinary use of the term, but when forming the walls of the cell, the contents of which are electrically excited, it allows molecules of sodium hydroxide to pass, but very little sodium chloride.

It is claimed that the above process is much more economical and simple than the former, including the rival electrolytic methods. It is stated that one difference between the Hargreaves-Bord process and the Kastner-Keller process (which has been in use in this district for some time) is that mercury is used in the latter process, but not in the former. Large sums of money have been spent in experiments with different electrolytic methods with varying success, and it is too early yet to say whether the new process will meet expectations. Speaking generally, however, the chemical trade of this district is now in a flourishing condition, and orders during the last month have been exceptionally large—mostly, however, for home consumption. Still, trade is not as good as it was ten years ago. Since the great decrease in shipments to the United States, continental orders have largely increased, in spite of German competition. Most of the new orders have been from Germany, Russia and France. Present prospects are good.

The salt trade is naturally closely allied with the chemical trade. Strange to say, however, the salt trade has not followed the chemical trade in a resumption of comparative prosperity. For months past attempts have been made to form a combination of all the salt companies of Great Britain, most of them being in this neighborhood, on the Cheshire side of the Mersey. The combination was effected at a meeting of the trade in Liverpool, and the announcement officially made of an advance in prices. It is not proposed to consolidate the many individual companies into one gigantic "trust," to be operated by one executive, with a "pooling" of the profits and losses; but the arrangement is to form an agreement to regulate and limit the output of each concern and to keep prices up to a certain point; each company, however, to retain its own separate organization, both as to management and profits and losses. JAMES BOYLE, U. S. Consul, at Liverpool (Consular Reports).

ICHTHYOL SUPPOSITORIES.—Eschenberg (Apoth. Ztg.) recommends for the preparation of ichthyol suppositories with cacao butter an addition of white wax and states that without wax a plastic mass cannot be obtained. He proceeds by melting the ingredients together at 90° to 95° F. on a waterbath, then forming into suppositories after partial cooling. According to Selten (Pharm. Post) the addition of wax is undesirable and unnecessary, powdered tragacanth being preferable. This author directs an addition of 10 to 15 per cent. of tragacanth to the prescribed quantity of ichthyol, with sufficient cacao butter to form suppositories of suitable size, the mass being readily and quickly made without heat.

(Continued from page 280 March 1.)

LONDON, PARIS, AND BERLIN.

Three Metropolitan Cities of the Old World. Their Places in History, Pharmacy and Commercial Importance.

A SERIES OF DESCRIPTIVE ARTICLES FOR THE TOURIST AND PHARMACEUTICAL VISITOR TO THE WORLD'S FAIR IN 1900.

SEVENTH PAPER

(Written for *The Era*.)

THE MUSEUMS OF PARIS.

There are few, if any, capitals in Europe which can vie with Paris in the variety and extent of their public museums, art galleries and libraries. The intrinsic value of the French collections is, in many cases, considerably enhanced by the beauty and historical interest of the buildings in which they are placed.

The Louvre

contains what is probably the largest and most valuable art collection to be found under one roof in the whole world. Built for the town residence of the French monarchs, the nobly proportioned and richly decorated rooms form a great contrast to the bare galleries in which collections of paintings are often placed. The finest apartment is the Gallery of Apollo, shown in our illustration, the rich carving, gilding and tapestry and the painted ceilings—nearly all the ceilings in the Louvre are in themselves valuable works of art—are unfortunately only partially visible in a photograph.

It is not our intention to describe the Louvre in detail—an entire number of the *Era* would not suffice—but simply to note a few leading features. The "Hall of Seven Chimneys" contains the masterpieces of modern French art, Gericault's "Ratt of the Medusa," David's "Coronation of Napoleon I.," Gros' "Napoleon I. Visiting the Plague-Stricken Patients at Jaffa" in 1799; portraits of Baron Larrey, surgeon of the Grande Armée, and his son, etc., etc.

The Square Hall, or "Salon Carré," is, on the contrary, devoted to the world-famed works of the Old Masters. Most of them are known everywhere by printed reproductions. This comparatively small room contains paintings to the value of one or two million dollars—perhaps more. \$123,000 was paid (half a century ago, when pic-

tures were cheaper) for Murillo's "Immaculate Conception." Here also is Raphael's "Holy Family," Van Dyck's portrait of King Charles I. of England, Holbein's portrait of Erasmus, and (what is considered by many the gem of all the collection), Leonardo da Vinci's "Joconde," a female portrait. An interesting picture is Gerard Dow's "Dropsical Woman," where the doctor holds up the bottle to the light to examine its contents. Exquisitely finished and colored, one of our leading Paris pharmacists so much admires this masterpiece of Dutch art that he has had it reproduced (in the finest manner and at considerable expense) on a large porcelain jar which is the centre ornament of his shop window.

The "Grande Galerie" is the longest picture gallery in the world; every school is represented, the religious subjects of the medieval Italian artists, Ruben's robust allegories, the homely scenes of the Dutch painters, the rich treatment of Velasquez and the Spanish masters, etc., etc.

Drawings, bronzes, metalwork, arms and armor, jewelry and goldsmiths' work, carving, furniture, pottery, a remarkable collection of drawings, and a museum of Egyptian, Greek, Roman, Assyrian and other antiquities fill the rest of the vast first floor. Down stairs is the sculpture, ancient and modern. Here is the Venus of Milo, the well-known armless female statue in marble. An offer of \$200,000 was made by the British Government for this masterpiece of Greek sculpture, but refused. On the upper floors is the Naval Museum; the fine collection of ship models seems strangely out of place in this inland city.

The collection of Italian pottery includes a handsome and interesting set of drug jars several centuries old, and the French pottery specimens include two big blue and white jars marked "Orvietan" and "Theriaca" (Venice treacle) such as every self-respecting French apothecary placed in a conspicuous position in his officine in days gone by.

THE LOUVRE: EXTERIOR.

NATIONAL LIBRARY.

THE DROPSICAL WOMAN.

Among the Egyptian antiquities, the tiny pestles and mortars (which may have mixed drugs for the ointmentaries of Moses and Aaron), the pots for salves, and eye washes, the combs, spatulas, etc., will probably catch the eye of the druggist.

The Luxemburg Museum

of modern paintings is a sort of feeder to the Louvre. The works of living painters are not admitted to the great museum, but after the artist's death they find their way there one by one. Besides the French pictures, the Luxemburg contains an interesting little gallery of foreign works, where the familiar names of Whistler, Sargent, Gay, Lorimer, etc., are to be found. In the sculpture gallery, the masterpieces of our modern medallists should not be overlooked. We may just cite A. Dubois' medals of Pasteur, Chevreul, Wurtz, J. B. A. Dumas, Becquerel and other famous savants.

Not far off is

The Cluny Museum.

the fine old mansion, built in 1515, and illustrated in our article on "Modern Paris." It is, generally speaking, a museum of applied art of medieval Europe, though it is hard to exactly define a collection which ranges from the nine crowns of the Gothic kings of Spain (A. D. 649) to a pair of postboy's boots. The arts of the wood carver, locksmith, goldsmith, potter, blacksmith, cloakmaker, embroiderer, coachmaker, etc., etc., are all represented. Some of the old drug pots have already been illustrated in the Era; there are also a dozen small mortars and two

CUVIER'S HOUSE

larger ones. One of these large mortars bears the arms of Brittany, the date 1616, and the founder's name, Simon Abblo. The other was made for the pharmacy of the Spanish Inquisition at Seville, as the inscription attests:

"Sold de Andres Romero Ministro de la Santa Inquisicion de Sevilla Francisco Solano Mc Ecedi en Triana.

Ano D 1677."

We may also just mention an interesting collection of the scientific instruments used three hundred years ago, astrolabes, compasses, etc., in fact whatever be a man's trade he is likely to find much to interest him at "Cluny."

At the other end of the Latin Quarter of Paris is

The Natural History Museum

("The Muséum," as it is styled par excellence), better known by its ancient name, the "Jardin des Plantes." This garden was founded in 1635 by Guy de la Brosse, physician to King Louis XIII., and was specially intended to enable physicians and apothecaries to study botany; classes were held and lectures given on general botany, and more particularly medicinal plants. Some of the ancient buildings, bought by Guy de la Brosse and enlarged by the naturalist Buffon, may still be seen along the Rue Geoffroy St. Hilaire.

The Menagerie,

which is the great attraction for the general public, was commenced by Geoffroy St. Hilaire in 1793, and now contains over 500 animals, 800 birds, etc. On a fine Sunday 35,000 persons pass the gates, not the aristocratic Sunday loungers of the London "Zoo," but the toilworn inhabitants of Eastern Paris with their children; the soldier, the nursemaid and the country v'sitor—it is an interesting place to study the French character.

The Botanical Garden

is evidently not to be compared with Kew, but it is useful for students, etc. There are 14,000 plants, classified after Jussieu's system, with D. Brongniart's modifications. The system of labels is worth noticing—red for medicinal plants, green for alimentary, black for poisonous, yellow for ornamental, blue for those employed in various arts and manufactures. Specimens are supplied to the Sorbonne, Ecole Normale and other educational institutions of the Latin Quarter. The greenhouse is small, but beautifully kept. An old building contains a herbarium of 175,000 specimens, and the Mineralogical and Geological collection, next door, contains 31,000 samples.

The Zoological Collection

is now lodged in a fine building at the end of the garden, opened in 1888. This, like the new Anatomical Hall here, is a proof of the zeal and intelligence of the present Director of the Museum, M. Milne Edwards, member of the Academy of Sciences, Professor of Zoology at the Paris School of Pharmacy, and one of the most distinguished of living zoologists.

A vast central hall contains the larger specimens, including some immense whales, etc. In the lateral galleries of the ground floor are the Mammalia, arranged in classes as usual, on the first floor the birds—a splendid collection, un-quailed either at London or Berlin—above are the fish, reptiles, insects, etc., half a million specimens of crustacea, a million of molluscs, and zoophytes. The painstaking exactitude exercised in the mounting of specimens may be judged by a recent case—the death of an orang-outang in a Parisian menagerie. Ere the body was yet cold M. Milne-Edwards and his assistants were hard at work photographing, measuring and taking plaster casts. The skeleton itself was bedded into the plaster model, and the skin thus re-mounted on the actual bones of the animal. M. Milne Edwards, like several of his colleagues at the Museum, is an artist as well as a

M. MILNE-EDWARDS

GALLERY OF APOLLO (LOUVRE).

AT VERSAILLES.

savant, and has made clever sketches of his various charges.

The Galleries of Anatomy.

paleontology and anthropology, opened in 1808, form one of the newest and best arranged of our Paris Museums. On the ground floor the Anatomical collection, arranged by M. Filhol. In the centre the skeletons of whales and other Cetacea, around the walls skulls of large animals. In the wall cases on the left, skeletons arranged by classes (Carnivora, Rodentia, etc.), on the right the organs, grouped for comparison, the stomach of the lion side by side with that of the rodent or the ruminant, etc. This exceedingly clear and simple arrangement makes the collection as readable as a book. We have often seen teachers with their pupils going round the room, illustrating the lesson by these admirably mounted specimens.

The Museum may be said to have been the birthplace of the Science of Paleontology, for was it not here that the great Cuvier found the confused mass of bones out of which he patiently constructed the monsters of the antediluvian epoch. Prof. Gaudry has made this collection (on the first floor) very striking, the gigantic Mammoth (*Elephas Meridionalis*) found in the Gard (France), the Paleotherium from Choisy, near Paris, and other specimens from America and all parts of the world.

One cannot help thinking how "primeval man" managed to exist alongside of such uncomfortable neighbors, as one mounts to the top floor, the Anthropological Section. Prof. Hamy has spared no means of illustrating the human race of every age in every clime. Skeletons, skulls, models, drawings, photos, mummies, dolls, nothing which can afford documentary evidence is lacking. This collection of models of heads of Red Indians is from the Smithsonian Institution; yonder assemblage of Oceanic Islanders from the German Museum, these figures of Hin-

ENTRANCE ANATOMICAL MUSEUM.

doos evidently of British origin.

Before leaving the Jardin des Plantes

Two Historical Trees

must just be noticed. This Cedar of Lebanon, every Frenchman will tell you, was brought here by Jussieu "in his hat." As a matter of fact it came in a little flower pot, but it really dates from 1735, and is the first Cedar of Lebanon planted in France. It is still growing—it increases about half an inch in circumference yearly.

Still older is the pseudo-acacia, propped up by bars of iron, which dates from 1636, when the garden was opened. There is only one other tree so old as this in the City of Paris.

Another object of interest is the house once inhabited by Baron Cuvier, the naturalist.

Pottery.

Space forbids any description of the other Museums. We may just advise lovers of old pottery and porcelain to inspect the Chinese and Japanese specimens at the Guimet Museum of Oriental Art and Religion. M. Guimet is a chemical manufacturer, and is president of the Historical Section in the Chemical Industries Group of the 1900 Exposition. There is a unique collection of old drug pots at the Central Hospital Pharmacy, of which Prof. Prunier, of the Paris School of Pharmacy, is director. Just outside Paris is the Sevres Porcelain Museum, where M. Garnier (who, like, M. Guimet, is a charming cicerone), can show some rare specimens of pharmaceutical and other ware.

No summer trip to Paris can be considered complete without a visit to one of the

Royal Palaces.

The Tuileries are destroyed, the Louvre is a museum, but Versailles is only twelve miles away, and the round trip to Fontainebleau and Compiègne can be made in a day. Our illustration will give some slight idea of the magnificence of these former homes of French kings and emperors. Chantilly, the late Duc d'Annamale's stately home, is also well worth a visit.

The National Library

of Paris claims to be the largest in the world. A trifle forbidding and prison-like in outward aspect, it is comfortable and cheerful enough inside. Founded in 1724, it contains 2,500,000 volumes, 90,000 manuscripts, 1,220,000 prints and 200,000 medals. The book shelves form a total of about thirty-three miles in length.

In the Mazarine Gallery some of the most remarkable manuscripts are shown in cases. We may just cite the most ancient having reference to Medicine. (No. 76) Dioscorides' Treatise (Greek uncials, Ninth century); Nicander's manuscript on Theriaca (Greek, Eleventh century); a handsomely illuminated collection of works on medicine dating from the Thirteenth century (No. 29) which the poet Charles of Orleans won (at a game of chess) from his doctor, Jean Caillau; an equally handsomely illuminated French translation of Hippocrates' Aphorisms, made in 1827 for John, Duke of Bedford, by his surgeon, Jean Tour'or.

The Oldest Printed Books

on Medicine are "The Virtues of Waters and Herbs," by Master Jehan Hymbres, a quarto volume in "old English" text; the "Antidotarius Nicolai" (Venice 1471); the "Lumen Apothecariorum," a Gothic folio; the "Thesaurus Pauperum" of Petrus Hispanus (1476), probably the first book ever printed at Antwerp; Verrard's "Ship of Health,"

("Nef de Sante"); and Arnauld de Villeneuve's "Regimen Sanitatis," the first book ever printed at Besancon (in 1487).

It will be seen that medical works were among the first to be produced after the invention of printing, though Theology was then the leading science. Wood engraving, as applied to scientific illustrations, is also a very early art. Witness the "Fasciculus Medicinæ" (Venice, 1483) with its remarkable engravings; and the "Arbolyayre," a French work of about the same date, "containing the quality and preparation of herbs, trees, gums and seeds, extracted from several medical treatises," which is also very fully illustrated. There are only two copies extant of this work, the other one was sold by public auction in London last year for \$500.

The Mazarine Library, at the Institute of France, was founded by the famous Cardinal Mazarin in 1643, and contains about 250,000 volumes, the Arsenal Library has half a million, the Carnavalet (Paris Municipal) Library nearly 100,000, the Sorbonne rather more.

The Genevieve Library

is in the heart of the Latin Quarter, and is principally frequented by students; it contains nearly 250,000 volumes. Founded in 1629 by Cardinal de la Rochefoucauld, it contains many Seventeenth century works, among others a 1617 edition of Albertus Magnus's work "On the Virtues of Herbs," Van den Bosche's "Historia Medica," (Brussels, 1639), Dussear's "Manipul de Micropoles," (Lyons, 1661), Zwelfer's "Pharmacopeia," published at Nuremberg in 1675, etc., etc., etc.

The Special Feature

of Parisian Museums, etc., is that they are kept up wholly out of the taxes, and are entirely free to all. The system of paying for entrance on certain days does not obtain favor in France. The intention is evidently excellent, the result probably less satisfactory in practice than in theory. Every institution has to struggle with financial difficulties, which sometimes handicap its being kept really smart and up-to-date. That the National Library should be closed in winter at dusk means that half the public can never profit by its treasures—the reason is simply that the budget will not cover the expense of installing electric light. Similar remarks might be made elsewhere; the Jardin des Plantes, notably, is placed at a disadvantage compared with the Zoological Gardens at Antwerp and elsewhere. A ten cent entrance fee to the principal museums three days a week would be a relief to the taxpayer and a considerable assistance to the institutions; while free tickets for such days to needy students would remove all possibility of injustice.

ointment FOR BALDNESS—Balzer (Nouv. Rem.) recommends rubbing the affected portions of the scalp at night before retiring with an ointment composed as follows: Yellow oxide of mercury, 5 parts; flowers of sulphur, 4 parts; oil of cade, 15 parts; petrolatum, 30 parts. The scalp should also be washed several times daily with Van Zweiten's solution (corrosive sublimate, 0.1; alcohol, 10; distilled water, 90 parts); either full strength or diluted with an equal volume of water. After washing with the above solution the scalp is rubbed with a mixture of spirit of camphor, 25 parts; oil of turpentine, 5 parts, and ammonia water, 1 part. (Apoth. Ztg.)

TANNOPIN is a compound of tannin, formaldehyde and ammonia claimed to be a very effectual remedy for intestinal catarrh, acute and chronic, owing to its astringent and bactericidal action. The dose for children is 4 to 5 grains given 3 to 5 times daily, for adults 5 to 15 grains several times daily. (Pharm. Post.)

TO PREVENT LOSS OF EYE LASHES A. Trouseau recommends an ointment of the following composition: Petrolatum, 10 parts; castor oil, 4 parts; gallic acid, 1 part; oil of lavender, ad lib. (Apoth. Ztg.)

TENALGIN is a tapeworm remedy for animals stated to contain as active ingredients a mixture of the alkaloids of the arca nut. (Pharm. Post.)

(For the Era.)

THE SOLANACEOUS ALKALOIDS AND SCOPOLA CONTROVERSY.

By V. COBLENTZ, Ph. D.

The recent appearance of an article bearing on this very important subject by so able an authority as Dr. Hesse¹ serves not only as a valuable contribution in clearing up this difficult and heretofore confused subject, but also some of the questions raised in the papers of Prof. Rusby and Mr. S. W. Williams² relative to the use of scopolia rhizome for belladonna root in pharmaceutical preparations. Omitting all technical details, the most eminent authorities distribute these solanaceous alkaloids as follows:

The root³ of the atropa belladonna contains atropin and hyoscyamin, and although the proportions of these vary according to age, the latter is usually in large excess.

The hyoscyamus niger contains chiefly hyoscyamin with very small quantities of atropin, also an alkaloid which Ladenburg named "hyoscinn," the formula of which has lately been established as $C_{17}H_{21}NO$.

Scopolia rhizome's total alkaloids consist of about nine-tenths hyoscyamin and atropin, the remaining one-tenth being an alkaloid which Dr. E. Schmidt isolated some years ago, naming it *scopolamin*. Hesse, after repeatedly examining the commercial scopolamin and this same base from scopolia, has again called attention to the fact that it is not a uniform product, but a mixture of hyoscin and a very small amount of another base which he calls *atrosin*. This view of Dr. Hesse is corroborated by Dr. Louis Merck⁴ (of E. Merck, Darmstadt). This atrosin was first discovered by Hesse in the commercial scopolamin hydrobromid, later in the scopolia rhizome.

Commercially, in order to avoid misunderstandings where a change of title is apt to create confusion, manufacturers retain the title hyoscyin for the base (amorphous) obtained from the hyoscyamus niger, while scopolamin (crystalline) has been retained for this mixture of hyoscin and atrosin from the scopolia.

The question of the use of scopolia rhizome in place of belladonna root would naturally resolve itself into a comparison of their active principles, qualitatively and quantitatively. The total quantitative yield of alkaloids of the former averages about 0.58 per cent., while that of the latter is about 0.50 per cent. Both of these plants contain as chief alkaloids hyoscyamin and atropin, the former being in large excess to the latter; according to Dr. Will (of E. Schering, Berlin), most of the atropin found in the total isolated alkaloids, is formed during the process of extraction, hyoscyamin being then the parent alkaloid in these plants. The close relationship of these stereo-isomeric alkaloids may be best illustrated in Dr. Hesse's statement that the hyoscyamin which is generally found in commercial atropin salts, will, on standing, revert over into the atropin, however if these alkaloids are present as gold salts, then the atropin goes over into hyoscyamin.

This explains the fact that pharmacologically the action of the two alkaloids is often indistinguishable. During the past ten years practically all of the atropin has been made from hyoscyamin, extracted from scopolia rhizome, this conversion taking place readily through the action of heat or alkalies on its solution. No differences in medicinal effect of galenic preparations of these two drugs can be ascribed to these two alkaloids, should the one or the other predominate.

The next question that arises is, does the presence of this scopolamin of Schmidt or mixture of hyoscin and atrosin of Hesse contribute any new or different effect which would prevent scopolia rhizome from replacing belladonna root in galenic preparations. Recently, Dr. Pinner, in an article in the Zeitschrift für Augenheilkunde, calls attention to the identity of the pharmacological effects of scopolamin (Hesse's hyoscin and atrosin) and

¹Proceed. Amer. Phar. Ass'n, 1899, p. 233 et seq.

²Libbig's Annalen, 346, p. 35-36.

³Although the root contains the same alkaloids, it is omitted from discussion here because of great variability.

⁴Journal Society of Chemical Industry, 1897-516.

atropin, and although they differ chemically, they may be used indiscriminately. This reference of Dr. Pinner, of course, relates to their applications in ophthalmology. According to Dr. Rahlmann, "scopolamin excels as a mydriatic and antiphlogistic all other tropeins in use, unlike atropin, it has no untoward after effects * * * * the anodyne effect is not second to that of atropin." Even should scopolamin (hyoscin and atrosin) exhibit effects antagonistic to those of hyoscyamin or atropin when employed hypodermically, or in ophthalmology, it would not necessarily follow that scopolin is a dangerous or undesirable drug when employed in galenicals or locally in the form of a plaster, it must also be borne in mind that this scopolamin contributes only as a very minute factor to the action of this drug, as it is only present to the extent of much less than one-tenth part of the total isolated alkaloids; even then, its local anodyne effect would seem to be desirable. When hypnotic action is desired a salt of scopolamin would always be used in preference to hyoscyamin or any galenical preparation.

Considering these drugs, belladonna leaves, belladonna root and scopolin rhizome (commercially known as belladonna scopolin), their actual value is, in the opinion of the writer, inversely proportional to their market valuation.

Again, scopolin rhizome, because of its greater constancy, qualitatively and quantitatively, in alkaloidal content, is to be preferred to belladonna root in securing preparations of a uniform standard. This was also the consensus of opinion among various European authorities whom the writer consulted while abroad last summer. Official recognition of scopolin is certainly warranted by the facts, at least nine-tenths of its alkaloid being practically identical with that of belladonna, any difference in the case of the other tenth being rather desirable than otherwise.

CHEMICAL TEST FOR COTTON IN WOOLEN GOODS.—For the detection of cotton in woolen fabrics E. Jandrier (Ann. chim. anal. appl.) has devised a method based on the fact that cellulose is converted by sulphuric acid to carbohydrates of an aldehyde character, which are identified by various color reactions. The sample in question is first carefully washed, then warmed on a waterbath with sulphuric acid of 20° B \acute{e} for one half hour. To identify the aldehyde thus formed, 0.01 Gm. of resorcin or other phenol is placed into a test tube, 1 to 2 Cc. of the diluted acid liquid added and then concentrated sulphuric acid free from nitroce cautiously poured in along the walls of the tube so as to form a separate layer beneath. If the sample of fibre contains cotton, the liquid will be colored orange when resorcin is used, or violet when x-naphthol is used as reagent. The coloration may be hastened or rendered more distinct by moderate warming. The test will detect very small quantities of cotton and may even be made roughly quantitative by comparing the reaction and intensity of coloration with that of a known quantity of cotton treated in a similar manner. (Apoth. Ztg.)

TO DISTINGUISH ALPHA AND BETA-NAPHTHOL vanillin is recommended. If 0.1 Gm. of vanillin be dissolved in 2 Cc. of concentrated sulphuric acid and 0.1 Gm. of alpha-naphthol added, a very permanent violet color will appear within 2 to 3 minutes. Beta-naphthol, under the same conditions produces an emerald-green color, which changes to orange. (Pharm. Post.)

CALCIUM PEROXIDE, as prescribed by Nencki, of Petersburg, is a dark-yellow powder, insoluble in water. According to investigations by Rochkowsky it is an excellent remedy for dyspepsia of children, given in doses of 3 to 10 grains per day in milk. The antiseptic action exerted on the digestive organs by calcium peroxide is thought to be due to the slow, but regular evolution of nascent oxygen. (Apoth. Ztg.)

CASCARIN is the name given by Leprieux to the active constituent of Cascara Sagrada, discovered by him in 1882. According to Lafond, cascarin is cholagogue and laxative, but is not a drastic purgative. Tyson employed it in obstinate constipation in form of pills, in doses of 3 grains given at bed time. (Apoth. Ztg.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Naval Apothecaries.—(J. H. G.) See this journal August 24, 1890, page 263, for information regarding enlistment, qualifications, pay, etc., of naval apothecaries.

Benzine Liniment.—(C. H. C.) (1) Mix and macerate for 24 hours: Oil of hemlock, 6 drams; oil of origanum, 4 drams; chloroform, 4 drams; powdered capsicum, 2 ounces; benzine, 30 ounces; oil of turpentine, 30 ounces. Agitate frequently and strain. (2) Oil of camphor (Japanese), 8 fluid ounces; oil of turpentine, 40 fluid ounces; benzine, deodorized, 16 fluid ounces; cottonseed oil, 16 fluid ounces; powdered capsicum, 1 ounce. Macerate the capsicum with the benzine for 7 days, agitating frequently and strain, and add to the other substances previously mixed.

Adhesive Plaster for Rubber Bandages.—(W. W. C.) Some years ago Dr. W. P. Morgan reported in one of the medical journals that india rubber sheets, when coated with an adhesive plaster composed of lead plaster, 1 pound, and resin, 6 drams, furnished an elastic plaster which, while being attached to the skin, would yield to the movements of that membrane and the parts beneath it without causing an unbearable sensation of stiffness or an uncomfortable wrinkling. The adhesive plaster of the Pharmacopoeia might be made to answer a similar purpose, though a little experimenting may be necessary to produce satisfactory results.

Camphorated Fluid Extract of Opium.—(V. Mc.) There is no official formula under this title. A "concentrated paregoric" may be made by dissolving 240 grains of camphor, $\frac{1}{2}$ fluid ounce oil of anise and 240 grains of benzoic acid in 12 fluid ounces of alcohol; triturate 240 grains of opium in fine powder with 3 fluid ounces of water, mix the two liquids, macerate for 7 days, agitating frequently, and filter. For use mix two fluid ounces of the concentrated preparation with 1 fluid ounce of glycerin and 13 fluid ounces of diluted alcohol. The resulting product, though containing the same substances as directed in the official process for "paregoric" is not paregoric and should not be supplied when that preparation is prescribed.

Books on Flavoring Extracts.—(J. M. L.) There is no one book devoted exclusively to this subject. For formulas the Era Formulary contains the largest and best collection with which we are acquainted. Hiss' "Manual of Beverages" and Dubelle's "Soda Fountain Requisites" are two books which contain many formulas for flavoring extracts particularly adapted to the manufacture of fountain syrups. A small work on the subject is Harrop's "Monograph on Flavoring Extracts." In addition to these works you may be able to gather considerable information from such works as Parry's "Chemistry of Essential Oils;" Sawyer's "Odorographia," a natural history of raw materials and drugs in the perfume and allied industries, or Brann's "Treatise on Animal and Vegetable Fats and oils." Part II. of which is devoted entirely to the consideration of essential oils, their manufacture, etc., physical and chemical properties, uses, etc. If you read German you will find much valuable information in Gildermeister and Hoffman's "Der Aetherischen Oele," a work published last year.

Red Fruit Coloring.—(F. L. J.) The National Formulary gives formulas for "cochineal color," "solution of carmine" and two or three other preparations which may

be sold for "red fruit coloring." The following formula under the title of "ruby cherry fruit coloring" has been published: Ruby S. aniline, $\frac{1}{2}$ ounce; alcohol, 2 fluid ounces; water, 14 fluid ounces. Shake the aniline with the alcohol, then add the water. This preparation is said to produce a brilliant color, not impaired by acids. Two fluidrams are sufficient to color one gallon of syrup a deep red. Among other aniline dyes employed for coloring confectionery, liquors, essences, etc., red are fuchsin, acid fuchsin, roceillin, Bordeaux red, ponceau, eosin, erythrosin and phloxin.

Stock Food.—(S. D. V.) Various formulas for preparations of this character have been published. Here are two of them: Ground linseed oil-cake, 500 pounds; fenugreek, 50 pounds; anise seed, 10 pounds; African ginger, 5 pounds; salt, 25 pounds; licorice root, 10 pounds. This mixture is said to have an excellent aroma and will not become wormy. (2) Ground oil-cake, 200 pounds; miller's shorts, 100 pounds; ground St. John's bread, 100 pounds; fenugreek, 50 pounds; anise seed, 10 pounds; salt, 20 pounds; iron sulphate, 5 pounds; African ginger, 5 pounds. Linseed meal in a stock food or condition powder for immediate use is preferable to oil-cake, but where the article is likely to remain in stock for a year or more the large quantity of oil in it is objectionable, causing a rancid odor to be evolved from the packages.

Fluid Tolu Soluble.—(V. Mc.) A preparation which passes under this name may be prepared by mixing 5 fluid ounces of alcohol with 6 fluid ounces of glycerin, adding $\frac{3}{4}$ ounces of balsam of tolu and dissolving the latter by the aid of a moderate heat, shaking frequently and avoiding loss by evaporation. Now add 6 fluid ounces of water, allow the mixture to become cold, decant the milky liquid from the resinous precipitate, mix the decanted liquid intimately with 2 drams of magnesium carbonate in a mortar, filter and wash the mortar and filter with enough of a mixture of 1 part of alcohol and 2 of water by measure to make the filtrate measure 16 fluid ounces.

It should be noted that the National Formulary gives a formula for a "soluble tincture of tolu," to which may be added syrup or water without producing cloudiness. A mixture of 1 fluid ounce of this preparation with 15 fluid ounces of syrup yields a product which may be used as syrup of tolu in all cases where the official preparation is not required.

Matches.—(W. E. M.) wants a formula for a match which must be scratched upon the box to be made to ignite. He uses such a match and box for advertising purposes.

We give two formulas, but we question the ability of the inexperienced operator to successfully compete, either in price or quality of product, with regular manufacturers making these matches on the large scale. (1) Dip the splints into a paste composed of potassium chlorate, 6 parts; sulphide of antimony, 2 to 3 parts; glue, weighed dry, 1 part. The paste for the rubbing surface is amorphous phosphorus, 10 parts; oxide of manganese or sulphide of antimony, 8 parts; glue, weighed dry, 3 to 6 parts. The ingredients must be thoroughly mixed and care must be taken not to mix the potassium chlorate in the dry state with the other materials; it should be first mixed with glue dissolved in warm water. The paste for the rubbing surface may be spread with a brush or spatula on the side of the box. (2) Glue, 16 parts; chrome yellow, 2 parts; oxide of iron, 2 parts; peroxide of manganese, 24 parts; hyposulphite of lead, 8 parts; chlorate of potassium, 50 parts. Composition for the box: Hypo-sulphite of lead, 200 parts; chlorate of potassium, 14 parts; oxide of iron, 7 parts; powdered glass, 8 parts; finest glue, 4 parts; amorphous phosphorus, 24 parts. Glue is dissolved in water and the other substances in powdered form are afterwards mixed with it to the consistence of paint and applied with a brush to the surface of the box.

Soluble Essence of Ginger.—(F. L. J.) See National Formulary, page 93. Extracts for the preparation of ginger ale are made after various formulas, many of them being "fortified" by the addition of capsicum and flavored

with aromatics. Here are two formulas of the character you indicate: (1) Mix 4 ounces ground Jamaica ginger, $\frac{3}{4}$ ounce powdered mace and 1 dram Canada snakeroot and in 16 fluid ounces of tincture by percolation with 12 ounces of alcohol and 4 ounces of water. Dissolve 1 dram of oil of lemon in a small quantity of alcohol, rub with 1 ounce of magnesium carbonate or talcum, add gradually with constant trituration the tincture, and filter. This extract may be fortified by adding 4 ounces of powdered grains of paradise to the ginger, etc., of the above before extraction with alcohol and water. (2) Extract in the usual manner 6 ounces ginger, 2½ ounces recently dried and ground orange peel, 20 grains grated nutmeg, 250 grains Ceilon cinnamon, 110 grains powdered vanilla with alcohol enough to make 16 fluid ounces. Capsicum may be added if desired.

Ink or Writing Fluid.—(A. M. F.) writes: "I am trying to make a writing fluid, my formula being as follows: Ground galls, 1½ ounces; ferrous sulphate, 6 drams; gum acacia, 6 drams; water enough to make one pint. To give the ink a blue tint I used 3 drams Prussian blue and 1 dram oxalic acid. When the ink was first made it was O. K., but upon standing the 'blue' precipitated out, and the ink on using became paler than it was before the Prussian blue and oxalic acid were added. Did the oxalic acid cause the trouble?" Yes. When oxalic acid is added to an ink of this character the ink turns from a black to a light blue. By omitting the acid and using a neutral soluble blue a much better ink may be made, though we prefer the following formula: Place 4½ ounces bruised blue Aleppo galls (free from insect perforation) with 1 dram bruised clove in a 50-ounce bottle. Pour upon them 40 ounces cold water and digest with daily stirring for two weeks. Then filter through paper into another 50 ounce bottle. Get out also the refuse of the galls and wring out of it the remaining liquor through a strong linen or cotton cloth into the filter in order that as little as possible be lost. Now put in the liquid $\frac{1}{2}$ ounces purified sulphate of iron, dissolve completely and filter through paper. Add 35 minims of sulphuric acid and agitate briskly. Lastly add 1 ounce indigo paste (neutral or nearly so) and thoroughly mix by shaking. Pass the whole through paper. Filter out of one bottle into the other till the operation has been completed. On a large scale this ink may be made by percolation. No gum or sugar is required except when intended for copying; then 5½ ounces galls should be used and 3 drams sugar. By omitting the acid and indigo paste and substituting therefore 40 grains of methylene blue to the 2 pints of liquid the formula may be used for the preparation of an aniline blue-black ink. A good work on the manufacture of ink is that by Lehner, translated by Wm. T. Brannt; price \$2. It may be ordered through this office.

Primuline Process.—(J. & Co.) We cannot give the formula for "primuline compound," but the "primuline process," as described in the "Encyclopedic Dictionary of Photography" consists of a new application of a group of colored compounds, of which the dyestuff known as primuline is the typical representative. Primuline is the sodium sulphinate of a complex amido base, which is obtained by heating paratoluidine with sulphur. Its formation is preceded by that of dehydrothioluidine, a body which appears to be an amide-benzene-yl-amidothiocresol, and the primuline base appears to result from a further condensation of this compound, and to differ from it in the same way that dehydrothioluidine itself differs from paratoluidine. This view is expressed in the formula for primuline proposed by Gattermann. Homologues of primuline closely similar to it in properties are similarly obtained from metaxyline and pseudo-cumidine.

In printing upon textile fabrics the material is first dyed with a hot solution of primuline, to which some common salt may be added. About fifteen to thirty grains of primuline are added to about a gallon of hot water. In this solution the fabric acquires a primrose-yellow color. It is then washed in cold water and afterwards diazotized by immersion for about half a minute in a cold solution of sodium nitrite $\frac{1}{2}$ per cent. which has been sharply acidified with hydrochloric sulphuric or other acid. The material is now washed in cold water and

stretched out on a level white surface and exposed to light beneath the object of which it is required to produce a positive reproduction. It is, of course, possible to print from ordinary photographic positives or from natural objects or from any painted, printed or photographed design or picture upon any sufficiently transparent material. Either sunlight or any artificial light of sufficient intensity may be employed, the time of exposure, of course, varying with the intensity of the light. In printing by daylight it varies from half a minute in bright sunshine to half an hour or so in very dull weather.

When the decomposition of the diazo compound in the high lights of the picture is complete (which can be easily ascertained by means of a test slip exposed simultaneously and touched with a solution of beta-naphthol, at intervals) these portions will be found to have changed from an orange to a pale yellow. The material is now either passed into the developing bath at once or is kept in the dark until it is convenient to develop the image. The developing bath consists of a weak solution (about 1% per cent.) of a suitable phenol or amine, depending upon the color in which the design is to be produced. The following phenols and amines, amongst others, have been found to give good results: Red; an alkaline solution of beta-naphthol. Maroon; an alkaline solution of a beta-naphthol disulphonic acid. Yellow; an alkaline solution of phenol. Orange; an alkaline solution of resorcin. Brown; a slightly alkaline solution of pyrogallol, or a solution of phenylenediamine-hydrochloride. Purple; a solution of α -naphthylamine-hydrochloride. Blue; a slightly acid solution of amido-beta-naphthol-beta-sulphonate of sodium (Eikonogen).

If the design is desired to be produced in two or more colors the respective developers suitably thickened with starch, if necessary, may be applied locally by means of a pad or brush.

After development, which with cotton is complete in less than half a minute, the material is washed, and the picture requires no further fixing. In the case of the purple and blue developers it is necessary to wash the material finally in a very weak solution of tartaric acid. It is sometimes advantageous to heat for a few seconds in a hot soap bath.

Velveteen, linen, silk, wool, and other fabrics may be treated in the same manner except that in the case of wool and silk a longer exposure to light is necessary and the immersion in the nitric and developing baths must also be more prolonged. The maroon and blue developers are not suitable for silk or wool.

Architectural and engineering drawings can be copied with clearness and accuracy upon paper or calico which has been dyed with primuline, diazotized and dried. The diazo paper for this purpose can be kept in the dark for some time without undergoing decomposition. The copy is developed by brushing over the surface a solution of beta-naphthol or alpha-naphthylamine. Transparent photograph pictures can be produced upon glass by coating with a film of gelatine containing primuline, then diazotizing with nitrous acid, printing, say, from a carbon or a silver positive, and developing as before. In all the above applications the primuline may be replaced by the higher homologues, already mentioned, and for producing designs upon silk dehydrothiotolidine sulphonic acid and its homologues may be employed, which are equally sensitive to light.

MANUFACTURE OF CYANIDE OF POTASH.—Ewald Riepe has devised a new method, which is as follows: Pulverized coal is mixed with carbonate of potash, slaked lime and organic matter, such as molasses or similar substance. The mass is formed into thin briquettes which are burnt to remove impurities. The carbonated alkali and lime serve the purpose of converting the contaminating sulphates, phosphates and carbonates into insoluble lime compounds. While the heat is continued a current of ammonia gas is passed through the briquettes with regular periodical intermissions. This current also serves as a carrier of carbonate of potash in the form of dust. Instead of carbonate of potash a mixture of ammonia salts with alkali nitrates and carbonates may be employed. (Drog. Ztg.)

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA COURSE STUDENTS.

Students will save themselves and the Director much unnecessary correspondence by keeping in mind the following rules of the Course:

1. Examination papers are not returned to students, but are preserved as a part of the permanent records of the Director's office.

2. Questions on the lectures are mailed to students as soon as received from the printers. If not received by the student within three weeks after the lectures, they have probably gone astray in the mails, and a card of inquiry may then be addressed to the Director.

3. It is expected that students will thoroughly study the lectures before looking at the questions. The student who confines himself merely to the questions in his study will necessarily narrow the range of his work, and will attain a lower grade than he otherwise would.

4. Communications respecting non-receipt of the lectures, concerning class pins, or regarding financial matters should all be addressed to The Pharmaceutical Era, and not to the Director.

J. H. BEAL, Director.

We have on hand a supply of pins for Era Course in Pharmacy students. These are made up in attractive styles, 14 karat gold, beautifully enamelled, and bearing a mortar and the letters E. C. P. in special design. The pins are mounted in three styles—safety pin, stick pin and button. The price is \$2 (either style), which is barely sufficient to cover the cost of production. Students who desire these pins are requested to send in their orders (with cash) at once, stating style of pin desired.

In last week's issue were sent to Junior students lectures 45 to 51 inclusive, and to senior students lectures 43 to 51 inclusive. This is sufficient to last until April 5, when another set will be forwarded.

Read the Bulletin each week.

NITRATE OF SILVER WITH BELLADONNA FOR ASTHMA.—Dr. Goloubow, of Moskow, has successfully treated asthma by persistent use of silver nitrate and belladonna in cases where the affect on was complicated with nervous dyspepsia, habitual constipation and general debility, the number and intensity of the attacks being sensibly diminished. The remedy was used in pill form as follows: Nitrate of silver, 0.1 Gm. (1½ grains); extract of belladonna, 0.2 to 0.3 Gm. (3 to 5 grains); extract of trifolium, a sufficient quantity to be made into 30 pills, Dose 2 to 3 pills daily after meals. (Sem. Medic.)

PILL EXCIPIENTS.—Dr. M. Hélonin (Bull. Sc. Pharm.) has made a study of numerous pill excipients and recommends the three following, which he regards as applicable in all cases, the pills prepared with them meeting all requirements, except that they cannot be varnished. (1) A mixture of equal parts of glycerin and alcohol. (2) The general excipient prescribed by the British Pharmacopœia consisting of powdered tragacanth 1 part, glycerin 3 parts and water 1 part. (3) A mixture recommended in Germany differing only in the proportions from the preceding, glycerin 15 parts, tragacanth 3 parts, water 2 parts. (Apoth. Ztg.)

CYSSATIT is the trade name for an infusorial earth (Kieselguhr) found in the vicinity of Auvergne. (Bull. de Pharm.)

ALL WIDE AWAKE DRUGGISTS

OUR PURE CRUSHED FRUITS

for soda fountains are unsurpassed.

OUR FAMOUS MEAD SYRUP

and other syrups are used everywhere.

Gordon's
CHEMICALLY PURE
Glycerin.

The Oldest Brand. The Purest Glycerin.

Every druggist should use it and dispense it. There's no good reason why he shouldn't do so, as it is easily obtained from jobbers in any quantity desired and it costs no more than other brands. All that's necessary is to specify "Gordon's" on your orders to jobbers. They all supply it.

The Standard for Nearly Fifty Years.

The W. J. M. Gordon Chemical Co.,
CINCINNATI, OH'IO.
Established 1848. Incorporated 1891

IN order to maintain regular prices we adhere to the "rebate contract plan."

We pay the war tax first, last and all the time.

We manufacture an excellent laxative remedy and advertise extensively to make business for the drug trade and ourselves.

We do not claim to excel in other things, but we endeavor to do one thing well and to give satisfaction to the trade.

We appreciate the friendly interest which druggists generally have taken in the sales of our remedy and we thank them most cordially.

We are,

Yours truly,

California Fig Syrup Co.,

IT MAKES YOU THE "WHOLE THING!"

Has it occurred to you that the manufacturers of Soda Water must make money enough to pay all expenses of manufacturing, selling and delivering the soda water, before they can make any profit?

For a surprisingly small amount of money you can buy a self-operating, dispenser's Carbonator, just the right size for a single fountain. It will do more for you than the manufacturer of soda water does, and besides you have all his profits on making, selling and delivering.

It is this way, Tufts Automatic Carbonator for dispensers is a little machine which, when connected with your fountain, makes you the "whole thing"—that is, manufacturer, seller, deliverer and dispenser of soda water. You have the four profits combined, and at less labor than if you buy your charged water, for our Automatic Carbonator runs itself, stops itself, and needs no care or attention, not even oiling. It needs no power, for it runs with the ordinary pressure of water in the city pipes.

Think of the relief of it. No connecting and disconnecting. No cocks to open and shut. No rocking and agitating. No gas is wasted by exchanging fountains. No empty fountain with impatiently-waiting customers. No hustling and bustling of fountains in and out your store by clumsy delivery men. It's the heart of your apparatus. It takes good care of the rest of the system, and you have a constant supply of high grade soda water, charged with carbonic-acid gas to 95 per cent. saturation, at an even pressure.

Charging at 180 pounds, you get 100 gallons of as fine saturated soda water from 22 pounds of gas as can be produced. SATISFACTION FULLY GUARANTEED. This means IF YOU ARE NOT SATISFIED with what Tufts Automatic Carbonator does for you, out 1: comes at our expense. You take no chances. We know the machine and are willing to back it.

Can't we figure with you on this basis? A little Tufts machinery improves any other apparatus, but when it's all Tufts it's perfect.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

South Africa.

The main Boer army seems to be in full retreat in the Orange Free State, pursued by the army of Lord Roberts, and it is expected that the British will soon occupy Bloemfontein, the Free State capital.

Presidents Kruger and Steyn of the two Republics cabled to Lord Salisbury last week a proposal for a cessation of hostilities, the Boers stipulating that whatever might be the final agreement, the republics should retain their independence. The proposal was promptly rejected.

The London press and many members of Parliament, believing that British triumph in South Africa is near, are urging that the Transvaal Republic and the Orange Free State be placed under military rule until they can be made Crown colonies, and it seems likely that this view will prevail.

It is reported that in case of Boer defeat Johannesburg and its mines will be wrecked with dynamite by the Boers.

During the siege of Ladysmith the British loss was 250 killed or died from wounds and 346 from disease. There were 500 men wounded. A revised list of Gen. Buller's casualties shows that the total loss to the rank and file in the final relief of Ladysmith was 1,850 men.

A booty account has been received of the situation of Mafeking, where fighting was reported on March 6, with all the outside forts save one taken by the Boers. A flying column of British troops from Zululand has entered the Transvaal and had a skirmish with Boer troops.

The House of Commons has passed the budget to meet the expenses of the war; it is proposed to raise £42,000,000 partly by bonds or stocks and partly by increased taxation; Sir Michael Hicks-Beach estimates the total cost of the war at £60,000,000.

The Philippines.

The President has completed the commission which is to establish civil rule in the Philippines. They are: Judge Tift, of Ohio; President Dean C. Worcester, of Michigan; Luke Wright, of Tennessee; Henry C. Ide, of Vermont, and Bernard Moses, of California.

Reports of increased activity among the insurgents in the Philippine Islands have reached Manila; the rebels are planning guerilla warfare on a larger scale as soon as the rainy season sets in.

The War Department has received a cabled statement that the total receipts from the Philippine Islands for February were \$126,423, of which amount \$257,000 was derived from customs.

General Joseph Wheeler expressed the opinion in San Francisco last week that territorial government should be provided for the Philippines.

Lieutenant Koehler, of the Ninth Infantry was lured into an ambush and shot by Filipinos near Tarlac last week.

Rear Admiral John C. Watson has been relieved from command of the American fleet at Manila and Rear Admiral George C. Remy has been ordered to succeed him.

General Gates with two regiments has made a successful advance into Southern Luzon, occupying several towns; the insurgent losses were heavy.

Other Foreign News.

Queen Victoria drove through the streets of London last week and was received with the greatest enthusiasm. Next month she will visit Ireland, where she has been but once before during her reign.

Mortality from the plague is increasing in Calcutta; fresh cases of plague have appeared at Buenos Ayres, and a steamer with a case of plague on board has arrived at Cape Town.

Floods in Peru have caused losses estimated at \$1,500,000. Renewed police precautions have been taken in Russia on account of the recent discovery of Nihilist plots.

There have been 2,700 prosecutions in the German Empire for answering United States consular queries contrary to a secret Government order.

Edinburg University is to confer the degree of LL.D. upon Ambassador Choate.

Robert J. Thompson, special commissioner on behalf of President McKinley, was presented to President Loubet of France the first Lafayette dollar that was struck from the mint.

The Theatre Francais, the historical play house of Paris and home of the Comedie Francaise, was burned last week Thursday. Many works of art were destroyed and a portion of the invaluable library of manuscripts

was burned. One person, a young actress, lost her life. The theatre will be rebuilt before the Exposition next summer.

DOMESTIC.

Congress.

It seems likely that the Senate will amend the Hay-Pauncefote treaty so as to provide that the United States shall have the right to defend the Isthmian Canal in war time. It is not known, however, whether England will accept such an amendment.

The Puerto Rico tariff bill is still the object of much criticism. Senator Davis of Minnesota, has offered an amendment granting free trade to the island and extending to it certain provisions of the Constitution, while implying that such privileges cannot be claimed by the Philippines without special action by Congress. Senator Fairbank will urge an amendment to the Diplomatic Appropriation bill providing for the payment of \$250,000 to Liliuokalani, lately queen of the Hawaiian Islands.

The House last week unseated Gaston A. Robbins, a Democrat from the Fourth Alabama District and seated in his stead William F. Aldrich, a Republican who has been three times a contestant from the same district, on the ground of fraud, and who is now given his seat for the third time by a Republican House. The vote was a strict party one.

The Congressional Committee on Cuban and Puerto Rican Affairs is going to Cuba this week on the steamship Dolphin.

The President is likely to withdraw the French Reciprocity Treaty from the Senate in order that the time for ratification may be speedily passed. A considerable opposition to all the reciprocity treaties, and the whole reciprocity movement may be defeated.

The Senate agreed to the conference report on the financial bill last week.

Other Domestic News.

Ambassador Pauncefote, who has already been in Washington much longer than is the British custom, has been requested by Lord Salisbury to remain longer and he has consented. His intimate knowledge of the matters pending between the two nations is considered to be the reason for lengthening the term. Edward J. Phelps, minister to England under President Cleveland's first administration, died in New Haven on Friday last week.

Startling revelations of corruption and vice made by the press of New York City last week have resulted in increased police activity. City papers allege that Tammany gleans over \$5,000,000 in blackmail every year from keepers of illegal resorts. Comptroller Cole is reported as saying that the methods of plundering as carried on by the present city government would make Tweed's methods look like those of an amateur.

The Cuban delegates who came to Washington to protest on behalf of the Cuban people against the appointment of Manager Sharett as Roman Catholic Bishop of Havana have failed in their mission.

Captain Silas W. Terry, late in command of the Iowa, has been assigned to succeed Admiral McCormick as commandant of the Washington Navy Yard.

The Republicans won the municipal elections in Seattle and Omaha last week.

General Gates has turned over to Mrs. Lawton, widow of Major General Lawton, the fund subscribed by the people of the country. It amounted to \$98,432.

The cruisers Detroit and Marblehead have been sent to Central America on account of the disturbance there. The Governor of Mississippi has approved the George Election bill, which takes from the Governor a large amount of patronage.

An appeal by Admiral Dewey and his men from the award of the Court of Claims in the matter of the bounty due for the destruction of the Spanish fleet at Manila has been filed in the United States Supreme Court.

A new gold field said to surpass the Klondike and Cape Nome regions in richness is reported to have been found near Eagle City, Alaska.

Representatives of independent telephone companies in Indiana, Illinois and Kentucky met in Terre Haute last week and effected a permanent organization in opposition to the Bell Telephone Company.

A Chinaman in San Francisco died last week of what is thought may be bubonic plague, and the whole of Chinatown is now under quarantine.

Floods did great damage in Northern Ohio last week. Hinds County, Mississippi, is badly afflicted with small pox.

During the past six weeks nearly 100 deaths have occurred.

The play "Sapho," which has been causing considerable scandal in New York, was taken from the stage last week by Mayor McGraw. His action holding Olga Nethersole, her leading man, her manager and Theodore Moss, manager of the theatre, for trial. Arrangements are being made to forward 500 tons of food supplies to the destitute people in the interior of Puerto Rico.

THE DRUG NEWS.

New York and Vicinity.

AWAITING ACTION OF N. A. R. D.

CONSOLIDATED DRUG CO. WILL CONTINUE PRESENT BUSINESS UNTIL ITS CASE IS DECIDED BY EXECUTIVE COMMITTEE.

A Conference in New York of Chairman Holliday and Representatives of the Affiliated Local Associations.

F. E. Holliday, chairman of the Executive Committee of the N. A. R. D., was in New York city the greater part of last week. On Wednesday evening, March 7, he held an informal conference with representatives of the various druggists' associations in this vicinity which are affiliated with the national body, for the purpose primarily of discussing the local situation, and especially one phase of it, namely, the application of the New York Consolidated Drug Company for recognition, by the joint committee of proprietary manufacturers, jobbers and retailers, as a regular jobbing house. The meeting was held at the Hotel Imperial, and there were present F. E. Holliday, William C. Anderson, of the Kings County Pharmaceutical Society, and vice-president of the N. A. R. D.; R. R. Smith and A. C. Searles, of the Manhattan Pharmaceutical Association; J. C. Gallagher and C. J. McCloskey, of the Jersey City Druggists' Association; Charles F. Schlessner, George Gregorius, Sidney Faber, Oscar Krause, Rudolph C. Werner, of the German Apothecaries' Association and shareholders in the Consolidated Drug Co.; and Charles F. Kalish, attorney for that company.

While the discussion of the subject was carried on in the friendliest possible spirit, it was animated by the intense earnestness of the speakers, and lasted well into the early morning hours. George Gregorius, president of the Consolidated Drug Co., and the other officers of that concern who were present, gave a clear and concise exposition of the status of that company, such as was printed in this journal last week. They assured Mr. Holliday of their strict loyalty to the N. A. R. D. and their desire to remain loyal. They explained to him the situation of the retail drug trade in New York city, going into the detailed history of the same for the past six or eight years. They showed that the Consumers' Drug Co. (which is to be superseded by the Consolidated) was organized to offset the demoralizing effect of price cutting on proprietary medicines; that the company had succeeded to the greatest satisfaction of its members; that it had been of such benefit to them, indeed, that they were not willing to give it up unless they could be sure of something better in its place. They showed that in order to bring their company within the plan of the N. A. R. D. and to maintain their allegiance to that association, they had changed absolutely the scope and character of the company. They had given up the co-operative buying club feature and were prepared to incorporate it under the laws of New York State as a stock company to carry on a wholesale drug business. They would never have done this except for the N. A. R. D. Now they asked to have their company put on the list of accredited jobbers.

In support of their contention that the New York Consolidated Drug Co. should of right go on that list, they pointed out that the committee had practically decided to recognize as jobbers many individuals who were also retailers, and several concerns which did a smaller busi-

ness than the Consolidated, because the manufacturers wanted such individuals and concerns recognized; that a similar organization of retailers in another city was on the jobbing list; that discrimination against the Consolidated in these premises would be unjust and unfair; and that in order to meet the requirements of the N. A. R. D. and for no other reason, the Consolidated was ready to become in fact a regular jobbing house for the sale of drugs, chemicals, medicines, sundries, etc., to retail druggists only at the prevailing jobbing rates.

Every phase of the subject was gone over carefully and exhaustively. Mr. Holliday answered many of the arguments offered and stated his position unequivocally, which was that he was opposed to the recognition of this or any other company composed of retail druggists as a jobbing house. He held that for retailers to engage in the wholesale trade was in direct violation of the tripartite agreement which the N. A. R. D. is seeking to secure and enforce among all proprietary manufacturers, jobbers and retailers throughout the United States. However, he could not predict the action of the Executive Committee. He could not promise that the Consolidated Drug Co. either would or would not be recognized as a jobber. He did promise that its application for such recognition should receive the most careful consideration of the committee when that body should meet for final action on the jobbing list. And there the matter was left, for that was all the chairman of the Executive Committee could say.

After the conference the feeling among all the local drug men represented or interested in the question was that the situation remained exactly the same as it had been before. Yet they were glad the meeting had been held. By it the friendly feelings of all had been intensified, and both sides of the question at issue had been made clear to all concerned. Those most interested are content to await the action of the committee which is to pass upon the list of approved jobbers. Meanwhile it is probable no change will be made in the affairs of the Consolidated Drug Co. The business of that concern will be conducted the same as heretofore, until its directors know positively where their company stands in the eyes of the N. A. R. D.

As was stated in these columns last week, this is one of the most ticklish questions yet raised since the organization of the N. A. R. D., a problem which demands the most thoughtful deliberation of the clearest-headed men in the association, the settlement of which is awaited with the intensest interest of all branches of the trade.

After the conference George Gregorius said to the Era's reporter:

"I think we have done everything in our power to put our case fairly and squarely before the N. A. R. D. Mr. Holliday met us honestly and listened to our statements. The friendliest feeling prevailed, and he promised to lay the matter fully before his committee, which was all he could promise. We shall wait the result. Either the committee will, or it will not, recognize our company as a jobber. If the tripartite agreement is enforced by the N. A. R. D. and if our company is refused

recognition, why, the Consolidated Drug Co. will cease to handle those proprietary medicines which are controlled by that agreement. We shall then limit our trade as a wholesale house to other things in the distribution of which the N. A. R. D. is not interested. This will be the result if the plan of the N. A. R. D. is carried out. We are as eager as any druggists in the country to see it carried out. Only we want to be sure that it is an accomplished result before we give up a concern which has been of the greatest benefit to us. We cannot afford to give up that benefit until we have something at least equally good in its place. We believe the plan of the N. A. R. D. will be even better—if it can be enforced. We are not yet sure that it can be. Nothing would please us more than to get full prices for patent medicines, but the members who devised this plan did not consider the great general public who buy the medicines. It is doubtful if the public, here in this city, at any rate, can ever be induced to pay full prices.

"But we are willing and eager to give the plan a fair trial as soon as the N. A. R. D. shall give the word. Our feeling in this matter is that its officers, or some of them, have shown that they were working more for the interests of jobbers than retailers, for those benefit the N. A. R. D. was organized. They have been at work nearly two years and what have they accomplished? Why don't they go for the cutters? Why don't they shut off the department stores? If they are working in the interests of retail druggists they should prove it by doing some of these things before asking their own members to give up the only benefit they have with which to meet these evils.

"Let them show us that the plan they propose is practicable and in fact does remedy the cut rate evil—let them put it into execution—and we are ready to fall into line, whether the Consolidated Drug Co. be placed on the jobbing list or not. But we must be sure the scheme is a 'go.' We should be extremely foolish to give up the half loaf we now have for no bread."

JERSEY CITY ASSOCIATION AGAINST NEW PHARMACY BILL.

A special meeting of the Jersey City Druggists' Association was held at Phillips' Hall, Bergen avenue and Montgomery street, on Friday afternoon, March 9, to take action on the new pharmacy bill pending before the New Jersey Legislature. President J. C. Gallagher was in the chair, and there was a good attendance of members. Assembly Bill No. 204, entitled "An act to regulate the practice of pharmacy in this State," introduced on Feb. 26th, by Mr. Klein, was the only subject discussed.

President George H. White, of the New Jersey Board of Pharmacy, explained that this bill had been prepared by the counsel of that board, and introduced at the board's request. The most important change in the bill over the existing pharmacy law is a new section, which reads as follows:

Section 5.—It shall be lawful for the said board to employ suitable persons as inspectors, whose duty it shall be to examine and inspect pharmacies, drug stores, and all places wherein drugs, medicines and poisons are kept, sold and dispensed, at retail, for the purpose of detecting violations of the provisions of this act, who shall have free access thereto and each and every part thereof, without trouble or hindrance of or from the owner or owners, proprietor, manager, clerk or person in charge; any one interfering with the inspector and said board in its work shall be guilty of a misdemeanor and liable to indictment, besides the penalty otherwise provided by this act.

There are several other new features in the bill. It provides that the New Jersey Pharmaceutical Association may send to the Governor annually three nominations for a member of the board. The present law says the association shall nominate five. Instead of requiring the Governor to appoint members of the Board of Pharmacy from such nominations, this bill says the Governor "may" appoint such nominees. The board is to be required to make a report to the Governor annually, and all surplus moneys, instead of going to the New Jersey Pharmaceutical Association, must be paid into the State treasury.

Mr. White explained that the only provision desired by the board was the new section 5, which the board hoped and believed would enable it to secure the conviction of violators of the law. Under the present law, he said, conviction was impossible, unless a member of the board could testify that he saw the unlicensed man put up a prescription. If the board could employ inspectors he believed the difficulty under the present law would be overcome. He said all the other changes in the bill were made by counsel on the ground of constitutionality, and that none of them had been asked by the board.

The members present asked Mr. White many questions concerning the new points in the bill, and kept him talking on it for over two hours. The opinion of these members was that the new section was altogether too sweeping in its provisions, and that in general the wording of the bill tended to open the way for placing the Board of Pharmacy in the hands of politicians. Also, they were inclined to think the Board of Pharmacy had exceeded its authority in formulating a bill of this kind, and seeking its passage without first submitting it to the State Association. After long and thorough discussion, Mr. White, as president of the board, was asked to withdraw the bill. He said he could not promise that it would be withdrawn. It was now in the hands of the committee on Public Health, and he promised to consult the chairman of that committee, saying, "I think I shall favor its withdrawal."

The following resolution, offered by William R. Laird, was adopted:

Resolved, That the New Jersey City Druggists' Association most emphatically oppose Assembly bill No. 204, for the reason that it does not emanate from the New Jersey Pharmaceutical Association, and has not that body's endorsement, and because of its many other objectionable features, and that this association ask the Committee on Public Health not to report the bill.

The president announced that the Public Health Committee would give a hearing on the bill on Wednesday, March 13, at Trenton, and it was voted to send a committee to represent the association at that hearing.

Wilcox Bottle Bill Squelched.

The Senate Committee on Public Health has decided not to report the Wilcox poison bottle bill, over which the drug trade has been exercised for several weeks past. This means that this measure dies in the hands of the committee, and nothing more will be heard from it—at least for this year.

The decision of the committee was arrived at after a hearing in the bill, held at Albany on March 7, at which there was a lively tilt between Senator Wilcox and the opponents of his bill. Its introducer told the Health Committee the bill had been offered to prevent mistakes in the handling of poisons. Dr. A. B. Husted of Albany; William M. McConnell, representing the Drug Trade Section of the New York Board of Trade and Transportation; William Muir, of the Kings County Pharmaceutical Society, and George Kleinau, of the German Apothecaries' Association of New York City, argued against the bill, pointing out that its provisions would not accomplish the results for which its framer said it was intended, and that it would lead inevitably to the adoption of a patented poison bottle, and so create a monopoly. (The text of the bill was printed in the Era for February 22, 1900, page 269.)

Mr. Muir told Senator Wilcox that if he would amend his bill by adding a provision that no patented bottle should be adopted, opposition would be withdrawn. But the Senator was not willing to accept such an amendment.

Pharmaceutical Clerks' Association.

The Pharmaceutical Clerks' Association of Greater New York held a regular meeting at the New York College of Pharmacy on Wednesday, March 7, with President C. W. Dietz in the chair. B. Seitsen, of No. 223 East Fourth street, was elected a member. An amendment to the by-laws was adopted providing for monthly instead of fortnightly meetings. The regular meeting day hereafter will be the third Wednesday in each month. It was voted to form a bicycle section and to suspend regular meetings during the summer months, letting the wheelmen of the society arrange excursions into the country in place of the meetings.

There was considerable discussion of the alterations in the clerks' bill for shorter hours made by the legislators at Albany, the secretary reporting that the bill had been passed by the Assembly. While the clerks expressed their disapproval of the changes made in the measure, they did not take any action on the matter, feeling that the bill in its present shape was the best they could expect.

These Passed the New York Board.

The New York City Board of Pharmacy at its regular monthly meeting held last week passed upon the papers of the applicants for registration as pharmacists who took the examination on February 19. The total number of candidates was 158, of whom 96 were students at the New York College of Pharmacy. The following were successful and are now entitled to registration:

Albert A. Adatte, Herman Appel, Rose Bernan, Isidore Berowicz, Leon E. Block, Thomas E. Burke, Nicholas V. Cadmus, Theodore V. Cady, Nicolo Caliva, Albert E. Colucci, Gustav Colonna, John F. Corr, Karl Dahlberg, Edward Dezurko, Louis H. Dockendorff, David Duckman, Arno F. Emeis, Theodor F. Endress, John J. Fenton, John F. Flynn, Frederick F. Green, Reuben F. Groves, Oscar H. Goodale, William P. Green, Reuben F. Groves, Herman Guarini, H. R. Hamilton, John F. Helmecke, Wilmer Hill, Pinks Jaffe, Laurence Jorgenson, Albert F. G. Kaehler, Martin A. Kaehler, George Kiesel, Nachin Xin, Cornel, John V. P. Krauss, Augustus G. Kruehbel, William Lage, Harrie M. Lane, Maria Lapenta, Frank G. Lascalia, L. P. Langbeinz, Frank Leogh, Julius Levine, Charles S. Loewenstein, Charles A. Loz, Nicolas Lukin, Edward J. Martin, Sidney May, Oscar Mathieson, Henry T. McClearn, Alexander B. McRae, Robert C. Medl, Raymond A. Miller, Louis Moss, Ernest E. Molwitz, Jr., Jos. A. Murphy, Charles A. O'Connor, Joseph Persensoni, Fanny Rabinowich, John P. Regan, Frank Scheuer, Edwin T. Schenck, Eva Scherppich, Hetty Sirota, William H. Smith, Edwin C. Steinach, Albert P. Unbehau, Albert F. Veeder, Bernard Walters, William W. Vasser, George H. Weiner, Harry E. Winne, Walter Zinn, George U. S. Alagoer, Simon M. Chess, Emilio De Mari, Paul O. Jadin, Joseph Lascoff, Abraham Solotoff, Walter G. Stewart, and Sewell F. Cain.

Arranging for N. Y. P. A. Annual Meeting.

The next yearly meeting of the New York (State) Pharmaceutical Association will be held at Newburg, probably June 26 to 29 inclusive. The local committee held a meeting last week to begin arrangements for the meeting. Those who were present L. C. Chapman, George Merritt, Arthur Du Bois, Clarence Miller, Richard Ennis, and, by the committee's request, William Muir, of Brooklyn. Mr. Chapman was chairman, and Mr. Miller secretary of the meeting. The entertainment programme was mapped out to include a reception and banquet, a euchre party for the ladies, a trolley ride to a suburban lake twelve miles out, with a visit to a knife factory, and a boat ride (with dancing on board) to West Point, where a special drill by the United States Military Academy cadets will be witnessed. The wives of the members of the local committee will form an auxiliary committee to arrange for the ladies' euchre party.

The sessions of the association will be held probably in the City Hall of Justice. Headquarters will be at the Palatine Hotel, where those attending the meeting may find accommodations at a rate of \$3 a day. The proprietor of the Palatine is desirous that persons planning to attend the meeting and wanting rooms at his house should notify him at their earliest convenience, stating whether they desire rooms for the whole time or only part of the meeting.

Shorter Hours Bill Passed by Assembly.

Dr. Henry's bill to regulate the working hours of drug clerks in New York City was passed by the Assembly last week. This bill was drawn originally by the Pharmaceutical Clerks' Association of New York City, which asked Dr. Henry to introduce it after securing for it the approval of the other pharmaceutical societies. It met with vigorous opposition from the Druggists' League and from Assemblyman Maher, who had a rival bill prepared by that organization. Governor Roosevelt interested himself in the measure and consulted with Dr. Henry and others about it. The bill was altered by the Health Committee to which it was referred. After being reported favorably by that committee it was changed still further before being passed in order. It is said, to facilitate its passage by the Senate. As passed by the Assembly it provides that no proprietor shall require a drug clerk to work more than 136 hours in each two weeks, or to sleep in any room that does not comply with the sanitary regulations of the local Board of Health. The clerk is to have one full day off in each two weeks. For its enforcement the State Factory Inspector is authorized to appoint two inspectors at a salary of \$1,500 each.

In the Senate last week this bill was ordered to a third reading and referred to the Committee on Cities.

New York Section, American Chemical Society.

The monthly meeting of the New York Section, American Chemical Society, was held at the Chemists' Club in West Fifty-fifth Street, on Friday evening, March 9. The program comprised a paper by G. C. Whipple and D. T. Jackson on "Normal Chlorine Map of Long Island," and a communication in French from Prof. Raoul Pictet on "A New Industrial Process for the Separation of Oxygen, Nitrogen and Carbonic Acid from Atmospheric Air at Extraordinarily Small Cost."

It was announced that a special meeting for the Exhibition of Laboratory Apparatus and Products will be held early in May. Some important exhibits have already been promised, and the success of the meeting seems assured. Each member is now invited to take active part and to forward a memorandum to the secretary of any article he may wish to send as an exhibit. Elaboration and perfection of finish are not necessary; apparatus that is novel or that contains the germ of new and useful ideas is welcome in any shape.

"Stag" Held by N. Y. C. P. Alumni.

The Alumni Association of the New York College of Pharmacy held a "stag" party at the college on Wednesday evening, March 7. There were over 100 members present and they had a good time. Prof. Virgil Coblenz gave what the boys termed "a copiously illustrated lecture" on "Muenchener Postal Cards." The professor also gave a highly interesting exhibition of the new X-ray apparatus and Geissler tubes presented to the college by President Kemp, and many of the boys saw their bones. The sight nerved them to demand a speech from Dr. Rudolph Gies, but as he had not been announced on the programme he refused.

For Elevation of Apothecaries in the National Guard.

The Assembly Committee on Military Affairs held a hearing at Albany on March 7 on Mr. Cotton's bill for the elevation of the hospital stewards in the National Guard of the State of New York to the rank and pay of first lieutenant. Ex-Assemblyman Robert Mazet, William Muir, of the Kings County Pharmaceutical Society, and George Kleinau, of the German Apothecaries' Association, appeared before the committee and argued in favor of the passage of the bill.

On the next day the committee reported Mr. Cotton's bill favorably, and it was advanced to a third reading in the Assembly.

New York Wholesale Bowlers.

Six games were rolled in the tournament of the New York Wholesale Drug Trade Bowling Association last Saturday. The feature of the day was the game between the teams of Colgate & Co. and Dodge & Olcott, the two leaders. The Colgate team won in the last frame by six pins. The team scores were: Colgate & Co., 784; R. W. Robinson & Son, 725; Dodge & Olcott, 717; R. W. Robinson & Son, 761; Colgate & Co., 777; Dodge & Olcott, 771. Roessler & Hasslacher Chemical Company, 577; National Lead Company, 725; Seabury & Johnson, 736; National Lead Company, 696; Seabury & Johnson, 669; Roessler & Hasslacher Chemical Company, 776.

Fined for Violating Pharmacy Law.

As a result of the inspections of drug stores made by the New York City Board of Pharmacy, five proprietors of Manhattan Borough were tried in the Court of Special Sessions on March 7 on the charge of violating the law by permitting unregistered clerks to conduct their stores and to compound prescriptions. Each of these proprietors was convicted and each was sentenced to pay a fine of \$50. They were: Alexander J. Dostrow, of No. 51 Bank street; Armin F. Richter, of 1010 Third avenue; Adolph J. Dittmar, of 1180 Second avenue; Max Hansburg, of 472 Third avenue; and Carl Koehler, of 813 Third avenue.

—The drug store of Charles H. Loveland, at No. 385 Chenango street, Binghamton, N. Y., was damaged by fire to the extent of \$4,000 on March 11.

NOTES.

—F. N. Mason, a druggist of Port Jervis, N. Y., has just moved into a handsome new store which he has fitted up with all the latest devices and conveniences for displaying and storing goods. Mr. Mason occupies the whole building of four stories and basement. The opening of the new pharmacy was made a gala occasion, and the proprietor's friends presented to him a handsome office chair of oak.

—Charles A. Miller, who has been in the employ of Schieffelin & Co. for several years, left that firm last Saturday to take a position as local buyer for the crude drug department of Parke, Davis & Co. Lyman Parke, who has held this position for some time past, will return to Detroit next week to take a situation in the home establishment of Parke, Davis & Co.

—Among drug men from out of town who visited the local wholesale market during the week were the following: J. Lawrence, Stamford, Conn.; A. Ekman, Orville, Cal.; George M. Burr, Northport, L. I.; D. W. Baker, Trenton, N. J.; A. R. Armstrong, Pine Bush, N. Y.; C. B. Story, Bayside, L. I.; H. D. Schwartz, Dover, N. J., and A. P. French, Susquehanna, Pa.

—Negotiations are pending for the purchase from the receivers of Hudnut's Pharmacy, at No. 205 Broadway, by Hegeman & Co., of No. 196 Broadway, and No. 209 West 125th Street. It is thought the receivers will accept the offer of the Hegeman corporation, as it believed this sale will enable them to pay the creditors of the Hudnut company in full.

—Papers of incorporation were filed at Albany last week by the National Drug Co., of Saratoga Springs, which has been formed to manufacture medicines on a capital of \$150,000. The incorporators are G. F. Harvey, L. J. Harvey, both of Saratoga Springs; C. E. Carr, of Philadelphia, and E. T. Brackett, attorney, of Saratoga Springs.

—Thomas Hatton, one of the most popular of downtown drug clerks, has been compelled by poor health to give up his position in the pharmacy of Hegeman & Co., at No. 196 Broadway, temporarily and go to his home in Philadelphia for rest and recuperation. His many friends in the trade hope that his health may soon be restored.

—The following visitors from out of town were among the guests entertained at the New York Drug Club during the week: Charles W. Sparks, Philadelphia; F. E. Holliday, Topeka; C. W. Ballard, Sewaren, N. J.; W. Irving, Short Hills; E. W. Wakelee, Demarest, N. J.; and James H. Coe, Englewood, N. J.

—William Zimmerman, for several years in the jobbing department of McKesson & Robbins, has left that firm and taken a place with Charles Pfizer & Co. Mr. Zimmerman's father, who died about two weeks ago, had held this position for many years.

—Elias De Gruche, of the chemical department of Schieffelin & Co., who had been in the employ of that firm for twenty years, has left to take a position with Kleinschmidt & Co., of 122 Fulton street.

—Wood & Murray is the title of a new firm which has bought the drug store of D. Schelmer, at No. 133 Bergen street, Brooklyn. The partners were formerly clerks in the employ of the Bolton Drug Co.

—Karl Schnackenberg, proprietor of the drug stores at No. 426 Pearl street and No. 437 Amsterdam avenue, Manhattan, has returned from an extended visit to the home of his parents in Germany.

—R. B. Paddock, who has been conducting a pharmacy at No. 641 Fulton street, Brooklyn, has bought the drug store of the E. J. Ringel estate at No. 302 Gates avenue, in the same Borough.

—Heydenreich Brothers have moved their pharmacy from No. 169 Atlantic Avenue, Brooklyn, across Clinton Avenue, where they have secured larger and better quarters.

—W. C. Bronson has bought the drug store of C. C. Kreamer, at Decatur Street and Ralph Avenue, Brooklyn.

—Owing to the death of Peter Robinson, president of the South Carolina Pharmaceutical Association, the first vice-president, A. P. Aimar, Charleston, succeeds to the office. The next annual meeting will be held at Charleston, March 21.

IN AND ABOUT BOSTON.

Two Bills of Interest to Druggists and Their Clerks.

Boston, March 10.—Before the House of Representatives of Massachusetts there are two bills which are of interest to druggists. One is an act to provide a penalty for the unlawful practice of pharmacy, and was introduced by William D. Wheeler, Representative from Boston, and also president of the Massachusetts Pharmaceutical Association. It provides for an amendment, to read as follows:

"Every person who has received a certificate of registration from the board shall conspicuously display the same in his place of business. Whoever, not being registered as aforesaid, shall engage in the sale, compound for sale, or dispense for medicinal purposes, or shall keep or expose for sale drugs, chemicals, medicines or poisons, shall be punished by a fine not exceeding fifty dollars. But nothing in this act shall be construed to prohibit the employment of apprentices or assistants under the personal supervision of a registered pharmacist, nor to apply to physicians putting up their own prescriptions."

A hearing has been held in this matter, and Mr. Wheeler spoke in its behalf. The only remonstrant who was heard was a druggist. No definite action was taken on the matter, which probably will be given another hearing later, after consideration by the committee.

Another bill before the House is perhaps of more interest to clerks than to the druggists. It was introduced by Mr. Lydon, as follows:

"The hours of labor for clerks and other employees in drug stores and pharmacies shall not exceed sixty-five hours per week; but this time may be extended six hours or less in any week, provided that such overtime is deducted from the hours of labor performed by such clerk or employee from the next two succeeding weeks."

"Clerks and employees in drug stores and pharmacies shall be allowed a full hour for each meal occurring within the period of his daily employment."

"Any employer or agent of an employer who violates this act by compelling or inducing any said clerk or other employee to labor for a greater number of hours than as above provided, or who deprives such clerk or employee of any part of the time allowed as aforesaid for meals shall forfeit the sum of ten dollars for each first offense and ——— dollars for any subsequent offense."

The amount of the penalties is to be fixed by agreement, this to be left open for discussion at the hearing.

Drug Clerk Guilty of Practising Medicine.

Boston, March 10.—On the charge of violation of the Physicians' Registration Act, Harry R. Foster, a drug clerk employed in the store of John M. Ames, at Chelsea, was arrested a week ago. He was found guilty in the Chelsea police court and fined \$100, from which he appealed. He was held in bonds of \$500 for the superior court. Several witnesses testified that on various occasions Foster had been called to cases in place of regular physicians, and that he had prescribed for patients. The specific complaint was made that he had attended a case of obstetrics and had received a fee of \$1. Other physicians had refused to take the case because they were not assured that they would receive their fee, so Foster declared, and under cross-examination he testified that he had once signed a death certificate during the absence of the attending physician, and that he had signed it "Harry R. Foster, Tufts Medical Student." The certificate was accepted. The drug clerk stated that, as it seemed to come within his province, he had advised people what medicine to take. He denied that he had ever represented himself to be a physician and that he had frequently told people that he was not a doctor. In the case of childbirth, he had merely advised certain treatment for the child. The medicines he prescribed were purchased at the drug store where he was employed.

Made a Fortune in Pepsin Gum.

Boston, March 10.—Mrs. George A. Manning, a young woman who as Miss Nellie M. Horton has made a large fortune, estimated as high as \$200,000, because she "invented" pepsin chewing gum, is soon to become a resident of Boston. Years ago Miss Horton was a stenographer in Cleveland, O., in the office of a pepsin manufacturer. One day it occurred to her that it would be a good idea to put pepsin into gum. After many failures

she was at last successful. She lost little time in placing the result of her experiments before the man for whom she had worked. He paid Miss Horton \$50,000 for the formula, and gave her an interest in the company. George A. Manning, to whom Miss Horton recently was married, is a ladies' tailor and is well known here.

NOTES.

—A voluntary petition in bankruptcy has been filed by J. W. F. Willson, Jr., a druggist on Broadway, corner of Dorchester street, South Boston district. Mr. Willson several years ago opened a branch store in Boston proper, but on account of poor health he was obliged to close out the business at a sacrifice. Not long ago he was compelled to move his South Boston store into temporary quarters while a new building was in course of construction, and his petition in bankruptcy was due to increased end heavy expenses, and to the fact that a decrease in receipts had resulted from the general interference with business. There are liabilities of \$4,703, of which \$3,715 is secured to Charles F. Cutler, Boston, and the assets amount to \$2,400. The business was established by his father in 1848.

—The trouble in which the bondsmen of William F. Heagney, the Clinton druggist, became involved through shortage in his accounts when serving as town treasurer, has finally been settled. The bondsmen, sixteen in number, are to pay the town \$2,350, while from other sources \$3,330 has been collected, so that the total amount which the town will receive will be \$5,680. This is very nearly the amount of the shortage.

—The Class of 1900 of the Massachusetts College of Pharmacy has just had its first banquet, at Young's Hotel. Dr. J. T. Murphy presided. There were many fine responses to toasts, as follows: "The College," Dr. J. Gigger; "The Faculty," Dr. S. T. Frame; "The Ladies," Dr. J. C. Peasley; "The Ph.C.," Dr. A. P. Cook; "Our Duty as Pharmacists," Dr. F. W. Goodwin; "State Board," Dr. C. O. Jordan.

—Popular dislike to seeing patent medicine advertisements among those ordinarily found in all street cars has arisen in Chelsea, and the Board of Aldermen has adopted a resolution offered by President James, requesting the Lynn & Boston Railroad to remove the patent medicine advertisements from the exterior of the cars of that system.

—It was stated a few weeks ago that Weeks & Potter Co. had petitioned Druggist S. A. Epstein, 20 Tremont Row, into bankruptcy. Mr. Epstein announces that the petition has now been dismissed.

—George R. Wiley has just opened a new pharmacy at 93 Stoughton street, Dorchester, with a new, clean stock.

—M. M. Murphy, of the Ely Pharmacy, at Holyoke, has been in Boston this week.

PHILADELPHIA.

A Narrow Escape.

Philadelphia, March 10.—Donaldson Marshall, senior member of the wholesale drug firm of D. Marshall & Co., had a singular experience on Tuesday of this week. Mr. Marshall was walking down Market street carrying an umbrella to protect himself from the rain. When he was near Seventh street he was startled by the report of a pistol near by and the simultaneous shock of a missile striking his umbrella. He stood motionless for a moment, apparently dazed, until a passerby who had also heard the report asked if he was hurt. Mr. Marshall replied in the negative, but said that something had struck his umbrella, and closer investigation proved there were two small holes in the silk covering, such as would be made by a bullet passing through it. No trace could be found of any person shooting off a revolver or a rifle.

NOTES.

—E. T. Wickham's pharmacy, Thirty-eighth and Market streets, West Philadelphia, was completely gutted by fire on Thursday morning of this week. A small colored boy was sent to the cellar about 7.30 A. M. to get some sawdust with which to sprinkle the floor preparatory to sweeping out. In some way or other the match which he struck in order to light the gas set fire to a box of excelsior standing near and notwithstanding the prompt ar-

rival of Edward Giles, the clerk in the store, the flames spread rapidly, and by the time the fire department arrived flames were bursting through the first floor. The only entrance to the cellar was through the door from the back part of the store and the irritating qualities of the smoke hampered the efforts of the firemen so badly that for a time it looked as though the building was doomed. By working in alternate shifts of a few minutes each the firemen finally got the blaze extinguished, but the damage will amount to \$3,000 or \$4,000. The building is damaged to the extent of about \$1,000. Mr. Giles, the clerk, was almost overcome by smoke during his efforts to extinguish the fire at its start and had his hair and eyebrows badly singed, but feels satisfied that he escaped with his life, so rapidly did the flames spread.

—Another large fire threatened the destruction of the properties in the vicinity of Eighth and Arch streets on Wednesday morning, and the handsome drug store of George B. Evans, which is located at the northwest corner of those streets, was slightly damaged by the intense heat resulting from the burning of Shoreman's department store, located immediately opposite on Eighth street. One of the large bulk windows was broken and another cracked by the heat, but the damage was comparatively slight taking everything into consideration. The awnings above the bulk windows on Eighth street caught fire repeatedly, and but for the quick-witted action of those in charge of the store, the damage would undoubtedly have been ten times what it actually was. The protection in this case was afforded by the use of the extra soda water cylinders. They were distributed along the pavement on Eighth street and every time the awnings caught fire a well-directed stream of "plain soda" extinguished the flames.

—The approaching expiration of the term of service of Charles T. George, secretary of the State Pharmaceutical Examining Board of Pennsylvania, has occasioned some fear in the minds of many prominent pharmacists as to his chances of re-appointment. As Mr. George has clearly proven his especial fitness for the position, the members of the Philadelphia Association of Retail Druggists appointed a committee to draw up resolutions petitioning Governor Stone for the re-appointment of Charles T. George.

—On Friday morning at an early hour the drug store of G. A. Ciccone, at 938 South Eighth street, was the scene of a conflagration which destroyed nearly all of the stock, entailing a loss of about \$2,000. The drug store is kept by an Italian, and is located in that section of the southern part of the city known as Little Italy. Mr. Ciccone is of the opinion that the fire was caused by the explosion of a bottle of acid.

—E. M. Holt, formerly with George B. Evans, at the Eighth and Arch streets store, has received an appointment as hospital steward in the U. S. Marine Service, and will be located at Boston. Mr. Holt is from Goldsboro, N. C., and is a graduate of the P. C. P., class of '99.

—A. S. Erney, of Sixteenth and Morris streets, has sold his store to William B. Steinmetz, who is conducting it under the name of William B. Steinmetz & Company. The present owner was lately with Eberly Brothers, at Twenty-fifth and Oxford streets.

—William Reice, manager of Dr. Hall's pharmacy, at Sixth and Reed streets, is spending a few days at his home in Bloomsburg, Pa., where he was called to attend the funeral of his brother, who died while in the U. S. Army in the Philippines.

—A slight fire in the drug store of J. W. Neff, at 1015 Columbia avenue, caused considerable excitement in that neighborhood on Monday morning, but the blaze was soon extinguished with a loss of about \$50.

—Stephen Reice, who has recently been with Aquila B. Hoch, at 541 East Thompson street, is now with George B. Evans, at his Eighth and Arch streets store.

—Melvin W. Bamford, with the Smith, Kline & French Company at their Poplar street laboratory, went to Reading on Saturday of last week to stay over Sunday.

—W. D. White, proprietor of the handsome Center Square Pharmacy, at Wilkesbarre, was in Philadelphia for a few days this week.

—Mahlan N. Kline has been in Washington, D. C., for several days this week, attending the Pure Food Congress.

—I. H. Tobias, of Twenty-second and Berks streets, has sold his business to Harry Arndt.

—William Sharp has opened a new store in Coatsville, Pa.

—J. F. Neely has opened a new store at Newcastle, Pa.

BALTIMORE.

Jobbers Indifferent.

Baltimore, March 10.—The Executive Committee of the Baltimore Retail Druggists' Association held a meeting on Thursday last, to receive the report of President John G. Beck and Secretary R. E. Lee Hall, who had been appointed a committee to call on the jobbers and ascertain their views with respect to the card system. The canvass, it appears from the statements made at the meeting, proved far from satisfactory. Leading members of wholesale firms were either indifferent or positively antagonistic, and none of the houses would commit itself to the strict observance of the limitations imposed by the system. The jobbers had many questions to ask, and raised numerous objections, and the committee felt impelled to report its mission had not been successful.

The situation is further complicated by the business relations which exist between many retailers and their jobbers, and which make the former disinclined to join in any movement involving the possibility of a transfer of custom to some other house. In numerous cases retailers are under special obligations to their jobbers, and cannot well enter into new connections. All these circumstances render difficult the exercise of pressure to secure the adoption of the card system.

The Executive Committee, although willing enough to go ahead, is handicapped by the palpable want of cohesiveness among the retailers, and feels that something can be accomplished only with the aid of the National Association. If the latter proves strong enough to compel the acceptance of conditions deemed necessary for the protection of the retailer, then the Baltimore jobbers can be brought into line. If not, the wholesalers will probably continue to take orders from anyone who has the money to pay for the goods. At the bottom of the Baltimore Retail Druggists' Association's weakness is the financial dependence of many members.

The Pure Food and Drug Congress.

Baltimore, March 12.—The attendance of Baltimore druggists at the Pure Food and Drug Congress in Washington last week was small, being limited to H. P. Hynson, Dr. A. J. Corning and Louis Schulze. What the delegation lacked in numbers, however, it made up in persuasiveness and determination. At the instigation of Mr. Hynson, as one of the Committee on Legislation of the American Pharmaceutical Association, the caucus of druggists adopted a resolution to leave cosmetics out of the bill and to restrict the provisions of the measure only to such drugs and preparations as are recognized by the United States Pharmacopoeia or the National Formulary. The Baltimoreans were deeply interested in the proceedings, and found the interchange of views highly instructive.

With the Bowlers.

Baltimore, March 10.—The Root and Herb team fell upon the quintet from Gilpin, Langdon & Co. last Tuesday night, at the Diamond and took all three games—with 72, 782 and 757 points, against 687, 719 and 719 points. Last night the Winkelmann & Brown Drug Company met James Bally & Son and showed the latter that they are after all not "in it." The scores were: Winkelmann & Brown Company, 738, 796 and 868; James Bally & Son, 719, 740 and 713. The standing of the several teams is now as follows:

Teams.	Games won.	Games lost.	Percentage.
Root & Herb.....	31	8	.792
Sharp & Dohme.....	28	8	.778
Winkelmann & Brown Drug Co.....	29	10	.745
James Bailey & Son.....	17	22	.436
Gilpin, Langdon & Co.....	11	27	.283
Muth Bros. & Co.....	8	28	.222
Parke, Davis & Co.....	8	28	.222

A Young Druggist a Homicide.

Baltimore, March 9.—Hilary H. Reid, a young druggist, who has been manager of a ginger ale manufacturing establishment on North Greene Street, this city, since last Summer, on Tuesday morning of this week shot and killed Robert Lee Smith, a bottler, in the company's laboratory. The deplorable occurrence seems to have been the result of a quarrel over Smith's discharge. Smith had been drinking, and, it is said by Reid, advanced menacingly upon the latter with an iron bar. Reid, fearful of bodily injury, drew his pistol and fired, the bullet taking effect in Smith's right breast, and causing death by hemorrhage. Reid surrendered to the police soon after the shooting, and was locked up. Several days later he was liberated on bail, the authorities being satisfied that the charge of deliberate homicide could not be maintained. Reid claims to have acted wholly in self-defence, and explains the circumstance—that he carried a pistol by saying that he had been told of threats against him by Smith. Reid was for some time in the employ of Adam Gosman, a well-known druggist at the corner of Charles and Mulberry Streets. While there he had control of the cash, and often held considerable sums of money, which induce him to go armed.

NOTES.

—For some unexplained reason the state pharmacy law introduced in the Maryland General Assembly still remains in committee. The session is drawing to a close. Only three more weeks are left, and it begins to look as if the meritorious measure might be lost in the hurry and bustle of the closing hours, an experience by no means novel to druggists.

—The Thomsen Chemical Company, which has a large plant in South Baltimore, is preparing for shipment an exhibit for the Paris Exposition. It has secured from the management the largest space allotted to any similar American concern.

—Dr. A. R. L. Dohme was prevented from attending the sessions of the Pure Food and Drug Congress, in which he has always taken a great interest, by the illness of his father, Charles E. Dohme.

—Druggist John Henry Hancock, of Fremont Avenue and Lombard Street, who has been quite ill, is able to be out once more.

PITTSBURG, PA.

—The Western Pennsylvania Retail Druggists' Association is progressing at a rate which is stimulating the druggists of adjoining counties into a state of activity which will soon mean organization. Secretary E. C. Garber, of the Western Pennsylvania Retail Druggists' Association, was recently called to Cambria County to assist the pharmacists in organizing. He was successful and the result is the Cambria County Pharmaceutical Association, which not only includes the druggists of Cambria County, but of Latrobe, which is in Westmoreland County. This organization will be a branch of the Western Pennsylvania Retail Druggists' Association. The druggists of New Castle will also form an organization. The Western Pennsylvania Retail Druggists' Association held its annual meeting on Thursday, February 15, in Heptasoph's Hall, 243 Fourth avenue. The annual election of officers resulted in the following officials for the coming year: President, Robert Christy; first vice-president, W. G. Markell; second vice-president, B. E. Pritchard; secretary, J. W. Cheswright; treasurer, Louis Emanuel; financial secretary, E. C. Garber.

—The marriage of Charles M. Kelley, the druggist of McKeesport, Pa., and Miss Margaret Campbell, of the same place, occurred recently at Pittsburg, Pa., and was extremely romantic in that all the accessories of an elopement were present, the obdurate parents, departure of the lover for the war, his return, continued obduracy of parents, the coming-of-age of the girl, a quiet trip to Pittsburg, a license, hotel and a minister, and the result—a bride and groom. Mr. Kelley served three years on the gunboat Marletta as apothecary, and made the now-famous trip around Cape Horn in the Oregon. Mr. and Mrs. Kelley are now on an Eastern bridal trip after which

they will go to San Francisco, Cal., where Mr. Kelley has purchased a drug store.

—Dr. J. M. Johnson, of Coalport, Pa., is figuring in a law suit brought by the State Board of Pharmacy to determine whether he has the legal right to run the store. Dr. Johnson claims that he is not preparing and selling any prescriptions nor medicines except those sold in any department store and his claim was substantiated in Coalport, though a second suit has been entered at Du Bois, Pa., and the druggists of Coalport are subpoenaed.

—The district bordering on the new Union station is being much enhanced in value by the prospect of the handsome new structure and it is expected that a number of fine office buildings and first-class stores will be the outcome. William H. D. Hieber, the well-known druggist, has already purchased for \$50,000 a lot in that vicinity, at the corner of Penn avenue and Thirteenth street. —"Come in and wait on the car" is the extremely hospitable, though decidedly ungrammatical, invitation in the form of a well-lettered sign on a drug store in the Lawrenceville district of the city.

—The drug store of Peter Robin, 1035 Fifth avenue, Pittsburg, was destroyed by fire about seven o'clock on Sunday morning, February 18. Mr. Robin's loss is \$3,000, covered by insurance.

—The Renfrew Drug Company, Pa., has purchased a beautiful new Lippincott fountain. It will be a luxury much appreciated by the Renfrewites, as this is the first one of the town.

—McClellan Brothers have opened a handsome store in the Hecnor block, at Ford City, Pa. The A. C. Bailey Company, recently burned out in this town, are ready to reopen.

—H. V. George, of Lisbon, O., and Mrs. George, nee Miss Baker, of Rogers, O., recently stopped in Pittsburg for a few days on their wedding trip East.

—George G. Strott, formerly of Strott & Lorah, Penn avenue, was recently adjudged a bankrupt. George S. Macrum was appointed receiver.

—W. A. McKnight, Sharon, Pa., moved on February 19, to the new Opera House block in that town.

—Dr. C. B. Leitzell has removed his drug store from Canonsburg, Pa., to Latrobe, Pa.

—W. W. Hyde has opened a new store at West Mid-dlesex, Pa.

The Wholesalers Reject Retailers' Proposition.

Cincinnati, March 8.—The regular meeting of the Hamilton County Druggists' Association was held at the Odd Fellows' Temple, Tuesday, February 27. The meeting was well attended as the members were expecting a decisive answer to their request to the local drug houses. They were not disappointed, as a letter addressed to the secretary from the wholesalers stated that at the advice of their attorneys they could not conform with the requests of the association. This action of the wholesalers caused an animated debate upon what action to pursue. It was finally agreed to purchase all the necessary drugs from the J. C. Reakirt Drug Co., who were the only wholesale house in sympathy with the N. A. R. D. principles. Offers were received from outside drug concerns offering to sell and deliver drugs and chemicals in the city, freight prepaid, at the same prices charged by local houses. Cards were issued to the following salesmen the past week: Louis H. Buisch (E. N. Rowell Co.); S. H. Cohen (Lehn & Fink); H. C. Potts (Hance Bros. & White); Joseph Gier (Henry Thayer & Co.) The Piso Manufacturing Co. agreed to sell only to those retailers who did not cut prices, and in return were given an order by almost every member of the association. They were the first proprietary medicine concern to acknowledge and sign the agreement and contract of the Hamilton County Association and in consequence were favored with some very good orders by those present. The members unanimously agreed to confine their purchases to dealers who support the N. A. R. D. only.

—The Michigan Board of Pharmacy announces the following meetings for 1900: Grand Rapids, March 6 and 7; Star Island, June 25-26; Sault Ste. Marie, August 28-29; Lansing, November 7 and 8.

DETROIT AND MICHIGAN.

Drug Clerks' Association.

Detroit, March 10.—The Drug Clerks' Association of Michigan is the name under which the Detroit Drug Clerks' Association has been reorganized, and the constitution has been so amended as to embrace all the drug clerks of the State who may desire to become members, and who will then be known as associate members. One dollar a year has been fixed as the membership dues of the State association, and this includes a year's subscription to the Drug Clerks' Journal (Chicago), which has been chosen the official organ of the association. Any ten or more members of the State association may form themselves into a club or local association, and may decide for themselves as to their local dues, and so on. In Detroit, the members of the local association pay \$3 a year, in addition to the dollar for their state membership. The State association will have its headquarters at Detroit, and all visiting members from any part of the State will have all of the privileges of the Detroit branch. A great deal of interest in the association is being manifested by the clerks throughout the State, and its success is assured.

Small Pox Among Students.

Detroit, March 10.—The Pharmacy Department, in common with all the other departments of the Detroit College of Medicine, has been closed on account of the small pox scare. A while ago the body of a negro was brought into the college for dissection. Some blood disease, it was supposed, had left its marks upon the victim, and it was some little time before the disease was diagnosed as small pox. In the mean time, the students who had handled the body went among their companions, to their homes and boarding houses, with no apparent thought of the consequences. At last they began to come down with the disease, and now, it is said, there are nearly twenty of them at the pest house. For some reason the city authorities are keeping the matter very quiet, and only the barest mention of it is made in the city press. The college buildings have been quarantined, and every precaution will be taken before the departments are opened up again.

NOTES.

—F. K. Stearns, president of Frederick Stearns & Co., entertained ten of the executive heads of departments at dinner on the evening of February 17th, at his Jefferson avenue home, in commemoration of the completion of the new laboratories. An excellent and elaborate menu of ten courses was served, and was accompanied by an abundance of "good stories," reminiscences and anecdotes. It was an occasion long to be remembered by the guests, among whom were: F. C. McLaughlin, vice-president and treasurer; W. J. L. Stearns, assistant treasurer; Thomas Bennett, secretary; W. D. Stearns, superintendent; S. C. Stearns, manager of physicians' department; D. M. Gray, manager of traveling department; I. H. Taylor, manager of Windsor Beach; N. A. Tabor, manager of credit and claims department; W. G. Rankin, assistant superintendent, and J. W. T. Knox, editor of the New Idea and manager of the advertising department.

—At a meeting of the Detroit and Wayne County Druggists' Association, it was decided to grant the clerks one extra evening off per month, to enable them to attend the meetings of the Detroit branch of the Drug Clerks' Association of Michigan.

—W. E. Moore, formerly with D. E. Prall of Saginaw, and well known throughout eastern Michigan, has become manager of the Saginaw Valley Drug Company.

—Druggist Alvin E. Holt of Detroit is at home sick with a severe attack of inflammatory rheumatism.

—George Benard succeeds F. E. Beard in the drug business at Battle-Creek.

—The annual commencement exercises of the Atlanta (Ga.) College of Pharmacy will be held at the Grand Opera House in that city, Tuesday evening, April 3. The graduates are R. H. Anderson, M. T. Gilmore, J. R. Jordan, all of Georgia; C. C. Reeves, Alabama; W. T. Whitlock, Virginia.

CHICAGO.

Drug Clerks Hold a Smoker.

Chicago, March 10.—On the 6th inst. your correspondent received the following unique invitation to a smoker: "Come and smoke a pill with us" Thursday, March 8, at 8:30 p. m. Plenty of cigars and punch. No expense. Good program. Enjoy yourself.

Yours,

DRUG CLERKS' ASS'N OF ILLS.

Punch, cigars and pleasant company were too strong a combination to be resisted and your correspondent appeared on the day and hour above set forth, and enjoyed himself immensely. He tried the cigars and they were excellent, and he sampled the punch and found it so good that he was forced to pass up his glass for a second helping. About fifty of the boys were present, and with the aid of three mandolins, a guitar and some good voices made things lively and musical. After the punch had gone around representatives of several different houses were called on and responded. Mr. J. Harris, of Johnson & Johnson, related some experiences—of other men—while on the road, and Mr. Schwabe, of John Block & Sons, did likewise. It was found desirable to break the solemnity of the speeches by a few timely musical selections, so Messrs. W. Nicholson, Frank Varvin and W. C. Koltz with their mandolins and Mr. John Larkin with his guitar, were introduced, and Mr. Larkin sang to the accompaniment of mandolin and guitar several popular songs, and was vigorously recalled. Messrs. E. G. Hopkins and Edwin Flischer, Jr., told several stories, and after the tears of the audience had been sufficiently stanch'd, C. E. Monaghan gave a bass solo, accompanied by guitar and mandolins. Everyone had a splendid time and all hope that the dance soon to be given by the association will be as successful.

Hyde Park Association.

Chicago, March 10.—Yesterday the Hyde Park Druggists had their first anniversary of the formation of their club, and celebrated the event by adopting a printed price list that will be binding on all druggists in the thirty-second ward. It is a neat, printed list, a long one, and advances prices all over the line, just like the wholesalers do, and the grocers and butchers do every day. This victory once being won, the club will approach other subjects. It will take up the uniform charges for telephone messenger service, the slot directory, the rent question, and assert its strength and independence in every direction. England did not crowd independence on America—nay, we had to scrap for it—and if druggists once learn to say "I will," they will cease to be the lackey and bootblack of an unreasonable public. The club held an election, and elected C. Avery president, W. Bodemann vice-president and G. Graves secretary-treasurer. It also appointed a grievance committee, a committee to assist the authorities in enforcing the liquor ordinance, an entertainment committee for promoting good fellowship. The thirty-second ward is the first ward in Chicago that adopted a uniform price list. Druggists of Hyde Park were the first ward to adopt pay telephones, which to-day save the retail druggists of Chicago \$150,000 per annum.

Untimely Death of Young Druggist.

Chicago, March 10.—The accidental death of Harvey Brown, a prominent young druggist of Austin, shortly after midnight on March 8, came as a great surprise to his many friends in Austin and elsewhere in Chicago. The circumstances of Mr. Brown's death were as follows: Wednesday evening Otto M. Breitenbach, Frank Hesterman, and Harvey Brown engaged a horse and sleigh and drove immediately to E. W. Bechtstein's roadhouse, Harlem avenue and Washington boulevard, Harlem. They remained in the roadhouse until nearly midnight, playing cards and bowling. Shortly before midnight the party started home. They had not driven two blocks when Brown was taken with a sudden illness and appeared to be in deep pain. His groans alarmed his companions, who believed that he was dying. They endeavored to arouse him but their attempts were of no avail. Then they decided to take him to his home. As they turned the horse on to Sixty-fourth avenue at Washington boulevard, they drove upon a snowdrift, which upset the sleigh, throwing the occupants to the ice-covered pavement.

Breitenbach and Hesterman regained their feet at once. Brown remained lying face downward on the snow. His companions endeavored to restore him to consciousness, but could not. Hesterman placed Brown in the sleigh and sent Breitenbach to Bechtstein's house for assistance. Then they drove to the livery barn and summoned physicians, who after examination pronounced Brown dead, but gave no definite reason for the cause of his death. Brown's store was at 235 North Park avenue. He was unmarried and lived with his parents. He was 26 years old. The police, after taking the statements of Breitenbach and Hesterman, permitted them to go to their homes and removed the body to the sub-morgue and notified the coroner.

Bowling.

Chicago, March 10.—On Tuesday evening, March 6, the "Lobsters" of the Chicago Drug Trade Bowling Club played a match game with the Fuller & Fuller Company team at Mussey's bowling alleys, on Madison street. The score was as follows:

First game—Lobsters.....	613;	F. & F. Co.....	615
Second game—Lobsters.....	670;	F. & F. Co.....	655
Third game—Lobsters.....	653;	F. & F. Co.....	632

From the above score it appears that the "Lobsters" are good players compared to people outside of their regular opponents in the club, but the Fuller & Fuller Company team is improving, so that in the fullness of time they may hope to become as "Lobsters."

In the regular games played by the club last night Dr. Thomas won the high average average medal. The score was as follows:

Storer	156	139	123
Fechter	196	144	121
McDuffy	147	169	157
Armstrong	171	161	162
Blocki	104	111	146
Thomas	165	187	186
Waldon	188	149	112
Bauer	167	163	173
Matthews	162	145	143

Obituary.

Chicago, March 10.—Henry C. Van Schaack, son of Peter Van Schaack of this city and an attorney in Denver, Col., died at Palm Beach, Fla., on March 3, after a protracted illness. He went to Florida about one month ago, hoping to benefit his health, and was apparently growing better slowly until a few days before his death. Mr. Van Schaack was 39 years old, and had lived in Denver eight years. He was a graduate of the old University of Chicago, of which institution he was for some years a trustee. He was also a graduate of the Chicago Law School. The funeral took place on March 7, from the residence of his father, at 37 Twenty-second street. Bishop Charles E. Cheney delivered the sermon and the choir of Christ Church sang. The interment was at Rose Hill Cemetery. A widow and three children survive.

NOTES.

—The Robert Stevenson Company, Chicago, has been incorporated and has succeeded Robert Stevenson & Company. The capital stock is \$50,000. No change is made in the membership of the company except that Charles and James Stevenson, sons of Robert Stevenson, are taken in on the firm. The incorporators are Robert Stevenson, I. Giles Lewis and Arthur Dawson. The stockholders include the three incorporators just named and Charles Stevenson and James Stevenson.

—The offices of the Empire Gum Company, 145 Oak street, were closed on Thursday night by the order of Chief of Police Kiple. The company sent out circulars offering a premium worth \$50 to anyone selling \$2.00 worth of gum or salve. The chief of police received a letter from a person in Auburn, N. Y., stating that the writer had sold the gum, but could not get the prize. The manager, George Conchar, was told not to resume the business.

—An investigation by the police of the methods of the Ten Girl Company, a chewing gum concern in the Schiller Building, came to nothing. It was claimed that impossible inducements in the way of prizes were being offered to agents for sales of gum. A Miss Addison is the manager. She states that the business is legitimate and that Inspector Stuart of the Postoffice Department had

called several times, but without finding anything wrong with it.

—R. H. Campbell, of Campbell & Son, druggists, in Market Hall, Pullman, was arrested Monday by the Kensington police for selling liquor illegally and to a minor. A policeman claims he saw Fred Freyburger, of Pullman, receive a small quantity of whiskey in a soda water glass, and he immediately placed Campbell under arrest. When the case came up before Justice Quinn a continuance for ten days was asked and received by the defendant.

—Carl E. Ebert, a clerk in the drug store of Chantler & Bernese, 1410 Thirtieth street, pleaded guilty the other day to the theft of \$97 and some money orders. In consideration of the fact that the young man had always borne a good reputation and this was his first offense, Judge Hutchinson sentenced him to one year in the house of correction.

—Charles G. Foucek, a well known druggist at 583 Cates avenue, gave a farewell dinner on March 4 to Miss Lizzie Foucek and Miss Louise Kreim, who will leave soon for Eohemia.

—Thomas H. Harvey, Chicago representative of the Tey Rubber Company, Boston, Mass., has gone to Boston on account of the serious illness of his brother.

THE NORTHWEST.

St. Paul, Minn., March 9.

—L. O. Heiber and George S. Mornin, druggists of Cedar Falls, Ia., have been indicted for the illegal selling of liquor. The general feeling is that the indictments will not be sustained when they come to trial.

—C. H. Babcock is going to Walthalla, N. D., to run the pharmacy department in Burley's drug store, Mr. Camden having left the firm and going into business himself in the same town.

—The drug store in the Endicott Arcade, St. Paul, so long occupied by W. S. Getty, has been leased to a telegraph company. Mr. Getty will, however, remain in the same building.

—Successions: Albert Readout, Union, Ia., by H. H. Ady; Shores & Horner, Waterloo, Ia., by Shores-Cushman Company; F. A. Mathews & Co., Spencer, Ia., by O. A. Bjornstad & Co.

—"Sid" Reeves, the druggist candidate for the Republican nomination for Mayor of St. Paul, has recovered from a severe illness, which at one time threatened a serious turn.

—J. E. Lewis, Chinook, Mont; L. E. Stinehour, Wadena, Minn., and C. M. De Voe, Minneapolis, Minn., have been burned out.

—Two druggists were among the victims of yesterday's conflagration at Lead, S. D.—W. R. Dickinson and L. P. Jenkins.

—E. M. Sturcker, Fairfax, S. D.; W. J. Kendall, Hamilton, Mont., and Babcock & Terry, Chappell, Neb. have sold.

—D. R. Noyes of St. Paul, who has been spending several weeks at Asheville, N. C., is expected home Monday.

—A. B. Powers has left pill-rolling for the contract department of the Northwestern Telephone Company.

—Campbell & Tower, Fort Dodge, Ia., have incorporated as the Campbell-Tower Drug Company.

—The stock of S. K. Tipton, White Sulphur Springs, Mont., is in the possession of the mortgagee.

—W. H. Hope, Little Sioux, Ia., died this week. The business is continued by the widow.

—D. M. Atchison has started at Chappell, Neb., and E. Worman at De Weese, Neb.

—Frank Danielson has returned home to Princeton, Minn., from a visit to Osage, Ia.

—B. F. Mackall of Moorhead, Minn., was in the city on business this week.

—C. A. Beise has gone to work in Dillner's drug store at Henning, Minn.

—S. J. Erickson has returned to this city from Northwood, N. D.

—J. H. Carper, Farmington, Wash., is dead.

ST. LOUIS.

Drug Clerks' Smoker.

St. Louis, March 10.—The St. Louis Drug Clerks' Society held its regular monthly meeting at Bowman's Hall. It was a "smoker," and through the fumes of the fragrant Havanas percolated sweet plantation songs from the throats of the "Imperial Trio." There was plenty of business accomplished, however. Four new members were admitted—F. W. Albert, P. J. Weber, Jr., Joseph Popp and John A. Collins. It was decided to adopt a society emblem, and the matter was put in the hands of Carl G. E. Klie to secure estimates, designs, etc. F. L. Whelpley, I. A. Schulherr and C. S. Roth were appointed a committee to attend the meeting of the Omega Phi Society of the College of Pharmacy next succeeding the Board of Pharmacy meeting, and hustle for members.

Alumni Association Matters.

St. Louis, March 10.—The Executive Board of the Alumni Association of the St. Louis College of Pharmacy held a meeting last Tuesday afternoon. The new president, R. S. Vitt, announced his appointment of standing committees and honorary vice-presidents for the coming year, all of whom were confirmed by the board.

It was decided to hold a lecture and smoker at the college Tuesday evening, March 20, in special honor of the senior students of the College of Pharmacy, all of whom are invited to be present.

Following are the new committee chairmen: Papers and Queries, Charles A. Lips; Constitution and By-Laws, Dr. Otto F. Claus; Publication, Henry O. A. Huegel; Library, Martin J. Noll; to Confer with Students, Carl G. Hinrichs; Entertainment, L. A. Seitz; Prizes, H. M. Whelpley; Resident Membership, Emil H. Burgherr; Memorial, G. H. J. Andreas.

NOTES.

—Heller Waldener, the faithful old general factotum around the store of L. A. Seitz, and who has been with the Seitz family for years, is seriously ill at the Alexian Bros.' Hospital. He is a well-known figure to salesmen, and his homely, sage remarks often cause amusement. Mr. Seitz has just acquired a fine St. Bernard dog, which formerly belonged to Dr. Stiepel, who was mysteriously shot some years ago. The massive canine departed this life some time before his murdered master, but as he calmly sits, surveying the passer-by in the drug store window, it is hard to believe that his usefulness is limited to window display purposes.

—The Bendel pharmacy, Barton and Menard Streets, is being given a coat of paint and freshened up generally. It is symbolic of the happiness pervading within. A new sign will go up shortly, it is said, with the name of Alfred Wittman as proprietor. Back of all of this is a romance. A few months ago, Mr. Wittman became manager of the store for Mrs. C. A. Bendel, the widow of the former proprietor, who died two years ago. Last month a quiet wedding occurred, by which Mrs. Bendel became Mrs. Wittman, and of course the name of the store will undergo a similar change.

—C. F. G. Meyer, president of the Meyer Bros. Drug Company, is in Washington, D. C., attending the Pure Food Congress as a delegate from the Board of Health. Three of the company's travelers—Messrs. Middleton (Texas), Gibbs (Louisiana), and Cram (Iowa) are at headquarters. Harry Physick, who for a year past has been with the San Antonio (Tex.) Drug Company, has returned to the M. B. D. Co., representing them in Southwest Texas.

—G. L. C. Seidltz, who died last week, left the bulk of his property, including the drug store on St. Ferdinand Avenue, and which he conducted for so many years, to Amelia Seidltz, his daughter, who is named as executrix. Charles Seidltz, a son, is the well-known druggist of Boyle and Maryland Avenues.

—The Twentieth Century Buyers' Guide was issued this week by the Moffitt-West Drug Company, after months of hard work by Buyer D. P. Daugherty. It is an admir-

ably arranged price list. A separate edition for wholesale houses, salesmen, etc., is issued.

—Henry Braun, the well-known druggist of Chouteau Avenue and Seventh Street, has sold his business to E. W. Loudt, the druggist of 3750 Page Avenue. Mr. Braun, it is understood, will leave St. Louis to become the chemist for a large beet-sugar concern.

—J. M. Campbell, representing the Moffitt-West Drug Company in Missouri and Northern Iowa, has resigned, and will open a retail drug store at Brookfield, Mo. He placed the order for the opening stock with his old house this week.

—H. F. A. Spilker, the druggist of Eighteenth and Chouteau Avenue, and president of the St. Louis College of Pharmacy, will leave next month for an extended European trip, including, of course, a visit to the Paris Exposition.

—Three druggists of Clarinda, Ia., have voluntarily surrendered their permits to sell intoxicating liquors. One permit was cancelled by legal proceedings some time ago. One permit is still in force.

—Dr. F. E. Hinch, formerly of Hinch & Waring, Gallop, N. M., is here buying stock for a new drug store he will open at St. Genevieve, N. M.

—The cases of the druggists accused of selling liquor without physicians' prescriptions will come up for trial March 13.

—Preparations are under way at the College of Pharmacy for the annual "exams," which commence March 26.

—The Hutchinson-Elliott Drug Company of Paris, Tex., has been incorporated, with a capital stock of \$50,000.

—S. R. Hudson was in the city this week, buying stock for a new drug store he will open at Newport, Ark.

—E. C. Kring has bought the drug stock of E. F. Schober, Tenth and Park Avenue.

MONTREAL.

—An important meeting of the Canadian Addendum Committee was held at the Montreal College of Pharmacy a few days ago. Dr. Adams, the president, occupied the chair. A voluminous correspondence from Prof. Atfield was read bearing logically on the list of drugs and preparations, sent some time ago to the British Medical Council for proposed inclusion in the forthcoming Colonial and Indian Addendum to the British Pharmacopoeia. It is a source of congratulation to the Canadian committee to find that out of thirty preparations sent for consideration twelve, as follows, were accepted for the Addendum: Arnica Flowers, Grindelia Robusta, Triticum Repens, Turpeth Root, Viburnum Prunifolium, O.1 Gaultheria, Liquid Extracts of Grindelia, Couch Grass and Black Haw, Tincture Arnica Flowers, Tincture Jalap Compound, a modified formula for Syrup Iodide of Iron. The remaining eighteen will be discussed at future meetings of the Medical Council in London as to the advisability of including them in the next issue of the B. P.

—A. Robert, president of the Pharmaceutical Association; W. H. Chapman, president Montreal College of Pharmacy; H. Willis, R. McNichols and E. Muir, members of the Pharmaceutical Council, recently interviewed the Provincial Government relative to alterations in the license law which the Government have in mind for the regulation of the sale of alcohol and liquors in drug stores. Any retail druggist in the city or province can purchase a liquor license, but there are extremely few (if any) who do so. The object of the Pharmaceutical Council is to procure a law whereby any druggist can sell without license any liquor, alcohol, etc., providing he keeps a record of the sales on the same basis that poisons are sold. The Government do not appear anxious to coincide with their views, and moreover the representative of the liquor people stated that the removal of all liquor restrictions to the drug trade would mean about 400 saloons less in Montreal alone and as many more drug stores.

—The Council of the Ontario College of Pharmacy do not feel very much elated over the recent edict of the Board of Pharmacy of Greater New York in which the latter state that they will for the future refuse to recognize any foreign diplomas. It does not affect the Quebec Province Association nearly as much, owing to the lack of Quebec graduates applying for positions in New York.

The Ontario and Quebec boards have for the past few months been discussing the advisability of interchange, the request coming from the former college. The associations here are not at all in favor of interchange as they feel that the gain would be altogether on the side of Ontario owing to the vast majority of graduates which the latter possesses.

—The Society of Retail Druggists of the Province of Quebec, which is amalgamated with the N. A. R. D., is very much on the move at present against cutting. Their object meets with the approval of the retail men generally, but they have overstepped their bounds lately by issuing a circular to the wholesale trade which has created no little amusement amongst the latter and will have to be materially altered before the recipients read it seriously.

—The following scene occurred in one of our pharmacies quite recently. Customer enters, asks for 10 cents lime water; 8 ounces given; customer objects, demands more; proprietor gets wrath and fills the bottle with water from the tap in purchaser's presence; customer now gets wrath; result, proprietor forcibly ejected from his own store and two panes of heavy glass broken.

—W. J. Furse, Gladstone pharmacy, has just issued a neat little pamphlet entitled "Snap Shots," in which he gives a full list of cameras and chemicals stocked by him. Mr. Furse stated that this side line is one of the most paying.

—The patriotic spirit of the present day is spreading to the staid Montreal druggist and Union Jacks side by side with "Old Glory" may be seen decorating many drug store windows.

—The sympathy of the drug trade is extended to Major Rogers, the oldest drug traveler in the Dominion, on the death of his eldest son, which occurred at Denver, Col.

—Dr. Albert G. Manns, chief chemist for Armour & Co., Chicago, paid a visit to our city recently.

HE'S AWAKE, ALL RIGHT.

M. M. Osborne, druggist at Elkins, Pa., if we judge from a letter received from him, is up to date in both professional and business practices. He writes:

"This place is a new one, but has been improved in the most modern manner, with water, gas, electricity, cement pavements, macadamized roads, etc., and the surrounding population is largely of the finest and wealthiest class. I erected a fine pharmacy here—my store-room is 30x32, with an offset specially for prescriptions—and am running a first class pharmacy in every sense of the word, equal to a city one; and catering to the best class, which has never been done here, and they have heretofore been driven to go into the city for all their fine goods, to say nothing of prescriptions, in many cases. The building stands in its own grounds, like the surrounding houses, has light all around with windows over all shelving and cases; is heated by hot water, has five rooms above, all heated in like manner, and all with hot and cold water lines and stationary basins, for use of employees and myself; and a bath room—meals being taken out. We make our own preparations, soda water, syrups, etc., and never show a patent medicine (or any signs) unless asked for, and we have our own preparations. We never put urinials, bed pans, toilet paper, suspensory bandages, syringes, or anything of that kind in our windows; but make them very attractive without, often showing something in drug lines, as the full making of some official preparation, with samples of drug, etc. Thought you might like to know there are some *pharmacists* in this part of the country. I am independent enough of current notions not to have even a colored bottle in my window! The space is more valuable to me in other ways."

ANABNA DRUGGIST SHOOTS A DRUMMER.

Alexander Cawthon, of the Cawthon, Coleman Co., wholesale and retail druggists, Selma, Ala., February 28 shot and killed Jacob Furth, a drummer, representing a New York firm dealing in brewery supplies. The shooting grew out of a quarrel over the price of a glass of mineral water Furth had called for at Cawthon's store. Cawthon was placed under arrest.

SOLD LIQUOR; NOW IN JAIL.

Robert Cameron, a Fremont, Ind., druggist, recently convicted of selling liquor without a license, was March 3 denied a new trial, the court confirming the jury's verdict that he be fined \$150 and costs, and be sent to jail for sixty days. He was locked up. He has been prominent in local affairs, is said to be wealthy, and his punishment has created quite a sensation.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

- ALABAMA—Birmingham—Jacobs' Pharmacy, Twentieth street and First avenue, burnt out.
- COLORADO—Denver—C. L. Thompson, 3,763 Downing avenue, sold to L. E. George.
- Leadville—R. L. Newman, Sixth and Harrison avenue, succeeded by Red Cross Pharmacy, J. F. Rinsey, proprietor.
- IDAHO—Silver City—Fred. J. Fehrens, sold to Botkin & Williams.
- ILLINOIS—Chicago—E. E. Peters, 5,732 Wentworth avenue, sold to Herbert Wilson.
- INDIANA—Franklin—D. H. Miller, sold to Wm. B. Strecker.
- Logansport—E. E. Pryor, 516 Broadway, sold to J. E. Owensville.
- H. L. Strickland, damaged by fire.
- INDIAN TERRITORY—Wilton—W. S. Phillips & Co., sold to W. P. Hailey.
- IOWA—Avoca—A. F. Conner, sold to Priestler, Lauvstad & Co.
- Elion—Phelps & Shores, succeeded by Phelps & Strickling.
- Grimes—W. J. Stewart, sold to L. E. Bennett.
- Iowa City—Louis & Breen, succeeded by H. Louis.
- New London—Snyder & Shaner, succeeded by B. B. Snyder.
- Sioux City—F. Hanson, 401 Fourth street, sold to Oscar Ruff.
- LOUISIANA—Jennings—Terry & Melanson, succeeded by M. C. Melanson, in issue of February 15 should be corrected to read Terry & Melanson, succeeded by Thos. L. Terry, M. D.
- MASSACHUSETTS—Lowell—Mills & Nolan, 57 Primrose street, removed to Popes Hill street and Neponset avenue, Dorchester, Boston, Mass.
- MICHIGAN—Aunising—Beckett & Labar, succeeded by Geo. W. Beckett.
- MISSISSIPPI—Natchez—J. C. Means, deceased.
- MISSOURI—Everton—W. R. Riley, succeeded by Riley & Wheeler.
- St. Louis—Alexander Drug Store, 518 Olive street, sold to Frost-Johnson Drug Co., Inc.
- Sturgeon—Canada & Summers, succeeded by Robinson & Summers.
- NEBRASKA—Belden—L. E. Keeler & Co., succeeded by L. E. Keeler.
- Chappell—Labcocq & Terry, succeeded by Chappell Drug Co.
- Charleston—J. W. Robison, removed to Bruno.
- Sioux Falls—E. Odell, Seykora & Co., Twenty-fourth and N. streets, sold to M. Dillon.
- NEW JERSEY—Newark—Henry J. Eber, 121 Ferry street, and also Market and Washington streets, discontinued.
- Rutherford—F. E. Hatch, sold to Wm. H. Knevit.
- NEW YORK—Amsterdam—Powell & Stryker, 12 East Main street, succeeded by C. W. Stryker.
- Albany—W. E. Odell, 14th Wall street, sold to Charles H. Sagar Co., W. B. Odell remaining as manager.
- Brooklyn—Fredk. H. Plump, 214 Bridge street, sold to Fred. B. Jacob.
- Liberty—Sears & Hasbrouck, succeeded by W. F. Hasbrouck.
- New York City—Henry C. Miner, 203 Bowery and 112 East 25th street, deceased.
- Shushan—W. F. Nelson, sold to Thos. E. Duffy.
- Syracuse—S. D. Devoe, 1644 N. Salina street, sold to Frank A. Tucker.
- Willsbridge—C. P. Wood, sold to A. A. Sisson.
- NORTH DAKOTA—Park River—Wm. J. Graham, Jr., sold to Dun Drug Co.
- OHIO—Canton—H. H. Ink, 333 E. Tuscarawas, sold to Roth & Huber.
- Defiance—J. A. Bechel, assigned.
- PENNSYLVANIA—Ashbourne—M. M. Osborne, should be added to D. D. List.
- Milton—Philadelphia Medicine Depot, No. 117 Front street, new store.
- New Kensington—L. M. Nemon, sold to Walker & Walker.
- TENNESSEE—Chattanooga—W. H. Douglas, No. 1073 Market street, deceased.
- TEXAS—Childress—G. F. Albright, sold to W. J. Ross & Son.
- El Paso—Potter & White, No. 4 Plaza Block, new store.
- Malakoff—Flagg & Wise, succeeded by H. L. Flagg.
- VIRGINIA—Bedford City—W. L. Lyle & Co., succeeded by W. L. Lyle.
- WISCONSIN—Darlington—J. V. Swift, assigned.
- Lancaster—Stone & Hassell, sold to Hatch Bros.

N. A. R. D. AND THE STAMP TAX.

The Executive Committee of the N. A. R. D. desires wide circulation and publicity for the following letter and petition:

Fellow Druggist:

Now, if ever, is the time when retail druggists should work with energy for the repeal of the Internal Revenue Tax on medicines. The public treasury is literally overflowing with money. At this date the government has about \$200,000,000 available cash on hand, and the surplus revenues for the current fiscal year are likely to exceed \$60,000,000. Under such circumstances what possible excuse can there be for continuing this oppressive and odious tax upon the druggists of the country?

Enclosed you will find a form of petition. Please fill in the proper blank with the name of your city and State, then sign the petition, getting such additional signers as you can conveniently and mail it to your Congressman for presentation to Congress. Please do not delay.

At the time you forward this petition, be sure to write an urgent personal letter to your Congressman, setting forth the hardship and injustice of this tax, and ask him to make every possible effort to secure its repeal. The Government no longer needs the money derived from this source, and, if it did, there would be no excuse for continuing so unjust a tax as this has proven to be when the money could be raised in some more just and equitable way.

Please send the petition and a personal letter at the earliest possible date; and kindly send me a postal card stating how you have done. We must have a strong, united effort to secure relief. Do not forget that the work of the officers of the Association will be of no avail whatever unless these officers can have the earnest, active cooperation of individual druggists.

Hoping to hear from you, I remain,

Fraternally yours,

THOS. V. WOOLEN, Secretary.

P. S. If you can secure the names of such corresponders in your town or city as are likely to have influence with your member of Congress, I hope you will make every effort to do so. Call upon the publishers and get their help if possible.

PETITION

For Repeal of the Stamp Tax upon Medicinal Proprietary Articles and Preparations.

To the Congress of the United States:

The undersigned, retail druggists, and other citizens of respectively petition for the repeal of the Stamp Tax on medicinal proprietary articles and preparations levied by the War Revenue Act of 1898. The members of the drug trade are entirely willing to bear with other citizens a fair share of the burdens of taxation required to meet the needs of the Government; but the tax upon such articles and preparations, in addition to all the other taxes borne by the retail druggists, is a more oppressive burden than is imposed upon any other class of citizens by any federal statute now in force.

If it was assumed that the burden of this tax would fall upon the consumers of such articles and preparations, the result has contradicted that assumption. Said tax, unlike nearly all other taxes imposed by the Government, is not and in practice cannot be shifted to the consumer. So long as it is collected it will remain a discriminative and burdensome incubus upon the business of the retail druggists, equivalent to an income tax upon their small earnings many times greater than the general income tax proposed by the act of 1894.

The principal weight of the law as it is now applied falls upon the retail druggists at a time when their business is already suffering from burdens and disabilities which render it difficult for them to make more than a bare living. In casting this burden upon the retail drug trade Congress (no doubt unintentionally, but none the less truly) has created a hardship upon a class of citizens unable to bear it without such sacrifices as no citizen should be called upon to make under any circumstances now existing.

At a time when the federal revenues are enormously in excess of public necessities; when the Treasury Department out of its vast cash balance can pay off \$25,000,000 of the public debt, and still have nearly \$300,000,000 cash in the Treasury; we respectfully submit that the continuance of this tax is no longer justified, and we earnestly ask for its repeal at the present session.

M. A. Burkhardt, president, and J. G. Spengler, secretary of the Dayton (Ohio) Druggists' Association, send us copy of resolutions on this subject adopted by that association, and forwarded to every Congressman from Ohio and every member of the Ways and Means Committee.

New Wholesale Drug House.

The Campbell-Tower Drug Co., of Fort Dodge, Ia., was incorporated March 2, with a capital stock of \$10,000, fully paid in. The principal members of the new company are J. W. Campbell and W. H. Tower, who have been successfully engaged in the retail drug business at Fort Dodge. The company will do a general wholesale drug business.

OBITUARY.

JOHN ARTHUR KIMBALL, thirty-nine years old, assistant superintendent for Johnson & Johnson, died at New Brunswick, N. J., last month. On the day of the funeral, February 23, the large factory was closed for several hours and several hundred of the employees attended the services. The body was taken for interment to Lowell, Mass. Mr. Kimball was the oldest son of Charles R. Kimball, druggist at Lowell. He was a graduate of Annapolis Naval Academy and had made a tour of the globe. He was unmarried.

ALBERT S. TURNER, an old resident and retired druggist of Willimantic, Conn., died February 19, aged fifty-seven years. He had been identified with the business interests of Willimantic from boyhood until the condition of his health compelled him to give up active business. A widow and four children survive him, one son, Fred. E., conducting the drug store formerly owned by his father.

ABNER S. BENDER died on February 8, at his home, Pittsburg, Pa. He was 52 years of age, and had been identified with Pittsburg drug interests for years. He was manager for L. H. Harris & Co., and at the same time was a partner of R. M. Totten, under the firm name of Totten & Bender. He leaves a wife and two children.

REUBEN GREENE, M.D., of "Nervura" fame, has just died at his home in Boston, of pneumonia. He had practiced medicine in and about Boston for forty years, but retired from active practice sixteen years ago. He leaves several children, one of whom, Dr. Frank E. Greene, is now the owner of "Nervura."

CHARLES G. MORRIS, of the drug firm of Morris & Co., Louisville, Ky., died February 11 after a long illness. He was 57 years old, and had been engaged in the drug business in Louisville for more than twenty years. A widow and several children survive him.

J. H. SANDS PENNINGTON, for more than a generation engaged in the drug business at Saratoga, N. Y., died March 3, after having submitted to an operation for hernia. For a number of years past he had lived in Troy.

CHARLES W. RAMSDELL, a pioneer druggist of Cincinnati, O., died February 25 at the City Hospital. He was eighty-three years of age and had been for some time a resident of the Old Men's Home.

Dr. L. S. ELLIS, a pioneer resident and druggist of Manistee, Mich., died at Chicago February 14. He had served as mayor of Manistee and was postmaster of that city for sixteen years.

JOSEPH P. ZOELLER died at his home, Pittsburg, Pa., January 29, after a month's illness of pneumonia. He was 36 years old, and is survived by a widow and four children.

JOHN HENRY HOLCOMBE, for many years engaged in the drug business at Danville, Va., died February 8, aged 67 years.

—The Louisiana Board of Pharmacy, at a meeting held February 3, granted a certificate as qualified pharmacist to J. L. Ransset, and certificates as registered pharmacists to J. S. Dunn, S. N. Gray, J. E. Brown, C. C. Wood, E. Doste, G. A. Bergeron, G. O. Dusseau, I. W. Hoesmer and A. Dupleche.

—At the examination held by the Illinois Board of Pharmacy in Chicago, February 13-15, the following passed as registered pharmacists and assistant pharmacists: Registered pharmacists—C. S. Aschermann, R. T. Alexander, F. O. Beck, C. A. Bertram, E. Blackburn, E. G. Coates, H. Diehl, L. A. Ellisburg, W. I. Frain, A. S. Gillette, Conrad Glogau, B. H. Goll, William Johnson, O. A. Kurz, E. W. Mueller, B. C. Kerntopf, John Niemeyer, W. H. Petersen, C. L. Rich, S. Schoeneich, Otto Stephen, W. H. Stolte, H. A. Yates, all of Chicago. E. C. Arno, Evanston; Otto Balensiefer, Joliet; J. F. Booth, Springfield; W. M. Brown, De Kalb; H. H. Carter, Shelbyville; C. N. Cortright, Dixon; W. L. Campbell, Byron; C. M. Green, Colfax; C. M. Griswold, Evanston; P. F. Grupe, Oak Park; George Ledford, Harrisburg; H. L. Pettitt, Ottawa; Claude Root, Paw Paw; L. J. Joubert, Kankakee; C. E. Wright, Mineral. Assistant pharmacists—L. F. Alexa, A. C. Caldwell, J. A. Gabrielson, Leo Gans, L. J. Hall, G. A. Hodges, H. A. Jackson, A. J. Jewell, A. R. Kokes, Wm. Kunz, R. A. Lonergan, Hattie F. Ladwig, D. W. Mott, C. H. Mercer, F. A. Mader, F. E. Neuper, H. T. Oelrich, R. M. Plummer, G. Reaugh, W. C. Reuter, C. F. Schaffarzick, F. Siedenburg, H. I. Sanford, all of Chicago. J. W. Alexander, Harvey; E. Bach, Jr., Taylorville; W. A. Barnett, Springfield; C. D. Detrick, Springfield; Albert Dockhorn, Bloomington; R. C. Johnston, Aledo; W. H. Roberts, Piper City; R. H. Stibgen, Freeport; C. W. Weiss, Streator; W. E. Wilcox, Geneva. The Board of Pharmacy desire to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores will be examined or given an interview until after being regularly registered as an apprentice. The next meeting of the board for examination will be held at 14 Thirty-ninth street, Chicago, April 17. New applications must be on file in this office at Springfield at least ten days previous to the above date. Those having applications already on file must also give a like notice, should they desire to appear for this examination. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. Address all communications to L. T. Hoy, secretary, Springfield, Ill.

—There were seventy-six candidates for examination at the last meeting of the Michigan State Board of Pharmacy, held March 9, at Grand Rapids. Of this number, fifty-eight were there for certificates as registered pharmacists, and sixteen were successful. Of the eighteen who wanted assistant pharmacists' certificates but ten received them. Following are the names of those successful as registered pharmacists: D. Ahern, of Kinde; W. L. Bower, of Petoskey; C. A. Everett, of Rochester; W. H. Friess, of Port Austin; J. M. Gleason, of Lansing; F. G. Glass, of Vernon; J. G. Hollands, of Detroit; M. A. Hubbard, of Midland; J. McEwen, of Escanaba; K. H. Nelson, of Cedar Springs; F. D. Patterson, of Three Rivers; A. B. Robertson, of Lansing; W. A. Stecker, of Carleton; W. J. Thew, of Saginaw; F. Vellema, of Grand Rapids; C. B. Warner, of Marlette. Those successful in the examinations for assistant pharmacists' certificates were: C. B. Braden, of Grand Rapids; J. L. Buckrell, of Flint; F. M. Duerr, of Benton Harbor; A. B. Flagg, of Penwater; W. T. Glimm, of Grand Rapids; C. W. Headley, of Mt. Pleasant; F. W. Neundorf, of Saginaw; O. Shauman, of Elsie; G. F. Stickney, of Gowen, and T. W. Sibitsky, of Eagle River.

—The Nebraska Board of Pharmacy has granted certificates to the following applicants who successfully passed the recent examinations: John B. Chadwick, Omaha; Will E. Fowler, Hastings; John Hauptman, Weeping Water; Edward Helsing, Wahoo; Richard C. Houston, Omaha; F. C. Kenower, Jackson; Frank Kinyon, Fullerton; Christ Koch, Jr., Omaha; James Manion, Humphrey; C. A. Manning, Omaha; Charles E. Stout, O'Neill; F. G. Thomas, Omaha; Adolph Zastera, Howell. At the meeting thirteen cases of violation of the pharmacy law were reported and it was announced that hereafter all violations would be prosecuted to the fullest extent of the law. The next meeting of the board will be held at Lincoln, May 9.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Novelties, Special Offers, and General Information for Enterprising Drug Buyers.

Lucas Mixed Paints.

We call attention on another page to the Mixed Paints advertised by John Lucas & Co., "Tinted Gloss," Metropolitan, and to their Liquid Floor paints. The name Lucas is a guarantee of good quality and their "Tinted Gloss" Paint is a recognized standard for brilliancy, durability, and covering capacity. The Metropolitan Liquid Paint is a cheaper paint, but it is claimed to be the best low priced liquid paint made, and it is just such a paint as dealers in reliable goods require to meet competing brands. Their advertising matter is voluminous and handsome, they are pleased to send it to any druggist who carries paints and who wishes to better inform himself in regard to the lines they make.

A New Line of Fruit Syrups.

Druggists who have bought Duroy wines will welcome the concentrated Fruit Syrups introduced this season by the Duroy & Haines Co., Sandusky, O. They offer ten leading specialties in gallon jugs, and guarantee all flavors to sell. They are made from wines, and require no antiseptics or preserving agents to keep them. If you have a soda fountain, and want good flavors, send for a sample gallon.

Two Good Things.

The Charleroi Oval and "Our Darling" Nursing Bottle are two good things recently introduced by the W. H. Hamilton Co., Pittsburg. Dispensers who want a perfect bottle, attractive in appearance, and one so formed that it can be emptied to the last drop, will make no mistake in using the Charleroi Oval. The new nursing bottle is illustrated in their advertisement in this issue.

Chocolate Syrup.

Druggists who prefer to make their own Chocolate Syrup, at a cost of only 40 cents a gallon, should read Runkel Bros.' advertisement in this issue.

The Slade & Hicks Co., Chicago, make an unusually interesting offer to druggists on page 9. This firm succeeds McGreer & Hicks, who were well known to the readers of the Era and originated the now celebrated automatic figures for window display to attract trade. The Slade & Hicks Co. are now in their new building at 143-145 Lake St., and with largely increased facilities for turning out unique and attractive advertising matter, suitable alike for the advertiser and the wholesaler.

James W. Tufts' catalogue of new Fountains for 1900 is one of the handsomest booklets we have seen this season. As the edition is only 100,000 there is no reason why every druggist who is interested in the subject should not have one. An inquiry on a postal card will bring one.

The Chocolate Cooler Co., Grand Rapids, Mich., illustrate a new Ice Cream Cabinet in their advertisement this week. They make over twenty different styles and sizes, and will be pleased to send a descriptive catalogue to any dealer.

Hospitality should be the desire of all, serve Cook's Imperial Champagne Extra Dry to your caller and your reputation will be established.

A Card from A. Major.

March 10, 1900.

The Pharmaceutical Era:

Gentlemen—I am advertising my cement all over the country, and am spending over \$5,000.00 per month; I have just refused to fill two large orders from department stores—one in Chicago, the other here; I refuse to allow discounts to any dealer who will not agree to maintain the established retail price; yet I learn there is a disposition on the part of some retailers to discriminate against my goods. Now, if all the druggists succeed in this, I am a ruined man. Not all the druggists think it wrong to substitute, but here is a plain case where one man can be ruined by the doings of many. If it isn't wrong for many to ruin one man, then it is not murder for many to kill one man.

Retailers should certainly realize that, if the manufacturer does not have a fair profit on his goods, he can't advertise, and if they are not advertised they will not sell. Major's Cement retails at 15 and 25 cents per bottle, and the prices to the trade are as low as the expense of manufacture and doing business will permit. I submit these facts for the consideration of all fair-minded druggists.

A. MAJOR.

Dr. Harrison's Proprietary Medicines.

These remedies go to the trade with a record of steady sale extending over seventy years, and most of them are yet in constant demand. The present manufacturer, E. Harrison Allison, 788 Massachusetts Ave., Cambridge, Mass., has reduced the prices on all of them, including Harrison's Peristaltic Lozenges, which are \$4.00 and \$2.00 per dozen for the large and small sizes respectively. These prices are tax paid. Druggists are invited to send for some attractive advertising matter.

A Bar of Olive Oil Soap Free.

The Home Soap Co., 54A Franklin St., New York, make a very attractive offer in this issue. It is good for a limited time only, and is made to introduce their brands of pure olive oil soaps. They furnish soaps for \$12.53 which retail for \$21.00, and include, free, a bar of Olive Oil Tar Soap, which retails for \$1.60. Only one assortment is sold to a store. They will send a price list of their regular line to any druggist interested in it.

Rocko Cough Drops.

A new candidate for the favor of the public and of the druggist is the Rocko Cough Drop advertised by Rigney & Co., Brooklyn, N. Y., on another page. Pure rock candy is used as a basis, and each drop is a fac-simile of a rock candy crystal. They also make Rocko Horehound Drops. Samples will be mailed to any druggist who will mention the Era with his request.

In the advertising columns Messrs. Frederick Stearns & Co., Detroit, announce their readiness to fill orders for Stearns' Diphtheritic Antitoxin, their latest biological product. With their new biological laboratories, perfect equipment and able bacteriological experts, they fully expect this product to win as enviable a reputation as their glycerinated vaccine, which, although placed on the market late last year, leaped into the front rank at a single bound, in many localities completely displacing older brands. There is "Stearns' Quality" in all these goods.

The genuine McAllister Mocking Bird Food has been on the market for twenty-five years, and has the signature of F. E. McAllister across the face of the label.

Drug buyers who are interested in any of the advertisements in this issue will confer a favor on us by mentioning the Era in their letters.

Druggists who want a pure olive oil Castile Soap at a special price will do well to consult the advertisement of Eugene J. McGrath on page 17.

State of Trade.

Routine Trading the Feature.

New York, March 13.—Routine trading has comprised the bulk of the movement in a wholesale way during the past week, and fluctuations in prices have been mainly of an unimportant character. This is attributed to the absence of speculative demand, operators apparently having found very little to attract their attention. Regular dealers, however, appear satisfied with prevailing conditions, while the demand has been chiefly for moderate quantities, the aggregate volume of business is reported as showing full average proportions.

None of the leaders has shown any material change in price, and the developments have been without special significance. Opium is a shade easier in a large way, but recent cables from abroad have shown some improvement in primary markets, and if the reports should be confirmed, they will probably be reflected here. Meanwhile consumers are limiting their purchases to actual necessities. Quinine has remained quiet and fairly firm. Manufacturers have received only a limited number of orders, and in the outside market exceedingly tame conditions have prevailed, second hands showing an inclination to await developments, and at the same time expressing confidence in the future. It is claimed that there is nothing of a discouraging character in the outlook, that the statistical position of both bark and quinine are favorable to holders, and that the consuming demand indicates early improvement.

The reaction in carbolic acid referred to last week was followed by a further decline in price. Picric also has been influenced by carbolic, and quotations for commercial grades show a marked decline. It is expected that normal prices will shortly be quoted for all.

Salline is somewhat unsettled, but there is an undercurrent of firmness, and it is doubtful whether there is much stock available at the inside quotation of manufacturers. It is very certain that supplies are light and that no more can be produced until next Summer. Consequently an improvement in demand would probably result in a hardening of prices. Acetanilid appears to be working into a better position. There is less of the keen competition heretofore noted, and the former cheap sellers are said to have withdrawn from the market. Whether the old and new manufacturers have reached an amicable understanding remains to be developed.

In the essential oil department, natural wintergreen is easier, owing to increased supplies and more liberal offers from producing sections. Natural mustard is also easier, but the decline in the latter is due to competition. A similar influence has caused a sharp break in values of Harlem oil, and present quotations are said to be very close to import cost. Cod liver oil has received very little attention, and owing to the unusually mild Winter, general results have been rather disappointing, as prices have not moved up to corresponding figures abroad.

Cutfish is firmer and prices show a material advance. Spot stocks are steadily diminishing, and late cable advices are to the effect that foreign markets are entirely bare and that several months will elapse before anything definite will be known regarding the next catch. Ergot continues unsettled and irregular under the influences noted last week, but there is no further important change in jobbing quotations, and the opinion that the recent depression is artificial is steadily gaining ground.

Among the seeds, the kombi variety of strophanthus is very scarce and decidedly higher, both here and in Europe. Dutch caraway is stronger in primary markets, and spot values are slightly higher. Fractional advances are reported in bleached coriander and sunflower, the season for consumption of the latter having commenced.

Bryony root is in reduced supply and firmer, while Belgian valerian is easier and a shade lower. Jaborandi leaves are offered more freely from first hands, and the market is easier.

Gum asafetida is stronger and quotations for all varieties are higher. The improvement is due to diminishing stocks, a good consuming demand and reports that the American market has decided to permit no further advance to enter unless it is up to the required standard. Carnauba wax continues to move upward in price, and the limited stock is more closely controlled.

Tin crystals are firmer, in sympathy with the metal. Leading manufacturers are not free sellers, and outside holders have advanced quotations 2/3c per pound.

Much Sickness; Brisk Business.

Boston, March 10.—This has been a week of much general sickness and the death rate is exceptionally high. Ten deaths have resulted from the grip alone and there also is much other illness from diphtheria, pneumonia and other diseases. All this sickness has made business for druggists. In the chemical and drug market there are practically no features of special note. Trading is mostly of a jobbing character. Carbonate of potash is strong. Nitrate of soda holds firm. Ipecac is reported higher. There is no life in opium nor in quinine. Steady prices and fair trade mark the present story of the line of dyestuffs and tanning materials.

Everyone Satisfied.

Philadelphia, March 10.—The favorable reports still continue regarding Philadelphia business conditions in both the wholesale and retail departments of the trade.

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c.

50c. and \$1.00 per bottle.

Trade price-list on application.

There is nothing new to report on the subject as everybody is busy and all seem to be satisfied with the present conditions. Some few changes are noted in prices, as ipecac has advanced slightly and carbolic acid is a trifle lower, but the market is unusually firm for this time of year. The retailers are making hay while the sun shines and the majority are busy all the day; those who report business a trifle irregular admit that it is ahead of the corresponding period of last year. Another epidemic of influenza has arrived and five deaths were reported from this cause during the past week. This keeps the prescription business moving and that is what the pharmacist most desires.

Trade Just Fair.

Baltimore, March 13.—The drug trade of this city and section was without exceptional features last week. The jobbers report trade as moderately active, but without special developments. On the whole, business is very fair, and the volume of transactions compares favorably with any similar period. Manufacturers of pharmaceuticals are quite busy, and laboratory forces are kept steadily at work. Retailers report a good prescription trade, but continue to feel the effects of the Sunday law agitation and rigid restrictions which have been given rise. Heavy chemicals are moving in acceptable quantities, while the drug market is without special features.

Recovering Slowly from Storm's Effects.

Detroit, March 11.—Things have been a little better this week, but not enough so to make druggists extravagantly happy. The great quantity of snow is disappearing just slowly enough to make the roads next to impassable. The little snow now scars throughout the passable. The State has created a demand for vaccine points, the orders from some of the small towns indicating the wholesale vaccination of their inhabitants. Although this is the time of the year when country druggists begin to stock up on paints and oils and other "house cleaning" properties, the demand for them has not yet begun. On the other hand, chemicals are moving in quantities at a standstill while things have been pretty generally at a standstill for the past two weeks in the drug business in Michigan.

A Little Quiet in Chicago.

Chicago, March 11.—Business among the jobbers is reported a little quiet here this week. The recent storms, followed by rain and a thaw, have been bad for traffic of all kinds. There is a fair amount of business, however. The sundries are moving well. No failures in the city are reported this week, and that is a good sign. Manufacturers say there has been no substantial change. Dealers and manufacturers in fountains and supplies are having a busy time and hope that the orders will continue to come in.

Continued Increase in Prescriptions.

St. Paul and Minneapolis, Minn., March 9.—The previous favorable aspect of general trade has been fully sustained in the past week, though here and there a retailer complains of dullness. Most of them report a continued increase in prescription work, the weather seeming to be in league with the ready pill maker. Jobbers declare that business far from being not only well abreast of February's fine record for trade volume, but perhaps still better. When the spring painting season now near at hand, arrives a material advance in insect oil is universally expected. So long has the price of this commodity remained unchanged that it has created suspicion for its normal condition is one of almost constant fluctuation. There seems to be something of a lull in the price advances which for so many months have been the most prominent feature of trade.

Good Weather and Good Business.

St. Louis, March 10.—Trade has largely recovered from the deterrent of the bad weather of last week and the past few days have been bright and almost springlike. There have been no marked price changes, with the exception of carbolic acid, which has suffered further decline and is now quoted by local jobbers at 40 cents in pound and 55 cents in five and ten pound quantities. Local retail trade shows quite a distinct improvement.

—The Wisconsin Board of Pharmacy held a meeting at Neenah, February 13-16. Certificates by registration were granted to A. A. Stahl, Escobed, from Tennessee; C. H. Finley, Milwaukee, from Missouri; F. P. Williams, West Superior, from Missouri; C. E. Nilson, Hayward, from Iowa. These received certificates; Licentiate or First Grade—B. G. Pemberton, Hortonville; J. H. Schroeder, Madison; R. A. McDonald, Mukwonago; Charles N. Marsh, Neenah; W. A. F. Liese, Berlin; A. C. Dewey, Hemlock; C. C. Johnson, Waupun. Assistant or Second Grade were granted to R. Pulenek, Alma; C. H. Hennig, Oshkosh; C. B. Sande, Neenah; A. A. Gryger, Stevens Point. Twenty-nine applicants were rejected. The next meeting will be held at Wausau, April 18, when the officers of the board will be elected and the places of meeting selected for the ensuing year.

Market Reports.

NEW YORK MARKET.

New York, March 13.—Business in a jobbing way has continued satisfactory to dealers and the market has a fairly steady undertone, with very few of the price changes of more than ordinary consequence.

OPIMUM—Round lots have remained dull and neglected with the tone of the market easy. Small parcels have moved fairly on orders from consumers at prices within the old range of \$3.30@3.50 for 9 per cent, and \$3.40@3.90 for 11 per cent, the outside figures for single pounds.

POWDERED OPIMUM—Limited quantities have been in fair request and jobbers continue to quote \$4.50@4.60 for 13 per cent, and \$5.10@5.25 for 16 per cent, according to size of order.

MORPHINE.—A moderately active market is reported with jobbing quotations unchanged on the basis of \$2.40@2.50 for eighths in 2½-ounce boxes and \$2.45@2.55 for smaller quantities.

QUININE.—Current trading is of a hand-to-mouth character, but the outlook is considered favorable to holders, and values are well sustained at 35¢@38¢. for 100-oz. tins, 37¢@40¢. for 50-oz. tins, and 42¢@45¢. for ounce vials, according to brand.

SALICYLIC ACID.—The easier feeling caused by the weaker market for carbolic has resulted in a decline in jobbing quotations to 65¢@75¢. as to quantity.

HARLEM OIL.—Quotations for round lots are somewhat irregular with the market unsettled, owing to competition among importers, but jobbers' prices are unchanged at 47¢@50¢. per gross and 35¢@40¢. per dozen, according to size of order.

CARBOLIC ACID.—Calvert's has declined in sympathy with other varieties, and the revised quotations are \$2.25@2.50 for No. 1 and \$1.75@2 for No. 2.

ACETIC ACID.—Jobbing quotations for U. S. P. have been reduced to 79¢. by the carboy and 11¢@15¢. for less.

ALCOHOL.—Manufacturers' prices are higher, owing to extra for crude material, but jobbers' prices are advanced quotations to \$2.45@2.46 by the barrel and \$2.35@2.75 for less, according to quantity. The revised figures for odorless are \$2.47@2.48 by the barrel and \$2.60@2.80 for less.

MURIATE OF AMMONIA.—Lump is firmer, and jobbing quotations have been advanced to 14¢@16¢., as to quantity. Powdered is held at 10¢@18¢.

CACAO BUTTER.—The market is stronger, in sympathy with bulk, and the Huyler and Mallard brands of cakes have been marked up to 51¢@52¢. by the box and 54¢@55¢. for less.

GUM ASAPETIDA.—All varieties are firmer under diminishing stocks and expected difficulty in securing fresh supplies, and jobbers have advanced their prices to 35¢@40¢. for No. 1 and 30¢@35¢. for No. 2.

TIN CRYSTALS.—Values are higher, owing to increased prices of the metal, and quotations for jobbing quantities have been advanced to 24¢@26¢. by the barrel and 37¢@42¢. for less.

OIL WINTERGREEN.—The market is better supplied with natural, and quotations for small lots have declined to \$2.35@2.55.

OIL MUSTARD.—Competition has caused an easier feeling, and jobbers have reduced quotations to 50¢@55¢. per oz.

CUTTLEFISH BONE.—Stocks are diminishing, and jobbers have advanced quotations to 35¢@40¢. for whole and 37¢@42¢. for powdered.

ERGOT.—Russian has been advanced by jobbers to 85¢@90¢. for whole and 68¢@71¢. for powdered. Ergot preparations have been advanced about 30 per cent. by all manufacturers.

STROPHANTHUS SEED.—The kombi variety is very scarce, and jobbing quotations have been advanced to \$2@2.

CARAWAY SEED.—Dutch is higher, and the revised jobbing range is 11¢@13¢. for whole and 15¢@20¢. for powdered.

VALERIAN ROOT.—Quotations for the Belgian variety have been reduced by jobbers to 22¢@27¢. for whole, 24¢@30¢. for cut and 27¢@32¢. for powdered.

JABORANDI LEAVES.—The market is easier, owing to fresh arrivals, and jobbing parcels are obtainable at 20¢@25¢. for whole and 25¢@30¢. for powdered.

DRUG CLERKS AND THE ERA BLUE BOOK.

We find that the ERA BLUE BOOK has no warmer friends than those among the drug clerks. Several of these have expressed to us their appreciation of the work. The clerk frequently wants to know, on short notice, who it is that manufactures a certain article, and its price, and the Blue Book is the most complete book in the drug store for furnishing him with such information.

We now have a request to make of our friends, the drug clerks.

We are already at work upon the Blue Book for 1901, and we will esteem it a special favor if every drug clerk will make it a point to notify us of any preparation for which he has a call, and which he cannot find in the Blue Book. We refer to the Drug and Chemical Price List and the Patent Medicine List, as well as among the Manufacturers' Lists.

Also let us know what Manufacturers' Lists you particularly require which you do not find in the Blue Book.

With each successive year this Blue Book will be more complete, and its completeness can be quicker attained through the kindly suggestions of our friends in the trade who use the book, particularly the drug clerks.

THE PUBLISHERS.

ASK US.

If any Era subscriber will ask us when he doesn't know where to buy what he wants, we will try to put him in touch with the firms who can furnish the goods to the best advantage. We make no charge to subscribers for this service.

See Students' Bulletin, Page 316.

ROLL OF HONOR.

The following manufacturers of proprietary medicines have agreed to conform to the wishes of the National Association of Retail Druggists in the matter of confining the sales of their products to the accepted list of jobbers approved by the joint retailers, wholesalers and proprietors' associations, and will refuse to sell to any one outside of this list and to any included in it who shall be found guilty of supplying aggressive cutters, department stores, brokers, and price-cutters generally in violation of the agreement made:

J. C. AYER CO., Lowell, Mass.
C. I. HOOD & CO., Lowell, Mass.
LYDIA E. PINKHAM MEDICINE CO., Lynn, Mass.
F. E. & J. A. GREENE, Boston, Mass.
WELLS & RICHARDSON CO., Burlington, Vt.

The names of all other proprietary medicine firms which shall enter the same agreement will be published here just so fast as reported to us by the executive officers of the N. A. R. D.

The retail drug trade is to be congratulated upon this influence which has now been thrown on the side of the N. A. R. D., and which, to a very great extent, guarantees the success of its plans. The proprietors named will likewise, without doubt, receive the uniform and united support of the retailers in recognition of the relief extended. The full particulars of the steps leading up to the agreement and the nature of the contracts to be enforced are set forth in the Era of March 8, page 265, and March 15, page 277.

THE MANUFACTURER'S RIGHT TO CONTROL PRICES.

One of the most important pieces of news, so far as its relation to and effect upon the retail drug trade and the sale of patent medicines are concerned, is set forth in the following press dispatch, received Friday night, March 16th:

THE PRICE OF PATENT MEDICINES.

Decision Upholding Right of Inventors to Fix Retail Rates.

The suit of John D. Park & Sons' Company, drug dealers of Cincinnati, to restrain the National Wholesale Druggists' Association from refusing to sell its patent medicines except on an agreement to maintain the rates set by defendant for the resale, on allegations that defendant's rule to that effect was in restraint of trade, has been finally dismissed on demurrer by Justice Russell of the Supreme Court because the plaintiff did not present a cause of action. The case has been pending three years, but has got no farther than the amended complaint, on which it is now thrown out. The defendant association consists of 125 drug dealers throughout the country, united for common action and benefit of its members. The defendants claimed the right to buy patent medicines which are manufactured by some of the defendants, without any restrictions on the price for which they should resell. It was really a fight of the plaintiffs for leave to cut prices and the dealers on the combination of the defendant's members to maintain certain prices unlawful. The Court said in part:

"The sacred right of the toiler to earn the means of subsistence for himself and dependents is and always will

be recognized; the freedom of competitive purchase of the necessities of life will be sustained; trade and commerce will not be shackled by monopolies designed to extort unnatural prices; but inventive skill, even though applied to medicinal compounds, may yet have protection from outlawry if the inventor reasonably uses his property rights and does not trespass into another's privileges.

This decision is what might have been expected, and it fully sustains the opinion of the legal adviser of N. W. D. A.'s Committee on Proprietary Goods, who has long contended that the courts, in the interpretation of the anti-trust laws, would discriminate between the necessities of life and such articles as proprietary medicines already protected under trademark laws. But it is unnecessary to review at length the history and progress of the case. The entire drug trade has been kept fully informed during the past few years of the litigation instituted against the N. W. D. A. and its members to compel manufacturers and jobbers to sell to houses which persistently refuse to maintain prices and just as persistently violate any trade agreements entered into. By this decision the principle is established that the manufacturer of an article has the legal as well as the moral right to impose upon the purchaser such restrictions as he may see fit relative to the manner in which the article shall be again sold by its purchaser. In brief, the manufacturer's right to control prices does not cease when the article leaves his own hands, but may be carried down through the jobber to the retailer. This is the principle for which at least one manufacturer (the Phenyco-Caffein Company) is now fighting, several cases being at present before the courts. It is the principle that Mr. Walbridge, the president of the N. W. D. A. insisted upon as his right when he refused to sell to cutters in St. Louis, and thereby was supposed by some to have made himself liable to prosecution under the anti-trust law. It is the principle upon which is founded the new agreement between the patent medicine men, the N. A. R. D., and the jobber, and finally it is a common-sense, moral and just principle in all respects. There is and can in justice be no law which shall compel the owner or inventor or discoverer of an article to sell his product to anyone whom he chooses not to. Were it otherwise, there would be no protection to private interests.

Although no one in the drug trade has had a moment's doubt of the ultimate outcome of the suit mentioned, it is none the less a gratification that it has terminated and that the decision rendered establishes so clearly the principle involved. The trade is to be congratulated upon this victory, which clears away many obstacles in the path of any plan, and especially the N. A. R. D. plan, to regulate the traffic in proprietary medicines in such manner that druggists shall be enabled to gain a fair living profit and not be subjected to cut-throat, illegitimate trade-destroying practices of the renegade jobber, the traitorous retailer, the aggressive cutter and the conscienceless department store.

THERE WILL BE NO "BLACK LIST."

Quite a number of people appear to be afraid that some feature of the N. A. R. D. plan to regu-

late the sale of patent medicines will be found in violation of trust laws or illegal in other respects. This fear is based upon a misunderstanding of the plan. A black list or cut-off list of jobbers, cutters, etc. is obviously illegal, but there is to be nothing of this kind. There is to be an "accepted" or an "approved" list, which will include every legitimate wholesale house which will keep its agreements, and upon which list may be placed hereafter the names of any more concerns determined eligible. Some of the best legal authority in the country have very clearly set forth that a list of this sort can in no manner be considered any contravention of the law. There is to be no combination, which some fear, and which might possibly be construed as a violation of trust regulations. Each individual manufacturer will make his individual contract with the jobber. There will be no combination of manufacturers whereby all will refuse to sell any of their goods if the requirements of any one are violated. Such combination is entirely unnecessary. If the trade will thoroughly study the plans proposed, we are sure all will find they do not present the flaws feared.

DEFEAT OF THE TRUE BILL FOR SHORTER HOURS.

The Henry bill to regulate the working hours of drug clerks in New York City was defeated by the Senate of New York State, on March 15. The Maher bill was squelched by the Assembly earlier in the session. While it is possible that politicians of the Maher stamp may attempt to reintroduce and rush this measure through before adjournment, it is not at all likely that such an attempt will succeed. So it is a pretty safe prediction to say there will be no legislation on this subject this year.

The history of the agitation for such legislation is too familiar to our readers to need any recapitulation at this time. But the present outcome is worthy of comment. It is highly instructive. It shows what the Governor of New York would call "the grim humor of the situation." The defeat of the bill formulated by the drug clerks themselves and helped along by the advice of the Governor proves incontrovertibly, just as this journal has emphasized from the beginning, that the cohorts of Thimme and Maher sought solely to make the drug trade of New York City an attribute of a political machine. They never for one moment tried honestly and sincerely to better the condition of the drug clerk. They care no more for the drug clerk than for the dirt in New York's streets. Their bill was devised only to enable them to provide "soft snaps" to be dispensed by Tammany Hall, and their agitation for "shorter hours for the poor down-trodden drug clerk" was merely a ruse to hide their real purpose. The Tammany contingent in the Senate voted solidly against the Henry bill, just as Thimme told them to do. The Governor is right in saying: "This opposition arose merely from the fact that Tammany could not get the little patronage involved in its own hands."

HE TESTS EVERYTHING.

A subscriber sends us a photograph of his chemical apparatus and laboratory to be reproduced in our special supplement. In connection therewith he says that he has recently inaugurated the plan of examining all his drugs and chemicals. To every prescription sent out he attaches a label reading: "I guarantee the purity of the drugs used in this prescription, having personally tested and checked each, and that it has been accurately dispensed according to the physician's order." On chemicals other than prescriptions he places a label worded thus: "This article has been chemically tested and is guaranteed pure." He says, and very truthfully, "I am of the opinion there is not a very large percentage of pharmacists through the land who are as careful in the examination of their drugs and chemicals." The question of testing these articles has been discussed very liberally in the pharmaceutical journals. None have denied its desirability, but many have stated that it would take entirely too much time and be too expensive for the druggist in ordinary business life to put into operation. If the proof of the pudding is in the eating thereof, here is one druggist at least who finds that it is not only entirely feasible, but profitable. Perhaps his experience will stimulate emulation.

THE UTAH BOARD IN LINE.

At the last meeting of the Utah State Board of Pharmacy, of the ten candidates examined not one was granted a first-class certificate, though three were registered as assistants. Several who presented diplomas from colleges of pharmacy, however, were duly registered. But this cannot occur again, as the board at once passed a resolution that hereafter the examinations will be more severe, and that diplomas from colleges will not be accepted, all graduates being required to stand examination before being allowed to practice pharmacy in that State. The holder of a college diploma is the very last man who should object to examination by the board of pharmacy to determine his qualifications. A diploma can be recognized as evidence that its possessor has done a certain amount of work, but it should confer no privileges beyond this. The board can ascertain for itself whether the candidate is a safe man behind the drug store prescription case.

Some one, we do not know who, because no name is signed to the communication, writes for information concerning colleges of pharmacy and the Era Course in Pharmacy. He says: "I am not a very smart boy, therefore it will take me a little longer to learn than some other people. I was cheated out of my money by so-called pharmacy institutes." If this individual will emerge from the obscurity of anonymity we will be pleased to write him in answer to his queries and give what assistance we can. We also suggest that he sign his name and address to all communications hereafter, if he expects attention.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

NO "BLACK LIST" CONTEMPLATED.

Philadelphia, March 10, 1900.

Editor Pharmaceutical Era: I have been a regular reader of the Era for a number of years and take a great interest in reading articles concerning the drug trade.

For some time past my attention has been frequently called to articles concerning the N. A. R. D. While I greatly approve a trade association, I fear they are going entirely too far in their demands. In the last issue of the Era, March 8, I find the manufacturers are also demanding more than will ever be granted them and would suggest that they strike out the fourth and sixth clauses.

Manufacturers, jobbers and retailers want to be extremely careful in their movements and demands or they will have the pleasure of defending some heavy damage suits.

I enclose herewith a clipping from the Evening Bulletin, this city, March 5, which fully defines the laws of Pennsylvania.

This clipping is sent thinking this decision might be of some interest to the members of the Associations.

HOWARD H. TOBIAS.

[The clipping referred to is headed "Black List" Liable," and presents the substance of a recent Supreme Court decision. The N. A. R. D. plan does not contemplate a "Black List," but a preferred list, and is therefore not believed to be illegal.—Ed.]

IT DOES.

Philadelphia, Pa., March 9, 1900.

Editor Pharmaceutical Era: Your paper must circulate all over the country. To-day I received a letter from a firm of druggists in Sioux Falls, S. D., in reference to the sale of filtered and distilled water, as published in your issue of March 1. They stated that they surmised they could do well in the sale of pure and distilled water in their community. I infer from their communication that Philadelphia does not stand alone in regard to impure water.

An amusing incident occurred last evening in connection with the sale of water which still continues. After being asked the price and informing the customer that filtered water was three cents a gallon, two gallons for five cents, but it was necessary to bring something to put it in, the customer handed me a basket and it was a few moments before he took a tumble to himself—expecting to get water in a basket.

W. W. CHALFANT.

Dose of Biennostasin, a Correction.

Prof. V. Coblenz calls attention to the following correction in "The Newer Remedies," third edition, page 31. The dose of "biennostasin" should read "1 to 4 grains" not "1 to 4 grammes." It is stated by medical authorities that while the action of biennostasin is similar to that of belladonna yet it is not toxic.

TO PREVENT BALDNESS IN CASES OF SYPHILIS Gaucher (Bull. gen. de Therap.) recommends that the hair be worn cut short and washed frequently with the following solution: Chloral hydrate, 1 parts; corrosive sublimate, 0.2 part; resorcin, 2 parts; castor oil, 1 part; alcohol, 200 parts. A portion of the alcohol (25 to 50 parts) may be replaced by tincture of cinchona. In addition the scalp should be treated frequently with one or the other of the following ointments: (1) Calomel, 3 parts; petrolatum, 30 parts. (2) Salicylic acid, 0.6 part; petrolatum, a mixture of spirit of camphor, 25 parts; oil of turpentine, 30 parts. (Apoth. Ztg.)

MORE ORIGINALITY.

The money question is one which the druggists are asking to-day the world over. There have been many changes during the past ten or twenty years—changes which have not improved the financial condition of compounders of drugs. This leads to the question: In what way can we direct our efforts to bring us more profits than the ordinary?

No answer can be given that can apply to all persons other than this: Do not do what all the others about you are doing. Do not run into something simply because your neighbor has done well at it. The time has come when we must plan for ourselves; when originality and novel methods prove the most profitable. There is not enough originality in pharmacy. How did the rich men of the East and West make their money? By copying after other people? No. They struck out in new fields. They looked ahead and discovered what to-morrow would bring forth. This we must do if we would deserve success. We must put more brains into our work, more enterprise, more originality. This is a progressive age, and those who do not keep up with the age or ahead of it will miss the best success.

It interests me much, but saddens me more, to watch the many bound to become insolvent through lack of primariness. Why do they not turn their thoughts to more profitable use? They dabble in a little of everything and succeed at nothing.

This is an age of specialties. In old times a doctor was expected to minister to many ills of humanity. Now one man studies the eyes, another the lungs, another the ear, the nerves, the brain, the teeth, the spine, etc. It is so in every department of human endeavor. He who would succeed best must do his work in such manner as is advantageous to a proposed end.

But what can the druggist do? My friends, there are dozens of divisional subjects which he might more thoroughly investigate. It might be "Quantitative Chemical Work," "Qualitative Analysis," "Urinalysis," "Analytical Tests and Methods," or "Prescription Work with Extemporaneous Realities."

It is not so much a question of *what* you undertake as *how* you undertake to do it. Do not be dissatisfied with

that which has been done, but lay foundations for something greater. Do not follow some other person, but become yourself a leader. You cannot do this in one year, nor ten—make it the work of a lifetime.

Think of what Edison has done in inventions. He has revolutionized his time and age. Is there no opportunity to improve methods in pharmacy? Is there no opening here for an ambitious man? Indeed there is, and many a man of this age is born for just such work.

C. M. THOMPSON.

Walpole, N. H.

RAPID PREPARATION OF A FINE ZINC OINTMENT.

The difficulty in making a smooth ointment of zinc oxide free from lumps is overcome. I find this by experiment by making a paste of the oxide with water and incorporating therewith an equal bulk or slightly less of lanum, then adding gradually, with trituration or stirring, cold or hot white petrolatum. The cold process works better, but if hot petrolatum is used it should be heated but slightly above its congealing point. I have produced in this way zinc ointment of perfect smoothness and whiteness and superior to that made in any other manner. This procedure is available for the extemporaneous preparation of any combination of the oxide in ointments.

The working formula would be as follows for a U. S. P. strength:

Zinc oxide	20 parts
Water	20 "
Lanum	10 "
White petrolatum	50 "

(A. B. Burrows, in Merck's Report).

BASICIN is a combination of quinine and caffeine obtained by a patented process. It is stated to have the advantage of being very soluble in water and in therapeutic activity to be three times as powerful as quinine and more enduring in effect, without having the deleterious and disagreeable secondary effects of the latter. It may be used in solution alone or combined with other alkaloids either internally or hypodermically, for infectious diseases, malaria, chronic articular rheumatism, etc. In doses of 0.1 to 0.2 Gm. (1½ to 3 grains) it is claimed to be an effective remedy for influenza and headache. (Pharm. Post.)

(For the Era.)

HOW THE DRUGGIST MAY INCREASE PROFITS.

By FREDERICK T. GORDON, U. S. NAVY.
(Dedicated to my Fellow Pharmacists).

The recent discussion in the pages of the Era on this most vital topic has no doubt awakened many a somnolent druggist to his sins of omission and commission; sins that have kept him with an empty till and a balance on the wrong side of the ledger. The ground seems to have been pretty well covered, as it most certainly should be, by the writers, but one or two points seem to have escaped more than passing notice. And since these points may be the very ones needed by some case, the writer takes the liberty of presenting this article to those most interested. Very often an outsider can see a fault in an undertaking to which the workers have grown blind from custom, so, with the hope that a fellow druggist will find something in this essay which can be converted into good by the light of his experience, I, an outsider, take upon myself the task of addressing my friends, the druggists, on a topic which is probably none of my business.

We all have a hobby; mine is to make pharmacy recognized as a profession equal in importance and dignity with the law and medicine, but as we have to eat and wear clothes while waiting for the millenium, it is just as well to get all the dollars we can while teaching others the sense. Before I begin this, I want to ask a large amount of charity for its shortcomings; I claim little of originality, for this essay is the collection of years, based on others' successes and failures, advice from here, a letter from there, a line in some journal, the resolutions of some meeting, etc., etc. Such as it is, I sincerely hope it may give some brother druggist an idea that will help him to increase his profits and build up trade.

Let us begin at the bottom! The first start towards increasing the profits of the drug business must be made by educating the future (and present) members of the profession so that they will know how to earn these profits. This is not only a professional necessity but is sound business logic as well, for how can a druggist take advantage of discounts and percentages if he doesn't know how to work them out? The druggist must learn bookkeeping to keep books. How many do keep a set of books that will tell them every day just how they stand as to stock, capital, debits and credits? Very few, because the average apprentice is not taught book-keeping, and when he gets to be a clerk he hasn't the time to learn it then. Education will teach the druggist how to make four drachms of a two per cent. solution of an alkaloid costing ten cents a grain without wasting fifty cents worth trying to do it; education will show him how to calculate the expenses and profits of his business and how to figure prices on goods to make them pay profits; it will enable him to calculate discounts, percentages, interest, and so forth, on his bills, and it will tell him just what is the loss by waste and breakage, if he wants to find this out! Education will make both clerk and proprietor better fitted to meet and deal with their customers, by giving them confidence and an ability to express themselves in good language; education will put the druggist on a mental equality with the doctor and make him equal to the demands of the latter, and, chiefest of all, education will teach the druggist to know his own profession, for if the druggist wants professional profits, he must know professional things. Education for the druggist will directly increase profits by a direct increase of custom; people will give their trade to the man best fitted to fulfill their wants, and they prefer to deal with a man whose speech and manner show him to be competent to advise them. There is a nice profit in knowing how to test foods, urine, etc., etc., for the people.

It may be a trite saying, but the self-made man would usually have done better if he had let the job to some one else, and a man must educate himself while he is young and has the time to do it. It shows something wrong when the druggist has to be advised to get a high school education before he goes up for his "Ph. G.," but if the list of failures from ignorance of book-keeping

and common business ways shows anything, it shows that such advice is needed. A most important part of the druggist's after-education comes from his trade papers and the daily newspapers. Let the druggist who wants to succeed, keep himself abreast of the times by means of drug and scientific papers, newspapers, magazines, etc.; he will find the time spent on these well spent. Let him see what his fellow druggists are doing, what the trade discounts and present advantages of trade are, the prices of his goods, what is newest and best to have and where and for what he can get it.

Education will teach the druggist the benefits of organization. In these days of fierce competition, the tradesmen who are not united will be crushed out by those who are. If the druggists had a strong, effective organization like the trades unions, how long would it be before they were masters of the situation? When the druggists control enough votes to make it worth their while, then the politicians will listen to them—and not before. But it is not for me to speak of the benefits of organization in this paper; the journals of the day are full of arguments for it, and he who doubts needs but to read to be convinced.

Organization leads to legislation. Somehow or other, it never seems to occur to the majority of druggists that they should and could control the legislation affecting their business and interests. They will read in their trade papers of some proposed enactment which will cost them many a dollar if passed; then they will grow a bit over the villainy of the politicians, and not make a single effort to prevent their own injury by trying to defeat the measure. When passed, they will accept its oppression meekly as another of the ills of the drug business, and later on vote for the same politicians if they take the trouble to vote at all. Nothing is more sensitive to "influence" than the politician; surely the druggists have enough influence to prevent the passage of laws that will cut down their profits, impose heavy burdens of taxation on them and subject them to still more vexatious restrictions. If the druggists and doctors would join hands and take the interest in politics that the saloon keepers and gamblers do, they might get as much protection for their interests as these gentry. The druggist need not go out and make stump speeches, but he can exercise a quiet influence over his customers, and with a word here and another there point out to them the evils of proposed laws and enlist their aid in behalf of the righteous cause. And a little influence politically in his neighborhood would cause the druggist to be respected and feared by his friends, the politicians, and these powers-that-be would listen with respect to a petition that is backed by the votes of a division. The druggist can increase his profits by attending to legislation in a direct way: By causing the repeal of those laws that have decreased profits (by taxation), by preventing the enactment of new laws to this effect, by removing unjust restrictions from the drug trade, and imposing just ones on quacks and charlatans, and by forcing his status to be recognized by the laws of the land. How much profit would it bring each druggist if the laws were repealed that now tax preparations, materials and business itself?

Education, organization and legislation will bring about a more profitable condition of affairs, but unless business methods are strictly adhered to, the druggist will not share in the prosperity. There is a business side as well as a professional side to the modern drug store, and a druggist must be both a man of business and a man of professional attainments. Where many druggists fail is in the "business end" of their store; they cannot seem to understand that outside their prescription department and laboratory is a "store" where the laws of trade govern every transaction. The same sound business principles that will make a grocery or dry goods store a success will make the sundry, patent medicine and perfumery departments, etc., of the drug store pay handsomely. Since the department stores and the manufacturers have made patent medicines merchandise, how would it do for the druggist to treat them as such for a while and buy and sell them just as he would combs and brushes?

Buy your goods in the cheapest market, having due

regard for quality; pay cash for your purchases and demand the fullest discount. Or, if you are unable to do that, buy on short time credit, and don't buy just because your credit is good; notes have a habit of falling due very fast. In these days of speedy communications, do not buy a particle more at one time than you need. It is poor economy to save two cents a bottle on a dozen purchase, and then have nine of the bottles left on your hands for a year or more. When you buy too much you not only lose the interest on your money, but you have your capital locked up in dead stock and lose the use and convenience of your money. If you should get "dead stock," sell it for what you can get; better a dollar than nothing. There are firms who buy unsalable articles, and sometimes you can "trade off" with another druggist for something that suits your trade better, so don't let old stuff accumulate on your shelves to gather dust and flies and to be a reminder of good money thrown away.

Don't wait for your competitors to get the novelties first; get them yourself, but don't load up with something pretty just because you like it; your customers may not. It is always easier to order more if it is a good seller than to work it off if it is slow. Keep on the lookout for these novelties and new remedies, and strive to catch the popular fancy on the rising tide, and turn down every drummer who tries to sell you anything whose vogue has passed and which is a "back number." By watching your trade journals, you can often learn what is going to be a money-making article, and you will be sure to learn what is being offered as a novelty to the trade. You can get an idea, too, as to the possibilities of the new remedies by noticing whether their advertisements increase or not, and often in the medical papers, the druggist can learn what new synthetics are popular with the doctors and what are not, and thus be posted when the salesman comes around and avoid being made to buy a lot of things that few doctors are prescribing.

Don't buy what you can make cheaper yourself, but be sure that you can make it cheaper before you try to do so. Time is money, and waste alcohol costs as much money as that which you use for menstruum. Be sure you know how much it costs to get up a thing before you put a price on it, and remember to reckon in store expenses as well as cost, for you must make such things pay for lights, rent, fuel, etc.

Keep a set of books that will tell you correctly just what your capital is, what your running expenses are and what are your gross and net profits. Keep track of your bills and notes, and don't let them get overdue and be protested; pay them promptly, but don't pay them ahead of time, unless you get a discount by so doing; the use of your money is worth just as much to you as to the jobber. Always mark things with the cost and selling price, then you will not be apt to sell a dollar comb for a quarter and be sorry later on; this plan will help you often to take advantage of a chance to sell a lot of something when you would not have time to look up old bills for cost. Prices on things will often be a guide to you in putting up prescriptions calling for valuable drugs; you will then know how much to charge without going to a lot of books and making your customer think you don't know how to put it up.

Make your books tell you your own personal expenses as well as those of your business; the business is supporting you. Be saving; paper is cheap, but it costs money when you buy it, and there are many little things like paper, twine, bottles and so on that will save many a dollar in time. More drug stores are wrecked by wasteful methods than by any other one cause; waste in the store, waste in the laboratory, waste in buying and waste in the druggist's own accounts. It is the "two drachms over;" the "twenty grains spilled;" the bottles broken, the menstruum thrown away, the perishable stock gone to ruin that might have been saved, the corks tossed out and many such little leaks that steal from the profits, no matter how good they are. But don't try to save ten cents' worth of alcohol by using fifteen cents' worth of gas to distill it.

Have a method and a place for things, and keep

them there; a sale lost of something that you could not find at the time is profit lost. Take care of your stock; every druggist should know how to do this, and see that you have a proper supply of needful articles. Keep your stock up to your trade, and don't be "out of things" because you forgot to order them; your customer will buy at some other place, and the man who has them will get the money.

Always push your own preparations in preference to another man's; there's more profit in it, and it is your own profit, too. Make a full line of articles to SUIT YOUR TRADE, and price them accordingly; there are many standard remedies easily and cheaply made that sell well. You can make these as well as anybody, but when the other fellow's goods are asked for, give them to your customer; he probably knows what he wants, and is apt to resent an imputation on his knowledge of this want. That means, "DON'T SUBSTITUTE," but always take advantage of a customer's desire to get "the best thing you have for a cough or cold," and give him your own make; it's the best YOU have.

Buy the smallest sizes of new nostrums and manufacturers' specialties, the "ols" and "ines" and "ons," for they go out of fashion with the doctors almost as fast as ladies' bonnets, and then they are the dearest of dead stock. It is distressing to be compelled to pay a dollar a bottle for a pharmacopoeial remedy that you can make just as good yourself, but if the doctor orders Jones's Elixir, don't put Smith's in the prescription. Make yourself a reputation for absolute integrity in the matter of giving what an order calls for, and live up to it.

Be polite and insist on it in your clerks; politeness pays big dividends in profits. Treat your customers just as you would like to be treated yourself; go around a bit and buy things yourself, and see what it is like to be in front of the counter; note the ways of the successful merchant and ponder on them.

You yourself, brother druggist, are the sole and only judge in the vital matter of credits; you will have to weigh your customers in the balance, and find out whom and when to trust. It is a good thing to know, though, that the loss of a poor-paying customer is often a gain in dollars saved on goods that you will not get paid for. If you extend monthly payments, insist on monthly payments; an honest man will not be insulted if you send in your bill promptly, a dishonest one may act as if he was, and this is a pretty good way to find out which is which. A debt is never lost so long as there is a chance to collect it, but when you begin to spend money trying to collect a "bad debt" it is good business policy to charge the amount up to experience and wipe it off your books.

Study the little peculiarities of your customers and humor them; take (or act as if you did) an interest in their affairs if they want your interest; be friendly when expected, and avoid familiarity. Never let anything be wrong with a customer, always correct mistakes in trade cheerfully and willingly, and show people that you mean what you say when you invite their confidence in your commodities. Be kind to the little ones; they are the customers of the future, and often influence their elders.

Devote all your spare time to study; try to learn everything and anything that you can about your business, and put the practical lessons into use. Be on the lookout for every improvement made in your line of business, and keep your store up to the needs of the times. Pay cash, sell for cash if you can; waste not and you will want not.

The question of SIDE LINES is like that of credit; each man will have to find out for himself what will best pay in his locality, for what will bring in many dollars in Maine will fall flat in Mississippi. Make it a point to find out what side lines will pay YOU, and don't keep bicycles or flying machines because some other man made money by so doing. One line, photographic supplies, should be peculiarly appropriate to the druggist, and there should be money in such a "line" properly conducted. Let the druggist study up the chemistry of photography so that he can pose as an expert court of last resort for the amateur and his trials; let him put up a full line of the chemicals used in photography;

he ought to be able to make most developers, fixers, etc., himself, and guarantee the purity and strength of his own preparations that he puts up in neatly labeled and wrapped bottles and packages. If he finds it pays, let him add a dark room for the convenience of workers near by; very few amateurs are able to command a good dark room, and would be willing to pay for the use of one which has in it all conveniences. Another line is spices, flavoring extracts and household chemicals. The druggist who puts up a line of such under his own label of the best quality obtainable and who advertises them a bit will be surprised at the profit they will bring him. A laboratory with facilities for analysis of urine, foods, drugs, chemicals, etc., might be made to pay in a properly located neighborhood. Many a customer is willing to pay so much a week or month for a daily analysis of urine or sputum, and the doctor will appreciate such a convenience. But these are merely hints, the topic is in itself a work for the master mind. Postage stamps do not pay. It should be borne in mind that the closer the "side lines" are allied to the profession of pharmacy, the more dignity they will have and the better profit they will pay. People are willing to pay professional profits for professional advice and professional articles and services.

The subject of advertising would require a volume in itself. Suit your advertising to your locality and the character of its people. As a general statement, any advertising that will tell people of your goods and their prices in good plain language, without deception, will pay, provided you have some inducement to offer and offer it in an attractive way. Every druggist should study his circumstances and advertise in some way; let each man learn his own requirements and be quick to make use of any advantage of popularity or successful ideas. The best advertisement of all is a clean, honest, well-conducted store, where politeness, consideration and integrity are fixed principles, and next to this, or perhaps equal to it, is the advertising of a well-pleased customer.

The relations between doctor and druggist should be those of friendly equality, and they will be a matter of profit just as far as the druggist chooses to work to that purpose. Take your stand on the ground that pharmacy is a profession allied to medicine and surgery in the fight against disease and death, and that you are the ally of the physician and surgeon in the combat, not the servant. Be ever ready to assist them when in difficulty, but do not toady. Cultivate the esteem and friendship of the doctor on this basis; don't go around with a chip on your shoulder waiting for some overbearing doctor to knock it off. Bear in mind that all doctors are men just the same as you are and act towards them just as you would like to have done to yourself if the positions were altered. When the doctor finds that he has an ally in you he will be very apt to help you all he can and there are many other ways of showing your feeling towards him than by buying him a box of cigars.

There is no reason, ethical or practical, why the druggist should not approach the doctor in regard to galenicals of his own make and of the National Formulary; he should do it, and if he would point out the elegant and useful formulas that are at his command, the doctor would often be more than willing to prescribe them. Most doctors do not know what the pharmacist can do or what he is doing every day to render the administration of medicines convenient and palatable. The druggist has as much right to the doctor's time as the salesman for the "ready-made prescription" house, the fellow who takes up hours of time telling the doctor what a splendid remedy his "assinol" or "muline" is, and what an ignorant and dishonest lot of men the druggists are. The manufacturers flood the doctors with their literature, claiming the most marvellous results with their most wonderful formulas, "which the doctor has only to write the name of on a prescription blank to get," and the physicians' supply houses offer to get them all they need; why should not the druggist take a hand in the matter himself and get some of the profit?

These "specialty" men and other nostrum makers lie to the doctor to get him to prescribe their stuff; they persistently and constantly misrepresent the druggist, accuse him of ignorance, incompetence, carelessness and dishonesty, and then they go to the druggist and ask him

to buy a few dozen of their stuff in order that they may have it ready when the doctor writes a prescription (?) for it. And the druggist does it too! He buys these products of veriest quackery by scores and dozens; he helps the sale of nostrums whose very existence is an insult and a disgrace to the profession of pharmacy, and then meekly submits to the slander of substitution which the manufacturer flings at him. Shame on us!

Do druggists fully realize the situation? Do they know that they are giving away the profits of their business with one hand and digging the grave of their profession with the other? What worse insult could be offered pharmacy than can be found in the lying circulars of the "ready-made prescription" literature? Can you blame people for being afraid to trust you when you yourself supply the public with the very things that slander your professional ability the most? The profit, as well as the honor, of the prescription business of to-day goes to the manufacturers of specialties; the druggist gets only the meagre discounts allowed him on stuff for which he is forced to pay hundreds per cent. profit. If the druggist wants to get back his honest dues and get the profits he honestly earns, he must look this question squarely in the face and prepare to fight the manufacturers with their own weapons. Let the druggist post himself on the composition of these nostrums and whenever he gets a chance tell the doctor how he is being humbugged by a product of quackery; nine-tenths of the doctors don't know the truth about these ready-made prescriptions they are giving their patients, and your information may supply the needed facts to explain why patients do not get well. Once get the doctors fully alive to the fact that they are being made fools and "suckers" of by the manufacturers and you will have their earnest support. Nothing makes a man madder than to find out that he is being swindled, and professional pride is a mighty strong weapon to enlist in your favor. Let the druggists through their associations expose such trash; they need not fear the results; the chemist will always prove their assertions, and when once the public get to understand the nature of their nostrums they will support you. Go to the doctors in your neighborhood with a copy of the National Formulary and some specimens of your own elixirs and preparations and talk to them about them and offer to make anything and everything that they may need in their practice. The trouble is that the doctors look upon the druggists as a set of incompetent swindlers and the druggists look on the doctors as a set of easily humbugged fools; get together and find out how much each of you knows and how easy it is for you two to work together for your own profit instead of that of the manufacturer.

Next to the proprietor himself the clerk is all important when it comes to winning profits. A good clerk is a "thing of joy forever," but a bad one is worse than fire, flood and cyclones rolled together. Get the best clerks you can, pay them the highest wages you can afford, treat them considerately and fairly, show your appreciation of well meant endeavor and be quick to praise when praise is deserved, and above all, whenever you are angry and put out because of some falling, "put yourself in his place" and see what you would have done. Insist on neatness, politeness, carefulness, cheerfulness, reliability and sobriety and see that you set the example. Get the best men, pay the best wages and exact the best work from them.

A cheap clerk will make a cheap store, and next to being a "cheap" man yourself, shun this as you would a plague. When you get hold of a good clerk, make it worth his while and make him want to stay with you. Encourage him to think for you and the store; encourage his ideas and original work and let him see that you appreciate him and value his work. But if he gets a "swelled head," either reduce the swelling or the clerk. It is really amazing the confidence and trust the average druggist reposes in a man he may know very little about; he will leave his store in charge of a clerk and go away for many hours and never think how much damage may be done in this time by a churlish or ignorant man. Many an otherwise prosperous store has been ruined by poor clerks through ignorance, carelessness, rudeness or intemperance, and many a proprietor has seen his best customers drop off one by one and never thought that the

cause of his losses was the incompetent cad at his side. Be polite to your clerk and insist on politeness from him, and as part of this policy never reprove a clerk before customers, it makes them lose confidence in him and you. Make your clerk understand that he represents you in your absence and require him to conduct matters just as you would yourself; then see that he does so by observation. Never keep a dishonest clerk. How many do so saying, "Oh, he only steals fifty cents a day and he is so pleasant to customers." How do you know but that he may be stealing more than fifty cents a day, and anyhow, it is your living. It sounds hard and harsh to say so in cold blood, but if druggists would league together and absolutely refuse to hire or recommend the lazy, ignorant, incompetent, drunken, dishonest clerks that the drug business is cursed with, it would be better for all concerned. If the worthless men were weeded out, the good men could earn a decent living, and it is these men of no account that are responsible for 99 per cent. of the mistakes and failings of the profession which they disgrace. Every druggist in the land can increase his profit by having none but thoroughly honest and reliable clerks in his employ and they could be had too if the druggists insisted upon having them and would refuse to employ or recommend the ones found unfit for a druggist's career.

Now for the druggist himself—the man. Be a man in all things; don't be afraid of your own honest opinions if they are based on honest study, but don't intrude them on others unless asked for, and don't be ashamed of the business by which you earn your living. Be strictly, scrupulously honest in all your dealings; suffer a loss of money rather than a loss of reputation for truthfulness and honesty. Be clean and neat in your personal habits and store; people don't like dirty medicines, and a

dirty man suggests dirt at the prescription counter. Be industrious; there is always something to do, but remember that it is just as much your duty to take exercise and recreation as it is to work, to keep your mind fresh and clear for business. Never show signs of drink while in your store; if it comes to a choice between whisky and the drug business, choose one or the other; you can't keep up your end in both. Be careful of your companions and associates; a man is judged by the company he keeps and a store by the kind of customers it has. Take the time to go around among your brother druggists and see what they are doing. Cultivate a friendly spirit and never be the first to start a war of cut rates or other such damaging foolishness. Very often by a plain, straightforward talk with the other fellow you can avert what might become a bitter quarrel. The other fellow is in the business for the same reason as yourself, to earn a living, so if you will get together and see how much you can help one another instead of trying to cut each other's throats, your till may be fuller on Saturday night. Cultivate a cheerful spirit and have a kindly word for all in proper season. Adapt yourself to your surroundings and try to make the best of circumstances; it is a mighty hard lot that might not have been worse, and don't be ashamed of your profession—pharmacy—it is an honorable one. Instead of crying down the drug business and the men who are in it, try to do your best to elevate it and to make yourself at least one of the masters whom men look up to and respect; do everything in your power to make a success of what you have undertaken as your life work.

Be honest, fear God, love your profession and be true to that which is noblest in yourself, and "failure" will not be written on your brow. The end will bring success to a life well spent.

PHARMACEUTICAL CELEBRITIES.

SIDNEY H. CARRAGAN.

Hail fellow, well met, with everyone in the drug trade is "Sid." Carragan. Everybody calls him "Sid.," for everybody knows him and everybody likes him. Carragan is one of the most popular of "the boys" in the commercial world. He's with "the boys" every time, and while he is the father of boys, he is as boyish at heart as any of the youngsters.

He has been with the corporation of Parke, Davis & Co. so long that the memories of his fellow employees go not back to the time when "Sid." was not there. This simply proves that he is a successful business man. He is that. But he never lets business interfere with pleasure. Perhaps he will tell you that it is the very reason of his success. At any rate he manages to get a deal of fun out of life, and so do the people who associate with him. "Sid." likes all the good things. He wears good clothes—things that on another would be called "loud," but which his lusty form carries so well that the only comment occasioned is an encomium of his good taste. He enjoys the manly exercise of bowling, or a quiet little game—either at cards, or pool, or billiards, and he will play as far into the wee sma' hours as you will, and probably beat you at that. He likes good things to eat and drink, and his taste in cigars is the most fastidious in the whole drug trade fraternity. He likes a good book, too, for he is a great reader and a book collector. If you doubt that, just ask him the merits of the latest history of China, or the new edition of Balzac or the latest popular novel.

How "Sid." can find time for all these things and still direct with phenomenal success the movements of a small army of travelling salesmen is the wonder and envy of his rivals in other firms.

The Era's artist has caught Mr. Carragan in a thoughtful moment. His expression may be a bit more serious than when he extends the hand of fellowship to a boon companion, but everybody will recognize the portrait at a glance and pronounce it all the better for indicating the man's sterling good qualities.

ARSENUCLEIN.—A. Gautier (Bull. Scienc. Pharm.) reports that thyroïdine acid contains arsenic, that of man in larger proportion than that of animals. The arsenic is present in the form of arsenocleïn, in a manner analogous to phosphorus in phosphocleïn, and plays as important a rôle in the organism. (Pharm. Post).

DISSOCIATION OF AIR AT ORDINARY PRESSURE.

Prof. Raoul Pictet, of Geneva, Switzerland, whose name is identified with the early liquefaction of air and gases, recently made a demonstration, says the New York Sun, of a process of his invention for the separation of the oxygen and nitrogen of the air at ordinary pressure.

It is said that the process is about to be introduced on a commercial scale. Prof. Pictet's process as described consists in the initial production of a certain quantity of liquid air, which is stored in tubes. Then through this is forced under a pressure of only about one atmosphere, or fifteen pounds to the inch, a stream of atmospheric air. This is cooled in the liquid air, but as it rises in a chamber beyond, the gases of which it is composed separate themselves by gravity and run off in separate tubes. The oxygen, being slightly the heavier, flows out through the lower tube, while the nitrogen goes off above. In addition to these gases, the air contains as an impurity carbonic acid gas, and this, it is asserted, leaves the machine in a liquid form, being reduced to that form by the low temperature. In ordinary liquid air, as it is produced by Tripler, Ostergren and others, the carbonic acid gas is frozen and gives the liquid air a milky appearance. It is taken out by pouring the liquid air through an ordinary paper filter.

In a demonstration recently, the apparatus used was of the laboratory character, and the proof of the effect was made by exposing a burning bunch of tow to the end of the pipe whence oxygen was expected to flow, where the combustion was made more intense, while at the end of the other pipe the neutral nitrogen diminished or extinguished the flame.

In the commercial machine, it is promised that with an expenditure of 500 horse-power, the daily output will be 500,000 cubic feet of oxygen, ranging from 50 to 90 per cent. in purity, and 1,000,000 cubic feet or more of nitrogen of similar quality. In addition, it is promised that 1,500 pounds of liquid carbonic acid will be produced.

The two products for which a direct commercial use are expected to be found are the oxygen and the liquid carbonic acid gas. The latter already has a fixed place in the market, and large quantities of it are saved in well-equipped breweries, where it is produced in great bulk through the fermenting of the beer. It is pumped into steel tubes under a pressure that liquefies it. It is worth about seven and one-half cents a pound.

The great market which Prof. Pictet expects to find for the oxygen is to support combustion at high temperatures in furnaces where coal is burned, making such fires available for purposes which only the electric arc is now suitable for, as well as making a great economy in producing heat for ordinary purposes. In burning fuel with the oxygen of the air there must be admitted to the furnace about three times the bulk of oxygen or nitrogen, and this absorbs a large quantity of the heat. If an excess of air goes into the furnace, this also takes up and wastes heat. By admitting oxygen these losses can be saved. This saving, Prof. Pictet thinks, would equal 40 per cent. of the present fuel bill.

It is proposed to put the oxygen in tubes or tank cars and ship it to consumers. Of the theoretical value of it there can be no doubt. The commercial feature remains to be demonstrated. The nitrogen, it is asserted, can be used for the production of nitric acid, and Prof. Pictet says that by a process of his invention he can combine it into ammonia directly by exposing hydrogen and nitrogen to the electric arc under certain conditions. If this be true, Prof. Pictet has solved a problem of wonderful value, which has defied the researches of the ablest chemists of the world.

"MEANS A NEW CHEMISTRY OF GASES."

Prof. Raoul Pictet repeated his demonstrations of the application of liquid air to the production of pure oxygen, ozone, nitrogen, carbonic acid gas, etc., at a dinner of chemical engineers in New York city last week. He was introduced by Henry B. McDowell, who gave a talk on the processes employed and the results accomplished by Prof. Pictet. Mr. McDowell says Prof. Pictet has con-

tracted with a New York company to give that concern exclusive control of all his patented appliances and processes for the production of oxygen, nitrogen and other gases and the salts of sodium and potassium. Mr. McDowell said to the Era's reporter:

"What the utilization of liquid air for such purposes (the handling of refractory gases) means fairly baffles the intelligence. The most astounding results are just beginning to be accomplished. When I saw Prof. Pictet's demonstrations for the first time I could not believe my own eyes. By the employment of the electric current, pressure and low temperatures atmospheric air can be separated into its elements, nitric acid can be made direct, ammonia can be made, ozone, 40 per cent. ozone, can be made in vast quantities—and all at marvellously low cost. This means revolution—that is what it means, a new electro-synthetic chemistry of gases. It is perfectly safe to say the chemistry of the future will sweep from the patent office all the old processes and substitute new ones. But I can't begin to talk on the general subject. It's too big. I could talk a week and then not exhaust the subject of oxygen alone. Limit ourselves to the use of oxygen in medicine, in pharmacy. Cheaper oxygen means a revolution there. But oxygen made with liquid air is not only cheaper than any other, it is purer and better. It is absolutely germ-proof and has no impurities whatever. Now, what is the wholesale price of oxygen today? One thousand cubic feet of oxygen under 200 pounds pressure sells at \$220—that's the wholesale price. With our present facilities for the production of liquid air we can make 1,000 cubic feet of pure oxygen, under a pressure of 200 pounds, at a cost of \$6. Nitrous oxide now sells at 15 cents a cubic foot. We can make it for less than half a cent a cubic foot. And so on, through the whole list. You see it is no exaggeration to say that Prof. Pictet's discoveries mean a revolution in the chemistry of gases. And every one of these discoveries has been made since he came to America, only a few months ago."

EPICARIN is a condensation product of cresotinic acid and beta-naphthol, recommended by Dr. Kaposé for many skin affections, as scabies, herpes tonsurans, prurigo, ichthyosis, psoriasis, eczemas, etc. It is used by him as a 10 to 20 per cent. ointment, 10 per cent. solution with caustic soda, and in 10 to 15 per cent. alcoholic solution. Instead of epicarin itself, its sodium salt is often used to advantage. Prof. Kaposé introduced beta-naphthol into dermatology in 1882 and at that time cautioned the profession against exceeding certain doses and concentration to prevent toxic symptoms. As, however, these precautions were often neglected, the employment of naphthol at times gave rise to very unpleasant consequences. This new derivative of naphthol, prepared by Bayer & Co., represents the therapeutic value of the mother substance without sharing its poisonous properties, and also has the advantage of ready solubility and freedom from irritant action. It is a reddish-yellow powder easily soluble in alcohol, ether, vaseline oil, and forms soluble, neutral salts, beta-naphthol forming only alkaline, caustic phenolates. These properties explain the relative non-toxicity of epicarin, which is admitted to be also somewhat slower and feebler in therapeutic effect than beta-naphthol. (Pharm. Post.)

OSTEOGEN is the trade name for a syrup of the phosphates of iron and calcium, prepared by Ziegenbruch, and recommended by him for rhabdicitis and similar diseases. The syrup is stated to contain 3.1 per cent. of phosphate of lime and 0.266 per cent. of phosphate of iron. (Pharm. Post.)

ATRABILIN is a new organo-therapeutic preparation obtained from the suprarenal glands. It is a light-yellow, opalescent liquid, having a faint odor of beef extract. Dr. Wolfberg recommends it especially in the treatment of various eye diseases as a substitute for cocaine. With the exception of aæsthesia and mydriasis it produces all the physiological effects of cocaine, in a higher degree. (Ztsch. f. Pharm.)

(Special Correspondence.)

PHARMACY IN ENGLAND.

London, March 10, 1900.

The Pharmaceutical Society of Great Britain.—The register of chemists and druggists contains (December 31, 1899) the names of 15,595 persons; of these 5,820 are members of the Society and 9,775 are unconnected with it. Subscription to the society is quite voluntary. This number of adherents is not satisfactory and much hampers the society in attempting to secure any parliamentary reform. It is a great improvement, however, from the state of things which existed before the passing of the Pharmacy Act Amendment Act in 1898. This Act made qualified men who had only passed the Minor examination eligible as members instead of as associates. Membership was previously restricted to Major men. In 1897 the number of registered chemists subscribing to the society was only 4,775 (number on the register, 15,215). It must be borne in mind, however, that a considerable number of those on the register are not actively engaged in business.

The Examinations of the Pharmaceutical Society.—In 1899 there were in all 1,550 candidates for the first or primary examination, of which 723 passed; 1,886 (552 passed) for the Minor or qualifying examination, which confers the title of chemist and druggist; and 103 (50 passed) for the Major, a purely optional examination conferring the title of pharmaceutical chemist. The Minor and Major are held four times a year, in January, April, July and October, simultaneously in London and Edinburgh. Last year 1,331 Minor candidates and 100 Major were examined in London, and 485 Minor and three Major in Edinburgh. The percentage of passes in London is appreciably lower than in the Scottish capital, and generally it is believed that, although the examinations are theoretically of equal stringency, it is somewhat easier to get through in Edinburgh than in London. One hundred and sixty-seven certificates of other examining bodies were accepted in lieu of the Preliminary, so that in all 890 persons entered the profession. After July next the Preliminary will be discontinued, and the certificates of other boards will entirely take its place. At the same time the Minor fee will be raised from five to ten guineas, the Major fee remaining at the present figure, three guineas. The only certificates acknowledged for practice in Great Britain are those of the Pharmaceutical Society.

A Curious Libel Action.—In the Queen's Bench division of the High Court on Wednesday, February 7, a London medical man sued Evans, Lescher & Webb, wholesale druggists, for libel. The circumstances were peculiar. It appears that the plaintiff purchased some bandages of the defendants. These bandages were invoiced at 1s. 1d. instead of 12s. 10d. and the plaintiff having paid the invoiced price declined to pay the difference. The defendant firm then wrote him that "the honest way" would be to settle their amended account. This letter was opened by the plaintiff's wife, and hence arose the action. Judgment was given for the defendants.

Technical Terms in Botany.—At the evening meeting of the Pharmaceutical Society of Ireland, held on February 12, Mr. J. Smith, one of the society's examiners, in the course of a lecture on botany and materia medica, entered a protest against the large number of Latin and Greek words used in botany, which he considered quite unnecessary, and in this connection he quoted Dr. Walter Bryan, of the Brooklyn College of Pharmacy, who had tabulated a number of technical terms and their English equivalents and who was in favor of using the English words whenever possible. (See Era, October 26, 1899, for Dr. Bryan's paper.)

Shop Hours.—Sir Charles Dilke has introduced a bill into the House of Commons to compel all shops to be closed at 1 p. m. on one day a week, at 7 p. m. on three other days, at 9 o'clock on the fifth and 10 o'clock on the sixth. It also provides for entire Sunday closing and limits the total hours per week during which an employee may be kept at work. The bill does not, however, apply to pharmacists and some other traders, except as regards a provision which restricts the employment of assistants after the shop is closed.

A Libel on Pharmacists.—The Medical Press, a somewhat widely distributed medical journal, recently had an article in it which stated that the average dispensing chemist was incapable of accurately dispensing prescriptions, such as pills, tablets, etc., containing minute doses of potent remedies and recommending reliance to be placed on the tablets, etc., made by large manufacturers. These unwarranted assertions have been taken up by the pharmaceutical papers, and at a meeting of the Council of the Irish Pharmaceutical Society Dr. Walsh brought the matter forward and showed that not only was the retail pharmacist better able to guarantee the accuracy of such preparations, but that the bulk of the better class of the medical profession fully recognized this and sent their prescriptions to the pharmacist instead of ordering a ready-made article.

The Companies Bill.—This bill has been introduced into the House of Commons by Mr. Ritchie, the Attorney-General, and the Solicitor-General, in a practically identical form to that in which it passed through the House of Lords last year. The main provisions are intended to protect the public against fraud in the promotion and carrying on of public companies, but there are two clauses which seem distinctly out of place in such a bill. They run as follows:

No company may carry on the business and use the description of a pharmaceutical chemist or chemist and druggist unless the business is bona fide conducted by a manager or assistant being a duly registered pharmaceutical chemist or chemist and druggist, as the case may require, (nor) unless the name of the person so qualified is conspicuously posted in the shop or other place in which the business is carried on, but, subject to this provision, anything which would be an offence under section 15 of the Pharmacy Act, 1868, if committed by an individual, shall be an offence if committed by a company.

It shall be unlawful for a company to carry on the profession or business of a physician, surgeon, dentist, or midwife, and if any company contravenes this enactment it shall be liable, on summary conviction, to a fine not exceeding five pounds for every day during which the contravention happens.

At present companies do practice pharmacy without hindrance, and in the case of an unqualified assistant selling a scheduled poison only the assistant can be proceeded against by the Pharmaceutical Society, while the present bill, while making it necessary for every shop owned by a company to be managed by a qualified chemist, will render the company jointly liable with the actual seller for the sale of poisons by unqualified employees. But the bill is not precisely worded; no definition is given of what exactly is meant by the term "business of a chemist and druggist," and pharmacists are anxious to be included in the section dealing with medical men. I am afraid they will not obtain their wishes, however, and it is extremely doubtful if either clause will pass, and anyway it would seem better policy to try and obtain some amendment of the pharmacy clause so as to render it really serviceable to the trade than to take up a position of uncompromising opposition.

Victor Meyer.—On February 8 Dr. T. E. Thorpe, president of the Chemical Society, gave the Victor Meyer memorial lecture before the Fellows of the Society; Sir Henry Roscoe presided. Dr. Thorpe, who is an old fellow student of Meyer's, gave a very appreciative discourse in which he touched on the charming personal characteristics and high scientific attainments of the deceased chemist. Meyer died on August 8, 1897, aged only forty-nine. He was at the time president of the German Chemical Society and a foreign member of the London Chemical Society. He worked successfully in Bunsen's laboratory at Heidelberg and with Baeyer in Berlin. When only twenty-five he succeeded Wislicenus at Zurich. In 1882 he became professor of chemistry at Göttingen, and six years later succeeded Bunsen at Heidelberg, his alma mater. His discoveries are historical, including thiophen, the iodonium bases and others. His vapor density apparatus is well known to all chemists and modifications of it have been numerous.

Medicine Stamp Act.—It is necessary in Great Britain for a separate license to be obtained for every shop or stall where stamped proprietary medicines are sold, and on February 16 a Leicester firm of chemists (Messrs. Butler & Son) were fined for selling a proprietary from a stall at an exhibition where they were showing.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Solution Peptonate of Iron and Manganese.—(G. H. W. and I. G. P. S.) See this journal, May 25, 1899, page 696, and October 12, 1899, page 498.

Re-registration in New York City.—(N. R. B.) The law regulating the practice of pharmacy now in force in this city does not require licensed pharmacists to re-register at stated periods.

Antiseptic Ointment.—(G. F.) The formula you submit is incomplete and appears to have been taken from the literature sent out to physicians by some enterprising manufacturer. We cannot work out the formula from the data furnished.

Manufacturers of Phosphorus.—(R.) The principal manufacturer of phosphorus in this country is the General Chemical Co., 32 Liberty street, this city. Phosphorus of foreign manufacture may be obtained through Chas Pfizer & Co., 81 Maiden Lane, this city.

Lithographers.—(J. S. C.) The following lithographers are located in this city: C. W. & O. F. Baumann, 108 Fulton street; Geo. F. Nesbitt & Co., 167 Pearl street; Steaer Lithograph Co., 105 Hudson street; Knickerbocker Lithographing Co., 97 Maiden Lane.

Bird Bitters.—(G. M.) The following have been published: (1) Tincture of cinchona, ½ fluidram; tincture ferri chloride, 2 drops; glycerin, 1 fluidram; caraway water, enough to make 1 fluid ounce; mix. (2) Compound tincture of cinchona, 2 fluidrams; compound tincture of gentian, 2 fluidrams; syrup of orange, 1 fluid ounce; simple elixir, 2½ fluid ounces. Put a few drops on a lump of sugar in the cage once daily.

Oil of White Pine.—(L. F. H.) We know of no oil of white pine, though it is possible that such a product might be distilled from the leaves of the white pine (*Pinus strobus*). Fritzsche Bros., manufacturers of essential oils, this city, say they have never heard the name applied to any oil of commercial importance, though it might be a synonym for the oil distilled from the leaves of the *Pinus sylvestris*, the silver or white pine of European countries.

Manufacturers of Non-Secrets.—(C. S. N.) A number of the large pharmaceutical houses maintain departments for the manufacture of "non-secrets." Here are the names of a few of them: Frederick Stearns & Co., Detroit, Mich.; Griffiths & Co., 2818 La Clede avenue, St. Louis, Mo.; C. B. Smith & Co., Newark, N. J.; Charles Wright & Co., Detroit, Mich. For list of dealers in druggists' sundries, stationery, etc., see "Directory of the manufacturers, jobbers, importers and firms who supply the drug trade," Part 1, Era Blue Book.

Formulas for Proprietary Medicines.—(G. F. and H. P. C.) We cannot give the formulas for Ayer's Cherry Pectoral, Kilmer's swamp root, hymoza, or any other proprietary medicines. These formulas are only known to their owners who consider them valuable trade secrets and as such they very wisely refrain from divulging them. The manufacturer's rights are thoroughly protected by common and statutory laws. Further considerations of this subject are fully set forth in an editorial in last week's issue. If you want a formula for a good alternative, cough syrup or any other prepara-

tion we will do our best to get them for you, but we cannot give formulas for patent medicines.

Solvent Wanted.—(L. L.) says he has had difficulty in finding a suitable solvent for the following mixture intended for a one ounce solution: Phenacetine, 8 grains; salol, 4 grains; caffeine citrate, 4 grains; tartaric acid, 2 grains; acetanilid, 10 grains; sodium bicarbonate, 12 grains.

Of course he has, though the greater part of it may be dissolved in a mixture of alcohol, glycerin and water, the phenacetine, salol, caffeine citrate and acetanilid being first dissolved in alcohol and added to the tartaric acid and sodium bicarbonate previously dissolved in glycerin and water. The solution is not satisfactory, however, as it is too strongly alcoholic. Carbonic acid gas is also evolved. A much better method of administering these remedies would be for the prescriber to order them put up in tablet form.

Bitterless Solution of Magnesium Sulphate.—(J. A. H.) We know of no specific formula under this title. However, the taste of magnesium sulphate may be considerably disguised by the addition of a small quantity of aromatic sulphuric acid to the aqueous solution containing the salt. Diluted sulphuric acid is similarly used, the formula recommended by Dr. Henry, of Dublin, and found in many of the older formularies, directing that 1 fluid ounce of the acid be added to 7 fluid ounces of a saturated aqueous solution of magnesium sulphate. Dose, a tablespoonful in a wine glass of water. It has also been stated that a solution of an ounce of the salt in about a pint of water, boiled for three minutes with a grain and a half of tannic acid, or with two or three drams of roasted coffee, is entirely deprived of bitterness. The liquid prepared with coffee should be strained and may be sweetened with sugar.

Here's Old British Sativa Again.—(M. and M.) say they have been unable to find in any market extract *Asiatic cannabis sativa*, extract *Asiatic halish sativa*, or extract *cashgar* leaves. They want to know where they can get them.

You cannot get them because there are no such preparations. The articles named constitute the principal ingredients of that familiar old fake, the "grateful sufferer" prescription, which has been exposed time and again in the pharmaceutical journals. As stated above, these substances have no existence and the prescription containing them is a fraud in every respect. We can hardly believe there is any druggist in the United States who is not posted concerning these "returned missionary," "retired clergyman" swindles. For twenty years past the trade journals have exposed them repeatedly. It only goes to show that druggists do not read their drug papers as diligently as they should.

Ægyptiacum.—(R. E. R.) "Ægyptiacum" is a term used by the practitioners of many generations ago to denote a preparation of vinegar, honey and verdigris. It is scarcely used at the present day, except possibly occasionally by veterinary surgeons as a detergent. It was formerly official in the old London Pharmacopœia under the title "Linimentum Æruginis," or "Mel Ægyptiacum," "Unguentum Ægyptiacum." Here is the process:

Verdigris, in powder.....	1 ounce
Vinegar.....	7 fl. ounces
Honey.....	14 ounces

Dissolve the verdigris in the vinegar, and strain through linen; then gradually add the honey, and boil down to a proper consistence.

It was formerly used either undiluted, or mixed with some mild ointment to destroy fungous granulations, or to repress their growth. In the latter state it is said to act as a stimulant to flabby, indolent and ill-conditioned ulcers, and largely diluted with water, it has been used as a gargle in venereal ulcerations of the mouth and throat.

Toothache Wax.—(W. S. R.) The Era Formulary gives the following formulas: (1) Melt white wax or spermaceti, 2 parts, and when melted add carbolic acid crystals, 2 parts; stir well till dissolved. While still

liquid immerse thin layers of carbolized absorbent cotton and allow them to dry. When required for use, a small piece may be cut off and slightly warmed, when it can be inserted into the hollow tooth, where it will solidify. (2) With a gentle heat melt 60 parts yellow wax and 10 parts Venice turpentine and stir into the mixture 10 parts powdered dragon's blood, 10 parts powdered mastic, 2½ parts salicylic acid, 5 parts oil of cloves and 1 part oil of cajuput. Stir while cooling and roll out into sticks weighing 30 grains. Wrap in paraffined paper and preserve in stoppered bottles. (3) Melt together 2 ounces beeswax, 6 drams Venice turpentine and 2½ drams powdered mastic; then add 80 grains chloral hydrate and 1½ drams powdered opium and stir the mixture until the mixture becomes plastic. It may then be rolled out into rods or formed into pellets.

Chewing Gum.—(J. S. C.) We cannot give a working formula for the proprietary chewing gum. The manufacture of specialties of this character is by no means the simple operation that it seems upon examination of the formula. Considerable experience in manipulation is necessary to success and the published formulas can at best serve as a guide rather than as something to be absolutely and blindly followed. Thus, if the mass is either too hard or too soft, change the proportions until it is right; often you will find that different purchases of the same article will vary in their characteristics when worked up. Some manufacturers add a little paraffin or wax to harden the mass, but the most successful attribute their success to the employment of the most approved machinery and greatest attention to details. The working formulas and the processes of these manufacturers are guarded as trade secrets, and aside from publishing the following general formula, we can give little information:

Chicle	3½ pounds
Paraffin wax	1 pound
Tolu balsam	2 ounces
Peru balsam	1 ounce

Dissolve the gum in as much water as it will take up, melt the paraffin and mix all together. Now take

Sugar, finely granulated.....	10 pounds
Glucose	4 pounds
Water	3 pints

Put the sugar and glucose into the water, dissolve and boil them up to "crack" degree (confectioners' term), pour the syrup over the oil slab and turn into it sufficient of the above gum mixture to make it tough and plastic, adding any one of the following flavors, if desired: Cinnamon, chocolate, sandal wood, myrrh, galingal, ginger or cardamom.

We know of no chemist engaged in the business of supplying formulas and working processes for the manufacture of confectionery, etc. It is possible that a letter addressed to the editor of the Confectioners' Journal, Philadelphia, Pa., might put you in a way to secure this information.

Plating Without a Battery.—(L. B. F.) Nickel.—There is no reliable method of depositing nickel from its cold solution, but a thin and adhesive coating may be given articles of brass, iron, etc., by the following process: Boil in a copper vessel a saturated solution of zinc chloride and an equal quantity of water. While boiling add hydrochloric acid drop by drop until the precipitate at first thrown down is again completely redissolved. Now add zinc in powder until the bottom of the kettle is nearly covered with a precipitate of zinc. The bath is now ready for the addition of a salt of nickel, and you may use either the sulphate or the nitrate. Add it in sufficient quantity to give the bath a strong green color. The articles to be nickelled are now hung in the bath by means of a zinc wire or a strip of sheet zinc, and a few pieces of the latter are thrown in along with them. Raise the heat to a strong boil and continue it for several minutes or until the articles are covered with a bright coating of nickel. The articles should be thoroughly cleaned and free from grease before being put in the bath. When finished, rinse and then rub well with precipitated chalk.

Silver.—(1) Dissolve 1¼ ounces silver nitrate in the smallest quantity of water, add 5 ounces sodium chloride

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA COURSE STUDENTS.

Students will save themselves and the Director much unnecessary correspondence by keeping in mind the following rules of the Course:

1. Examination papers are not returned to students, but are preserved as a part of the permanent records of the Director's office.
2. Questions on the lectures are mailed to students as soon as received from the printers. If not received by the student within three weeks after the lectures, they have probably gone astray in the mails, and a card of inquiry may then be addressed to the Director.
3. It is expected that students will thoroughly study the lectures before looking at the questions. The student who confines himself merely to the questions in his study will necessarily narrow the range of his work, and will attain a lower grade than he otherwise would.
4. Communications respecting non-receipt of the lectures, concerning class pins, or regarding financial matters should all be addressed to The Pharmaceutical Era, and not to the Director.

J. H. BEAL, Director.

We have on hand a supply of pins for Era Course in Pharmacy students. These are made up in attractive styles, 14 karat gold, beautifully enamelled, and bearing a mortar and the letters E. C. P. in special design. The pins are mounted in three styles—safety pin, stick pin and button. The price is \$2 (either style), which is barely sufficient to cover the cost of production. Students who desire these pins are requested to send in their orders (with cash) at once, stating style of pin desired.

Read this Bulletin each week.

and 3 ounces cream of tartar; rub in a mortar to a smooth paste, adding sufficient water. Preserve the mixture from light. Apply the paste by rubbing on the cleaned copper or brass until the silver layer is thick enough, then wipe with a chamois skin.

(2) Silver oxyhyposulphite, ½ ounce; ammonium chloride, ½ ounce; distilled water, 6 fluid ounces. Mix and apply with a soft cloth. Either of these formulas may be used for silvering articles of brass, copper, iron, steel, etc.

ARTIFICIAL PEARLS FROM FISH SCALES.—Fish scales are being utilized in France, where a chemist has discovered that the scales may be used in the manufacture of artificial pearls, and our consul at Lyons has found that the supply is inadequate and that there is an actual demand for large quantities of the scales in his consulate, where good prices are paid for them. The scales should be sprinkled with salt as soon as they are removed from the fish and packed in tin cans. As the American sturgeon has the most beautiful and largest scales of almost any fish in the world, this may be of considerable importance to fishermen who engage in catching sturgeon. (Sci. Am.)

ASK US.

If any Era subscriber will ask us when he doesn't know where to buy what he wants, we will try to put him in touch with the firms who can furnish the goods to the best advantage. We make no charge to subscribers for this service.

Wyeth's Soluble Powder=Capsules

or, Capsuled-Powders are a new and novel form for administering medicines. They contain the various substances in a perfectly powdered condition, which is certainly the most efficient form for administration; thus a desideratum of utmost importance to the physician has been attained. There is no previous preparation made necessary, as in other forms of medicine—notably **gelatine-and sugar-coated pills**—no cohesive or excipient is required or used. The materials or medicines are simply enclosed in a pliant, soft, soluble gelatine capsule, quickly dissolved in the warmth and fluids of the stomach, presenting no such objectionable resistance as the ordinary double-cased, **hard**, gelatine capsules. In addition to this brief description, an inspection will at once impress the judgment. Physicians and pharmacists are urged to examine these products.

~CORRESPONDENCE SOLICITED.~

ROBERT STEVENSON & CO., WHOLESALE DRUGGISTS,
92-94 Lake St., Chicago.

Opinions on the Era Blue Book sent us by Practical Pharmacists.

Washington, Ark., Feb. 26, 1900.
The Pharmaceutical Era: The Blue Book exceeded me in safety and it supplies a long-felt want. I used to be a subscriber to your journal. It is superior to all others, and, like the prodigal, I have returned after several years' wandering.

S. M. CARRIGAN.

Corona, L. I., March 3, 1900.
The Pharmaceutical Era: Your Blue Book to hand. An excellent idea on your part as saving us considerable trouble in looking up matters. Altogether, I consider the money I send well invested.

H. C. GESSNER.

Falatine, Ill., Feb. 28, 1900.
The Pharmaceutical Era: I received the Blue Book and use it almost exclusively.

ROBERT MOSSER.

Cincinnati, O., Feb. 27, 1900.
The Pharmaceutical Era: Money invested in the Pharmaceutical Era may be considered well spent. Have already saved more than subscription through Weekly Change Sheet.

M. WM. HAMILTON.

Flint, Mich., Feb. 26, 1900.
The Pharmaceutical Era: The Blue Book is very fine.

ORRIN P. SAFFORD.

Girardville, Pa., March 6, 1900.
The Pharmaceutical Era: Just received the Blue Book this A. M. I think your price list the best I ever saw. Wishing you the success you deserve.

Z. T. TROUT.

Marion, O., March 5, 1900.
The Pharmaceutical Era: Your Blue Book at hand and we are more than pleased with its comprehensiveness and convenience. Put us down for 1901.

LINCOLN PHARMACY CO.

Palo Alto, Cal., March 2, 1900.
The Pharmaceutical Era: The Blue Book received a few days ago and am highly pleased with it. It is what we call out here as "just all right."

E. O. WEBB, JR.

Chetopa, Kan., March 1, 1900.
The Pharmaceutical Era: The Blue Book is all you claim for it and more too. No retail druggist should be without The Pharmaceutical Era and Era Blue Book. I certainly want an Era Blue Book for 1901.

F. J. CUNNINGHAM.

Indianapolis, Ind., March 1, 1900.
The Pharmaceutical Era: I think your Blue Book, together with the Weekly Change Sheets, will be a big help in keeping posted and will save me several times the cost of your journal per year in correcting overcharges on my drug bills.

CHAS. W. EICHRÖDT.

Los Gatos, Cal., Feb. 27, 1900.
The Pharmaceutical Era: We do not see how any progressive druggist can do without the Blue Book.

WALKER & SCHREIBER.

Roscoe, Mo., March 3, 1900.
The Pharmaceutical Era: The Blue Book came yesterday and I think it is a thing of beauty, a book I appreciate, as I consider I have got my money's worth already. The Weekly Change Sheet is a great deal of help to me, and all in all I think you are doing us poor devils of the drug trade a great deal of good.

CHARLES JONES.

Ashbourne, Pa., March 13, 1900.
The Pharmaceutical Era: The Era Blue Book is to hand and is the most complete price list I have yet seen. It is very valuable either as a price list or reference book to the pharmacist who is trying to keep abreast of the times and highly creditable to you, especially as a first issue. Success to the future.

M. M. OSBORNE, Pharmacist.

Grove City, Pa., March 13, 1900.
The Pharmaceutical Era: Your Blue Book to hand. It is immense; just the thing. Thanks.

I. W. FITHIAN.

Chicago, Ill., March 12, 1900.
The Pharmaceutical Era: Many thanks for your Blue Book just received. It is up-to-date and a friend in need. Every pharmacist should have one.

FREDERICK C. KURZ.

Derry Station, Pa., March 12, 1900.
The Pharmaceutical Era: I want to thank you very much for the issue of the Blue Book. When I first heard of its mention I felt confident it would be a good thing and I want to assure you I am not disappointed.

J. W. FREEMAN.

Watertown, Conn., March 13, 1900.
The Pharmaceutical Era: Kindly accept my thanks for Blue Book. It is certainly the most complete work of its kind and should be found in the library of every up-to-date druggist.

D. G. SULLIVAN.

Madison, Wis., March 12, 1900.
The Pharmaceutical Era: The Era Blue Book came to hand this A. M., and from examination it is just what every one in the drug business requires. There is no small undertaking to produce such a work.

A. A. PARDEE.

Mansfield, O., March 12, 1900.
The Pharmaceutical Era: Please accept my thanks for the copy of your Blue Book, which I received last Saturday. It is the most complete book of its kind I have ever had, and it will be of great service to all retail druggists who are in possession of a copy. Your valued journal, The Pharmaceutical Era, is a great success.

C. W. WAGNER.

Washington, D. C., March 12, 1900.
The Pharmaceutical Era: I am very much pleased to acknowledge receipt of your Blue Book which I desire to thank you, for I consider it a very complete work; in fact, I am rather surprised at its size and scope. Trusting you will meet with the success which you so well deserve, I am, respectfully,

EDWIN YARNOLD.

Polo, Ill., Feb. 21, 1900.
The Pharmaceutical Era: The Blue Book is indispensable to any pharmacist. May your every effort be successful.

C. E. BAMBOURGH.

Berrien Springs, Mich., March 6, 1900.
The Pharmaceutical Era: The Blue Book was received in good shape and I have found it quite useful already. It is a book every drug buyer needs, and it fills a long-felt want.

PHILIP KEPHART, Ph. C.

Suffield, Conn., March 6, 1900.
The Pharmaceutical Era: The Era Blue Book received in good condition. Thank you. Am sure I will find it of great value.

A. L. STRONG.

Hanover, Pa., March 6, 1900.
The Pharmaceutical Era: I wish to say the Era Blue Book has safely reached here and is the most complete and the handiest price list I ever saw.

J. L. EMLET.

Luray, Va., March 5, 1900.
The Pharmaceutical Era: We received copy of Era Blue Book to-day and think it is the very thing we want. Thanks to the Era.

GROVE & MCKAY.

Mineral Point, O., March 5, 1900.
The Pharmaceutical Era: I am in receipt of the Blue Book. It is as fine as silk.

W. B. COUSINS.

North Baltimore, O., March 5, 1900.
The Pharmaceutical Era: I received the Era Blue Book yesterday morning and have spent all my spare-time in examining my book. I have to say that no up-to-date drug store can afford to do without it. Please accept my heartiest thanks and well wishes for the Era and the Era Blue Book.

J. KATZENMEYER & SON.

Mound City, Kan., Feb. 28, 1900.
The Pharmaceutical Era: Have received the Blue Book and find it excellent.

E. B. VAN NESS.

Shelbyville, Ill., Feb. 14, 1900.
The Pharmaceutical Era: We Blue Book received. It is all O. K. and just what we wanted.

FATE & CO.

Pittsboro, N. C., Feb. 19, 1900.
The Pharmaceutical Era: I like the Era very much. It is a journal indispensable to the drug trade. Send me a copy of the Blue Book as soon as you can.

G. R. PILKINGTON.

Blue Mound, Ill., Feb. 19, 1900.
The Pharmaceutical Era: I desire to thank you for the Change Sheets sent in advance, one of which saved me \$1.50 on a single purchase, as it came to hand before the traveling salesman had been advised to change price, and although I called his attention to the advance, he sold me the goods at former price.

T. J. UPCHURCH.

(SPACE FORBIDS PUBLISHING MANY HUNDRED MORE.)

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN. South Africa.

Lord Roberts and his army are in Bloemfontein, the Free State capital. They will soon advance northward, it is said, toward the Transvaal. The British forces are converging against the Boers, south of the Free State, and unless the burghers offer battle their forces may have to surrender or retreat; General Pole-Carew's division is threatening their rear. Late arrivals from Pretoria at Lorenzo Marquez say the Boers admit that their cause is hopeless, and the burghers are going home by hundreds. The Mafeking garrison was holding out at last reports. At President Kruger's request, the United States Government offered its good offices to Great Britain last week to bring about peace in South Africa, but the offer was declined. Lord Salisbury, in his reply to the Boer peace proposal, indicated that the purpose of the British Government is to annex the South African republics to the British Empire.

The Philippines.

Flores, Aguinaldo's Secretary of War, has surrendered to General MacArthur. Aguinaldo's infant son, who has been held a prisoner by the American forces for several months, died of smallpox last week. Professor Dean C. Worcester, of the new Philippine Commission, has tendered his resignation as a member of the Michigan University Faculty. Brigadier General William A. Kobbe has been appointed Military Governor of the Province of Albay, Luzon, and of the islands of Samar and Leyte. Rear Admiral Kemf has been ordered to sail from San Francisco for Manila, in company with Rear Admiral Remey, on the 31st inst. A company of the Sixteenth Regiment was attacked by Filipinos at Aparri, in Northern Luzon, recently, and eight Americans were wounded. Thousands of insurgents are resisting Colonel Houston's force of Americans in the Province of Panay, Philippines; seven Americans have been killed.

Other Foreign News.

There is great anxiety in official circles at Constantinople regarding the Russian Government's refusal to modify its demands regarding railroad concessions in Asia Minor. The Turkish Government advises against submission. The American Association at Shanghai has complained of the vigorous anti-foreign Chinese policy, and a United States warship will be dispatched from Manila to aid in the preservation of order in the disturbed district of the Empire. Ex-Premier Crispi, of Italy, is dangerously ill. The bubonic plague has broken out in Sydney, N. S. W., and in Buenos Ayres. The Paris Exposition will open April 15. The subscription lists for the British war loan of \$150,-000,000 covered that amount twenty times. Permission to do general business in Japan has been refused sixty foreign insurance companies, most of them American, because their applications have failed to comply with the Japanese laws. Though Korea has never formally assented, Russia regards as accepted her proposal to loan Korea several million dollars in return for exclusive mining privileges. The Russian and French cable and telegraph systems in Siberia, China, and Indo-China are soon to be connected. Many people are starving in Barbadoes and arrangements are being made to send twenty thousand to St. Lucia.

DOMESTIC. Congress.

T. C. Puerto Rico tariff bill is still before the Senate, and it seems unlikely that an agreement will be reached soon. A committee of conciliation is trying to frame a bill more likely to pass. The Senate passed the Puerto Rico Relief Appropriation Bill last week, placing over \$2,000,000 in the President's hands for internal improvements on the island. The Senate has decided to take up the Quay case a week from next Tuesday. Representative Fitzgerald of Massachusetts has introduced a joint resolution to make April 12, the anniversary

of the battle of Concord and Lexington, a legal holiday. The House, last week, unseated S. W. A. Young, of the Second Virginia District, and seated the contestant, R. A. Wise. The House passed the urgency deficiency bill last week. The Senate has passed the Diplomatic and Consular Appropriation bill. An amendment proposing the payment of an annuity to ex-Queen Liliuokalani of Hawaii was laid on the table. Many bills have been introduced in the House of Representatives to restrict the action of trusts. The House Committee on Militia has directed a favorable report on the bill increasing the appropriation for the National Guard of the country from \$400,000 to \$2,000,000 annually. General Joseph Wheeler has arrived in Washington, and will begin his fight for a seat in the House as soon as his resignation from the army is accepted by the President. Senator Proctor of Vermont has introduced a bill providing for the prevention of the adulteration of food and authorizing the creation of a Bureau of Chemistry in the Agricultural Department. The House Committee on Naval Affairs has decided to recommend the insertion of a provision in the Naval Appropriation bill for two battle ships, three armored cruisers and three protected cruisers. The President signed the Financial bill last week, making gold the standard of our currency system.

Other Domestic News.

The New York police, as a result of recent newspaper exposures of vice, raised a number of illegal resorts last week. The Grand Jury has taken some of the cases in hand, and it is thought that a serious movement for a clean city may result. Secretary Long has issued an order constituting a general board to insure sufficient preparation of the fleet in case of war and for the naval defense of the coast. Admiral Dewey will be president of the board. The total exports of merchandise during February amounted to \$119,765,762. The imports for the same month were valued at \$68,774,150. These figures indicate that the foreign commerce of the country for the fiscal year ending June 30 will probably be a hundred millions greater than last year, and go beyond the two billion dollar line. The State Department has been notified that the Persian Government is about to send a minister to Washington. The Rhode Island Democratic Convention, held last week, endorsed the Chicago platform. The Rhode Island Republican Convention endorsed McKinley. The friends of the Ramapo Water Company won a success at Albany last week by preventing temporarily at least, the passage of the Morgan bill, a measure hostile to the Ramapo scheme. The Fallows Anti-Ramapo bill, however, was passed by the Assembly. President Gates of Iowa College has resigned. It is said that his radical views made his resignation desired by the more conservative friends of the college. Prof. Herron had to leave the same college not long ago on account of his radical opinions. The Topeka Capital, which Rev. Charles M. Sheldon, author of "In His Steps," conducted last week as he believed Jesus would do, attracted much interest and criticism. The circulation approached half a million a day, and plates were sent to Chicago, Kansas City and New York to help handle the Capital's unwanted circulation. The Kentucky Legislature adjourned sine die last week after passing a bill appropriating \$100,000 for the use of Governor Beckham in reorganizing the State militia. It is said that the two claimants to the Governorship have agreed to make no aggressive move until after the Court of Appeals has made its decision in the case. The transportor Kilpatrick took a cargo of supplies for the suffering poor of Puerto Rico, to San Juan, last week. A strike has occurred among the workmen on the military road in Puerto Rico for an advance in wages from 40 cents to 50 cents a day. Six hundred men have left work. Fourteen lives were lost last week in an Italian tenement house fire in Newark, N. J. The United States car strike at St. Louis motormen has been averted through arbitration.

HUNTING & SON WILL DO A JOBBING BUSINESS.

Bunting & Son, engaged in the retail drug business for many years at Bristol, Tenn., have recently enlarged their establishment to do a jobbing business. The store was established in 1869 by J. Bunting, Sr., who died in December of last year. After his death his youngest son, Lindsay, who had been a full partner for twenty years, assumed control of the business, retaining unchanged the firm name of Hunting & Son.

THE DRUG NEWS.

New York and Vicinity.

DRUG TRADE SECTION, BOARD OF TRADE AND TRANSPORTATION.

The regular monthly meeting of the Drug Trade Section, New York Board of Trade and Transportation, was held on Thursday afternoon, March 15. In the absence of Chairman John McKesson, Jr., Herbert D. Robbins was made temporary chairman.

Thomas F. Main, chairman of the Committee on Legislation, presented a report on bills pending in Congress and in the State Legislature. He announced that the Section had been represented at the Senate Health Committee's hearing on the Wilcox poison bottle bill, and he believed that iniquitous measure had been killed. His committee believed the Section should favor the enactment of Mr. Cotton's bill to elevate the hospital stewards in the National Guard, and to that end the following resolution was offered:

Resolved, That the Drug Trade Section of the New York Board of Trade and Transportation heartily endorses and urges the passage of Assembly Bill 1490, introduced by Mr. Cotton, to amend the military code of the State so as to provide for the appointment of registered pharmacists to the hospital corps of the National Guard, and for the appointment of principal officers as military pharmacists to the rank of first lieutenant. Upon the ability of these men depends in a large degree the welfare of every sick or wounded man in the service, and their rank and pay should be commensurate with the special professional knowledge and skill required of them.

The committee also recommended favorable action on the bill pending before Congress to enable manufacturers using alcohol in the arts to recover rebate moneys under Section 61 of the Tariff Act of 1894, and Mr. Main offered the following resolution:

Resolved, That the Drug Trade Section of the New York Board of Trade and Transportation urges the passage by Congress of Senate Bill 2283, introduced by Senator Platt, of Connecticut, and H. R. Bill 5,765, introduced by Congressman Russell, to enable the manufacturers using alcohol in the arts and manufactures to recover the money due them under Section 61 of the Revenue Act of 1894 for the reason that the then Secretary of the Treasury failed to perform the duty imposed upon him by that Act, and therefore assumed to nullify an act of Congress.

In the judgment of this Section it is a matter of the highest constitutional importance that Congress should assert its right to have its mandates obeyed by the executive and administrative officers of the Government and forever prevent any officer nullifying an act of Congress under any circumstances.

The Section adopted each of these resolutions by a unanimous vote.

Chairman John H. Stallman, of the committee of importers, reported that in accordance with the request of the Section, the customs officials had decided to permit the entrance of Carthagenia ipecac. A report was then called for from the special committee on co-operative buying clubs appointed at the preceding meeting, and the following report was read:

"February 20, 1900.
"At a meeting of the committee formed to report on the 'buyers' combination' held to-day, at which the following members were present: W. S. Mersereau, Henry T. Jarrett, E. W. Fitch, and James Hartford, the committee opened the meeting by naming Col. Fitch as chairman and Mr. Hartford as secretary. After discussing the question in all its bearings, it was found that the members disagreed so much in their views of this question that no conclusion could be arrived at that was considered satisfactory, and it was therefore decided to report back to the Drug Trade Section that the committee was unable to arrive at any solution of the question, and leave the Section to take any further action in the matter that it deems necessary.

E. W. FITCH, Chairman.

JAMES HARTFORD, Secretary.

This report was accepted and the committee was discharged. On motion of Mr. Main it was voted to make the discussion of this subject a special order for the next meeting of the Section.

The meeting voted also to extend an invitation to E. C. Frisbie, of Hartford, Conn., the president of the N. W. D. A., to attend the April meeting of the Section and address the members on some subject of his own choosing.

KINGS COUNTY SOCIETY MEETING.

The regular monthly meeting of the Kings County pharmaceutical Society was held at the Brooklyn College of Pharmacy on Tuesday afternoon, March 13. President Adrian Paradis was in the chair and there was a good attendance of members. In the regular order of business six new members were elected; they were: Myer Arensburg, 219 Adelphi street; O. F. Bancroft, 1000 Fulton street; George H. Born, 182 Bedford avenue; Charles G. H. Gerken, 1485 Broadway; Jacob J. Lauffer, 1551 Broadway, and R. C. Taplin, 1485 Broadway. Applications for membership were received from fifteen other druggists of Brooklyn, and these will be acted upon at the next meeting. The treasurer, Dr. Peter W. Ray, reported a balance of \$255.45 on hand.

Secretary Tuthill reported that in compliance with a resolution adopted at the preceding meeting he had written in the name of the society to U. S. Senators and representatives from this section asking them to support the Boutelle bill (House Bill 7,093) for the repeal of the stamp tax on proprietary medicines. He read answers from Senator Depew, Congressman Clayton, F. E. Wilson and John J. Fitzgerald, promising to give the matter their earnest attention. On motion of Dr. Ray the secretary was instructed to send copies of the resolution on this bill to the members of the Ways and Means Committee of the House of Representatives.

Wm. Muir, of the Committee on Legislation, reported that progress was being made with the bill to amend the New York City Pharmacy Law. The Shorter Hours bill, introduced by Dr. Henry at the request of the Clerks' Association, had been passed by the Assembly. [Later it was killed in the Senate]. He also announced that the Hill bill, familiarly known as the "All-State Pharmacy Bill," had been passed by the Assembly. He reported attending a hearing held by the Senate Health Committee on the Wilcox Poison Bottle bill. That committee agreed not to report the bill.

Dr. Muir spoke of the work of Chairman Holliday, of the N. A. R. D. Executive Committee in the Eastern part of the country and urged renewed effort to increase the membership of the local society. Dr. Sheets also spoke on this subject and congratulated the society on the efficient work of its secretary. He said that fifteen applications for membership had never before been made at one time since the organization of the society. He was one of the charter members, and he believed the society was in a more flourishing condition now than ever before. The attendance at the meetings had always been about the same. With the society's membership it should be much larger, but he did not see any better plan for bringing this about than to encourage the secretary to continue his good work in securing new members.

Dr. Sheets also spoke of the law against using registered bottles and said the Bottlers' Union was presently actively engaged in prosecuting persons who refilled such bottles with any substance whatever. The secretary was instructed to obtain from the Bottlers' Union a list of such registered bottles and furnish the same to all druggists in Kings County.

Wm. C. Anderson addressed the meeting on the work of the N. A. R. D., saying that at last the beginning of the end was in sight. The large proprietors had finally come into line and agreed to restrict sales to legitimate

wholesalers. He continued: "We feel that the list of signatures to the agreement will grow rapidly and it will be only a short time before the committee of the three associations will complete its work and put the plan of the N. A. R. D. into execution. Local associations must work consistently with the N. A. R. D.; they must furnish lists of cutters and these lists must be prepared with the greatest care. No man should be placed on such a list without absolute knowledge that he is doing a cut-rate business and every cutter should be given an opportunity to come within the lines of the N. A. R. D. plan if he is willing to do so." Mr. Anderson moved the appointment of a special committee of three to arrange a plan for ascertaining which druggists in Kings County will stand with the society in its allegiance to the N. A. R. D., and also which ones will not abide by that plan. This was carried and the chair appointed W. C. Anderson, W. B. Avere and O. B. Deakney.

Dr. Muir announced attending a meeting of the local Committee on Arrangements for the annual meeting of the New York State Pharmaceutical Association, to be held at Newburg, in June next. He announced the arrangements for entertainment, etc., already made, and promised an interesting and profitable time for all who could attend. The meeting was then adjourned.

Druggists Must Not Refill Registered Bottles.

The Long Island Bottlers' Union has issued an appeal to the druggists of Brooklyn asking them to refrain from refilling registered bottles. The union has, it is said, a large collection of all sorts of soda, lager and other registered bottles, with labels attached, from druggists all over the city. The circular says:

"Consequently our members have either to stand the enormous loss of bottles caused in this manner, or by refilling these bottles to endanger the health of the public at large. We hold, further, a large variety of citrate of magnesia and similar bottles, to which porcelain stoppers, well branded and registered, and the properties of our members, have been attached, showing that the unscrupulous will not shrink from depriving us openly of the use of our own property."

The union believes there is no intent on the part of druggists to do injury, but that the improper use of these bottles is due to carelessness and negligence on the part of employees. After this warning the Bottlers' Union announces that it will be compelled to prosecute offending druggists under chapter 933 of the Laws of 1896, which is as follows:

"Any person who shall fill with any beverage, medicine, medical preparation or compound any bottle or siphon having produced thereon the registered mark of any person, without the written consent or purchase from the owner of such mark, is guilty of misdemeanor, and shall be punished by a fine of not more than five dollars for each bottle so filled or by imprisonment for not more than one year."

A Good Argument for Repeal of the Stamp Tax.

The Humphreys' Homeopathic Medicine Co. is sending out a card on the present state of Uncle Sam's finances, which should set the proprietary stamp tax in a new light before those who are opposing its repeal. It quotes the Secretary of the Treasury on the excess of revenues over disbursements, and gives some interesting figures. On March 10 there was in the U. S. Treasury a cash balance of \$90,927,159.28. Surplus revenues collected since July, 1898, have averaged \$6,582,190.85 a month, which is at the rate of \$78,986,290.10 a year. The card asks what is the need of this excess? and concludes: "If the entire tax levied under 'Schedule B' of the War Revenue Act were repealed, the annual reduction of revenue thereby effected would not equal the surplus for a single month."

N. Y. Wholesale Drug Bowlers.

Six games were rolled last Saturday in the tournament of the New York Wholesale Drug Trade Bowling Association. The teams of Parke, Davis & Co. and of the General Chemical Co. each won a double victory. The team scores were: General Chemical Co., 752; Colgate & Co., 746. Colgate & Co., 885; Roessler & Hasslacher Chemical Co., 659. General Chemical Co., 697; Roessler & Hasslacher Chemical Co., 689. National Lead Co., 745; R. W. Robinson & Son, 734. Parke, Davis & Co., 727; R. W. Robinson & Son, 657. Parke, Davis & Co., 759; National Lead Co., 716.

NATIONAL DRUG TRADE BOWLING TOURNAMENT.

The Third Annual Tournament of the Drug Trade Bowling League of the United States will be held in New York City probably April 20 and 21, although the date has not yet been decided upon. The New York Wholesale Drug Trade Bowling Association has begun to prepare for this event and will leave nothing undone to give the visiting bowlers a royal good time during their stay in this city. A general committee, consisting of one member from each team in the New York Association, held a preliminary meeting last week. The following sub-committees were appointed: On Hotels—William Robinson, of R. W. Robinson & Son; C. A. Darfus, of Merck & Co., and J. W. Norman, of the General Chemical Company. On Alleys—H. O. Barnes, of Colgate & Co., M. Judd, of Seabury & Johnson, and W. Meeks, of the National Lead Company. On Entertainment—E. A. Olin, of Dodge & Olcott; William A. Hamann, of the Roessler & Hasslacher Chemical Co., and Wm. J. Carr, of Parke, Davis & Co.

The tournament will last two days and besides the contests there will be other forms of entertainment, including, probably, a dinner and smoker. Teams from Chicago, Baltimore and New York will compete for the prizes offered by the league. Invitations have been sent to the drug trade bowling clubs in Philadelphia, Buffalo and Cincinnati, and it is hoped that they will also be represented in the tournament.

SHORTER HOURS BILL DEFEATED IN SENATE.

The bill to regulate the working hours of drug clerks in New York city, which was passed by the Assembly several days ago, was defeated in the Senate on March 15. Senator Ford called up the bill for final action in the Senate on the afternoon of that day, moving its passage. Immediately Senator Grady objected to the bill in the form in which the Assembly had passed it, and offered an amendment giving the powers of inspection and enforcement to the local Board of Health, instead of to the State Factory Inspector. His motion to amend was lost by a vote of 18 to 25. On the original motion the vote was 21 yeas to 20 nays, and as favor was not a constitutional majority shown in its favor the bill was declared lost. All the Democrats present voted against the bill, and with them voted three Republicans—Senators Brackett, Stranahan and Thornton.

ALL STATE BOARD BILL PASSES ASSEMBLY.

The Assembly last week passed the bill introduced by Mr. Hill, at the request of the New York State Pharmaceutical Association, to create a new Board of Pharmacy of fifteen members to have pharmaceutical jurisdiction over the entire State. This is the bill which was approved by the N. Y. P. A. at its last annual meeting. It was printed in full in the Era at that time (July 6th issue), and a summary of its provisions was printed in the issue for December 21 last.

NOTES.

—George H. Bancroft is back in the Hudnut pharmacy, at 245 Broadway, as manager. This pharmacy, which has been in the hands of Emanuel Blumenstein and Harry E. Littell, as receivers for a little over a year, was bought last week by Hegeman & Co., and Justice Lawrence, of the Supreme Court granted an order dismissing the receivers, as the creditors had been paid off. Mr. Bancroft was manager of the Hudnut Pharmacy for several years, but left there a year or so ago to become secretary of J. N. Heroman & Co.

—Dr. J. H. Bird has resigned his position with Parke, Davis & Co., and will leave the New York house of that firm on April 7. He intends to go to Chicago and re-enter the practice of medicine. Dr. Bird has been in the employ of Parke, Davis & Co. for about fifteen years, and for the past six or seven years has been connected with the New York office. He has a large circle of friends in this vicinity, all of whom as well as his fellow employees will regret to see him leave this city.

—Among out-of-town visitors to the local wholesale market during the past week were the following: D. P. Hart, (Cincinnati); B. F. Stacy, Boston; Charles Fleisher and J. W. Ballou, New Haven; Mr. Croft, of the retail drug

IN AND ABOUT BOSTON.

Hearing on Taxing Department Stores.

Boston, March 17.—The bill providing for the taxation of department stores has been given a hearing by the Committee on Joint Judiciary of the Massachusetts Legislature. There was general remonstrance to the passage of the bill. Much was said in favor of the department store. It was characterized as a pacemaker and just as much of a machine for the distribution of goods as is an elevator for the distribution of grain, a saver of time and money to the community.

Ex-Senator Morse presented a draft of his proposed new bill for taxation of department stores. In its first section it defines a retail store on the lines laid down in the original bill. It differs in that instead of prescribing a specific amount to be paid in special taxes, the draft substitutes a percentage of the actual sales in each specified department.

The new draft provides that stores which deal in many varied kinds of goods, like the general stores, shall pay each year a license tax of three per cent. of the total amount of sales in each line of goods. The bill also prescribes a penalty of not less than \$100, or more than \$500, upon anybody who knowingly misrepresents the value or quality of the goods. One half of such fine is to go to the complainant and one half to the city or the town.

It is also provided that the proprietors or managers of such stores shall annually, before December 1, submit a statement showing the amount of money received from sales of all different classes of goods enumerated in the bill. For any violation of this provision the penalty shall be imprisonment for not more than one year, or a fine not less than \$100 or more than \$500. Mr. Morse said he would submit his case on this bill and upon a brief which he would file with the committee. Many of the department stores in Boston carry large lines of patent medicines and all have toilet articles of all kinds.

A Boston Druggist Assaulted by a Footpad.

Boston, March 17.—Early on the morning of March 15, a bold assault was made on N. Lawton Graves, a druggist doing business at 569 Tremont street. Mr. Graves was preparing to close his store about 1 o'clock in the morning, when a man came in and asked for a glass of soda. He was served with his drink, and meanwhile the druggist went on with his work of closing the store. Both men left the store at the same time, and the customer followed Mr. Graves, and at the corner of Dartmouth and Appleton streets the stranger came up behind and struck him, demanding money. Mr. Graves gave him twenty-five cents, at the same time crying for help. This frightened the highwayman and he fled. The case was reported to the police of various stations. The druggist fortunately was not injured by the blow. Two men heard his cries for help and went to his aid. They also followed his assailant for some distance.

Nobody Wanted Patent Medicine Formulas Printed.

Boston, March 17.—When the hearing was held by the Legislative Committee on Public Health, on the bill of Representative Lydon to provide for printing the formulas of all patent medicines on the labels, no one appeared to speak in its favor, although several were there to speak against its passage. Mr. Lydon said he had no personal interest in the bill and really was against it. He urged it in behalf of his constituents merely. Representative Wheeler, who put in one provision, that the formula should be filed with the State Board of Health, said he did not favor that measure, though he thought it preferable to the Lydon bill. Both measures were opposed by F. W. Kittridge, representing J. C. Ayer & Co., and by Mr. Carter, of Carter, Carter & Meigs, wholesale druggists of Boston, and by Gorham D. Gilman, of Gilman Brothers, who said that the printing of the formula would lead to a great deal of litigation because of alleged infringements, and that it would not be of advantage in competition, for, while all the ingredients of a remedy might be known, they would be of no benefit unless properly combined.

firm of Croft & Conlyn, Baltimore; R. L. Corbin, Ellenville, N. Y.; Seward Thornhill, Sayville, L. I.; J. Thompson, Derby, Conn.; Samuel Davis, Boonton, N. J.; A. C. Bayles, Port Washington, L. I.; E. R. Post, Newburg, and I. Voorhees, Whitehouse Station, N. J.

—A new retail drug store is to be opened about May 1st at 140 Nassau street, one door north of Beekman street, Manhattan, probably under the firm name of Reid & Yeomans & Cubid. Reid & Yeomans have two retail drug stores in Brooklyn. In this new venture in Manhattan they will have associated with them Charles T. Cubid, who was for several years chief prescriptionist in the pharmacy of Hegeman & Co., 196 Broadway.

—Incorporation has been secured in this State by the Himrod Manufacturing Company, of New York city, to manufacture proprietary medicines on a capital of \$12,000. The incorporators are: Kate E. Pinkney, of Nyack; A. H. Hudson, F. E. Himrod, both of New York city, and W. J. Pinkney, of Cape Vincent.

—Edward D. Cahoon, manager of the pharmacy of the Wm. B. Riker & Son Company, at Sixth avenue and Twenty-third street, Manhattan, was given a complimentary banquet at the Waldorf a few nights ago by the employees of that pharmacy, who also presented to him a handsome silver loving cup.

—The Marcal Company, of Passaic, N. J., has been incorporated under the laws of New Jersey to conduct a drug business on a capital of \$100,000. The incorporators are: H. S. Granger, L. F. Wilson, both of New York, E. Mollenhauer, Jersey City; Lewis & Wilson, attorneys, of New York city.

—Frank Avignone, proprietor of a pharmacy at 69 McDougal street, Manhattan, who had been confined to his house by sickness for several weeks, is again able to attend to his business duties.

—Carl Wuest & Son, who have a drug store at 58 Manhattan avenue, Brooklyn, on March 15 opened a new pharmacy at the corner of Flushing avenue and Whipple street, Brooklyn.

—Emil Keidanz, who formerly had a drug store at 335 Flushing avenue, Brooklyn, has bought the pharmacy of the Quee Drug Company at 1280 Third avenue, the same borough.

—Isaac Schlossberg, formerly proprietor of a drug store at No. 398 Marcy avenue, Brooklyn, has bought the pharmacy of Joseph Bochar, at No. 302 Stanton street, Manhattan.

—Charles T. Dill and Dr. A. Jacobus, New York State travelers for Wm. R. Warner & Co., visited the local branch of that firm in Malden Lane, last Saturday.

—G. A. Smith has left the pharmacy of Henry C. Miner at 114 E. 125th street, to take a position in the drug store of Henry A. Cassebeer, at 951 Madison avenue.

—J. W. Gesell, of Lehn & Fink, sailed for Europe last week on the Fuerst Bismarck for a business trip of about three months for that firm.

—The drug store of H. H. Kauffman at 315 Leonard street, Brooklyn, was sold at auction on March 14, in foreclosure proceedings.

—Dr. C. E. Born has accepted a position with the local office of Wm. R. Warner & Co. to do detail work in New York City and vicinity.

—E. F. Bridgewater has moved his drug store from 529 Tenth avenue to new quarters in the Mills House No. 1, in Bleecker street.

—M. Weiss has moved his pharmacy from 550 to 556 Marcy avenue, Brooklyn.

—The Vermont Board of Pharmacy will hold meetings during 1900 at Rutland, April 4; White River Junction, July 11; Burlington, October 3. The secretary, J. G. Bellrose, Burlington, calls attention to that provision of the law requiring biennial registration and requires that all pharmacists who have not paid the renewal fee due January 1, 1899, must return their licenses to him at once.

ASK US.

If any Era subscriber will ask us when he doesn't know where to buy what he wants, we will try to put him in touch with the firms who can furnish the goods to the best advantage. We make no charge to subscribers for this service.

Burglars Visit a Cambridge Pharmacy.

Boston, March 17.—Burglars this week visited at an early morning hour the pharmacy of N. P. Tobey, at the corner of Putnam avenue and Brookline streets, Cambridge, and about \$25 worth of goods were taken. Entrance to the store was effected by a rear window. A woman who lives over the store heard the robbers at work and frightened them away by the noise she made in moving about. Two men have been arrested on the charge of being implicated in the break. One is thirty years old and the other is eighteen. A knife was found in the latter's possession with one blade broken. The police claim that they found the missing point in the window casing at the drug store. Besides the goods taken, part of which have been recovered, \$15 in cash was stolen, but the thieves overlooked \$100 tucked snugly away in a drawer. The arrested men deny their guilt.

Annual Good Time of the J. C. Ayer Employees.

Boston, March 17.—The J. C. Ayer Company, at Lowell, has just given its third annual complimentary party to its employees. A banquet and entertainment at Russell's Hall was followed by general dancing. A speech by Alfred E. Rose showed the company's large increase in business—amounting to almost fifty per cent. in the past year. The reconstruction of the company's plant and the additions to make it nearly perfect, formed a theme of his talk. In behalf of the company, Mr. Rose presented each employe with a copy of "A Message to Garcia." The supper and dancing were enjoyable features of the occasion.

NOTES.

—A new corporation just organized under the laws of Maine is the Joslyn Maple Syrup Company, to purchase and sell maple sap, syrup, sugar and candy. It is to have \$50,000 capital stock, of which \$30 has been paid in. The president is A. B. Palmer, of Malden, Mass., and M. A. Palmer of the same city is the treasurer.

—C. O. Danforth, a clerk in Wyer's drug store, in the Bradford district of Haverhill, proved "a friend in need" to a woman who was attacked by a large dog. The barking of the dog attracted the attention of Mr. Danforth and he rushed to the assistance of the woman and drove the animal away.

—A bowling team from the Eastern Drug Company has rolled an exhibition match with one from the American Type Foundry at Carruth's alleys, the first-named team taking three straight games. The drug company players were Messrs. Higgins, West, McLeod, Cullen and Williams.

—A. D. Marcy, who has a retail drug store at Grove Hall, has sold out to George W. Walker, until lately in the Walker-Rintels Drug Company. Mr. Marcy will retain his other pharmacy at the corner of Massachusetts avenue and Tremont streets.

—In a big fire at Hopkinton, at an early morning hour on March 15, W. E. Day, a druggist occupying a store in Bridge's block, which was destroyed, lost stock and fixtures valued at \$5,000, on which there was insurance of \$4,500.

—Burglars have this week visited the drug store of J. R. Bigelow, at Blackstone, where they blew open the safe and secured \$40. The explosion of the safe did much damage to the store interior.

—The week's exports at the Port of Boston include drugs and chemicals, \$1,450; hops, \$140; India rubber manufactures, \$2,123; wax, \$201; spirits, \$3,171.

—A new drug store at Beverly is that of Clarence E. Browne, in the Pingree Block.

Other New England Items.

—After a recent severe snow storm at Groveton, N. H., a local paper contained this notice regarding W. C. Carpenter, a prominent druggist of that place: "Lost—On the day after the big snow storm, one druggist, in a very large snow storm. The last seen of him he was on the edge, at midday, hands in his pockets, cigar in his mouth. The finder will be well rewarded by returning the same to Mrs. W. C. Carpenter."

—To advertise an entertainment called the "District Sk-w-l," at Torrington, a local artist made some fine

crayon pictures. One represented the school room, "Miss Switchemwell," and was on view in the window of Lyon's drug store, while a picture of the committee was seen at Temple's drug store, and "Bill," the pupil who "owned" the school, had his picture on view at Morrissey's store. —Fire in a jewelry store at Bangor, Me., worked its way into John P. Frawley's pharmacy, next door, most of the damage being from smoke and water. Mr. Frawley was well protected by an insurance of \$8,000. He estimated his stock and fixtures as worth \$10,000.

—A recent fire at Oldtown, Me., beginning in the cellar of the drug store of Alexander Fraser, caused about \$10,000 worth of damage. The building was damaged to the extent of \$1,000. Mr. Fraser's loss was covered in part by insurance to the amount of \$4,600.

PHILADELPHIA.**Result of the Board Examination.**

Philadelphia, March 17.—At the last meeting (January 20) of the Pennsylvania State Pharmaceutical Examining Board in Philadelphia for the examination of applicants for registration, 312 persons presented themselves for examination, 170 for registered pharmacists' certificates and 142 for qualified assistants' certificates. Of this number ninety-nine of the former and 109 of the latter passed the examination successfully. They are as follows:

Registered Pharmacists: Steve G. Hartman, Lansdale; William C. Reemey, Ocean Grove; P. George P. Grantz, Pitsburg; Allegheny; John J. Bye, Bradock; Peter Klingler, Kratzerville; A. R. Pfaffel, Shippensburg; Henry C. Bruning, Scranton; J. G. Heckman, Meadville; W. S. Scheck, Coneders; Jesse L. Hixson, W. S. Trechal, Pottsville; Mr. Holly, N. J.; Nicholas J. Hoffman, Reading; Joseph H. Stackhouse, Bristol; F. C. Lewis, Washington; William J. Forker, Pitsburg; J. C. Dougherty, Pitsburg; J. R. Moore, Camden; N. J. George P. Grantz, Pitsburg; Peter S. Settle, Frankford; Erwine Sedlemayer, Easton; Edward H. Young, South Bethlehem; Clarence E. Ricketts, Kane; William A. Perry, Allegheny; Frank W. Hunkabach and William Huber, of Atlantic City, N. J.; M. Hope Scorer, Homestead; Victor D. Schuler, Sarthmore; Mary E. Tassel, Latrobe; L. I. Clewell, South Bethlehem; Michael V. Magee, Conshohocken; Frank J. Parrish, Galitzin; Joseph O. Blew, Bridgeport, N. J.; Raymond K. Kinder, C. P. E. W.; C. P. E. W.; H. A. Burdett, Harrisburg; H. H. Reynolds, Reynoldsville; P. E. Timmins, Gettysburg; William J. Paulung, Wilkes-Barre; J. P. Rooney and J. R. Touhill, of Pittston; William H. Barr, Espeen; Benson S. Schaeffer, Harrisburg; William H. Hill, Pottsville; W. Allison, Clearfield; Jacob Greenberg, Lloyd S. King, H. J. Garrett, William C. Jaeger, H. R. Converse, Herman Dilks, Robert S. Engler, C. P. Sunday, E. F. Cook, Charles C. Reimley, J. E. Marsden, Harrisburg, Carey, Walter Brooks, A. W. Beatty, William C. Birchfield, H. A. Kintzer, Joseph T. Griest, Levi Scott, H. A. Speck, L. G. T. Kilman, H. G. Lilly, H. A. Kalkmann, W. H. Guest, J. H. Salzman, Charles N. McClure, W. H. E. Kupper, Ernest Ribben, H. F. Fox, G. A. Faulhaber, C. C. Corson, R. J. Gosslein, E. E. Zeller, T. E. Lonshaw, J. T. Shaw, A. W. Pfleger, H. F. Simons, Jay Shelley, William J. McDonald, T. J. Sweeney, D. M. Rouch, H. E. Dietz, H. H. Tobias, E. W. Tucker, E. P. Zion, P. E. Hemberger, H. P. Balliet, E. G. Spears, Harry J. Goodyear, J. McCollen, W. W. Buckman, O. C. Winkler, J. J. Levy, J. S. Clark, G. C. Faunce, Charles Welland, homeopath, Philadelphia.

Qualified Assistants: W. W. Oster, Lancaster; F. Christ, Scranton; H. W. Snyder, Columbia; H. B. Voorhees, Phillipsburg; C. Stroth, Pittston; J. Stone, Jr., Camden; L. Schuster, Pottsville; W. E. Boyer, Danville; Charles E. Martin, Columbia; R. E. Welsh, Altoona; M. Greenstein, Wilkes-Barre; E. J. Kelley, Scranton; W. C. Rogers, West Chester; H. C. Fay, Altoona; Charles D. Wilman, Middletown; H. G. Goring, York; Louis Lingenfelter, Pittsburg; George H. Whitehouse, Pitsburg; William H. Raser, Reading; Charles A. Fisher, Myerstown; William Evans, Plymouth; F. J. Curtz, Williamsport; William M. Knouse, Allentown; John R. E. Tettle, Shippensburg; John S. Fezley, Allentown; L. M. Hires, Bridgeport, N. J.; H. G. Mealsbury, Woodbury, N. J.; William Ottor, Jr., Burlington, N. J.; James J. Clarion; W. B. Arndt, Lehigh; E. G. Bugle, Bedford; L. M. Myers, Carlisle; F. L. Cather, Chester; Harry W. Smith, Pottstown; E. F. Gehring, Allentown; W. S. Stinson, Titusville; Samuel Urffien, South Bethlehem; E. G. Eselman, H. S. Stauffer, Pottsville; W. Roberson, L. S. Dobson, C. B. Boudwin, William W. Scheffer, H. L. Casperson, C. N. Rife, George E. Swain, W. H. P. Bishop, Earl H. Cone, R. H. Freude, H. R. Hays, Philip Wether, H. W. Scott, James C. Leary, R. S. Blum, William E. Heffelfinger, William R. Fretz, H. B. Strauge, Victor C. Nichols, Thomas William Penrose, Charles H. Slobig, Paul K. Boltz, W. F. Felman, F. O. Lewis, N. J.; J. A. Egan, W. H. Hillard, E. G. Goring, and Hillard, Charles L. Billard, Albert A. White, Matthew E. Goring, Harry P. Mauger, A. J. Strathe, Gay M. Musser, Samuel F. Shaw, A. A. G. Frantz, Frank Leichman, H. D. Johnson, H. M. Hildner, J. C. Truex, Charles P. Hess, J. G. Wismer, Edward Weber, H. E. Kendig, W. J. Leib, F. A. Brenner, S. P. Hassinger, I. L. Chipman, Charles T. King, W. C. Meredith, fine

J. J. McPhee, John Smart, Thomas Duffy, Joseph A. Cathin, Harry H. Searle, William M. Kennedy, C. C. Comfort, William B. Davis, A. Rolland, William H. Welch, H. R. Moyer, Lane V. Collins, E. W. Lintner, Joseph P. Steine, P. B. G. Shanno, Joseph H. Berberich, O. M. Hinski, George C. Fegley, all from Philadelphia.

Next meeting April 7, at Pittsburg and Harrisburg.

NOTES.

—A meeting of the Philadelphia Section of the American Chemical Society was held on Thursday evening, March 15th, in the Harrison Chemical Laboratory of the University of Pennsylvania. The program was unusually interesting and consisted of the following papers: "Notes on the Alleged Adulterations of Milk with Brain Matter," by Professor Henry Löffmann; "Note on the Repeated Use of the Double Chloride of Copper and Potassium in Carbon Determinations," by Dr. George W. Sargent; "Exhibition of the Apparatus for Rapid Combustion of Carbons Used in the Laboratory of the Carpenter Steel Works," illustrated by a couple of combustions, during the meeting, of carbons from steels of known carbon content, by George W. Sargent. All local chemists are cordially invited to attend these meetings whether members of the Section or not.

—The pharmacy of George W. Barton, at the northwest corner of Fifth and Porter streets, was about the busiest drug store in Philadelphia last week as regards the number of persons wanted upon, if not in the number of purchasers. Mr. Barton kindly consented to allow his store to be used as the headquarters of the schoolboys from the James H. Taggart school on the opposite corner, to aid them in obtaining signatures to the set of resolutions of sympathy which the schoolboys of Philadelphia intend sending to "Oom Paul." This school holds the record so far, as 524 signatures were obtained in two days, and the line of boys outside the store attracted many grown persons, who state that Mr. Barton handled the crowd with the ability of a veteran theater policeman.

—The March Pharmaceutical meeting at the Philadelphia College of Pharmacy will be held Tuesday, March 20th. The program which has been announced shows that the standard of this meeting will be up to the high mark established by the previous meetings of this year's series. The 1st of subjects is as follows: (1) "In Lands where Drugs Grow," illustrated with lantern slides, by F. E. Kilmer; (2) "Effervescing Citrate of Magnesia," by Professor Wilbur I. Scoville; (3) "The Examination of Urine, Sputum, and Blood by Pharmacists," by Dr. L. Napoleon, Boston; (4) "Exhibition of Apparatus for the Quantitative Determination of Urea," by Mr. Frederick T. Gordon.

—George F. Lambert, pharmacist at Belmont and Girard avenues, West Philadelphia, has issued printed announcements of the removal of his store to 1263 and 1265 Belmont avenue, a few doors above. The removal will take place about May 1st, by which time Mr. Lambert expects to have ready for occupancy one of the handsomest stores in West Philadelphia.

—A new medical school was organized in Philadelphia this week, who call themselves osteopaths. If their mission is successful the druggists may as well retire from business, as the treatment of this school consists entirely of massage; drugs being used only as antidotes in cases of poisoning. They claim to be able to successfully cure organic heart trouble by simple massage.

—Ludwig Hermann Baer, who graduated from the Philadelphia College of Pharmacy in 1896, and has since been engaged in the study of medicine at the Jefferson Medical College, is engaged to Miss Mabel McKinley, niece of President McKinley. Mr. Baer is a native of Somerset, Pa.

—C. W. Dirmitt, a graduate of the Special Chemistry Course at the Philadelphia College of Pharmacy, in 1898, is occupying a position in the chemical manufacturing department of the Smith, Kline & French Company's laboratory, at Poplar and Canal streets.

—Joseph W. England, who has for a number of years occupied the position of chief apothecary at the Philadelphia almshouse, has resigned. It is understood that Mr. England expects to take a position with a large manufacturing house in this city.

—Professor A. H. Sabin, of New York, read a paper on Saturday, March 17th, before the Engineers' Club of Phil-

adelphia, on "The General Chemical Aspects of the Corrosion of Structural Metals, and the Principles Involved in their Protection."

—A joint meeting of the Chemical Section, Astronomical and Physical Section and Electrical Section of the Franklin Institute, is announced for Tuesday, March 20th, at 8 o'clock P. M., in the hall of the Institute.

—The second year class examinations took place at the Philadelphia College of Pharmacy on Wednesday, Thursday and Friday of this week. The third year class examinations began on Saturday, March 17th.

—The ratio between positions and clerks has again increased, the advertising columns of the papers this week showing twenty-six positions vacant as compared with forty-four clerks desiring situations.

—George P. Ringler, of Bloomsburg, Pa., is an enthusiastic member of the local bicycle association. At the February progressive euchre held by the wheelmen, Mr. Ringler carried off the first prize.

—The "Bachelors' Club," one of the students' clubs at the P. C. P., was entertained by Messrs. Morris and Stoltz at the Odd Fellows' Temple on Friday night of this week.

BALTIMORE.

The Drug Trade Bowlers.

Baltimore, March 17.—This week has been a comparatively quiet one for the members of the Baltimore Drug Trade Bowling Club. Only three games were scheduled, these being played last night between the Root and Herb team and Parke, Davis & Co. The representatives of the latter firm appeared to be in bad form and lost all three contests by scores which did not leave the result in doubt at any stage of the bowling. Under the circumstances little interest was manifested in the competition, the Root and Herb men having matters all their own way and being under no necessity to exert themselves. They rolled up 726, 723 and 736 points respectively against 624, 627 and 535 for Parke, Davis & Co. This establishes the winners more firmly in first place, with Sharp & Dohme close behind. The games of last week ended the second third of the series and Secretary Kornmann has completed a tabulation which shows not only the standing of the several teams, but strikes, spares, splits and other features of the matches, and the record of each individual bowler. The standing of the teams is as follows:

	Games won.	Games lost.	Per-centage.
Root and Herb.....	34	8	.810
Sharp & Dohme.....	28	8	.778
Winkelmänn & Brown Drug Co.....	29	16	.745
James Baily & Son.....	17	22	.436
Gilpin, Langdon & Co.....	11	27	.283
Muth Bros. & Co.....	8	28	.222
Parke, Davis & Co.....	8	31	.205

A meeting of the members of the Baltimore Drug Trade Bowling Club was held this afternoon at 4 o'clock, when the team to compete with representative teams from New York, Philadelphia, Chicago and other cities was selected. It will include Colonel Brent Waters and Andrew Baumgartner, of the Root and Herb aggregation; Dr. A. R. L. Dohme and T. Goldsborough, of Sharpe & Dohme, and Lockwood, of the Winkelmänn & Brown Drug Company. Smuck, of Gilpin, Langdon & Co.; Davis, of the Root and Herbs, and Covey, of James Baily & Son, will be the substitutes. The regular team will try conclusions next Saturday with the Catholic Club by way of getting practice. April 29 and 21 are the probable dates for the national matches.

Pharmacy Legislation.

Baltimore, March 18.—If the effort to secure the enactment of a State Pharmacy Law fails it will not be the fault of Dr. A. R. L. Dohme, the president of the Maryland Pharmaceutical Association, and other prominent members of the profession. The former especially has labored indefatigably to overcome opposition to the measure now before the General Assembly and to conciliate legislators who stand in the way of its passage. Agitation of the subject has been kept up almost uninterruptedly and much missionary work has been done. Circular letters have been sent to every Senator and Delegate, and many of the lawmakers have been appealed to personally. The modified measure, an outline of which

has been given in the Era, will come up as a special order for a third reading in the House on Monday evening, and Dr. Dohme will endeavor to be on hand. Several of the counties are certain to ask for exemption from the operation of the measure and their wishes will be acceded to if necessary to the success of the bill. In the Senate the proposed law should have easier traveling, the only disquieting feature being the nearness of the end of the session. Only two weeks remain and hardly a single measure of consequence has so far been enacted. The Pharmacy bill, however, has good backing. Governor Smith has said that he will sign it if passed, and influential members of the upper House are committed to it. The prospects, therefore, of the draft becoming a law are very encouraging.

The Card System.

Baltimore, March 19.—Matters connect with the efforts to introduce the card system of purchasing drugs are in a quiescent state. Nothing has lately been done by the Baltimore Retail Druggists' Association, and the jobbers are disposed to let well enough alone. The disinclination of the wholesalers to co-operate with the retailers has again turned the thoughts of the latter to the idea of establishing a general distributing agency and purchasing all goods through this concern direct from the manufacturers, to the complete exclusion of the jobber. Considerable feeling exists against the jobbers on account of their apathy or hostility toward a project designed for mutual protection, and if the retailers could find some influential and resourceful leader it might not be difficult to put the purchasing agency scheme into effect. The retailers feel that they are not getting the support from the jobbers in endeavors to abate trade abuses which they may reasonably expect.

NOTES.

—Another medical corporation involved in difficulties is the Dr. Martin Homeopathic Family Medicine Company, incorporated in December, 1898 with a capital stock of \$20,000. The application for a receiver was filed last Saturday in Circuit Court No. 2 by the World Newspaper Company, which claims that the medicine company is indebted to it in the sum of \$217.85. The petitioner alleges that Dr. Paul T. Deford, the president of the company, has sold his stock and left the business; that the secretary and treasurer has also ceased to perform his duties and that internal strife and mismanagement are causing a waste of assets. The defendant is required to answer why the petition should not be granted by the 29th inst.

—The manager of the Goodwill Chemical Company, North Charles street, against which, it is reported from New York, A. W. Kraus, of that city, will petition the Baltimore courts for an injunction restraining it from using his wife's picture to advertise its specialties, says he will continue to employ the portrait for advertising purposes. Mrs. Kraus, known on the stage as Annie Belmont, objected to the effigy of herself, which showed the face to be all mottled and blotched, with the prescription "before using." She declared that it did her an injustice and that she is entitled to relief.

—At last week's meeting of the Maryland College of Pharmacy C. V. Emich, Louis Schulze, J. Fuller Frames, J. W. Westcott and Stephen M. Lee were named as delegates on the part of the college to the next annual meeting of the American Pharmaceutical Association. Dr. William Simon delivered an interesting lecture on wireless telegraphy, explaining the scientific principles on which the invention is based.

—The Dublin Company, manufacturer of ginger ale and carbonated waters, on Wednesday of last week filed its answer to the petition of C. Powell Noland, who had asked for the appointment of a receiver, denying that the company owes Mr. Noland \$3,000, as he alleges, and controverting the claim of insolvency. The indebtedness to Mr. Noland is said to be only \$37, which amount he refuses to accept.

—E. Allen Sauerwein, Jr., and Campbell Carrington were appointed receivers for the Fisher Drug Company on the 13th inst. by Judge Sharp. The suit against the company which resulted in this action was instituted in Circuit Court No. 2 last April by James O. Brooks, who alleged that the concern was hopelessly insolvent, its assets consisting of some printed matter of no market value.

—Among the out-of-town druggists in Baltimore last week were F. Forthman, of Forthman & Miller, Waynesboro, Pa., who was partly burned out not long ago; Theodore F. Klutz, of T. F. Klutz & Co., Salisbury, N. C., and Mr. Roberts, of Roberts & Co., Raccoon Ford, Va. Mr. Klutz is here with his daughter, who is undergoing surgical treatment.

—The Goodwill Chemical Company has been incorporated by William N. Wamsley, George S. Fallen, H. E. Wofford, Frederick W. Barnacio and I. H. Porter. The company has a capital stock of \$100,000, divided into 10,000 shares, and will deal in drugs and pharmaceutical specialties.

—Russell Taibott & Co., who recently purchased the drug store of L. J. Roth, 1601 Light street, have also acquired by purchase the pharmacy of F. Schmidt, 338 South Monroe street.

—S. H. Merritt & Co. have succeeded D. O. Davis in the proprietorship of the pharmacy at 950 North Gay street.

—C. P. Gowman has opened a new drug store on Washington road, near Mount Winans.

DETROIT.

—The third and last game of indoor baseball played by the teams of the Detroit Western High School and the Michigan Drug Company was ended in a hot finish Thursday evening, March 15, and resulted in a victory for the druggists, the score being 5 to 4. At the end of the sixth innings the score was 3 to 0 in favor of the High School boys and it took lively playing to change it. The druggists have won two of the three games played. Hostilities are now suspended until the opening of out-door games.

—A. E. Kent, for several years occupying an important position with Farrand, Williams & Clark, Detroit wholesalers, has resigned to go on the road for J. Elwood Lee & Co., Conshohocken, Penn. The "boys" at Farrand, Williams & Clarke's gave Mr. Kent a handsome parting gift in the shape of a set of cuff buttons and studs to match. No one has yet been found to take Mr. Kent's old position.

—Parke, Davis & Co. will entertain the graduating class of the Illinois College of Pharmacy on Friday, March 23. W. F. Egler, president of the Chicago Drug Clerks' Association, will accompany the party with a view to perfecting the arrangements between the Detroit Drug Clerks' Association and his paper, the Drug Clerks' Journal.

—Elaborate arrangements are being made by the Michigan Drug Company Baseball Pleasure Club for their annual Easter ball, to be given Easter Monday, April 16, at the Light Infantry Armory. The committee are arranging for a minstrel troupe to give a performance to precede the dancing programme.

—J. A. Forbes, of the George R. May & Co. store at Jackson, was so favorably impressed with the visit he made to California last winter that he has decided to make that State his future home, and he will leave shortly with his family for Los Angeles.

—The Michigan Agricultural College has recently graduated a class in scientific cheese making. It is claimed that these graduates are as much in demand as the graduates of the scientific course in beet sugar making.

—W. A. Wright, formerly with the Patterson Drug Co., Jackson, has taken a position with J. Schanher, proprietor of the Central Drug Store, Mt. Clemens.

—Fred. Kurtz, of the drug firm of Harris & Kurtz, Jackson, has bought out his partner and will run the store under the name of Fred. Kurtz & Co.

—Rumor has it that Fred. O. Graves, clerk for Perry Ward, Pontiac, will open a new drug store in that city.

—The Retail Druggists' Association of Western Pennsylvania has elected the following officers for the ensuing year: President, Robert Christy; vice presidents, W. G. Markell, B. E. Pritchard; secretary, J. W. Cheswright; treasurer, Louis Emanuel; financial secretary, Edward C. Garber; board of directors, E. E. Heck, E. A. Schafer, H. C. Murto, Charles Weigle, William Schirmer, H. A. Spilker, P. C. Spilker, P. C. Schilling, H. J. Slegfried, E. J. Kretz, L. B. Hughes, S. C. Jamison, Charles Eble, B. P. Welch, J. P. Urben, J. R. Thompson, A. J. Kaercher, O. A. Schad, William Dice, H. J. McBride, E. E. Eggers and J. L. Jones.

CHICAGO.

Patent and Trade Mark Commission Letters.

Chicago, March 17.—The Commission for the Investigation of Patent and Trade Mark laws, consisting of Judge Grosscup, of the United States Circuit Court, for the Northern District of Illinois, and Messrs. Forbes of New York and Greeley of the U. S. Patent Office, Washington, D. C., held a session in Chicago last week. Among others who appeared before the committee were Messrs. W. Bodemann, representing the N. A. R. D.; Albert E. Ebert, representing the Committee on Legislation of the A. Ph. A., and G. P. Engelhard, representing the Chicago Retail Druggists' Association. The gist of the points presented to the commission on behalf of the druggists was that the druggists did not favor the patenting of a medicinal article and its process of manufacture and the copyrighting of the name descriptive of the article itself. They favored the right to patent processes of manufacture, but would not allow patenting the article itself. When a name has become generic, it should no longer be applicable as a trade mark. Trade marks should be arbitrary names or symbols, indicating goods of some special manufacture. Here is the argument presented by Mr. Bodemann:

It is indeed a great pleasure to appear before a body authorized by our Government to devise ways and means for remedying the present patent laws and trade mark monstrosities. Heretofore I have addressed many meetings on this subject, but they were composed, alas, only of sympathizers, not of men in authority.

I had the pleasure to start this agitation early in 1889, I returned from Europe with a box of antipyrine that had been given me by a colleague as a remedy for sea-sickness. Not having had occasion to use the stuff, I put it into stock, attending to the difference in the labels, but having no idea at all of our patent laws, I addressed the United States distributors of Antipyrine, Lutz & Movius, who came all the way from New York thinking I had imported Antipyrine on a large scale. Having satisfied the firm on this point I soon learned my first lesson in patent law. According to our patent laws, although I had brought this Antipyrine from Europe in good faith, I was not allowed to take the stuff away from them, this remedy without paying a royalty to the United States distributors of the article. Upon learning this I set to work to study the laws and to agitate wherever I could the question of changing our patent laws.

The United States is the only Government that grants patents on articles used in the healing art. Not even darkest Russia permits such a barbarism. Thus it is possible for articles costing twenty-five cents per ounce in the country where they are made to be sold in Canada for twenty-five cents and in the United States at one dollar. Our Government permits the importation of these articles from Europe on payment of twenty-five per cent. ad valorem duty. It takes the money from the importer, whether he be the legally recognized distributor or not, through one branch of the Government, and then, if he is not the legal distributor, takes money from him through the judiciary department for his violation of the patent laws. Not a student of law, but a layman only, I have always regarded this practice as dishonest and indefensible.

You gentlemen are asked by Congress and the President to make suggestions for remedying the inequities of existing laws. In corresponding with Judge Grosscup, he seemed to think that the scope of the Commission was confined to devising a more uniform practice in the patent office, but I hope the Commission has come to the conclusion that it has authority to propose amendments to the law, and I hope you will make a clean sweep and recommend to Congress the abolishment of patents on articles used for the purpose of healing. As a consequence of this I do not refer here to patents on processes of manufacture. I hold that the object of the patent laws should be to encourage inventions, discoveries and research. To these our present laws are not matter. No matter whether a scientist discovers a new process for making a certain remedy the United States has already granted a patent on this or some other process, and the manufactured product itself and has already granted a trade mark on the name of the patented article. As a consequence of this incentive to research is destroyed. Look at the absurdity of this policy. Instead of encouraging the chemists of the United States to devise improved methods for producing valuable synthetics, the United States Government virtually says "Hands off." Let me appeal to you not only as jurists, but as American citizens, to correct this abuse. We went to Cuba and to the Philippines to carry liberty to a lot of foreign savages; but we grant the same savage savants, who cannot obtain a patent in their own country, the privilege of coming here to rob our poor and sick. Is that justice? Is that liberty? I say, no; but it is law, and I pray you to beseech you to appeal to Congress to change such laws.

Let the Government grant a patent on the process of manufacture, but refuse to patent the product, if used for the art of healing. No country grants this far-reaching protection except ours, and we give this right to our citizens, but to foreigners who come here and obtain

permission to despoil our sick and suffering. Sulfonal, for instance, costs thirty-five cents in the country where made. At least six manufacturers are making it and they combined and took out patents in this country. Not an ounce can now be purchased here for less than \$1.40.

As for trade marks, I confess I am not quite so clear in my opinion; but the law ought not to grant a trade mark on the name of an article, but on the maker. For instance, a name might be coined for a solution of Epsom salts; the trade mark should follow the maker, but not the name of the article. If a sewing machine is invented, do not trade mark the name "sewing machine," but let the protection go where it belongs—to the maker. France, our sister republic, goes further than any other country in this respect. France does not allow the importation of any secret remedy. In Germany the Reichstag is now deliberating on a bill to forbid the advertising of patent medicines. Would that we could follow France and Germany's example. Of course, patent medicines have nothing to do with patent laws, but it shows that European legislation leans toward the protection of the sick, while the United States laws give protection to legalized robbery practised in the name of patent laws.

There is no doubt that patent medicines could not exist were it not for their advertising. A number of them are dangerous at best; for the most part they are useless, and no medicines should be allowed to be sold the formulae of which is not known. I fear, however, this is outside of your jurisdiction and I close by again appealing to you to help restore the good name of our country by protecting the patent office against patent law sharks, just as our Saviour threw the money sharks out of the House of his Father.

For Repeal of Stamp Tax.

Chicago, March 17.—The Illinois Manufacturers' Association has decided to start an agitation looking to the repeal of the war revenue act. This action was taken at a meeting of the Board of Directors, and the secretary has been directed to circulate a petition among the business men of Chicago and the leading manufacturing centers throughout the State. "Representatives of the association visited Washington recently," said an officer of the association, "with a view of ascertaining what was necessary to secure action on the part of Congress. It was found that the disposition among the leaders of both Houses was not to make a move in the direction of repealing the law at the present session. It was, therefore, determined by the association to start an agitation with the view of bringing pressure on Congressmen to accomplish the desired end. An effort will be made to interest other associations and business organizations in the large business centers of the country, and create a sentiment so strong that Congress will be compelled to act."

Bowling.

Chicago, March 17.—Last Wednesday evening the Chicago Drug Trade Bowling Club met the team of the Chicago Athletic Association on the latter's alleys and fell easy victims to the prowess of the Michigan avenue athletes. At the regular meeting of the Drug Trade Bowling Club last night the medal was won by Mr. Armstrong. The score was as follows:

Fechter	128	129	164
Matthes	147	140	128
Waldron	112	157	169
Blocki	163	133	125
Storer	176	161	167
Obdert	131	138	162
Armstrong	179	198	219
Baker	150	172	166
Ester	177	142	152
Medbery	134	154	151
Thomas	138	170	194

NOTES.

—Albert Schillinger, a drug clerk employed by E. G. Binz, Sixty-ninth street and Normal avenue, aroused the neighborhood at 1 o'clock on Sunday morning, March 11, in his efforts to capture a burglar. Schillinger seized the burglar's hand, which he had thrust through a hole he made in the store window, there was a short struggle, and the robber wrenched his hand free and escaped. Schillinger, who had been shouting for help during the tussle, ran into the street with a revolver and fired several shots. The neighbors, and later the police, were aroused, but the burglar, though pursued as far as Sev. enteenth street, eluded the police. Schillinger received a blow on the wrist from a revolver while struggling with the robber, but was not seriously injured.

—The People's Drug Company of Chicago has been incorporated with a capital stock of \$20,000, to do a wholesale and retail drug business. The incorporators are Arthur B. Scaffner, Harry Goodman and Louis M. Cahn. The

new concern, it is reported, is now buying stock for a new cut-rate drug store soon to be opened on State street, between Madison and Monroe streets.

—Mr. Ebert is just in receipt of a photographic reproduction (actual size) of a very large piece of Indian flint found in Union County, Illinois. The flint is twenty inches long and weighs forty-three ounces. It was used by some pre-Columbian savage as a spear head. The original was found by Dr. H. M. Whelpley, of St. Louis, and is in his possession.

—The drug store of J. S. Frantz, Sixty-ninth street and Wentworth avenue, was visited by burglars Saturday morning. The thieves took \$15 from the cash register and telephone box. They also carried off a quantity of documentary stamps, a new overcoat belonging to Mr. Frantz, cigars and perfumes, and some drugs.

—Fred P. Kennedy, a well known druggist at Fifty-fifth street and Garfield boulevard, has been laid up for two weeks with a serious case of grip.

—Louis Jungk and wife, Fifty-first street and Ashland avenue, have just returned from a three months' trip through Germany.

—Peter Van Schaack & Sons filled a large order for chemicals this week to go to Bluff Harbor, New Zealand.

—Alexander Calder has bought out V. H. Chantler & Company, at Fifty-fifth street and Ashland avenue.

—The regular quarterly meeting of the Chicago Veteran Druggists' Association will take place on March 21.

—Ole Olsen will soon open a new drug store at Kedzie and Milwaukee avenues, near Logan square.

—It is reported that a new drug store will soon be opened at Forty-fourth and State streets.

—F. Schmeling has opened a new drug store at Fifty-fifth and Halstead streets.

—W. J. Knick has succeeded A. L. Coppock, at 1152 Lincoln avenue.

THE NORTHWEST.

"Sid." Reeves' Candidacy.

St. Paul, Minn., March 16.—Sidney H. Reeves, the druggist who is reaching out for the Republican nomination for mayor of St. Paul, will win if faith and energy can accomplish the result. One of his two competitors for the nomination is Fred. Schiffman, who is associated in business with his father, Dr. Rudolph Schiffman, who has made a large fortune out of a patent medicine of his invention. One of the daily papers says: "Sidney H. Reeves opened headquarters to-day on the main floor of the Germania annex building, on East Fourth street. The rooms will be open all day and during the usual hours in the evening, when Mr. Reeves will be on hand to receive his friends and direct his campaign. The Fifth Ward evidently means business and does not propose to make a laggard's campaign out of it as far as he is concerned, but will hold the fort till March 29, and hopes and expects thereafter that his headquarters will be in the rooms of the City Committee as the candidate for mayor. No verdure will be permitted to grow under his feet in the next two weeks. The Fourth Ward location is chosen because of its convenience, being central and on the ground floor and Reeves' candidacy will be on the ground floor in more senses than one."

NOTES.

—Successions: C. W. Robb's, Humbolt, Neb., by Geo. A. Abbott; Charles Colson, Roseland, Neb., by the Hohlfeld Drug Co.; E. W. Childs, Reardan, Wash., by R. G. White; F. G. Danielson, Princeton, Minn., by the Princeton Drug Co.; William Edwards, Bowdle, S. D., by H. C. Maas.

—J. C. Elicel, probably the most widely known drug dealer in Minneapolis, has just been re-elected president of the village of Minnetonka Beach, where he has a summer house.

—Davies has resigned as pharmacist at the City and County Hospital, St. Paul, and is taking a course at Pharmacy College.

—Edward P. Sweet, Minneapolis, has filed a voluntary petition in bankruptcy.

—C. F. Hilgenbocker, Blunt, S. D., has admitted O. H. Collins to partnership.

—O. Sequist is going to work in the Rice Street Pharmacy, St. Paul.

—New: Hardy & Co., Spokane, Wash.; Walter & Skinner, Beatrice, Neb.

—Chas. Dupont has returned home from Staples, Minn.

—A. H. Parsons & Co., Ireton, Ia., are reported sold.

—D. G. Ladd, Pierson, Ia., has removed to Bolliver.

—E. D. Facker, Gettysburg, S. D., died this week.

—Hanson & Co., Farwell, Minn., are closing out.

—Daniel Handel, Onawa, Ia., is trying to sell.

ST. LOUIS.

Mr. Crow is Heard From.

St. Louis, March 17.—Attorney-General Crow is being likened by the druggists to the soldiers in the Pirates of Penzance, who are always saying "we go," "we go," but don't.

In response to a letter from the attorneys for the druggists in the "anti-trust" case, asking him whether he intended to file an amended petition he wrote this week stating he had not before heard that the demurrers of the defense had been sustained by the Court and that he would come to St. Louis this week and examine into the matter and determine upon what method he will pursue. He has not yet appeared.

The patience of Court and attorneys is about exhausted. The present term of Court expires the first Monday in April and if Mr. Crow is not heard from the coming week final judgment on the demurrers will no doubt be asked for and granted.

P., O. and D. Club.

St. Louis, March 17.—The St. Louis Paint, Oil and Drug Club held its regular monthly meeting Thursday evening at the Columbia Club. After the regular dinner the business session was held. Aside from routine matters the principal feature of interest was the reading of a letter from Elihu Root, Secretary of War, written in response to a telegram concerning the removal of the headquarters of the Mississippi River Commission from New York to some town or city on the Mississippi River.

Secretary Warner explained that a bill had been introduced in Congress to change the headquarters of the Commission from New York to some Mississippi River town, and that the club had sent a petition to the Secretary of War requesting him to name St. Louis as the future headquarters.

The Secretary of War stated in his reply that he believed that in view of the fact that the chairman of the commission was compelled to be in New York on account of other duties and the expense of traveling across the country would be so great, he had reported adversely on the bill, and did not expect to see any change made in the headquarters of the commission.

NOTES.

—C. R. Gibbs, who formerly traveled for Meyer Bros Drug Co. and more recently with the F. R. Rive Mercantile Cigar Co., will take his old position with M. B. D. Co., representing them in Northern Missouri. J. C. Middleton, for the past six months with Texas Drug Co., will travel again for the M. B. D. Co. in his old territory, Central Texas. E. C. Gerarde, formerly with Houston Drug Co., will represent M. B. D. Co. in Eastern Texas. Ed. G. Armsby, formerly with McPike & Fox, Atchison, Kan., has been engaged by M. B. D. Co.

—C. C. Daily, who will travel for Eli Lilly & Co. in Colorado, Utah and Wyoming, with headquarters at Denver, is in the city for a few weeks introducing a new preparation. Mr. Daily was formerly with the New York Pharmacal Co., representing them in the West, traveling from Kansas City. He has been to Indianapolis posting up and will leave for his future field of labor in a few days.

—H. C. Brenner, who bought the Republic Pharmacy on Olive street (the old Allen & Geiger stand) has moved the stock and fixtures this week to the store formerly occupied by the Anti-Monopoly Drug Co., corner of Washington avenue and Sixth street, under the Lindell Hotel.

—Dr. George Richter will lecture on "Gelatine" at the smoker of the Alumni Association next Tuesday evening given to the students of the graduating class of the Col-

lege of Pharmacy. Interesting talks will also be made by the alumni officers.

—The C. F. Simmons Medicine Co. has been incorporated with a capital stock of \$100,000. The stockholders are Charles F. Simmons, W. Davless Pittman, Wm. B. Homer, Frederick E. Mason and Mandus A. Haldeman.

—Frank W. Rapp, formerly with H. J. Black & Co., is now local representative for Nelson, Baker & Co. Mr. Berryman, formerly with Allen-Pfeiffer Chemical Co., has associated himself with H. J. Black & Co.

—A. W. Daudt, who bought the drug store of Henry Braun, Choteau avenue and Seventh street, has discontinued his Page avenue store, consolidating the stock with that of the Choteau avenue establishment.

—J. H. Oubert, representing Hance Bros. & White, was in the city this week negotiating for a St. Louis representative in place of L. E. Frost, who resigned to go into the new Frost-Johnson Drug Co.

—Earl Cook, with Johnson & Johnson, is here and expects General Manager A. R. Lewis and Mr. St. Clair, manager of the Chicago house on Monday.

—F. R. Richt, Meyer Bros. Drug Co.'s South Side salesman, was called this week to Sedalia, Mo., his old home, on account of the death of his mother.

—S. W. Wright, general representative for the Searle & Hereth Co., spent Monday with Frank L. E. Gauss, manager of the St. Louis office.

—The drug store of S. L. Pickett, 2604 Chestnut street, was visited by a thief Friday night who stole a quantity of perfume and other articles.

—Ben. Davis, until recently prescription clerk for Judge & Dolph, is now on the road doing detail work for the Cystogen Chemical Co.

—Mr. Robertson, formerly with the Anti Monopoly Drug Co., is now at Judge & Dolph's Seventh and Locust streets store.

—Fred. Miller, clerk for Dr. Otto C. Claus, is at his home, Waterloo, Ill., suffering with an attack of typhoid fever.

—Dr. A. G. Enderle, the popular druggist and leader in cocked hat circles, is laid up with an attack of tonsilitis.

—M. J. Wallace, who was recently burned out at Mt Pleasant, Texas, has bought new stock and fixtures.

—Druggist J. W. Peeler has the sympathy of his friends in the death of his baby girl, who died last Sunday.

—J. S. Christy, Quincy, Ill., and Mr. Donahue, Joplin, Mo., were among the visiting druggists this week.

—G. E. Remick, manager of the Phenique Chemical Co., is spending a few days in the country.

—Judd I. Loyd's drug store at Nashville, Tenn., was burned March 14.

—Stephens & Tabb, of Mt. Pleasant, Texas, are opening a new store.

—Freeland's drug store, Hillsboro, Ill., was burned March 14.

—R. E. Hudson, Newport, Ark., will open a new store.

SOUTHERN CALIFORNIA.

—H. G. Dean, for several years at Third and Main streets, Los Angeles, has leased the room under the Hollenbeck Hotel, Second and Spring streets, and is putting in new fixtures, furniture and stock and will have one of the finest stores in one of the best locations on the Pacific Coast.

—C. H. Ward was burned out recently at Clarinda, Ia. He has now purchased the stock of B. Gutierrez, at Santa Barbara, for about \$7,500. Mr. Gutierrez has been in the drug business at Santa Barbara for over forty years and never had a cigar case in his store.

—J. W. Wood, of Pasadena, was arrested, pleaded guilty and was fined \$100 and costs for violating his druggist's liquor license. Dr. A. G. Smith was also found guilty of the same offense but has appealed the case.

—Teague & Honeywell, Fourth and Hill streets, Los Angeles, have put in handsome, new, square shelfware and otherwise much improved the appearance of their store.

—Parrish & Davis, Fifth and Broadway, Los Angeles, have moved across the street into a larger room and have much improved the appearance of their store.

—After a long and hard fought cut-rate war the druggists of Los Angeles are making an effort to restore prices and join the N. A. R. D.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. B. List" used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

ADDRESS, THE PHARMACEUTICAL ERA.

ALABAMA—Anniston.—J. H. Castleberry, deceased. Enterprise.—Byrd & Henderson, succeeded by J. W. Henderson.

ARIZONA—Phoenix.—Arthur Hulett, succeeded by Elvey & Hulett.

ARKANSAS—Cabot.—S. R. Young, succeeded by Young & Sandtrlin. Harrison.—Watkins & Co., succeeded by Watkins & Coffman.

CONNECTICUT.—New Haven.—H. Good, 29 Dixwell avenue, sold to A. H. Metcalf.

GEORGIA—Claxton.—George Reese, succeeded by Claxton Drug Company.

ILLINOIS—Arcola.—W. P. Boyd, succeeded by Al. Magnusson.

Chicago.—F. Grammer, 135 Ashland boulevard, sold to Wilson's Pharmacy, H. R. Friedgen, manager.—E. Brewer, 2206 State street, sold to A. S. Schmerker.

Elmhurst.—Paul Eiche, new store.

Jacksonville.—J. H. Williamson, succeeded by J. D. Brewer, in issue of March 1, is an error; should be L. B. Williamson, J. D. Brewer, manager.

INDIANA—Anderson.—H. A. Walser & Co., 28 West Main street, damaged by fire; insured.

Decker.—L. Winegar, sold to T. J. Grayson.

Greensburg.—Grover & Bonner, damaged by fire; insured.

INDIAN TERRITORY—Lebanon.—Jas. White, sold to F. J. Hamilton & Co.

IOWA—Albia.—Albia Drug Company, should be added to D. B. list.

Mystic.—L. A. Duffield, sold to M. Smith.

KANSAS—Burden.—J. M. Hooker, sold to I. E. Bailey. Larned.—Cummins & Wickwire, succeeded by E. G. Wickwire.

KENTUCKY—Louisville.—Albert A. Dieg, 500 East Walnut street, sold to John Kruhl.

MAINE—Bangor.—J. P. Frawley, 45 Main street, damaged by fire; insured.

South Paris.—Sturtevant's Pharmacy, sold to Ernest P. Parlin.

MASSACHUSETTS—Boston.—Kelley & Durkee, 332 Boylston street, assigned.

MICHIGAN—Grand Rapids.—F. J. Hill, corner East street and Fifth avenue, sold to N. R. Whalen.

Silverwood.—O. G. Milliken, sold to D. J. Mitchell.

MISSOURI—Canton.—Graves & Hodges, succeeded by W. F. Hodges.

Kahoka.—Martin & Brainerd, succeeded by Brainerd & Bridges.

St. Louis.—O. A. Hartwig, Seventh and Washington streets, sold to Washington Street Pharmacy, H. S. Ruppner, proprietor.

Steeleville.—Eugene Trask, sold to Dr. J. L. Walker.

NEW YORK—Gloversville.—J. S. Hamilton & Co., 11 West Fulton street, sold to Houck Bros.

Ithaca.—Platt Drug Co., 78 East State street, sold to the Cornell Pharmacy.

New York City.—W. S. Rockey, Sixty-fifth street and Columbus avenue, sold to Wiley Holmes.

OHIO—Cleveland.—F. C. Emde, 877 Payne avenue, sold to J. C. Braun.—W. H. Flood, 1403 Woodland ave., deceased.

NILES—McCorkle Bros., succeeded by C. E. McCorkle.

PENNSYLVANIA—Clarion.—J. C. Campbell & Co., sold to Clarion Drug Co., D. R. Hindman, proprietor.

Clearfield.—E. W. Graham, damaged by fire.

Philadelphia.—Jacob Osterberg, Jr., surgical instruments, discontinuing business.

TEXAS—Kyle.—Borchert & Gross, succeeded by Borchert & Co.

Walden.—J. M. & J. C. Henderson, succeeded by Henderson & Brown.

VERMONT—Burlington.—Henry, Johnson & Lord, reorganized, now Henry, Johnson & Lord Co.

VIRGINIA—Harrisonburg.—E. B. Coates, sold to L. B. Smoot.

WASHINGTON—Colfax.—Mills & Stuart, succeeded by Chas. F. Stuart.

Spokane.—Nicholson, Hittle & Co., corner Stevens and Sprague streets, succeeded by W. S. Nicholson.

WISCONSIN—Medford.—J. Hammel, sold to W. H. Tonne.

Sheboygan.—Washington Correll, removed to Linden.

ASK US.

If any Era subscriber will ask us when he doesn't know where to buy what he wants, we will try to put him in touch with the firms who can furnish the goods to the best advantage. We make no charge to subscribers for this service.

N. A. R. D. NEWS.

Dues and contributions have been received from the following societies: Dues—Rhode Island State; Knoxville, Tenn.; Springfield, Ohio; Hamilton County, Ohio; Burlington, N. J.; Hancock County, Ind.; Vermont State; Head of the Lakes, Minn.; Freeport, Ill.; Atchison, Kan.; Spokane, Wash. Contributions—Vermont State; Madison, Wis.; Chicago Retail Druggists; Spokane, Wash.

The R. T. Booth Co., Ithaca, N. Y., has reduced the price of Hyomei to \$8 a dozen and express the determination to do everything possible to keep the goods out of dry goods and department stores and prevent cutting of prices. Any persons found selling Hyomei at less than \$5 cents will be debarred from handling it.

The Knoxville, Tenn., Retail Druggists' Association, composed of most of the entire drug trade of this city of 40,000, is one of the most recent organizations to affiliate with the national body. D. A. Rosenthal is president and John C. Moore, secretary.

The Executive Committee has approved a constitution and set of by-laws for the use of local associations. Copies may be obtained from Thos. V. Wooten, 153 La Salle street, Chicago.

The Meller Drug Co., St. Louis, has reduced the price of Tongaline to \$8 per dozen and are selling only the jobbers on the list supplied by Mr. Faxon.

The Seattle, Wash., Retail Druggists' Association, thirty members, has joined the N. A. R. D.

AN ADVERTISING STORY.

I.

Heavens! I've got every one of these symptoms. No appetite after eating. Legs in motion when I walk. Opening of the mouth when I talk. Must buy a box of these pills.

II.

An unsteady feeling when I drink too much. Sort of fearful ague when I fall down stairs. A tired feeling over-

comes me after walking fifteen miles. Must take another box.

III.

Ringin' in the ears when some one boilers loudly at me. I'm somewhat agitated when I get excited. Must take a few more boxes. Bound to get well if I keep at them.

IV.

Spots before my eyes when I see a creditor. Dimmed vision when I am without my glasses. Must be seriously ill. Study closer directions on box. Must swallow more pills—only cure.

V.

Beat the record. The largest user of Pile's Pills. Swallowed over two hundred boxes of his never failing pills. No occasion to use more. (The Advisor.)

—The Texas State Pharmaceutical Association will meet in annual session in Dallas, May 15, 16 and 17. A most interesting program has been arranged and degrees in the M. O. M.'s (a secret Order Mysterious Order of Microbes belonging especially to the craft) will be conferred upon this occasion, and from past experience it will be a drawing card. Several prominent pharmacists have promised papers, so we are well assured of all sorts of foods of relish upon this happy event. The profession at large are most cordially invited to be present. R. H. Walker, Secretary, Gonzales, Tex.

(Specially Contributed.)

PHARMACY IN AUSTRALASIA.

Sydney, N. S. W., Jan. 17.

The 1st of January saw the introduction of the early closing law in New South Wales, under which pharmacies have to be closed at 9 p. m. and 10 p. m. Saturdays, power being given pharmacists at all hours to dispense prescriptions. With three exceptions, Messrs. R. T. Bellemy, ex-president of the Pharmacy Board; F. C. Newman and H. A. Rose, all of the city of Sydney, the whole of the pharmacies were closed in strict observance of the act. Mr. Bellemy has had the words "surgeon dentist" written in conspicuous places about the shop, and hopes to defeat the law by this means, as dentists do not come under its provisions. Already he and the two others have been visited by inspectors under the act and threatened with prosecution. The great body of pharmacists are delighted with the earlier closing scheme, and they insist that the three exceptions named shall be compelled to close their doors.

The Cuticura Soap Company, of Boston, have been constantly in the Sydney Equity Court, asking and receiving injunctions against Assyrian dealers for a breach of their trade mark in respect of an imitation of their wrapper. One Assyrian caught selling "Cutis Care" soap was heavily fined in the Petty Sessions Court in Sydney on the 13th of this month.

Mr. E. Norton Grimwade, who recently returned to Melbourne from his trip to Great Britain and the United States, has been press interviewed about the pharmacies in New York. Here is a sample of what he says: "In the United States the appearance of the pharmacies is so unlike that to which we are accustomed that the visitor would probably pass them without thinking of pharmacy in connection with them. Large soda fountains, cigars and tobacca, confectionery and fancy goods make up the bulk of the business, and so far as the external or the internal appearance of most of the pharmacies is concerned, medicine takes a very inferior position. The pharmacists visited in New York were all of the very best." He alludes to Parke, Davis & Co.'s laboratories at Detroit as an "extraordinary sight."

The Olive crop of South Australia for the current year amounts to 12,000 gallons, which gives a large surplus for export. Last year the crop was a failure through drought, and scarcely enough was produced to satisfy local demands. Experts tell us that this South Australian oil is probably the only olive oil in the world against which no charge or suspicion of adulteration has yet been heard. The oil is never on the market, as stocks are always cleared before the subsequent season.

While British wholesale houses are constantly setting up branches in the colonies, with headquarters either in Sydney or Melbourne, from which bagmen are sent throughout Australasia, no similar move is made by any of the great firms in the United States, and so far Parke, Davis & Co., who have fine premises adjacent to the leading Sydney wholesale druggists in O'Connell street, Sydney, control the bulk of American trade and do an enormous business. Unquestionably there are fine opportunities for other United States wholesalers.

Messrs. Elliott Brothers, the leading wholesale druggists of New South Wales, have gratuitously supplied the New South Wales contingent of 876 men, who leave for South Africa to-morrow, with all necessary drugs and medicines, etc., representing a gift equal to about \$2,500. Felton, Grimwade & Co., of Melbourne, did a similar thing with the first Victorian contingent for the Transvaal. The British War authorities freely admit that the New South Wales ambulance and medical corps is superior in every way to their own.

The latest New Zealand customs decisions are: "Glycerine wash for horses, free; Gabriel & Troke's gelatine capsules are proprietary medicines, 40 per cent.; "Kasagra," prepared by F. Stearns & Co., as druggists' sundries, 20 per cent.; prussiate of potash as chemicals, 20 per cent.; Stearns' baby soothing syrup, 20 per cent.

Business is anything but good in any of the colonies, and pharmacies in every colony are on the market. In Queensland the other day, William John Costin, trading as the Queensland Drug Company, Brisbane, seques-

trated, with liabilities \$6,865, and assets, \$855. Instead of bankruptcy, the estate is being liquidated by arrangement.

Scott's Emulsion has been registered under the Trade Marks act in Tasmania and South Australia. The Antikamnia Chemical Company, of St. Louis, Mo., has registered in Western Australia under the Trade Marks the letters A. K., surrounded by a circle, for chemical substances for use in medicine and pharmacy.

PITTSBURG COLLEGE.

The Junior Class of the Pittsburg College of Pharmacy, Pharmaceutical Department of the Western University of Pennsylvania, were pleasantly entertained at a reception Monday evening, March 12, by Mr. and Mrs. W. F. Sunderland, of Boquet and Frazier streets, Oakland, whose son, George B. Sutherland, Jr., is a member of the class. During the evening a fine musical program was carried out by Miss Olive A. Beach, Miss Birdie Sunderland, Miss McNally, Miss Lillian Sunderland and George B. Sunderland, Jr.; Charles Fawcett gave a phonograph recital, at the close of which refreshments were served. The following members of the class were present: George B. Sutherland, Jr., and Messrs. Dixon, Gheghorn, Lewis, Harley Barnhardt, Brosius, Reiser, Brown, Jones, Lozier, Hornbake, Heilfline, Struble, Gahn and McSwigen. Speeches were made in behalf of the class by G. Clarence Dixon and James S. Gheghorn.

The Junior Class will hold a collation and reception at Braun's Dancing Academy, East End, Wednesday evening, March 21. The class appointed the following executive committee: James S. Gheghorn, chairman; Harry Chew, William Aldendorfer, Charles Brosius and Louis Linsenfelder.

—At a meeting of the Kansas Pharmacy Board held at Holton, March 7, the following persons were registered by examination as pharmacists: E. R. Allebach, El Dorado; Alf. J. Athay, Bluff City; G. A. Beauchamp, Jr., Holton; R. W. Boyle, Lou'sburg; John W. Cone, Chanute; E. L. Evans, Meriden; H. G. Farris, Great Bend; E. R. Garland, Cimarron; Seth DeZell Hawley, Burr Oak; T. C. Hughes, Atchison; C. T. Kohler, Lawrence; Jos. W. Kraemer, Topeka; Clyde Leavengood, Rosedale; C. A. Little, Pomona; John B. Marshall, Jr., Topeka; T. J. Morrow, Baxter Springs; T. Todd McCulligan, Pittsburg; W. H. Newman, Leonardville; John H. Pritchard, Fort Scott; Chas. R. Whitmer, Topeka. Assistants: N. G. Edelblute, Keats; Claude C. Hoaglin, St. John; Geo. Luebke, St. Marys; O. H. McCandless, Emporia; Michael E. Reddy, St. Marys; Wm. Shellhaas, Abeline; Chas. M. Wilson, Caney. The following applicants having presented satisfactory evidence of having had the required experience and of possession of diplomas from recognized colleges of pharmacy were registered without examination as pharmacists: E. E. Armstrong, Gardner; Louis Kennedy, Baxter Springs; John B. Paul, Mound City. The next meeting of the board for examination will be held at Hutchinson, May 24, 1900.—W. C. Johnston, secretary.

—The Utah Board of Pharmacy examined ten applicants for registration to practice pharmacy at Salt Lake City, February 14 and 15. Three of those examined were passed as registered assistant pharmacists and seven failed altogether, no first class certificates being issued. The three who passed as assistant were A. J. Davis, O. T. Clough and Walter Lloyd, all of Salt Lake City. The following graduates of colleges of pharmacy were given first class certificates: W. W. Cook, Frisco; D. M. Munger, Ogden; G. A. Huscher, Willard Donaldson and W. F. Bruehl, Salt Lake City. Hereafter certificates of graduation from colleges of pharmacy will not be accepted, and every applicant for registration will be required to take the examinations. The next meeting will be held May 23.

OBITUARY.

JOHN C. HENDERSON, an old druggist of Chicago, died on Sunday morning, March 11, at his residence, 1142 Washington boulevard. He had been in the retail drug business in Chicago for twenty-five years, his last place of business having been at Lake street and Oakley avenue. Mr. Henderson was born in the north of Ireland sixty years ago. He came to this country when eighteen years of age and settled in New Orleans. At the close of the Civil War he came to Chicago. The cause of Mr. Henderson's death was apoplexy, the first stroke coming two years ago. He left a widow and one daughter.

LEONARD GARDNER BABCOCK, a druggist of Lexington, Mass., where he also was postmaster, died on March 14. He was fifty-nine years of age, and was a son of Dr. Aaron G. Babcock and Anna Blashfield Babcock, of Princeton, Mass. At the outbreak of the Civil War he was in St. Louis, and enlisted for three years' service in the Eleventh Illinois Regiment. At Fort Donelson he was wounded severely, being struck in six places, and for a time his life was despaired of. On December 25, 1864, he married Miss Francis C. Chalmers, of Galzburg, Ill.

CATO M. AISQUITH, a prominent young druggist of Charlottesville, W. Va., succumbed to diphtheria, complicated with other ailments, after an illness of two weeks, on the 10th inst. He was twenty-nine years old and succeeded his father, the late Charles W. Aisquith, in business. He was highly esteemed among his acquaintances and associates.

CHARLES S. TILYARD, for many years in the retail drug business at Greene and Franklin streets, Baltimore, and who had during the past few years lived in retirement, died March 14, in the eightieth year of his age. The deceased was widely known and had the reputation of being one of the most conscientious men in the profession.

Dr. GARLAND H. DAVISON, a member of the firm of G. H. & C. T. Davison, manufacturers of sulphuric acid and other agricultural chemicals in Baltimore, died March 16 at the age of fifty-eight years. He was a graduate physician, but had not practiced since early in life. He leaves a widow and daughter.

THE DEVELOPMENT OF THE SOUTH.

Frank Presbrey has written and the Southern Railway Co. has issued a timely publication under the title of "The Empire of the South," giving an exposition of the present resources and development of the Southern states. The book, which is quarto in size, contains 181 pages and is elaborately illustrated from photographs. It discusses the South as it was, as it is, and as its destiny promises it will be; and treats at length of such varied interests as agriculture, tobacco, cotton, iron, coal, Southern climate and resorts. A chapter is devoted to each State south of the Ohio and Potomac rivers and east of the Mississippi. In these the early history of the states is narrated and the important factors in their growth are touched upon, as well as the progress of the leading cities. It is, in short, a sort of cyclopedia of the Southern States, a guide book to a traveler unfamiliar with that region, and full of interesting and valuable information to anyone at all interested in the development of this country. Copies may be had (on payment of 15 cents for postage) from Alex. S. Thwaitt, Eastern Passenger Agent, 271 Broadway, New York.

—At a meeting of the Erie County, N. Y., Board of Pharmacy, held March 10, pharmacists' licenses were granted to John L. Brodie and Sylvester W. Hunter, and assistant pharmacists' licenses to Wallace E. Johnson and Arthur G. Sortore.

Book Reviews.

PRESCRIBERS' PHARMACOPEIA.—A Synopsis of the More Recent Remedies, Official and Unofficial, with a Therapeutic Index. Fourth Edition. 12 mo., 423 pages; cloth, Bombay. Kemp & Co., Ltd.

This little book is intended to supply prescribers in India with information regarding the properties and doses of the various new drugs, synthetics, etc. This, the fourth edition, has been fully revised and rewritten, a large number of new remedies and indigenous Indian drugs having been included. While intended primarily for the physician, the book will also serve to furnish the pharmacist with many hints regarding Indian drugs. It is well printed, and contains, in addition to the names and descriptions of drugs, preparations, etc., a synopsis of the British Pharmacopoeia, 1898; chapters on Urinary and General Testing; various tables illustrating systems of weights and measures; thermometric scales, etc., and a very complete therapeutic index.

MISSOURI BOTANICAL GARDEN.—Eleventh Annual Report, 1899. 8 vo., 144 pages; 58 plates. St. Louis. Published by the Board of Trustees.

This report is similar in character to the annuals which have preceded it. It contains, besides the report of the officers of the board and the eleventh annual report of the director, the following scientific papers: "A disease of *Taxodium distichum* known as peckiness, also a similar disease of *Libocedrus decurrens* known as 'pin rot,'" by Hermann von Schrenk; "Agave expatriata and other agaves flowering in the Washington Botanic Garden in 1898," by J. N. Rose; "A revision of the American species of *Euphorbia* of the section 'Thymalus' occurring north of Mexico," by J. B. S. Norton; Revision of the species of *Lophocarpus* of the United States; and description of a new species of *Sagittaria*," by Jared G. Smith. These articles are accompanied by fifty-eight full page illustrations.

PROGRESS IN PHARMACY AND THERAPEUTICS.—Reported in Notes on New Remedies from September, 1898, to December, 1899. Pamphlet, 106 pages. Price—50 cents. New York. Lehn & Fink.

This little work, as indicated in the title, is a compilation of the reports of the progress in pharmacy and therapeutics which have appeared periodically in Notes on New Remedies during the past sixteen months. The material presented is authoritative, and the information concerning new remedies will be sure to be appreciated by the discriminating pharmacist. From a commercial standpoint, it is interesting to note that the most salable antipyretics and antirheumatics of the new remedies named are derivatives of pyrazolon and phenetidín.

A POCKET MEDICAL DICTIONARY, giving the pronunciation and definition of the principal words used in medicine and the collateral sciences, etc. By George M. Gould, A. M., M. D., author of "The Illustrated Medical Dictionary," editor of the "Philadelphia Medical Journal," etc. Fourth edition, revised and enlarged. 30,000 words. 837 pages. \$1 Philadelphia: F. Blakiston's Son & Co.

This book, which may easily be carried in the pocket contains a remarkable amount of literary material. It contains, besides the definitions of the thousands of words noted above, very complete tables of clinical eponymic terms, of the arteries, muscles, nerves, bacteria, bacilli, micrococci, spirilla, and thermometric scales, and a dose list of official and unofficial drugs compiled to 1900 by Dr. A. A. Stevens, of the University of Pennsylvania. As an exposition of printing and the bookmaker's art, at a price within the reach of anyone, the publishers may well claim "there is not so cheap a book published." It is bound in full limp leather, with gilt edges, and presents a most pleasing appearance. The author's well-known position in the world of science is a guarantee of the authoritative character and excellence of the work.

The twenty-fifth annual volume of the Proceedings of the National Wholesale Druggists' Association, uniform in style and binding with former reports, has been issued by the secretary. It is a work of some 350 pages, and contains a report of the last annual meeting, held at Niagara Falls; a list of deceased members, from the organization of the association in 1876 to 1900; a list of the various committees for the current year, and other information of special interest to members of the association.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Novelties, Special Offers, and General Information for Enterprising Drug Buyers.

A Handsome Show Card.

We have just received from the Vapo-Cresolene Co., 120 Fulton St., N. Y., one of their beautiful cards, and

we congratulate them on its appearance. It is the desire of this firm to have one of these cards in the hands of every druggist interested in their goods, but they are too expensive to send out promiscuously. Write to them at once if you wish to receive one.

How Money is Made in Soda Water.

The following letter explains itself, and shows what can be done with an attractive soda fountain:

Bayonne, N. J., July 13th, 1899.

John Matthews Apparatus Co.,
449 First Ave., New York.

Gentlemen:
Allow me to say that when I ordered the apparatus from your Mr. Clark I shouldered a heavy responsibility for my small business. I have sold soda for a number of years and always hired an apparatus, and by using extract flavors and a small apparatus I was able to make my rent \$80 a year for the last few years I hired. So when your Mr. Clark persuaded me to go into debt for \$450 and to raise \$170 a year beside the interest, it certainly meant something for me to do, if I expected the apparatus to pay its own way. This I am happy to say; the apparatus has not only paid its own way ever since you put it in, but has made money for me from the start. I started using the apparatus with the best and purest Fruit Juices I could obtain, and everything I use on the fountain is the best that money can buy; besides I do considerable advertising and I am happy to say (as I wrote you before) I am selling more Soda than any other place in Bayonne.

My advice for anyone wishing to purchase an Apparatus is, to get a good one and not let the price discourage them, for it will take care of itself, provided it has a fair chance. An elegant apparatus cannot pay for itself by using poor flavors and giving a little stinky glass of warm Soda.

Very respectfully,

L. F. ROAKE.

The Ray Chemical Co. Leads the Market on Pepsin and Pancreatin.

This fact, the Ray Chemical Co., Detroit, assert, is proven by their offer on the front cover page. They guarantee every grain of their product to conform to the highest standard on earth—the U. S. Pharmacopeia. If you are paying more than this house asks for Digestive Ferments, they claim you are paying more than the goods are worth. A trial order will convince you.

Rubber Stamps.

Write to C. L. Safford, 181 Madison Street, Chicago, and get an up-to-date catalogue of rubber stamps of all kinds, and at all prices.

Store Ladders.

The best shelf ladders made are manufactured by Morley Bros., Saginaw, Mich. They are durable, economical and convenient. Their rolling-ladder has been used all over the country for the last 20 years, and every user is enthusiastic in praise of its durability and fine appearance. The special attention of dealers is directed to the merits of this appliance, so that they may avail themselves of this labor and time saving device.

Artificial Limbs.

The druggist is not expected to carry Artificial Limbs or Deformity Apparatus in stock, but he can take orders for this class of goods if he will let it be known that he can furnish them. One of the best known makers of artificial limbs in the country is Geo. E. Fuller Co., Rochester. Orders or inquiries sent to him will receive prompt attention, and a liberal commission is paid to the druggist who sends in the order.

Perfecto Fruit Juices.

As the time approaches for the fountain trade more than ordinary care should be taken by buyers to obtain the best juices on the market. Do not buy an inferior article, but order the "Perfecto" fruit juices and crushed fruits, the standard of excellence, manufactured by The Crandall & Godley Co., New York.

Nestle's Food.

Henry Nestle, manufacturer of Nestle's Food, has opened an American branch office at 73 Warren street, New York. This well known food product is now being manufactured in this country, a factory having been established at Fulton, N. Y.

Mixed Paints.

The Eagle Paint & Varnish Works, Pittsburg, offer special inducements to dealers in paints, lead, zinc and linseed oil. They solicit inquiries from the trade for their prices and color cards.

In Wyeth's Soluble Powder-Capsule no cohesive or expellent is required or used. The material is simply enclosed in a pliant, soft, soluble gelatin capsule which quickly dissolves in the fluids of the stomach and presents no such objectionable resistance as in the ordinary hard gelatin capsule. Messrs. John Wyeth & Bro. will be pleased to submit samples and prices on application.

Advertisers who receive inquiries from any of their announcements always want to know in what journal the advertisement was seen. Intending buyers should always give this information in their letters. There are some special offers in this issue and readers will please advertiser and help us if they mention the Era when they write.

There is probably no better known soda fountain drink than Coca Cola, certainly none is more widely advertised. Therefore a druggist makes no mistake in including it in his soda fountain supplies. Attractive advertising matter will be furnished to any dealer on application.

If you make perfumery and want fine ware designed especially for perfumers' use, you should write for the catalogue of Swindell Bros., Baltimore, Md. They make a specialty of this line of goods.

No dispenser of soda water should be without Smith & Painter's Manual of Soda Beverages. They will send one free to any druggist or drug clerk who will write for it.

It is a natural sparkling wine produced in America under the supervision of expert wine makers. Cook's Imperial Extra Dry Champagne.

State of Trade.

General Conditions Satisfactory.

New York, March 20.—Business in a wholesale way has continued of a routine character, but general conditions are apparently satisfactory to dealers and the general market retains a fairly steady undertone. The leading feature of the week was an unexpected break in juniper, two domestic manufacturers having issued circulars on Saturday last announcing a reduction in quotations to the basis of 37 cents for bulk in large tins. The announcement was a genuine surprise to the trade as the influences were thought to be of a stimulating, rather than a depressing character. London quotations were called higher and bark shipments from Java continued under similar conditions at a quotation advanced in advance instead of a decline. Some were of the opinion that the lower prices were intended to stimulate demand, while others believed that competition was the cause, and a rumor was current that there had recently been some quiet cutting of official quotations.

Opium has developed considerable improvement on account of confirmed reports from Turkey to the effect that serious damage has been done to the growing plants. According to reliable advices it appears that an open winter and copious rains have promoted the growth of the poppy plants considerably, but at the same time making them very tender. This was followed by severe cold weather, and there being no covering of snow to afford the plants needed protection, serious damage has resulted. Values are decidedly higher in primary markets and spot quotations have advanced to 15½¢ per pound. Powdered is higher in sympathy.

The position of caliche has improved and manufacturers are quoting uniform prices. Thymol is very scarce and prices under the influence of correspondence from conditions abroad. Salicylic acid continues more or less unsettled, with outside prices again lower, but manufacturers' quotations remain nominally unchanged. Gum damar is unsettled and decidedly higher and only limited quantities are obtainable at the advanced quotations. In the department of essential oils natural wintergreen is again easier under the influences noted last week, but nothing of noteworthy importance in other descriptions and general business has been of a hand to mouth character, with quotations for leading varieties nominally steady. Cod liver oil, the movement of which has been disappointingly slow during the current season, has declined about 82 per bbl. notwithstanding reports from Norway to the effect that the new catch promises to be smaller than last year's. Foreign markets appear unsettled with values irregular and while some manufacturers have advanced quotations, others report a decline. Balsam Peru continues to reflect weakness under further arrivals from primary sources and wholesale prices are about 2½¢ lower. The position of Mexican saundersia has improved materially. Former cheap sellers have withdrawn their low quotations and with the limited spot stock more closely concentrated, the tone of the market is firmer and prices are about 2¢ per lb. higher. Jalap is easier, the new crop arriving quite freely and the demand being rather slow.

There has been a large arrival of Condurango bark, and with the market better supplied the tone is easier. It is thought, however, that the weakness is only temporary and that a portion of the stock will be wanted abroad, as foreign markets are thought to be rather bare.

Liberal stocks and slow demand have caused an easier feeling among holders of beeswax and prices are a shade lower.

Owing to the imposition of an export duty of 10 per cent. on all jungle products, gums damar and Manila have advanced in proportion at primary markets.

Much General Sickness Creates Trade for Druggists.

Boston, March 17.—This has been a week of great sickness, various diseases are prevalent and there have been almost three hundred and fifty deaths. Bronchitis, influenza, grippe and pneumonia have had many victims and the percentage of deaths has been larger per thousand inhabitants than in many years. The general illness has made considerable business for druggists. Not only prescriptions have been required to be filled in larger numbers than ordinarily, but in the simpler remedies, especially for colds, there has also been a large trade. In drugs and chemicals the jobbing trade has been moderately good on unchanged prices, for the most part, with slight indications of better values in sight. English bleaching powder is fairly active. Opium is a bit more in demand, so it is said. Dyestuffs and tanning materials are rather quiet, the call being only for actual necessities. Alcohols are strong and in good demand. The call for waxes and pretty good, most of the list being steady, except that Brazilians are a shade firmer.

No Change in Philadelphia.

Philadelphia, March 17.—There is no change whatever in trade affairs in the Quaker City. The orders are coming in as fast as ever and collections are good. No price changes of importance are reported, this making about the fourth consecutive week of practically uniform prices. The manufacturing houses are all working to their fullest capacity and the indications are bright for an unusually heavy spring trade. The unfavorable weather conditions have caused an increase in the number of cases

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliousness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25¢,

50c. and \$1.00 per bottle.

Trade price-list on application.

of sickness and the prescription trade is daily increasing. The Sunday closing agreement, which is being adhered to by the members of the P. A. R. D., makes quite a little difference in the Sunday sales of those outside of the association, and so long as they escape prosecution it will be a hard matter to induce them to join the association.

Fair Week in Baltimore.

Baltimore, March 19.—Business during the past week has generally been fair. The wholesale houses report numerous orders, some of them calling for large quantities of goods, while the manufacturers also have been quite active. The movement of preparations and compounds is considerably larger than at this time last year, and a feeling of gratification prevails over the situation. The marketing for crude drugs and botanicals continues to be of such a character as to keep up prices; while, as a rule, are in decidedly good demand. Retailers, as a rule, are meeting with greater encouragement than they have experienced, and the trade conditions continue in the main satisfactory.

Weather Played Havoc with Business.

Detroit, March 17.—The unseasonable weather of March to date has played havoc with business generally in Michigan and druggists have had to take their share of the trade. It has been very good two or three days of this week, but the coming of the orders from outside countries. Manufacturer and chemists give better reports, and say that March turning gets into much better than January or February. Some of the houses have had extra force on duty the last week. Everywhere collections are reported easy.

Trade Quieter in Chicago.

Chicago, March 17.—Fifty thousand men are idle in Chicago owing to the strike in the building and other trades. The result is that retail stores, especially in those districts in which the male population is most generally out of employment, are complaining bitterly of the slackness of business. The city business of the jobbing trade, owing to the causes just mentioned, and the further fact that the weather has been abominably unseasonable of late, has been rather more quiet this week than usual. The country trade has been more liberal in orders, however, and the general demand for staples has been good. What applies to the jobbers applies also in some measure to the less extent affected save that the manufacturers are to a large extent affected by a temporary slackness of business. It is expected that next month the spring trade will open up in earnest. The general outlook is good and the trade looks forward to a more than usually prosperous season.

Business Enough to Satisfy All.

St. Paul and Minneapolis, Minn., March 16.—Seldom are the retailers of these cities so nearly unanimous in their declarations that they positively have business enough to satisfy them. Not a single complaint is heard as to the general condition of trade, with the exception of collections, which some report less favorable than usual. There is a steady increase in the sales of cigars and fancy goods, while prescriptions are holding their own and more too. Jobbers say their operations are well in advance of the corresponding season of 1899. The new currency law is depended upon to make money easier and increase business. Everyone is looking forth with confidence for a very satisfying spring business. The long expected rise in the price of insect oil has at last taken place, and a very substantial one it is, too—3 cents. Raw is now 30 cents per gallon and boiled 61 cents.

Spasmodic Business, Spasmodic Weather.

St. Louis, March 17.—Wholesalers report business as spasmodic, following weather conditions closely. Most of last week was bright and spring-like and business picked up, bringing very satisfactory mail last Monday. Since Tuesday the weather has been sharp and cold and orders have shown another falling off. The country roads are still in bad condition, impeding traffic to a large extent. Locally retail trade is very quiet. Lined oil has advanced 3 cents. P. & W. quinine declined 4 cents yesterday. Salicine has advanced to \$5.50 per pound. Opium has advanced 10 to 15 cents per pound.

—The sixth annual meeting of the Indian Territory Pharmaceutical Association will be held in Muskogee, May 22, 23 and 24. The local committee, H. C. Cobb, local secretary, will spare no means to see that everyone has a good time. Every druggist in the state is urged to attend and bring his wife and daughters.

—The Tarrant Co. (Tex.) Druggists' Association recently met at Fort Worth and elected the following officers: President, L. M. Whitsett; vice presidents, H. S. Sanders, Arlington, and W. L. Smallwood, Fort Worth; secretary, J. P. Brashear, Fort Worth; treasurer, J. R. Reeves, Fort Worth. The membership numbers about fifty.

Market Reports.

NEW YORK MARKET.

New York, March 20.—Continued steadiness is a feature of the general market with the volume of business, in a jobbing way, of satisfactory proportions. An advance in opium and a decline in quinine are the principal changes.

OPIMUM.—Values are firmer in sympathy with primary markets, which are decidedly stronger on reports of serious crop damage. The revised quotations are \$3.30@3.50 for 9 per cent, and \$3.40@3.65 for 13 per cent, the outside figures for single pounds.

POWDERED OPIUM.—Limited quantities have continued in fair request and the tone of the market is firm with jobbers quoting \$4.40@4.60 for 13 per cent, and \$5.10@5.30 for 16 per cent, as to quantity.

MORPHINE.—The jobbing market continues moderately active with quotations unchanged but steady on a basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for smaller quantities.

QUININE.—Manufacturers have unexpectedly reduced quotations 4c. per oz. and the revised jobbing figures are 3½@3¼c. for 100-oz. tins, 3½@3¾c. for 50-oz. tins and 28¢@11c. for ounce vials, according to brand.

COLICIL.—Market somewhat unsettled with quotations reduced to \$24@26 by the barrel, as to brand, and \$1.05@1.20 by the gallon.

JALAP.—Supplies are more abundant and the market is easier, jobbing prices for the article a decline to 22@28c. for whole and 23@25c. for powdered.

CONDURANGO BARK.—Large arrivals have relieved the stringency of the market and jobbing quotations have been reduced to 30@40c. for whole and 40@50c. for powdered.

GUM ELEMI.—Values are higher owing to scarcity and jobbers have advanced quotations to 45@50c.

BALSAM PERU.—A continued easy feeling prevails and values in a jobbing way have further declined to \$1.85@2.15, as to quantity.

OIL WINTERGREEN.—Market for natural rather weak with prices for jobbing parcels reduced to \$2.30@2.50. LAMP OIL.—Some competition has caused a decline in values and the revised jobbing range is \$2.50@2.75 per gross and 35¢@50c. per doz.

COTONSEED SORTS.—Have been advanced to 5½@6c. by the cask and 9½@11c. for less. An extra charge is made of \$1 per cask for breaking and 50c. for half inspection.

SAL SODA.—Market firmer with jobbing prices advanced \$1.05@1.15 per 100 lbs. by the keg.

OIL CEDAR LEAF.—Jobbers have advanced quotations to 70@80c. for pure and 60@70c. for ordinary.

CARBOLIC ACID.—The jobbing quotations for single drums have further declined to 28@32c. NAPHTHALENE BARS.—A slight reduction in jobbing prices makes the revised figures 30@34c. by the barrel and 4½@5c. for less.

SEEDS.—A general revision of quotations by jobbers shows slight advances in the following varieties: Russian hemp by the bag, 36½@4c. less, 4½@6c.; German rape, 34½@34c. by the bag and 50¢c. for less; Smyrna canary, 25¢@3c. by the bag and 4½@6c. for less; Sicily, 34½@34c. by the bag and 50¢c. for less.

CATTLEFISH BONE.—Jobbers have modified their views and prices have been reduced to 28@32c. for whole and 30@35c. for powdered.

LYCOPodium.—Market firmer with quotations advanced to 65@75c.

ALCOHOL.—Manufacturers' prices are higher and jobbing quotations show an advance to \$2.45@2.60 by the barrel and \$2.45@2.65 for smaller quantities. \$2.47@2.48 by the barrel and \$2.00@2.75 for smaller quantities.

OIL CLOVES.—Market stronger in sympathy with the spice and jobbers have advanced quotations to 75@90c.

OPIMUM.—Jobbers have reduced quotations to \$2.55@2.50 for Baltimore and \$1.75@2 for Western.

—The Missouri Board of Pharmacy will hold meetings for examination of applicants for registration at Kansas City the second Monday in April; Sedalia, second Monday in June, and at St. Louis the second Monday in October. In addition, special meetings will be held at St. Louis, Charleston, Hannibal, St. Joseph and Carthage. The first special meeting will occur Monday, March 19, in St. Louis, at Liederkranz Hall, opening at nine a. m. All inquiries for information should be addressed to secretary, Aug. T. Fleischmann, Sedalia.

ERA WANT ADS.

If every reader of the Era knew the value of the little Want Advertisements which we publish every week, the page we devote to them would not be large enough to hold all that we would have to print.

These little cards can be used to great advantage by any druggist to dispose of his dead patent medicine stock. Many proprietary medicines which have a sale in one section of the country do not sell at all in other sections. If a druggist has goods on his shelves which he cannot sell, another druggist in some other State where there is a demand may be willing to buy them at a discount or to exchange them for other goods.

Perhaps the reader has an old soda fountain to dispose of; perhaps he wants to sell his store, and we occasionally hear of a druggist with enough surplus cash to invest in a second store. All of these wants can be satisfied if they are made known in the Era's Want Department, which is read by dealers in all parts of the country every week.

See Students' Bulletin, Page 344.

COLLEGE GRADUATION AS PREREQUISITE TO BOARD EXAMINATION.

There is a considerable and growing number of supporters for the proposition that as a prerequisite to examination by a board of pharmacy the candidate should possess a diploma from a reputable college of pharmacy. Inasmuch as this proposition has already assumed the form of a definite attempt to secure legislation of this character in at least one of the states, a general discussion appears desirable.

It is urged that this requirement would materially elevate the status of pharmacy, tending thereby to both financial and professional benefit. Is this contention warranted?

One effect of such a regulation would be that all candidates for examination by boards of pharmacy would possess some amount, great or small, of a systematic training. How much and how good this would be would depend entirely upon the complexion of the list of colleges whose diplomas would be granted this recognition. If the boards were lax in this respect, accepting the diplomas of the lower grade of colleges, little real reform would be effected. But if the list were carefully prepared, restricted to those institutions only whose courses of study and graduation requirements were of specially high standard, undoubtedly those admitted to practice pharmacy would possess better qualifications than is now the case. The diploma requirement, if properly enforced, would keep both the boards of pharmacy and the colleges of pharmacy up to the mark.

Another effect would be the restriction of the practice of pharmacy to those who were best qualified to do it credit, and to largely decrease the number of those entering the profession. Decrease in competition would mean increase in profits.

The question of paramount importance to be considered, however, is what degree, if any, of injury would be worked by legislation of this character? Would such requirement debar from the practice of pharmacy worthy young men who, though possessing a good general knowledge of the drug business, have been unable by force of circumstances to secure the college education? There is some degree of plausibility and justice in this objection, but is it not offset by probable advantages? Such a law could not be made retroactive, could in no way affect those already following the profession, and with regard to those studying for it, or contemplating study, the date at which the law should go into effect could be placed so far distant as to exempt all these from its operation, and at the same time be a warning to those who would hereafter pro-

pose to adopt the drug business that they must qualify themselves in the stipulated manner.

The tendency of the times is to require that ail in the learned and skilled professions shall possess the requisite amount and character of learning and skill to safely and properly discharge the duties and responsibilities of these callings. The physician in order to enter practice, the lawyer to be admitted to the bar, must each show evidence by diploma or certificate that he has followed a certain outlined course of preparation and has become qualified.

There is no danger that the proposed restriction will become general at once, or even very soon. Necessary to establish it is the securing of legislation in the several states, by new laws, or the amendment of existing statutes. Inasmuch, also, as there is such great diversity of requirements among both boards and colleges, the minimum educational requirements might possibly be determined by a system of State Regents' marks, rather than the college diploma. There is some question also of the constitutionality of such a measure, although on the ground of protection of the public health and life it may be urged that there is nothing unconstitutional in a measure which shall provide for the better qualification of those having this health and life in their charge.

There likewise obtrudes for discussion the question, or rather phase of the main question, whether the college graduate is the superior or the inferior of one who attains his pharmaceutical knowledge in ways and paths other than those provided by the college. Some druggists are loud in their protestations that they would not employ a college graduate under any conditions, whereas there as many others who would always give preference to the diplomaed man.

It is axiomatic that one cannot have too much preparation, too much education, for any calling, not excepting the drug business. The education which commences at the beginning, proceeds by successive steps, is logical, systematic, thorough and complete, is unquestionably superior to that hit-or-miss variety gained by unsystematic, desultory, unindirected reading of text books, with no definite plan, and the picking up here and there of trifles of information during one's apprenticeship. Other things being equal, there is no denying the superiority of the former variety over the latter. It must be clearly understood, in addition, that the proposition is not to do away with board examination as a test of the candidate's efficiency, but to impose an additional requirement before he is eligible to examination. The curse of the drug business is the opportunity afforded for entrance of young men sadly deficient in preliminary education, poorly equipped with technical, professional education, but who, through lack of the proper restrictions in this respect, succeed by hook or crook in passing the board examination and receiving registration as pharmacists. The board is not to have its present powers curtailed, but increased. It will still examine, but it will have better material provided to work upon.

The whole subject presents so many phases, so many apparently irreconcilable differences, that it is an instance where we should make haste slowly. There should be an expression of the opinion of every educator and practicing pharmacist, that out of the mass of opinions and suggestions there may be derived a line of operation along which progress of the right kind may be made. The pages of this journal are open to its readers for such liberal discussion, and it is hoped that the opportunity will be very generally embraced. Let us talk it over, and see whether we want it or do not want it. Many of those now complaining of the poor financial and professional status of pharmacy see salvation only along the line of higher, better education; the restriction of the pharmacist's avocation to the properly qualified. Would such a regulation as that proposed effect this elevation of standard? Or are its possible benefits outweighed by its probable disadvantages? All are requested to voice their views upon any or all of the phases presented.

OLEATE OF MAGNESIA TO PREVENT SPONTANEOUS IGNITION OF BENZIN.—Dr. Fischer, of Breslau, delivered a lecture on this subject before the Chem. Gesellschaft, in which he states that of thirty to forty benzin fires that occur in Germany yearly in laundries, 80 per cent. are caused by spontaneous ignition of the benzin through electrical excitation in the vessels containing the clothing during the washing process, most benzin fires taking place during the washing of wool and silk fabrics. The material of the vessels used is without influence, the ignition being caused solely by the electricity generated through the motion of the clothing in contact with the fluid. Wool is most susceptible to electrical excitability under these conditions, silk being next in order. The fires take place chiefly in winter, owing to the dry and dust-free air at this time of the year. Dr. Fischer has discovered that the danger of fires from this source may be obviated by the addition of a small quantity of a benzin-soluble soap to the contents of the machines; oleate of magnesia having been found the most efficient. The addition of 0.1 per cent. of this soap to the wash-fluid completely prevents the electrical excitability of benzin. (Drog. Ztg.).

PREPARATION OF BITTER ALMOND WATER.—S. Siebert (Pharm. Centralhalle) proposes the following method: Five parts of bitter almonds are thoroughly expressed with the aid of a moderate heat and reduced to powder, then mixed with 1 part of sifted beechwood sawdust, the mixture moistened with $\frac{1}{2}$ part of water and placed in a tin-lined distilling apparatus provided with a porous diaphragm. About two-thirds of the alcohol the product is to contain is placed in the still below the diaphragm and one-third in the receiving vessel for the distillate. The mixture is allowed to stand over night, to permit complete dissociation of the amygdalin. Steam is then passed through under ordinary pressure, and the oil of bitter almond and hydrocyanic acid pass over almost entirely with the alcohol. The product so obtained is perfectly clear and keeps well, being free from the decomposition products that would be distilled over with the employment of superheated steam. This method is suitable also for the preparation of the oil of bitter almond, in which case the alcohol is omitted, also for the rectification of ethereal oils, by mixing them with sawdust and distilling with steam. Oil of turpentine may in this way be rectified without loss. (Pharm. Post).

OUR LETTER BOX.

♦♦♦♦♦

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

WANTS THE N. A. R. D. TO TAKE THIS UP.

Clarksville, Tenn., March 18, 1900.

Editor Pharmaceutical Era: I have just read the article on "What the Manufacturers Agree and Require." It says in regard to the cutting among retail druggists that their salvation lies in the N. A. R. D., if they affiliate with the N. A. R. D. in sufficient numbers to represent the majority. We have a letter from the Church Kidney Cure Company, where they acknowledge the quotation of six bottles of their Alkavis for \$5 (they would not sell the retailer for less than \$15 per dozen) to a customer, and a price was made by Dr. Slocum (for \$10.54 worth of medicines at wholesale price) to a customer for \$30. Now this not only shuts the retailer out of his profits, but the jobber also. The manufacturers of patent medicines expect the retailer to hold their prices up and then they sanction such prices to their customers. I fail to see where we can get full prices in this way. I want the National Association of Retail Druggists to take this up.

J. T. FLETCHER.

HOW WILL REMOVAL OF TAX BENEFIT DRUGGISTS?

Titusville, Pa., March 20.

Editor Pharmaceutical Era: Will the secretary of the N. A. R. D. tell us wherein the repeal of the Internal Revenue tax on proprietary medicines is going to benefit the retail druggists? The manufacturers advanced their prices to more than cover the cost of the stamps and in cases where the retail druggist gets the full retail price for the goods the tax is borne by him. Where he is subject to the competition of cut rates he has been enabled to advance his prices a few cents to cover the cost of the stamps. But supposing the stamp tax is repealed. Will the manufacturer reduce his prices? I believe not and it looks to me as if this action was solely in the interests of the poor down-trodden manufacturer. I protest against the retailer being used to pull the manufacturers' chestnuts out of the fire.

J. E. PHILLIPS.

TO INCREASE PROFITS BY MORE CAREFULLY.

Baltimore, Md., March 18, 1900.

Editor Pharmaceutical Era: The Blue Book at hand. It is absolutely the best price list that I have ever seen. I know that it will many times pay for itself. I fail to see one or two manufacturers' lists in it that I would like to have seen. The Weekly Change Sheet is invaluable.

Some time ago you asked me to write on the subject "What can druggists do to increase their profits?" I am sorry that I did not have a chance to do it. I read all the different letters with great interest; some were very good. But it seems to me the only way druggists can increase their profits is in buying. If one cannot buy in large quantities, go with five or six, yes, twenty, other druggists, and buy in large lots. Money is our only friend.

O. C. SMITH.

SAYS THERE WERE MORE.

New York, March 20, 1900.

Editor of the Pharmaceutical Era: In reporting in your journal the hall of the New York Retail Druggists' Association you stated that 250 persons were on the floor, while as a matter of fact, judging by the number of hat checks, we did have not less than 1,800 guests. This misrepresentation of facts by your reporter, as well as the unaccounted for partiality of your journal, came to be noticed by the association, which requests you the

said error to have corrected, and if mention of our association is in the future to be made, have it, please, in the true light.

Respectfully,

L. MARMOR,

Recording Secretary of the N. Y. Retail Druggists' Ass'n.

READY TO HELP IT ALONG.

Edwards, N. Y., March 19, 1900.

Editor Pharmaceutical Era: We are ready to do anything in our power to help the druggists' cause. What society is best for us to join? We have considerable influence upon our Representative and Senators. Why can't New York State do as Illinois has done? No unlicensed person can handle patents. Putting the selling of them into only certain jobbers' hands is a good thing, but there is going to be a leak there, as the cutters will find some retailer who will buy for them. We stand ready to help.

BALCOMBE & TAYLOR.

PHOSPHO-TUNGSTIC ACID AS REAGENT FOR POTASSIUM in 10 per cent. aqueous solution is proposed by E. Woerner. It is stated to be superior in delicacy to the usual reagents (tartaric acid, platinum chloride, etc.). From acid solutions phospho-tungstate of potassium precipitates as a coarse, crystalline powder, from neutral solutions it is thrown out in a very fine condition, giving the liquid a milky appearance. A 0.5 per cent. solution of potassium chloride becomes turbid at once after addition of reagent, a 0.25 per cent. solution in 1 or 2 minutes, a 0.1 per cent. solution in 1 to 2 hours, more dilute solutions after standing a correspondingly longer time. In all cases the liquid becomes milky and opaque. Gentle warming facilitates the separation of the phospho-tungstate of potassium. Tartaric acid and platinum chloride cause precipitation in 0.25 per cent. solutions only in presence of alcohol, more dilute solutions giving practically no reaction. Barium, strontium, calcium and magnesium salts are not precipitated by phospho-tungstic acid, but ammonia salts interfere with the test for potassium and if present should be removed by dissolving the precipitates obtained in caustic soda solution and expelling ammonia with heat. This solution may then be acidulated with hydrochloric acid and phospho-tungstic acid added. Any precipitate now formed is due to potassium only. Presence of alcohol prevents precipitation by phospho-tungstic acid in dilute solutions. (Apoth. Ztg.)

INCOMPATIBILITY OF RESORCIN AND ZINC OXIDE.—It has been observed by Kiessling that an ointment paste composed of petrolatum, zinc oxide, resorcin and starch, when kept in a closet together with other preparations, acquired a deep-blue color on the surface. The supposition that this was caused by the action of iodine vapors on the starch was proven unfounded. Schneider and Becker (Pharm. Zentralh.), who instituted some experiments, came to the conclusion that the color was caused by the action of ammonia on the resorcin and the zinc oxide. If resorcin be shaken in aqueous solution with zinc oxide, a portion of the latter is dissolved, and the mixture, as well as the filtrate obtained from it, gives on the addition of ammonia within a few minutes, a beautiful dark-blue coloration. The same result is obtained when a zinc salt is used instead of the oxide. The oxides of calcium and magnesium act similarly, but more slowly. The blue coloring matter is not removed from aqueous solution by shaking with ether, acetic ether, benzin, chloroform or fusel oil. On addition of acid it changes to red and may then be extracted with acetic ether or fusel oil. The authors regard this substance as identical with lacmoid, used as indicator and present in litmus, also obtained by heating resorcin with sodium nitrite. (Apoth. Ztg.)

PURIFICATION OF LARD.—A patented method for removing coloring contaminations consists in adding powdered calcium chloride to the liquefied lard brought to 75° to 80° C., mixing thoroughly and forcing the mixture through a filter press. The impurities, consisting chiefly of iron salts, are thus separated together with the calcium chloride. (Apoth. Ztg.)

THE LIQUORES OF THE UNITED STATES PHARMACOPOEIA.

By JOSEPH H. KAHN, Phar. D.

In the following classification, the official liquors are so arranged as to present to the pharmacist and physician their salient features in easily mastered form.

LIQUORES—SOLUTIONS.

Liquors—Solutions of Chemical Substances in a Menstruum Consisting Chiefly or Wholly of Water—There Are Twenty-four Official in the U. S. P.—They Are Among the Most Active and Important of the Preparations of the U. S. P.

OFFICIAL TITLE.	ENGLISH NAME.	SYNONYMS.	PERCENT-AGE STRENGTH	ACTIVE CONSTITUENTS.
Liquor Calcis	Solution of Lime.	Solution of Calcium Hydrate; Lime Water.	0.17% at 15°C (a saturated solution).	Ca(OH) ₂ .
Liquor Acidi Arsenosi.	Solution of Arsenous Acid.	Valangin's Solution. (0.38 per cent., or 1½ grs. in the fl. oz.).	1%.	As ₂ O ₃ .
Liquor Potassii Arsenitis.	Solution of Potassium Arsenite.	Fowler's Solution.	1%.	As ₂ O ₃ .

Liquor Arseni et Hydrargyri Iodidi.	Solution of Arsenic and Mercuric Iodide.	Donovan's Solution.	1%.	AsI ₃ and HgI ₂ .
Liquor Ferri Nitrat.	Solution of Ferric Nitrate.	1.4%.	Fe. (Metallic Iron).
Liquor Sodae Chloratae.	Solution of Chlorinated Soda.	Labarraque's Solution.	2.0%.	Cl. (available by weight).
Liquor Plumbi Subacetatis, Dilutus.	Diluted Solution of Lead Subacetate.	Lead Water.	3%.	Liquor Plumbi Subacetatis, or 0.75% of Lead Subacetate.
Liquor Potassae.	Solution of Potassa.	Solution of Potassium Hydrate.	5%.	KOH.
Liquor Sodae.	Solution of Soda.	Solution of Sodium Hydrate.	5%.	NaOH.
Liquor Iodi Compositus.	Compound Solution of Iodine.	Lugol's Solution.	5%.	I, dissolved by the aid of KI, 10%.
Liquor Ammonii Acetatis.	Solution of Ammonium Acetate.	Spirit of Mindererus.	7%.	NH ₄ C ₂ H ₃ O ₂ , together with small amounts of HC ₂ H ₃ O ₂ + H ₂ CO ₃ .
Liquor Ferri Acetatis.	Solution of Ferric Acetate.	7.5%.	Fe. (Metallic Iron).
Liquor Ferri Citratis.	Solution of Ferric Citrate.	7.5%.	Fe. (Metallic Iron).
Liquor Ferri Tersulphatis.	Solution of Ferric Sulphate.	8%.	Fe. (Metallic Iron).
Liquor Potassii Citratis.	Solution of Potassium Citrate.	Mistura Potassii Citratis; Neutral Mixture; Saline Mixture; Effervescing Draught.	9%.	K ₂ C ₆ H ₅ O ₇ (Anhydrous), together with small amounts of H ₂ C ₆ H ₅ O ₇ + H ₂ CO ₃ .
Liquor Ferri Chloridi.	Solution Ferric Chloride.	Solution Sesquichloride of Iron.	13%.	Fe. (Metallic Iron).
Liquor Ferri Subsulphatis.	Solution of Ferric Subsulphate.	Solution of Basic Ferric Sulphate; M-ysel's Solution. Solution of Persulphate of Iron.	13.6%.	Fe. (Metallic Iron).
Liquor Plumbi Subacetatis.	Solution of Lead Subacetate.	Goulard's Extract.	25%.	Pb ₂ O(C ₂ H ₃ O ₂) ₂ .
Liquor Zinci Chloridi.	Solution of Zinc Chloride.	Burnett's Disinfecting Fluid.	50%.	ZnCl ₂ (by weight).
Liquor Hydrargyri Nitrat.	Solution of Mercuric Nitrate.	60%.	Hg(NO ₃) ₂ + 11% of free HNO ₃ .
Liquor Ferri et Ammonii Acetatis.	Solution of Iron and Ammonium Acetate.	Mistura Ferri et Ammonii Acetatis; Basham's Mixture.	(Not specified).
Liquor Magnesii Citratis.	Solution of Magnesium Citrate.
Liquor Sodii Silicatis.	Solution of Sodium Silicate.	Liquid Glass; Soluble Glass. (Nearly saturated).

(See opposite page.)

A COLORING SUBSTANCE FROM DIGITALIS has been obtained by Adrian and Trillat (Chem. Ztg.) in crystalline form. It was isolated from the residues remaining from the preparation of crystallized digitalin from Digitalis lutea. The new compound crystallizes in beautiful yellow, silky needles, which melt at 217° to 218° C. It has the formula C₂₂H₃₂O₄, and dissolves in alkaline liquids with a fine, red color. It is insoluble in water, dilute mineral acids, and petroleum ether, but soluble in alcohol, chloroform and amyl alcohol with aid of heat. (Apoth. Ztg.)

HAIR RESTORER.—The following is the formula for a preparation much used in Switzerland: Precipitated sulphur 60, acetate of lead 60, glycerin 360, rose water 300, distilled water 1,440, oil of lavender 45, bismuth nitrate 3.75 parts. (Ztsch. f. Pharm.)

ALSOL is an aceto-tartrate of aluminum, recommended by Dr. Hönigschmied. Owing to its difficult solubility it is best kept for use in form of a concentrated solution, which may be prepared in the following proportions: Alsol, 50 parts; distilled water, 45 parts; conc. acetic acid, 5 parts. Acetic acid is added to prevent precipitation of alumina, when this concentrated solution is diluted with ordinary, hard water containing carbonate of lime. (Pharm. Post).

ANTIPERMENTIN is a food preservative consisting of 40.6 per cent. potassium sulphate, 15.8 per cent. potassium fluoride, 16.68 per cent. sodium fluoride, 9.58 per cent. ammonium fluoride, 1.66 per cent. hydrofluoric acid, and water. (Apoth. Ztg.)

CLASSIFICATION.

OFFICIAL TITLE.	FORMULA.	DOSE.		PROPERTIES.
		English.	Metric.	
I.—Solutions of Free Elements. Liquor Iodi Compositus.	I.	1 to 10 m.	0.06 to 0.6 C.c.	Alterative.
II.—Solutions of Hydroxides. Liquor Potassæ.	KOH.	5 to 30 m.	0.3 to 2 C.c.	Antacid, diuretic and anti-lithic.*
Liquor Sodæ.	NaOH.	5 to 30 m.	0.3 to 2 C.c.	Antacid, diuretic and anti-lithic.*
Liquor Calcis.	Ca(OH) ₂ .	1 to 8 fl. dr.	4 to 30 C.c.	Antacid, tonic and astringent. Very useful in dyspepsia, with acidity of the stomach.
III.—Solutions of Free Acids. Liquor Acidi Arsenosi.	As ₂ O ₃ (H ₃ AsO ₃) + H ₂ O.	5 to 10 m.	0.3 to 0.6 C.c.	Alterative. In excessive doses very powerful gastro-intestinal irritant.
IV.—Solutions of Salts. (A.—Used Internally).				
Liquor Potassæ Arsenitis.	KH ₂ AsO ₃ .	1 to 10 m.	0.06 to 0.6 C.c.	"
Liquor Sodii Arsenatis.	Na ₂ HAsO ₄ .	1 to 10 m.	0.06 to 0.6 C.c.	"
Liquor Arseni et Hydrargyri Iodidi.	AsI ₃ + HgI ₂ .	1 to 10 m.	0.06 to 0.6 C.c.	"
Liquor Ferri Chloridi.	Fe ₂ Cl ₆ .	2 to 10 m.	0.12 to 0.6 C.c.	Chalybeate. Styptic.
Liquor Ferri Subsulphatis.	Basic Ferric Sulphate of variable chemical composition.	2 to 10 m.	0.12 to 0.6 C.c.	Styptic in hemorrhage of stomach and bowels, also to bleeding surfaces.
Liquor Ferri Nitratis.*	Fe ₂ (NO ₃) ₆ .	2 to 10 m.	0.12 to 0.6 C.c.	Tonic and astringent in diarrhoea, etc.
Liquor Ferri Citratis.*	Fe ₂ (C ₆ H ₅ O ₇) ₂ .	2 to 10 m.	0.12 to 0.6 C.c.	Tonic, ferruginous.
Liquor Ferri Acetatis.*	Fe ₂ (C ₂ H ₃ O ₂) ₆ .	2 to 10 m.	0.12 to 0.6 C.c.	Chalybeate.
Liquor Ferri et Ammonii Acetatis. (Should be freshly made when wanted).	Fe ₂ (C ₂ H ₃ O ₂) ₆ + NH ₄ ⁺ C ₂ H ₃ O ₂ ⁻ .	1 to 4 fl. dr.	4 to 15 C.c.	Chalybeate and astringent. Largely used in chronic Bright's Disease.
Liquor Magnesii Citratis.	Mg ₃ (C ₆ H ₅ O ₇) ₂ .	2 to 8 fl. oz.	60 to 240 C.c.	Cooling cathartic.
Liquor Sodæ Chloratæ.	Chiefly NaCl + NaClO. (Containing at least 2.0% available chlorine).	½ to 1 fl. dr.	2 to 4 Cc.	Stimulant; Antiseptic. Chiefly used as a disinfectant.
(B.—Used Only Externally).				
Liquor Ferri Tersulphatis.	Fe ₂ (SO ₄) ₃	Used for other preparations in which the Ferric Hydrate is wanted. It should always be kept on hand for the quick preparation of an antidote to arsenic.
Liquor Plumbi Subacetatis.	Pb ₂ O(C ₂ H ₃ O ₂) ₂	Astringent and sedative in sprains, etc. (Well diluted, 1 to 10).
Liquor Plumbi Subacetatis Dilutus.	Pb ₂ O(C ₂ H ₃ O ₂) ₂	Astringent and sedative in sprains, etc.
Liquor Zinci Chloridi.	ZnCl ₂	Caustic. Antiseptic. Also employed for preserving anatomical specimens.
Liquor Sodii Silicatis (has no official process for its preparation).	Na ₂ SiO ₃	Used for surgical dressings.
V.—Solutions of Salts and Acids. (A.—Used Internally).				
Liquor Ammonii Acetatis (should be freshly made).	NH ₄ C ₂ H ₃ O ₂ + HC ₂ H ₃ O ₂ + H ₂ CO ₃	1 to 8 fl. dr.	4 to 30 C.c.	Valuable diaphoretic.
Liquor Potassæ Citratis (should be freshly made).	K ₃ C ₆ H ₅ O ₇ + H ₂ C ₆ H ₅ O ₇ + H ₂ CO ₃	1 to 8 fl. dr.	4 to 30 C.c.	Valuable diaphoretic.
(B.—Used Only Externally).				
Liquor Hydrargyri Nitratis (Made from mercuric oxide and nitric acid. HgO + 2HNO ₃ = Hg(NO ₃) ₂ + H ₂ O.)	Hg(NO ₃) ₂ + 11% of free HNO ₃	Caustic application to chancre, etc.

*Are prepared by forming first Ferric Hydrate. Made by precipitating solution of tersulphate of iron with water of ammonia: Fe₂(SO₄)₃ + 6NH₄OH = Fe₂(OH)₆ + 3(NH₄)₂SO₄. The resulting hydrate is then washed and dissolved with corresponding acid to form the corresponding salt.

†In excessive doses irritant poisons. Used externally as escharotics.
NOTE.—Of the official solutions, nine are simple solutions; the rest are chemical solutions. The following are the simple solutions:

- Liquor acidi arsenosi.
- " arseni et hydrargyri iodidi.
- " calcis.
- " iodi compositus.
- " plumbi subacetatis dilutus.
- " potassæ (2d formula, U. S. P.).
- " sodæ (2d formula, U. S. P.).
- " sodii arsenatis.
- " sodii silicatis.

HOW CAN DRUGGISTS INCREASE PROFITS?

"What Can Druggists Do to Increase Their Profits?" Organize, organize, organize; and don't do anything else first, but do it right away. Organize for practical business purposes—not for sentimental, theoretical, or professional purposes. There is no other way in which they can increase their profits so much, so easily, and so certainly, as by thoroughly organizing their local territory, and there is no community wherein they cannot increase their profits by so doing. Then raise their prices up to where they belong—not to fancy figures, mind, but to a just and legitimate margin. They are behind the times with their prices, that's what's the matter with them. Go into any other kind of a store and try to buy an article for which you remember the price you paid a year ago. Two to one the price has advanced; ask the man the reason why. Ten to one he will lay it onto a trust, or else he will not give you a satisfactory answer; the price has advanced, that's all. Look up the prices on crude material of all kinds and the cost of production and see where they've gone to. The prices for almost everything else have materially advanced during the past year. Of course there are bargain sales (so-called) and special inducements advertised occasionally, but the general tendency is an upward one. Now why? Simply because the whole country outside of the retail drug business is organizing, organizing, organizing. Nearly every other business in the country that is any longer profitable, from capital to labor, is either already organized or in process of organization. The retail druggists have never had such splendid opportunity for organization and they probably never will again as they have now this year.

Mr. Editor: Whoop 'em up on organization! Hammer 'em long and hard and let's hear the anvil of business resound with the resonant sounds of co-operation and combination—the druggists' only real salvation—the salvation of themselves from themselves. Then it will be in order to legislate as we ought and as we see fit, and to do every other good and needful thing.

Yours for organization, fore and aft, even trust-wise.

SAMUEL KIDDER, JR.

Chicago, Ill.

What can druggists do to increase their profits? In theory, we would unite, support each other, have strong home organizations under the N. A. R. D., etc., etc. In this way the pharmacists could absolutely control selling prices, and it's on this line we are working at present, but if we are successful, what will be our situation then? Yes, a trust, a powerful trust, a drug monopoly. Other business men in various lines have confronted the same conditions in their business as we are confronting to-day. Some of them have formed trusts to protect their business, and, without going into the pros and cons of the trust question, its workings, etc., we will only observe the result, because it is the result which is the main thing, of course.

A trust to exist must keep prices below reasonable competition, consequently, a trust does not bring increased profits by increased prices. A trust is beneficial to its members by keeping their business on a secure footing, and crushing or preventing competition. The keynote of a successful trust is, union.

How, then, would a trust apply to the drug trade? Could it be maintained among so many thousand members. What has been the result of attempt at union heretofore? Then what would the dear public do—has not every political party of to-day an anti-trust plank? These questions bring us to the ultimate result; the verdict of the people. Suppose that union could be maintained. Suppose that our organizations would be perfect, prices maintained, over-production of college of pharmacy druggists checked. Suppose all our ideals were attained, the result would be a perfect, polished, complete trust, and then (to use slang) "it would be up to the public." And what the public would do we all know. Local, State and Federal machinery would be unremittently employed, until our ideal, our work of years, our

masterpiece, would be smashed, crushed and stamped out of all recognition—and chaos would reign again.

Our work of to-day—N. A. R. D. and all—is the best we can do to help ourselves, in theory, but in practice the result must be the same as outlined above.

What then, do we ask, can we do to increase profits, if all our past, present and future work would be doomed to such a result?

Yes, practical business. Profits can't be increased; that is, we cannot raise prices on our merchandise. Prices of every kind of merchandise are going lower and lower, and have done so since time immemorial. We cannot increase profits for the druggists of to-day, as a whole, but every man can increase his yearly profits, if he is not doing so now, by being first and foremost a business man. Profits on the goods we sell are high enough now—an increase is impossible—therefore the only way to increase our business is to increase our trade, and to do this the poorer business druggist must drop out of the race, whether he wants to or not. It is the same as in any other business. When prices decrease stores decrease, and the man who gets the most trade is consequently the best business man. In our business we have two ways—either to develop into a scientific pharmacist or into a mercantile druggist. Just like our dry goods stores of to-day. We have high-toned, high-priced establishments, and popular low-priced department stores. The scientific pharmacist will have the cream of the trade, willing to pay high prices for scientific work, and the mercantile druggist the common herd; numerous, of course, but hunting for "the cheapest place." The profits will be good in either class, but the poor "middling" druggist, who neither has a reputation for science nor cheapness, will live from hand-to-mouth or go under.

P. A. LIGNELL.

West Superior, Wis.

HOW TO "RUN" A DRUG STORE.*

In Towns of Ten Thousand or Less.

BY VERNON DRISKELL.

In the first place, nine-tenths of the chance of success depends on the kind of man at the helm.

In small towns business is conducted on a plan in which there is more sociability entering than in larger towns or cities, and for some reason the druggist is one among the most prominent persons in town. He is usually known by every one, and to "run" a successful business there are necessary social qualifications that must be possessed by him.

He must be a man of character, so that when he makes a statement it will not be doubted. He must be a man of good habits, thus creating confidence, so that customers will feel that he is at all times in condition to intelligently serve them and morally worthy of their support.

He must know all of his regular customers well, and strive to know as many other people as possible; he must be sociable and be prepared to give them the "lard hand" wherever and whenever he meets them, and be always loaded to engage them in a short, appropriate and interesting conversation—if 'tis best to do so—make them feel that you are their neighbor and friend, and are interested in them, not for the sole purpose of extracting money from them.

In his store he must be affable, courteous, accommodating and a good judge of human nature—few persons have the same tastes, inclinations, ideas, manners or desires, and to please your customers you must study to get in touch with them. Some customers (but not many) love to have you meet them with a slap on the back, and an enthusiastic "Howdy-do, John;" others want you to meet them familiarly but not enthusiastically; others want you to meet them in a dignified manner, and so on down the line. Study to meet them all as they would rather be met, but always meet your customers as near the front door as possible. In some manner make them feel that you are glad they came, even though they want only an almanac—to-morrow they may want drugs.

If you have the above qualifications you are almost sure of a living, and if you combine industry and ability with them you need have no fear of ultimate success.

*Papers read before the Kentucky Pharmaceutical Association, June, 1899. Reprinted from Proceedings.

We are all out for the almighty dollar, and would love to make it out of our legitimate drug trade, but if it isn't there don't sit down and whine—"Laziness travels so slowly that poverty soon overtakes him." Be up and doing. Don't let time hang heavily on your hands—work your surplus time into cash.

No druggist has any excuse for sitting around, too many opportunities are afforded you for turning time into dollars by making regular stock; also by making a line of your own preparatons and pushing them. Then, if not able to use all your time in those ways, add "sidelines." Add one at a time and pay special attention to it until you get it sufficiently complete for your community and well introduced, then take up another. The smaller the town the greater the opening offered for this, because in the smaller places the demand for goods is not sufficient to pay a dividend on a complete line handled exclusively.

All or part of the following lines are suitable for druggists in such places, viz. Paints, oils, wall paper, optical goods, cameras and supplies, lamp goods, school books and school supplies, stationery, books, monthly magazines, daily papers, cigars and tobacco, musical instruments, etc., depending, of course, entirely upon your surroundings as to how many or which you can use.

Keep your store clean, neat and tidy, so that it will be attractive. This is one of the cheapest, and at the same time most effective, advertisements you can present. To be successful, remember that "he who by the plough would thrive, himself must either hold or drive." In other words, be attentive to business; be in your store as much as possible. You may have ever so good a clerk, but you know how often certain people would rather deal with the proprietor. Hold complete control of your business; know exactly what you are doing—don't let your business get control of you or away from you so you will have to worry. Keep a clear head and use your "worry time" in driving forward.

Be up to date; be aggressive. Don't be afraid to make a move for fear your competitor will go you one better. "Fear is the graveyard of prosperity." Be enthusiastic; be in love with your business or sell it out. Be systematic, but have no system so binding but what it may be temporarily suspended if business will be the better by so doing.

Aim high. First of every year have a definite end in view as to the year's work. Make up your mind to force your business to make you "so" many hundred dollars, or pay for a liberal amount of improvement in stock or real estate, then strive to attain unto the end.

If possible keep your own books, at least the ledger with your customers. You see who is imposing on you and just how old the accounts are getting. On the other hand, you learn how little you are selling some old customers, and it ought to cause you to renew your efforts in that direction. Watch your credit system. Don't let credit get to be too great a part of your day's business. Watch your expense account; continually decrease it if possible. Compare each day your cash and credit sales and expense account. Do this and you will do less credit business and do less spending.

If you have no surplus cash don't speculate. Don't be persuaded into putting onto your shelves for the sake of an extra 5 per cent. or so a large stock of goods that are not ready sellers, and don't even buy too largely of the staples. Confine your purchases to your early wants, so as to turn your money often; but, on the other hand, don't commit the too common error of letting your customers find you "out" of staple articles.

Keep a "want book" and use it. Never sell the last of any article without putting the name on your want book; in fact, anticipate your wants slightly. Don't wait to sell the last bottle of your ready sellers before going to your want book. Nothing comes nearer creating a bad impression among your customers than for you to be frequently telling them you are "out to-day," when that has reference to some staple article that you should not be out of.

Supply your customer's wants as promptly as possible. If they ask for an article you are not in the habit of keeping, tell them so and offer to procure it for them at once. Order it by first mail, even though it takes all your profit for express charges. You lose nothing, for you

would have lost it anyhow in a "missed sale." Perhaps you may make a good customer on whom you can depend for future profit. Pay cash when you can, thereby taking advantage of all discounts. When you can't do that pay promptly when due. In either case you are in a position to demand close prices from your jobber. "Goods well bought, half sold," you know.

Begin early to be saving and careful. Be saving, but not stingy. With your customers be liberal to a fault. Be careful, it leads toward accuracy; also avoid breakage. Keep fully insured and watch that it does not expire on you.

Advertise—advertise largely. Make your appropriation for advertising just as large as you can possibly stand. Don't do advertising loosely just as if you thought it just that much money thrown away, but make it part of your business. Don't confine yourself to any one manner of advertising. Make use of every opportunity and many varieties. Be original if possible. Spring something new. Get the reputation of being a hustler, and have your community wondering what their druggist is going to do next. Use newspapers; use circulars, letter writing, novelties. Have good show windows and change display frequently. Watch the effect of the displays. Note the effective ones, and after short intervals repeat the good ones in a manner similar but not like the former displays. Changes in the appearance of your store are also good advertising.

In a Town or City of More Than Ten Thousand Inhabitants.

By ADDISON DIMMITT.

This is rather a broad question, as conditions in towns and cities vary, due to local causes. Based on the supposition that the query applies only to the retail business, and that cut-rate conditions are not to be considered, also that the word successful means both from a professional as well as a financial standpoint, I respectfully submit the following:

A successful druggist must necessarily possess many qualifications, namely, honestly directed energy and intelligent system in conducting his store; a progressive knowledge of pharmacy coupled with natural tact and acuteness. When I say honestly directed energy I mean he should be thoroughly alive to all the conditions that surround his locality and be in full sympathy with them. To be one of the people and for the people.

If you must discuss religion and politics, be firm in whatever position you take, but never become abusive. Keep your eyes and ears open to any possible way to increase your business. When the opportunity presents itself go after it earnestly. If you fail the first time, do not give up, but persevere; you will win in the end. Never resort to any dishonorable means or subterfuge to gain an end; it is wrong morally, and will in time react against you.

A progressive knowledge of pharmacy is a most essential point in the character of the successful druggist. As the expression would indicate, he must keep himself thoroughly posted in the many developments in the science of pharmacy and its allied branches; follow up new practical ideas; present them to your physician friends and put them into use in your store; besides this, you should have a general knowledge of pharmacy so that you could answer the many queries of physicians and customers as to therapeutic value, incompatibles and doses of drugs; also to test the purity of your chemicals and be able to select the best quality of crude drugs. With this knowledge you would not only prepare all official and semi-official preparations, but originate new combinations and ideas. All of which gains not alone profit to the druggist, but the confidence and respect of physicians and customers.

Possibly one of the best evidences of the successful druggist is the appearance of his store. When you enter it the very atmosphere seems to impress one pleasantly. You are at once struck with the correct arrangement of his fixtures, the uniformity as well as harmony in everything, the various lines of merchandise properly classified and displayed to the best advantage. The most striking feature is the scrupulously clean appearance of

the entire place, all of which tells the story of careful attention to details and perfect system.

Another important point to be carefully considered by the druggist is the selection of his clerks; avoid cheap help, for their services are usually in keeping with their salaries. Select intelligent men who are competent from a pharmaceutical standpoint, and whose appearance and manner carry confidence with them. Pay them well for their services, for remember they represent you and your business qualifications.

Another condition, which, if properly conducted, adds much to the success of the druggist, is his relation to the physician. Place it strictly on business lines. Be at the service of the doctor at all times; assist him in any way possible in connection with his practice; protect him in any error that might creep into his prescriptions; keep him posted on new remedies, appliances, etc., and when he purchases goods from you charge him cost for them, but require that he pay for same.

DRUG STORE RULES.

The pharmacy at Eighth and Walnut streets, Philadelphia, popularly known for years as "Blair's," has had a career of success which, among pharmacists, is envied by many and possessed by but few. It was founded by H. C. Blair, in 1820, and an illustrated historical article concerning this establishment was published in the Era several years ago. The reputation of this store is more than purely local and cannot be attributed to its age alone nor to lack of competition, but is found in the fact that the clerks in this establishment have for years been of an unusually high order of excellence, both on account of their careful selection and the training which they receive. It is no easy matter to obtain a position as clerk in Blair's, and after graduation the fact of having been employed there for several years is a recommendation par excellence. The following set of rules may explain this fact. These rules have been in force in their present form since 1893, at which time the original rules, adopted in 1848, were subjected to revision.

Rules and Regulations (originally adopted in 1848 and modified in 1893), of the drug store of Henry C. Blair, Walnut and Eighth streets, Philadelphia. Established 1820.

1. Store to be opened promptly at 7 a. m. and closed at 10 p. m.; Saturdays, 10.30 p. m. Sundays, 9 a. m. and 9 p. m.
2. Business hours will include time between 7 a. m. and 6 p. m. on week days, except when special work requires longer hours.
3. During business hours all hands must be on their feet and employed either in waiting on customers or some other store duty.
4. As waiting on the counter requires most knowledge and experience, the senior clerk must always go front first, then the next oldest. The younger clerks are not to wait on customers except where the older clerks are occupied.
5. In every case customers must be waited on promptly and when goods are to be sent it must be done with the least possible delay.
6. Never put up an article unless you are certain you are right.
7. Every other duty must give way to waiting on the counter, except where serious detriment would be the consequence.
8. Every person entering the store, whether rich or poor, infant or adult, white or colored, must be treated with courtesy and kindness.
9. Boisterous mirth and a sullen temper are to be equally avoided as productive of neither business nor business character. The acquisition of a uniformly cheerful temperament is an attainment worth far beyond the price it usually costs.
10. There are to be no master and no servants. Each one is to feel conscious of the fact that the performance of the duties assigned to him is just as necessary and as important as what pertains to any other hand in the store. All useful employment is honorable. Indolence is a disgrace.
11. As neatness, order, cleanliness and accuracy are necessary and not mere accomplishments in a pharmacist, all are required to practice them constantly.
12. Every clerk is expected to become a graduate of the Philadelphia College of Pharmacy, and time will be allowed during third and fourth years for attending the lectures (three evenings for Senior course; two evenings and afternoon for Junior course).
[This latter rule has been modified to suit the day lectures at the College of Pharmacy.]
13. To deserve the Degree of Graduate will require severe economy of leisure hours, and their application to

Don't counter prescribe. When a person comes to you and wants you to diagnose his case, refer him to a physician; it will make a staunch friend of him and will bring you far more business than you could possibly get by prescribing for the patient, provided even you are competent to do so.

Another very important consideration in the success of a druggist is to be a good buyer. It is an art and requires much thought and experience to be successful in it. You should watch very carefully the extent of your sales on an article before you stock it heavily, keeping in mind that 5 per cent. better price on a quantity of goods is not saving of money unless you can consume it in a reasonable time. Buy often. Turn your money over just as many times as you can in the year.

Last, but not least, watch your credit business, do just as little of it as possible; never give more than thirty or sixty days' time on an account. It is better to do less business on a cash basis than to have your money scattered to the four winds.

the study of those books which relate to the theoretical and practical knowledge necessary to make an accomplished pharmacist.

14. Students need but few social acquaintances, and they should be very select. While the occasional visit of a well behaved young friend will be allowed, lounging in the store will not be tolerated.

15. Goods in junior clerk will have at his disposal an afternoon and evening every week (from 1 P. M. until 10.30 P. M.), and these privileges will not be interfered with unnecessarily.

16. Rooms are furnished for all clerks in store building. No junior clerk will be allowed to be absent at night after hours without permission. The first and second clerks are expected to be in at reasonable hours, and under no circumstances are both to be away at the same time.

17. Each clerk will be allowed two weeks' vacation each year.

18. Necessity requires that the store should be accessible on Sunday for the purpose of supplying medicines; beyond this the proprietor is not desirous of doing business on that day, and he enjoins on those in his employ that while they need not positively decline to furnish an article when asked for, to hold out no inducements to purchasers.

19. It is not the wish of the proprietor that any of his clerks should extol an article beyond its merits to advance his personal interests, or to say or do aught in the performance of his duty that he would not be willing that others should say or do to him under the same circumstances.

20. Goods taken from stock for personal use of clerks must be paid for at cost.

21. The proprietor would affectionately recommend and advise all his clerks to attend public worship with a denomination of his own selection, at least once every Sunday, as circumstances may permit. The habit, when accompanied by a corresponding moral deportment (without considering the immense spiritual advantage which may result from it), confers a degree of respect in the estimation of those whose esteem is worth having, that scarcely any other act will.

22. The daily intercourse of the employees should be characterized with the courtesy becoming young gentlemen.

23. Should a clerk wishing to leave before his allotted time expires have a good reason, the proprietor will not probably object, and should his cause be a bad one and be persisted in, the proprietor will certainly not offer hindrance to his going. The proprietor depends on the honor of the individual.

24. A cheerful compliance with the foregoing rules is expected and the repeated infraction of a rule or regulation will be cause for immediate dismissal.

CRESOL-IODO-CINNAMIC ESTER.—A new antiseptic, having the composition of a meta-cresol-iodo-cinnamic ester, is prepared by dissolving 27.4 parts of para-iodo-cinnamic acid and 10.8 parts of meta-cresol in 180 parts of benzol and adding to this solution 8.5 parts of phosphorus oxy-chloride. The mixture is heated during 20 hours on a water-bath under a reflux condenser, then cooled and filtered to remove any uncombined iodo-cinnamic acid. After washing and drying the benzol is distilled off and a residue obtained that solidifies on cooling. Recrystallized from wood alcohol it has a melting point of 85° to 86° C. (Pharm. Post).

DIURETIC WINE.—Trousseau proposes the following: Juniper berries 1.50, digitalis 30, and squill 15 parts, are macerated two weeks with 250 parts of alcohol and 2,000 parts of white wine, the mixture then expressed, 100 parts potassium acetate dissolved in the liquid and filtered. (Ztsch. f. Pharm.).

HOW THE DRUG CLERK SPENDS HIS "NIGHT OFF."

HOW ONE DRUGGIST ADVERTISES.

Mechanic Falls, Me., March 20, 1900.

Editor of The Pharmaceutical Era:—In regard to successful advertising, all I can speak is from a country druggist's point of view. We use a space in our weekly newspaper and change it every two weeks. I enclose a few copies of the style which has been used. We also enclose an envelope that we have printed and give to the mills and factories, and they use them to pay off their help. By this method we get a lot of newcomers to trade with us. The railroad time cards we change about twice a year, or whenever the trains change time, and it only costs us about \$3.00 for 500, and we like it much better than calendars. Customers keep them and consult them often, and each of the stores in town always want us to tack one up near their door so their customers can see it. We consider it a very valuable means of advertising, particularly as we are the only ones that get one out.

MERRILL & DENNING.

[Facsimiles of the pay envelope and railroad time card are shown below. Other samples of this firm's advertisements will be shown in future issues. Ed.]

BOSWEN, PORTLAND AND LEWISTON DAILY PAPERS

Use DeCoster's Headache Powders.

ADVICE TO AD. WRITERS.

Be powerful in expression. Don't waver. Say what you mean—exactly what you mean.

After you've written your ad, edit it as carefully as if it were an editorial. Use plain language. There's a world of force in simplicity.

Be convincing. Don't write loosely. Write to sell goods—not merely to interest readers.

Chocoly rounded sentences look alluring. They read interestingly, but—they don't always sell goods.

Be truthful. A liar deceives only himself. Falsehoods bring a store into disrepute.

A CHANGE IN "TIME."

Consult this Card! Don't get Left!

Prescription Druggist.

MECHANIC FALLS, MAINE.

Manufacturers of

DeCoster's Headache Powders and "Corn Buster."

Don't hesitate to kill a poor ad. Write it again—ten times if necessary. Don't be in too great haste.

Don't wait for inspiration. It may end, as some genius has said, in perspiration.

Be keen. Be original. Have something to say. Say it well.

Let every sentence be incisive—clear-cut as a cameo. Don't be funny. Humor in an ad, is usually more harrowing than delightful.

Avoid outlandish words. Don't strain for freakish combinations. Plain English is good enough. (A. J. Meister in Profitable Advertising).

PHARMACY.

ACETYLENE TETRABROMIDE has been recommended by Muthmann as a medium for separating minerals from each other because of its high specific gravity. It is a liquid boiling at 137° C., insoluble in water, soluble in ether. (Pharm. Post.)

SOLIDIFIED PETROLEUM OIL is obtained by mixing 91 parts of the oil with 7 parts of hard soap and 2 parts of stearin, heating the mixture until the soap and stearin are melted and thoroughly incorporated and cooling, when a solid mass will result. (Apoth. Ztg.)

BASICIN OIL is recommended for external application in rheumatism, for colds, etc. It is composed of basicin (a compound of quinine and caffeine), 5 parts; chloroform, 37.5 parts; alcohol, 12.5 parts, and olive oil, 45 parts. It is placed on the market by a Hamburg firm. (Ph. Post.)

TO DISTINGUISH RASPBERRY JUICE FROM CHERRY JUICE.—Dr. Wimmer recommends to add succinate of lead solution to the liquid and filter. In presence of cherry juice, the filtrate will be colored reddish-blue, the filtrate from pure raspberry juice being colorless. (L'Union Pharm.)

WINE OF PHOSPHATED CREOSOTE.—Beechwood creosote 10 parts, alcohol 90 parts, monoacetic phosphate 20 parts, distilled water 20 parts, simple syrup 100 parts, Malaga wine sufficient to make 1,000 parts. The wine contains 1 per cent. of creosote, and is employed for chronic affections of the chest. (L'Union Pharm.)

SOLUTION OF PHOSPHATED GUAIACOL.—Crystallized guaiacol 6.6 Gm., pure glycerin 66 Gm., pure bicalcic phosphate 33.35 Gm., hydrochloric acid, about 21 Gm., distilled water sufficient to make 1,000 Cc. of product. Dissolve the guaiacol in the glycerin and mix with the solution of the chlorohydrophosphate by agitation until the solution is complete. (Bull. de Pharm.)

TERPIN HYDRATE PREPARATIONS.—The following prescriptions are given in Bull. d. Sciences Pharm.: Elixir of Terpin Hydrate—Terpin hydrate, 2 parts; alcohol (90 per cent.), 30 parts; glycerin, 67 parts; tincture of vanilla, 1 part. Syrup of Terpin Hydrate—Terpin hydrate, 2 parts; alcohol (90 per cent.), 30 parts; glycerin, 67 parts; tincture of vanilla, 1 part; simple syrup, 100 parts. (Pharm. Post.)

USES FOR PINE NEEDLES.—The pine needles of South Oregon are being utilized. The needles are first boiled and then run between horizontal wooden rollers, which extracts the juice. This is called pine needle oil, which is supposed to possess medical properties. The pulp is used as a medicated material for upholstery, and is also said to be a good substitute for horsehair. It is said that insect pests will not live in furniture that has been upholstered with pine needles. (Sci. Am.)

A RUBBER-YIELDING PLANT IN THE TEMPERATE ZONE.—Rubber is obtained at the present time almost entirely from plants of the order Sapotaceae, indigenous to sub-tropical regions. Dybowski and Fron, according to Comptes Rendus, have discovered a tree in the temperate zone that also yields this substance. It is a Euphorbiacea, growing in northern China, Eucomia ulmoides, which was described in 1892 by Oliver and Weiss. All parts of the plant contain numerous milk-vessels. The authors have made experiments upon two very young specimens which are in the Colonial Garden of Paris. The dried leaves were found to contain 2.25 per cent. and the fruits 2.7 per cent. of a blackish caoutchouc of metallic luster, adjudged by connoisseurs to be of good quality. Attempts are being made to cultivate the plant in northern France, Tonkin and Annam. (Drog. Ztg.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Old Balish Sativa Again.—(G. T. M.)—See last week's Era, page 315.

Antiarrhythm Tablets.—(P. L.) These tablets may be obtained through H. A. Cassaber, 255 Columbus avenue, this city.

Manufacturers of Tumbler Washers, etc.—(S. & M.) Whitall, Tatum & Co., this city, and L. L. Rowe, 247 Portland street, Boston, Mass., manufacture tumbler washers and other soda fountain adjuncts.

Tichenor's Antiseptic.—(W. M. F.) We cannot give formulas for proprietary preparations. Some formulas for antiseptic solutions may be found in reply to another correspondent in this issue.

Liquor Ammonii Anisatus.—(L. E. G.) This preparation is official in the German Pharmacopoeia, and it is made by dissolving 1 part oil of anise in 24 parts of alcohol, then adding 5 parts water of ammonia. The resulting liquid is yellowish and clear.

Unguentum Crede.—(J. V. F.)—This specialty is stated by Schering and Glatz, 58 Maiden Lane, this city, American agents of the German manufacturers, the Chemische Fabrik von Heyden, to be an ointment of soluble metallic silver. We cannot give the formula.

Dustless Floor Polish.—(H. G. M.) The following formulas have been contributed to this journal: (1) Neats-foot oil, cottonseed oil, petroleum oil, of each, equal quantities. For the latter may be used that known on the market as "golden machine oil." A part of the cottonseed oil may be displaced by lard oil. A coating of the mixture is applied to the floor with a mop. (2) Melt together 5 parts beeswax, 2 parts paraffine, and 10 parts stearic acid. Then incorporate 5 parts oil of turpentine and 5 parts benzine. Raw sienna triturated with linseed oil or varnish may be added if desired.

White Ink.—(H. J. D.) Triturate together 1 part of honey and 2 parts of dry ammonia alum. Dry thoroughly and calcine in a shallow dish over the fire to whiteness. Cool, wash and rub up with enough of gum water to use. (2) Fine French zinc white or white lead rubbed up with gum water to the proper consistency. (3) Mix pure, freshly precipitated barium sulphate or flake white with water containing enough gum arabic to prevent the immediate settling of the substance. Starch or magnesium carbonate may be used in a similar way. They must be reduced to impalpable powder.

Liquid Headache Remedy.—(M. T.) (1) Caffeine 20 grains; ammonium carbonate, 20 grains; elixir of guarana, 1 fluid ounce. Mix and give 1 fluid dram every hour until relieved. This mixture is recommended as particularly suitable for neuralgic headaches. (2) Ammonium bromide, 1 dram; aromatic spirit of ammonia, 1 dram; syrup of orange, ½ ounce; water, enough to make 3 ounces. Mix. Two tablespoonfuls for the first dose; then one tablespoonful every 4 hours until the headache is relieved. (3) Iron and quinine citrate, 1 dram; potassium bromide, 2 drams; tincture of orange, 1 dram; syrup, 5 drams; water, enough to make 6 ounces. Dose: one tablespoonful two or three times a day.

Cheap Solvent for Naphthalene.—(W. M. L. W.) Probably the cheapest solvent for naphthalene is petroleum benzene, though carbon disulphide may be employed. Other solvents are: methyl and ethyl alcohol, chloroform, ether and some of the fixed oils. A solution of naphthalene in benzene has been recommended as an insecticide, but owing to the inflammable character of the benzene, the employment of the preparation is attended with considerable danger.

To Charge Fire Extinguishers.—(J. D. C.) The Babcock fire extinguisher is charged with a solution of bicarbonate of soda in water, and sulphuric acid, in a lead bottle, which, when required is turned over by a crank, sparkling the acid into the water containing the bicarbonate of soda. Carbonic acid gas is instantly generated, by which a pressure is obtained sufficient for throwing the whole contents of the apparatus on to the fire. To make the solution 5 parts of sulphuric acid to 6 parts of bicarbonate of soda (both by weight) are employed. Other combinations are used, such as carbonate of ammonium, carbonate of potassium, etc.

Elixir of Beef from "Fresh Beef."—(W. M. P.) We much prefer to make an elixir directly from an extract of beef prepared by Liebig's method, as recommended in the National Formulary for the preparation of wine of beef. However, the following formula is suggested: Cut 2 pounds of the lean of freshly killed meat very small. Put it into 8 times its weight of cold water and heat gradually to the boiling point. When it has boiled for a few minutes strain through a cloth and evaporate the liquor gently upon a water-bath to about 4 fluid ounces. When cold, add enough simple elixir to make the whole measure 2 pints. Allow to stand for several days, and filter. In cutting the meat great care must be taken to exclude all fatty portions.

Antiseptic Solution.—(J. F. M. C.) See this journal October 12, 1899, page 505. (1) An effective antiseptic and disinfecting solution is prepared, according to *Drug, Ztg.*, by mixing 2.5 Gm. of chinisol, 3.5 Gm. of carbolic acid, and 20 drops of o. of eucalyptus with sufficient water to make 700 cc. (2) Dissolve 240 grains sodium bicarbonate, 240 grains borax, 10 grains sodium salicylate and 10 grains sodium benzoate in 64 fluid ounces of water. In 1 fluid ounce of alcohol dissolve 5 minims eucalyptol, 5 grains thymol, 2½ grains menthol, and 3 minims oil of wintergreen, and add to the solution of the salts in water. Mix; then add ¾ fluid ounces of glycerin and enough water to make the whole measure 1 gallon. Allow to stand 24 hours and filter.

Production of Flames.—(J. W. E.) wants the names of any two fluids or compounds, which, when brought together, will at once ignite; or the names of any chemicals that will produce similar results.

There are a number of experiments of this character. Fire may be produced by adding fuming nitric acid to oil of turpentine, about a dram of the latter being placed in a saucer, and an equal quantity of the former being poured into it. Ignition immediately takes place, leaving only a little resinous matter in the saucer. Or, take 1 ounce of turpentine and ½ ounce of nitric acid, the latter having had added to it a few drops of sulphuric acid. To ignite: pour the turpentine into a saucer and carefully add the acid.

"Fire at Command."—Dip a glass rod into sulphuric acid and touch the moistened end to the top of a cone composed of 3 parts of powdered potassium chlorate, 1 part powdered white sugar, made into a paste with mucilage of acacia and carefully dried. In a few moments the cone will burst into flame.

An experiment sometimes performed by teachers of chemistry to show one of the methods by which hydrogen may be obtained consists in placing in water a piece of metallic potassium, the latter abstracting oxygen from the water so violently that the heat developed is sufficiently great to cause the hydrogen to inflame. This experiment and others are outlined in many text books on general chemistry.

Transparent Mirrors.—(F. O. C.) A "transparent" mirror, the invention of Alfred Roos, Heilstadt, Germany, was described in this journal, May 9, 1895, page 590, but the details of the manufacture of the glass were not given. When the mirror is placed in the wall between the back room and a shop it is stated that the occupant of the first-named apartment can see into the shop, while to a person in the shop the surface of the glass appears as a mirror. Several inventions of this character have been recorded, that known as the "translucent platinum mirror," exhibited in the French section at the Columbian Exposition in 1893, having been the subject of considerable attention. This mirror is also made by a patented process, the inventor being M. M. Dodé, Reims, France. Some information on the so-called "Japanese magic" mirrors was printed in this journal of June 8, last year, page 767.

Confectioners' Colors.—(P. O. C.) See this journal March 15, 1900, page 286, where may be found several formulas, and a list of substances used, for imparting various shades of red to confectionery, cakes, etc. For blue, use Prussian or ultramarine blue, or the aniline dyes, Lyons blue, light blue, or Couper's blue. Yellow: carmine, light saffron, turmeric or fustic. Green: mixture of one of the blues with yellow, or the aniline dye malachite green may be used for the purpose. Purple: Paris violet or methyl aniline. For coloring sugar used by confectioners and bakers the following method furnished by a manufacturer may be employed: Take any number of pounds of A sugar, sieve, reject everything save the large white crystals. Place them into a candy pan; add a little red color, either prepared cochineal or carmine. With the hands rub the color thoroughly through the sugar until it is as red as desired. Then spread it on trays, or on large sheets of heavy paper to dry. Sugars having other colors, such as orange, green, yellow, etc., may be produced by proceeding in the same manner, using suitable coloring substances.

Ink for Writing on Metal Surfaces.—(J. G. & Co.) Inks for writing on metallic surfaces may be made as follows: (1) One part verdigris (acetate of copper), 1 part sal ammoniac, ½ part soot, 10 parts water; stir well; write with a quill. (2) One grain sulphate of copper dissolved in 20 grains water; add 2 drops hydrochloric acid, and enough solution of gum arabic to make the ink adhesive. To make the writing appear at once add a little pyrogallic acid. Write with a copper pen. (3) Dissolve 2 ounces shellac in 1 pint alcohol, filter through chalk, mix with finest lampblack; forms a jet black lustreless ink, insoluble in water. (4) Take ½ pound of nitric acid and 1 ounce muriatic acid. Mix and shake well together, and then it is ready for use. Cover the place you wish to mark with melted beeswax; when cold, write your inscription plainly in the wax clear to the metal with a sharp instrument. Then apply the mixed acids with a feather, carefully filling each letter. Let the acids remain one to ten hours, according to the appearance desired; then wash and remove the wax. (5) Chloride of platinum, ¼ ounce; soft water, 1 pint; to be kept in glass and used with a quill pen. (6) Verdigris, sal ammoniac and levigated lampblack, of each, ½ ounce; common vinegar, ¼ pint; mix thoroughly.

Tanret's and Haines' Tests.—(W. M. P.) Both of these tests are employed in the analysis of urine. Tanret's test, known also as the "potassium-mercuric iodide test," is a most sensitive test for albumin, and is made by dissolving in distilled water separately 3.32 grams potassium iodide, and 1.35 grams bichloride of mercury. The solutions are then mixed, the resulting compound being a double iodide of mercury and potassium, to which 20 cc. of acetic acid is added, and the whole made up to 100 cc. with distilled water. The test is applied by the contact method; the reagent, specific gravity 1.490, is introduced into the test tube first, and the urine poured in carefully to form a distinct layer above it. The test may also be applied by keeping the acid and the mercuric iodide solution separate. The urine is then acidified, first with acetic acid, and the reagent added to a half test-tubeful of urine, and if albumin be present it is immediately caused to fall out of solution in a white cloud more or less pronounced, according to the quantity present. The test re-

sponds to all modifications of albumin, also to peptone and the proteoses, the vegetable alkaloids, etc.

Haines' test.—Take pure copper sulphate, 30 grains; distilled water, ½ ounce. Make a perfect solution and add glycerin ½ ounce. Mix thoroughly, and add 5 ounces of solution of potassa. In testing with this solution take about 1 dram and gently boil it in an ordinary test-tube. Next add from 6 to 8 drops, not more, of the suspected urine, and again gently boil. If sugar be present a copious yellow or yellowish-red precipitate is thrown down. If no such precipitate appear, sugar is present. This test solution is stable, and though kept on hand indefinitely, it is said, it may always be depended upon to be in order for testing.

Coloring Glass Globes.—(W. M. P.) The process generally recommended for coloring incandescent lamp globes is to coat them with a thin solution of colloidion, in which has been dissolved aniline of the required density. To "frost" the globes, omit the dye. Colored films for show globes may be prepared by Clague's process as follows: For a five-gallon show globe soak 1 ounce gelatine in water; dissolve 15 to 25 grains anilin dye in warm water, add to the softened gelatine and warm till melted; then add 1 dram carbolic acid. When the solution has cooled to about 150° F., pour it into the show globe. Place the show globe in a warm position until it has acquired a temperature of from 90° to 100° F., and then remove. Now keep turning it upside down and round about until the gelatin shows signs of setting, then put it on its stand and allow the jelly not adhering to the sides to settle to the bottom. Leave the stopper out for a few hours. If the first attempt is not a success, it is only necessary to put the show globe into a warm place and try again. The process is an easy one, and has been applied to half a dozen show globes with ease and success. As to the colors the following have been tried: Malachite green, a good color to work with, and strikingly like sulphate of copper solution; about 25 grains to 6 ounces is required. The color fades somewhat, so that it is just as well to make it a trifle dark. Methylene blue, 15 grains, a rich color very like ammonio-sulphate of copper. Methyl violet, 15 grains, a rich bluish-red; can be made to vary according to the dye used. Technically, R. means red; R.R., redder; R.R.R., still redder. The blue shades are similarly indicated by the affix E. Flamingo gives the nicest red. Browns may be got with Bismarck brown; brownish-yellow with the same dye in a smaller proportion, but the colors are not so striking as those named earlier. Methyl orange is wanting in brightness and transparency. Of course, if the globe is exposed to the sun the film must be allowed to harden well before the show globe is placed in position. Carbolic acid or some preservative is required to prevent mould from liquefying the gelatine.

A frosting mixture to be painted on the glass is composed of sandarac, 18 drams; mastic, 4 drams; ether, 24 ounces; benzine, 16 to 18 ounces. Of course this application is not to be exposed to high temperature.

Registration of Trade Marks and Label Copy-rights.—(A. and B.) You can protect your proprietary remedy by trade mark or label copyright, either of which may be registered at the Patent Office at Washington, D. C. The United States law provides that any firm or corporation may secure an exclusive right to use a trade mark by complying with the official regulations of the Patent Office. The especial advantage of registration is, that it facilitates the pursuit and stoppage of infringements by authority of the Government. As defined by law, trade mark consists of a distinctive or special name or title for an article, or a device, design, or stamp, or combination thereof, applied to merchandise, or the envelopes or packages. The mere business name of a person is not registerable as a trade mark, nor can words that are merely descriptive of an article be registered as trade marks. In other words, you may select as your trade mark any non-descriptive word or words, picture, figure, autograph, monogram, or a combination of any or all of these, provided the same has not been used on a similar class of goods. The only way that you can find out whether the mark you have selected has been registered is to search the records of the Patent Office, or

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA COURSE STUDENTS.

Students will save themselves and the Director much unnecessary correspondence by keeping in mind the following rules of the Course:

1. Examination papers are not returned to students, but are preserved as a part of the permanent records of the Director's office.
2. Questions on the lectures are mailed to students as soon as received from the printers. If not received by the student within three weeks after the lectures, they have probably gone astray in the mails, and a card of inquiry may then be addressed to the Director.
3. It is expected that students will thoroughly study the lectures before looking at the questions. The student who confines himself merely to the questions in his study will necessarily narrow the range of his work, and will attain a lower grade than he otherwise would.
4. Communications respecting non-receipt of the lectures, concerning class pins, or regarding financial matters should all be addressed to The Pharmaceutical Era, and not to the Director.

J. H. BEAL, Director.

We have on hand a supply of pins for Era Course in Pharmacy students. These are made up in attractive styles, 14 karat gold, beautifully enamelled, and bearing a mortar and the letters E. C. P. in special design. The pins are mounted in three styles—safety pin, stick pin and button. The price is \$2 (either style), which is barely sufficient to cover the cost of production. Students who desire these pins are requested to send in their orders (with cash) at once, stating style of pin desired.

Read this Bulletin each week.

employ someone to do it for you. Trade marks remain in force for thirty years, and may be renewed for thirty years more. The Government's fee for registering a trade mark is \$25; for registering a print or label, \$6. By the word "label," as used in the Act of Congress providing for such registration, is meant a slip or piece of paper, or other material to be attached in any manner to manufactured articles, or to bottles, boxes and packages containing them, and bearing an inscription (not a trade mark), as for example, the name of the manufacturer, the place of manufacture, the quality of goods, directions for use, etc. A "print" (see Construction of Statutes Relating to the Registration of Prints and Labels, as amended and issued by the Department of the Interior, 1893), is a device or representation not borne by an article of manufacture or vendible commodity, but in some fashion pertaining thereto—such, for instance, as a pictorial advertisement thereof. To secure registration of a trade mark, label or print, application must be made to the Commissioner of Patents, Washington, D. C., who will furnish you with a blank form to be filled out and signed by you requesting such registration.

IODOFORM OINTMENT does not become discolored when kept in well closed vessels, protected from light. Exposure to light causes darkening due to liberation of iodine, which may be identified with starch paste. The discoloration may be removed or prevented by adding a little sodium hyposulphite in 10 per cent. solution. An ethereal solution of iodoform also becomes colored in a short time when exposed to light, while it remains unchanged when kept in the dark. (Pharm. Post).

Won the Third Prize.

The following paper was awarded the third prize in the Scott & Bowne contest.

Why a druggist injures himself most by trying to persuade his customers to take something else when **SCOTT'S EMULSION** is asked for?

Twenty-five cents now against dollars in future. Confidence of the physician and the public is the main stock in trade of the Druggist. Without it he will find business very unsatisfactory.

If **SCOTT'S EMULSION** is asked for, it is evident that it is wanted. The mind has been made up either by direction of a physician or from reading advertisements that **SCOTT'S EMULSION** is wanted and the druggist must supply the demand. Now let him try to persuade them to take another article, they wanted **SCOTT'S** and **SCOTT'S** they are going to have, the druggist has once before supplied them an unsatisfactory article or attempted to do so, so they try another place, having lost confidence in the first place, they continue to try the second and their friends go with them, there goes a long string of customers to the competitor who sells what is asked for without question or suggestion.

Then if **SCOTT'S** was recommended by a physician, as is often the case, he hears the whole of it, and in the future his prescriptions go elsewhere, as he believes the druggist who interferes with his patient carrying out his orders, would also use his own judgment in filling a prescription for a like consideration, say fifteen to twenty-five cents.

Therefore we have fifteen to twenty-five cents immediate profit in one scale pan, while in the other we have the doctor, the customer and that big old fellow **Public Confidence** which means dollars upon dollars in the future. It is easy to see which side outweighs and thereby where the druggist hurts himself most and **SCOTT'S EMULSION** little.

Why a Druggist should give his customers Scott's Emulsion when called for?

Because he calls for it, if it does not please him, it is not our fault, if we give him something else and it should displease him, he blames us and we are responsible for the loss of his money.

Why does he call for it? His physician has told him to do so. Who told the physician? **SCOTT & BOWNE**; he tried it and had the results been unfavorable, would not have tried it again.

He saw it advertised, and decided to try it. Who paid for the advertisement?. **SCOTT & BOWNE**. Then both ways **SCOTT & BOWNE** sent him to the druggist, then he is **SCOTT & BOWNE'S** customer and not the druggist's.

Then when the customer comes to the druggist as a result of **SCOTT & BOWNE'S** investment, they are entitled to their profit on the trade as a return for their investment.

Had it not been for their advertisement, the customer would never have known what **SCOTT'S EMULSION** was, or that the druggist has it, and when another preparation is offered, it is a reflection on the doctor who recommended it, or on the customer who asked for it, and this, like plain Cod Liver Oil, does not set well on the ordinary stomach.

Therefore, I consider it to the interest of all concerned that **SCOTT'S EMULSION** be given when called for, and if the druggist wishes to replace it, let him advertise and create a demand in the same way that the proprietors of **SCOTT'S EMULSION** have done.

Anstell, Ga.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

South African advices show that the Free Staters are surrendering, and the British are making preparations for the invasion of the Transvaal. The Boers, however, have destroyed several railway bridges over the Modder River, and are said to be gathering their forces strongly at Kroonstad, in the northern part of the Free State, to oppose the British advance into the South African republic. The burghers are also in considerable force in the Biggarsberg range, where they may make a stand.

Col. Plumer's Mafeking relief force appears to have been driven back, after casualties on both sides. Feeling is strong in Cape Town against the leniency with which rebels of Cape Colony and Natal are being treated by the British authorities.

The rebellion in the Prieska District has been suppressed and Lord Kitchener is returning. It is reported from Lorenzo Marquez that Pretoria is prepared to stand a siege of two years, and that Boer women, from whom the Boers have received their arms, are entreating to be allowed to shoot British officers imprisoned at Pretoria.

It is announced from the Transvaal capital that the Italian government has declined to intervene. Cecil Rhodes sailed from Cape Town for England last week.

The Philippines.

Insurgent plotting is said to be rife in the city of Manila itself. A Filipino junta has its headquarters there and keeps in close touch with the Filipino junta in Hong Kong. A conference of rebel leaders from all over Luzon was recently held in Manila.

Native activity and resistance to the American forces are reported to be increasing as the rainy season approaches, and although Gen. Otis has officially announced that the war is over, many army officers believe that armed resistance will be kept up for years. Travel without a military escort is said to be perilous in any part of the island.

Nearly all the towns in the northern part of Luzon are now garrisoned by American troops, and Gen. Bates is driving the insurgents out of the southern towns and garrisoning them. Several of the native mayors of these towns have resigned, and declared their unwillingness to have anything to do with the Americans.

Lieut. M. S. Batson, Fourth Cavalry, who achieved distinction in the Philippines during the active campaigns of last summer and winter in command of the "Macaabee Scouts," has arrived in Washington on sick leave.

The new Philippine Commission will sail from San Francisco for Manila on the transport Hancock April 15. A report from Manila indicates that the cruiser New Orleans must undergo extensive repairs in order to continue in active service.

Bishop Potter has just returned from a trip around the world. He spent some time in Manila, and says that he has changed his views on the Philippine question, and now believes that the United States should keep the islands.

Other Foreign News.

Mexico has accepted the proposition of the United States to hold a Pan-American Congress in the City of Mexico early in 1901.

A dispatch from Buenos Ayres says the rebellion which recently broke out in the Province of Entre Rios has collapsed, and the rebels have surrendered.

The Japanese Government has taken steps to prevent any further emigration of its subjects to the Hawaiian Islands while the present plague situation lasts. Premier Lyne, of Sydney, New South Wales, is making extraordinary efforts to eradicate the plague. Darling harbor has been quarantined, and attendants at the exhibition have been inoculated. Adelaide, capital of South Australia, is infected with the plague.

There is no truth in the report that Osman Pasha, the hero of Evrna, is dead. The famous Turkish general has been sick for a week, but his health is improving.

The bubonic plague is increasing in India, recently five thousand deaths being reported from Bengal in a week.

In a conversation with Ambassador White in Berlin last week, the Emperor referred repeatedly to the "open door" policy in China, which he emphatically espoused, saying, "We must all do our best to establish and maintain an open door there."

The report on the financial condition of India shows that more than \$15,000,000 will be needed to cope with the conditions caused by the famine.

Russia is said to be making special efforts to increase her shipping, and will give free trade in shipbuilding materials and pay bounties for the establishment of navigation schools.

The verdict of several of the Powers against the American locomotives that were tried in Bavaria is that "notwithstanding their faultless construction, they cost considerably less than locomotives of similar style of Prussian make."

The increasing hostility of the Dowager Empress of China toward foreigners has been shown by the promotion of several officials whose actions were irritating to several of the Powers.

The coal famine continues unabated throughout Germany. Activity in Russian naval circles in the Korean Straits gives rise to fears of an early outbreak of war in the East.

A convention in the interest of Irish National unity will be held in Dublin shortly.

Incendiarism continues in Barbadoes. There were nine plantations fired during the week which ended March 17. The steady decline in the revenue of Barbadoes is causing uneasiness among the authorities.

DOMESTIC.

Congress.

Both houses of Congress passed the Puerto Rican relief appropriation bill last week. The Puerto Rican tariff bill is still before the Senate, and an attempt to pass it will probably be made this week.

The House defeated the Loud postal bill last week. The measure was intended to take books, advertising circulars and other such matter from the second class of mail matter, where they are now carried, and make them pay higher rates of postage.

Representative Shafroth, of Colorado, has introduced a bill admitting Nicaragua into the Union as a State, the purpose being to acquire the right to construct the Nicaragua Canal through that country.

A resolution was introduced in the House last week by Mr. Fitzgerald, of Massachusetts, directing the Postmaster-General to exclude the book "Sapho" from the mails.

The New York Board of Trade and Transportation has unanimously condemned the Puerto Rican tariff bill.

A resolution was unanimously adopted last week by the lower House of the Iowa Legislature, declaring "that the people of Iowa are unalterably opposed to the Puerto Rican Tariff bill, passed by the lower House of Congress."

The Senate Committee on Privileges and Elections has made a report in favor of Senator Scott, of West Virginia, the legality of whose election has been questioned.

It is reported in Senatorial circles in Washington that Great Britain is willing to consent to the defensive use of the Nicaragua Canal by the United States, being thus assured that the neutrality of the waterway would be maintained.

Senator Lodge in the Senate and Representative Moody in the House have introduced a joint resolution making the senior major-general of the army, while commanding the army, a lieutenant-general, and the adjutant-general of the army a major-general.

Other Domestic News.

The Goebel murder suspects are on trial in Frankfort, Ky., and feeling is running high. It is feared that bloodshed may result.

The United States Supreme Court affirmed last week the decision of the Texas courts barring the Standard Oil Company from Texas for violating the Texas anti-trust law. There is a similar case before the Nebraska Supreme Court alleging that the Standard Oil Company has violated the anti-trust law of that State. Two railroad companies are on trial in Canada charged with violating freight rate discriminations in favor of the Standard Oil Company, and they have practically admitted that the charges are true.

Labor leaders threaten to call out 100,000 or more marchers all over the country in a strike for a nine-hour day. Fifteen hundred machinists in Cleveland, O., struck for a nine-hour day last week.

The publishing house of D. Appleton & Co., New York, has been closed for a week.

The Metropolitan Street Railway, in New York, has obtained control of the Insolvent Third Avenue road, and now practically all the surface roads on Manhattan Island are under one control.

Ground was broken for the new underground rapid-transit road in New York last Saturday.

Rev. C. M. Sheldon, who ran "The Topeka Capital" for a week as a Christian newspaper, will receive over \$10,000 as his share of the profits, and will devote the money to the improvement of a negro settlement near Topeka, for which he has done a great deal in the last few years.

There has been an increase of 1,272 in the number of smallpox cases in the United States during the past

week. There are now over 5,000 cases in the country, of which Louisiana has over 2,000. California has three, the smallest number. New York has eleven. Smallpox has broken out at Yale and Columbia Universities, and diphtheria at Princeton.

Commander Seaton Schroeder has been appointed Naval Governor of the island of Guam, to succeed Captain Leary, who asked to be relieved. Captain Leary issued a proclamation last week abolishing slavery on the island. Commander Schroeder expects to reach his new post in May or June.

The Military Governor of Cuba has decided to have the island represented at the Pan-American Exposition in 1901.

Kansas will have an exposition in 1904, in celebration of the fiftieth anniversary of the organization of the territory of Kansas.

The Silver Republican National Convention is to meet in Kansas City on July 4, where the National Democratic convention will be held on the same date.

Distress is reported from many towns in Puerto Rico, and there are threats of trouble.

The Russell Anti-Trust resolution has been defeated in the Ohio House. The bill sought to require persons summoned to appear before trust investigating committees to bring all books and papers necessary to the inquiry and to tell all they might know.

The Navy Department has issued orders for the repair of the cruiser Boston, now at the Mare Island Navy Yard, at a cost of about \$300,000.

A treaty providing for the settlement by arbitration of claims of American citizens against Nicaragua was signed last week at the State Department.

The Grand Jury, in New York last week, found an indictment against Miss Nethersole, Hamilton Revelle, her leading man, Marcus Mayer, her manager, and Theodore Moss, lessee of Wallace's Theater, on account of the production of "Sapho."

The Navy Department has been notified that the battleship Kearsarge will be ready for her official sea trial on the 3d of April.

The Secretary of the Navy has granted ship building contracts engaged in the construction of about forty torpedo boats an extension of one year's time for the completion of her contracts.

The Delaware Republican State Convention met last week and endorsed the administration of President McKinley and urged his re-nomination.

Secretary Hay and Ambassador Cambon have signed a protocol extending the time allowed for the ratification of the French reciprocity treaty.

Carnegie and Frick have patched up their differences; a new company is to be formed with a capitalization of \$200,000,000.

Arrangements are practically completed, it is announced, for an amalgamation by the Whitney syndicate and allied interests of all the big air power companies in the country, with a \$200,000,000 capital.

In future no American goods will be allowed to go north in Canadian vessels to skagway for local consumption there without payment of the regular duties. This is a victory for American ship owners.

Admiral Dewey has promised to visit St. Louis next May. He will arrive in St. Louis on May 2d, remaining there Friday and Saturday, and leaving for Memphis on Sunday.

THE DRUG NEWS.

TO LEGALIZE ALCOHOL TAX REBATE.

House Ways and Means Committee Gives a Hearing on Russell Bill.

At Washington on March 20 the Ways and Means Committee of the House of Representatives gave a special hearing on the bill introduced in the House by Mr. Russell of Connecticut, and in the Senate by Senator Platt, of the same State, which provides that the failure of the Secretary of the Treasury to prescribe regulations for the use of alcohol in the arts and in medicinal and other like compounds, as required in Section 61 of the Wilson Tariff act, shall not operate as a defence on the part of the United States to a suit of a manufacturer under that act brought in any court in the United States. If passed this bill would allow the recovery of rebates aggregating about \$6,000,000 on alcohol used in the arts and manufactures.

Ex-Postmaster General Don M. Dickinson, of Detroit, and H. B. King, of Washington, appeared at this hearing to support the bill in behalf of the manufacturers who made claims for the rebate.

The time was taken up almost wholly with the presentation of the legal questions involved, but a brief statement of the facts of the case was given. In 1894 an act was passed granting a rebate of the tax collected on alcohol used in the arts and in medicinal and other compounds, and the Secretary of the Treasury was directed to prepare and promulgate regulations carrying this into effect. This the Secretary declined to do, giving as an excuse that no specific appropriation had been made for carrying this section into effect and in the absence of such appropriation he had no funds out of which he could pay the expenses of prescribing the regulations and seeing that they were complied with by the manufacturers. Nevertheless the manufacturers took it for granted that they would receive their rebates in accordance with the law and proceeded to make contracts based on the cost of the alcohol without the tax.

Alcohol enters largely into many medicinal preparations in addition to being the base for a large number of proprietary medicines and the difference in the cost of taxed alcohol and untaxed alcohol made quite a difference in the price of the manufactured articles. It also enters into the composition of soaps, varnishes, etc., and is extensively used in the manufacture of hats and other articles. Before the passage of the bill, Dunlap, the New York hatter, used wood alcohol to dissolve the shellac which was used to stiffen the hats he manufactured, grain alcohol then being too expensive for use. Expecting to

get the rebate he changed from wood to grain alcohol, the latter being much less harmful to the operatives. Other instances were given in letters filed with the committee from all parts of the country where chemists and manufacturers had proceeded on the supposition that the law would be operative.

When the Secretary of the Treasury declined to prescribe the regulations and insisted on retaining the tax, which had already been collected, a suit was brought by the Brown Chemical Company of Baltimore to recover the rebate on the alcohol used by it. Later this suit was dropped as a test case, and that of Dunlap substituted, as there was less difficulty in proving the amount used and its purposes in the case of a hat manufacturer than in that of a druggist making a variety of preparations. The Dunlap case was heard by the Court of Claims, which held that in the absence of an appropriation the Secretary was within his rights; that the law was of no effect, and that the rebate could not be collected. The case was carried to the Supreme Court, which sustained the decision by a vote of 5 to 4. The law was repealed after standing for one year and nine months.

Mr. Dickinson said it was the manifest purpose of Congress to grant the rebate as an encouragement to the trade in this country as against that in Europe, where alcohol was employed extensively in manufactures, and he maintained that such purpose should not be overcome by the inaction of an executive official.

He argued that the legislative power of Congress could not be delegated to any executive officer, and he cited the decision of the Supreme Court in the case of the reciprocity provision of the act of 1890 in support of his contention. Secretary Carlisle therefore, he added, had no discretion under the Wilson law in the matter of making regulations, and his action could not nullify or repeal that act.

If Congress intended that alcohol should be free, Mr. Dickinson continued, the men who had suffered by the failure of the Secretary of the Treasury to make regulations should be entitled to have the taxes paid by them refunded. Mr. Dickinson pointed out that dealers, relying on the law providing for free alcohol for use in the arts, had reduced prices when they entered into contracts. It had been estimated that the dealers had lost \$6,000,000.

Chairman Payne said he understood from his investigation of the subject that some manufacturers made no reduction of prices, and others arranged with retail dealers for provisional rebates when the Government should make the rebate.

In conclusion, Mr. Dickinson explained that the bill

he advocated was to remove the technical defense which the United States now had.

Mr. King, Mr. Dickinson's associate, presented letters from various pharmaceutical firms setting forth loss alleged to have been sustained on account of reduced prices in the belief that they were to have free alcohol.

N. A. R. D. NOTES.

Chicago, March 22, 1900.

Chairman Payne, of the Committee on Ways and Means, House of Representatives, Washington, has informed Thomas Stoddard, chairman of the N. A. R. D. committee on national legislation, that he will appoint a convenient date in the near future for hearing the representatives of the N. A. R. D. on proposed legislation. The Proprietary Association of America desire to be heard at the same time.

The Northwestern Ohio Retail Druggists' Association has within its membership more than five-sixths of the druggists of Toledo. M. F. Newcomer, Toledo, has succeeded Clayton Reed as secretary. C. H. F. Lembke, the assistant secretary, would like to confer with the officers of Ohio associations who have in contemplation the adoption of the Louisville certificate plan.

The druggists of Multnomah County (Portland), Oregon, have organized and sent out an appeal to the druggists of the State to form similar county organizations to take action against cutters and department stores handling drugs and medicines. When enough counties have thus organized it is proposed to call for a reorganization of the State pharmaceutical association.

The Allen Co. (Lima), O., Druggists' Association, with a membership of twenty-three, has joined the national organization. The officers are J. P. Harley, Lima, president; F. S. Amstutz, Bluffton, secretary. The Lima Association becomes a part of the new organization but retains its membership in the N. A. R. D.

The treasurer of the N. A. R. D. has received since the last report, dues from the Vermilion Co. (Ill.), Schenectady (N. Y.), Saginaw (Mich.), Mahoning Valley (O.), and Will County (Ill.) pharmaceutical associations.

\$10,000 SUIT AGAINST W. H. TORBERT THROWN OUT OF COURT.

Dubuque, Ia., March 20.—A suit of considerable interest to the drug trade was thrown out of court in this city March 14. Some time ago one William M. Gibson, residing at Fort Dodge, sent to W. H. Torbert, a wholesale druggist of Dubuque, and obtained a quantity of phosphorus. When the sale was made the usual precautions were observed, the package correctly labeled, the phosphorus itself being immersed in a vessel of water, which was carefully packed in clay. On the outside plainly posted was a notice warning against removing the phosphorus from the water. Disregarding this notice, Gibson took the phosphorus out of the water, and was marking on a wall, when by accident he dropped it on the floor, and, as he picked it up, it ignited and badly burnt his hand. He thereupon sued Torbert for \$10,000 damages, his attorneys claiming that Torbert should have known from the mis-spelling and poor chirography in Gibson's letter that he was ignorant and should have refused to send him the phosphorus. Mr. Torbert's attorneys took the position that Mr. Torbert had the right to suppose that a man who wanted phosphorus understood its dangerous character. They claimed that the accident was the direct result of Gibson's own carelessness. Judge O'Donnell took this view and dismissed the case.

Kemper and Terrill, Druggists at La Junta, Colo.

Kemper and Terrill, formerly proprietors of a well-known drug store at Harrisonville, Mo., have sold their business at that place and purchased the Arcade Pharmacy at La Junta, Colo. Walter J. Kemper is the head of the firm.

Customer.—“Got any propenyl trihydrate?”

Clerk.—“No, we’re just out.”

Customer.—“Well, gimme five cents worth of glycerin.”

Home of J. C. Fox Destroyed by Fire.

The home of J. C. Fox, a member of the firm of McPike & Fox, wholesale druggists, Atchison, Kan., was destroyed by fire shortly after midnight, March 12. The house was one of the finest in Atchison, and the loss is estimated at \$10,000, partly covered by insurance. The fire was started by an incendiary, about whom there is much mystery. During the past winter Mr. Fox has been annoyed by an unknown enemy, or insane person, who has been throwing stones through the windows of his house. For several weeks previous to the fire an officer had been watching the house.

Emmert & Burrell Dissolve Partnership.

Emmert & Burrell, a well known drug firm of Freeport, Ill., whose existence dates back nearly half a century, dissolved partnership March 7. The business was started in 1846 by John S. Emmert, a brother of the senior member of the firm, and it is said there are not fifty people living in Freeport to-day who were there when the partnership was formed. Mr. Emmert will hereafter conduct the business, Mr. Burrell retiring on account of the multiplicity of his other interests.

Blairsville, Pa., Druggists Indicted.

Milton Kerr and G. M. Alter, retail druggists of Blairsville, Pa., were indicted March 9 for the illegal sale of liquor, the charges against the former being selling without prescription, selling without license, selling to minors, and selling on election day. The Anti-Saloon League is the prosecutor and will summon, it is said, 100 witnesses for the trial. Under the special prohibitory law for Blairsville the fine for selling liquor without a license is fixed at \$50, but if the parties are convicted of selling to minors and on Sunday, the Brooks law will come in, which means several hundred dollars fine and imprisonment.

New York and Vicinity.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

A regular monthly meeting of the Manhattan Pharmaceutical Association was held at the New York College of Pharmacy on Monday evening, March 16. President Reuben R. Smith occupied the chair, and the attendance was the largest in the history of the association.

The special committee appointed at the last meeting to devise ways and means for increasing the membership and extending the usefulness of the association submitted a report containing many suggestions and recommendations. It advised the employment of a salaried canvasser, changes in the constitution to make the yearly dues payable in quarterly instalments, and to drop members from the roll for six months' arrears; the establishment of a bureau or department to undertake the defense to the extent of \$200, of any member made defendant in a damage suit incurred in the legitimate discharge of his duties; and the founding of a beneficiary club for members of the association to provide in case of a member's death immediate aid for his family. The report also suggested the advisability of forming a co-operative buying club, in case the N. A. R. D. should fail to control the distribution of proprietaries, or if it should recognize as a jobber any existing concern of that kind. The report was discussed at some length, and most of the recommendations were adopted. The amendments to the constitution suggested will be voted upon next month. Some of the members of the New York Consolidated Drug Co., who were present, said that company had decided to admit others than members of the German Apothecaries' Association, and advised members of the Manhattan Association to join the Consolidated rather than to start a new concern of a similar character. After a deal of debate on the subject, in the course of which was described the recent conference between the Consolidated Drug Co. and F. E. Holliday, chairman of the N. A. R. D. executive committee, the chair was authorized to appoint a special committee of three members to examine into the matter.

Mr. Faber offered an amendment to the constitution to change the time of regular meetings. This will be voted on next month.

Chairman Bigelow, of the committee on legislation, reported the defeat of the Wilcox poison bottle bill and of the Henry bill for shorter hours for drug clerks. He also said the bill to amend the New York City Pharmacy Law and the bill for the elevation in rank of the hospital stewards in the National Guard were progressing favorably, and he was hopeful of their passage.

A communication was read from the Erie County Pharmaceutical Association containing a resolution favoring the Bouteille bill for the repeal of the proprietary stamp tax, and announcing that Chairman Stoddard, of the N. A. R. D. committee on legislation, had secured the promise of a hearing on this bill by the Ways and Means Committee of the House of Representatives. The Erie County Society's resolution was adopted, and Clarence O. Bigelow was delegated to represent the Manhattan Association at the hearing, the date for which has not yet been decided upon.

In his notification of the meeting the secretary had announced that a committee would be appointed to nominate officers for the ensuing year. The meeting refused to sanction the appointment of such a committee, and the only nominations will be made on the floor at the April meeting, when the election will be held.

Shorter Hours Bill Amended to Senate.

In the New York State Senate on March 23 Senator Ford called up the Henry bill for shorter hours for drug clerks in New York City, which had been defeated in the Senate the preceding week, and moved to amend it by striking out the section providing for the enforcement of the act by the State Factory Inspector. This amendment was adopted and the bill was placed on the calendar for passage this week.

It is understood that this recalling of the bill after the Senate had refused to pass it was brought about by Governor Roosevelt, who last year pledged himself to do all in his power to secure legislation to shorten the working time of drug clerks. The Governor was very much disgusted when the Henry bill was defeated by the Senate, and he let the Senators know it. He spoke out plainly and said he knew that Tammany opposition had downed the bill because the small amount of patronage involved could not be controlled by the Democratic machine. His own position on the bill was that he earnestly hoped it would pass as drawn, giving power of inspection to the State Factory Inspector's department, but rather than have it fail to pass at all he was willing to have that section on inspection dropped. So if the bill is passed by the Senate in this form and the Assembly concurs in the amendment, the Governor may be counted upon to sign it.

New York Section, Society of Chemical Industry.

A regular monthly meeting of the New York Section, Society of Chemical Industry, was held at the New York College of Pharmacy on Friday evening, March 23. The programme comprised the following papers: "Process for Sensitizing Paper," by R. C. Schupphaus, with demonstrations in which the author had the help of Prof. Virgil Coblentz; "Smokeless Powder," with demonstration, by H. C. Aspinwall; "Statistics of Custom House Laboratory Work," by R. W. Moore; "Varnish Analysis," by P. C. McIlhiney; and "The Determination of Sulphur Dioxide in Sulphites and Thiosulphates, with Iodine," by M. L. Griffin.

Announcement was made that the president of the Society would take with him to Paris, for the Fourth Congress of Applied Chemistry, papers written by members which were of sufficient interest.

The proposed excursion of members to London and Paris during the World's Fair, it was announced, had been given up because of the difficulty of securing satisfactory accommodations from the steamship companies.

New York Wholesale Bowlers.

Six games were rolled at Reid's alleys last Saturday in the tournament of the New York Wholesale Drug Trade Bowling Association. The feature of the day was the bowling of J. Ruddiman, of the Dodge & Olcott team, who rolled a score of 244 and thereby broke the association's individual score record. The team scores follow: Roessler & Hasslacher Chemical Co., 718; Merck & Co., 637. R. W. Robinson & Son, 719; Merck & Co., 593. R. W. Robinson & Son, 756; Roessler & Hasslacher Chemical Co., 593. General Chemical Co., 724; Dodge & Olcott, 707. National Lead Co., 797; General Chemical Co., 736. Dodge & Olcott, 829; National Lead Co., 697.

New York College of Pharmacy Elects Officers.

The annual meeting of the New York College of Pharmacy was held on Tuesday evening, March 20, with fifty members present. The only business transacted was an election of officers to serve for the ensuing year. The regular ticket named by the nominating committee was elected without opposition. The new officers are:

President, Charles F. Chandler; first vice-president, William M. Massey; second vice-president, Gustavus Ramsperger; treasurer, Clarence O. Bigelow; secretary, Thomas F. Main; assistant secretary, O. J. Griffin. The following trustees were elected to serve three years: Charles Rice, Herbert D. Robbins, F. W. Carpenter, Arthur H. Elliott and Felix Hirsman.

NOTES.

—Lyman Parke, who has been for some time past local buyer for the crude drug department of Parke, Davis & Co.'s New York establishment, has gone to Detroit to take a position in the home office of that corporation. Before he left this city last week two luncheons were given in his honor at the Drug Club, one by Colonel B. W. Fitch

and one by J. H. Kaufman. Mr. Parke made many friends during his stay in New York, and all wish him the greatest success in his new position.

—Among the out-of-town visitors to the local wholesale market during the week were: S. McClintic, Hot Springs, Va.; A. B. Huested, Albany, N. Y.; H. A. Stoke, Reynoldsville, Pa.; G. H. Ames, Corry, Pa.; D. E. David, Danbury, Conn.; J. H. Lee, Monroe, N. C.; E. J. Dunn, Schroon Lake, N. Y.; T. C. Wood, Haverstraw, N. Y.; F. H. Slater, Mattawan, N. J.; and Bunting Hankins, Bordentown, N. J.

—John J. Murphy, the well-known drug clerk who is superintending one of the stores of Walter S. Rocky on the upper west side of Manhattan Borough, has been appointed to the office of Fire Commissioner of Mount Vernon. Mr. Murphy has been connected with the fire department of that town, where he lives, for several years.

—Edward G. Wells, secretary of the M. J. Breitenbach Co., last week returned from the Bermudas, where in company with Mrs. Wells, he had been enjoying about a month's vacation. He says rain fell eighteen days out of twenty-five during his stay, and he had a stormy trip coming home, but he had a good time notwithstanding.

—The annual "commencement" exercises of the New York College of Pharmacy will be held at Carnegie Hall, Seventh Avenue and Fifty-seventh Street, on Wednesday evening, May 2. The college year will close a week earlier than that date, but the hall could not be obtained for an earlier evening.

—The frame shed, 300 feet long, at Port Richmond, Staten Island, owned by the Jewett branch of the National Lead Co., was destroyed by fire on March 20. The building contained large quantities of white lead and considerable machinery. The loss was estimated at \$100,000.

—R. H. Saunders will succeed Dr. J. H. Bird in the local establishment of Parke, Davis & Co., when the latter goes to Chicago next month to resume the practice of medicine. Mr. Saunders has been in the employ of the firm in various capacities for several years.

—Henry G. Hirscher, who formerly conducted a pharmacy at Lexington Avenue and Ninety-third Street, has opened a new drug store at No. 1,133 Washington Avenue, Bronx Borough.

—Dr. T. H. Chattle, proprietor of the Rhinelander Pharmacy at Second Avenue and Sixty-fifth Street, Manhattan, married Miss M. J. Grimshaw, of this city, on March 21.

—S. C. Powell, dealer in silver novelties, glass sundries, etc., has moved from No. 53 Maiden Lane to more commodious quarters at No. 41 Maiden Lane.

—Henry L. Carter has succeeded C. W. Cannon & Co., as proprietor of a pharmacy at Broadway and Eighty-fifth Street, Manhattan.

—Babcock & Finch have opened a handsome new drug store at Amanssett, L. I., which they call the Green Oak Pharmacy.

IN AND ABOUT BOSTON.

Spotters Trying to Round Up Massachusetts Druggists.

Boston, March 24.—Strong efforts appear to have been made in Brockton to prove that some of the druggists have been breaking the liquor laws. The apothecaries say that spotters are abroad, although the police deny this. One stranger who has been on a friendly footing with a prominent special officer went to considerable trouble in this connection, making a pretext of purchasing a half interest in a drug store in the Centreville district. He went behind the counter a few days on trial, and, according to the proprietor, was surprised that the latter would not allow him to sell alcohol on Sunday. He did not seem to get his expected money for the purchase and after two weeks the partnership was declared off. When leaving the store he is said to have stated that he intended to make it warm for the proprietor in the course of a few weeks. Although this man was a regular visitor at the police station, the officers there claimed not to know his name.

Several of the druggists claim that they have been

approached by strangers recently who were anxious to purchase liquor and who they believe to have been spotters.

A Druggist's "Custies in the Air."

Boston, March 24.—W. F. Weld, a Malden druggist, is one of a small company of men interested in a project to be developed in Guatemala. The company expects to go into coffee and cocoa growing, gold mining and general corporation business there, including the development of the rubber industry. Mr. Weld is one of the stockholders of the company, which as yet has made no attempt to sell stock. It is said that a Malden banking house has offered to finance the deal. Already a clergyman who is interested in the scheme has left his pulpit and gone with an engineer to prospect a little for the company. It is rumored, but cannot be verified, that the company will be capitalized for \$1,000,000. Samples of gold and copper from the properties which the company expects to operate have been analyzed in Boston.

"Irregular" Practitioners Alarmed.

Boston, March 24.—Christian Scientists, spiritualists and meta-physicians have been somewhat alarmed by the strange position in which they think they find themselves owing to an advertised hearing "on the annual report of the Board of Registration in Medicine." Although there was nothing of menace to the public tranquility in the conventional announcement, something in the report interested these people more than normally. As a matter of fact the report contained the recommendation of the secretary and executive head of the board, Dr. Edwin B. Harvey, that the law of 1894 be so amended as to exclude from the practice of healing independent practitioners of the classes and schools described, and providing fine or imprisonment for violation of the law. The supposition was, naturally, that a bill might develop from the report and it was to oppose hostile legislation that the representatives of the three cults assembled this week at the State House.

After explaining several points in the law to which, he said, no objection had been raised when they were originally proposed, Dr. Harvey explained that the existing law relating to "irregular" practitioners was contradictory, for one section of the law recognizes them and another opposes them. This is a condition of things which the board hopes to see remedied.

NOTES.

—Alexander Cawthon, a young druggist of Selma, Ala., who shot and killed a New York traveling salesman on March 4 in Selma, is well known in Boston, where his sister attended the Boston Conservatory of Music for several years. Alexander Cawthon visited here frequently during that time and both he and his sister made many friends in Boston, and those who knew him speak in the highest terms of him and in the kindest manner. He made many acquaintances among the drug trade.

—Alfred A. Burditt, an old-time druggist of Clinton, has just gone to Washington, D. C., and further South hoping to benefit his health thereby. Though not actively engaged now in the drug trade, Mr. Burditt still retains deep interest in everything connected with it. Two of his sons, Oscar A. Burditt and Henry A. Burditt, have drug stores in Clinton, both on the main business street.

—John S. Smith, apothecary, will occupy a store in the fine new office buildings of the Clyde Line Steamship Company at Lewis Wharf, to be completed in about two months. Mr. Smith was forced to vacate to Battery street during the alterations and on his return will occupy the northwest corner of the building.

—Charles W. Cheney, this city, vice-president of the Mellin's Food Company, who has been fishing in the waters around Fort Myers, Fla., now enjoys the enviable honor of landing the largest tarpon of the season, weighing one hundred and fourteen pounds and measuring seven feet three inches in length.

—Frank M. Breed, of Lowell, has bought of George Y. Sawyer his drug store on Main street, in the Bradford district of Haverhill, and is now in charge. Mr. Sawyer has gone to Malden, where he will engage in business.

—Applications for licenses to sell intoxicating liquors in

Fall River are now being filed with the clerk of the Board of Police. Many druggists are among the applicants for sixth class licenses, the fee for which is \$1.

—A petition in bankruptcy has been filed by Eugene Levitan, a druggist at 34 McLean street, whose liabilities are \$2,080, of which \$1,000 is secured. There are no assets.

—The week's exports at the Port of Boston include drugs and chemicals, \$25,269; india rubber manufactures, \$7,086; hops, \$2,547; tobacco, \$2,468; spirits, \$15,077; wax, \$967.

Elsewhere in New England.

—Sheriff Reeves is again on the war path and recently a search for liquor was made by him at the drug store of A. E. Lemerise & Co., at Burlington, Vt. He captured twenty-four quart bottles of whiskey.

—S. F. Collins is for a short time replacing Merritt L. Stowe, prescription clerk in the drug store of H. W. McMahon & Co., at Burlington, who is ill and has gone to his home in Middlebury.

—It is fortunate for C. E. McInich, a Calais, Me., druggist, that for the proposed city hall there the land opposite his drug store, known as the Barnard property, is the chosen site.

—Work of adjusting the loss caused recently by the fire in Frawley's pharmacy at Bangor, Me., is now in progress. It is no small undertaking.

—The store of R. V. Singleton, Hartford, Conn., has been sold to Duchett & Wilson, of Westerly.

—A new store is to be opened at Glastonbury, Conn., about April 1 by a Mr. Talcott.

PHILADELPHIA.

Druggists Want Telephone Concessions.

Philadelphia, March 24.—The committee which was appointed recently by the Philadelphia Association of Retail Druggists to wait upon the Bell Telephone Company and see what could be done in the way of obtaining concessions from them by allowing druggists who have pay stations to have two or three free calls per day allowed them, consisted of the following well-known druggists: D. M. Harris, chairman; C. H. Campbell, J. C. Perry, L. C. Funk and W. A. Rumsey. These gentlemen called upon the superintendent of the company, who, after hearing their request, appointed a time of meeting at his residence for further consideration of the subject. After going over the matter thoroughly he promised to lay the matter before the board of directors and it is quite probable that the request will be favored, in some degree at least.

NOTES.

—The destructive power of magnesium flash light powder as used in photography was shown on Thursday afternoon of this week when an explosion occurred in a photographic supply house while one of the employees was handling the powder. The four-story building in which the explosion occurred was completely wrecked, the wall falling upon and wrecking the adjoining building, which was lower. Flames immediately appeared and before the fire department had time to get there the entire building was on fire. The Jefferson College Hospital was separated from the building by a narrow street and the patients in the wards were shocked by the explosion which hurled bricks and embers through the windows. A sheet of flame followed which set fire to the hospital and it was only by hard work that the building was saved. The patients were removed to points of safety and strange to say all recovered from the shock. Two employees of the photographic house lost their lives by the explosion and a number were injured.

—Robert W. Maris, of Twenty-second and Market streets, died from appendicitis on Monday of this week. Mr. Maris was in business for a number of years at the northwest corner of Tenth and Spruce streets, a corner made famous by Joseph Twispenny, one of Philadelphia's best known druggists many years ago. He then established himself at Twenty-fifth and Brown streets, being succeeded at Tenth and Spruce streets by George Y. Wood. A few years ago he took the store at Twenty-

second and Market streets, but shortly after sold his Brown street store and devoted his entire attention to the store which he conducted at the time of his death.

—The annual meeting of the members of the Philadelphia College of Pharmacy will be held at the College, 145 North Tenth street, on Monday, March 26, at 4 o'clock p. m. There will be an election of officers and trustees in addition to the consideration of a nominee for the presidency of the institution to fill the vacancy occasioned by the death of Charles Bullock, who has filled the office for so many years.

—A special meeting of the members of the Philadelphia College of Pharmacy was held on Friday morning at 10 o'clock, when action was taken relative to the death of President Bullock. The funeral took place on Saturday morning and was attended by all of the prominent members of the drug trade as well as the faculty and officials of the Philadelphia College of Pharmacy.

—Howard Converse, one of the P. C. P. second year students, has given up his position in a downtown store and will spend a few months' vacation at his home in Picture Rocks, Pa. He has completed his course for this year, and was one of the successful candidates who tried to get managers' certificates at the last meeting of the State examining board.

—The warehouse and stables of the Colburn Spice Company were damaged by fire on Wednesday night to the extent of several thousand dollars. There was a large fire in the neighborhood and an engine was directly in front of Colburn's place when the latter building was discovered to be on fire, so that the flames had no opportunity to gain much headway.

—J. Addison Eberly and W. F. Steinmetz, with their wives spent several days at Washington, D. C., last week. They accompanied Mary's Commandery, Knights Templar, which went over to visit one of the Washington Commanderies. While there they attended one of the President's receptions and shook hands with the chief executive of the nation.

—The third year students at the P. C. P. were up against a stiff examination on Friday of this week. The subject was analytical chemistry, by Prof. Frank X. Moerk, and the boys had a written examination, in addition to practical work in urinary analysis and volumetric analysis.

—A meeting of the members of the Philadelphia Botanical Club was held on Thursday evening, March 22, at the Academy of Natural Sciences. The plans for trips of the allied botanical societies of Philadelphia were discussed and the schedule will be announced in the near future.

—H. P. Carpenter, of Wilmington, Del., who was a former student at the University of Pennsylvania and a drug clerk in Wilmington, committed suicide on Friday of this week on account of insomnia.

—Charles E. Kelchner, manager of John P. Frey's store at 1514 South Tenth street, is laid up with the rheumatism at present but hopes to be able to attend to business again in a few days.

—A. H. Spear, of Seventh and Carpenter streets, has been laid up during the past week with the grip, but expects to be about again in a few days.

—Professor Henry Leffmann has been confined to his home at 1330 North Franklin street for the past week by an attack of the grip.

—J. A. Weaver, a veteran druggist of Easton, Pa., died this week from pneumonia, after a short illness.

Drug Store Burglarized at Florence, Kans.

Burglars entered the drug and jewelry store of George W. Kate, Florence, Kansas, the night of March 12, blew open the safe with nitroglycerine, securing therefrom about \$1,500 worth of jewelry, cash, etc. About two weeks before the burglars tried to blow open the same safe, but failed.

—The North Dakota Board of Pharmacy held a meeting at Fargo March 14-15, and examined a class of twenty applicants for registration as pharmacists. The following were successful: Rasmus O. Hatfield, Grafton; Fred M. White, Wyndmere; Carl Sundstrom, Barnesville, Minn.; Andrew Erickson, Cooperstown; H. J. Murphy, Courtenay; T. A. Boss, Fargo. The next meeting of the board will be held at Fargo, October 17.

BALTIMORE.**Progress of Pharmacy Legislation.**

Baltimore, March 25.—The prospect of the passage of the bill to regulate the practice of pharmacy in Maryland, which is now before the General Assembly, is very encouraging. Not since druggists began to interest themselves in the enactment of such a statute has the outlook been so encouraging. The measure was to have come up in the House of Delegates last Monday as a special order, but its consideration was postponed until Tuesday, when the amendments exempting ten of the twenty-three counties in the State from the operation of the bill were offered and accepted. The supporters of the proposed law reasoned that it would be better to make concessions than to jeopardize the movement. Some of the county delegations which desired exemption for their respective counties are not opposed to regulating pharmacy in principle, but yielded to the wishes and preferences of their constituents, who seemed to regard the provisions of the bill as an interference with individual rights. It developed, after the exemptions had been voted on, that Queen Anne's county had been included in the list under a misapprehension. The error will be remedied when the bill comes up in the Senate, and it is expected that the House will concur in the change. The measure will be taken up in the House for a third reading as the special order to-morrow evening. No further amendments can be offered; delegates must either vote for or against it as it stands. No formidable opposition is anticipated. When the measure goes to the Senate no time will be lost in calling it up. As the session will end on Tuesday night of next week delay would prove dangerous.

War Stamp Tax Repeat.

Baltimore, March 24.—Petitions are being circulated for signatures among the druggists of this city asking Congress to repeal schedule B of the Act of 1898, otherwise known as the War Revenue Act. The petitions are being signed by virtually the entire drug trade. Of all the pharmacists in the eastern part of the city who were approached with reference to the matter only two refused to sign. The movement emanates particularly from the Proprietary Association, but has the cordial endorsement of all the national bodies. Representatives of all the druggists' organizations are to have a hearing before the Ways and Means Committee of Congress at a date yet to be fixed. The Baltimore representatives of the American Pharmaceutical Association at this hearing will be Dr. A. J. Corning, H. P. Hynson will be present in behalf of the National Association of Retail Druggists, Louis Schulze will speak for the Maryland Pharmaceutical Association.

The Drug Trade Bowlers.

Baltimore, March 23.—The week has been a bad one for the Baltimore Drug Trade Bowling teams of the second division, Gilpin, Langdon & Co. having lost two out of three games played with the Winkelmann & Brown Drug Company last Tuesday night and Muth Bros. & Co. sustaining three defeats to-night at the hands of James Bally & Son. The Winkelmann & Browns scored 806, 685 and 725 points, against 768, 702 and 706 points for Gilpin, Langdon & Co., James Bally & Son beat Muth Bros. & Co. with 772, 703 and 673, against 652, 631 and 631. In addition to these games there has been bowling of a special order. The all-star team which is to compete with drug trade quintettes of other cities in New York next month tried its hand during the week, and made an extraordinary showing. In two out of three games the totals exceeded 900. If the Baltimoreans put up such a game in the national contests they are certain to land somewhere near the top, and their chances of taking first prize will be excellent. To-morrow they will tackle the Catholic Club. Some of the towns solicited to have teams at the national bowling contest in New York display decided indifference. Although Secretary H. O. Barnes' invitations were sent out on the 8th inst., no answers have been received from St. Louis, Buffalo, Detroit and Boston. The drug trade bowlers would like to hear from these cities. A full representation would add to the interest of the matches.

A Former Drug Clerk Kills Himself.

Baltimore, March 22.—Howard B. Carpenter, aged 25 years, son of George H. Carpenter, of 1300 Washington street, Wilmington, Del., committed suicide this afternoon by shooting himself through the heart. Despondency and insomnia were the causes. He left a note saying, "I must sleep. Forgive me, but it is a good thing that I do in every respect. Love and thanks to all. Howard." Carpenter had been attending lectures in a Baltimore medical college for several years, and had also studied at the University of Pennsylvania, but had never taken a degree. He was formerly employed in the drug store of N. B. Danforth, on Market street, in Wilmington.

NOTES.

—Window benches in handsome upholstery for the accommodation of soda water patrons are receiving much attention from the retail druggists of Norfolk this spring, and several drug stores have lately added these conveniences, among them the pharmacies of Henry Buff and George Gatling, the latter under the Monticello Hotel. Ways and means of pushing the soda water business are, in fact, more extensively considered now than for some time past. L. A. Billisly is another Norfolk druggist who believes in making the soda water department as attractive as possible, and has recently completed notable improvements.

—The Wedgewood Club of Baltimore, an organization of druggists, held its third monthly dinner to-night at Tierney's restaurant, on North Calvert street. On the invitations announcing the affair Secretary J. Webb Foster informs the members that "stories hoary with age will be received with due reverence to antiquity, new stories with gusto similaribus."

—The Druid Chemical Company of Baltimore has been incorporated by Charles L. Meyer, a well known druggist; Frank M. Hall, Solomon M. Brenner, Edwin L. Hall and Albert Rosenheim. It will have a capital stock of \$10,000 and will deal in medicinal and pharmaceutical preparations.

—Druggist J. F. Cochran, Gilmor and Lorman streets, has made a number of improvements which add much to the attractiveness of the store. Among them are a new soda fountain of artistic design, handsome fixtures, new wall decorations and a general renovation of the interior.

—Fred W. Robertson, senior member of the Robertson & Duck Drug Company, under the St. James Hotel, Charles and Center streets, has bought out Dr. Duck's interest and is now sole proprietor. The old firm name will be retained.

Grand Rapids Chemical Society.

A correspondent writes from Grand Rapids, Mich.: "We have recently organized a society in this city, known as the 'Grand Rapids Chemical Society,' the object of which is to study chemistry in all its branches. We will have regular weekly meetings, the first being Monday evening, March 19. We have fitted up a complete laboratory. The society is composed of about forty drug clerks, but eligibility to membership is not confined to drug clerks only, as we are glad to take in anyone of good moral character regardless of his or her occupation. The fee for joining this society is \$1.00, and dues thereafter \$1.00 per month, so each member shares alike in the expense of maintaining it. The officers are Martin Wiggazer, president; C. W. Brayman, vice-president, and Harry Falchlid, secretary and treasurer. We have engaged Marlon Nichols, Ph.C., a graduate of Ann Arbor University, who has been employed for the past four years as chemist for the Wallin Leather Company of this place.

The members of the Linnean Society of the Junior Class of the Pittsburgh College of Pharmacy celebrated the closing of school by giving a box party at the Grand Opera House on Wednesday evening, March 21. After the theater the party repaired to Miller's, where a supper was served. The party included J. S. Gleghorn, C. O. Wherry, G. A. Harley, C. W. Stengle, W. F. Garrow, F. W. Jones, R. E. Warner, C. S. Davidson, J. Lezeur, C. H. Collins, C. M. Yeomans and J. G. Struble.

CHICAGO.

Drug Clerk Shoots a Man.

Chicago, March 24.—John Nechvatal, a clerk in the drug store at 709 Milwaukee avenue, on Monday morning at 2:30 o'clock shot and almost instantly killed Louis Blunkenbor, of 682 Milwaukee avenue. Nechvatal and his brother, Anton S. Nechvatal, an attorney at 169 Washington street, had been in a billiard hall on Milwaukee avenue playing billiards that night. During the games Blunkenbor entered in an intoxicated condition and tried to pick a quarrel with the proprietor. Failing in this he attempted to get up trouble with the patrons of the hall among whom were the Nechvatal brothers. The man was in an ugly mood and no one would have anything to do with him. About this time the Nechvats started for home and Blunkenbor followed them and an altercation ensued during the course of which Blunkenbor made reference to using a knife. Young Nechvatal thinking he detected a movement on the part of the man to produce a weapon, drew his own and fired, the ball striking Blunkenbor in the left temple. He died while the police were taking him to the hospital. The coroner's jury the next day exonerated Nechvatal from blame, finding that the shooting was done in self defence.

Students Visit Parke, Davis & Co.

Chicago, March 24.—The students of the Chicago College of Pharmacy and others have been given a treat this week by Parke, Davis & Company, of Detroit. At two o'clock on Thursday afternoon a special train left Chicago via the Lake Shore and Michigan Southern Railway bearing the students of the Chicago College of Pharmacy, several members of the Illinois Drug Clerks' Association, including W. F. Egler, president of the association, Messrs. Ben. S. Cooban, Charles Rice, John Lueder, H. J. Houghton, Ed. Binz, Harry Patterson, John Kask and others, for Detroit. The party took supper at Niles, Mich., and arrived in Detroit about 10 p. m., marching in a body to the headquarters at the Russell House. The following day was spent in going over the extensive plant of Parke, Davis & Company and in seeing the other sights of Detroit. In the evening they took the train back to Chicago, arriving here at 7:50 this morning. The special train was in charge of C. N. Randolph, of the Lake Shore road, who left nothing undone for the entertainment of all. The boys voted Parke, Davis & Company royal hosts and assert with one voice that they could not have had a better time.

NOTES.

—After having robbed his employers of hundreds of dollars, the thefts extending over a period of three years, Otto Domke has been arrested and is confined at the Harrison street police station. Domke held the position of clerk in the mailing department of the Heath & Milligan Manufacturing Company, 170 Randolph street, and is charged with systematically stealing stamps and disposing of them to James S. Mattas, a druggist at 1540 West Twenty-second street, at a discount.

—H. W. Bartlett, Englewood salesman for the Robert Stevenson Company, has been presented with an addition to his family. The interesting event occurred night before last, but the proud father in his telephone message to the house neglected to state whether the baby is a boy or a girl. If the former the firm expects soon to have him on the pay roll selling goods to Englewood druggists.

—Jeanette and Maggie Patterson, two girls employed in the factory of Bauer & Black at Twenty-fifth street and Armour avenue, were killed on the 21st inst. while crossing the tracks of the Belt Railroad. They had just reached the crossing when a switch engine backed down upon them. Jeanette was dead when picked up and Maggie was so badly injured that she could not recover.

—The store of the Daie & Sempill Drug Company at Clarke and Madison streets will undergo a number of important changes in the near future. New fixtures will be put in throughout, including an elegant fountain. A new mosaic floor will be laid and no expense will be spared to make the store one of the handsomest in Chicago.

—Herman Fry, the well-known druggist, had the misfortune to suffer the complete loss by fire of his store at Larrabee street and North avenue on Thursday night. Mr. Fry has other stores, but feels that he hasn't any to lose. His misfortune has evoked the sincere sympathy of his many friends.

—The Allegretti Chocolate Cream Company has filed a bill for an injunction against C. Kuhlman, manager of the Kenwood Hotel Pharmacy, and Bernardo Allegretti. The bill seeks to enjoin the defendants from trespassing on the trade mark rights of the plaintiff company.

—James Stevenson, of the Robert Stevenson Company, has gone to Hot Springs, Ark., for a couple of weeks to get rid of some malaria left over from his tussle with the Cuban swamps and in the trenches before Santiago a year or so ago.

—It is reported that Manley & Simmons' "Twentieth Century Drug Store" on State street has been sold for a consideration of \$12,000. Rumor has it that a prominent wholesale drug firm here is interested in the transaction.

—V. A. Fox has sold the drug store at Prairie avenue and Forty-third street, but will remain in charge for some time until the parties to whom he sold can make other arrangements.

—F. E. Holliday, chairman of the Executive Committee of the N. A. R. D., was in Chicago from Topeka, Kan., this week attending to some matters connected with the association.

—The alumni of the Chicago College of Pharmacy will hold another meeting on Wednesday night, March 28 to discuss the coming revision of the Pharmacopœia.

—The Pennsylvania Rubber Company, having a capital stock of \$100,000, has been licensed to do business in Illinois with a capital stock of \$2,500.

—It is reported that B. F. Parnell, who recently sold his store on Hayne avenue, is confined to his bed with a severe attack of appendicitis.

—E. C. Fallon, a druggist, 178 East Ohio street, has filed a voluntary petition in bankruptcy. His assets are \$30 and his liabilities \$394.

—I. W. Blood will move his Forty-first street and Cottage Grove avenue pharmacy to Bowen and Cottage Grove avenues on April 1.

—Ed. T. Hitechock, a druggist at Fifty-fifth and Halsted streets, has gone to New York to visit relatives.

—Kidder & Lewis have bought the drug store of Fitzmaurice & Brown at 5310 Wentworth avenue.

—It is reported that the Hyde Park Hotel drug store has changed hands.

THE NORTHWEST.

Calls It a Fraud.

St. Paul, Minn., March 23.—J. C. Eliel, the wholesale druggist of Minneapolis, president of the Board of Trade and former president of the N. W. D. A., whose firm will realize about \$2,500 if the bill allowing rebates on alcohol used in the arts and manufactures passes, denounced the measure as designed to permit one of the biggest steals ever perpetrated upon the American public.

"It is not true," said Mr. Eliel, "that the druggists relying upon the law providing for free alcohol for use in the arts and manufactures have reduced prices. Instead they have steadily maintained prices, and, even though the law may allow it, are really not entitled to the amount which may accrue to them because of rebates. The bill was originally intended to benefit the consumer by permitting a reduction in the prices of articles with an alcoholic admixture for which there is a general demand."

"The wholesaler has lost nothing by that; he has simply made the consumer pay the revenue. While the hardship has all been on the consumer the wholesaler has lost nothing, and now stands a chance, with absolutely no sense of justice in the claim, of reaping immense gains. The sooner the public understands this bill the better. Every means should be used to defeat it. It was not true, as the Committee on Ways and Means was informed, that the consumers had received advantages in reduced prices equal to \$6,000,000 and that the dealers had lost a corresponding amount. The manufacturers made no arrangements with retail dealers, as

reported, for provisional rebates when the Government should make the rebate.

"Our firm, on the advice of an attorney, has saved all the stamps on alcoholic drugs and kept the records of the same. Our claims will aggregate \$2,500, which must be allowed if the bill is upheld. From the standpoint of justice we are in no wise entitled to it. Wholesale druggists all over the country can, in that event, collect a greater or less amount from the Government. The only way justice can be done is to let the law stand as it is now construed. The manufacturers have already received all that's rightfully due them and there is no need why they should receive any more. They were not taking any chances on the law from the outset and did not run the risk of losing on reduced prices. Of course our firm will not refuse to accept \$2,500 if it is presented to us, but I certainly prefer that right shall prevail in this as in every other case."

It is not every business man that is capable of taking so broad, unselfish and patriotic a view of this matter as Mr. Eliel.

Grief of Grip and a Black Eye.

St. Paul, March 24.—Two of the Conger brothers of St. Paul—Fred, and Joseph J.—have run against some hard luck. The former is just recovering from an attack of grip, while the latter, in "fooling" with a shoemaker who called in his store, was hit in the eye with a tin can, all of which moves one to rhyme no less than to tears:

The fate that's befallen a pair of the Congers
Has made all their friends bona fide griefmongers;
First Freddie, so chipper, urbane and kerflip,
Was completely undone by a siege of the grip,
Which compelled him to close the last doorway to hope
By swallowing some of his own awful dope.
Then Joe—the slick, dapper, magnificent Joe—
Received from a neighboring cobbler a blow,
'Twas dealt in pure fun, but, Oh, mamma! a crack
That painted Joe's optic blue, yellow and black;
Now the side of his face is adorned by a patch,
And he has of distress an unlimbed batch.
Less handsome, but wiser is he, realizing
That it shouldn't be reckoned so very surprising
If one is done up while attempting a fall
To take out of a brawny shoemaker. That's awl;
'Twould fracture my gizzard to dwell any longer
On the plight of this pair of the good brothers Conger.

NOTES.

—Successions: Reynolds Drug Co., Bussey, Ia., by the Dunkle Drug Co.; Ball & Thomas, Fairfield, Ia., by A. J. St. Clair; Webster & Churchill, Minneapolis, Minn., by Churchill & Scheldrup; Frank P. Lathrop, Bowden, N. D., by George Brynjulson.

—Among those paying a brief visit to the wholesale houses this week were S. H. Brownlee, of Sandstone, Minn.; B. E. Webber, formerly of the same place, but now of Black River Falls, Wis., and C. A. Jack, of Princeton, Minn.

—Ethelda Burge, of Bigelow & Burge, Charter Oak, Ia.; J. C. Hanson, Port Huron, Wash., and J. M. Alexander, of the Alexander Soap and Chemical Co., Helena, Mont., have given bills of sale.

—Jacob Arnold, formerly a well-known druggist of Minneapolis, is now traveling agent for a commercial agency.

—H. A. Glendenning, of Hastings, Minn., has gone on a short visit to his previous location in South Dakota.

—The stock of T. A. Muir & Co., New Westminster, B. C., was damaged by water the other day.

—H. M. Belding & Son have started at Osakis, Minn., and Dr. D. C. Steele at Fairmont, N. D.

—Count B. Walsh, Redfield, Ia., and S. L. Rowe, Eustis, Neb., were damaged by fire this week.

—M. M. Colbert is now in one of A. A. Campbell's drug stores in this city.

—Solso Bros., Duncombe, Ia., have sold.

—At the meeting, March 20 and 21, of the Massachusetts State Board of Pharmacy, out of the twenty-nine candidates examined only six were successful and were granted certificates, as follows: Frank J. Connolly, Cambridge; Patrick H. Burke, Natick; Bertha M. Haynes, Somerville; Adolphus C. Loewe, Waverly; William Donaghy, Everett; Charles J. Sullivan, Lowell.

ST. LOUIS.

Alumni Association Lecture.

St. Louis, March 24.—The lecture and smoker given by the Alumni Association to the Senior Class of the College of Pharmacy, Tuesday night, was a distinct success scientifically and socially. Oscar F. Bausch presided, introducing the speakers, and Carl G. Hinrichs, chairman of the Committee to "Confer with Students," saw that the cigar box was kept briskly moving. The lecturer of the evening, Dr. George Richter, has found time in the midst of a busy practice to make a remarkably close and exhaustive study of "gelatine," and his description of its various uses and peculiar properties as developed by original experiments was listened to with the greatest interest and attention. Succeeding Dr. Richter, Prof. Francis Hemm spoke on Gelatine in Pharmacy, Dr. H. M. Whelpley on the Physiology of Gelatine, and Charles Gietner told of a visit to a capsule factory and what he saw there. Addresses were made on the Alumni Association and its work by President R. S. Vitt and First Vice President Otto A. Wall, Jr., and others. Henry M. Mitchell, secretary of the senior class, responded for the students. The whole tenor of the evening was to give the students a most favorable idea of the real benefit to be obtained by fellowship in the Alumni Association, and it is safe to say that an unusually large proportion of the class will be enrolled.

Class of '75, C. of P.

St. Louis, March 24.—The "Class of 1875" of the St. Louis College of Pharmacy celebrated its silver anniversary at the Planters Hotel, Thursday night. Just twenty-five years ago that night the gentlemen who were present and their absent associates, were made Ph.C.'s, and many were the reminiscences indulged in of the old class days and of events that have happened in the years since. The banquet was served in Parlor B of the hotel, and the tables were elaborately decorated with flowers. Eight of the original class were seated at the table with their wives. After the excellent menu had been discussed the toasting commenced. Prof. Francis Hemm, the class president, presiding. Toasts were responded to as follows: "Our Silver Jubilee," Prof. Hemm; "Our Alma Mater," Charles Gietner; "Our Alumni," Wm. C. Bolm; "The Ladies," Charles A. Lips, and "Man, Poor Man," Mrs. J. E. Koch. The wives of the members were made "class members" in good standing and will hereafter be present at the annual reunions which will be held at the residences of members, that of next year to be given at the home of Mr. Watkins. In accordance with the time-honored custom of the class, the secretary for the past year, Charles A. Lips, was elected President, and H. T. Bechtold was made secretary for the coming year. The original class of 1875 consisted of sixteen members. Of these the following were present Thursday night: Prof. Francis Hemm, H. T. Bechtold, Charles A. Lips, William C. Bolm, Charles Gietner, Julius E. Koch, James A. Watkins and John Raboteau. Only two of the entire class had died—Henry Rummel and Ernest Krebs.

Bowling.

St. Louis, March 24.—The six teams of the Druggists' Coked Hat League are all doing fine work, and the lover of the game who wanders around the alleys where the druggists bowl of a Thursday night will see some of the prettiest rolling in town. On Thursday night of this week the match between the Catnips and the Burdocks was a decidedly hot one, the Catnips landing the last and odd game by three pins. The winners piled up a total of 1,116 pins in the five games, and their opponents but three less. Kahre was high for the Catnips with an average of 49, and Aszman for the Burdocks with an average of 49 1-5. The Dandelions won the odd game from the Chamomiles. Hobbs was high for the winners with a 50 average and May topped the Chamomiles with a 47 average. The Junipers won the odd game from the Mustards, although the latter scored the greater number of pins. Ludwig and Niemann were on top for the Junipers, each with an average of 44 2-5, while Neu was the best of the Mustards, with Helbig a close second.

NOTES.

—Druggist S. L. Pickett, of Jefferson avenue and Chestnut street, believes in making and pushing his own remedies and toilet preparations, and his list now numbers thirty-five, and is growing. He is fitting up two rooms above his store for laboratory purposes. This store is one of the few all night, year 'round stores in the city.

—George Heller, the prominent East St. Louis druggist, left Monday for a four months' European trip. Quite a few St. Louis pharmacists will visit the Exposition and tour the continent. H. F. A. Spilker and family sail May 10, and Otto Traubel, Julius E. Koch, C. C. May and Richard Schweickert will go in June.

—C. F. Weller, president of the Richardson Drug Co., Omaha, was here Thursday and Friday, on his way to Chicago to make arrangements for the coming convention of the N. W. D. A., of the Entertainment Committee of which he is chairman. He was accompanied by Mr. Bruce of Blake, Bruce & Co., Omaha.

—George G. Berg, the well known druggist formerly in business in South St. Louis, and who for a year past has been doing relief work, has a rather remarkable record in that line, every day of the week being regularly engaged with the exception of every other Sunday, which he insists on reserving to himself.

—W. F. Angermueller, Choteau avenue and Twelfth street, who has been ill for two months past, is convalescent and will probably be able to be at the store again in about a week.

—Druggist W. P. McPherson, of Paducah, Ky., was a visitor this week. He is moving his store into a new building and has put in entire new fixtures, fountain, etc. —C. P. Ochsner, of Finney & Vandeventer avenues, has returned from an extended Southern pleasure trip, which included the Mardi Gras.

—Dr. M. G. Hatcher, druggist, Jefferson avenue, near Geyer, is moving into a new and larger store a few doors from his present location.

—George Tenn, formerly with A. F. Fleischmann, of Sedalia, Mo., is now clerking at Koenig's, Twenty-second street and Clark avenue.

—George Polston, whose drug store at Broadway and O'Fallon street was recently burned, will resume shortly in the same location.

—Charles R. Judge, of Judge & Dolph, and Manager A. J. Davenport, have returned from a business trip to Chicago and Cincinnati.

—A. J. Kidd, Taylor avenue and Morgan street, who has been seriously ill, is convalescent.

—A. D. Roach, William R. Warner & Co.'s detail man, has returned to the city after a seven months' absence.

—E. H. Nelson, of Nelson, Baker & Co., was a visitor this week.

MISSOURI BOARD.

At a meeting of the Board of Pharmacy of Missouri, held in St. Louis, March 19th, seventy-five applicants were examined, and the following were successful:

E. P. Angermueller, James E. Craig, George W. Bader, William G. Breitenpfeiler, J. C. Burkhardt, C. W. Bush, C. W. Craemer, St. Louis; A. D. Chenoweth, Fayette; T. Crawford, W. A. Elsen, Theo. Engelskind, George Einbeck, William C. Fahrenhorst, H. N. Fore, St. Louis; C. T. Flachenecker, Alton, Ill.; Herman Frank, A. A. Fricke, Chas. J. Goessler, Ralph T. Hill, Chas. B. Hohmann, E. H. Kretzner, M. Kirkpatrick, Ernest A. Le Bien, William C. Lieser, Richard M. Moess, C. N. Magruder, A. V. Marshall, St. Louis; A. C. Mercier, Perryville; W. C. Middleworth, Chas. E. Miller, H. M. Mitchell, J. P. Muehling, C. G. Mueller, St. Louis; J. F. Nelson, Leeton; George Neves, N. J. Peppert, St. Louis; E. M. Reinhard, Union; A. E. Ringwald, E. L. Roth, J. N. Scharf, J. P. Schmidt, W. J. Schneider, B. W. Shryock, E. R. Smith, H. Strobel, C. M. Kirkpatrick, St. Louis; H. C. Wesner, Windsor; D. P. Wright, D. F. Wulfman, St. Louis.

Next meeting, Kansas City, April 9th. Aug. T. Fleischmann, Secretary; Sedalia.

PAMPHLETS RECEIVED.—Twelfth Annual Report of the Indiana Agricultural Experiment Station (Purdue University, Lafayette, Ind.); Reports of the New York and Kentucky Boards of Pharmacy, 1899; First Annual Report of the Indiana Board of Pharmacy, 1899; Proceedings of the Kentucky, New Hampshire, North Carolina and Ohio Pharmaceutical Associations.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items so recorded, but those who are supplied from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

CALIFORNIA.—Los Angeles.—August Krug, Fifth and Wall streets, deceased.

Fair River Mills.—M. M. Rowley, burnt out.

COLORADO.—Lake City.—Z. Felder, sold to D. S. Hoffman.

CONNECTICUT.—Hartford.—R. V. Singleton, No. 112 New Britain avenue, sold to Duchette & Wilson.

South Norwalk.—Charles S. Finch, No. 246 Washington street, sold to T. B. Griffin.

FLORIDA.—Dade City.—T. J. Howard, deceased.

High Springs.—E. E. Holton, burnt out, insured; J. C. Stephens, burnt out, insured.

GEORGIA.—Augusta.—Parr & Stanley Drug Company, No. 52 Broadway, succeeded by C. R. Parr.

ILLINOIS.—Earlville.—O. E. Kaul, succeeded by Kaul & Rhodes.

INDIANA.—Frankfort.—Metzler & Co., sold to George De Bey.

Indianapolis.—L. H. Renkert, No. 320 West Washington street, damaged by fire; insured.

IOWA.—East Peru.—William Painter, sold to R. R. Rogers & Co.

Ixtova.—A. H. Parsons & Co., sold to Townsend & Holihan.

KANSAS.—Bluff City.—A. J. Athay, new store.

KENTUCKY.—Brandenburg.—Nevitt, Gough & Co., succeeded by R. H. Nevitt.

Owingsville.—S. P. Anderson, sold to Meyers & Kincaid.

MASSACHUSETTS.—Haverhill.—G. V. Sawyer, No. 67 Main street, sold to Frank M. Breed.

MICHIGAN.—Berlin.—A. E. McCulloch, deceased.

Davidson.—C. S. Brooks, sold to E. E. Anderson.

St. Louis.—F. W. Blair & Co., sold to C. Vandenberg.

MINNESOTA.—Minneapolis.—Webster & Churchill, No. 15 Washington avenue, succeeded by Churchill & Schelgrun.

MISSOURI.—Chula.—A. V. Fore, sold to F. P. McGee.

Corder.—Leiser & Charlton, sold to C. A. Benton.

Grant City.—Williams & Bulnich, succeeded by E. R. Williams.

Hannibal.—Ray Drug Company, No. 122 North Main street, sold to James O'Donnell.

Oseola.—Toalson & McMehean, succeeded by W. W. Toalson.

NEBRASKA.—Beatrice.—P. B. Sprague, sold to R. J. Hoagland.

Omaha.—H. F. L. Eckerman, No. 1501 Park avenue, sold to S. L. Hestwood & Co.

NEW YORK.—New York City.—Theo. Renneberg, No. 103 Ninth avenue, new store.

OHIO.—Clyde.—Bowe & Wright, succeeded by R. G. Bowe.

East Liverpool.—Laban Wilson, new store.

OKLAHOMA.—Byron, Woods County.—J. H. Lynes Drug Company, new store.

Noble.—Newman & Murphy, sold to D. L. Hooper.

Tonkawa.—Dinkler Brothers, sold to J. L. Freeman & Co.

Woodward.—Dr. D. Chantler & Co., sold to R. E. Davis & Co.

PENNSYLVANIA.—Hughesville.—W. H. Jenkins, succeeded by Bert H. Miller.

Philadelphia.—Charles E. Keeler, No. 3936 Locust street, sold to A. H. Zullinger.

TENNESSEE.—Pulaski.—W. P. Reeves, succeeded by Reeves & Alexander.

TEXAS.—Comanche.—Oden & Rogers, sold to James Holland.

VIRGINIA.—Petersburg.—Louis C. Wright, No. 236 North Shore, succeeded by W. A. Keeling.

WEST VIRGINIA.—Ravenswood.—Sayre & Flesher, new store.

WISCONSIN.—Madison.—H. L. Howard, No. 436 State street, deceased.

Montfort.—J. A. Thomas & Co., sold to J. R. Rundlett.

The 30th anniversary of the J. C. Ayer Co. was celebrated by the employees of the establishment and a few invited guests on March 14th. The souvenir of the occasion, which was designed and printed by the company, is one of the handsomest specimens of typography we have seen in a long time.

Cook's Imperial Extra Dry Champagne has stood the test for forty years, a trial case will explain the reason.

OBITUARY.

CHARLES BULLOCK.

Charles Bullock, president of the Philadelphia College of Pharmacy, died at his home, 1017 Clinton street, Philadelphia, March 21, from pneumonia. He had been ill for about five weeks. A son, William A. Bullock, survives. Mr. Bullock was the senior member of the drug firm of Bullock & Crenshaw, on Arch street. He was born at Wilmington, Del., February 25, 1826. His father, John Bullock, a prominent member of the Society of Friends, was principal of a boarding school for boys at Wilmington, which acquired a wide reputation, not only in the United States, but in the West Indies and South America. Charles Bullock at an early age showed a fondness for experimental science. His mother was the only sister of the late John Griscom, LL.D., of New York, who was among the first to introduce and illustrate chemistry in the public schools of New York. From his uncle Charles Bullock received his first attraction to the department of sciences, which determined his choice of business life. At the age of fifteen years he entered Haverford College, where he remained for two years. In 1844 he was taken into the store of Smith & Hodgson, at Sixth and Arch streets, where he learned the business of a druggist and apothecary, remaining until 1849, when, with another employe, the late Edward A. Crenshaw, he succeeded to the business of Smith & Hodgson. During the time he was employed at the store Mr. Bullock attended the College of Pharmacy, where he was graduated in 1847. Mr. Bullock became a member of the College of Pharmacy in 1849, a few years later was elected a trustee, and, after serving several years as vice-president of the college, was elected president, upon the death of Dillwyn Parrish, in 1856. He was also vice-president of the Franklin Institute and a member of the American Philosophical Society and the Academy of Natural Sciences. For many years he was a vestryman of Christ Episcopal Church, Second street, above Market; Christ Church, Germantown, and of St. Peter's Church, Germantown, since its foundation, twenty-six years ago.

DUMONT G. JONES, a well known citizen of St. Louis, and many years ago a prominent druggist there, died at his home in that city March 18, aged 67. Mr. Jones came to St. Louis when a young man of 20 years and entered the drug business with Alexander Leitch. Subsequently he opened a pharmacy of his own under the old Pacific Hotel, Seventh and Poplar streets. The hotel afterwards burned and Mr. Jones did not re-enter the drug business, but became connected with the Missouri "Republican," the predecessor of the "Republic," continuing for twenty-five years and retiring a few years ago to open a general advertising business. Mr. Jones is survived by his wife and eight children.

HENRY ENTWISLE, a son of the late Dr. James Entwisle, for a long time city pharmacist of Alexandria, Va., and himself bred to the business, died there at an early hour on March 1. For some time past he had been traveling salesman for Leadbeater & Sons, the Alexandria drug firm. He leaves a widow and several children.

RALPH C. WARREN, a native of Lincoln, Me., and for several years in the employ of Lewis & Co., druggists, Boston, Mass., died very suddenly at the Massachusetts General Hospital, March 3, the result of an operation for appendicitis. He was born in 1876.

CHARLES F. VOSS, proprietor of a pharmacy at No. 1911 Second avenue, New York city, died last week after a short sickness. He was 40 years old and had been in the drug business in this city for several years.

A. E. McCULLOCH, a druggist and old settler of Berlin, Mich., died March 14. He settled in Berlin in 1856. A widow and three children survive him.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Novelties, Special Offers, and General Information for Enterprising Drug Buyers.

Threatened Invasion of Bubonic Plague.

The fact that a number of cases of bubonic plague have made their appearance in San Francisco since the United States Marine Hospital Service alarm. Dr. Kinyoun of this service was called to the Pacific Coast and verified by post mortem and bacteriologic examination that the disease was true bubonic plague and urged the most rigid sanitary measures. There can be no question that this disease is the most frightful and rapidly fatal of all contagious diseases. The mortality rates of small pox, typhus and yellow fever sink into insignificance compared with that of bubonic plague. One epidemic in Constantinople caused ten thousand deaths in one day. In Bombay there were recently over one hundred and sixty thousand deaths within a very short time. Out of sixteen hundred cases in Hong Kong there resulted fifteen hundred and forty-one deaths. Such a disease is truly to be prevented from gaining a foothold in this country.

The specific organism of bubonic plague was discovered independently by Versin and Kitasato in 1894, since which time there have been constant efforts on the part of bacteriologists to produce a prophylactic either in the form of a serum or vaccine. These investigations have met with the most successful results and it is now known that the mortality in the unvaccinated is seven times greater than in the vaccinated.

The H. K. Mulford Company of Philadelphia have fitted up a separate laboratory for the preparation of Haffkine's plague vaccine and are shipping large quantities of it to the Orient. This laboratory is several miles distant from their antitoxin and vaccine laboratories. They have sent to us a pamphlet that contains a concise and complete description of the cause, development, symptomatology and prevention of bubonic plague, which is particularly valuable now when the disease has placed the entire Sanitary Corps of the Government on the alert. A copy of the pamphlet will be sent free to all druggists requesting it.

A Corkscrew Almost Free.

Any druggist who will send 10c. in stamps to the Welch Grape Juice Co., Westfield, N. Y., and mention the brand of Grape Juice he is handling, will receive a self-pulling corkscrew like the illustration. This corkscrew will do all that its name implies—pull the hardest cork by a turn of the handle. This little appliance and Welch's Grape Juice together are a strong pulling team, for the juice "pulls" at the

soda fountain and by the bottle. Every druggist should have both at his fountain. Welch's Grape Juice is made only from selected Concord grapes grown near the factory, and it contains all the goodness that 80 tons pressure can extract from them. It is a tonic food for the sick, delicious as a beverage, and is one of the finest of juices for soda fountain use. It can be served right from the bottle with shaved ice, or made into syrup for the fountain. It blends with other flavors to make special drinks, but if to be used in this way, the dispenser should have the little booklet of 30 formulas which will be sent to any one who will ask for it. If you have never used Welch's Grape Juice, you should send for a free 3 oz. bottle.

A Handsome Advertisement.

The Liquid Carbonic Acid Mfg. Co. of Chicago have another very handsome advertisement in this issue. Early in the month their insert showed a number of different sizes and types of soda apparatus which they make. This one, however, deals more particularly with their Crushed Fruits and specialties for the fountain. Their latest soda fountain novelty is Grape Kola, which, by the way, is a pure fruit juice. They make the claim that it beats any drink yet on the market, and they back up the dispenser with some very handsome advertising matter. They have a beautiful Serving Urn which is loaned to druggists, and they give a supply of finely engraved tumblers, paper napkins and booklets, with the druggists' advertisement printed on them. They also offer a premium to dispensers of Grape Kola to the amount of \$50. Particulars will be furnished to anyone interested enough to inquire.

Counter Wrappers.

Most manufacturers of proprietary medicines who use counter wrappers as a method of appealing to possible purchasers, seem to go on the theory that the druggists' wishes are not worth considering, and any old thing goes out under the name of "counter wrappers." A notable exception to this rule are the wrappers supplied to the trade by the manufacturers of Castoria. Druggists pride themselves on presenting neat packages to their customers. Chas. H. Fletcher knows it and gives as much thought to the counter wrapping question as to getting his signature before the public. We have no hesitation in saying that many of the counter wrappers sent out never reach the consumer because druggists will not use a cheap grade of paper, and when they are printed on both sides they have no place on a drug store counter. You will not be disappointed if you drop a card to Chas. H. Fletcher, New York city.

A Card From the Home Soap Co.

The Pharmaceutical Era:

Gentlemen—Certain unscrupulous parties are selling an imitation of our La Primera Castile Soap of such inferior character that it has been thrown out by some houses after they had been induced to try it. Even our package is simulated, and their salesmen have created the impression that they were actually selling our goods. This was the more easy as two of the salesmen were formerly in our employ. By giving this publicity you will protect your readers and oblige us. In the meantime we are getting legal evidence and shall take energetic steps to protect our rights.

THE HOME SOAP CO.

Artificial Plants.

Druggists who wish to make an Easter display will do well to consult the advertisement of Frank Netschert on another page. He sells Palms, Lilies, and other decorative plants which can hardly be told from natural ones. A few decorations of this sort add greatly to the drug store's appearance, and usually pay for themselves in the increased custom which they draw to the store.

Powdered French Chalk.

There are not many first hands in this country in Powdered Talcum, but of the few E. S. Jackson & Co., Cincinnati, O., are one of the largest. They solicit correspondence from buyers for the finest quality of North Carolina or imported Tale, and will be glad to send samples and quote prices.

An attractive Soap offer will be found in this issue. It is that of Eugene J. McGrath, 108 Greenwiche St., New York. He offers to furnish to any druggist a case of assorted pure Olive Oil Castile Soap, retailing for \$21.00, for \$10.00. This offer is made for a short time only and he claims his soaps to be the finest line of Castile Soaps in the world—he will not even except the imported Castile Soap. He guarantees that his Soaps are made of absolutely pure olive oil.

The company which has made Bromo Chloralum for many years, and which was known as the Bromo Chemical Co., has been reorganized, new capital introduced, and is now the Bromo Chloralum Co. The general offices are at 81 Fulton street, New York. The new owners are pushing the business with energy, and intend to keep this popular liquid antiseptic in the front rank of staple preparations, a position which it has occupied for 30 years. They are preparing some handsome advertising matter for distribution in the trade, and have ready to send out a beautiful embossed hanger, which will be sent to any druggist who asks for it.

Krembs & Co. have placed on the market a new Vaccinat on Shield, to which they have given the characteristic name of "Ouch." It is a pad made of chemically pure wood pulp and is claimed to be the most practical and the cheapest shield on the market. It adheres to the arm by means of rubber adhesive strips, and there are no strings to tie or to slip. They have been adopted by the United States Government and are now in use in the army. They are attractively put up and are sold to the trade at 75c, a dozen, retailing at 10c. each.

A new line of preparations makes its first appearance in the Era in this issue. Dr. Iman's Medicines, made by the Angeline Mfg. Co., Grand Rapids, Mich. Although they all retail at \$1.00, they are sold to the trade at the low prices of \$5.50 and \$7.00 per dozen. These prices show that the manufacturers intend to co-operate with the druggists. Attractive advertising is furnished and they intend to push the goods energetically and persistently. They invite correspondence with at least one druggist in every town.

Referring to his letter which he published in the Era March 15th. A. Major says one of the department stores, whose order for Major's Cement was refused, has since signed an agreement not to sell the Cement for less than the regular retail price. Mr. Major says if he could get such an agreement from a department store, other manufacturers ought to be able to.

New York State Board.

Eighty-nine candidates presented themselves for examination before the State Board of Pharmacy for New York on February 23, and of these 47 were passed, and 42 rejected. Four of the successful examinees were licensed as assistant pharmacists. Registered pharmacists' certificates were granted to Benjamin F. Hutchins, South Richland; Mary R. Jenkins, Auburn; C. Eugene Sunderland, Genesee; Edward S. Johnson, Jr., Oswego; William P. Hennessey, Oswego; Augustus A. Farthing, Gloversville; Leonard M. Gunton, Newburgh; Harley E. Dowman, Olean; George F. Ferries, Hornellsville; Albert E. Hodge, Palatine Bridge; A. Burton Smith, Ellenville; Jesse P. Wetmore, Parish; William V. Gale, Lodi; William H. Rogers, Bridgehampton; Louren P. Young, Niagara Falls; Louis A. Bradley, Niagara Falls; Winslow C. Beatty, Coxsackie; Orville E. Davis, Albany; James M. DuBois, Catskill; Charles E. Horton, Elmira; Frederick W. Carr, Troy; William H. Regan, Natick, Mass.; Albert P. Howarth, Utica; Frederick R. P. Bollen, Poughkeepsie; Elmer D. Williams, East Otto; Paul S. Whedon, Canandaigua; Charles N. Dean, Belmont; John F. Curlette, Mountain Dale; B. Franklin Neal, M.D., Ellenville; Francis M. Brimmer, Watertown; Charles L. McLouth, Franklinville; Willis B. Fitch, Mooers; M. Edwin Cottrill, Arcade; Jasper F. Kobler, Niagara Falls; Adelbert H. Lawrence, Syracuse; John H. Boothman, Saugerties; Freeman Dempsey, Millerton; Edward Glass, Troy; Burt O. Kinney, Gouverneur; Clarence N. Smith, Saratoga Springs; George A. Partridge, Lansingburg; Harry J. Gibney, Olean; Howard E. Lane, Mount Vision; John J. A. Lyons, Albany; Edward A. Stapleton, Hoosick Falls; John F. Brady, Ithaca; William J. Gram, Rochester.

The next examination will be held on or about June 28, at Albany, Middletown, Plattsburg, Rochester and Syracuse. The next meeting will be held at Newburgh, on or about June 26. Edw. S. Dawson, Jr., Secretary, Syracuse.

TOURNEY BOTANICAL CLUB.

February 13.—The paper of the evening was by Dr. H. H. Rusby, on the "Distribution of antero-posterior irregularities among the families of plants." All irregularities not connected with insect-visits were excluded. The cases considered were traced among the Monocotyledons and Dicotyledons respectively. None were found among the twenty-one lowest of the forty-three families of Monocotyledons. Of the ten next higher, five show none, four show slight or doubtful forms, while the highest, Liliaceae, with 197 genera, twice as many as the other nine families combined, shows, amidst general regularity, a few highly irregular genera, two of them simulating Orchidaceous forms. Of the twelve highest families, only three are regular. Five of the highest six are very irregular indeed, the highest, Orchidaceae, phenomenally so. It thus appears that an increased tendency to irregularity is indicative of higher development, but it is liable to occur in families and groups of families usually distinguished for its absence. This principle was then shown to be even more clearly illustrated by the Dicotyledons. In the fifty-three lowest families, but four show irregularity. Only one of these is found among the first thirty-nine, and this is Aristolochaceae, with a single irregular genus. Among the next 120 families, twenty-seven show irregularity, and these are rather uniformly distributed among the others. Then come nineteen, several showing slight irregularity, and one very irregular indeed. The next seventeen are, with one exception, highly irregular, one of them, however, being so in only a few of its genera. The eleven highest families are very peculiar. While mostly regular, some of them are noted for irregularity, but this is so peculiarly adjusted in the inflorescence as to bring about the condition of regularity so far as the latter is concerned. Thus the daisy, while an inflorescence, is essentially a regular flower, by virtue of the arrangement of its irregular florets. It is also noticeable that as these ray flowers are usually pistillate, this arrangement reverses the position, so far as the head is concerned, of the distinctively pistillate portion. The various types of irregularity in composite flowers were discussed, and these were contrasted with other families exhibiting radiant inflorescences. It was pointed out that irregularity was not a fundamental characteristic, but was readily called into existence by the exigencies of any group, or even species, and might be expected to develop anywhere. Special attention was called, as illustrating this principle, to the marked irregularity of *Cotyledon gibbiflorum* and *Saxifraga sarmentosa*, species in notably regular genera. It was also noted as significant that the most irregular families, such as Leguminosae, might have extensive series of genera perfectly regular; also that almost exactly equal forms of irregularity might develop in families most widely separated, as the Liliaceae and the Capparidaceae. The fact that irregularity is more frequent in the higher families of the two classes is due to the fact that the essential property of such families is a greater power of adaptation, floral irregularity being only one manifestation of this character. Edward S. Burgess, Secretary.

THE GEORGIA STATE BOARD OF PHARMACY.

The Georgia State Board of Pharmacy met on March 20 in the ball room of the Kimball House, Atlanta, Ga. A full attendance of the board was present. There were forty applicants for license, twenty-eight succeeded in passing the examination required and twelve failed. The following is the grade and address of the successful applicants: Robert H. Anderson, pharmacist, Crawfordville, Ga.; O. W. Bethea, pharmacist, Florence, S. C.; M. J. Blackman, apothecary, Columbus, Ga.; Edgar K. Braselton, druggist, Perry, Ga.; Virgil C. Cooke, apothecary, Atlanta, Ga.; D. L. Franklin, apothecary, Atlanta, Ga.; H. C. Freeman, druggist, Columbus, Ga.; M. T. Gilmore, pharmacist, Milledgeville, Ga.; Horace Gray, druggist, Atlanta, Ga.; Isadore Herrman, druggist, Sandersville, Ga.; J. P. Harrell, apothecary, Quitman, Ga.; L. P. Jamerson, druggist, Yatesville, Ga.; W. E. Johnson, M. D., druggist, Atlanta, Ga.; J. R. Jordan, pharmacist, Barnesville, Ga.; F. G. Miller, apothecary, Milledgeville, Ga.; Jas. W. Powell, druggist, Sylvania, Ga.; Chandler Raymond, apothecary, Atlanta, Ga.; C. C. Reeves, pharmacist, Selma, Ala.; J. Sidney Roberts, apothecary, Atlanta, Ga.; W. A. Sams, apothecary, Fayetteville, Ga.;

Stovall Simpson, druggist, Atlanta, Ga.; H. S. Smith, apothecary, Cartersville, Ga.; R. W. Spier, pharmacist, Guyton, Ga.; R. E. Stone, M. D., druggist, Atlanta, Ga.; Cosby Swanson, pharmacist, Newnan, Ga.; J. D. Timmons, pharmacist, Edgefield, S. C.; Chas. G. Watson, pharmacist, Cuthbert, Ga.; A. G. Verderman, apothecary, Sparta, Ga. O. W. Bethea secured the highest mark and was awarded a complimentary inter-state license free of charge. C. C. Reeves, of Selma, Ala., made the second highest percentage. Bethea now stands highest on the score for the Sprague gold medal, which is offered by Mr. Sprague, of New York, a representative of Sharp & Dohme, for the young man making the highest general average during the year. There is one other examination which takes place before the close of the competition for this year's medal, which will give someone else an opportunity to exceed Mr. Bethea's percentage. This class of forty is by far the largest that has ever come before the board at one time. This shows the increased interest and activity of pharmacists in the enforcement of the law. Dr. S. C. Durban, chairman of the board, appointed Dr. George F. Payne as a committee of one to get up portable prescription cases for using in practical examinations at the next meeting, the State Pharmaceutical Association at its last meeting at Warm Springs, having appropriated a sum of money for this purpose. The next meeting of the board will be at Savannah, May 21, the day preceding the annual meeting of the State Pharmaceutical Association.

—Seventy-six applicants for registration were examined by the Michigan Board of Pharmacy at its recent meeting held in Grand Rapids. The following received certificates as registered pharmacists: D. A'Hern, Kinde; W. L. Bower, Petoskey; C. A. Everet, Rochester; W. H. Friess, Port Austin; D. M. Gleason, Lansing; F. G. Glass, Vernon; J. G. Hollands, Detroit; M. A. Hubbard, Midland; J. McEwen, Escanaba; K. H. Nelson, Cedar Springs; F. D. Paterson, Three Rivers; A. B. Robertson, Lansing; W. A. Stecker, Carleton, W. J. Thew, Saginaw; P. Vellema, Grand Rapids; C. B. Warner, Marlette. Registered assistants: C. B. Braden, Grand Rapids; J. L. Buckrell, Flint; F. M. Duerr, Grand Harbor; A. E. Flagg, Pentwater; W. T. Glimm, Benton Rapids; C. W. Headley, Mt. Pleasant; F. W. Neundorf, Saginaw; O. Shauman, Elsie; G. F. Stickney, Gowen, and T. W. Sibiisky, Eagle River. The next meeting will be held at Star Island, near Detroit, in June.

—The Beta Phi Sigma Fraternity of the Department of Pharmacy of the Western Pennsylvania University, had its first annual banquet in the Palm room of the Hotel Henry, Pittsburg, on Wednesday evening, March 1st. It was a hummer, and the boys had a royal time. A specially appropriate menu was served in a superb fashion. The position of toastmaster was ably filled by Prof. Adolph Koenig. J. K. Love, New Castle, responded to the toast "Class of 1900;" E. K. Shumaker, New Bethlehem, to "Frats;" W. A. Cubbison, New Castle, "Our Alumni;" "Department of Pharmacy, W. P. U.," by Prof. A. F. Judd, and the "Juniors," by Clarence Dixon Tarentum. Extemporaneous remarks were made by Prof. Aschman, Mr. Snyder, Prof. Sutter, F. R. Brosius and Louis Emanuel.

—The New Britain, Conn., Druggists' Association held its annual meeting March 15 and elected the following officers: President, S. P. Storrs; vice-president, George E. Bunney; treasurer, R. B. Bancroft; secretary, Charles Scherp; censor, James R. Halloran.

W. J. White, the well-known chewing gum manufacturer who has just taken up his residence in New York as an officer of the American Cholate Company, the new chewing gum trust, has had a romantic business career, says the New York Commercial. During the early years of his married life he and his wife worked until midnight every night making candy which Mr. White peddled about the streets the next day. When he was endeavoring to get his new chewing gum industry under way he several times offered to sell a half interest for \$1,000 but the offer was refused in every case. Mr. White has a stable of thoroughbred and trotting horses and maintains a splendid stock farm in Ohio. He is also a heavy stockholder in vessel companies operating on the lakes.

PATENTS

TRADE MARKS, DESIGNS, ETC.

PATENTS.

Issued January 2, 1900.

- 40,175.—Eugene Bournonville, Jersey City, N. J. Acetylene gas generator.
- 40,186.—Carl D. Ekman, London, England. Obtaining useful products from liquors resulting from manufacturing cellulose by sulfate processes.
- 40,207.—Heinrich Korrodi, Berne, Switzerland. Capsule for compressed or liquefied gases.
- 40,229.—George D. Ballou, Syracuse, N. Y. Inhaler.
- 40,273.—Van Dyke Cruser, assignor of one-half to J. B. Hicks, New York, N. Y. Non-refillable bottle.
- 40,290.—Amos L. Foreman, Wilmerding, Pa. Package for liquids.
- 40,292.—Hans A. Frasch, New York, N. Y. Apparatus for continuous fractional distillation of hydrocarbons.
- 40,300.—Frederick J. Millington, Brushton, N. Y. Acetylene gas generator.
- 40,406.—Richard P. and J. D. Osgood, Methuen, Mass. Themo-stat.
- 40,454.—Cornelius Donovan, New York, N. Y. Truss-pad.
- 40,461.—Edward Fresse, assignor of one-half to H. Mundheim, New York, N. Y. Non-refillable bottle.
- 40,521.—Luther T. Bailey, Adrian, Mich. Acetylene gas apparatus.
- 40,528.—John T. Bennett, Cape Town, Cape Colony. Apparatus for removing saccharin or other impurities from all kinds of liquids.
- 40,531.—Frederick Brown, assignor of one-half to F. J. Stodman, London, England. Apparatus for making oxygen.
- 40,558.—Oliver H. Hampton, Williamsburg, Ind. Acetylene gas generator.
- 40,559.—Otto Hansma, assignor to Actien-Gesellschaft fur Anilin Fabrikation, Berlin, Germany. Brown sulfur dye.
- 40,562.—Benno Homolka, Frankfort-on-the-Main, and A. Stock, assignors to Farbwerke, vormals Meister, Lucius & Bruning, Höchst-on-the-Main, Germany. Making amidobenzyliden anilin compounds.
- 40,646.—Alphonse F. Galciné, assignor to himself and J. Leche, La Rochelle, La. Acetylene gas generator.
- 40,705.—Lewis J. Ruth, Leamington, Canada. Acetylene gas apparatus.

Issued January 9, 1900.

- 40,853.—George E. T. Arnold, Lancaster, Ky. Surgical sewing instrument.
- 40,868.—Lars Bring, Stockholm, Sweden. Sizing.
- 40,908.—Henry K. Hess, Philadelphia, Pa. Process of and apparatus for making ethylid of zinc.
- 40,953.—Ida L. Robinson, Boston, Mass. Non-refillable bottle.
- 40,977.—Heinrich Thron, assignor to Vereingte Chini-fabrik, Zimmer & Co., Gesellschaft mit Beschränkter Haftung, Frankfort-on-the-Main, Germany. Making quinin carbonic ether.
- 40,986.—Oscar Bally, Mannheim, assignor to Badische Anilin and soda Fabrik, Ludwigshafen, Germany. Green dye.
- 40,989.—Melchior Boniger, assignor to Chemical Works, formerly Sandoz, Basle, Switzerland. Bluish-red azo dye.
- 41,017.—Adolf Jolles, Vienna, Austria-Hungary. Making ferruginous nuclei.
- 41,026.—Pulaski D. Wescott, Corning, N. Y. Acetylene gas generator.
- 41,059.—Ira C. Wightman, Norwich, N. Y. Acetylene gas generator.
- 41,080.—Luigi F. Comitù, London, England. Registering chemical thermometer.
- 41,100.—Hermann Gussmann, assignor to Farbwerke, vormals Meister, Lucius & Bruning, Höchst-on-the-Main, Germany. Making para-oxyl-para-amido-ortho-oxypyrenylamin.
- 41,111.—Henry Hungerford, New Haven, Conn. Cork extractor.
- 41,184.—Hermann Boedeker, assignor to Farbwerke, vormals Meister, Lucius & Bruning, Höchst-on-the-Main, Germany. Rhodamin dye.
- 41,194.—William F. Cooper, Meriden, Conn. Acetylene generator.
- 41,225.—Charles E. Postlethwaite, London, England. Detergent.
- 41,243.—William C. Sterne, Littleton, Colo. Acetylene gas generator.

Issued January 16, 1900.

- 41,417.—Henri de Thiersant, London, England. Acetylene gas apparatus.
- 41,431.—George S. Bowers, Spring Grove, Minn. Acetylene generator.
- 41,491.—Augustus Bischer, assignor to Basle Chemical Works, Basle, Switzerland. Quinquinolin.
- 41,506.—Robert Goodwin, assignor to M. Crowley, Dublin, Ireland. Apparatus for producing acetylene and carbonic acid gas combined.
- 41,530.—Mathew E. Rothbe, Westmont, Pa. Making magnesia and plaster of paris.
- 41,555.—Augustus F. Shriver, Arubcke, assignor to himself, W. Storey, San Francisco, and J. H. Smith, Stonyford, Cal. Acetylene gas generator.

- 41,558.—Spencer Spillars, Pomona, Cal. Hydrocarbon burner.
- 41,559.—Arthur G. Green and A. Meyenberg, Manchester, England. Making black sulfur dye.
- 41,588.—Arthur G. Green, Heaton Moor, and A. Meyenberg, Manchester, England. Black sulfur dye.
- 41,589.—Arthur G. Green, Heaton Moor, and A. Meyenberg, Manchester, England. Black sulfur dye.

- 34,054.—Nuclein. Karl Schwickerath, Detroit, Mich. The word "Nucleol."

State of Trade.

Trade Conditions Less Satisfactory.

New York, March 27.—There are indications of a shrinkage in the general volume of business and conditions were less satisfactory during the past week than for any corresponding period since the beginning of the current season. The demand for jobbing quantities has continued fair but the aggregate of sales was slightly below the average, while round lots were dull and neglected and the continuance of such circumstances has been disappointing. The latter is especially conspicuous in regard to quinine. Many in the trade had been looking for a reaction from the recent decline in manufacturers' quotations, for the reason that at the bark sale in Amsterdam on Thursday last nearly the entire quantity offered was disposed of to quinine manufacturers and values were only about 5 per cent. below the unit of the February sale. On the contrary, the makers who took the initiative in the first decline announced a further reduction of 2 cents per ounce and the market in consequence became very unsettled. It is considered very evident that the bark situation has had nothing to do with the break in prices of quinine and the consensus of opinion is that some kind of a war is on between domestic and foreign manufacturers. Consumers are not inclined to operate in excess of current necessities and developments are awaited with considerable interest. Opinion is maintained a fairly firm basis and quotations cables have been received confirming previous reports of serious crop damage, but the movement into consuming channels has been only moderate and quotations have accordingly no further change. Morphine, codeine and other products continue to move freely at full quoted prices.

There has been a further decline in values of carbolic and picric acids and the revised figures closely approximate the normal quotations which prevailed prior to the restrictions placed on shipments by the English Government. Manufacturers have reduced quotations for salicylic, but official figures are yet considerably below second-hand prices.

Manufacturers of castor oil have further advanced their quotations 1/2c. on all grades and the market is decidedly firm on account of the unfavorable outlook for the current crop, which promises to show a material shortage. Cacao butter in cakes is in better supply and quotations for leading brands have been reduced. Menthol also is easier, notwithstanding advices to the effect that foreign markets show considerable steadiness. The easier feeling here is attributed to a continued slow demand and more or less keen competition among holders.

Among the essential oils the only noteworthy change is an advance in manufacturers' quotations for clove, due to higher prices for the spice. Cod liver oil is firmer on account of the stronger tenor of advices from Norway, recent cables reporting unsatisfactory results of the current season's fishing. The catch thus far is considerably below the average of the past three years and the outlook indicates that the total yield will be comparatively small. New crop buchu leaves have begun to arrive and with the market better supplied the tone is easier and quotations show a slight reduction. Ipecac also is a shade lower in price, but there is no change in the condition of affairs in the London market.

Quotations for saffron have been revised and show a lower range for the Valencia variety of Spanish. German ergot is lower in sympathy with primary markets, but some local holders decline to meet the lower quotations and are sanguine that conditions will improve before fresh supplies are available. Flax seed is stronger at producing points and jobbing quotations for both cleaned and ground are slightly higher. Manufacturers of bichloride of tin have advanced quotations 1/2c. per pound.

Boston Death Rate is Alarming.

Boston, March 24.—This week has shown even larger increase in the number of deaths than a week ago. From grip the deaths have been forty, to say nothing of thousands of cases not proving fatal. There have been just one hundred deaths from pneumonia this week, and ninety-five from heart disease. Bronchitis has claimed seventeen victims and diphtheria nine. From consumption forty-six persons have died, and so on through the list of various ailments. All this sickness and these deaths have meant more than usual demands upon the resources of druggists all about the city, and the trade has been large with nearly every one. Wholesalers also say that they have been exceptionally busy, owing to the retailers experiencing the great impetus to trade just at this time. The city has been heavy for waxes and gummy resins, and the prescription departments at most stores have been kept very busy. The general market shows no special feature. There is no marked activity in quinine, opium or other things in the list, although a fair trade is found in these. Chemicals keep steady on a moderate call. Alcohols show a steadiness which results from a fairly good demand, and they look higher. A limited call on essences is reported. Waxes are gaining strength slowly, especially Brazilians. There also is a bit more interest taken in Japan waxes just at present.

Business Increasing in All Branches.

Philadelphia, March 24.—Business is still increasing in all branches of trade, according to this week's inter-

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Biliaryness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised, not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.,

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c.

50c. and \$1.00 per bottle.

Trade price-list on application.

views with the members of the wholesale, retail and manufacturing firms of this city. Nobody is willing to prophesy how much the present boom will continue, but everybody is "sawing wood and saying nothing," being content to take things as they come. The only change in prices is that of quinine, which dropped 4 cents per ounce. The statement made this week by former Postmaster-General Don M. Dickinson, who is working in behalf of the manufacturers in the alcohol rebate question, that the rebate would likely be paid, has not inspired great confidence in the bosoms of the Philadelphia manufacturers, so far as could be ascertained. Nobody expects anything, so there will be little disappointment when the bill is finally enacted. It is predicted by all those who were asked to express an opinion.

Trade Satisfactory in the Main.

Baltimore, March 26.—The volume of business done by the jobbing druggists of this city during the past week was of moderate proportions. No dullness was experienced, neither did the various houses report a lull. Trade was in the main satisfactory. The out-of-town orders compared well with other similar periods. The manufacturing druggists report a steady increase in business. Some of the houses are compelled to work after hours to meet the demand for the various preparations. Heavy chemicals are moving in acceptable quantities, while the market for botanicals reflects outside conditions.

Trade Firm in Chicago.

Chicago, March 24.—The spring business in all the departments of the manufacturing and jobbing trade opens up well and gives promise of an unusually good season. Drugs are moving freely, and orders, both city and country, are satisfactory. The week, taken as a whole, has been an unusually good one, and jobbers are hoping that the coming week will fulfill the promise held out by this one. "It is a little strange," said a prominent jobber, to-day, "that the strike which prevails so generally here now among the building and the machinery trades has not affected our business. I have been looking for a decrease, but cannot find it. The reverse is the case, however, for business seems to be increasing steadily every week. Our February business was better than that of the previous month, our February business still better, while March will go ahead of either."

Comfortably Satisfactory Condition.

St. Paul and Minneapolis, Minn., March 23.—The retailers of these cities continue in a tranquil frame of mind, induced by the comfortably satisfactory condition of trade. Only a very few have the least complaint to offer. The prescription business holds up amazingly, constituting, in the cases of many dealers, fully 75 per cent. of their business. Wholesalers report their work considerably ahead of last year, it being, indeed, in advance of the first three months of any previous year. The prospects for the building industry are quite good, though hampered to some extent by the high price of materials. Collections are better than anticipated.

Trade Is Decidedly Better.

St. Louis, March 24.—Country trade is now moving in decidedly better shape than early in the month, owing mainly to improved weather conditions. Price changes have been but few. P. & W. quinine declined two cents to-day, and is quoted at 33 cents in hundred-ounce tins. Locally, retail trade is showing some little improvement.

Signs for Humphreys' Specifics.

Did it ever occur to you that your patrons know quite as well what you do not keep as what you do keep, and if you were to display a sign of Humphreys' Specifics you would be surprised to find how many of your customers have been buying elsewhere, under the impression that you did not keep the Specifics. We, therefore, urge you to send for a sign, which will be forwarded free, and give it a conspicuous place in your store—if in the window, so much better. We furnish three kinds—blue and white enamel with List; large red and white glass sign, very effective; small transparent sign, can be displayed where a larger one might be objectionable. A few books of directions may do good. Address the Humphreys' Homeopathic Medicine Co., cor. William & John Sts., New York.

J. L. Hopkins & Co., importers and drug millers, 100 William street, New York, are sending out eleven hundred handsome, circular, glass paper-weights to their customers and friends. The sample received here was accompanied by a stanza of original poetry (copyrighted, but not for publication), not to be distributed with the souvenir generally. The paper weight is much better than the poetry, and the latter is not bad.

Market Reports.

NEW YORK MARKET.

New York, March 27.—General trading has been on a moderately scale, with another unexpected decline in quinine the leading feature.

OPIMUM.—A continued firm feeling has prevailed, but the movement has been light and unimportant and the market new firms. The quoted figures are \$3.30@3.50 for 9 per cent. and \$3.40@3.65 for 13 per cent., the outside prices for single pounds.

POWDERED OPIMUM.—Small lots have been in fair request at prices continuing firm. The quoted figures are \$2.40@2.50 for 16 per cent. and \$2.45@2.50 for 16 per cent. according to quantity.

MORPHINE.—The movement into consuming channels is moderately active and values continue steady on the basis of \$2.40@2.50 for eighths in 2½-oz. boxes and \$2.45@2.55 for smaller quantities.

QUININE.—Market unsettled owing to a further unexpected reduction of 2c. per oz. in manufacturers' quotations. The revised jobbing prices are 31@32c. for 100-oz. tins, 33@34c. for 50-oz. tins, and 38@39c. for ounce vials.

MENTHOL.—An easier feeling has developed and jobbers have reduced quotations to \$3.10@3.20.

SAFFRON.—Jobbing prices for leading varieties of Spanish show a decline to \$12.50@13.50, as to quantity.

BURCH LEAVES.—Short are in heavier supply owing to arrivals of new crop and jobbing quotations have been reduced to 37@47c. for whole, 40@60c. for ground and 42@52c. for powdered.

CAJOTE BUTTER.—Cakes are offered more freely and the tone is easier, with Huyler's obtainable at 47@48c. by the box and 50@55c. for less.

ESSENTIAL OILS.—Among the changes during the week are an advance in clove, due to higher prices for the spice, a decline in sandal wood to \$3.55 for ordinary English, \$5.50@6 for extra and \$3.25@3.50 for German, a decline in almond to \$8@6 for English, and declines in cassia to \$1.50@1.60, native citronella to 45@55c. and cubeb to \$1@1.25.

CASTOR OIL.—Manufacturers' prices are higher for all grades and jobbers have advanced quotations to 13@14c. for prime in bbls., 14@14½c. in 10-lb. cases, and 14½@15c. in 40-lb. cans. Crystal 1c. higher. No. 3 is held at 11½@12c. in bbls., 12½@12½c. in cases, and 12½@13c. in cans.

IPCAC.—Holders have modified their views somewhat and jobbing quotations show a decline to 35@37c. for whole, \$3.55@3.85 for ground, and \$3.00@3.35 for powdered.

ERGOT.—Russian is slightly easier and jobbing quantities are available at 70@80c. for whole and 75@85c. for powdered.

FLAXSEED.—Primary markets are higher and jobbers have advanced quotations to \$6.50@6.75 per barrel for whole and \$6.00 per lb. for less. Ground, 4@4½c. by the barrel and 5@7c. for less.

SALICYLIC ACID.—Manufacturers' prices are lower and jobbers have reduced quotations to 60@70c. Salicylate of soda has declined to 12@75c.

TIN CRYSTALS.—Quotations for muriate have been advanced by jobbers to 35@40c.

CHLORATE OF POTASH.—English is firmer and jobbing quotations show an advance to 10½@11c. by the keg and 11@11½c. for less. Powdered 11½@11½c. by the keg and 10½@11c. for less.

STROPHANTHUS SEED.—Values are higher owing to scarcity and the revised quotations are \$1.85@2 per lb. and 18@25c. per oz., according to size of order.

CUTTLEFISH BONE.—Stocks are steadily diminishing and jobbing prices have been further advanced to 32@37c. for whole and 35@40c. for powdered.

DAMIANA LEAVES.—Values show a slight decline and jobbers offer at 24@30c. for whole, 27@30c. for ground and 29@35c. for powdered.

ROSEAX.—Producers have marked up prices for round lots and jobbing quotations are correspondingly higher, the revised figures being 8@8½c. for crystals in barrels and 10@12c. for less. Powdered 8½@8½c. by the barrel and 10@11c. for less.

CLOVES.—Primary markets are decidedly stronger and quotations in a jobbing way have been advanced to 14@16c. for whole and 18@20c. for powdered.

PETEGALATUM.—The market is slightly firmer with jobbing prices marked up to 3½@4½c. for bbls., 4½@5½c. in half bbls. and 6@14c. for 50 to 1-lb. cans.

VANILLIN.—Competition has caused a further decline in quotations to \$1.60@1.80, as to quantity.

The growing business of the Searle & Hereth Co., Chicago, has made more laboratory room necessary. They accomplish this by moving their offices from the second floor to the ground floor, which gives the space vacated for laboratory purposes.

ERA WANT ADS.

If every reader of the Era knew the value of the little Want Advertisements which we publish every week, the page we devote to them would not be large enough to hold all that we would have to print.

These little cards can be used to great advantage by any druggist to dispose of his dead patent medicine stock. Many proprietary medicines which have a sale in one section of the country do not sell at all in other sections. If a druggist has goods on his shelves which he cannot sell, another druggist in some other State where there is a demand may be willing to buy them at a discount or to exchange them for other goods.

Perhaps the reader has an old soda fountain to dispose of; perhaps he wants to sell his store, and we occasionally hear of a druggist with enough surplus cash to invest in a second store. All of these wants can be satisfied if they are made known in the Era's Want Department, which is read by dealers in all parts of the country every week.

See Students' Bulletin, Page 372.

DRUG CLERKS' UNIONS.

Drug clerks in several localities are trying to form, in some instances have succeeded in forming, themselves into regular labor unions. Springfield, Mass.; Denver, Colo.; and St. Joseph, Mo., are cases in point. In the latter city such an organization has been perfected and has become a part of the Central Labor Council.

The professed objects of these combinations are to prosecute druggists who employ unregistered clerks, to lessen the number of hours of the clerks' labors, and in various ways to better the conditions of this admittedly over-worked and underpaid class. But we question very much whether the best way to secure these reforms is to seek them through labor unions.

Pharmacy is not a calling which can ever be governed by the kind of regulations imposed upon the manual trades. Conditions are not at all similar. The demand for the druggist's services cannot be confined within an eight-hour day; they must be available at any and every hour. The trade unionist would be the very first to object when late at night he seeks a drug store for a remedy for a sick child and finds the store closed, because of the very regulations he himself has put in force.

Clerks have their grievances, and serious ones too, but the way to lessen them is not by such radical opposition to the employer. Organization among the clerks is a useful and needed thing, but not of the arbitrary trades union variety. Clerks should remember that they hope to be proprietors themselves some time, and should not lay the wires for their own undoing. The clerks have the right to insist on certain desirable reforms, and the proprietors will meet them more than half way if approached in the proper manner, backed by the weight of a well-knit and powerful organization of the clerks. The labor union idea, however, which considers only, and that arbitrarily and unjustly, the interests of but one party to the controversy, will not succeed in the drug business. The public wouldn't have it, for one thing. The clerks can get what they want by a more just and satisfactory method than this, and will not cut off their own noses to spite their faces. A drug clerk's trade union and an eight or ten hour day would not close the drug stores any earlier, it would only oblige every proprietor to double his force of clerks and cut salaries in half, and this surely is not what the clerks want. Let the clerks form the proper kind of organization and approach the proprietors in the proper, fair spirit, and the desired concessions and compromises will not be withheld. As for violations of law by the proprietors, the board of pharmacy or police

authorities can punish these, without the aid of any drug clerks' labor union. Think these things over, boys, and go at it in the right, not the wrong way.

THE DIPLOMA REQUIREMENT.

We publish in this issue the views of a number of correspondents in answer to the editorial appearing in the ERA of last week upon the advisability of legislation which shall require the possession of a college of pharmacy diploma as a pre-requisite to examination by the boards of pharmacy. In the editorial we endeavored, without bias and without advancing our own preferences, to put before readers the arguments for and against this proposition which is coming into considerable prominence in the pharmaceutical world. We made no attempt to argue the case, merely desiring to call forth the opinions of the pharmaceutical fraternity. It will be seen in the number of letters published in this issue that we have succeeded in our intention, and to such a degree, in fact, that there will be several installments of this discussion in succeeding numbers.

As is natural, there is a diversity of opinion among our correspondents, but, to us at least, is surprising the evident preponderance of sentiment in favor of the diploma requirement. We knew that the teachers and ultra-professional faction were in favor of the regulation, but were unaware that so many practical business druggists were likewise on that side of the fence. We are sure that this liberal discussion will clear the atmosphere and result in good. We are especially glad to have the drug clerks offer their opinions, as one of them does in this number.

OUR CARTOON.

Every one knows that Moses led the Israelites out of bondage to the Egyptians, that the Red Sea opened before the escaping hosts, allowing them dry passage to the other shore, and that the pursuing Egyptians were overtaken by the flood and perished miserably. We have made use of this historic incident in an endeavor to depict in a kindly way the present status of the drug trade. Is the N. A. R. D. the Moses to lead the retailers from their bondage to all manner of trade evils which have so long oppressed them? We hope so. At any rate, our artist has tried to give his conception of the conditions existing to-day.

NOT OIL RIGHT.

A woman is suing an Ohio druggist because, as she alleges, he gave her machine oil when she ordered cod liver oil. She took a dose of the lubricator and was, she asserts, laid up for three months and suffered permanent injury to her health. She asks for \$4,800.75 for damages, \$25 for physician's services and medicines, \$75 for the expense of taking care of her household duties while sick, and the return of 25 cents she paid for the oil. There's something "fishy" about this story, probably the cod liver oil.

A Boston theatre has back of the auditorium a quiet little parlor furnished with quite a stock of medicines for the treatment of patrons who may become ill during the performance. The same theatre also has in the lobby a bulletin board upon which are nightly given the names and seat numbers of physicians in attendance upon the performance, so that they may be called out, either by their patients or members of the audience needing their services. The scheme works well, and has been found to be very useful.

MANUFACTURE OF BENZOIC ACID FROM COAL TAR.—A patent has been granted in France for the following new process: The light and middle fractions of distillate from coal tar are fractionally redistilled in a column apparatus and the portions distilling between 160° and 240° C. collected separately. This is the same fraction that also serves for the separation of carbolic acid and cresol. By washing with caustic soda solution of sp. gravity 1.10 in the cold these substances are removed. The remaining oil is then transferred to a distilling apparatus provided with mechanical stirrers, about twice the quantity of caustic soda of sp. gr. 1.40 added that is necessary for saponifying the benzonitrile present in the oil, and the mixture heated, under stirring, as long as ammonia is evolved. This operation is ended in a few hours. The receiving vessels contain the low boiling constituents of the oil and a moderately concentrated ammonia water. The contents of the still separate into two layers; the lower, alkaline layer, is removed from the supernatant oily stratum and treated with carbonic acid or a mineral acid to saturate the excess of alkali. Small quantities of phenol, resinous and oily matter are thus removed, leaving a nearly colorless liquid consisting of a solution of almost pure benzoate of soda. From this solution the benzoic acid is precipitated by means of a mineral acid. Instead of caustic soda, potash, lime or baryta may be employed, but the latter are less desirable because of the sparing solubility of their salts. (Apotheker Zeitung).

EFFECT OF LIGHT ON CHEMICALS.—An interesting phenomenon has been observed by Wilhelm Marckwald in connection with the change of color undergone by certain bodies upon exposure to light, without being otherwise altered in composition or structure. (Sci. Amer.) The anhydrous chloride of quinoquinoline, upon exposure to light, changes from a yellow color to an intense green, returning to its original state when heated to 60° C., or if kept in the dark for a few days at the ordinary temperature. This change of color is brought about in a few seconds by exposure to bright sunlight, and in a few minutes by diffused daylight; it is chiefly due to the more refrangible rays of the spectrum. No effect has been observed with the X-rays. A similar action has been observed with the body known as E-tetrachloro- α -ketonaphthalene, which crystallizes from its solutions, forming colorless and transparent crystals. These, when powdered and exposed to the light, change to an amethyst color; the large crystals upon exposure show a reddish violet color in one direction. These changes do not appear to be connected with a chemical or crystalline modification, and by fusion a non-sensitive modification may be obtained, which slowly returns to the sensitive form. To these phenomena the experimenter gives the name of phototropy.

VANADIC ACID AS DEVELOPER.—The anhydrous acid, V_2O_5 , is a cinnamon-brown powder insoluble in water and makes an excellent photographic developer. For use it is prepared as follows: 3.75 parts of the acid are mixed with 7.5 parts of concentrated sulphuric acid and 60 parts of water. Metallic zinc is then added in excess and the liquid filtered as soon as effervescence ceases. One volume of this liquid is diluted with 150 volumes of water and acidulated with acetic acid.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

HEARING ON THE STAMP TAX.

The Legislative Committee of the National Association of Retail Druggists has been informed through the Hon. Boutell that he has arranged for a hearing before the Ways and Means Committee of the House for Tuesday, April 17 at 10.30 a. m.

The delegates are requested to assemble at the Raleigh Hotel, Washington, at 9 a. m. sharp on the morning of the hearing to counsel and arrange plans prior to going before the committee. All interested parties are requested to join us.

Please make mention of the above facts, as we are anxious to secure as large a delegation as possible.

Sincerely yours,

THOMAS STODDART,

Chairman Legislative Committee, N. A. R. D.

Buffalo, N. Y., March 27.

WANT TO BE ON THE LIST.

Muscataine, Iowa, March 26.

Editor Pharmaceutical Era: We have read with much interest your article touching the agreement of the manufacturers refusing to sell jobbers who supply cut raters. We are a young company out here in the West, who are making some strides in this field, and are conducting our business on a most honorable, business-like basis, and while we need orders worse than some of the heavy weights, we have most strenuously opposed the cut rate idea, and we have absolutely refused to sell to anyone whom we knew to be in that class. We recently opened a campaign in the city of Detroit, Mich., and we are approached by a prominent firm there who wish to have us place them on our jobbing list with our line of preparations, but knowing them to be in the habit of cut rating, we lost the order, because we required of them an affidavit to the effect that they would not cut rate our goods. We simply recite this to you to give you an idea how anxious we are to have you place us as quickly as possible on your list in opposition to this method of handling patent medicines. It has been our policy from the beginning of our business to work "hand in glove" with the retailer, feeling that his interest and ours were so closely allied that the dividing line could not be defined. For that reason we took this stand against the cut rate method, and figured the most favorable profit of 100 per cent. for the retailer on our line. If you will place our name on your list with those who have already signed this agreement, we will consider it a favor.

THE LIGHTNING MEDICINE CO.

EARLY CLOSING AND OTHER MATTERS.

Chicago, March 28.

Editor Pharmaceutical Era: The druggists of South West Chicago, about twenty in number, through an organization called the South West Retail Druggists' Association of Chicago, have been closing their stores at 7 o'clock on Sunday evenings since last October. The experiment has been quite widely noticed by the journals. The time of the agreement for closing has expired—"the last Sunday in April"—and we think it is expedient to publish the fact that opening during the summer is not a retreat. We did not expect to close Sunday evenings during the summer. We will resume closing next October. We have found it a good thing. It has been honestly observed by everyone interested. It has gained us respect. The "it'll last two or three weeks" prophet has had a page ripped from his seer book.

Our small organization has been a good thing in many ways. Especially, and first, we have become ac-

quainted with one another, and found that we are all pretty good sort of fellows; we have put prices in our territory on a pretty fair basis; we have closed Sunday evenings; we have stopped the abuse of credit by those who run bills to the limit with every available druggist; we have saved something in buying together, though we have not attempted much at this; we have had several very pleasant evenings together, and we are in shape so that we can control our territory in any action the N. A. R. D. might want to take through us. If the city was organized as we are, the N. A. R. D. would be able to accomplish any right thing it might undertake.

We think it expedient that you take some notice of our resuming of Sunday evenings, in order that it may be known that it is not a failure with us.

If our small experience will be of any aid to any one, we will gladly answer any inquiries. Very truly,

S. W. R. D. A.

RICHARD VOGEL, President.

E. F. MCCLURE, Secretary.

THINKS BLACK LIST IS NOT ILLEGAL.

Worcester, Mass., March 26.

Editor Pharmaceutical Era: In your issue of the 22d inst., you state that there will be no black list, because such a list would be illegal.

For the last three years we have furnished cut-off lists to the wholesale drug trade from time to time, and have had no fear of being sued. The National Wholesale Druggists' Association has also furnished a cut-off list of the firms that supplied The John D. Park & Sons Co. No doubt that list was one of the grounds of complaint against the N. W. D. A. The court discriminates between a list for the purpose of unjustly injuring a dealer and a list for self-protection.

PHENYO-CAFFEIN CO.

OUR SUPPLEMENT: AMERICAN DRUG STORES.

In this issue we present subscribers with a four-page supplement representing a selected number of drug store window displays and interior views. In response to our request for photographs we have been favored with so large a number that it will be necessary to issue others of these supplements. The present one contains twenty views, and a brief description of these is appended.

First page.—The Owl Drug Company, Kansas City, Mo. This handsome store was especially built and decorated after the designs of Architect Louis Curtis. It is believed to be one of the handsomest drug stores in the country, at least in the West.

Inside pages.—No. 11. L. L. Moore, Muskogee, Ind. Ty., gives a view of his experimental laboratory, which he has found a very profitable investment. Numbers 28 and 29 on these pages, and 27 on the last page, are three views of exhibits in the drug store of W. P. Huckle, Kansas City, Mo. The first two of these were Christmas displays, and the third an Easter exhibit. 30 is an interior view of the store of W. F. Egel & J. H. Booth, Philadelphia, formerly known as the Hawthorne Pharmacy. The present owners are both graduates of the Philadelphia College of Pharmacy, class of 1889, and have been conducting the store for about a year past. Numbers 6 and 7 are respectively an interior and exterior view of Walter S. Rocky's drug store at Columbus avenue and Sixth-fifth street, New York. 17 is a Kentucky drug store, that of Walthall & Pemberton, Horse Cave, Ky. This store is 70 feet by 28 feet, and has an interior balcony constituting a second floor, which is devoted to wall paper and picture mouldings. 31 is a window display by Druggist H. B. Smith, Brooklyn, N. Y., showing the goods of the Empire State Drug Company, of which concern he is a stockholder. 42 and 43 are interior views of George Y. Woods' store, Spruce and Tenth streets, Philadelphia, Pa., one of the oldest in that section, having been founded in 1832. Ever since its institution it has been in the hands of Friends. There are numerous departures from the ordinary, conventional store arrangements; the prescription department, for instance, being in the basement. Number 21.

Mentzer & Clugston, Waynesboro, Pa., send a photograph of a window display which they say sold Beef, Iron and Wine for them faster than any other advertising they ever did. 15 is a tooth brush exhibit in the store of Oscar Ross, Baltimore. Hundreds of tooth brushes are stuck into the meshes of a net and so arranged as to bear a resemblance to a lot of fish being drawn out of the water. 23 is an interior view of the large store of Rothinghouse Bros., Jonesboro, Ind. No. 3 is an exterior view of the premises of Thomas & Thompson, Baltimore. 45 shows a cigar display in the window of E. A. West's store at Decatur, Ill. 13 is the interior of the famous old store of Theodore Metcalf Co., Boston. Volumes could be written of the history of this store. There are many curious things about it. It has no soda or confectionery department, and no cigars, cigarettes, etc., are sold. One of its plate glass windows is the first ever known to be insured in Boston. The store is full of treasures which would delight the heart of an antiquary.

Last page.—Two of the displays on this page have been noticed above, the other, Number 19, is an exterior of the Economical Drug Company's store in Chicago, a famous cut-rate establishment.

It is impossible to adequately describe each of the displays pictured in this supplement, hardly even more than brief mention. The druggist will enjoy looking at them and will undoubtedly gain hints and suggestions therefrom.

AN APPEAL FOR THE N. A. R. D.

The editorial notices contained in the issues of March 15 and 22 should give every member of the N. A. R. D., and in fact every retail druggist in the land, great encouragement, as it certainly evinces a willingness upon the part of five of the principal proprietors to not only adopt the plan submitted to them for approval, but go even a step farther, by promising to refuse supplies to such jobbers as violate the conditions of the contract by selling to the "illegitimate dealers."

It seems nothing is lacking now but honesty, integrity and fidelity upon the part of the retailer himself. The jobber will be exceedingly careful to maintain his contract, especially if the first violator is made an example. The proprietor makes the demand. The retailer is more than willing to sell the standard goods, especially so if he can get even a fair margin of profit, and it would seem that there should be no necessity for a single jobber to violate the contract.

The greatest difficulty that the retailers have to contend with is the lack of organization upon their own part. For quite two years the officers and the active members of the N. A. R. D. have been preaching "organization," but while we have made progress, there is no reason why every retail druggist in this country should not now, at this very moment, belong to some organization, giving his money and a liberal share of his time for fostering the principles of the N. A. R. D. and using his every endeavor to push to a successful conclusion the plans laid down by the association. With a great many it seems to be the belief that all of the work is done gratuitously; that printing, postage, issuing bulletins and all the necessary correspondence cost nothing. This is a very serious and grievous mistake; it all costs, and while the entire association is run with but one salaried officer—small in comparison with the work to be done—very, very economically, there is no reason why the forty thousand retail druggists of this country should not keep the treasury abundantly supplied for all necessary expenses. The work of forming new associations could be undertaken, organizers would willingly go into unorganized territory, form associations, if only absolute expense money could be guaranteed. Right to-day there are many members of the N. A. R. D. who from love of their work, and whose feelings are so wrapped up in the success of the association, would do the work without pay for their time. The average druggist, unfortunately, is not over-burdened with this world's goods, but an immense amount of service could be done by these organizers; and while helping the national association towards success, would strengthen the retailer's position everywhere.

Let every reader of this letter ask himself if he feels that he has contributed his share to this great cause. Let him go "down into his pocket" and send to the treasurer all that he can afford; it will not be wasted. And if the N. A. R. D. is successful, it will come back to him four-fold. Let every association send its dues and contributions promptly; then by the time of the next annual meeting we may have 75 per cent., if not the entire retail trade allied with the N. A. R. D. This is all possible. It will take a great deal of work, but the association is fortunate in having a very large majority of its members who are not only willing but anxious to do the work, and do it well.

Don't stand back at this critical time, when the proprietors are doing for us all that we have asked, but come forward as members, come forward with your contribution of money, come forward with a willingness to do your share to the utmost for the N. A. R. D. The usefulness of the association, its power to bring to a successful conclusion the task undertaken is limited only by the industry and fidelity of the retailers. If each retailer will do his share there cannot be such a thing as "failure." We don't want sympathy; we don't want your promise to abide by the suggestions or resolutions of the association. We don't want your quiet acquiescence in everything that is being done to bring prosperity to the business, but we do want your active, earnest support; we do want your contribution of the necessary "cash," either direct or to your association, and we do want all of this promptly and willingly. It will never be regretted by those who follow these requests.

SMON N. JONES,

President N. A. R. D.

Louisville, Ky.

THE "ORPHOL" NEW REMEDIES.

"J. A. F." sends the Lounger (N. E. Drug.) the following lamentation. Of pathos and pertinence it cannot be said to LACTOL:

"I AMMONIA druggist," he said, "but I protest this is ORPHOL. I refer to the new remedies. To keep track of them AMIDOL our other troubles is too much, and often wonder how we DIOTAL. Say," (this was an aside to the cat), "do you know that's DIURETIN?"

"Yes," he resumed, "once in a while we AIROL our news on this subject, and it does BETOL how the names increase. The Germans seem to delight in FERRATIN out the hardest names and FORMIN the most marvelous combinations, and then they TRIONAL sides and succeed in CREATIN a demand, and to METOL calls we must have them. In THYMOL a druggist will need to know will be the German chemical lists. I suppose it will be just GLYCOL other fads, and will run out. I hope our best days have not BENZINE, but I am somewhat fearful. I think KINO this, that if they don't stop TAXINE us there will be trouble. Why, the way they are ROBIN us is wrong. You may think I SEDATIN jest—"

While he answered the telephone I skipped out.

The Deacon's Dream.

"May you take this lesson home with you to-night, dear friends," concluded the preacher, at the end of a very long and wearisome sermon. "And may its spiritual truths sink deep into your hearts and lives to the end that your souls may experience salvation. We will now bow our heads in prayer. Deacon White, will you lead?"

There was no response.

"Deacon White," this time in a louder voice, "Deacon White, will you lead?"

Still no response. It was evident that the Deacon was slumbering. The preacher made a third appeal and raised his voice to a pitch that succeeded in waking the drowsy man.

"Deacon White, will you please lead?"

The Deacon rubbed his eyes and opened them wonderingly.

"Is it my lead? No—I just deat."

—Detroit Free Press.

THE MOSES OF THE DRUG TRADE.

And the waters returned, and covered the chariots, and the horsemen, and all the hosts of Pharaoh that came into the sea after them: there remained not so much as one of them. (Exodus XIV, 28)

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—The Question Discussed by Pharmacists, Clerks and Teachers.—Its Advantages and Drawbacks Contrasted.

A Move in the Right Direction.

Our move is in the right direction. My thought is expressed in the motion offered at the Put-in-Bay meeting of the American Pharmaceutical Association, see 1890 Proceedings, page 327:

"RESOLVED, That the A. Ph. A. hereby expresses its approval of the proposition that none but recognized graduates should be received by boards of pharmacy as candidates for examination; also that while such action is not practicable at the present time, it should be steadily advanced by all reasonable discussion and agitation."

To me this would seem to be an almost ideal condition. Perhaps never has an ideal condition been reached, and surely never by leaps and bounds. The good things come slowly, and by a natural process of evolution and advancement. This good thing will be all the better for coming slowly. A general education of the public up towards this high standard is the thing to work for now, and your editorial, with the agitation it suggests, helps just along that line.

The pharmacist of the future must be a more highly educated man than the old apothecary. It is only as such that he can survive. His work will be more scientific than commercial, for the commercial side of the business is already drifting away and must continue so to do. Therefore, welcome all experiments along the line of more legal restrictions and higher standards. This legislative experimenting is as necessary as experimenting in the laboratory. All chemists learn much from negative results, and do not necessarily class such results as failures. The same should be true of legislation. Of course legislative experiments are costly in many ways, but they are necessary, all the same. Let us have just as many of them tending along this line as we can get anywhere in the country.

Boston, Mass.

S. A. D. SHEPPARD.

As Soon and As Fast As Possible.

In reference to the "graduation before examination" question my opinion is well established. We should insert the requirement in our pharmacy laws as soon and as fast as possible. By possible, is meant the earliest time at which such insertion will not imperil the existence of the law. The bone we have is better than its shadow seen in the surface of the stream over which we are passing. The legislative object of pharmacy laws is to protect the public by requiring qualified pharmacists to handle the public's medicine. The examinations of the boards of pharmacy are to ascertain that such qualification does exist in the candidates for licenses. The methods for preparing for these examinations are twofold. First, practical experience, and, second, study. The first method cannot be omitted and is not a part of the graduate discussion. The second method cannot be omitted, but it can be modified quite largely. The usual methods of store study, such as disjointed perusal of the dispensatory, and when the examination approaches memorizing of the quiz compends, may enable the candidate to pass the board, but certainly cannot equal an orderly and logical presentation of the principles and sciences included in pharmacy. In the average case the quiz man will have but little educational resources beyond those necessitated for the examination, whereas the college-taught man will have a fairly good foundation upon which to build as his experience widens. You will notice it is not claimed that all college men are superior to all store-taught men. It is the average of these men that is considered in these statements. Is it

not the fact that many board examinations are framed to license a fair proportion of examinees rather than give the public an ample measure of protection? If this is true, as it is believed to be, the graduate requirement would justify the material raising of their standard. Now look for a moment at the three interests affected. First, the public would naturally receive better protection from the coming generation of pharmacists if the college requirement was made from now on; second, those already in pharmacy would be helped temporarily, at least, by the added difficulty of engaging in our calling, and third, it is altogether possible that those entering our ranks in the future under this requirement would find their income sufficiently increased to justify the additional investment.

This is a transition period in pharmacy. The pressure of the times seems to be toward commercialism rather than professionalism. We are told repeatedly by physicians that they cannot prescribe in the metric system because pharmacists make so many mistakes in preparing their prescriptions. This certainly cannot be true of the college taught man. But if physicians' actual experience with pharmacists is such as to require them to discard the metric system, when they have been educated in it, and have to acquire the old system, how can we expect them to concede anything professional to our calling. If any professional element in pharmacy is to be preserved or developed, the time to begin is right now, and the first practical step is to make college training a pre-requisite to licensing, as is done in medicine, dentistry and even veterinary medicine.

Buffalo, N. Y.

WILLIS G. GREGORY,

Dean Buffalo College of Pharmacy.

Desirable, But Not Practical.

"College Graduation as Prerequisite to Board Examination." A splendid subject for discussion; the more discussed the better, but in my honest opinion not practical at present, although very desirable. But do not let us make it compulsory just yet. Let us wait till we have better colleges, better boards, and above all, better common schools.

At a recent examination the majority of applicants gave a wrong answer to such simple questions as divide $\frac{3}{4}$ by 24; divide $\frac{1}{2}$ by 30; how much is 3 per cent. of 500. Among these applicants were a goodly number of Ph. G.s, licentiates from other boards, and graduates of common and even high schools. In view of such facts—regrettable as they are—I am forced to believe that the best plan is to go slow, not try to take the second step before the first one. Let us hope that in the future boards will be selected more and more on the basis of fitness than on politics; that common schools will be governed by educators more than by politicians, and colleges will be so strong financially as to look more for quality of students than quantity. As I consider that at the San Francisco meeting of the A. Ph. A. my "eloquent" (?) plea for a higher grade of apprentices was more positively than politely laid on the table, and observe how the opinion on that one subject has changed in ten years, I am encouraged to hope for far better things within the next decade. A few years ago nobody who had jerked soda squirt for two years, or slashed out chewing gum and cigarettes for that length of time, could walk up to the front and demand his assistant paper "on time." There now begins to dawn the opinion that such an applicant should be able at least to multiply and divide reasonably well. Let us not insist by legislation on a sheepskin—as long as too many black

sheep succeed in obtaining the skin. Let the boards do the skinning for a while, and enforce the necessity of a good schooling before we insist on colleges.

There is no room for argument that the conditions of pharmacists will be bettered, if the enforcement of qualifying restrictions lessens the army of new comers. Same applies to colleges; if we had fewer of them we could hope for better ones, and their diplomas would stand for something more definite. The cry for fewer and better pharmacists, fewer and better colleges, fewer and better teachers, fewer and better boards, all is of the same cloth. While we strive for these highly desirable objects, don't let us hamper the progress by beginning to insist on a diploma, as long as a diploma is such an unknown or rather uncertain quantity. This is my opinion. I may and do undoubtedly differ with other men just as capable or more to judge, but you asked for my opinion, and I can only give you mine, owned by nobody else but me, and my opinion, I am forced to admit, has undergone an evolution since I have seen with mine eyes and heard with mine ears just for one year on the Illinois board.

Chicago, Ill.

WILHELM BODEMANN.

Favored by Pennsylvania Board.

I am heartily in favor of a pharmacy degree as a prerequisite to board examination, and favor a degree requiring a three-year term, which demands at least five months for each term, and at least three hours instruction daily, one-third of which shall be practical work in the laboratory.

I am in favor of such a provision because it is for the best interests of the individual, because it is to the best interests of the board of examiners, and last but not least because it is to the best interest of the public, whose bodily health is largely in the keeping of pharmacists.

The individual would be benefited by being more able to compete with trade conditions, which often take advantage of trade ignorance, for example: A few months ago a polished gentleman offered for sale "Vanilla oil," which he represented as the active principle of vanilla bean. He sold large quantities of it to those who believed him. They paid dearly for their ignorance. Another example: A pharmacist buys powdered cantharides, from which he makes a blister to be used in a critical case; but it fails to perform its function. The cantharides was bought in good faith from a reliable jobber, who has had his broker buy his supplies for him. The latter is instructed to buy in as cheap a market as possible. No examination is made by the jobber, because none is demanded. None is made by the pharmacist, because he does not know how; hence the patient suffers, perhaps by the loss of his life, and the physician by his reputation. But, say the patient is robust enough to battle with disease a day or two longer, and the doctor orders a blister from a druggist who takes pride in his profession. The latter also buys powdered cantharides, but he is a crank; he does not take it for granted that it is O. K. He examines it for its active constituent, if deficient, he returns his purchase. This he does until he gets a reputation as a "kicker," which in due time is modified into a reputation as a careful pharmacist. He pays no more for his pure products than he would for the impure, and gains a profitable reputation. The public gets efficient services at a time when the skillful services of the pharmacist are most needed.

I do not regard requirement of a diploma degree as a bar from the practice of pharmacy of worthy young men who, though possessing a good general knowledge of the drug business, have been unable by force of circumstances to secure the college education. I was some twenty-seven years ago just such a young man; this fact, however, did not deter me from living frugally in order to save sufficient money to leave my native town for a college some four hundred miles distant. To-day colleges of pharmacy are not so far apart that much expense is necessary, and to-day assistant pharmacists are better paid. They have more leisure time, better equipments as to utensils and literature, than were at the command of assistants in former years.

It is an axiom in law that it is better that one hundred guilty should escape punishment than that one innocent person should be punished. The world perhaps would be better if the example of Christ was more in practice. He was condemned and punished, though not guilty, so that mankind may better its condition. It is impossible to enact laws for individual cases; laws are enacted for the benefit of the majority.

During the past century the average life of man has been increased from 30 to about 40 years (at this rate it will be possible in six centuries to increase the average life of man 100 years). Many causes have contributed to this result, one of which is undoubtedly improvement in medicine, for pharmacy has not been slow in the past century to provide relief and comfort to suffering humanity. Let pharmacy, medicine and religion join hands. Pharmacy and medicine shall take upon themselves the burden of increasing the average life of man (in bodily ease and comfort) to 100 years; religion, to supply mental ease and comfort and, at the expiration of a full term of life here on earth, a certainty of a happy life in the eternal future.

Pittsburg, Pa.

LOUIS EMANUEL.

Also by Michigan.

The following circular I sent throughout the State of Michigan several days ago:

The question is becoming somewhat agitated whether it is not advisable to have the pharmacy laws of the different States so changed that before a person can become a registered pharmacist it will be necessary for the applicant to furnish an affidavit that he is a graduate of a recognized school of pharmacy, besides showing affidavits for at least one year's experience.

In other words a person (no matter how much practical experience he has had) must be a graduate of some recognized school of pharmacy before he can appear before a board of pharmacy for examination.

I have my own views on this subject, and would like to get the sentiment of the druggists of the State of Michigan on this matter.

This question I am satisfied will come before the board of pharmacy at no very distant date; therefore I am anxious to know the sentiment of the parties that are interested on this subject.

The idea is, that if the law was so changed, it would not take effect until two years after the change was made.

I am in favor of a graduate of a recognized school of pharmacy with not less than one year's practical training in a drug store before entering college.

A. C. SCHUMACHER,

Secy. Michigan Board of Pharmacy.

Ann Arbor, Mich.

The Drug Clerk Does Not Like It.

As you have opened your columns in regard to discussing whether it would be beneficial to the pharmaceutical profession to require all applicants for the board examination to be graduates of a college of pharmacy, I would like to say:

Any young man having an ordinary public school education and a good idea about mathematics is fit to become a good druggist, provided he will enter a good store and have a chance at the prescription counter and in the laboratory during intervals, assisting the registered man; that is to say, mixing powders, making pill masses, folding powders, filling capsules, etc., after the registered man has weighed or measured the different preparations or chemicals. Will he not thus become familiar with the different drugs and chemicals and be able to commence to study by himself or with the assistance of the registered man and become as good a pharmacist as any graduate of a college?

As the ordinary up-to-date drug clerk is not able to earn more than \$12 to \$20 per week, how can it pay a poor boy to spend about \$250 on a college education and work for \$1 or \$5 per week during his apprenticeship, being hounded like a dog by the board inspectors when he attempts to pass the board examination? What would be the consequences? The colleges would naturally raise their fees, and you would have to pay them if there were no other means to become registered.

You say the physician or lawyer must show a college

diploma. Certainly, a young man intending to become a lawyer or physician will do his utmost to scrape the money together, because he knows when he has reached his goal he can enjoy the life of a professional man; but what can a poor drug clerk do at \$12 to \$20 per week. Can he become married and support a family as a professional man ought to? Would the proposed law change his condition? No.

Would not the colleges of pharmacy increase their time to three or four years? Could he make more money because he spent four years or \$500 at college? No.

Therefore, I say give every poor boy a chance in this united land to earn an honest living. Nobody can pass a board examination, no matter how much cramming he does, unless he is a competent practical druggist. Therefore this law would benefit nobody but the colleges of pharmacy.

Hoping you will favor me with your valuable space in your journal and give my fellow clerks a chance to read my opinion, I am,

Yours respectfully,
GEORGE A. GUNBOK, JR.

With C. W. Klein, 797 Flatbush ave., Brooklyn, N. Y.

Ohio Wishes It.

I am unequivocally in favor of the higher standard of qualification before examination for registration as pharmacists. We had no trouble in price-cutting when the young man had to go into the store and learn the business and work there until he knew it. But when pharmacy laws became general and a young man could, by a few weeks' "coaching" and the use of quiz compends, go before a board of pharmacy and become registered, while he practically knew nothing of the business, he was thus legally qualified to open and conduct a pharmacy, and draw his trade from those who had studied for years to qualify themselves; then began the cutting of prices, and all the evils that now curse the business. The young man who became legally qualified in that way was not qualified to take a position in a store under a competent man, and yet he felt himself better qualified than the older man, who was not registered by examination. I give you the above as my principal reason for believing that under the present conditions the more thorough the education now the better.

Cincinnati, Ohio.
JOHN WEYER,
EX-member of the Ohio Board of Pharmacy.

Guard Against Inferior Colleges.

I have always believed every young man should be a graduate in pharmacy before being registered. At the last meeting of the Ohio State Pharmaceutical Association Mr. Kaufman, of Columbus, recommended that such a resolution ought to be adopted, and upon my motion it was passed. I heartily endorse any movement to elevate our profession (?) as I feel sure higher education will certainly do. The inferior colleges will have to be guarded against, but every profession has to contend with that evil.

FRANK P. WEISENBERGER.

Defiance, O.

Will Add More Expense.

My opinion in brief is that college graduation as a pre-requisite to board examination will merely add more expense to the learning of the profession of pharmacy, without giving additional compensation, unless interstate agreements are made that licentiates or registered pharmacists of one State can receive certificates or licenses in any other State.

Chilton, Wis.
HENRY ROLLMANN,
Secretary Wisconsin Pharmaceutical Association.

Fitching the Voice.

"I have a severe cold," said the sweet singer. "I shall have to use a cough syrup."

"Use only tar syrup," spoke up the manager.

"Does it make any difference?"

"Yes; everything depends on the pitch of your voice."—Chicago Daily News.

PHARMACY AFFAIRS IN GREAT BRITAIN.

The Companies Bill.—It will be remembered that the Pharmacy clause in this bill legalizes the practice of pharmacy by limited companies, provided qualified assistants are employed. It also empowers them to assume the titles of pharmaceutical chemist, and chemist and druggist, according as their assistant is the one or the other. Chemists have cried out very much against the Government's proposals—why, it is somewhat difficult to understand, as owing to a flaw in the Pharmacy Act of 1868 companies have been able to carry on the business without hindrance, and even in the case of a company which sold poisons without employing a registered chemist, only the unqualified employee is open to prosecution. The suggested clause is certainly an improvement on the existing state of things, as in the event of a company keeping a shop for the sale of poisons without a qualified chemist in charge, the company, under the bill, could be prosecuted, as well as the actual unqualified seller. It is probable that the pharmaceutical objections to the bill are based largely on sentimental reasons, and also on a vague and, we may say, vain hope that as long as Parliament does not actually legalize company pharmacy there is a chance that it may one day be declared illegal, and the original intention of the 1868 Act be rendered an actual fact. That this will ever come to pass is, however, as the president of the Board of Trade (Mr. Ritchie, who has charge of the bill in the House of Commons) told Mr. Martindale, the president of the Pharmaceutical Society, when he waited on him recently to put the society's views before the government, quite impossible. With Mr. Ritchie's dictum we must agree, as whatever chance might have been of remedying the flaw in the Act was let slip by the Pharmaceutical Society when they failed to take decisive action at the moment the defect was first discovered, twenty years ago. At the present time, when the companies interested in pharmacy, either wholly or as part of their business, are very numerous, and their shareholders reaching some hundreds of thousands and their capital amounting to millions, it is hopeless to expect that Parliament will put a stop to their carrying on business. That being so, and absolute prohibition of company pharmacy being hopeless, we think the Pharmaceutical Society would have been wiser to have endeavored to have amended the government clause rather than to oppose it altogether, a course they decided on at the Council meeting on March 7. Surely half a loaf is better than no bread!

A Degree in Pharmacy.—A degree in pharmacy seems within measurable distance, the University of London under its new constitution as a teaching body, having decided to reorganize the school of the Pharmaceutical Society, and to establish a board of pharmacy. The professor of materia medica will be styled professor of pharmaceuticals.

British Pharmaceutical Conference.—The preliminary arrangements with regard to the meeting of the conference in London in July this year are now fairly on the way. An influential local committee, under the chairmanship of Wm. W. Martindale, F. L. S., F. C. S., has been formed to look after the entertainment of the visitors, and already subscriptions to the amount of £200 have been promised.

The Proprietary Articles Trade Association.—The Scheme for Chemists' Defence, which was inaugurated by the P. A. T. A. last year is being fairly well taken up. The scheme is financed as a limited company with a capital of £10,000, and already 600 41 shares have been taken up. Mr. Glyn-Jones, the organizer and secretary, estimated that a subscription to the share list of £500 would be sufficient to start the scheme, so that it is now in a fair way to commence practical working.

Citral Content of Lemon Oil.—E. J. Parry, B. Sc., F. I. C., controverts the statement that no pure oil of lemon ever contains more than 4 per cent. of citral. He states that he has frequently found from 5 to 6 per cent. He recommends the following process of estimation: 200 Cc. of oil are concentrated in a Wurtz condenser under a pressure not exceeding 15 mm., 10 Cc. of the residue are shaken with 5 grammes of cyanacetic acid, and 5 grammes of caustic soda in 30 Cc. of water in a small absorption flask, with a long graduated neck. The non-absorbed residue is read off.

EXAMINATION QUESTIONS

OF THE

PENNSYLVANIA BOARD OF PHARMACY.

A.—(1) What is the purpose of the pharmacy law of this State? (2) What does the law consider a drug or chemical which is fatal to adult human life in quantities of 60 grains or less? (3) What does the law require for the sale of a drug or chemical which is fatal to adult human life in quantities of 5 grains or less? (4) Give common names of three drugs which are used as insecticides? (5) Are there any restrictions for the sale of insecticides?

(1) What effect has heat upon solids? (2) What effect has it upon liquids? (3) What instrument is used for measuring the degrees of heat? (4) Name the different scales of degrees in common use. (5) Which of these is recognized as the standard? (6) How many degrees are included between the freezing and boiling points of water in each scale? (7) How may degrees of one of these scales be converted into those of another? (8) Give an example. (9) What is the purpose of a water bath? (10) Why does the Bunsen burner give a smokeless flame?

C.—(1) Give the official Latin name of Cramp Bark. (2) Give Nat. Ord. of plant yielding it. (3) Briefly describe the drug. (4) Give its medical properties. (5) Give the official Latin name of the preparation made from it. (6) Give official name of Black Haw. (7) Give Nat. Ord. of plant yielding it. (8) Briefly describe the drug. (9) Give its medical properties. (10) Give official Latin name of the preparation made from it.

D.—Define the following: (1) Benzol. (2) Benzene Benzol. (3) Benzoin. (4) Camphor. (5) Chloral U. S. P. (6) Chrysarobin. (7) Cocous. (8) Gamboge. (9) Phenol U. S. P. (10) Spermaceti.

E.—(1) What is Bismuth? (2) Give its chemical properties. (3) How is Bismuth Citrate prepared? (4) In what liquids is this salt soluble? (5) How is Bismuth and Ammonium Citrate prepared? (6) In what liquids is it most soluble? (7) How would you recognize Bismuth subcarbonate? (8) How Bismuth subnitrate? (9) What dangerous impurity is liable to be present in Bismuth salts? (10) Give test for limit of said impurity.

F.—Give full Latin name and ingredients of each of the following official preparations: (1) Vegetable Cathartic Pills. (2) Tonic and Stimulant. (3)romatic Spirit of Ammonia. (4) Syrup of Hydriodic Acid. (5) Compound Tincture of Benzoin.

G.—(1) Give the official Latin name of Squill. (2) Give the botanical name of plant yielding it in what natural order is it included? (3) What is its habitat? (4) What portion of the plant is used? (5) Describe it as it exists in the natural state. (6) Describe it as it is found in the market. (7) Name its active ingredients. (8) Give its therapeutic action. (9) Give dose of crude drug. (10) Give dose of official.

H.—Give official Latin name and maximum dose of each of the following: (1) Sodium Phosphate. (2) Potassium Ferrocyanide. (3) Cerium Oxalate. (4) Zinc Oxide. (5) Lactucarium. (6) Iron Chloride. (7) Quill tilla. (8) Tr. Iodine. (9) Tr. Gelsemium. (10) Tr. Strophanthus.

I.—(1) Why should pharmacists know how to take the specific gravity of liquids? (2) In what country are 70 grammes will 1,000 C. C. of Distilled Water weigh? (3) How many grammes will 1,000 C. C. of Ether weigh? (4) How many grammes will 1,000 C. C. of Alcohol weigh? (5) How many grammes will 1,000 C. C. of Mercury weigh?

K.—(1) Give official Latin name of Turpentine. (2) How is it obtained? (3) What products are obtained by distilling it? (4) In what forms is the distillate official? (5) Which should be used for internal use? (6) What product of the residue is official?

L.—(1) How is Salicylic Acid made? (2) What is the principal objection to prescribing it in simple aqueous solution? (3) Name three official Salicylic Acid official. (4) What official liquid is made from the acid? (5) Give the official name of the salicylic ether of phenol. (6) Describe its physical properties. (7) What are its medical properties? (8) What is its dose? (9) How is it usually administered?

M.—(1) Give the official Latin name of Phenylacetamide. (2) Give the chemical name and graphic formula of Aniline. (3) Show by reactions how it is derived from benzene. (4) How is Acetanilid made? (5) Give its chemical, physical and therapeutic properties.

N.—(1) Give the botanical name of the plant from which Castor oil is obtained? (2) In what country does the plant grow? (3) From what part of the plant is the oil obtained? (4) What is the dose of the oil, and how is it best administered? (5) How would you prepare to prepare an official Castor oil official?

O.—Name the Antidotes for: (1) Iodine. (2) Opium; (3) Chloral; (4) Veratrum; (5) Phosphorus; (6) Paris Green; (7) Tr. Aconite; (8) Carbolic Acid; (9) Aqua Ammoniac. (10) Nitric Acid.

P.—(1) What two well defined series of compounds does Iron form? (2) State the valence of each series. (3) How is Reduced Iron made? (4) What should its color be, and what impurity does it usually contain? (5) What three forms of Ferric Sulphate are official? (6) What Iron Salt is contained in Liquor Ferri Tersulphatis? (7) How does "Monsel's Solution" differ in character of its iron compound from Liquor Ferri Tersulphatis? (8) In making the official solution of the Ferric Chloride, how is the acidulated solution of Fer-

rous Chloride oxidized and what is the special order of mixing the acidulated solution and the oxidizing agent? Is the former added to the latter, or the reverse, and why?

Q.—(1) Give official definition of Asafoetida. (2) From what countries is it obtained? (3) How is it gathered? (4) How may it be powdered without injury to its medicinal properties? (5) What are its chief constituents? (6) What are its medicinal properties? (7) When rubbed with water it forms an official preparation; give its name and properties.

R.—(1) Name the principal solid constituents of Cow's Milk. (2) In what percentage are they usually present? (3) Give the official name and chemical formula of a solid substance obtained from milk. (4) Into what official preparations does the latter enter? (5) Give the official name and chemical formula of a liquid derived from milk.

S.—Latin.—Translate the following into English: (1) Recipe. (2) Signa. (3) Misco. (4) Tere in bette. (5) Secundum U. S. P. (6) Vel. (7) Ovum. (8) Pilula. (9) Pilula. (10) Vitellus.

T.—I nunguentum Hydrargyri U. S. P.:
 Mercury 500 Gm.
 Lard 250 Gm.
 Suet 230 Gm.
 Oleate of Mercury 20 Gm.
 Triturate the Oleate of Mercury, with the Mercury gradually added, in a mortar, until globules of the metal are no longer visible (about 30 minutes). Then add the Lard and Suet.

Oleatum Hydrargyri U. S. P.:
 Yellow Mercuric Oxide 200 Gm.
 Oleic Acid 800 Gm.
 Introduce the Oleic Acid into a mortar, and gradually add to it the Mercuric Oxide. Then set the mixture aside in a warm place, at a temperature not exceeding 40° C., and stir frequently, until the oxide is dissolved.

The above is the U. S. P. method for preparing Blue Ointment an Oleate of Mercury. (1) What is the cost if you pay 70 cents a pound for Mercury, 10 cents a pound for Lard, 10 cents a pound for Suet, 30 cents a pound for Oleic Acid, \$1.50 a pound for Yellow Mercuric Oxide? (2) If the market price of Blue Ointment is 50 cents a pound, how much more will it cost to buy than to make? (3) What percentage is the difference equal to? (4) If a manufacturer will sell Blue Ointment for less than you can make it, what would you infer? (5) What is the percentage strength of Blue Ointment, and give a simple method of ascertaining the strength of a sample.

U.—(1) Give the U. S. P. definition for Vinum Rubrum. (2) If Red Wine is prescribed without specification, may wine may be used? (3) Why should Port Wine not be used when Red Wine is prescribed for urethral injections? (4) What percentage of Alcohol should Red Wine contain? (5) Give the Pharmacopoeial method of ascertaining the percentage of Alcohol present in Red Wine, why is the hydrometer not employed for this purpose?

V.—Copy the following prescription, write out the quantities in words without abbreviation. How would you prepare it?

R. Tinct. Ferri Chlor. 12.5
 Sol. Ammon Carb. U. S. P. 60.
 Sol. Acid Acetic, U. S. P. 60.
 Morphine Sulphatis 245
 Acidi Aceticii 4.15
 Syr. Aurantii Cort. 60.

W.—How would you dispense the following prescription?

R. Strychnin. Sulphatis gr. ½
 Chinin. Sulphatis gr. i
 Ferri Redact. gr. ii
 M. ft. Pil. d. t. d. No. XX.

X.—Critique the following prescription, and state how it could be improved, leaving out none of the present ingredients.

R. Sodii Iodidi ʒi
 Potass. Bromidi ʒiiv
 Ext. Eucalypti Fld. ʒi
 Ext. Lupulini Fld. aa ʒss
 Aqua Ment. ʒiiv
 Misco.—Sig.—A teaspoonful every two hours.

Y.—Critique the following prescription, what physica change takes place? Would you dispense it or not, and why?

R. For Mrs. Brown.
 Antipyrin gr. X L
 Sol. Aeth. Nit. ʒi
 Syrupus aa ʒj
 Aqua Ment. ʒiiv
 Misco.—Sig.—A teaspoonful every four hours, q. c.

Z.—How would you prepare the following prescription:
 R. Potass. Permangan. gr. xii
 Secundum Artum ft. Pil. No. XII.
 Signa.—Take one every four hours.

TOOTH DROPS.—(1) Tincture of benzoin, 4; tincture of opium, 2; chloroform, 2; creosote, 2 parts. (2) Tincture of benzoin, 6; tincture of opium, and chloroform, of each 2 parts. (Bull. de Therap.)

PHARMACY.

TO DISTINGUISH AMBER AND COPAL.—O. Rössler proposes the following test: A small fragment of the sample is heated in a small glass tube, sealed at one end. If the sample be amber, sulphurous vapors will be evolved, recognizable by blackening of a strip of filter paper saturated with a solution of acetate of lead. Copal is free from sulphur and gives no reaction when subjected to this test. (Apoth. Ztg.)

DETECTION OF PEROXIDES.—To a small sample of the liquid to be tested a solution of silver nitrate is added. In presence of an alkali peroxide a brisk effervescence will be observed, due to the evolution of oxygen, metallic silver separating at the same time. In the case of superoxides of the alkaline earths the reaction is somewhat slower, brown silver oxide being first thrown down, which subsequently dissociates into metallic silver and oxygen. (Apoth. Ztg.)

PHYSIOLOGICAL ACTION OF FORMALDEHYDE.—Recent researches by G. Bruni have shown that formaldehyde having a perfectly neutral reaction is fairly well borne by the animal organism, in contradistinction to the formaldehyde of commerce, which has an acid reaction. In very dilute solution formaldehyde causes vomiting. It causes hardening of the tissues with which it comes in contact, even when administered highly diluted in non-toxic doses and when used only a few days. Neutral formaldehyde solutions have only a feeble bactericidal power, but it is admitted by Bruni that they have a greater sterilizing value than boric acid. (Pharm. Post.)

MANUFACTURE OF IODOFORM.—A new process, patented in Germany, consists in treating a mixture of iodide of potash, alcohol and carbonate of sodium with ozone. The total amount of the combined iodine is converted into iodoform. In detail, the method is as follows: A mixture of 100 parts water, 300 parts alcohol, 10 parts sodium carbonate and 55 parts potassium iodide, contained in a tub, is warmed to 50° C. and a current of gases containing ozone passed through the liquid. The iodoform separates in a pure condition and crystallizes on the walls of the container. Instead of alcohol, acetaldehyde or acetone may be employed. (Apoth. Ztg.)

DISINFECTION WITH FORMALDEHYDE.—A new mode of application recommended by Schering consists in subjecting a mixture of burnt lime and a polymeric form of formaldehyde, e. g., paraformaldehyde, to the action of water, formaldehyde gas being evolved mixed with steam owing to the heat generated in slaking the lime. By this means a room may be quickly disinfected. This method has the advantage of great convenience, since it requires no special apparatus and is quite inexpensive. The mixture of paraformaldehyde and lime is offered in form of compressed tablets. The same results may be obtained by slaking lime in the room with aqueous formaldehyde solution. (Apoth. Ztg.)

HYDROFLUORIC ACID AND ITS SALTS are finding increased application in the chemistry of fermentation, as antiseptics, tissue preservatives, etc. The following are chiefly used: Hydrofluoric acid, the fluorides of potassium, sodium and ammonium and sodium bifluoride (NaF₂HF). This last is a white salt of acid reaction, which is used in 20 per cent. solution for etching glass. Marpmann includes it among the best antiseptics. For preserving lower organisms a liquid composed of sodium fluoride 0.5 part, sodium bifluoride 2 parts and water 100 parts is recommended. For the preservation of animal tissues a 5 per cent. aqueous solution is the most suitable. Frogs and reptiles retain their natural colors longest in a solution containing sodium bifluoride 5 parts, glycerin 50 parts, alcohol 100 parts, water 400 parts. (Pharm. Post.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Marseilles Soap.—(G. G.) As generally employed, this name is used to designate the variety of Castile soap "mottled" with iron. It is made by the saponification of olive oil, with or without the addition of other oils, and soda lye. For an outline of the process of manufacture, see one of the dispensatories, or almost any work on technical chemistry.

Tar Stick Salve.—(C. F. B.) Tar stick salve is not listed in the Blue Book, as it is one of those preparations which the retail druggist generally makes himself. The name has been applied to the Compound Tar Plaster of the National Formulary, and it is undoubtedly what your customer wants. It is usually sold in sticks or rolls. We know of no proprietary preparation under this title.

White Ink.—(T. & T.) See last week's Era, page 342. For writing on blue paper a solution of oxalic acid may be used. For writing on dark colored paper the following may answer your purpose: Rub together until perfectly smooth 30 grains of zinc oxide and 1 ounce of mucilage. Then add 30 minims of alcohol and 3 drams of silver bronze, and make up the quantity with water to 2 ounces.

Brushmaker's Cement.—(P. and O.) The various cements and glue used by the manufacturers of brushes are trade secrets, though we are informed that glue, shellac and various gums are employed, a special formula being used for each particular kind of brush. For lather brushes a shellac composition is sometimes employed and we presume any of the stronger waterproof glues might be made to answer a similar purpose.

Perfume for Face Powders.—(E. S.) Face powders may be perfumed by triturating them with any of the perfume extracts such as heliotrope, white rose, jockey club, etc. Here are two formulas, either of which is said to satisfactorily perfume face powders: (1) Vanilla, 1½ drams; orange flower water, 10 drops; oil cherry laurel, 5 drops; musk, ¼ grain; benzoin, 6 drams; alcohol, 1 pint. (2) Extract orange flower, 1 ounce; extract white rose, 1 quart; extract benzoin, 1 ounce; extract vanilla, ¼ pint; extract civet, 1 ounce; oil of bitter almond, 3 minims.

Restoring Discolored Syrup of Hydriodic Acid.—(R. L. C.) The following process has been recommended to restore discolored syrup of hydriodic acid to its original condition: Mix the discolored syrup with from 3 to 5 per cent. its weight of purified animal charcoal in a bottle. Allow to stand from two to three hours with frequent agitation, and filter. Should the filtrate not be perfectly colorless, an additional amount of charcoal must be used. This process was recommended some years ago by O. A. Rouillon, of Brooklyn. Syrup of hydriodic acid is far from a permanent preparation at best, the decomposition of the hydriodic acid being the cause of the trouble.

Iodine with Camphor and Oil of Origanum.—(E. & T.) write: "We prepare a liniment composed of iodine, ½ dram; camphor, 1 ounce; oil of origanum, 1 ounce, and alcohol, 8 ounces. When put up, the liniment looked dark and all right. When we put it in the window the light turned it light colored. Does this change affect the strength of the liniment?" The change modifies the individual characteristics of the iodine, camphor and oil, but just how much it affects the thera-

peutic value of the liniment we are unable to say. The mixture cannot be compounded without the reaction taking place. Iodine forms colorless compounds with volatile oils, and with the camphor it forms cymene, carvacrol, laurene and other bodies, the exact nature of which are not yet very well known, and hydriodic acid.

Marble Cement.—(T. B.) Here are several formulas: (1) Take plaster of Paris and soak it in a saturated solution of alum, then bake in an oven the same as gypsum is baked to make it plaster of Paris, after which grind the mixture to a powder. It is then used as wanted, being mixed up with water like plaster and applied. It sets into a very hard composition, capable of taking a very high polish and may be mixed with various coloring minerals to produce a cement of any color capable of imitating marble. This cement is also used for attaching glass to metal. (2) An excellent cement for mending marble or any kind of stone is made by mixing 20 parts of litharge and 1 of freshly burned lime in fine dry powder. This is made into a putty by linseed oil. It sets in a few hours, having the appearance of light stone. (3) Resin, 8 parts; wax, 1 part; plaster of Paris, 4 parts; mix by fusion. The pieces to be joined must be made hot. (4) Into a solution of chloride of zinc, sp. gr. 1.400 to 1.652, is introduced 3 per cent. of borax or sal ammoniac; when this is dissolved, oxide of zinc, which has been subjected to a red heat, is added, till the mass attains the desired consistence. This cement becomes as hard as marble, and may be used for moulding.

Saturated Ethereal Solution of Cocaine.—(W. E.) Dissolve one part of cocaine (alkaloid) in 4 parts of ether, sp. gr. 0.735. An ethereal solution cannot be made with cocaine hydrochloride, as this salt is almost insoluble in ether. Here are some formulas used by dentists for producing local anaesthesia: (1) Frohmann's Solution—Cocaine hydrochloride, 0.05 to 0.2 grams; morphine hydrochloride, 0.025 grams; antipyrin, 1 to 2 grams; guaiacol, 0.1 gram; sodium chloride, 0.2 grams; sterilized water, 100 grams. (2) Schleich's formula for obtunding the gums in dental operations—Cocaine hydrochloride, 20 cgm.; morphine hydrochloride, 25 mgm.; sodium chloride, 20 cgm.; distilled water, 100 grams; carbolic acid water (5 p. c.), 2 drops. (3) Legrand's Anaesthetic and Haemostatic—Gelatine, pure, 2 grams; sodium chloride, 70 cgm.; phenol, pure, 10 cgm.; B. eucaine hydrochloride, 70 cgm.; cocaine hydrochloride, 30 cgm.; distilled water to 100 grams. Mix and dissolve. Put into tubes and properly sealed, this solution, it is said, will keep indefinitely. At ordinary temperatures it appears as a gelatinous solid, but warmed to 75 to 80° F., it becomes entirely liquid and may be injected with an ordinary hypodermic needle with ease.

Coloring Marble.—(T. B.) We know of no practical process for staining marble black, although some time ago an exchange published a newly discovered process for treating marble or other similar stones in order to give them any color, shade, veins or spots. The process consists in leaving the marble or stone in one or more baths composed of a solution of alcohol and one or more colors of aniline or other coloring material. The coloring materials are then fixed by leaving the colored stones in a bath of oil or any other fatty substance, or by applying upon the stone layers of the same stuff. It is stated that the absorption of the organic coloring material and of the fatty substance by the marble may be accelerated by heating or boiling the bath which contains the stuff to be treated. About three years ago this journal published a patented process for the manufacture of artificial black marble. It is said the artificial stone can be produced in any desirable form and size, resembling natural black marble to such a degree that it can hardly be told from it by the eye, and is much cheaper. Ordinary white sandstone is cut into the desired shape and size and the blocks placed into large iron tanks upon wire nets, so that they rest a few inches above the bottom of the tanks. Contact of the blocks with one another must be avoided. A hot, thin fluid, consisting of asphalt and coal tar, is then run in, in sufficient quantity to cover the blocks. The mixture is kept boiling for 36

hours, the stones then taken out, cooled and dried. The product withstands the action of air, heat and acids. In similar manner the patentee manufactures brick from cement, sand and water.

Ant Exterminators.—(F. K. J.) has been annoyed by ants around his soda fountain and has never been able to find a satisfactory remedy for their extermination. He wants a "positive exterminator." We do not know of any positive exterminator, though if any reader of the Era has a formula for such a mixture he is invited to send it in for publication in these columns. A few practical hints on the destruction of ants are given in the following formulas and methods: (1) A simple method consists in placing at night a few lumps of sugar into places frequented by the ants, and killing the insects that have collected about the sugar the following morning. (2) Mix powdered or granulated sugar with a little yeast and place it in the way of the insects. (3) Honey is mixed with a little tartar emetic and the poisoned honey exposed on plates, or pieces of sponge or cloth are saturated with it. (4) A mixture of two parts of honey and 1 part of yeast may be used in a similar manner as the preceding. (5) Sprinkle about a mixture of powdered calamus root and carbonate of ammonia, or a mixture of table salt and borax. (6) Alum sprinkled about the paths of the insects, across the sills of doors and windows, etc., will drive them away and keep them out of houses.

Action of Light upon Syrup of Iodide of Iron.—(D. and B.) write that in dispensing a prescription of syrup of iodide of iron they instructed the patient to keep the medicine exposed to the light. The physician again visiting the patient laughed at the idea of keeping the medicine in the light and directed that it should be kept in the dark. Who is right? The syrup was made accurately as possible in accordance with the formula of the U. S. P.

The question raised here—the action of light upon syrup of iodide of iron—is one which has been frequently discussed for a number of years through the columns of the pharmaceutical journals. The present Pharmacopoeia is silent upon the subject, though the Pharmacopoeia of 1880 specifically directed that syrup of iodide of iron should be kept in "small bottles, completely filled, securely corked and in a place accessible to light." Recent investigations seem to confirm these instructions and to prove that the syrup in improved by exposure to direct sunlight. By such exposure the syrup is said to maintain its full strength in ferrous iodide better than if kept in the dark, the actinic rays of light acting as a reducing agent and preventing the oxidation of the iron and liberation of the iodine. It is a well known fact that a sample of discolored syrup on exposure to light will be restored to its normal color, provided the color change has not gone too far. Syrup of iodide of iron kept in bottles partly filled and frequently opened is very susceptible to the action of the atmospheric oxygen and it is to guard against this cause of decomposition that the Pharmacopoeia directs, it should be kept in small, well-stoppered and completely filled bottles. Keeping a sample of the syrup in the dark will not prevent decomposition.

Copying Process: Carbon Paper.—(S. A. B.) asks how he may coat tag paper on one side so that it will copy similar to carbon paper. Some experimenting is undoubtedly necessary to produce a satisfactory method of copying with this paper. However, the following formulas have been published and we give them for what they are worth. The first formula is from Dieterich: (1) (A) Mix 10 kilos of coarsely ground Paris blue with 20 kilos of ordinary olive oil, then add 0.25 kilo of glycerine. Expose in a drying room for one week at a temperature of 40° to 50° C., then grind as fine as possible in a paint mill. (B) Dissolve 0.5 kilo of beeswax and 7.5 kilos of ligroin and add to this 3 kilos of the blue pigment A, mixing slowly at a temperature of 30° to 40° C. Apply this honey-like mass to the paper with a coarse brush, and afterwards evenly spread and polish with a badger's hair brush. Lastly dry the sheets on a

steam-heated table. The quantities mentioned are for 1,000 sheets of 50 x 90 centimeters. For black use anthracite black in the same proportion. Owing to the inflammability and toxicity of the lignin the work must be performed in a well-ventilated room and away from open fire. (2) Melt 10 parts of purified tallow with one of yellow wax, and intimately mix the mass with one part of fine Paris blue. With the hot fluid uniformly coat one side of stout smooth paper. For use place the copying paper, colored side down, between two sheets of paper. By writing upon the upper sheet with a dull lead pencil, using a certain amount of pressure, the copy of the original appears upon the lower sheet in a blue color. (3) Melt together 1 part of beeswax and 6 parts of lard, and pour gradually into a warmed mortar containing 1 part of lamp-black, triturating well all the time. While still fluid apply with a brush to the paper and wipe off any excess. (4) Saturate fine unglazed paper with the following: Tallow, 2 ounces; linseed oil, 4 ounces; finest graphite, $\frac{1}{2}$ ounce; lampblack, sufficient to make it of the consistency of cream. Melt together and rub together in a mortar. (5) Melt together 1 part of wax and 10 parts of beeswax and rub the soft mass on sized paper with a wad.

Cider Preservatives.—(E. V.) In many of the States laws are in force which practically prohibit the addition of chemicals or other foreign substances to cider as preservatives. However, among the substances recommended for the purpose are salicylic acid, bisulphite of lime, formalin, etc. Of the first named about $\frac{1}{2}$ ounces are required for 50 gallons of cider. A so-called "calcium sulphite" is on the market in packages, just the size for one barrel of cider (32 gallons).

To "preserve" with salicylic acid: Place the acid in some suitable container and pour upon it a sufficient quantity of cider and thoroughly mix before adding it to the contents of the barrel. If the acid is added directly to the cider in the barrel, it is very likely to float upon the top and not be dissolved. It should be dissolved in a little alcohol and added to the barrel. The time when this addition should be made depends on individual taste and circumstances, generally just when the first fermentation is completed. As the cider runs from the press pass it through a hair sieve into a large open vessel. In a day or less the pomace will rise to the top, and in a short time becomes very thick. When little white bubbles break through it, draw off the cider through a spigot placed about three inches from the bottom. At this stage the acid may be added:

Another method, and one largely followed, is at this point to transfer the cider to clean, sweet casks, and when the bubbles again escape at the bung-hole, rack it again; repeat this a couple of times. Then fill up the cask with cider in every respect just like that originally contained in it, add a tumbler of warm sweet oil, and bung up tight. For very fine cider it is customary to add at this stage about $\frac{1}{2}$ lb. glucose or a smaller portion of white sugar. The cask should then be allowed to remain in a cool place till the cider has acquired the desired flavor. In the mean time clean barrels for its reception should be prepared as follows: Some clean strips of rags are dipped in melted sulphur, lighted and burned in the bung-hole, the sulphur vapor being retained in the barrel. Then $\frac{1}{2}$ lb. mustard seed in a coarse muslin bag, and put it in the barrel, fill the barrel with cider, and add about $\frac{1}{4}$ lb. isinglass or fine gelatine dissolved in hot water. This is an old-fashioned but very satisfactory method.

Other old-fashioned, though frequently used processes, are the following:

(1) Place in each barrel immediately on making, 4 oz. mustard; salt, 1 oz.; chalk, 1 oz.
 (2) Mustard seed, 1 oz.; allspice, 1 oz.; olive oil, 4 oz., and alcohol, 8 oz.

(3) To keep cider sweet: When it has reached the flavor required, add 1 to 2 tumblers of grated horse-radish to each barrel of cider.

The addition of bismuth subnitrate has been recommended to retard the formation of free acid (souring) in cider. For some interesting details of experiments along this line, see this journal, February 3, 1898, page 173.

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA COURSE STUDENTS.

We have on hand a supply of pins for Era Course in Pharmacy students. These are made up in attractive styles, 14 karat gold, beautifully enamelled, and bearing a mortar and the letters E. C. P. in special design. The pins are mounted in three styles—safety pin, stick pin and button. The price is \$2 (either style), which is barely sufficient to cover the cost of production. Students who desire these pins are requested to send in their orders (with cash) at once, stating style of pin desired.

In this issue are sent to Junior students lectures 52 to 59 inclusive, and to Seniors lectures 51 to 59 inclusive, sufficient to last until April 26, when the next and last supply will be sent.

The Juniors take up the subject of Pharmaceutical Botany, the lectures on which have been very carefully prepared with a special view to meeting the wants of the students in this course. It is believed that these Botany lectures will prove both practical, systematic and sufficiently complete for the needs of the students of the course.

The Seniors continue with the subjects Organic Chemistry and Materia Medica.

Read this Bulletin each week.

COPPER IODIDE REACTIONS.—M. Pozzi-Escot has lately given an account to the Academy of Sciences of a series of reactions which he has carried on with the iodides of copper; he has succeeded in obtaining two new compounds. These take the form of minute crystals, whose formation may be observed to advantage under the microscope. It is already known that if iodide of potassium is added to a cupric salt a precipitate is obtained which is a mixture of iodine and cuprous iodide, Cu_2I_2 . The experimenter has obtained the cupric iodide, in combination with ammonia, in two different forms. The first of these is the iodide, $\text{CuI}_2 \cdot 4\text{NH}_3 \cdot \text{H}_2\text{O}$, which takes the form of small tetrahedral crystals of a fine blue color; it is obtained by treating an ammoniacal solution of copper by ammonium or sodium iodide. A second and rather unstable compound has also been obtained, which the experimenter supposes to be $\text{CuI}_2 \cdot \text{NH}_3$. Its formation gives a fine reaction when viewed by the microscope. To a solution of a cupric salt is added a slight excess of ammonia; this is heated to 40°C ., and a solution of ammonium or sodium iodide added. Under these conditions the liquid becomes yellow green and deposits fine rhomboidal crystals of a blackish-brown color, and sometimes orthorhombic crystals of an orange tint. These preparations, seen under the microscope, resemble the iodoplatinate of potassium, but the distinction is easy to make, and besides the crystals change their form and color rapidly. In 10 to 40 minutes, according to the conditions of the experiment, one finds only flat and short prisms and irregular crystals, whose color has changed to a light yellow-green. (Sci. Am.)

ARTEMISIN is recommended for chlorosis and anemia in combination with quassin and ferrous oxalate. It occurs in form of colorless, crystalline scales, soluble in alcohol, and melting at 260°C . The formula is $\text{C}_{15}\text{H}_{22}\text{O}_5$. In France it is sold in the combination mentioned in form of pills under the name of *Dragées de fer Briss*; each pill containing artemisin 0.0001 Gm., crystallized quassin 0.0001 Gm., oxalate of iron 0.1 Gm. Dose, one pill twice daily before meals. (Pharm. Post.)

was rather anxious you to deliver the program with a five-minute speech by myself. Since you desire it, I will deliver the speech, but in such a form that you can take it home with you and after you get over the weariness of the night, can read it at your leisure. Before doing that, however, I want to congratulate every one of you, from the office boy up, on the successful business year which is drawing to a close. I don't mind letting you into the secret that the sales of the Ayer preparations in the United States during this year have been 40 per cent. larger than they were last year. Mr. Hall says just 43 per cent., and last year was the banner year of a decade. Our Canada business has forged ahead so rapidly that our friend over there who takes his vacation manufacturing in Montreal, gets two vacations this year, because the year's supply of goods has been utterly exhausted in eight months. Our foreign manager, Mr. Howitt, without any apology for such a little thing as a South African war, is exhibiting orders from Natal and Cape Colony within a week proving that Ayer's Sarsaparilla is gaining there, war or no war. During the year we have acquired the right and title to the buildings in which we work and they are home to us now, because we own them. We have a new set of offices, new machinery, new facilities and a laboratory second to none the country over, if not the world over. We make no invidious comparisons when we say this. We simply mean that we have utilized the facilities and experience of others and have turned everything that seemed practical in half a century of progress to our betterment. Fifty years of experience has taught us how to do things well and this new factory and laboratory of ours provide the means of doing them in an up-to-date, practical, more economical way. We have only been able to do some few of the things which the directors of this company have planned and promised, but when the whole of their intention is spread before you, you will feel both old employe and new) proud to be associated with a house that bears the honored name of Ayer. Now for my speech:

I have thought that the best speech I might would be one prepared by some other

Just a "leaf torn out" of an informal talk by our Treasurer, Mr. Alfred E. Rose, at the banquet and celebration on the occasion of the Company's entry on its 60th year of business, March 14.

As you may infer therefrom, we are about the youngest old people you ever saw. We want to co-operate with you in any way that will promote good business for you and for us.

J. C. AYER CO.

Ayer's Hair Vigor, \$1.00 size only; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00; — 25c. size is a very rapid seller; Ayer's Pills, 25c., more for the money now than ever; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of Pills free; Ayer's Ague Cure, 50c. now, new and improved; Ayer's Cherry Pectoral Plasters, 25c., "they take the ache."

A Genuine "Comer" — Ayer's Comatone.

Hunyadi János

BEST NATURAL APERIENT WATER.

"The Prototype of all Bitter Waters."—The Lancet, London, 1896.

Hunyadi János is the only aperient water imported to this country from the "Hunyadi Springs" of Hungary.

No druggist should be without it, it being a household article well advertised and always in demand.

FOR PRICES AND TERMS APPLY TO

ANDREAS SAXLEHNER, 130 Fulton Street, NEW YORK.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

South Africa.

Lord Roberts, who has been recuperating his men and perfecting his line of supplies at Bloemfontein for about two weeks, is now showing signs of renewed activity. He reports that he has attacked the Boers south of Bloemfontein, and seized several kopjes. The British casualties were about 100, including Captain Going killed and several officers wounded.

Piet Joubert, the Boer general, died last week. General Louis Botha has been appointed as the successor of Joubert as commander-in-chief of the Transvaal forces. The award of the Swiss Court in the Delagoa Bay Railroad case was made last week. The sum that Portugal must pay to the English and American plaintiffs is so small (about \$5,000,000) that it is not believed that England will get Delagoa Bay, the possession of which would be an immense military advantage in the war with the Boers.

President Kruger has announced his intention to recapture Bloemfontein within a few days.

The London Times publishes a dispatch from its Bloemfontein correspondent stating his belief that 125,000 foreign troops have been landed to aid the Boer Republics. It is thought, however, that this is an overestimate.

Dr. Leyds has protested against the loan of cannon to the British army by the Egyptian Government.

The latest South African advices tell of a determined effort of the Boers to capture the long besieged town of Mafeking. The garrison has been both renewed and the weakened conditions of the garrison may prevent a much longer resistance.

Twenty thousand Boers are massed at Kronstadt, north of Bloemfontein, to resist the advance of the British forces.

The British War Office has issued another table of British losses, showing an aggregate of 16,652, which does not include 4,000 killed, but has included home-land. Three Boer peace envoys are visiting the European capitals, trying to persuade some of the powers to intervene in the South African war. If unsuccessful in Europe, they will come to this country.

Gen. Woodgate has died from the wounds he received in the battle of Spion Kop.

The Philippines.

The Chinese Gen. Pana, the insurgent leader, who has been terrorizing and devastating the Province of Panay, has surrendered to Brig-Gen. Kobbe and is being brought to Manila.

The Secretary of War has created a new military "division of the Pacific," embracing all of the Philippine Islands under the command of Gen. Otis. It will be sub-divided into four departments, Northern Luzon under Gen. MacArthur, Southern Luzon under Gen. Bates, the Visayas under Gen. Hughes, and Mindanao and Jolo under Gen. Kobbe.

President McKinley gave a dinner to the new Philippine Commission last week. They will start for Manila in a few days.

The Secretary of State and the Spanish Minister in Washington have signed a protocol extending for six months the time allowed Spanish residents in the Philippines whether they shall remain Spanish subjects or adopt the nationality of the territory in which they reside.

Rear-Admiral Kempf, bound for the Philippines, and Rear-Admiral Kelly, who will command the China station, sailed last week from San Francisco.

The court of inquiry on the wreck of the cruiser Charleston has exonerated the officers of the cruiser from all blame. A report had been circulated that the officers were drunk when the cruiser was wrecked off the north shore of Luzon.

Other Foreign News.

Persistent reports are current of strained relations between Japan and Russia, which may result in war.

German emigration last year was 23,746, an increase of 1,500. Of the total number, 39,000 came to the United States.

The German Agricultural party are trying to push a measure through the German Reichstag that will put a prohibitive tariff on American food products. If they succeed, a tariff war between the two countries may result.

The Arabs have been defeated with heavy loss by a French force at Inrah, in the Sahara Desert.

The Maroons are again threatening disturbance in Jamaica. Armed police have been sent to quiet them, and the military authorities have been notified to hold troops in readiness.

The Shah of Persia has appointed Mofakham Ed Dowleh Minister Plenipotentiary of Persia to the United States.

The first international cat exposition will be held in Berlin this month.

Nearly 40 million famine sufferers are receiving government aid in India.

A German expedition will soon start for the South Pole. The Paris Exposition will open on Saturday of next week. Two Libia cruisers and the entire navy of the little republic, have been lost.

The number of bubonic plague cases officially reported at Sydney, N. S. W., has reached thirty-six. There have been thirteen deaths, and 5,000 persons have been inoculated.

DOMESTIC.

Congress.

The Puerto Rico tariff bill was before the Senate all last week. It is feared that there will be great difficulty in bringing the two houses of Congress into agreement in the matter.

A Congressional committee is investigating the Coeur d'Alene riots of last spring.

A bill of Prohibition is appearing before the House Committee on Insular Affairs, last week, attacked the President and charged the administration with responsibility for an alleged increase of drunkenness in new possessions under American rule. It came out last week in a letter from Secretary Hay to the House Committee on Foreign Affairs that Great Britain has apologized to this government for the opening of Consul Macrum's letters, by which the British censor in Durban, South Africa, Mr. Macrum appeared before the committee last week and told again the story of the violation of his mail and code dispatches.

The House has passed the Army Appropriation bills. Secretary Hay last week submitted to Congress the correspondence between the State Department and the various powers interested in China, by which the "open door" negotiations were brought to a successful termination.

Other Domestic News.

The New York State Legislature has repealed the Horton law, under which Chief of Police Devery has been allowing prize fighting in New York City. The repeal will take effect the first of next September.

The striking machinists of Chicago have agreed upon a compromise with employers and returned to work, and the threatened general strike of machinists all over this country is believed to be averted. An Interstate and West Indian exposition will be held in Charleston, S. C., during the autumn of next year. The negotiations looking to a parcels post convention between this country and Nicaragua have been completed, and the treaty will go into effect June 1.

Rev. Dr. Ames, of New York, has been accused of heresy, and has offered to withdraw from the Presidency.

It is intimated at the War Department that 25,000 men will be under immediate employment on public works in Puerto Rico under the operation of the Relief Appropriation act.

Rabbi Isaac M. Wise, founder of the Hebrew Union College, died last week in Cincinnati.

Ex-Senator Sawyer, of Wisconsin, died last week in Oshkosh.

A daughter was born to Gen. and Mrs. Leonard Wood in the palace of the military governor in Havana last week Thursday.

The New York Senate has passed the Assembly bill to prohibit the issue of trading stamps. Only seven negative votes were cast.

The Kentucky Court of Appeals is considering the Kentucky Governorship dispute this week. The case will be appealed until it is decided by the United States Supreme Court.

The Columbia Theatre in Chicago was burned last week, the loss aggregating about \$100,000.

The Grand Jury in New York City banded up to Recorder Goff last week a presentment declaring that its efforts to get at high police officials for allowing vice to thrive were discouraged and headed off by District Attorney Gardiner. The Grand Jury has indicted Police Capt. Thomas, of the Tenderloin Precinct, and several others held to be responsible for law violations.

This week the battleship Wisconsin, now almost completed by the Union Iron Works, San Francisco, will go out on a series of trial trips.

It is announced that as a result of the conference at Chicago a few days ago of manufacturers of wagons and carriages, an average advance of 20 per cent. over the old scale is now in effect.

The military department of Mexico of Havana and Pinar del Rio, commanded by Brig-Gen. Fitzhugh Lee, and the department of Havana, commanded by Brig-Gen. William Ludlow, are to be consolidated under the command of Brig-Gen. Leonard Wood.

In a circular given out by Thomas F. Smith, Richard Croker's private secretary, a frank avowal is made of the Tammany organization's purpose to try to get possession of the work on the rapid transit tunnel for political purposes.

THE DRUG NEWS.

New York and Vicinity.

THESE PASSED THE NEW YORK CITY BOARD.

At the regular monthly meeting of the New York City Board of Pharmacy, held on March 26, the board passed upon the papers of the candidates for registration who took the examination held at the Brooklyn College of Pharmacy, on March 19. Sixty-seven applicants were examined, among them being twenty-three members of the senior class of the Brooklyn College of Pharmacy. The following named were successful: Emil Beyer, Flora C. Fuhs, Otto A. Huener, Max Jacobson, Robert L. Mead, Isidore Wilson, William E. Swift, Henry F. Brinckmann, Bernard Colle, George Lindner, Daniel Lowenstein, George E. Neuschaefer, Jr.; Harris Sarason, Fred Scheuter, Alfred Wertheim.

The secretary of the board furnishes the following figures concerning the class: Nationality of candidates—United States, 34; Russia, 22; Germany, 4; Italy, 1; Great Britain, 3; Denmark, 1; France, 1; Austria, 1; total, 67. Passed at their first examination, 5; at second, 5; at third, 2; at fourth, 1; at fifth, 1; at sixth, 1; total passed, 15. Rejected at first examination, 25; at second, 8; at third, 6; at fourth, 4; at fifth, 5; at sixth, 1; at seventh, 1; at ninth, 2; total rejected, 52.

L. S. HOWLING LEAGUE TOURNAMENT.

Arrangements are progressing satisfactorily for the third annual tournament of the Drug Trade Bowling League of the United States. A second meeting of the general committee of the New York Wholesale Drug Trade Bowling Association appointed to prepare for the tournament, was held on March 27. The various sub-committees reported progress, and a new committee was appointed to select the bowlers to represent the local association. Word has been received from Chicago and Baltimore that April 29 and 31 are satisfactory dates, and the tourney will be held on those days. A business meeting will be held on Thursday evening, April 19, at which officers will be elected for the coming year. The Herald Square Hotel will be the headquarters of the league. The contests, of which there will be three each day, will be held at Reid's alleys in Church street. At the conclusion of the tournament on Saturday evening, there will be a banquet and entertainment—or "smoker"—at the Drug Club.

Sues Druggist for Mistake in Prescription.

Suit has been begun in the Supreme Court by Eugene Fallot against George Kantor, proprietor of a drug store at No. 759 Ninth avenue, Manhattan, for \$10,000 damages for the results of an alleged mistake in a prescription. One of the plaintiff's children was sick last November. A prescription, written by the family physician, which called for cinnamon water as one of the ingredients was taken to the drug store of George Kantor and there put up. The complaint is that the druggist gave ammonia instead of cinnamon water, and as a result the child on taking the medicine nearly died and was so badly burned internally that it will never be wholly well.

Mr. Kantor says no mistake was made in his pharmacy. The prescription was properly compounded and the complainant cannot prove that ammonia was used.

Working an Old Trick on New York Druggists.

A neatly dressed swindler has been working an old gag on some of the druggists of the upper west side of Manhattan Borough. He goes into the drug store to buy a bottle of perfume for his wife, but forgets what kind she prefers. He asks to have the druggist's boy accompany him to the house with a selection of three or four kinds—boy to collect for the perfume chosen and return the other bottles. He asks the boy to wait in

the hall of an apartment house to which he goes. The boys on whom the trick has been worked are waiting yet. The swindler is described as a man of between thirty-five and forty years old, with dark hair and a moustache, of medium build and of polite address.

Clipped Shorter Hours Bill Passed by Senate.

Dr. Henry's bill regulating the working hours of drug clerks in New York City, with the clause providing for inspections by the State Factory Inspector's Department cut out, was passed by the Senate on March 29. The bill with the inspection section was passed by the Assembly two or three weeks ago. But in that shape it failed to pass the Senate. If the Assembly concurs in the change demanded by the Senate the bill will become a law, as the Governor is committed to sign it.

New York City Pharmacy Bill Reported.

In the State Senate last week the Committee on Cities reported favorably the Henry bill to amend Title V. of the Greater New York charter, which contains the provisions of the law regulating the practice of pharmacy in New York City. The bill was introduced by Assemblyman Henry at the request of various pharmaceutical societies of the city. Its provisions have been stated in this journal several times, and were printed in full in the Era for January 4, 1900.

NOTES.

—Among out-of-town visitors to the local wholesale drug market during the week were: Charles E. Martzloff, Buffalo; Harry Hubbard, Syracuse; Dr. S. E. Palmer, Elmira; C. M. Giffen, Scranton, Pa.; A. D. Chiquewine, Philadelphia; J. C. Perry, Philadelphia; W. C. Baur, Norwalk, Conn.; W. R. W. Pound, Ithaca, N. Y.; George M. Burr, Northport, L. I.; Thaddeus Benjamin, Riverhead, L. I.; R. Richardson, Boston; P. T. Chadwick, Asbury Park, N. J.; H. N. Clark, Cornwall-on-the-Hudson.

—Horatio N. Fraser, head of the Fraser Tablet Triturate Manufacturing Company, and proprietor of a retail drug store at No. 262 Fifth avenue, Manhattan, has returned from a visit to Chicago. He has arranged to open a branch establishment in that city, having rented quarters in Washington street, near State street, where he will fit up a handsome pharmacy similar to his New York store, and in the same building a depot for the distribution of his manufactures.

—E. C. Frisbie, of Hartford, president of the N. W. D. A., has accepted the invitation of the Drug Trade Section, New York Board of Trade and Transportation, to address that body at its next meeting, which is to be held on Thursday, April 19. Mr. Frisbie will choose his own subject. He has not yet announced what it will be.

—A "first annual entertainment and ball" will be given by the New York County Medico-Pharmaceutical League at American Star Hall, No. 165 East Broadway, on Thursday evening, April 26, beginning at 8.30 o'clock. Extensive preparations are making to insure a good time to all who attend.

—John C. Miller, of Easton, Pa., called at the Era office the other day. Mr. Miller is one of the McKesson & Robbins travelers and represents them in Northern New Jersey and Eastern Pennsylvania. He says he is having the best trade this winter he has had since he took the territory.

—P. R. Lunce, general representative of William R. Warner & Co., has returned from an extensive trip through the southwest. He says he found business in that section in excellent condition. The druggists are all busy and happy and are counting on continued prosperity.

—In the Court of Special Sessions on March 27, Louis Hilf, proprietor of a pharmacy at No. 750 Third avenue, Manhattan, was convicted of violating the pharmacy law by permitting an unlicensed clerk to compound prescriptions. He was fined \$50.

—The next examination by the New York City Board of Pharmacy for candidates seeking registration will be held at the New York College of Pharmacy, No. 115 West Sixty-eighth street, on Monday, April 16, beginning at 6 o'clock p. m.

—Henry Nordlinger & Co., the dealers in seeds and herbs, have moved their place of business from No. 396 Washington street to No. 81 Water street.

—John R. Caswell, of the retail drug firm of Caswell, Massey & Co., has returned from a pleasant and successful shooting trip to North Carolina.

—Samuel W. Fairchild, of the firm of Fairchild Brothers & Foster, has gone to Virginia to indulge in his favorite sport of duck shooting.

—The drug store of H. A. Tice, at Ridgewood, N. J., was destroyed by fire last week. The property was partly covered by insurance.

—Frank J. Myers has succeeded William Heuthers as proprietor of a drug store at Lexington avenue and 113th street, Manhattan.

IN AND ABOUT BOSTON.

Druggists to be Congratulated.

Boston, March 31.—It seems fortunate for druggists that cigars are considered drugs rather than as "victuals," for the Supreme Court in Massachusetts has just ruled that a common victualer's license does not carry with it the privilege of selling cigars on Sunday. The full bench of the Court gave this decision in the case of the owner of a restaurant in Revere, who was arrested some time ago on a complaint charging that the place was kept open for the purpose of doing business on the Lord's Day. Under a recent ruling, drug stores are exempt and the police will not interfere with them. This recent decision of the Court stated that druggists could sell cigars, as tobacco must be considered as a drug. In that way druggists escape the new order of things.

NOTES.

—Walter Kneeland, formerly a clerk with D. J. Kelley, who has a pharmacy on Pearl street in the Edgeworth district of Malden, has opened a drug store on his own account at the corner of Pleasant street and the Park-way, Malden. This is a point passed by thousands every day and as it is opposite a much-used entrance to one beautiful section of the Middlesex Falls, in the Metropolitan Park system, it will be a popular place to catch soda, cigar and like trade. There is no similar store anywhere near it.

—About twenty members of the Boston Druggists' Association were present at a reception and banquet at Young's Hotel on the night of March 27, when Hon. Joseph Maccabe, of East Boston, and Samuel H. Bravo were the guests of the evening. Mr. Maccabe addressed the club on "A Ramble in Tangiers," and Mr. Bravo, recently returned from Jamaica, gave a talk on his experiences in that island. Elliott W. Keyes and Charles E. M. Harrington were elected to membership in the association.

—J. E. Richardson, who has been in the drug business at the corner of Broadway and Marshall street, Winter Hill district of Somerville, has received an appointment as inspector of milk and vinegar and this has been confirmed by the Somerville Board of Health. An office will be arranged for him in the building occupied for his drug business.

—Hon. Charles L. Dean, mayor of Malden and senior member of the firm of Dean, Foster & Co., dealers in druggists' glassware of all kinds, has been elected a member of the Mayors' Club, an organization made up of the mayors of various New England cities. They hold their meetings at Young's Hotel, Boston.

—This week's exports at the port of Boston include, among other things, drugs and chemicals, \$12,400; hops, \$5,625; tobacco, \$8,185; spirits, \$21,180.

PHILADELPHIA.

Pharmaceutical Meeting.

Philadelphia, March 31.—The monthly pharmaceutical meeting of the members of the Philadelphia College of Pharmacy was held on Tuesday afternoon, March 29, at 3 o'clock, James T. Shinn presiding. The first paper was read by F. B. Kilmer, of New Brunswick, N. J., and was entitled "In Lands Where Drugs Grow." The address was accompanied by lantern views, which added greatly to its interest. In the discussion which followed the reading of the paper, Mr. Kilmer stated that it is not possible at present to successfully cultivate medicinal plants in this country, as the labor expense is so much greater here than in Europe. Prof. Frank G. Ryan then read a paper by Prof. Wilbur L. Scoville, of the Massachusetts College of Pharmacy, on "Effervescing Citrate of Magnesium." In commenting upon this paper, Prof. Ryan stated that the U. S. P. process is impracticable for use by the larger manufacturers. Dr. L. Napoleon, Boston, contributed a paper bearing the title, "Microscopic Study of Urine, Sputum and Blood by Pharmacists." Prof. Kraemer stated that the list of staining reagents yielding uniform results was very small, and that the safest plan to follow in microscopic work was that of Virchow, which embodies the use of as few reagents as possible, and endeavoring, instead, to understand the structure of the subject. A simple and inexpensive apparatus for the estimation of urea was exhibited and explained by Frederic T. Gordon, apothecary at the League Island Navy Yard. The process is based upon the volume of nitrogen evolved from a mixture of urine and chlorinated lime. Prof. Moerk stated that Dr. Squibb had described a somewhat similar apparatus some years ago, using Labarraque's Solution instead of chlorinated lime for decomposing the urea. A number of specimens were exhibited, among which was a line of products obtained from animal refuse in the manufacture of fertilizing compounds. These had been presented by Baugh & Sons Company, who are engaged in that business in this city. A valuable collection of opium specimens was exhibited by Prof. Ryan, who stated that they had been presented to the college by Gilpin, Langdon & Co., of Baltimore, Md. After tendering a vote of thanks to Messrs. Gilpin, Langdon & Co., the meeting adjourned.

Howard B. French Elected President of the Philadelphia College of Pharmacy.

Philadelphia, March 31.—At the annual meeting of the members of the Philadelphia College of Pharmacy, held early this week, Howard Barclay French was unanimously elected president to fill the vacancy caused by the death of Dr. Charles Bullock last week. Mr. French was the natural choice for the position on account of his energetic efforts in behalf of the college during recent years, he having been vice-president for about five years, and chairman of the Property Committee for nearly ten years. He was also chairman of the Building Committee in 1891, when the college was practically rebuilt. Mr. French is senior member of the paint and builders' supplies firm of Samuel H. French & Co., of which his father, Samuel H. French, was the founder. He started his mercantile career as an apprentice in the drug store of William B. Webb, although his father was exceedingly well to do. By this step he qualified himself for employment in his father's business, which at that time was merged in the well-known house of French, Richards & Co., dealers in drugs, paints, oils, etc. In 1883 the two branches of the firm's business were separated, his father, Samuel H. French; his brother, William A. French, and John L. Longstreth, succeeding the former firm as manufacturers of paints and dealers in builders' supplies, Howard B. French joining his fortunes with this firm. In addition to his extensive business interests, Mr. French has identified himself with many philanthropic movements, and every institution for the promotion of Philadelphia's interests has found him an active supporter and indefatigable worker.

NOTES.

—The pharmacists of Schuylkill County, Pa., are proud of the fact that they have the only successful county

pharmaceutical association in Pennsylvania, and probably the most successful one in the United States, outside of the large cities like New York. They hold monthly meetings, at which papers are read and subjects of interest discussed. Sixty per cent. of the druggists in the county are members, and the association is affiliated with the N. A. R. D. The recent election of officers for the ensuing year resulted as follows: President, Paul A. Houck, Shenandoah, Pa.; vice-president, Thomas E. Maguire, Mahanoy City, Pa.; secretary and treasurer, Louis C. Voshage, Ashland, Pa.; Executive Committee, H. E. Davis, St. Clair, Pa.; Dr. James Donahue, Girardville, Pa.; Dr. J. H. Hagenbuch, Mahanoy City, Pa. The next meeting will be held at Mahanoy City, Pa., on Thursday, April 12. Dr. George W. Kennedy, the well-known Pottsville pharmacist, who has held the position of secretary of the council of the American Pharmaceutical Association for so many years, and who was last year appointed a member of the Pennsylvania State Pharmaceutical Examining Board, will read a paper, and one will also be read by John E. Gregory, of Gordon, Pa.

—The next meeting of the Philadelphia Association of Retail Druggists will be held in the College of Pharmacy, No. 145 North Tenth street, on Friday afternoon, April 6. There will doubtless be some interesting opinions expressed by the members on the Sunday sales rule, which went into effect at the last meeting, whereby the members agreed to refrain from selling cigars, soda water, candy or postage stamps on the Sabbath. The majority of the members are satisfied with the present state of affairs as they appreciate the rest it affords them, but some of the members have been keeping the agreement under protest and feel that their trade is beginning to drift away a little to the stores whose proprietors do not belong to the association and who are willing to run the risk of arrest by the Philadelphia Sabbath Association.

—The pharmacy department of the Medico-Chirurgical College of this city gave a musicale and dance to its members and friends on Friday evening of last week. The amphitheatre of the college, in which the affair took place, was taxed to its fullest capacity, and those who labored to make the evening an enjoyable one to the guests, received the congratulations of the members of the faculty upon their success. Among those coming in for a share of the praise were: P. Zoeller, the conductor of the orchestra; M. P. Grady, a P. C. P. graduate of 1899, who sang "Palm Branches," and J. W. Clark, who sang "The Holy City."

—William L. Cliffe, the well-known Kensington druggist, who has two stores on Kensington avenue, within a few squares of each other, reports business excellent, and a proof of the assertion is found in the fact that he is making extensive improvements to his stores just now. When the last coat of paint has dried and the new show cases are in place and the metal ceilings and fixtures by Reible are completed, Mr. Cliffe will have the finest stores in that section of the city.

—Dr. Harry W. Jayne, a well-known chemist of Philadelphia, has issued invitations to the members of the Philadelphia Section of the American Chemical Society, and will entertain them on Thursday evening, April 5, at his home, No. 921 North Broad street. Dr. Jayne is desirous of increasing the interest of the local members in their association, and has selected this method of bringing them together in order that they may become better acquainted with one another.

—The students of the senior class at the Philadelphia College of Pharmacy have been undergoing the ordeal of the final examinations this week, taking up a different subject each day since Tuesday. The suspense will last for several weeks now before the results are made known. Many of the students will leave for their homes and await the news there.

—J. Lawson Crothers, who has two drug stores in this city, one at Eighth street and Girard avenue, the other at Twentieth street and Fairmount avenue, says that the month of March, just completed, was the best month in the history of his business, and that the increase in the number of prescriptions was almost without precedent.

—P. N. Pinchbach, of Thirty-fourth and Walnut streets,

went West some time ago on account of ill health. Word was received this week by his relatives and friends that he had died in Phoenix, Ariz., and that his body had been shipped home via San Francisco. The funeral will take place some time next week.

—The Medico-Chi expects to put a baseball team into the field this spring to contest honors with the P. C. P. and other institutions. The election of a captain took place on Monday evening, Mr. Blau being chosen to fill the position. The practice will commence as soon as the team is formed.

—S. S. Ely, proprietor of the pharmacy at Forty-ninth street and Baltimore avenue, who went West some time ago on account of poor health, is reported to be improving very rapidly.

—George Wright, proprietor of Wright's pharmacy at Ninth and Dickinson streets, has disposed of his store to Edwin Beh.

CLEVELAND.

Northern Ohio Pharmaceutical Association.

Cleveland, March 31.—After an honorable and useful existence of twenty years the Cleveland Pharmaceutical Association has ceased to exist under this name. The original purpose of its organization was to stop cutting on patents and drugs and incidentally in its career the prosperous pharmacy school now existing here was formed. It succeeded admirably in all it undertook until the department stores, backed by drug dealers in other cities, became too powerful to overcome. Realizing the changed conditions of to-day as compared with twenty years ago, it was resolved to enlarge the field of its usefulness, but methods to accomplish this object were difficult to find. The organization and rapid development of the N. A. R. D. offered a magnificent opportunity for the strengthening and growth of the association. The P. C. P. clearly saw the value of the national society from the day of its inception and sent delegates and money to the St. Louis and Cincinnati meetings and now has taken further steps to thoroughly and consistently carry out its work by changing the name of the organization to the Northern Ohio Pharmaceutical Association and broadening the field so as to cover the territory indicated by its name. Every druggist in Cleveland and vicinity is a member and before long the same result may be expected throughout Northern Ohio.

Druggists in Politics.

Cleveland, March 31.—The municipal election to be held on Monday, April 2, will be hotly contested, the registration numbering 80,000, the heaviest ever known here. Among the candidates are two prominent druggists, Abe Honecker is a candidate on the Republican ticket for re-election as police court clerk, a \$4,000 office, which he has honorably filled for the past two years, and Arthur F. May is a candidate for school director, a \$5,000 office, on the Non-Partisan ticket. Both have excellent chances for success. Another druggist, Dr. Steuer, is at present a prominent member of the City Council.

NOTES.

—The senior class of the Cleveland School of Pharmacy held the first dance ever given by a class of this school in Trostler's Hall a few nights since. Nearly 150 couples responded to the invitations, and such was the success of this first dance that it was decided to make it an annual event. Commencement will be held April 24 and two days later a banquet to the graduating class will be given.

—A large number of Detroit druggists were in the city last week examining the working of the nickel-in-the-slot telephone system here. The local druggists are all satisfied with the arrangements and as the Detroit Telephone Co. is owned by the same parties that own the local company they wish to give their patrons the benefit of the result of the fight of the Cleveland druggists.

—As a whole the retail druggists have been well satisfied with their trade this winter. Many report a greater number of prescriptions than for many years past and a

tendency on the part of physicians to direct patronage to drug stores.

—Druggists through Northern Ohio report that the demand for pills, both sugar and gelatine coated, is surely and steadily declining and tablets are daily increasing in favor.

CINCINNATI.

Fiftieth Anniversary of the Cincinnati College of Pharmacy.

Cincinnati, March 29.—The fiftieth anniversary of the Cincinnati College of Pharmacy was celebrated on Monday evening, March 19, at the College Building. The exercises were held in the lecture room and were of a most interesting character. Among the speakers was the first president of the college, Prof. William J. Gordon, who related many reminiscences regarding the early years of the college. Prof. John Uri Lloyd also spoke of his coming to Cincinnati to study pharmacy, and the fact that he was apprenticed to Mr. Gordon at the salary of \$2 per week while his board amounted to double that amount. Prof. Chas. T. P. Fennell, the head of the college, spoke of the enterprise of the institution and the rank it holds among the various colleges in the United States. The Cincinnati College was organized in March, 1850 and was the second of its kind in the United States, the other one being the Philadelphia College, which was organized in 1821. The exercises concluded with a microscopic projection lantern display and lecture by Dr. Otis Cameron, assisted by Julius Greyer.

Druggists' Bowling Club.

Cincinnati, March 31.—The members of this club decided by a full vote to bowl at their regular alleys for the following month, which will wind up the season. The secretary, Edwin Heineman, will answer the invitation from the New York Drug Trade Club in regard to match games. Owing to the expense that would be incurred to send a team of five men to New York, it was suggested to have a telegraphic match with any five-man team that the Eastern clubs decide on. This proposition will be brought up at the regular meeting on Friday, April 6. The club has the greatest faith in the team, and earnestly believe they can outbowl any other five druggists in the United States. The scores made Friday, March 30, were:

	First.	Second.	Third.
Rendigs	157	202	137
Leuchenburg	157	183	160
Chas. Diehl, Jr.	136	156	134
Kipp	135	159	147
Heineman	188	155	137
Knemoller	191	181	171
Voss	148	139	128
Lineman	143	155	127
Chas. Diehl, Sr.	172	179	164
Muehlberg	165	146	191
Nicholas	—	291	202
Streithorst	—	128	171

Hamilton County Druggists' Association.

Cincinnati, March 31.—The regular monthly meeting of the Hamilton County Association was held in the Odd Fellows' Temple, Tuesday, March 27. The meeting was in the main a secret one, as only members of the association were admitted. Among the business of the afternoon was the recommendation of a medicated soap to take the place of those sold at any old price by the department stores. It was decided to adopt Benzo Derma Soap, and to maintain a uniform price; the Gray & Huston Company were decided upon to have complete control in this city. New cards were issued to the following the past week: Lester Keene, Razorine Company, New York City; C. S. Wood, Eli Lilly & Co., Indianapolis; Albert Schwartz, Parke, Davis & Co., Detroit, and F. M. Weller, R. T. Booth Hyomei Company.

NOTES.

—A team of runaway horses hitched to an ice wagon played havoc with Nodler's drug store, corner Fifth and Madison streets, Covington, Ky., Wednesday morning, March 21. After demolishing a doctor's buggy, the frightened horses ran up on the sidewalk and into the plate glass window of the drug store. The wagon came

in contact with the iron awning support in front of the store and tore it down completely. Several ladies were entering the store at the time, but luckily escaped injury. The total damage to the store will amount to over a hundred dollars.

—Andrew E. Diebold has decided to quit the drug business as soon as he can find a purchaser for his store. Andy is promised a lucrative position at Washington, D. C., which will pay him more, with less work, than the drug business, hence his decision. Mr. Diebold's store at Walnut Hills is considered one of the finest furnished stores in Cincinnati. He will be missed by the members of the Bowling Club next summer, as Andy was counted upon to win the game when the club played baseball, for as a pitcher he was unexcelled.

—Charles and Frank Serodino, two of the best-known druggists in Cincinnati, will embark in business for themselves about May 1. They have been connected with Serodino's drug store, at Fifth and Walnut streets, since it was started about six years ago. They will occupy the store at the corner of Fifth and Race streets, which is being remodeled and is one of the most prominent corners in the city. No expense will be spared in furnishing the store.

—The drug store formerly conducted by Daniel J. Kavanaugh at Covington, Ky., was sold by Master Commissioner's sale in that city on March 21. The stock and fixtures were purchased by J. M. O'Maley, who will remove them to the corner of Pike and Main streets. The soda fountain was bought by the Zwick Pharmacy. The amount realized from the sale will not leave much for the creditors, as the court costs in the case have been very heavy.

—John C. Falls, former clerk at Hall's pharmacy, has accepted a position at Serodino's drug store as head clerk. He will be assisted by John Kohl, who until recently clerked for Carl Plath, at Eighth street and State avenue.

—A fire in the fourth floor of the building at Twelfth and Vine streets damaged the stock of goods in the third floor to the extent of \$50. They belonged to Edward Voss, the druggist, who has his store on the first floor.

—Newton E. Smith will soon be ready to open his new store in Avondale. The building is rapidly nearing completion. The location is a promising one, and the building one of the largest in Avondale.

—Edward Voss, the druggist at Twelfth and Vine streets, received the nomination for Board of Education on the Fusion ticket and will make a strong effort to be elected at the coming election.

—William E. Salt, the druggist at Second street and Broadway, has recovered from a severe attack of malaria which kept him from his business for several weeks.

—W. T. Gray, president of the Gray & Huston Co., has returned from New York, where he spent ten days purchasing goods for the Fall and Christmas trade.

DETROIT.

Stat Telephone for Detroit Druggists.

Detroit, March 31.—At a very lively meeting of the Detroit and Wayne County Druggists' Association last evening it was finally decided to accept the proposition of the Telephone Company and make all drug stores pay stations. The company will put in nickel-in-the-slot machines and in many cases, at least, will provide booths for the same that they may be as private as possible. Druggists may, if they wish, retain their private 'phones at the old rate of \$36 per year and may use them as heretofore, but they are not supposed to allow anyone else to use them. They may also use the pay machines without charge for emergency calls to the police, fire department or hospitals, or to the residence or office of any physician. For all other use of the pay 'phone he must pay five cents per call. Further, the druggist may permit all physicians to use the 'phone without charge to call up their own offices or residences or other drug stores. For any other call the physician, too, must pay five cents. All incoming calls, no matter of what nature, are free to the druggist. At the end of each year the Telephone Company will pay back to each druggist 40 per cent. of the receipts of the pay 'phone in his store, provided that

the income to the company from the 'phone shall not fall below \$2.50 per month. Physicians having headquarters at any drug store may arrange for an "extra name service" at the rate of \$10 per year, for which they will get the same privileges as the druggist himself.

Hot arguments were made both for and against the proposition. All were willing to acknowledge that the "may-I-use-your-'phone?" privilege is very often abused, and that much business is often lost thereby. Young people come in and use the 'phone to talk nonsense and to make dates for the evening, while physicians are tearing their hair trying to call the druggist for a prescription. But others argue that it helps business at times to allow a customer the privilege of the 'phone, and that five cents a call is too much anyway.

"The whole scheme is in the interest of the Telephone Company," said a prominent druggist this morning, "and the drug trade is merely asked to join hands in holding up the public. The man up a tree wonders why a meeting was called at all, as we were told in advance that the plan was a go and that pay stations would be put in, and any druggist that stood out would not be allowed to use his 'phone or have it used except for his own business. It is simply another case of 'stand and deliver.'"

Figuring on the Slot 'Phone.

Detroit, March 31.—Twenty of the retail druggists of Detroit visited Cleveland a few days ago as the guests of the Erie Telephone Company, with a view to investigating the operation of the nickel-in-the-slot telephone which is in good working order in that city. A Pullman and a dining car were provided for the druggists and they received every kind of attention. They found the Cleveland druggists quite enthusiastic over the pay-station idea, but the Detroiters are not quite ready to make a report to their association concerning it. Some would like it if the cost were a penny instead of a nickel, but it is said that the company will never come below the nickel—receiving ten cents at Pittsburg. Thus far arguments pro and con are about evenly balanced, and there is no way of telling the ultimate result.

NOTES.

—A vigorous housecleaning is going on at Farrand, Williams & Clark's. Fresh paper and paint are making the store unusually attractive. It is one of the best lighted stores in the city, standing, as it does, on a corner and "long" on the street, and having an east and south exposure.

—Doty Brothers, owners of four drug stores in Detroit, have been making some changes among their clerks. J. Hollands has taken the place of A. M. Edwards, and Sherwood supplants Julius Bertram, who has taken a place at J. L. Hudson's.

—Druggist Charles H. Woods, for fifteen or eighteen years at the corner of Grand River and Trumbull avenues, made an assignment on Friday, March 30. Mr. Woods says his assets are \$2,600; liabilities, \$2,300.

—P. M. Bennett, druggist on Gratiot avenue, has sold his stock piecemeal. John S. McKibben took the fixtures, Geo. S. McDonald the shelf contents, while the drugs were divided up among several purchasers.

—Frank Shultz, of Ann Arbor, wanted a drink of cider, but the mug he picked up contained caustic potash and he took two mouthfuls. Prompt medical attention saved his life, but he suffered terribly.

—The Michigan Drug Company Bowling team played three games with the team of the Flint and Pere Marquette R. R. and took every game. The same team will try another three games.

—A carboy of muriatic acid exploded in one of the warehouses of Farrand, Williams & Clarke, Detroit, on Saturday morning, March 24. No one was hurt and very little damage done.

—Walter Paine, traveler for the Michigan Drug Company, has been quite sick, and W. M. Anderson, of the sundry department, filled his place on the road.

—Fred Riddle, clerk in the drug store of E. D. Clark & Co., Hudson, Mich., has bought out the "Co." A. J. Colvin. The firm name will not be changed.

—The Michigan Drug Company Bowling Team won the second series of games from the team of the F. & P. M. R. R. Score again, 3 to 0.

—M. G. Ritchie, formerly in business on Grand River avenue, will locate on Michigan avenue, near corner of Fourth street.

—Leo Van Vleet, formerly clerk for G. B. Trochet, Gratiot avenue, Detroit, has bought out Mr. Trochet and takes possession April 1.

—B. S. Webb has bought the Blackmar drug store at Owosso and has moved it to Alma, Mich.

—C. G. Stone, with Mellin's Food Co., spent a day last week in Detroit with his mother.

CHICAGO.

Chicago College of Pharmacy Alumni.

Chicago, March 31.—The annual business meeting and election of officers of the Alumni Association of the Chicago College of Pharmacy was held the evening of March 28. The treasurer's report showed a balance of \$226. The election resulted as follows: President, W. B. Day; first vice-president, Herman Fry; second vice-president, Max Sobel; secretary, E. D. Irvine; treasurer, W. P. Knoche; Executive Committee, W. A. Puckner, P. F. A. Rudnick, C. C. Cook, J. A. Hellmuth, E. A. Zahn and A. D. Thorburn. A committee was appointed to arrange for the annual banquet to the graduating class of the college, on Thursday evening, April 26. Following the business meeting, the fourth of the series of meetings for the discussion of pharmacopoeial revision was held. W. B. Day read a paper on "The Proposed Introduction of Powdered Drugs Into the Pharmacopoeia." A preliminary report on "The Therapeutic of the Solid Preparations for Internal Use" was presented by C. S. N. Hallberg.

Bowling.

Chicago, March 31.—The score of the Chicago Drug Trade Bowling Club last night was as follows:

Fechter	114	136
Waldron	124	192
Storer	123	141
Melbery	116	147
Armstrong	146	185
Baker	171	185
Bauer	159	128
Thomas	139	166
Delbridge	192	132
Blocki	112	122

Dr. Thomas carried off the high average medal.

NOTES.

—A hot water boiler in the Golden Eagle Pharmacy, North avenue and Clark street, exploded at 11 o'clock Sunday morning, March 25. A valuable soda fountain was damaged and a plate glass window was wrecked. The explosion was heard by many residents in the neighborhood. Pieces of the plate glass window were hurled across the street and a number of pedestrians had narrow escapes from injury. A. C. Singer, manager of the store, was alone in the place at the time of the explosion.

—The Public Drug Company, of Chicago, has been incorporated with a capital stock of \$20,000. The incorporators are Arthur B. Schaffner, Harry Goldman and Louis McAnn. The company will do a wholesale and retail drug business.

—Corporation Counsel Walker, of this city, has rendered an opinion that the slot telephone is legal. The telephone company has recently decided to make a uniform toll of 10 cents to all points inside the city limits.

—Schrader's Pharmacy, at Lake and Leavitt streets, will move on May 1 to Campbell avenue and Van Buren street, the location soon to be made vacant by the removal of Dickerman's pharmacy to Streator.

—The stock and fixtures of Dickerman's Pharmacy, now at Campbell avenue and Van Buren street, will be moved to Streator, Ill., on April 15, where the store will be reopened.

—William Beinssen, a well-known druggist at No. 305 Augusta street, died to-day. Mr. Beinssen had been ill for nearly a year with heart trouble. He left a wife surviving him.

—A boy was born to the wife of Herman Clause, South

Side salesman for Peter Van Schaack & Sons, on March 26, Mr. Claus is bearing his honors with becoming modesty.

—Mrs. George H. Harris, wife of the well-known West Side druggist and legislator died on March 28. Mr. Harris has the most heartfelt sympathy of many friends.

—L. J. Steege has purchased the Harvey W. Brown drug store in Austin. The sudden death of Mr. Brown, the former owner, was recorded recently in this column.

—The Thirty-second Ward Drug Club met last week and agreed upon a uniform price list. F. E. Holliday and Thomas V. Wooten, of the N. A. R. D., were present.

—The drug store of H. H. Hubbard, at Thirty-ninth street and Cottage Grove avenue, was closed this week by the Sheriff on a confession of judgment for \$4,300.

—The Illinois State Board of Pharmacy will meet in Chicago on April 16 to hold examinations and perform the other regular business of the board.

—Carlton S. Welch, manager of the American offices of the Crown Perfumery Company, New York City, was in Chicago this week.

ST. LOUIS.

Cocked Hat.

St. Louis, March 31.—This is distinctly a cocked hat town and very little ten pin rolling is to be found therein. Consequently St. Louis will not be represented at the Drug Trade Bowling Leagues tournament of the United States to be held in New York next month, although an invitation to send a team has been received. When the National Bowling League holds its tournament in New York, however, there will be some cocked hat rolling and a team may be sent from St. Louis. If so, it is safe to say that it will number among its members one or more of the druggists, as their local organization includes some of the most proficient rollers the old town can boast. There remain but six more weeks this season, which ends May 10. Then cometh the awarding of prizes and its accompanying excitement. Thursday night of this week the Burdocks got the odd game from the Mustards, although the latter secured thirty-eight more pins than the former. Wurmbe was high for the Burdocks and Helbig for the Mustards. The Chamomiles won three of the five games from the Catnips, Davis and Schneider leading their teams. The Dandelions won the odd game from the Junipers; Hobbs led the winners and Ludwig was high for the Junipers.

NOTES.

—W. C. Simpson, of Vienna, Ill., vice-president of the Illinois State Association, was in East St. Louis Friday in the interests of his organization. He secured the signatures of a large number of the local druggists, and it is quite certain that a druggists' association will be organized there. The principal object of the local organization would be the prosecution of those who violate the pharmacy laws of the State.

—Alfred W. Pauley, the well known druggist of 14th and Madison streets, was married Wednesday evening of this week to Miss Adele Busch at St. Paul's M. E. Church. In the three years Mr. Pauley has been in business he has built up an excellent business and is known as one of the most progressive young druggists in the city. Mr. and Mrs. Pauley have gone to housekeeping at 1319 Madison street.

—It looks very much as though the drug trade of St. Louis was to have an honored representative in the halls of Congress. Hon. C. P. Walbridge will receive the nomination from the Eleventh District unless confident predictions go wrong, and it would be difficult to find a man better equipped by virtue of ability and by experience as an honored public official for so high a position.

—The H. K. Mulford Co., Philadelphia and Chicago, have secured a most capable representative in the person of Dr. H. C. Duering, formerly manager of the Republic Pharmacy, who will cover the cities of St. Louis, Kansas City, Denver and Omaha. He will have six detail men assisting him and will himself call only on the jobbers and leading retailers.

—In the United States Circuit Court the Court sus-

tained the demurrer of the defendants in the case of Fairchild Bros. & Foster against the Fairchild Chemical Laboratory Co., solely on ground of misjoinder of parties plaintiffs and the plaintiffs were granted until the May rules to file amended bill.

—The engagement is announced of Carl G. Meyer, son of C. F. G. Meyer, of the Meyer Bros. Drug Co., to Miss Leah Newell, daughter of B. G. Newell, of this city. The wedding will probably be one of the early spring events.

—The store formerly occupied by the Republic Pharmacy, 716 Olive street, has been leased by the Huyler Candy Co., New York and Chicago, who will fit it for a confectionery establishment.

—The J. S. Merrell Drug Co. purchased the remainder of the stock of the Allen-Hall Drug & Surgical Co., including a full line of the Searle & Hereth Co.'s goods.

—John H. Allen has gone to Chicago preparatory to making an extended trip through Iowa for the U. S. Pharmaceutical Co.

—G. N. Davenport, formerly with Coit & Co., Chicago, will represent the Moffitt-West Drug Co. on sundries in Colorado.

—The Tri-State Medical Association meets at the Planters' Hotel on Tuesday and Wednesday of next week.

—A. L. Swinney, Arkansas representative for the J. S. Merrell Drug Co., is at headquarters this week.

—McClurkin & Thomas have succeeded R. C. Butler in the retail drug business at Little Rock, Ark.

THE NORTHWEST.

Medicine Men Defeated.

St. Paul, Minn., March 30.—Two of the candidates for mayor at the Republican city convention yesterday are in the drug business. Fred Schiffmann, who had the largest following of any among the delegates at the opening of the convention, is engaged in the sale of a patent medicine invented by his father, Dr. Rodolph Schiffmann, who has agencies in this city, London, Paris and Berlin. Sidney H. Reeves, another candidate, runs two drug stores at the Seven Corners. Both Messrs. Reeves and Schiffmann failed, as one nomination went to Chester R. Smith. The medicine men submitted to defeat most gracefully, promising hearty support to the chosen nominee.

NOTES.

—Successions: W. E. Nichols & Co., Eagle Grove, Ia., by Anderson & Walters; O. G. Carr, Unionville, Ia., by W. I. Gall & Co.; Kern, Krieger & Co., Plainfield, Ia., by Fish & Krieger; W. H. Carter, Ballard, Wash., by J. R. Conley; H. D. Williams, Barnum, Ia., by G. L. Walrod; M. C. Nix & Co., Hubbard, Ia., by M. C. Nix; C. C. Ruegnitz & Co., Stratford, Ia., by F. C. Ruegnitz; Baker & Johnson, Crete, Neb., by A. H. Johnson; the Robertson-Crasper Drug Co., Minneapolis, Minn., by the Robertson-Nagel Drug Co.

—John G. Eckoff has left Davenport's drug store in this city and returned to his home at Spring Valley, Minn., this week, where he has bought out the interest of C. F. Rohde in the firm of Rohde & Shepherd.

—The Cedar City Drug Co., Cedar City, Utah; M. Smith, Mystic, Ia.; James J. Knapp, Waterloo, Ia., and H. Williams, Osceola, Ia., have sold.

—C. F. Rohde, after over twenty years in the drug business, is varying the programme by traveling for a firm of casket manufacturers.

—L. E. Stinehour, recently burnt out, of Wadena, and A. Rundberg, of Elbow Lake, were in the city this week on business.

—O. W. Hood, Florence, Ore., a druggist who also owns and operates a general store and creamery, has acquired a saw mill.

—Charles J. Hoffbauer, druggist and saloonkeeper in Milwaukee, Wis., has disposed of his saloon business.

—C. A. Rice & Co., Rush City, Minn., have filed a voluntary petition in bankruptcy.

—B. F. Knell has started at Cedar City, Utah, and R. J. Hoagland at Beatrice, Neb.

—C. E. Hill, Seattle, Wash., has sold to his partner, F. Breuckman.

—A. C. Johnson is now working in Onstad's drug store, Dawson, Minn.
 —S. J. Erickson has gone to work for Johnson & Co., Cando, N. D.
 —Woodward, Clark & Co. have incorporated at Portland, Ore.
 —D. Alverson, Fairhaven, Wash., has given a bill of sale.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

ALABAMA.—Mobile.—M. F. Tucker, No. 450 Dauphin street, deceased.
 Prattville.—J. T. Floyd & Co., damaged by fire; Rice & Hagler, damaged by fire; J. E. Wilkinson, damaged by fire.
CALIFORNIA.—Oroville.—A. Ekman, succeeded by Ekman-Stow Company.
ILLINOIS.—Chicago.—A. Arend, No. 189 Madison street, succeeded by A. Arend Drug Company.—Herman Fry, North avenue and Larrabee, damaged by fire; insured.
 Elgin.—Nichols & Jencks, No. 16 Grove avenue, succeeded by John Jencks.
 Fidelity.—J. I. Roady, sold to Masters & Fuller.
 Mionok.—S. L. Zinser, sold to Eugene M. Hodgson.
 Virginia.—C. B. Gatton, sold to Eli McCaulley.
INDIANA.—Bluffton.—L. C. Davenport, succeeded by Davenport & Ehle.
 Huntington.—Frank A. Haines, No. 9 East Market street, should be added to D. D. List.
 Indianapolis.—Philip Miller, No. 1201 East Tenth street, sold to Henry Gauss.
INDIAN TERRITORY.—Ardmore.—C. H. McCoy, burnt out; insured.
IOWA.—Carroll.—J. W. Hatton, sold to Rettenmeyer Bros.
 Centerville.—John W. Clark, sold to Johnson Bros.—J. H. Udell & Co., sold to Carl Weeks.
 Eagle Grove.—W. E. Nichols & Co., sold to Anderson & Walters.
 Plainfield.—Bern. Krieger & Co., succeeded by Flish & Krieger.
 Unionville.—O. G. Carr, sold to W. I. Gail & Co.
KENTUCKY.—Milford.—N. W. Moore, sold to W. A. McKinney.
MASSACHUSETTS.—Boston.—E. Rogers, Jr., No. 160 Hanover street, deceased.
 Gardner.—C. A. Adams & Co., should be added to D. D. List.
 Lexington.—L. G. Babcock, deceased.
MICHIGAN.—Essexville.—A. J. Harris, deceased.
MISSOURI.—Dexter.—Harris Drug Company, sold to Charles E. Walters.
 Mokane.—Lehman & Walker, should be added to D. D. List.
 Springfield.—J. F. Boas, Public Square, deceased.
NEW YORK.—Ballston Spa.—F. E. Mitchell, sold to E. E. Cole.
OREGON.—Portland.—Woodward, Clark & Co. (W. & R.), Fourth and Washington streets, incorporated.
PENNSYLVANIA.—Williamsport.—Frank E. Truckenmiller, No. 101 East Third street, sold to H. C. Freck, Jr.
TEXAS.—Dalra.—St. John & Powell, succeeded by Powell & Powell.
 Brownwood.—Payne Drug Company, sold to J. C. Weakley.
 Corrigan.—T. D. Wilson & Bro., succeeded by R. A. Wilson.
 Laveria.—Sanders & Canfield, succeeded by P. G. Canfield.
 Trroup.—R. T. Bradford, sold to F. E. McKay & Co.
WASHINGTON.—Seattle.—Dubbs & Goodwin, No. 904 Second avenue, succeeded by Dubbs & Son; Dubbs & Son, No. 419 Pike street, sold to L. F. Swift.
WEST VIRGINIA.—Marlington.—J. W. Price, sold to Harry P. Echols.

—E. B. Hall, Parkersburg, W. Va., has been appointed a member of the West Virginia Board of Pharmacy to succeed Floyd Pfost, of Jackson County.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising and General Buyers.

New Sizes of Eskay's Food.

Druggists' attention will shortly be called to a change in the sizes of Eskay's Food. The Smith, Kline & French Co. explain they have found it impossible to continue to give the large quantity of food heretofore put up owing to the increase in cost not only of the ingredients in the Food itself but also in the tins in which it is packed. Nevertheless it will be found by careful comparison that the cost to the consumer in the new sizes is still far below that of other foods.

Messrs. Smith, Kline & French Co. call the attention of the trade to the fact that they have arranged their schedule so as to allow druggists a living profit. They refuse to supply retail dealers direct at wholesale discounts no matter how large their orders, and in this way they protect the average dealers against unfair competition. This, they say, has resulted in a higher schedule of prices on Eskay's Food than prevail on other foods, even in cut rate centres. They are very liberal in furnishing attractive advertising matter, and few manufacturers of infant and invalid foods so effectively co-operate with the dealer in creating a demand for his products. They especially request the trade to look at the bottom of the outside wrapper of all Food in stock, and if neither a cross, nor a circle, nor a star is stamped on it, to report stock, when arrangements will be made to exchange it, either directly or through the jobber.

Artificial Plants.

The artificial plants which Frank Netschert advertises on another page are remarkably true to nature. In fact they cannot be told from the natural plants except on the closest inspection. They make fine soda fountain decorations, and are very suitable for Easter displays. The Fern Dish illustrated here is

correct in color and design, and makes a handsome ornament. They are sold in four sizes.

Shakespeare and Soda Fountains.

The connection may not be apparent at first, but it is plainly shown in James W. Tufts' advertisement on page 22. He says "No man has yet understood all of Shakespeare, for to understand all of Shakespeare one must be a Shakespeare." From this he reasons that to make a soda fountain as good as Tufts one must be a Tufts, and that while Tufts' fountains are imitated, none but a Tufts can put into a soda fountain the real excellence always found in a Tufts apparatus. To quote again, "The first dispensing soda-water apparatus that was something better than a square white marble box, was a Tufts' fountain. Soda fountain esthetics began with Tufts and from the beginning Tufts has led the world in the production of artistic soda water fountains."

If your dealer doesn't keep Cook's Imperial Extra Dry Champagne order of American Wine Co., St. Louis, Mo.

A New Camera.

In selling the Sunart Vici Magazine Camera, advertised on another page, experience is unnecessary. It is one of the simplest cameras on the market. It has an Improved Pneumatic Shutter and Achromatic Lens, and it takes a picture 4 x 5 inches and holds twelve plates or twenty-four films at one loading. It is low in price and will readily sell. The Sunart Photo. Co., 18 Aqueeduct street, Rochester, N. Y., also make a full line of Folding and Cycle Cameras, from \$5 to \$50. Druggists who are interested in the photographic line should send for catalogue and discounts.

Antikamnia Quantity Reduced.

St. Louis, March 27, 1900.

The Pharmaceutical Era:

Gentlemen—It will undoubtedly be a matter of pleasurable interest to your readers and to the retail druggists especially to learn that we are offering to the retail trade all Antikamnia preparations in 10 ounce lots for \$9.25. The smallest wholesale quantity heretofore has been 25 ounces. All wholesale druggists, in fact the entire jobbing trade, has been instructed to furnish the 10 ounce quantity, assorted as desired by the retailer, at these figures.

THE ANTIKAMNIA CHEMICAL CO.,
Frank A. Ruf, Pres. and Treas.

Druggists' Tie Pins.

These are furnished by the J. Arthur Co., 18 Colonial Arcade, Cleveland. They come in oxidized and bright silver, with ruby or emerald eyes, at 26 cents each, or in

solid gold, Roman or bright finish, at \$1.35 each. They are made by a well-known firm of manufacturing jewelers in Cleveland, who also make buttons in mortar and pestle and other designs, class pins and other novelties in gold and silver.

Ice Cream for the Fountain.

By mixing Rippey's Foamaline with the dry sugar and then adding cream or milk, it is all ready for the freezer, no eggs or heat being required. The Foamaline not only enriches the cream and gives it that smooth appearance so much to be desired, but it adds to its bulk, and ice cream made in this way will remain solid longer with less ice and less labor. For a limited time a full half pound trial package will be sent on receipt of 25 cents in stamps. It is made by William Rippey, 58 Walnut street, Cincinnati, O.

Power's Asthma Specific, Free.

This well-known preparation has now been on the market for over twenty years, and in that time it has never been sold to department stores or to aggressive cutters. It is well advertised and in general demand, and is a staple article found in every complete drug stock. Mr. Powers will send a full size 50 cent package free to any druggist who will furnish a list of asthma patients in his neighborhood and to each of these a sample will be sent with the druggist's name on it.

The M. Winter Lumber Co. add to their advertisement in this week's issue a notice of Kade's Safety Adjustable Brackets, an all stamped steel adjustable bracket made on the knife edge principle, and a very simple, durable and practicable device for show cases, wall cases and shelving of all kinds. They are said to be the strongest and lightest bracket made, are easy to adjust, and can be instantly removed without moving other brackets or shelves. They issue an illustrated circular describing them which will be sent to any druggist who is interested.

An Automatic Carbonator.

The Reliable Carbonator is a practical, self-running machine which is to be attached to the fountain at one end and to the water faucet at the other end. It makes the highest possible grade of soda water, just as it is needed, and keeps the fountain constantly supplied at an even pressure. It is inexpensive, can be run by the ordinary pressure in the water pipes, or by electricity, and every machine is guaranteed to satisfy the purchaser. A postal card to Jas. W. Tufts, 282 East Congress street, Boston, will bring a circular about it.

Tablet Machines.

If you intend to buy a tablet machine get a good one. Money paid for a poor one, because it is cheap, is money thrown away. Of the makes of high grade machines in this country the F. J. Stokes Machine Co., Philadelphia, is one of the best known, and their tablet machine, the Eureka, is in use all over the country. This machine will compress any size of tablet up to $\frac{1}{4}$ inch at the rate of one hundred a minute, and it is sold with three sets of dies for \$25.

Special Rates on Ice Cream Cabinets.

On orders for Burrows' Floor Cabinets received during April, the Bradley Mfg. Co., New Haven, Conn., will allow extra special discounts and the freight on all shipments east of the Rocky Mountains. They also make the famous Bradley Counter Cabinet with metal doors. The latter are a new feature and they cannot warp or swell.

Vanilla Extract.

W. E. Kennedy, 370 Greenwich street, New York, makes a special Extract of Vanilla for soda fountain use, which he sells to druggists at \$6 a gallon. He wants every soda water dispenser to try it and will send a sample on application.

Prices of Chase's Remedies.

The preparations of the Dr. Chase Co., Philadelphia, are sold to the trade at the following reduced prices:

Dr. Chase's Blood and Nerve Food.....	\$4.00 per doz.
Dr. Chase's Kidney Food.....	4.00 " "
Dr. Chase's Liver Cure.....	2.00 " "

Wood Boxes.

Those who prefer to buy wood boxes direct of the manufacturer should correspond with the New Haven Mills Mfg. Co., New Haven Mills, Vt. They make lock-cornered, wood, mailing and small packing boxes and have just begun the manufacture of finished hardwood boxes in high grades and at moderate prices.

Tyrian Rubber Goods.

Each month the Tyer Rubber Co., Andover, Mass., show a different Tyrian specialty in their advertising space on the back cover. The name Tyrian on any rubber goods is a guarantee of quality, and Tyrian Atomizers, Syringes and Hot Water Bottles are well known throughout the trade.

Witch Hazel Jelly.

Mayell-Hopp Co.'s Witch Hazel Jelly is now sold in a new package and at new prices. Each tube is packed in a neat carton, six cartons in a box. To the retailer the price is \$2 a dozen, with discounts in one and two gross lots.

Vaccine Virus.

Probably the oldest propagator of Vaccine Virus in the country is Dr. Francis C. Martin, Boston, Mass., and there is no better vaccine sold anywhere. He makes very liberal terms to druggists.

The Salem Chemical and Supply Co., Salem, Mass., make a general line of druggists' supplies, Petrolatum, Ammonia, Acids, etc., etc., which they sell to the trade as the Witch City brand.

A Trip Through the Laboratories of Frederick Stearns & Co.

A visit to any of the larger pharmaceutical laboratories is generally of interest to a retail druggist, but when it is one that is entirely new throughout and most modernly equipped in every way as is that of Frederick Stearns & Co., the visit is doubly enjoyable. This firm's new home is situated in one of Detroit's most beautiful thoroughfares—Jefferson avenue, near the bridge leading to Belle Isle. The laboratory, which covers an entire city square, is built in the form of a hollow rectangle, with Jefferson avenue on the south, Bellevue avenue on the east and the Michigan Central Belt Line on the west.

Around the open court (which affords perfect light) is a gallery on each floor. These galleries are completely enclosed in glass and are used as a means of connecting the different buildings and departments.

At first glance this imposing structure seems to be one continuous building, but in reality there are seven separate buildings—six of which are devoted to the laboratories and the remaining building (that fronting on Jefferson avenue) is for office purposes only. This office building is of the Elizabethan or English renaissance style and is the handsomest of its kind in the city. Its entrance is through a beautiful stone arch the floor of which is inlaid tiling. Entering the vestibule and passing into the main hall, one goes directly into a large reception room, which is finished in antique oak—floors, pillars and ceiling—right off from which are located three cosy little consulting rooms. On the first floor are the directors' room, the office of the vice-president and treasurer, Mr. F. C. McLaughlin, and in regular rotation are the offices of Mr. W. I. L. Stearns, assistant treasurer; Mr. W. D. Stearns, superintendent, and W. G. Rankin, assistant superintendent. At the other end of the hall are located the bookkeeper's office and the office of Mr. N. A. Tabor, manager of collections and credits. On the second floor the president, Mr. F. K. Stearns, has a suite of three rooms at the southeast corner, adjoining which are the two offices of Mr. S. C. Stearns, assistant secretary, who is also in charge of the scientific department. Next in order come the three offices of the secretary, Mr. Thos. Bennett, who has charge of the foreign business, then following come the offices of Mr. J. W. T. Knox, advertising manager and editor of "The New Idea," and Dr. Yarbrough. At the end of the hall is a suite of rooms in charge of Mr. D. M. Gray, manager of the department of sales and traveling salesmen. Adjoining Mr. Gray's offices is a large room called the "travelers' room," which is at the service of the many traveling men of the house whenever they happen to be in off the road; adjoining this is the sample room. There is also a library and reading room on this floor.

From the office building the visitor is conducted to the laboratories, which were built in the form of a rectangle, so that the material handled which enters at one gate may, after going around the whole rectangle, come out a finished product at the same gate in which it entered as crude material. It goes first into the stock building, devoted wholly to the storing of drugs, chemicals and glass. The first floor (which is really a high cellar) of this stock building is devoted to the manufacture of vinous preparations, such as wine of cod liver oil, beef, iron and wine, and similar compounds. This room is concreted and is cool during the hottest summer months.

The next building contains on the first floor or cellar the plant for power, heating and lighting. Here are three new steel boilers of 100 horse power each, an engine of 150 horse power, and an immense dynamo. Above this is the mill room where the crude drugs are ground or powdered, by means of various appliances. Adjoining the mill room is a room devoted to the manufacture of "Kasagra," and next comes the still room containing vacuum pans, pumps, etc. The largest pan used for water evaporation has a capacity of evaporating 70 gallons an hour. In the still room in addition to the vacuum pans are found "all sorts and conditions of" stills, from the small twenty-gallon copper ether still for the making of oleo-resins up to the large steel still for recovering alcohol, which holds six hundred gallons. Here are also located several large open evaporating pans of different

sizes. Passing along in regular order one comes to the percolating room in which are located fluid extract percolators of all sorts and sizes, from the huge wooden-tapering tanks, which hold five hundred gallons for exhausting mandrake for podophyllin, down to the little glass two-gallon percolators for special work. Leaving the percolating room one passes into the general manufacturing room, in which the special formula work and simple domestic remedies are made.

The next department in order is the packing and shipping room, but as that is nearly the last place where a drug or preparation is taken to it is generally left until later on. Passing over, then, to the second story west building, the guest next visits the analytical department presided over by Prof. Sherrard. It is here that all crude drugs as well as finished preparations are assayed. Next in order comes the department of the manufacturing and putting up of cachets.

The next department in order is the label stock room. This is a large-sized room given up entirely to the keeping of the thousands upon thousands of assortments of the different labels made and used by this concern. Then comes the press room and printing department. Here is an array of printing machinery, the like of which does not exist in many cities even in the regular printing business, and no pharmaceutical establishment here or abroad has such great facilities for fine printing. A bindery and a paper stock room complete this department.

Moving along the gallery one comes next to the pharmaceutical finishing department, the assembly room, where are finished the private formulas, etc.; the paper box factory, which covers an area 300 feet long and 40 feet wide and employs 70 people; the elixir or wet department, a room 100 by 40 feet; the pill finishing room, department for making filled capsules and capsoids, tablet room and drying rooms. On the fourth floor the powdered goods are put up.

In the next building is the perfume department. The perfumes are made, bottled and stored in the basement. On the next floor are the filling, labeling and boxing rooms. Across the court are the packing and shipping rooms, where a most perfect system of handling orders is installed.

In this article nothing has been written about the buildings themselves, the people who inhabit them or of the company whose business is done within them. Nor will space permit a description of the biologic laboratory, which occupies a separate building. A description of the buildings was printed in the Era for March 1. Frederick Stearns & Co. claim that in these new quarters they have "the most modernly constructed and perfectly equipped institution of its kind in the world."

Veterinary Medicines.

Daniels' Veterinary Specifics, as a general line, are said to have the largest sale of any veterinary medicines in the country. They are made by Dr. A. C. Daniels, Boston. These remedies are supplied to the trade in display cases, on which special terms are made with druggists.

If druggists interested in paint brushes will send to McKesson & Robbins they may receive a copy of G. R. Kent & Sons' 1900 price list. In issuing this list, Messrs. Kent & Sons announce that the high water mark in the price of bristles has not yet been reached, notwithstanding the marked advance that has already taken place. This will explain why pure bristle brushes show increases in price. In this list all descriptions of brushes and accessories for painters are to be found in the alphabetical index, which covers, approximately, ninety distinct lines of great variety.

An exhibit of Mandruka Bath and Toilet Sponges on sale by the Smith, Kline & French Co., of Philadelphia was held at the Grand Hotel, this city, April 2 to 4 inclusive. The exhibit was in charge of Mr. Albert Hart and was viewed by many druggists and others interested in fine sponges.

STATE OF TRADE.

Business of Fair Proportions.

New York, April 3.—Large parcels have not received much attention, but in a jobbing way the aggregate volume of business during the past week has reached fair proportions and the general market has retained a steady undertone. The quinine situation has undergone no important variation since the last reduction by domestic manufacturers and the movement into consuming channels had been light and unimportant. Foreign makers did not follow the action of domestic manufacturers, and it is considered evident that current quotations are very close to cost of production on the basis of present values of the crude material. The market has continued very sensitive and the trade is still awaiting developments with no small degree of interest.

Opium has continued firm under the influence previously noted, and values show a further advance of 3 cents per pound. Several round lots have changed hands at improved figures, and a moderate jobbing movement was reported. Powdered is correspondingly firmer. Cocaine has been reduced 25 cents per ounce as a result of more or less keen competition among local manufacturers, although it is claimed that there is nothing in the general situation to warrant a decline. On the contrary conditions abroad have improved and an early reaction is not improbable.

Domestic manufacturers of citric acid have reduced quotations 3 cents per pound to meet competition from the foreign article, which has advanced more or less freely of late. All the citrates are 2 cents lower. Refined camphor is 1½ cents higher owing to steadily hardening markets abroad, where the available stock of crude is steadily diminishing. The outlook is favorable to extreme prices before the Japanese Government will allow fresh supplies of crude to come on the market, but quotations for refined will be largely governed by the fluctuations in foreign markets.

In the essential oil department business has been almost exclusively of a jobbing order, with the changes of prices mainly in favor of buyers, but none of the fluctuations are of special significance. The revised quotations show a lower range of prices for anise, cassia and citronella, with a fair business in the latter.

Norwegian cod liver oil has continued to harden in price, but the market is somewhat unsettled on account of uncertainty as to the final yield of the current season's catch. Thus far the results have been disappointing and I should there be no material improvement during the next few weeks values are expected to develop considerable strength. Meanwhile holders are disposed to offer sparingly and for leading brands some holders quote much higher prices.

Ergot is unsettled and decidedly lower under the influence of free offerings from primary markets, but there are some in the trade who are of opinion that the depression is wholly due to manipulation, and that efforts are being made to cover short sales made early in the season before the upward movement set in. All narcotics are slightly easier and among the changes in quotations are a lower range for belladonna leaves and root and aconite root. Cannabis Indica is decidedly stronger owing to cable reports that the London market has been "cornered" and that prices there show an advance of fully 10 per cent.

Buchu leaves are in better supply and lower quotations are named for both short and long varieties. Ipecac has continued to rule easy and values have again been slightly reduced. Menthol is a shade easier owing to competition among holders and lack of important demand. Gum elemi is steadily moving upward in price on account of scarcity. Notwithstanding the recent improvement in opium manufacturers of morphine have reduced quotations 10 cents per ounce. The decline is attributed wholly to competition.

Grip Under Control, but Death Rate Still High.

Peston, March 31.—Although the epidemic of grip appears to be practically under control and while physicians and druggists by combined efforts can handle the many cases, as compared with the past fortnight when it has been difficult to do this, the death rate still is high, the number of deaths being far in excess of the corresponding week of a year ago. Diphtheria is prevalent, as is scarlatina, and there also are many cases of measles. Pneumonia claimed more than eighty victims, and bronchitis twenty, from other causes being also the cause of deaths. All this has made much business for druggists. More activity is apparent in the line of chemicals, and the feeling is better for increased trade, partly due to the number of mills the beginning operations again after having been closed for more or less time. The call for drugs is only fairly good, with no special feature, so that changes in quotations have been unimportant. Prices on dyes and tanning materials are held pretty well, but there is lack of trading because of disposition to wait for lower quotations. Waxes are in fair demand, and alcohol sets strong and the call for them is good.

Still Prosperous in Philadelphia.

Philadelphia Pa., March 31.—The condition of business in the "City of Brotherly Love" is still in the prosperous

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Bilioussness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising.

THE

Abbey Effervescent Salt Co.

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade price-list on application.

condition which has characterized it for a number of weeks past. The outdoor trade is very good and the city orders keep the delivery wagons busy until ten and eleven o'clock every night. Collections are good and everybody is hopeful of a continuance of the present state of affairs. Grip increased during the past week with a corresponding augmentation of the number of prescriptions. Spring is at hand and the fizz of the soda fountain will soon be heard, so the careful pharmacist is stocking up his soda counter and is ready for the first warm day which always causes a rush on the soda fountain. Camphor has increased $1\frac{1}{2}$ cents per pound, which serves as a reminder of the fact that furs will continue to be packed away until the summer and the law of supply and demand regulates the price of this article with un-failing regularity. The pessimistic druggist is silenced for the time being, as the present condition of the city seems to be generally distributed throughout the city.

Detroit Druggists Feeling Better.

Detroit, March 31.—Druggists feel better than they did a week ago, for the last few days have been very busy ones. Spring is in the air, and tar camphor, coppers and all kinds of moth and germ killers are in the drug store windows. Placards which appeal to the house-cleaning-loving woman are conspicuous inside the store. "It is a fact," says one of the wholesalers, "that people buy more general drugs when the weather is seasonable and when they feel well, than when there is sickness amounting to anything less than an epidemic. The druggist simply has his share of the stimulation of 'I-love-myself-and-everybody-else' that goes with good health and pleasant weather. People get out of the house just to be in the open air, and wander along the streets ready to buy almost anything properly advertised or placarded. The wise druggist makes his display an attractive one on bright spring days."

Manufacturers continue to report excellent sales, with amount of business down for the year to date surpassing ahead of last year's record. This is particularly true of the smaller manufacturers, for it takes an enormous increase to make any kind of a showing in the very large houses, of which there are but two or three. These have the territory of North America pretty well covered; the smaller houses have the continent to conquer.

Business Active in Chicago.

Chicago, March 31.—Jobbers report trade very good this week. While there has been no especially strong demand of one or more articles over others, yet trade in staples has been very active all along the line. March has been a heavy month with all the jobbers and manufacturers, and city trade has been at fever heat for some time, but has been unusually good. There has been much sickness in Chicago, and druggists have been busy. Strange as it is, the strike has not yet seemed to have any effect on the wholesale trade. Both retail and wholesale dealers in manufacturers of fountain supplies are doing good business and are booking some very satisfactory orders. Sundries are active.

Retailers and Jobbers are a Contented Lot.

St. Paul and Minneapolis, Minn., March 30.—Both retail and jobbing druggists continue to be as contented a lot of men as can be found anywhere. The former are finishing up one of the most active weeks in their experience. The manner in which the prescription work is maintained is little short of amazing. In the wholesale branch the paint, oil and glass sales are noticeably large, being of greater volume than last year at this time, for people are much better able than they to build and repair. The trade in fine cigars is also bulky, revealing an improvement in financial conditions. Collections are somewhat slack, yet fully up to what could have been reasonably looked for at this time.

Trade Picking Up Steadily.

St. Louis, March 31.—Trade is picking up steadily with the wholesalers, owing in great measure to favorable weather conditions. The condition of the winter wheat crop was never more satisfactory at this season and the feeling among the farmers is one of confidence. There have been few changes in prices worthy of note beyond a further decline of 25 cents in cocaine. Jobbers believe that the next development will be an upward movement on this drug, as they declare the stocks in the hands of manufacturers are light. Retail trade has been fairly satisfactory the past week and shows a general tendency to improvement.

Store Stools.

Metal chairs and stools add to the appearance of a store. They are artistic, cleanly and practically indestructible and pay for themselves out of the increased patronage they bring. A. H. Andrews Co., Chicago, are well-known makers of this furniture and own three patents covering stools and chairs with twisted wire frames, but they have discovered that two of their patents are being infringed, and in their advertisement in this issue they announce their purpose to proceed against all users of the imitation stools as well as against those who are making them.

MARKET REPORT.

NEW YORK MARKET.

New York, April 3.—A fairly good jobbing trade in leading descriptions has continued throughout the week, with moderate fluctuations in values, although some of the advances and declines are of more than ordinary importance.

OPUM.—The market has developed increased firmness under the influence of stronger cable advices from primary sources and quotations for jobbing quantities have been advanced to \$3.40@3.60 for 9 per cent, and \$3.50@3.75 for 15 per cent, the higher figure for single pounds.

POWDERED OPUM.—Small lots have continued in fair request and values are firmer in sympathy with higher prices for the gum, the revised jobbing range being \$4.45@4.65 for 15 per cent, and \$5.15@5.35 for 16 per cent, according to size of order.

MORPHINE.—The movement into consuming channels continues moderately active with values reduced to the basis of \$2.30@2.40 for eighths in 2½-oz. boxes and \$2.35@2.45 for smaller quantities.

QUININE.—All leading brands of both domestic and foreign are quoted on a uniform basis and the jobbing quotations are \$17.50c. for bulk in 100-oz. tins, \$39.50c. in 50-oz. tins and \$39.50c. in ounce vials.

COCAINE.—Manufacturers have reduced their quotations 25c. per oz. and jobbing prices show a corresponding decline to \$56.25 for large crystals and \$47.50 for small.

CRUDE OIL.—Domestic makers have reduced quotations to meet competition from recent importations of foreign and the revised jobbing figures are 37@40c. by the keg and 35@36c. for less.

POTASHES.—Quotations for all varieties are 2c. lower or on the basis of 48@53c. for potash, 50@55c. for soda, and 53@58c. for iron.

CAMPHOR.—Steadily hardening markets for crude have caused a further advance in refined, and jobbers have marked up their quotations to 55@56c. for domestic by the barrel, 56@57c. by the case and 60@61c. for less. Japanese in quantities, 56@57c. by the case and 62@64c. for less. ½-oz. lb. higher and ¼-oz. 2cs. higher than our casks.

MENTHOL.—A slightly easier market is noted with jobbing quotations showing a decline to \$3.10@3.25; ounces unchanged at 27@30c.

OIL ANISE.—Lower primary markets have caused a weaker feeling among local holders and spot quotations have been reduced to \$1.50@1.75, 2½ to 3 lbs. small.

OIL CASSIA.—Competition among importers and a slow consuming demand have resulted in a decline to \$1.15@1.40, according to test and quantity.

GIUCONELLE.—The tone of the market is easy and jobbers have reduced quotations to 40@50c.

COD LIVER OIL.—Values are firmer owing to unfavorable reports from primary sources, and jobbers have advanced quotations to 40@45c. for 100 lbs. cask.

GUM ELEMI.—Market decidedly firmer on account of scarcity and jobbing prices show a further advance to 45@50c.

SALICYLATE OF SODA.—Manufacturers' prices are firmer and quotations for small lots have been advanced to 65@75c.

PEPCAC.—An easier feeling has developed and jobbers are willing to sell at the reduced range of \$3.40@3.65 for whole, \$3.50@3.70 for ground and \$3.50@3.75 for powdered.

CANNABIS INDICA.—Cables report the London market "con-rod," and spot values are stronger with an advance to 32@35c.

ALCOHOL.—Distillers' quotations for grain have been advanced and the revised jobbing figures are \$2.40@2.47 for 100 barrel and \$2.40@2.45 for 400 lbs. cask. Odorless, \$2.45@2.49 by the barrel and \$2.50@2.75 for less.

BUCHU LEAVES.—Foreign markets are lower and spot quotations for jobbing quantities have declined to 26@26½c. for short and 40@45c. for long. Ground are quoted 35@40c. and powdered 44@51c.

ERGOT.—Conditions abroad are unsettled with values weaker and jobbers have reduced quotations to 70@80c. for whole and 72@82c. for powdered. Spanish is held at \$1.10@1.25 for whole, \$1.15@1.20 for sifted and \$1.20@1.25 for powdered.

BELLADONNA.—Both leaves and root are easier, the former showing a decline to 26@30c. for whole and 32@35c. for powdered, while the latter is obtainable at 15@25c. for whole and 23@25c. for powdered.

ERA WANT ADS.

If every reader of the Era knew the value of the little Want Advertisements which we publish every week, the page we devote to them would not be large enough to hold all that we would have to print.

These little cards can be used to great advantage by any druggist to dispose of his dead patent medicine stock. Many proprietary medicines which have a sale in one section of the country do not sell at all in other sections. If a druggist has goods on his shelves which he cannot sell, another druggist in some other State where there is a demand may be willing to buy them at a discount or to exchange them for other goods.

Perhaps the reader has an old soda fountain to dispose of; perhaps he wants to sell his store, and we occasionally hear of a druggist with enough surplus cash to invest in a second store. All of these wants can be satisfied if they are made known in the Era's Want Department, which is read by dealers in all parts of the country every week.

THE ROLL OF HONOR.

The secretary and the chairman of the Executive Committee of the National Association of Retail Druggists authorize the publication of the following list of proprietors who have agreed to confine their sales at best prices to the selected list of jobbers, and who state their determination to rigidly adhere to this agreement.

THE J. C. AYER CO., Lowell, Mass.
C. I. HOOD & CO., Lowell, Mass.
LYDIA E. PINKHAM MEDICINE CO., Lynn, Mass.
DRS. F. E. & J. A. GREENE, Boston, Mass.
WELLS & RICHARDSON CO., Burlington, Vt.
WORLD'S DISPENSARY MED. ASS'N., Buffalo, N. Y.
DR. D. JAYNE & SON, Philadelphia, Pa.
THE PISO COMPANY, Warren, Pa.
CALIFORNIA FIG SALT CO., San Francisco, Cal.
THE CENTAUR CO., New York City.
THE PERUNA DRUG MFG. CO., Columbus, O.
DR. KILMER & CO., Binghamton, N. Y.
DR. MILES MEDICAL CO., Elkhart, Ind.
TAURANT & CO., New York City.
J. W. CAMPION & CO., Philadelphia, Pa.
KICKAPOO INDIAN MED. CO., New Haven, Conn.
J. M. GROSVENOR & CO., Boston, Mass.

It is expected that many more proprietors will make the same decision, and their names will be added to this list when duly authorized.

REVISION OF THE PHARMACOPOEIA.

On the 2nd of May, at Washington, D. C., will be called to order the convention to arrange for the decennial revision of the United States Pharmacopœia. This convention will select a Revision Committee from the delegates who represent the medical and pharmaceutical associations, colleges, etc. The convention will also decide upon general rules for the government of the committee.

What shall be these rules in several important particulars is a question which just now is greatly agitating the minds of doctors and druggists. Readers of this paper need not be told what the problems are concerning which the convention is expected to instruct the Revision Committee. There is a very strong feeling among both physicians and pharmacists, especially the latter, that the Pharmacopœia should be made more of a handbook and ready reference guide to both doctor and druggist, that it should contain more directly practical and serviceable information, that it should be improved along certain lines which will leave it no longer open to the charge of being a useless compendium of obsolete information. The committee on revision cannot go beyond the lines of action laid down for it by the convention, therefore it is extremely important that the convention shall act wisely in formulating its rules for the committee's guidance.

Two of the questions to be met which are perhaps of more importance than the others are:—Shall doses be stated in the Pharmacopoeia? and, Shall any or all of the so-called new remedies, synthetic chemicals, which are protected by patents upon product and process, by trade-marks and by copyrights upon their names, be given place in the new revision? There are many good, forceful arguments on both sides of both these questions, but the preponderance of sentiment seems to be that both should be answered in the affirmative.

These two questions have been literally discussed in the pharmaceutical journals, but very timely and of particular weight are the views of the chairman of the present committee on revision, which are set forth on another page in this issue, constituting a paper prepared and read by him before the German Apothecaries Society of this city. Dr. Charles Rice is perhaps better qualified, from information and experience, to pass judgment upon these problems than any other one man in the United States, and it is therefore significant that in his opinion doses should be stated and synthetics included under proper conditions and reservations. Every word of his paper deserves, and no doubt will receive, scrupulous consideration by every reader. He weighs the arguments pro and con, and decides impartially and logically. From his long and masterly work in connection with several revisions of the U. S. P. his opinion will, or should, outweigh that of all others combined in opposition, and, indulging in a little prophecy, we predict that the new Pharmacopoeia will state doses and will include a liberal number of protected synthetics which conform to the regulations Dr. Rice proposes and which are intrinsically worthy of this official recognition.

HELP THE MARINE HOSPITAL STEWARDS ALSO.

As every pharmacist knows, the A. Ph. A. through a special committee, and particularly the chairman of that committee, has been working for some years to secure higher rank and better pay for the apothecaries of the United States Navy. This effort was crowned with a certain degree of success when, a few months ago, some twenty-five apothecaries in the navy received warrants and were accorded the title of pharmacist, together with a regular pay rating proportioned to length of service. The recent war with Spain stimulated a similar agitation in favor of the apothecaries in the United States Army, but though there are bright prospects, success has not as yet crowned this effort. The Hospital Stewards of the United States Marine Hospital Service now want to come in and share in the effort in behalf of their brothers in the army and navy, and they make formal appeal to the pharmacists to help them along in this laudable work. We are in receipt of a circular setting forth the great service thus far rendered by the A. Ph. A., and voicing forcefully the appeal of the Hospital Stewards. There is no

reason that they should not be included, every reason they should, and this paper is pleased to do what it may in effort and good words to help the thing along.

THE A. PH. A. ANNUAL MEETING.

In the historic and altogether delightful city of Richmond, Va., during the week of May 7th, immediately following the U. S. P. Convention at Washington, will be held the annual meeting of the American Pharmaceutical Association. The meeting promises to be unusually pleasurable and profitable. The attendance will undoubtedly be larger than customary, for not only is Richmond an accessible point, to say nothing of its exceptional attractions, but many delegates to the Washington meeting will take advantage of the opportunity to kill two birds with one stone, and will "On to Richmond." The various officers and committees upon whom lies the duty of arranging for the meeting are promising a grand good time, so good in all respects that the 1900 meet will be notable above the many notable meetings which have heretofore characterized this national association.

THE DIPLOMA PREREQUISITE.

Another collection of opinions upon this topic is presented in this issue. There are given the views of board members, teachers, practical pharmacists, clerks and college students. From the liberality of responses to our request it is evident that the subject is one which lies very close to the hearts of pharmacists, and we believe it is a good thing to have it so candidly debated, for in matters of such importance it is always essential to know where we are at, or, as Davy Crockett said: "Be sure you are right, then go ahead."

IS THIS A CLERK'S ERROR?

A druggist in Ohio, or rather his clerk, is charged with having committed an error in dispensing which presents a rather unusual feature. The doctor is alleged to have prescribed paraldehyde, but the clerk in filling the prescription gave in error formaldehyde instead. The patient died from inflammation of the stomach, caused, it is claimed, by the formaldehyde. Investigation of the case is now under way. If the result shows the error charged to have been committed, it is hard to conceive of any excuse which can be pleaded in behalf of the dispenser. It is to be hoped, however, that his skirts will be cleared.

QUINIC ACID is highly recommended in uric acid diathesis, combined with lithium, in troches containing each: Quinic acid, 0.5 Gm. (8 grains); lithium citrate, 0.15 Gm. (2½ grains); sugar, 0.3 Gm. (5 grains). Quinic acid occurs in white crystals, melting at 162° C., soluble in water. It reduces distinctly the formation of uric acid in the system.

ONTMENT FOR LUPUS.—Unna recommends the following: Salicylic acid, 1 part; antimony chloride, 1 part; creosote, 2 parts; extract cannabis indica, 2 parts; wool-fat, 4 parts. (Ph. Post.)

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THE WORLD'S FAIR.

Dr. Fr. Hoffmann Tells What Side Trips Are Most Advisable and How Best to Enjoy Them.

Dr. Fr. Hoffmann, now resident in Berlin, but who is familiar to all American pharmacists through his many years' residence in the United States and his work as editor of the *Pharmaceutische Rundschau*, gives the following advice to visitors to the Paris Exposition who may wish to visit other cities and points in continental Europe of interest.

Berlin, Germany, March 18, 1900.

Editor *Pharmaceutical Era*: Most Americans visiting Paris and its World's Fair this summer will leave the French capital in a state of mental exhaustion from the overwhelming, incessant sight-seeing among the immensity of displays of the finest products of arts, industries and architecture with a pressing desire for restful recuperation in calmer realms among the mountain scenery of Germany and the adjoining Swiss, Tyrolean and Austrian Alps, or else in the beautiful mountain resorts of the grandeur of the historic places and cities of Germany.

It is an error generally committed by the most experienced excursionists from abroad to crowd too much sight-seeing into too limited a space of time. In consequence the excessive and confused multitude of the most varied impressions upon the eye and the mind leave no clear and lasting conception, except of the most impressive and grandest objects and scenery. This may be particularly noticeable to visitors to the Paris Exposition. After having passed through the ordeal of the great show all inclination for further roaming through the halls of museums, collections, academic and educational institutions, etc., will be subdued by a longing for some mental relaxation and for scenes and places of placid diversion, abundantly to be found in Germany and the nearby Alpine regions. For these less taxing recreative trips Baedeker's guide books will serve as an ever-ready and most reliable mentor.

In visiting large cities like Berlin, Vienna, Munich, etc., it should be borne in mind that they, like the great American cities, do not show at their best during the hot season of July, August and September, in so far as the wealthier class of the population are largely out of town and in summer resorts, and as the foremost places of pleasure, as well as of education, are closed during these months. In consequence, the halls of the universities, their laboratories, libraries, etc., are unoccupied and frequently in a state of repair, cleaning, etc. All this will be different in Paris at the exceptional occasion of the World's Fair this summer, when everything worthy to be seen will be made to appear to its best advantage.

For American pharmacists it may not be amiss to state that Germany, Austria and most other continental countries have no colleges or special university schools of pharmacy. Special pharmaceutical lecture halls, laboratories, collections, etc., like those of the larger American colleges and universities, therefore are wanting here; nor can the continental pharmacies and drug stores compare in size, elegance and general appointment, nor in the multitude and variety of goods with the higher order of American and British drug stores. German pharmacy moves in its traditional conservative channels, and hardly offers anything worthy of display or of emulation.

Excursionists inexperienced in European trips and seeking recreation and less exciting scenes after their stay in Paris, do well to pass from there to Brussels, Cologne and Coblenz, thence by steamer up the Rhine to Bingen, visiting the beautiful tributary valleys of the Ahr, the Moselle, the Lahn and the Nahe, and subse-

quently the cities of Wiesbaden, Frankfurt, Heidelberg, Strassburg, Freiburg and the scenery around these places. The entrance to Switzerland is best made via Basle and Luzern, or via Schaffhausen and Zurich, to the Tyrol via Innsbruck, and to the Austrian Alps via Salzburg (Gastein and Berchtesgaden). The return northwards may be made via Munich and Nuremberg, or via Vienna, Prague, Dresden or Berlin.

All these routes, as well as every point of interest in city and country, are graphically described in the English editions of Baedeker's guide books, without which no trips should be undertaken. In all hotels on the Continent English is spoken, or at least well understood, but rarely by the officials on the railway trains; but no one will meet with any difficulty in getting along without knowledge of the German language. It is also advisable to travel on second class passenger cars and to avoid traveling at night time, except on longer distances through less interesting scenery. Any chance to get the benefit of letters of introduction, particularly to Americans residing for the time in Continental cities, should be utilized; it may in many cases prove to be of advantage. But it is advisable in these cases to inform the parties several days in advance of one's arrival and of the hotel where one is staying, and if possible propose time and place (best the hotel) for a meeting; or else for allowing time for a response in case the respective parties should be out of town.

These few fragmentary points of advice are all I can offer just now. They may be subservient to your aims and purposes.

I hope to have the pleasure of greeting many American friends here in the course of the pending summer. They may rest assured of my hearty welcome and of every favor I may be asked for and able to extend to them.

FRED. HOFFMANN.

FORMALDEHYDE AND METHYL ALCOHOL FROM METHANE.—When a mixture of methane and air is passed over glowing platinum, formic acid is obtained, but neither methyl alcohol nor formaldehyde. If, however, the platinum be replaced by copper, asbestos or pumice stone, the products are chiefly methyl alcohol and formaldehyde. Dr. Glock, of Berlin, has patented a process in which copper in granular form, obtained by reduction of copper oxide, is used. A mixture of equal volumes of methane and air is passed through a tube filled with the copper and heated to a low red heat, about 600° C. The gases passing through the tube are cooled, washed, again mixed with an equal volume of air and passed through a second tube, and this procedure repeated until the mixture of gases is free from methane. The methyl alcohol and formaldehyde are recovered from the wash liquids in the ordinary manner. Pure methane may be replaced by gaseous mixtures containing methane. (Chem. Ztg.)

ACTION OF HEAT ON PEPSIN AND PANCREATIN.—Observations of V. Harley (Jour. de Pharm.) show that prolonged heating sensibly lessens the digestive power of pepsin. In aqueous solution a temperature of 68° C. fully destroys it and heating at 60° decidedly lessens it. This was shown by the rotatory power of the liquids in which the digestion experiments were made. In aqueous solution pepsin appeared to offer more resistance to the action of heat than in physiological liquids. Trypsin (pancreatin) suffers deterioration in aqueous solution even at 55° C. and is rendered entirely valueless at 60° C. The drying of these preparations, in their manufacture, should, therefore, be done at the lowest possible temperature. (Apoth. Ztg.)

PRESERVATION OF RUBBER ARTICLES.—Prof. Krollkowski publishes, in a Polish paper, the results of extensive tests, which show that the best method of keeping rubber articles is in a 1 per cent. solution of formal or zinc chloride or a concentrated solution of boric acid. Red rubber keeps better than black, he asserts, other conditions equal. Rubber articles, he adds, should never be left exposed to the air or the action of cold.

(Continued from Page 368, April 5)

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—The Question Discussed by Pharmacists, Clerks and Teachers.—
Its Advantages and Drawbacks Contrasted.

Rather Favors the Non-Graduate.

I am very much interested in your editorial, as it covers ground I have worked over in thought many times, and I am not certain as to my position, as there is so much sound and sensible argument on both sides of the question. You have ably argued the subject from all view points, and I do not see that there is anything left for me to say.

I have never known anyone to be injured by education, and it would seem that the best place for a pharmacist to be educated would be in a college where pharmacy is taught. If I had a boy who had selected pharmacy as his life's work, I would give him all the benefits of all that the best colleges afforded. It is an unfortunate fact that there some colleges of pharmacy, and medicine, too, for that matter, whose diplomas are not worth the paper upon which they are printed. I think it would be a very difficult matter to draw the line between the good and the bad, and if it is to be done, who is to do it? In my long experience I have had all kinds of clerks, graduates and non-graduates, and rather favor the opinion that for general usefulness in an ordinary drug store the knowledge as the outcome of actual experience behind the counters and in the counting room in a drug store is more valuable than that acquired in a college where the science is more particularly taught, to the exclusion of the handling and mixing of medicines. I am aware that the latter is taught, but more attention is paid to the former, which I believe is not as important for the general usefulness of a clerk in a drug store. I think I have known very scientific, college-bred pharmacists who had very little common sense or had a marvelous faculty of concealing it. I am a great believer in common sense in every thing, not excepting pharmacy. One of the absolute essentials of a good drug clerk is not taught in our colleges at all, or if at all, so theoretically that it is valueless. I mean the art of waiting upon customers who come into drug stores. This is so important I think it can hardly be overestimated. Some could not learn it at all, and I doubt if a college diploma would be an auxiliary in acquiring this essential. If not a gift it has to be learned in a drug store.

There are many very worthy, impecunious young men who would be absolutely debarred from ever becoming pharmacists if a college diploma was requisite for their appearing before a State Board as applicants for registration. In my acquaintance I can count scores of such cases. This is more the case in the South where young men have to get their education in drug stores or not at all, their impecuniosity making it absolutely impossible to have a college education. Our State Board has just turned out a number of licentiates. In looking over the list I recognize only two acquaintances. The education of both of these young men was from force of circumstances in drug stores, one of them having had the benefit of the Era Course, and I have never known a more worthy person in every particular. I shall be surprised and disappointed if both do not reflect great credit upon their chosen profession. I think, and do you not agree with me, that it would have been hard, yes, very hard, if these two most worthy men were debarred from ever having become pharmacists because of their circumstances, which they could not control. I would like to add that the standard of examination of our Board is second to none in the United States.

The whole question, it seems to me, reduces itself to

this: It is more the man than the diploma which is going to make the pharmacist. Some of the most incompetent, useless and dishonest men I ever employed were brilliant graduates—one a medallist—of the best graded colleges this side of the Atlantic; some of the best, indeed, a great majority of the best I ever had, never saw the inside of a college. I think the standard of knowledge, discretion and morals is infinitely more important in the members of pharmacy examining boards, and medicine too, than of those who come before them; and I have known of instances where, in their zeal to let a nervous, rattled candidate see how much knowledge they had crammed into their mouths which had never reached their brains, by irrelevant, worthless catch questions fail to get any real idea at all of what useful knowledge the candidate has.

Our State Legislature has lately distinguished (?) itself by passing special acts directing our Pharmacy Board to register certain parties, some who had failed before the board and others who would not go before it for fear of failure. 'O! politics! politics! In such cases as this what good would a diploma do? And how is this great wrong to pharmacy and the people to be righted?

E. A. CRAIGHILL.

Lynchburg, Va.

A College Student Thinks the Graduate is Superior.

It affords me great pleasure to avail myself of the opportunity for discussing so vital a topic. Though being at present occupied in preparation for the final college examination, I dare not miss so excellent an opportunity of expressing my views publicly.

Should college graduation be a prerequisite to a board examination? Yes; for not only would the professional and financial status of pharmacy be elevated and candidates would possess a more complete and systematic knowledge, but it would also check the production of that vast number of incompetent pharmacists who are being manufactured monthly as candidates for the Board of Pharmacy examination by so-called "Institutes of Pharmacy," which guarantee to prepare anyone within three months. If this were prevented it would prove beneficial to the professional and financial status of pharmacy and a boon to public safety.

Pharmacists would then know better than to keep Pulvis Cantharidis and ground flax seed mixed together in one drawer, as the writer recently observed to be actually a fact.

Greater restrictions would lessen competition, and this would enable the pharmacist to dispense genuine U. S. P. preparations, and not permit, as to-day, some pharmacists, because of competition, to dispense a blue ointment made from lard and charcoal. Now the stores of this class are so poorly equipped that it occasionally becomes necessary (as they think) for them to substitute tincture of cinchona for tincture of nux vomica; to prepare tinctures and fluid extracts with Columbian spirits; to omit active ingredients from physicians' prescriptions. It is in such a store that you will find an 1870 U. S. P. in use; it is there where tincture of cudbear is extensively used as a coloring agent for syrup simplex so as to substitute it for raspberry syrup. It is there that a potassium permanganate solution is made with sink water.

Thus it is evident that not only does the present state of affairs degrade the status of pharmacy, but it also puts public health at stake.

College graduation as a requirement from candidates for a board examination would by no means debar from the practice of pharmacy the poor, ambitious young men, for we find that many a good standing physician of to-day was struggling for a bare means of subsistence previous to his entering a medical college.

The present laws and requirements are too lenient with the candidate for examination, and hence he becomes a menace to public health.

It stands to reason that the parrot-like study which the board candidate of to-day pursues for a period of three months without having had any store experience, cannot under any circumstances make a professional man of him, nor does it prepare him to execute the duties assigned to him by the public at large; yet it is but too true that hundreds of such candidates pass the board month after month, while the Ph. G. who spends two years of hard study receives no preference either by the public or by his employer, i. e., if he, the employer, happens to be a licentiate.

The following will illustrate the superiority of a Ph. G. over a licentiate: Some time ago it happened that I was employed as an apprentice in a drug store where both a licentiate and a Ph. G. were employed. A customer entered the store with an ointment jar that was nearly empty and requested the licentiate to renew the ointment. There was no label on the jar and the clerk was at a loss to know what the contents were. When he was about to dismiss the patient the Ph. G. recalled him, put a minute portion of the jar's contents to his tongue and at once grabbed the bottle marked Tr. Ferri Chloridi, and confirmed the presence of tannic acid which at once suggested to him that it was Ung. Acidi Tannici. The licentiate, though being no novice, stood gazing in amazement at the Ph. G. while he refilled the ointment jar. The same Ph. G. detected calomel tablets in a bottle from which the label was lost; he sold quercus alba when the customer simply showed him a sample of the drug, not knowing its name. The licentiate, however, cannot do all that, for he only knows a drug by its label on the drawer. The same Ph. G. prepared an egg preservative for an egg dealer and cleared \$5 profit for the proprietor of the drug store; on the other hand, the licentiate dispensed baking soda when lye was wanted, and directed the customer to use a teaspoonful to a kettle of clothes to be washed with boiling water.

Thus it will be seen that a graduate is of inestimable value in a drug store, and it is he who will satisfy his employer most, and above all insure public safety. I hope that the Era will do its utmost in agitating the worthy cause.

NATHANIEL I. GILLMAN,

Senior Student, Brooklyn College of Pharmacy.

New York.

The Diploma, Says Mr. Muir.

My position in the matter of a college graduation as a prerequisite to examination by boards of pharmacy is so well established that it seems almost superfluous to again express my views. I will say, however, that my thirty-four years of practice in the profession, together with five years' experience as a member of an examining board, has taught me that the thoroughly educated man who is systematically and scientifically trained in a college of pharmacy, with the four years apprenticeship in a drug store which the college requires before graduation, is the safer and better man to trust with the delicate affairs that relate to the profession of pharmacy.

While it is true that many successful pharmacists have not been graduates of colleges of pharmacy, it is also true that the large majority of those who stand at the head of the profession throughout the country to whose skill and science the public and pharmacists are indebted, have been and are college graduates.

Not only am I in favor of college graduation as a prerequisite to examination, but I am also in favor of raising the standard of examination upon entrance to the college course, by requiring applicants to pass a regents' examination. While this would no doubt tend to slightly reduce the number of those desiring to enter the profession, it would result in securing those who by reason of education and cultivation would enhance the professional and commercial welfare of the pharmacist.

The argument that such restrictions and conditions would work injury to the worthy young man who, by force of circumstances, cannot secure the college education can have no merit, for the reason that if the same worthy young man is anxious to become a pharmacist and is not inspired thereto by mercenary motives, he can and will manage to qualify himself precisely as the aspirants for admission to the legal or medical professions are required to do at the present time, who look forward to the honor as lawyer or doctor, realize the long and costly preparation necessary therefor, and somehow arrange their affairs to accomplish their purpose. Thus it will be with those who aspire to proficiency as pharmacists. The thing will take care of itself, and as in the case of law and medicine, the high standard requirements will make the profession of pharmacy honored and respected more than it has ever been, with resultant pecuniary benefit to those who are engaged in it.

The tendency of all professions has been and now is to a higher standard, therefore rigid conditions are being imposed upon those who desire to become professional men. It is undeniable, therefore, that if we wish to be known as members of a profession standing on a par with other professions before the community, we must also adopt the same higher standards.

I am glad that the Era has undertaken to secure discussion upon this important subject.

WILLIAM MUIR, PHAR. D.

Member New York City Board of Pharmacy.

New York.

Favors More Stringent Regulations.

College graduation as a prerequisite to board examination would be a move in the right direction and could be successfully enforced, provided a law to that effect would be accorded the proper support by the druggists themselves.

Such a law would, at first, find many and bitter opponents, for, as is always the case, a measure carrying with it decided reforms or restrictions tending to a higher education and perfection of any profession, will encounter fierce opposition, and, strange to say, such opposition usually comes from the members of the very professions whom such reforms would benefit most.

Better, broader and more thorough education of the druggist is needed, and any law bringing about this result ought to and eventually will be enforced. The druggists of this country by concerted action, can have desirable legislation enacted, but it would require time and patience as well as "hard pounding" to make many of them understand that their hope and salvation lie in education and organization.

Not alone would such a regulation prove beneficial to the druggist, but would also be a boon to the colleges of pharmacy, making it possible for those worthy institutions to revise and improve their curriculum so as to conform with the advanced ideas and thought.

These institutions, with the best of intentions, with competent and conscientious instructors, and with indulgent boards of trustees, are not up to the standard and do not exert the inspiring influence nor have they the prestige which educational institutions of their kind and scope should have.

A requirement of college graduation as a prerequisite to board examination may possibly debar some few worthy young men from the practice of pharmacy, but if they be "worthy" such a regulation would remain an obstacle to them but a short time and instead would act as a stimulus, urging them on to thoroughness and proficiency.

Even taking it for granted that it may prove a hardship and a severe restriction in many cases, still it must be considered only in the broad sense, that, proving a benefit to the largest number and to the public at large, and, being in accord with public opinion, it would then be regarded as a good and just law.

The ineligibility of numerous candidates appearing for examination before the boards of pharmacy is often so pitifully apparent as to make one shudder for the future welfare of pharmacy. Hence, any restriction or regulation improving this lamentable and humiliating condition of pharmacy would meet with my approval and aid.

East St. Louis, Ill.

THOS. KOEHLER.

SYNTHETICS AND DOSES IN THE U. S. P.*

By CHARLES RICE,

Chairman U. S. P. Revision Committee.

To the President and Members of the German Apothecaries' Society:—

Gentlemen: Having been invited by your president to lay before you my views on certain matters deserving consideration in connection with the next revision of the U. S. Pharmacopœia, I take pleasure in complying with this request. I have for this purpose selected two of the more important problems, namely, the recognition of the new synthetics and the introduction of doses.

I. Shall any of the new synthetic remedies be recognized by the Pharmacopœia?

A careful examination of the literature which has appeared during the last decade will undoubtedly show that the opposition to the introduction of the new synthetics has very greatly diminished. Almost the only ground still adduced against their introduction is their subjection to, or connection with, patents and proprietary rights. And even regarding these features the position formerly taken by many opponents has materially changed, inasmuch as it is now better understood that a patent for a *process*, which does not necessarily monopolize the product, should be clearly distinguished from a patent for a *product*, in which case there is an absolute monopoly. Probably all the newer remedies which deserve consideration in connection with the next Pharmacopœia are made only under process-patents, the products themselves being unfettered, except perhaps by copyrighted names. As it is generally known that a process-patent, to be valid, implies full publicity of every essential step in the method of manufacture, whereby all secrecy is eliminated, objections against products solely subject to patented *processes* have practically ceased—at least in principle. Unfortunately it so happens that, while these products are not themselves patented, they have been launched on the market by their original discoverers or producers under names which are protected by copyrights or trade marks, this protection securing to the owners a practically unlimited proprietorship of the respective products *under such protected names*.

There are three parties whose position or bearing towards these patented synthetics must be carefully considered, namely, the *owner* of the patent, the *physician*, and the *pharmacist*.

From the standpoint of the *owner*, the securing of a patent protection is perfectly natural, being legitimate, commercial exploitation of the results of laborious and costly scientific researches, which otherwise would scarcely have returned to the discoverer an adequate compensation for the time, labor, and money spent on his work.

The position of the *physician* towards patented remedies was, at one time, a decidedly antagonistic one. But when the great therapeutic utility of some of the new synthetics was proven beyond doubt, and when some of them were shown to be absolutely irreplaceable by other remedies, antipathy against them became converted into approbation, so much so that it would now probably be impossible to find any physician of intelligence and standing who does not freely employ them. But if the physician employs and prescribes these remedies, if he mentions and recommends them in his writings and on the lecture platform, is it not reasonable to suppose that he considers their employment as being in accord with the Medical Code of Ethics? To suppose otherwise would be against common sense. And if the act of prescribing or employing one of these remedies is ethical, why should it not be equally ethical to give them a place in the Pharmacopœia? Their absence from the Pharmacopœia will simply leave them without an official standard.

The *pharmacist* is equally concerned with the physician in this subject, and, while he has nothing to do with *medical ethics*—being in fact expected to furnish whatever the physician prescribes, excepting, of course, what would be clearly dangerous or criminal—he should be enabled to comply with his *own code of ethics* by being given the means to verify the identity and purity of these remedies

by such tests as the Pharmacopœia may prescribe for them.

Now, if it be once conceded that the three above-mentioned parties (and particularly the two last mentioned) are equally interested in the official recognition of the new synthetics—at least of those which have stood the test of time—it follows that these articles should be admitted into the next Pharmacopœia under any and all circumstances. And if this is conceded, then they should be admitted under names which are easily remembered and convenient for prescribing. Remedies like aristol, phenacetin, salol, sulfonal, trional, etc., will always be sold and spoken of in the trade and prescribed by physicians under these names. Let no one suppose that physicians will accept and use any new-fangled titles or names which a Revision Committee might invent for them. It is reported that the German Pharmacopœia, which is expected to appear shortly, will introduce *Salipprin* under the title "Pyrazolonum phenyldimethylcum salicylicum." Does anybody believe that an American physician would use such a term in a prescription, or would speak of it by that name in conversation? How many brain-confusing, jaw-breaking names would we have to commit to memory, to be ready with them for instant use, if this principle were applied to all the synthetics that will, from time to time, be found worthy of reception into the official code? The only practical solution of this difficulty appears to be to give to each of these substances *two* titles—main title and synonym—one being the true scientific name (no matter how long this may be), and the other the ordinary commercial name, provided the use of the latter is not objected to by the owners, at least during the period of the validity of the patent. It is not probable that the owners would raise any objections, to judge from the many pleas so far received from interested parties in favor of having their products made official under the mistaken notion that the present Committee of Revision had the power of decision. If the admission of the common commercial name, as one of the regular titles, should be found impracticable—either by not being permitted by the owners, or by being forbidden by the Convention—then the Committee of Revision would, indeed, be compelled to invent titles for these articles. In this case, however, a note should be added in which the corresponding commercial name is mentioned as being that under which the substance described in the text is known in the market.

In determining which of these synthetic remedies may be introduced into the new Pharmacopœia, the next Committee of Revision need only apply the following tests to arrive at a sound decision:

1. The remedy must be a definite chemical individual of uniform composition, and the physical and chemical constants of which can be determined by appropriate tests.
2. It must possess therapeutic properties of recognized value.
3. It must have passed the experimental stage and be in general use by the medical profession.

There should be no objection to the introduction of any remedy which complies with these conditions.

On the other hand, articles of uncertain or variable composition, or whose source or mode of preparation is kept secret, and all those which are clearly perpetual monopolies, should be excluded.

II. Shall doses be introduced into the Pharmacopœia?

For more than twenty years many pleas have been offered in favor of introducing doses into the Pharmacopœia, but both of the preceding conventions voted against them, mainly on the ground that such doses might be construed as binding on the prescriber, who might be held liable for damages accruing from the use of larger doses which he might have found advisable or necessary in particular cases. It is, however, apparent that, as in the case of synthetic remedies, the introduction of doses is at the present time much less antagonized than formerly. This is in part due to the fact that no injury has ever resulted to any English physician from the presence of doses in the British Pharmacopœia (which states the doses about in the same manner as is proposed to be done in the U. S. Pharmacopœia). Moreover, it is well

*Read at a meeting of the New York German Apothecaries' Association, April 5.

understood that the interests of the physician can be safeguarded by clearly proclaiming the elasticity of the doses quoted, in case the prescriber finds it advisable to deviate from them. Of course, for any evil or fatal results arising from an excessive dose, the physician can be held responsible even under the present laws when there are no official doses at all. His responsibility is not made heavier by the introduction of *average* doses officially declared as not being binding on him.

It should be clearly understood that nothing but the *average* (approximate) doses for adults, and, where deemed advisable, also for children, should be introduced in the next revision. The medical profession would undoubtedly and almost unanimously oppose, at least at this time, the introduction of *maximum* doses (either for a single dose or for a day) and would never consent to the use of any caution signs such as are customary or prescribed by law in certain countries of Europe. It would be useless to argue in favor of these two features, for it is hopeless to expect that the Pharmacopœia would be accepted by the medical profession as its official guide, if it were to introduce conditions perilous to physicians. Moreover, no Pharmacopœial Convention is likely to authorize its Committee of Revision to introduce these features.

The absence of doses from the Pharmacopœia is one of the chief reasons why the work is so seldom consulted by the physician. Knowing beforehand that he would look in vain for doses, he consults other works, particularly such as give him at the same time information regarding the physiological action and therapeutic effects or medical uses of the respective drugs. This is not to be wondered at, because the pharmacopœias of the present time, being compelled to adapt themselves to new conditions, have become gradually of decreasing interest to the physician, useful only to give him information as to what preparations are officially available from any particular drug, or as to their strength. The numerous laws passed during the last fifteen or twenty years, bearing upon the quality and purity of foods and drugs and upon sanitary matters in general, have compelled the revisers of modern pharmacopœias to expand those portions which assist the pharmacist in complying with these laws, while no corresponding addition could well be made to the parts more particularly interesting to the physician.

Experienced pharmacists will be able to confirm the statement that the average practitioner (unconnected with medical schools) is but poorly informed on the subject of doses—except of a limited number of remedies which he is in the habit of prescribing regularly. The pharmacist, to whom flow the prescriptions of many physicians of different habits in prescribing, acquires within a comparatively short time a much more extensive knowledge of posology, particularly as to dangerous or excessive doses of potent remedies. And he is likely to be much more keen in his practical application, because he knows that he is the first one whom any injured person is liable to fall back upon. The pharmacist, however, like the physician, is without an official guide regarding the doses, and must gather his information from such sources as may happen to be at his command.

If the introduction of doses is to be advocated only on the ground that these constitute a useful or necessary matter of information to both professions, while not at all binding on the prescriber, it is difficult to see what valid objection can be raised against them. But the pharmacist has a special interest in the matter in so far as it releases him from uncertainty, which he is at present laboring under, when he is called upon to dispense prescriptions containing ingredients regarding whose doses the works of reference available to him are at variance. In the case of the large majority of the ordinary non-powerful drugs and preparations he will probably not need to consult the Pharmacopœia at all as to doses. But he will find it to his advantage to consult the work concerning the "average" doses given for the *more potent* remedies. If the prescription directs a quantity not exceeding the dose given in the Pharmacopœia he can under no circumstances be held accountable for any untoward result. On the other hand, if the official average dose is exceeded, he will exercise his judgment in accordance with the nature of the circumstances, and

in case of doubt assure himself that the prescriber designedly ordered a larger dose.

It is unnecessary to extend this theme. It has been discussed so often, and the advantages of having doses in the Pharmacopœia have been so often brought out by arguments, that their introduction will no doubt be sanctioned by the next convention.

There are many other matters which will have to be passed upon by the next Committee of Revision, but most of them refer to details which are not quite ripe for discussion and had therefore better be deferred to a later period.

In order that there may be some practical result from the consideration of the matters laid before you in this paper, I would make the suggestion that, after discussion has ceased, the sense of the meeting be taken on the following propositions to be approved or rejected as the majority may decide. The result will, no doubt, serve as a guide to the delegates who will attend the convention:

1. Such of the new synthetic remedies as are found worthy of recognition should be introduced into the Pharmacopœia.
2. If any of these are introduced, their full scientific name and common commercial name should be given. If the latter cannot be employed as one of the official titles, it should at least be given in a note or mentioned in the text.
3. The conditions above given, which any of these remedies must fulfill to be deemed worthy of recognition, are approved.
4. In the case of all drugs, chemicals and preparations which are used or likely to be used internally or hypodermically, the average approximate dose for adults shall be stated, and, where deemed advisable, also for children.
5. No maximum doses shall be given nor shall the use of any caution sign be recommended or directed.

EXAMINATION QUESTIONS NEW YORK CITY BOARD OF PHARMACY.

PHARMACY.

1. Convert each of the following into grains: (a) 0.065 gm.; (b) 0.062 gm.; (c) 2.321 gm.; (d) .933 gm.
2. What is specific gravity? Give the gravity of each of the following: (a) Glycerin; (b) Chloroform; (c) Sulphuric acid; (d) Ether.
3. What is a precipitate? Give the titles of two official substances obtained by precipitation.
4. Among the components of a two-ounce mixture are: $\frac{1}{2}$ grain atropine sulphate and $\frac{1}{2}$ drachm of Magendie's solution. What quantity of each will one teaspoonful of the mixture contain?
5. In the manufacture of diluted sulphuric acid, how should the components be added to each other? Why is this of importance?
6. Name an ointment base which is readily miscible with water. State what advantage it possesses on account of this property.
7. Name three volatile oils which are heavier than water, giving the source from which each is derived.
8. Name three official tinctures which are prepared by maceration. Why is this source preferable to percolation in such instances?
9. From what source is terebinth obtained? Name its chief impurity, and state how it may be detected.
10. What are ointments? State how Unguentum U. S. P. is prepared and how it differs from Ceratum U. S. P.
11. How does a spirit differ from a liquid? Name an official spirit which is a solution of gas, and state what per cent. of this it contains.
12. How is Basham's mixture prepared? What is its color? Why does the Pharmacopœia direct that it be freshly made when wanted?
13. How would you distinguish between syrup of ferrous iodide and syrup of hydriodic acid? Give tests which you would apply to establish their identity.
14. Name the official charte and give an outline of the method for the preparation.
15. Give the official title of each of the following: (a) Hoffman's Anodyne; (b) Sugar of Lead; (c) Borax; (d) James' Powder.

CHEMISTRY.

1. Define the following terms: (a) Matter; (b) Amorphous; (c) Isomorphous; (d) Dissociation.
2. Theoretically, how many grains of hydrogen and oxygen can be obtained from 2 kilogrammes of pure water?
3. Give the chemical title of each of the following: (a) HPO_3 ; (b) K_2AsO_5 ; (c) NCl_3 ; (d) SiO_2 .
4. From what source is yellow or crystalline phosphorus obtained? Name a good solvent for it. What happens when it is exposed to moist air?
5. Give a characteristic test for each of the following:

Pharmaceutical Celebrities.

- (a) Thiosulphates; (b) Magnesium; (c) Sulphides; (d) Aluminum.
6. How would you determine the presence of phosphorous acid in phosphoric acid? If present, how would you remove it?
7. Write the chemical formula for each of the following: (a) Wood Alcohol; (b) Auric Chloride; (c) Caustic Soda; (d) Ferric Nitrate.
8. What happens when a solution of Calcium Bicarbonate is heated to boiling? Illustrate by equation.
9. Name the compound which results when Ethyl Alcohol is partially oxidized. When completely oxidized.
10. What are the chief constituents of Crude Carbolic Acid? From what source is it obtained?
11. What compound is formed when a solution of Bichloride of Mercury is added to an excess of Caustic Soda?
12. Show by equation how Nitro-Benzol ($C_6H_5NO_2$) can be converted into Amido-Benzol ($C_6H_5NH_2$). What is the common name of the latter?
13. What is a substitution product? Show by formula what products are formed when Methane is treated with one, two and three molecules of Chlorine.
14. What classes of compounds does Mercury form? How may they be distinguished chemically? Write the formulas for the two iodides.
15. Complete the following equations: (a) $Na_2CO_3 + C =$; (b) $NaCl + NH_4HCO_3 =$; (c) $2CuCl + Ag_2S =$; (d) $Al_2Cl_6 + 3Na_2CO_3 + 3H_2O =$.

MATERIA MEDICA.

1. Give the botanical name and habitat of each of the following: (a) Calaver's Root; (b) Bittersweet; (c) Black Haw; (d) Wormwood.
2. Give the official names of three gum resins and three oleoresins.
3. Name four official preparations containing mercury in the metallic form. State the percentage of mercury in each.
4. From what are the following obtained: (a) Croscote; (b) Phosphorus; (c) Iodine; (d) Croton Oil.
5. Name the source of (a) Iodoform; (b) Resorcine; (c) Salophen; (d) Trional.
6. *Podophyllum*. Give common name, habitat, and part of plant used. Name its active principle and official preparations.
7. Name two examples of each of the following classes, and give their official titles: (a) seeds; (b) Leaves; (c) Root; (d) Barks; (e) Flowers; (f) Animal.
8. Name three official drugs belonging to the Natural Order Coniferae.
9. What is understood by the term "alteratives"? Describe two or more not of vegetable origin.
10. *Oleum Theobromatis*. Give common name. State from what and how obtained. What is its principal use in pharmacy?
11. Is *Oleum Adipis* a fixed or a volatile oil?
12. What is Camphor? Give botanical name of the plant from which it is obtained. In what country does it grow?
13. *Jaborandi*. Give the official name. Where does it grow? What part of the plant is official? Name the chief medicinal constituent.
14. Give the official name of the plant and the part from which the following are obtained: (a) Saffron; (b) Henbane; (c) Chamomile; (d) Lupuline; (e) Iris.
15. Give the common names of the following: (a) Lappa; (b) Juglans; (c) *Pel Eovis*; (d) *Inula*; (e) *Triticum*; (f) *Phytolacca*.

TOXICOLOGY AND POSOLOGY.

1. Define: dose; a poison; an antidote; a corrosive, a narcotic.
2. Name two other evidences of poisoning besides those of symptoms. Give symptoms of *Belladonna* poisoning.
3. Name one of the most deadly poisons, the fatal dose of it and the antidote or other emergency remedy.
4. State the best antidote for poisoning by Oxalic Acid; by Corrosive Sublimate; by Opium; by Silver Nitrate.
5. How would you detect arsenic in vomited matter and what treatment would you give for arsenic poisoning?
6. Name three good emetics, with dose of each.
7. In poisoning, by what substances are fats and oils contra-indicated? Why?
8. Give general directions as to mode and order of procedure in the emergency treatment of poisoning cases.
9. What poisons would you register in the Poison Book? Why? How would you label the poison?
10. What emergency treatment should be employed for poisoning resulting from the inhalation of: nitrous fumes; sewer gas; illuminating gas?
11. What emergency treatment would you give for poisoning by Croscote? by Phosphorus? What is the proper dose of each?
12. What is the dose of Acetanilid, Chloral, Dover's Powder, Paraldehyde, strychnine Sulphate?
13. What is the dose of Fowler's Solution, Guaiacol Carbonate, Phenacetin, Potassium Iodide, Red Mercuric Iodide?
14. What is the dose of the extract of each of the following: *Belladonna*, *Conium*, *Ergot*, *Digitalis*, *Nux Vomica*?
15. What is the dose of the Tincture of each of the following: *Cnicifluga*, *Colchicum Seed*, *Hyoscyamus*, *Opium*, *Physostigma*?

WILLIAM MUIR.

William Muir, of Brooklyn Borough, New York City, is known throughout this nation—and by reputation beyond its borders—as a champion of the retail druggists, a champion of pharmacy, of every good cause in the true interest of pharmacy. By accident of birth he is a Scot. But by education, long continued residence and proved conduct, he is a thorough American. Big of build, strong, robust, energetic morally as well as physically, he is hearty and wholesomed in friendship, and a fighter who is a terror to his enemies.

For about thirty-five years Dr. Muir was a practical and practicing pharmacist, who in the thick of business affairs always found time to take part in every movement coming to his notice for the advancement of pharmacy as a profession or the betterment of the druggist's condition as a tradesman. He turned his drug business over to other hands nearly two years ago. But since that time he has not abated one jot his interest in affairs pharmaceutical. Rather he has been more strenuous than ever in opposing bad legislation and other effort tending to the debasement of the profession. His pockets bulge more than ever with papers containing matter touching pharmacy, and he devotes practically all his time to this sort of work for the welfare of his fellows. Serving without compensation as a member of the Board of Pharmacy of New York City; as chairman

of the Committee on Legislation of the Kings County Pharmaceutical Society; as chairman of the Board of Trustees Committee of Supervision and Examination of the Brooklyn College of Pharmacy; and as one of the leaders in the affairs of the N. A. R. D., it may well be supposed that Dr. Muir finds plenty to do. He does it with a will. He works, and works hard, and he enjoys the work.

In time past many testimonials and tokens of appreciation and regard have come to him from his associates. It is not needful here to enumerate the decorations and offices and other honors that have been bestowed upon him by his fellow pharmacists. He has a host of friends and their number is growing steadily. They hope that he may be permitted for many years to come to continue the excellent work he is doing so ably and successfully to-day.

EFFERVESCING CITRATE OF MAGNESIUM.*

By WILBUR L. SCOVILLE.

It is frequently reported in pharmaceutical literature that magnesium sulphate is found in solution of magnesium citrate as an adulterant, but rarely does anyone call attention to the almost universal existence of magnesium sulphate in the so-called granular effervescent citrate of magnesium. Yet true citrate of magnesium is seldom obtained, at least in New England, under this title. Nearly all of the so-called granular effervescent citrate of magnesium consists of an effervescent sulphate of magnesium or of sodium.

The objections to the official preparation are threefold: (1) it is not as nice appearing a preparation as its substitutes; (2) it costs several times as much, and (3) it is a difficult and tedious preparation to make.

Probably the greatest obstacles to its practical employment are its cost and the difficulties of making it. In its manufacture, acid citrate of magnesium is first formed by reacting upon magnesium carbonate with citric acid.

Finally, the sugar, bicarbonate and citric acid are to be mixed to a powdered mass, and the whole formed into a granulated salt in the usual manner.

This yields a preparation which effervesces copiously when dropped into water, but the last portions pass into solution very slowly, and the liquid remains opalescent for several hours.

Thus the increased cost of the official preparation is due not only to the added value of the magnesium carbonate and the extra amount of citric acid required, but to the expense of forming and powdering the citrate, in itself a slow, tedious and difficult operation.

The substitutes offered have been mostly magnesium or sodium sulphate, combined with citric or tartaric acid, bicarbonate of soda and sugar. Some have contained Rochelle salt and some a mixture of this with a sulphate.

The British Pharmacopoeia has recognized the futility of advocating an unvalued ideal, and has given an effervescent sulphate of magnesium its official recognition.

Even the official solution of magnesium citrate is frequently found to consist mostly of sulphate, and it is probable that a large proportion of the bottles sold contain sulphate in place of citrate. The arguments in favor of recognizing this are similar to those which apply to the granular salt, but are not as strong. In my opinion, however, the effervescent sulphate solution is quite as acceptable to patients and physicians, and it would be the part of wisdom for our Pharmacopoeia to sanction it. The physician or patient cares naught whether a preparation is recognized by the Pharmacopoeia so long as it is satisfactory to himself.

Edited.

In a neighboring town a salvation army advertiser wrote on a billboard, "What shall I do to be saved?" A patent medicine man came along the next day and wrote underneath, "Take Carter's Little Liver Pills." Shortly afterward the Salvation Army man noticed the sacrilegious work of the medicine man and printed below, "And prepare to meet thy God."—Sterling (Ill.) Herald.

*Abstract of a paper read at the March Pharmaceutical Meeting at the Philadelphia College of Pharmacy.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

White Ink.—(D. O. R.) See this journal March 29 and April 3 (last two weeks), pages 342 and 370 respectively.

Celluloid Manufacturers.—(W. J. S.) The Celluloid Company, 72 Washington Place, this city, owns nearly all the patents for the manufacture of celluloid and practically controls the industry in this country.

Solution of Sodium Phosphate with Tincture of Iron.—(C. G.) A solution containing about 38 grains of sodium phosphate and 6 minims of tincture of iron to the fluid ounce may be made by triturating 5 drams of sodium phosphate with 1½ drams citric acid and heating on a water bath until liquefied. Then add to the liquid about 2 drams of water and 48 minims of tincture of iron and finally enough water to make 1 ounce. Syrup may be substituted for the water if desired. A formula for liquefied sodium phosphate is given elsewhere in this department.

Palestine Drug Company.—(C. and F.) write: "Can you give us any information concerning the Palestine Drug Company, of St. Louis; is there such a firm? We cannot find them in the Era Blue Book. We have written to them twice and our letters have never been returned or answered."

The commercial agencies report that there is such a company operating in the patent medicine and wholesale and retail drug business in St. Louis. Their local street address is not given, nor is any statement made concerning their financial rating.

Red Coloring for Toilet Preparations.—(P. A. L.) We do not know the coloring agent used in the proprietary preparation you name. It is a trade secret. We suggest the addition of liquid cochineal for tinting a hair lotion, though some experimenting is necessary to determine what coloring substance will work best with a given preparation. Among other coloring substances may be named solution of carmine, tincture or compound tincture of cudbear, tincture of red saunders and the following: coal tar colors: Fuchsin, acid of fuchsin, roccelin, Bordeaux, ponceau, erythrosin, eosin, phloxin, etc. Alkanet root or alkanin may be used for coloring oily or spirituous liquids.

Dehorner or Horn Killer.—(A. W. V. B.) There are several kinds of so-called chemical dehorners, but nearly all contain potash in concentrated solution. The solution is thoroughly rubbed over the "button" of the horn of the young calf. Some time ago an agricultural exchange published the following method: "As soon as the buds of the horn appear and can be found on the calf, take a stick of caustic potash, and after moistening the horn with a little water rub the exposed horn with the end of a stick of potash. This stick being about the size of a lead pencil is very convenient to use and can be slipped into a bottle for preservation, where it must be closely corked until again wanted. It takes but a single application to kill the young horn and is harmless." The various agricultural experiment stations throughout the country have published considerable literature upon the subject of dehorning cattle, as has the Agricultural Department at Washington.

Elixir of Lactopeptine.—(J. F. D.) We cannot give the formula for this proprietary preparation. An elixir containing pepsin and lactic acid may be made by the formula for compound digestive elixir of the National Formulary; see that work, page 22. Here is another formula: Mix together 80 grains pure pepsin, 40 grains pancreatin; 10 grains diastase or ptyalin, 180 grains powdered cubeb, 20 minims dilute hydrochloric acid, 3 drops lactic acid, 7 fluid ounces water and 3 fluid ounces alcohol. Macerate for three days, agitating frequently; filter. To the filtrate add 6 fluid ounces syrup and then through the filter add enough of the mixture of alcohol and water in the proportion of 5 to 7 by measure to make the finished preparation measure 16 fluid ounces.

Liquefied Sodium Phosphate.—(F. W.) Several formulas for a liquefied preparation of sodium phosphate have been published. The following is from the Formulary of the Cincinnati Academy of Pharmacy: Triturate together and heat on a water bath until liquefied 100 grains of sodium phosphate with 23.4 grams of citric acid. Strain through a pellet of cotton if necessary. This preparation crystallizes at 15° C., but will readily liquefy again upon warming. It is miscible with water or syrup in all proportions without separation. Each fluid dram represents about 75 grains sodium phosphate. The preparation is said to be cathartic and antilithic, and a stimulant of biliary secretion. It is useful as a mild laxative and in calculi of the bladder. Another formula by Westcott is as follows: Triturate together until they liquefy 3,650 grains sodium phosphate crystals, 475 grains citric acid, and 73 grains sodium nitrate and then add a sufficient quantity of water to make 8 fluid ounces. See also article on sodium phosphate solutions in this journal June 9, 1898, page 868.

"Hypersamphire."—(W. F.) writes: Can you tell me where I can get a drug called "hypersamphire" and what is its price? It is to be used as an egg preservative. I am told it can be had of Max Zeller, of New York, but I don't know the address of his firm and the article is not listed in the Era Blue Book.

"Hypersamphire" is put out by the U. S. Salyx Co., of New Concord, O., the exploiters of "per algretta" and "black pepsin," two frauds whose villainous character has been repeatedly exposed in this journal and also by the chemists of the Department of Agriculture, at Washington. The price list for 1899 of this "enterprising" firm lists "hypersamphire" at \$2.50 an ounce or \$24 per dozen. It is claimed 1 ounce of the "stuff" will "preserve" 300 dozen eggs. Mr. Zeller, 37 Bowery, this city, when asked about his connection with "hypersamphire," said he was not agent for the article and did not want to be known as such. He has sold a few ounces, however, at \$2, plus 15 cents for postage, but says he knows nothing about it, and the trade in it is not enough to pay him for handling it. The methods used by the exploiters to push the sale and introduce "hypersamphire" stamp it to be a preparation of "per algretta" ilk, and the less the drug trade has to do with it the better for all concerned.

Tasteless Syrup of Quinine.—(C. S. E.) "Amorphous quinine," as used in some febrifuges upon the market, has been reported to be simply alkaloidal quinine in crystals, reduced to fine powder and then triturated with the desired vehicle. (The true "amorphous" quinine, the alkaloid quina, makes a paste with syrup, therefore it is not used in preparations of this character.) Here are some formulas for "tasteless syrup of quinine": (1) Mix 1 dram saccharine with 4 ounces of water; add two grains sodium bicarbonate and dissolve. Rub ¼ dram oil of lemon and ½ dram of potassium carbonate together in water, and add the saccharine solution gradually with constant stirring. Now weigh out 4 ounces and 298 grains (avordupois) of quinine alkaloid, place in a glass bottle and pour on the other ingredients and enough simple syrup to make the whole measure 128 fluid ounces. (This, it will be noted, does not contain quinine, hence the name is a misnomer.) (2) Quinine sulphate, 128 grains; potassium carbonate, 110 grains; saccharine, 40 grains; solution potassium arse-

nite, 2 fluid drams; soluble essence lemon, 4 fluid drams; water, 1 fluid ounce; syrup, enough to make 16 fluid ounces.

Several additional formulas were published in this journal last year, see issues of October 19, page 548, and November 19, page 642.

Artificial Flavoring Extracts.—(G. A. M.) Here are a number of formulas, though it is proper to state that in many of the States the sale of these products for genuine fruit flavors constitutes a misdemeanor, the vendor being liable to prosecution under the pure food and drug laws: Pineapple—(1) Butyric ether, 5 parts; amyl-butyrlic ether, 10 parts; chloroform, 1 part; glycerin, 3 parts; alcohol, enough to make 100 parts. (2) Acetic aldehyde, 14 drams; chloroform, 14 drams; butyric ether, 6 drams; amyl butyrate, 12 drams; glycerin, 4 drams; deodorized alcohol, enough to make 1 pint. Color yellow with tincture saffron. Strawberry—(1) Nitrous ether, 1 dram; formic ether, 1 dram; acetic ether, 5 drams; butyric ether, 5 drams; amyl butyrate, 2 drams; amyl acetate, 3 drams. Mix. To prepare an "extract" add enough alcohol with two drams of glycerin to make one pint. Color red if desired. (2) Butyric ether, 6 drams; acetic ether, 6 drams; nitrous ether, 2½ drams; alcohol, deodorized, enough to make 16 ounces. Raspberry—Amyl butyrate, 1½ fluid drams; amyl acetate, 12 fluid drams; acetic ether, 1½ fluid drams; tartaric acid, 180 grains; glycerin, 6 fluid drams; weaker tincture of orris, 2 or 3 fluid ounces; alcohol, deodorized, enough to make 16 fluid ounces. Color red with carmine solution or other suitable coloring. (2) Acetic ether, 1 fluid ounce; butyric ether, ½ fluid dram; spirit of nitrous ether, 4 fluid drams; chloroform, ½ fluid dram; glycerin, 1 fluid ounce; weaker tincture of orris, 3 fluid ounces; alcohol, 6 fluid ounces; water, enough to make 16 fluid ounces. Clarify by filtering through purified talcum.

Carbon Copying Process.—(J. T. M.) Your query concerning the "process for making carbon copies from the original" is rather indefinite, and may or may not refer to the process for making carbon paper used in copying or duplicating handwriting. If this process is what you want you will find it described along with several formulas for the preparation of the paper in last week's Era, page 371. Here is another formula: Take of clear lard, 5 ounces; beeswax, 1 ounce; Canada balsam, 1-10 ounce; lampblack, q. s. Melt by the aid of heat and mix. Apply to one side of thin writing paper with a flannel dauber, removing as much as possible with clean woolen rags. The carbon process, also known as the autotype process in photography, is used for the reproduction of prints, the printing process being done by exposure to light. In this process the carbon tissue or paper consists of a layer of gelatine containing finely powdered carbon or other pigment. You will find it very fully described in almost any work on photography. Another process used for copying drawings is the following, which is said to be well adapted to the multiplication of drawings: A solution of potassium bichromate and albumen or gum, to which carbon, or some pigment of any desired shade, has been added, is brushed as uniformly as possible, upon well-sized paper by lamplight, and the paper is dried in the dark. The drawing executed on the fine transparent paper (or an engraving or woodcut, etc.) is then placed beneath a flat glass upon the prepared paper and exposed to the light for a length of time dependent upon the intensity of the light. The drawing is removed from the paper by lamplight and after washing the latter with water, a negative of the drawing remains, since the portions of the coating acted on by the light become insoluble in water. From such a negative any number of positives can be taken in the same way.

ELIXIR DE MYNSICHT is a remedy for indigestion for which Gazz. des Hôpitaux gives the following formula: Calamus, galanga, of each, 40 parts; wormwood, spearmint, sage, of each, 20 parts; chamomile flowers, cinnamon bark, cubeb, ginger, cloves, mace, of each, 15 parts; aloes, lemon peel, of each, 5 parts; sugar, 100 parts; alcohol (60°), 500 parts; pure sulphuric acid, 100 parts. Dose, 2 to 40 drops in water. (Apoth. Ztg.)

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN. South Africa.

The Boers captured a British force of nearly 600 men south of Bloemfontein last week. With the 450 captured east of that city and the loss in skirmishes to the northward, Lord Roberts has lost nearly 1,300 men in two weeks.

Gen. Methuen captured fifty-four Boers and killed Gen. Villebois de Mareuil, a French officer serving as chief of staff of the Boer army, in an engagement north of Kimberley last week.

Gen. Snyman, who is besieging Mafeking, defeated Baden-Powell's garrison and repulsed Col. Plumer's relief expedition, both in one day, last week.

It is believed that the Boers are trying to surround Lord Roberts' army and shut them up in Bloemfontein, a task that most of the war critics think will prove too much for them.

The Portuguese Foreign Minister has announced that, under treaties with Great Britain, British troops and supplies are entitled to transit over Portuguese territory.

Gen. Cronje, Col. Schiel and 1,000 Boer prisoners have sailed for St. Helena from Cape Town.

Lord Methuen's difficulties are apparently increasing. He has Boer laagers or guerilla bands on three sides of him, and he will be obliged to watch carefully his communications with Orange River.

Walter Davis, United States Assistant Secretary of the Interior, has resigned his post. It is said that his action is the outcome of the embarrassment caused this government by his visit to South Africa, and accepting the hospitalities of President Kruger. Mr. Davis is outspoken in his sympathy with the Boers in the present struggle.

Transvaal Agent Leyds informs the Berlin press that about \$80,000 have been collected in Germany for the Boers.

President Kruger says that the last expressed desire of the late Commandant General Joubert was that he should be succeeded as Commandant General by Louis Botha, who has been chosen in his place. President Lord Roberts has sent a telegram of condolence to President Kruger on the death of Gen. Joubert.

The Philippines.

A report from Gen. Otis shows that in the 124 skirmishes in the Philippines since January 1 the American loss was 81 killed and 104 wounded, while the insurgent and Ladronne loss was 1,426 killed, 1,450 captured, mostly armed. The Americans have also captured 3,151 small arms and 165 cannon. "A number of important insurgent officers are surrendering," Gen. Otis says, "and the situation is gradually becoming more pacific."

A dispatch from Manila says that Gen. Bates peacefully occupied Surigao, Cagayan, Hagay and Misamis, in the island of Mindanao, and captured a number of rifles and cannon. Insurgent atrocities in Cagayan and Camarines Provinces continue.

Gen. Otis cables from Manila that the "home battalion" of the Fourteenth Infantry, consisting of four officers and 211 men, has left Manila for San Francisco.

It is reported that Aguinaldo is in Singapore, but intends to return to Luzon.

The Philippine Commission will sail from San Francisco for Manila on the 15th.

It is reported from Washington that Gen. Otis has been ordered home from the Philippines, and that Gen. MacArthur will succeed to the military command. The civil government of the islands will be largely in the hands of the Taft Commission.

Other Foreign News.

Queen Victoria's visit in Ireland has been quiet and uneventful, and she may prolong her visit to the latter part of April.

The feeling between Japan and Russia continues to be bitterly hostile, and war is feared.

A tin-smith's apprentice, an anarchist, 16 years of age, fired two shots at the Prince of Wales as he sat in a railway carriage at a station in Brussels, on Wednesday of last week, neither shot taking effect. The would-be assassin was arrested.

The Chinese Foreign Office has refused a grant to Russia a concession to build a railway from Mukden to Peking. The plague in Austria is reported to be increasing.

It is reported from Caracas that the Venezuelan revolutionary General, Hernandez, has been obliged to retreat to the banks of the Orinoco, having suffered

a new and decisive overthrow sixteen miles from Ciudad Bolivar.

The recent heavy floods in Uruguay have caused great destruction of cattle and wheat.

The Treaties Commission of the Italian Chamber of Deputies has approved the reciprocity arrangement under the section of the Dingley act, signed last February in Washington by Baron Fava, the Italian Ambassador, and John A. Kasson, Special Plenipotentiary for the United States.

Disturbances are reported from Bologna, Turin, Naples and Forth between students and Socialists, growing out of the recent action of the Socialist members of the Italian Chamber of Deputies, who are now agitating for a convocation of the Constituent Assembly, with a view to reforming the constitution.

Eleven fresh cases of bubonic plague have been officially reported at Sydney, New South Wales, and two additional deaths have occurred.

DOMESTIC. Congress.

The Senate passed the Puerto Rico tariff bill last week by a vote of 49 to 31. Six Republicans voted against the bill. A strong effort will now be made by the party leaders to get the House to concur in the Senate's bill.

It is thought at Washington that there will be no effort to reduce the war revenue taxes at this session of Congress.

Representative Hay, of Virginia, has introduced a bill for the organization of the militia as a reserve force for the regular army.

The committee of Senators which visited Cuba has returned to Washington well satisfied with their visit. All classes of people on the island are declared to be anxious for independence, the only difference of opinion being as to the haste with which it should come. The American problem will be greatly simplified if the municipal elections next month are orderly and successful.

The house, after four days of debate, has passed the substitute for the Senate bill providing for a territorial form of government for Hawaii. The bill now goes to conference.

Other Domestic News.

Admiral Dewey's announcement that he is a candidate for the Presidency has aroused great interest among the politicians, but not many have indorsed the movement thus far.

The striking machinists in Chicago returned to work last week, and the threatened strike of 100,000 machinists all over the country was averted. Many other strikes, mostly in the building trades, were begun last week.

Hundreds of sick and starving people are flocking into Ponce and San Juan, Puerto Rico, in search of relief. The jury in the "Sapho" case in New York last week returned a verdict of not guilty.

The Kentucky Court of Appeals has decided in favor of Beckham, the Democratic contestant for the Governorship. It is expected that the Republicans will carry the case to the United States Supreme Court.

Much excitement has been caused in Santiago, Cuba, by the suspension of the newspaper and the arrest of five members of its staff by order of the Mayor of the city. A fatal riot, growing out of a strike, occurred in San Juan, Puerto Rico, last week. It was suppressed by the military.

The United States Government has bought the Holland submarine boat.

President Castro, of Venezuela, has signed the Parcels Post with the United States.

The statement of the Government receipts and expenditures during March show the receipts to have been \$48,726,837, and the expenditures \$32,188,271, a surplus of \$16,538,566.

Rev. Dr. Hillier, pastor of Plymouth Church, Brooklyn, has resigned from the Chicago Presbytery, having repudiated the Presbyterian doctrine.

The trials of the new battle ship Kearsarge, the first vessel to carry super-rimpos, have shown that the new device is a great success, and some experts declare the Kearsarge the most powerful war vessel afloat.

Convention Hall, the mammoth auditorium in which the Democratic National Convention was to have been held at Kansas City on July 4, was burned to the ground on Wednesday of last week. Prompt measures were taken by the people of Kansas City to rebuild the hall in time for the convention.

President McKinley has invited the President of Switzerland to name the empire on the Chilian Claims Commission.

The Democratic National Committee has issued a circular urging that all delegates to the Kansas City convention be instructed for the reaffirmation of the Chicago platform, and the selection of candidates loyal to it in 1895 and loyal now.

The municipal elections in Missouri resulted on the whole favorably to the Democrats. Republican gains were made at the municipal elections in Nebraska. Several Democratic strongholds elected Republicans. The Republicans were generally successful in the municipal elections in Kansas. The results of the municipal elections throughout Wisconsin, outside of Milwaukee, show that the Republicans and Democrats placed party tickets in the field, the Republicans gained the greater number of victories. In Milwaukee Mayor Rose was re-elected. The Republicans carried Rhode Island by an estimated

majority of 10,000 for Gregory as Governor, and the rest of the State ticket. The Republicans carried the municipal elections in Cincinnati, and elected Col. Julius Fleischmann Mayor by about 3,000 plurality. President Vates, of the Buffalo, Rochester and Pittsburgh Railroad, confirms the report that negotiations are in progress for the merging of that road with the New York Central system. The Iowa Senate bill prohibiting the establishment of a saloon within five miles of any town within the State in which is situated a State educational institution has been defeated in the House.

THE DRUG NEWS.

New York and Vicinity.

NEW LAWS REGULATING PHARMACY.

New York State Legislature Passed Bills to Create a New Board of Pharmacy for Entire State, to Regulate Drug Clerks' Hours, and to Improve Hospital Corps in the National Guard.

The Legislature of the State of New York adjourned sine die on Friday, April 6, after a long and stormy session. After its adjournment, Gov. Roosevelt gave out a statement in which he characterized its work as thoroughly creditable. He said:

"Not a bad law has been put upon the statute books, and many good laws have been enacted. Of course, as is always the case, things were left undone which I should like to have seen done, but the net result is very satisfactory, for there is no debit of evil, and there is a large credit of good."

And the Governor is right. Those who have followed the work of the Legislature of 1900 with the best interests of the commonwealth at heart agree that it passed nearly all the measures of pressing importance that were before it, and failed to pass any conspicuously bad or vicious measure. Over two thousand bills were introduced. Less than three hundred were passed. Not a single "strike" measure reached a vote in either house. In these times, when the tendency is toward altogether too much legislation, this record of the New York lawmakers is "thoroughly creditable."

This is true not alone of the session's enactments in general, but as well of its treatment of the various bills affecting the practice of pharmacy. Nearly a score of such bills was introduced. Just three of them were passed. These three are pretty generally regarded as excellent measures. Certainly they are the best three that could be chosen out of the lot introduced. They are: The Hill bill, creating uniform regulations for the practice of pharmacy in all parts of the State.

The Henry bill, regulating the working hours of drug clerks in New York City.

The Cotton bill, elevating in rank the apothecaries in the National Guard and increasing the number of men in the hospital corps.

ALL-STATE PHARMACY ACT.

The Hill bill is the measure which was approved by the New York Pharmaceutical Association at its annual meeting last June. A summary of its provisions follows:

For the purpose of this act the State is to be divided into three sections, the Eastern (New York), Western (Erie), and the Middle (Albany), and the State Board of Pharmacy is to consist of fifteen members, five members from each of these sections. These members are to be elected; of those for the New York section, two being chosen by the Manhattan Pharmaceutical Association, two by the Kings County Society and one by the German Apothecaries' Association; those for the Western section being chosen by the registered pharmacists and druggists of that section in meeting assembled under the auspices of the Erie County Pharmaceutical Association; and those for the Middle section being selected by members of the State Association residing in that section of the State. Members are to serve for five years. The board is to elect its own officers annually, fix the salary of its secretaries, and organize into three branches, each to consist of members from its respective section. Each branch is to carry out the provisions of the act and

collect the revenue as provided in the law in its own section. A member shall be entitled to receive \$5 for each day engaged in the work of the board.

Among the powers of this board enumerated are: The regulation of the practice of pharmacy, of the sale of poisons, and of the standards of drugs and medicines dispensed in the State; the investigation of all complaints as to quality of drugs, etc.; the regulation of the working hours of employees in drug stores "in cities of first class" (in this section of the bill provides that such working hours shall not exceed 136 hours in any two consecutive weeks); the proper inspection of pharmacies, dispensaries, etc.; the examination of applicants for licenses as druggists, the investigation of non-compliance or violations of the act; to require and provide for annual registration of all drug stores; to preserve the records of former boards; to revoke any license (issued by the board) for cause and to make yearly to the Governor and the State Pharmaceutical Association a detailed report of its work.

The bill provides for two grades of licenses, those of "licensed druggist" and "licensed pharmacist" and one grade of certificate, "registered apprentice," except that in New York City the grade of "licensed druggist" shall not be issued.

A person holding registration as a "licensed druggist" is to be permitted "to practice limited pharmacy," that is, to dispense, compound or retail drugs in any place having a population of less than 500, and also under the supervision of a pharmacist. The temporary license of a pharmacist anywhere within the State except New York City.

A "licensed pharmacist" is to be permitted to practice pharmacy, and to be conducted in any place within the State, but he shall not have personal charge of more than one pharmacy, drug store or dispensary at the same time. A licensed druggist or pharmacist must at all times display his certificate of registration, and it shall be unlawful for any person to practice pharmacy without registration.

All pharmacies, drug stores and dispensaries are to be required to be registered annually, the fee for such registration is to be \$2. The name of the proprietor must be displayed upon a sign conspicuously placed upon the exterior of the store.

The proprietor is to be held responsible for the quality and strength of all drugs and medicines sold by him (except those in original packages of the manufacturer). Adulteration or falsification of any drug or medicinal substance is made a misdemeanor, punishable by a fine of from \$75 to \$150, or by imprisonment.

All fines and other moneys collected by the board shall be used for its expenses. In the Eastern section three-fifths of any surplus money are to be given to the New York College of Pharmacy and two-fifths to the Brooklyn College of Pharmacy. Any surplus remaining in the Western and Middle sections is to be used as now by law provided.

This act is to take effect on January 1, 1901, but the members of the board are to be elected at once.

ACT TO REGULATE DRUG CLERKS' HOURS.

The Henry bill was somewhat modified from the form in which it was ratified by the Pharmaceutical Clerks' Association. As passed it provides that in New York City "No pharmacist or drug clerk employed in any pharmacy or drug store shall be required or permitted to work more than sixty-eight hours per week. Nothing in this section shall prohibit the working six hours overtime during any week, for the purpose of making a shorter succeeding week, provided, however, that the aggregate number of hours in any such two weeks, shall not exceed one hundred and thirty-six hours. The working hours per day shall be consecutive, allowing one hour for each meal. The clerk shall be given one full day off in each two weeks.

No proprietor of any drug store shall require or permit a clerk to sleep in any room or apartment connected with such store, which does not comply with the sanitary regulations of the local board of health. It shall be failure to comply with any of the provisions of this act shall be deemed a misdemeanor, punishable by a fine of twenty-five dollars, or imprisonment, or both, for each offense."

This act is to take effect at once.

The Cotton bill amends the "military code" by providing for each regiment one military pharmacist, of the grade of first lieutenant, two hospital stewards, (three if the regiment is of more than ten companies), and a hospital corps of twenty-five men, of whom one may be a sergeant and five may be corporals. To be eligible for appointment as a military pharmacist or a hospital steward, a candidate must be a registered pharmacist. The act is to take effect immediately.

The Governor has thirty days in which to sign or veto these acts. He may be expected to sign the Hill bill, although he has not expressed himself upon it. He will sign the Henry bill. He has repeatedly urged its passage. His attitude toward the Cotton bill is not known. He has said that he favors anything for the betterment of the State militia. The only possible objection to this act is that its provisions do not conform to the national military code. They are in advance of that code. To the lay mind this is not a valid objection. The Governor has been asked to grant a hearing on the measure by some of those who favored its passage.

BILLS KILLED.

Among the bills which failed to pass was one which the New York City pharmacists urgently desired. This was the bill offered by Dr. Henry to amend the pharmacy sections of the city charter. It was reported favorably in both Senate and Assembly, but was not reached in "general order" in the hurry attending the wind-up of the session. But the city men are not feeling very bad over the failure of this measure. The All-State bill, which passed, contains nearly all the provisions for which the other bill was specially wanted.

The rest of the bills introduced are better dead. Not one of them all was in the interest of pharmacy or to be tolerated by the druggists of this State, and in most cases their defeat was owing to the opposition of the pharmaceutical organizations. Among these bills were:

The Wilcox Poison Bottle bill, a "grab" of the worst kind; the Maher bill, to place the regulation of pharmacy in New York City in the hands of the Board of Health, misnamed a bill for drug clerks' hours; the Gale bill, a "strike" at department stores; the Fiske bill, to require cleansing of second-hand bottles; the Morgan bill, to legalize the sale of antioxin by the city Board of Health; the Sullivan bill, to prohibit the sale of medicine containing cocaine, and the Weeks bill, to establish an asylum for drug fiends and drunkards.

NEW YORK GERMAN APOTHECARIES' ASSOCIATION.

The regular monthly meeting of the German Apothecaries' Association of New York City, was held on Thursday evening, April 5. President Charles F. Schleussner was in the chair and there was a good attendance. Five new members were elected. They were: August H. Reuss, No. 92 Eighth avenue; Anton Woll, No. 515 Ninth avenue; Reuben R. Smith, No. 195 Ninth avenue; Arthur C. Searles, No. 127 Avenue C; Charles F. Lord, No. 482 Seventh avenue. Four additional applications for membership were received. These will be acted upon at the next meeting. Regular reports were made by officers and committees. The Committee on Amusements reported that arrangements were making for an excursion to Greenwood Lake about the middle of June.

The topic of chief interest brought before the meeting was the revision of the United States Pharmacopoeia, which received exhaustive discussion. The association's delegates to the Pharmacopoeial Convention are Dr. Gustave Pflingsten, Dr. Adolph Tsheppe and Dr. George C. Diekmann. Dr. Pflingsten started the discussion by propounding two questions: Should patented synthetic remedies be introduced? and, Should doses be introduced?

Dr. Charles Rice then read a paper he had prepared for the association on the subject of revision. The full text of Dr. Rice's paper will be found on another page of this issue.

A general discussion started, in the course of which several recommendations were voted. The association went on record as opposed to the introduction into the Pharmacopoeia of patented synthetic remedies which are

monopolized by their manufacturers, as favoring the introduction of doses, mentioning antidotes, giving elixirs, admitting witch hazel, so as to secure an official standard of strength; and omitting acetic fluid extracts. The delegates were also instructed to recommend that Dover's powder be made according to the Pharmacopoeia of 1870; that the old formula for rhubarb and soda mixture be substituted for the present one; and that turpentine liniment be omitted.

At the conclusion of the business session two of the association's officers were honored by their fellow members in very pleasant fashion. A chainless bicycle of the newest style was presented to Archivist George Leincker, and a handsome gold watch and chain were given to Secretary Sidney Faber. Each recipient was greatly surprised and each assured the association of his appreciation of such token of regard.

LEHN & FINK WILL BUILD A NEW HOUSE.

Albert and Joseph Plaut, who compose the wholesale drug firm of Lehn & Fink, last week bought from Felix Campbell the property at No. 79 John street, and from Judson Lawson that at No. 120 William street. These two plots adjoin on the rear, making an L from William to John street containing about 7,000 square feet. The William street plot has a frontage of about 25 feet and is 150 feet deep. The other lot measures about 25 by 125 feet. It is understood the purchase price was \$151,000.

The firm will tear down the old buildings now on the site and construct as soon as possible a modern six-story building particularly adapted to its needs and requirements and its methods of business. The details of the building have not yet been determined upon, but its equipment will be up-to-date in all essentials. The "mill construction" will be employed in order to secure a strong, substantial building. The floors will be made specially strong, to sustain a load of 250 pounds to the square foot. Adequate arrangements will be made for the storage of the various goods handled by the firm, and in every way the structure will be designed expressly for a wholesale drug house. Lehn & Fink will occupy the whole building. The work of clearing the site will begin at once and the firm hopes to be in its new quarters in about eleven months.

It has been known in the local trade for some time that Lehn & Fink were looking for an opportunity to build. The firm has long been in need of larger quarters and better accommodations for its business. At present its business is in four sections. Its main store and offices are at No. 128 William street. It occupies No. 120 William street as a storehouse, has a laboratory in Gold street, and a warehouse in Pearl street. The new building, it is estimated, will give the firm just about double the amount of space it now has in these four different locations.

NEW YORK WHOLESALE DRUG HOWLERS.

An interesting series of games was bowled last Saturday at Reid's alleys in the tournament of the New York Wholesale Drug Trade Bowling Association. The team of Dodge & Olcott broke two records. The team score of 939 is the highest ever rolled in the league, and Howe's score of 248 is the individual record for the tournament. The year's bowling will end with the games of next Saturday. Last Saturday's team scores were as follows: Dodge & Olcott, 930; Merck & Co., 822; Merck & Co., 745; Seabury & Johnson, 753. Seabury & Johnson, 717; Dodge & Olcott, 793. National Lead Co., 735; R. W. Robinson & Son, 747. National Lead Co., 669; Parke, Davis & Co., 786. R. W. Robinson & Son, 755; Parke, Davis & Co., 865.

NEW YORK CONSOLIDATED DRUG COMPANY INCORPORATED.

The New York Consolidated Drug Company filed its papers of incorporation with the Secretary of State at Albany last week. The papers state that the concern is to carry on a general wholesale and jobbing business in drugs, chemicals, medicines, etc., and that its authorized capital is \$26,250. The incorporators named are George Gregorius, C. F. Schleussner, A. Wortmann, of Manhattan Borough; R. C. Werner, of Brooklyn Borough, and

C. A. Kalish, of New York, attorney. This is the company composed of retail druggists, the application of which for recognition as a legitimate jobbing house is one of the most warmly debated questions now pending settlement by the Executive Committee of the N. A. R. D.

NEW JERSEY PHARMACEUTICAL ASSOCIATION ANNUAL MEETING.

The thirtieth annual meeting of the New Jersey Pharmaceutical Association will be held at Asbury Park on May 23 and 24. The sessions will be held at the West End Hotel. The local committee, which is composed of George E. Williams, F. F. Coleman, M. D., S. D. Woolley, Henry Thornton and F. L. Wilcox, in a preliminary circular outlines the business sessions and promises good entertainment to all who attend. A special rate of \$2.50 a day has been arranged for with the West End Hotel. A detailed announcement of the programme of entertainments will be issued later. The president wishes to meet the officers of the committee on Tuesday evening, May 22, to prepare reports, examine accounts and outline the work of the meeting. Business sessions will be held on Wednesday morning and afternoon and on Thursday morning.

NEW YORK SECTION AMERICAN CHEMICAL SOCIETY.

The regular monthly meeting of the New York Section, American Chemical Society, was held at the Chemists' Club, in West Fifty-fifth street, on Friday evening, April 6. The technical programme of the meeting comprised two papers: "A Method of Obtaining Nucleic Acid," by P. A. Levene, and "Note on Analysis of a Saline Deposit from Southern Nevada," by Ralph W. Bailey. There was considerable discussion of the details for the reception and entertainment by the New York Section of the members of the Society who will be in attendance at the next general meeting of the society, which is to be held in June. In conjunction with this meeting of the American Chemical Society will be held a meeting of the American Association for the Advancement of Science. Extensive preparations are being made for these meetings, which it is believed will be as interesting and profitable as any heretofore held by these associations.

NOTES.

—Dr. J. H. Bird, who has been in the employ of Parke, Davis & Co. for the past fifteen years, severed his connection with that house on April 7. He intends to go to Chicago in a few days to make his home in that city, where he will take up the practice of medicine. On Friday evening, April 6, eighteen of the fellow workers with Dr. Bird in the local house of Parke, Davis & Co., gave him a farewell dinner at the Drug Club. They fed him on birds, gave him a handsome gold matchbox and in their speeches told him how sorry they were to lose him and how much they should miss him.

—Nelson S. Kirk is making extensive alterations and improvements in his pharmacy at 450 Third avenue, Manhattan. He has put in a new window, repapered the interior of the store, repainted both inside and outside, and altogether given the place a new and up-to-date appearance and has contracted for a handsome new soda fountain. Mr. Kirk says when these improvements are completed he will have a "Broadway store in Third avenue." His friends are glad to see these evidences of prosperity.

—Among the drug men from out of town who visited the local wholesale market during the week were C. B. Gee, of Madison, N. J.; J. M. McGarrath, of the firm of McGarrath & Thomas, Scranton, Pa.; Samuel Korn, Arkville, N. Y.; T. H. Crouse, Philadelphia; F. J. Hubbard, Newton, Mass.; F. B. David, Dillon, S. C.; H. C. Collier, Binghamton, N. Y.; and F. W. Beaver, manager of the John H. Phelps estate pharmacy, Scranton, Pa.

—Walter A. Tichenor, senior clerk in the pharmacy of Thomas D. McElhenie, DeKalb avenue and Ryerson street, Brooklyn, married Miss Claribel Van Skelline, of Greenpoint, on March 22. The ceremony was performed at the home of the bride in the presence of a houseful of the friends of the young people. Will. F. Morgan was

groomsman. Mr. and Mrs. Tichenor went to Washington for their honeymoon, where they spent two weeks.

—The premises occupied by the Mutual Drug Company, at 432 Third avenue, Manhattan, have been purchased by Dr. Parkhurst's church for the erection of a new mission house. The Mutual Drug Company has secured new quarters a few doors lower down the avenue, midway between Twenty-ninth and Thirtieth streets, to which it will move on May 1.

—Wednesday, April 25, is chosen for Alumni Day at the New York College of Pharmacy. A programme of musical and literary exercises will be provided, and the committee in charge promises an interesting entertainment. The Alumni prizes for members of the Junior class will be presented and the day will be celebrated in the usual manner by the students.

—John Rheinhold, druggist of Erie, Pa., and wife returned from Europe last week. Mr. Rheinhold told his New York friends he had had a good time, but he was glad to get back. "America is good enough for me," he said, "and New York beats all the foreign cities I saw." He thought the old world cities were "dead slow" compared with this town.

—The firm of Marth & Stallman, brokers, exporters and commission merchants, of No. 93 William street, has been dissolved by mutual consent. Mr. Stallman retires to return to his old place with Stallman & Fulton. G. B. Martin will continue the business at the old stand, under his own name.

—The firm of J. N. Hegeman & Co. has decided to give up its drug store at No. 9 East Fifty-ninth street, and on May 1 that property will be consolidated with the same firm's pharmacy at No. 770 Broadway, which will be moved across the street to new quarters adjoining the St. Denis Hotel.

—Among the visitors from out of town who were entertained at the Drug Club during the week were Edmund Prickett, of Hazardville, Conn.; R. Richardson, Boston; W. H. White, Nyack, N. Y.; R. H. Leslie, of Newark, N. J.; Percy Sanford, of Washington, and Thomas Dolber, of Boston.

—Incorporation papers have been filed at Albany by the Lincoln Chemical Co., of New York City, to manufacture medicinal preparations on a capital of \$5,000. The incorporators are W. E. Jewell, L. B. Ochmicher, of New York; F. P. Morse, of Brooklyn; A. A. Mitchell, of West Brighton.

—J. F. Brookfield, who has been traveling in the Southern States for McKesson & Robbins, for the past 20 years, is confined to his home in Newark, N. J., by sickness. He has a host of friends, both here and in the South and they hope he may soon be restored to health.

—The Georgian Remedy Co., of Camden, has been incorporated under the laws of New Jersey, to conduct a drug business on a capital of \$100,000. The incorporators are W. R. Respass, Jr., W. Cann, M. F. Hearn, M. W. McDonnell, of Philadelphia; H. I. Budd, Jr., of Camden.

—Dr. Carl Schwickerath and P. E. Hall, of the Detroit establishment of Parke, Davis & Co., passed through New York during the week; Dr. Schwickerath en route to Germany for a few months' of special study and investigation, and Mr. Hall on his way to Baltimore.

—The Martin H. Smith Company, of New York City, has been incorporated in this State to manufacture pharmaceutical products on a capital of \$10,000. The incorporators are M. H. Smith, M. J. Breitenbach and E. G. Wells, all of New York City.

—The Flower Medicine Company, of Jersey City, has been incorporated in New Jersey with a capital of \$35,000. The incorporators are S. B. Ayers, J. B. Heald, of New York; and W. F. Devoy, of Hasbrouck Heights.

—A. C. Jones, the original manufacturer of Coke Dandruff Cure, sailed from this city last week for Paris, where he will have charge of the interests of the A. R. Bremer Company, at the International Exposition.

—John C. Smith, who was formerly head clerk in the pharmacy of Nelson S. Kirk, at No. 450 Third avenue, has taken a position in the prescription department of J. Milhau's Son, at No. 183 Broadway, Manhattan.

—The Brooklyn wholesale house of Townes & James is moving this week from 216 Fulton street to 174 Fulton street, two blocks nearer the Brooklyn Bridge, where larger and better quarters have been secured.

—W. W. Wilcox, Pennsylvania traveler for L. H. & Fink, who has been confined to his home by sickness for some time, has recovered and is ready to start on his regular spring trip through the State.

—Theodore D. Buhl, of Detroit, president of the corporation of Parke, Davis & Co., came to this city last week to meet his son, who had been traveling and studying in Europe for about a year past.

—Lawrence Jorgensen, of the class of 1900, New York College of Pharmacy, after graduation next month will take a position as clerk in the pharmacy of Nelson S. Kirk, at 450 Third avenue.

—John W. Reed has bought the pharmacy of Davis & James, at 1900 Seventh avenue, corner of 118th street.

—Prof. F. G. Ryan, of the Philadelphia College of Pharmacy, has been spending a few days in this city.

—E. R. Carter has bought the drug store of Cannon & Co., at 2350 Broadway, Manhattan.

IN AND ABOUT BOSTON.

The Evolution of a Cigar.

Boston, April 7.—As a result of the edict that went forth from police headquarters that cigars and tobacco must not be sold on Sundays at restaurants and cafes, druggists everywhere in Boston reaped a fine harvest on the first Sunday in this month. Care was taken to enforce the rule. No attempt was made to prevent the large hotels from selling as usual. The public seemed not to realize the purport of the rule and hundreds of men were amazed to learn that they could not buy cigars. They faced this unexpected situation by rushing to the nearest drug store to lay in a stock, since cigars being considered by law as a "drug" may be sold. In restaurants, the cigar was merely a "weed," while in the drug stores it was a "drug" and drugs may be sold on Sunday by druggists without violation of Divine or human law. "Weeds" sold by a restaurant keeper on Sunday expose him to a fine in the city courts.

Many persons had interesting experiences in purchasing their cigars. One man went into a small place, asked for a package of cigarettes and was told that the proprietor could not sell them. But the clerk said that he would sell the man a small box of matches for five cents and throw in a bunch of cigarettes. This was done and the consumer remarked that he will buy his week's supply of cigarettes on Sunday after this because he gets matches free, which he cannot do on week days. Some of the small lunch room proprietors provided pies and sandwiches capable of defying the most ravenous appetites. These were sold to customers calling for cigars. The cigars were then given away. The customers being human, naturally took the cigars and then turned their backs upon the "property" food. They paid for the pie and took what they wanted—the cigars.

Law Would Affect Hoys in Drug Stores.

Boston, April 7.—A large crowd was attracted by a session of the Committee on Labor, Massachusetts Legislature, before whom several bills were heard, notably that of Representative Higgins, of Boston, "To prohibit the employment of minors, male or female, in establishments where intoxicating liquors are bottled, prepared or offered for sale." Representative Higgins conducted the hearing. This bill was intended to regulate employment in liquor or beer bottling establishments, but its wording could, if the bill became a law, be made to affect drug stores where liquor often is sold under restrictions of license and where it is "prepared" in various forms and prescriptions. All the witnesses heard at this hearing, another of which will take place, were bottlers or of a kindred trade. Druggists, grocers, hotel proprietors and others who employ boys, overlooked its importance.

Interest in a Bill to Restrict Use of Poison as a Coloring Matter.

Boston, April 7.—Much interest has been taken in this city in a hearing which the Committee on Public Health gave on a bill to prevent the manufacture and sale of textile fabrics and papers containing arsenic. The bill

provides for an investigation and adoption of measures by the State Board of Health, and provides a maximum fine of \$200 for sales of such articles, exception being made in the case of dress goods containing arsenic in no greater proportion than one-tenth of a grain to each square yard.

Proposed Law if Enacted Would Seriously Affect Druggists.

Boston, April 7.—Much opposition to the proposed amendments to the act relative to the registration of physicians and surgeons by the Board of Registration in Medicine has developed. At a hearing before the Committee on Public Health, ex-Senator Kirtledge spoke for the remonstrants. If the amendment proposed is passed there is not a druggist in the State who would not be liable to indictment under it.

NOTES.

—The opening of the Boston Jewish Dispensary for women and children fills a much needed want at the North End, owing to the large influx of Hebrew residents, all of whom are members of the Orthodox class, whose laws regarding their food and the manner of its cooking and service prohibit them from remaining at any hospital for any length of time. Not only is the dispensary the first institution of its kind in this city, but it is in charge of the only woman doctor among the 50,000 Jewish residents in this city, Dr. Cecelia Shereshefsky, who is a graduate of Tufts College, class '97. After her graduation she took charge of a dispensary which was a branch of the Federation of Jewish Charities.

—The police hope that possibly through the help of druggists they may be able to catch thieves who, after breaking into the factory of H. Traiser & Co., 115 Merrimac street, one night this week, made their escape with nine thousand cigars. Since the case was reported to the police no trace of the thieves or the missing property has been obtained. It is thought these stolen weeds may be offered for sale to druggists.

—In a bowling match at candlepins, a team from the Eastern Drug Company defeated one from the Parker House. It was played at Carruth's alleys, the drug team including these men: Higgins, whose total score was 255; Stanley, whose score was 260; Miller, 220; Cullen, 231; and Williams, 267. This made a grand total of 1,233, as against 1,080 rolled by the opponents.

—At a meeting this week of the Malden aldermen, fifteen druggists petitioned for sixth-class druggists' licenses and the petitions were referred to the License Committee. This is but a small part of the many druggists in this city of about 38,000 inhabitants, with between forty and fifty drug stores scattered throughout the city.

—R. Armante, a French chemist, has just been added to the force of the laboratory of J. Middleby, Jr., Boston, from whom many druggists get their soda syrups and fruits. Mr. Armante has had an experience covering thirty years.

—On the night of April 5 members of a chemical company were called to extinguish a fire in the drug store occupied by Fred. M. McKinnison, at 50 East Brookline street. Damage \$25.

—The week's exports at the port of Boston included drugs and chemicals, \$9,777; hops, \$2,322; India rubber manufactures, \$4,194; tobacco, \$4,345; wax, \$627.

OTHER NEW ENGLAND NOTES.

—A new drug firm in Maine is that of Devine & Percival, at Augusta. Mr. Devine has been in the business for more than twenty-five years, the last three of which have been spent in Calais. His return to Augusta is therefore like a home-coming. Mr. Percival for many years has been chief clerk for C. B. Murphy, an Augusta druggist, and is very popular in that city. The store which they have opened is new throughout.

—A recent fire which is believed to have had its origin in an explosion in the rooms of the Colophite Chemical Company, at New Haven, Conn., resulted in the destruction of the building, involving a loss of \$50,000.

—George E. Baldwin, a Providence, R. I., druggist, is among those who have recently received the benefit of an accident insurance which he carries and on which he was paid \$65 for temporary incapacity.

—The drug store of John A. Morgan, at Greenville, Conn., has been utilized as an office recently by the tax collector.

—Harry Good, a New Haven, Conn., druggist, is effecting a compromise with his creditors on a basis of 36 per cent.

PHILADELPHIA.

Meeting of the Philadelphia Association of Retail Druggists.

Philadelphia, April 7.—The April meeting of the Philadelphia Association of Retail Druggists was held yesterday at 3 p. m. in the museum of the Philadelphia College of Pharmacy. One hundred members were present. President McIntyre presided and after the reading of the minutes of the previous meeting the secretary announced nine new names for membership. The first subject under discussion was the Mercantile tax. According to the new ruling druggists do not have to pay a tax on preparations manufactured at their place of business. Those who have filed their reports, giving gross amount of sales, can appeal after May 1. Extracts from opinions of Hon. John P. Elkins, attorney general of Pennsylvania:

(1). "Manufacturers may sell their own products at their factories, or send them to commission merchants, to sell without being liable to a mercantile license tax."

(3). "All manufacturers who bestow care, skill or labor upon the articles manufactured and sold by them are exempt from the payment of a mercantile tax if the goods are sold at the manufacturing establishment."

The next subject taken up was that of Sunday selling. It was agreed that druggists who choose to sell soda on Sunday can do so, but they are requested to refrain from selling cigars and candy and are asked to pull down their window curtains and extinguish window lights. Fifty dollars was voted to be sent to the National Association of Retail Druggists on account of dues. A Memorial Committee was appointed as follows: W. W. Chalfant, chairman; J. W. Pechin, Dr. F. A. Conerton, Russell Blackwood, Chas. G. Neely. The following members go to Washington to represent the association at the hearing of the Ways and Means Committee, on April 17, on the proposed repeal of the Stamp Tax: Messrs. McIntyre, Cliffe, Poley, Hoch, Gatchell and Perry. A committee was appointed to revise the constitution and by-laws and have the same printed. It was also decided to appoint a committee to consult the proprietary manufacturers and formulate a plan whereby a limited retail selling price can be placed on proprietary remedies. The meeting then adjourned until Friday, May 4, 2 p. m.

NOTES.

—The season of the year has arrived when the botanists begin their field trips and collect specimens for their herbariums again. The Botanical Section of the Academy of Natural Sciences will hold a stated meeting on Monday evening, April 9, at 8 o'clock, at which time the following interesting papers will be read: "Some Interesting Sedges," by Joseph Crawford (the well-known Frankford druggist); "The Southern Cypress," by Thomas Meehan; and "The Big Trees of California," by Dr. J. G. Harshberger, of the University of Pennsylvania. The list of field meetings for April has been announced. Many of the Philadelphia druggists are enthusiasts in botany and the field trips are welcomed as a relief from business cares.

—The Poplar Street Laboratory of the Smith, Kline & French Company has been treated to a coat of paint which makes it one of the most conspicuous buildings in that section of the city. The brick work is Venetian red, the sashes and shutters dark green and the signs, which are lettered on the brick work, are in yellow and black. The tank which supplies the fire sprinkler system has been painted black and has "Eskey's Food" painted on it in white letters which can be seen over in Camden. The contract was made and the work completed within

two weeks, which is pretty quick work considering the magnitude of the job and the fact that two coats of paint were applied to the entire surface.

—The reception tendered to the members of the Philadelphia Section of the American Chemical Society on Thursday evening, April 5, by Dr. Harry Jayne, at his home on North Broad street, was an enjoyable occasion and fulfilled the purpose of promoting the usefulness of the association by bringing the members together in a social manner and causing them to become better acquainted. There were about fifty members present, five of whom were ladies. There was no formality or set speech making, the time being devoted exclusively to social intercourse and partaking of refreshments later in the evening.

—The Physical Laboratory of the Lehigh University at Bethlehem, Pa., was completely destroyed by fire on Friday, April 6, with a loss of \$200,000, only partially covered by insurance. The fire originated in the laboratory of Prof. W. S. Franklin, who was doing some photographic work, the upsetting of a lantern setting fire to some curtains and although every effort was made to check the fire at the start, the flames had gained such headway by the time the fire department arrived that nothing whatever could be saved of the rare and costly physical apparatus which the building contained.

—George P. Ringler, one of the leading druggists in Bloomsburg, Pa., has enjoyed the prosperity of the past few months to such an extent that he was able to make a large number of changes and improvements in his store recently. A new set of grained oak fixtures and shelving, together with a fine new soda fountain of Tufts latest pattern make his store look like new.

—J. H. Redsecker, the well-known Lebanon druggist, has been a Philadelphia visitor during the greater part of the past week, having been summoned to this city to serve as a juror in the United States Court, which is now in session. Mr. Redsecker reports business as having been very good during the past few months up in his section of the State.

—R. Kindig, manager of Abell's pharmacy, Frankford and Girard avenues, has secured passage for himself and wife on a steamer sailing July 7 for Europe. They will visit Paris, Rome, Naples, attend the Passion Play at Oberammergau, and finally take in Vienna and Berlin.

—The Smith, Kline & French Company is organizing a fire brigade of their store employees for the protection of the Arch street store. It will be patterned after the brigade which has been in such successful operation during the past year at the Poplar street laboratory of the firm.

—The students of the third year class at the Philadelphia College of Pharmacy are on the anxious bench now that their examinations have ended, as the reports will not be ready for about two or three days yet and the uncertainty is very trying to many of them.

—J. D. McFerren, pharmacist at Twelfth and Race streets, expects to beautify his store as regards its external appearance by giving it a new coat of paint.

WANGLER DRUG COMPANY ORGANIZED.

The Wangler Drug Company was organized with \$100,000 capital at Waterloo, Ia., last week, and will commence business on July 1 of the present year. The stockholders of the new corporation are C. D. Wangler, R. C. Wangler, P. J. Martin, J. F. Burns, W. L. Barrett, J. P. Kleffer, C. F. Fowler, B. S. Hillman, W. N. Barr, W. M. Law, J. W. Blessing, R. E. Wald, N. O. Munger, C. E. Pickett and P. A. Lane, and the directors for the ensuing year are C. D. Wangler, N. O. Munger, P. J. Martin, C. E. Pickett, J. F. Burns, R. E. Wald and R. C. Wangler. The following officers were elected: President, C. D. Wangler; vice-president, P. J. Martin; secretary and treasurer, R. E. Wald. The new company will transact a wholesale drug business.

TO WASHINGTON AND RICHMOND.

Parties in the territory tributary to St. Louis desiring to attend either or both the Washington Pharmacopoeial Convention, May 2, and the Richmond A. Ph. A. meeting, May 7 to 12, should address Dr. H. M. Whelpley, 2342 Alblon Place, St. Louis, Mo., member of the Committee on Transportation.

BALTIMORE.

Failure of the Pharmacy Bill.

Baltimore, April 4.—The latest attempt to place Maryland in line with the States which regulate the practice of pharmacy by statute and protect the public against incompetency has failed. Until almost the last moment the outlook for the passage of the measure, introduced shortly after the beginning of the session by Dr. Truitt and approved by the House, seemed bright. Its champions had been led to believe that no formidable opposition would be encountered in the Senate. Almost at the last moment, however, the bill was killed by its professed friends. In the absence of Mr. Bryan, one of the Baltimore City Senators, who had promised to make it his special concern, the bill was reported favorably by the Committee on Health, but the Senator who submitted the favorable report also immediately proceeded to demonstrate his good faith by moving an indefinite postponement. The motion was promptly passed, and the bill was done for.

The species of double-dealing of which the Senator in question gave such striking evidence will, of course, excite condemnation. At the same time the fact must not be lost sight of that primarily and chiefly, the bill owes its defeat to the apathy and indifference displayed among the druggists themselves. If the members of the trade were thoroughly united in the demand for a State drug law, and if the movement had the undivided support of the jobbers there would perhaps be no difficulty about putting such a measure on the statute books. The failure to redeem Maryland from a serious reproach has been especially disappointing to Dr. A. R. L. Dohme, president of the Maryland Pharmaceutical Association, who labored indefatigably to secure the enactment of the bill. That the attempt will be renewed two years hence is quite certain.

College of Pharmacy Association.

Baltimore April 9.—Much interest was manifested at the last meeting of the American Pharmaceutical Association in the proposition to form a national organization of colleges of pharmacy. The matter was discussed at the recent meeting of the Maryland College of Pharmacy and H. P. Hynson, the secretary of the institution, was instructed to send out the following letter, which defines the attitude of the Baltimore school toward the project:

Dear Sir: While this college has, from the beginning, witnessed the great benefits accruing to the professions of medicine and dentistry through their respective associations of colleges, and notwithstanding it has been for some time fully convinced that an association of colleges of pharmacy is quite necessary and desirable to secure similar advancement in the teaching of pharmacy, it has, until now, refrained from acting in the matter, because it hoped the initiative would be taken by some one of its more conspicuous sisters.

Finally realizing its share of the responsibility, it has directed me to communicate with all the institutions in the United States, teaching pharmacy, and request each to send three delegates to Richmond, Va., during the forty-eighth annual meeting of the American Pharmaceutical Association, which will begin May 7 next. Delegates should be authorized to take part in the formation of an association of teaching schools of pharmacy, and empowered to commit the institutions they severally represent to such uniform rules and regulations as may be adopted by a majority of those present.

The exact time and place of meeting, which must be secondary to the programme of the A. Ph. A., will be announced at one of the sessions of that body.

Trusting we will have the active co-operation of your school in this very important matter, I am, very sincerely,

HY. P. HYNSON, Secretary.

The Drug Trade Bowlers.

Baltimore, April 7.—James Bailly & Son were treated to a surprise last Tuesday night, when they bowled Gilpin, Langdon & Co. three games. Hitherto the former team has generally come out of such encounters decidedly in the lead, but this time the opponents turned the tables and took two contests by good scores. The totals were: Gilpin, Langdon & Co., 794, 849 and 700; James Bailly & Son, 771, 741 and 828. Cann, of the winning team, rolled up a total of 269 in the first match. Last night the tall-enders met, with the result that Parke, Davis & Co. captured all three games, and thereby

moved ahead of Muth Bros. & Co. The totals were 634, 716 and 587 for Parke, Davis & Co., against 565, 501 and 550 for Muth Bros. & Co.

An Impostor Brought to Book.

Baltimore, April 3.—For some time past the A. R. Bremer Company, of Chicago, manufacturers and proprietors of Coke Dandruff Cure, has had information that large quantities of bogus goods, made in imitation of the genuine article, were being distributed in Eastern markets. J. D. Sipp, the company's Baltimore representative, was entrusted with the task of running the makers of the fraudulent article to earth. He soon ascertained that Washington seemed to be the headquarters of the impostor, and accordingly put his detective talent to work in that city, with the result of capturing not only a large quantity of bogus stuff, but effecting the arrest of John D. Tregor on the charge of false pretenses. The accused had a hearing on March 30, and was released on bail for the action of the court. The infringer had operated with surprising boldness, selling his compound to Washington barbers and evading the proprietary stamp tax law. The Grand Jury promptly brought in an indictment when the facts revealed by the investigation were laid before it. The investigation covered a period of three months.

Retailers and the Card System.

Baltimore, April 7.—The conclusion reached by the Baltimore Retail Druggists' Association with reference to the card system and the attitude of the jobber toward it are embodied in a circular letter which was sent out several days ago by Secretary R. E. Lee Hall, of the association; and in which occurs this paragraph:

At a special meeting of the Retail Druggists, held March 1st, inst., under the auspices of the Baltimore Retail Druggists' Association, a resolution was passed adopting the card system so far as the Association and those in sympathy with it were concerned, and a committee was appointed to confer with the Wholesale Trade with reference to putting the system into immediate operation, said committee to report to the Executive Board of this Association to which was referred the final disposition of the matter. The committee reported that it had met with no success in securing the effective co-operation of the Jobbing Trade.

The Executive Board at a specially called meeting held on the 9th inst. unanimously decided that, since, without the active and earnest support of at least a few Jobbers the Card system could not be successfully operated, it had better be abandoned for the present at least.

Wedgewood Club Diners

Baltimore, April 5.—That noble band of congenial spirits, the Wedgewood Club, sat down to its third monthly dinner at Tierney's restaurant March 29, and spent a most enjoyable evening. The invited guests included Dr. Wilmer Brinton, C. F. Penrose and E. F. Erlich. John G. Beck presided, acquitting himself in fine style, and J. Webb Foster, secretary and poet laureate, read the minutes of the previous meeting in rhyme. The doings of each member were happily hit off and afforded much amusement. Dr. R. E. Hall, secretary of the Baltimore Retail Druggists' Association, was elected a member, a vacancy having occurred by resignation.

NOTES.

—The improvements in progress for some weeks past in the pharmacy of W. M. Fouch, Charles street and North avenue, are completed, with the exception of the installation of the new soda water fountain. The store has been considerably enlarged and most attractively furnished. It is generally pronounced one of the handsomest pharmacies in Baltimore.

—O. C. Smith, Pennsylvania avenue and Hoffman street, has improved his pharmacy handsomely by installing new fixtures, renovating the interior and making a number of other changes.

—The pharmacy at the northeast corner of Baltimore and Calhoun streets, conducted for some time past by Smith Bros., has been closed.

—The drug store established at No. 700 North Howard street by Thayer & Co., a Philadelphia firm, has been opened for business.

—George G. Muth, of Muth Bros. & Co., was confined to his residence, on North Carey street, for over a week by illness.

CHICAGO.

Bauer & Black Entertain.

Chicago, April 7.—The firm of Bauer & Black, manufacturers of plasters and antiseptic goods at Twenty-fifth and Armour avenue, entertained the Chicago Veteran Druggists' Association and invited guests to-day in royal style. Those present were Messrs. A. E. Ebert, Thomas V. Wooten, Paul J. Behrens, Thomas Brown, H. A. Antrim, Charles E. Matthews, F. W. Armstrong, Dr. Thomas, C. A. Storer, G. P. Englehard, Al. Bauer, C. H. Black, Capt. W. G. Morris, W. Bodemann, Thomas N. Jamieson, H. W. Medbery, Henry Biroth, W. F. Blocki, Louis Woltersdorf, John Blocki, J. C. Borchardt, W. K. Forsyth, T. H. Patterson, John Tainsh, H. C. Mathison, Louis K. Waldron and your correspondent. After being shown through the extensive manufacturing establishment of the firm the party fell in line and wended its way to the elevated station at Twenty-sixth street and from thence was taken to the Union restaurant on Randolph street. Mr. Englehard was elected toastmaster. After the dinner was well under way the toast "The Druggist as a Statesman," was proposed, and T. N. Jamieson was called upon to respond to it. Mr. Jamieson began with a disclaimer of the term "statesman," modestly denying the application of the idea, and went on to give a number of very entertaining anecdotes, political and otherwise, concerning his own experience and the experiences of those present who had, from time to time, dalled with the varying fortunes of politics.

H. A. Antrim was next called upon and responded as only Antrim can respond. He gave a number of witty and pertinent remarks, reciting an apt selection from the poems of James Whitcomb Riley and wound up with a new version of "Casey at the Bat," which brought down the house. As a single-handed entertainer Mr. Antrim is the peer of anyone and the guests of Bauer & Black heartily appreciated the foresight which gave them the pleasure of listening to the inimitable character sketches and recitations of the Western representative of the Randolph Box and Label Company. Mr. Antrim enjoys the reputation of being not only a splendid entertainer, but even a better business man, a versatility of which few men can boast. Mr. Wooten responded aptly and pleasantly to the toast "The Veteran Druggists' Association." He said that his relations with the association had taught him one important lesson, "How to grow old gracefully." To enjoy the friendship of his amiable hosts and the Veterans is the proper method of first instruction. To follow their example is but to fit precept to practice. "You have," said the speaker, "but to look at these gentlemen to find out the method. I know of no men who enjoy themselves better. I look forward to the time when I can become a member of the association." Mr. Bodemann was characterized by the toastmaster as a hard fighter. Whatever he does he does with his might. Mr. Bodemann responded briefly and wittily and gave some hard knocks to the enemies of the drug trade. He complimented the hosts and stated that the last plaster they had sold him was still adhering to his person with a tenacity painful to remark upon. W. G. Morris described his candidacy for alderman of the Thirteenth Ward, and in terms which evoked shouts of sympathetic laughter, told of his campaign experiences. Mr. Ebert responded to an appropriate toast, gave a few political experiences of his own and wound up with some advice which, if followed, would make druggists more prosperous. He paid a tribute to Messrs. Bauer & Black and gave some entertaining reminiscences of T. N. Jamieson, "who does not lie, talks little and organizes." Others who responded to toasts were Dr. Thomas and Messrs. Henry Biroth, Black, Al. Bauer, John Blocki, Charles E. Matthews, H. W. Medbery, L. K. Waldron, W. Blocki, Paul Behrens, L. Woltersdorf, F. W. Armstrong, Fechter, Forsyth, Thomas Brown, H. C. Mathison and your correspondent. The dinner closed with a cordial vote of thanks to Bauer & Black, the hosts, who had given their guests an occasion whose pleasure will never be forgotten.

Bowling.

Chicago, April 7, 1900.—The score of the Chicago Drug Trade Bowling Club last night was as follows:

Armstrong	146	130
Bauer	179	224
Medbery	167	194
Baker	158	137
Thomas	237	200
Matthews	120	158
Mathes	121	154
Blocki	156	137
Waldron	174	168
Fechter	108	148
Delbridge	100	109
Storer	134	124

The club will send a team to New York on April 17 to compete for the national championship of the American Drug Trade Bowling Association. New York and Baltimore will be represented and it is hoped that Philadelphia and Buffalo will join in time to come into the contest. The following members will go from Chicago: George R. Baker, A. Bauer, F. W. Armstrong, Dr. G. A. Thomas and Charles E. Matthews, with Louis K. Waldron, C. A. Storer and H. W. Medley present as substitutes.

NOTES.

—The students of the Rush Medical College, guests, druggists and others, attended the second of trips arranged by Parke, Davis & Company to their plant in Detroit this week. They went via the Michigan Central Railroad and had an excellent time. The former party, whose trip was recorded in these columns, went over the same road. This correction is made as a matter of truth and justice.

—Messrs. Lyon & Sagar have bought out Manley & Simmons' drug store on State street. This sale was reported a couple of weeks ago, but without knowing the names of the buyers. Frank Lyon is head of the sundries department of Lord, Owen & Company and Mr. Sagar had charge of the country trade. Mr. Sagar was formerly in the wholesale drug business in St. Paul, Minn.

—Stephen Hexter, a former Western representative of an Eastern firm, is now buyer for a projected State street drug store, presumably that of the People's Drug Company. He is now placing large orders.

—The Universal Vitaine Company, of Chicago, has been incorporated to make remedies with a capital stock of \$100,000. The incorporators are Charles A. Butler, Eben F. Runyan and Samuel Shaw Parke.

—The genial and sometimes explosive Capt. W. G. Morris, one of the best known men among the West Side retailers, ran for alderman from his ward last Tuesday, but failed to get votes enough.

—Clarence Davidson, of the druggists' sundries house of James A. Davidson, went to Detroit with the students of the Rush Medical College to visit the plant of Parke, Davis & Company.

—Manning T. Hackley, a well-known Republican druggist at 2135 West Lake street, was elected alderman from the Twenty-eighth Ward on Tuesday last.

—Fred. Perry, formerly Chicago representative of Powers & Weightman, but now in charge of the New York office of that firm, was in Chicago this week.

—Miller & Bradley, of Coal City, Ill., were in Chicago this week buying a new stock of goods with which to replace one just destroyed by fire.

—John T. Jencks has succeeded the Elk Drug Company at Elgin, Ill. He will continue the store at its present location in the Opera House block.

—It is reported that George R. Baker has sold his store at Van Buren and Clark streets to Walter H. Krouskup, of 3658 State street.

—James Stevenson, of the Robert Stevenson Company, returned last Tuesday from a couple of week's sojourn at Hot Springs, Ark.

—L. M. Mills, Michigan representative of Morrisson, Plummer & Company, has just resigned to take up other work.

A drink for the gods. The pure juice of the grape, naturally fermented, such is Coak's Imperial Extra Dry Champagne.

DETROIT.

The Slot 'Phone.

Detroit, April 7.—There are about two hundred retail druggists in this city and last night 147 of them had signed the contracts with the Telephone Company concerning the pay telephone service. It is expected that the canvass will be finished to-night and that all of the 200 will be secured. So far only one man has refused to sign. The company will "get even" with him, it is alleged, by refusing any message from his store except from himself, and will try to make it uncomfortable for him generally. The new arrangement will go into effect very soon, probably sometime next week.

Parke, Davis & Co. Entertain Students.

Detroit, April 6.—Yesterday a party of some 150 students, representing the graduating classes of the College of Physicians and Surgeons and the Medical Department of Northwestern University, at Chicago, left that city on a special train for Detroit for the purpose of visiting the works of Messrs. Parke, Davis & Co. This morning was devoted by the party to inspection of the biological department and stables and the staff of that branch of Parke, Davis & Co.'s immense business gave a full exposition of physiological assay methods. The afternoon was spent in the analytical and pharmaceutical departments. The members of the visiting party came to Detroit with the sole purpose of learning something, preferring to spend their entire time in the laboratories, so that other show places of the city were neglected. They were quartered at the Russell House, and this evening enjoyed a special banquet, accompanied by orchestral music. The students of the Department of Pharmacy of Northwestern University would have participated in the excursion had it not been that the graduating exercises of that school took place to-night.

NOTES.

—The customs authorities at Port Huron have confiscated 1,726 pounds of asafetida consigned to Daniel Mahoney, of Chicago, and will destroy it under the laws governing the importation of impure drugs. The stuff was first consigned through Baltimore, Md., to Chicago, but was stopped at Baltimore by the customs officials. It was then withdrawn by the consignees for exportation, they shipped it to Toronto, Ont., for a blind, when it was again started for Chicago, but was held up at Port Huron.

—A bowling team composed of men from the two wholesale houses of Detroit took three successive games from the boys of the Detroit, Lansing and Northern R. R. on Wednesday evening. A communication from the American Drug Trade Bowling Association invites a picked team from Detroit to enter the coming contest for the championship among the American cities, but the boys will not be able to go this year. Next year they expect to go, and to return with the gold medal.

—The drug stock of C. H. Woods, Detroit who made an assignment last week, has been sold by his creditors to C. M. Landon for \$1,500.

—A. M. Edwards, Jr., has taken a clerkship in the drug store of Alfred L. Walker, Detroit.

Indianapolis Druggists Sold Liquor and Were Fined.

In a crusade recently inaugurated against the sale of liquor in Indianapolis, Ind., a large number of druggists were arrested, charged with selling liquor without the proper license. All of them pleaded guilty and made no resistance whatever, stating that they believed it would be useless to do so, and also that the expense would probably be greater than that of pleading guilty. Only one case was pushed against each druggist and each was fined \$5. In the Criminal Court March 20 more than a dozen druggists paid their fines. Later the druggists held a meeting and expressed their indignation against the action of the grand jury in returning indictments against alleged liquor violators. If any more indictments are returned the druggists will employ attorneys and put up a defense.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

A Card From Van Stan's Stratena Co.

To the Drug Trade of the United States:

In order to remove misconception, we desire to say that as we have never given Stratena away gratis to our old established customers and patrons (either through jobbers or salesmen) we certainly will not do so to others. Although the cost of materials used by us has advanced in varying ratios of 15 per cent., 25 per cent. and even 40 per cent., we do not propose to advance the price of Stratena during the Nineteenth Century and trust that we will not be compelled to do so during the Twentieth. We do not sell to cutters but to the "approved list" of jobbers. We are members of the Proprietary Association of America and have been for many years. Our quantity price has been adhered to without variation for a period of twenty years and we have during that period imported from France a particular brand of high class material to ensure the maintenance of the high standard and superior quality of Van Stan's Stratena Cement, of which we are the sole manufacturers. The genuine has the full name blown in the bottle.

Your very truly,

VAN STAN'S STRATENA CO., LTD.,
Philadelphia.
Per R. S. Pettet, Manager.

One of Printers' Ink's correspondents writes as follows:

"I think it was in Frank Leslie's Popular Monthly that I saw a quarter-page advertisement of Rogers' Antiseptic Tar Soap, and sent to the manufacturers, the Rogers Soap Co., of Chicago, for a sample. I liked it very much and went to several drug stores to buy some cakes. In none of them could I find it and I was finally induced to buy the brand of another manufacturer. I know it says in the circular sent with the sample that the Rogers people will send a cake, postpaid, for fifteen cents or three for forty cents, but who is going to take the trouble to send by mail for soap? If it were a medicine and one were convinced that that was the only medicine that would do, the case might be different. I think seeing that the article can be easily secured is as important as inserting an advertisement that makes the reader desirous of securing it."

It is sometimes hard to introduce new preparations to the retail druggist, but manufacturers would find it easier if they would acquaint the trade with their goods by a liberal use of the advertising pages of the principal drug journals.

Manufacturers, druggists and others who want a drug mill that will grind more material with less power than other machines and one that is not likely to get out of repair, should send to Mead & Co., Detroit, Mich., for an illustrated catalogue of their mill. It is very simple in construction and by unscrewing one bolt the whole interior can be cleaned. They will grind samples of any material sent and will return with a statement of the time consumed in grinding.

The attention of druggists is called to the circulars sent out by the Turner-Looker Co., Cincinnati. In this circular work the entire country is included, with the exception of two or three of the largest cities. This firm is one of the leading jobbers of whiskies in the country. They ship direct to responsible dealers and deal directly with the retailer.

We call attention to the advertisement of the Citrosandalene Co., New York, on another page. Citrosandalene is a new preparation which has been on the market about a year. It is in the hands of jobbers. Retailers who have calls for it are requested to purchase it of their nearest wholesaler.

A Novelty.

Not long ago our attention was called to a Nail Clipper in a certain drug store and the proprietor said he had sold a gross of them that week, and had made 50 per

cent. profit. This cutter is advertised on page 19. It is made by the Coe Manufacturing Co., 50 Warren street, New York, who think it answers the question, How can a druggist increase his profits?

Soda Fountain Clocks.

Manufacturers of soda fountain supplies spend a great deal of time and money in devising new and attractive advertising to draw the thirsty public to the fountain, and to the Thompson Phosphate Co. belongs the credit of putting out one of the most taking novelties of the season—the Wild Cherry Phosphate Clock—which is illustrated in their advertisement in this issue. Thompson's Phosphate as it is known, is now sold in two-thirds of the drug stores of the country; it is a popular beverage and one of which the sales are constantly increasing. This is particularly noticeable in the Southwest, where a new factory at Dallas, Tex., has been required.

The Welch Cork Screw.

Westfield, N. Y., April 2, 1900.

The Pharmaceutical Era:

The "Corkscrew" notice in your last issue is proving very satisfactory. We lose about five cents on each corkscrew, but we would be willing to send out a great many on those terms. The druggists seem to want the corkscrew, and nearly all of them say they are handling Welch's Grape Juice already and speak of it in the highest terms.

THE WELCH GRAPE JUICE CO.

The Hart Manufacturing Company, Chicago, state the case exactly in their advertisement in this issue, when they say that a business is judged by the appearance it makes. In the same way, a soda fountain business depends largely on the way in which the drinks are dispensed. A handsome fountain, neat surroundings, thin tumblers and clean ones, with all the other accessories showing constant care, are just as necessary to the success of a soda fountain business as the fountain itself. The Hart Company claim to make the best fountain sold. They illustrate in their advertisement a very beautiful design and make the announcement that any apparatus carrying their name is guaranteed equal to their standard. They also show an automatic electric Carbonator, the "Chicago," but they make others according to druggists' requirements for operation by hand or water. They carry a full line of general fountain supplies, such as tumblers, pitchers, holders, spoons, strainers, etc., etc.

There are many druggists who want imitation glass labels. Such dealers can find just what they want by corresponding with Dr. R. R. Lansing, 75 Beaubien street, Detroit. Lansing's Glassine Labels are made of celluloid and once on the bottle the label is there to stay. In attractiveness and durability they are equal to glass labels.

The genuine Serre-Rubinat is in green bottles with buff labels. It is a most agreeable cathartic water and a good seller. It is the product of three springs which yield 20,000 pints daily. The water reaches the consumer fresh, natural and uniform. The United States agency is the Rubinat-Serre Co., 19 Bridge street, New York.

Buyers of labels or pill and powder boxes are invited to send for samples and prices to F. Huhn, 72-74 Pine street, New York. He makes the highest grade of these goods at the lowest prices.

Free Wrapping Paper For Druggists.

A constant expense to the druggist is involved in the outlay for wrapping paper, and, at the present time, when the price of paper is so high, this item is receiving more than the usual consideration. Attractive circulars regarding "Apenta" Water, 12 by 14 inches, put in pad form and very useful on the counter for wrapping up articles, are offered free by the United Agency Company, 508 Fifth avenue New York, agents for Apollinaris, Johannis-Lithia, Apenta and Friedrichshall Waters. Write The United Agency Co., stating from whom you buy Apenta and your request for pads will have their attention.

Prevents Contagion. Recommends Itself.

The spread of contagion by the common house fly is best guarded against by "Tanglefoot" sealed sticky fly paper, which catches the fly and the disease germs it carries and coats them with a varnish from which escape is impossible. This staple article is so well advertised and its sale is so thoroughly pushed that it is known the world over. It recommends itself at once. Dealers run no risk in laying in a stock, and the terms of sale afford a good profit. It may be termed a valuable cash asset. All jobbers in druggists' goods handle "Tanglefoot."

Dealers in mixed paints, and most druggists outside of the large cities handle this class of goods, should write to the Eagle Paint and Varnish Works, Pittsburg, for Color Cards and for their terms. They offer special inducements on their paints. They make five brands, each well known and easily sold and their terms are extremely liberal.

Billings, Clapp & Co., Boston, furnish Syrup White Pine Compound in 4 ounce bottles with the buyer's name on the label, in 1/4 gross lots at \$12.50 per gross. They also furnish it in bulk in five and ten gallon lots to those druggists who prefer to put it up in their own packages. Notice their advertisement on the inside front cover.

A. Major reports two more large orders from big Chicago firms which he was obliged to refuse because they failed to sign the agreement in regard to maintaining the established prices.

THE COMMITTEE OF ARRANGEMENTS AND ENTERTAINMENT OF THE NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION

met pursuant to the call of Chairman Charles F. Weller at the Auditorium Hotel, Chicago, on Monday, March 26.

G. P. Engelhard was elected secretary and M. L. Barrett, treasurer. September 10-15 was selected as the time for the meeting of the association and the Auditorium Hotel as the headquarters.

It was decided that the banquet shall be for gentlemen only, a separate dinner to be provided for the ladies who are to be invited to the banquet hall when the responses to the toasts are begun.

The hotel management named the following special rates to members and friends of the association: European plan, \$2 per day, \$2.50 with bath; American plan, \$3.50 per day; \$4 with bath.

The entertainment programme will have many attractive features, as will appear from the following outline for convention week:

Monday evening (September 10)—"Smoker," etc.

Tuesday evening—President's Reception.

Wednesday afternoon—Excursion about the city.

Wednesday evening—Theatre party.

Thursday afternoon—Carriage drive.

Thursday evening—Banquet at the Auditorium Hotel, with a brilliant list of speakers.

Friday, 10 a. m.—Excursion to Mackinac Island at the head of Lake Michigan by the palatial steamer Manitou, occupying about three days.

G. P. ENGELHARD, Sec'y.

(Special Correspondence).

ENGLISH PHARMACY AND NEWS.

London, March 31, 1900.

The Companies Bill.—The interest in this bill seems to be on the increase and chemists in various parts of the country have interviewed their representatives in the House of Commons, and have put the pharmaceutical case before them. In most cases favorable answers, but of a non-committal nature, have been given. It is pretty certain, however, that if the Government make up their minds to press the bill forward it will pass, pharmacy clause included, whatever steps chemists may take to oppose it.

Produce Brokers' Notes.—One of the expedients of the Chancellor of the Exchequer to raise the money to meet the additional expenditure caused by the South African War was to levy a stamp duty on brokers' notes. On goods between the value of £5 and £100 the note would bear a penny stamp, and if of the value of £100 or more a shilling would be charged. The whole sum expected to be realized by the impost was only £150,000, and at once Mincing Lane was up in arms, and a deputation waited on Sir Michael Hicks-Beach to protest against the duty. In consequence of this opposition among the drug brokers and other Mincing Lane commercial men, the Chancellor of the Exchequer has decided not to proceed with the clause in the budget proposals to tax brokers' contract notes.

The Isle of Man Pharmacy Bill.—This bill now only awaits the royal assent to become law. In the form in which it finally passed the local legislature it contained a clause permitting joint stock companies to carry on the business of, and use the description of, chemist and druggist, provided each place of business be conducted exclusively by a qualified person whose name must be conspicuously posted in the place where the business is carried on. A maximum penalty of £10 is provided for a breach of this regulation.

Chemists' Defence Association.—The first general meeting of the Chemists' Defence Association was held on March 15, when it appeared that the association was in a fair way to become a success. Already 667 of its shares have been taken up, an analyst has been appointed, and active operations are now in view. The society has been formed to defend chemists when prosecuted under any of the acts which specially affect the trade, such as the Sale of Food and Drugs Act. It will not, however, defend when the Pharmaceutical Society prosecutes for breaches of the Pharmacy Act.

A Fire.—Damage to the amount of some thousands of dollars was done to the premises and stock of Cresswell Bros. & Schmitz, sponge merchants, by a fire that broke out in their London premises on March 15. Business was not, however, interfered with.

The Vinolia Company, since the commencement of the war in South Africa, have set aside one half penny on every tablet of Vinolia soap sold as a contribution to the War Relief Fund and in this way they have been able up to the present to send £5,210 to the fund, being one-half penny each on over two million and a-half of tablets.

Reciprocity of Diplomas.—At a meeting of the Western Chemists' Association, of London, on March 21, A. B. Chater, of Brisbane, Queensland, urged that a system of interchangeability of certificates should be arranged between Great Britain and the Colonies. The president of the Pharmaceutical Society, W. Martindale, and two others of the society's councillors (W. S. Glyn-Jones and J. F. Harrington) spoke. The general feeling appeared to be in favor of reciprocity, but it was pointed out that at present the British Society had no power to accept certificates other than its own. Difficulties in the way of securing a universal standard of examination were alluded to. Altogether the matter is not likely to be practically dealt with yet awhile.

Mrs. Steyn, the wife of the president of the Orange Free State, is the grand-daughter of Wm. Paterson, an Aberdeen chemist and druggist.

The will of Thomas Greenish, ex-president of the Pharmaceutical Society, has been sworn at £7,984. His two sons are the chief legatees; one is T. E. Greenish, pharmaceutical chemist of Conduit street, London, and

the other, H. C. Greenish, professor of materia medica in the school of the Pharmaceutical Society.

Society of Chemical Industry.—Arrangements are well advanced for the annual meeting which will be held in London in July this year, and special efforts are being made, as it is hoped that Prof. Chandler, the first American president of the society, will preside. At a meeting of the London Section on March 5, R. W. Allen read a paper on "Naphthalene in Coal Gas." The experiments had been conducted in the laboratories of Prof. F. D. Brown, at the University College of London, New Zealand. The chief point of the paper was the statement that coal gas absolutely free from naphthalene when forced into the mains will deposit that body within them. The explanation advanced for this somewhat startling statement was that the naphthalene is produced by condensation of hydrocarbons on passage through the conduits. The general feeling of the meeting was that further evidence was required.

The Manx Pharmacy Bill.—The two Houses of the Manx Legislature, having disagreed as to the exact form in which the pharmacy bill under consideration shall become law; a conference between the two bodies has taken place. New clauses have been drafted, and it is hoped that an agreement will be arrived at whereby this necessary measure will be added to the Statute Book. The bill is based mainly on the British Act, but will recognize for practice in the Island Licentiate of both the British and Irish Pharmaceutical Societies.

The Budget.—Like the American-Spanish War, the conflict now raging in South Africa has involved enormous expense and British taxpayers, like American citizens, have been called upon to pay the piper. The Chancellor of the Exchequer has not, as did the American Government, imposed an extra direct tax on medicines, but nevertheless his proposal indirectly hit the trade pretty severely. As some country chemists sell both tea and tobacco the additional 2d. per pound duty on tea, and the 4d. per pound on tobacco are not without interest, but the main impost which affects pharmacists is the extra 6d. per gallon on proof spirit (this raises the duty to 11s. per gallon). This will, of course, increase the prices of all medicinal spirituous preparations to the retailer, tinctures of 90 per cent. alcohol going up as much as 2d. per pound. This sum is one that the chemist cannot conveniently recoup from his customers, so he will have to grin and bear the tax himself. It is probable that a higher increase, that is to say, one that could have been charged to the public would have suited the chemist better. In agreement with the increased excise duty customs duty on imported articles has also been raised. On perfumed spirits the customs charge will now be 18s 1d. per gallon, an increase of 10d. The following import duties have also been raised:

	New Duty		Old Duty.		
	£	s. d.	£	s. d.	
Chloral hydrate.....per lb.	0	1	4	0	1
Chloroform.....per lb.	0	3	3	0	3
Collodion.....per gal.	1	6	3	1	5
Ether, acetic.....per lb.	0	1	11	0	1
Ether, butyric.....per gal.	0	16	5	0	15
Ether, sulphuric.....per gal.	1	7	5	1	6
Ethyl bromide.....per lb.	0	1	1	0	1
Ethyl chloride.....per gal.	0	16	5	0	15
Ethyl iodide of.....per gal.	0	14	3	0	13

Faculty of Physicians and Surgeons of Glasgow.—The teneventhary of this body was celebrated by a conversation on March 2, at which an interesting exposition of pharmaceutical products was arranged by Mr. J. McMillan, a local chemist. In addition to Mr. McMillan, Messrs. Armour & Co., Parke, Davis & Co., and Seabury & Johnson were among the exhibitors.

Southall Bros. & Barclay, Limited.—This well-known firm of wholesale and retail chemists of Birmingham, which was formed into a joint stock company two years ago, have just issued their statement of the results of last year's business; a profit of £11,365 was made, and a dividend of 10 per cent. will be paid.

GEORGE LAMPING, of Meriden, Conn., died on April 1. He was one of the best known and most popular druggists in his part of the State. He had conducted pharmacies in New Haven, New Britain and Meriden and had held several town offices in the last-named city. He was fifty-five years old and was a graduate of the New York College of Pharmacy.

A NEW CONTAINER FOR DRUG TRADE PRODUCTS.

Vacuum Jar—An Air Vacant Package—Its Uses and Advantages.

The Vacuum Can and Jar Co., of New York City, is bringing to the attention of druggists, manufacturing pharmacists and chemists a new container for the keeping of such products as deteriorate or evaporate upon contact with the air. This is the "vacuum jar," which was invented in Germany and patented there in 1893, and on which the American patents are owned by this company. The jar or "can" is made of glass in a great variety of shapes and sizes. It differs from the ordinary screw-top fruit jar in having a wedge-shaped top or mouth, over which is fitted a rubber band and a tin cap, the flange of which exactly fits the top of the jar. The rubber ring used on this jar, made of the best obtainable Para gum, differs from the flat rubber band used on the common fruit jar in being round like a bicycle tire. This fits into a groove in the top of the entrance of the jar. The adjustment of the cap is simple. The rubber band is put in place; the tire cap is clamped on with a steel spring; the air is exhausted from inside the jar, and all is done. The ordinary pressure of the atmosphere keeps the cap tightly in place, and makes of the "vacuum jar" an air vacant package which may be kept indefinitely and handled and shipped about like any other.

There are two methods of producing a vacuum in the jar. With cooked or heated products no air pump is needed. The product is poured hot into the jar. The cap is laid evenly on top, the spring clamped in place, and when cool the jar is sealed (by the contraction of the contents in cooling), and the clamp may be removed. For cold or dry products the filled jars are placed in a tank from which by means of an air pump the air is exhausted and at the same time taken from every package. A gauge attached to the pump registers the amount of vacuum secured. When practically all the air is withdrawn, as indicated by this register, the external air is let into the tank by opening a valve. Thus the cap on each jar is held firmly in place by the air pressure of 15 pounds to the square inch.

This jar has been gradually coming into more and more extensive use in the United States during the past five years. It is used to-day in many sections by housewives for "canning" and preserving fruits, etc., in place of the ordinary screw-top fruit jars. It is made easier to handle, easier to open, by prying the rim of the cap until the air is admitted, and is never broken by fermentation of the contents. It is being used also by manufacturers of food products for containing prepared vegetables and fruits of all kinds, bacon, jelly, milk, pickles, olives, cigars and a hundred other articles. The vacuum jar is being used extensively also in England, Germany and other foreign countries.

Its owners claim that this jar is the best package ever devised for containing medicated and antiseptic bandages, vaccine points, beef and other meat extracts, sterilized milk, milk powder, health foods, powdered drugs, in short a thousand and one products handled by the drug trade.

At the office of the Vacuum Can and Jar Co., No. 91 Hudson street, a reporter for this journal was shown a hundred or more vacuum jars of assorted shapes and sizes and containing a great variety of articles and preparations which had been kept in these jars without deterioration for two, three and four years.

George P. Johnson, treasurer of the company, said to the reporter:

"Our vacuum jar can be used for everything except raw meat and raw fruit. Certain germs will live in raw meats even if deprived of air. The advantage of this jar over every other in the market is that practically all the air can be extracted and a vacuum can be kept for any length of time. The jar is closed automatically and can be opened more easily than any other. The possibility of extracting all air from the package, instead of sealing with the product a portion of air, makes this jar invaluable for all purposes where it is desired to preserve a dry product or one that deteriorates on ex-

posure to the atmosphere. Extracting all air, instead of sealing with air inside, makes change of contents impossible."

BULLETIN OF THE LLOYD LIBRARY.

To make the valuable Lloyd library, at Cincinnati, more immediately serviceable, Messrs. J. U. and C. G. Lloyd have adopted the plan of reproducing a number of the rare works on pharmacy and botany on the shelves of the library in as nearly fac simile as possible, and will supply them to journals and societies, and also, at the nominal price of \$1 per issue to persons who wish them for their private libraries. The first of these Bulletins is now before us. It consists of a reproduction of "Collections for a Materia Medica of the United States" by Benjamin Smith Barton, published in Philadelphia, 1798 and 1804. This reproduction is accompanied also by a biography and portrait of the author. The second Bulletin will reproduce in full the first work on medicine published west of the Allegheny Mountains, "Peter Smith's Dispensary," of which but one copy is known to exist. The third Bulletin will reproduce the "Materia Medica Americana," of Schoepf, which was the first botanical work connected with American medicinal plants. Judging from this first Bulletin, which is gotten up in very handsome style, this departure of the Messrs. Lloyd will prove of inestimable value to pharmaceutical and botanical literature, by preserving and rendering more generally available the oldest and rarest works upon these subjects, which perhaps now are only to be found in the Lloyd library. Those interested in this Bulletin should see to it that their orders at \$1 each be sent in promptly, as when the edition is exhausted additional copies cannot be supplied, the reprints being made from type and no plates being preserved.

ROBERT CHRISTY.

The death of Robert Christy, president of the Western Pennsylvania Retail Druggists' Association, was one of the sad events in Pittsburg drug circles during the past month. His death resulted from a few days' illness of pneumonia, and was a severe shock to his family and friends. Mr. Christy had been a Pittsburger all his life, having been born in Pittsburg fifty-six years ago. He had a drug store in the borough of Carnegie, where he resided, coming up daily to his store at the corner of Smithfield street and Fourth avenue, which has been in operation for over twenty years. Mr. Christy is survived by his wife, Lydia Brown Christy, and seven children. He was held in high esteem by all who knew him and his death causes a loss to the community.

STATE OF TRADE.

Gradual Shrinkage in Volume of Business.

New York, April 10.—Fluctuations in prices during the past week were limited to a smaller number of articles than usual, and a gradual shrinkage in the volume of business has been a more or less prominent feature. The latter condition, however, is attributed to the waning season, and very little was heard in the way of complaint. The comparatively mild winter has, to some extent, curtailed the consumption of several commodities which find their largest outlet during cold weather, but in a general way the season has resulted satisfactorily.

Quinine has not received much attention from the consuming trade, but there has been considerable speculative activity, and several large parcels have changed hands, part at the full parity of manufacturers' quotations. Both domestic and foreign makers have turned down large orders which had a speculative tinge, and it is evident that the majority in the trade are of opinion that there was nothing substantial to warrant the recent break in values. There is a steadily growing belief that an early advance is inevitable in view of the generally strong statistical position of raw material, and confirmatory reports from abroad of continued light shipments of bark from Java. While it is true that the consuming demand is light, there is believed to be no doubt that the smallest pressure of orders from the regular consuming trade would cause a general advance by manufacturers.

There has been no further quotable change in opium, and no important improvement in demand, but the market has retained a firm undertone and holders are indifferent sellers. Morphine has remained nominally steady at advanced figures noted in last week's report. Cocaine is unchanged in price, but the undertone of the market is firm, and an early reaction is expected. Advice to hold are to the effect that all manufacturers of crude in South America have formed a combination for the purpose of restricting the output, and to prevent, if possible a continuation of the unprofitable business which has been in progress for several months. European markets in consequence are stronger, and in view of the fact that current quotations are below cost of importation, there is foundation for the expectation that values will shortly show improvement.

Cocaine is decidedly firm under the influence of reports from producing points, to the effect that the stock of raw material is very much reduced and higher in price. Domestic refiners of camphor have again advanced prices 1c. per pound, owing to steadily hardening foreign markets for crude, the available stock of which is said to be rapidly diminishing. Camphor monobrom. is correspondingly higher under the same influence.

Grain alcohol has continued to harden in price owing to the stronger position of corn and quotations of leading distributors have been advanced 1c. per gallon. Values of cacao butter declined slightly at the monthly sales in London and Amsterdam last week, and the spot market reports with reduced quotations for both bulk and cakes. Manufacturers of cream tartar have advanced their prices 1c. per pound, it having transpired that the outside stock is much smaller than had been supposed, and competition consequently was less keen.

Ipecac has reacted from the decline noted last week and values are again firm, mainly on account of improved conditions in the London market. Jalap is a shade easier under the influence of fresh arrivals from primary sources. Valencia saffron has moved only in a jobbing way, and a revision of prices shows a slightly lower range. Pomegranate bark of root is very scarce and holders of the limited stock are decidedly firmer in their views. Domestic flaxseed is again higher in sympathy with primary markets. Other changes of minor importance are a fractional advance in blue vitriol, due to scarcity, and a slight decline in blue Aleppo nutgalls.

General Sickness Brings Business.

Boston, April 7.—Notwithstanding that there is less sickness and fewer deaths reported this week than in some time past in this city, druggists have had a rather good trade. The jobbers and wholesalers are also finding business as lively as they could wish it, with plenty of orders coming in. Grip has diminished, as have diphtheria, scarlatina and others of the infectious diseases so prevalent in the last month. The death rate likewise has diminished, but so many people are still on the continent that medicines are still much in demand and have given considerable impetus to regular trade. In the drug market, quinine is scheduled for an advance, in sympathy with the strength just now of the bark. Opium shows poor prospects for future crops, so it is said. Carbolic acid is quiet. Cacao butter holds well, even though not especially active. Essential oils are in fair demand. Chemicals as a class are inactive, and prices change practically not at all, so little is the business being done. Cologne spirits and alcohols are selling pretty freely. Most of the dyestuffs and tanning materials are dull at this time. Waxes are in fair request.

Business in Philadelphia Still Bright.

Philadelphia, April 7.—The business prosperity of the Philadelphia drug trade is still at flood tide, and by the time that the ebb commences most of the members of the

YOU can conscientiously recommend Abbey's Effervescent Salt as a high-class remedy for the prevention and cure of Indigestion, Acidity, Bilioussness, Constipation and attendant ills, especially Headache.

"Abbey's" is a standard English preparation, prescribed and endorsed by physicians. It is a clean remedy, honestly advertised not an exaggerated statement entering into the literature of this Company.

N. B. Sizer, M.D., New York, states:

"I am glad to say I find Abbey's Effervescent Salt an excellent laxative and antacid. It gives good results in various forms of Dyspepsia and Constipation. I have always thought that the Effervescent salines were not half as well known and used, in this country, as they ought to be."

We should be glad to have you keep Abbey's in stock constantly as the demand will be continuous owing to our steady advertising

THE

Abbey Effervescent Salt Co.

9-15 MURRAY ST., NEW YORK CITY, N. Y.

Sold in three sizes, retailing at 25c. and \$1.00 per bottle.

Trade price-list on application.

trade will be thankful for a breathing spell and a little spare time in which to compute their profits for the business done during the past few months. The reports received show that the boom is not local, but general, and every druggist seems to be sharing in the present prosperity. Wholesale orders are just as numerous as last week, and a trifle larger if anything. Prices are unchanged, excepting a drop of 10 cents an ounce in morphine and its salts, due to the weaker condition of the opium market. Collections are still good, and it may be possible for some druggists to pay their outstanding obligations to begin to take advantage of cash discounts. Prescriptions are still on the increase, as grip is still prevalent. The outlook for the month of April is very encouraging at present, and that is enough to satisfy the most confirmed kicker.

Baltimore Business Brisk.

Baltimore, April 9.—The epidemic of grip and of diseases which attack the respiratory organs abated somewhat during the past week, and retail druggists were less busy as a consequence. But much sickness still prevails, and the drug trade is correspondingly brisk. The jobbers are all more or less busy, receiving many city and out-of-town orders, while the manufacturers of pharmaceuticals frequently work after hours to supply the increased demand for their goods. The retail chemists are moving quite freely, and the entire drug trade may be said to present satisfactory conditions.

Very Busy in Detroit Trade.

Detroit, April 7.—Promises of fine weather have kept the wholesalers busy getting out soda fountain supplies, and the retailers are busy preparing for the summer. Many will open up to-morrow for the summer's campaign. Last Monday and Tuesday were unusually good days in the prescription departments of the stores here. A sort of "rheumatic grip" came like a wave over the city, and hundreds succumbed. But warm, pleasant weather followed, and the kinks got out of shoulders and joints, and trade in the drug stores fell off quickly. Among the manufacturers, business is so good that they have an extra force on in every establishment, and the Saturday half-holiday is an impossibility just at present.

Trade Active in Chicago.

Chicago, April 7.—Business in Chicago this week among the jobbers and manufacturers has shown good average. No unusual markets were recorded, and the demand for all standard goods has been excellent. The retailers have been doing a fairly good business, and have enjoyed a full demand for seasonable goods, which in turn has reacted upon the jobbers. The usual spring goods are in full demand, and there is very little to be said save that trade is better than it has been for some time at this season.

Conditions Wholly Satisfactory.

St. Paul and Minneapolis, Minn., April 6.—Business in these cities continues wholly satisfactory. For the moment, prices have ceased to advance, but those who make a study of the situation confidently predict higher prices within a few months. The spring demand for goods used in building is very heavy, despite the fact that the expense of building has so largely increased. The extension of Twin City trade into new territory continues. Retailers report themselves very busy—seldom so busy and never busier. The weather is becoming warmer, and jobs are not so few. Some contractors running all winter are expecting to resume operations in a few weeks. Linseed oil has taken another jump—almost unprecedented—4 cents a gallon. The prices are now 65 and 67 cents, respectively, for boiled and raw, the highest prices known for several years.

Considerable Improvement in St. Louis.

St. Louis, April 7.—Country trade shows considerable improvement. The good weather of the past week has stimulated building operations, and caused renewed demand for paints, oils, etc., and general business is given an impetus by the improved conditions of country roads. Linseed oil is quoted 61 and 62 cents respectively for raw and boiled, an increase of 80 per cent over a year ago. The anomalous condition of P. & W. and foreign quinine ruling at the same price continues. Gum camphor advanced 1 cent this week. Country druggists speculated heavily on carbolic acid, and a number of them are now caught with one to two hundred pounds on their hands in the face of a declining market.

Druggists who make their own emulsions should have one of Hunter's Cyclone Emulsifiers. This machine has been in use for years, and there is nothing better on the market. It is cheap, easily worked and easily cleaned, and the price is only \$5. Particulars may be obtained by writing to the manufacturers, J. H. Day & Co., No. 14 Harrison avenue, Cincinnati, Ohio.

MARKET REPORT.

NEW YORK MARKET.

New York, April 10.—There has been a slight falling off in the jobbing demand, but that is usual toward the close of a season, and while there is a shrinkage in the volume of business, general results thus far appear to be of a satisfactory character.

OPIUM.—A continued firm feeling has prevailed, under the influences noted last week, but the movement into consuming channels has been light and unimportant. The ruling quotations for small lots are \$3.50@3.50 for 9 per cent, and \$3.45@3.60 for 13 per cent., the outside figures for single pounds.

POWDERED OPIUM.—Jobbers report a continued fair inquiry for small lots, and quotations are unchanged at \$4.50@4.65 for 13 per cent, and \$3.15@3.35 for 16 per cent., according to size of order.

MORPHINE.—Consumers are purchasing freely, and the market continues moderately active, with values nominally steady at \$2.50@2.50 for eighths in 2½-oz. boxes and \$2.35@2.55 for smaller quantities, according to brand. For lots of 10 ozs., a rebate of 10c. per oz. is allowed.

QUININE.—There are no new features, and the jobbing market remains quiet under a light consuming demand, with quotations steadily maintained at 3¼@3¼c. for bulk in 100-oz. tins, 3¾@3¾c. in 50-oz. tins and 38@38c. in ounces vials.

ALCOHOL.—Grain is again firmer in sympathy with producing markets, and jobbing quotations show a further advance to \$2.47@2.48 by the barrel and \$2.55@2.65 for less.

CREAM TARTAR.—Manufacturers' prices are higher, and jobbers have advanced quotations for powdered to 25½@26c. by the barrel, 24½@25c. in 50-lb. boxes and 27@28c. for less.

CAMPFIOR.—The available stock of crude is steadily diminishing, and values continue to harden. Refiners have advanced their quotations 1c. per lb., and the revised jobbing range is 37@38c. by the barrel, 38@38c. by the case and 62@67c. for less.

CAMPFIOR MONOBROM.—The market is stronger under the above mentioned influence, and jobbers have advanced quotations to \$1.90@1.85, as to quantity. Quinces are unchanged at 16@20c.

CITRATES.—A revision of jobbing quotations shows a reduction to 35@36c. for iron, 35@35c. for iron and ammonia and 36@36c. for potash.

SVAPNIA.—A firmer feeling has developed, and quotations in a jobbing way have been advanced to \$3.25 per oz. for crystals and \$8.50 per dozen for granular.

FLUXES.—Market quotations are higher, and jobbers have advanced quotations to 5½@6c. by the barrel and 8½@12c. for less.

FLAXSEED.—Primary markets continue to harden, and for jobbing quantities the revised quotations are 50@50c. for whole and 5½@7c. for ground.

VALENCIA SAFFRON.—Small lots are obtainable at \$14.00@15.50, and the market is slightly easier.

POKA PLANT BARK OF ROOT.—Owing to scarcity the jobbing quotations have been advanced to 35@40c.

CACAO BUTTER.—Jobbers have reduced their prices for Huyler's and Maillard's to 48@49c. by the box and 32@33c. for less.

PECCAC.—Values have reacted from the recent decline, and jobbers quote \$3.60@3.85 for whole, \$3.60@3.90 for ground and \$3.15@3.35 for powdered.

POKA PLANT BARK OF ROOT.—Owing to scarcity quotations to 45@50c. for Huanoec and 35@40c. for Truxillo. Ground 5c., and powdered 10c. additional.

CANELLA BARK.—The market is firmer, and jobbers have advanced their quotations to 16@20c. for whole and 21@25c. for powdered.

ALLSPICE.—The undertone of the market is strong, and jobbing quotations show an advance to 12@15c. for whole and 17@20c. for powdered.

Charged With Cruelty.

Pittsburg, April 5.—A sensation was created at Cumberland, Md., on March 27, when Mrs. Caroline Elliott filed a petition asking to be divorced from her husband, Dr. Edgar Elliott, a prominent South Cumberland druggist. The bill alleges cruel and brutal treatment, that he is squandering her property in gambling, and asks that he be restrained from interfering with her property. They were married in Alabama in 1890.

ERA WANT ADS.

If every reader of the Era knew the value of the little Want Advertisements which we publish every week, the page we devote to them would not be large enough to hold all that we would have to print.

These little cards can be used to great advantage by any druggist to dispose of his dead patent medicine stock. Many proprietary medicines which have a sale in one section of the country do not sell at all in other sections. If a druggist has goods on his shelves which he cannot sell, another druggist in some other State where there is a demand may be willing to buy them at a discount or to exchange them for other goods.

Perhaps the reader has an old soda fountain to dispose of; perhaps he wants to sell his store, and we occasionally hear of a druggist with enough surplus cash to invest in a second store. All of these wants can be satisfied if they are made known in the Era's Want Department, which is read by dealers in all parts of the country every week.

AN ASSOCIATION OF COLLEGES.

The proposition, originating with the Maryland College of Pharmacy, that during the meeting next month of the American Pharmaceutical Association there shall be held a meeting of delegates from all institutions teaching pharmacy, is a good one. The object is, through these delegates, to form an association of schools of pharmacy which shall formulate uniform rules and regulations to be adopted and observed by the several schools thus represented by delegates. It is to be hoped that this proposition will be more generally accepted and a greater measure of good follow than rewarded a similar attempt a number of years ago.

It is very necessary that the colleges of pharmacy in this country be placed on some plane of uniformity. At present the degree Ph.G. does not represent anything definite. Received from one college, it may be worth twice or ten times as much as if received from another institution. We need a uniform minimum standard in requirements for matriculation, of the curriculum, of qualification for graduation, and this minimum should be as high as the minimum of the best college, not the worst or the mediocre.

It is not to be expected or hoped that this uniformity can be attained immediately or even soon, but the first step can and should be taken. *Festina lente* must be the motto. There must be reconciliation of present existing differences between the colleges, concession here, compromise there, and the thing will take time and good common sense and judgment to effect. But it is bound to come, for the demand is created and growing among the rank and file of the pharmacists themselves, who feed and maintain the colleges, and the latter in self defense and self preservation must heed the demand.

In the discussion of late in these pages of the question of a college diploma as a prerequisite to board examination, the fact stands out very clearly that the level-headed, progressive pharmacists are going to insist, by legislative enactment, and soon, too, that the pharmacist of the future shall be a well educated man in his profession.

The proposition from Baltimore as a whole is to be heartily commended, though in my opinion a trifle "too previous" in the request that delegates be empowered to commit the institutions they represent to such rules and regulations as the convention may adopt. Few, perhaps none, of the colleges are quite ready to give delegates such power as this, but most or all, we are sure, see the need for the proposed association and will do what they can to help it along.

FORK UP.

If the N. A. R. D. is to succeed in its plans it needs the support of the entire retail drug trade; if it fails it will be because of the indifference of druggists to their own welfare and their disposition to quibble over the expenditure of money to carry on the work. There is hardly a druggist who will not willingly give up half a dollar for a few cigars, but when this sum is asked to enable a national association to work for promotion of the financial welfare of the trade collectively and individually, he hems and haws and often refuses to contribute. Associations and individuals ought not to hesitate in this way. The cause is a good one, worth a fifty-cent gamble, anyway. Read the president's appeal in a recent issue of this paper, then fork up promptly and liberally.

SHALL DELEGATES HAVE A HAND IN IT?

The argument, printed in this issue, from a present delegate to the U. S. P. Convention, urging that the next committee of revision have the co-operation of the delegates to the decennial convention in preparing the new pharmacopoeia, has considerable of common sense and plausibility to commend it. The writer makes out a rather strong case in support of the contention that the committee of revision, as now constructed, is not thoroughly national in character, that the pharmacopoeia is not truly national, that it does not represent the wishes and necessities of pharmacists and physicians at large.

He, however, is not quite sound on one point, in his evident belief that the committee acts without ascertaining the wishes of the rank and file. It is doubtful whether the delegates could add anything to the value and quantity of the material and suggestions received by the committee. There is hardly an association of pharmacists and physicians which does not have a committee on pharmacopoeia to send, and which does send, a lot of criticisms, suggestions and advice to the committee on revision, the aggregate being appalling in amount, and constituting a task for selection and harmonizing which is the committee's most arduous labor. Then there are the papers in the journals, the contributions direct of individuals, etc. The Digest of Criticisms gives a good idea of one feature of this work.

This is one, at least, of the objector's criticisms which can be readily refuted. What force lies in his general contention remains to be seen. The object of a small and select committee of revision is to facilitate rapid and effective work; encumber it with the necessity of advising and consulting with some two or three hundred delegates, the result might be the retardation of work, the decrease of efficiency, rather than the converse, as desired. Probably this whole question has been thoroughly threshed out in convention and committee in past years, and if so its

revival will not meet with serious consideration; but if, on the contrary, it is a new and radical proposition, of possible and probable utility, it will be given the necessary attention to secure adoption or rejection.

MEDICAL ETHICS AND ADVERTISING.

It is very hard for the managers and editors of medical journals who want to do the right thing to conduct their publications with due observance of medical ethics and business sagacity. Advertisements are needed to enable these journals to live, but ethics must be considered, and there are a good many advertisements which are, to put it mildly, decidedly unethical. The right-minded medical journal, therefore, in endeavoring to steer a safe course, is veritably between the devil and the deep sea.

There are some so-called medical journals which will take any sort of advertisements, of any kind of article, and, surprising it is, these journals have a very large following among supposedly ethical physicians. Then, too, there are journals whose editors, while wishing to do the right thing, are apparently ignorant of the true nature and value of the advertised article, and admit many to their pages which belong to the prohibited category. Way up at the top of the heap are some three or four medical weeklies, which, representing the best medical thought, profess to admit nothing in advertisements or reading matter of the objectionable variety. Even these top-notchers, however, make many mistakes in this regard.

While infallibility does not and never will characterize the medical editors in this judgment upon advertisements, yet it is refreshing to see that some are doing the best they can, and their best is something pretty good. A very frank statement appears in the editorial columns of a recent issue of the Journal of the American Medical Association, a journal which has never been altogether free from the taint mentioned. The Journal very succinctly states its policy with regard to advertisements, announcing that hereafter no proprietary medicine will be advertised in the Journal, unless accompanied by a statement showing the active ingredients it contains, and the amount of each ingredient to a given dose; that no proprietary medicine which is advertised directly to the laity will be admitted to the advertising pages of the Journal.

The Journal furthermore announces in a general way that the so-called new remedies, patented synthetics, will not be admitted to its pages, unless such products be of definite composition, the identity, purity and strength of which can be determined by physical and chemical tests. No compound nor mixture will be admitted if its composition or mode of manufacture is kept secret.

Our medical cotemporary is to be congratulated upon its outlined policy, but there is trouble ahead when it comes to deciding yes or no in many cases. Fake medicines have increased in number to an alarming extent, they

A TRAGEDY WITH A MORAL
(In Three Spasms.)

have found introduction to the medical fraternity through reputable journals, the doctors and the journals have been imposed upon by lying and preposterous claims, and something should be done to separate the black sheep from the white.

GINSENG CULTIVATION.

Ginseng is an article which has no value except to the Chinese, but with them has acquired a reputation for high efficiency, and this favor has resulted in making the article one of the most profitable of crude drugs. High prices are obtained for the root, even for a poor quality, while the best grades, according to the Chinaman's method of estimation, frequently assume a value which is almost fabulous. Besides the ginseng in the home market, the Chinese call upon the United States to supply a large proportion, and for many years past the root has been systematically gathered in the United States, and through Chinese brokers, particularly in New York, has been forwarded in large quantities to the Celestial Kingdom. The demand for the drug and particularly the high prices which the good grades command have stimulated Americans to inquire into the question of the profitable cultivation of ginseng for the Chinese market. Several individuals have made more or less successful experiments in this line, and of late a regular stock corporation has been formed for carrying on the industry in New York State.

ANHALONIUM ALKALOIDS.—In the heads of the Mexican cactus, Anhalonium Lewinii, several alkaloids have been found, anhalonine and three bases named by Heffter mescaline, anhalonidine and lophophorine. Dr. Kander found two other bases, which he named pelletine and anhalamine. Of these the following salts have been studied: Anhalonine hydrochloride cryst.; anhalonidine hydrochloride cryst., of the formula $C_{12}H_{16}NO_2HCl$; lophophorine hydrochloride cryst., $C_{12}H_{16}NO_2HCl$, which occurs in form of white, soft opaque needles, readily soluble in water. Mesalaine sulphate cryst., $(C_{12}H_{17}NO_2)_2H_2SO_4 \cdot 2aq.$ is in form of colorless leaflets, very soluble in hot, but sparingly soluble in cold water. (Pharm. Post.)

ACROLEIN is stated to be a powerful bactericide and a better antiseptic than formaldehyde. It is a liquid having a very pungent odor and is very soluble in water. (Pharm. Post.)

OUR LETTER BOX.

برای نظر

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THEY WISH TO BE INCLUDED.

Cincinnati, O., April 9.

Editor Pharmaceutical Era: We have been very much interested in the efforts the N. A. R. D. are making to stop the unprofitable cutting. We have for some time felt that the druggist was the legitimate channel through which to sell our face powder, and sometime since put our face powder on contract and are declining to sell any jobber who will not agree not to sell to cutters or to any retailer who does not maintain the price. We understand that the present movement relates only to proprietary medicines, and if we cannot be embraced in the general agreement between the three associations, we yet stand hand in hand with them and shall continue on our contract arrangement.

FREEMAN PERFUME CO.

W. D. Freeman.

EFFERVESCING FATTY OILS.—The idea of impregnating fatty oils with carbonic acid is due to the observation that nauseating remedies, when administered in combination with carbonated beverages are often rendered comparatively agreeable to the taste, for example, cod liver oil is readily taken by children in form of a carbonated emulsion. When cod liver oil is supersaturated directly with carbonic acid gas, a strongly effervescing liquid is obtained, which has only the oily, but not the acid and disagreeable taste of the original oil. The carbonic acid appears either to dull the sense of taste, or to form tasteless compounds with the constituents to which the unpleasant taste is due. Castor oil, olive oil, etc., may also be saturated with carbonic acid. The acid is absorbed by the oils the more readily, the more they are cooled. Oils of animal origin are more readily impregnated than oils from plant sources. Castor oil is the least of all susceptible to impregnation. (Apoth. Ztg.)

HORSE POWDER.—The Military Pharmacopoeia of Serbia gives the following formula: Sodium sulphate, 2 parts; sublimed sulphur, black sulphide of antimony, powdered juniper, powdered fennel, powdered calamus root, powdered gentian, of each, 1 part. (Drog. Ztg.)

REMOVAL OF IODOFORM ODOR.—Ricketts (Münch. Med. Wochschr.) proposes as the simplest and surest means thorough washing with soap, followed by rubbing with a small quantity of wine vinegar. (Drog. Ztg.)

(Continued from Page 389, April 12.)

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—The Question Discussed by Pharmacists, Clerks and Teachers.— Its Advantages and Drawbacks Contrasted.

Has Always Favored It.

My opinion on the desirability of college graduation as a prerequisite to examination by the Board of Pharmacy may be found in the proceedings of the American Pharmaceutical Association of 1892, page 327, where you will see that I was the first one to agitate this question. I have continued my agitation in every society and private circle wherever occasion offered itself, and the cause has gained a host of friends since then, so that now at least one-third of all the pharmacists of the United States are in favor of it.

It is simply a question of a few years when every pharmaceutical law will be changed so as to incorporate this clause of proper preliminary education, unless pharmacy is destined to cease to be a profession. The opposition to this necessary step is based on a peculiar misconception in the minds of most druggists, caused by a misconception of their dual position as business men and professional men. They try all kinds of combinations and unions and agreements to increase the profits on work that requires neither education nor experience, and is of the lowest commercial order, because, they say, we are professional men and should be rewarded as such. On the other hand, when it is pointed out to them that professional standing and claims require as a foundation professional education, they reply: "O, pshaw! professionalism! we are business men and need no college." In other words they attempt to make their professional standing an excuse for the mistakes made as business men, and vice versa.

Let us understand that as business men we must hustle and push like all other business men; that the handling of our merchandise is subject to the general laws of supply and demand, and that no amount of resolutions or combinations will alter these laws. Let us understand that if we wish to preserve our professionalism we must not stay behind other professions, but must demand of our apprentices and students a proper amount of knowledge and education. In the present state of science and professional requirements in every branch of knowledge no young man should enter pharmacy without a diploma from a pharmaceutical college, nor should anyone be allowed to enter a pharmaceutical college or be inscribed as an apprentice without having received an ordinary public high school education.

WILLIAM C. ALPERS, Se. D.

New York.

Salvation of Pharmacy Depends Upon It.

In expressing my views on "College Graduation as a Prerequisite to Board Examination," I would say that I am very strongly in favor of requiring the candidate to possess a diploma from a college of pharmacy of high standing and reputation among the pharmaceutical fraternity. I am and always have been an advocate of higher education and deem all the preparation obtained in the drug store and laboratory preparatory to pursuing a three years' course in a college of pharmacy not too much knowledge for the applicant to possess who presents himself to a State Board for a certificate to practice his profession. The college graduate is far superior to one who obtains his knowledge in other ways. To make a first-class pharmacist, one must possess a theoretical as well as practical knowledge of the sciences,

and this can only be obtained by submitting to the course prescribed by the prominent colleges of pharmacy throughout the country. The one-sided pharmacist must soon sink into oblivion. Again, the State Board should make the examination a very thorough one, and the members composing it should be pharmacists of high standing in their profession and such as would conduct the examination in such a manner that those who pass the same may be looked upon by the general public as being thoroughly competent to practice pharmacy. While this requirement might seem unjust to many worthy young men who are unable to secure a college graduation by force of circumstances, yet the same proposition confronts every young man who would practice any other profession for which a collegiate education is requisite and could be readily extended to this case. The tendency of the present time is to subject persons desirous of obtaining a profession to more requirements than heretofore, in order to prevent those from entering it who are entirely incompetent and ill-suited for the same; and the pharmaceutical profession is not free from these impostures. The salvation of pharmacy depends upon this prerequisite as the only means by which it may be rescued from its present state and be professionally and financially benefited. While this cannot be accomplished in a few months, now is the time for the pharmaceutical fraternity to unite and take steps to that end, that the profession may rank foremost among all others and its adherents be honored as they would justly deserve.

GEO. W. KENNEDY.

Pottsville, Pa.

Yes, But Five Years Hence.

My opinion in the matter of college graduation as a prerequisite to board examination is that such a law would bring an improvement in the qualification of pharmacists, but to force it at the present time would be an injustice to many hundreds of young men who have put in one, two or three years in drug stores with the expectation of passing an examination of a board of pharmacy. Very fair druggists are now produced by the aid of the Era Course in Pharmacy. Before the enforcing of a college diploma upon the applicant for board examination, the guarantee should be given that he will be protected in his rights to dispense medicine and not the physician. It has been said in the New York State Association meeting that the pharmacist should be placed on the same high pedestal as the physician, the dentist, the veterinary surgeon and the lawyer, and I endorse the sentiment, provided the same protection be given to the pharmacist as is given the gentlemen of the professions referred to.

To get the majority of those interested as near together as possible, doing justice to all concerned, I would suggest that a law be framed to make it mandatory that in five years hence the applicant for a board examination be in possession of a college diploma; at the same time a law should be passed which forbids anyone but as above licensed to keep a drug store or dispense medicine to the public, physicians not excepted, unless they reside in rural districts, in villages or towns of less than 1,000 inhabitants.

WM. MUENCH.

Syracuse, N. Y.

Advocates Bureau of Education.

As to the proposal to make a diploma from a reputable college of pharmacy a condition precedent to examination by any board of pharmacy, it seems to me there can hardly be two opinions as to the merit of that proposition. But there would inevitably be a great increase in the number of colleges going into the college business for revenue, and there comes the need of some sort of national control of the education of pharmacists; and if of pharmacists, why not also of physicians and lawyers? I suggest that the Bureau of Education at Washington be given enlarged powers, and a body be formed similar to the Board of Regents of New York State, which should have a supervision over the schools and colleges of pharmacy, and probably others as well, and that its certificate should define what constitutes a reputable college of pharmacy, after a thorough examination of its curriculum, charter, faculty, methods and facilities, and that this board should decide as to the chartering of any new schools. When some such idea is carried out, to be a registered pharmacist would be to be somebody.

But, on the other hand, the Supreme Court of the United States, if asked, would very likely have to decide that the law creating the National Board of Regents to supervise State boards of pharmacy was unconstitutional. So there you are.

THOS. D. McELHENIE.

Brooklyn, N. Y.

Certainly.

Your article on board examinations touches an interesting point just now. As a prerequisite to the board of pharmacy examination the board certainly should require that the candidate be a graduate of a reputable college of pharmacy. In this age, where States have had State laws for some years it is very doubtful whether any but a graduate, and a recent graduate, could pass the examinations, as they are harder every year. However, I doubt very much the advisability of enacting a law (especially in Indiana) compelling candidates to be graduates. Such rules should be adopted by the pharmacy boards.

One point not mentioned in your article is, no college should accept a student who is not a graduate of the common schools and who has not had at least two years' experience in a retail pharmacy.

H. E. GLICK.

Lafayette, Ind.

Not Practical.

College graduation as prerequisite to Board of Pharmacy examination is ideal, but until the law that prescribes certain standards of qualification, provides educational facilities for the obtaining of such a degree, it is not practical.

ALBERT E. EBERT.

Chicago.

SOLUTION OF CALCIUM GLYCERINOPHOSPHATE.—Because of the sparing solubility of this substance the following convenient method is proposed to obtain a satisfactory solution: 10 parts of neutral calcium glycerinophosphate are triturated with 80 parts of water at 40° to 50° C. and the hot solution mixed with a hot solution of 3 parts of tartaric acid in 10 parts of water. The precipitate of calcium tartrate is filtered off. 5 parts of cherry laurel water added to the filtrate and the liquid brought to 100 parts with water. This solution may be used for preparing the syrup of calcium blycerinophosphate. (Pharm. Post.)

Mamma—What is Willie crying about?

Bridget—Shure, ma'am, he wanted to go across the street to Tommy Green's.

Mamma—Well, why didn't you let him go?

Bridget—They were havin' charades, he said, ma'am, and I wan't shure as he'd had 'em yet.

"I feel as if I had wheels in my head!" groaned the man.

"It must be the truck you ate for dinner," rejoined his wife, innocently enough.

IS THE UNITED STATES PHARMACOPOEIA A NATIONAL WORK?*

By A. L. LENGFELD, M. D.,

Professor of Materia Medica and Medical Chemistry (Medical and Dental Departments, University of California, 1882-1899); delegate to Pharmacopoeial Convention, 1890 and 1900; member American Medical Association, etc.

The Pharmacopoeia of the United States was certainly intended to be a National Pharmacopoeia by those who originated the idea, and for the first few decades it probably was. Later we find that it practically was a Philadelphia work, Drs. Wood and Bache, of Dispensary reputation, and their Philadelphia friends being the actual revisers of the Pharmacopoeia. This continued until after the publication of the Pharmacopoeia of 1870, when criticisms both by physicians and pharmacists showed that the work could not be considered a national one—that many physicians did not even know of its existence and not one pharmacist in fifty had it on hand or even made use of it, its use being entirely displaced by the Dispensatories.

At this time Dr. E. R. Squibb thought it well to take action, looking to again making the U. S. P. what it was intended to be—a work of all sections and for all sections—a national work. Through his efforts and the discussions brought about by him in the various medical and pharmaceutical associations and in the professional journals, the largest and most enthusiastic number of delegates ever before assembled met in Washington in May, 1880. After much excited discussion and considerable politics the U. S. P. was lifted out of the Philadelphia rut. The Committee of Revision, elected by that convention, published a Pharmacopoeia of which for the first time in nearly half a century American physicians and pharmacists were proud, and which they consulted and used.

When the convention of 1890 met the delegates were as enthusiastic and as numerous as those of 1880. In accordance with the instructions given to the Committee of Revision of 1880, they presented a general scheme for the guidance of the Committee of Revision of the U. S. P. of 1890, and with but slight changes the delegates adopted these suggestions. When the U. S. P. of 1890 was published it was a disappointment like so many published before 1880. It could hardly be considered a national work; it was neither abreast of the times nor of any particular value or use to the practicing physician, while the practicing pharmacist could derive all the knowledge which could be gleaned from it and much more from the various Dispensatories. The cause of this sudden relapse may perhaps be explained when we analyze the constitution of the Committee of Revision and the method in which their work was done. Not that their work was not only well done and perfect and their intentions strictly honorable and honest, but following in the groove of preceding committees they erred and failed in their object—that of making the Pharmacopoeia a work suitable for the entire nation, equally invaluable to physician and pharmacist alike.

The delegates to the convention of 1890 represented at least fifty-eight (58) pharmaceutical and forty-five (45) medical bodies; the Committee of Revision as elected consisted of thirteen (13) pharmacists, either in active practice or professors in colleges, while of the thirteen (13) physicians only nine (9) were in active practice. Of these twenty-six (26) the hold-overs were eleven (11) in number. Twelve (12) members were representatives from the cities of New York and Philadelphia, while nine (9) were from Boston, Chicago, St. Louis and Washington. We furthermore find the entire delegation from the College of Pharmacy of New York (3), the entire delegation from the St. Louis Medical Society (2), and two (2) of the three (3) delegates from the Philadelphia College of Pharmacy on this committee. As a result we find that of the hundred and three (103) organizations and the more than two hundred (200) delegates present,

*Read at a meeting of California Academy of Medicine, March 27, 1900, and specially contributed to the Era for publication.

the disproportion of representation of certain bodies on the committee of twenty-six (26) was so great that three (3) associations were represented by seven (7) members, while the cities of New York and Philadelphia supplied twelve (12).

Can such a committee be fairly considered a national one? Would a convention nominating the president and vice-president of the United States, of which three (3) cities and three (3) clubs held the majority be considered as expressing the national opinion? Were Congress to instruct a committee in a general way regarding the laws it should enact and if then that committee, without ever again consulting the body that created it, should enact and enforce those laws—could such legislation be considered national?

Yet that is just what the Committee of Revision have been accustomed to do. Their work is theirs and theirs only; no delegate is ever consulted, no opinion is ever asked, either from the delegate or the body he represents, and yet when the Pharmacopœia is published the delegate shares in the praise or blame even though he has had no more to do with it than any one of the forty thousand pharmacists of this Union who have never attended a convention and perhaps never expect to.

Why come from the Golden West or the Sunny South to attend a convention when the work is done by a few Eastern cities? Cities whose representatives are so fully satisfied of their ability to do the work for the entire nation that the necessity of calling upon the West, the North or the South as to their wants appears to them superfluous. These sections are not asked for their views or their criticisms, nor is it deemed necessary during the whole decade to send a single circular, criticism, inquiry or letter of any kind to any of their delegates. Even the courtesy of sending to the delegates a copy of the "Digest of Criticisms" or the pamphlet on "Reagents and Volumetric Solutions" or a circular letter announcing the publication of the Pharmacopœia is forgotten. Why, then, have this decennial convention if the representatives from all over this Union are merely intended to give tone and prestige to the work of a few? Surely the work of these few, no matter how good it is—and it is a good work—cannot be considered a national work, good for all sections of this country.

The delegates do represent the entire country; the committee does not. Would it not be wise for the committee to consult with the representatives occasionally; would not their suggestions help to make the book a better and greater national work? Would it not keep up and renew interest in the Pharmacopœia, making it a work better known and more frequently consulted? Would not the ordinary courtesies which every committee shows to the body which it represents bring about an esprit de corps between the committee and the delegates which could but make the influence of the U. S. P. more universal and more potent?

All are willing to admit that the East furnishes the best material for the scientific work and that comparatively close proximity of residence may be requisite for the successful work of the committee, but even this should not prevent the committee from asking and, without doubt, obtaining practical advice and opinions from other sections. Such consultations will cause neither waste of time nor delay in publishing the U. S. P. and will make every delegate a working member of the convention. It will appeal to his pride and will make him as enthusiastic a supporter and exponent of the Pharmacopœia as the most ardent worker of the committee. The work of the committee need not be curtailed, nor its powers abridged by any action looking to consultation with the delegates. The delegates also will feel that their work is not done by merely visiting the beautiful city of Washington, spending a few hours in the convention and many more in sight-seeing, but that with the meeting of the convention their work only begins, to continue at least a decade.

Printing is cheap, postage is inexpensive, and with the facilities on hand there can be no reason why the method followed both by the Committee of Revision of 1880 and that of 1890 cannot be extended to include all the delegates. We find "that owing to the distances separating the members of the committee, the interchange of discussions and arguments and the voting on

motions and propositions were carried on by circulars." The committee of 1890 printed and distributed two hundred and fifty-three (253) circulars amongst its members. Would the sending of one to each delegate as well have seriously delayed the work or increased the expense? Many an idea, many a suggestion can be secured in this manner which cannot be obtained by any other means, and when completed, the U. S. P. would be to all intents and purposes the work of delegates from the entire Union and not merely the work of a small coterie of Eastern scientists.

RESOLVED, That the Committee of Revision be instructed to mail to every delegate of this convention a copy of every circular, document, etc., issued by them, with a request that the delegate reply to same.

RESOLVED, That the Committee of Revision be requested to take cognizance of the answers so received before taking final action on any subject.

THE NEWCASTLE APOTHECARY.*

A member of the Æsculapian line
Lived at Newcastle-on-the-Tyne,
No man could better gild a pill,
Or make a bill,
Mix a draught, or bleed, or blister;
Draw a tooth out of your head,
Or chatter scandal at your bed,
Or spread a plaster;
His fame full six miles round the country ran
In short, in reputation he was solus:
All the old women called him a fine man—
His name was Bolus.

Benjamin Bolus, though in trade
(Which oftentimes will genius fetter),
Read works of fancy, it is said,
And cultivated the "belles lettres."
Bolus loved verse and took so much delight in it,
All his prescriptions he resolved to write in it.
No opportunity he e'er let pass
Of writing the directions on his labels,
In dapper couplets like Gay's Fables—
Or rather like the lines in Hudibras.

He had a patient lying at death's door,
Some three miles from the town—it might be four—
To whom one evening Bolus sent an article
In pharmacy that's called cathartical.
And on the label of the stuff he wrote this verse,
Which one would think was clear enough and terse:
"When taken,
To be well shaken."

Next morning early Bolus rose,
And to the patient's house he goes upon his pad,
Who a vile trick of stumbling had;
But he arrived and gave a tap—
Between a single and a double rap.
The servant lets him in, with dismal face,
Long as a courtier's out of place,
Portending some disaster,
John's countenance as rueful looked—and grim—
As if the apothecary had physicked him,
And not his master.

"Well, how's the patient?" Bolus said;
John shook his head.
"Indeed! Hum! Ha! That's very odd!
He took the draught?" John gave a nod.
"Well? How? What then?—Speak out you dunce!"
"Why then," says John, "we shook him once."
"Shook him! How? How?" friend Bolus stammered
out,
"We jotted him about."

"What, shake the patient, man!
Why that won't do."
"No, sir," quoth John,
"And so we gave him two."
"Two shakes! Oh, luckless verse,
"Two would make the patient worse!"
"It did so, sir, and so a third we tried!"—
"Well, and what then?"
"Then, sir, my master died."

FOR THE EXAMINATION OF MEDICINAL SOAP
SOAP Jonescu (Rev. Med. Pharm.) give the following tests: (1) The soap must dissolve in water without the separation of oily drops (unsaponified fat). (2) It should be soluble in double the quantity of alcohol without leaving more than traces of residue (starch, kaolin, sodium silicate, etc.). (3) The alcoholic solution, when acidulated with hydrochloric acid, should give no flocculent precipitate (resin soap). (4) A solution of 10 Gm. of the sample in 30 Cc. of alcohol should remain clear after addition of 0.5 Cc. of normal hydrochloric acid and further addition of a drop of phenolphthalein should not produce a red color (free alkali). (Ztsch. f. Pharm.)

*J. A. S. Woodrow, Roxbury, Mass., sends this copy of some lines in an old book in his possession.

(Special to the Era.)

THE OPENING OF THE PARIS EXPOSITION.

Paris, April 3, 1900.

April 14 has been officially fixed as the date for the formal opening ceremony, and by the time these lines appear the New York daily press will doubtless have published fully detailed cablegrams describing the function. The principal features are to be a meeting in the vast Palace of Petes, in the Champ de Mars, built to contain 20,000 persons. Here President Loubet will declare the Exhibition open. The cortege will then pass through the Champ de Mars to the river and take steamboats along the Seine, where the buildings of the Street of Nations, Old Paris, the Palace of Congresses, the Horticultural building, and the Paris Municipal building form charming riverside groups. The disembarkation will take place at the noble "bridge of Alexandre III.," now being completed, and a visit to the Fine Arts buildings will bring the President to within a few minutes of his official residence. These leading features of the Exhibition were illustrated in the Era several months ago, but the

Street of Nations

may now be definitely summarized, as it will evidently form one of the most attractive and picturesque groups of the Exhibition, happily placed as it is, between two bridges, on the bank of the Seine. Very varied and often characteristic, is the architecture displayed in each pavilion; the Italian roomy, florid and artistic; the United States vast and imposing; the Hungarian bizarre and picturesque; the British small and homelike, somewhat dwarfed by its tall Belgian neighbor (a gem of Flemish Renaissance, the reproduction of the Town Hall of Audenarde); the Spanish semi-Moorish, handsome and spacious; the Norwegian a wooden chalet; the Swedish, also timber built, but of fantastic and extraordinary design. The German pavilion is characteristic of that nation; Greece, Servia and Roumania have buildings where the Byzantine style of Oriental Europe can be plainly traced.

Will All Be Ready

in a fortnight's time? is everywhere asked and nowhere answered. Mr. Picard and his assistants must certainly be complimented on the wonderful progress daily made, and it seems highly probable that the exterior of the buildings will be practically completed. But with regard to the interior, and more particularly the completion of stands, etc., it is evident there will be some laggards as usual. The railway depots are blocked with goods sent at the last moment ('twas even thus at exhibitions), and the workmen, daily pouring in from all countries, often stand idle awaiting the arrival of cases, for steam and horsepower have their limits when delivery is concerned.

A Visit to the Galleries

Is the Parisians' favorite distraction just now, for it has all the charm of the undress rehearsal of a play that one's friends have not yet seen. And as fitting up is in full swing, the workmen themselves are a feature of interest, the lively Frenchman and the pensive Russian, the active American and the patient German, the bluff Englishman and the swarthy Italian, not to speak of the Orientals of various shades in the Colonial Section, another charming corner of the Exhibition which it is yet too early to describe.

THE CHEMICAL AND PHARMACEUTICAL GROUPS AT THE EXPOSITION.

The space allotted to foreign nations has in many cases been very actively taken up, and I hope to give a full description of these exhibits very shortly after the date of the opening ceremony.

English and German.

In the English section the soap and varnish makers are, as usual, well to the fore, and the alkali industry has an important stand. The individual character of this nation is emphasized by the contrast of the German section, just opposite, which is distinctly collective in its nature, and forms a striking and harmonious whole. Just behind the chemical exhibit is a German perfumery court, which is evidently organized on the same co-operative principle. The other nations are as yet scarcely forward enough to say much, but

The United States

do not seem to have been as well placed in this section as in some others. In the Invalides (furniture and decoration) for instance, the American court is centrally located, spacious and particularly elegant, as well as being one of the most advanced. Here, in the chemical section, the first floor gallery over which the stars and stripes float, is yet practically untouched, and not particularly well situated.

The French Chemical Section

is at present an extensive, but entirely unoccupied, floor space. I have, however, been able to obtain some advance information from Professor Troost, of the Sorbonne, who is chairman of the committee for this group.

Much of the French ground floor space, he tells me, has been taken up by an important papermaking exhibit, leaving about 27,000 square feet for some 400 chemical and pharmaceutical exhibitors. On the ground floor the paraffin industry and the manufacture of stearine candles will be very fully represented. In this latter case, M. Picard's idea of showing the raw material, the process, and the finished article side by side will be practically carried out.

In the galleries, Poirrier, of St. Denis, will make a fine show of chemicals, Lorilleux of inks, and others of aniline dyes and products, blacking, varnishes and pharmaceuticals.

Electric power is conveyed underground throughout the Champ de Mars; the generating machinery lies between the Chemical Court and the Palace des Machines. Among the

Members of the Committee of Organization

for the French Section are M. G. Lefebvre, president of the Paris Syndicate of Chemical Manufacturers; M. Adrian and M. Champigny, well known to all pharmacists here; M. Buchet, of the Pharmacie Centrale; M. Lorilleux, the ink maker already named, and the heads of some large Marseilles soap firms. M. Guimet (chemical manufacturer) and Mr. Debuchoy (a wholesale pharmacist) have organized the Retrospective Section.

M. Guimet

is a man of many parts; son of the inventor of the ultramarine blue industry, a practical chemist and business man, a great oriental traveler and curio collector, a philosopher, a musical composer, the founder and director of the Paris Museum of Oriental Art and Religion, and last, but not least, a capital organizer and indefatigable worker. I found him in his office at the Guimet Museum, a handsome room hung around with sketches made by Regamey when he visited Japan with that artist, the statue of the "Great Gawd Budd" being in the place of honor on the chimney-pace.

The History of French Chemical Progress

since the time of Lavoisier would, he explained, be illustrated by laboratory apparatus and finished products, and (in the case of deceased inventors) by portraits, note books of experiments, correspondence, etc. The scientific schools and faculties, both in Paris and the provinces, have been drawn upon, and many private collections have also been placed at M. Guimet's disposal by their owners.

This retrospective exhibit will occupy the center of the French chemical section, and will be chronologically arranged as far as possible. This idea of a collection illustrating the progress of each industry will be carried out in other groups of the 1900 Exhibition where practicable.

THE TREATMENT OF ALCOHOLISM.—Dr. C. W. Hidden (Medical Brief) reports very great success with a mixture of which the base is a strong fluid extract of powdered cinchona rubra, to which are added, with a due regard to dosage, avena sativa, nitrate of strychnine, and tincture of capsicum. The usual time of treatment is about three weeks. The patient must not drink while taking the remedy. The desire for drink, the author says, begins to fade away on the fourth day. In one week there is complete absence of desire, and the patient begins to feel like himself. The improvement is most marked. The remedy is prepared fresh for each case. A second bottle is rarely needed, so complete is the killing of the appetite.

PROPOSED CHANGES IN PATENT AND TRADE-MARK LAWS.

To the Commissioners appointed to revise patent and trade mark laws of the United States:

Gentlemen: The chairman of the Committee on Trade Marks and Patents of the National Association of Retail Druggists has the honor to submit to you for your consideration an account of the unjust features of the present trade mark and patent laws, in so far as they affect the pharmaceutical trade of this country. He trusts that the very apparent evils that have resulted and are continuing under the present law will furnish a compelling and irresistible argument to your commission of the urgent necessity for revising the existing trade mark and patent laws, so that the ends of fairness and justice may be forwarded and secured. Our objections against the unjust features are as follows:

1. To the patent laws in that they grant
 - (a) monopolies on the drug itself, thereby stifling invention and encouraging exorbitant prices.
 - (b) too liberal concessions to foreigners.
 - (c) their laxity.
2. To the trade mark laws in that they grant
 - (a) trade marks on the name of the article.

I.—Patent Laws.

(a) The present patent laws are supposed to grant a limited monopoly to the inventor as a reward for the good that his ingenuity and labor have conferred on the people at large; often this reward is out of proportion to the deserts of the inventor, for by granting letters patent on the article itself and not on the process of manufacture only, we stifle the inventive energy of this country and deprive the community of the additional benefit that would accrue by reason of the cheapness and improvement of the article itself through the discovery of improved and more economic methods of manufacturing; hence the monopoly is too extensive and stimulation of personal greed results as opposed to the general good. The classes and not the masses are directly and indirectly benefited, exorbitant prices are demanded and exacted. An illustration of this fact may be adduced from the well-known medical remedy, Antipyrine, which, when under the protection of our patent laws, that throw too many safeguards around the article instead of the process of manufacture, retailed for one dollar and a half an ounce, since expiration of the patent the same article may be bought for eighteen cents an ounce.

(b) Foreign countries, viz., Argentina, Austria, Belgium, Bolivia, Denmark, France, Germany, Hungary, Italy, Japan, Norway, Portugal, Russia, Sweden, Turkey, Uruguay, do not grant patents on medicinal preparations and chemicals; some grant the patent on the process only—not on the product; surely our country, which makes the proud boast of encouraging and protecting home industry, should not be less solicitous of its citizens' welfare than the countries already enumerated. Some of these countries compel the inventor, as a condition upon which the patent is granted, to manufacture the article within the confines of the country; that grants the letters patent; we do not, and the result is that an article patented in this country may be manufactured in another country and imported, much to the detriment of our home industries; here again the general good is ignored and private gains augmented. Protection to other industries has produced such good results that to-day they are exporters instead of importers, while in the drug industry the opposite obtains, owing to the fact that our government grants, by the present patent laws, more concessions to foreign countries than it will give to us.

(c) It is a notorious fact that many letters patent are granted on drugs and chemicals that cannot substantiate their claims of conferring additional good on mankind. This is due to the laxity of our present patent laws and to the failure of proper investigation and experimentation being instituted to attest these claims; the average time given to the consideration of an application is not sufficient to fully establish the merits or demerits of the invention.

The remedy we desire is:

First. That adequate time be given to investigate

the merits claimed by the inventor, so as to demonstrate that it is novel and thereby confer additional good on the country at large.

Second. Patents should be granted on the process only—not on the product.

Third. Articles made according to the process patented must be manufactured in this country.

Fourth. No foreigner be granted greater privileges in this country than are given to him by his own.

As an alternative for second, we desire that the revised patent laws forbid the granting of letters patent on medicines as that term is understood in the art of healing.

II.—Trade-Marks.

The predominant iniquity of our present trade mark laws is that they secure to the owner a too exclusive right to the name of the article. This name might be a word coined by him, or one or a combination of two or more words in ordinary usage. They allow possessors of patents to continue the life of the monopoly granted by the letters patent by claiming a perpetual protection by reason of their registered Trade Mark or Trade Marks.

Remedy:

(a) No trade mark be granted on a name or combination of names, coined or otherwise.

(b) That the trade mark rights be confined entirely to brands, symbols, signs and devices.

In conclusion, the Chairman of the Committee on Trade Marks and Patents of the National Association of Retail Druggists prays the Commissioners appointed under the Act approved June 4, 1898, to revise and amend the statutes relating to patents, trade marks and other marks and trade and commercial names; that they give due consideration to the argument briefly stated by him against the iniquities of the present Patent and Trade Mark laws, as they affect the pharmaceutical industry of this country. He cannot too strenuously emphasize his objections to the injustice of granting patents on the product instead of the process, and of trademarking the name instead of the sign, symbol or device distinguishing the brand. "Charity begins at home"; under the present Patent and Trade Mark laws we have gone abroad to dispense the good that we should have to foreigners who will not grant to us equal if not similar benefits. The reciprocity that now obtains puts us at the mercy of the foreign manufacturer; most exorbitant prices are demanded and received, against which the present laws contain no remedy. The Chairman of the above named committee further prays the Commissioners that the results of their revision shall be such that amelioration of the present dissatisfaction and unjust conditions will ensue in the event of its acceptance and passage by Congress, so that an everlasting benefit may be conferred on the sick, sore and afflicted citizens of these, our United States. He asks this as the representative of thirty-eight thousand (38,000) retail druggists of the United States, who voice their wishes with the power that unity of organized effort gives, and who are determined to agitate these measures for relief until Congress shall see the justice of their demands.

JOHN C. GALLAGHER,

Chairman.

Committee on Trade Marks and Patents of the National Association of Retail Druggists.

HÆMATOGEN AROMATIC.—To a solution of 200 parts hæmatogen sicc. in 1,000 parts of cold water is gradually added a mixture of 300 parts alcohol, 300 parts simple syrup, 3 parts aromatic tincture and 20 parts tincture of vanilla. The liquid is allowed to stand 4 to 5 days before filtering. (Pharm. Post.)

HÆMATEIN, $C_{22}H_{12}O_6$, is an oxidation product of hæmatoxylin. It is brown and dissolves in most ordinary liquids. Its application is that of a staining agent in microscopy, combined with ammonia. (Pharm. Post.)

AQUEOUS EXTRACT OF CLOVES has been proposed to remove spots from the cornea. It is a thin liquid obtained from the buds of *Caryophyllus aromaticus*. (Pharm. Post.)

SYNTHETIC CHEMICALS UNDER THE WAR REVENUE ACT*.

By C. A. CRAMPTON and F. D. SIMONS.

Schedule B, of the War Revenue Act, provides for a stamp tax upon medicinal proprietary articles and preparations, as follows:

"Medicinal proprietary articles and preparations: For and upon every packet, box, bottle, pot or phial, or other inclosure, containing any pills, powders, tinctures, troches or lozenges, sirups, cordials, bitters, anodynes, tonics, plasters, liniments, salves, ointments, preparations, waters (except natural spring waters and carbonated natural spring waters) essences, spirits, oils and all medicinal preparations or compositions whatsoever, made and sold, or removed for sale by any person or persons whether, when in the person making or preparing the same has or claims to have any private formula, secret or occult art for the making or preparing the same, or has or claims to have any exclusive right or title to the making or preparing the same, or which are prepared, uttered, vended or exposed for sale under any letters patent or trade mark, or which, if prepared by any formula, published or unpublished, are held out or recommended to the public by the makers, vendors or proprietors thereof as proprietary medicines, or medicinal proprietary articles or preparations, or as remedies or specifics for any disease, diseases or affection whatever affecting the human or animal system."

This is seen to be a comprehensive list, covering quite thoroughly the entire field of pharmaceutical preparations.

Section 20 of the law, however, containing the penal clause, has also a proviso which makes certain exemptions from Schedule B, and at the same time extends the scope of the law, as follows:

"*Provided, That no stamp tax shall be imposed upon any un-compounded medicinal drug or chemical, nor upon any medicine sold to or for the use of any person which may be mixed or compounded for said person according to the written recipe or prescription of any practicing physician or surgeon, or which may be put up or compounded for said person by a druggist or pharmacist selling at retail only. The stamp taxes provided for in Schedule B of this Act shall apply to all medicinal articles compounded by any formula, published or unpublished, which are put up in style or manner similar to that of patent, trade-mark or proprietary medicines in general, or which are advertised on the package or otherwise as remedies or specifics for any ailment, or as having any special claim to merit or to any peculiar advantage in mode of preparation, quality, use or effect."

It will be seen that the first paragraph of this proviso has the effect of restricting the scope of Schedule B; first, by exempting un-compounded drugs and chemicals, and, second, by exempting compounded preparations when prepared by direction of a physician. The last paragraph, on the other hand, extends the scope of Schedule B, by applying it to preparations which, though not patent, trade-mark or proprietary medicines, are "put up in style or manner similar to proprietary medicines in general."

The first regulations issued by the Commissioner of Internal Revenue in execution of the Act made no attempt to define what was or was not an "un-compounded drug or chemical," the ambiguous character of this term having been early recognized. In fact, this question was not raised, the earlier contentions in regard to the scope of the law having been mainly with pharmacists and pharmaceutical manufacturers over the interpretation of the phrase, "put up in style or manner similar to patent, trade-mark or proprietary medicines in general."

Several months after the law was in operation, some of the importers of the class of medicines known as patented synthetics made a move upon the Internal Revenue Office, claiming exemption for their medicines as un-compounded chemicals, and rebate of tax upon such as had been sold. The Commissioner refused to so consider them, and the contention was taken into court upon a sort of an agreed case, the proceedings being in the nature of an action *in rem* against twelve articles of this class, *viz.*, aristol, phenacetin, europen, piperazine, protargol, isosphan, lycetol, sulphonal, tannigen, tannipen, trional and salophen, all products of the Farbenfabriken of Elberfeld Co. A jury trial was waived and testimony taken before the District Judge of the Southern District of New York.

It was admitted that the articles in question were trade-marked or patented, or both, but it was claimed

that they were exempt under the proviso, as un-compounded chemicals.

A large number of experts testified in the case, including persons prominent in chemistry, pharmacy and medicine. By these experts, the importers aimed to show that while the articles in question were known as chemical compounds, they were not compounded in the sense in which the word is used in medicine and pharmacy; that, while composed of different elements, these elements were combined in such a way that the constituents had lost their individualities, while the compound acquired a being or individuality entirely its own, with characteristics and properties peculiar to itself and distinct from other compounds—different and distinct, also, from the properties of the various constituents of which it was composed. In pharmacy, on the other hand, it was shown that *compounding* is understood to mean the mechanical mixing of two or more different substances where no chemical union takes place, the resulting compound having no distinctive features peculiar to itself, but retaining the characters of all its constituents.

The Government, while admitting in general the contentions above stated, argued that the design of Congress was to tax, primarily, *proprietary* medicines, even to the extent of including medicines which imitated or counterfeited proprietary medicines; that this object would be defeated if the desired construction was placed upon the law, as it would result in relieving a medicine which could be designated as an un-compounded chemical from any restriction whatever, so that quinine, for example, could be sold unstamped as "Smith's Ague Cure," or under any patent or trade-mark designation, so long as it were unmixed with other substances. Moreover, Congress deals with broad and general meanings, and could not be expected to note such delicate distinctions as that between *chemical* compounding and *pharmaceutical* compounding, between cohesion and chemical attraction. The court upheld the technical construction of the law, and decided the articles in question to be exempt from tax. The decision (published as Treasury Decision No. 20,634; 91 Fed. Rep., 608), is quite a clear and comprehensive discussion of the disputed points, and marks out, with a considerable degree of exactness, the distinction between a *compounded* and *un-compounded* chemical basing it entirely upon the question whether the substance in question is or is not a distinct chemical species unmixed with any other substance. It is worthy of note, however, as an indication of the difficulty experienced by a layman in dealing with the extensive field of substances used in medicine, that Justice Brown, in his decision, classes *opium* with quinine as a chemical compound, while he puts *alkaloids* along with the tinctures, extracts, etc., in the category of pharmaceutical compounds. Little light is thrown upon the more difficult question of the definition of an un-compounded *drug* as distinguished from an un-compounded *chemical*.

The decision was accepted by the Commissioner of Internal Revenue, and regulations issued in accordance therewith, providing for the submission, in the case of an article claiming exemption, of a sample for chemical analysis or examination, the result to govern the action of the office in the premises.

These samples have occupied a large share of the time of the Chemical Division of the Internal Revenue Office during the past year, the analytical work having been performed chiefly by Mr. Simons. A complete ultimate analysis was not found necessary in any case, the estimation of the nitrogen in bodies containing it, of halides or metallic bases in others, together with the determination of melting points, solubilities and other characteristics, usually serving to establish the identity and individuality of a chemical, although it will be seen that each sample required a separate investigation and study, in some cases constituting quite a puzzle, as chemical literature is very scant concerning them. The work has been interesting in many ways, however, more particularly on account of the interest attaching to the preparations as representing the products of the skill of the synthetic chemist.

It would be highly interesting, no doubt, to make a study of the class from any one of three different points of view, of the chemist, the pharmacist or the physician, but such a presentation of the subject would be entirely

*A paper read before the Washington Chemical Society, February 8, 1900.—Am. Jour. Pharm.

outside the limits of our time, and we aim to give you to-night only a general idea of the work we have been doing. Most of you are doubtless aware of the marvelous rapidity which has marked the development of the use of this class of remedies in medicine, and the consequent increase in the variety of different compounds discovered and manufactured for such use. Antipyrin was about the first to attract general attention, and, as the patent on this has recently expired, it will be seen that all have been originated within the past fifteen years.

The contention over the construction of the act, which we have previously described, affords, in itself, a further illustration of the very recent origin of the class, in this way; the language of Section 20 of the Act, including the phrase "uncompounded chemicals," was taken almost word for word from the old War Revenue Act, the proprietary medicine feature of which was repealed in 1883; during the operation of that Act no question was ever raised as to the exemption of proprietary medicinal articles as uncompounded chemicals, for the very good reason that, as we have seen, there were no chemical compounds which were patented or proprietary, the large class of patented synthetic chemicals having been originated subsequent to the repeal of the law.

The extent and variety of their present use may be well shown by the size of these reference books, Coblenz and Thoms, which are merely lists of the remedies in question, giving very briefly the principal characteristics of each substance, with no extended description.

Coming now to our work on these chemicals, the following list of medicinal articles represents those which have been examined, and having been found to be definite chemical compounds, are, therefore, uncompounded chemicals, and exempt from payment of tax as proprietary remedies (Treasury Decisions, No. 21,875). (See List in Era, January 4, 1900).

The pharmaceutical profession has been discussing of late the propriety and advisability of admitting some of the patented synthetics to the U. S. Pharmacopœia at the next (1900) decennial revision. Should this be done, it would be that only such as have been shown to have a definite chemical structure, together with valuable medicinal properties, would be recognized in this way, and the work represented by the foregoing list may prove of some value in that connection as well.

It would seem, at first sight, a very simple proposition to determine whether a substance in hand is or is not a definite chemical species or entity. With most of the chemicals examined, it is true, no serious difficulty was experienced. A substance like phenacetin, for instance, having a definite chemical formula, crystalline in form, with a well-defined melting point and characteristic reactions, gave us very little trouble, but it was by no means such clear sailing with less definite substances; and, thinking that, perhaps, you would find a hasty review of some of the articles which failed to pass the ordeal more interesting than those which did, we have brought a number of the latter, and will show them to you, with an explanation of the reasons for rejection in each case.

The Commissioner of Internal Revenue is inclined to hew pretty close to the line, and exempt no proprietary remedy under the proviso which is not clearly and fully entitled to it under the terms of the decision of the court. This being the case, a rather rigid standard was adhered to, and quite a number of medicinal chemicals failed to answer its requirements.

Many preparations which are classed in the trade as synthetic remedies, and included in the lists given by Coblenz and Thoms are very far from being definite bodies, pure and unmixed with any other substance whatever. Ichthylol and Tumenol, for example, are products obtained by treating mineral oil with sulphuric acid, whereby sulphones and sulphonic acids of the various unsaturated hydrocarbons present in the oil are produced. While both preparations contain sulphur in organic combination, and are doubtless valuable in medicine, they are mixtures, not only of the sulphones of different hydrocarbons, but even of the different classes of bodies, sulphones and sulphonic acids, as shown

in the following figures, hence they are not definite bodies:

	Ichthylol.	Tumenol.
	Per Cent.	Per Cent.
Loss at 100° C.	43.69	6.32
Ash	0.03	9.25
Extracted by alcohol (sulphonic acids)	50.21	46.00
Insoluble in alcohol (sulphones)	6.30	33.31
Totals	99.63	100.00

Somewhat similar is the case of albuminoid or protein bodies, and combinations of such bodies with different bases and acids. Hemol, hemogalloy, ferratin, iron somatose, tannabin, argonin, etc., are examples. Iron, for instance, enters into chemical combination with protein bodies, and the combinations formed are very stable ones; but that a preparation made by treating egg albumin with an iron salt produces a single definite chemical compound is altogether improbable. In fact, it is disproved by the very variable quantity of combined iron found in such preparations, as will be seen by the analyses which follow. No protein bodies, therefore, have been exempted except one, protogal, this having been included with the articles passed upon in Justice Brown's decision.

	Per Cent.	Total Proteids.	Per Cent.
		N X 6.25	Fe.
Ferratin	89.25	7.18	
Iron somatose	54.87	1.52	
Hemol	88.51	0.30	
Hemogalloy	89.94	0.26	

Some of the difficulties experienced in making out the line of division between compounded and uncompounded chemicals may be illustrated by the closely allied preparations called *creosotal* and *duotal*. The latter, being the carbonate of a single definite body, viz., guaiacol, is itself definite, having a crystalline structure and constant melting point. It is, therefore, a distinct chemical compound and entitled to exemption. Creosotal, on the other hand, is prepared by the action of phosgene gas upon beechwood creosote. It contains, therefore, carbonates of the various phenoloid bodies contained in creosote, consequently is a mixture of different substances in indefinite proportions, and not an uncompounded chemical.

Tyoktanin blue and *pyoktanin yellow* are two aniline dyes used in medicine. The yellow is exempt, being a single definite chemical compound; the blue is not, being a mixture of the hydrochlorides of penta and hexa methyl para-rosaniline.

Two very interesting preparations used in latter-day medicine are colloidal silver and mercury, known under the trade names of *collargolum* and *hyrlogolum* respectively. In both preparations the intention has been to produce the metal in a colloidal state, the advantage for medicinal purposes being the solubility in water of metals in this condition. Colloidal silver or mercury would, of course, fully answer the requirements of the definition of a distinct chemical entity, being simple elements. Upon examination, however, the samples submitted were found to contain such considerable proportions of other chemicals as impurities incident to the process of preparation, some of which have, moreover, decided therapeutic properties of their own, that they cannot possibly be considered as pure silver or mercury. As these preparations have considerable interest in themselves, and much attention has been paid in the journals recently to metals in the colloidal state, we give the results of analysis in full. A large percentage of the metals had reverted to the ordinary, or insoluble, form. According to the latest theory in regard to colloidal metals they are in a state of emulsion, as it were, and the impurities are necessary to keep the minute particles of the metal in suspension. (Jour. Soc. Chem. Ind., 1890, 18-1, 129.)

Duritin represents a class of preparations in which the application of the usual test of a definite chemical formula would appear to entitle them to exemption. It is prepared by mixing solutions of the sodium salts of theobromine and sodium salicylate in the proper molecular proportions to form a double salt, and evaporating to dryness. The manufacturers claim that a definite compound is produced, but the combination, if any, is a very weak one. The presence of free theobromine is also shown by its extraction with a solvent.

Similar preparations are *Uropherin S* and *Uropherin B*, the analyses of which follow. We think chemists will agree with us in considering such preparations as mixtures.

PUBLISHING A LIST.

American pharmacists can gain a hint or two from this recital of the experience of a correspondent of the *Chemist and Druggist*:

I've published a list. Not one of those leather-covered, gilt-edged and highly illustrated lists, but a plain, suitable-to-my-trade, paper-covered one, full of local information, guide to health, herbal preparations, drugs, patent and sundry price lists.

Perhaps you and many of your readers will say, "There's nothing wonderful in that." But there is to me. It's my first born, and was ushered into my world with fear and trembling. The result has been—but I'm hurrying on too fast. First let me write of the cost of the result.

I sent circulars to the various firms for quotation for a 64-page drug price list—specimen enclosed—covers to be printed in two colors, 5,000 issue, proofs of each page to be supplied. All prices, ranging from \$75 to \$150, were sent in, and eventually I decided on one firm whose price was \$95, and whose name was a guarantee of good work.

That was the first step. Then, with scissors and paste, I collected a bit from this list and a bit from that, until all the patents, drugs, herbs and sundries were complete. My pen then began its labor, and soon supplied introductory address and page after page of my own proprietaries. Then came writing to the various firms for page advertisements, payable in stock. Some politely declined, some offered to deduct the cost of page (\$7.50) on a \$25 order, and others accepted my terms.

Result was, I obtained \$72.50 worth of promises, and with that I was fain to be content. Total cost to me, \$22.50.

At last the lists came, and I secured two men to thoroughly book the district. They took six days to do this, and their charge was \$9.00, which I considered very reasonable. Total cost of lists to me, \$31.50.

Every house in the district was supplied with one, and I had not long to wait for the result. From far and near customers came, some with the lists for fear they might forget the name of the mixture or potion that they had set their mind on, and some with slips, whilst others came to spy the land, and remained to pay.

Thirty dollars a week increase has been the result up to now, and that has been maintained for nineteen weeks, so that my \$22.50 has grown into \$115 a week, and looks like keeping so.

I do all the work myself, so that I am busy night and day. My prescribing trade (apart from proprietaries) is now averaging \$55 a month. Most chemists send their lists out at the commencement of the year, and the consequence is there is a glut. To avoid this was my reason for publishing mine later in the year, and I have found it best. To any struggling chemists, whose businesses are dragging, or, owing to keen competition are declining, I urgently press on them, "Publish a List."

IS IT WORTH WHILE?

The druggist stands accused by the proprietor of substituting. How prevalent such a pernicious practice is need have no consideration here. That it has existed, and probably does at present exist, is too well known to admit of question. The remedy is made a condition of co-operation on the part of proprietors in the movement of general reconstruction.

But how does the druggist stand before his customer in substitution? The same thing is true of cigars as of well-known remedies. When a man wants a certain brand of cigar he is going to get it, and unless he is pressed for time he will go where he can procure it if the druggist fails to supply him. You cannot convince a man that any cigar is as good as the one he is used to smoking.

A family moves into the neighborhood of a drug store. They are believers in Dr. Blank's Euphoric Tonic and make a requisition on the druggist for it. He does not keep it, but his own "Vegetable Bitters" is better in every way. Perhaps they try it; even so, the chances are ten to one they are not weaned from their first love. They go elsewhere next time, not only for the tonic, but for other things.

This represents but one class of customers, and they are worth mollifying, not only for their own patronage but for the influence they wield. The wide-awake druggist will hardly stultify himself under such circumstances by the slightest semblance of imposition upon his trade. Every thorough business man knows that a satisfied customer is the best advertisement and the quickest and surest satisfaction comes from supplying just what is asked for.

GASTERIN is a prepared gastric juice obtained from dogs by a process devised by Frémont. According to Le Gendre it is efficacious in treating all affections of the stomach, excepting cancer. Linossier is of the opinion that the good results obtained with this remedy are solely due to the action of hydrochloric acid and pepsin, both of which are present in larger quantity in the gastric juice of the dog than in the customary remedies. (Apoth. Ztg.)

NECTRIANIN is a liquid preparation recommended for cancer, prepared by Bra and Mongour from *Nectria Ditissima*, the cancer parasite of the vegetable kingdom. It is to be looked upon as a purely local, symptomatic remedy, useful chiefly as a substitute for morphine, owing to its analgesic powers. (Apoth. Ztg.)

CURANGIN is the name given by Boersma to a glucoside isolated by him from *Curanga amara*, a plant used in Japan for fever and for intestinal worms. It is a grayish-yellow powder, soluble in alcohol, wood spirit, acetic ether and acetone, insoluble in water, petroleum-ether, ether and carbon disulphide. (Ztsch. f. Pharm.)

SAPODERMIN is a soap employed by Dr. A. Sack with success in various skin diseases. It contains 0.2 per cent. of mercury in form of a soluble mercury-casein compound. The soap is used as a lather, which is allowed to dry on the skin. (Apoth. Ztg.)

PHARMACY.

KINEMINE is a copyrighted name of quinine glycerinosphosphate, which is recommended as antiperiodic and antineuralgic, in doses of 0.3 to 0.6 Gm. (5 to 10 grains) daily. (Pharm. Post.)

SAPOLAN is a new naphtha product obtained by a special method of extraction and distillation and mixed with 3 to 4 per cent. of soap to give it an unctuous consistency. It is claimed to be an excellent ointment base. (Ztsch. f. Pharm.)

NEW MORPHINE PREPARATION.—H. R. Vidal, of Paris, has patented a process by which morphine is charged into a substance to be used as a local anæsthetic, particularly in dental practice. Morphine sulphate and hydrochloride are rendered more soluble by mixing with an excess of borax or some other alkali salt, and with iodoform. Carbolic acid is then added, which forms with the mixture a very soluble phenolate. (Ztsch. f. Pharm.)

WATER SOLUBLE CASEIN COMPOUNDS.—Casein combines with salicylates to form water-soluble compounds, which have been introduced into therapeutics because of their rapid absorption and insignificant irritant effect on the mucous membranes of the stomach. These compounds are obtained by allowing the components to react upon each other in presence of some indifferent liquid, such as water. When this is employed, the product is separated either by addition of some suitable precipitant (alcohol, ether-alcohol, etc.) or by evaporating the solution in vacuo. (Pharm. Ztg.)

COD LIVER OIL WITH IODIDE OF IRON.—According to Dr. C. Martinotti (Bull. Chim. Pharm.) anhydrous iodide of iron is completely absorbed by cod liver oil. The absorption is not merely the formation of a simple solution, but a chemical union of the iodide of iron with certain constituents of the oil. If the oil be shaken with iodide of iron it becomes at first very dark, but gradually assumes a reddish color. On heating this solution with an excess of metallic iron it becomes greenish. When the oil so treated is washed with water, no trace of iodide can be detected in the wash-water, from which the author concludes that iodide of iron is no longer present in the oil in an uncombined state. When kept for long periods, the oil so treated becomes oxidized and resinifies more rapidly than plain cod liver oil. A precipitate is gradually formed, containing fat acids. (Ztsch. f. Pharm.)

THIS PROVED EFFECTIVE.

Zanesville, O., April 10.

Editor The Pharmaceutical Era: As to the kind of advertising that has seemed to give best results, I would say that direct advertising by means of circulars, dodgers, slips put in packages and other matter along these lines has been most beneficial, and my experience has been that the average drug store does not obtain results from advertising in newspapers. I would not underrate the value of newspaper advertising and there are undoubtedly druggists so situated that judiciously handled it would pay.

This season I have printed a calendar with half-tone of a local scene that will advertise myself all the year 'round instead of a proprietary firm. I also send you

samples of other printed matter that I have recently put out. I have a very good sale on preparations of my own, but make it a rule never to offer them in preference to any other remedy that may be called for, but advertise them by the above means and advise their use when the customer asks for a remedy and desires to leave to my judgment what may be best to use.

J. R. JOHNSON.

[Mr. Johnson publishes a neat little 4-page paper, called The Drug Mirror, filled with a few columns of carefully selected reading matter and numerous ads. of his own devising, which are attractive in wording and typography. Some specimens of his style of work are given below. Ed.]

In Medicine Quality is of First Importance

after that freshness, skill in compounding and price in the order named. We buy of reliable, well established houses which have demonstrated their dependability. Our large sales and weekly purchases insure freshness.

REDDENING OF SALICYLATED TALCUM.—O. Langkopf (Pharm. Ztg.) states that the gradual reddening of dusting powders containing salicylic acid and talcum is ordinarily due to the presence of iron in the talcum, the reaction of the acid with the oxide of iron being facilitated by the moisture introduced with some of the ingredients of the powder. The discoloration may, however, be prevented, and a permanently white powder obtained if the ingredients of the powder are thoroughly dried separately before admixture and the powder kept in well-closed vessels. (Ztsch. f. Pharm.)

DETECTION OF CANE SUGAR IN SUGAR OF MILK.—To detect the adulteration of milk sugar with cane sugar the difference in the behavior of the two sugar varieties toward Fehling's solution may be utilized which reduces milk sugar directly, but cane sugar only after inversion. In this manner the proportions of the two may be quantitatively determined. If, however, it is desired merely to prove qualitatively the presence or absence of cane sugar, concentrated sulphuric acid is a more convenient test. When pure milk sugar is mixed with strong sulphuric acid it is colored at first only faintly yellow, later a light reddish-brown, the acid itself becoming only slightly reddish. But in the presence of only very small quantities of cane sugar the sample becomes rapidly colored, at first dark brown, then brown-black, and this coloration is also assumed by the acid. In presence of a larger proportion of cane sugar, both sugar and acid are blackened. By means of comparative

trials very small contaminations with cane sugar may be detected by this test. (Apoth. Ztg.)

PYROARSENATE OF IRON is considered by Sibona (Bull. Chim. Pharm.) the most important, medicinally, among the several arsenates of iron. It may be prepared by double decomposition between pyroarsenate of sodium and ferric chloride. The salt is insoluble in water, but dissolves in presence of an excess of sodium pyroarsenate. By addition of alcohol to this solution a pyroarsenate of sodium and iron, soluble in water, is precipitated. If a solution of this latter salt be mixed with citric acid a precipitate is formed which re-dissolves on the addition of a sufficient quantity of ammonia. On evaporating this solution amorphous pieces are formed consisting of "citro-ammoniacal ferric pyroarsenate." Similar compounds are obtained also from orthoarsenates and alkali-citrates. By dissolving arsenate of iron, in the cold, in a neutral solution of sodium citrate to saturation, an amorphous product of yellow-green color will be obtained on evaporation, completely soluble in water. This substance varies in composition with the concentration of the sodium citrate solution employed and cannot, therefore, be regarded as a definite chemical compound. Ammonium citrate yields a similar preparation. The name, "citro-ammoniacal iron arsenate," is frequently applied incorrectly to a solution of 1 part arsenous acid and 49 parts citrate of iron and ammonia. It is clear that this is not a chemical combination, and moreover, arsenous acid does not form arsenates, but arsenites. (Ztsch. f. Pharm.)

SOME PRODUCTIVE HOLIDAY ADVERTISING.

Philadelphia, March 10, 1900.

Editor Pharmaceutical Era: I am a careful reader of the business hints published in the Era. I will enclose samples of some of my holiday advertisements. Some are original, others partially so. I gave 1,000 circulars marked No. 1, which were to be filled out by the children. 832 were returned filled out, representing 651 families. I then inclosed circular No. 1 filled and circulars 2 and 3 delivered in sealed envelope to person named on No. 1, in whose name it was sent. The beneficial result was wonderful. Very truly,

W. W. CHALFANT.

No. 1.

To All Good Children:

I shall send a special messenger to Chalfant's Drug Stores, Tasker and Fifteenth, Moore and Sixteenth streets, twice each week until Christmas for letters from all good children (this means you) who let me know what they want for Christmas. Write below what you want, put it in an envelope, address to Santa Claus in care of Chalfant's Drug Stores, and bring or sent it right away. My messenger, Oneitete, the Frog, will bring them to me.

Yours, with love,

SANTA CLAUS.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Unguentum Resinol.—(J. W. A.) We cannot give the formula for this proprietary remedy. It is recommended by the manufacturers as a "harmless antiseptic and true skin anaesthetic."

Dealers in Second-Hand Medical Books.—(J. L.) The following dealers carry a stock of second-hand medical books and most of them issue catalogues; Leggett Bros., 81 Chambers street, and A. S. Clark, 174 Fulton street, this city, and A. E. Foote, Philadelphia, Pa.

Parchment Paper for Capping Bottles: Baudruche.—(C. F.) The parchment used for capping bottles, a sample of which you submit, is known in the trade as "Baudruche," a variety of goldbeaters' skin, prepared from the intestines of the ox, and presumably other animals. It may be obtained from Lehn & Fink, of this city, or any large jobber. For capping bottles it is first wet with water, then tightly drawn over the cork, and securely fastened under the lip of the bottle with thread or twine, and allowed to dry.

Microscopes and Accessories.—(J. L.) The Bausch & Lomb Optical Co., Rochester, N. Y., and Queen & Co., Philadelphia, Pa., manufacture microscopes and accessories designed especially for the physician in his professional work, urine analysis, bacteriological work, etc. There are so many good instruments obtainable at a reasonable price that the matter of choice is merely a question of individual preference and the amount of money one wants to invest. In selecting a microscope a good method is to write to the manufacturers for their catalogues and prices and then you can make such a selection as you desire. If you want an instrument for a specific purpose and will inform the manufacturers of your desires we are sure they will help you out.

Manufacturers of Percolators.—(J. R. J.) Whitall, Tatum & Co., this city, can supply you glass percolators up to 10 gallons capacity. Percolators of the latter size cost about \$10, and are only made upon special order. The manufacturers say percolators of a larger size may be made from glass, but the risk of breakage in moulding and shipping renders such manufacture impracticable. Most of the large percolators used by manufacturers are made of tin-lined copper or earthenware. They are not as a rule carried in stock by any manufacturer, but must be built to order. The New York Pottery Company, Twelfth Avenue, this city, manufactures all kinds of earthenware, crockery, etc., and may be able to supply you with earthenware percolators of 20 gallons capacity. Write them for information, telling them just what you want.

"Gelatine Cases" or Capsules.—(H. F. K.) asks "if it would be possible to make gelatine cases on the order of the capsules made by Parke, Davis & Co., to hold a quart. They are to be filled with a substance and put into water, the capsules not to be dissolved until the container holding the water is entirely closed. The substance to be put into the capsules or cases is intended to generate a gas, just as one might put potassium bicarbonate into a gelatine capsule and drop it into a solution of magnesium citrate." Parke, Davis & Co. say it is possible to manufacture capsules or cases of gelatine of the size you describe, but they do not believe the use of gelatine for such a purpose is practicable. At any rate, some experimenting is necessary to determine just what may be done, and it might be well for you to write to the various gelatine capsule manufacturers for further information. Here are the names of some of them: Parke,

Davis & Co.; F. A. Habel; Merz Capsule Co., Detroit; Hall Capsule Co., Cincinnati, O.; H. Planten & Son, New York City; Grape Capsule Co., Allentown, Pa.

Lanoline in Ointments.—(N. V.) asks how the following prescription should be compounded:

Carbolic acid	1 dram.
Acetic Acid	1 dram.
Cocaine hydrochloride.....	10 grains
Fluid extract hyoscyamus	2 drams.
Salicylic acid	2 drams.
Lanoline, enough to make.....	2 ounces.

The difficulty here is due to the proportionately large amount of solids and liquids directed to be incorporated with a rather small quantity of lanoline, which at best is not a good vehicle for insoluble powders and bulky solids. However, a presentable ointment may be made by first reducing the crystals of carbolic acid, salicylic acid and cocaine hydrochloride to fine powders, and incorporating them with the lanoline. The fluid extract of hyoscyamus should be evaporated to a soft extract, and then incorporated along with the acetic acid. A better looking preparation may be made if a small quantity of petrolatum be substituted for some of the lanoline. This of course should not be done without the prescriber's sanction.

Kidney and Liver Remedy.—(F. S.) Many of the remedies for liver complaints are also recommended for derangements of the kidneys. Here are some formulas:

(1) Grind to a coarse powder 4 ounces liverwort, 1 ounce Jamaica dogwood, 4 ounces couchgrass, 2 ounces gaultheria. Mix and percolate with a mixture of 32 fluid ounces alcohol, 12 ounces glycerin and 32 ounces of water. When the menstruum has ceased to pass through, add enough hot water to make 1 gallon of mixture, in which dissolve 1 ounce potassium nitrate.

(2) Fluid extract of huchu, 3 fluid ounces; fluid extract of dandelion 3 fluid ounces; fluid extract of juniper berries 2 fluid ounces; fluid extract pareira 2 fluid ounces; fluid extract of stone root 2 fluid ounces; potassium acetate 3 ounces; simple elixir enough to make 32 fluid ounces.

(3) Hepatica, hydrangea, scopolin, apocynum cannabinum and triticum, of each, 1 ounce; hot water sufficient to make an infusion measuring 10 ounces. When cold, add 320 grains potassium nitrate, 3 ounces alcohol and 3 ounces dextrose syrup. Fluid extracts may be substituted for the crude drugs in this mixture, in which case the alcohol should be omitted and the proportion of water reduced to 5 ounces, instead of 10 as above, the remaining ingredients being left the same.

Soluble Flavoring Extracts.—(G. A. M.) Dubelle gives the following formulas for soluble extracts of orange and lemon:

Orange: Dissolve $\frac{1}{4}$ fluid ounces pure oil of orange in 12 fluid ounces of alcohol, and rub the mixture with 2 ounces of carbonate of magnesium in a mortar; pour the mixture into a quart bottle and fill the bottle with water. Allow to macerate for a week or more, shaking every day, then filter through paper; add enough water through the filter to make 2 pints.

Lemon: Oil of lemon, $\frac{1}{4}$ fluid ounces; carbonate of magnesium, 2 ounces; alcohol, 12 fluid ounces; water sufficient to make 2 pints. Proceed as directed in the foregoing.

A soluble extract, i. e., one which can be diluted with water, may be made according to the following formula, proposed by George C. De Lessing, of this city: 1 ounce of lemon oil, in a 12-ounce glass separator with a stop cock, is mixed with 10 ounces of dilute alcohol (50%), and well shaken. In about twenty-four hours separate the oil from the dilute alcohol, when the latter will be found to be a saturated solution of the soluble parts of the lemon oil, containing about 16 grains of citral and citronellol. Lemon water is prepared by mixing $\frac{1}{2}$ to 1 ounce of the alcoholic solution so made with 1 gallon distilled water, and filtering, if necessary, through purified talcum. (The use of carbonate of magnesia is thus avoided). If a stronger solution of oil in water is desired, larger quantities of the drugs must be used. To produce a clear solution, add to each gallon of water 1 ounce of polysolve (ammonium sulpho-ricinoleate); no filtering is then necessary. Other formulas may be found in previous volumes of the Era. Consult the indexes.

Wyeth's Soluble Powder=Capsules

or, Capsuled-Powders are a new and novel form for administering medicines. They contain the various substances in a perfectly powdered condition, which is certainly the most efficient form for administration; thus a desideratum of utmost importance to the physician has been attained. There is no previous preparation made necessary, as in other forms of medicine—notably **gelatine-and sugar-coated** pills—no cohesive or excipient is required or used. The materials or medicines are simply enclosed in a pliant, soft, soluble gelatine capsule, quickly dissolved in the warmth and fluids of the stomach, presenting no such objectionable resistance as the ordinary double-cased, **hard**, gelatine capsules. In addition to this brief description, an inspection will at once impress the judgment. Physicians and pharmacists are urged to examine these products.

FOREIGN.

South Africa.

The Boers have been very active and aggressive around Bloemfontein the last week. The principal encounter has been at Wepener, south-east of Bloemfontein.

The Boers are trying to force back Gen. Buller from Elandslaagte toward Ladysmith.

Lord Roberts's army at Bloemfontein is delayed by lack of cavalry horses and clothing suitable for the colder weather now prevailing there.

A serious British defeat, with a loss of 600 killed and 900 captured, was reported last week, but an investigation showed that the report was untrue. The error arose from two reports of skirmish that had already been reported the week before.

The Boer force in the Free State and Natal numbers 42,000, and the estimate of Burgher losses in the war is placed at 12,000.

Fears are expressed that the Boers will again besiege Kimberley, and military preparations have been made to resist the attack.

United States Consul Hay, at Pretoria, says that the report that Cap. Reichman, the United States Military Attaché, participated in the recent fight near Sanna's Post, is false.

The Boers report that Col. Baden-Powell, the defender of Mafeking, is dead, but the report is not believed in London.

General Gatacre has been ordered home by Lord Roberts. It is thought that this order comes as a result of Gen. Gatacre's record of defeats in South Africa.

Owing to the unfavorable conditions for keeping the Boer prisoners at Simonstown, the authorities have decided to ship them all to St. Helena with the least possible delay. The sickness is abating.

The total British loss since the war began last October from wounds, disease and capture, is 23,000 men; one tenth of the entire army in South Africa.

Consul Hay at Pretoria reports to the State Department that he has failed to find the slightest evidence to support the charges of ex-Consul Macrum, that the official mail of the consulate was tampered with.

A messenger-boy started for New York last week to take greetings from the school boys of Philadelphia, New York and Boston to President Kruger.

The Philippines.

General Otis expects to leave the Philippines about the middle of next month.

Frequent encounters between rebel bands and the American troops have taken place recently.

Advices from Manila intimate that Aguinaldo is hiding in the Tagal quarter of that city. Other reports have placed him at Hong Kong, Tokio and Singapore.

The Navy Department has practically decided to put out of commission in the harbor of Manila, the monitors Monterey and Monadnock, releasing the crews for service on other vessels.

Other Foreign News.

War between Russia and Japan is still feared.

The Paris Exposition was opened last Sunday. The American exhibit is to be closed on Sundays.

The Queen's visit in Ireland continued last week with out special incident.

It is officially announced at Sydney, New South Wales, that 111 cases and 38 deaths from bubonic plague have occurred there.

King Leopold has presented all his real estate to the Belgian nation, to be used as recreation grounds for the public.

The American, British, German and French ministers have demanded of the Chinese government the suppression of the anti-foreign society of "Boxers" within two months; otherwise the powers will land troops and march into the interior.

DOMESTIC.

Puerto Rico.

The House passed the Senate bill providing a tariff and civil government for Puerto Rico last week, and it was signed by the President. The law will go into effect May 1.

This law provides that 15 per cent. of the Dingley tariff rates shall be paid on goods entering Puerto Rico from the United States, or entering the United States from Puerto Rico, until the island's government shall devise a way of raising revenue to pay the govern-

ment expenses by internal taxation. When such a plan is devised the tariff will cease and free trade will exist between Puerto Rico and the United States. In any event the tariff is not to continue after March 1, 1920.

By the civil government provisions of the law, the President appoints the Civil Governor and other high officials of the island and the upper branch of the island's legislature. The Civil Governor appoints the lesser officials of the government. The lower house of the legislature is chosen by popular vote. The President has appointed as Civil Governor of the island Charles H. Allen, now Assistant Secretary of the Navy.

A woman died of starvation in the public square of Ponce, Puerto Rico, last week.

Congress.

The House by a vote of 240 to 15, adopted last week a resolution for a constitutional amendment, providing for the election of United States Senators by direct vote of the people.

The Senate has passed the Pacific Cable bill a measure which appropriates \$3,000,000 for a cable from San Francisco to Honolulu. It now goes to the House for consideration.

The Senate Committee on Privileges and Elections, has decided unanimously to recommend that the seat of Senator Clark, of Montana, be declared vacant. Senator Clark is charged with having secured his election by bribery. There is no doubt that the Senate will adopt the report of the committee.

Adjournment early in June is planned by the Republican leaders in Congress and many important measures now pending will go over to the next session.

Other Domestic News.

George B. Cortelyou of New York has been appointed secretary to the president, succeeding John Addison Porter, who has resigned owing to continued ill health. The Spanish Government has ordered to sell the floating steel dry dock at Havana for the sum of \$200,000, but this price is considered excessive.

The engagement of Alta, daughter of John D. Rockefeller, to E. Parmelee Prentice, of Chicago, was announced last week.

The President has signed a proclamation opening to settlement on October 10, the northern half of the Coyote Indian Reservation in Washington.

The Navy Department has agreed to buy the Holland submarine torpedo boat for \$150,000, and to pay \$175,000 each for any subsequent boats of the same type it may purchase hereafter.

Leut.-Commander J. C. Gilmore, who has been on leave of absence in Washington, recuperating from extreme hardships incident to his long captivity among the Filipinos, has been ordered to resume duty at sea as executive officer of the cruiser Prairie.

A complete fusion between the Democrats and Populists of Oregon was accomplished by the two State conventions at Portland last week.

A movement is on foot in the Presbyterian church for a shorter creed, omitting the doctrine of foreordination.

The Naval Construction Board has decided to put no more double turrets on battle ships.

It is said that Gov. Roosevelt has definitely refused to accept a nomination for the Vice-Presidency.

Osborn Deigman, who was one of the crew of the Merrimack when that vessel was sunk in the harbor of Santiago, has been appointed an acting boatswain in the navy, and assigned to duty on the gunboat Marietta.

The President has increased the rations for the troops serving in the Department of Alaska on account of the severity of the climate.

The New York East Conference of the Methodist's Church has asked the general conference to relax some of the strict rules of the church relating to amusements. The Ecumenical Conference will meet in New York City next week.

The President has issued an order consolidating the Departments of Havana and Pinar del Rio, Cuba, under the command of Gen. Fitzhugh Lee.

Gen. Gomez has left Cuba and will live at his home in San Domingo.

Admiral Dewey has denied all reports that he intends to abandon his candidacy for the Presidency.

The Rev. Dr. Arthur C. McGiffert has withdrawn from the Presbyterian Church, the New York Presbytery granting his request that his name be dropped from the roll. This action does away with the necessity for a heresy trial by the general Assembly.

From Skagway comes news of valuable quartz discoveries on Sullivan Island, Lynn Canal, where a fifty-foot ledge will be developed immediately.

The Marine Hospital Service has received information that the yellow fever is epidemic in San Salvador. Reports reaching Dallas from southern and southwestern Texas indicate that more than fifty lives were lost in the recent floods. The property loss is estimated at \$2,600,000.

THE DRUG NEWS.

New York and Vicinity.

KINGS CO. PHARMACEUTICAL SOCIETY.

The regular monthly meeting of the Kings County Pharmaceutical Society was held at the Brooklyn College of Pharmacy on Tuesday, April 10, with President Adrian Paradis in the chair, and a good attendance of members. Fifteen new members were elected. They were the following: Richard W. Gibbons, Charles W. Meyers, Wm. C. Vincent, Louis N. Jansen, Frank G. Goetz, Benjamin Althelm, Jacob Kilne, Andrew P. Murken, Edward A. Ancelin, Charles Speth, Charles A. Hillis, Joseph J. Vetter, Cornelius A. Vandersande, Thomas H. Botham and Walter H. Pafford. The treasurer reported a balance on hand of \$302.85. Wm. Muir, as Chairman of the Committee on Legislation, reported on the work of the State Legislature, ended the week previous. After stating that the Hill Bill, commonly called the All-State Pharmacy Act, the Henry Bill to regulate drug clerks' hours, and the Cotton Bill elevating the Hospital Stewards of the National Guard, had been passed, he explained that the bill to amend the pharmacy sections of the Greater New York charter had failed in the rush of business of the final days of the session. He said that bill had been devised solely because the local associations had no hope of the passage of the Hill Bill. Now that the Hill Bill was passed they were satisfied. This gave to New York City practically all the improvements sought for in the other bill. He moved to have the Society ask the Governor to sign the All State Pharmacy Bill and the Cotton Bill. Dr. Albert H. Brundage seconded this, speaking of the advantages provided by the Hill Bill, and the motion was carried. A vote of thanks to Senator Davis and Assemblymen Hill and Cotton for their efforts in securing the passage of these acts was also passed.

An agent for the Knickerbocker Telephone Company addressed the meeting on the service furnished by that company and its advantages to the druggists over that of its competitors. Thomas J. France was appointed a committee of one to consult this telephone company as to the best arrangements it was willing to enter into with the druggists.

Prof. A. P. Lohness, of the Committee on Revision of the Pharmacopoeia, asked for an expression of the Society's attitude on the introduction of synthetic remedies and doses. There ensued a lengthy discussion on this subject. Mr. Muir favored the introduction of non-patented synthetics and of average doses. Dr. Brundage thought that statements of average doses would be of no use to anyone. He said the pharmacist should have a guide as to how much is safe. The smallest dose or the mean dose might also be included, if desired, but the one thing that was needed was the average maximum dose of the various authorities on dosage. The majority of those present agreed with him, and voted that it was the sense of the Society that the Pharmacopoeia should state maximum doses. After a good deal of discussion, the question of introducing synthetics was left in the hands of the Society's delegates to the pharmacopoeial convention to be decided according to their judgment after they should hear the arguments likely to be made at that convention.

The special committee appointed to formulate a plan to ascertain the disposition of the druggists of Kings County toward the N. A. R. D., reported that it had divided the county into eleven districts and assigned each of these to a member of the Society to be canvassed. It was believed this plan would work admirably, and the committee recommended that the Manhattan Association and the German Apothecaries' Association be informed of the work. The report was adopted. Announcement was made of the annual meeting of the New Jersey

Pharmaceutical Association to be held at Asbury Park May 23 and 24. A communication was read from Thomas Stoddard, chairman of the Committee on Legislation of the N. A. R. D., stating that the Ways and Means Committee of the House of Representatives would hold a hearing on the Boutelle Bill for the repeal of the Proprietary Stamp Tax on April 17. Wm. Muir was appointed a delegate to attend that hearing.

The secretary, Dr. Frederick P. Tuthill, read a paper on "Primitive Pharmacy as Compared with Pharmacy of the Nineteenth Century," in which he gave some interesting statements concerning the practice of pharmacy among the ancient Egyptians, Hebrews, Syrians and Chinese, and also in Europe during the Middle Ages. Coming down to more recent times, he said the first apothecary in New York City was James Tagree, who flourished in 1703, and the first patent medicine was introduced in 1711.

THE MAYOR WAS IN A STEW OVER SHORTER HOURS BILL.

Mayor Van Wyck gave a hearing last week on the Henry Bill to regulate the working hours of drug clerks in New York City, at which he made a needless outcry over the fact that he had two bills of this kind, both of which had evidently been passed. The Henry bill was amended in the Senate. Senate reprint bill No. 1373 is the true measure so amended. Before it was amended it was Assembly bill No. 1299. Through a clerical mistake at Albany both bills were sent to the Mayor. The day after the hearing Deputy Clerk Wm. V. Ross, of the Assembly, came to New York to notify the Mayor of this error and to inform him that the bill as amended by the Senate had passed both Houses.

Edward Timme appeared at the hearing and asked the Mayor not to sign Assembly bill No. 1299 because it gave power of inspection of drug stores to the Department of the State Factory Inspector. He argued that the other bill should be signed, because "the power of enforcing is left to the local authorities."

Timme's solicitude was also unnecessary, as the clause providing for the inspection of drug stores was killed. In the act as passed nothing whatever is said about enforcement or inspection either by "local authorities" or anybody else.

The Mayor did not intimate what he would do, but two or three days later signed the bill. On April 16 the Governor also signed the bill and it is now a law.

EXHIBITION BY N. Y. ACADEMY OF SCIENCES.

Extensive preparations are being made by the New York Academy of Sciences for its reception and exhibition of recent progress in science, which is to be held April 25 and 26 at the American Museum of Natural History. The reception this year is the seventh of a series given by the Academy, and a number of recent discoveries in pure and applied science are to be shown. On Wednesday evening, April 25, there will be a reception to the members of the Academy. On April 26, in the afternoon, the exhibition will be opened to the public, and in the evening there will be a reception of the members of the Scientific Alliance. The honorary reception committee of members comprises Edward D. Adams, Addison Brown, John H. Caswell, James Douglas, Morris K. Jessup, the Rev. Dr. H. M. McCracken, Emerson McMillan and Chas. A. Post. The committee in charge of the exhibition is composed of Prof. J. F. Kemp, Chairman; Prof. Henry F. Osborn, Chas. F. Cox, Prof. Charles A. Doremus and Prof. J. J. Stevenson. The exhibition is to be divided into a number of sections, that of chemistry being under the supervision of Prof. Chas. E. Pellet. In this section will be exhibited a large number of important industrial products, such

as smokeless powder, German dyes, synthetic perfumes and other new substances, as well as new and rare alloys, radio-active elementary substances and much new chemical apparatus.

NEW YORK WHOLESALE BOWLERS' END SEASON.

The yearly tournament of the New York Wholesale Drug Trade Bowling Association ended with the games rolled at Reid's alleys last Saturday afternoon. The season has been one of the best in the history of the association. Some fast work has been done on the alleys and several new records have been made. The team of Colgate & Co. won the tournament, and that of Parke, Davis & Co. was second, winning from Dodge & Olcott the last game of the year after an exciting contest. Following is the record of team standings:

	Won.	Lost.	High Score.
Colgate & Co.	23	9	915
Parke, Davis & Co.	22	10	880
Dodge & Olcott.	21	11	936
R. W. Robinson & Son.	17	15	894
General Chemical Co.	16	16	810
Seabury & Johnson.	15	17	834
National Lead Co.	14	18	900
Merck & Co.	12	20	849
Roessler & Hasslacher Chem. Co.	4	28	776

The record of last Saturday's games was as follows: National Lead Co., 839; Merck & Co., 844. Colgate & Co., 678; National Lead Co., 879. Colgate & Co., 802; Merck & Co., 849. Dodge & Olcott, 763; Roessler & Hasslacher Chemical Co., 713. Parke, Davis & Co., 865; Roessler & Hasslacher Chemical Co., 723. Parke, Davis & Co., 875; Dodge & Olcott, 797.

NATIONAL DRUG TRADE BOWLERS' ANNUAL TOURNAMENT.

Arrangements are about completed for the annual contests of the American Drug Trade Bowling Association, to be held in New York on Friday and Saturday of this week. The committee of the local association last week issued the following announcement:

The Wholesale Drug Trade Bowling Association of New York was organized for the purpose of developing friendly relations between the working forces of the houses constituting the drug and allied trades of the city, and its long career evidences its success. Similar organizations have flourished in other large cities for the same purpose and under the same conditions, and a natural consequence has been the formation of a National Association.

The third annual tournament of the N. D. T. B. A. is to be rolled in this city on the 20th and 21st of April on the home alleys of the local association, and teams from Chicago and Baltimore, and possibly other cities, will vie with each other in efforts to defeat our best local talent.

A large attendance of New York drug men on the alleys is desired, and in due course tickets of admission will be issued.

On Saturday evening, the 21st, a dinner to the visiting teams will be given at the Drug Club. This dinner will be announced more particularly later on, and it is hoped that when the tickets are offered there will be a liberal response from the trade at large to show New York's appreciation of the sportsmanship and friendly feeling which induced men in distant cities to accept our challenge and hospitality.

POLICE ARE WATCHING GREGG, STEVENS & CO.

Many questions of inquiry have been coming from the drug trade recently concerning Gregg, Stevens & Co., of 253 Washington street, New York, and 164 Market street, Newark, N. J., who claim to be distributors of "general merchandise," but who also pay special attention to drugs and druggists' sundries. The local drug trade has been wary in dealing with this concern, refusing to let it have goods except for cash. It appears now that this caution was wise. The Metropolitan police have been watching Gregg, Stevens & Co. for a fortnight, and Captain McClusky, of the Detective Bureau says:

"I consider that their actions are very shady, not to say suspicious, and that the more publicity such a concern be given the sooner its transactions will be stopped. It is clear they did not intend to pay when the bills became due, for no business is conducted on a losing scale that is perfectly legitimate."

Plant & Co., of 106 Fulton street, have been acting as brokers for Gregg, Stevens & Co., and selling below cost all sorts of merchandise obtained on credit by Gregg,

Stevens & Co. Captain McClusky says he has no doubt Plant & Co. and Gregg, Stevens & Co. are identical.

"GREATER NEW YORK PHARMACEUTICAL SOCIETY."

Incorporation papers have been filed at Albany by the Greater New York Pharmaceutical Society, which has been formed by some druggists of Harlem and Brooklyn. According to its constitution the purpose of this new society are to elevate the profession of pharmacy to a higher standard, hold meetings, read papers and publish such matter as shall tend to such elevation, to safeguard the profession against the attacks of agitators, defamers, etc., to foster feelings of harmony and friendship between pharmacists and physicians and to make physicians more familiar with the National Pharmacopoeia and Formulary. Only registered pharmacists of good moral character of New York City or State are eligible to active membership. The directors named in the incorporation papers are Leon E. Block, O. S. Donaldson, Thomas Stevenson, Guy E. Currie, of Brooklyn; A. L. Goldwater, David Kantor, Wm. J. Robinson, Jacob Scheinblum and Charles H. Halper, of New York City. The names of about forty prospective members have been enrolled. No officers have yet been elected.

BOARD OF TRADE AND TRANSPORTATION WANTS WAR TAXES REPEALED.

At the monthly meeting of the New York Board of Trade and Transportation, held last week, a resolution was passed favoring the modification or repeal of the War Revenue Act. This resolution was offered by Thomas F. Main, and set forth that if it be found that the revenues exceed the needs of the Government, the Stamp Tax should be the first of the war taxes to be revised or abolished. This resolution reaffirmed one of similar character passed in November. The action was to bring the matter afresh to the attention of the Ways and Means Committee of the House of Representatives at its hearing on the Boutelle bill on April 17.

SECRETARY OF NEW JERSEY COLLEGE IN TROUBLE.

Dr. George W. Mueller, who was secretary of the New Jersey College of Pharmacy at Newark, and who disappeared from that city on January 29 with a young girl named Paula Gels, was arrested on his return to Newark last Saturday on a warrant charging him with embezzling \$300 from the college. In the police court Mueller said he had settled his accounts with the College of Pharmacy. He was held in \$500 bail for further examination.

SWINDLER CROSER STILL AT IT.

Letters of inquiry about Henry P. Croser, of 168 Greenwich street, New York City, and orders from him which manufacturers have "turned down" continue to pour into the office of the Era. The rascal is as busy as ever at his trade of getting goods without paying for them. Readers of this journal are again warned to have no dealings with him.

NOTES.

—Lanman & Kemp are preparing to move into their new building at Water and Pine streets on May 1. This is a fine six-story structure, having a frontage of 64 feet on Water street, 103 feet on Pine street and 100 feet on De Peyster street. It was built and arranged specially for the needs and purposes of Lanman & Kemp, and is one of the largest and most complete structures of the kind occupied by any firm in this trade. Lanman & Kemp have been in the Kemp Building at William and Cedar streets for many years. The increasing demand for space in that locality for office purposes has made it too valuable for occupation by a business of this kind, and so the firm decided last year to build new quarters.

—One day last week a boy went into Baumgartner's drug store, at Ninth avenue and Fifty-eighth street, and asked for two siphons of seltzer, to be sent to Mrs. Starrs, on the second floor of 256 West Fifty-ninth street, to be paid for on delivery. The errand boy who was sent with the goods was induced to put the siphons, together

with \$4.60, as "change for \$5," on the dumb waiter, and send it up from the basement. The police found the second floor flat to be vacant and that no Mrs. Starrs lived at that address. Thomas Burke, who sent the errand boy into the basement, was arrested, but he protested that he "didn't get no money."

—At a meeting of the Torrey Botanical Club (N. Y.), on February 28, Dr. T. D. MacDougal read a "Note on *Aspeha*," describing some peculiarities of inflorescence of this tree which he had noticed. The principal paper of the evening was by Dr. N. L. Britton "On the Flowering Plants Collected by R. S. Williams in the Yukon Territory, 1898-1899." Mr. Williams' collection contains several new species and several others which are new to North America. Long and interesting discussion followed the reading of the paper. E. S. Burgess, Secretary.

—Among out-of-town visitors to the local wholesale market during the week were: C. H. Kelly, Allegheny, Pa.; A. W. Reynolds, Carbondale, Pa.; John H. Allen, Millbrook, N. Y.; R. G. Foster, New Hartford, Conn.; Willis L. Mix, New Haven; T. C. Wood, Haverstraw; Samuel Felt, Watertown; J. S. McArthur, Buffalo; A. W. Twiss, Bethel, Conn.; P. D. Blauvelt, Nyack, N. Y.; Dr. N. Vayt, Staunton, Va.; T. R. Anderson, Port Jervis, N. Y.; H. C. Porter, Towanda, Pa.; W. C. Clark, Narragansett Pier, R. I.; J. E. Barnabe, Montreal, Canada.

—The monthly meeting of the New York Section, Society of Chemical Industry, will be held at the New York College of Pharmacy on Friday evening, April 20. The programme will include papers on petroleum and paraffin by C. F. Mabery; on "Analysis of Titaniferous Iron Ore," by C. Baskerville, and an exhibition of some recent and novel forms of chemical stoneware by F. Behrend.

—Dr. A. L. Lengfeld, a prominent druggist of San Francisco, came to New York last week for a visit of a fortnight. Dr. Lengfeld is a delegate to the United States Pharmacopoeial Convention in Washington, the first week in May, and he will also attend the annual meeting of the American Pharmacopoeial Association at Richmond. While here he is staying at the Waldorf-Astoria.

—A number of wholesale druggists from other cities visited New York during the week. Among them were C. W. Snow, of Syracuse; J. A. Gilman, of Gilman Bros., Boston; Harry B. Gilpin, of Gilpin, Langdon & Co., Baltimore; F. C. Herrington, of the Burlington Drug Co., Burlington, Vt.

—B. A. Parsons, who represents Parke, Davis & Co. in Georgia, spent three or four days visiting the local house of that firm last week. A. J. Staudt, of Parke, Davis & Co.'s Philadelphia salesmen, also spent a day in town during the week.

—Before Recorder Goff in the Court of General Sessions last Thursday Carlos Hernandez, who in 1898 had charge of the Spanish business of Schieffelin & Co., was convicted of forgery in the third degree for having altered the accounts of that firm.

—Drug clerk Frank W. C. Ross has resigned his position in the pharmacy of A. W. Stewart & Co., at Broadway and Thirty-eighth street, and is now in the employ of the "Astor House Pharmacy," in the Syndicate building, Park Row.

—The prescription department of the pharmacy of A. S. Wolfs & Co., at Amsterdam avenue and 168th street, was badly damaged by an explosion and fire last week. The prompt work of the fire department saved the rest of the store.

—Druggist F. A. Seaman, of Perth Amboy, N. J., returned last week from the West Indies, where he had been spending the Winter. He went there on account of poor health and found the climate very beneficial.

—Emil Brunor, whose "Red Cross Pharmacy" at Eighth avenue and Thirty-fourth street, was burned out a few weeks ago, has opened a new drug store at the corner of Eighth avenue and 136th street, Manhattan.

—V. I. Etlinger has bought the drug store formerly owned by H. H. Kaufman, at 315 Leonard street, Brooklyn, on which a mortgage, held by Townes & James, was foreclosed a few days ago.

—S. B. Leonard, druggist of Tampa, Fla., came to New York last week on special business in connection with a new advertising scheme in which he is interested.

—George Oberdorfer, who has a drug store at No. 2393 Eighth avenue, Manhattan, and Miss Lillie Ammen, also

of this city, were married on April 11.

—Charles S. Warner, of Philadelphia, manager of the laboratories of Wm. R. Warner & Co., spent Easter Sunday with friends in this city.

—H. A. Schaefer, formerly proprietor of a drug store at 1987 Third avenue, is opening a new pharmacy at Lenox avenue and 119th street.

—Wm. E. Kolb has just repainted the interior of his drug store at the corner of Greene and Grand avenues, Brooklyn.

IN AND ABOUT BOSTON.

This Internal Revenue Collector May Have Exceeded His Authority.

Boston, April 14.—Because of the action of an internal revenue collector when he visited the druggists of Wakefield, not far from Boston, several interesting questions of vital importance to the trade arise. This inspector called at Jordan's pharmacy, at the store of S. R. Ryder & Co., at C. F. Ginn's drug store and other places. He made an examination of the stock at each place, finding everything all stamped according to law. He also found a large number of regular stock labels such as "syrup of ipecac," "aromatic spirit of ammonia," "tincture of iodine" and "tincture of myrrh," and many others upon which were printed the dose and directions, also to what use the article could be put. The inspector stated that if a man entered a store and asked for a few cents' worth of syrup of ipecac or any of the other named medicines and the druggist put one of the stock labels on the bottle, he must stamp the same to cover the revenue law. He also claimed that glycerine and camphorated oil must be stamped, they being classified under toilet preparations, but, if this is so, the druggists want to know why the manufacturers are allowed to sell them to the druggists without first complying with the law. The inspector, it is claimed, stated that if the druggists settled with him they would get off easier than if they let the matter be brought to the attention of Inspector Gill, collector of revenue in Boston. Manager Weir, the manager of Jordan's pharmacy, did not see the justice of the settlement with the inspector, and refused to settle. Mr. Gill being in Washington, the facts of the case were stated to his assistant, who stated that, provided these preparations were bottled and exposed for sale with one of the stock labels on them defining to what use the same could be put, a stamp must be placed on the article. The matter has been held open awaiting a decision from Mr. Gill. At the other drug stores, the druggists made sworn statements, estimating the amount of unstamped preparations which they sold since the revenue law had been in force, and they settled at once with the inspector. Now the question arises, no matter how the case is decided, had the inspector any right to settle with the druggists, as he sees fit, without first calling the attention of his superior to the affair?

Efforts to Make the Sale of Tobacco on Sunday Legal.

Boston, April 14.—Led by Representative Saunders, efforts are being made through the Judiciary Committee to make the selling of cigars and tobacco on Sunday legal in places where they ordinarily are sold during the week and which now, with the exception of drug stores, may not legally make such sales on the Sabbath. After the Supreme Court affirmed the constitutionality of the law, a futile attempt was made to enforce it in Boston and the result was that a plate of baked beans which cost fifteen cents was sold for twenty-five cents with a cigar thrown in, and a Sunday paper for fifteen cents with a cigar given away. Such a practice as this brings the law into contempt and makes its enforcement a farce. The proposed law makes no change in the prevailing practice, and does not provide for the opening of stores for the sale of tobacco alone. Mr. Saunders stated that it cannot be said that tobacco is not a necessity, for to some it is as necessary at times as food. Bread is sold on Sunday, and yet it could be provided for that day by purchase only, or making it, on Saturday. There is no noise or disturbance coming from the use of tobacco on Sunday, as from the letting of carriages and the running

of electric cars and steam railroads on that day. Others can sell cigars and tobacco as quietly as druggists always have done. One representative said that although he did not use tobacco and is a church member, he favored the bill because it would stop the use of a dead letter law for the purpose of prosecution. There were, of course, some remonstrants, but their arguments were rather weak.

A Druggist Kidnaps His Own Child.

Boston, April 14.—A sensation was caused this week at Norwood, not far from this city, owing to the taking of his own child from his mother's custody, by Adolphus Holton, the proprietor of two drug stores in that town. Mr. Holton was married about five years ago, but his married life was unhappy. The couple decided last summer to separate and the mother has since retained the charge of their four-year-old boy. One day this week, while the child was on the street with his mother, Mr. Holton met them and placed the boy in a carriage, on the seat of which Mr. Holton's brother sat. Mrs. Holton attempted to prevent the carriage from leaving and clung to her husband, who finally broke away and ran after the fast disappearing carriage. Legal proceedings probably will ensue to determine which parent shall retain the custody of the child.

Paint and Oil Club Men Dine Pleasedly.

Boston, April 14.—Members of the Paint and Oil Club have just had the one hundred and twenty-second dinner in the history of the club. Frederick H. Newton, the president, presided. William S. Cutler was elected to represent the Paint and Oil Club in the Associated Board of Trade, and Jerome Marble, of Worcester, and Charles Tyler, of Boston, were elected to represent the club at the annual convention of the National Paint, Oil and Varnish Association, with John D. Morton and C. M. Hay as alternates. W. Prentiss Parker was the guest of the evening and gave a most interesting talk on "Historical Houses of Roxbury and Eastern Massachusetts," which he illustrated by fine stereopticon views.

NOTES.

—Druggist O'Donnell of Cambridge is a man of three licenses which allow the selling of liquor. He hired a head clerk to take out these licenses for him. The clerk took the liberty to get drunk and Mr. O'Donnell is ready to believe in the old religious dogma of "total human depravity." The wish to aid one's fellow men in the getting of proper stimulants for medicinal purposes is often attended with embarrassment in the realization of the generous thought.

—There is to be no stiffening of the medical law at present, owing to the fact that the Senate has accepted the report of the Committee on Public Health that no legislation is necessary, on the annual report of the State Board of Registration in Medicine.

—John Graham and John E. Quimby, both of East Milton, are respectively the president and treasurer of the Rugby Pharmaceutical Company just organized at Kittery, Me., under the laws of that State, with a capital stock of \$5,000, of which \$300 is paid in.

—By the explosion of a still in the chemical laboratory of the Cabot Lamplack Company, Chelsea, Frank McCormack, an employee, was killed. The damage by fire to the plant is estimated to be about \$5,000.

—Mr. Cunningham, the Inman Square druggist, Cambridge, has gotten into a disagreement with the City Government because of a clerk who sold liquor on Sunday.

—Michael Burke is to leave the firm of Flynn & Company, druggists at Lawrence, to take a position with Albert Arthurs, the Broadway pharmacist in that city.

—F. J. Nolan, a Whitman druggist, owes \$2,200 and is trying to effect a settlement with his creditors. His assets figure a little more than \$800.

—Governor Stanley, of Kansas, has appointed L. Ardery, of Hutchinson, a member of the State Board of Pharmacy to succeed Charles Lawrence, of Wichita, whose term has expired, and W. W. Naylor, of Holton, to succeed himself.

BALTIMORE.

It Looks Like Sharp & Dohme.

Baltimore, April 14.—The season of the Baltimore Drug Trade Bowling Club is drawing to a close. By winning six contests this week, Sharp & Dohme have greatly improved their chance of capturing the cup. The teams which Sharp & Dohme have yet to meet are for the most part "easy fruit." With the three victories over the Root and Herbs last Tuesday night, the race was virtually decided, and the triple defeat inflicted on Gilpin, Langdon & Co. last night enabled the Sharp & Dohme quintette to strengthen its hold on first place. The week's games leave the several teams in the following positions:

Teams.	Games Won.	Games Lost.	Percentage.
Sharp & Dohme.....	40	8	.833
Root & Herb.....	12	36	.750
Winkelmann & Brown Drug Co.....	14	708	
James Baily & Son.....	18	20	.375
Gilpin, Langdon & Co.....	16	22	.333
Parke, Davis & Co.....	6	40	.167
Muth Bros. & Co.....	6	42	.125

The Baltimore bowlers who intend to participate in the national contests at New York next week will leave here Thursday evening, April 19. The party will include Dr. Dohme, Messrs. Lockwood, Goldsborough, Waters, Beaumont, Winkelmann, Baker and Baily. Dr. Dohme will be accompanied by his wife. All will return on Saturday night.

Maryland College of Pharmacy.

Baltimore, April 16.—The students of the Maryland College of Pharmacy, faculty and the other officials of the institution are busy with the annual examinations and with preparations for the commencement, which will take place on the 28th inst. The senior class numbers fifty-two, and of this total more than forty, it is thought, will pass and receive their diplomas. The examinations will be in progress all of this week and a part of the next. Arthur Quandt, J. Webb Foster, S. L. Robinson, Thomas L. Richardson and A. E. Thompson are the Committee on Commencement. A reception to the students of the college will be given on the 23d inst. at the residence of Charles E. Dohme, the president of the institution, on North Carrollton avenue.

Three Times Burglarized.

Baltimore, April 13.—For the third time the post office at Mount Airy, Md., of which Charles Rudy, a well-known druggist, is postmaster, has been burglarized. About one year ago cracksmen carried off some plunder, and about 2 o'clock last Thursday morning another raid was made. Three masked men blew open the safe in the office, having forced the door of the place with a jimmy and took \$550 worth of stamps, in addition to \$300 in money. The heavy charge of dynamite blew the safe to pieces and tore large holes in the floor and ceiling of the apartment. A man who happened to pass by the store while the thieves were at work found himself looking into the muzzle of a revolver with one of the burglars at the other end. He was compelled to go inside, was blindfolded and released only after the job had been finished. His captor also searched his pocket, but finding only some small change, molested him no further. The sum of \$650, which Mr. Rudy had drawn from one bank to another, had been taken to a private house, otherwise it, too, would have fallen into the hands of the burglars. The latter made good their escape, and the authorities have only a very superficial description of them.

A Druggist's Sudden Death.

Baltimore, April 10.—William T. Smith, a popular druggist at Columbus and Princess streets, Alexandria, Va., across the river from Washington, died very suddenly there to-day under circumstances which have deeply distressed his friends and family. He had been in ill-health for some time past, suffering, it is said, from Bright's disease. According to one version, he used by mistake a glass in which poison had been compounded, to drink water, and the remnant of the toxic substance caused death several hours later. Others aver that, feeling very bad, he was induced to take a stimulant

which made him sick and brought on a state of coma, from which he did not rally. He was very popular and had many friends, who were shocked by his sudden demise. The deceased was quite a young man.

NOTES.

—H. P. Hynson, chairman of the Committee on Practical Pharmacy and Dispensing, American Pharmaceutical Association, is making special efforts to arouse general interest in this feature, which attracted so much attention last year. He has sent out postal cards, requesting druggists to select out of the last twenty-five prescriptions which they have filled the one which required the most pharmaceutical skill, the one that gave the most trouble and annoyance, or the one that was most difficult to prepare. In this way a large amount of instructive data may be obtained. Mr. Hynson has already received a number of compliances with the request.

—Among the visiting druggists in Baltimore last week were C. W. Brant, of York, Pa., formerly Mayor of the town, and a member of the firm of Dale & Co.; A. T. G. Hodnett, of York, Pa.; William Brown, of Brown & Hooff, Charlestown, West Va.; Dr. N. W. Vayt, Staunton, Va.; State Senator Feldmeyer, of Annapolis, Md.; Joseph B. Boyle, of Westminster, Md.; L. H. Dielman, of New Windsor, Md.; John Clugston, of Mentzer & Clugston, Waynesboro, Pa.; William G. Burgess, of Newport News, Va.

—A large number of the Baltimore druggists made interesting Easter displays in the windows of their stores. Pretty ribbons hung in graceful loops, beautiful decorations and articles suitable as presents were arranged in tasteful and artistic fashion, and attracted much attention. A decided change has been noted during recent years in the character of such displays. They include as a rule things of substantial value, the practice of making a show with gewgaws having been discontinued.

—A certificate of incorporation has been filed at Dover, Del., for the Slingluff-Glacken Chemical Company, of Baltimore. The incorporators are Raymond M. Glacken, John F. Williams, Charles E. Hill and William H. Purcell, all of Baltimore. The company will manufacture chemicals and chemical specialties. Its capital stock is \$50,000.

—The Caf-fee-no Drug and Advertising Company of Baltimore has been incorporated by Albert W. Robinson, of Sharpstown, Md.; Thomas J. Pyle, of Georgetown, Del.; Thomas B. McDowell, Kansas E. Ringer and Edgar W. Tenemen, of Baltimore. The capital stock is \$20,000, divided into \$5 shares. The company will manufacture drugs.

—The condition of J. H. Hancock, a druggist at Fremont avenue and Lombard street, who has been ill for some time past, shows no signs of improvements, and his friends are beginning to feel apprehensive.

—F. J. Deudonne, of Deudonne & Son, the well-known Washington drug firm, sailed for Europe March 24, accompanied by his wife. The travelers expect to visit the Paris Exposition.

—Mertz, the popular druggist under the Columbia Theatre, in Washington, has made a number of improvements, which greatly enhance the attractiveness of the establishment.

—Owing to the absence of a quorum at the meeting of the Baltimore Retail Druggists' Association, called for last week, no business was transacted.

—Charles H. Rowe, of Rowe & Rowe, Spartansburg, S. C., was in Baltimore last week. His firm intends to open a new store about May 1.

—This month's banquet of the Wedgewood Club will be merged with a dinner of the Maryland College of Pharmacy Alumni.

BLAIRSVILLE, PA., DRUGGISTS SENTENCED.

A. M. Baker, Milton G. Kerr, G. M. Alters, H. J. Zimmerman and T. C. Duncan, druggists of Blairsville, Pa., who recently pleaded guilty of selling liquor without a license, were each sentenced April 3 to pay a fine of \$200 and undergo imprisonment in the county jail for 20 days. J. M. Cribbs and T. J. Condon, non-active partners of two of the druggists, were allowed to go free.

PITTSBURG, PA.

W. P. R. D. A. Euchre.

Pittsburg, April 14.—The Western Pennsylvania Retail Druggists' Association is preparing for its first elaborate entertainment, in fact for the first entertainment of any kind since its inception. This affair will be held on Monday, April 23, at 8 o'clock sharp, in the old Columbus Club building at the corner of Sixth avenue and Cherry Alley. It will partake of a varied form of entertainment, including a luncheon, a lecture, "red lemonade," a progressive euchre and plenty of cigars. There will be both instrumental and vocal music and in the former line, Secretary E. C. Garber, one of the most noted banjoists in the United States, will contribute his share. A phonograph will be a noteworthy feature, as among its records will be speeches for the occasion by ex-President H. B. Hynson, of Baltimore; President Simon N. Jones, of Louisville, Ky., and F. E. Holliday, chairman of the Executive Committee of the N. A. R. D. B. E. Pritchard, vice-president of the W. P. R. D. A., will deliver the address of welcome. The members of the association through Secretary Garber have issued invitations to the wholesalers and the city salesmen, all of whom expect to be present. This is but a brief outline of the array of allurements prepared for the occasion, which is expected to be the beginning of a series of affairs of similar nature planned by the organization.

College of Pharmacy.

Pittsburg, April 14.—The Pittsburg College of Pharmacy held its commencement exercises April 12. The senior class consisted of twenty-six graduates, of whom four were women. Joseph A. Baird was awarded first honor, John P. Pfaff, second, and Juliet McA. Jennings and James K. Love, third. The other graduates are: James E. Barr, George H. Brackman, James M. Goldsmith, Esther Hamilton, Ira C. Hess, Paul H. B. Hess, Anna G. Hay, Joseph D. Mercer, Edgar H. Miller, Harry A. Morris, Sada C. McClintock, Clark T. McCutcheon, Hugh J. O'Donnell, John H. Phillips, William T. Piper, Matthew H. Scorer, Charles E. Smith, Alexander R. Snedden, Rollin L. Snyder, Charles C. Sweeney, Charles C. Stanton and Raymond A. Thompson. The students of 1900 will leave behind them a useful memorial in the way of a comfortably-fitted up reading room.

Drug Stock Sold.

Pittsburg, April 4.—The executors of the estate of the late Robert Christy held an auction sale last week of the holdings of the decedent in the Christy Drug Company, realizing about \$52,000. The stocks sold were 1,796 shares of a par value of \$50, also one share of the Mansfield Land Company at \$2,200; 50 shares of the Walther-Robertson Drug Company at \$45 per share, and five shares of the Denton Drug Company of Carnegie, at \$1 per share. The Christy Company was incorporated February 1, 1900, with a capital of \$90,000. A number of odd lots of stock was bought at from \$20 to \$32 per share. The remaining shares, numbering 1,421, were purchased by R. H. Brown at \$29 per share. The store at Fourth avenue and Smithfield street and the one at Carnegie are owned by the company, which also controls a large number of proprietary preparations.

Explosion of Gasoline.

Pittsburg, April 5.—The borough of McKees Rocks narrowly escaped a most disastrous conflagration lately which would have wiped out the flourishing district in a short space of time. David Banker, a clerk employed in Dr. Onstolt's drug store, known as the McKees Rocks Pharmacy, undertook to fill a vessel with gasoline and the vapor arising from the freshly-opened can communicated with the flame from a chandelier hanging from the ceiling and an explosion followed. Banker was hurled to the floor and shorn of his locks and eyebrows. The prompt appearance of the fire department saved the establishment and borough, as the store is a wooden one situated in a close cluster of frame dwellings of which McKees Rocks is largely built up.

NOTES.

—Lorah & Myers is the name of the firm in the old Dickson Pharmacy on Penn avenue, near Ninth street. In the case of George G. Strott, formerly in business with Mr. Lorah, now a bankrupt, the account of the receiver was confirmed nisi.

—Anton Armbruster, a clerk for Charles Menkemeller, Wheeling, W. Va., died on March 23 from injuries received on February 20, falling from a telegraph pole which he was decorating in honor of Dewey's visit to Wheeling on February 22.

—Mr. Markell, the first vice-president of the Western Pennsylvania Retail Druggists' Association, was elected by virtue of his office to fill the vacancy in the presidency caused by the death of Robert Christy.

—The matrimonial engagement of Hugh J. Canney, of W. J. Gilmore & Co.'s traveling staff, to Miss Pauline Casey, one of Pittsburg's most prominent society girls, was announced last week.

—J. C. Campbell & Co., Clarion, Pa., have sold out to D. R. Hindman, the county treasurer. The new name is the Clarion Drug Company, with J. C. Campbell as acting pharmacist.

—E. H. Hyatt, formerly in business at Johnsonburg, Pa., and succeeded there by G. G. Messenger & Son, has bought a drug store at Wilcox, Pa.

—F. C. Bittner, formerly a clerk for Theodore Cappellet, Oakland, started in business April 1 with Mr. Newcome on Mt. Oliver, Pittsburg.

—P. C. Schilling, who has three stores in Pittsburg, will soon open the fourth at the corner of Wylie avenue and High street.

—The Retail Druggists' Association of Butler, Pa., purchased the People's Pharmacy stock and divided it proportionately.

—Kennedy's Pharmacy, at 1801 Penn avenue, was ablaze recently but the damage was slight.

—McClelland Brothers have opened a new store at Ford City, Pa.

LOUISVILLE RETAILERS FORM A MANUFACTURING COMPANY.

Simon N. Jones, who is president of the N. A. R. D., and several other prominent druggists of Louisville, Ky., and other Southern cities have formed the Southern Pharmaceutical and Chemical Co. for the manufacture of pills, tablets, elixirs, syrups and other pharmaceutical preparations. The company was incorporated on April 11, with a capital of \$250,000. The principal place of business is to be in Louisville. The officers are: Simon N. Jones, president; Theodore Rectanus, vice-president; R. L. Boldrick, secretary and treasurer; R. C. Stockton, general manager. When asked about the project Simon N. Jones said:

Yes, we think the field is a good one for such an industry. There is nothing like it in the South, and we feel assured it will be profitable. All the stock is subscribed by retail druggists, to whom we wish to confine it. We have sixty subscribers, and expect to sell to about 600 retailers in this section, many of whom will become stockholders. The movement probably will bring us into competition with such houses as Parke, Davis & Co., Eli Lilly & Co. and others. We have a competent and experienced chemist coming from the East. How soon we begin will depend upon our getting machinery, which may require from thirty to ninety days."

New York representatives of several of the large pharmaceutical manufacturing houses when called upon by the Era's reporter had nothing to say in regard to this new concern, except that their firms did not fear competition from such a quarter.

—Two men at Rose Bower, Va., died recently from drinking each a bottle of some proprietary bitters, kept in stock in the store of one of the men. People who fool with medicines, even secret ones, without knowing anything of pharmacy or medicine, are apt to get into serious trouble, sometimes fatal, as in this case.

CLEVELAND.

How the N. O. P. A. Works.

Cleveland, April 14.—The method of taking care of the entire business interests of the retailer has been well planned by the Northern Ohio Pharmaceutical Association. In addition to the monthly meetings, which average sixty-five members in attendance, the Board of Control, composed of L. C. Hopp, C. A. Godman, J. A. Bartlett, E. C. Lingard, E. A. Schellentrager, W. F. Kuder and L. I. Metcalf, hold a meeting every Thursday afternoon, usually lasting about three hours. At this time the board receives the report of its agent, A. S. Cooper, who devotes his entire time to the work and is fully paid by the N. O. P. A. and also give him instructions. As an evidence of the board's activity the following circular issued recently to every pharmacist in Northern Ohio is a good example:

"When in the course of human events it becomes necessary for a man to stand by his platform, which has been established in words as follows:

"No member shall sell or advertise for sale, scheduled goods at a lower figure than the prices stipulated on current price-list of this Association."

Then, with such rule of conduct before us, no one has ground to break the law, and cut his neighbor's throat, for two wrongs never make a right or gave one warrant for outlawry—no cut-throat should go at large. Of what use is law if not to be enforced? Rule 3 was made to be enforced, and such as break it class themselves as cutters, and will be dealt with accordingly.

All we ask is proof of violation in prices, for if there are any cutters in the N. O. P. A., we wish to know it and you need to know it for self-protection. We look to you to do your part in protecting prices, and rest assured that we will do ours.

Prices are issued almost weekly, not alone for proprietary articles, but likewise for generalicals. It is worthy of note that the retailers implicitly follow these schedules. If it took twenty years of cutters' ingenuity to bring about the present condition of trade degradation, it will certainly require heroic and well considered measures of the above character to eradicate them.

NOTES.

—The Pharmacy School examinations are over and fourteen seniors will be graduated on Wednesday, April 25 at 8 p. m. in the Y. M. C. A. Hall. The following are the successful candidates: C. H. Flandermer, Simon Davis, David Lesser, Frank J. Hinst, Ed. W. Meyer, L. V. Warren, Leo A. Lesser, Mike Salzer, C. Schwarzwalder, F. A. Priebe, F. H. Bader, Wm. S. Schweitzer, Hugh H. McKenzie and Moss J. Cramer.

—Abe Honecker was elected police clerk by a large majority. Arthur May did not succeed in landing the school directorship; he was on both the Non-partisan and Democratic tickets and refused to accept the latter nomination, otherwise he would have been elected. Dr. D. B. Steuer, another pharmacist, has been elected president of the City Council.

—Prof. Henry W. Stecher, of the drug firm of Stecher Bros., secretary of the Pearl Street Savings Bank and the Cleveland Stockyard Co., was married to Miss Margaret Dixon on Tuesday, April 3. The happy couple will spend their honeymoon at Bermuda and return to Cleveland about June 1. They will reside at 819 Scranton avenue.

—G. L. Hechler, well known to druggists throughout the country, leaves for an extended visit to his old home in Germany, after an absence of thirty-eight years.

Drug Clerks of Lexington, Ky., Agitating Sunday Closing.

Drug clerks of Lexington, Ky., are agitating the question of Sunday closing and have asked the proprietors to close their stores on that day. It is believed their contention will be realized, as it is stated that all of the druggists interviewed on the subject, with but one exception, have expressed a willingness to enter into such an arrangement, provided, of course, that a clerk shall be available when calls are made on Sunday.

—The annual meeting of the Massachusetts Pharmaceutical Association will be held June 19-21 at Newburyport, Charles L. Davis, local secretary.

CHICAGO.

Meeting of C. R. D. A.

Chicago, April 14.—A meeting of the Chicago Retail Druggists' Association was held yesterday at the Masonic Temple. Election of officers was the order of the day. George A. Graves was elected president, John I. Straw first vice-president, Herman Fry second vice-president and S. C. Yeomans third vice-president. Thomas V. Wooten, former president of the association, was elected secretary, and Walter Gale treasurer. The following trustees were elected: For the North Town, Bruno Batt and George I. Malone; for the South Town, George R. Baker and E. F. Cooban, and for the West Town, J. S. Stiles and Charles Lange. A full meeting was in attendance, and many pertinent topics were discussed. The work of the N. A. R. D. was gone into, and an extended discussion was indulged in favorable to the repeal of Schedule B of the internal revenue act. Resolutions of thanks to the outgoing officers were adopted, and the association directed that a copy of the same be engrossed and presented to the retiring president, Thomas V. Wooten, in recognition of his work in behalf of the retail druggists, not only of Chicago, but of the whole country. The past year has shown a record of good and successful work on the part of the association and its officers. A practical working plan has been put in operation, the membership has increased and the finances of the organization are in good shape. All signs point to a successful future for the body whose voice more and more is becoming the voice of the druggists of Chicago.

Bowling.

Chicago, April 14.—Last night's score of the Chicago Drug Trade Bowling Club was as follows:

Bauer	124	118	184
Fechler	142	163	158
Mathews	146	148	..
Medbury	104	143	203
Baker	176	144	156
Thomas	168	153	192
Armstrong	176	190	189
Storer	130	116	103
Waldron	99	181	182
Eloeki	143	148	148
Delbröge	151	118	111
	138	135	110

The following members of the club and others will leave next Tuesday, April 17, at 3 p. m., via the Michigan Central Railroad for New York to take part in the national drug trade bowling contest: Messrs. Storer, Mathews, Dr. Thomas, Matthes, Wallace, Bauer, Medbury, Baker, Waldron and Armstrong.

NOTES.

—On April 13 the Searle & Hereth Company entertained the graduating class of the College of Physicians and Surgeons of Chicago, about 150 in number. Last week they entertained the graduating class of the Bennett Medical College, also the National Medical University on Saturday the graduating class of the Chicago College of Pharmacy, and next week will have a visit from the graduates of the Rush Medical College, making altogether about 500 students received.

—Thomas V. Wooten, secretary of the N. A. R. D., left to-day for Washington, D. C., where he will speak before the Ways and Means Committee of Congress as the authorized representative of the druggists of the country, to urge the repeal of that portion of the internal revenue act which bears most heavily upon the drug trade. He took with him petitions from retailers and proprietary associations, urging the repeal or modification of Schedule B.

—Clarence Davidson returned from Detroit this week, after having an elegant time with the Medicos who went on the Parke, Davis & Co. excursion. Among those who went along were Messrs. John Zelowski, J. W. Blood, Dr. Zaleski, V. L. Masliko, G. N. Herzberg, W. F. Datz, J. S. Stiles, T. Schmid, W. R. Forsyth, J. D. Barnes, C. B. Mead, C. O. Lindstrom, F. J. Steker, H. R. Gillespie, Jos. Grubb, A. I. Movette and A. F. Steker.

—J. L. Klika, a druggist of Sumnerdale, was put on trial this week before Judge Hutchinson, charged with selling liquor without a license. Frank McMahon testified that on July 12, 1899, he procured a drink of whisky at

Klika's drug store. Another witness testified that last summer, when he was feeling faint, he went into Klika's store and procured a glass of whisky and soda.

—Fred. D. Pierce has bought the drug store of F. P. Kennedy, at Fifty-fifth and State streets. Mr. Kennedy will take a well earned rest, and on May 15 will leave for Joplin, Mo., to assume charge of his mining interests at that place. Mr. Pierce will continue in possession of his West Side store, and will run it with the assistance of a managing registered pharmacist.

—A. A. Winberg & Co. have leased the Hyde Park Hotel Pharmacy. They will put in an entirely new stock and fixtures. Mr. Winberg was assistant manager for E. O. Carlson, the former proprietor, who will open a new drug store in the building across the street.

—William A. Dyche and W. Bodemann, resident members of the Illinois Board of Pharmacy, held apprentice examinations here this week. The full board will be in attendance next week to hold the regular examinations for registered pharmacists.

—It is quite reliably reported that Lazell, Dalley & Co., of New York, are having an automobile built for their Chicago representative, Ed. F. Mallory. The vehicle will be built for four, with room for greater seating capacity when needed.

—Henry Cook, for twenty-three years assistant manager of the sundries department of Morrison, Plummer & Company, has resigned and will take charge of the sundries department of the Charles Baumbach Drug Company, of Milwaukee.

—Ferdinand Schmeling, formerly in the drug business on Milwaukee avenue, will open a new drug store at the northwest corner of Fifty-fifth and Halsted streets, on May 1.

—Charles A. Haley, the Western representative of C. W. White & Co., has just returned from Michigan, and reports a good trade in every locality he visited.

—W. F. Faber, representing the well known druggists' sundries house of James A. Davidson, leaves to-morrow for an extended selling trip through the Northwest.

—Hollander Brothers, of Galena, Ill., have left a stock sundries order with James A. Davidson. They will open a new drug store in Galena in the near future.

—Dr. M. C. Korb has bought the drug store formerly owned by W. F. Dessau, at the corner of West Randolph and Ada streets.

—Goodall & Green, of Osage, Iowa, have dissolved partnership. Both will continue in the drug business in separate stores.

—August Lundvall, a well-known druggist on Division street, is recovering from a recent severe injury to one of his ankles.

THE NORTHWEST.

The fierce sun melts earth's frosty crust,
And lassitude in man produces;
On trees the buds will soon out burst,
And soda fountains squirt their juices.

Iowa Pharmacy Law Decision.

St. Paul, Minn., April 13.—The reversal just made by the Supreme Court of the decision of the District Court at Iowa Falls in the case of the State of Iowa vs. F. W. Gregory is a ruling that is of interest to every druggist doing business in the State, as action was brought under alleged violation of the State pharmacy law. In the lower court Gregory was found guilty and fined \$800. He took an appeal to the Supreme Court and the above decision has just been rendered. The appeal was taken on several technicalities, among others being the omission from the certificates signed by the purchasers of liquor of the complete residence of the purchaser. In some instances the county was omitted and in others the State of the party's residence. It was held in making the appeal from the decision of the lower court that these were merely clerical errors and that they were not made with any intent or design of violating the law by misrepresentation of the purchaser's residence.

Getting Rid of the Tax.

St. Paul, Minn., April 13.—The Minneapolis druggists are doing their full share of the work of trying to secure the repeal of portions, at least, of the war revenue tax law. Members of the Retail Druggists' Association of

that city at a recent meeting drew up a very strong petition asking for relief in this regard, which has been sent to the Minnesota Congressmen and Senators. The petition made a very plain statement of the attitude of the members and of the burden which the druggists are bearing because of the revenue law.

NOTES.

- Successions: J. H. Owings & Co., Deer Lodge, Mont., by the Deer Lodge Drug Co., which has incorporated with \$5,000; Olive & Smith, Bayard, Ia., by Hoover & Lynch; M. J. Gruber, Winlock, Wash., by J. L. Gruber & Co.; F. L. Norin, Ada, Minn., by F. O. Weygant; Apland & Gandrup, Cambridge, Ia., by the Apland Drug Co.; I. L. Arzner, Canyonville, Ore., by J. E. Love; J. E. Love, Liddle, Ore., by Harris & Nichols; Rohde & Sheppard, Spring Valley, Minn., by Sheppard & Eckhoff; C. D. Loomis, Gilmartin, Wis., by Mrs. E. B. Clark.
- D. C. Steele has started at Fairmount, N. D.; A. J. Davis & Co. at Salt Lake City, Utah; Smith & Gilpin, Osseo, Wis.; Ed. Wright at Provo, Utah, and Mart & Gross at Sedro-Wooley, Wash.
- W. M. Bright, formerly of Minneapolis and Princeton, but now in the drug and banking business at Walker, Minn., is here on a visit, reporting everything in Walker booming.
- W. H. Flinn was down from Foley, Minn., a few days ago. He is arranging to erect a fine new store there this spring.
- E. E. Roebuck has returned to this vicinity after an absence of several years in another part of the country.
- L. F. Entrup is in temporary charge of the City Drug Store at Morton.
- M. D. Martin is getting ready to start at Redwood Falls, Minn.
- V. A. Qvale, of Rochester, was in the city on business this week.
- Sanfield & Co., Salt Lake City, Utah, have sold.
- G. L. Humphrey, Monroe, Neb., died this week.

ST. LOUIS.

College Commencement and Banquet.

St. Louis, April 14.—The commencement exercises of the St. Louis College of Pharmacy were held Wednesday evening at the Y. M. C. A. Hall. There were forty-two graduates out of fifty-one who took the examinations, the entire senior class numbering sixty-five. On the platform, besides the faculty, officers and Board of Trustees, was Dr. Enno Sander, the oldest living graduate of the college. The degrees were conferred by Vice-President Theo. F. Hagenow, in the unavoidable absence of President H. F. A. Spilker. Prof. James M. Good delivered the valedictory on the part of the faculty. He traced the history of pharmacy during the nineteenth century, and described the existing conditions both scientific and commercial, and directed his closing remarks directly to the graduates. The class valedictory was delivered by George Neves, Ph. B., Oklahoma City, Okla. The alumni prizes were distributed by President Rudolph S. Vitt, of the Alumni Association, and the college prizes by Prof. H. M. Whelpley. Carl W. Craemer, of St. Louis, received the gold medal given to the candidate for the degree Graduate of Pharmacy, for the best examination in all branches, while the second prize, a silver medal, went to Albert A. Fricke, of Plattsmouth, Neb. George Neves won the college prize of a gold medal for best examination in all branches for degree Bachelor of Pharmacy. The junior class prizes were awarded as follows: College prize, a free general lecture ticket to the senior class, for the best general examination, Paul A. Mueller, St. Louis; alumni prizes, standard works on the subject of pharmacy, Samuel W. Agree, silver City, N. M., and George P. Hemm, St. Louis. Following is the list of the graduates:

Degree, Graduate in Pharmacy, "Ph.G."—Edward P. Ansermueller, St. Louis; George W. Bader, Belleville, Ill.; Frank M. Buch, Bentonville, Ark.; Jacob C. Burkart, St. Louis; Christopher W. Busb, Centralia, Mo.; Carl William Craemer, St. Louis; James E. Craig, Cape Girardeau, Mo.; Thomas F. Cranford, Nashville, Ark.; Edgar Cunningham, Honey Grove, Texas; George Elmbeck, New Haven, Mo.; Theodore J. O. Engelskind, St. Louis; Joseph S. English, Paris, Mo.; William C. Fahrnhorst, Springfield, Mo.; Harry N. Force, Galveston, Mo.; Homer S. Fore-

man, McKinney, Texas; Herman Frank, St. Louis; Albert A. Fricke, Plattsmouth, Neb.; Ralph T. Hill, St. Louis; Charles J. Holbrook, Kinnmund, Ill.; Edward H. Kerstner, Gordonville, Mo.; Otto William Klee, St. Louis; Arthur E. Kring, East St. Louis, Ill.; Ernest A. LeBien, Lincoln, Kans.; William C. Lieser, St. Louis; Clyde H. Magruder, St. Louis; William J. Meisburger, Webster Groves, Mo.; Wilfred C. Middlesworth, Mount Ayr, Iowa; Charles E. Miller, St. Louis; Henry M. Mitchell, Seneca, Mo.; Richard M. Moews, Memphis, Tenn.; Christian G. Mueller, St. Louis; Nicholas J. Pippert, St. Louis; Charles H. Roberts, Hallsville, Mo.; Otto Schmidt, St. Louis; Alfred N. Townley, Miami, Fla.; Frederick G. Weiss, Memphis, Tenn.; Finis E. Williams, Carthage, Miss.; Scott H. Wilson, St. Louis, and Daniel F. Wulman, Evansville, Ind.

Degree, Bachelor of Pharmacy, "Ph.B."—Arthur Huhn, St. Louis; George Neves, Oklahoma City, Okla.; Edgar Roberts, East St. Louis, Ill.

Degree, Pharmaceutical Chemist, "Ph.C."—Harvey E. Manning, Fort Smith, Arkansas.

The faculty of the college gave its annual banquet in honor of the graduating class at the Southern Hotel, on Tuesday evening. The menu was an elaborate one, but those about the board enjoyed the good things that were said after the dinner no less than the good things on the table. Prof. J. M. Good acted as toastmaster, and informal toasts were responded to by Prof. Gustavus Hinrichs, Prof. Francis Hemm, Dr. O. A. Wall, Dr. J. C. Falk, Dr. H. M. V. Nepley, Sol. Boehm and Dr. Enno Sander. President H. F. A. Spilker responded on behalf of the college, Charles Getner for the Board of Trustees, R. S. Vitt for the Alumni Association, Mr. Schulher for the Drug Clerks' Association, Henry Fischer for the St. Louis Apothecaries' Association, and George Neves and E. A. Le Bien for the graduating class.

The annual meeting of the college will be held on Monday afternoon, April 30, at 3 o'clock, at the college hall. Reports of all officers will be presented. Election of officers for the ensuing year will follow, and all members are earnestly requested to attend.

Missouri Pharmaceutical Association Matters.

St. Louis, April 7.—Preparations are going on apace for the convention of the Missouri Pharmaceutical Association in June at Pertle Springs. Prof. Francis Hemm, chairman of the Committee on Papers and Queries, calls the attention of members to the fact that the time before them for preparation of papers is limited and there should be no delay in getting to work. A new method of awarding prizes for papers has been adopted. Heretofore prizes have been solicited from manufacturers and jobbers and there have been so many that practically every paper offered secured an award. Following along the lines of the A. Ph. A., awards will be made in the future only on papers of distinctive merit and the committee have the right to withhold an offered prize if none of the papers submitted are deemed up to the standard. Four prizes are offered by the association. Gold and silver medals respectively for best and second best papers on commercial pharmacy and gold and silver medals for best and second papers on scientific subjects. Under the circumstances no one will hardly be able at the coming meeting to win a prize on an essay on "Fishing," although such instances have been known in the past. Will. L. Meyer, chairman of the Entertainment Committee of the Missouri Pharmaceutical Travelers' Association, will run up to Kansas City on the 10th and after the meeting of the Board of Pharmacy there go with the members to Pertle Springs and look over the land with a view of planning the amusement features for the meeting.

Trade Excursions.

St. Louis, April 14.—The second of a series of excursions to ena-e the principals of St. Louis wholesale and manufacturing establishments to come into personal contact with their trade will be given April 25-6, to Chillicothe, Mo., and return, stopping at all intermediate points. A band will be taken along, the train elaborately decorated, and souvenirs given by the concerns taking part. The first excursion in January, to Terre Haute, Ind., was not attended by representatives of the drug trade, but both Meyer Brothers' Drug Company and the J. S. Merrell Drug Company have signified their intention of having representatives on this one. If the coming excursion is a success, as it promises to be, the probability is that the next one will be into Oklahoma.

Bowling.

St. Louis, April 14.—Some notable work was done by the members of the Druggists' Cockeyed Hat League Thursday night. The Burdocks won four of the five games from the Chamomiles, but in the second game, which was the only one the latter succeeded in winning, they broke the league's record. Wurnb was high for the Burdocks, and Stork for the Chamomiles. The Mustards got away with four of the five games rolled with the Dandelions. Pauge was high for the winners and Hobbs for the Dandelions. The Catlins won the odd game from the Junipers by one pin. Kahre and Ludwig were high for their respective teams.

Permanent Headquarters for Clerks.

St. Louis, April 14.—The St. Louis Retail Drug Clerks' Society held its monthly meeting Thursday night at Bowman's Hall, the usual meeting place. No business was transacted, but the matter of permanent headquarters was informally discussed and laid over until the May meeting. It is proposed to secure a suite of two or three rooms in a centrally located office building, and which will be suitably fitted up, equipped with reading tables, billiard table, etc., and kept open evenings for the benefit of the members. An increase in the annual dues would be necessary to meet the expense, and a full attendance is desired at the May meeting, so that the matter may then be acted upon.

NOTES.

—Joseph Maserung, lecturer on materia medica and pharmacy in the medical department of Washington University, and in charge of the O'Fallon dispensary, has accepted the responsible position of chemist with the new W. C. Wetmore Tobacco Company. He will assume his new duties June 1, but will continue to lecture at the college as heretofore.

—W. S. Fleming, of Fleming & Hoch, Seventeenth and Washington avenue, is prominently mentioned for State treasurer on the Republican ticket. Mr. Fleming is high in the councils of his party, and is Mayor of the thriving suburban town of Webster Groves, Mo.

—Eichelberger Bros., druggists, Pana, Ill., have remodelled their store, put in new fixtures, shelfware, etc., and now have what is described as one of the finest drug stores in Central Illinois. At the same place Burroughs & Judd have succeeded Whiteside & Burroughs.

—Owing to the erection of a new building adjoining the J. S. Merrell Drug Company, on the east, the entire east wall of the drug house is being reconstructed, furnishing the unusual spectacle of a large business house running as usual, with one side torn out.

—The wedding of C. F. G. Meyer, Jr., to Miss Eleanor Newell, daughter of E. G. Newell, will take place June 18, at St. Mark's Evangelical Lutheran Church. They will make a Western wedding trip, spending some time among the mountains of Colorado.

—Hurwitz & Kalls, who recently opened a drug store at No. 4600 Page avenue, have not found the location all they expected and will move May 1 to the corner of Prairie and Page avenues, the store formerly occupied by Mr. Dandt.

—The Dr. J. H. Snoddy Remedy Co. has been incorporated at Alton, Ill., with a capital stock of \$10,000 to manufacture a remedy for hog cholera. James H. Snoddy, Ernest Meysenburg and Frank Rippley.

—Frank A. Spurr, formerly representing Bauer & Black in this territory, has been transferred to Ohio, while Frank Simmons comes back to his old stamping ground, covering local trade and adjoining territory.

—Examinations at the College of Pharmacy are all completed. The graduation exercises occur next Wednesday evening and the annual banquet tendered by the college to the graduates, Tuesday night.

—Mr. Bader, of the senior class of the College of Pharmacy, has the sympathy of his friends in the loss of his father, George S. Bader, who died at his home near Belleville, Ill., Wednesday.

—R. A. Hartnagel, for several years past clerk at Schlueter's pharmacy, East St. Louis, has bought the drug store of Frank L. Thrasher, the old M. C. Huggins stand, in the same city.

—John J. Grauer, secretary of the St. Louis Label Works, 306 Morgan street, died at his home in Old Orchard, Tuesday, aged forty-nine. He leaves a widow and five children.

—Dr. Henry Harnisch, a graduate of the College of Pharmacy, but now a practicing physician on the South Side, leaves next week with his family for Europe.

—J. C. Heffner, clerk for J. M. Good, has bought the drug store of J. J. Holscher, Twenty-ninth and Manchester avenue, and will take possession on the 16th.

—Henry Braun, who recently sold his drug store on Choteau avenue, left Friday for Oklahoma, where he will engage in the cold storage business.

—R. G. Thomas, representing Meyer Brothers Drug Company in Southern Arkansas, will take unto himself a helpmeet in the near future.

—The drug store at Taylor avenue and Morgan street, of the late Albert J. Kidd, will be continued by his brother, Thomas Kidd.

—Both members of the new drug firm of Hinch & Douglass, St. Genevieve, Mo., were in the city this week buying opening stock.

—The firm of Hamist & Dale, Edwardsville, Ill., has been dissolved, Mr. Dale retiring and W. D. Hamist continuing the business.

—C. W. Wall, treasurer of the Meyer Bros. Drug Company, has been quite ill for two weeks past, but is on the road to recovery.

—Michael C. Arendes, city salesman for the J. S. Merrell Drug Co., rejoices in the advent of a new girl at his house.

—The cases of the druggists charged with violation of the dram-shop law come up for trial April 23.

—J. J. Weingartner, the druggist of Belleville, Ill., will leave for a European trip early in May.

T. D. REED.

Dr. T. D. Reed, dean of the Montreal College of Pharmacy, died from apoplexy March 30, at Montreal, Can. Dr. Reed lived the whole of his professional career in Montreal. He graduated about thirty years ago from McGill University, and served his time with Lamplough & Campbell.

He was appointed lecturer of the Pharmaceutical Association of the Province of Quebec in 1877. His quiet, unassuming manner endeared him to his pupils, and at the annual reunion of the college there was no health more heartily drunk than that of Dr. Reed, and the news of his death will be universally regretted. For a few years past he has attended the annual meetings of the American Pharmaceutical Association, of which he was a member, and contributed materially to its debates and proceedings.

D. S. DALY, for twenty-nine years an employee of the Fuller & Fuller Company, Chicago, died April 7 of pneumonia. Mr. Daly began his business life in the Commercial Bank of Oshkosh, Wis., from whence he went to Marshall & Ilsley's bank in Milwaukee. He entered the employment of the Fuller & Fuller Company early in 1871, taking charge of the city ledger. From this position he was advanced to the country ledger and again promoted to the cashier's office and the general ledger. He resided on the West Side and was a well-known figure in West Side politics. He leaves two unmarried daughters to mourn his loss, Mrs. Daly having died some years ago. Mr. Daly was a man of strict and unimpeachable integrity. Albert B. Hunt said of him: "He was the most faithful man I ever knew. In all the relations of his life he was to be absolutely relied upon."

JAMES SEELEY, of Rochester, N. Y., the well-known manufacturer of perfumes, died on April 5.

Business Record.

ترايد ريكورد

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from this record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA.

ALABAMA.—Montgomery.—A. R. Harvey & Co., No. 33 Commerce st., succeeded by Harvey & Powers.

ARIZONA.—Clifton.—C. P. Dunn, new store.

ARKANSAS.—Bentonville.—W. S. Black & Co., sold to Frank M. Euch.

Camden.—G. W. Hudson, sold to S. L. Green.

CALIFORNIA.—Los Angeles.—H. G. Dean, Third and Main streets, removed to Second and Spring.—C. H. Lewis, No. 10 South Broadway, removed to Third and Main streets.—H. L. Park, Thirty-eighth and Wesley streets, sold to A. F. Shideler.—H. Parrish, No. 500 South Broadway, succeeded by Parrish & Davis.—Frittie Drug Company, Rosslyn Hotel, new store.

North Ontario.—H. M. Johnson, new store.

Northwalk.—D. F. Everett, sold to Harold Day.

San Luis Obispo.—J. W. Smith, new store.

Santa Barbara.—B. Gutierrez.—Sold to C. H. Ward.

Visalia.—N. W. Kibler & Co., sold to Mixer & Smith.

CONNECTICUT.—Glastonbury.—C. O. Talcott, new store.

Meriden.—George Lamping, No. 42 East Main street, deceased.

New Haven.—H. M. Holton, Elm street, should be added to D. D. List.—J. O. Loomis, No. 339 Grand avenue, sold to M. F. Hoop.

Wethersfield.—Walkley & Damery, succeeded by T. E. Damery.

FLORIDA.—Cedar Keys.—J. W. McCollum, sold to Dr. R. T. Walker.

Gainesville.—J. S. Bodiford, succeeded by Bodiford & McCollum.

ILLINOIS.—Urbana.—C. A. Hunt, sold to Hubbard Bros.

INDIANA.—Dillsboro.—W. J. Ewing, damaged by fire; insured.

Farmland.—White & West, succeeded by Fred. C. West.

Lebanon.—T. Perry Kenworthy, sold to Parkhurst & Morrison.

Marion.—M. F. Evans & Co., No. 119 West Fourth street, sold to E. C. Brimscombe.

Washington.—Scudder & Co., sold to Warren Van Trees.

INDIAN TERRITORY.—Vian.—Weast Bros., sold to W. T. Bryan.

IOWA.—Ames.—H. D. Miller, sold to Tilden & Laughran.

Bayard.—Olive & Smith, sold to Hoover & Lynch.

New Sharon.—R. H. Todd & Co., sold to Charles P. Roe & Co.

Strawberry Point.—Barnes Bros. Co., succeeded by Cameron-Spangler Co.

KANSAS.—Wichita.—The Hocking Drug Company, No. 216 East Douglas avenue, succeeded by The Hocking-Moore Drug Company.

KENTUCKY.—Ermine.—McRoberts & Walsh, sold to Charles W. Bauer.

MAINE.—Biddeford.—F. G. Warren, No. 157 Main street, deceased.

MASSACHUSETTS.—Conway.—H. W. Hopkins, deceased.

MICHIGAN.—Detroit.—C. H. Woods, No. 524 Grand River avenue, assigned.

Elk Rapids.—W. J. Mills, sold to Mix Bros.

Perry.—L. M. Marshall, sold to Don A. Blanchard.

Saginaw.—William Graham, No. 504 Potter street, sold to H. L. Tomlinson.

MISSOURI.—Atlanta.—Abbott & Davison, succeeded by Davison & Goding.

Dexter.—J. W. McCollum, succeeded by A. J. McCollum & Co.

St. Louis.—A. J. Kidd, corner Taylor and Morgan, deceased.

Tipton.—J. T. Liggett, sold to W. R. Patterson.

MONTANA.—Deer Lodge.—J. H. Owens & Co., succeeded by City Drug Co., Inc.

NEW YORK.—New York City.—G. E. Bayha, No. 339 Second avenue, deceased.—Francis Frenz, No. 311 Seventh avenue, sold to Joannes & Co.

OHIO.—Cleveland.—A. L. McLaren, No. 2825 Euclid avenue, damaged by fire.

SOUTH DAKOTA.—Delmont.—George F. Swartz, succeeded by Dr. C. L. Robertson.

Parkston.—O. P. Swartz, succeeded by George F. Swartz.

Plinkinton.—F. L. Stevens, sold to A. G. Pond.

TEXAS.—Bristol.—T. P. Thornton, sold to Nelson & Co.

McGregor.—Walton & Ramsey, sold to Hall & Hicks.

Skidmore.—R. E. Harris, sold to S. C. Skidmore.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

Duroy Wines.

Just 33 years ago in the city of Cleveland the now famous Duroy Wines were first introduced. The introduction was a quiet affair and for a long time the Wines were unknown outside of the field covered by the Cleveland jobbers who marketed the goods. But in that field the sale steadily increased, for the trade soon found that Mr. Duroy knew how to make good wines. In 1876 he died and was succeeded by his son and namesake. The son followed in the father's footsteps, and continued to make the wines from his own vineyard near Lakeside, O., and still supplied the product to the drug trade through wholesalers as his father had done, but he felt that his wines ought to cover a larger field. He knew that he made the best wines then sold to the trade and believed thoroughly in the policy of letting others know it. In the summer of 1888 the Duroy and Haines Co. was formed at Sandusky with Mr. Martial Duroy and Mr. E. J. Haines as the principal stockholders, Mr. Duroy continuing to supervise the manufacture of the wine, while Mr. Haines looked after the sales. The result has justified Mr. Duroy's faith in his wines, for they are now known in every State in the Union and are recognized as the standard of excellence everywhere.

The building where they first began business was a one-story frame affair, with a capacity of but 50,000 gallons. Their present building in Sandusky was erected in 1893. It is a handsome two-story, fire-proof structure with a capacity of 250,000 gallons and equipped with every known appliance for the successful and perfect fermentation of wine. We give a picture from a flash light photograph of a section of one of the lower vaults far underground, showing three of the 3500 gallon casks. Ever since this building has been outgrown in the seven years they have occupied it and they are now erecting as an addition to it another building of the same size and style. It will be completed early in the summer and then they will have one of the finest wine-making plants in the country.

The Duroy Vineyards are not far away and a beautiful view can be obtained from them by looking across Sandusky Bay eastward toward the famous Johnson Island, used during the war to confine Confederate prisoners.

The Chamberlain Medicine Co., Des Moines, Iowa, have outgrown their present quarters and are building a new plant at the corner of Sixth and Park streets in that city. The new building will be of brick and stone, three stories in height with a frontage of 183 feet on Sixth street and 115 feet on Park street. It will cost, when completed, about \$100,000.

"From a Straw to a Soda Fountain."

We have received from the Liquid Carbonic Acid Manufacturing Company, Chicago, a copy of their new catalogue, "From a Straw to a Soda Fountain," one of the most comprehensive lists of soda fountain requisites we have ever seen. It is beautifully printed and the cover is treated in a novel way by Manz & Co., the engravers, from Mr. C. E. Marble's own designs.

Success at the soda fountain, like everything else, is only obtained by hard work and the most careful attention to details. To this phase of the business they devote two pages in a chapter entitled, "The Way to Succeeding." Following this are half-tone illustrations of wall apparatus, of which the Alhambra Kohinoor on Page 9 is, to our mind, the most attractive. The Kohinoor on Page 10 is an exceedingly handsome counter apparatus. Following these illustrations is a complete list of their carbonating machinery, of which the Perfection Electric Carbonator, illustrated on Page 58, is, they claim, the best automatic apparatus of its kind ever made for the dispensing trade. For cheaper machines they refer to the illustrations on Pages 50 and 60. Following these is a complete list of minor requisites—silver ware, lemon squeezers, crushed fruit bowls, straws, spoons, ice cream cabinets, tumblers, ice picks, in fact every conceivable item which the dispenser uses. They even furnish a list of bent wire furniture, as well as dispensing coats and aprons. The last pages of the catalogue are devoted to their syrups, crushed fruits, flavors, etc., etc. Their speciality this year is Grape-Kola, which has come to the front rapidly, and which is already a staple drink wherever it has been introduced. Their Grape-Kola serving urn is an exceedingly handsome piece of furniture.

This catalogue is a book of 132 pages, and it reflects great credit on the advertising department of that enterprising firm. A copy of the catalogue will be sent to any soda dispenser who will take the trouble to write for it.

A Line Which Is All Profit.

Frank Netschert, No. 7 Barclay street, New York, is probably the leading manufacturer of artificial plants in this country. He has been carrying an advertisement of these goods in this paper for several weeks, and the responses from druggists from all parts of the country have been most liberal. He has been surprised as well as pleased at the way the drug trade has taken hold of these goods, and wants to still further extend his line in this field. In order to do this, he proposes to make every druggist a selling agent, not to carry stock unless it is so desired, but simply to send to him names

of parties or firms who are likely to be interested, and he will do the rest. If a sale is made to any of these names, a liberal commission will be paid to the druggist furnishing it. He has a complete catalogue of these plants, which he will send to any one who will take the trouble to write for it. His artificial plants are exceedingly true to nature, and a few feet away they cannot be told from the natural plant. They are particularly adapted to the decoration of stores and residences, and a great help in making the soda counter attractive, and thus drawing more business. It will help us and please him if correspondents will mention the Era in their communications.

They are particularly adapted to the decoration of stores and residences, and a great help in making the soda counter attractive, and thus drawing more business. It will help us and please him if correspondents will mention the Era in their communications.

A Successful Preparation.

The remarkable progress which has attended the introduction of Abbey's Effervescent Salt is a matter of extreme gratification to all concerned. It is now about ten months since the introductory efforts were commenced, and in that time sales of this excellent preparation have reached a figure far in excess of the anticipated output, and still maintain a constant increase. The most pleasing feature of this extraordinary business, is the rapidly increasing demand for the one dollar size. The sales of the dollar size now are greater than the sales of the two smaller sizes. This would seem to be fairly conclusive proof of the fact that Abbey's Effervescent Salt is gaining for itself a place as a standard medical preparation. By a standard preparation, we mean a

staple that no druggist can afford to be without. The medical profession throughout the country are prescribing Abbey's Salt largely, which is another indication of its unqualified merit and success. We are safe in saying that no other medicine in so short a time has ever reached or maintained such a position.

The advertising of Abbey's Effervescent Salt to the consumer is continuous, large and of exceptional demand—creating power. In addition to their regular newspaper advertising, the Company contemplates a thorough system of window display and other characteristic local work, which in itself will be of great benefit to the retail druggist in pushing sales. Progressive druggists will find it of advantage to get in line for the Spring campaign. Abbey's Effervescent Salt can be obtained from the wholesale trade, and is manufactured by the Abbey Effervescent Salt Co., 9-15 Murray street, New York.

Cod Liver Oil at 82 a Dozen.

On page 4 is the advertisement of Barker's Shore Cod Liver Oil, put up in 6 oz. flint bottles to retail for 25c. A bottle of this Oil costs the druggist less than 17c, and the manufacturer says it is always sweet and fresh. Barker's Shore Cod Liver Oil is of a light straw color with but little taste, and he says it is as sweet as the best olive oil. To druggists this oil is particularly useful, as the price of the package sells it readily and it is not necessary to open a large bottle when a small quantity of emulsion is ordered, in order to get three or four ounces. He will send samples to any druggist who will mention the Era.

We have just received a notice from the M. Winter Lumber Company, Sheboygan, Wis., referring to an order for a large hygienic soda fountain from Honolulu, H. I. They call attention to this to give us some idea of the extent of territory which is covered by the sale of these fountains. They also inform us that they carry in stock for prompt shipment their four leaders, the Sheboygan Filler Drug Outfits, the Great Western Drug Outfits, the Great Northeastern Outfits and their Great 1900 Sectional Outfits. Druggists who contemplate refurnishing their stores or fitting out new ones and who want fixtures on short notice, will do well to correspond with this company.

We show on another page an advertisement of the well-known Christy Saddle, probably the most popular saddle now in use, and by one not only recommended by physicians, but ridden by them.

An American product that excels all foreign makes is Cook's Imperial Champagne Extra Dry. Bouquet perfect.

Wholesale Drug Stock of J. H. Sheehan & Co. Sold.

Chas. Hubbard, Son & Co. and C. W. Snow & Co., wholesale druggists, Syracuse, N. Y., have purchased jointly the wholesale drug stock of J. H. Sheehan & Co., of Utica, and removed it to Syracuse. It is understood that J. H. Sheehan & Co. will continue their retail drug business.

—Commencement exercises of the Northwestern University School of Pharmacy, Chicago, were held Friday, April 6, in Handel Hall. The graduating class was composed of Grace Clouse, Hope, Ind.; Alfred H. Figgins, Quincy, Ill.; Margaret M. Gray, Robert C. Hawley, Hermann L. Kretschmer, Walter C. Keeler, Chicago; Achille B. Gremer, Racine, Wis.; Edward L. Griffith, Ottawa, Ill.; Volney G. Hoke, Morris, N. Y.; Howard Hewitt, Chenoa, Ill.; Glenn H. Mercer, Liberty, Ill.; Aaron M. Thatcher, Meadville, Pa.

—The wholesale druggists of Ohio, Kentucky and Indiana held a meeting at the Bates House, Indianapolis, March 27. Questions of importance to the trade were discussed and in the evening the members attended the theatre in a body.

—The next meeting of the Connecticut Pharmaceutical Association will be held in Hartford, June 12 and 13. Chas. A. Rapelye, secretary.

STATE OF TRADE.

Business Comparatively Light.

New York, April 17.—Business in a wholesale way has been comparatively light, the shrinkage in volume being to some extent due to the intervention of the Easter holidays. This is especially true of the articles usually affected by conditions abroad, as the occasion is very closely observed in nearly all commercial centres of Europe, and with business practically suspended in foreign primary markets, there were very few developments to influence any important variations here. The agent of meter weather has also been a factor in the general situation, and the demand for goods consumed chiefly during the winter season has materially subsided.

The position of quinine has not changed to any important extent. There has been a steady inquiry from the consuming trade and in the speculative department the feeling among the operators continues firm, but no further important business has transpired, and there is an apparent disposition to await developments. At the monthly auction sale of bark in London last week the average price advanced 5 per cent, and this is considered a stimulating feature. The next sale will take place in Amsterdam on the 30d prox, and in the event of a further advance in values it is believed that quinine will immediately improve.

Opium has been held with a fair degree of steadiness considering the limited inquiry, but manufacturers of morphine have surprised the trade by announcing a further reduction of 10 cents per ounce. This is attributed to keen competition from comparatively new makers, who have recently become more or less aggressive. This is the second decline of 10 cents since values of opium began to move upward and it is at least singular that with the crude material 25 cents higher the product should be 20 cents lower. Another surprise was furnished by the same manufacturers who unexpectedly reduced their quotations for codeine 15 cents per ounce. This decline is also believed to be due to competition.

Manufacturers of cocaine have advanced their quotations 25 cents per ounce and the market shows considerable strength under the influence of firm European markets for crude, and advices from South America to the effect that a combination of producers has been formed for the purpose of restricting the output and thereby prevent a continuation of the unprofitable business which has been a feature of the situation during the past few months.

In the department of essential oils general business has continued slow and unimportant and the only quotable change in values was a slight improvement in bergamot, due to corresponding conditions at primary sources of supply. Clove continues firm in sympathy with the sugar, the latter ruling very strong, especially in foreign markets. Anise and cassia are unchanged, but barely steady owing to the dull condition of trade together with keen competition among holders.

Canary seed is hardening in price and quotations for both Smyrna and Sicily are fractionally higher in a wholesale way. The improvement is chiefly due to unfavorable crop reports from Turkey and indications that there is likely to be a material shortage. Celery seed also shows a fractional advance in sympathy with primary markets. The active consuming season is near at hand and importers are inclined to offer somewhat cautiously.

Among the minor changes, a revision of quotations for arnica flowers shows a slightly lower range. Menthol continues easy and quiet with quotations a shade lower. There is likely to be a material shortage. Celery seed also shows a fractional advance in sympathy with primary markets. The active consuming season is near at hand and importers are inclined to offer somewhat cautiously.

Less General Sickness Diminishes Trade Somewhat

Boston, April 14.—Because there has been a material falling off in the cases of general sickness and with a less number of deaths than in the past two or three weeks, there has come about a lessening of the general drug trade, although this has been pretty good, all things considered. Grip is far less prevalent and the number of deaths from this and from diphtheria, pneumonia and malignant diseases has greatly decreased, bringing the death rate of Boston down to a more normal condition.

Some of the dealers in chemicals report a rather active trade, while others find it only fair. Nitrate of soda is showing strength, as is blue vitriol. Other things on the list show very little change. Quinine, opium and morphine are a bit quiet. Cacao butter holds strong. Essential oils show no special feature. A little improvement in one or two things in the list of dyes is noticeable, other than which there is no change in these things. Hops are a trifle more active, and the outlook for higher prices is good. Waxes show no special feature. Alcohols are strong and in good demand.

On the Crest of Prosperity's Wave.

Philadelphia, April 14.—Notwithstanding the reports of slacking up in business which come from other parts

Abbey's Effervescent Salt

reaches the consumer through the retail druggist only. The retail druggist is backed by continuous advertising of exceptional demand creating power. The result is a constant increase in sales.

Hoosick Falls, N. Y.,

March 28th, 1900.

There has been a good demand for your Salt since your representative was here. There are at least two physicians prescribing it from time to time.

(Signed) C. F. W. SMITH.

Fall River, Mass.,

March 23d, 1900.

Greatly increased sale of your Salt. Prescribed especially by Dr. S. W. Gordon and Aug. W. Duck, M. D.

(Signed) CHAS. A. BAKER.

Springfield, Mass.,

March 23d, 1900.

I have noticed decidedly an increase in the sale of your goods since your representative was here.

(Signed) E. A. WEBSTER.

Portsmouth, N. H.,

March 28th, 1900.

Two or three physicians have used your goods since your representative was here, and there is, in my opinion, an increasing demand for the goods.

(Signed) BOARDMAN & NORTON.

Abbey's Salt is a standard preparation prescribed and endorsed by physicians. It is a clean, honest remedy, one that you can conscientiously recommend. Your wholesaler will supply your wants.

The Abbey Effervescent Salt Co.,

9-15 Murray St., New York, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

of the country. Philadelphia has a firm hold on the wave of prosperity, which arrived some weeks ago, and the proverbial slowness of the Quaker City is exemplified by the way the boom continues, as though reluctant to let go. The wholesale and retail trade are almost unanimous in their reports of the present favorable conditions. The only change in wholesale prices worthy of mention is the additional drop of a cent per ounce in the price of morphine sulphate. The prescription business still continues at the top notch, and everything is about the same as reported last week.

Baltimore Business Good.

Baltimore, April 16.—The jobbing druggists of this city report business very good last week. Both the local and the out-of-town trade was of very satisfactory proportions, and the clerks in all the establishments were kept busy. The manufacturing pharmacists also experienced a rush of orders, and even the retailers felt the beneficial influence of existing conditions. Much of the activity is due to the prevalence of sickness, the services of doctors and druggists being in frequent request. Heavy chemicals are moving with considerable freedom and acceptable volume, and the market for botanicals presents various encouraging features.

Business Active in Chicago.

Chicago, April 14.—Trade is reported very active and quite satisfactory. It is said to be ahead of last year at the corresponding periods. Outside of Chicago, conditions are ripe for prosperous business. The strike here makes local conditions doubtful. This is an element which seriously threatens the business prospects of the city, and it is felt by all business men that it cannot be settled so soon. Manufacturers are more than usually busy. If the weather will only remain settled, trade will keep on increasing as the summer approaches. Collections are good.

Grip Keeps Trade Up.

St. Paul and Minneapolis, Minn., April 13.—The almost unprecedented prevalence of grip in these cities brings added work to retail druggists. Were it not for this, prescriptions would show something of a falling off. The weather is becoming warmer again, which has a tendency to increase sales, as people are in the streets more. There is a gradual improvement in the general trade, and never did a spring open with brighter prospects of commercial activity than this. The jobbers report a most healthful condition of affairs, with a liberal volume of outside orders coming in. They, like the retail dealers, say that collections are much better than expected. This has thus far been the best month for a year for bill paying.

Trade Fair in St. Louis.

St. Louis, April 14.—Trade is of fair dimensions for the season but begins to show considerable falling off from the marked activity of the first quarter of the year. Morphine has declined ten cents the past week. Cocaine has advanced 25 cents, the turn in the tide being attributed to short stocks in the hands of manufacturers. Generally speaking, local retail trade is not brisk, but in some localities prescription trade has increased on account of the prevalence of pneumonia and kindred diseases.

VIRGINIA BOARD.

The fourteenth annual meeting of the Board of Pharmacy of Virginia was held in Richmond March 19 to 24. Of the sixty-one candidates the following passed successfully: W. W. Tyler, Cape Charles; J. E. Boon, Roanoke; F. T. Cassidy, Richmond; W. Kent Vaughan, Elizabeth City; G. F. Grant, Abandon; W. F. Driver, Timberville; J. W. Barnett, Bedford City; S. S. McGee, Roanoke; E. J. Conrad, Salem; W. S. Nicklin, Winchester; Frank R. Tyler, Fredericksburg; W. H. Barnes, Greenville, S. C.; C. N. Gibson, Newport News; R. J. Marks, Richmond; W. K. Goolrich, Fredericksburg; L. B. Montague, Norfolk; C. N. Price, Lexington; B. T. Thompson, Berkley; Dr. C. F. Hall, Snow Hall, Md.; A. T. Snellings, Boydton; Oscar Doster, Richmond; J. W. Rison, Richmond; R. C. Hume, Petersburg; R. H. Scott, Richmond, Assistant Pharmacists—Thomas J. Jeffries, Newport News; E. J. Willson, Rockville, Md.; R. R. Totty, Petersburg; Charles L. McDonald, Hot Springs; E. P. Wilkins, Norfolk; H. T. Morrison, Luray; J. Paul Jones, Onancock; Z. E. Burgess, Elizabeth City, N. C.; J. A. Allen, Staunton; J. M. Lea, Danville; J. L. Price, Ashland; G. B. Sheppe, Dayton; Lawrence Washington, Alexandria; H. H. Aldhizer, Broadway, Va. At the reorganization of the board J. L. Aylis was re-elected president and E. R. Beckwith secretary and treasurer.

MARKET REPORT.

NEW YORK MARKET.

New York, April 17.—Business in a jobbing way has continued of limited volume and with the exception of unexpected declines in morphine and codeine, the fluctuations in values have been of only ordinary character and wholly the result of natural causes. The general appearance, with little to note in the way of interesting features.

OPUM.—The movement into consuming channels has continued light and unimportant, but a fairly firm feeling has prevailed among jobbers and quotations for small lots are maintained at \$3.35@3.50 for 9 per cent. and \$3.50@3.60 for 11 per cent., the higher figures for single pounds.

POWDERED OPIUM.—Moderate quantities are meeting with attention from consumers and quotations remain fairly steady at \$4.40@4.60 for 13 per cent. and \$5.15@5.35 for 16 per cent. according to size of order.

MORPHINE.—Owing to a further unexpected decline of 10 cents in manufacturers' prices, the market is somewhat unsettled and jobbers have reduced quotations to \$2.10@2.45 in eighths and \$2.00@2.15 in ounces.

CODEINE.—Under a similar influence the quoted range for jobbing quantities shows a decline to \$4.85@5.10 for pure in eighths and \$4.60@4.85 in ounce. Sulphate is obtainable at 45c. per ounce under the quotations for pure.

QUININE.—Small parcels have moved rather more freely, but otherwise the market is without feature of interest and values are unchanged at \$162@164c. for bulk in 100-oz. tins, 35@34c. in 50-oz. tins and 38@39c. in ounce vials, according to size of order.

COCAINE.—The market is decidedly stronger, with manufacturers' quotations 25c. per ounce higher. Values in a jobbing way show corresponding improvement and the revised figures are \$3.25@3.50 for large crystals in ounces and \$5@5.25 for small, less the usual rebate of 25c. for lots of 25 ounces in bulk.

SALICINE.—A firmer feeling has developed, and with the consuming demand fair and supplies gradually diminishing jobbers offer very sparingly at \$6@6.25 per lb. and 4@5.0c. per oz.

ALCOHOL.—Distillers' quotations are again higher and jobbing quotations are 14c. higher at \$46@47c. for 95% by the barrel and \$2.55@2.75 for less, according to quantity. Odorless, \$2.48@2.49 by the barrel and \$2.00@2.50 for less.

METHOL.—The market continues easy in tone and jobbing quotations have been further reduced to \$3.10@3.20 as to quantity.

ACETATE OF POTASH.—Jobbers have advanced quotations to 2@2.7c. and the tone of the market is firm.

CARBOLIC ACID.—The market is easier and quotations show a decline to 24@25c. for 112-lb. drums, 40@45c. for pound bottles and 57@40c. for 5-lb. bottles. Amber bottles 2c. less.

CANARY SEED.—Primary markets are firmer on account of unfavorable crop conditions, and jobbing prices have been advanced to 37@38c. for Smyrna by the bag and 5@6c. for less. Sicily is held at 3@4@3c. by the bag and 5@6@4c. for less.

OIL BERGAMOT.—Cables reporting higher markets at producing points has caused an advance in jobbing quotations to \$2.40@2.55 for the finer grades and \$2.00@2.30 for ordinary.

BUCHU LEAVES.—Quotations in a jobbing way show a decline to 2@2.7c. for short and 3@3.5c. for long, 43@50c. for ground and 45@50c. for powdered.

GRAINS OF PARADISE.—Values are decidedly higher owing to extreme scarcity and jobbers are quoting 80@90c. for whole and 85@95c. for powdered.

VERMILION.—English is firmer and jobbers have advanced quotations to \$2@90c., as to quantity.

KANSAS CITY COLLEGE OF PHARMACY.

The Kansas City College of Pharmacy held its commencement exercises at the Academy of Music, Tuesday evening, April 3. Addresses were delivered by O. H. Swearington and W. F. Kubn. The graduates were John H. Avard, Dennis J. Brown, Charles M. Berthoff, John S. Coughenour, Robert D. Irland, James K. Mugg and Calvin B. Wilkins. A gold medal was awarded to James K. Mugg for superior excellence in work. F. D. Peter, of the junior class, was also honored with a gold medal.

IT PAYS TO ADVERTISE IN THE ERA.

The following letter received recently explains itself. It was entirely unsolicited:

New York, April 18, 1900.

The Pharmaceutical Era,
396 Broadway, City.

Gentlemen: You will doubtless be pleased to learn of the returns from the notice which you gave us, describing our embossed show cards. To date we have received 199 requests, 72 mentioning the Era, 12 mentioning the — and 115 not stating where the advertisement was seen. We had a notice in the — which appeared the week following that of your paper. Without doubt the Era deserves the same proportion of the 115 requests not mentioning any paper as 12 bears to 72.

Very truly yours,

THE VAPO-CRESOLENE CO.,
Abdon L. Page, Secy.

See Students' Bulletin, Page 450.

UNIFORMITY IN PHARMACY LAWS.

In this issue is presented the report of Prof. J. H. Beal, who was appointed by the American Pharmaceutical Association at its last annual meeting to draft a general form of pharmacy law suitable for enactment by the several States. The report bears evidence of much patient research and investigation, and is in keeping with the views of many of those who have endeavored to secure greater uniformity in the enactments of the various States, at the same time securing legislation which should benefit pharmacy and pharmacists and protect the rights of the people. As a whole, the draft of the law is conservative in tone, but there are a few provisions which are not now found in existent enactments.

The requirement that every applicant for registration shall be a graduate of a reputable school or college of pharmacy before he shall be allowed to take the examination for such registration, is one of these provisions, and it will doubtless be one of the most prominent questions members of the association will discuss when the report is laid before that body at the Richmond meeting.

Another provision, which appeals to us as most desirable, is that the funds of the board shall be covered into the State treasury and credited to a fund for the use of the Board of Pharmacy. We believe such a provision should be made. The history of most of the boards of pharmacy shows them to have been handicapped by the want of money to prosecute their work. With a regulation of this character in force, supplemented by that one which allows a board of pharmacy to employ its own attorney, there is no reason why boards of pharmacy should fail to do their duty in enforcing the law.

There are other features in the proposed law which are to be commended, most of them, however, being sections or modifications of sections of laws now in operation in some of the States. The provision for the regulation of the sale of poisons is one of the most difficult to deal with, a difficulty the author fully realizes. We believe this provision cannot be made too comprehensive: it should be full, specific, direct. Trade rights must be subservient to the public health and the maintenance of human life.

This report will cause considerable discussion, but its provisions are in the right direction. The law proposed, however, is not claimed by the author to be ideally perfect, either from a public or professional standpoint. It is also not claimed to be incapable of further improvement, but it is a "workable draft, adapted to enactment in the various States where any form of law revolutionary in character would not

receive serious consideration." If the legislation proposed shall be enacted, many of the impracticable features of existent laws will be eliminated.

THE STAMP TAX HEARING.

Considerable space this week is occupied by the report of the special hearing given to representatives of the drug trade by the Ways and Means Committee upon the merits of the Boutelle bill, which advocates the repeal of the internal revenue stamp tax on proprietary medicines. It may be said at once that the committee seem to be fully impressed with the injustice of the tax levied upon the drug trade and with the desirability for its repeal. If only this proposition were to be met, the drug trade would be relieved of the burden very soon, we are sure. But there are so many questions of a political nature bearing thereon, that no one can actually predict the outcome.

Some one has said that foresight is better than hindsight. The experience of the drug trade amply proves this. If druggists had been active to protect their own interests and protested against the injustice and inequity of this tax before the law was enacted, they no doubt could have secured its satisfactory modification. They waited, however, until they felt in their own individual businesses the effect of the stamp tax, and then they began to protest. They have protested hard, however, as was shown at the hearing at Washington last week. Retailers, manufacturers and wholesalers were present in large number, representing many formally organized bodies in these branches of the trade, and especially the national organizations which for a few months past have been flooding the law makers at Washington with petitions and protests. The case of the druggists was admirably presented, and made an evidently deep impression upon the members of the committee.

Why was not such a demonstration of strength of organized power made before instead of after? During the past year or two druggists, especially the retailers, have been very much aroused to an appreciation of the value of organization. This Washington incident is a striking proof of this value. Any industry that is well organized can get about what it wants from the law makers, or at least prevent obnoxious and burdensome legislation. The drug trade for years has been forced to withstand assaults and buffets of all nature, and it has made hardly a squeal; but now each member of the trade is squealing, and what is more, they are squealing in unison, and the resulting volume of sound is of such power and far reaching quality that it penetrates the deafest of ears. With regard to the repeal of the stamp tax, it cannot be definitely predicted that this removal will come at this session of Congress; in fact, most think it will be delayed until the next session. But there are bright hopes that it will be repealed before very long, and this united effort of the drug trade is the factor which will have contributed most to this desirable result.

"SHORTER HOURS"—ITS EFFECT?

Some one, we do not know who, for he is too modest or too ashamed to sign his name, asks what is to be done now that the drug clerks' bill for shorter hours has become law in this city? The propounder of this question is apparently a proprietor, and he seems to fear that he will have to close his store earlier every night and keep open only a few hours on Sunday, because he cannot afford to hire more clerks. Well, what of it? Will not such a result be a good thing for him and for all druggists similarly situated? At any rate, it is just what the clerks in such stores have been working for when they sought the passage of the bill in question.

If a proprietor has a drug store which does so poor a business that he must work his clerk sixteen or eighteen hours a day it is time that something radical should be done. Wisdom would suggest that he go out of such an unprofitable business and get into something where he will not be a slave for a bare existence.

There is no reason under the sun why drug stores should be kept open all night or all Sunday. This is an abuse which has come through the fault of the druggists themselves. It has resulted in an under-paid, over-worked class of employees, with not a cent's more profit to the proprietor, but rather a decrease thereof, because it has brought him into competition with a rather undesirable class of druggists. The survival of the fittest is a rather harsh truth, but it is a truth none the less, and the drug business as a whole would be infinitely benefited by the weeding out of a considerable proportion of its members.

If a druggist is so situated that he can hire only one clerk, and if he feels obliged to keep his store open sixteen to twenty hours out of each twenty-four, then he will have to arrange a time schedule in such a way that he and the clerk may "spell" each other. Edward Thimme, the agitated labor agitator, says he is going to make it lively for druggists who violate the new law. Perhaps. But at any rate the clerks have at last secured something tangible upon which may be based the conditions of their engagements in the drug stores. If the new law brings about early closing and Sunday closing, it will be the "best that ever happened."

ADMINISTRATION OF TERPIN.—The mixtures containing terpin usually prescribed have the disadvantage that on prolonged standing the terpin separates out in crystalline form, make accurate dosage impossible. The following formula of Malakoff is claimed to obviate this difficulty: Terpin, 20 parts; alcohol, 300 parts; glycerin, 670 parts; tincture of vanilla, 10 parts. The terpin is dissolved in the alcohol, the vanilla added and finally the glycerin. A 2 per cent. solution is thus obtained which is permanent and may be mixed with water and other liquids without separation of terpin. (Apoth. Ztg.)

ANIODOL is the name given by Sedan to an antiseptic consisting essentially of a solution of trimethanal. In a concentration of 1-10,000 it stops development of germs, in 1 per cent. solution it is bactericidal. For disinfecting instruments a dilution of 1-5,000 suffices, also for disinfecting the hands. (Apoth. Ztg.)

(Special Correspondence).

PHARMACY IN GREAT BRITAIN.

The Chemical Society.—The annual meeting of the Chemical Society was held on March 29 at Burlington House, London. There were a number of representative pharmacists present, including W. Martindale and M. Cartelge, president and ex-president of the Pharmaceutical Society, respectively. The total number of Fellows is now 2,288. The president (Dr. T. E. Thorpe) referred to losses sustained by the society through death during the past year, especially referring to Sir E. Frankland, Profs. Bunsen, Friedel, Nilson and others. The Longstaff medal was presented to Dr. W. H. Perkin, who received it on behalf of his son, Dr. W. H. Perkin, Jr. (It is interesting to note that Dr. Perkin, Sr., was awarded the medal in 1858 in recognition of his discovery of aniline dyes.) Dr. Tilden, the treasurer, reported that the income of the society for the year had been £4,088 from admission fees and subscriptions, £781 from the journal, and £444 interest on investments. The expenditures had been, including £3,388 on the journal, £4,993. The list of officers recommended for election by the council was adopted unanimously, among them being: Dr. T. E. Thorpe, re-elected president; Dr. W. A. Tilden, re-elected treasurer, and W. R. Dunstan and Dr. A. Scott, re-elected secretaries. Dr. Tilden is an ex-pharmacist, and Mr. Dunstan was formerly professor of chemistry to the Pharmaceutical Society.

The Bunsen Memorial Lecture.—Sir Henry Roscoe delivered the Bunsen memorial lecture to the fellows of the Chemical Society on March 29. Sir Henry gave a very interesting sketch of the career of the deceased scientist, in which his personal characteristics were well brought out and his historic contributions to scientific research duly appreciated.

The Examinations of the Pharmaceutical Society in London.—Dr. Thomas Stevenson, the Government visitor to the London Examinations of the society, has issued his report for the year ending March 31, 1900. The report shows the annexed results:

	Candi- dates.	Failed.	Passed.	Percentage of passes.
Preliminary examinations.....	1,589	843	746	47
Minor examinations.....	1,371	993	378	27.6
Major examinations.....	103	53	50	48.5

In the preliminary examination seven out of eight failures were due to arithmetic. In the minor the two subjects in which most candidates failed were chemistry (599) and pharmacy and dispensing (299). The number of candidates entering for the minor was unusually large, due, no doubt, to the fact that in October next the fee will be raised from five guineas to ten guineas.

NOTES.

Miss Mary Ann Driver, the sister-in-law and residuary legatee of "Professor" Thomas Holloway (proprietor of Holloway's pills and ointment), who died on January 7, has left an estate valued at £250,405.

Mr. Richard Reynolds, pharmaceutical chemist of Leeds, one of the best known of the older generation of pharmacists, died on April 5. Mr. Reynolds was one of the founders of the British Pharmaceutical Conference and was president for the meeting at York in 1881.

The April examinations of the Pharmaceutical Society in Scotland have just concluded. The only candidate for the Major examination failed, and out of 117 entrants for the Minor only 33 were successful.

Sir Andrew Douglas MacLagan, M. D., F. R. C. P., died at Edinburgh on April 5, aged 88 years. Sir Douglas was formerly professor of Medical Jurisprudence to the University of Edinburgh. He was for a number of years, up to 1897, when he resigned, Government visitor to the Examinations of the Pharmaceutical Society in Scotland. He was elected an honorary member of the Pharmaceutical Society in 1852.

Mr. Otto Hehner succeeds Mr. Boverton Redwood as Chairman of the London Section, Society of Chemical Industry, and F. Napier Smith, A. C. Chapman, C. T. Tyrer and B. E. R. Newlands take the places of J. Heron, J. B. Knight, T. Tyrer and F. Wilson on the Council.

SUGGESTIONS FOR REVISING THE SEVENTH DECENNIAL U. S. PHARMACOPOEIA.*

The author introduced his remarks by the statement that these suggestions were not made with a fault-finding spirit, but to point out imperfections apparent to a reasoning person.

He referred to the ideal standard required in some cases, which is so impracticable that certain of the manufacturers in this country have refused to make these products to comply with the U. S. Pharmacopoeia. The Pharmacopoeia also contains a number of analytical methods, which are either faulty *per se*, or, if applied, lead to erroneous conclusions. As an example, he referred to the estimation of moisture in wool-fat, which, if attempted by the U. S. P. method, will give results of no value whatever.

The case of Sodium Benzoate was quoted to illustrate the point that a U. S. P. product can not always be made from U. S. P. ingredients, a limit of chloride being allowed in the carbonate of sodium employed, while the resulting benzoate is required to be free from chlorides.

The standard should also take into account the liability of certain products to change or deteriorate, as in the case of Iodine preparations, Ammonia Water and Spirits, Bleaching Powder, etc.

Many Essential Oils may be adulterated without fear of detection by the U. S. P. analytical tests, among which are Oil Copaiba, Oil Peppermint, Oil Eucalyptus, etc. According to the author, the following three propositions should be rigidly kept in mind by those who prescribe standards:

(1) "The standard of all U. S. P. preparations, drugs and chemicals, should be so adjusted that they are not only satisfactory medicinally, but that they can also be manufactured from other U. S. P. goods which enter into their preparation either in part or as a whole."

(2) "The requirements of all U. S. P. goods should be such that they can be employed in the manufacture of all other U. S. P. goods, of which they form an integral part, either in part or as a whole."

(3) "The best medicinal goods available in commerce should form the basis of all standards."

The author stated that the present Pharmacopoeia is frequently at variance with the above proposition, and it throws the responsibility entirely upon the individual opinion of the analyst.

The correction of the temperatures when they are high is advisable, and it is also necessary to use uniform methods in taking Melting Points, Boiling Points and Specific Gravities in an absolutely uniform manner, in order to obtain uniform results.

The author advised the consolidation of class tests, as for Carbonates, Chlorides, etc., except where special directions are necessary, and in conclusion said: "The formation of high ideals is an easy matter, but it would be far better to establish such standards as the progress of chemistry, pharmacy and botany warrants and therapeutic needs."

CAFFEINE IN BRONCHITIS.—Excellent results are reported by Edgenroth in acute and subacute bronchitis from the administration of 1.2 to 1.8 Gm. (20 to 25 grains) of acetate or citrate of potassium every 3 or 4 hours and 0.3 Gm. (5 grains) of caffeine at bedtime. (Sem. Med.)

SALOL AS TÆNIFUGE.—Prof. Galli-Valerio reports the removal of a tape worm within several hours after administration of 1 Gm. of salol, the effect probably being due to the dissociation of the salol into carbolic and salicylic acids in the Intestines. (Apoth. Ztg.)

A CEMENT FOR METAL LETTERS consists of mastich 9, litharge 18, lead carbonate 9, linseed oil 27 parts, melted together and employed hot. (Pharm. Post.)

*Abstract of a paper read by Lyman F. Kebler at the April Pharmaceutical Meeting of the Philadelphia College of Pharmacy.

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—The Question Discussed by Pharmacists, Clerks and Teachers.— Its Advantages and Drawbacks Contrasted.

He Votes in the Negative.

I have read with much interest and pleasure the many letters that have been appearing in the Era recently discussing this question. The subject interests me very much, so much so that I feel inclined to say a few words. I guess it is because I am a pharmacist and the question concerns our profession.

My views are with those on the negative side; i. e., college graduation should not be a prerequisite to Board of Pharmacy examination. I sympathize with the apprentices and others who are working, and will be working, behind the drug store counters for their pharmacy education, and who are not able or have not the means and advantages to obtain a collegiate education.

It is true that most of our colleges graduate young men as Ph. Gs in two years, and some in less time. How much previous experience do they require their students to have upon admittance? There are not many, if any, that require any previous experience. Then, do you suppose that a young man who is taken from the "country swamps" (a regular green head), and rushed through a college of pharmacy, and graduated in two years of nine months each, knows as much as the young fellow who enters a pharmacy at the age of fourteen or fifteen years, washing bottles and graduates, running errands, etc., and at the end of three or five years obtains his license through a bona fide examination before the State Board to conduct a pharmacy?

Which of the two is the best man practically; I say practically because a practical man is of more service behind the prescription counter than a theoretical one to conduct a pharmacy, compound prescriptions, etc. I say the one who learns his profession behind the prescription counter, studying under the guidance of a skillful proprietor. Then, when he is prepared to go before the board, he has had his three or five years' experience which is required by law.

There are many men who are conducting pharmacies at present, under their diplomas, and many who are incapable of even acting as assistants. Why are they practicing, then? Simply because the boards recognized their diplomas and licensed them whether they were worthy of it or not. Then comes the fellow who has learned what he knows about pharmacy in the drug store. He goes before the board without any fear, and passes with as much credit and honor as the graduate would have done had he been required to stand the examination, too.

I hope to see this question more thoroughly discussed through your columns.

Southport, N. C.

GEO. Y. WATSON.

A National Law Requiring Graduation.

Thanks are due you for agitating the diploma prerequisite question. It is needed, especially in this State. Mr. Atuir's views are mine, only I would require a proficiency equal or superior to the foreign standard. As for the "poor young man," why should the pharmaceutical profession favor him more than the medical or legal professions? If he wants an education he always gets it in spite of obstacles, and this measure is as much for his benefit as any one's. Let him be assured, and with a high, scientific, professional standard he will be, of a pay of twelve to fifteen hundred a year, and he will get there. He has reached the top notch in all professions, and has

become a professor, teaching in the leading colleges. We are trying to be salesmen, merchants, instead of professional men, and yet we expect professional profits. The public value us as merchants, and will only pay us merchant's profits. Let us become professional and they will pay us professional profits. I know of four lives saved which would have been lost but for college lectures heard by the pharmacist who, using his college knowledge, in the absence of a medical man, did all necessary, and in one case received a present of \$100 from the person whose life he saved. Give us a national law, with graduation as a prerequisite to examination, and raise the standard by all means. Stop political registration and enforce the law and we will not have to complain.

L. WAGNER, JR., PH. G., PH. D.

Buena Vista, Va.

He Also Favors Graduation.

Prerequisite of college graduation to board examination seems to me the only true qualification to be desired by the future pharmacist. The parrot-like drilling of the concher and professional crammer is merely a superficial method to meet expected questions appertaining to pharmacy, whereas the thorough and gradual acquirement of knowledge under the guidance and tuition of well-fitted men, by courses of recitations and lectures, laboratory practice and quizzes, impresses the student for life, and gives him a true conception of the professional side of pharmacy. Having finally acquired, by hard study, time and labor, the desired degree, he takes greater pride and greater care to uphold the dignity and ethics of his profession. On the other hand, the boards of pharmacy, composed of practical men, will be the final judges, whether the college education claimed by the candidate for registration is from a college of such standard as the respective boards may demand. That the colleges shall require an education equal to what is taught in the highest grade of our public schools before accepting students, I take as self-understood. There should also be established a certain number of points by the Board of Regents for students to qualify for the study of pharmacy—that would be the initial step for official recognition as a profession, and the public's indorsement as such is sure to follow.

FELIX HIRSEMAN.

New York.

Thinks Graduation Unnecessary.

Graduation, to my mind, prior to examination is unnecessary. In twelve years' experience as a pharmacist and chemist, being a graduate from one of America's best schools, I have known men who were capable in the highest degree as pharmacists who had never attended any school save a country public school. I have known them to pass examinations before State Pharmaceutical Boards which graduates could not pass, and I unite heartily with my brother druggist, George A. Grunbok, Jr., of Brooklyn, N. Y., in giving every poor boy in this united land a chance to earn an honest living. Nobody can pass a rigid board examination, no matter how much cramming he may do, unless he is a competent, practical druggist. Therefore this law would benefit none but the colleges of pharmacy, which, in many instances, turn out with diplomas mighty poor timber out of which to make pharmacists.

Chanute, Kansas.

N. PRENTISS SYKES.

Graduation Requirement Unjust.

I have taken a great deal of interest in the subject—should college graduation be a prerequisite to board examination—and have formed the opinion that the measure would be quite an injustice to the impecunious young man who is striving to climb the ladder by his own efforts. The article written by Mr. N. I. Gillman impresses me to be a gross injustice to both the subject and the non-graduate. He relates experiences which tend to show the incompetency of the non-graduate, which, if put to test, would not apply to one in a hundred licentiate. "Keep politics out of pharmacy and roll pills" is a very good maxim.

GEORGE F. CARTER.

Fayetteville, Tenn.

Yes.

Having watched the argument in the Era for some time, as regards the college graduation as a prerequisite, I would like to support the sentiment expressed by Mr. Gillman in last week's Era (April 5). I for one see no reason why every student and pharmacist should not endorse such an action, and the Era should be given great credit for the work it is doing.

A. T. HUNT.

Baltimore, Md.

A PLEA FOR THE CLERK.*

BY R. L. NEWMAN.

"The boy that yu kan't stimulate with praise, yu kan't stimulate with enything but a rawhide." I believe Josh Billings is credited with this remark. It contains a great deal of common sense, which we can more easily understand if we think of the time when we were boys, and what a pleasant feeling we experienced when we were praised for doing something extra well. This quotation, I believe, is particularly applicable to the relations of pharmacists to their employes, for I think the drug clerk does more good work and gets less real encouragement for it than the clerk in almost any other line of business. Today there are thousands of drug-store "boys" and clerks who work day in and day out in a half-hearted way, doing just enough to earn their salaries, and only that which they have to do, simply because when they try to do extra well, and do succeed in doing especially good work, they are never encouraged by a few words of praise, or made to feel that their constant and close attention to business is in any way noticed by their employes.

The average druggist does not seem to realize that two heads are better than one, and that when he gives his clerk proper encouragement and a chance he enlists that clerk's earnest and true interest, and an interest, too, which is valuable to him, for there are many ways in which a clerk has opportunity to do his employer a service or further his interests.

I know of a young man who began his drug career by washing bottles for an Alabama druggist. He was earnest and anxious to learn. His employer, dubbed by his friends "Happy John," praised him when he did something especially good; such, for instance, as decorating a window nicely, achieving good salesmanship, or doing a successful bit of newspaper ad. writing. And to say that that boy worked hard for his employer does not express it! He felt that his employer's interests were his own, and he strove to advance those interests in every possible way. This young fellow is now manager of a neat, clean pharmacy in Alabama; the system used in his store is almost perfection, and his trade is constantly growing. All his progress he attributes to the proper kind of encouragement when he was clerk for "Happy John." His employer has prospered also, and there are few drug stores in the South as neat, as well managed and as successful as Thomason's, at Opelika, Ala. The way to get one's true interest and very best efforts is to show him that his efforts are appreciated. Yes, it pays to be the friend of your clerks! The employer who treats his clerks as he would want to be treated if in their places is sure to be greatly benefited when he counts up his profits and sales.

*Reprinted from Bulletin of Pharmacy.

"Take courage; you may not be a soda fountain clerk all your life."

"That's true, I may get fired to-morrow."

This little note is intended as a plea for drug clerks, a great many of whom are poorly paid, overworked and coldly treated. The drug clerks of the North, especially those in New York and Philadelphia, are very poorly paid and are harder worked than those of any other part of the country with which I am familiar. This I know from experience. I have had experience in one of the largest stores in New York City, and the work was harder and the pay less than in any other city of which I know. I was offered a place in the South at an actual advance in salary of thirty-seven dollars per month, and, accepting it, find it a most pleasant position. Let some people think this matter over. Very little is ever said about the proper treatment of clerks. But the employer who pays his men what they are worth, and who treats them as he ought, will reap greater returns than he dreams of.

SOLUTIONS OF PROTARGOL are best prepared, according to P. Schultz, without the application of heat. The preparation is very slowly and with difficulty dissolved in cold water, but only solutions thus prepared are admissible. The most convenient way to proceed is simply to stir the protargol with water by means of a glass rod until solution is effected. Trituration in a mortar will succeed only when mortar and pestle are previously moistened with a little glycerin, otherwise solution would be retarded by adhering of the substance to the mortar. A properly prepared solution has a black-brown color. (Apoth. Ztg.)

FORTOIN is a new derivative of cotoin, prepared by Zimmer & Co. It is obtained by the action of formaldehyde on cotoin and has the composition of a methylenedicotoin. The preparation consists of yellow, tasteless crystals melting at 211° to 213° C., and having an odor suggestive of cinnamon. It is readily soluble in chloroform, acetone, glacial acetic acid, sparingly soluble in alcohol, ether and benzol, and soluble in water. The compound is recommended for treatment of diarrhoea in doses of 0.25 Gm. (4 grains) three times daily. (Apoth. Ztg.)

A GENERAL FORM OF PHARMACY LAW.

SUITABLE FOR ENACTMENT BY THE SEVERAL STATES OF THE UNION.

By J. H. BEAL.

THE OLD MODEL.

At the annual meeting of the American Pharmaceutical Association in 1869 a committee, consisting of Messrs. Wright, Milhau, Moore, Stearns and Malsch, presented a draft of a general form of pharmacy law, which, after extended discussion, was accorded a place in the proceedings of the association as representing the general principles which, it was hoped, would be followed in case the several States should attempt legislation regulating the practice of pharmacy.

Prior to the appearance of the 1869 model only two pharmacy statutes were in existence in the United States, both of which were very imperfect and of limited application. Since then nearly every political division of the United States has provided itself with a pharmacy law, the general plan of all being, in the main, similar to that of the model above referred to, though the different conditions existing in the various States have served to produce a very great variety in detail. Many new features not present in the old model have been developed, some have been greatly modified by the different hands through which they have passed, while others of the ideas originally advanced have proved to be impracticable and have been abandoned.

This multiplicity of details in the several States and the unsatisfactory character of many of the statutes early produced a desire for a general revision, and, if possible, the creation of a substantial uniformity among the several enactments. Naturally the most convenient arena for the exploitation of this idea has been the annual meetings of the society which produced the original model, and for a decade past the subject has received especial attention at the hands of nearly every president of the association, by the various chairmen of the section on education and legislation, in many papers presented by various members of this association, and by practically all of the pharmaceutical journals.

At the Montreal meeting of this association in August, 1896, the writer presented a comparative exhibit of the pharmacy laws then in force in the United States, and offered a resolution providing for the appointment of a special committee which should enter into communication with the colleges and boards of pharmacy and pharmaceutical associations of the United States and Canada, and from materials thus collected construct a model form of law to be submitted for the approval of the association at its next annual meeting. The resolution failed of adoption in its original form, but was referred to the officers of the Section on Education and Legislation, with power to act. Since then no further official action has been taken by the association until the meeting at Put-In Bay, Ohio, in 1899, when the present writer, much against his inclination, was appointed to prepare such a draft of a general form of law which is hereby submitted:

THE MEANING OF THE TITLE "MODEL LAW."

At the outset the writer frankly admits that his idea of what the model should be differs widely from that of some of the foremost writers upon the subject, and he therefore feels called upon to set forth briefly his reasons for the draft which is herewith presented.

In the first place, the writer is not in accord with some as to the construction to be placed upon the title "Model Law." Many have understood from this title that the proposal is for a form of law which shall be *ideally perfect*, both from a public and from a professional standpoint. From this interpretation the writer is compelled, by what he believes to be the necessities of the case, to dissent. An ideal law would be possible of enactment only in an ideal community, and if communities were ideally perfect

such a form of law would be useless. What was meant by the resolution offered at Montreal was not a form of law which should be without fault, and therefore incapable of further improvement, but a *workable* draft adapted to enactment in the various States where any form of law revolutionary in character would not receive serious consideration. While this may be a disappointment to some who have expected that the model would present some new and startling innovation, the author is of the opinion that a draft based upon a conservative plan will be of far greater helpfulness in promoting progress in pharmaceutical legislation than one based upon purely theoretical considerations could possibly be.

GENERAL PLAN OF THE MODEL LAW.

In accordance with the view above expressed it has been attempted to frame the model in accordance with the following principles:

First—The model should be constructed, as nearly as possible, wholly of tried and tested material, selected from statutes already in force, and should consist of provisions which have withstood the test of experience and have been found to work well in practice. Experiments should be taboed, and new provisions not found in existing statutes should be admitted only upon the clearest evidence of their usefulness and practicability.

Second—The machinery required for the enforcement of the law should be simple and inexpensive, as every complication increases the liability to break-downs and the difficulty of enforcing the law.

Third—The form of statement adopted for the various provisions should be as clear and simple as is consistent with the technicalities of legal phraseology indispensable to accuracy and certainty.

Fourth—The provisions of the statute should be confined to the creation, support and direction of the Board of Pharmacy, the requirements for examination and registration, the regulation of the sale of poisons, and the definition and punishment of offenses against the law. Provisions regulative of adulterations and other collateral matters should be left to the general statutes.

Fifth—Since experience has shown that nearly all State Boards are hampered by lack of necessary funds for the enforcement of the law, the draft should provide ample revenue for the use of the board, and should allow its members such compensation as will justify them in devoting sufficient attention to the law to make it efficient.

SUMMARY OF THE MODEL BY SECTIONS.

Section One is unavoidably long. Its object is to forbid any one but licensed pharmacists from controlling or managing stores and to prohibit unlicensed persons from selling drugs in any place or capacity. As criminal statutes must be construed with the greatest strictness, it is absolutely essential that the section which defines the crime should be worded with the greatest exactness and detail.

This section has been prepared after a careful study of all the statute laws, and while the author does not flatter himself that it will be found invulnerable he still ventures to hope that it may prove an improvement over many existing statutes, some of which are so loosely drawn that it is practically impossible to obtain convictions under them.

In order to make this section constitutional it is necessary that it shall not be a bar to the pursuit of any legitimate business or occupation, and for this reason several clauses of exceptions have been added. The first of these excludes from the operation of the section the right of a physician to furnish his own patients with such medicines as he may deem proper. This exception is not only in accord with public opinion, but is, we believe, essentially just and right, even if it does operate to reduce the num-

ber of prescriptions dispensed by the pharmacist. The right to furnish medicines to his patients is inherent in the physician, and it is not probable that the Legislature would attempt to deprive him of it or that the courts would sustain any such attempt if made.

The next exception is that of non-poisonous domestic remedies and of patent and proprietary remedies which do not contain poisonous ingredients. While it is the opinion of the writer that the business of dealing in all such substances should be confined to the druggist, he is nevertheless convinced that the restriction herein contained is as much as can be expected in the present state of public education upon the subject.

The insertion of the exception regarding insecticides is based upon the same reasons.

The provision permitting legally licensed assistant pharmacists to manage drug stores in small villages, and dealers in general merchandise to sell certain drugs in country places, it is believed, will do much to disarm the opposition of legislators from rural districts, and will, at the same time, permit the interests of the rural population to be sufficiently safeguarded.

Section Two provides that all persons registered or licensed at the time of the enactment of the proposed law may continue to act under their license without re-examination. In States where renewal is not provided for it would be necessary to modify this part slightly in order to make a portion of Section Six effective. The section also prescribes the nature of the application which must be filed by new candidates for registration.

Section Three prescribes the qualifications of pharmacists and assistants. The first must be 21 years of age, a graduate in pharmacy, have four years' experience in pharmacy, and must have been previously registered for two years as an assistant, and in addition must pass a satisfactory examination. Assistants must be 18 years of age, have two years' experience, and sustain an examination, but are not required to be graduates.

The requirement of graduation as a prerequisite to registration is now so generally admitted to be necessary that it need not be discussed.

The requirement that applicants must have been licensed for two years as assistants is new in the United States, though not in Canada, but its necessity is equally as urgent as that of graduation.

It is conceded by all thoughtful students of the subject that it is at present far too easy for applicants to qualify as managers of pharmacies. The present laws seem to have been composed with the idea that there is a dearth of pharmacists and that the public interest would suffer if the gateway to registration were not as wide as possible. There may be an occasional scarcity of properly qualified assistants, but if there has ever been an insufficient supply of pharmacists to meet all public demands we have not heard of it.

Another provision of this section permits a reduction of experience in the case of those who have attended schools of pharmacy; provided, however, that a pharmacist must have not less than two years' experience, no matter how long he may have attended college. This is only a reasonable concession in view of the absolute requirement that all candidates must graduate before receiving license as pharmacists.

Section Four provides that licenses shall be granted to successful candidates for two years. This is for the purpose of avoiding the contention that when candidates are registered once they are registered for all time, and therefore cannot be compelled to renew their registration.

The latter part of this section provides that the board may refuse license to persons unfitted by reason of drunkenness or addiction to drugs, and that they may revoke licenses for the same cause. In order to avoid the possible charge of arbitrary abuse of power, an appeal is permitted to the Governor and Attorney-General. It is possible that in some States an appeal might have to be taken to a different body.

Section Five authorizes the board to grant licenses to licentiates of other boards, but safeguards the practice in such a way as to avoid possible abuse of the power.

Section Six contains the usual requirement as to the exposure and renewal of certificates and permits, and prescribes the penalties for failing to renew the same. In this section an effort has been made to state the require-

ment with clearness and ample detail, so as to minimize as much as possible the occasion for misunderstanding.

Sections Seven, Eight, Nine, Ten, Eleven and Twelve provide for the appointment of the Board of Pharmacy and prescribe its powers and duties. The provisions, in the main, are along the usual line of existing laws. Care has been taken to secure definiteness of statement on all important parts. Several features, perhaps, deserve special mention. One of these provides that the record of the Board of Pharmacy or a properly certified transcript therefrom shall be accepted as competent evidence in all courts. Another is that no provision is made for a treasurer, but that the receipts of the board shall be covered into the State treasury as a special fund for the use of the board.

Another important feature is the one allowing the board to employ an attorney, since local attorneys are frequently loath to undertake prosecutions under the pharmacy law, and usually do so in only a half-hearted way.

Perhaps some objection may be found with the size of the fees required for license and renewals, but the writer is convinced that they are not too great for the expense of the board in order to execute the law as it should be executed.

Section Thirteen provides for the labeling and recording the sale of poisons. In the author's opinion it is not within the wit of man to prepare a schedule of poisons which will not still leave something to be desired. Either it will be too broad or too narrow, or either too loose or too rigid. It is not likely that the present attempt has escaped any of these objections. The utmost that has been hoped for has been to prepare a section which shall be reasonably comprehensive without being oppressive, and which shall afford a reasonable protection to the public without too great an interference with trade rights.

Section Fourteen requires the preservation of the original of every prescription for a period of five years. The desirability of this provision is doubtless sufficiently obvious without extended explanation.

Section Fifteen imposes a license upon itinerant vendors of medicines. Doubtless it would be better if such might be suppressed altogether, but until public opinion is further advanced than at present probably the most that can be done is the regulation of the business by the Board of Pharmacy in the manner indicated.

The purposes of Sections Sixteen, Seventeen, Eighteen and Nineteen are sufficiently apparent with comment.

CONCERNING THE SALE OF DRUGS BY UNLICENSED PERSONS.

Sec. 1. It shall be unlawful for any person not licensed as a pharmacist within the meaning of this act to conduct or manage any pharmacy, drug or chemical store, apothecary shop, or other place of business for the retailing, compounding or dispensing of any drugs, chemicals or poisons, or for the compounding of physicians' prescriptions, or to keep exposed for sale at retail any drugs, chemicals or poisons, except as hereinafter provided, or for any person not licensed as a pharmacist or assistant pharmacist within the meaning of this act to compound, dispense, or sell at retail any drug, chemical, poison or pharmaceutical preparation upon the prescription of a physician, or otherwise, or to compound physicians' prescriptions, except as an aid to or under the immediate supervision of a person licensed as a pharmacist under this act. And it shall be unlawful for any owner or manager of a pharmacy, or drug store, or other place of business to cause or permit any other than a person licensed as a pharmacist or assistant pharmacist to compound, dispense or sell, at retail, any drug, medicine or poison, except as an aid to or under the immediate supervision of a person licensed as a pharmacist or assistant pharmacist.

Provided, however, that nothing in this section shall be construed to interfere with any legally registered practitioner of medicine or dentistry in the compounding of his own prescriptions or to prevent him from supplying to his patients such medicines as he may deem proper with the exclusively wholesale business of any dealer who shall be licensed as a pharmacist or who shall keep in his employ at least one person who is licensed as a pharmacist, nor with the selling at retail of non-poisonous domestic remedies, nor with the sale of patent or proprietary preparations which do not contain poisonous ingredients, nor with the sale of poisonous substances which are sold exclusively for use in the arts, or for uses insecticides, when such substances are sold in unbroken packages bearing a label having plainly printed upon it the name of the contents, the word "Poison" and the names of at least two readily obtainable antidotes.

Provided, further, that in any village of not more than 500 inhabitants where there is no person licensed as pharmacist within less than two miles of such village the

Board of Pharmacy may grant to any person who is licensed as assistant pharmacist a permit to conduct a drug store or pharmacy in such village, which permit shall not be valid in any other village than the one for which it was granted, and shall cease and determine when the population of the village in which such permit is granted shall become greater than 500, and provided also that in rural districts where there is no person licensed as pharmacist or assistant pharmacist within less than two miles from the Board of Pharmacy, the holder of such permit may in general merchandise to sell such drugs and medicines as may be specified by the board, which permit shall run for a period of two years.

Within the limits of this act, rural districts are villages or other places of not more than 200 inhabitants.

CONCERNING EXAMINATIONS AND REGISTRATION.

Sec. 2. Every person now licensed or registered as a pharmacist or assistant pharmacist under the laws of this State shall continue in the practice of his profession until the expiration of the term for which his certificate of registration or license was issued. Every person who shall hereafter desire to be licensed as a pharmacist or assistant pharmacist shall file with the secretary of the Board of Pharmacy an application, duly verified under oath, setting forth the name and age of the applicant, the place or places at which, and the time spent in the study of pharmacy, and the number of years of experience in the compounding of physicians' prescriptions which the applicant has had under the direction of a legally licensed pharmacist, and shall appear at a time and place designated by the Board of Pharmacy to undergo an examination as to his qualifications for registration as a licensed pharmacist or assistant pharmacist.

Sec. 3. In order to be licensed as a pharmacist within the meaning of this act, an applicant shall be not less than 21 years of age, and shall have been licensed as an assistant pharmacist for not less than two years prior to his application for license as a pharmacist, and he shall be present to the board of Pharmacy to receive his license as a graduate of a reputable school or college of pharmacy, and that he has had four years' experience in pharmacy under the instruction of a licensed pharmacist, and he shall also pass a satisfactory examination before the Board of Pharmacy.

In order to be licensed as an assistant pharmacist within the meaning of this act an applicant shall be not less than 18 years of age, and shall have had not less than two years' experience in pharmacy under the instruction of a licensed pharmacist, and shall pass a satisfactory examination before the Board of Pharmacy.

Provided, however, that in the case of persons who have attended a reputable school or college of pharmacy the actual time of attendance at such school or college of pharmacy may be deducted from the time of experience required of pharmacist and assistant pharmacists, but in no case shall less than two years' experience be required for registration as a licensed pharmacist.

Sec. 4. If an applicant for license as a pharmacist or assistant pharmacist has complied with the requirements of the two preceding sections, the Board of Pharmacy shall enroll his name upon the register of pharmacists or assistant pharmacists and issue to him a certificate which shall entitle him to practice as pharmacist or assistant pharmacist for a period of two years from the date of the said license.

The Board of Pharmacy may refuse to grant a license to any person guilty of felony or gross immorality, or who is addicted to the use of alcoholic liquors or narcotic drugs to such an extent as to render him unfit to practice pharmacy; and the Board of Pharmacy may, after due notice and hearing, revoke a license for like cause, or any license which has been procured by fraud.

An appeal from the action of the board in refusing to grant or in revoking a license for such cause may be taken to the Governor and Attorney-General, and the decision of which officers, either affirming or overruling the action of the board shall be final.

Sec. 5. The Board of Pharmacy may issue licenses to practice as pharmacists or assistant pharmacists in this State, without examination, to such persons as have been legally registered or licensed as pharmacists or assistant pharmacists in other States or Territories or foreign countries, provided that the applicant for such license shall present satisfactory evidence of the same qualifications as are required from licentiates in this State, and that he was so registered or licensed by examination in such other State or foreign country, and that the standard of competence required in such other State or foreign country is not lower than that required in this State, and provided also that the board of Pharmacy of such other State or foreign country accords similar recognition to the licentiates of this State.

Applicants for license under this section shall, with their application, forward to the secretary of the Board of Pharmacy the same fees as are required of other candidates for license.

Sec. 6. Every certificate of license to practice as pharmacist or assistant pharmacist and every permit to an assistant pharmacist to conduct a drug store in villages of not more than 500 inhabitants, and every permit issued to dealers in general merchandise to sell such drugs and medicines prescribed by the Board of Pharmacy, and every renewal of such license or permit shall be conspicuously exposed in the pharmacy or drug store or place of business of the pharmacist or assistant pharmacist or other person to whom it is issued is the owner or manager, or in which he is employed.

Every licensed pharmacist or assistant pharmacist who desires to continue in the practice of his profession, and every person holding a permit to sell drugs in rural dis-

tricts shall, within thirty days next preceding the expiration of his license or permit, file with the board an application for the renewal thereof, which application shall be accompanied by the fee hereinafter prescribed. If the board shall find that the applicant has been legally licensed in this State and is qualified to receive his permit or to a renewal of such permit, it shall issue to him a certificate attesting that fact.

If any pharmacist or assistant pharmacist shall fail for a period of sixty days after the expiration of his license, to make application to the board for its renewal, his name shall be erased from the register of licensed pharmacists or assistant pharmacists, and such person, in becoming a candidate for license, shall be required to proceed as in the case of original registration. And if any holder of a permit to sell drugs in rural districts shall fail for a period of thirty days after the expiration of his permit to make application for the renewal thereof, his name shall be erased from the register of persons holding such permits, and may be restored thereto only upon the payment of the fee required for the granting of original permits.

CONCERNING THE BOARD OF PHARMACY.

Sec. 7. The Board of Pharmacy shall consist of five persons, one of whom shall be a pharmacist in this State, who shall be appointed by the Governor, by and with the advice of the ———, and who shall hold their office for five years from the date of their appointment and until their successors shall be appointed. The members of the board, one of the members of the board first appointed shall hold their offices for one, two, three, four and five years, respectively, as shall be designated in their several commissions. The members of the board may be re-elected, and the Governor may submit to the Governor the names of five persons licensed as pharmacists, within this State, and from this number, or from others, the Governor, by and with the advice of the ———, shall select one member to fill the vacancy annually occurring in the Board of Pharmacy, and vacancies occurring from any other cause shall be filled in like manner.

The members of the Board of Pharmacy shall continue in office until the expiration of their respective terms, and the vacancies thus occurring shall be filled as previously designated.

Sec. 8. The Board of Pharmacy shall organize by the election of a president and secretary, both of whom shall be members of the board, who shall hold their offices for one year and until their successors shall have been elected and qualified.

The secretary shall give a bond in such sum as may be prescribed by the board, conditioned for the discharge of the duties of his office according to law.

The board shall meet at such times each year, at such places, at such times and places as it may provide by rule, for the examination of candidates and for the discharge of other business as may legally come before it, and such additional meetings as may be necessary.

Sec. 9. The Board of Pharmacy shall have a common seal and shall have power to adopt such rules and by-laws as may be consistent with the law as may be necessary for the regulation of its proceedings and for the discharge of the duties imposed under this statute, and shall have power to employ an attorney to conduct prosecutions or to assist in the conduct of prosecutions under this act.

The board shall keep a record of its proceedings and a register of all persons to whom certificates of license as pharmacists and assistant pharmacists and permits have been issued, and of all renewals thereof, and the books and register of the board or a copy of any part thereof certified by the secretary, attested by the seal of the board, shall be accepted as competent evidence in all the courts of this State.

The Board of Pharmacy shall make annually to the Governor and to the ——— of the Pharmaceutical Association a report of its proceedings and of its receipts and disbursements under this act, and of the persons licensed to practice as pharmacists and assistant pharmacists in this State. A majority of the board shall constitute a quorum for the transaction of business.

The president and secretary shall have the power to administer oaths in matters pertaining to the examination and registration of pharmacists and assistant pharmacists.

Sec. 10. The secretary shall receive such salary as may be prescribed by the Board of Pharmacy, and his necessary expenses while engaged in the performance of his official duties. The other members shall be paid a sum of five dollars for each day actually employed in the discharge of their official duties and their necessary expenses while engaged therein.

All fees collected by the secretary for the examination of pharmacists and assistant pharmacists, and for the issuing of the permits authorized by this act, and for the renewal of certificates of registration and permits, and all fines collected under previous enactments, and that to be begun by the Board of Pharmacy, and all other funds collected under this act, shall by him be covered into the state treasury monthly, and shall be placed to the credit of a fund which shall be hereby appropriated for the use of the Board of Pharmacy.

The compensation and expenses of the secretary and members of the Board of Pharmacy, and all expenses incurred by the board in carrying out the provisions of this act, shall be paid out of said fund upon the warrant of the Auditor of State, issued upon requisition signed by the president and secretary of the board.

Sec. 11. Upon information that any person has this law has been or is being violated the secretary of the

Board of Pharmacy shall investigate the matter, and upon probable cause appearing shall file a complaint and prosecute the offender therefor.

It shall be the duty of the prosecuting attorney, upon request of the secretary, to take charge of and conduct such prosecutions.

All fines assessed and collected under prosecutions begun or caused to be begun under this act shall be paid to the secretary and by him covered into the State treasury monthly, and shall be credited to the fund for the use of the Board of Pharmacy.

Sec. 12. The Board of Pharmacy shall be entitled to charge and collect the following fees: For the examination of an applicant for license as pharmacist, \$10.00; for the examination of an applicant for license as an assistant pharmacist, \$5.00. For renewing the license of a pharmacist, \$10.00; for renewing the license of an assistant pharmacist, \$1.00. For issuing a permit to an assistant pharmacist to conduct a drug store in villages of not more than 500 inhabitants, \$2.00. For issuing a permit to dealers in general merchandise to sell certain drugs in rural districts, \$2.00, and for the renewal thereof, \$1.00.

All fees shall be paid before any applicant may be admitted to examination or his name placed upon the register of pharmacists or assistant pharmacists, or before any license or permit, or any renewal thereof, may be issued by the board.

CONCERNING THE SALE AND REGISTRATION OF POISONS.

Sec. 13. It shall be unlawful for any person to sell or deliver to any minor under sixteen years of age, except upon the written order of a physician, or to sell or deliver to any person any of the following described substances, or any poisonous compound, combination or preparation thereof, to wit: The compounds and salts of arsenic, antimony, gold, lead, mercury, strychnine, zinc, and zinc, the caustic hydrates of sodium and potassium, solution of water of ammonia, the concentrated mineral acids, oxalic and hydrocyanic acids and their salts, yellow phosphorus, Paris green, and the salts of the essential oils of almonds, pennyroyal, tansy and savine, croton oil, creosote, chloroform, chloral hydrate, cantharides, or any acetonite, belladonna, bitter almonds, colchicum, cotton root, cucullaria, digitalis, ergot, foxglove, hemlock, hyoscyamus, ignatia, lobelia, nux vomica, opium, physostigma, phytolacca, strophanthus, stramonium, veratrum viride, or any of the poisonous alkaloids or alkaloidal salts or other poisonous principles derived from the foregoing, or cocaine and veratrine, or any other poisonous alkaloids or their salts, or any other virulent poison, except in the manner following:

It shall first be learned by due inquiry that the person to whom delivery is made is aware of the poisonous character of the substance, and that it is desired for a lawful purpose, and the box, bottle or other package shall be plainly labeled with the name of the substance, the word "Poison," and the name of the dispenser. In dispensing the substance, and the names of two or more substances which may be used as antidotes. And before a delivery shall be made of any of the foregoing substances there shall be recorded upon the package for the purpose the name of the article, the quantity delivered, the purpose for which it is intended to be used, the date of delivery, the name and address of the purchaser, and the name of the dispenser, which record shall be preserved for at least five years, and shall at all times be open to the inspection of the proper officers of the law.

Provided, however, that the foregoing provision shall not apply to articles dispensed under order of a physician believed by the dispenser to be lawfully authorized practitioners of medicine or dentistry; and provided, also, that the record of sale and delivery above mentioned shall not be required of manufacturers and wholesalers, who shall sell any of the foregoing substances at wholesale, but the box, bottle, or other package containing such substance, when sold at wholesale, shall be properly labeled with the name of the substance, the word "Poison" and the name and address of the manufacturer or wholesaler.

And it is further provided that it shall not be necessary to place a poison label upon or to record the delivery of the sulfid of antimony, arsenic, bismuth, calcium, zinc, or of colors ground in oil and intended for use as paints, or calomel, paregoric, or other preparations of opium containing less than two grains of opium to the fluid ounce, nor in the case of preparations containing any of the substances named in this section when in a single box, bottle, or other package, or when the bulk of two fluid ounces or the weight of two avoirdupois ounces does not contain more than an adult medicinal dose of such poisonous substance.

GENERAL PROVISIONS.

Sec. 14. Every proprietor or manager of a drug store or pharmacy shall keep in his place of business a suitable book or file in which shall be preserved for a period not less than five years the original of every prescription compounded or dispensed at such store or pharmacy. Upon request the proprietor or manager of such store shall furnish to the prescribing physician, or to the person for whom such prescription was compounded or dispensed, a true and correct copy thereof, or a true copy or file of original prescriptions shall at all times be open to the inspection of duly authorized officers of the law.

Sec. 15. It shall be unlawful for any person to sell or to offer for sale or to offer for sale by public outcry, or to offer for sale by public outcry, or by vending in the street, any drug, medicine, chemical, or any composition or combination thereof, or any implement or appliance or other agency for the treatment of

disease, injury or deformity, unless such person shall have first procured from the Board of Pharmacy a license for such purpose, for which license there shall be paid to the Board of Pharmacy the sum of \$100 per annum. No license shall be granted to any person for the sale of any substance or thing the use of which may be injurious to health or public morals.

Sec. 16. It shall be unlawful for any person not legally licensed as a pharmacist to take, use, or exhibit the title of pharmacist, or licensed or registered pharmacist, or the title druggist, or apothecary, or any other title or description of like import; and it shall be unlawful for any person not legally licensed as an assistant pharmacist to take, use, or exhibit the title of assistant pharmacist, or any other title or description of like import.

Sec. 17. All persons licensed under this act as pharmacist or assistant pharmacist, and actively engaged in the practice of their profession, shall be exempt from jury duty in all the courts of this State.

Sec. 18. Whoever, not being licensed as a pharmacist, shall conduct or manage any drug store, pharmacy, or other place of business for the compounding, dispensing or sale at retail of any drugs, medicines or poisons, or for the compounding of physicians' prescriptions contrary to the provisions of Section One of this act, shall be deemed guilty of a misdemeanor, and upon conviction shall be fined not less than \$25 nor more than \$100, and each week such drug store or pharmacy, or other place of business is so unlawfully conducted shall be held to constitute a separate offense.

Whoever, not being licensed as a pharmacist or assistant pharmacist, shall compound, dispense, or sell at retail any drug, medicine, poison or pharmaceutical preparation, or dispense a physician's prescription, or otherwise, and whoever being the owner or manager of a drug store, pharmacy, or other place of business shall cause or permit any one not licensed as a pharmacist or assistant pharmacist to dispense a physician's prescription, or sell any drug, medicine, poison or physician's prescription contrary to the provisions of Section One of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined not less than \$10 nor more than \$100.

Any license or permit or renewal thereof obtained through fraud or by any false or fraudulent representation shall be void, and no effect in law. Any person who shall make any false or fraudulent representation for the purpose of procuring a license or permit or renewal thereof, either for himself or for another, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$25 nor more than \$100, and any person who shall wilfully make a false affidavit for the purpose of procuring a license or permit or renewal thereof, either for himself or for another, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be subject to like punishment as in other cases of perjury.

Whoever, being the holder of any license or permit granted under this act, shall fail to exercise such license or permit or any renewal thereof in a conspicuous position in the place of business to which such license or permit relates, or in which the holder thereof is employed, contrary to the provisions of Section Six of this act, shall upon conviction thereof be fined not less than \$5 nor more than \$25, and each week that such license, permit or renewal shall not be exposed shall be held to constitute a separate and distinct offense. And whoever, being the holder of any license or permit granted under this act, shall, after the expiration of such license or permit, and without renewing the same, continue to carry on the business for which such license or permit was granted contrary to the provisions of Section Six of this act, shall upon conviction thereof be fined not less than \$5 nor more than \$25.

Whoever shall sell or deliver to any person any poisonous substance specified in Section Thirteen of this act, without labeling the same and recording the delivery thereof in the manner prescribed in said Section Thirteen, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$10 nor more than \$100.

Whoever shall sell or offer for sale by peddling from house to house, or offer for sale by public outcry, or by vending in the street, any drug, medicine, chemical or combination thereof, or any implement or appliance for the treatment of disease, injury or deformity, without having first procured from the Board of Pharmacy the license provided in this act, and upon conviction thereof shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$25 nor more than \$100.

Whoever, not being legally licensed as a pharmacist, shall take, use, or exhibit the title of pharmacist, licensed or registered pharmacist, druggist, apothecary, or any title of similar import, contrary to the provisions of Section Sixteen of this act, or who, not being legally licensed as an assistant pharmacist, shall take, use, or exhibit the title of assistant pharmacist, or any title of similar import, contrary to the provisions of said Section Sixteen, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$10 nor more than \$50.

Sec. 19. This act shall be in force from and after its passage, and all acts or parts of acts in conflict with this act shall be and the same are hereby repealed.

TUBERCULIN SOAP is recommended by Unna for lupus, scrofula, etc. It is composed of tuberculin 1 to 4 parts, soft soap 20 parts. (Pharm. Post.)

(Written for the Era.)

THE METRIC SYSTEM.

The International Bureau of Weights and Measures. Its History, Its Organization and its Work.

At the present moment, the Committee on Coinage, Weights and Measures of the House of Representatives is examining the advisability of the official adoption of the Metric System of Weights and Measures throughout the United States.

In a previous article we briefly sketched the wonderful progress of this system during the last century, but a few additional details of the remarkable and comparatively little known body by which this progress has been carried out may be of current interest).

PART I.—1870 TO 1889.

The International Committee

on Weights and Measures was formed at Paris in 1870, but its work, interrupted by the Franco-German war, was only definitely commenced in 1872. The United States were represented by Mr. J. Henry, (of the Smithsonian Institution), and Mr. Hildgard (inspector of Weights and Measures at Washington); England, by G. Biddell Airy, (Astronomer Royal), and Mr. Chisholm; France, by Gens. Morin and Jarras, MM. Pelliot, Flizeau, Le Verrier, Faye, Becquerel, Tresca, and the chemist, St. Claire Deville. Numerous delegates were nominated by other countries.

The first step was to form a permanent and official International body. The population of each country was taken as the basis for voting, and the nations were classed under three heads.

Class I.—(Countries with over 20 million inhabitants)—France, Germany, Great Britain, Italy, Russia, Spain, Turkey and the United States; three votes each.

Class II.—(10 to 20 millions, two votes apiece)—Austria, Hungary.

Class III.—(Under 10 millions, one vote)—Nineteen smaller countries, mostly in Europe and South America.

As the ten countries included in Classes I. and II. alone mustered (in 1872) a total of 238,000,000 inhabitants, and the vast colonial empires of England alone would double the figure, one may say that the delegates were deciding the interests of

Over Five Hundred Million People.

The first International Permanent Committee, thus elected, consisted of Gen. Ibañez de Ibero, Marquis of Mulhacen, Director of the Spanish Geographical Institute, who was chosen as chairman, and eleven other delegates, Messrs. Bosscha (Holland); Broch, Chisholm (Great Britain); Foerster, Germany; Herr (Austria); Hildgard (United States); Hussey Bey (Turkey); Morin, (France); Stas (Belgium); Wild (Russia), and Wrede (Sweden).

It was decided to construct a section of Standard Metre, new Standard Metre for France, and thirty others (with forty standard Kilos) for the foreign countries who had adhered to the idea.

The "Metric Convention"

was signed at Paris on May 20, 1875, by the representatives of the Argentine Confederation, Austria, Hungary, Belgium, Denmark, France, Germany, Italy, Peru, Portugal, Russia, Sweden and Norway, Switzerland, Spain, Turkey, United States and Venezuela. These countries bound themselves to establish and keep up at their joint expense a permanent and scientific

International Bureau

of Weights and Measures, located at Paris. The annual budget was fixed at \$20,000, and the Pavillon de Breteuil, a picturesque little hunting lodge in the leafy solitudes of the Park of Saint Cloud, was selected as the site.

In 1878 the scientific instruments were installed, the staff nominated and all ready for work.

The Standard Metre of 1790 was in pure platinum, but St. Claire Deville proposed an alloy of 9 parts of platinum to one of iridium. As this metal costs about \$600 per pound, it was important to choose a form sufficiently rigid yet economical of metal. The section sketched in the margin was designed by Tresca, and adopted as the best.

The standards were cast by Matthey, of London, straightened and polished by Brunner Bros., of Paris, and traced at the Paris Technical School (Arts and

JEAN SERVAIS STAS.

Meters). Pages would be required to describe the minute care with which the precious bars of metal were measured and compared; plunged in water kept at an even temperature, (as four thermometers, one at each corner of the tank, attested); ruled under a microscope, etc., etc. Suffice it to say that the maximum difference between the original and the longest and shortest of the thirty standards was three microns*. The one nearest in length to the original standard of 1790 was kept by the French Government as the International Standard Metre; for the other twenty-nine lots were drawn by the representatives of the various nations.

The Kilo

is perhaps more interesting to pharmacists than the Metre. As M. Guillaume, of the International Bureau, writes: "Weighing is perhaps the most delicate operation in Physics, owing to the marvelous sensibility of scales. The slightest variation in temperature, the movement of a heavy mass in proximity, not to speak of the microscopic dust which hangs to the weights, all confuse results and must be avoided." He accordingly insisted on evenly heated rooms, the distance of the operator from the scales, (to avoid the influence of animal heat), the necessity of allowing a balance, once used, several hours' rest, and of checking each operation by the opposite scale (weights being transferred by mechanical means), etc., etc., and concludes:

"For the kilogram, the precision is the fraction of the hundredth of a milligram, say 1-100,000,000 (one hundred millionth part) of a kilo."

In 1889 the standard metres and kilos were terminated

*A micron is the 1-1,000 part of a millimetre; in consequence about 1-25,000 of an inch.

D. RENE BENOIT. P. CHAPPUIS.

and distributed. Each was carefully packed—the Metre in a cylindrical velvet lined box, encased in a thick brass tube, hermetically closed by a screw cap with a rubber plug—and carried to its destination under the delegates' watchful eyes. Many may still remember how the U. S. standard was

Officially Received at the White House

by President Harrison, and opened in his presence, after which scientists and savants signed the report, and a ball was given in honor of the occasion.

The International Committee's great work was now terminated. The annual budget of the Bureau was reduced to \$15,000, and meetings are now biennial instead of annual.

PART II.

Last Year's Work.

The last meeting of the International Committee on Metric Weights and Measures was held in April, 1879, and the official report shows how the work goes steadily and silently forward.

Herr Foerster, of Berlin, is now chairman. The members present were Messrs. Arndtsen, (Norway); Arrilaga, (Spain); Benoit, (Director of International Bureau, Paris); Bertrand, (secretary of the Paris Academy of Sciences); De Bodola, (Hungary); Chaney, (London); Hirsch, (Switzerland); De Macedo, (Portugal); Hepites, (Roumania); Mendeleeff, (Russia); Thalen, (Sweden), and the two new delegates, Prof. Blaserna, (Rome, Italy), and Prof. Michelson*, of Chicago University—the former representatives of Italy and the United States having died since the 1879 meeting. M. Van Lang (Austria) was the only absentee.

Five sittings despatched all current business. England's new Act of Parliament, legalizing the use of the system, was naturally the subject of much congratulation.

It was decided to exhibit standards and statistics of progress at the 1900 Paris Exhibition, and an International Congress will also be held on Weights and Measures this year at Paris.

Checking the Standards

regularly and periodically is important. Several foreign standards had arrived. Three keys are necessary to open the three doors of the safe (built into the walls of the fireproof vaults of the Bureau) where the French prototypes are kept. The Director of the Archives sent his key, M. M. Foerster and Benoit each produced their own. The safe opened, three metres lie side by side, the standard, an exact copy, and a third in a vacuum tube. The differences are noted and the French standards locked up again.

*Prof. Michelson's recent comparisons between the base of the metric system and a natural unit—the length of the wave of red cadmium light—have aroused much interest. Thus (remarks a French writer) were every metre in the world destroyed, the unit of length could be reconstructed on an invariable and scientific basis.

INTERNATIONAL BUREAU.

A New Applicant

for admission to the International Metric Bureau is the Kingdom of Greece, which adopted the metre in 1886, and now asked on what terms her Government could be officially represented on the committee.

Table Showing the Annual Contribution of Each State to the Support of the International Bureau.

State.	Population.	Coefficient.	Units of tribu- tion, 60 fr. 83.	Total Annual Con- tribution, francs.
Germany	49,428,470	3	148	10,835
Austria	23,835,261	3	72	5,028 1/2
Hungary	17,835,929	3	52	3,531 1/2
Belgium	6,083,321	3	18	1,257
Argentina	4,500,000	3	14	978
Denmark	2,172,205	1	2	140
Spain	25,902,931	3	78	5,447
U. S. America	62,622,250	2	125	8,725
France	38,218,903	3	115	8,031
Gt. Britain & Ireland	35,241,482	2	70	4,888
Italy	28,951,374	3	87	6,075
Japan	39,063,931	2	78	5,447
Mexico	11,632,324	3	35	2,444
Peru	2,628,663	3	8	559
Portugal	4,708,178	3	14	978
Roumania	5,000,000	3	15	1,047
Russia	107,737,235	1	108	7,542
Servia	2,162,759	3	6	419
Sweden	4,785,000	3	14	978 1/2
Norway	1,899,176	3	6	419 1/2
Switzerland	2,917,740	3	9	628
Venezuela	2,234,355	3	(7)	(489)
Total				*75,000

*=\$25,000.

As will be seen by above table, the contribution of each country is based (1) on its population; (2) on the fact of the use of the Metric System being legally compulsory or merely optional. In the latter case the "coefficient" is 2, in the former case 3. For instance:

	Population.	Coefficient.	Annual Contribution.
Germany	49 1/2 millions	x 3=148 1/2 parts,	at \$14=\$2,079
U. S.	62 1/2 millions	x 2=125 parts,	at \$14=1,750

If, therefore, the United States adopted the metric system on the compulsory basis, her annual contribution to the support of the bureau would be 62 1/2 x 3 = 187 1/2 x \$14 = \$2,625. (We omit fractions for brevity's sake.)

Greece's population being 2 1/2 millions, she would only pay \$70 a year, or \$105, if the metric system were legally compulsory; but an entrance fee of \$50 or \$760 would be charged. A reply to this effect was accordingly drawn up. It will be noticed from the above list that since 1875 five new countries have joined—Great Britain, Japan, Mexico, Roumania and Servia; while only one, Turkey, has seceded. It is also interesting to note that the advent of each newcomer diminishes the proportional payment to be made by each State.

The Examination and Certification

of weights, measures and instruments is one of the leading features of the International Bureau. For instance, in 1897 to 1899 weights were examined and certi-

fied for Finland's government, and for a private individual at Moscow, measures for Buda-Pesth Polytechnic, and for the French Artillery; thermometers for Cornell University, Ithaca; University College, London; the St. Petersburg Academy of Medicine, the Swiss Geodesic Committee, the Brussels Weather Bureau, Italian Universities, etc.

The Thermometer

has ever been one of the important objects of study at the International Bureau. The mercury thermometer was first compared with the gas thermometer, and, finally (in 1877), it was decided that the Centigrade hydrogen thermometer should be the official standard. Since then, M. Callender has introduced his platinum thermometer which permits the measurement of temperature between -100° and $+1,000^{\circ}$ (Centigrade), whereas the mercury only serves between -40° and $+400^{\circ}$. But—especially at high temperatures—the hydrogen and platinum readings are not always identical, and Dr. Harker came over to Paris from Kew a couple of years ago to compare the Callender thermometer with the standard (gas) instrument of the International Bureau. The result of his work (in collaboration with M. Chappuis) was presented by the authors to the British Association for the Advancement of Science at Dover last September. Whether gas or platinum is to be the final standard is yet uncertain, but it is to be hoped that

The Centigrade Thermometer.

with its child-like simplicity of freezing point of water as 0° and boiling point as 100° , may become as universal as the electric units (the ohm, volt, ampere, etc.). That the modern civilized world, so closely knit by the railway, the steamship and the telegraph, must necessarily finally decide on an international system of weights and measures, heat and force units, coinage, meridians, etc., etc., is evident to any one who has studied the evolution of these matters. In olden days, for instance, weights and measures varied in each town or province; then a standard was adopted for each kingdom; nowadays two systems (the Anglo-Saxon and Metric) divide the whole of Europe and America. The "survival of the fittest" and the final unification of this detail cannot therefore be far away now.

POISONING THROUGH EXTERNAL USE OF NAPHTHOL.

—Dr. Karl Stern warns against the use of large quantities of beta-naphthol in the treatment of scabies, and reports the death of a woman due to the employment of 20 to 25 Gm. of anointment containing about 15 per cent. of naphthol. In one other case toxic symptoms were observed after application of about 10 Gm. of the ointment. (Apoth. Ztg.)

PLANT CASEIN is obtained chiefly from Leguminosae in form of a fine, white powder almost insoluble in water, but very soluble in dilute alkaline solutions. It is prepared in solution by digestion with a 0.5 per cent. solution of caustic potash at about 37° C., precipitating with weak hydrochloric acid and redissolving the washed precipitate with the aid of a few drops of caustic soda. (Pharm. Post.)

SILICO-TUNGSTIC ACID is regarded by Bertrand as one of the best alkaloid reagents, since it forms with these bodies well characterized and stable salts. It is preferably employed as a 5 per cent. aqueous solution. The acid ($12\text{WO}_3\text{SiO}_2 + 2\text{H}_2\text{O}$) occurs in white or yellowish-white crystals, readily soluble in water and alcohol. (Pharm. Post.)

PILLS OF CANADA BALSAM, when prepared only with calcined magnesia, according to Mesnard (Presse Med.) often pass through stomach and intestines unchanged. He proposes the addition of powdered soap and benzoin to the pill mass to facilitate disintegration in the stomach. (Apoth. Ztg.)

STRYCHNINE ARSENITE is a soft crystalline powder, very sparingly soluble in water. It is recommended for malaria, dyspepsia, tuberculosis and skin diseases. Also in veterinary practice it is employed to advantage. (Pharm. Post.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

California Fig Syrup.—(G. R., Jr.) We cannot give the formula for this proprietary preparation.

Poultice or Dressing.—(F. S.) The formula you submit is incomplete and appears to have been taken from the "literature" sent to physicians by some enterprising manufacturer. We cannot work out the formula from the data furnished.

Ether and Naphtha as Fuel for a Naphtha Engine.—(F. E. S.) wants to know the effect of a few drams of ether added to a gallon of naphtha, the mixture to be used in a naphtha engine. He wants to know if such an addition would tend to drive the engine faster.

We have no available data upon this subject, though we are informed that the mixture would tend to drive the engine faster. Whatever may be the effect, its greater cost over that of gasoline or naphtha prohibits its practical application for the purposes named.

Resorcin in an Ointment.—(K. E.) asks "if an ointment composed of resorcin, zinc oxide, starch and vaseline can be kept in tin boxes for any length of time without any reaction on the tin?" There will be no reaction unless the tin coating be imperfect and the ointment comes in direct contact with the sheet iron of which the box is made. Resorcin ointments are best dispensed in dark, amber-colored glass ointment jars and should be freshly prepared when wanted for use. Resorcin is very susceptible to the action of light and air and on exposure acquires a reddish or brownish tint.

Frosting Mirrors.—(H. T. J.) A frosted appearance may be given to glass mirrors by etching them with hydrofluoric acid. A simpler process is to paint over the glass with a solution of sandarach, 18 drams; mastic, 4 drams, in ether, 24 ounces, and benzine 16 ounces. A less permanent "frosting" may be made as follows: Make a saturated solution of alum in water and wet the glass with the liquid. It is advisable to have the glass in a horizontal position as the solution is not likely to drain off. The more slowly it is cooled the more perfect the crystals will be. If desired the alum solution may be colored with cochineal and, of course, the more solution used the thicker will be the crystals.

Bichloride of Carbon.—(U.) Merck lists a bichloride of carbon (tetra-chlor-ethene) obtained from "carbon trichloride by dissociation," at \$1.75 per ounce, but this is never used as a solvent in cleaning preparations. It is possible that carbon tetrachloride might be used as a cleaning fluid, as it is employed as a solvent for industrial purposes. It dissolves fats, resins of different kinds and many other bodies of organic origin, being similar in this respect to alcohol, ether, benzene, carbon disulphide, etc., over which it possesses the advantage of being free from danger when used near the open fire. We cannot give the formula for the proprietary cleaning fluid.

Bed Bug Killer.—(J. R. C.) One of the most commonly used bed bug exterminators is corrosive sublimate, 1 ounce, dissolved in alcohol, 32 fluid ounces. Other formulas are: (1) Corrosive sublimate, 150 grains; ammonium chloride, 300 grains; decoction of quassa (about 1 in 20), 32 fluid ounces. (2) Dissolve 6 ounces soft or green soap in 20 fluid ounces hot water; then incorporate in the solution $1\frac{1}{2}$ ounces turpentine (thick); 3 fluid ounces

kerosene and stir until cold. (3) Naphthalin, 3 ounces; benzene, 30 fluid ounces. This preparation must be used with great caution to avoid explosion or ignition from contact with light or fire. Any of these "extinguishers" may be applied by means of a brush or feather.

Detection of Copper in Soda Water.—(H. M. S.) The presence of copper in soda water may be detected by adding two drops of chemically pure sulphuric acid to about 1 fluid ounce of the suspected water, mixing thoroughly, and then adding 1 fluid dram of stronger water of ammonia. If the copper be present it will be recognized by a blue discoloration. Perhaps the most delicate test is that known as lawrowsky's, which is as follows: To 5 Cc. of the liquid to be tested add ammonia in excess and then add one or two drops of carbolic acid. Shake thoroughly and let stand for one-half hour or an hour. If copper be present in the smallest proportions the mixture will develop a blue color, the depth of coloration being in direct proportion to the amount of copper present.

Saddle and Harness Galls.—(E. L. J.) See formulas numbers 2565, 2566, 2575 and 2582 in the Era Formulary. Here are some others: (1) Goulard's extract, 2 drams; vinegar, 8 ounces; alcohol, 4 ounces. (2) Ammonium muriate, $\frac{1}{2}$ ounce; muriatic acid, 2 drams; water to 8 ounces. (3) Dissolve 12 grams of tannin in the smallest possible quantity of alcohol and 90 grams of boric acid in a similar quantity of glycerine. Mix the two solutions and add enough water to make 168 grams. Apply twice daily. (4) White lead and linseed oil, mixed as for painting, is said to be unrivalled for healing saddle, harness or collar galls and bruises. The application is made with a brush and soon forms an airtight coating of paint and promptly assists nature.

Glyceryl Salicylate, Terpin Carbolate and Lithium Thio-Arsenite.—(T. A. M.) asks if any of these combinations are on the market. If they are on the market under these names no one in the trade in this city seems to know of them. The names "glyceryl salicylate" and "terpin carbolate" have no true chemical significance, and appear to have been coined by some enterprising promoter who had a mixture of glycerin and salicylic acid or some other important "discovery" he wanted to work off upon gullible physicians. A thio-arsenite of lithium is a possibility (there are thio-arsenites of the alkali metals), but we fail to find this particular combination quoted in any of the trade or chemical lists we have consulted.

Antidote for Formaldehyde.—(C. A. L.) writes: "Owing to the extensive use of formaldehyde solution in the treatment of grain for preventing the development of 'smut' in this section of the country (North Dakota), I would like to know what reliable antidote can be used in cases of poisoning by this chemical, a fatal instance having occurred near here recently."

We know of no positive antidote and a search through medical literature reveals but little direct information upon this subject. Andree (Jour. Ph. Chim.) some time ago observed a case of poisoning with formaldehyde where the solution of ammonium acetate acted as a rapidly effective antidote. The action is said to be due to the formation of hexamethylene tetramine, which is a non-irritant compound of formaldehyde and ammonia.

Tannic Acid with Cocaine Hydrochloride.—(R. H. T.) submits the following: Cocaine hydrochloride, 2 grains; tannic acid, $\frac{1}{2}$ dram; boric acid, 1 dram; glycerin, 2 drams; water enough to make 4 ounces. Mix and use as a spray. He reports that in attempting to compound the mixture he only secured an opaque liquid with a flocculent precipitate, when he expected to obtain a clear solution. He found in experimenting that when boric acid and tannic acid were mixed, or when boric acid and cocaine hydrochloride or tannic acid and cocaine hydrochloride were mixed in the solvent in the order named a clear solution resulted. But whenever he attempted to add the third ingredient a precipitate was produced. What caused it?

Tannic acid. Neither boric acid nor tannic acid (by

itself) precipitates cocaine. But in acid solutions (Sohn) tannic acid does cause precipitation and is the cause of the difficulty here. Either one or the other of these acids should be omitted or the resulting solution cannot be used in a spray apparatus.

Georgia Pharmacy Law.—(J. R. C.) The pharmacy law of Georgia requires that the Board of Pharmacy shall grant licenses to applicants for registration possessing the following qualifications: First to druggists who, after three years' experience in a drug store managed by a licensed apothecary or pharmacist, shall pass a satisfactory examination. Second, to physicians, graduates of a regular medical college and graduates of schools of pharmacy who shall pass a satisfactory examination. Third, to pharmacists who have obtained license from such other State board as may be recognized by the Georgia Board of Pharmacy. The fee for examination and license is \$5 and an annual renewal fee of \$2. In addition to the license granted by the Board of Pharmacy the druggist must register his name and credentials with the ordinary of the county in which he expects to practice. For this registration there is an additional fee of 50 cents. We do not know just what recognition the Georgia Board of Pharmacy accords to licentiates of the Tennessee Board of Pharmacy. This information you can undoubtedly obtain by writing directly to the secretary of the board, Dr. Geo. F. Payne, 19 West North avenue, Atlanta, Ga.

Black Coating for Iron or Steel.—(Era.) A black varnish for iron or steel may be made by boiling together oil of turpentine 15 parts and sulphur $\frac{1}{4}$ parts. Put a very thin coat of the varnish on the article of iron or steel to be blackened and hold over the flame of an alcohol lamp.

Asphaltum Varnish for Iron.—Melt and mix uniformly by stirring West Indian copal, 30 parts; pine resin, 30 parts; mineral asphaltum, 30; tar asphaltum, 30; yellow wax, 5 parts and Venice turpentine, 6. Add to the melted mass, while still moderately warm, resin oil, 12 parts; boiled linseed oil, 30 parts; oil of turpentine, 30 parts, and benzole, 30 to 45 parts. If the varnish is too thick add more benzole.

Ozokerite, a fossil wax, found in bituminous shale, has been recommended for use in lacquering articles of iron. The ozokerite is first melted in a boiler and then heated to the boiling point of water, 212° F. The iron previously made bright as possible by scouring, is dipped into the melted mass, allowed to drain off, and then held in the flame over a coal fire. After burning for some time the flame is extinguished, when the iron will appear with a tenaciously adhering black coating, which is said to resist all atmospheric influences and to suffer no injury from acids or alkaline substances.

Palestine Drug Company.—(C. and F.) In farther reply to your inquiry concerning the Palestine Drug Company of St. Louis (see this journal April 12, 1900, page 393), a correspondent writes: "The Palestine Drug Company is not a drug company at all. One member of the so-called firm travels through the country and trades the 'Palestine Medicines' for all kinds of old, unsalable patent medicines and all the spot cash he can get. The old medicines are shipped to St. Louis, Mo., where they are put in as salable condition as possible and worked off at any price the company can get for them. All that they cannot sell they re-bottle and ship back to their 'dupes' as 'Palestine Medicines.' They now have a 'receiving depot' at No. 107 South Second street, St. Louis, Mo., but as they move about once a month and never leave any notice on the door, the commercial agencies cannot locate them."

A well-known Brooklyn manufacturer also informs us that he was recently asked to supply new wrappers to take the place of a lot of damaged wrappers on a certain amount of his remedies the Palestine Drug Company said it had on hand. From other sources we learn that the operations of this concern cover a period of several years. Its business record is very unsavory and druggists are warned to look out for it and its representatives. It does not do business on business principles and the drug trade should not deal with it other than on a cash basis.

Mercuric Chloride in a Prescription.—(J. E. R.) asks if a man would be justified in dispensing the following prescription under a "shake" label:

Mercuric chloride	1 grain
Tartar emetic	1 grain
Morphine muriate	3 grains
Aromatic spirit of ammonia	5 drams
Syrup of glycyrrhiza, enough to make	3 ounces

Dose, one teaspoonful every three or four hours. This prescription was written by a physician of twenty years' practice in a neighboring village. Our correspondent explains he could not have recourse to the prescriber, so he filled the prescription and strictly cautioned the customer to shake the bottle each time before using. Knowing it to be an incompatible mixture, he felt very uneasy over the transaction, but so far as he could learn, no bad results followed the use of the medicine.

This prescription should not be compounded. The reactions here depend upon the order of admixture; thus mercuric chloride is precipitated by aromatic spirit of ammonia as ammoniated mercury. When mercuric chloride is mixed with tartar emetic, the former is reduced to mercurous chloride. Mercuric chloride is also incompatible with the other ingredients of the prescription. Of course, it is possible for the quantity of spirit here directed to be used to redissolve some of the precipitates formed, but this does not remove the danger. At best the last portions taken from the bottle will contain such a large proportion of the precipitated substances as to render the medicine unsafe to use. Prescriptions of this character should not be compounded.

Removing Aniline Stains.—(D. D. M.) Most of the aniline colors may be removed by washing with a solution composed of sodium nitrite, 7 parts; dilute sulphuric acid, 15 parts; water, 500 parts. Put in a flask and let stand 24 hours before using. Apply to the spot with a camel's hair brush and after a disappearance of the stain rinse with plenty of water.

The following methods have been suggested for cleaning the hands discolored by dyes which cannot be removed by water: If the dye, e. g., fuchsine, contains no amido (NH_2) group, the hands are dipped into a dilute weakly acid solution of sodium nitrite. The dye is diazotized and may be removed by washing in water. The two methods following are applicable to all dyes: The hands are immersed in a dilute solution of potassium permanganate to which some sulphuric acid has been added and are allowed to remain for some time; the dye is oxidized and thereby destroyed. After the permanganate has been washed off with water, the hands, especially the nails, are colored brown by manganese dioxide. This is removed by washing the hands with a little sulphurous acid. The second method is this: A thick paste of bleaching powder and sodium carbonate solution is rubbed on the hands. This causes the oxidation and destruction of the dye, as above. In order to take away the unpleasant odor of the bleaching powder, the hands are scrubbed with a brush, care being taken to remove the particles adhering to the upper and under surface of the nails, and are then washed, as just described, with sulphurous acid.

Prussian Blue.—(T. J. R.) Prussian blue is known chemically as ferrocyanide of iron. It is obtained commercially by precipitating a solution of ferrous salt with ferrocyanide of potassium. The more or less deeply colored precipitate is then exposed to the air and treated with chlorine water, dilute nitric acid or bleaching powder solution, and afterwards with hydrochloric acid in order to remove ferric oxide which is formed. It is a deep blue powder, and always contains more or less potassium. As described in a previous issue of this journal (see March 8, 1900, *Era*, page 262), the terms "Chinese Blue" and "soluble blue" are used interchangeably and refer to the soluble Prussian blue or ferric potassium ferrocyanide; ($K_4Fe_2(Cy)_6$). A precipitate very similar to Prussian blue is termed Turnbull's blue and contains ferrous ferrocyanide; It is obtained when solutions of potassium ferri-cyanide and ferrous sulphate are mixed. According to Roscoe & Schorlemmer the precipitates obtained with these reactions always contain potassium, unless a double salt is formed. This is the

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA STUDENTS.

Several important announcements as to prizes, examinations, etc., will shortly be made to the students of the Era Course. Every member of the course should therefore carefully examine the contents of all letters from the Director's office immediately upon their receipt, in order that he may know the nature of all announcements as early as possible.

J. H. BEAL, Director.
Selo, Ohio.

Read this Bulletin every week.

same in composition, but possesses different properties, and it is obtained in the pure state by pouring a solution of the iron salt into an excess of ferrocyanide or ferricyanide. The precipitate is then well washed with water in order to remove potassium chloride, until the wash water is colored blue. The residue consists of soluble Prussian blue. Insoluble Prussian blue or Williamson's blue, is obtained, mixed with soluble Prussian blue, by pouring a solution of ferrocyanide of potassium into one of ferric chloride; by heating the precipitate for some time with ferric chloride the whole of the potassium may be removed. This blue may be also obtained by oxidizing Turnbull's blue or ferrous ferri-cyanide by treating it with nitric acid or chlorine water. Prussian blue dissolves in ammonium tartrate with a violet color and with oxalic acid with a beautiful blue color. The solubility of ordinary Prussian blue in oxalic acid is made use of in one of the common methods of making bluing, as follows: Make ordinary Prussian blue into a thick paste with distilled or rain water and add a saturated solution of oxalic acid sufficient to dissolve. If time be of no consequence, by leaving this solution exposed to the atmosphere the blue will be entirely precipitated in soluble form. Wash with weak alcohol; dry at about 100° F. The resulting mass dissolves in pure water and is said to remain in solution indefinitely. It gives a deep, brilliant hue. Formerly soluble Prussian blue was much used for making inks, but it is now largely replaced by the aniline dyes.

ELIXIR OF SODIUM GLYCERINO-PHOSPHATE is employed for treating neurosis, neurasthenia, hysteria, Basedow's disease, etc. The following formula is recommended: Sodium glycerino-phosphate 25, distilled water and orange flower water, of each, 50, syrup of orange peel 20 parts. Dose, a teaspoonful three times daily. (Pharm. Post.)

NAPELLINE is obtained from the mother liquors of aconitine, in the preparation after Duquesnelle's method. It is a dissociation product of the crystalline aconitine, having a decided sedative action on the nerve cells. The maximum dose of napelline is 0.3 Gm. (5 grains) per day as sedative, taking the place of morphine. (Pharm. Post.)

SODIUM PARA-FLUORO-BENZOATE is a white powder, soluble in cold water, stated to yield favorable results in the treatment of lupus. Because of its deleterious effects on the stomach it can be given only in moderate doses. (Pharm. Post.)

MAGNESIUM CHLORATE has been proposed as a remedy for epithelioma in form of a 20 per cent. ointment. The salt occurs in colorless, deliquescent crystals, very soluble in water and alkaline solutions. (Pharm. Post.)

SODIUM NITRITE, in form of a 10 per cent. solution, has been recommended for atony and disturbances of the functions of the bladder. No untoward effects of the remedy have been observed. (Pharm. Post.)

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN, South Africa.

Comparatively little is known as to the situation in the Orange Free State, owing to the censorship observed on war correspondents' dispatches from Blomfontein, but the indications are that the British forces are on the eve of an important move against the Boers. Indecisive fighting is going on in the Free State, and Wetener's siege is still kept up. The Boers are reported as retiring from the Biggarsberg range with heavy ordnance.

Gen. Gatacre has been ordered back to London from South Africa.

Major-Gen. Prettyman has been appointed military governor of the whole territory which hitherto belonged to the Free State.

Gen. White, if not required in South Africa, will go as Governor of Gibraltar toward the end of May.

By way of Pretoria comes a report that fever is decimating the Mafeking garrison, and a letter from the Mayor of Mafeking says Lord Roberts asked Col. Baden-Powell to hold out until May 20.

The British War Office made public last week a dispatch from Lord Roberts severely criticising Gens. Buller and Warren for their lack of energy and judgment at the Spion Kop defence, and it is thought they will either resign or be recalled.

Lord Kitchener has hardly been heard of since the battle of Paardeberg, and it is believed that his ill success has led Roberts to relegate him to minor duties.

Nearly half the members of the Chicago Ambulance Corps, when offered Mausers on their arrival at Pretoria, tore off their Red Cross badges and joined the Boer army.

Reports from Mafeking say that the garrison can hold out two months longer.

Winston Churchill, the London newspaper correspondent, predicts that the war will prove a costly one to England, and that 250,000 troops will be necessary in South Africa to ensure a triumph for Lord Roberts.

Lord Roberts has protested to President Kruger against the treatment of prisoners, sick and wounded, in the hands of the Boers, and has formally demanded the observance of the Geneva convention.

The Philippines.

The Senate Committee on Foreign Relations has agreed to a favorable report on the convention between the United States and Spain extending for six months the time in which Spanish residents of the Philippine Islands can elect whether they will remain citizens of Spain or become citizens of the Philippines.

The Philippine Commissioners sailed from San Francisco last week on the transport Hancock.

Montenegro, an insurgent general in Luzon, has surrendered.

The rebels in Mindanao attacked the American forces last week, but were repulsed.

Fifteen cases of the plague, fourteen of which proved fatal, occurred in Manila last week. The total number of bubonic deaths thus far is 119 Chinamen and 66 Filipinos.

Col. Iliard and Major Case, with a battalion of the Twenty-ninth Infantry, have sailed for two islands south of Luzon, where rebellion has broken out.

The insurgent has cut the cable between Manila and Hilo, cutting off communication between Luzon and all the southern islands.

Other Foreign News.

The troubles in the British dependencies on the Gold Coast, Africa, are thickening. A Nigorian force has been dispatched to Gaman, and there are reports of trouble with the French near Dahomey; heavy fighting is reported at Comosse.

The Prince of Wales met with a great popular demonstration of affection on his return to London from Copenhagen.

Eight thousand miners have gone on strike at Santa Pauline, near Santander, Spain.

A Russian Chamber of Commerce has been installed in Paris.

The Amer of Afghanistan has written a letter complaining of British inaction regarding Russian aggression.

The plague has broken out in Persia near the Turkish frontier. Many deaths are reported.

The King Oscar is visiting England.

The United States stands next to France in the number of exhibits at the Paris Fair. No other nation has

one-third of the number displayed by the United States.

The bubonic plague is reported from Cairo to have made its appearance at several ports on the Red Sea.

The deaths from plague throughout India during the past week slightly decreased, but the aggregate is still upwards of 4,000.

The Chinese Government has issued an edict directing all viceroys and governors to warn armed organizations that they must refrain from acts of hostility toward native Christians.

It is reported that two big battles have been fought in Colombia, in which the insurgents were completely routed, a large number being killed, wounded or captured.

The Emperor William expects to visit England in August.

DOMESTIC, Congress.

The Senate is considering the bill passed by the House for the election of Senators by popular vote. The Senate has referred the bill to a committee, and probably will not take any further action on it. This is the third time the House has passed a bill for the popular election of Senators, and thirty State Legislatures have declared their assent.

The House and Senate Conference Committee has agreed on a territorial form of government for Hawaii.

The House Judiciary Committee has framed a stringent Anti-Trust bill, but it is generally looked upon as a political move, and not likely to be enacted into law. A bill has been introduced in the Senate to grant a pension of \$60 a month to Gen. Longstreet, the Confederate leader, for his services in the Mexican war. The bill makes no reference to his connection with the Confederacy.

A bill to repeal the war taxes has been introduced in the House.

It is said that the President will in a few days send to the Senate treaties with Nicaragua and Costa Rica covering the necessary concessions of the right of way for the Nicaragua Canal.

The President has sent to the Senate the nomination of Frank W. Hackett, of New Hampshire, to be Assistant Secretary of the Navy.

The Senate has confirmed the nomination of Charles H. Aldrich, formerly Assistant Secretary of the Navy, to be Governor of Puerto Rico.

The House passed the Naval Appropriation bill last Saturday.

Senator Hoar delivered a speech in opposition to the expansion policy on Tuesday of last week.

Other Domestic News.

The State Department is making a strong effort to collect from Turkey a debt of \$100,000 of five years' standing, due as indemnity for the destruction of the American missionary property during the Armenian massacres. If the amount is not forthcoming soon, it is said that a peremptory ultimatum will be sent to the Porte.

The Cuban census returns, made public last week, show that the island has a population of over 1,500,000. The whites outnumber the negroes two to one, and will thus be able to control the island's political future. Nearly three-fourths of the population, however, are illiterate. Local elections will be held in all parts of Cuba June 16.

Miss Annie Ling, who suffered from melancholy over her financial troubles, jumped from the Brooklyn Bridge on Friday of last week in an attempt to commit suicide. She was rescued, however, and will probably recover.

The American Steel and Wire Company closed twelve of its mills last week, and gave out such discouraging reports of the condition of its business that the price of its stocks on Wall Street collapsed. The mills soon started again, and the reports of dull business were found to be untrue. It is widely believed that the action of the company's managers was an attempt to "rig" the stock market.

An officer of the New York State Militia was killed by strikers at the Croton Dam last week.

The Ecumenical Conference is in session in New York City.

The movement for the revision of the Presbyterian creed seems to be gaining strength.

The Postmaster-General has signed a parcel post treaty with New Zealand, which will go into effect on July 1 next.

The Joint Committee on Judiciary of the Massachusetts Legislature has reported a bill abolishing the death penalty and substituting imprisonment for life.

John W. Rockefeller has reported that the Denison University at Gravelle, Ohio, if the trustees shall raise \$150,000 this term, President Purinton announces that nearly \$125,000 has been secured.

The Atlanta Supreme Court last week upheld a street railway company in the enforcement of a rule that whites and negroes should occupy separate portions of the car.

The committee for the Chicago Dewey celebration sent

an invitation, by mistake, to the Spanish Minister at Washington last week. He wrote to the Mayor of Chicago, asking an explanation, and a satisfactory apology was returned.

Floods did much damage in the South last week.

The Supreme Court of the United States ruled last week in two cases involving the stamp taxes on express packages that the companies had the right to shift the burden to the shippers by means of an increase of rates.

The Secretary of Agriculture has arranged to have the

weather forecasts distributed to farmers on the rural free delivery routes.

William F. Miller, the "get-rich-quick" banker, whose Franklin Syndicate promised 520 per cent. dividends per year, was convicted in New York last week of larceny in the first degree.

The Ohio Legislature has passed bills providing that eight hours shall constitute a day's work for all men employed on public works, requiring that all working men shall be given two hours' respite from their labor on election days.

THE DRUG NEWS.

REPEAL THE PROPRIETARY STAMP TAX.

WAYS AND MEANS COMMITTEE HEARS ARGUMENTS FROM THE DRUG TRADE.

Delegation of Over 100 Representative Drug Men Visits Washington and Explains the Operation of the Tax.—Congressmen Visibly Impressed.—Repeal Likely to Come Next Year.—Political Reasons Will Probably Prevent it at Present Session.

At Washington, on April 17, the Committee on Ways and Means of the House of Representatives gave a hearing to representatives of the drug trade from all parts of the country on the Boutelle bill to repeal the Proprietary Stamp Tax imposed under Schedule B, of the War Revenue Act of 1898. Nearly all the members of the Ways and Means Committee were present. Before them appeared about 100 representatives of all branches of the drug trade, and the impression made upon the committee was undoubtedly a strong one. An able presentation of the case for the abolition of the Proprietary Tax was made. Whether the committee will decide to report in favor of the Boutelle bill at this session is a political question which has not yet been decided, but even if there is no immediate result in this direction, there is no doubt that the hearing impressed the members of the committee, opening their eyes to the conditions of the drug trade and the effects upon it of the Stamp Tax and cleared up several points which would not have been brought out except for such a hearing, and that a bill will be passed at the next session which will provide for the repeal or the material reduction of the tax in the interest of the 40,000 to 45,000 druggists and manufacturers affected.

Among those who attended the hearing were Thomas Stoddart, Buffalo, chairman of the N. A. R. D. Committee on Legislation; Wm. Muir, of Brooklyn; Clarence O. Bigelow, Thomas F. Main, H. B. Harding, Felix Hirseman, W. M. Whitelaw, Charles H. Fletcher, S. Britton, of New York; James C. Perry, Warren H. Peley, Wm. McIntyre, W. L. Cliffe, A. Hoch and A. M. Hance, of Philadelphia; Thomas V. Wooten, G. P. Engelhard and H. L. Kramer, Chicago; V. Mott Pierce, Buffalo; H. C. Wilson, F. P. Weller and Henry A. Johnson, Washington; O. M. Oleson, Fort Dodge, Ia.; John C. Gallagher, Jersey City; Herman W. Reitzke, St. Paul; F. W. Herbst, Columbus, Ohio; John A. Nipgen, Chillicothe, Ohio; James L. Demoville, Nashville, Tenn.; Henry P. Hynson, Baltimore; R. I. Eads, Indianapolis; A. S. Wright, Woodstock, Ill.

Among the associations represented were the National Association of Retail Druggists, the National Wholesale Druggists' Association, the Proprietary Association of America, American Pharmaceutical Association, the State Pharmaceutical Associations of New York, New Jersey, Pennsylvania, Virginia, Delaware, Maryland, Minnesota, Ohio, Illinois, Iowa and Indiana, The Manhattan Pharmaceutical Association, Kings County Pharmaceutical Society and German Apothecaries' Association of New York City, Erie County (New York) Pharmaceutical Association, Western Pennsylvania Retail Druggists' Association, Philadelphia Pharmaceutical Association, Jersey City Retail Druggists' Association, Washington Pharmaceutical Association, Baltimore Retail Druggists' As-

sociation, and the Drug Trade Section of the New York City Board of Trade and Transportation.

At a conference preliminary to the hearing it was arranged that the speakers for this immense delegation should be G. P. Engelhard, of Chicago; Thomas V. Wooten, of Chicago; H. B. Harding, of New York; Thos. F. Main, New York; Felix Hirseman, New York; J. C. Gallagher, of Jersey City; Thomas Stoddart, of Buffalo; R. I. Eads, of Indianapolis, and O. W. Clark, of Conshohocken, Pa. The committee allowed an hour and a half for the hearing. A good deal of the time was taken up by questions by members of the committee and there was not time to hear all of the speakers.

Thomas V. Wooten, secretary of the N. A. R. D., spoke of the discrimination and injustice of this Stamp Tax and of its unnecessary character in view of the large surplus in the National Treasury.

George P. Engelhard spoke at length on the way in which the law was being enforced by the Internal Revenue Bureau. He said that under the rulings of the Internal Revenue Department the tax was not a tax on patent medicines, as originally intended. It was levied on all medicines, except those sold on physicians' prescriptions. Why not, he asked, impose a similar tax on food and clothing, as this was distinctly class legislation. The only medical preparations exempted by the Commissioner of Internal Revenue, he stated, were the large and increasing products of foreign uncompound chemicals coming chiefly from Germany.

Representative Grosvenor questioned this statement, saying that if the foreign remedies paid no Internal Revenue tax they did pay a heavy customs duty, six or eight times greater than the internal tax on domestic products. Chairman Payne and other members of the committee asked many questions and for half an hour or so there was a general discussion.

Felix Hirseman, of New York, corroborated the statements made by Mr. Engelhard, and in turn he was closely questioned on the condition of the drug business in New York City.

O. W. Clark, of Conshohocken, Pa., spoke for the manufacturers' interests. He said that some of the men present at the hearing paid \$10,000, and even \$20,000 a year, in proprietary taxes. Much of this tax was on articles designed for the relief of suffering humanity. Many of the bandages which saved the lives of our soldiers had to bear revenue stamps. With a surplus of \$85,000,000 the Government could very well do without the amount brought in by this tax. He pointed out that by the elimination of the Proprietary Tax the Government would not be deprived in one year of more than one-half the surplus for a single month.

H. B. Harding, of New York, spoke for the Drug Trade Section of the New York Board of Trade and

Transportation. He seconded some of the statements of Mr. Clark and thought it would be a great example of prosperity to show the world that within two years this country could remove the war taxes.

Representative Boutelle, who introduced the bill, spoke briefly in its favor. He said the enormous sums raised under the act were a surprise to its framers, as they greatly exceed the estimates. He believed the time had come when the people demanded some modification of the law and the mere fact of the surplus imposed a duty on the present Congress to reduce the tax burden at the earliest moment. Reduction should be made at the points where the act caused the greatest friction. In inquiring what these points were, Mr. Boutelle said he had found that the collection of the tax under Schedule B was more bothersome, both to the people taxed and to the Internal Revenue Department, than under all the other parts of the act. The Commissioner of Internal Revenue had experienced the greatest difficulty in interpreting this section. Therefore, he regarded Schedule B as the first article for repeal. Mr. Boutelle's statement was enthusiastically applauded.

John C. Gallagher, representing the New Jersey Pharmaceutical Association and the Jersey City Retail Drug-

gists' Association, told the committee how the tax was a burden on the retail druggist. In the majority of cases the manufacturers had raised their prices to the druggists. But the druggist could not get higher prices from his customers, and so the payment of the tax came out of his pocket. He made a strong plea for lifting the burden from the retail druggist.

Those who attended the hearing were thoroughly satisfied with it. All agreed that it was one of the best hearings of the kind they had ever attended. Whether the immediate object sought will be attained, all were satisfied that the members of the Ways and Means Committee had been deeply impressed and had learned many facts about the operation of the law which they did not know before.

The Ways and Means Committee gave no intimation what its action would be, but word came from Washington a day or two later that the members of that committee and of the Senate Finance Committee had practically concluded that it would be impossible to reduce war revenue taxes during this session. Were it possible to have the taxes on proprietary medicines, checks, notes, and transfers of real estate taken off without the bill being loaded down with amendments, that would be done.

New York and Vicinity.

BENEFITS OF ASSOCIATION.

**President E. C. Frisbie, of the N. W. D. A.,
Addresses the Drug Trade Section, New
York Board of Trade and
Transportation.**

The regular monthly meeting of the Drug Trade Section of the New York Board of Trade and Transportation was held on Thursday afternoon, April 19. The announcement that President E. C. Frisbie, of the N. W. D. A., would be present to address the meeting, brought out a large attendance of members of the section. In the absence of Chairman John McKesson, who was away from the city, the chair was occupied by Andrew B. Rogers.

Chairman Thomas F. Main, of the Committee on Legislation, submitted a report on the hearing before the Ways and Means Committee on the Boutelle bill. The report ended with two resolutions: that the proprietary tax is a tax on necessities, is essentially discriminative, and is oppressive on every branch of the drug trade; and that this tax should be immediately repealed.

Mr. Main's motion that copies of these resolutions be sent to Senators and Congressmen from New York State and members of the Ways and Means Committee of the House of Representatives was carried.

On motion of Henry T. Jarrett, the special order of business (the discussion of buying clubs of retailers) was laid over until the next meeting.

Mr. Frisbie was then introduced. He addressed the section upon "The Pleasant Side of Business Association." His address was in part as follows:

"It is pleasant indeed to compare the present with the past, and to see how much stronger social friendship is to-day than it was two generations or even one generation ago.

"It is gratifying to note the pleasure with which one competitor will confide in another; to note the mutual exchange of improved methods each has discovered in his business experience; and I look forward to the time as being not far distant when even with merchants, strong though the competition may be, greater heed will be given, and greater regard shown, for the motto of our childhood days 'In honor preferring one another.' Where do you suppose our profits would be to-day, with the small margin we have, if the old and lax systems of credits were in vogue? Each section has its local plans so well adjusted that its credit plan fits its conditions.

"I assume it will not be out of order to congratulate the wholesale druggists upon the outcome of the Park suit. I have very great sympathy for those who assert that the rebate system has in a degree been an evil; that

the violation of agreements has tended to lower the standard of integrity.

"The trouble is due to the endless variety of contracts framed by the many proprietors. No one head is large enough to remember all the details. Thus, unwittingly, violations have crept in. No article which has not merit enough to stand alone should be recognized by the trade as entitled to be in the class of rebate items. A small list of proprietary items, with uniform terms honestly and fearlessly maintained, will, I believe, correct and punish trade evils.

"No business other than ours is conducted with so much generosity and thought for mankind. Many a proprietary article has, through our trade, returned a fortune which never would have been obtained through any other line. With us, a merchant or firm having gained our confidence, has gained in us a friend willing to battle in his behalf; let the same firm introduce its lines through other channels and the friendship lasts only so long as they can find a similar line which can be bought or sold at a lower price. With us, quality is the standard.

"I believe most heartily in organization. Men of a naturally retiring disposition or men too thoroughly engrossed in business often think they can not overcome their diffidence or leave their business, as the case may be, and meet their fellow-men. Let them break over the bounds a few times, and they soon will see the error of their ways. They will find the pleasant side of business association."

ERA'S WARNING SAVED ONE MAN'S GOODS.

One firm in the drug trade in another city which had sold goods to Gregg, Stevens & Co., 164 Market street, Newark, N. J., and 233 Washington street, New York, whose questionable business methods were exposed in this journal last week, telegraphed to Gregg, Stevens & Co. demanding immediate payment or return of the goods and threatening legal proceedings. Gregg, Stevens & Co. returned the goods. The manufacturers' loss was the amount of freight charges and cartage.

THIS SWINDLER IS STILL AT WORK.

Tom Fraser is still trying to get goods without paying for them by ordering under the title of Fraser & Co., "Wholesale Druggists and Manufacturing Chemists," giving the address No. 81 Amsterdam avenue, corner of Sixty-third street, New York City. This is the address of a small retail drug store. Tom Fraser is no more wholesaler than he has been at any time these ten years past. Readers of this paper are again warned against having any dealings with him.

ANNUAL MEET OF DRUG TRADE BOWLERS.

National Association Comes to New York, and After a Series of Hard Fought Games, Chicago Wins.

The third annual tournament of the American Drug Trade Bowling Association was held in New York Friday and Saturday of last week. Teams from Baltimore and Chicago vied with each other and with a team from the New York Association for the national championship, and incidentally were entertained by the New York bowlers in royal good style. Socially the meeting was the most successful since the organization of the National Association. The boys all had a good time and all said they would be glad to come to New York again.

The tournament resulted in a tie between New York and Chicago for first place. Eighteen games were rolled in the regular contest, and at the end the standing of the teams was as follows: New York, won 8, lost 4; Chicago, won 8, lost 4; Baltimore, won 2, lost 10. This left things in such unsatisfactory shape that at the conclusion of the festivities on Saturday night the bowlers returned to Reid's alleys and the tie was rolled off. This final game resulted in a victory for Chicago. The scores were: Chicago, 80; New York, 79.

On the first day the Chicago team took two games from Baltimore and on the second day won all its games from both New York and Baltimore. The New York team had a good lead on Friday, with five games to its credit. On Saturday the New York boys made a clean sweep in their series with Baltimore, but lost two games to Chicago. The team scores were as follows:

First Game—Chicago, 79; Baltimore, 74.
 Second Game—Chicago, 84; New York, 84.
 Third Game—New York, 85; Baltimore, 76.
 Fourth Game—Baltimore, 84; New York, 84.
 Fifth Game—Baltimore, 79; Chicago, 88.
 Sixth Game—New York, 81; Chicago, 87.
 Seventh Game—New York, 80; Chicago, 75.
 Eighth Game—New York, 85; Baltimore, 73.
 Ninth Game—Chicago, 70; Baltimore, 77.
 Tenth Game—Chicago, 82; New York, 82.
 Eleventh Game—Chicago, 82; Baltimore, 85.
 Twelfth Game—Baltimore, 74; New York, 89.
 Thirteenth Game—Chicago, 86; Baltimore, 79.
 Fourteenth Game—Chicago, 88; New York, 87.
 Fifteenth Game—Baltimore, 78; New York, 95.
 Sixteenth Game—Baltimore, 76; New York, 88.
 Seventeenth Game—New York, 76; Chicago, 78.
 Eighteenth Game—Chicago, 87; Baltimore, 76.

On Saturday evening the New York Wholesale Drug Trade Bowling Association entertained its guests from Baltimore and Chicago with a banquet and smoker at the Drug Club. The dinner was a good one, enlivened with popular music and good speeches and was thoroughly enjoyed by the wholesale drug trade fraternity to the number of about 150. Vice-president Sidney H. Carragan presided as toastmaster, and in a neat little address welcomed the visiting bowlers, told of the growth of the association and expressed the hope that next year the drug trade of the New England States would send representatives to bowl for the national championship.

A felicitous letter from President George J. Seabury was read; short speeches were made by Dr. Dolme, of Baltimore; Dr. Thomas, of Chicago, and Messrs. Davis, Mayo and Hitchcock. The diners were further entertained by recitations by Frank Cuddy, of the local staff of Parke, Davis & Co. After the banquet most of the men attending it returned with the bowlers to Reid's alleys to see the roll-off between New York and Chicago. The alleys were a scene of merriment far into the early hours of Sunday morning. After the game an adjourned business meeting was held at which the year's affairs of the National Association were wound up. The following officers were elected: President, Wm. J. Carr, New York; vice-president, Dr. G. A. Thomas, Chicago; secretary and treasurer, L. W. Davis, Baltimore. Executive Committee, Matthew Judge, A. W. Medbury and J. A. Waters.

These new officers were installed and the prizes were distributed. There were individual gold medals for the members of the winning team and also a prize of \$25 to the Chicago team. The high average prize went to Matthew Judge and the second high average prize to Timothy Goldsborough. The individual high score was won by Dr. G. A. Thomas by a score of 237. The second high score prize went to John Riddiman.

It was decided to hold the next annual tournament in Baltimore about the middle of April, 1901.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

The annual meeting of the Manhattan Pharmaceutical Association was held at the New York College of Pharmacy on Monday evening, April 15, with President Smith in the chair and a large attendance of members. Joseph Weinstein, 75 East Broadway, and Abraham Bakst, 243 Broome street, were elected members. The various amendments to the constitution, which had been proposed at the March meeting, were adopted. These reduce the number of vice-presidents from three to two, do away with the Executive Committee and provide that the Association shall undertake to defend any member in good standing against whom any legal action may be brought for alleged errors or on other charges while said member has been engaged in the lawful discharge of his business or professional duties, provided the cost of such legal defence shall not exceed \$100.

The following officers were elected for the coming year: President, Reuben R. Smith; first vice-president, J. M. Pringle, Jr.; second vice-president, George E. Schwenfurch; secretary, S. V. B. Swan; treasurer, George H. Hitchcock.

A communication was read from Wm. C. Anderson, of Brooklyn, vice-president of the N. A. R. D., outlining a plan adopted by the Kings County Society for ascertaining the attitude of the druggists individually toward the National Association. This was referred to the Committee on Trade Interests.

The Cotton bill for the elevation in rank of the hospital stewards in the National Guard, which was passed by the Legislature, was discussed, and the secretary was instructed to ask Governor Roosevelt, in the name of the association, to sign the bill.

A gift of \$100 was voted to the retiring secretary in recognition of his services during the past year.

THIMME WAS REHEARD.

Edward Thimme was on the rampage again last Sunday. At a meeting of the Social Progress League he announced that he would hold a special meeting on Wednesday, May 2, to arrange for the enforcement of the new shorter hour law. He went on to say that if the city officials did not compel druggists to obey the law, they would meet their Waterloo at the next election. He accused the druggists of charging 10 per cent. more for patent medicines on account of the war tax, although the tax only added 2½ per cent. to the prices. He made several equally absurd statements, when Edward Ransford, of the Church Association for the Advancement of the Interests of Labor, asked the privilege of answering. He said:

"I have listened to Mr. Thimme, and I know that he doesn't know what he is talking about. He is not a druggist, nor a drug clerk, and never was either, and what he says now and has said before is misleading."

JERSEY CITY DRUGGISTS' ASSOCIATION.

A regular quarterly meeting of the Jersey City Druggists' Association was held at Phillips' Hall, Bergen avenue and Montgomery street, Jersey City, on April 17. In the absence of President John C. Gallagher, who was in Washington attending the hearing on the Boutelle bill given by the Ways and Means Committee, the chair was occupied by vice-president Wm. R. Laird. Letters were read from several Congressmen who had been asked to favor the repeal of the Proprietary Stamp Tax. The treasurer reported a balance on hand of \$37.89. He was instructed to pay the association's dues to the N. A. R. D. at once. It was voted to authorize the president to appoint two delegates to attend the annual meeting of the New Jersey Pharmaceutical Association. The remainder of the meeting was taken up with a discussion of trade interests.

ANNUAL MEETING OF THE PROPRIETARY ASSOCIATION.

The eighteenth annual meeting of the Proprietary Association of America will be held at the Waldorf-Astoria Hotel, New York City, on Wednesday, May 2, and Thursday, May 3. A large attendance of the association's members is expected and arrangements have been made to make the sessions both interesting and profitable.

Business sessions will be held both morning and afternoon each day.

A dinner, including a smoker and vaudeville entertainment, will be given at the Waldorf-Astoria on Thursday evening. Friends of the association will be welcomed at this dinner and entertainment. Tickets, which are to cost \$10 each, may be obtained from Clarence G. Stone, 2 East Forty-second street, New York City.

NEW YORK CLERKS' ASSOCIATION.

A regular monthly meeting of the Pharmaceutical Clerks' Association was held at the New York College of Pharmacy last Wednesday. There was a general discussion of the question of how to secure enforcement of the new law regulating the working hours of drug clerks and it was decided to address a letter to the various associations of employing druggists asking their co-operation; also to appoint a committee to see that flagrant violations of the law are properly dealt with. At the next meeting, on the third Wednesday in May, nominations will be made for the annual election of officers which will be held in June.

NOTES.

—Among out-of-town visitors to the local drug market during the week were Edward Mallinckrodt, of the Mallinckrodt Chemical Works, St. Louis; Wm. Francis, of the firm of Moncrief & Francis, Troy, N. Y.; Daniel R. Noyes, of the wholesale firm of Noyes Bros. & Cutler, St. Paul, Minn.; J. B. Goodwin, St. Louis; T. Sisson, Hartford, Conn.; M. S. Elmendorf, Albany; James Cooper, Jr., Red Bank, N. J.; W. F. Muchmore, Easthampton, L. I.; A. M. Schwartz, Peekskill, N. Y.; William Schoelles, Sea Cliff, N. Y.

—George W. Yoss and George L. Hechler, the well-known druggists of Cleveland, Ohio, who have been regular attendants for many years at the annual meetings of the American Pharmaceutical Association, will be missed at this year's meeting. They sailed from New York on Sunday morning on the Kaiser Wilhelm II. for Europe. They are going to the Paris Exposition and will remain abroad several weeks.

—A new sponge house under the firm name of Leouss, Clonney & Co., at 134 William street, began business last week. The firm is composed of John E. Leouss, who has conducted the Mediterranean branch of the Leboss Sponge Company for several years, and A. M. Clonney, who has been in the sponge business on his own account for the last five years.

—John W. Doe, who conducts a drug business at Palm Beach, Fla., during the winter and a similar business at Bar Harbor, Me., in the summer, passed through New York last week on his way North. He reports an excellent season at Palm Beach, the winter resort business having been especially good during the past season.

—T. V. Wooten, of Chicago, secretary of the N. A. R. D., and Herman Rietzke, of St. Paul, after attending the hearing before the Ways and Means Committee at Washington last week, came to New York and spent a day or two calling on friends in the local market. From here they went to Boston for a visit of a few days.

—The Eagle Remedy Co., of Hoboken, has been incorporated under the laws of New Jersey to carry on a drug business with a capital of \$75,000. The incorporators are E. D. Sear, A. E. Burdick, both of Winoski, Vt.; P. J. Little, of New York; J. Kennell, of Union Hill, and A. C. Young, of Hoboken.

—Charles W. Whittlesey, president of the Charles W. Whittlesey Company, wholesale druggists, New Haven, Conn., called at the Era office while in New York the end of last week. Mr. Whittlesey has been elected a delegate to the Pharmacopoeial Convention in Washington next week.

—The firm of Reid, Yeomans & Cubit, which is preparing to open a new drug store at 142 Nassau street, Manhattan, filed incorporation papers at Albany last week. The capital stock of the firm is \$25,000. The incorporators named are R. J. Reid, C. H. Lott and C. T. Cubit.

—C. E. Gleeson, Western salesman for the importing department of Parke, Davis & Co., returned last week from an extensive Western trip. He reports that he

found business flourishing in all the towns he visited.

—The New York Retail Druggists' Bowling Association will hold its annual celebration, known as Ladies' Night, on Monday, April 30. Extensive preparations have been made to make the occasion enjoyable.

—Nelson S. Kirk, of 450 Third avenue, warns fellow druggists against an impostor who calls himself Joseph M. Braun, and represents himself as a Forester in search of a physician for his lodge.

—Charles Pfizer & Co., the Maiden Lane manufacturing chemists, have filed application for incorporation in New Jersey to do a manufacturing druggists' business on a capital of \$2,000,000.

—Irving McKesson and Howard M. Kirkland, of McKesson & Robbins, were among the members of the Seventh Regiment on duty quelling the strike at Croton Dam last week.

—John P. Farley has sold his drug store at 1332 Lexington avenue, to C. J. Hoerle, who was formerly in the employ of Wm. T. Lins, at 157 Eighth avenue.

—John L. Riker, senior member of the chemical firm of J. L. & D. S. Riker, sailed last week for Germany to take the baths for the benefit of his health.

—E. J. Lauer, who came to New York recently from Chicago, has bought the pharmacy of F. Krumbholz, at No. 2439 Eighth avenue, Manhattan.

—F. E. Holliday, chairman of the N. A. R. D. Executive Committee, was in New York for a few hours one day last week.

—Henry J. Braker, senior member of the firm of H. J. Baker & Bro., returned home last week from a short foreign trip.

—Druggist W. R. Bailey and Mrs. Bailey, of Greenwood, S. C., came to New York last week for a visit of several days.

IN AND ABOUT BOSTON.

Contest Over the Will of a Boston Druggist.

Boston, April 21.—Contest over the will of the late Isaac T. Campbell, a South Boston druggist, who died early in the winter, has resulted from the various provisions which the instrument names. The case has been given a hearing in the Supreme Court. The contention is made that, at the time of making his will, Mr. Campbell was of unsound mind and was unduly influenced in making the said instrument. He left an estate thought to be of the value of about \$7,500, and by his will, dated February 13, 1897, he gives \$1,000 to Mrs. Mary H. Hayden, who was his housekeeper, provided any notes or claims of herself or her husband, Frank Hayden, against him are surrendered. He also gives \$2,000 to Mrs. Charlotte Campbell. The will names Charles T. Gallagher as his executor. By the first codicil, dated June 23, 1897, he gives his drug store on West Broadway and his other property, not otherwise disposed of, to his nephew, Fred Jones, instead of to Miss Martha Hill, to whom he originally bequeathed it by his will. By a second codicil, however, dated January 27, 1899, he gives his drug store and other property, not otherwise disposed of, to his nephew, Pliny M. Campbell, Manchester, N. H., instead of to his nephew, Fred Jones. The contestants of the will, Mrs. H. Francis Jones and Mrs. S. Francis Shedd, are a sister and niece of the deceased, respectively.

Taunton Druggists Out in the Cold.

Boston, April 21.—An unexpected turn was taken by the License Commissioners of Taunton, who, at their last meeting, voted unanimously not to grant any druggists' licenses this year. The commissioners were somewhat puzzled about this matter, acting on the presumption that all of the druggists, as good citizens who always acted in the best interests of the city, probably (?) voted "No" on the license question last fall. So they decided that it would be much better to allow the aldermen to handle the question. The law allows the aldermen jurisdiction in such matters, after the first of June, always, and even if the commissioners did grant a license or two to druggists, after that time the aldermen would have all control of the matter and the commissioners would have no voice. Again, it might be that the commissioners would grant licenses to druggists whom the aldermen would not favor and disagreeable features be shown later in the season.

The action of the people last fall and the commissioners at the recent meeting has put a seal upon any kind of spirituous liquors in Taunton until the first of May, 1901.

NOTES.

—There was much interest shown in the last regular meeting of the New England Association of Chemistry Teachers, held at the Massachusetts Institute of Technology. President Rufus P. Williams, of Boston, presided. John W. Dow, of Roxbury, exhibited several hundred chemical substances and gave a description of their preparation. Papers on "Recent Progress in Physical Chemistry" and on "Current Events in Chemistry" were given. Professor Francis G. Benedict, of Wesleyan University, gave an address on the "Respiration Calorimeter and Experiments on the Metabolism of Matter and Energy in the Human Body." The lecture was well illustrated by means of lantern slides, and a most complete description was given of the unique experiments carried on in an almost hermetically sealed chemical laboratory, in which a man can be confined from two to ten or twelve days with no communication with the outside world except through tubes which carry measured quantities of air, food and drink. The members of the association represent all of the New England States.

—When the License Commissioners of Worcester last met to consider applications, petitions were received from these druggists for licenses of the sixth class: Albert W. Andrews, Main street; Albert J. Amelotte, Grafton street; Elshah D. Buffington, Main street; Brewer & Company, Front street; Victor Bergwall, Main street; John F. Brusio, Main street; Timothy A. Brennan, Millbury street; Elie Barnaud, Southgate street; Charles A. Boyden, Main street; Harry E. Culverhouse, Pleasant street; Odell Boynton, Pleasant street; John H. Carpenter, Maywood street; Edward J. Churchill, Green street; Fred A. Hyde, Main street; Edward B. Moulton, Summer street; Godfrey K. Mellor, Main street; George T. Scott, Southbridge street; William R. Webster, Green street; D. B. Williams, Lincoln square. The following named firms desired to be granted simply pure alcohol licenses: G. H. Clark & Company, Norwich street; F. M. Heath & Co., Southbridge street; Jerome Marble & Company, Main street, and Charles C. Lowell, Pearl street.

—Edward K. Gardiner, of Salem, has been found guilty of illegally keeping liquor with intent to sell, and in court has been fined \$75. Two boys, aged fifteen and seventeen, testified that on the street a man whom they never had met before went into Gardiner's drug store on a recent Sunday and got them a pint of whisky. The boys owned up to drinking this, and the younger of the two was arrested for intoxication. Each boy corroborated the other's testimony, and their stranger friend stated that he got the liquor for the boys, but swore that he did not buy it at Gardiner's. He professed not to know just where he did get the whisky. For his services the boys gave him a nickel, with which he bought cigarettes. Harry I. Hill, clerk in the drug store, testified that whiskey kept on the premises was used to compound a patent cough syrup. The proprietor likewise testified to this fact.

—The funeral services of the late Myron A. Clark, a salesman with the Eastern Drug Company, took place from his home in Wenham, with many people from the drug trade present, with also a large number of relatives, personal friends and town officials and a delegation from Liberty Lodge of Masons, of Beverly. Two clergymen conducted the services and a male quartet of singers furnished the musical selections. The floral offerings were many and beautiful. They were sent by the Eastern Drug Company, by the employes of the company and by friends and associates. The burial was at Wenham.

—Of the many Easter displays the one made by Ferrin & Fausnaught, who have a pharmacy at the corner of Tremont and Concord streets, was very attractive. About the sides of the window, cloth of a dark rich purple was draped. Here and there small bunches of imitation violets were fastened. In the center of the window was a wooden cross, loosely draped with a cream-colored cloth. On this, also, sprays of violets were fastened. About the foot of the cross were various toilet articles, etc.

—In the window of the Tremont street drug store of the T. Metcalf Company there is at present displayed what

probably is the largest piece of castile soap ever shown, weighing more than 250 pounds. It is a beautiful white specimen, rectangular in shape. All about it are boxes and piles of small cakes. In the Copley square store window of this company are shown more than \$2,000 worth of cup sponges, with a fine display of curios.

—A friend of the Era's Boston correspondent says that on the street in this city he met the proprietor of a well-known spring medicine, the other day, and in the course of conversation asked him if his " concoction was really any good, and if he knew of anybody that it had actually helped?" The proprietary manufacturer replied, with a quiet smile: "It has helped me a great deal," as he jingled some coins in his pocket.

—An attempt made at Braintree to enforce the laws for the Sunday sales of soda, cigars, tobacco and other articles not strictly medicines or drugs proved a failure and was but short-lived. Since the trial, to feel the pulse of the public in the town, proprietors of stores have not been molested in their sales of just the things they have been in the habit of selling on Sundays.

—The week's exports from the Port of Boston include: Drugs and chemicals, \$21,719; hops, \$3,414; india rubber manufactures, \$1,074; waxes, \$184.

—C. J. Countie & Co., of 23 Charles street, Boston, will open a new store about June 1 in a new, modern building now being erected at Nahant.

—Furbush & Furbush have opened a well-equipped drug store in Teale square, West Somerville.

PHILADELPHIA.

COMMENCEMENT WEEK AT THE P. C. P.

Philadelphia, April 21.—The past week has been the busiest week at the Philadelphia College of Pharmacy since the corresponding week of last year. The alumni meeting and reception took place on Monday afternoon and evening respectively, (see report in another column). The banquet to the graduating class by the members of the faculty was held on Tuesday evening in the college auditorium. When the eatables and drinkables had all disappeared, the speechmaking began. The members of the faculty, beginning with Dean Remington, each gave the boys some good advice and the usual compliments regarding the high general average of this year's graduating class. A number of the students, representing various sections of the country, were then called upon for remarks, among them the following: Harry Lionel Meredith, of Maryland; Rupen Hagop Kazanjian, of Armenia; Jacob Greenberg, of Russia; Hermann Christian Siegle, of Illinois; Henry James Garritt, of Ohio; Charles Daniel Wiltman, of Pennsylvania; Frank Casper Schaad, of Pennsylvania; Ernest Fullerton Cook, of Pennsylvania; Robert Woodliffe Tucker, of Bermuda.

The commencement exercises were held in the Academy of Music on Wednesday evening. On the stage were seated the officers of the college, the members of the faculty and the members of the college. The entrance of the graduating class (which numbered 102, including the three special students and two students who received the degree of graduate in pharmacy), was the signal for much applause. The conferring of the degrees was performed by the recently elected president, Howard B. French. The students were assembled in sections of about twenty-five and after forming a circle they handed the parchment from one to the other until each had by its touch been invested with the degree of Doctor of Pharmacy. Dean Remington made a speech after the conferring of the degrees. The award of prizes was the next feature of the programme. The list is given in the report of the Alumni meeting following.

Following the award of prizes was a selection by the orchestra, after which the valedictory address was delivered by Prof. Henry L. Kraemer. The graduates were:

William Hall Andrews, Charles Howard Austin, Howard Paul Ballett, P. C., Laura Alice Barker, Arthur Bartholomew, John Wyckoff Bayles, Arthur William Beatty, Joseph Oscar Blow, Walter Brooks, William Clinton Burchfield, Harris May Carey, Henry Lyle Casperson, Francis Joseph Connell, Ernest Fullerton Cook, Thomas Clark Corson, Roy W. Dentler, Edward Allen Desch, Harry Edgar Dietz, John Joseph Dooley, Harry Milton Dorman, John Thompson Doughty, Eugene Henry Eddy, Manly Bruce Edwards, William Arthur Eldridge, Ellis Good Eshleman, Asa Fabian, George Castor Fausnaught, John Anthony Fischer, Harry Terry Fox, Louis Franke, Henry

James Garritt, Jacob Greenberg, Joseph Taylor Griest, Wilbert Hillman Guest, William Harvey Hampson, Edmund Franklin Harmony, Christian Henry Hauber, John George Heckman, George Elmer Heinze, Joseph Edward Hemberger, John Henry Hibbs, William Gustav Hillebrand, Harry Wilbert Hughes, Moreland Russell Irby, William Charles Jaeger, Ruppen Hagop Kazanjian, William Frederick Klefer, Harry Edward Knags, Lloyd Stanley King, Raymond Keck Kineaid, Harry Augustus Kintzer, Oscar Landauer, Samuel William Lehman, Joseph Jacob Levy, Ward Holey McCaffrey, Charles Nevin McClure, William Thomas McEwin, Joseph Gward Mackey, Frank Joseph Maier, Harry Lionel Meredith, Alfred William Metz, George Albert Michael, Carl Frederick Edward Moeller, William Torrey Morris, Carl Willard Olliger, Arthur Rickett, Daniel Lewis Beckenwald, Clarence Emerson Rickett, James Spang Sauman, Frank Casper Schaid, John Calvin Scott, Levi Scott, Harry A. Fahnstock Seabold, Charles Louis Selp, Peter Smith Settle, Henry Shapiro, Herman Christian Siegle, George Carroll Smith, Herbert Arthur Speck, Abraham Homer Stacks, William Samuel Stinson, Louis Stolz, Edward Browning Stone, Jr., James Francis Sullivan, Carlton Pierce Sunday, Lynwood S. Taylor, Robert Woodliffe Tucker, John LaMonte Weis, Charles Daniel Witman, Samuel David Witmeyer, Alexander Young, Jr., Edwin Henry Young. —Pharmaceutical Chemists—William H. Pancoast Bishop, Wilson Howe Hand, August Gustav Lambert, P. D. DeWalt, Albert Morzan, Walter Clement Muttly, P. D. Graduates in Pharmacy—William Joseph McDonnell, William George Peck. Certificates of Proficiency in Chemistry will be awarded to Eugene Henry Eddy, Wm. Charles Jaeger, Ignatz Sues.

PHILADELPHIA COLLEGE OF PHARMACY ALUMNI ASSOCIATION.

Philadelphia, April 21, The Alumni Association held its annual meeting on Monday afternoon, April 16, in the alumni rooms of the college building. There were twenty-three members present. The meeting was opened with Theodore Campbell in the chair, during the reading of the address of the retiring president, F. W. E. Stedem. President Stedem's recommendations included the reduction of the secretary's salary from \$150 to \$100 per annum; the abolishing of the treasurer's salary, and the augmentation of the Finance Committee by two members who are to be appointed by the president; to serve during the period in which the secretary's expenses are under consideration.

These recommendations were all approved by the committee appointed to report on the address. The secretary, Mr. Krewson, then read his report, which was adopted, as was also the report of the Memorial Committee, which showed that the association had lost thirty members by death, twenty-five of whom had died during the past year, and five who had died previously, but whose deaths had been learned of but recently.

The treasurer, William L. Cliffe, read his annual report, which showed a balance of about \$100 in favor of the association. The election of officers resulted as follows: President, Theodore Campbell, '95, Overbrook, Pa.; vice-presidents, John H. Hahn and Frank G. Ryan; recording secretary, William E. Krewson, Philadelphia, Pa.; corresponding secretary, William G. Nebig, Philadelphia; treasurer, C. Carroll Meyer, Philadelphia; five members of the Board of Directors, Jacob M. Baer, Melvin William Bamford, Albert Oettinger, Clarence H. Campbell, L. S. A. Stedem.

The report on the reading room and students' specimen cabinet, which was inaugurated by the Alumni Association, showed a gratifying increase in the interest shown by the students in the college work. The report of the Committee on Social Meetings, of which Frank G. Ryan is chairman, showed that the attendance had been larger than during any previous year in the history of the association, and that the harmonious relations between the students had been greatly benefited thereby.

The annual reception tendered to the students of the college by the Alumni Association was held on Monday evening, April 16, at 7.50, in the auditorium of the college. A very attractive programme was rendered, and prizes awarded as follows: Alumni gold medal, to Harry Lionel Meredith, of Hagerstown, Md., for the best general average of the class of 1900; alumni prize certificates for the best examination in the following branches: Pharmacy, to Harry Lionel Meredith, of Hagerstown, Md.; chemistry, to Ernest Fullerton Cook, of Waynesboro, Pa.; materia medica, to Oscar Landauer, of Philadelphia; general pharmacy, to Peter Smith Settle, of Frankford, Pa.; operative pharmacy, to Ernest Fullerton Cook, of Waynesboro, Pa.; analytical chemistry, to

Thomas Clark Corson, of Philadelphia; pharmacognosy, to Harry Lionel Meredith, of Hagerstown, Md. Alumni silver medal, Edwin Mason Murphy, of Macon, Miss., for the best general average in the second year examination; alumni bronze medal, awarded to James Clarence Fitch, of Philadelphia, for the best general average in the first year examination.

Pharmaceutical Meeting.

Philadelphia, April 21.—The April Pharmaceutical meeting at the Philadelphia College of Pharmacy was held April 17 in the materia medica lecture room of the college. The chairman was J. H. Redsecker, of Lebanon, Pa., and the attendance of members was very good considering that this particular week was the busiest of the college year. Frederick L. Lewton, of the Philadelphia Commercial Museums, gave an interesting account of the "Cultivation and Economics of Agave." The lecture was rendered doubly interesting by the lantern views and the large collection of specimens showing the practical uses to which the fibre is put, such as brushes, ropes, hammocks, etc. The next paper was "Formulas for the Official Preparation of Soap," by M. I. Wibert, in which the author showed the advantages of using methyl alcohol in place of ethyl alcohol in soap liniment. The paper by Robert G. Shoults on "An Examination of Aca-cia" was of interest on account of the discussion it produced. The subject of adulteration of the powdered gum with dextrin was spoken of and it was stated that the potato-like odor which the dextrin evolves when moistened could be used as a means of detecting this adulterant. Mr. Kebler, however, called attention to the fact that a large proportion of the dextrin on the market is made from corn starch and sold as corn starch dextrin, which does not possess this odor in such a marked degree. The making of artificial gum arabic was referred to and mention was made of the fact that the small fissures which gave the natural gum its characteristic appearance would not be present in a dextrin product, but Mr. Kebler stated that this characteristic could also be imitated and that a chemical analysis would be absolutely necessary to determine the genuine character of a given sample. The paper on "Suggestions for Revising the Seventh Decennial United States Pharmacopœia," by Lyman F. Kebler, was productive of much discussion on the part of Prof. Henry L. Kraemer and others. The next month's meeting will conclude the year's series of pharmaceutical meetings which have been unusually successful both from the high character of the papers which have been read and in point of attendance.

The Philadelphia Drug Exchange Smoker.

Philadelphia, April 21.—The smoker which was held by the Philadelphia Drug Exchange was a gratifying success. About two hundred guests, some of them from out of town, were received in the rooms of the Exchange on the second floor of the Bourse, east side, and after supplying everybody with plenty of cigars the committee in charge conducted the guests to the adjoining room. The programme consisted of a number of musical selections rendered by the Drug Exchange Mandolin, Banjo and Guitar Club, interspersed with vocal and piano solos, zither solos and addresses by several well-known members of the drug trade, some of which were in a humorous vein and others serious. The baritone solos by Mr. Davis were greatly appreciated and repeatedly encored, while the "Sparks" which emanated from the galvanic Col. James Whitecar were so brilliant as to bring tears (of laughter) to the eyes of those present. Col. Whitecar's speech consisted of a succession of "roasts" of all the well-known persons in the audience and were enjoyed by the victims as thoroughly as those who escaped his eagle eye. An intermission of ten or fifteen minutes was granted when the programme had been half completed, and the way in which the guests did justice to the sandwiches and claret punch, not to mention the famous "Fish-house" brew, showed that every person present entered into the spirit of the occasion. The second half of the programme included the rendition of the "Launching of the Ship" and "The Charge of the Light Brigade" by Mr. Barkley, who was vociferously applauded after each effort. William Tucker, secretary of the Board of Trade of Philadelphia, made a short speech which was laden with compliments

to the members of the Drug Exchange, and Dr. A. W. Miller, on behalf of the older members of the Exchange, expressed his pleasure with the evening's entertainment, stating that it was a step in the right direction toward the promotion of the harmonious relations of the members and that such an evening's intercourse had a tendency to lessen jealous rivalry and promote the interests of the organization by increase of good feeling among its members. Adam Pfromm, chairman of the Entertainment Committee, presided and made the announcements of the various features of the programme. Mr. Pfromm, at the conclusion of the programme, made a few remarks on the value of such informal meetings, stating that if the Exchange were convinced of the advantages of these entertainments, they would be continued throughout the year and that perhaps it might result in the giving of an entertainment later on to which the members of the fair sex would be invited also.

NOTES.

—Frederick T. Gordon, the apothecary of the League Island Navy Yard, is pursuing a line of experiments in drug culture which will be observed with interest when results begin to appear. The work concerns the culture of medicinal plants and was inspired by the address on that subject delivered by F. B. Kilmer, of New Brunswick, N. J., at the March Pharmaceutical meeting. Mr. Kilmer supplied the seeds of several medicinal plants which contain alkaloidal principles and the growth of the plants will be carefully observed, estimations of the active principle being made from time to time in order to definitely determine the time at which a plant becomes most valuable for medicinal purposes.

—A wholesale house in this city recently received a consignment of five barrels of balsam of fir with a letter from the producer who was a resident of the State of Oregon and whose faith in human nature was something superb in these matter of fact days. He stated that he had shipped five barrels of balsam of fir to be purchased on approval and added that he did not know what the commercial requirements of a prime product were, but he would leave the matter to the consignee to deal with him in a manner appropriate to a transaction between man and man.

—The regular monthly meeting of the Philadelphia Section of the American Chemical Society was held April 12 at the Harrison Chemical Laboratory of the University of Pennsylvania. The papers read were as follows: "Some Alleged Adulterations of Milk with Brain Matter," by Prof. Henry Leffmann; "The Theoretically Possible Production of Steel or Semi-Steel in the Blast Furnace," by Dr. G. L. Mecker; "Notes on the Methods of Analysis of Hard Rubber Articles," by C. A. Torrey, Jr.

—Dr. A. W. Miller, of Aschenbach & Miller, wholesale druggists at Third and Callowhill streets, is an enthusiastic field botanist and conducts many field trips for the allied Botanical Clubs during the summer season. His first trip was made Saturday, April 21. Dr. Ida Keller, professor of chemistry in the Girls' Normal School of Philadelphia, who is another of Philadelphia's well-known botanical enthusiasts, is at present taking a trip through Europe.

—The base ball team of the Philadelphia College of Pharmacy met the team from the Temple College last week and were defeated by a score of 30 to 17. The season for a baseball team of P. C. P. students is very short as the course ends during April and the students separate at that time, so the interest taken in baseball is less than that shown by the football team, which lasts during the entire season for that sport.

—The close of the courses for this season in the pharmaceutical colleges of this city always causes an exodus of clerks, many of whom are working to defray the expenses of their education. A corresponding increase takes place in the ratio of positions to clerks and this ratio is now at its maximum point for the year, as there are forty-four positions advertised and only thirty-seven clerks seeking positions by the same method.

—The Smith, Kline & French Company are profiting by the experience of W. A. Hover, the Denver wholesaler, whose establishment collapsed from the weight of the stock contained in the building, by making some alterations in their stock rooms at the Arch street building,

bracing up the floors and taking every possible precaution to prevent a similar occurrence.

—The annual meeting of the members of the Smith, Kline & French Company Employees' Death Benefit Association was held Saturday evening, April 14. The affairs of the organization were shown to be in a prosperous condition and after transacting the regular business and re-electing the officers unanimously the meeting adjourned.

—The Chemical Section of the Franklin Institute held its regular monthly meeting April 10. The paper of the evening was on "The Utilization of Animal Wastes," and was presented by Dr. S. P. Sharpless, State Assayer, Boston, Mass. The regular meeting will be held hereafter on the evening of the fourth Thursday in each month.

—The store of Emil F. Haenchen at 384 Haverford avenue, was badly damaged by fire early last week. The flames communicated to the prescription department from the building next door in which the fire originated and the occupants of the building had some difficulty in escaping.

—John P. Frey, the proprietor of a number of downtown drug stores, is having his Sixteenth and Tasker streets store remodelled and improved with the intention of making it one of the finest pharmacies below Chestnut street.

—Hibbert P. John, proprietor of the drug store at 242 Chestnut street, formerly the well-known Jayne Pharmacy, has been seriously ill for several weeks, the trouble being due to an abscess on his neck.

—John E. Raser, one of Reading's most prominent druggists, was in Philadelphia to attend the smoker given by the Drug Exchange, of which body Mr. Raser is a member.

—J. W. Harrigan, of Twenty-second and Wharton streets, has put in new store fixtures, repainted and repapered and started in as a sub-station post office.

—Chalfant Brothers, proprietors of the pharmacy at Fifteenth and Tasker streets, have purchased the store of Fred. Rapp at Ocean City, New Jersey.

—R. S. Doake, who conducts the drug store at Fifteenth and South streets, has made a number of improvements in the appearance of the store.

—B. A. Hertsch, who has for some time conducted a pharmacy at 414 Germantown avenue, has opened a second store at 410 Cambria street.

—Mahon N. Kline, general manager of the Smith, Kline & French Company, made a business trip to the West this week.

—George P. Scheele, Fifteenth and Christain streets, is confined to his bed by a severe attack of the grip.

—Russell L. Cox, of Forty-sixth street and Baltimore avenue, has sold his store to O. W. Osterlund.

—Robert S. Doake has opened a second store at Fifty-first and Mastee streets, West Philadelphia.

PITTSBURG.

—One of the most interesting matrimonial engagements recently announced in Pittsburgh drug circles is that of Hugh J. Canney and Miss Anna Pauline Casey. Mr. Canney has been a traveling salesman for W. J. Gilmore & Co. for many years, and hails from New York State. Miss Casey is a daughter of T. D. Casey, is a graduate of St. Xavier, and is a charming and cultured girl. They will be married in the early fall and will live in Pittsburgh.

—Harry Robinson has moved his drug store across the street at Saltsburg, and now has a modern up-to-date establishment.

—Paul Kuhn, for many years with Louis Emanuel, on Second avenue, has opened a store at No. 2 Rhine street, Allegheny.

—W. G. Stout has opened a fine store in the new Colonial building at Wilkensburg, Pa.

BALTIMORE.

Large Order for Surgical Instruments.

Baltimore, April 20.—What is said to be the largest order for surgical instruments ever turned out in Baltimore is being filled by Charles Wilms Surgical Instrument Company, at the corner of Howard and Sara-

10ga streets, for the use of the American army in the Philippines. The last consignment of the order is about ready for shipment, the greater portion having previously been dispatched. The order includes 200 pocket surgical cases, 600 dental forceps, 200 sets of tourniquets and 1,200 hemostatic forceps, besides various other kinds of instruments. The surgical cases are for the surgeons in the field. They contain knives, scissors, forceps, sutures, needles and other material, such as can be used in first aid to the injured. Frequently wounds sustained render necessary the removal of teeth and the dental forceps are intended for this purpose.

Among the Bowlers.

Baltimore, April 21.—Sharp & Dohme further increased their lead in the Baltimore Drug Trade Bowling Club's race for the silver cup last Tuesday by taking two games from the Winkelmann & Brown Drug Company, the scores being 755, 896 and 754 against 711, 745 and 760 points, Goldsborough and Konrman each rolling up 181 points. Last night James Baily & Son met Parke, Davis & Co. and took two out of three games, the scores being: James Baily & Son, 831, 734 and 618; Parke, Davis & Co., 662, 648 and 656. No particularly high totals were made by individual bowlers. The season is almost ended and the contest for first place has been virtually decided. No likelihood exists now of a change in the positions of the several teams.

Maryland College of Pharmacy.

Baltimore, April 19.—At the monthly meeting of the Maryland College of Pharmacy held to-day the Committee on National Association of Pharmaceutical Colleges, which consists of Professors Simon and Caspari and H. P. Hynson, reported that the idea had met with a very favorable reception and that the co-operation of the various institutions throughout the country could doubtless be secured. Charles Schmidt submitted a sample of aloes adulterated with a liberal admixture of iron ore. The adulteration resembled the drug closely in appearance. John G. Beck was elected a member. It was announced that the college trustees would pass upon the candidates for graduation on April 28. Resolutions of condolence with the family of the late John H. Hancock, who died yesterday after a lingering illness, were adopted.

NOTES.

—Thomas V. Wooten, of Chicago, secretary of the National Association of Retail Druggists, took advantage of his visit to Washington as a member of the delegation which appeared before the Ways and Means Committee of Congress to urge the repeal of the special stamp tax on medicinal compounds, to run over to Baltimore and learn at first hand the exact status of the relations between the retailers and the jobbing druggists here. He was met by A. J. Corning, H. P. Hynson, R. E. Lee Hall, the secretary, O. C. Smith, T. A. Conlyn, Louis Schulze, John G. Beck and other members of the Baltimore Retail Druggists' Association, who went over the entire ground and told him just what had been done. Mr. Wooten was unable to offer a remedy beyond declaring that the Baltimore druggists were certainly entitled to the support of the national organization.

—James A. Butler, of the retail drug firm of Butler & Clarridge, Indiana avenue and Third street N. W., Washington, was before Judge Kimball on the 17th inst. to answer the charge of having sold half an ounce of Fowler's solution without registering the name and address of the purchaser on his poison register, as provided for by the District Pharmacy law. He entered a plea of guilty and was sentenced to pay the minimum fine of \$25.

—The District of Columbia Commissioners have transmitted to Congress the draft of a bill to regulate the practice of homeopathic pharmacy, with the request that it be acted upon at the earliest moment. The measure follows closely the text of the law relative to allopathic pharmacy.

—George L. Muth, senior member of the wholesale drug firm of Muth Bros. & Co., spent several days in New York last week. He felt the need of recreation and also desired to see his brother off on a trip to Europe.

CHICAGO.

Illinois Board Meets.

Chicago, April 21.—The Illinois State Board of Pharmacy held a session here this week. About a hundred applicants were examined. An amusing incident happened when one of the time clause candidates learned that he had failed in the preliminary examination. He thought the Board had to register him anyhow, and raised quite a row over his alleged failure in history and geography. On looking up the papers it was found that he had failed, not in geography and history, but in arithmetic. He had nothing more to say.

The Board is highly pleased over the way in which the newly inaugurated apprentice examinations work. Formerly anything in the way of a certificate went; now, every would-be apprentice must appear before the board. That in itself is important. One lad came, tried the examination and gave it up. He was honest enough to admit that he did not intend to learn pharmacy, but the man for whom he worked as porter wanted him registered as an apprentice in order to make use of the privileges of apprenticeship under the law. The board ordered the prosecution of all who have not, by May 1, secured their certificates for 1900.

Bowling.

Chicago, April 21.—Just to keep their spirits up and in emulation of the adventurous souls who have gone to New York to compete for that bowling pennant, braving the dangers of the overland journey and the banquet, the "Lobsters" last night consoled themselves with a game with the Fuller & Fuller Company team. To-day the "Lobster" stock is below par and the Fullers, led by the debonair Muldoon, are emitting whoops of victory. The teams ranged up, four men on a side, as follows: "Lobsters"—Fechter, Delbridge, Matthes and Blocki; Fuller & Fuller Co. team—Wert, Townsend, Klose and Muldoon. Here is the score:

Lobsters	506	498	578
F. & F. team.....	488	530	625

Muldoon bowled the high score of the evening—198 points in one game—and bears his blushing honors thick upon him. Wert once bowled less than the required 100. He was accordingly set upon by friends and foes alike and compelled to provide refreshment according to time-honored custom. One of the "Lobsters," in strict confidence, told your correspondent that it is rumored that Klose is a "ringer." In no other way can they account for the "Lobsters'" defeat.

NOTES.

—The commencement exercises of the Chicago College of Pharmacy, the School of Pharmacy of the University of Illinois, will be held next Thursday afternoon at the Grand Opera House. A very attractive programme has been prepared for the occasion and is now out. In the evening the Alumni Association of the college will tender a banquet to the graduating class at the Palmer House. This banquet will undoubtedly be one of the most successful ever given by the association. Good speakers will respond to toasts and the addresses will be interspersed with vocal and instrumental music.

—The Committee on Transportation of the American Pharmaceutical Association has been unable as yet to make satisfactory terms with the railroads for the transportation of the Western delegation. The Big Four and the Chesapeake and Ohio roads on May 1 will sell tickets to Richmond good for three weeks. It was the plan of the Chicago delegation to attend the convention for the revision of the Pharmacopoeia in Washington and then go on to Richmond and attend the A. Ph. A. meeting. It was hoped that a favorable rate could be secured to both places.

—At Mishawaka, Ind., the firm of Graham & Ostrom have succeeded the Graham & Wilson Company. Mr. Ostrom has been a travelling salesman for Reed, Murdock & Company, the wholesale grocers, for many years. He has resigned this position and will devote his attention to the drug business.

—James A. Powell, a well-known and very popular drug-

glist at 690 West Madison street, married a young lady of this city, Miss McDonald, last Wednesday afternoon. Mr. and Mrs. Powell left immediately for a few weeks' sojourn in Canada.

—Harvey H. Lord, son of Thomas Lord, of Lord, Owen & Company, has been chosen to represent the University of Chicago in the mile relay race to be given at Philadelphia next week by the University of Pennsylvania.

—A conference of representatives of the N. A. R. D., the N. W. D. A. and the Proprietary Association was held last week at the Auditorium Annex. What conclusions were reached have not yet been learned.

—The Chicago Apothecaries' Society met on April 6 and elected the following officers: George R. Baker, president; Albert E. Ebert, vice-president; Walter Gale, treasurer, and John Conrad, secretary.

—A. L. Coppock, who recently sold the store at 1132 Lincoln avenue to W. J. Knick, has bought the drug store which belonged to the Schoenkaes estate at 1500 Barry avenue, corner of Evanston avenue.

—A Mr. McKenna has purchased the drug store at Forty-seventh street and Evans avenue from C. F. Garrahan, the former owner.

—Owing to the death of his aged father in Iowa L. K. Waldron was unable to go to New York with the Chicago bowlers.

—Herman Fry has bought the store of William C. Balowitz, at 1100 North Halsted street.

—John Ritter has opened a new store at Colorado avenue and Whipple street.

—W. I. Brady has succeeded A. Shyn'n at 324 Blue Island avenue.

ST. LOUIS.

Proprietary Committee Meets.

St. Louis, April 21.—The Committee on Proprietary Goods of the N. W. D. A. held a conference at the Southern Hotel, Wednesday and Thursday of this week. The greatest secrecy was observed regarding the proceedings of the meeting, but it is understood that alleged infractions of the rebate plan were considered and that the result is likely to be a more thorough adherence to the plan in the future. Complaints were made against one large house in particular, but the answer was made that if any concessions in the way of discounts or rebates to retailers were given it was entirely without the knowledge of the heads of the house. Those present at the conference were Frank A. Faxon, Kansas City; J. C. Fox, Atchison, Kan.; W. J. Waiding, Toledo, O.; Mr. McKnight, Texas Drug Co., Dallas, Texas, and C. P. Walbridge, Theo. W. Meyer, C. W. West and others, St. Louis.

NOTES.

—Prof. J. M. Good, Dr. O. A. Wall and Charles Gietner have been appointed delegates to the U. S. P. and A. Ph. A. conventions from the St. Louis College of Pharmacy and Dr. H. M. Whelpley will represent the St. Louis Medical Society. The Missouri Pharmaceutical Association will be represented by the president, Dr. H. M. Pettet, of Carrollton, and probably also by Wm. Mittelbach, of Boonville, and J. M. Love, of Kansas City.

—Ludwig & Lloyd will open a drug store at Broadway and O'Fallon street, the location formerly occupied by the late Geo. W. Polston, and have bought the new fixtures made for Mr. Polston after the fire which recently destroyed his stock. Dr. Lloyd is the city corbner and Dr. Ludwig is one of the coroner's staff. George Jacobs, now with C. D. Merrem's California and Shenandoah avenues store, will manage the new pharmacy.

—W. L. Meyer, W. B. Kerns, A. F. Fleischman and A. Brandenberger spent a day at Fertle Springs last week. Plans were partially made for the entertainment features of the coming Mo. Ph. A. convention and which will include boat races and fishing, prizes being offered for the most accomplished walking of either sex. A railroad rate of one fare for the round trip has been secured.

—The Jackson Lithia Spring Co. has filed an injunction suit in the Circuit Court against J. A. Ritzler and John Fowle asking that the defendants be restrained from

using the words "Jackson Lithia Water" or "Jackson Lithia" on labels or packages containing the defendants' goods and for \$10,000 damages.

—C. P. Waibrige is not only chairman of the General Committee of Arrangements for the reception of Admiral Dewey next month, but has been chosen toastmaster for the banquet to be given at that time.

—Hoover Bros. have bought the drug store of G. T. Woolridge, Boonville, Mo. Mr. Woolridge is one of the oldest druggists in the State and retires on account of ill health.

—Arthur Clark, of Clark & Mead, East St. Louis, left unexpectedly for Oklahoma recently. Dr. Mead continues the business with Frank Ross, a well-known drug clerk, in charge.

—At a meeting of the Executive Board of the Alumni Association of the College of Pharmacy Tuesday evening of this week sixteen new members were admitted.

—Edward Pearson, local detail man for Searle & Hereth Co., is on a trip into the State and General Representative S. W. Wright will be here Monday.

—The annual election of officers of the St. Louis College of Pharmacy will take a place at a meeting to be held Monday evening, April 30.

—C. W. Wall, treasurer of the Meyer Bros. Drug Co., is at his old home, Fort Wayne, Ind., seeking recovery from his recent illness.

—Wm. H. Lamont, who has been covering Northwest Missouri for Eli Lilly & Co., will again visit city trade for them after May 1.

—Druggist J. E. Hilby had the severe misfortune to lose his little four-year-old son, Joseph E. Hilby, Jr., who died April 19.

—E. R. Brown, resident agent for Roessler & Hasslacher, is making a trip through Tennessee and Kentucky.

—Emil H. Burgherr, Nebraska and Lafayette avenues, was married Wednesday to Miss Ella Swartz, of this city.

—Mr. Helne, formerly with the Oleson Drug Co., Fort Dodge, Ia., will open a new drug store in that town.

—J. K. Lilly, of Eli Lilly & Co., made a flying trip to St. Louis this week.

—The Lufkin Avenue Drug Co. will open a new drug store at Lufkin, Tex.

—The McCurnin & Henry Drug Co., Des Moines, Ia., is putting in new fixtures.

—The Provo Drug Co., Provo, Utah, will soon open its new store.

—Dr. Ed. Bolton is now clerking for Moore & Son, Fulton, Mo.

—Fleet Miller is again clerking for John F. Curry, Moberly, Mo.

THE NEW YORK STATE PHARMACEUTICAL ASSOCIATION ANNUAL MEETING.

The annual meeting of the New York State Pharmaceutical Association will be held at Newburg, June 26 to

29. Arrangements are about completed which will insure an interesting and profitable session. The entertainment features will include a reception and banquet, a euchre

party for the ladies, a trolley ride into the neighboring country side and a boat ride to West Point, where the delegates will be permitted to witness a special drill by the cadets at the United States Military Academy.

The headquarters of those attending the meeting will be the Palatine Hotel, which has been styled "the model hotel of the Hudson Valley." The house is conveniently located, only five blocks from the steamboat landing, and the ferry and union passenger station. It occupies a site commanding an unobstructed view of river and mountains for twenty miles. The hotel is new and thoroughly modern in its appointments and conveniences. With its 116 rooms ample accommodations will be found by all who go to Newburg on this occasion. The proprietor of the Palatine is desirous that those planning to attend the meeting should let him know at their earliest convenience what accommodation they will need and whether they will want rooms for the whole time or only a part of the meeting.

AMERICAN PHARMACEUTICAL ASSOCIATION.

The forty-eighth annual meeting will be held in the City of Richmond, Va., beginning May 7, 1900, at 3 p. m. The first session of the Council will be held on the same date at 10 o'clock A. M.

The following programme for the meeting has been adopted by the Council:

Monday, May 7, 10 a. m., session of the Council; 3 p. m., first general session; 8.30 p. m., reception to visitors.

Tuesday, May 8, 9 a. m., second general session; 12 m., carriage drive; 3.30 p. m., first session of section on commercial interests; 8.30 p. m., concert.

Wednesday, May 9, 10 a. m., second session of section on commercial interests; 3.30 p. m., first session of section on scientific papers; 8 p. m., second session of section on scientific papers.

Thursday, May 10, 9 a. m., trip to Old Point Comfort, via C. & O. R. R., returning about 7 p. m.

Friday, May 11, 9 a. m., third session of section on scientific papers; 2 p. m., first session of section on education and legislation; 4.30 p. m., trolley car ride; 8.30 p. m., second session of section on education and legislation.

Saturday, May 12, 10 a. m., third session of section on education and legislation; 3 p. m., final general session; 8.30 p. m., roof garden entertainment.

Hotel Accommodations—The local secretary reports that hotel rates have been secured as follows: the Jefferson, European plan only, \$1.50 per day; bath extra, the New Ford's, American plan, \$2.50 per day; double, \$2 per day, each person; the Lexington, American plan, \$2 and \$2.50 per day; double, \$1.50 per day, each person; Murphy's, European plan, \$1 per day; American plan, \$2.50 per day.

Transportation—The committee beg to announce that the principal railroads, with exception of the New England Passenger Association, have made a rate of one and one-third fares on the "certificate plan" for all persons attending the Richmond meeting of the American Pharmaceutical Association.

Purchasing Tickets—To secure the reduced rate under the certificate plan, full fares should be paid going and a certificate (not a mere receipt) obtained from the ticket agent. If the ticket agent has no certificates, purchase a local ticket to the nearest point at which certificates are kept, and from that point purchase through ticket with certificate. Going tickets cannot be obtained before May 4, except as stated on last page.

As the New England Passenger Association has declined to grant a reduction, Mr. S. A. D. Sheppard has effected the following desirable arrangement for members from that territory: From Boston to Richmond via Fall River Line to New York; Royal Blue Line and connections to Richmond via Philadelphia, Baltimore and Washington; returning via Old Point Comfort, Norfolk and Merchants' and Miners' Transportation Co.'s steamer direct to Boston—\$23.84.

From New York (for those residing in Western New England) and return to Boston, rate will be \$1.60 less.

Meals and stair-rooms are included on steamers, Nor-

folk to Boston. Tickets are good going on any date and permit stop-overs at New York, Philadelphia, Baltimore, Washington, Richmond and Old Point Comfort, being good for return on M. & M. T. Co.'s steamers sailing from Norfolk at 6 p. m., Saturday, May 12, and Monday, May 14.

CHAS. CASPARI, Jr.,
General Secretary,

Baltimore, April 16, 1900.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

The better judge you are of Champagne the more likely you will be to choose Cook's Imperial Champagne Extra Dry.

We have received from William R. Warner & Co., Philadelphia, four handsome booklets treating respectively, of Tono Sumbul Cordial, Ingulvin and Warner's Granular Effervescent Salts. They are sending these pamphlets to physicians, but any druggist can have the set by applying to them.

The New York Quinine and Chemical Works are producing fine medicinal chemicals upon a very large scale, and they are of a quality that must commend them to every careful pharmacist. Their products can be had from every jobber in the country, and very naturally the co-operation of every one interested in the betterment of this class of preparations will be a substantial encouragement to this enterprising house.

There is no specialty a druggist can sell with more satisfaction than Arnold Milk Sterilizers. Put in a stock of them and let physicians in your vicinity know that you can supply them, and they will send you customers. When you order them, send your address to the manufacturers, Wilmot Castle & Co., Rochester, N. Y., and they will send you free of charge attractive circulars and booklets with your name, also handsome show cards to help you dispose of them and create a demand for more.

On another page we begin the advertising of the Swiss American Ring Co., who are going to carry a series of advertisements in this paper throughout the summer. While these Rings and the Teething Necklaces which they sell are not a new idea, it is the first time, we believe, that they have been pushed in the drug trade. It is the desire of the Swiss American Ring Co. to have an agent in every town; they want druggists who handle these goods to push them, and they promise a liberal profit.

The Duffy Malt Whisky Company are publishing the following paragraph in newspapers all over the country: "There is nothing 'Just as good' as Duffy's Pure Malt Whiskey. A dealer who says so is thinking of his profits—nothing more. Of course, when a remedy has been before the public so long, has been recommended and prescribed by doctors, imitations are bound to arise. They are only able, however, to imitate the bottle and labels. No one can imitate the product. The process is known to the manufacturers alone. Ask for the genuine, refuse injurious substitutes. See that our seal over the cork is unbroken, and that the bottle has on it the government medicine stamp. We have found cases where unreliable dealers have refilled our bottles, so we wish to caution our patrons against accepting some cheap imitation in our bottles."

The New Idea.

Have you seen it in its new dress? As a journal for druggists the New Idea is unique. It is independent, fearless, frank and fair, and always aggressively "openness." It is published by Frederick Stearns & Co., Detroit, who claim that three-fourths of the druggists in America read it regularly. If you haven't seen it, send for a sample copy.

Landers' Vaginal Douche.

McKesson & Robbins have just been appointed wholesale agents for the Landers' Vaginal Douche, which is advertised on another page. Its chief claims are simplicity and the ease with which it can be kept clean, while the shield and outflow tube absolutely prevent leakage. The douche is sold at a price which puts it in reach of everybody, and at the same time affords the dealer a handsome profit.

A Novel Contest.

The Malay Remedy Company, Baltimore, writes to us that the mention of their Word Contest in the Era of February 22 brought a heavy response from druggists and their clerks, and some druggist will get the \$50 prize. The contest is open to everybody, but closes June 1, 1900. Prizes of \$50 down to \$1 are offered for largest lists of words made from the sentence "Malay Oil Cures Rheumatism." Complete rules governing the contest will be furnished to any one on application to the head office, No. 100 West Fayette street, Baltimore.

A New Nail Clipper.

The Gem Nail Clipper, sold by the Coe Manufacturing Company, No. 50 Warren street, New York, is made of the best tool steel of best temper, and from perfection of workmanship merits the demand which it has met. It will trim the nails in a perfect oval, as well as remove cuticle or hang nails. The price to druggists is \$2.00 per dozen, and the makers would be pleased to have any retailers report to them if their jobber cannot provide the goods, as they sell only to the wholesale trade, and

have placed the clipper with nearly all jobbers throughout the country.

Digestive Ferments.

The Ray Chemical Co., Detroit, Mich., has made a new departure in the matter of prices for Digestive Ferments. They offer to deliver their ½ lb. special packages of either Pepsin or Pancreatin anywhere in the United States for \$2.50 per package; 1 lb. packages at \$4 each and 5 lbs. at \$3.50 per pound. Special prices for larger quantities will be quoted on demand. Every grain of their products is guaranteed to conform to the U. S. P. Now is the time to enter upon a contract with this firm for Digestive Ferments to be used during the current year.

A Special Offer.

Berry's Root Beer is famous throughout New England, and it satisfies thousands of thirsty patrons every summer. But little has been done to advertise it, and nothing at all except locally. George A. Berry & Co., Concord, N. H., the manufacturers, believe that if it will draw trade to soda fountains in that part of the country, it will in other sections, too, and their advertisement on another page of this issue tells how any druggist can secure it for his summer business. They make a special offer of one pitcher, six steins, an ice tray and sufficient extract to make 95 gallons of Root Beer, and they invite correspondence with dispensers who want something good, something that will not only satisfy the thirsty customer, but will make him come again.

The Chattanooga Medicine Co.

The laboratories, general offices, publishing department and warehouses of the Chattanooga Medicine Company are located at the foot of the eastern slope of historic Lookout Mountain, one mile south of Chattanooga, Tenn. The suburb is called St. Elmo, after the hero of Augusta Evans' famous novel, the opening scene of which was laid near the spot where the buildings here described are located.

The main building is a three-story brick and stone structure, 20x50 feet, with floor space of 30,000 square feet. The north end of the first floor is given to the great Corliss engine battery of boilers, electric dynamo and herb grinding machinery. The remainder of the floor accommodates the printing and binding machinery, consisting in part of twelve large presses, two folders, four book trimmers, six stitchers, two punches and one automatic machine for tying the strings in almanacs. This is said to be the best equipped printing office in the South. It takes fifty employes to operate it in every department.

On the second floor are found rooms for wrapping and packing Theford's Black Draught and Black Draught Stock Medicine, with thirty-five hands; the shipping and mailing departments, with twenty-five workers, and the business offices, with thirty-one men and women. Theford's Black Draught and Black Draught Stock Medicine are compounded on the third floor of this building, and

the packing boxes, cartons, etc., are stored there awaiting use.

The four-story brick building to the east is 50x100 feet, giving 20,000 square feet of space. The first floor of this building is given entirely to the storage of Ladies' Birthday Almanacs, affording space to carefully classify shipments by States, transportation lines, etc. By September 1 this building will contain over 15,000,000 almanacs for 1901, printed and ready for shipment. Incoming freight is received on the second floor, and from there distributed to its proper departments. The third story gives room for the great Wine of Cardui tanks and the bottling rooms for that medicine. The empty bottles and reserve supplies of all medicines ready for the market are kept here. The Wine of Cardui laboratory takes the west end of the fourth floor, and the supply of crude herbs crowds the remainder of that upper story.

The reserve warehouse, 75x75 feet, is located on the Union Railway tracks several hundred yards away, and duplicate stocks of necessary articles are kept there as an extra precaution in case of fire. In addition to the buildings named, a machine shop, 25x60 feet, transfer barn, 50x75 feet, and waste paper warehouse, 25x50, are used by the company regularly. The erection of another large building has also been commenced. The St. Louis branch of this business at No. 318 North Main street, also occupies a very large building.

STATE OF TRADE.

Jobbing Movement Only Moderate.

New York, April 24.—There has been very little inquiry for round lots of any description, and in a jobbing way the movement into channels of consumption has been only moderate, but prevailing conditions are characteristic of this period of the year, and there are no disturbing influences apparent. The general market, while ruling quiet, and in some instances rather tame, has a fairly steady undertone, with the fluctuations in values mainly within a narrow range.

Nothing of consequence has transpired to materially affect the quinine situation, and the market for this leading commodity has been exceedingly quiet, both first and second hands reporting a slow demand from the consuming trade. There is to be another auction sale in Batavia this week, and some interest is manifested in the probable outcome. The next Amsterdam bark sale is scheduled for the 3d prox., and these two events may influence a revival of interest in quinine. The shipments of bark from Java have been unusually small for some time past, and it is well known that the Amsterdam stock in second hands has been exhausted. Consequently it is expected that only a small quantity will be offered at the May sale, and that values are likely to improve. In the event of a material advance, it is believed that manufacturers of quinine may find it necessary to mark up quotations.

Opium has remained quiet but fairly steady, although developments in morphine have had a somewhat depressing influence. Manufacturers of the latter article have again surprised the trade by announcing a further reduction of 10c. per ounce, and buyers are wondering to what extent the competition between the old and new makers will be carried. Consequently there is an inclination on the part of consumers to keep close to actual requirements when making purchases. This is the third decline during the current month, and manufacturers' prices are 30c. per ounce lower without any corresponding reduction in values of opium. No further change has been made in quotations for codeine, and the demand for this article is light, as usual during mild weather.

Pyrogallic and picric acids are a shade easier, a recent revision of wholesale quotations showing a reduction of about 10c. in the former and 5c. in the latter. Among the essential oils a slightly lower range of prices is quoted for native lemongrass and natural wintergreen, but the general market is without new feature of consequence, and business has been mainly of a jobbing order. Interests in ergot has apparently subsided, and absence of important demand has caused an easier feeling among holders, and quotations for German show a decline. Cannabis Indica has developed increased interest, and a firmer undertone owing to reports from London that the market there has been "cornered," and spot quotations are fully 5c. per pound higher.

Among cheap, Mexican sarsaparilla is slightly firmer, former cheap sellers having advanced their quotations. Senega also is a shade firmer owing to reduced available supplies. The consuming season for powdered white hellebore is rapidly approaching, and distributors have begun to draw on their contracts. In the seed line fractional declines are noted in Russian hemp, poppy and sunflower, but the changes are too slight to affect jobbing quotations. Balsam Peru has continued to reflect weakness, and first hand quotations show a further reduction of 5c. per pound.

Tahiti vanilla beans have hardened in price, owing to small stocks and an increased demand. Export orders in the market cannot be filled, and advices from the Pacific coast are to the effect that there are none obtainable at producing points. Angostura tonka beans also are in reduced supply, and quotations for the latter grades are somewhat firmer. Egg albumen is in better supply and easier.

Trade Has Become More Normal.

Boston, April 21.—Far less illness is found this week, and this condition has in a measure brought about some lessening of the general retail trade. However, conditions are normal and the druggists appear to be having a pretty good trade. The warmer weather of the week and also a holiday on April 19, when "Patriots' Day" was celebrated in Massachusetts, combined to make the soda fountain trade exceptionally good. General sales at the big houses have been practically of a jobbing character, and there are no important features this week. Demand and prices both seem to be fair. Alcohols are in excellent demand. There has not been active enough demand for dressings and tanning materials to create any marked change in market values.

Philadelphia Trade Good.

Philadelphia, April 21.—The favorable reports of the condition of business are still applicable to the week just past, and what is still more significant, the reports from up the State are equally good. The statistics show that the condition is general throughout the eastern part of the State. The number of cases of sickness is unusually high for this time of year, as the swelling prescription files of the druggist bear witness. This

An indication of the merit of any preparation is an honest expression of opinion from the trade in general.

THESE DRUGGISTS SAY:

7 Falls Street,
Niagara Falls, N. Y.

March 27, 1900.

The sale of your Effervescent Salt has increased very much. Dr. J. H. Sutherland of this city is prescribing it in his practice.

(Signed) P. R. Croy.

Scranton, Pa.

March 23, 1900.

We note an increase in the demand for the Salt. Some of the physicians are prescribing it, one in particular, Dr. C. E. Roos of this city.

(Signed) Matthews Bros.

Fall River, Mass.

March 23, 1900.

The sale on your goods has increased. I have one doctor who is using a large quantity. (Signed) Ph. A. Brosseau.

Abbey's Salt reaches the consumer through the drug trade only. No preparation on the market has so thoroughly won the confidence of the public and medical profession in so short a time.

The advertising of Abbey's Salt is of exceptional demand creating power. Get in line for our spring campaign.

The Abbey Effervescent Salt Co.,
9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c. 50c. and \$1.00 per bottle.

Trade price list on application.

week, being commencement week at the college, brought some trade visitors from out of town and they report an unusually large prescription business at present. In the wholesale markets, few price changes are reported. Norwegian cod liver oil has advanced slightly and morphine has suffered another drop of 10 cents per ounce, making 30 cents decline in three weeks, an unusual variation for this commodity. So far as indications are at present, no immediate change in business conditions is looked for, and everybody seems more than satisfied with the business done so far this year.

Very Good Business.

Baltimore, April 23.—Business during the past week has been very good, both for the jobbers and the manufacturers of pharmaceuticals. All of the houses had a rush of orders. Diseases of the respiratory organs and kindred ailments continue to afflict large numbers of people and the death rate remains above the normal, which accounts for the activity in the drug trade. Even the majority of retailers speak encouragingly of the outlook, the prescription trade being unusually brisk. The chemicals are moving in fairly large quantities, and the drug market is in a satisfactory condition.

Chicago Jobbers Busy.

Chicago, April 21.—Jobbers report unusual activity. The coming of good spring weather has freshened trade and given a boom to the jobbers. The market has been no falling off at any time within the last three months, and business remains ahead of the corresponding period last year. Manufacturers are busier than usual filling orders on a regular basis. Sales of goods are moving freely and collections are good. The strike has affected the general trade very little. It has borne hardest on the department stores, it having been reported recently that the "Fair" had discharged 240 employees owing to a 25 per cent. reduction in business since the strike. This reason may be taken with a grain of salt, perhaps, especially as to the extent of the falling off.

Retailers Very Happy.

St. Paul and Minneapolis, Minn., April 20.—Among the happiest and most contented men in these cities just now are the retail druggists. As one of them truly said, the drug business here was never in such good shape as it is right now. There is no let-up in prescription work, and every branch of the trade is "doing nobly." Those who have soda fountains in operation are very busy with them, as the weather is summery. The proprietor can no longer run his counting as a side issue, but must have a clerk to devote his entire attention to it. Jobbers continue eloquent in their descriptions of business. Orders are being filled from town and country in most satisfactory number and bulk, and collections are such that no complaint is called for. This applies to retailers as well as wholesalers. The market on Western products and specialties is steady, and mostly in fact—and no price changes of any character have occurred this week, with the exception of turpentine, which has undergone two declines of two cents each. The trade is commenting on the curious fact that whereas opium is higher, morphine is lower.

Trade in Satisfactory Volume.

St. Louis, April 21.—Trade continues in satisfactory volume for the season, although somewhat below the marked activity of March. Travelers state that the high prices of linseed oil, turpentine, white lead, mixed paints, etc., are undoubtedly restricting the movement of these grades, and that there promises to be much less painting by the farmers than usual. Farmers are actively at work in the fields, and corn planting is in progress. The wheat crop never promised better at this season. Locally, retail business is only fair.

PURDUE UNIVERSITY SCHOOL OF PHARMACY.

The School of Pharmacy of Purdue University, Lafayette, Ind., held its fifteenth annual commencement exercises in the chapel of the University, March 28. The exercises consisted of music and addresses, Prof. T. F. Moran delivering the principal address of the evening, his subject being "The Professional Man and the State." The members of the graduating class were as follows: J. B. Clem, Higbee, Ind.; Frank S. Crockett, Lafayette; Gus F. Davis and Gustav Ferger, Lebanon, Ind.; Frank E. Miller and August L. Flandermeier, Cleveland, O.; Charles H. Franz, Marion, Ind.; Charles W. Friedman, Ft. Wayne, Ind.; Edmund A. Geyer, St. Joseph, Ind.; Joseph E. Haney, Mexico, Ind.; Charles L. Hoffman, Lafayette; Walter C. W. Johnson, Greensburg, Ind.; Roy C. McKennan, C. W. Connersville, Ind.; Charles S. Miller, Shellman, Ga.; Eliza O. Ringwalt, Halls Corner, Ind.; Charles Shroyer, Warsaw, Ind.; Clyde N. Smith, Antwerp, O.; John W. Tudor, Homer, Ill.; Paul E. Wolter, South Bend, Ind.; Christian H. Young, Goeglein, Ind.; Wilbur P. Westfall, Lafayette; Alonza M. Pecka, Evansville, Ind. At the close of the programme the graduates received their friends in the Philhellenic Carlisle Hall.

MARKET REPORT.

NEW YORK MARKET.

New York, April 24.—Only a moderate volume of business was reported in the jobbing department, and the general market has continued to present a more or less tame appearance. Another unexpected decline in manufacturers' quotations for morphine was the leading feature. The changes in values were within a narrow range and of no special significance.

OPIUM.—There has been no improvement in demand, and in the absence of new features the market has remained quiet with quotations for small lots maintained at \$3.35@3.50 for 9 per cent. and \$3.45@3.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPIUM.—Small parcels are finding a moderate outside outlet, and values continue fairly steady at the old range of \$4.45@4.65 for 13 per cent. and \$3.15@3.25 for 16 per cent., according to size of order.

MORPHINE.—Manufacturers have again unexpectedly reduced their quotations 10c. per ounce, and the market retains an unsettled appearance, with jobbing prices showing a further decline to the basis of \$1.95@2.05 for pure, and \$2.00@2.30 in eighths, according to brand and quantity.

QUININE.—The demand has been light and unimportant, but a continued steady feeling is manifest on the part of holders, and quotations have advanced at \$1@32½c. for bulk in 100-oz. tins, 33@34c. in 50-oz tins and 35@36c. in ounce vials, as to brand and quantity.

CACAO BUTTER.—Jobbers have modified their views somewhat, and quotations for good quality have been reduced to 46@47c. by the box and 50@53c. for less.

ERGOL.—There is very little inquiry, and the market has ruled dull and easy under the influence of conditions abroad, with a falling quotation following a decline to 70@80c. for whole Russian and 75@85c. for powdered.

HELLBORE ROOT.—The active consuming season is near at hand, and quotations for powdered white have been advanced to 12@13c. in round lots and 15@20c. for smaller quantities.

SENEGAL ROOT.—Supplies have diminished, and the market is firmer with jobbing prices showing an advance to 60@65c. for whole and 65@70c. for powdered.

SARSAPARILLA.—Importers' quotations for Mexican are slightly firmer, but jobbers' prices remain unchanged at 20@22c. for whole, 22@27c. for cut and crushed and 24@30c. for powdered.

CANNABIS INDICA.—Values generally are decidedly higher, owing to a "corner" in the London market, and jobbing quotations show an advance to 35@40c.

HENBANE LEAVES.—Jobbers have reduced quotations to 25@30c. for whole, 28@35c. for ground and 32@37c. for powdered.

SAFFRON.—Primary markets are easier, and jobbing quotations have declined to \$12@13 for Valencia and \$11@12 for Alicante.

PYROGALLIC ACID.—Manufacturers' quotations are lower, and the revised jobbing range is \$2.75@3 per pound and 25@30c. per ounce, according to quantity.

BALSAM PERU.—The market continues easy in tone, and jobbing quotations have been further reduced to \$1.85@2.

TONKA BEANS.—Quotations for prime quality Angostura have been advanced to \$1.05@1.25.

VANILLA BEANS.—Light stocks and an increased demand have caused an advance in values of the Tahiti variety to \$2@3, as to grade.

OIL LEMONGRASS.—A revision of quotations shows a decline in the jobbing range to \$1.00@1.10 for native.

OIL WINTERGREEN.—Native is in better supply and easier, with jobbing quotations showing a decline to \$1.75@2.

OIL WORMSEED.—Jobbers have reduced quotations to \$1.85@2.10 for Baltimore and \$1.60@1.85 for Western.

POPPY SEED.—The market is dull and easy, with quotations for small parcels reduced to 10@14c., as to quality.

EGG ALBUMEN.—Values have declined to 73@82c., as to quality and quantity.

WHITE PEPPER.—The market is firmer, and jobbers have advanced quotations to 25@30c. for whole and 28@35c. for powdered.

—The Minnesota Pharmaceutical Association will hold its annual meeting at Owatonna, June 19-21, R. H. G. Netz, local secretary. The association has chosen F. J. Wulling, of the College of Pharmacy, University of Minnesota, delegate to the U. S. Pharmacopoeial Convention, at Washington, D. C., May 2.

FRUITS OF ADVERTISING.

The following letter just received explains itself. It simply shows that it pays a manufacturer to keep the name of his goods before the trade, and that the Era is a good medium to do it in.

Westfield, N. Y., 4-19-1900.

The Pharmaceutical Era, New York.

Gentlemen:—

We enclose copy for two new ads.; cuts go under separate cover.

We have received about seventy replies from our "Cork-screw" notice. Very truly yours,

THE WELCH GRAPE JUICE CO.

(E. S. Welch.)

ARSENIO-CITRATE OF IRON AND AMMONIA is proposed by Valvasoni and Peroni as an antiperiodic. It contains about 1.4 per cent. of arsenous acid and 15 to 18 per cent. of iron. The salt forms green scales, soluble in water. For the treatment of malaria in children the authors employ it hypodermically, injecting it in the gluteal region. The following liquid is used for this purpose: Arsenio-citrate of iron and ammonia 0.35 Gm., distilled water sufficient to make 10 Cc. Each Cc. of the solution contains 0.035 Gm. of the preparation, equivalent to ½ mg. of arsenous acid. (Pharm. Post.)

See Students' Bulletin, Page 478.

THE ROLL OF HONOR GROWING.

In addition to the list published in this journal April 12, Page 385, the following firms have announced their intention to confine their sales to the list of accepted jobbers, in accordance with the plans and desires of the National Association of Retail Druggists:

Dr. Seth Arnold Medical Corporation, Woonsocket, R. I.
Bullis & Co., St. Louis, Mo.
Brown Medicine Company, Erie, Pa.
N. K. Brown Medicine Company, Burlington, Vt.
Chamberlain Medicine Company, Des Moines, Ia.
Crab Orchard Water Company, Louisville, Ky.
The Denver Chemical Manufacturing Company, Denver, Col.
E. C. De Witt & Co., Chicago, Ill.
M. M. Fenner, Fredonia, N. Y.
Seth W. Fowle & Son, Boston, Mass.
Gilpin, Langdon & Co., Baltimore, Md.
J. D. Guild, Rupert, Vt.
W. T. Hanson Company, Schenectady, N. Y.
Henry Johnson & Lord, Burlington, Vt.
Henry P. Launacel, Louisville, Ky.
Hiscox & Co., Long Island City, N. Y.
Hostetter Company, Pitsburg, Pa.
T. H. Jackson & Co., Quincy, Ill.
The Lawrence-Williams Company, Cleveland, Ohio.
Ell Lilly & Co., Indianapolis, Ind.
Mange Emulsion Company, Troy, N. Y.
Meade & Baker Company, Richmond, Va.
Mechants' Gargling Oil Company, Lockport, N. Y.
J. S. Merrell Chemical Company, Cincinnati, O.
The Morgan Drug Company, Brooklyn, N. Y.
Omega Chemical Company, Boston, Mass.
J. J. Pike & Co., Chelsea, Mass.
E. C. Powers, Boston, Mass.
Schenck & Son, Philadelphia, Pa.
R. Schiffman, M. D., St. Paul, Minn.
Sterling Remedy Company, Chicago and New York.
Henry K. Wampler & Co., Philadelphia, Pa.
The J. H. Whitehurst Company, Baltimore, Md.
J. O. Woodruff & Co., New York, N. Y.
Orator F. Woodward, Le Roy, N. Y.

NEW PHARMACY LAW FOR NEW YORK STATE.

On Thursday of last week, April 26, Gov. Roosevelt signed the bill creating a uniform pharmacy law for New York State. There are thus legislated out of existence the three boards of pharmacy which have been operating in this State, namely, the State Board, the New York City Board and the Erie County Board. The new law practically combines these three boards into one, without taking away from any one of them its privileges and characteristics, rather, on the contrary, adding to its power of usefulness. The new measure is very generally considered a satisfactory one, and in many respects it will tend to greatly better pharmacy affairs in this State.

The law provides for the selection of a State board of fifteen members, divided into three branch or sectional boards of five members each. The Western section is practically that now covered by the Erie County Board, the Eastern section by the present New York City Board, and the Middle section by the present State Board. The election of members of each of these branch boards will occur in June of this year, and the new law goes into effect January 1

next. The law is published in full on another page, as finally amended, passed and signed. It is well to point out some of its most salient features, stripped of all the confusing legal verbiage.

The board is granted the power to make such regulations, by-laws and rules as may be necessary for the protection of public health and the performance of its powers, to regulate the practice of pharmacy, the sale of poisons, character and standard of drugs and medicines, to investigate all complaints, to regulate the number of hours of employes in stores in cities of the first class, to employ inspectors, to hold monthly meetings, except in July and August, etc., etc. The principal powers are to examine all applicants for licenses for registration, and to issue two grades of licenses, ("licensed druggist" and "licensed pharmacist,") and one grade of certificate ("registered apprentice.") The State Board and each of its branches shall be a board within the meaning of the code of civil procedure, and this implies much power and effectiveness. There is to be annual registration of every pharmacy, store or place in which drugs, medicines or poisons are compounded, dispensed or sold. Two dollars is charged for such annual registration. Readers are referred to the text of the law for the explicit wording governing these points.

All now practicing pharmacy as registered pharmacists or assistant pharmacists may have their licenses changed to conform with the new law upon the payment of specified fees. The new license as "licensed pharmacist" is practically similar to the present registered pharmacist. The "licensed druggist" grade applies in towns having a population of less than 500, a provision it was found very necessary to insert, and such licensed druggists can also serve under the management or supervision of a licensed pharmacist elsewhere in the State, except in cities having a million or more inhabitants. The law is stringent with regard to the display of certificates and licenses, and requires that the actual name of the proprietor or proprietors of every place of business shall be displayed upon the sign.

Regarding adulteration, every proprietor of a wholesale or retail store shall be held responsible for the quality of all drugs sold or dispensed, except those in original packages of the manufacturer and the ordinary patent or proprietary medicines. The poison schedule is in the main satisfactory. It exempts physicians' prescriptions, and requires wholesalers to put poison labels upon all packages of poisons enumerated in Schedule A, and, an important power, the Board of Pharmacy shall have authority to add to either of the schedules as it shall deem necessary. Physicians, as usual, are exempted from the application of the act, save when they may wish to conduct stores as pharmacists. Certain household remedies, which are carefully specified, are likewise exempt. The members of the Board of Pharmacy will have compensation for the time actually spent in the perform-

ance of their duties. The provisions for re-registration and license fees, etc., are calculated to provide a good working fund. All surplus from the Eastern section is granted to the colleges of pharmacy in New York and Brooklyn, but for the other two sections of the board the surplus shall be paid into the State treasury.

The foregoing is but a very sketchy outline of the provisions of the new law, and it is important that it be carefully read and understood by every pharmacist in the State. The several elections for the members of the new board are to occur in June, and undoubtedly considerable log-rolling and wire-pulling among our pharmaceutical politicians will take place prior thereto.

CUTTERS IN THE SUPPLEMENT.

Two or three letters have been received from subscribers who object to the publication in our supplements of the pictures of cut-rate drug stores, one correspondent saying: "It seems so out of place for The Era to advertise this most persistent, active, unscrupulous, substituting and thieving outfit. Looking at such pictures leaves a mighty bad taste in the mouth of every druggist who claims to have a little respect for himself."

We thoroughly understand the feelings of these objectors, but they make the mistake of viewing this matter from only one direction. Cutters are just as obnoxious to us as to anyone. We don't believe in their methods, and many of them without doubt are exactly what our friend terms them. But the cutter is in the drug business; he is a fact, and he must be considered when anything concerning the drug trade of the United States is in question. Bad as he is, much as we dislike him, there is still something in his business and methods from which good can be learned. Leaving out of the discussion his bad characteristics, his crimes of substitution, etc., he is a business man first and last. The picture of his store is published because it is a handsome store, neat, attractive, well stocked, which too many drug stores are not; he advertises and does it well, which many druggists do not; he is a shrewd buyer and good salesman, which many druggists are not, and in many particulars the regular druggist could profit by following his example. We don't like cutters' methods, and wish the drug trade were not afflicted with them, but a collection of photographs of American drug stores without the cutters' stores would be like the play of Hamlet with Hamlet left out.

Just allow us to allude to another phase of this question. In response to our request for photographs the cutter was the first and most numerous in his replies; the pictures received from druggists were woefully few in proportion. The cutter knew a good, cheap opportunity (to "advertise," if you will); the druggists as a class must have it forced down their throats almost before they will "sense it." The most violent of our critics, every one of them, failed to send in their own store photos. In short, while many a druggist is slow, careless of his oppor-

tunities, the cutter is a hustler, up-to-date, has new goods, displays them, sells them fast, is always on the alert for business, and he makes money. Is it any wonder he has a fine store, the handsomest in the town? In some particulars, druggists would do well to copy him. If they do, they may succeed in driving him and his "outfit" out of business. Were it possible to graft the good characteristics of the cutter (without the bad) upon the drug trade it would be a great blessing.

MICHIGAN CLERKS WANT IT.

In this journal, April 5, Page 367, was printed a letter from the secretary of the Michigan Board of Pharmacy, which he had sent to all the pharmacists in Michigan, relative to the desirability of requiring graduation from a college of pharmacy as a preliminary to acceptance for examination by the board of pharmacy. In reference to this proposition, the Detroit branch of the Drug Clerks' Association of Michigan has passed the following resolutions:

"Whereas, we recognize that the present poor condition of the drug business is largely caused by permitting men to practice pharmacy who do not know and appreciate the responsibilities and the ethics of the profession; and

"Whereas, young men of higher education and capabilities are deterred from studying pharmacy on account of the long hours. Therefore, be it

"Resolved, That we, the Drug Clerks' Association of Michigan heartily indorse the action of Mr. Schumacher in his endeavor to institute a higher standard of education; and recommend that the State pharmacy laws be so amended that all apprentices desiring to become pharmacists must have attended some recognized high school at least two years, or pass an examination before the State board in the subjects taught in that grade; and further recommend that before any apprentice or other candidate be allowed to take the examination for registered pharmacist, he be required to present a certificate from some registered pharmacist (the pharmacist who has had at least three years' experience in some drug store; and also be required to present a certificate from some recognized college of pharmacy that he has during these three years attended two full prescribed courses in chemistry, botany, materia medica, prescriptions, dispensing, pharmacy and pharmacognosy. And be it also

"Resolved, That in the proposed amendment to the State pharmacy laws provision be made to regulate the hours of employment of drug clerks to not more than ten hours a day, in turns of five consecutive hours."

The newspapers report that it is a common practice for the women in a certain New Jersey town to put laudanum in their husbands' beer to quiet them when they show a tendency to become noisy and quarrelsome. The druggists say they make frequent sales of laudanum for this purpose.

The State chemist of Minnesota has made the new (to him) and startling discovery that tin cans of food products do not always contain what the labels on the exterior say they do. He instances many flagrant violations of the law regulating the sale of honeys and jellies, samples of supposedly finest California honey being nothing but glucose, with a few pieces of honey-comb to make the play realistic. It is just because such gross adulteration is not new, but widely prevalent, that there is such earnest demand for national pure food and drug legislation.

EULACTOL is a nutrient preparation consisting of milk, milk sugar, and albumins of milk, eggs and plants. It contains 25.5 per cent. albumen, 14 per cent. fats and 46 per cent. carbohydrates. (Pharm. Post.)

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

ONE DRUGGIST'S EXPERIENCE.

Editor The Pharmaceutical Era:

I was in the employ of a pharmacist some years back taking the place of a non-graduate who, although skilful in making sales and cleaning, failed to make the store pay even after doing without any help. The proprietor did all the ordering, having three stores, one of which he ran himself. The stores are all in different mining towns in Pennsylvania. My first order included a boy to clean up and run errands. The second month my order called for an assistant, which I received. When I left him the store was paying clear \$50 a week. Two graduates and one boy, two hundred dollars' worth of laboratory apparatus, including a still and drug mill; the latter the boy usually worked. The other man made mixtures from fluid extracts for tinctures, etc. The proprietor bought his ointments, etc. He could sell anything; was very polite and tactful, and always managed to sell things paying a good profit and never to my knowledge offended anyone. I merely gave what was called for, with due care in regard to poisons, etc. (Sold lots of so-called patents). Never cleaned a bottle or anything else in that line unless the boy was away and I had to use the utensil. Insulted two customers? (I don't like loafers) and stopped all except employes from coming behind the counters. Called one down for trying a brush on his head (could not call it hair for he did not have enough), and sold him one, making a regular customer by it. Refused to exchange any but sealed articles and would do that only under conditions. Saw that everything was kept neat, orderly and quiet. Told the truth about my goods, and when asked, often suggested some home remedy in place of medicine; treating my customer as I like to be treated. Protected them in every way, often selling a better article than called for by showing the quality of each. That was what made the store pay. But the same policy has not made mine pay here, as (I thought some one would tell you this, but as they have not I will) I had to assign for the benefit of my creditors after struggling along a year. Liabilities, counting goods on commission, \$1,600; assets, \$1,450, about. I tell you, as I am not ashamed of my failure, having acted honestly, and I have gained (in spite of strong opposition of a certain M. D. and another pharmacist) the main thing—a reputation as pharmacist and doctor, which has held all my trade, in spite of closure of store, and made others. Store open an hour or two a day to fill prescriptions. The trustee put in another man, but I had to do the work, as they came to my house for me. (To fight the M. D. I had to counter prescribe and did so successfully enough to cure ten cases he failed on.) The cause of my failure was lack of money and illness. (Started on \$1,000.) I was fought three months in every way and then the opposition called a truce, as I understood, making one or two cents profit where they lost it; my father being in the wholesale and retail business I could buy cheaper. I made everything, even some chemicals, where cheaper to make them than buy. Today broke, with a big reputation and a trade made. I will get one of my creditors to buy it in and let me buy it back out of the earnings. Two creditors only pushed, and I especially owe thanks to Muth Bros. & Co., Whitall, Tatum & Co., Parke, Davis & Co., for whom I was foreman some years ago. I will remain here and succeed, if I only get a box of my liver pills to start on.

ERA SUBSCRIBER.

CUPRIASEPTOL is a copper combination of phenol-sulphonic acid, used in veterinary practice as a hemostatic. It occurs in light bluish-green, small crystals, readily soluble in water. (Pharm. Post.)

THE GOLDEN AGE OF PHARMACY.

Our artist has tried to depict the awful condition which will result if the direful prognostications set forth by Timorous Thimme (in the newspaper report below) are realized.

MICROBES BY MILLIONS WHEN TUNNEL IS BEGUN.

Druggist Edward Thimme Says So and Gloats
Over Outlook for Business in His Line.

GOLDEN AGE OF PHARMACY COMING

According to Edward Thimme, of the Druggists' League, drug dealers of New York are laying in big stocks of medicine in anticipation of a rush of business when the construction of the rapid transit tunnel gets fairly under way.

At a meeting of the Social Progress League, held in Amity Hall, No. 312 West Fourteenth street, yesterday afternoon, Mr. Thimme declared that the breaking of ground for the tunnel would let loose an army of microbes on the defenceless population of the city.

"There will be fevers, malaria, colds, stomach trouble and a host of other complaints," said Mr. Thimme, rubbing his hands with delight as he recited the list of diseases. "Millions of microbes will be released from the earth. There will be such a demand for quinine as has never been known. Drug men along the tunnel route who have laid in a stock of quinine will make their fortunes."

Mr. Thimme went on to explain that during the late Col. Waring's term as Street Cleaning Commissioner the druggists had almost starved to death.

"The streets were so clean" he said, "that everyone was healthy. Business picked up a little after his death and lately it has been fair, but when the tunnel begins there will be a rush of trade. It will be the golden age of pharmacy."

CLEVER HARVEY.

These are the things that happened over the telephone for three successive days, and the druggist felt his hair turning gray.

"Hello! Is Harvey there?"

"No, Harvey's not with us any more. What can I do for you?"

"Nothing. I always get my cigars of him, and I don't know the brand," and the "customer" would ring off.

"Please call Harvey to the 'phone," a little later.

"Not there? He's the only pharmacist I know of who can put up a tonic that really does me good. I'll call him up later."

"Say," before the druggist could get through saying things, "will you kindly tell Harvey to put me up a quart of those Spring bitters he always makes for Jackson? Send it C. O. D. I'm awful busy."

"Harvey's left. What were the bitters?"

"How do I know? Harvey knows. Have him call me when he comes in."

After ten minutes: "Is this Harvey? Oh, I want Harvey. Have him prepare a gallon of that horse liniment. I'm just beginning to work out my trotters. Get it up here this afternoon. Not there? Where can I reach him? He makes the stuff from a recipe of his own. Gone? Too bad! Guess I'll advertise for him. Can't do business without that liniment."

When it came to where the druggist couldn't sleep and he thought he was losing about \$100 a day in trade, he sent for Harvey, apologized for having dispensed with his services, took him back and increased his wages 50 per cent. Then Harvey went the rounds and set up the cigars to the true friends who had "plugged" for him over the telephone. The druggist sleeps well and Harvey's champions send in an occasional order just to allay suspicion.—Detroit Free Press.

The best that I have heard of as to what a retail druggist is expected to do to accommodate his trade, happened in my store on last Sunday. A customer called for 10 cents worth of postage stamps and after she had placed the stamps on her letters, said "Please charge them to my papa," and it is a wonder she did not ask us to mail them for her. J. H. Weber, Cascade, Ia.

A New Pharmacy Law For New York State.

Uniform Provisions for All Sections—One Board of Fifteen Members, Five for Each of Three Parts of State—Drug Stores to be Registered—Penalties for Substitution and Adulteration—Other Improvements Over Old Law.

AN ACT

To Amend the Public Health Law and the Acts Amendatory Thereof, in Relation to Pharmacy, and Repeating Certain Sections Thereof.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Article eleven of chapter six hundred and sixty-one of the laws of eighteen hundred and ninety-three, entitled "An act in relation to the public health, constituting chapter twenty-five of the general laws," as amended by chapters eight hundred and ninety-six of the laws of eighteen hundred and ninety-five, chapter two hundred and fifty-three of the laws of eighteen hundred and ninety-six, chapter two hundred and ninety-seven, of the laws of eighteen hundred and ninety-seven, and chapter three hundred and sixty-four of the laws of eighteen hundred and ninety-nine, is hereby amended to read as follows:

ARTICLE XI.

Pharmacy.

Section 130. State board of pharmacy; election of members, term of office; how organized; vacancies, how filled; revenue.

Section 131. Books; records and funds of existing boards to be delivered.

Section 132. Powers and duties of the board.

Section 133. Licenses of existing boards of pharmacy of this State, their rights and privileges.

Section 134. Licenses of State board; how granted; rights under revocation.

Section 135.

Section 136. Registration of pharmacies and drug stores; proprietors' names to be displayed.

Section 137. Adulteration or substitution of drugs, chemicals and medicines.

Section 138. Poison retailing of.

Section 139. Application of article limited.

Section 203. Apprentices, employees, et cetera.

Section 201. Penalties; expenses.

Section 190. State board of pharmacy; election of members; term of office; how organized; vacancies, how filled; revenue.

Subdivision 1. For the purpose of this act, the State shall be divided into three sections, by counties, to be known respectively as the eastern, western and middle sections. (a) The eastern section shall consist of the counties of New York, Kings, Queens, Nassau, Suffolk, Richmond and Westchester; (b) the western (Erie) section shall consist of the counties of Erie, Niagara, Orleans, Genesee, Wyoming, Allegheny, Cattaraugus and Chautauqua; and (c) the middle (Albany) section shall consist of the counties of Albany and all other counties not contained in the other two sections.

Subdivision 2. The state board of pharmacy shall consist of fifteen members, five members from each of the above named sections. No person shall be eligible for election to the state board of pharmacy unless he be a citizen of the State of New York and a resident and licensed pharmacist of that section of the State from which elected.

Subdivision 3. At the first election of the State Board of Pharmacy, one of the members from each section shall be elected for a term of one year, two for two years, one for three years, one for four years, and one for five years, such terms determined by lot after which members thereof shall be elected for the term of five years and shall hold office during the term of such members. Electors shall have been duly elected and qualified. Each member of such board before entering upon the discharge of his duties shall take and subscribe the oath of office, which he shall swear to perform to the best of his ability, to the effect that he will support the constitution of the United States, and the constitution of the State of New York, and that he will faithfully discharge the duties of the office of member of the State Board of Pharmacy of the State of New York according to the best of his ability.

Subdivision 4. The election of the members of the State Board of Pharmacy for the eastern section shall occur in the month of June of each year, two of them shall be elected by the Manhattan Pharmaceutical Association, two by the Kings County Pharmaceutical Society and one by the New York German Apothecaries' Society. The election of the members of the State Board of Pharmacy for the western section shall occur at a meeting of the licensed pharmacists and druggists residing in such section, to be held in the month of June of each year, called by the Erie County Pharmaceutical Association at the Buffalo College of Pharmacy, or at such other place as may be designated by the State Board of Pharmacy, and such election shall be by ballot. The election of the members of the State Board of Pharmacy for the middle section shall occur at the annual meeting of the State Pharmaceutical Association, at which meeting all licensed pharmacists and druggists

residing in such middle section are entitled to vote, and such election shall be by ballot.

Subdivision 5. The members of the State Board of Pharmacy who have been duly qualified, shall meet annually on the first Monday in January of each year, at the College of Pharmacy building in the City of Albany, or at such other building in said City of Albany as may be designated by the State Board of Pharmacy, at two o'clock, noon, and shall proceed by ballot to elect a president and a secretary, who shall also be treasurer, both of whom shall be members of such State Board and shall hold office for the term of one year and until their successors are elected and have qualified. The State Board shall fix the salaries of the secretary of the State Board and the secretaries of the branches for the eastern, western and middle sections. Such secretaries shall each execute a bond in such sum and with such conditions for the faithful performance of their duties as the State Board of Pharmacy may prescribe. The secretaries shall perform the duties devolving upon them under this act and such further duties as may be imposed by the State Board of Pharmacy, or by the several branches thereof.

Subdivision 6. Immediately after the organization of the State Board of Pharmacy as heretofore provided, the members of the State Board from the respective sections shall organize branches, to be known as the eastern, western and middle branches respectively. The officers of each of such branches shall be a chairman and a secretary who shall also be treasurer, and such officers shall be elected by the members of the State Board comprising such branches respectively. The secretary of the State Board of Pharmacy shall also perform the duties of the secretary and treasurer of the branch of the section wherein he resides and no local secretary shall be elected for such branch. Vacancies occurring in the State Board of Pharmacy for any cause, other than expiration of term of office, may be filled by appointment by the president of the State Board until the next annual election in the section wherein the member whose office has become vacant resided, of an eligible pharmacist, residing in such section.

Subdivision 7. Each branch of the State Board is hereby authorized and empowered to receive and collect for its section the revenue, authorized by this act, for the purposes herein provided, and each branch is hereby authorized and empowered, subject to the approval of the State Board of Pharmacy, to enforce and carry into effect within its section the provisions of this act and to perform such other duties as may be lawfully imposed by the State Board of Pharmacy. Each member of the State Board of Pharmacy shall be entitled to receive five dollars for each day actually engaged in the performance of services as a member of such board, or any one of its branches, provided that no member shall receive more than one hundred and fifty dollars in any one year, together with his necessary expenses and disbursements.

Section 191. Books, records and funds of existing boards to be delivered to the State Board of Pharmacy.—As soon as the State Board of Pharmacy has been fully organized under this act, it shall forthwith notify the custodians of all records, books, papers and vouchers of every nature and of all unexpended funds belonging to existing boards of Pharmacy existing in this State, at the time this act shall take effect, to deliver and the same shall be delivered into the hands of the secretary of the branch of the State Board of Pharmacy, heretofore or hereafter created. The State Board of Pharmacy may be located and receive the receipt of such secretary therefor and thereafter the powers and duties of the Board of Pharmacy for Erie County, and the duties of the office of member of all Greater New York and the Board of Pharmacy for the remainder of the State shall cease and determine.

Section 192. Powers and duties of the board.—Subdivision 1. The State Board of Pharmacy shall have power:

- To make such by-laws and regulations not inconsistent with the laws of the State, as may be necessary for the protection of the public health and the lawful performance of its powers.
- To regulate the practice of pharmacy.
- To regulate the sale of poisons.
- To regulate and control the character and standard of the drugs and medicines dispensed in this State.
- To investigate all complaints as to quality and strength of all drugs and medicines and to take such action as may be necessary to prevent the sale of such articles not conforming to the standards prescribed in the latest edition of the United States Pharmacopoeia.
- To regulate the number of hours constituting a day's work of employes in a drug store, or pharmacy, in cases having at the time of the United States census a population of a million or more inhabitants, which shall not exceed one hundred and thirty-six hours in each two consecutive weeks.

(g) To employ inspectors of pharmacy and to inspect during business hours all pharmacies, dispensaries, stores, or places in which drugs, medicines and poisons are compounded, dispensed or retailed.

(h) To hold meetings as often as its business shall require and to conduct examinations of applicants for licenses monthly, when so determined by the board, except in July and August, and not less frequently than once in three months.

(i) To examine all applicants for license or registration and to issue two grades of licenses, to be known respectively as that of "licensed druggist" and "licensed pharmacist," and one grade of certificate as that of an "apprentice," except that cities having at the last State or United States census a population of a million or more inhabitants a license for the grade of "licensed druggist" shall not be issued. To investigate all alleged violations of the provisions of this act, or any other law of this State regulating the dispensing or sale of drugs, medicines or poisons, or the practice of pharmacy, and when cause therefor appears, and whenever there appears reasonable cause therefor to take and hear testimony with reference to the same and in the discretion of such board to bring the same to the notice of the proper prosecuting authorities, or bring actions in the name of the State Board of Pharmacy, for the recovery of penalties in such cases as may be provided by law. The State Board of Pharmacy and each of its branches shall have a laboratory to the same meaning of sections eight hundred and forty-three and eight hundred and fifty-four of the code of civil procedure.

(k) To require and provide for the annual registration of every pharmacy, store, dispensary or place in which there is compounded, dispensed or sold, drugs, medicines or poisons, and to require as a prerequisite for such registration the filing of a certificate satisfactory to the board that the same is conducted in full compliance with the law, and the rules and regulations of the board and to charge and to receive the sum of two dollars for each such registration.

(l) To revoke any license issued by any board of pharmacy of the State for cause, and after an opportunity for a hearing, as herein provided.

Subdivision 2. Within the board—

(a) The board shall preserve a record of all licenses issued by former boards of the State and make and keep a record of all licenses issued by it. Such records shall be open to inspection by any citizen of the State.

(b) The State Board of Pharmacy shall render annually to the governor and to the State Pharmaceutical Association a report of its proceedings, including receipts and disbursements for the preceding year.

Section 103. Licenses of existing Boards of Pharmacy of this State, their rights and privileges.

Subdivision 1. The licenses of the several legally constituted boards of pharmacy of this State shall continue to enjoy in their respective sections the rights and privileges conferred upon them by their licenses or registration at the time this act shall take effect, and to comply with the law and the requirements of this act and of the board hereby created.

Subdivision 2. Any person who, on the first day of January, nineteen hundred and one, shall hold a license or certificate of registration granted upon examination as an "assistant pharmacist" from any legally constituted board of pharmacy of this State, the same not having been revoked, may apply to the board of Pharmacy hereby created surrendering his or her certificate of license or registration accompanied by a fee of one dollar and his or her affidavit that he or she has had three years' practical experience in the compounding, dispensing or retailing of drugs, medicines or poisons and may be granted a license as a "licensed druggist" entitling him or her to practice as such throughout the State, except in cities having a population at the last State census a population of a million or more inhabitants.

Subdivision 3. Any person who, on the first day of January, nineteen hundred and one, shall hold a license or certificate of registration as "pharmacist" granted upon examination by any legally constituted board of pharmacy of the State of New York may make application to the Board of Pharmacy hereby created, and may be granted his or her certificate of license or registration accompanied by a fee of one dollar and may be granted by said board a license to practice as a "licensed pharmacist" anywhere within the State.

Section 104. License of state board; how granted; rights under; revocation.

Subdivision 1. From and after the passage of this act every place in which drugs, medicines or poisons are compounded or dispensed or physicians' prescriptions are compounded shall be deemed to be a pharmacy, or a drug store, and the same shall be under the personal supervision of a licensed pharmacist or druggist respectively.

Subdivision 2. Every licensed pharmacist who shall take into his employ an apprentice for the purpose of becoming a pharmacist, shall report to the board within three months thereafter, the facts as the board may require or registration. The board may issue to such apprentice, when his character and qualifications are satisfactory, a certificate of registration as a "registered apprentice," and the date when the certificate shall be given, the time when practical experience began with the apprentice named therein. The fee for such registration shall be fifty cents.

Subdivision 3. Except as specified in a preceding section no person shall be granted a license as a "licensed druggist" until he or she shall have made written applica-

tion to said board setting forth upon affidavit that he or she has had not less than three years' practical experience where drugs, medicines and poisons were dispensed and retailed and prescriptions compounded, at least two years of such experience in the State of New York, and preceding the date of such application, shall have paid such license fee as shall have been fixed by such board, not exceeding five dollars, and shall have passed an examination satisfactory to said board for the granting of such license.

Subdivision 4. It shall be lawful for a "licensed druggist" under this act, who shall conform to the rules and regulations of the State Board of Pharmacy to take, to exhibit and use the titles "licensed druggist," and "drug store," and to have charge of, engage in, conduct or carry on, on his own account or for another, the dispensing, compounding or retailing of drugs, medicines or poisons in any place which by the last State or United States census had a population of less than five hundred, but no licensed druggist shall have charge of more than one drug store at the same time.

Subdivision 5. A licensed druggist may be employed for the purpose of dispensing, compounding or retailing drugs, medicines and poisons in a duly registered pharmacy or drug store under the management and supervision of a licensed pharmacist and during his temporary absence therefrom, except in cities having at the last State or United States census a population of a million or more inhabitants.

Subdivision 6. Except as specified in a preceding section no person shall be granted a license as a "licensed pharmacist" until he shall have made written application to the board setting forth upon affidavit that he is of the age of twenty-one years, or upwards, that he has had at least four years' practical experience where drugs, medicines and poisons were dispensed and retailed and prescriptions compounded, and that his experience one year must have been had within the five years last preceding the date of such application in a pharmacy, or store in the United States under the personal supervision of a licensed pharmacist and druggist, and shall have paid such license fee as is fixed by said board, not exceeding the sum of ten dollars, and until he shall have passed an examination satisfactory to said board for the granting of such license.

Subdivision 7. It shall be lawful for a "licensed pharmacist" under this act, who shall conform to the rules and regulations of the State Board of Pharmacy, to take, to exhibit the titles "licensed pharmacist," and "pharmacy," and "licensed druggist" and "drug store," to have charge of, engage in, or carry on for himself or another, the dispensing, compounding or retailing of drugs, medicines and poisons anywhere within the State, but no licensed pharmacist shall have personal supervision of more than one pharmacy or drug store at the same time.

Subdivision 8. Except as prescribed in this act, a person shall not be lawful for or to practice as a pharmacist, assistant pharmacist or druggist, or to engage in, conduct, carry on or be employed in the dispensing, compounding or retailing of drugs, medicines or poisons within this State.

Subdivision 9. Every person practicing as a licensed or registered pharmacist, assistant pharmacist or druggist must at all times display his certificate of license or registration conspicuously in the place in which he practices under such license or registration.

Subdivision 10. In case of a failure of an applicant upon his or her first application to pass a satisfactory examination before said board, a second examination shall be granted him or her without further payment of fee, if applied for within six months from the presentation of such first application for examination.

Section 105. Registration of pharmacies and drug stores; proprietors' names to be displayed.—Subdivision 1. In the month of January, nineteen hundred and one, and annually thereafter, the proprietor of every place in which drugs, medicines or poisons are compounded, dispensed or retailed, shall make a statement under oath to the Board of Pharmacy showing what licensee is in charge of the same and what other licensees are registered in such place, and such names shall be conspicuously displayed in said place with the certificate of registration or license of the person in charge thereof.

Subdivision 2. Every person, partnership, association or corporation doing business as the proprietor or proprietors of a place in which drugs, medicines or poisons are retailed or physicians' prescriptions are compounded or dispensed, shall cause the actual name of such proprietor or proprietors to be displayed in such place, which shall be kept conspicuously placed upon the exterior of the premises where such business is conducted. The name or names so displayed upon the sign shall be deemed presumptive evidence of ownership of such pharmacy, drug store or business.

Section 107. Adulteration or substitution of drugs, chemicals and medicines.—Subdivision 1. Unless otherwise provided for or specified in the chemical or pharmaceutical preparations sold or dispensed in a pharmacy, dispensary, store or place, shall be of the standard strength, quality and purity as established by the latest edition of the United States Pharmacopoeia.

Subdivision 2. Every proprietor of a wholesale or retail drug store, pharmacy, or other place where drugs, medicines or chemicals are sold or held responsible for the quality and strength of all drugs, medicines or chemicals sold or dispensed by him except those sold in

original packages of the manufacturer, and those articles or preparations known as patent or proprietary medicines.

Subdivision 3. Any person who shall knowingly, wilfully or fraudulently, falsify or adulterate any drug, medical substance or preparation authorized or recognized in the said Pharmacopœia, or used or intended to be used in medical practice, or shall knowingly, wilfully or fraudulently offer for sale, sell or cause the same to be sold, shall be guilty of a misdemeanor; all drugs, medical substances or preparations so falsified or adulterated shall be forfeited to the board and by the board destroyed.

Section 198. Poisons; retailing of.—It shall be unlawful for any person to sell or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed, to the bottle, box, vessel or package, a label containing the name of the article and the word "poison" distinctly shown, with the name and place of business of the seller, all printed in red ink, together with the name of such poisons printed or written thereupon in plain, legible characters, which schedules are as follows, to-wit:

SCHEDULE A.

Arsenic, cyanide of potassium, hydrocyanic acid, cocaine, morphine, strychnia and all other poisonous vegetable alkaloids and their salts, acetate and iodides, containing hydrocyanic acid, opium and its preparations, except paregoric and such others as contain less than two grains of opium to the ounce.

SCHEDULE B.

Aconite, belladonna, cantharides, colchicum, conium, cotton root, digitalis, ergot, heliobore, henbane, phyto-lacca, strophanthus, oil of tansy, veratrum viride and their pharmaceutical preparations, arsenical solutions, carbolic acid, chloral hydrate, chloroform, corrosive sublimate, creosote, croton oil, mineral acids, nuxvomica, paris green, salts of lead, salts of zinc, white heliobore or any drug, chemical or preparation which, according to standard works on medicine or materia medica, is liable to be destructive to life. If sold in quantities of more than sixty grains or less. Every person who shall dispose of or sell at retail or furnish any poisons included under Schedule A shall, before delivering the same, make or cause to be made an entry in a suitable book for that purpose, stating the date of sale, the name and address of the purchaser, the name and quantity of the poison, the purpose for which it is represented by the purchaser to be required, and the name of the keeper of the store. The books shall be always open for inspection by the proper authorities, and to be preserved for at least five years after the last entry. He shall not deliver any of said poisons without satisfying himself that the purchaser is aware of its poisonous character, or that the said poison is to be used for a legitimate purpose. The foregoing portions of this section shall not apply to the dispensing of medicines or poisons on physicians' prescriptions. Wholesale dealers in druggeries, medicines, pharmaceutical preparations or chemicals shall affix or cause to be affixed to every bottle, box, parcel or outer enclosure of an original package containing any of the articles enumerated in Schedule A, the name of the manufacturer or brand in red ink with the word "poison" upon it. The Board of Pharmacy shall have authority to add to either of the above schedules, from time to time, whenever it shall deem such action necessary for the protection of the public.

Section 199. Application of article limited.—This article shall not apply to the practice of a practitioner of medicine, who is not the proprietor of a store for the dispensing or retailing of drugs, medicines and poisons, or who is not in the employ of such a proprietor and shall not prevent practitioners of medicine from supplying their patients with such articles as they may deem proper, and except as to the labeling of poisons it shall not apply to the sale of medicines or poisons at wholesale when not for the use or consumption of the purchaser, or to the sale of paris green, white heliobore and other poisons for or to destroy insects, or any substance for use in the arts, or to the manufacture and sale of proprietary medicines, or to the sale by merchants of ammonia, bicarbonate of soda, borax, camphor, castor oil, cream of tartar, dye stuffs, and other articles, or to the sale of essence wintergreen, non-poisonous flavoring essence or extracts, glycerine, licorice, olive oil, sal ammoniac, saltpetre, sal soda and sulphur, except as herein provided. It shall be lawful for the proprietors of every town of this State outside of incorporated villages or physicians may compound medicine, fill prescriptions and sell poisons, duly labeling the same as required by this act, and merchants and retailers may sell the ordinary non-poisonous domestic remedies.

Section 200. Apprentices, employees, et cetera.—This article shall not be so construed as to prohibit the employment in licensed pharmacies, or drug stores, of apprentices or assistants for the purpose of being instructed in the practice of pharmacy; but such apprentice or other unlicensed employes or assistants shall not be allowed to prepare or dispense receipts or prescriptions or to sell at retail or furnish any of the poisons named in the presence of and under the personal supervision of a licensed pharmacist or licensed druggist, who must either be the proprietor or owner of said pharmacy or drug store, or must be the employer of such apprentice or other unlicensed employes, and where violations of this article occur on the part of the said apprentices or other unlicensed employes in any pharmacy or store, the person, partnership, association or corporation, being the proprietor of such phar-

macy or drug store, shall be equally liable as principal for such violation.

Section 201. Penalties; expenses.—Subdivision 1. The State Board of Pharmacy shall not grant a license to any person who is not a resident of this State, if the public health will be endangered by reason of the habits or character of said applicant. If any person shall have obtained a license by misrepresentation or fraud or shall become incompetent by reason of the habits or character of said person, or for any other cause to practice as a pharmacist, assistant pharmacist or druggist, the State Board of Pharmacy shall have the power to revoke such license after giving such applicant reasonable notice by certified mail to the board, and if any licensee shall wilfully and repeatedly violate any of the provisions of this act or the rules and regulations established by the Board of Pharmacy, such board may revoke his or her license, in addition to any other punishment by law imposed for such violation.

Subdivision 2. Whenever the board shall revoke the license or registration of any pharmacist or druggist or apprentice, it shall notify the licensed or registered person of such action and he or she shall immediately deliver to the board or its representative his or her certificate of license or registration.

Subdivision 3. Any person who shall attempt to procure or who shall procure a license or registration for himself or for another person, or who shall attempt to do so by making or causing to be made any false representations shall be guilty of a misdemeanor. Any licensed pharmacist who shall permit the compounding and dispensing of prescriptions or medicines except under the immediate supervision of a duly licensed person, whose certificate, license or registration is displayed in the place where the same is prepared, dispensed or sold; any person not licensed by the board who shall open a pharmacy or have charge of or supervise any pharmacy or drug store for retailing, dispensing or compounding medicines or poisons; any person who shall fraudulently represent himself or herself to be licensed, or any person who knowingly refuses to permit any member of said board or inspector of pharmacy employed by said board to enter a pharmacy or drug store for the purpose of lawfully inspecting the same, or intentionally prevents the lawful inspection of the same, in which drugs, medicines or poisons are retailed or dispensed or physicians' prescriptions compounded; any person whose license or certificate of registration has been duly revoked by said board and who shall thereafter attempt to procure a license or certificate of registration; any proprietor whose name does not appear upon the sign as hereinabove provided, any holder of a license or certificate of registration who fails to display the same as herein provided, or who shall intentionally violate any of the provisions of this title, in relation to the retailing and dispensing of drugs, medicines and poisons, for which violation no other punishment is hereinbefore imposed, shall for such offense be guilty of a misdemeanor.

Subdivision 4. Any person violating any of the provisions of this article, in addition to, or irrespective of the punishment hereinbefore provided, shall be fined for every such violation, which shall be the sum of twenty-five dollars for every such violation, which may be sued for and recovered in the name of said board and shall be paid to the State Board of Pharmacy for its use, as in this article provided. All fines imposed and collected under any of the provisions of this article shall be paid over to the State Board of Pharmacy.

Subdivision 5. Of the three branches of the State Board of Pharmacy, each branch shall receive the amount due from all sources in its section of the State, and apply the same to the payment of the lawful expenses of such board and the necessary expenses incurred in carrying out the provisions of this act. The sum of three-fifths shall be used for the benefit of the College of Pharmacy of the City of New York, situated in the Borough of Manhattan, and two-fifths for the College of Pharmacy of the City of New York, situated in the Borough of Brooklyn. Any surplus remaining thereafter in the western and middle sections shall be paid into the State treasury. Said surplus to be determined by the annual meeting of the board, and shall be payable immediately at the annual meeting of the board, and the sums so paid to the trustees of the said colleges shall form and be known as the library fund of the colleges named.

Section 202. The sum of two hundred and one, two hundred and two, two hundred and three, two hundred and four, two hundred and five, two hundred and six, two hundred and seven, two hundred and eight, two hundred and nine, and two hundred and ten, of the health law are hereby renumbered sections two hundred and ten, two hundred and eleven, two hundred and twelve, two hundred and thirteen, two hundred and fourteen, two hundred and fifteen, two hundred and sixteen, two hundred and seventeen, two hundred and eighteen, two hundred and nineteen, two hundred and twenty and two hundred and twenty-one respectively.

Section 5. All acts and parts of acts inconsistent with the provisions of this act shall be repealed.

Section 4. This act shall take effect January first, nineteen hundred and one, excepting so much thereof as relates to the election of the members of the State Board of Pharmacy, which shall take effect immediately.

(Special London Correspondence).

PHARMACY NOTES FROM ENGLISH SOCIETIES.

Balsam of Tolu.—(Midland Pharmaceutical Association)—J. Spilsbury and T. Goode Boyce state that the B. P. tests, while distinguishing between a spurious and a genuine balsam, do not detect sophistication with exhausted balsam, which substance, they say, is sometimes used to adulterate this drug. They suggest that the cinamic acid should be estimated, and provisionally propose 18 per cent. as the minimum for genuine balsam.

Cinchona.—According to J. M. Vangas-Vergana (Societate Chemical Industry, London Section) cinchona barks from the cold Andes are much richer in quinine than was formerly the case, and cinchonidine is now contained in them in a much lower proportion.

Safflower Oil.—According to H. B. Le Sueur (London Section, Society of Chemical Industry) the oil of Safflower, *Carthamus tinctorius*, contains palmitic, stearic, oleic, and linoleic acids.

Aromatic Spirits of Ammonia.—At an evening meeting of the Pharmaceutical Society of Great Britain Edmund White read a paper on "Aromatic Spirit of Ammonia." He showed by experiment that it was impossible to satisfy the B. P. requirements in that a solution of Sp. Gr. 0.891 cannot be made to contain 32.5 per cent. of NH_3 . For a solution of sp. gr. .8902 he obtained 31.85 per cent. NH_3 , and for a solution of .8916, 31.4 per cent. NH_3 . He also criticised the tests employed, particularly the barium chloride test.

Determination of Iodine in Official Iodides.—(F. R. Dudderidge, Newcastle Chemists' Association)—The B. P. orders titration with decinormal AgNO_3 , and, in the case of syrup ferrous iodide, the conversion of the ferrous into sodium iodide, the removal of excess of sodium carbonate by neutralization, and then titrating with the silver solution, using potassium chromate as an indicator. These methods, Dudderidge shows, give inaccurate results, and he recommends the following modification of Cook's process: Set free the iodine by the addition of hydrogen peroxide in the presence of acetic acid, remove with successive portions of chloroform, wash to remove H_2O_2 , and titrate with thiosulphate, using starch paste as indicator. For syrup Iron Iodide 10cc are diluted with 100cc water, and 10cc of the diluted syrup taken, the further proceedings being as above.

Test for Peroxides.—(F. R. Dudderidge, Newcastle Chemists' Association)—To detect peroxides of alkali or alkali earth metals add AgNO_3 solution to the powder. With alkali metals oxygen is evolved with effervescence, oxide of silver being deposited first, and, this being broken up, a black precipitate of silver forms. With alkali earth metals the action is the same, but more gradual.

Murcia Lemons.—(Flora C. Madgshon, Edinburgh Chemists' Association)—Murcia lemons may be obtained much larger than Messina or Palermo varieties. They yield a tincture having a finer flavor and aroma. The citric acid content of the juice is about 4 grains per ounce less than that of other lemons. One specimen fruit weighed 19½ ounces, and yielded 2¼ ounces of peel suitable for tincture.

Detection of Sulphate in the Presence of Thiosulphates.—(Leonard Dobbin, Pharmaceutical Society)—Thiosulphates much retard and sometimes prevent the precipitation of sulphates by barium chloride. The following process is recommended, founded on that of Grossmann: The solution is placed in a fitted flask, and the air is displaced by CO_2 , and the liquid is heated. Excess of HCl is added and the liquid boiled down to one-fourth of its original volume, a current of CO_2 being passed into the flask during the operation. The whole of the SO_2 is thus carried off. The liquid is filtered free from sulphur, and the sulphate can then be dealt with in the usual way.

Potassium Arsenate.—(John Lothian, Pharmaceutical Society)—There are three potassium salts of ortho arsenic acid, but the mono-potassium salt, KH_2AsO_4 , is the only stable one.

Potassium Arsenates and Strychnine Hydrochloride.—(J. R. Hill, Pharmaceutical Society)—The potassium salt found in commerce is the di-hydrogen arsenate, KH_2AsO_4 , and as it is compatible with hydrochloride of strychnine it is suggested that this salt, containing 41.6 per cent. of

arsenic, should displace the sodium salt containing 40.23 per cent. (which decomposes strychnine hydrochloride), when it is required to give an arsenate with liq. strychnin. It was stated that arsenum in the "ous" state possesses twice the therapeutic effect of the base in the "ic" state. Chloroform and Strychnine Hydrochloride.—(J. R. Hill, Pharmaceutical Society)—shows that strychnine salts are not entirely insoluble in chloroform.

Camphorated Oil.—Edwin Dowzard states that the usual method employed for estimating this article—namely, heating until the camphor is driven off, and taking the loss as camphor—yields high results, as some of the olive oil is lost. He suggests taking the optical rotation in 100mm. tube at 150C, using an instrument of the Laurent half-shadow type. The result is multiplied by 1.962 (obtained by dividing the percentage of camphor by the rotation of a number of samples and taking the mean results). The results by the two methods approximate very closely. Dowzard claims that his is much more easily worked.

Dispensing Notes.—D. B. Kidd, (Edinburgh Chemists' Assistants' Association) shows that Strontium Bromide and Sodium Bicarbonate are incompatible in mixtures, SrCO_3 being thrown down as a white precipitate, according to the equation $\text{SrBr}_2 + 2\text{NaHCO}_3 = 2\text{NaBr} + \text{SrCO}_3 + \text{H}_2\text{O} + \text{CO}_2$. Hydrochloric solution of arsenic and tincture nuxvomica, B. P., when mixed yield an insoluble resinous precipitate from the tincture. Phenazone and sodium nitrite are incompatible if acid be present, and when dispensed even as powders with citrate of caffeine the following reaction takes place: The moisture present sets free the citric acid from the caffeine salt, which reacts with the sodium nitrate, yielding free nitrous acid. The nitrous acid forms with the phenazone, isouitroso-phenazone, the powder becoming green and finally red. If powders of sodium nitrite and phenazone (alone) are dispensed in parchment paper the reaction takes place, owing to a trace of sulphuric acid in the parchment paper.

Malaria and Mosquitos.—On March 2 Major Ross delivered a lecture before the Royal Institution on this subject. He stated that he was induced to take up the subject owing to the theories of Dr. Patrick Manson, which so fascinated him that he determined to prove their correctness. He first took up the subject in 1895, and although he dissected the bodies of some hundreds of mosquitos, in the hope of finding the parasite he had previously detected in the blood of malarial patients, it was nearly three years before he was successful. During his earlier experiments he had only examined the genus *Culex*, and it was only when he turned his attention to the anopheles that he located the parasite. The parasite—*Hemamoeba Danielyskyi*—inhabits the salivary gland in the thorax of the mosquito, and Major Ross succeeded in communicating the disease to a number of birds by means of the bites of infected mosquitos. The infection of the human subject takes place in a similar manner. It was mentioned in the course of the lecture that only the female insect bites. Numerous lantern slides were shown, as well as microscopic specimens.

Pilocarpine and Other Alkaloids of Jaborandi.—Dr. H. A. D. Jowett, in a paper before the Chemical Society, reviewed the researches of previous workers. He stated that the only alkaloids existing in the leaves are pilocarpine, isopilocarpine, and pilocarpidine. Jaborine he failed to find, and said that the commercial alkaloid consists of a mixture of the other alkaloids. Pilocarpidine does not exist in the leaves now found in commerce, but may possibly be contained in *Pilocarpus Jaborandi*, an extremely scarce variety, but the source of the original pilocarpine. Isopilocarpine is contained in the pilocarpine nitrate of commerce. Pilocarpidine can be obtained from some manufacturers of alkaloids; it is a distinct alkaloid.

Otto of Orriis—says J. C. Stead (Pharmaceutical Society) is a golden-yellow fluid possessing in a marked degree the odor of orris root. It is much more powerful than the concrete oil; it is soluble in ether, 90 per cent. alcohol, chloroform, petroleum ether, and benzine. Dissolves in eight volumes of 70 per cent. alcohol, Sp. gr. 0.9480. Optical rotation (100mm) = 20.25. Congealing point, 5° Centigrade.

Cochineal and Carmine.—George F. Merson, F. C. S., gave two communications on cochineal and carmine before the Pharmaceutical Society in Edinburgh recently. He had examined thirty-one samples of cochineal of both the dark grain and silver varieties. He found that the

percentage of ash varied from 2.4 to 43.6 and the color value from 114 to 48. The dark grain insects had, generally speaking, the greatest colorimetric value. The percentage of ash bears no definite relation to the color value, although, of course, adulteration will reduce the coloring property. But the results showed that the variations were great; thus a sample with 23 per cent. of ash had a color value of 92, while one with 2.9 had a color value of 56. Barium sulphate was a common adulterant. Merzson suggests the following process for estimating the color value: Take 1 gramme of finely powdered cochineal, place in 100cc. flask with 30cc of distilled water and 5 drops of liquor ammonia. Heat to boiling and strain through cotton wool, and wash with sufficient water to make 100 cc. Put 25 cc. of the liquid into a 100 cc. stoppered test mixer; add 5 cc. of strong hydrochloric acid and make up to 100 cc. with water. Run in solution of chlorinated soda (containing 1 per cent. of available chlorine) in 5 cc. portions until the color is bleached, shaking briskly during the operation. The number of cc. of chlorinated solution used, multiplied by 8, gives the quantity of solution required to destroy the color of 1 gramme of cochineal. The standard taken as 100 color value is a sample which requires 29 cc. of solution to 1 drachm. A modification of the process is suitable for carmine.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

PHARMACY.

- 1.—What will be the weight of two fluid ounces of Sulphuric Acid? Give answer in grains.
- 2.—Give the volume, expressed in fluid ounces of one avoirdupois pound of Alcohol.
- 3.—Give the official title and quantitative composition of Dover's Powder?
- 4.—What physical change usually takes place in a mixture containing Antipyrin and Spirit of Nitrous Ether?
- 5.—Give an outline of the Pharmacopoeial method for determining the per cent. of Alcohol in White Wine. What per cent. should be present?
- 6.—How is Oleoresina Aspidii prepared? What should be done with the granular-crystalline substance which deposits upon standing?
- 7.—How is Ammonia Water used in the manufacture of Aromatic Spirit of Ammonia by the official process?
- 8.—Give an outline of the Pharmacopoeial process for the assay of Opium. How much Morphine expressed in grammes should each of the following yield:—
(a) 10 Gm. of Extract of Opium.
(b) 150 Cc. of Tincture of Opium.
- 9.—How is Solution of Ferric Citrate prepared? What results when it is concentrated, and spread in a thin layer, on plates of glass?
- 10.—Why is Benzin employed in the manufacture of Tincture of Lactucarium?
- 11.—Reduce: Iron.
- (a) Give its official title.
(b) State what impurity it usually contains.
- 12.—What quantity of a stock solution of Potassium Iodide, containing 30 grains in each fluid drachm, must be employed to make 200 Cc. of a solution, each Cc. of which shall contain .06 Gm. of the salt? Give answer in fluid drachms.
- 13.—In the manufacture of Oleum Phosphorum, why does the Pharmacopoeia direct that the Expressed Oil of Almonds should first be heated to 250° C. before adding the Phosphorus?
- 14.—Infusum Sennæ Compositum:
(a) Give common name.
(b) Name all its constituents.
- 15.—Why is Nitric Acid employed in the manufacture of Solution of Ferric Sulphate? What is the strength of the acid which you would employ?

MATERIA MEDICA.

- 1.—Give the official titles of two drugs that are obtained from each of the following parts of the plant: (a) Tuber; (b) Fruit; (c) Rhizome; (d) Flower.
- 2.—From what are the following acids obtained: (a) Lactic; (b) Pygallic; (c) Citric; (d) Oxalic; (e) Tartaric; (f) Tannic.
- 3.—What is Asafetida? Give the source from which it is obtained. Name the official preparation and doses.
- 4.—Name five drugs indigenous to the State of New York. Give the official title of each.
- 5.—From what are the following obtained: (a) Salicin; (b) Thyroid Extract; (c) Veratrine; (d) Antipyrine; (e) Daturine.
- 6.—Define the terms: (a) Antiperiodic; (b) Anodyne; (c) Antihelmintic; (d) Diaphoretic. Name two official drugs that belong to each of the above classes.
- 7.—Name two official drugs that belong to the Natural Order Liliaceæ.
- 8.—Jaborandi: (a) Give official name; (b) Where does it grow? (c) What part is official?
- 9.—Piper: Give the common name. State two important constituents.

- 10.—Is Oleum Gossypii a volatile or a fixed oil?
- 11.—Opium: (a) From what obtained? (b) What per cent. of morphine should it contain to be official? Name two of its alkaloids.
- 12.—Name two drugs that belong to each of the following classes. Give the official title of each: (a) Gum Resins; (b) Oleo Resins; (c) Gums; (d) Balsams; (e) Resins.
- 13.—Ipecac: What is its source and part used? State the active constituent and official preparations.
- 14.—Give the botanical name and habitat of the following: (a) Jalap; (b) Black Haw; (c) Cramp Bark; (d) Buchu.
- 15.—Give the official title of each of the following: Monkshood, Blue Cohosh, Isinglass, Sweet Flag, May Apple, Cloves.

CHEMISTRY.

- 1.—Define the following terms: (a) Hydrate; (b) Actiad; (c) Super; (d) Pentavalent.
- 2.—What series of compounds does Iron form? Give an official example of each.
- 3.—Give a characteristic test for each of the following: (a) Sulphites; (b) Sulphides; (c) Fe. (ic); (d) Fe. (ous).
- 4.—Write the formula of the compound which forms when water is added to each of the following: (a) N_2O_3 ; (b) P_2O_5 ; (c) SO_3 .
- 5.—Give the chemical title of each of the following: (a) CrO_3 ; (b) $LiBrO_2$; (c) $(NH_4)_2Fe_2(SO_4)_4 \cdot 24H_2O$; (d) NH_4MgAsO_6 .
- 6.—How many grammes of Iron will be required to unite with 351 grammes of Iodine, both being chemically pure? Which iodide of iron will form? How many grammes will the resulting product weigh?
- 7.—How is Bleaching Powder prepared? What is its composition? To what does it owe its bleaching property?
- 8.—Write the chemical formula for each of the following: (a) Phenol; (b) Red Precipitate; (c) White Lead; (d) White Precipitate.
- 9.—When Chlorine is passed into a solution of Potassium Ferrocyanide, what compound results?
- 10.—Show by formula what compounds are formed when heat is applied to Lead Acetate.
- 11.—Name the elements which are usually present in organic compounds.
- 12.—Give the official title of Meta-dioxy-benzol. Show its relation to Benzol, by graphic formula.
- 13.—How do Hydrocarbons differ from Carbohydrates? Give an official example of each.
- 14.—What is a secondary alcohol? Show by formula, expressed graphically, how secondary propyl alcohol is derived from propane.
- 15.—Complete the following equations:
(a) $KHCO_3 + HI =$ _____
(b) $C_2H_5ONO + H_2O =$ _____
(c) $As_2O_3 + 6KHCO_3 =$ _____
(d) $Sr(NO_3)_2 + K_2CrO_4 =$ _____

TOXICOLOGY AND POSOLOGY.

- 1.—For what non-poisonous substances and under what conditions might the following be dispensed by mistake owing to similarity in appearance, etc., and what precautions should be employed to prevent such accidents? Ammonia Water, Corrosive Sublimate, Morphine, Oxalic Acid.
- 2.—What poisonous substances are common constituents of various vermin destroyers?
- 3.—What emergency treatment should be employed for poisoning by such?
- 4.—What do you consider the most active and fatal common poison? How does poisoning by it usually occur and what emergency treatment should be employed?
- 5.—Give a characteristic chemical test for Corrosive Sublimate. For Verdigris.
- 6.—What emergency treatment should be employed for poisoning by Sugar of Lead? By Phosphorus?
- 7.—What emergency treatment should be employed for poisoning by Iodine? By Silver Nitrate? If there is a true antidote for each, name such.
- 8.—What emergency treatment should be employed for poisoning by Acetate? By Opium?
- 9.—A prescription called for "Liq. Morph. Sulph." 2 drachms in a two ounce mixture, to be taken in teaspoonful doses every hour, should Magendie's Solution be dispensed? Explain, stating quantity of Morphine in each dose.
- 10.—Why should the pharmacist know the maximum doses of medicinal substances? Would it be desirable to have the maximum doses stated in the next Pharmacopoeia? Give reasons.
- 11.—What is the dose of Arsenous Acid, Atropine Sulphate, Bismuth Subgallate, Mercurous Chloride, Sparteine Sulphate?
- 12.—What is the dose of Chloralamid, Cocaine Hydrochlorate, Creosote, Croton Oil, Sodium Salicylate?
- 13.—What is the dose of Compound Powder of Glycyrrhiza, Compound Powder of Jalap, Compound Powder of Morphine, Potassium Bromide, Santonin?
- 14.—What is the dose of Camphor, Chloroform, Extract of Aconite, Naptalain, Strychnine?
- 15.—What is the dose of Diluted Hydrocyanic Acid, Donovan's Solution, Oleoresin Aspidium, Syrup of Ferrous Iodide, Tincture of Conium?

IODIZED GLYCERIN.—A solution of 1 part each of Iodine and potassium Iodide in 98 parts of glycerin. (Pharm. Post)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Antiseptic Solution.—(M. W. P.) See this journal January 25, 1900, page 94.

Concentrated Solution of Sodium Phosphate.—(W. E. B.) See this journal April 12, 1900, page 294.

Bickmore Gall Cure.—(F. M. M.) We cannot give the names of "the supposed" ingredients of this article. Neither can we give the formulas for proprietary medicines.

Colleges of Pharmacy in the South.—(M. W. P.) There is a good college of pharmacy connected with Tulane University in your own State (Louisiana). Write to the dean, Dr. S. E. Chaille, for information. He will doubtless be able to tell you whether you can secure employment in New Orleans while attending the lectures at the college. Other colleges in the South are South Carolina College of Pharmacy, Charleston, S. C.; Vanderbilt University, Department of Pharmacy, Nashville, Tenn.; Atlanta College of Pharmacy, Atlanta, Ga., and the Department of Pharmacy of the State Agricultural and Mechanical College at Auburn, Ala.

Peanut Butter.—(K. T. M.) The Spice Mill gives the following method for preparing this food product, which has come into considerable favor of late: "Take eight pounds of roasted peanuts, put them through the mill, opened wide, to break up the shells and rub off the red skins; it will separate the kernels into two halves; then with wind mill blow away the shells. Add to the kernels all the fine salt that will adhere to them and then pass them through the mill, grinding to a very fine, smooth, soft, oily, tough, delicious, yellow butter, that will spread on crackers, bread, etc. You have now five pounds of nut butter that contains more nutriment than ten pounds of cow butter, which would cost two dollars and fifty cents."

Nail Cosmetic.—(R. E. H.) We cannot give the formula for the proprietary article. Most nail polishes, however, contain oxide of tin, and may be either paste or powders. Here are two formulas: (1) Oxide of tin, 2 pounds; carmine, 3 drams; oil bergamot, 75 grains; oil lavender, 75 grains. (2) Putty powder, 4 ounces; liquid cochineal, 1 dram; glycerin lotion, enough to make a soft paste.

Nail Varnish.—Dissolve 1 dram of paraffine mixed with enough chloroform to make 2 ounces and perfume with oil of rose or some other suitable odor.

Finger Nail Dressing.—Sulphuric acid, 5 drops; tincture of myrrh, 1 dram; water to make 4 ounces. For tinting finger tips, alcoholic solution of alkanet or eosin may be used.

Cold Cream with Vaseline.—(F. M. M.) (1) Melt together at a low temperature 2 ounces spermaceti; 1 ounce white wax; 4 ounces oil sweet almond; 6 ounces white vaseline, and add 2 ounces glycerine and 2 drams boric acid. Stir well. When nearly cool add 50 minims oil geranium, 50 minims oil lemon, 1 dram oil of bergamot, 20 minims oil cassia, 12 drops oil of neroli, 4 drops oil of rose. (2) Mix together 12 ounces white vaseline and 108 grains powdered white soap. Mix together 6 drams glycerin and 3 fluid ounces of water and gradually incorporate with the mixture of white vaseline and soap. Then add five drops each of oil of rose, oil of neroli and oil of bergamot. (Dieterich.) (3) Melt 3 ounces sperma-

ceti and 3 ounces white wax, then add 6 ounces white vaseline. Dissolve 40 grains powdered borax in 6½ fluid ounces of rose water and gradually incorporate the solution with the mixture of spermaceti, wax, etc. When nearly cool add 6 drops oil of rose or some other suitable odor.

Violet Ammonia.—(C. S.) Most preparations of this character consist of either coarsely powdered ammonium carbonate, with or without the further addition of ammonia water, or of a coarsely powdered mixture, which slowly evolves the odor of ammonia, the whole being perfumed by the addition of volatile oil, pomade essences or handkerchief extracts. The following are typical formulas:

(1) Moisten coarsely powdered ammonium carbonate, contained in a suitable bottle, with a mixture of concentrated tincture of orris root, 2½ ounces; aromatic spirit of ammonia, 1 dram; violet extract, 3 drams. (2) Fill suitable bottles with coarsely powdered ammonium carbonate and add to the salt as much of the following solution as it will absorb: Oil of orris, 5 minims; oil of lavender flowers, 10 minims; violet extract, 30 minims; stronger water of ammonia, 2 fluid ounces. (3) The following is a formula for a liquid preparation: Extract violet, 8 fluid drams; extract cassia, 8 fluid drams; spirit rose, 4 fluid drams; tincture orris, 4 fluid drams; cologne spirit, 1 pint; spirit ammonia, 1 fluid ounce.

Imitation Ground Glass.—(C. F. F.) wants a formula for making a solution which can be used to produce an imitation of ground glass, to be applied by dipping the glass articles in it. His customer intends to use it on lamp chimneys for gasoline lights, so the application must be something not affected by heat.

Glass may be etched by hydrofluoric acid or by hydrofluoric acid gas. The gaseous acid has the property of producing a surface which imitates ground glass in its appearance, and we presume may be utilized by giving to lamp chimneys the desired appearance. Liquid hydrofluoric acid produces clear etching. The operation should be performed in a leaden trough in which is placed a small quantity of finely powdered fluorspar. To every 2 parts of the fluorspar add 3 parts of strong sulphuric acid. Stir quickly with a wooden stick and allow it to stand in a warm place. Vapor will soon rise, over which is placed the glass to be etched. When the etching has proceeded far enough the glass, of course, must be removed. By merely dipping the glass in dilute acid (one volume hydrofluoric acid to four volumes of water) for one or two minutes, the coating and dirt are removed and the glass is left with a delicate, fine grained dull lustrous surface. It is only the concentrated acid or gas which produces a "mat" or opaque surface. Great care must be taken not to allow any of the hydrofluoric acid to come in contact with the skin as it produces most painful and malignant ulcers.

Black Drawing Ink.—(P. T.) wants a formula for "an indelible ink which seems to be composed of lampblack or some other amorphous form of carbon, suspended in a viscid, gummy solution." Try the following:

(1) Dissolve ½ ounce borax in 9 fluid ounces of water and boil with 1 ounce of shellac until nearly all is dissolved; filter and add ½ ounce gum arabic, previously dissolved in 2 fluid ounces of water. Then color with sufficient lampblack. (2) For making a deep black India ink, which will also give neutral tints in its half shades, rub thoroughly together 8 parts lampblack, 64 parts water and 4 parts finely-pulverized indigo. Boil the mixture until most of the water has evaporated; then add 5 parts gum arabic, 2 parts glue and 1 part extract of chicory. Boil the mixture again until it has thickened to a paste, then shape it in wooden moulds which have been rubbed with olive or almond oil. (3) A so-called "indelible" ink which contains no lampblack or silver salt may be made by dissolving 2 grains of gelatin and 10 grains of nigrosin in 6 fluidrams of water and adding to the solution 2 grains of potassium bichromate dissolved in 2 fluidrams of water. The ink should be kept in an amber-colored

bottle. The indelibility of this ink depends on the fact that when potassium bichromate and gelatin come together, particularly in the form of a thin film, in the presence of daylight, the film becomes insoluble in hot or cold water. If the ink "gums" on the pen, the quantity of gelatin and potassium bichromate may be somewhat reduced.

Elixir of Phosphate of Iron, Quinine and Strychnine.—(H. F. J.) There is always more or less trouble with this preparation. The proportions and combination of medicinal principles, vehicle, etc., are so nicely adjusted that any little alteration, especially the addition of water, is apt to cause precipitation. All preparations containing phosphate or pyrophosphate of iron are very susceptible to the action of light. However, as none of the formulas you have tried has proven satisfactory, we suggest you pin your faith to the formula offered by the revised edition of the National Formulary. It differs considerably from that in the first edition, and has received much favorable comment. It also has the prestige of semi-official authority, and if you closely follow the directions outlined you will have no precipitation.

A year or so ago Dr. A. R. L. Dohme recommended the following formula in a report to the Maryland Pharmaceutical Association: Soluble phosphate of iron, U. S. P., 128 grains; quinine, alkaloid, 65 grains; strychnine, alkaloid, 2 grains; phosphoric acid, 53 per cent., 15 minims; acetic acid, 36 per cent., 225 grains; ammonium carbonate, 71 grains; alcohol, 1 fluid ounce; aromatic elixir, distilled water, of each sufficient to make 16 fluid ounces of finished preparation. Dissolve the alkaloids in the alcohol, add 6 fluid ounces of aromatic elixir and then the phosphoric acid. Add the ammonium carbonate to the acetic acid, and when solution is complete add enough distilled water to bring the volume up to 6 fluid drams. Mix this solution with the solution of the alkaloids and then add sufficient aromatic elixir to make the liquid measure 14 fluid ounces. Dissolve the iron salt in one-half ounce of distilled water by the aid of gentle heat, and if the solution be acid to test paper, neutralize exactly with ammonia water; add enough aromatic elixir to this to bring the volume to 2 fluid ounces and then add the solution previously obtained and mix.

Tanning Skins with the Fur On.—(L. D. C.) Here are several processes: (1) First thoroughly wash the skin and remove all fleshy matter from the inner surface, then clean the hair or wool with warm water and soft soap, and rinse well. Take ½ pound each of common salt and ground alum, ½ ounce borax, dissolve in hot water and add sufficient rye meal to make a thick paste, which spread on the flesh side of the skin. Fold the skin in a quite moist condition lengthwise, the flesh side in, and allow to remain in a cool place for about two weeks. Open and shake out, and after removing the paste from the surface wash and dry. For a heavy skin the operation may have to be repeated. After the tanning operation is completed the skin must be stretched and the flesh side scraped with a blunt knife.

(2) After cutting off the useless parts and softening the skin in warm water take away the fatty part from the inside, and again soak the skin in tepid water for two hours. Mix equal parts of borax, saltpetre and glauber salts in the proportion of about one-third ounce of each for each skin, with enough water to make a thin paste. Spread with a brush over the inside of the skin, applying more on the thicker parts than on the thinner. Double the skin together, flesh side inward, and place in a cool place. After standing 24 hours, wash the skin clean and apply the following mixture in the same manner as before: Sal soda, 1 ounce; borax, 1-3 ounce; hard white soap, 2 ounces; melt slowly together without allowing to boil; fold together again and put in a warm place 24 hours. Now dissolve 3 ounces alum, 7 ounces common salt and 1½ ounces sodium bicarbonate in sufficient hot water to saturate the skin; when cool enough not to scald the hands soak the skin in the solution for 12 hours and then wring out and dry. Repeat the operation two or three times till the skin is sufficiently soft. The inside of the skin may be smoothed with fine sand paper or pumice stone.

(3) The following from Davie's "Methods in the Art

of Taxidermy" is recommended for small skins: When taken from the animal, let the skins be nailed in the shape of an oblong square to dry, fur side down. Before taking them from the board clean off all of the fat or oily matter with a dull knife. Be careful not to cut the skins. To tan them soak them thoroughly in cold water until soft; then squeeze out the water and place the skins in a solution made by dissolving ½ pound common salt and 1 ounce best sulphuric acid in ¼ gallon of soft water. Allow the skins to remain in the solution thirty minutes, then remove and squeeze (not wring) them out and hang in the shade, fur side down, to dry. It is said that if the quantity of the acid solution be proportioned to the skins they will need no rubbing to make them soft, and tanned in this way the moths will never disturb them.

Two "Blind" Prescriptions.—(H. G. M.) writes: "I enclose two prescriptions for comment. In that marked "No. 1" I cannot make out the first or the last ingredient, and in "No. 2" I am unable to make out any of them except the third ingredient, which I have named "oatmeal." I would like to have you give me the correct reading of the two prescriptions, and if I am at fault I am willing to "swallow" what the physician has written, and if not I would like to see what you have to say regarding his letter to his patient (and our customer). The prescriptions were brought in to me, but for the above reasons I was unable to compound them. Our customer wrote the doctor to this effect and I enclose his reply."

Here are the prescriptions:

	No. 1.
R	Tinct. Hydropip. ʒi.
	Nuc. Vom. grt. xxx.
	" Ergotae ʒiv.
	" Rutae ʒv.
	Sp. Lav. Comp.
	Vin. Gal. aa. q. s. ft. ʒiv.
M.	Sig. Thirty drops before each meal.
	M. L. Stehley, M. D.
	No. 2.
R	Fld. Ext. Liriosmae Ovat.
	" " Sabal Serruet. aa. ʒi.
	" " Avenae Saty. ʒiv.
	" " Tumarae Aph. ʒiv.
	" " Scrop. Maril. aa. ʒiv.
	Aquae (Dist.) q. s. ft. ʒiv.
M.	Sig. Thirty drops before meals.
	M. L. Stehley, M. D.

The letter of the physician to the patient referred to by our correspondent follows:

Dear Sir: I have your letter, and under the circumstances have no hesitancy in sending the treatment upon the terms you have named; the same goes forward by Adams Express. The names of the medicines included in the prescription are most of them in Latin form, and I am surprised that your druggist could not handle the prescription more readily. I have had a good many applicants report having prescriptions filled for them by their druggists and used them with every satisfaction. I gave the names of the medicines just as I would order them from my wholesale druggist. The worst feature of the druggists' preparations of them is that they do not have all ingredients, and for the sake of filling the prescriptions will substitute, and oftentimes use remedies of doubtful age or inferior grade.

Yours sincerely,

M. L. Stehley, M. D.

We do not wonder our correspondent experienced difficulty in making out these prescriptions, though the names of the medicines "are most of them in the Latin form." "Most" of these forms are not in ordinary use, however, and it is possible some of them may have been "coined" for the prescriber's particular use. Indeed the whole of the nomenclature smacks of that flavor suggested by his reference to "those remedies of doubtful age or inferior grade." The reputable physician has no need to hide his knowledge behind a subterfuge of this kind and he certainly does not write the names of medicines in prescriptions "just as he would order them from his wholesale druggist." It savors too much of quackery and "life is too short."

The first prescription we translate:

Tincture of waterpepper.....	1 ounce
Tincture of nuc. vomica.....	30 drops
Tincture of ergot.....	4 drams
Tincture of rue.....	6 drams
Compound spirit of lavender,	
Brandy, of each, a sufficient quantity	
to make 4 ounces.	

The second prescription is not so easy, the names of the first and fourth ingredients not being found in any

literature at our command. The other ingredients are fluid extracts of saw palmetto (*Sabal serrulata*), common oats (*Avena sativa*), figwort or carpenter's square (*Scrophularia marilandica*) and water.

Our correspondent should not feel badly over his inability to handle the doctor's business. The latter doesn't want his prescriptions put up by anyone but himself or some fellow who will pay him a "commission." In this manner he has a better chance to make the patient "fork up." Maybe some of our readers have met these prescriptions and can tell through these columns how they handled them. We invite their comments.

Sale of Liquor by Druggists and the Government Tax.—(G. N. D.) writes: "Some time ago I saw a statement in one of the drug journals that "no drug store can sell tinctures without paying the government tax." My total sales of alcohol, wines and liquors for legitimate purposes during one year were \$22.50. I pay for township permit \$10, for government license \$25, a total of \$35. If the above statement be true, then the \$25 should not be figured in the question of liquor sales. If it is not true, then it would be good business policy for me to drop this part of the business, as I can procure the necessary goods for customers from a saloon and thus save a direct loss. Kindly give an opinion."

A druggist does not need a special government license to sell tinctures. The settled ruling of the Internal Revenue Department on the provisions of Section 3246, R. S. amended, covers very fully the sale of liquors by druggists. We quote from the official circular: "A druggist is permitted to keep spirits and wines and use them in combination with drugs in the preparation of medicines that are not beverages and to sell such medicines without paying special tax as a liquor dealer under the Internal Revenue Laws of the United States. But under the uniform ruling of this office, and the decisions of the United States Courts, he cannot, without subjecting himself to this special tax, sell spirits or wines that are not combined with drugs or materials of any kind, taking these liquors out of the class of beverages, even when he sells the liquors on a physician's prescription and for medicinal use only.

Besides the medicinal compounds which a druggist is authorized to sell without paying special tax as a liquor dealer, although they contain alcoholic liquors, there are other compounds containing spirits which, while they are not medicines, are non-potable articles, and do not come under the head of 'distilled spirits, wines or malt liquors,' in contemplation of the Internal Revenue laws, and which, therefore, he is entitled to sell without paying special tax: e. g., toilet articles, such as cologne and bay rum, ether and alcohol for use in photography, benzine, or ether and alcohol for cleaning purposes, castor oil and alcohol for toilet use, Florida water, violet water, etc.; toilet articles made from alcohol, alcohol and camphor, alcohol and ammonia and whiting, a cleaning preparation; alcohol and shellac for painters."

As to the compounds called "bitters" and "tonics," etc., the ruling is that if they are composed of spirits in combination with drugs, herbs, roots, etc., and are held out as remedies for diseases, stated in labels on the bottles, they are to be regarded as medicines, until the facts ascertained as to the purpose for which they are usually sold or used show them to be beverages; and until such facts are obtained druggists and merchants who sell these compounds in good faith as medicines only are not required to pay special tax as retail dealers on account of such sales. Every person who sells them as beverages, either by the bottle or by the drink, or sells them knowingly to those who buy them for use as beverages, involves himself in liability to criminal prosecution under the Internal Revenue Laws, unless he holds a special tax stamp as a liquor dealer covering such sales.

FORMALDOXIM LIQUIDUM is a colorless, aqueous solution of formaldoxim hydrochloride, proposed by Bach as a reagent for detecting very small quantities of copper. It gives an intensely blue color with very dilute solution of copper sulphate containing caustic potash. The coloration is visible in dilutions of 1:1,000,000. (Pharm. Post.)

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

NOTICE TO ERA STUDENTS.

Several important announcements as to prizes, examinations, etc., will shortly be made to the students of the Era Course. Every member of the course should therefore carefully examine the contents of all letters from the Director's office immediately upon their receipt, in order that he may know the nature of all announcements as early as possible.

J. H. BEAL, Director.
Selo, Ohio.

With this issue are sent the final lectures to both Junior and Senior students. The installment of Junior lectures covers numbers 59 to 66, and of Seniors 59 to 64. The lecture work to the Juniors closes May 31, to the Seniors May 17, and very soon thereafter the questions for final examination upon the year's work will be sent out by the Director.

It has been found impossible to include all the material prepared for this course in the regular numbered lectures, several of the special papers being unavoidably crowded out. Some of these papers will therefore receive publication in the pages of the Era and will thus be accessible to all readers.

Students who desire the class pin are again urged to send in their orders at once. The supply now remaining on hand is small, and unless orders are promptly received there is likelihood that they cannot be filled. The pin is a very beautiful one in gold and colored enamels, bearing the appropriate design of the mortar and pestle and the letters E. C. P. Three styles of mounting are offered for choice, as a safety pin, stick pin or button. The price is \$2 for either style, this sum just barely covering the cost of production and mailing. Send in your orders at once.

Read This Bulletin Each Week.

HEMATIN-ALBUMIN is a new blood preparation in form of chocolate-colored, fine, almost odorless and tasteless powder, consisting chiefly (about 90 per cent.) of nitrogenous compounds having an albuminoid character. Experiments have shown the preparation in a high degree nutritive and blood-forming and because of its easy digestibility particularly adapted to supply the organism with iron and albumin. (Pharm. Post.)

CEVADINE AND CEVINE.—Cevadine has the formula $C_{20}H_{39}NO_7$ and occurs in colorless, needle-like crystals, which are easily soluble in alcohol and ether and melt at 295° C. Through the action of caustic potash cevadine is split into cevine, $C_{20}H_{39}NO_6$, and triglic acid, $C_3H_5O_2$. Cevine is slightly soluble in water, very soluble in alcohol. Cevadine is considerably more toxic than cevine. (Pharm. Post.)

FLUOROFORM AND FLUOROFORM WATER. have been found to resemble chloroform closely in their physiological effects. They are recommended by Dr. Stepp in tuberculosis. Particularly in treating peripheral tuberculosis the remedy has given good results. (Pharm. Post.)

MULBERRY LEAVES are recommended as diuretic. About 2.5 Gm. (40 grains) of the leaves are boiled with two cupsful of water and a cupful of the decoction taken mornings and evenings. (Ztsch. f. Pharm.)

MERCURIC BENZOATE has been brought to notice as having the advantage over many other mercury compounds of being easily soluble in boiling water. (Pharm. Post.)

LIQUOR COLCHICIS COMPOSITUS is composed of colchicine 1 part, extract of colocyth ½ part and sherry wine 1,000 parts. (Ztsch. f. Pharm.)

Something to Think About

Once identify yourself in the minds of your public with the idea of *full value for money*, and you have accomplished the greatest object of advertising.

Ayer's goods are the kind to help you make such an impression—honest, effective, reliable in every way. We offer you the benefit of a lifetime of progress in the building of reputation, coupled with margins which enable you to consider the advertising end of it clear gain. This means business.

Write us at any time about anything of real interest.

The J. C. Ayer Co., Lowell, Mass.

Ayer's Hair Vigor, \$1.00 size only; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00, 25c. size is a very rapid seller; Ayer's Pills, 25c., more for the money now than ever; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of pills free; Ayer's Ague Cure, 50c. now, new and improved; Ayer's Cherry Pectoral Plasters, 25c., "they take the ache."

Watch for Ayer's Comatone.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN. South Africa.

Lord Roberts's campaign plans have resulted in the relief of the beleaguered colonial troops at Wepener and the occupation of Wepeword, both important strategic points in the Free State, where considerable forces of Boers had been massed.

Intertribal hostilities in the running fight between the burghers retreating from the southern portion of the Orange Free State and General French's horsemen, and the infantry of Gens. Pole-Carew, Chermiside and Rundle. The Boers who escaped did an immense amount of damage and have now slipped off to hold the next commanding ridge through a broken country admirably suited for a rear guard defence.

All was reported well at Mafeking at last accounts. A concert in aid of the Boers given at the Metropolitan Opera House in New York Thursday night of last week netted \$5,000.

Thirteen men were killed and fifty injured last week by an explosion which wrecked the Siegburg Works in Johannesburg, where the Boer shells are made.

The British authorities have listed at Cape Town the names of 12,000 alleged rebels in Cape Colony and Natal.

A Cape Town correspondent of the London Daily Mail says that General Carrington's force is the only one going to the relief of Mafeking, and that no force of any kind is operating from the south.

General Sir Charles Warren has been appointed Governor of Griqualand.

The Boer Peace Commissioners are understood to have been disappointed by their visit to the Hague, but will visit Berlin and Paris before going to Washington.

The Philippines.

Reports from the province of South Camarines show that there has been heavy fighting with the insurgents. Hundreds have been killed, with slight American loss. General Bell has issued a proclamation warning the insurgents that if guerrilla tactics are continued he will retaliate relentlessly by burning their villages.

Several Canadian schools, protesting the action of the school boys of Philadelphia, New York and Boston in sending a message to President Kruger, have announced their intention of sending a message of sympathy to Aguinaldo.

Gen. Wheaton captured Paterno, ex-president of Aguinaldo's Cabinet, last week.

Other Foreign News.

Fire almost totally destroyed the city of Hull and consumed a large section of the city of Ottawa, Canada, last Thursday. The property loss is estimated at over \$15,000,000. Fifteen thousand persons were made homeless, and four lives were lost.

It is asserted at Constantinople that the Porte has revived the project of building a cruiser in the United States to disguise the payment of the American indemnity, and Ahmed Pasha is going to Philadelphia to negotiate with the Cramps on the subject.

James M. Barrie, the novelist, has accepted an invitation to contest the vacancy in the representation in the British House of Commons of Edinburgh and St. Andrew's Universities.

Queen Victoria returned to England from her visit to Ireland last week on Thursday. It is reported that Cartagena, Columbia, has fallen into the hands of the insurgents.

General Bravo's force of Mexican troops has had several severe engagements with the Mayan Indians in Yucatan district the last ten days, and the rebels have suffered a heavy loss in killed in wounded.

News from Venezuela says that President Castro's administration is so despot that his own troops are rising against him, and that military officers are engineering another revolution.

Viceroy Li Hung Chang has legalized big lotteries at Canton by licensing them. They will furnish revenue of nearly a million taels yearly, which he proposes to use in suppressing piracy.

Under the patronage of the King of Wurttemberg, a Marine Expedition will depart May 5 at Stuttgart.

The famine in India is spreading in spite of all efforts to relieve it. The famine stricken region embraces a population of 80,000,000 people.

Further deaths from the bubonic plague have occurred at Sydney, and signs of the disease have appeared at Auckland and Melbourne.

DOMESTIC. Congress.

The Senate, by a vote of 33 to 32, last week decided that Mr. Shuldor of Pennsylvania should not be admitted. Many think that this will be a serious blow to his power as a political leader in Pennsylvania.

Senator Mason of Illinois has introduced a joint resolution requiring the President to withdraw the forces of the United States from Cuba, so as to turn the government to the Cubans by the 4th of next July. The House last week, by a vote of 57 to 59, struck from the Post Office Appropriation bill the entire provision for the pneumatic mail tube service. The bill was then passed.

The Secretary of the Navy sent to the Senate last week a statement showing the assignment of commissioned officers in the Navy on December 31 last. Of the 882 officers of the line there were 455 on duty at sea, 365 on shore duty, 39 on leave or waiting orders, 126 on sick leave, 12 detailed on school ships and three on special duty.

Congress has made provision that the military officers in Puerto Rico shall continue their present duties until their civil successors are appointed, and has provided additional safeguards to the granting of franchises in the island.

Other Domestic News.

The total receipts of the Puerto Rican treasury for the first half of the fiscal year of 1899-1900 were \$831,304, of which sum \$667,949 came from customs.

The Nicaraguan Government has finally canceled the concession to the Maritime Canal Company to construct a ship canal across Nicaragua.

President McKinley visited Canton, Ohio, last week.

The Centennial conference of Foreign Mission Workers attracted large audiences in New York City last week.

The General Conference of the Methodist Church, which meets once every four years, will be in session in Chicago during the month of May.

The King of Sweden and Norway has offered to Assistant Secretary of War Meiklejohn the decoration of Chevalier of the Sword, on account of courtesies extended to Swedish officers during the war with Spain.

The Senate Committee on Foreign Relations has agreed to report a resolution authorizing Mr. Meiklejohn to accept.

The National Association of Manufacturers, in session in Boston, last week, indorsed the ship subsidy and reciprocity with Canada and other countries, the open door policy in China and the Nicaraguan Canal.

The Sioux Indians claim that their rations have been cut in half and money due them has not been paid in violation of the treaty, and they threaten violence.

Official reports from Honolulu to April 17 say that there have been no cases of the plague since March 31.

Six Republican State conventions were held last week, and all of them indorsed the present administration and urged the renomination of President McKinley.

The Massachusetts convention started a "boom" for Secretary Elihu Root for the Vice Presidency.

Gov. Roosevelt has appointed a commission to investigate tenement house conditions in New York City, and suggest remedies, and another commission to revise the New York City charter.

Gen. Rius Rivera, Secretary of Agriculture in the Cuban Cabinet, who wanted a time limit set upon American intervention, has resigned. He thinks that ultimately Cuba will ask for annexation, but that first it must pass through a stage of independence.

The Supreme Court has denied Capt. Oberlin M. Carter a new trial, and he has been taken to the military prison at Fort Leavenworth, Kansas.

The United States transport McPherson sailed last week for Puerto Rico with between \$400,000 and \$500,000 in subsidiary coin. This is the first instalment of the \$2,000,000 voted by Congress.

The Ishmian Canal Commissioners do not expect to complete their report before December.

SCANDAL OF THE CALIFORNIA BOARD OF PHARMACY.

Charges of corruption and malfeasance in office have been made against certain members of the California Board of Pharmacy and two of its members, Samuel L. Waller and C. A. Siefert, stand accused, the former of supplying the examination questions of the Board to a broker for the purpose of selling them to candidates, the latter, of offering to sell the questions on each subject for \$25, or \$100 for a complete set. At a meeting held April 12 the board passed a resolution to have the charges investigated by the Governor, but it is said the Executive is powerless to make an effective investigation, followed by punishment. A majority of the members of the board, W. M. Seaby, S. Oberdeener and S. Baer, are determined to prosecute an investigation and they will ask the aid of the Grand Jury.

THE DRUG NEWS.

New York and Vicinity.

BROSIOUS PURE FOOD BILL REPORTED FAVORABLY IN THE HOUSE.

On April 27 the Committee on Interstate and Foreign Commerce reported favorably the Brosius Pure Food Bill, which has been under consideration for many months. The measure is officially termed "a bill for preventing the adulteration, misbranding and imitation of foods, beverages, candies, drugs and condiments in the District of Columbia and the Territories, and for regulating interstate traffic therein, and for other purposes."

The first section states that for the purpose of protecting the commerce in food and drugs between the several States and in the District of Columbia and the Territories of the United States and foreign countries, the Secretary of Agriculture shall organize the chemical division of the Department of Agriculture into a bureau of chemistry.

The bureau is charged with the inspection of food and drug products, as provided for in the act, and the Secretary of Agriculture shall make necessary rules and regulations for carrying out the provisions of the act, under which the Director of the Bureau of Chemistry shall procure, from time to time, or cause to be procured, and analyze or cause to be analyzed or examined, chemically, microscopically or otherwise, samples of food and drugs for sale in original, unbroken packages, in the District of Columbia, in any Territory or in any State other than that in which they shall have been respectively manufactured or produced, or from a foreign country, or intended for export to a foreign country.

The Secretary of Agriculture is authorized to employ such chemists, inspectors, clerks, laborers and other employees as may be necessary to carry out the provisions of the act, and to make such publication of the results of examinations and analyses as he may deem proper.

Section 2 provides that any person sending, shipping, exporting or delivering any article of food or drugs, adulterated or misbranded, within the meaning of the act, shall be guilty of a misdemeanor, and for such offense be fined not exceeding \$200 for the first offense and for each subsequent offense not exceeding \$300, or be imprisoned not exceeding one year, or both, in the discretion of the court.

Section 5 defines the term "drug," as used in the act, to include all medicines and preparations recognized in the United States Pharmacopœia for internal or external use.

The term "food" includes "all articles used for food, drink, confectionery or condiment by man or domestic animals, whether simple, mixed or compound."

The term "misbranded" applies to "all drugs, or articles of food, or articles which enter into the composition of food, the package or label of which shall bear any statement regarding the ingredients or substances contained in such article, which statement shall be false or misleading, in any particular, and to any food or drug product which is falsely branded as to the State, Territory or country in which it is manufactured or produced."

Section 6 defines adulterations, such as the deceptive reduction or lowering of the quality or strength of articles of food, the substitution, abstraction or imitation of the specific name of other articles.

Those drug trade men who have interested themselves in the matter are not in favor of this kind of legislation, but they are not exerting any opposition to this measure, believing that there is no chance of its passage this year.

Thomas F. Main said to the Era's reporter: "I am as heartily in favor of pure food and pure drugs as any man but I believe all measures of this kind should be opposed because they give to the bureau or department charged with their enforcement such a limitless field for blackmail. Under such a law the maker of inferior or

deleterious goods would pay money to the officials, but would continue to put out the same inferior goods. The honest manufacturer would be the one to be injured. I think competition is the surest force in keeping up the standard of all manufactured goods. I know that competition has worked wonders in this respect in the drug trade."

Others in the drug trade said they were not troubling about the matter, as they were sure the bill could not pass during this session of Congress.

A MOVEMENT FOR EARLY CLOSING.

One Started by C. O. Bigelow, a Result of the Law Regulating Clerks' Hours.

Clarence O. Bigelow, president of the New York City Board of Pharmacy, and proprietor of a drug store at 102 Sixth avenue, has started a movement for earlier closing of the drug stores in New York City. The end of last week he sent out fifty post cards to the druggists in the Eighth, Ninth and Fifteenth Wards, on which was printed the following:

"Dear Sir—As the law regulating the working hours of the drug clerks in this city is now in force, requiring a re-adjustment of their hours of service, the time appears opportune for an early closing movement throughout the entire territory. To this end it is suggested that the pharmacists in the Eighth, Ninth and Fifteenth Wards take the initiative and close at 10 p. m. from May 1 to October 1, and at 9 p. m. during the other months of the year. You are requested to notify the undersigned if such an arrangement or modification of the same is acceptable to you."

This was signed by Mr. Bigelow, and sent with a reply card. Up to Monday noon about half of the druggists to whom this card had been sent had answered. All of the answers received, except one, were favorable to such an arrangement.

Charles A. Osmun, of 13 Seventh avenue, as soon as he received Mr. Bigelow's card, answered it favorably and set about inducing others to do likewise. In speaking of the movement, Mr. Osmun said:

"Our principal reason in inaugurating this early closing movement is to do away with the necessity of employing additional clerks, which we would have to do under the new law if we kept open late at night. The law says that a clerk in a drug store must not work more than 136 hours in two weeks, and he must get 24 hours off every two weeks. This would mean an additional expense to us and one which we can ill afford. There is no reason why people should not buy their drugs during the day or early in the evening, just the same as they buy their groceries and meats. The people must be educated up to the new order of things. We have decided to confine our efforts at first to our own neighborhood, but eventually we hope to extend the movement throughout the entire city. In cases of emergency there is always somebody on the premises who can fill a prescription at any time and there is no need to keep a store open simply to fill emergency prescriptions. There are not now as many emergency calls as in past years. Physicians carry emergency remedies in their satchels, and the druggist is not needed usually until morning."

Renben R. Smith is not in the district selected by Mr. Bigelow for trying the experiment, but he is heartily in favor of early closing. He said: "Formerly I kept open until 11 o'clock, 11.30 and sometimes 12, but a year ago I stopped and tried to get my neighboring druggists to join with me in closing earlier. Many promises were made but none was kept. I tried closing at 10 o'clock, but my customers complained that I was not accommodating, so I was forced to keep open until 10.30. I have been closing at that hour for the past year. But that is too late. There is no reason why the drug stores should

not close at 10 o'clock and earlier still in winter. It is simply a matter of letting the public know that you will close early and sticking to it individually. I have no hopes of doing much of anything through agreement, unless the leading druggists of the whole city bind themselves to close early. If the majority enter upon such an arrangement the other fellows will have to follow suit."

NEW YORK CITY DRUGGISTS ON THE NEW LAW.

New York City druggists, for the most part, are well pleased with the new pharmacy law. Clarence O. Bigelow, president of the City Board of Pharmacy, regards it as the most far reaching and elevating legislation that has ever touched the drug trade of this State. He said: "It has three distinct advantages. First, it unites the pharmaceutical boards; second, it raises the class of drug clerks, and third, it gives them shorter hours. The new board will be composed of fifteen men, as heretofore, and they will have three separate districts in the State, but, instead of having three different rules, the three boards will have the same laws and rules of government."

William Muir, who was president of the New York Pharmaceutical Association when the measure was approved by that body, said:

"It will do much to improve the conditions of the pharmacist and will be of great benefit to the pharmacist and the public alike. The new Board of Pharmacy will have the power to yearly license pharmacists, and only a licensed pharmacist can open or maintain such a store. It has also the power to prohibit the adulteration and substitution of drugs and medicines. I approve most heartily of both of these provisions. The law is a good one, and gives to this city many of the improvements we have been trying to obtain by charter revision. It is an advance for the whole State over the previous pharmacy laws. I am glad it passed."

Charles A. Osmon, of 13 Seventh avenue, said: "I have always been in favor of an all-State pharmacy law. This one is in many respects a compromise, but still it is an improvement over existing laws. In matters of this kind advance often has to be made by means of compromise. The board of fifteen members appears to me to be rather unwieldy, but there is considerable advantage in having regulations for the practice of pharmacy, examinations, registration, etc., uniform throughout the whole state.

Reuben R. Smith, of 198 Ninth avenue, said: "I am waiting to see a certified copy of the new law before I say much about it, but I believe it is an improvement over the old law."

THESE PASSED THE N. Y. CITY BOARD.

The following named candidates passed the last examination by the New York City Board of Pharmacy, held on April 16:

Joseph P. De Gregori, Adolph L. Goelz, Everett S. Howell, Joseph J. Huether, Martin Krom, Max Mahler, Robert McCullagh, Otto Safarik, Isidore Streiffner, Richard G. Todd, Henry S. Webster, Ludwig Blaspaun, William H. Bonnett, Herman Brandner, Ambrose R. Brochu, Frank A. Cade, John W. Casey, John E. Collins, Fred. Christ, Alfred d'Annunzio, Arthur F. Decker, Louis B. Decker, Simon S. Goldner Samuel Halper, Charles Heller, Jr., Frank A. Hunold, Oscar G. Hutchings, Meyer Isaacs, Henry A. Klingler, Eleanor Knoop, Robert S. Lehman, Francis X. Lynch, John F. Manning, Gibson P. Minckler, William Mindlin, Lawrence A. Murphy, Benjamin O'Kane, Thomas O'Neill, James F. Paisley, Edward F. Pfaff, Jr., Adolph J. Poll, Fred. Prager, Carmine Pugliese, Chas. F. Richter, Albert W. Schaefer, Sarah Silverman, Joseph Sokol, Walter P. Stowe, Samuel Strahl, Moses M. Strauss, Abraham Weinstein, Chas. A. Thompson, Sam. J. Weidenhamer, Rudolph Zahn, Martin S. Jewell.

Secretary Faber furnished the following statistics about the month's candidates:—

Nationalities: United States, 56; Russia, 18; Germany, 5; Great Britain, 6; Italy, 3; Austria, 3; Scandinavia, 2; total, 93.

Passed at 1st examination, 5; at 2nd, 36; at 3rd, 4; at 4th, 4; at 5th, 2; at 6th, 2; at 7th, 1; total passed, 54.

Rejected at 1st examination, 9; at 2nd, 14; at 3rd, 5; at 4th, 6; at 5th, 1; at 6th, 2; at 7th, 1; at 9th, 1; total rejected, 39. Thirty-seven senior students of the New York and the Brooklyn Colleges of Pharmacy passed at this examination.

DRUGGISTS AND DOCTORS DANCE.

The New York County Medico-Pharmaceutical League celebrated the completion of the first year of its existence by giving an entertainment and ball on Thursday evening, April 26, at American Star Hall, No. 165 East Broadway. The members and their friends turned out in force, and the affair was an enjoyable and successful one for all. The entertainers included Maud Le Mout, Joe Lester, Masters David and Joseph Rappoport, J. Lerner, Joe Brown and Bert Cooper. Addresses were made by A. S. Rosenthal and Dr. Thomas H. Manley. Dancing followed the entertainment and lasted until an early hour of the morning. The celebration was so enjoyable every way that the officers of the League decided to make it an annual affair. Its success was due to the effort of the following committee, which made the arrangements and carried them out:

Arrangement Committee.—Dr. Thomas H. Manley, chairman; Dr. J. Gutfreund, Dr. W. Mason, Dr. Louis Rosenthal, Dr. I. Levy.

Reception Committee.—B. Mishking, chairman; Dr. J. Broder, Charles S. Rosenthal, Esq.; J. Massell, Esq.; Dr. H. Goldberg.

Floor Committee.—Dr. Louis Rosenthal, floor manager; G. Ginsberg, Esq.; Dr. I. Levy, Dr. J. Gutfreund, Dr. W. Mason.

BROOKLYN COLLEGE OF PHARMACY GRADUATING CLASS.

The commencement exercises of the Brooklyn College of Pharmacy were held last night (Wednesday) at the Brooklyn Academy of Music. A full report of the exercises will be printed next week. The names of the graduating class follow:

Diplomas.—Emil Beyer, Ida F. Bougher, John M. Buckley, Frank A. Cade, John E. Collins, Leo Degenstein, Joseph P. De Gregori, Louis Finkelstein, Flora C. Fuhs, Nathaniel I. Gillman, Henry L. Goetting, Robert Kasdan, Arthur E. King, George Lindner, James Livson, Helen L. Murray, John Oppel, Solomon Robinson, Peter Riebling, Edward I. Steele, Robert J. Watson, Everett S. Howell, Barnet Kopolwitz, Robert L. Mead, Frank L. Kirchoff, John C. Bassenschutt, Paul Caplan, Christian Eckelkamp, Frederick A. Muller, John Schmitt, Wm. Campbell, Jr.; Helen Mal, George Stockvis, Simon Volet, John H. Witzenger, George N. Lawrence, E. J. Dobbins, Clinton S. Ramee, Frederick Schroeder, Jr., John J. Gillen, Max Altheimer, Charles Dichter.

Certificate Students.—Adolph G. Goelz, Otto Huener, Joseph J. Huether, Meyer Isaacs, Halsted James, Rosie Karp, Edward Kléne, Henry E. Licht, George E. Neuschaefer, George H. W. Reither, Frederick W. Schlagenhaut, George P. Schmitt.

MANHATTAN ASSOCIATION COMMITTEES.

President Reuben R. Smith, of the Manhattan Pharmaceutical Association, who was re-elected at the annual meeting of that association two weeks ago, announces the appointment of the following new committees for the ensuing year:

Committee on Legislation—T. J. Keenan, A. P. Kerley and Otto Boeddicker.

Committee on Finance—A. C. Searies, R. W. Sayer, Sidney Faber.

Committee on Grievance—A. E. Gebhard, Wm. H. Poor, Wm. Schaff.

Committee on Trade Interests—Charles S. Erb, S. F. Haddad, F. O. Collins.

Committee on Entertainment—Wm. H. Ebbitt, John C. Denner, Clarence O. Bigelow, George C. Diekmann, Wilbur F. Rawlins, W. H. White, David Costello, M. Rafter, F. N. Pond and Leo W. Gelsler, Jr.

ALUMNI DAY AT N. Y. C. P.

"Alumni Day" was celebrated in accordance with a time-honored custom at the New York College of Pharmacy, on Wednesday, April 25. The programme on this occasion consists of an entertainment provided for the students by the Alumni Association. The amphitheatre of the college was filled by the students and their friends, who enjoyed equally the programme of songs, violin music, recitations, etc., and the fun they made themselves. The address to the students was delivered by Charles S. Erb, president of the Alumni Association, and the Alumni prizes to junior students were presented by Dr. George C. Diekmann. The committee which arranged and carried the entertainment through successfully comprised Edward A. Meinecke, Frank N. Pond, E. L. Remel, E. F. Lohr and Fred. Borggreve.

LOOK OUT FOR R. J. LOWENSTEIN.

R. J. Lowenstein, of No. 72 Beekman street, is the latest name to be added to the Era's directory of dead beats. This man claims to be doing an importing, exporting and commission business in drugs, chemicals, etc. He has been buying goods on credit from firms in various parts of the country, and immediately placing these goods on sale in New York at considerably lower than the market prices. The manufacturers whose goods have been obtained and so handled by him have not been able to collect their bills against Lowenstein. Readers of this journal are warned against dealing with him.

RECEIVER ASKED FOR GREGG, STEVENS & CO.

Gregg, Stevens & Co., of 164 Market street, Newark, N. J., and 223 Washington street, New York, whose crooked business transactions were exposed in this journal two weeks ago, have been brought to court. On Tuesday Michael T. Barrett, as solicitor for the complainants, applied to the Court of Chancery of New Jersey for the appointment of a receiver for Gregg, Stevens & Co. Among the victims of the concern are several firms in the drug trade, as well as many grocery houses.

NOTES.

—On May 7 will begin the work of tearing down the buildings now occupied by the Mallinckrodt Chemical Works, which is to build at once a modern eight-story structure on the property occupied by it for the past sixteen years at No. 90 William street and extending through to Platt street. Two buildings will be erected, but these will be connected on the ground floor, all of which will be occupied by the Mallinckrodt people. The William street part of the building will be used for office purposes and the Platt street part for the storing, packing and shipping of goods. The firm will probably use all or nearly all of the upper floors in the Platt street building, but the upper stories of the William street part will be rented for office purposes. Work on the new building will be rushed as rapidly as possible. Manager Henry T. Jarrett, of the New York branch of the concern, says he hopes to be doing business in the new building in six months.

—J. L. Lascoff, proprietor of the drug store at Eighty-third street and Lexington avenue, was caught last week by the trick which was played on the manager of Baumgarten's pharmacy, as reported in this journal last week. He sent his errand boy with two bottles of seltzer and change for \$5 to the same house, No. 256 West Fifty-ninth street, and the boy placed the seltzer and the money on the dumb waiter on the strength of the promise that a five dollar bill would come down in return. Of course he never saw the five dollar bill. Thomas Burtie, nineteen years old, who lives in the house, and who was charged with working the trick, was arrested and held for trial by Magistrate Meade.

—On May 1 Fairchild Bros. & Foster moved into their new building at the corner of Washington and Laight streets. This new building is a ten-story fireproof structure, which was put up specially to meet the needs and requirements of the firm, which will occupy all parts of it. The ground floor is to be used for the packing and shipping departments. The officers of the firm will occupy the second floor and the rest of the building has been arranged for use as a chemical laboratory and for the

various manufacturing processes employed in preparing the products of Fairchild Bros. & Foster.

—The Adolph Levy Company last week moved its pharmacy from 125 Grand street to 313 Bedford avenue, corner of South Second street, Brooklyn. In the new place the company has more space and better facilities. The basement will be used as a pharmaceutical laboratory and one of the floors of the building will be used for the handling and sale of surgical instruments and eyeglasses. One room has been especially arranged for the testing of vision by experienced assistants. Frank Schaefer, who is president of this year's graduating class of the New York College of Pharmacy, is to have the management of this branch of the firm's business.

—Among the out-of-town visitors in the New York Drug Market during the past week were C. A. Rugg, Jamestown, N. Y.; Dr. J. S. Pollmer, Milton, Pa.; Steward Flagler, Stroudsburg, Pa.; Henry Woodward, Middle-town, Conn.; George A. Kelly, Pittsburg; D. W. Humphrey, Scranton, Pa.; W. D. Fallman, Syracuse, N. Y.; F. S. Henry, Cleveland, Ohio; John W. Doe, Bar Harbor, Me.; F. J. Ostrofsky, Bridgeport, Conn.; Samuel Davis, Boonton, N. J.; T. S. Armstrong, Plainfield; S. Roos, Boston.

—Mrs. Elizabeth Gower, of Lincolntonville, S. I., was killed last week by a dose of hellbore administered by her daughter in mistake for licorice powder. Two packages of powder had been left side by side in a closet, one containing the licorice powder and the other the deadly drug. Margaret Gower, the girl who made the mistake, was arraigned before Magistrate Croak at New Brighton. He was convinced that the poisoning was accidental, and paroled her until the coroner's inquest.

—M. J. Breitenbach, head of the M. J. Breitenbach Company, has gone to his old home in Georgia for a few weeks of rest and recreation. A few days ago Mr. Breitenbach presented to the City of Albany, Ga., where he was born, a new flag pole 100 feet high, a mammoth United States flag and a full set of State flags, signal flags, streamers, etc. There was a great celebration in the town the day the new flag pole was raised.

—A petition of involuntary bankruptcy has been filed against J. F. Smith & Co. (corporation), formerly manufacturers of patent medicines, at 681 Sixth avenue. The petition is made by C. H. Williams for several creditors whose claims comprise notes of the corporation. It was represented that the corporation was insolvent and owes over \$10,000. The firm of J. F. Smith & Co. was incorporated in 1890 with a capital stock of \$120,000.

—F. E. Holliday, of Topeka, chairman of the N. A. R. D. Executive Committee; Alfred E. Rose, of the J. C. Ayer Co., of Lowell, Mass.; C. I. Hood, of Lowell; Chas. H. Pinkham, of Lynn, Mass.; A. E. Richardson, of Burlington, Vt., and H. L. Kramer, of Chicago, were among the early arrivals the first of the week to attend the annual meeting of the Proprietary Association which is being held at the Waldorf-Astoria Hotel.

—John F. Sprague, manager of the traveling force of Sharp & Dohme, has started on an extensive trip through the West and South in the course of which he will call on the jobbing druggists in Pennsylvania, Ohio, Kentucky, Tennessee, Arkansas, Louisiana, Georgia, Alabama, Mississippi, Oregon, North and South Carolina, Virginia and West Virginia. He will be away about a month.

—Walter S. Rockey is moving his drug store from 503 Eighth avenue one block lower down to the corner of Eighth avenue and Thirty-fourth street, where he has secured the store formerly occupied by Emil Brunor's "Red Cross Pharmacy." This will give him larger and better quarters than he had in the old store.

—W. W. White, for several years preceding last June with the Roessler & Hasslacher Chemical Company, but since that time in the employ of the Emerson Drug Company, on May 1 returned to the Roessler & Hasslacher Chemical Company to take charge of that firm's selling department.

—Incorporation papers have been filed at Albany by the Bruckmann Chemical Company, of Brooklyn, which has been organized to carry on a drug business on a capital of \$25,000. The incorporators named are T. T. Bruckmann, S. Bruckmann, Louise Heeren and A. Heeren.

—James E. Davis, of the wholesale drug firm of Williams, Davis, Brooks & Hinchman Sons, of Detroit, spent a few hours in New York on Monday calling on friends in the trade. He was on his way from Atlantic City, where he had been spending ten days with his family.

—The Renova Medical Company, of Jersey City, has been incorporated in New Jersey to manufacture drugs, etc., on a capital of \$50,000. The incorporators are F. W. Pugsley, S. E. McManus and F. W. Bendsley, all of Jersey City.

—W. T. Finkel, for eight years past salesman for John C. Wiardi & Company, on May 1 left that concern to take a position with the Harshaw, Fuller & Goodwin Company, the Cleveland, Ohio, and New York manufacturers and importers.

—Jacob Bernard, who was formerly a drug clerk in the employ of George Minrath, at 365 Amsterdam avenue, is preparing to open a new pharmacy at the corner of Broadway and 107th street, Manhattan.

—Mrs. Rosa Levy, who owns the F. E. Roen pharmacy, at 521 Sixth avenue, Manhattan, and her daughter, sailed for Europe the first part of the week to visit the Paris Exposition and other interesting places.

—Wm. J. Gesell, of Lehn & Fink, who has been abroad in the interests of that firm for the past two months, sailed for home on the Kaiser Wilhelm der Grosse, which left Southampton on April 25.

—Henry Dalley, Jr., and Edwin H. Burr, of Lazell, Dalley & Co., spent the greater part of last week in Boston attending the annual convention of the National Association of Manufacturers.

—G. V. Johnson, formerly head clerk in the pharmacy of Duryea & Conover, at Freehold, N. J., has accepted a position as manager of the drug store of C. A. Pittinger, in Englishtown, N. J.

—C. F. Richter, of this year's graduating class at the New York College of Pharmacy, has accepted a position in the drug store of O. Doepfner, at 240 Lexington avenue, Manhattan.

—F. A. Seaman, the Perth Amboy, N. J., druggist, has just returned from Florida, where he has been spending the last three months riding his bicycle and recuperating his health.

—Jacob Israelson and another under the firm name of the Cantor Drug Company, have just opened a new drug store at 85 Leonard street, corner of Johnson avenue, Brooklyn.

—J. L. Hopkins, head of the drug importing house of J. L. Hopkins & Co., has been spending the past week with his family visiting Baltimore, Washington and Philadelphia.

—A. M. Jones, who has a pharmacy at No. 110 Sands street, Brooklyn, will open a new drug store at the corner of Seventh avenue and 141st street, Manhattan, about May 15.

—Martin Kuhn, formerly manager of Balluff's pharmacy, at 495 Columbus avenue, has bought the drug store from Adolph Muench, at 66 First avenue, Manhattan.

—F. H. Nowill, formerly proprietor of a drug store at White Plains, is opening a new pharmacy at the corner of Carleton and Lafayette avenues, Brooklyn.

—Wm. R. Warner, of Philadelphia, attended the Boston convention of manufacturers last week, and on his return spent Sunday in this city.

—Mahlon N. Kline, of the Smith, Kline & French Company, of Philadelphia, made a business trip to this city the end of last week.

—Wm. M. Warren, of Detroit, manager of Parke, Davis & Co., and P. E. Hall, auditor, have been spending several days in the city.

—Charles A. Marsh, on May 1, moved his drug store from 47 East 125th street to the corner of Fifth avenue and 131st street.

—L. A. Behn is preparing to open a new drug store at 729 Bushwick avenue, corner of Hart street, Brooklyn.

—On May 1 Philip Jackson moved his pharmacy from 1293 Fulton street to 546 Nostrand avenue, Brooklyn.

—S. L. Neier has severed his connection with the Red Cross Drug Company, of Dover, N. J.

—A. Slutzkin has bought the drug store of Kogan Bros., at 100 Manhattan avenue, Brooklyn.

—C. A. Pittinger has bought the drug store of A. E. Gammidge, at Englishtown, N. J.

—L. A. Behn has sold his drug store at 209 Avenue A to Eugene Gordon.

IN AND ABOUT BOSTON.

A BIG TIME AT LOWELL.

A Reception by the J. C. Ayer Company Attended by Many Notable People in the Drug Trade and in All Walks of Life.

Inspection of Plant is Followed by a Banquet with Fine Addresses.

Boston, April 25.—By invitation of the J. C. Ayer Company, of Lowell, a large company of guests assembled at the company's big patent medicine manufactory in that city on Monday afternoon and evening, April 23, to inspect the large new plant just opened. Everything which in any possible way could contribute to the comfort and general welfare of the guests had been carefully studied, and was perfectly carried out under the personal supervision of Alfred E. Rose, the treasurer and general manager of the company.

A large company went up from Boston, and there were many other guests from Lowell, especially the druggists of that city, and from other places. Even the far West was represented, Frank E. Holliday, the chairman of the Executive Committee of the National Association of Retail Druggists, being here from Topeka, Kan., to attend this reception. The Boston party went up in special Pullman cars in the middle of the afternoon, and when "good night" had been said they were all sent back to Boston by a special train.

On arrival at Lowell the party joined other guests already on the scene, and a carriage drive was provided, that Lowell's good points might be seen. Upon arrival at the Ayer plant, an immense place, the visitors were taken in detachments, under the guidance of appointed leaders, through the most interesting parts of the manufactory. The new offices, where guests first were received and where the banquet later was served to fully one hundred and fifty or more, came in for much praise because of the size and general look of comfort. The offices are large and especially well lighted. The printing office, which the company conducts for its own needs, is a most interesting place, and to see the various kinds of wrappers, circulars, almanacs and like matter thrown off from the presses by thousands and thousands under the latest improved methods of printing, is an object lesson of value. The exhibition room, where all kinds of printed matter and advertising posters are shown, attracted general attention, and the guests while in this department were given ample opportunity to refresh themselves previous to dinner. The big engine room, with its immense wheels and with everything as clean and fine looking as if it were a drawing room, instead of a mechanical department, proved an instructive sight. The electrotyping department and the storage rooms, the mixing rooms with big tanks and pungent odor of herbs and fine smelling things; the pill room, with seemingly millions of these helpful little things; the filtering room for the Sarsaparilla and Pectoral, the Hair Vigor department, and indeed, apparently the entire plant over which visitors were shown, all proved a novel experience to almost everyone, and admiration was expressed on all sides.

Later dinner was served, and in a most admirable way, the menu being one which would have done credit to any first-class hotel in Boston, New York or any city. The service was excellent, and seldom does one hear finer or more appropriate music than that played by the orchestra (Hibbard's, of Lowell, so the dinner souvenirs announced). Treasurer Rose presided, and after cigars had been lighted, he opened the exercises in an interesting speech of welcome that met with hearty recognition and applause. Seated beside him

were Col. Taylor, of the Boston Globe, and Stephen O'Meara, of the Boston Journal, both of whom were among the speakers of the evening. Others at this head table included Hon. George A. Marden; Jeremiah Crowley, the Mayor of Lowell; Col. Butler Ames, Prof. E. L. Patch, Prof. W. G. Gregory, of the Buffalo College of Pharmacy; Prof. Irving W. Fay, of Brooklyn Polytechnic Institute; Dr. H. F. Walcott, chairman of the Massachusetts State Board of Health; C. F. Nixon and Amos K. Tilden, well known druggists, who are members of the Massachusetts State Board of Registration in Pharmacy; Dr. C. P. Flynn, president of the New England Pharmaceutical Association; Chairman Frank E. Holliday, of the Executive Committee, National Association of Retail Druggists; Senator William H. Lott, Senator Ray, Senator Harrington, Representative William D. Wheeler, a Boston druggist; Frank A. Davidson, president of Theodore Metcalf Company, Boston; Fred L. Carter, of Carter, Carter & Meigs, Boston; John A. Gilman, of Gilman Bros., Boston; Bernard Jenney, Jr., of the Eastern Drug Company, and George F. Kellogg, of the same company, Boston, together with many others of distinction.

Besides Treasurer Rose, the speakers included Mayor Crowley, Gen. Taylor, John A. Gilman, Fred L. Carter, Hon. George A. Marden, Frank A. Davidson, Stephen O'Meara, Frank E. Holliday, Profs. Gregory, Fay and Patch, and one or two others. Each was most interesting, and each had something to say which was greatly to the credit of the company whose guests they were. All the speakers recalled some little personal experience in which the Ayer Company had played a part, and demonstrated that the record of integrity of the house had been established from its very start and retained, in the estimation of the trade, to the present time, with no doubt whatever of the future. The office where the banquet was served to the hundred and fifty or more who gathered about the tables, was prettily decorated for this occasion, and the tables were bright with flowers and shining candelabra with lighted wax candles.

Candy and Cigar Firm Well Known to Druggists Falls.

Boston, April 28.—This week has brought about the assignment of the long-established candy and cigar firm of B. P. Clark & Co., Cambridgeport, known to every druggist in Boston as well as throughout New England. The Clark wagons from which druggists are supplied with confectionery and cigars are still familiar sights in all places in New England, just as they have been during two score years. Considerable surprise came to the trade in the announcement that this old-time firm had assigned to Willard A. Bullard, president of the First National Bank of Cambridge, and Walter M. Lowney, president of the Walter M. Lowney Company, manufacturing confectioners. The present firm, composed of E. C. Wheeler and William F. Alley, now finds itself unable to meet its obligations at maturity; therefore, to protect all their creditors, they have made this assignment of all their estate without preference to the above-named assignees. An account of stock is now being taken and a schedule of indebtedness and assets is being prepared. When finished, a meeting of creditors will be held.

Both members of the firm are personally well liked and there seems to be a general disposition to help them in every way to make possible some settlement later which will enable the firm to continue in the business with which this house has for so long been identified.

Spoke on Chemistry of Dyes.

Boston, April 28.—At the three hundred and sixty-sixth corporate meeting of the Boston Scientific Society, the technicalities of coal-tar dyeing were shown by Arthur Elson, a well-known specialist. Mr. Elson first outlined the method of producing various products from coal tar. Some of the distillations of the tar are familiar to many, for example benzene and the ill-smelling naphthalene. Others are less known excepting to chemists. There are seven products, including the two named, which are the basis of the colors and by chemical combinations and substitutions hundreds of commercial dyes are made. From certain combinations come the aniline dyes and from other combinations the alizarines. In conclusion, Mr.

Elson showed practically the processes of dyeing, securing series of pleasing tints.

Fred'k Ayer Acquires More Property in New York.

Boston, April 28.—Frederick Ayer, of the great Lowell medicine company, has recently bought the annex to the Hotel Victoria property, Broadway and Twenty-sixth street, New York, from the former owners, John Ritchie, 2d, and Samuel Ritchie, Elizabeth Lewis and Amelia and Rosa G. Ritchie, of Boston and Newton. That property had been sold was known a few weeks ago, but since then there has been much secrecy regarding the identity of the buyer, who now turns out to be Mr. Ayer. The consideration named in the deed is merely "nominal," but the revenue stamps affixed show the price to be \$382,500.

Chairman Frank E. Holliday in Boston.

Boston, April 28.—There was a fair attendance at the April dinner of the Boston Druggists' Association held at Young's Hotel. The president, G. W. Cobb, presided. After dinner the association listened to an interesting talk by R. L. Richardson, on his recent trip to Mexico and Cuba. Among the guests was Frank E. Holliday, of Topeka, Kan., chairman of the Executive Committee of the National Association of Retail Druggists.

NOTES.

—Clerks in Stanley's drug store at Beverly proved of great help to a young lad of ten years who recently was the victim of a painful accident. He tried to catch on to a moving team, but missed his hold and fell to the pavement, tearing one side of his face in many places and gouging a big piece of flesh out under the eye. The boy was taken into the drug store where the wound was dressed and where he was relieved until a doctor arrived.

—C. W. Bass, the Putnam Square, Cambridge, druggist, has recently had a sorry experience with a new clerk. Mr. Bass's assistant found the new clerk one evening counting the money in the cash drawer. He said that he was counting it to make sure it would be all right in the morning. The next morning, however, \$20 were missing, and the new clerk also had disappeared. Later he was arrested and sent to the Concord Reformatory.

—At the first session of the Superior Court, before Judge Lawton, Ralph P. Hoagland, a wholesale druggist and dealer in paints, etc., sued Daniel E. Parker, a traveling salesman, for the sum of \$64, which he claimed Parker owed him. The defendant filed a declaration as an offset claim and the jury, instead of finding a verdict for the druggist, returned one of fourteen cents in favor of the Mr. Parker.

—After a varied career in the Klondike, Arthur Whitcher is again to be found at the "Old Reliable" drug store in Winter's Bank block, Woburn, a store that he owned and ran successfully before selling out to Mr. Wilcox two years ago, when the Klondike fever broke out. He has bought back his old stand and is again established there. He has rechristened the store "The Pillbox."

—Mr. Coombs, who has a drug store on Cambridge street, near Inman square, in the University City, allowed a man to go into his cellar the other day, ostensibly to shut off the water from a neighboring place. Whether the water was shut off does not interest Mr. Coombs so much as the fact that, soon after the man's departure, \$40 in cash were missing from the money drawer.

—Henry A. Miner, of Miner & Miner, druggists at Malden, is back home again, after nearly six months passed in the South, particularly Florida, Cuba and Jamaica, for the benefit of his health.

—This week's exports at the Port of Boston include among other things, drugs and chemicals, \$11,760; india rubber manufactures, \$4,071; tobacco, \$1,890; wax, \$1,901; spirits, \$22,430.

—Because he is to retire from the drug business, the stock, fixtures and good will of Charles F. Rogers, 663 Main street, Waltham, are to be sold out at auction.

EMIL GEBHARDI, proprietor of a drug store at No. 1046 First avenue, New York City, died suddenly on April 27. He was a member of the German Apothecaries' Association, and had been in the drug business in New York for many years.

PHILADELPHIA.

\$5,000 Verdict Against T. J. Husband.

Philadelphia, April 28.—The suit for damages which was brought some months ago against Thomas J. Husband, Jr., son of the late Thomas J. Husband, who made a fortune in calcined magnesia, was rendered void because of a legal technicality. Last week the plaintiff, Lida E. Delaney, again entered suit for \$25,000, claiming that after several decades of courtship, which had been prolonged on account of the opposition of the defendant's father, the defendant's love had grown cold and he had not only refused to marry the plaintiff, but had married another. About a bushel of love letters (300 in number) and an engagement ring which the plaintiff claimed to have received from Mr. Husband in 1873, were important features among the exhibits. After being out several hours the jury brought in a verdict of \$5,000 damages for the plaintiff. The case will be promptly appealed by the defendant.

NOTES.

—The first month's series of botanical excursions for the field class in botany of the P. C. P. has been announced by Professor Kraemer, the director, as follows: May 2, Cedar Grove, Pa. Leave Reading Terminal at 2.13 p. m., returning at 4.17 p. m.; fare 25 cents. May 9, Swarthmore, Pa. Take Angora car on Walnut street and meet at Angora Junction at 2 p. m. to take trolley for Swarthmore; fare 20 cents. May 16, Upper Wissahickon. Take Chestnut Hill car on Eighth street and meet at junction of Chestnut Hill and Norristown trolleys at 2.30 p. m.; fare 10 cents. May 23, Haddonfield, N. J. Leave Market street ferry at 2 p. m.; fare 25 cents. May 30, University Botanical Gardens. Meet at Biological Hall, University of Pennsylvania, at Thirty-eighth and Spruce streets, at 2 p. m. The trips on May 2 and 9, which occur during Professor Kraemer's attendance at the meeting of the Revision Committee of the U. S. P., will be conducted by Charles H. Lawall.

—The action of the N. A. R. D. in cutting the Philadelphia Wholesale Drug Co. off the rebate list came as a surprise to many persons, as the understanding was that existing conditions should be left undisturbed, which was interpreted to mean that such organizations which were in existence at the time of the formation of the N. A. R. D., would be exempt from such action. The Philadelphia Wholesale Drug Company has passed the experimental stage and was included in the list of accredited wholesalers drawn up by the local association. The movement against it is said to have originated in New York on account of the precedent it established by its unusually successful career. The parties who are interested in the company say they will not retire from business, however, on account of this action, and some interesting features are looked for at the annual meeting of the N. A. R. D. this year.

—An Easton, Pa., youth named Stewart, who recently absconded with \$1,700 from the bank in which he was employed, went to Denver, Col., and succeeded in passing himself off as a son of John Harrison, the wealthy chemical and paint manufacturer of Gray's Ferry road, Philadelphia. He was entertained royally by the 400 of Denver for several weeks, when his holiday was abruptly interrupted by his arrest, followed by a trip to Philadelphia, where he now has apartments in "Moyamensing."

—The committee appointed at the March meeting of the Philadelphia Association of Retail Druggists to confer with the officials of the Bell Telephone Company with reference to the granting of certain concessions to druggists who have pay stations, has not yet been able to report anything as the matter has been held up by the Telephone Company ever since the first conference, when things seemed very auspicious for the druggists.

—A Hungarian miner, crazed by a thirst for liquor and having no money with which to purchase a drink, stole a quart bottle of bay rum from the drug store of Charles Smith, of Altoona, Pa. He went out and after drinking the whole quart dropped to the pavement in an unconscious condition and died shortly afterward.

—Herman C. Slegle, who clerked with John P. Frey at Tenth and Dickinson streets during the years of his college attendance, has resigned and will return to his home in Peoria, Ill., where he has accepted a position in the store of R. D. McDougal.

—The drug store of George Davis at Centra, Pa., narrowly escaped destruction by fire a few weeks ago, when a number of adjoining properties burned, several of which were owned by Mr. Davis.

—The ratio of clerks wanted to positions wanted is getting back to its normal position again since college closed. There were thirty-five clerks advertised for this week and forty-six positions wanted.

—Dr. Charles Rice, chairman of the Committee of Revision of the U. S. Pharmacopœia, stopped over for a day or so in Philadelphia to see Professor Joseph P. Remington.

—Robert McNeil is opening a new store at Front and York streets, making three stores which he now has within a radius of six blocks.

—C. H. Hauber, a graduate of this year's class at the P. C. P., has accepted a position with Emil Yungmann, Sixth and Green streets.

—Ernest Reiber, with E. G. F. Miekley, at Twenty-eighth street and Girard avenue, spent last week at Ocean Grove, N. J.

—H. E. Kilgus, of Renovo, Pa., is now with H. H. Deakney, corner of Pacific and Kentucky avenues. Atlantic City, N. J.

—Wm. E. Ridenour, formerly chemist with the Smith, Kline & French Co., is now analytical chemist with Lord & Company.

—Jefferson Miller, a pharmacist from Reading, spent a day or so in Philadelphia this week.

—A new store is being fitted up at Third and Green streets by J. L. Joffe.

BALTIMORE.

Commencement Week.

Baltimore, May 1.—This has been commencement week for the Maryland College of Pharmacy. The institution has turned out the largest class of graduates in its history, and to-night the new druggists, members of the Alumni Association and the Wedgewood Club ate a joint dinner at the Hotel Rennet. No toasts had been formally assigned, which rendered the speechmaking all the more interesting, the addresses being unpremeditated.

The commencement exercises were held this afternoon at the Academy of Music. The announcement of the graduates was made by H. P. Hynson, the secretary of the college, while Charles E. Dohme, the president, conferred the degrees. The Rev. Llewellyn Fulmer delivered the address to the graduates, dwelling upon the dignity of the calling upon which they were about to enter, and giving them excellent advice. The prizes were awarded by Prof. William Simon. George D. Campbell received the first college prize, a gold medal; Henry Storey Redding the second, and J. Temple Ligon the third. The practical pharmacy prize went to C. Douglas Hickman, the analytical prize to Wm. Robinson Zemp, the alumni prize to Harry Leroy Eichelberger and the junior class prize to L. D. Pruden. Charles Hudson, J. S. McMath, B. L. Cole, E. M. Stevens and D. E. Morgan were declared entitled to honorable mention. The graduating class, the largest ever sent out, consisted of:

Maryland—Samuel H. Armstrong, F. F. Brenner, George D. Campbell, Frank E. Dannette, Hugh G. Downs, William Newton Fox, Joseph Francis Graham, Lester P. Goodhand, Thomas Joseph Hanrahan, Andrew Heck, Louis Bernard Henkel, Jr.; George S. M. Kieffer, Samuel J. King, F. L. Kramer, Pierce Marmor, Frantz Naylor, C. J. A. Schulte, Adolph Walsor and H. George Wendell.

Virginia—Louis La Van Baker, Arthur Edgar Bowman, George Woodruff Pace, Claude Douglas Hickman, Page Nelson Keesee, James Wistar Schofield and Melville Strasburger.

North Carolina—Frank Stevens English, William Burwell Harrison, H. Archie Johnson, Ruffin Murray Mann, Odell Sutherland, John Kelly Thigpen, Thomas Arthur Walker, John Hood Williamson and J. Arthur Doshier.

South Carolina—James Heath Blake, John Temple Ligon, W. E. Pelham, Jr.; William I. Sawyer, Thomas Pope Young and William Robinson Zemp.

Pennsylvania—Harry Leroy Eichelberger and Henry O. Hershey.
 Kentucky—Walter Hendricks Davis.
 Texas—Thomas Means.
 Georgia—George Storey Redding.
 Alabama—James Otis Williamson.

There were originally fifty students who had prepared for examination. One of them, however, withdrew almost at the last moment and two failed. The class officers were: J. Temple Ligon, president; W. Robin Zemp, vice-president; Harry L. Eichelberger, reporter, and William Burwell Harrison, secretary and treasurer. Mr. Ligon was also president of the day, Mr. Eichelberger the valedictorian, Mr. Harrison the historian and Mr. Zemp the prophet. The Committee of Arrangements for the commencement consisted of Frantz Naylor, Claude H. D. Hickman, J. Heath Blake, Louis B. Henkel, Jr., T. P. Young, W. E. Pelham, Jr., George D. Campbell, J. K. Thigpen and George W. Face, Jr. The annual meeting of the Alumni Association was held last night in the college building, an address by President A. P. Sharp, the first matriculate of the institution, being the feature. Officers were elected for the ensuing year and other business was transacted.

An event in a measure connected with the commencement was the reception tendered to the students of the college, the members of the faculty and other invited guests by Charles E. Dohme, the college president, at his charming residence on North Carrollton avenue, last Wednesday evening. Mr. Dohme was assisted in receiving by Mrs. Dohme, Miss Alma Dohme, Miss Ida Dohme, Mrs. von Marees, Mrs. A. R. L. Dohme and Mrs. Pomplitz.

A. Ph. A. and Revision of the Pharmacopœia.

Baltimore, April 30.—Two events of exceptional importance are engaging the attention of the Baltimore druggists at the present time, these events being the annual meeting of the American Pharmaceutical Association, which will take place next week in Richmond, Va., and the meeting of the delegates appointed to revise the United States Pharmacopœia, and who are to assemble in Washington this week. Among the Baltimoreans to attend the latter gathering are Charles E. Dohme, Dr. A. R. L. Dohme, Dr. D. M. R. Culbreth, H. P. Hynson and J. Fuller Frames, on the part of the Maryland College of Pharmacy; Dr. J. Frank Crouch, of the Baltimore Medical College, and William Simon, Dr. Wm. F. Lockwood and Dr. Samuel W. Fort, of the College of Physicians and Surgeons. Who will be of the Baltimore party to visit Richmond has not yet been determined. As far as can be learned no effort to make up a party is under way.

Among the Bowlers.

Baltimore, April 28.—In the Wholesale Drug Trade Bowling Club series at the Diamond last Tuesday night the Root and Herb quintette took all three games from Muth Bros. & Co. and settled that aggregation still more firmly in last place, the scores being: Root and Herb, 732, 806 and 778; Muth Bros. & Co., 617, 631 and 628. Last night Muth Bros. & Co. defeated Gilpin, Langdon & Co. twice and sustained one defeat by 663, 737 and 697 against 659, 657 and 649 points. By winning one more game Sharp & Dohme will clinch their hold on the silver cup. The standing of the several teams is as follows:

Teams.	Games Won.	Games Lost.	Percentage.
Sharp & Dohme	42	9	.824
Root and Herb	39	12	.760
Winkelmann & Brown Drug Co	35	16	.686
James Baily & Son	20	21	.488
Gilpin, Langdon & Co.	17	24	.418
Parke, Davis & Co.	9	42	.177
Muth Bros. & Co.	8	46	.148

NOTES.

—The annual meeting of the Maryland Medical and Chirurgical Faculty was held last week at the hall of its organization on North Eutaw street. Many interesting papers were read. The customary drug display was omitted.

—E. M. Smith and others have incorporated the Smith Drug Company of Newport News, Va., with a capital of \$5,000.

CINCINNATI.

Heavy Damages Against a Druggist.

Cincinnati, April 28.—Woodson Weaver, an aged colored man, entered suit Wednesday, April 25, against John H. Linneman for the sum of \$15,000. The plaintiff claims that on May 15, 1899, his son, James Weaver, purchased from Wm. Willeke, a clerk, at Linneman's drug store at the corner of Park and Chapel streets, a box of Rough on Rats. He further alleges that the sale of the poison was not registered according to the laws of Ohio, that the sale was made without a prescription and that the purchaser was a minor. This suit will revive interest among the local druggists, who remember the circumstances of the case, which at the time created much excitement among the profession. The boy, James Weaver, purchased the poison, as he said in his confession, to make his father sick. He put it in the coffee the next morning resulting in the death of the elder brother and making his father desperately sick for a long time. The boy is now in the Reform School, where he will remain. Mr. Linneman has retained Hon. Wm. Littleford as attorney and will defend his case through all the courts.

New Chemical Works.

Cincinnati, April 28.—The E. Berghausen Chemical Co., of this city, has recently purchased a piece of property at the corner of Ninth and Carr streets. The lot is 17x140 feet and the company will at once begin the erection of new buildings which will cost in the neighborhood of \$50,000. The buildings when completed are intended to be the best equipped in the United States for the manufacture of chemicals, etc. The officers of the company are Edward Berghausen, president; Edward Gromme, secretary and treasurer, and Dr. E. J. Bergham, sr., vice-president.

NOTES.

—C. B. Helzer, a former druggist of Cincinnati, is in the city renewing acquaintanceship and visiting friends preparatory to going to Alaska. Mr. Helzer gave up his store on Walnut Hills a few years ago and went to British Columbia, where he staked claims that have since panned out very well. He returned some months ago and has been traveling in the East. Mr. Helzer leaves here on April 14 for Seattle, where he will be joined by Prof. H. F. Kalsowski, professor of chemistry in the National College of Pharmacy, Washington, D. C. Together they will sail on the steamer Santa Anna about May 20, their destination being Nome City, Alaska.

—The Hamilton County Druggists' Association issued the following trade cards the past month and recommend the holders to the drug trade: William Hanna (Nelson, Baker & Co.); Joseph Gier (Henry Thayer & Co.); E. V. Paul (Red Raven Splits); E. H. Coffin (Ladd & Coffin); W. J. Wilcox (Alfred Wright); E. S. Neil (Merrill Chemical Co.); Chas. Diehl (Pictorial Printing Co.); Charles Lowman (Lambert & Lowman); Wm. C. Massmann (The Gray & Huston Co.); H. L. Van Etta (Hance Bros. & White); W. H. Wright (Seely Manufacturing Co.); H. F. De Graaf (Foote & Jenks); J. B. Davis (Seabury & Johnson).

—A severe accident occurred Tuesday, April 24, to Alfred Klester, a young boy in the employ of Gray's drug store at Fifth and Mand streets. The boy had only been employed a short time when he entered a back room of the store and fell through an open cellar door, suffering a fractured rib and internal injuries. Mr. Nelson, the clerk in charge of the store and also a graduate of surgery, volunteered his services, which the boy refused. Later he became weak from his injuries and was sent home by Mr. Gray.

—Superintendent of Police Deitsch has sent out notices to the druggists in a certain locality of the city that unless they discontinue the indiscriminate sale of cocaine and morphine he will prosecute them. His action was the result of a visit by a cocaine fiend who asked for a charity pass to his home in the South, and who asserted that the druggists would sell cocaine to him in any quantity.

—Miss M. C. Dow, Cincinnati's cut rate druggist, is about to open a store on Walnut Hills. The location

dedicated upon is between two of the most prominent stores on that hill. This store will be the fifth Dow store in the city. All the druggists on the hill have agreed to meet any price Dow advertises and do not anticipate any falling off of their sales.

—E. F. Hollenbeck has purchased Berube's drug store at Avondale and will remodel the entire store, putting a new front in the building besides new fixtures, bottles, soda fountains, etc. His store at Eighth and Baymiller streets will be in charge of his nephew, Charles Wiebold and George Fizzer, an old clerk of Mr. Hollenbeck.

—H. L. Wels, a partner in the firm of Dr. H. F. Wels & Son, Dayton, O., for the past four years, has disposed of his interest in the business and will start a new drug store in his own building, Xenia avenue and Vlot street. In the same city. Mr. Wels has been in the drug business for thirty years.

—Among the visiting druggists who purchased goods here the past week were John Ulrich, Aurora, Ind.; W. C. Bleher, New Richmond, Ohio; W. H. Gillard, Oxford, Ohio; F. Baumgartner, Middletown, Ohio; W. C. Moon, Blanchester, Ohio.

—Wm. F. Knemoeller, the druggist at Grand and Nassau streets, is preparing to take a holiday and with Mrs. Knemoeller will visit Philadelphia, Washington, Boston and New York. They will be absent several weeks.

—A. W. Nelson, clerk at Gray's drug store, will graduate as an M. D. from the Cincinnati College of Medicine and Surgery on May 2.

—Geo. H. Theobald, the Sedamsville druggist, announces his wedding to Miss Minnie Goldmeier, of Holabird, Ohio, May 23.

—Theo. F. Norwood has purchased L. Roberts' drug store at Riverside.

CHICAGO.

THE N. A. R. D.

Chicago, April 28.—The next meeting of the N. A. R. D. will be held in Detroit on September 5 to 7 inclusive. The decision was reached at the recent meeting of the Executive Committee in Chicago. At the recent joint meeting of the committees representing the three associations the following gentlemen were present: For the N. A. R. D.—S. N. Jones, F. E. Holliday, D. E. Prall, T. V. Wooten, Arthur Timberlake and Alfred De Lang. For the Jobbers—F. A. Faxon, J. C. Ellel, W. J. Walker, Chas. F. Weller, W. J. Walding, M. C. Peters, M. N. Kline. For the manufacturers—H. M. Sharp, H. L. Kramer, A. H. Beardsley and G. L. Douglass, attorney for the Proprietary Association.

The conclusions reached are explained in the resolutions voicing the sentiments of the committees and the following firms there represented: C. I. Hood & Co., J. C. Aver Co., F. E. & J. A. Greene, Wells & Richardson Co. and the Lydia E. Pinkham Medicine Co. The sentiment of these resolutions was that all jobbers should agree to stop selling to department stores and cutters immediately upon the adoption of a special list of jobbers by the manufacturers.

Jobbers through salesmen must not run down proprietary goods and must sell what is called for without prejudice. Each jobber agrees to ask for no further discounts and to discontinue their non-secret departments.

All manufacturers, so far as possible, are to agree upon the same list of distributors, and retailers not to substitute, but to give what is called for. The status of cutters will be left in the hands of the retailers, to be determined by three-quarters of the retailers in the locality where the cutting exists.

[The proprietors agreeing to abide by the propositions contained in the plan are named on the editorial page this week.]

Chicago College of Pharmacy Commencement.

Chicago, April 28.—The fortieth commencement of the Chicago College of Pharmacy of the University of Illinois was held at the Grand Opera House on Thursday, April 26. The programme was excellent, comprising, beside numerous musical selections, the following: Salutatory, George Arthur Kiedalsch; address W. K. Forsyth; conferring of degrees, President Andrew S. Draper, LL.D.,

University of Illinois; presentation of prizes, Alumni medal, Marvin B. C. Rounds; W. B. Day, president of the Alumni Association. Bi-Orth Microscope, William R. Graham; Professor F. M. Goodman. Junior Class Medals, Pharmacy, William Downey; Chemistry, Walter H. Whisenant; Botany, Benjamin Perry; Trustee Augustus F. Nightingale. Valedictory, Clarence Lorenzo James.

The following students received the degree of graduate in pharmacy:

John William Alexander, Harvey; Almond Clifford Arnold, Perrinton, Mich.; Rudolph Sigfried Bosh, Chicago; Walter Caron, Chicago; William Henry Daley, Nashua, Iowa; Raymond August von Danden, Chicago; Leonard Watkins Davis, Topeka, Kan.; T. Guthred Drake, Princeton, Indiana; Fred Henry Dralimeier, Quincy; Irving Lewis Emerson, Sank Center, Minnesota; Arthur S. Gillette, Hudson, Mich.; *William Rice Graham, Carlinville; Walter Holderread, Litchfield; Gilbert Houseman, Chicago; Abraham Arthur Jackola, Calumet, Michigan; Clarence Lorenzo James, Herscher; John August Johnson, Gile, Wisconsin; George Arthur Kiedalsch, Keokuk, Iowa; Anton Kucera, Hazelhurst, Wisconsin; Joseph Matthew Lestina, Chicago; George Henry Paul, Augusta, Wisconsin; *Frederic Horace Priest, Quincy, Iowa; William Ernest Rose, Harrisburg; Louis Schreiber, Columbus, Nebraska; Leo K. Solomon, Chicago; Alfred Wenzel Stamm, Milwaukee, Wisconsin; George Edward Steyer, Chicago; Charlotte Elizabeth Summerville, Chicago; Alfred Reuben Utt, Pittsfield; Philip Darius Vincent, Mason City, Iowa; Alverson Frank Warhanik, Chicago; Charles Jeremiah Webster, Canton; Alfred Dennison Weibel, Maiden; Walter Henry Wines, Quincy; James Earnest (Class of '99), Evansville, Indiana; William Leonard Jansen (Class of '99), Quincy; John Whitaker Lawrence (Class of '99), Johnstown, Pennsylvania. Receive certificate of having finished the course successfully. With reference to the degree when the required age and practical experience are attained: Roscius Wright Freeman, River Falls, Wisconsin; Peter McMullen Fulton, Stockton; George Smith Ives, Amboy; Fred Bayard Lyon, Lyons, Kansas; *Fred Lewis Pfaff, Centralia; *Marvin Bird Cleo Rounds, Chicago.

In the evening the Alumni Association tendered the graduating class a magnificent banquet at the Palmer House. The toastmaster was A. D. Thorburn, Ph. G., and the toasts were as follows: The Alumni Association, W. B. Day, Ph. G.; Class of 1900, J. M. Lestina, Ph. G.; The University of Illinois, Alice Asbury Abbott; A Suggestion, Dr. H. H. Rogers, Ph. B.; The Pharmacist of Yesterday and To-day, Dr. James A. Lydston, Ph. G.; Reading, H. A. Antrim.

For Repeal of Stamp Tax.

Chicago, April 28.—The N. A. R. D. has just issued a pamphlet giving the proceedings before the Committee on Ways and Means of Congress on April 17. Portions of the speeches, comments and interrogations are given, all of which makes "mighty interestin' readin'" for druggists. The N. A. R. D. has also just gotten out a circular letter to the druggists and a petition to Congress. Both letter and petition bear upon the stamp taxes and give convincing arguments for the repeal of Schedule B. Both will be sent out together, and after the petition is generally signed it will be sent to Congress.

Drug Clerks Elect Officers.

Chicago, April 28.—The Drug Clerks' Association of Illinois held an election recently, the following officers being announced for this week as elected for the ensuing year: President, W. F. Egler; first vice-president, W. R. Phillips; second vice-president, E. R. Rose; third vice-president, Robert Roch; fourth vice-president, J. C. Swan; secretary and treasurer, W. E. Kotz. The association will give a May party and dance at Oriental Hall in the Masonic Temple on May 23. This event will be the affair of the season so far as the clerks are concerned. The proceeds will be devoted to the library fund of the association. In July the clerks will go on a lake excursion to Milwaukee to meet the drug clerks of that city.

NOTES.

—Thomas V. Wooten, secretary of the N. A. R. D., returned from his Eastern trip last Monday. He feels much encouraged concerning the outlook for the organization and the success of its plans. He received assurances from members of the Committee on Ways and Means of Congress that should anything be done touching the repeal of any part of the Internal Revenue Law the druggists would receive the first consideration.

*Class honors for scholarship average of 90% or above.

—The following delegates from the N. A. R. D. will attend the coming meeting of the American Pharmaceutical Association: Messrs. M. J. Quattelaum, Dr. W. C. Anderson, H. P. Hynson, J. M. Good and F. E. Holliday. Those who will attend the meeting of the Proprietary Association in New York next week and represent the N. A. R. D. are Messrs. John C. Gallagher, Felix Hirseman and F. E. Holliday.

—Lord, Owen & Company will, as soon as the strike in the building trade is settled, begin the construction of a large modern building of steel and terra cotta at 233, 235, 237, 239 East Randolph street, which premises they have recently acquired. They will move their business to the new premises as soon as the building is finished.

—J. Nechvatal, the drug clerk who, on March 19, shot Louis Blankenberg and was discharged by the coroner's jury, which found that the shooting was done in self defence, was arrested this week for the same killing on a warrant sworn out by John A. Nelson and was held to the Grand Jury in \$10,000 bonds.

—E. O. Carlson, former proprietor of the Hyde Park Hotel Pharmacy, will have one of the finest drug stores in Hyde Park when he completes his new establishment across the way from his former location.

—The name of the B. M. Butler Chemical Company, of Chicago, has been changed to the E. M. Butler Company and the capital stock increased from \$25,000 to \$40,000.

—Charles J. Benes, formerly of North Judson, Ind., has opened a new store at 4226 Centre avenue, at the corner of Forty-ninth place and Centre avenue.

—George Lanz, who formerly owned a drug store at Twenty-second and State streets, has opened a new store at Twenty-fourth place and Western avenue.

—Chris. H. Wagner will move his store from the corner of Whipple street and Colorado avenue to Albany avenue and West Madison street on May 1.

—R. N. Wilson will move his store from Marshfield avenue and Van Buren street to Ashland avenue and Van Buren street on May 1.

—George C. Oglesby has moved his store from 4848 State street to Washington avenue and the Midway Plaisance.

—F. C. Taylor is about to open a new drug store at Forty-third street and Grand Boulevard.

—The Fuller & Fuller Bowling team will play the "Lobsters" again next Friday night.

—T. Winholt has bought Charles Mattson's store at 1107 West Chicago avenue.

THE NORTHWEST.

Long List of New Pharmacists.

St. Paul, Minn., April 27.—At the spring examination at the College of Pharmacy, University of Minnesota, the following were granted certificates as pharmacists: Charles C. Crosby, Oscar E. Dahly, Charles O. Danielson, Henry H. Legal, Albert H. Bell, Henry Prestholt, August Peterson, Andrew M. Reite, Christopher Rygh, J. Oliver Taft, William H. Ziegler, George A. Cowin, William G. Hanson, Arthur B. Dinsmore, Fred Soderberg, Minneapolis; Carl H. Freas, Fred. W. Krueger, Herman F. Lueders, John E. McCarthy, John W. Nelson, William F. Tullar, Henry E. Billington, Lyle; Carl W. Arbes, New Ulm; Davy E. Billington, Lyle; Carl W. Bremer, Stillwater; Louis J. Christensen, Albert Lea; Russell F. Clark, Hector; John C. Dills, Albert Lea; George E. Foster, Fairmont; H. Odin Hanson, Rushford; Charles J. Moos, St. Cloud; Adolph G. Melle, New Ulm; Jacob P. Soes, Crookston; John W. Shanks, Jackson; Albert J. Schilling, Fergus Falls; Earl B. Stoddard, Stewartville; Eva A. Taylor, St. Charles; Oscar K. Weinmann, Duluth. The following were granted the certificate of assistant pharmacist: Irvin R. Anderson, Peter J. Arbes, Frank S. Brandt, Edward D. Collins, Rudolph Ehrenberg, George A. Hallman, Harold W. Jones, Victor E. Lofstrom, Walter P. Meyer, Charles J. O'Connell, Edwin F. Stewart, Gustave H. Somer, Carl J. Nelson, Clyde L. Aiken, George W. Blasing, William E. Burke, Westwood D. Case, Charles E. Haggerty, August Hille, W. A. Hargeshelmer, Emil W. Haase, Charles J. Hartmann, Jacob J. Jacobson, Olof Guhnson, Otto A. Kubat, Gunder M. Larsen, Allen R. McGuire, Peter J. Runberg, Alois J. Spellmann, Joseph A. Cox, Adolph W. Johnson.

Death of a Pioneer Minnesota Druggist.

St. Paul, Minn., April 20.—Alonzo T. Guernsey, a pioneer Minnesota druggist, was stricken with paralysis at 7 o'clock yesterday morning while in his store, Selby avenue and Dale street. He was unable to reply to questions, and a physician was hastily called. With the assistance of friends and members of the family he was carried to his home adjoining the store, and placed in bed. He knew nothing that went on around him and did not recognize the members of the family. Death came after a few hours.

Mr. Guernsey was born in Tioga, Pa., December 21, 1829. His early boyhood was spent in that village, where he acquired a common school education. Later he clerked in a general store, and added to his education by the study of medicine. In 1857 he came to Minnesota and opened a drug store at Lake City. A year later he married Miss Rowena Stevens, of Middleboro, Mass. He remained in business in Lake City until 1880, when he came to St. Paul and opened a drug store at Selby avenue and Dale street. He had one son, Alonzo J. Guernsey, who lives with him, and a grandson, Newell F. Guernsey.

Mr. Guernsey was always prominent in church circles, and for many years had been an elder of the Dayton Avenue Presbyterian Church. He was a member of the I. O. O. F., of the Northwestern Legion of Honor and of the American Legion of Honor. He was one of the best of men and enjoyed the high esteem of the community.

NOTES.

—Successions: John Nelson, Atwater, Minn., by S. E. Peterson; J. H. Shaw, Hallock, Minn., by Lockwood Bros.; M. D. Burge & Co., Castlewood, S. D., by M. D. Burge; W. C. Albach, Falls City, Neb., by Burris Bros.; S. M. Gangstedt, Bode, Iowa, by Watson, Gangstedt & Co.; J. H. Udell & Co., Centerville, Iowa, by Carl Weeks; D. M. Bruner, Cllo, Iowa, by Bruner Bros.; C. M. Lanning & Co., Dupuyer, Mont., by Thomas B. Mager; C. S. Collins, Garner, Iowa, by the Baas McMahon Company; H. G. Weber & Co., Atlantic, Iowa, by F. D. Jeffrey; George G. Abbott, Humboldt, Neb., by Neill's Pharmacy; W. D. Abbott, Peru, Neb., by E. L. Uptegrove; Aug. Wuerch, Puyallup, Wash., by W. Scott; W. S. Arnold, Viroqua, Wis., by Arnold & Davis; Thomas J. Baird, Mount Vernon, Iowa, by A. J. Berrymann; John Nelson, Atwater, Minn., by S. E. Peterson; E. W. Miller, Sherman, S. D., by C. F. Clancey; D. H. Decker, Menomonie, Wis., by Louis Ehrland; E. J. Anderson, Hector, Minn., by Dr. H. L. D'Arms.

—The body of Alonzo T. Guernsey, of St. Paul, the pioneer Minnesota druggist whose death has been announced above, was taken for burial to Lake City, where Mr. Guernsey started business forty-three years ago. The store in St. Paul will be retained and managed by the son, Alonzo J., who has for several years been in partnership with his father and who, in order to put in all his time in drugs, has abandoned the photographic business in Minneapolis, which has claimed all his attention for nearly two years past.

—W. W. Noble has had a large window of his store at West Fourth and St. Peter streets, St. Paul, adorned with the most magnificent sign that ever a drug store of this city boasted. It is a cigar advertisement, and the main feature is large portraits of the city's most distinguished men—United States Senator Davis, Archbishop Ireland and James J. Hill, the railroad king. The sign is painted in a variety of colors, and perhaps the most artistic detail is the imitation of pearl in the borders, which is perfect.

—The remains of Walter Danforth Field, who formerly lived in Minneapolis, but who died March 30 at Newark, N. J., have been interred in Lakewood Cemetery, the former city. Mr. Field was a well known chemist. Only thirty-five years of age, he had invented several chemical processes of much value. He studied chemistry at the University of Minnesota and took a post-graduate course at Johns Hopkins University. For the past five years he has conducted a laboratory at Newark.

—Quite an upheaval took place among the drug stores at Brainerd, Minn., last week. Ex-Postmaster C. D.

We are manufacturers of **EVERYTHING** required or desired by the down-to-date dispenser of soda water, and can fill orders promptly. Our prices and liberal terms make it to your interest to buy direct of us, rather than to split up your account among a dozen different manufacturers or jobbers.

This mark bespeaks perfection.
Where'er you see it stand,
The goods which bear the talisman
Excel on every hand.
The "lucky mark"—the mark for good—
The mark for all that's fair,
Where'er you view this symbol plain
The quality is there.

JACOB BAUR, Ph. G., Pres. & Treas.

Chicago New York Pittsburg Cincinnati St. Louis Milwaukee Baltimore Newark, N. J.

Were we to attempt to name the qualities which go to make the

"Perfection Electric" Continuous Automatic Carbonator

the Best Carbonator in the World

words would fail us. We shall simply let the machine talk for itself.

This is Me!

I am the "PERFECTION ELECTRIC" Continuous Automatic Carbonator

I am the greatest economizer about a soda fountain.

I save ice!

I save Carbonic Gas!

I save room!

I save time!

I save money!

I am continuous, because I continue to carbonate until my work is done.

I am absolutely automatic!

The only attention I require is a drop or so of oil occasionally.

I supply the most highly carbonated water at a lower cost than any other machine in the world.

I am the handsomest carbonator in the world, and will save my cost in ice, CO₂ and time in a surprisingly short time. I ast, but not least, I am backed in everything I say by the Liquid Carbonic Acid Mfg. Co.—the greatest soda water dispensers' supply house in the world, which in itself is a guaranty of absolute "perfection." Yours truly,

"Caterers to a thirsty world"

Johnson bought and took possession of Johnston's pharmacy, and Mrs. Julia McFadden, F. B. Johnston and H. P. Dunn bought the business of M. L. Schwartz. The new firm is styled H. P. Dunn & Co.

—J. Schweitzer, of Mapleton, Minn., is thinking of taking a trip to Paris this year, and was in the city to arrange for the care of his store in his absence. He has engaged Harry Filbert for that purpose. Mr. Filbert had charge of the same store a few years ago while Mr. Schweitzer took a long trip.

—Three men have just been admitted to partnership in the great wholesale drug establishment of Noyes Bros. & Cutler, St. Paul. They are Winthrop S. G. Noyes, son of D. R.; Thomas E. Ladington, for some years credit man, and Julian N. Kirby, who has been with the house a long time.

—Successors: D. F. Rae, Pelican Rapids, Minn., by Donovan Bros.; George N. Gardner, Jewell, Ia., by F. R. Carver; E. F. Tabler, Colfax, Ia., by T. Marquis & Co.; J. H. Shaw, Hallock, Minn., by Lockwood Bros.; Dunning & Longstaff, Huron, S. D., by P. H. Dunning & Co.

—O. O. Wold, who some years ago and for some years was in the drug business in this city and later at Rothsay, Minn., and who has been out of the State for several years, has returned to the city.

—E. Warner's drug store at Big Stone City, S. D., has been closed on an attachment for the Charles Betcher Company, which claims about \$90. The stock is small and is mortgaged for \$300.

—C. F. Rohde, who recently sold his interest in the store of Rohde & Shepherd, Spring Valley, Minn., is going on the road for the Minnesota Pharmaceutical Manufacturing Company.

—Stephen Fisher has gone to Cando, N. D., where he is working in Johnson & Co.'s drug store till next October, when he goes back to the medical college.

—David Englund is now in charge of the Lion Drug Company, Clinton, Minn., Mr. Lundholm, the owner, being incapacitated by sickness.

—Dr. Cole is starting in at Eagle Point, Wash.; W. H. Carter at Lynden, Wash., and Louis W. Koch at Lidgerwood, N. D.

—Robert G. Jessup, Wellington, E. C., and the Big Bend Drug Company, Davenport, Wash., have given bills of sale.

—S. H. Williard, of the Golden Drug Co., Salt Lake City, Utah, has been attached and several judgments found against him.

—The Toronto, S. D., Drug and Music Co. has bought the stock of musical instruments of Andrew Nelson, same place.

—A. E. Lofstrom, of Northwood, N. D., has been on the sick list for two weeks past, but is getting all right again.

—It is reported that C. Hove, of Lake Mills, Ia., is about to put a drug stock into the new town of Kelster, Minn.

—Hon. William Gausewitz has recovered from his recent illness and was in the city again this week on business.

—B. H. Townsend, manufacturing pharmacist, has established himself in business at Salt Lake City, Utah.

—E. E. Roebuck has been to New Paynesville, Minn., this week helping take inventory of a stock there.

—Bredenbach & Rogers have started at Kenmare, N. D., and D. L. Evans at Tenhassen, Minn.

—H. H. Drake has retired from the Metropolitan Drug Company, Sioux City, Iowa.

—Heldgerken & Reichert, Red Lake Falls, Minn., have removed to Browerville.

—C. G. Nickells, Wyndmere, N. D., has filed a voluntary petition in bankruptcy.

—E. J. Anderson, Hector, Minn., has filed a voluntary petition in bankruptcy.

—W. B. Stevens, a druggist at Sibley, Iowa, has sold his bottling outfit.

—Charles Dupont has gone to Cloquet, Minn., to work for E. M. Johnson.

—E. C. Krueger, Forest River, N. D., has opened a branch at Bowbells.

—Love & Bushong, Portland, Ore., have dissolved, W. D. Long continuing.

—W. C. Haney, of Marshall, Minn., was in the city this week on business.

—The National Chemical Company has incorporated at Portland, Ore.

—F. M. Hickman has established a business at Worthington, Minn.

—William Harris, Leland, Idaho, has removed to Pullman, Wash.

—L. A. Minster, Rock Rapids, Ia., has given a bill of sale.

—E. W. Emmons contemplates starting at Sprague, Wash.

WESTERN PENNSYLVANIA ASSOCIATION IN- DUCEES IN A SYMPOSIUM.

Pittsburg, April 24.—Last evening the members of the Western Pennsylvania Retail Druggists' Association, with their drug friends, assembled in the G. B. U. hall, 422 Sixth avenue, to enjoy the entertainment, partake of an excellent luncheon, drink a social glass of "red lemonade," and enter into the excitement of a progressive euchre, all of which had been arranged and offered as a compliment to the association by the members of the Directory, Messrs. W. G. Markell, B. E. Pritchard, J. W. Cheswright, Louis Emanuel, A. J. Kaercher, B. P. Welsch, J. P. Urben, J. R. Thompson, Wm. Dice, O. A. Schad, H. J. McBride, E. E. Eggers, E. A. Schaefer, E. A. Heck, H. C. Murto, Chas. Wiegell, Wm. Schirmer, H. A. Spilker, P. L. Jones, P. C. Schilling, H. J. Siegfried, E. J. Kretz, S. C. Jamison, Chas. Ebie, L. B. Hughes and P. P. Knapp. This initial social performance was opened by the organizer of the association, E. C. Garber, who manipulates the banjo in a manner that has rendered him famous throughout the East. His accompaniment was furnished in a most masterly manner by H. S. Brickell, America's premier guitarist. Byron W. King, a gentleman of great erudition and oratorical ability, who, as Webster once said, "make you think as he thinks and feel as he feels," and who upon this occasion impressed upon the minds of his hearers the absolute necessity of being in love with your work or profession in order to be successful in life, after a brief apology to the druggists for his continued good health and the fact that he had little or no use for the druggist professionally, entertained them all in a way as pleasing as it was beneficial. The acoustics of the hall were of such a nature as to render unintelligible the phonographical reproduction of ex-President H. P. Hynson's speech. The address of Simon N. Jones, President of the N. A. R. D., was read by the secretary. David Timothy recited in a scholastic manner the lines of Clarence and Brackenbury in Richard III., wherein Clarence portrays most graphically the horrors of his terrible dream. Following the entertainment thirty tables were arranged and filled with earnest euchre loving devotees. After twelve exciting games the following prizes were awarded to the successful contestants:

First prize—Diamond-studded charm (presented by W. J. Gilmore & Co.) to James W. Pritchard, of Burrough Bros., Baltimore. Second prize—Gem-studded gold and enamel clock (by Waltham-Robinson Co.) to R. E. Schrimpling, Allentown, Pa. Third prize—Silver chocolate pitcher and serving tray (G. A. Kelly Co.), to E. F. Stratman, Pittsburg, Pa. Fourth prize—Gold watch chain (W. J. Gilmore & Co.), to F. A. Abel, Pittsburg. The other prizes and their donors were as follows: One gross Cutaneous Soap, C. F. Miller Mfg. Co.; one gross Roseoline Cream, J. P. Urben & Son; 10,000 capsules, Eli Lilly & Co.; two cases Veronica Water, Jos. Fleming & Son; one gross belladonna plasters, Johnson & Johnson; half gross Frog in Throat, Hance Bros. & White; ten pounds Koko, Hance Bros. & White; cut glass gold and enamel bottle, Victor carnation perfume, Smith, Kline & French Co.; three dozen Euthymol Tooth Paste, Parke, Davis & Co.; three dozen Euthymol Tooth Powder, Parke, Davis & Co.; three dozen Euthymol Breath Tablets, Parke, Davis & Co.; Era Formulary, Pharmaceutical Era; History Ancient Pharmacy and Medicine, Western Druggist; five packages Cascara Aromatic, Nelson, Baker & Co.; six cork wood casks, Armstrong Cork Co.; five gross Firsio Tablets, Hottin Chemical Co.; 50 fine Havana cigars, Raubitschek Bros.

The Home Soap Co., 54 Franklin street, New York, have put on the market a new Tar Soap which they call "Tarpoo" Olive Oil Tar Castile. They claim that this soap is made of the finest material and that it is superior to any tar soap on the market. It retails for 10 cents a cake and the cakes are larger in size than the tar soaps usually sold. It makes a good lather, leaves no disagreeable smell on the hands, and there is a good profit in it for the retailer.

OBITUARY.

JOHN H. HANCOCK. Profound sorrow was occasioned in Baltimore drug circles last month by the death of John H. Hancock, a well-known retail pharmacist at the corner of Fremont avenue and Lombard street, who passed away after a lingering illness on Wednesday, April 18. His demise was due to Bright's disease, complicated with heart trouble. Mr. Hancock was fifty-two years of age and lived at 823½ West Lombard street. He had been located at the above-mentioned corner during the past twelve years. Before that time he was manager of the laboratory for Reed & Carnrick and he was also at one time in the employ of Wyeth & Bro. In these various positions he manifested exceptional capability and won the confidence of his employers. A native of North Carolina, Mr. Hancock received his early education in the public schools of Richmond, Va. He afterward came to Baltimore and entered the Maryland College of Pharmacy as a student, taking his degree. He acted as clerk in several of the most prominent drug stores and then went to other cities. He was a member of the Maryland College of Pharmacy and of the Maryland Pharmaceutical Association and had served several years as secretary of the Maryland Pharmacy Board. Everything calculated to further the profession found in him an earnest and zealous supporter. His wife and two sons survive.

DR. SAMUEL ROOSA.—The only colored druggist in Boston, where he has been considered perhaps the richest colored man in the city, is dead. His sons say that he was worth \$135,000. He was born in High Falls, New York, in 1844. Early in life he showed a liking for classical studies. At the outbreak of the civil war, he enlisted in a colored New York regiment, and for conspicuous bravery was promoted to be orderly sergeant. About twenty-two years ago he came to Boston, after having acquired a fortune in New York. He opened a drug store in Cambridge street, and also began to practice law. Successful beyond his expectations, he extended his business to Cambridge, where he opened a store in Harvard Square.

DR. F. G. WARREN, of Biddeford, Me., where for a long time he had been engaged in the drug business and also practicing his profession as a physician, died on Monday, April 2, aged seventy-two. He was born in Hollis, and was graduated at Brown Medical School and Jefferson Medical College in Philadelphia. He served through the civil war, first as assistant surgeon and later as surgeon of the Fifth Maine Regiment. He was with the regiment in several severe battles. During his term of service he performed more than four hundred amputations. He was one of the most extensive real estate owners in Biddeford, where he served on the Board of Aldermen and was mayor for two years. He was a member of many organizations.

GEORGE W. POLSTON, a well-known druggist of St. Louis, died April 14, after a brief illness of pneumonia. He formerly clerked for some of the best druggists in the city and about ten years ago went into business for himself at Broadway and O'Fallon street. The stock was entirely destroyed by fire recently, but new fixtures had been made and preparations were being made to resume business when death overtook the proprietor.

JOHN L. WALDRON, father of Louis K. Waldron, of Chicago, died Tuesday, April 17, at his home in Iowa City, Ia. He was eighty-two years old, and had been a resident of Johnson County, in which Iowa City is located, since 1854.

HERBERT F. LONG, twenty-five years old, a drug clerk of New Brighton, Staten Island, New York, died on April 22. He was born in Scranton, Pa., and was graduated from the Brooklyn College of Pharmacy in 1896.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Enterprising Drug Buyers.

A Handsome Advertisement.

We display in this issue one of the handsomest advertisements which the Liquid Carbonic Acid Mfg. Co., Chicago, have ever sent to us. The advertisement is not only beautiful and interesting from a typographical point of view, but it will be particularly interesting to the soda fountain dispenser, especially pages 2 and 3. The Liquid Carbonic Acid Mfg. Co. supplies everything that the soda dispenser wants, from a straw to a soda fountain, and it seems to us the suggestion they make that instead of splitting up his account among several different firms, the dispenser make it a point to buy his soda supplies of one firm in one account, is a good one. As a matter of fact, this insert duplicates in colors what their very complete catalogue, described in a recent issue of the Era, contains in black and white. The second page of the insert is taken up with an elegant display of fancy glassware, tumblers, sherbet cups, etc., and they illustrate a new crushed fruit bowl which ought to find instant favor. Druggists who buy their fountain requisites and supplies of this company are assured that they will be supplied with liberal quantities of wide-awake advertising of a kind that brings new business and helps to keep it. A postal card to them will bring fuller information.

The Way It Works.

In our advertising columns is the report of a conversation by a retail druggist with a representative of C. I. Hood & Co., which is worth reading by any retailer.

That man gains the confidence of his customers; gets more advertising matter by putting it out judiciously; his business increases, and he is happy.

Moral.—You can spend your time to better advantage than in trying to kill someone else.

The genuine Cheeseman's Pills are made by The H. Robinson Co., New York, and have Robinson's name on the box. They are gelatine-coated and the label is copy-

righted. They retail for \$1 and are never cut. As there are imitations on the market, buyers should see that Robinson's name is on each box.

The Red Cross Chemical Co., of Boston, manufacture disinfectants and deodorizers and claim to have one of the best lines of these goods on the market. They are about to incorporate and are willing to dispose of a limited amount of their capital stock to retail druggists. They consider it a gilt-edged investment and inform us that they have already established dealings with some 2,000 druggists throughout New England and the Middle Atlantic States. Full information may be obtained at 97 Haverhill street, Boston.

No dealer should be without Cook's Imperial Extra Dry Champagne. If yours is, order from American Wine Co., St. Louis, Mo.

STATE OF TRADE.

Trade of Moderate Volume Only.

New York, May 1.—Business in a wholesale way has continued of moderate volume, as usual between seasons, and the general market has ruled tame, with few developments of more than ordinary interest. There is, however, nothing of a discouraging character in the general outlook, and dealers continue to express satisfaction with prevailing conditions. The quinine situation has not changed materially. There has been very little inquiry from the consuming trade, and none in a speculative way, but notwithstanding the prevailing dullness, the market has retained a firm undertone, with outside holders showing no inclination to sell at present prices, for a reason which that values will improve shortly. This belief is based on the continued strong position of raw material. Shipments of bark from Java during the current month have been light, the quantity to be offered at the May sale in Amsterdam on Thursday will be small, and indications are considered favorable to an advance in values. In the latter event it is expected that manufacturers would find it necessary to mark up quotations. Cables concerning the outcome of the Batavia auction sale of quinine last week were somewhat conflicting, but it was evident that only a small quantity was sold, and that the prices realized indicated a steady market.

Opium has remained dull, and an easier feeling has developed, with a slight decline in quotations for case lots. Morphine continues more or less unsettled, owing to keen competition between old and new manufacturers. Refined camphor has been advanced 2c. per pound, owing to higher markets abroad, and the continued strong position of crude. Naphthalene also is firmer, and the consuming demand shows increased activity. Domestic manufacturers are said to be unable to make prompt deliveries to the full extent desired, and are refusing to book new contracts. Cocaine continues firm at the recent advance in manufacturers' prices, and the available stock has been considerably reduced by the demand from the consuming trade. Acetanilid has been somewhat unsettled for a long time past, and manufacturers' prices have been shaken by outside holders, but there are indications of an early improvement.

Cannabis indica has shown further improvement. It has transpired that the sharp upward movement in London is chiefly the result of an influx from India, the effect that the government at primary sources of supply has imposed a duty upon this drug which will prohibit exportations except at extreme prices. Spot quotations are still below the parity of the London market, and holders are decidedly firm in their views. The stock of lycopodium is steadily diminishing, and values are higher in sympathy with a corresponding advance abroad. Holders decline to sell except in a small way, and the tendency of prices is toward a still higher basis.

Ergot is easier under the influence of weaker markets abroad and there is more or less desire to sell at the reduced prices. Ergotone also is easier, and former quotations can be shaded. Among the roots, golden seal is easier under freer offers from producing points, while serpentaria is firmer, owing to scarcity and an improved demand. Among the herbs, sweet marjoram is hardening in price, on account of unfavorable crop reports from abroad.

In the essential oil line general business has continued of a routine order, and the only quotable change in prices is a slight decline in natural sassafras. Balsam Peru is still tending in buyers' favor, and quotations from first hands show a further reduction of 5c. per pound.

Druggists Finding Business Fairly Good.

Boston, April 28.—With a falling off in the death rate in this city, this week, bringing it to a normal figure, and due to a lessening of the cases of general illness hereabout, there is some decrease in the retail drug trade, especially in the prescription departments. There is a prevalence of measles, and diphtheria and scarlatina are also represented by a large number of cases. There have been more than forty deaths from pneumonia. One case of smallpox just discovered has caused some scare and excitement. Spring medicines are being sought more and more, as spring advances, and the call for the various sarsaparillas and tonics to brace up the system is good.

Moderate business and steady prices tell the story on the general line of drugs in the jobbing houses at this time, with no special feature to make the week different from others which have just passed. There is no great call for quinine nor for opium, either, both of which lack life and activity. Cocoa butter is a bit easier. Balsams are without life, and essential oils are quiet. In much the same way, the general list of chemicals shows only a fair amount of trading. Alcohols are stronger and more active in both grain and wood showing greater activity. There is a fair market reported on dyestuffs and tanning materials, yet no one line appears to stand out conspicuously as a feature. Waxes are selling fairly well at this time.

THE DEMAND for ABBEY'S SALT will be continuous, owing to the exceptional character of our steady advertising.

THESE DRUGGISTS SAY:

Brookline,
March 28, 1900.
The Salt sells well and there has been an increase in the sale of same.
(Signed) Wm H Butler.

Boston, Mass.
March 28, 1900.
The sale of Abbey's has been very fair during the last few weeks.
(Signed) A. D. Marcy.

Dorchester, Mass.
March 28, 1900.
We are selling a slight increase in the past few weeks.
(Signed) A. M. Baker.

701 Centre Street,
Jamaica Plains, Mass.,
March 28, 1900.
We have noted an increase in the sales of Abbey's Salt recently.
(Signed) Chas. B. Rogers & Co.

40 Water Street,
Newburgh, N. Y.
March 28, 1900.
The demand for Abbey's Salt has increased.
(Signed) Theo. Merritt's Sons.

ABBAY'S SALT is a clean remedy, honestly advertised, prescribed and endorsed by physicians the world over. Abbey's Salt reaches the consumer through the drug trade only.

...THE...

ABBAY EFFERVESCENT SALT Co.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

The Same Story of Good Business.

Philadelphia, April 28.—The same old story of good business which is heard in every direction is becoming a trifle monotonous, but the average druggist seems to enjoy monotony of that kind, and there are no complaints from the wholesale trade nor from local manufacturers, all of whom appear to be hustling as hard as at the outset of the present boom, which has lasted for an unusually long time. The same price changes are reported by the wholesale trade, too, morphine having dropped ten cents per ounce, and camphor having advanced two cents per pound. The retailers are reporting favorably on business conditions from all sections of the city, and up the State the news is of the same character. The advent of open trolley cars since the warm days of the early part of the week seems to have caused an increase of soda water sales, and that is no unimportant feature of the retail business, so the average druggist is kept hustling the whole day long, and is compelled to hire a relief clerk if he wants to take a day off himself. Relief clerks are much in demand at present, and some of them are reaping a rich harvest of late.

Very Active in Baltimore.

Baltimore, April 30.—Business last week was very active. Jobbers received many orders from local retailers, and also report the out-of-town trade to have been very good. The manufacturers of pharmaceuticals experienced a not less satisfactory movement throughout the entire list of preparations, and the laboratory forces continued in the work after hours. The trade in heavy chemicals is in the main encouraging, while the drug and botanical market reflect accurately the conditions elsewhere.

Very Good, Indeed.

Detroit, April 28.—Drug business for the week closing has been very good, thanks to a weather condition which has attacked the mucous membranes of a large percentage of the inhabitants of Eastern Michigan. Colds in the head are the rule, and there is a great deal of pneumonia and other pulmonary troubles. In consequence, prescription business among the retailers is unusually good. Wholesalers report totals for April to be better than they had thought possible two weeks ago.

Trade Active in Chicago.

Chicago, April 28.—The advent of spring brings out all the seasonal trade there is. The manufacturers of pharmaceuticals continue to make their sales of tonics and syrups are very busy. Jobbers report a more than usually busy week. Staple goods are moving very freely. Sundries are active and collections are good. While there is little to be said, that little is full of encouragement.

Still No Complaint.

St. Paul and Minneapolis, Minn., April 27.—And still no complaint as to any phase of the drug business is to be heard in these cities. The manner in which the huge volume of prescriptions is maintained is so unusual as to be astonishing. One would suppose that with the advent of summer, and the weather, which has prevailed all through the week, this branch of the trade would show a relaxation; but such is not the case. Soda fountains, are kept "humming"—that is, those which have started up; but these are as yet rather small in number. The majority of the fountains in these cities will probably be in full operation by the middle of May. Collections are fair. No price changes have taken place, the steadiness of the market on Western products giving rise to expressions of surprise. Orders from the country continue coming in freely, but the number of new stores this week has not been very large.

Business is Generally Fair.

St. Louis, April 28.—Trade with the flooded portions of Texas has of course been greatly checked, but, generally speaking, business is very fair, although showing a reasonable falling off from the activity of March. The most notable price changes have been a decline of three cents in carbolic acid, and an advance of 25c. in cocaine. Retail trade locally is picking up, and sales of soda water and cigars have been excellent the past two days on account of the warm, bright weather.

Few manufacturers co-operate with the retailer in creating a demand for their products among physicians and the consumer as do Smith, Kline & French Co. for their Eskay's Food. If retail dealers will let them know that they stock Eskay's Food they will be supplied liberally with samples and suitable advertising matter. Their schedule of prices is arranged so as to yield druggists a living profit, and they claim that the average schedule of retail prices on Eskay's Food is higher than that prevailing on other foods, even in cut rate centres.

MARKET REPORT.

NEW YORK MARKET.

New York, May 1.—In the jobbing department, dealers continue to report a moderate volume of business, with only a limited number of price changes, the more important of which are wholly due to natural causes.

OPIMUM.—Continued slow demand, as reported during the entire period of the week, and the tone of the market is easier. Quotations for round lots are a shade lower, but for small parcels jobbers continue to quote \$3.55@3.75 for 9 per cent, and \$3.65@3.90 for 11 per cent, on the outside figures for single pounds.

POWDERED OPIUM.—Small parcels have continued to find a moderate consuming outlet, and jobbing quotations remain unchanged and fairly steady, with a range of \$4.50@4.65 for 13 per cent, and \$5.15@5.35 for 16 per cent, according to size of order.

MORPHINE.—No further change is reported, but the market has a more or less unsettled appearance, and buyers are inclined to operate cautiously. Jobbers continue to quote on the basis of \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, according to brand and quantity.

QUININE.—The demand has continued light and unimportant, but there is no abatement of steadiness on the part of holders, and indications are considered decidedly favorable to an early improvement in values. Meanwhile, jobbers continue to quote on the basis of 31@32c. for bulk in 100-oz. tins, 33@34c. in 50-oz. tins and 37@39c. in ounce vials.

CAMPHORE.—Manufacturers have advanced their quotations 2c. per lb. on account of higher prices abroad and diminishing stocks of crude. The revised jobbing figures are 50c. by the barrel, 60c. by the case and 65@70c. for smaller quantities. Powdered is held at 55@56c. Japanese is in ounces is correspondingly higher, and in light available supply, with holders offering sparingly at 67@72c., according to size of order.

CANNABIS INDICA.—Jobbers continue to quote 35@40c., but the market shows a hardening tendency under the influences heretofore noted, and a further advance is generally expected.

ERGOT.—Foreign markets for the German variety are easier, and spot holders have modified their views to the extent of reducing quotations to 65@75c., as to quality and quantity. Spanish is quiet and unchanged at \$1.15@1.30.

MONOBROMIDE OF CAMPHOR.—Values are firmer in sympathy with the market, and jobbing quotations show an advance to \$1.60@1.80.

EALE.—AMERICAN.—An continued easy feeling has prevailed, and jobbing quotations have been further reduced to \$1.80@1.95.

ACETIC ACID.—The market is firmer, and jobbers report in 50 per cent, 50¢, 55¢, and 60¢, in carboys and 10@12c. for less. For 36 per cent, 6@6½c. in carboys and 10@12c. for less.

VANILLA BEANS.—The market for the Tahiti variety is again somewhat under the influence of the last week, and jobbing quotations show a further advance to 35¢, as to quality.

CARBOLIC ACID.—Quotations for Calvert's are easier, and the revised figures are 2½@2.10 for No. 1 and \$1.50@1.60 for No. 2.

CANARY SEED.—Market a shade firmer, with jobbers quoting 3½@3¾c. for Sicily by the bag and 5@6c. for less; Smyrna, 3¾@3c. by the bag and 4@6c. for less.

ROCK CANDY SYRUP.—Values are firmer, and jobbers have advanced quotations to 53½c. in bbls., 55½c. in half bbls., 57½c. in 10 gallon kegs and 63½c. in 5 gallon kegs.

ISINGLASS.—Quotations for the Japanese variety have been marked up to 70@80c.

GUMME OF COPALU.—A firmer feeling has developed, and jobbing quotations show an advance to 80@85c.

LITHARGE.—Jobbers have revised their quotations to correspond with the recent advance by manufacturers, and the new figures are 82½c., as to quality.

SPERM OIL.—Values are higher at producing points, and spot quotations have been marked up to 80c. @ \$1.

GEORGE H. WHITE, an importer of leeches at No. 104 John street, New York City, died at his Brooklyn home on April 23. Some years ago he conducted a large importing and jobbing trade in crude drugs.

WANT ADS. RESULT IN BENEFIT.

A subscriber writes to us, "I always read the "Want" page first, and on two recent occasions this habit has resulted greatly to my benefit." Every reader of this paper should follow this subscriber's example. On the Want page in every issue will be found a list of stores for sale, stores wanted, salesmen wanted, store-rooms to rent, second-hand fountains for sale, clerks wanted, patent medicines to exchange, positions wanted, and other wants among which the reader surely will find some item to interest him.

The Era probably prints more paid notices of this kind than any other similar journal, and these little advertisements cover a wide range of druggists' wants which come to us every week from every section of the country. In no other way can the dealer communicate with brother druggists in other towns, so effectively or so cheaply, and there is no one in the trade, from the clerk in a little retail store to the president of a big manufacturing house, who cannot use these Want Ads. to advantage.

THE U. S. P. REVISION CONVENTION.

In this issue is presented a full and careful report of the proceedings of the Pharmacopoeial Convention at Washington last week. Readers are urged to very carefully peruse this report so that they may be fully informed of the principles and regulations laid down for the guidance of the new Committee of Revision. It will be noticed that in two or three important respects the plan and scope of the national guide have been materially altered and, we believe, improved. The inclusion of average doses cannot but result in making the work much more serviceable and acceptable to both pharmacists and physicians. This is information which has always been lacking in the United States Pharmacopoeia, but which, to our mind, is what the pharmacist and doctor both most often need. Hitherto they have been obliged to go elsewhere, to other works of reference, and in this way much of the effectiveness and usefulness of the Pharmacopoeia has been lost. We are very glad that this important step has been made. There are no really sound and valid reasons against it, but everything to recommend it. Pharmacopoeias of other countries have long included doses and, so far as we know, without any unfortunate results therefrom. We do not believe that the fears of some supersensitive people in this respect will ever be justified.

The recognition in a limited way of proprietary synthetic preparations is also a wise step. The Pharmacopoeia will recognize those, and those only, upon which it can keep control in the matter of standard, purity, efficiency, etc. It does not throw the bars open to secret articles, but it does recognize those of a proprietary character which are able to prove their claims in the matter of identity, purity and medicinal effects.

It is hardly necessary to comment upon the report, for it is so full that the reader can gain from it a very comprehensive knowledge of what was done at Washington last week, and what will be done by the new committee.

It is timely, however, to urge upon the pharmacists of this country the importance of each one of them doing all in his power to secure the general adoption of the Pharmacopoeia, to popularize it and make it a constant handbook and companion of the druggist and the doctor. The Pharmacopoeia is supposed to, and should, represent the combined opinion and results of experience of pharmacists and physicians. Each individual pharmacist, each doctor, has a certain amount of responsibility, a certain duty, in the matter of revision of the work which he should not shirk. Each should give to the Committee

of Revision the results of his own experience and observation, should send in his suggestions and criticisms, in order that from this great mass of accumulated information the committee may cull, in its wisdom, that which will tend to make the Pharmacopœia the most reliable and comprehensive. The next two years or so the committee will be very busy in preparing the next volume. During this time let druggists take a personal interest in the matter, and do all they can, individually and collectively, through their State and local associations and colleges to assist in the revision.

We do not know what will be the price of the new work, and we do know that it is necessary that the committee shall have a sufficient income to enable it to do its work in the best way; but, after considering all matters of necessity and advisability, we would urge, at this early day, that the price of the new Pharmacopœia be made just as low as it is possible to make it, in order that it may receive a wider circulation, and that it may consequently be found in the majority rather than the minority of drug stores and physicians' offices. We wish it were possible in some way to secure from the United States Government an appropriation sufficient to place a copy of this work in the hands of every doctor and pharmacist in the entire United States. The sum necessary would not be so very great, and inasmuch as the Pharmacopœia is, to a certain extent at least, a national standard, it would seem that there is every excuse for action of this sort. At any rate, whatever is done in the matter of distributing the work, it should be made as easily obtainable as possible. The price should be kept low, and no large discounts accorded the book trade for handling it; only just sufficient to cover the cost.

THE PROPRIETORS.

The report of last week's meeting of the Proprietary Association of America in annual session in this city, is given in full in our news pages. All throughout the proceedings it was evident that these proprietors are fully aroused to the necessity for keeping on the good side of the retailer. The plans of the N. A. R. D. and the work already accomplished by that organization have won the very decided respect for power which is always accorded united effort. There is a very obvious desire and intention of all three branches of the drug trade, the retail, wholesale and proprietary, to get together on a footing of amity and uniformity of interests. Hitherto for many years the trade has been at cross purposes, each section looking upon the others as natural enemies, and as a result there have come into existence the many trade abuses, particularly the cut rate evil, which we are all now trying to remove. Proprietors seem in earnest in their promises to co-operate in the N. A. R. D. plans, and without doubt there will be sufficient acceptances received from the wholesale trade to authorize the early putting into effect thereof. Some three or four weeks now

ought, we believe, to see the start at least in the operation of this tripartite agreement. There is only one thing necessary to its full success, namely, the majority sentiment and honest action of the three branches of the trade; there is only one thing which will destroy this carefully erected structure, and that is traitorous action on the part of those who have signed the obligation to maintain the agreement.

The important features of the proprietary meeting are well emphasized in the report, and the whole is commended to careful perusal.

NATIONAL STANDARDS BUREAU.

The movement now under good headway to secure the establishment of a National Standards Bureau is one which should commend itself to every citizen. This country manufactures all sorts of instruments of precision, scientific apparatus, etc., of a grade equal to any produced in any country, but we have no facilities or provision for accurately standardizing and verifying these instruments. They must be sent abroad for these purposes, a proceeding which involves considerable outlay and which should be made unnecessary. Other countries spend much money in the establishment and maintenance of bureaus for standardizing purposes, but the United States is totally lacking in these facilities.

It is now proposed that a bureau, adequately equipped and with provision made for its maintenance and extension, shall be established under the Secretary of the Treasury, to which bureau may be sent all manner of instruments and appliances for calibration, standardization and verification. There is no science, no industry, which does not imperatively call for facilities of this character. There is a United States Office of Weights and Measures, but its work is very limited. The bill which has been prepared and submitted for consideration is one which meets the approval of the officials of the Government themselves, and is sure to meet with favor generally. In fact, there is no opposition to the movement after the plans and value of a bureau of this kind have been explained. It will enable the makers and users of all forms of measuring instruments and other scientific apparatus to verify and perfect their work, and will place the United States where it ought to be, at the top, in this respect. We have a few standards, for instance, the standard meter (see Era, April 26), but most of these are copies of originals preserved in foreign countries. The movement for the new bureau has received the approval of every scientific association of importance, of the manufacturers and of a large number of individuals. All that seems to be necessary to insure its success is a thorough understanding on the part of our Senators and Representatives of the utility, immediate need and propriety of passing a measure of this kind. It is one which will be of immense benefit to every industry where measures of any sort whatever are employed.

(Special Correspondence).

GUSTAVE PLANCHON.

M. Gustave Planchon, Director of the Paris Superior School of Pharmacy, president of the Paris Society of Pharmacy, and president-elect of the International Congress of Pharmacy of 1900, died suddenly on Good Friday, April 13, at the age of sixty-six years.

He was spending Easter at Montpellier with his nephew, Dr. Louis Planchon, who is one of the professors at the school of pharmacy in that town. M. Gustave Planchon had been suffering from influenza, and it was hoped that this short vacation in his native department might restore him to his usual robust health. But a telegram announced a sudden seizure, and a second his death.

The body was conveyed to the School of Pharmacy at Paris, where

The Funeral Ceremony

took place on April 18, at noon, the coffin being placed under the large entrance porch. Prof. Planchon was a Protestant, and this arrangement allowed his colleagues and friends (Catholics for the most part) to join in the public ceremony unhampered by religious considerations. On the coffin lay the official robes and cap of the deceased, at the foot was a handsome floral cross. Above, on the gable, the tri-color flag was tied around with crape, and around the pall were grouped the chief mourners, the officiating clergyman and the professors of the school, with delegates from the other Faculties of the Paris University, these latter in their rich robes of office. Hundreds of pharmacists, scientific men and sympathizers were grouped in the roomy cloister and garden. Outside the gate stood a detachment of infantry and a curious crowd. All hats were reverently lifted as the proceedings began. Pastor Fontanés, after offering up a short prayer, read the XIII. chapter of Corinthians, which many of us felt to be singularly appropriate to the memory of the man we had met to mourn. He then reviewed

Planchon's Career.

The son of a working man in a village in the Cevennes Mountains, Gustave Planchon had an elder brother Emile, who, by hard study and privation had obtained a position in the neighboring (Montpellier) School of Pharmacy. Stimulated by his brother's help and example, and by the sympathy of his far-sighted and ever self-denying parents, Gustave embraced the same profession. Every hour he could honestly spare from the pharmacy counter was devoted to his favorite study of botany. His simple, honest, kindly nature was, the pastor hinted, doubtless greatly formed by his hard studious youth with its leisure thus spent in communion with Nature's fairest works.

He studied at Montpellier, but took his Pharmacy and Sc. D. degrees at Paris in 1864. He spent a couple of years at Lausanne as Professor of Botany, and then returned to Montpellier, but was named Professor of Materia Medica at the Paris School of Pharmacy in 1866, and on the retirement of Prof. Chatin (who had consistently, though secretly, taken a kindly interest in his modest and meritorious assistant) succeeded him as Director in the School, which may be considered the highest position French pharmacy can offer to its followers.

His Many Virtues.

his filial affection, unwearying industry, absence of jealousy and almost of ambition, his natural kindly and genial disposition, his sincere religious belief, his love for science and truth, his genuine sympathy with the students and all around him, were cited by the pastor as a worthy example to be followed by all.

Professor Moissan

spoke briefly and well, in the name of the school teaching staff, referring to the painful shock felt at the news of the Director's death. He described M. Planchon's Parisian career, his election to the Academy of Medicine, his chairmanship of the Society of Pharmacy, his promotion as officer of the Legion of Honor, his simple and clear method of imparting instruction, his devotion to the School's interests, and its prosperity under his guidance. He alluded to the benevolence of their deceased chief, generous to a fault—the needy or distressed student never appealed to him in vain.

Other Speeches

were made by M. Guignard (Botany Professor at the School and Member of the Academy of Sciences), who analyzed at some length M. Planchon's scientific publications, his works on the fossil flora of Montpellier, his papers on Quinquinas, Ipecacuanbas, Jaborandi, etc., and his great work, the "Treatise on Simple Drugs of Vegetable Origin."

Then followed Prof. Bourquelot, representing the Academy of Medicine; M. Yvon (Paris Society of Pharmacy); M. Marty, (army pharmacist), and M. De Mazieres (Paris Pharmacists' Syndicate).

M. Rieth (General Association of French Pharmacists), expressed in warm and eloquent language the sincere respect and affection which were felt for M. Planchon by the thousands of pharmacists who passed their youth under his directorship, while the representatives of the General Association of Students and the Pharmaceutical Students' Friendly Association joined in testifying that the same sentiments were fully shared by those still at the school.

THE FUNERAL SERVICE.

The military honors due to an officer of the Legion of Honor having been rendered by the detachment of infantry, they filed off to the beat of their muffled drum and

The Funeral Procession

was formed. A large car was covered with floral tributes from individuals and societies, the most conspicuous being the immense crown of flowers offered by the School of Pharmacy officials "to our regretted director." The hearse followed. The four pall-bearers were Prof. Moissan (School of Pharmacy), Prof. Bourquelot (representing the Academy of Medicine), Prof. Brouardel (head of the Faculty of Medicine), and Military Pharmacist Marty.

After the son and nephew of M. Planchon came the group of professors of the School of Pharmacy, draped in their flowing crimson and black robes, preceded by their mace-bearer and accompanied by the delegates from the other Faculties of the University of Paris, in scarlet, violet and black—a very striking group.

MILITARY HONORS.

Delegates from the various pharmaceutical and student's associations (already named) followed, the long, sombre black column, relieved by the military pharmaceutical graduates from Val de Grace. A number of other pharmacists and friends followed, making up a very lengthy procession, which attracted much attention as it passed on foot to Mont Parnasse Cemetery, about a mile from the school, the hearse being respectfully saluted, after the Parisian fashion, by every passer-by. Doubtless few of the hundreds of working class people, who came to their doors to view the brilliant costumes, knew that the

man thus publicly honored commenced his career in their own humble walk of life.

Short and simple was the grave-side service, and in twenty minutes the mourning coaches and cabs had dispersed the assistants towards their various destinations.

Personal Impressions.

The allusion to Gustave Planchon's natural kindness which formed the keynote of all the speeches was no empty official flattery. Simple, unaffected and retiring by nature, he had a singularly winning face and manner which immediately put the most timid completely at his ease, and was, moreover, never belied by his words or actions. Placed by his official position over the heads of men of almost world-wide scientific reputation, his genuine worth and good nature disarmed jealousy. He was, like most kindly people, supposed to be deficient in firmness. I can only say from personal experience that my efforts to obtain an autobiographical "interview" some time ago were met by an indulgent but most efficient resistance, and that he voted with his colleagues when he was firmly convinced that disciplinary measures were absolutely necessary for the well-being of the school in particular or the university in general.

I remember on one occasion my protestations as to the possible innocence of a very eloquent young offender were met by an official of the school by the simple observation, "Well, M. Planchon considers him guilty, and voted accordingly," which convinced me more than any argument.

It was generally felt that such a man was

The Ideal Chairman for the 1900 Congress

of Pharmacy—placed alike by his official position and his natural disposition above the petty factions of French or foreign pharmaceutical politics, respected and liked by all. The gap will be a difficult one to fill.

His Hobby

In his scanty leisure was the study of the history of pharmacy in by-gone days. He had collected in printed form many curious details as to the apothecaries of past centuries, and his series of pamphlets on the history of the Paris School of Pharmacy, which breathes throughout the painstaking, kindly character of its author, should be read by all interested in the pharmaceutical educational establishments of long ago.

His home, next door to the School of Pharmacy, was simply furnished, with family photographs and souvenirs of his elder brother, of whom he would speak with grateful pride. He had been a widower for many years. His only son has not followed in his father's footsteps, but his nephew, Dr. Louis Planchon, of Montpellier, is Professor of *Materia Medica* at the local School of Pharmacy, as already mentioned.

A NEW TREATMENT FOR PULMONARY CONSUMPTION.

Mendel has instituted a new kind of treatment for consumption, which has given him considerable satisfaction. By means of a long curved syringe of the capacity of a drachm, he injects through the mouth into the trachea about 3 drachms of the following solution: Oil of eucalyptus, oil of thyme, oil of cinnamon, of each 1 drachm; iodoform, 20 grains; bromoform, 10 drops; sterilized olive oil, 3½ fluid ounces. The tracheal injection is practised daily. The patient, who feels the solution trickling into his lungs, experiences an agreeable sensation of warmth, and does not cough. In his early experiments, Dr. Mendel operated with a mirror, but now he is able to dispense with that aid. The patient holds his tongue himself outside his mouth between thumb and finger by means of a napkin. The treatment is simple and inoffensive, and the effects vary with the stage of the disease. In patients in the first stage, he has succeeded after two or three weeks' treatment in relieving the cough and expectoration, and even stopping them altogether; strength, sleep and appetite also return. In the two remaining stages of the malady, the results are not so satisfactory, but still considerable benefit is obtained, expectoration being easier and less abundant, while strength and appetite improve.—(Med. Press; Pharm. Jour.)

"May Sweetly is going to marry the corner druggist."
"There! I knew she would never get over the ice cream soda habit."

Volumetric Estimation of Red Lead.—The ordinary methods of estimation are unsatisfactory, according to J. F. Tocher. He proposed the following process in a paper read at a meeting of the Pharmaceutical Society in Edinburgh: Treat 2.064 grammes with 50 cc. of nitric acid (sp. gr. 1.05). Boil the mixture, run in 50 cc. of N.3. oxalic acid; boil, add a little H₂SO₄, and titrate.

Pure Hydrobromic Acid.—A. Scott, F. R. S. (Chemical Society), recommends placing bromine with six times its weight of water in a glass apparatus, with exit and entrance tubes, and blowing in SO₂, and finally purifying by distilling.

New Sulphide of Arsenic.—A. Scott has obtained a brown sulphide of the formula As₂S by acting on a mixture of phosphorus and As₂O₃ with SO₂. The new sulphide is insoluble in ammonia.

Solution of Arsenic.—W. Duncan, F. C. S., suggests (Edinburgh Chemists' Assistants' Association) that a solution (1 per cent.) As₂O₃ in water containing a little glycerine should displace the three liqoures of the B. P.

Lotio Hydrarg. Nigra.—W. Duncan, F. C. S. (Edinburgh Chemists' Assistants' Association), states that mercury in black wash is in solution in the mercuric condition, and suggests that the lotion owes its activity not to the precipitated mercurous oxide, but to dissolved mercuric oxychloride.

Dialysis of Drugs.—Dr. J. C. McWalter (Pharmaceutical Society of Ireland) recommends the preparation of a number of galenicals by dialysis. He speaks well of Liquor Cascariillae dialysatus, liquor rhei dialysatus and others.

HÆMOL MERCURIC IODIDE is recommended as an antisyphilitic. It is claimed to have remarkable tonic and blood-forming powers. It may be given in pill form in doses of 0.05 to 0.06 Gm. (½ to 1 grain) daily, or by intramuscular medication, combined with vaseline oil. (Pharm. Post.)

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—
The Question Discussed by Pharmacists,
Clerks and Teachers.—Its Advantages
and Drawbacks Contrasted.

COLLEGE TRAINING ABSOLUTELY ESSENTIAL.

In considering this question, permit me to make the following statement:

1. As a teacher, it should not be necessary for me to state that I believe in the value of thorough and systematic general and technical training as opposed to the apprenticeship system. The fact that this system has produced good results in the past is no reason why it should prevail at present. No one desires to go back to the stage coach, no matter how valuable the older method of transportation was in its day. The above statement should not be construed as expressing a lack of appreciation of drug store experience. Experience is a costly school, it is true, yet it may be the most valuable if we are willing to profit by it. No matter how efficient and long the college course, no State law ought to permit any college or university graduate to practice his profession independently until he has served several years of probation in a drug store under the direction of men of experience, and until he has demonstrated his capacity to apply his knowledge acquired at college.

2. As pharmacy is taught to-day in this country, I need not fear contradiction when I claim that even the best course in pharmacy will not make too good a pharmacist. The most important is not what will elevate the status of pharmacy, though this in itself is desirable; nor whether the pharmacist will be benefited financially, which is also important; but what education and training are necessary on the part of the pharmacist to give the best service to man in those hours of his life when he is most in need of competent and faithful service.

3. Aside from ideal aspirations, what is practical? Let me illustrate by giving a concrete illustration. Wisconsin, like many of her sister states, has a university which stands at the head of the educational system of the state. The instruction in most of our state universities is of such a standard that as a rule it is at least a little above anything else that is offered in the state, yet not of too high a grade to lose touch with the people of the state. The grade of such an institution may properly be taken as a standard. Indeed, the Wisconsin law recognizes the pharmaceutical course of the University as the standard by giving credit to graduates of the University of Wisconsin and other institutions giving a like course. If the Wisconsin Board of Pharmacy, and this is within its power—were to demand in its examinations such a knowledge of chemistry, botany, pharmacognosy, etc., as is demanded for graduation at the university, the problem would be solved. With such co-operation the standard at the university could gradually be raised to any standard that seemed necessary by the Board of Pharmacy. Graduates, e. g., from Michigan and other institutions offering similar courses naturally come within the scope of the law. Graduates, e. g., from Beloit, a denominational college with no course in pharmacy, could secure the necessary technical training wherever they chose, and with the graduates from the University of Wisconsin and others present themselves for examination by the Board after having had the required drug store experience. To suppose for a moment that a candidate can acquire a knowledge, e. g., of modern chemistry from a dozen text books is arrant nonsense. College training in pharmacy is absolutely necessary to acquire a knowledge of the pharmaceutical sciences that is worth anything.

I have taken the State university as an illustration, for another reason. Educational requirements in Arizona cannot be the same as in Michigan. The differences are reflected by the standards of the State universities, and thus the differences in pharmaceutical standards will be such as the respective States will warrant. Absolute

equality may be demanded on paper, but it will be a lie on the very face of it.

Your own State, New York, like a number of other Eastern States, has no State university. New York, however, has an examining body which might well be called upon to set the standard. That this would be done by consulting the faculties of the various colleges and boards of pharmacy in your State there can scarcely be any doubt.

The plan presented briefly above does not make graduation from a college or school of pharmacy a prerequisite, though it makes college or university education in the sciences the foundation. It accomplishes the same and possibly more than proposed in your query, but leaves the system more flexible. In order to bring this about, a law can be passed that sets the proper basis for State board examinations. This should be of such a nature as to permit development, growth.

Madison, Wis.

EDWARD KREMER.

FIRMLY OPPOSED TO THE DIPLOMA REQUIREMENT.

As one opposed to a statute that will compel those who desire to come before the board of pharmacy for examination to possess a diploma from a college, I desire to express my views through the columns of your valuable journal.

In giving my opinion I can safely say that I voice the sentiment of a good majority of the reputable druggists throughout this State as well as Pennsylvania. In gathering the statistics on this subject the first question asked is, who is it that demands this legislation? It is certainly not forty per cent. of those interested in the drug business; on the other hand, it is not the public. From personal observation and experience which the writer has had in the retail drug business, I know of many worthy young men whom an enactment of this character would debar from engaging in the pursuit of pharmacy.

Practical experience, coupled with a natural ability and desire to engage in the pursuit of a druggist, is worth far more than a theoretical training.

We are far from being a profession. Our business today calls for business ability, more than scientific knowledge. We have talked profession a long time, and have tried to make ourselves think we are classed with professional men; but have found that when it comes to making a livelihood, we have fallen short and realized that the secret lies in the ability for business.

If better qualifications are important let our board raise their standard, allowing many worthy young men in the interior to qualify themselves by their choice of channels through which they may gain their information. The Era, as well as other institutions, have opened a way to young men that assists them to qualify, if the calibre is in their make-up. Of course too much knowledge was never a detriment to any man, but it is necessary that as a prerequisite to come before a board we should make it compulsory to show a diploma from a college?

I find that many young men engage in this business, not from mere love of professional renown, so much as from the desire to engage in a noble business, which is noble in itself.

There have been many articles published in the Era from those whose views are certainly worthy and have logically discussed the point, and their consideration must bear much weight. Yet, when we find physicians in the smaller cities and towns prescribing ready-made medicines and even patent medicines, the incentive to acquire a college education, which entails time away from home and money hard earned, the incentive, I say, is not very great. Why is it that there is a desire to make laws which are onerous and oppressive to the retail druggist? The time has not yet arrived for this new legislation. Pharmacy is not an art free from the consideration of mere profit, and such an idea will never be paramount to the business of pharmacy.

If those who advocate the diploma prerequisite think that the ability to conduct a pharmacy in cities is more important than country towns, why not have two grades of certificates, one for cities of the first class, and one for the balance of the state? I certainly am not in favor of making it a compulsory requirement by law.
Binghamton, N. Y.

CLARK Z. OTIS.

EIGHTH DECENNIAL CONVENTION FOR THE REVISION OF THE U. S. PHARMACOPOEIA, Held in Washington, D. C., May 2-4, 1900.

THE COMMITTEE OF REVISION

The opening session of the Eighth Decennial Convention for the Revision of the U. S. Pharmacopoeia began at noon on May 2, in the new banquet hall of the Raleigh Hotel, in Washington. Dr. Horatio C. Wood, the president of the convention in 1890, called the assembly to order, and, in accordance with the custom of the organization, presided over this convention until its officers were chosen. The immense room afforded an ample and most comfortable meeting place for the large body of delegates. Its location on the tenth floor of the building, away from the noise of the streets, yet immediately adjacent to the elevators, was agreeably in contrast with the auditoriums that similar large gatherings are frequently forced to occupy.

THE SESSIONS OF WEDNESDAY, MAY 2.

were devoted to preliminary formalities and the appointment of committees for various purposes. The Hon. John B. Wight, representing the Commissioners of the District of Columbia, welcomed the delegates to Washington in a brief but forcible address, saying that it was fitting that such an important gathering of men, upon whom so largely depends the welfare of humanity, should assemble in the capital of the greatest and most prosperous of nations.

The official call for the convention was then read by Mr. W. S. Thompson, of Washington, chairman of the Committee on Credentials, this being followed by the reading of the report of his committee, which included a list of the delegates eligible to participate in the work of the convention. At the close of the reading of this report, attention was called to the fact that the names of the delegates from certain organizations had not been read. Mr. Thompson explained by quoting from the resolutions

of the Seventh Convention regarding the basis of representation in the Decennial Convention of 1900, wherein it is stated that the call should extend to "the several bodies represented in the conventions of 1880 and 1890, and also such other incorporated State Medical and Pharmaceutical Associations and incorporated Colleges of Medicine and Pharmacy as shall have been in continuous operation for at least five years immediately preceding, and the Surgeon-General of the Army, the Surgeon-General of the Navy and the Surgeon-General of the Marine Hospital Service." The discussion was stopped by a motion referring the matter to the Committee on Credentials.

The address of President Wood was next listened to. It contained several recommendations for the consideration of the convention, based upon the experience of the Committee of Revision of 1890. The most important of these were:

1. That a constitution and by-laws be adopted and that the organization be incorporated.

2. That the work of the Committee on Revision and Publication be divided between two committees. He suggested that one of these, consisting of twenty delegates, constitute a Committee on Revision, and that the publication and distribution of the Pharmacopoeia and other business affairs connected with the work of the Convention and its committees be placed in the hands of a business committee, composed of the President of the Convention, the Chairman of the Committee of Revision and five others, and which shall be known as the Board of Trustees, or by another appropriate name. At the close of the address, in accordance with a motion by Dr. H. M. Whippley, of St. Louis, the following committee was appointed

to consider and report upon the President's recommendations: Dr. H. M. Whelpley, of St. Louis, chairman; Prof. Joseph P. Remington, of Philadelphia; Dr. Oscar Oldberg, of Chicago; Prof. Samuel A. D. Sheppard, of Boston, and Dr. R. A. Cleeman, of Philadelphia.

In the course of his address, Dr. Wood also suggested the appropriateness of arranging for remuneration for a larger part of the expert work necessary in connection with the revision, citing as an example of the past the vast amount of painstaking work done entirely without pay by the late Prof. John M. Maisch, of Philadelphia, in connection with the Seventh Revision. His suggestion that Dr. Charles Rice, of New York City, be continued as the chairman of the Committee of Revision and his report that Dr. Rice's health is rapidly improving were received with great applause.

The Convention then adjourned for lunch.

Second Session.

The second session of the day was called to order at three o'clock and the report of the committee appointed to consider the president's recommendations was immediately taken up and adopted. The report approved those recommendations substantially as stated above, with the exception that the committee advised that the Committee of Revision consist of twenty-five members instead of twenty. The work of drafting a constitution and by-laws was referred to the following committee, which was directed to report at its earliest convenience: Dr. H. M. Whelpley, of St. Louis; Prof. Joseph P. Remington, of Philadelphia; Dr. Oscar Oldberg, of Chicago; Prof. Samuel A. D. Sheppard, of Boston; Dr. R. A. Cleeman, of Philadelphia; Dr. E. H. Squibb, of Brooklyn; Dr. A. B. Lyons, of Detroit; Mr. W. S. Thompson, of Washington, and Dr. N. S. Davis, of Chicago.

The formal roll call and announcements of the representatives of the various organizations for the Committee on Nominations, one delegate from each society or institution represented, were then made. The entire evening of this day was given up to the work of the Committee on Nominations, which consists in making nominations for the officers of the Convention, for the membership of the Committee of Revision and of the newly-created Board of Trustees.

In the absence of Dr. Charles Rice, the chairman of the Committee of Revision and Publication (1890-1900), Prof. Joseph P. Remington, the first vice-chairman, read the report of that committee.

THE SESSIONS OF THURSDAY.

The committee's report anticipated somewhat the work of the Committee on Drafting Constitution and By-Laws, in accordance with resolutions passed on the previous day. This action had been taken in order that the Eighth Decennial Convention and its committee might be organized in accordance with the new constitution and by-laws without the necessity of delaying the work of the Convention while the formal drafts of those documents were being prepared by the committee to whom the task had been assigned.

The nominees named by the committee were elected by a vote cast by the secretary, in obedience to a motion duly passed. The list is as follows:

OFFICERS OF THE EIGHTH UNITED STATES PHARMACEUTICAL CONVENTION.

OFFICERS: President, Dr. Horatio C. Wood, of Philadelphia; vice-presidents, Dr. Albert B. Prescott, of Ann Arbor; Prof. O. A. Wall of St. Louis; Dr. R. W. Wilcox, of New York; Dr. N. S. Davis, Jr., of Chicago; Dr. A. L. Lengfeld, of San Francisco. Secretary, Prof. H. M. Whelpley, of St. Louis; treasurer, Dr. William M. Mew, of Washington.

BOARD OF TRUSTEES: The president of the Convention and the chairman of the Committee of Revision, ex officio; and A. E. Ebert, of Chicago; S. A. D. Sheppard, of Boston; William S. Thompson, of Washington, D. C.; Charles E. Dohme, of Baltimore, and George W. Sloan, of Indianapolis.

COMMITTEE OF REVISION.—Chairman, Dr. Charles Rice, of New York; secretary, Dr. R. W. Wilcox, of New York; and Dr. E. H. Squibb, of Brooklyn; J. P. Remington, of Philadelphia; Charles Caspari, Jr., of Baltimore; W. G. Gregory, of Buffalo; Dr. N. S. Davis,

Jr., of Chicago; James M. Good, of St. Louis; Dr. George F. Payne, of Atlanta; Edward Kremers, of Madison, Wis.; S. P. Sadtler, of Philadelphia; Henry Kraemer, of Philadelphia; Dr. H. A. Hare, of Philadelphia; L. E. Sayre, of Lawrence, Kan.; A. B. Stevens, of Ann Arbor, Mich.; Dr. A. B. Lyons, of Detroit; C. Lewis Diehl, of Louisville; Oscar Oldberg, of Chicago; John Marshall, of Philadelphia; W. S. Haines, of Chicago; Dr. J. J. Abel, of Baltimore; Virgil Cybientz, of New York; W. L. Scoville, of Boston; C. S. N. Hallberg, of Chicago; A. R. L. Dohme, of Baltimore, and the president of the Convention, ex-officio.

The value of the Nominating Committee as a device for saving the time of the Convention was illustrated in a most convincing manner by the promptness with which the report of that body was accepted and acted upon. The approval of the work of a committee session of more than five hours, 8 to 1.15 o'clock of the previous evening, was accomplished in scarcely a larger number of minutes.

The consideration of the "General Principles to be Followed in Revising the Pharmacopœia," as recommended by the Committee of Revision and Publication of 1890, was then taken up, considered paragraph by paragraph, and finally adopted with some comparatively slight amendments. These rules for the guidance of the new committee as finally adopted are as follows:

General Principles to be

FOLLOWED IN REVISING THE PHARMACOPŒIA.

[Submitted by the Committee of Revision and Publication of 1890, in accordance with the instructions of the Convention of 1890 and adopted by the Convention of 1900.]

1. Scope of the Pharmacopœia.

The Committee of Revision is authorized to admit into the Pharmacopœia any product of known origin; also any synthesized product of definite composition which is in common use by the medical profession, the identity, purity or strength of which can be determined. No compound or mixture shall be introduced if the composition or mode of manufacture thereof be kept secret, or if it be controlled by unlimited proprietary or patent rights.

2. Doses.

After each pharmacopœial article (drug, chemical or preparation) which is used or likely to be used internally or hypodermically, the committee is instructed to state the average approximate (but not the maximum or maximum) dose for adults, and, where deemed advisable, also for children. It is to be distinctly understood that neither this Convention nor the Committee of Revision created by it intends to have these doses regarded as obligatory on the physician or as forbidding him to exceed them whenever in his judgment this seems advisable. The committee is directed to make a distinct declaration to this effect in some prominent place in the new Pharmacopœia.

3. Nomenclature.

It is recommended that changes in the titles of articles at present official be made only for the purpose of insuring greater accuracy, or safety in dispensing. In the case of newly admitted articles, it is recommended that such titles be chosen as are in harmony with general usage and convenient for prescribing; but in the case of chemicals of a definite composition a scientific name should be given at least as a synonym.

4. Assay Processes.

The committee is instructed to append assay processes to as many of the potent drugs and preparations made therefrom as may be found possible, provided that the processes of assay are reasonably simple (both as to methods and apparatus required) and lead to fairly uniform results in different hands. As regards the products of such assays, tests of identity and purity should be added wherever feasible. Physiological tests for determining strength should not be introduced by the committee.

5. Purity and Strength of Pharmacopœial Articles.

The committee is instructed to revise as carefully as possible the limits of purity and strength of the pharmacopœial chemicals and preparations for which limiting tests are given. While no concession should be made towards a diminution of medicinal value, allowance should be made for unavoidable innocuous impurities or variations due to the particular source or mode of preparation, or to the keeping qualities of the several articles. In the case of natural products, the limits of admittance of impurities should be fixed high enough to exclude any that would not be accepted by other countries.

Regarding the strength of diluted acids, tinctures and galenic preparations in general, it is recommended that the committee keep in view the desirability of at least a gradual approach upon mutual concessions towards uniformity with similar preparations of other pharmacopœia, particularly in those cases where remedies which are in general use among civilized nations.

6. General Formulae.

It is recommended that general formulae be introduced, as far as the particular nature of the several drugs will permit, for fluid extracts, tinctures and such other preparations as are made by identical processes, and that the general formulae to be followed in each case can be merely indicated by reference.

7. Weights and Measures.

The committee is instructed to retain the metric system of weights and measures adopted in the Seventh Decennial Revision.

8. Provision for a Supplement.

The Committee of Revision is hereby authorized to prepare a supplement to the Pharmacopoeia whenever that body believes such action advisable. [This amendment as here stated is not a verbatim copy of the official record.]

9. Precedents.

In all matters not specially provided for in these "General Principles," the rules established for previous revision, if there are any, should be followed.

For fairness to the demands of the minority on various questions, it should be stated that exception was taken to the propriety of several provisions of the instructions just preceding. The members composing the respective majorities and minorities on the different points necessarily varied, according to the interests involved. The discussions were very spirited at times and it is to be regretted that our space does not permit a full report of them, as many of them were instructive, since they voiced the opinions of representative men on the interests involved. The admission of synthetics was the subject of much discussion. A very determined effort was made to secure the striking out of the word "Inhibited" in the last line of Section I, "Scope of the Pharmacopoeia".

The adoption of doses stated in terms of the Metric system was opposed by many physicians present, and a request was made for the insertion inclosed in brackets, of the equivalent expressions of the several doses in terms of the apothecaries' system. The matter was finally referred to the Committee on Revision. An unsuccessful attempt was made to introduce into section 6, a provision for one liquid and one solid preparation of each vegetable drug. This was very generally considered impracticable.

An unsuccessful reform was attempted consisting in the changing of certain words used in botanical descriptions and derived from foreign words, to the alleged English equivalents.

A motion was carried directing that all articles of purely commercial value and not of medicinal value be excluded from the Pharmacopoeia.

A recommendation of Prof. William H. Seaman of Washington, relative to the adoption of a standard dropper was referred to the Committee on Revision.

During this session a communication from the American Chemical Society, requesting the co-operation of the Convention in the efforts of the Chemical and other scientific societies to secure the establishment of a National Standardizing Bureau, was presented and referred to a special committee consisting of C. Lewis Diehl, Dr. Albert B. Prescott and Prof. S. P. Sadler. Three sets of resolutions inclosing the movement for the establishment of a bureau of this kind were presented later and referred to this committee, whose report and the action thereon will be found in the proceedings of the last session.

The Convention adjourned for luncheon.

THE SECOND SESSION OF THE DAY.

was called to order at three o'clock and the consideration of the partial report of the Committee on Drafting of a constitution and by-laws was begun. The recommendations of the committee were adopted almost without debate, hence, an adjournment was taken until five o'clock to allow the committee to complete its work, at which time the remainder of the report was presented and adopted. The constitution and by-laws as finally agreed upon were as follows:

CONSTITUTION.

ARTICLE I.

1. This organization shall be known as the United States Pharmacopoeial Convention.

2. Its object shall be the revision and publication of the Pharmacopoeia of the United States of America.

ARTICLE II.

1. This Convention shall consist of delegates elected by the following organizations: Incorporated Medical

Colleges and Medical Schools connected with incorporated Colleges and Universities. Colleges of Pharmacy and Pharmaceutical Schools connected with incorporated Universities, incorporated State Medical Associations, incorporated State Pharmaceutical Associations, the American Medical Association, the American Pharmaceutical Association and the American Chemical Society. provided that each organization entitled to representation shall have been incorporated within, and in continuous operation, in the United States for at least five years before the time fixed for the decennial meeting of this Convention.

2. The Convention shall further consist of delegates appointed by the Surgeon-General of the United States Army, the Surgeon-General of the United States Navy, and the Surgeon-General of the United States Marine Hospital Service, and other organizations represented in the Convention of 1900, each body and each branch of the United States Government above cited shall be entitled to send three delegates to this Convention.

ARTICLE III.

The officers of this Convention shall be a president, five vice-presidents, a secretary and assistant secretary and a treasurer, to be elected by ballot.

ARTICLE IV.

The Convention shall elect a Nominating Committee, a Committee of Revision and a Board of Trustees.

ARTICLE V.

The time for holding this meeting shall be upon the second Tuesday in May, in the first year of each decade ending in 0 and the place of meeting shall be in the City of Washington, D. C.

ARTICLE VI.

Every proposition to alter or amend this Constitution shall be submitted in writing, and may be balloted for at the next decennial meeting, when, upon receiving the votes of three-fourths of the members present and voting it shall become a part of this Constitution.

BY-LAWS.

Chapter I.

OF THE PRESIDENT AND VICE-PRESIDENTS.

ARTICLE I.

The president shall preside at all meetings of the Convention until his successor shall have been elected. In the event of his absence or inability to serve, one of the vice-presidents, or in the absence of all, a president pro tempore to be elected by the Board of Trustees shall perform the duties of the president.

ARTICLE II.

In the absence of the secretary and assistant secretary the president shall appoint a secretary pro tempore.

ARTICLE III.

At each session the president shall take the chair at the proper time, announce all business, receive all motions, resolutions, reports and communications and order the vote upon all proper questions.

ARTICLE IV.

In all balloting, and on questions upon which the ayes and nays are required, the president is required to vote, but his name shall be called last; in other cases he shall not vote unless the members be equally divided, or unless his vote, if given to the minority, will make the decision equal; and in case of such equal division, the motion is lost.

ARTICLE V.

He shall enforce order; it is his duty to hear all that is spoken in debate, and in case of personality and impropriety, he shall promptly call the speaker to order. He shall decide all questions of order, subject to the right of appeal, unless he should prefer to submit the matter to the members. He shall promptly who is to speak when two or more members rise at the same moment, and be careful to see that business is brought forward in the proper order.

ARTICLE VI.

He shall have a right to call a member to the chair in order that he may take the floor in debate. He shall see that the constitution and by-laws are properly enforced.

ARTICLE VII.

He shall appoint all committees not otherwise provided for; he shall obey the instructions of the Convention and authenticate by his signature, when necessary, the proceedings.

ARTICLE VIII.

He shall issue, on or about the first of May of the year immediately preceding the year of the meeting of the Convention, a notice informing the several bodies entitled to representation in the Convention, of the place in the Constitution, to send delegates to the next Convention, and repeat the notification eight months later, and request the medical and pharmaceutical journals of the United States to publish the call for the Convention.

ARTICLE IX.

He shall present at each decennial meeting an address, embodying such subjects as may seem to him suitable to the occasion.

Chapter II.**OF THE SECRETARY AND ASSISTANT SECRETARY.****ARTICLE I.**

The secretary shall keep the minutes of each meeting of the Convention and carefully preserve all reports, essays and papers of every description presented, or presented in the Convention, and to the Convention and shall be charged with the duty of replying to communications addressed to the Convention when necessary.

ARTICLE II.

He shall read all papers handed to him by the president for the purpose, shall record the ayes and noyes when required; shall notify the chairman of every committee of its appointment, giving him a list of his colleagues, and state the business upon which the committee is to act.

ARTICLE III.

He shall act as secretary of the next ensuing Convention until his successor shall have been elected.

ARTICLE IV.

It shall be the duty of the assistant secretary to aid the secretary in his official duties, or in the absence of the latter, to act as his substitute.

Chapter III.**OF THE TREASURER.****ARTICLE I.**

The treasurer shall receive all moneys coming from any source to the Convention, Board of Trustees, or Committee of Revision, and shall pay out such moneys as may be directed by the Board of Trustees.

ARTICLE II.

He shall pay no money except on the written order of the secretary of the Board of Trustees, such orders must be accompanied by proper vouchers and all payments shall be by checks, and such checks drawn by the treasurer for the payment of money shall be countersigned by the chairman of the Board of Trustees to become valid.

ARTICLE III.

The treasurer shall present a report to the decennial meeting of the Convention showing the receipts and disbursements during his term of office, and he shall present annually a report to the Board of Trustees showing the receipts and disbursements. His report in all cases must be properly audited and placed on file. He shall act as treasurer until his successor shall have been elected and qualified.

ARTICLE IV.

The treasurer, in order that he may qualify for his office, shall procure and file a sufficient bond or bonds to the amount of \$10,000 with the president of the Convention for the faithful performance of his duties as treasurer. This bond or bonds must be signed and executed by a trust company acceptable to the Board of Trustees. The expense attending the procurement of the bond shall be paid by the Convention.

Chapter IV.**OF THE TRUSTEES.****ARTICLE I.**

The Board of Trustees shall consist of five delegates elected by the Convention together with the president of the Convention and the chairman of the Committee of Revision. Four members shall constitute a quorum.

ARTICLE II.

It shall be the duty of the Board of Trustees to permanently invest the funds of the Convention; to execute contracts of agreements for the publication of the Pharmacopoeia; to pay experts and others for services performed; to transact all business involving financial matters and to perform such duties as the Convention may from time to time direct.

ARTICLE III.

Vacancies occurring in the Board of Trustees shall be filled by the Board of Trustees and the officers of the Convention, a majority of the votes of the whole number shall be necessary to elect a member to fill the vacancy. Delegates to the last decennial Convention are alone eligible for election to the Board of Trustees.

ARTICLE IV.

The officers of the Board of Trustees shall consist of a chairman and secretary who shall be elected by ballot by the board. A majority of the votes of the board being sufficient to elect. The secretary need not be a member of the Board of Trustees. The secretary shall issue a notice of each meeting in writing. Special meetings of the Board of Trustees may be called by the chairman upon the written request of the members.

ARTICLE V.

The Board of Trustees shall meet annually, or oftener if required. They shall receive no compensation for their services, but their traveling expenses and such expenses as are incurred by their attendance at the meeting shall be paid from the funds of the Convention.

Chapter V.**OF THE COMMITTEE OF REVISION.****ARTICLE I.**

The Committee of Revision shall consist of twenty-five members, to be elected by the Convention, together with the president of the Convention, ex officio. Fourteen shall constitute a quorum. Members may send their vote to the chairman of the committee in writing.

ARTICLE II.

The Committee of Revision shall have entire charge of the preparation of the manuscript and reading proof for the revised Pharmacopoeia, and shall, through its chairman, appoint such sub-committees, committees on research and experts as may be required for the proper revision of the work.

ARTICLE III.

The Committee of Revision shall elect a chairman, two vice chairmen and a secretary to serve until their successors are elected. The chairman shall direct the work of revision, receive and announce the votes, attend to the correspondence and prepare the final manuscript of the work. A vacancy occurring in the office of chairman shall be filled by the votes of the committee, a majority of the whole number being necessary to elect.

ARTICLE IV.

The chairman of the Committee of Revision shall receive such salary for his services as may be determined by the Board of Trustees. He shall appoint all sub-committees, research committees and experts with the advice and consent of the Committee of Revision, and shall present to the Convention a report of the work of the Committee of Revision, and shall hold office until his successor is elected.

The Committee of Revision shall receive such nominal compensation for their services as the Board of Trustees shall direct.

ARTICLE V.

The members of the Committee of Revision shall be elected for their especial fitness and technical knowledge of the various subjects required for the proper revision of the work and shall hold office until their successors are appointed. Vacancies in the Committee of Revision may be filled by election by ballot by the Committee of Revision.

Chapter VI.**OF THE NOMINATING COMMITTEE.****ARTICLE I.**

The Nominating Committee shall be selected from the delegates present at the Decennial Convention, each body entitled to representation selecting one of their delegates to serve on this committee.

ARTICLE II.

The Nominating Committee shall nominate the officers of the Convention. The Board of Trustees and the Committee of Revision to serve for the ensuing ten years.

Chapter VII.**OF THE COMMITTEE OF CREDENTIALS AND ARRANGEMENTS.****ARTICLE I.**

The Committee on Credentials and Arrangements shall consist of five members and shall be appointed by the president of the Convention from among the delegates to the Convention not less than two months before the meeting.

ARTICLE II.

It shall be their duty to carefully examine the credentials of all delegates, making a roll and reporting the names of the properly accredited delegates to the Convention.

ARTICLE III.

This committee shall continue in office until their successors are appointed and shall be charged with the duty of making the necessary arrangements for holding the next Convention. The president, secretary and assistant secretary of the Convention shall be ex officio members of the committee.

ARTICLE IV.

Vacancies in this committee shall be filled by appointment by the president of the Convention.

Chapter VIII.**OF MEMBERS.****ARTICLE I.**

Members of this Convention consist of those delegates whose credentials have been accepted by the Convention, and who have been given seats in the body. Delegates who are not present at the Convention shall not be considered members, but all those who are present, delegates, if present, may be members. In no case, however, shall any body be represented by more than three delegates. Each member shall be entitled to only one vote in the Convention upon all questions.

ARTICLE II.

Resignations of membership shall be made in writing to the secretary of the Convention. All resignations

shall be acknowledged in writing by the secretary, and shall be reported to the Board of Trustees.

ARTICLE III.

Any member may be expelled for improper conduct or the violation of the constitution or by-laws adopted by the Convention, but no person shall be expelled unless he shall receive by a majority two-thirds of all the votes cast at a general session of the Convention.

Chapter IX.

OF MEETINGS.

ARTICLE I.

The meetings of the Convention shall be held upon the second Tuesday in May every tenth year, as provided in the constitution, and the place of meeting shall be in the City of Washington, D. C.

ARTICLE II.

The order of business at the first session of each decennial meeting shall be as follows:

Section 1. Promptly at the time named in the notice issued for the meeting, the president or in his absence one of the vice-presidents and in their absence a president pro tempore, shall call the Convention to order and proceed to business.

Section II. In the absence of the secretary and assistant secretary the president shall appoint a recording secretary, pro tempore, who shall perform the duties of secretary until his arrival.

Section III. The first business in order shall be the reception of the report of the Committee on Credentials and Arrangements, which shall be acted upon.

Section V. The president shall then call the roll of bodies entitled to send delegates, and each delegation from each body shall designate one of their number who may be present, to serve upon the Nominating Committee.

Section VI. The report of the Committee on Arrangements and incidental business shall then be considered.

ARTICLE III.

The order of business at the second general session of the decennial meeting shall be as follows:

Section I. The president shall call the association to order.

Section II. The secretary shall read the minutes of the preceding session, which may be amended if necessary, and shall then be approved.

Section III. The report of the Committee on Nominations shall be read, when the president shall appoint tellers, and the persons nominated shall be balloted for.

Section IV. Discussions on general principles governing the actions of the committee shall next be considered.

ARTICLE IV.

The order of business for subsequent sessions shall be determined as the Convention may direct.

ARTICLE V.

Every proposition to alter or amend these by-laws shall be submitted in writing, and may be balloted for at the next session of the Convention when receiving the votes of three-fourths of the members present, and voting it shall become a part of these by-laws.

A resolution providing for the incorporation of the U. S. Pharmacopoeial Convention was passed.

Resolutions expressing gratitude to the Hon. John C. Bullock for legal counsel were unanimously passed.

The Convention adjourned at 5.30. A meeting of the Committee of Revision was immediately called for the purpose of organization. Prof. Joseph P. Remington presided in the absence of the chairman, Dr. Charles Rice.

A reception was given to the delegates to the Convention in the evening at the home of Thomas E. Waggaman, at 33d and O streets. The pleasure of the evening was increased by the elaborate decorations, by appropriate music and refreshments.

CLOSING SESSION, FRIDAY, MAY 4, 1900.

The final session opened at ten o'clock with the prospect of an uninteresting, poorly attended meeting for the passing of a few formal resolutions and the transaction of other unfinished business. It proved, however, to be the liveliest of all. As the news of the sudden revival of interest spread through the corridors of the hotel the delegates swarmed into the hall until the attendance reached possibly the maximum of the entire series of meetings, including spectators.

A series of resolutions expressing appreciation of numerous courtesies was passed. These were followed by several resolutions relating to the copyrighting of the Pharmacopoeia, to the transfer of the funds of the old Committee of Revision to the Treasurer of the Convention, etc.

Prof. Joseph P. Remington then offered a resolution

directing that the Board of Trustees permit the use of the matter contained in the Pharmacopoeia, for purposes of commentation upon the same terms as those that governed the same matter in the case of the Seventh Revision. A motion to refer to the Board of Trustees raised a storm of objection, which was not allayed by an amendment to include the Committee of Revision, made to answer the objection to the original reference of a professional matter to a purely business committee. President Wood called the First Vice-President, Dr. Albert B. Prescott to the chair, and took the floor in support of Prof. Remington's original motion. Messrs. Ebert, Rusby, Remington, Good, Albers, Wall and others were active in the debate. Dr. Albert B. Prescott made a most earnest and convincing plea against the policy of tying the hands of a body which might be called upon to meet emergencies that could not now be foreseen. He also said that the balance of \$12,000 should not be looked upon from the merely business standpoint, but its possibilities as a means of future progress as a research fund must not be overlooked.

A motion was passed directing the Board of Trustees to print a list of the delegates with the names of the Institutions or Societies represented by them, together with the constitution and by-laws; and to send copies of this publication to the delegates and to the bodies they represent.

Prof. S. F. Sadtler reported on behalf of the special committee having the matter in charge, a series of resolutions indorsing the movement now in progress for the establishment of a National Standardizing Bureau. These resolutions were duly passed and direction given for the forwarding of copies of the resolutions to the proper government officials, to the presiding officer of each house of Congress, and to the appropriate committee thereof.

The convention then adjourned. Subject to the call for the session of 1901.

The afternoon was devoted to a trip down the Potomac River to Mt. Vernon. On the return journey a "planked-shad" dinner was served at Marshall Hall.

In the evening a visit was made to the Congressional Library by a large number of the delegates to the Convention.

LIST OF ACCREDITED DELEGATES TO THE EIGHTH DECENNIAL CONVENTION FOR THE MEDICAL SOCIETY OF THE UNITED STATES PHARMACOPOEIA, 1900.

(Delegates whose names are prefixed by this sign * registered; those thus indicated † were present but did not register.)

ARKANSAS.—Arkansas Association of Pharmacists: *E. F. Klein, W. W. Kerr; alternate, †W. H. Skinner.

CALIFORNIA.—California Academy of Medicine: *Dr. A. L. Lengfeld, California College of Pharmacy: Prof. John Calvert, †Josephine E. Barbat, Valentine Schmidt; California State Medical Society: *Dr. A. L. Lengfeld, California University, Medical Department: *Dr. A. L. Lengfeld.

COLORADO.—Colorado State Medical Society: Dr. E. C. Hill; Dr. T. McVain; State: Dr. W. E. Wilson.

CONNECTICUT.—Connecticut Pharmaceutical Association: *Charles A. Rapelye, *Charles W. Whittlesy, John K. Williams; alternates, Emil A. Gessner, Richard H. Runkel, Arthur S. Clark; Connecticut State University, Medical Department: *Dr. Oliver T. Osborne.

DELAWARE.—Delaware Pharmaceutical Society: *John M. Harvey, *Jacob S. Beetern, *Francis E. Gallagher.

DISTRICT OF COLUMBIA.—Columbian University, Medical Department: *Dr. G. Wythe Cook, *Dr. E. A. de Schweinitz; alternate, Dr. W. F. Carr; Georgetown University, Medical Department: *Dr. C. M. Magruder, *Dr. W. H. Hawkes, Prof. J. D. Ibrd, Howard University, Department Medicine: Prof. J. E. Brackett, *Prof. F. J. Shadd, *Dr. Robert Reburn; Howard University, Department of Pharmacy: *Prof. Wm. H. Seaman, *Prof. J. H. Purdy, *Dr. R. B. Tyler; Medical Society of District of Columbia: *Dr. Thos. C. Smith, *Dr. M. G. Motter, *Dr. G. J. Loebboehler; National College of Pharmacy: *Samuel L. Hildart, *P. M. Criswell, Frank C. Henry; alternates, †W. S. Thompson, Dr. Samuel Waggaman, W. G. Duckett; National University, Medical Department: *Dr. John Winter, *Dr. George C. Ober, *Prof. W. H. Bradburn.

GEORGIA.—Georgia State Pharmaceutical Association: *Dr. George F. Payne, *Dr. Henry R. Slack, H. H. Arrington; alternates, J. M. Cleveland, J. O. Tigner, Charles D. Jordan; Atlanta College of Pharmacy: *Henry M. Cleveland (Ph. G.), J. W. Galloway (Ph. G.), W. T. White (Ph. G.); alternates, E. T. Davidson (Ph. G.), T. A. Duke, L. L. Scarborough (Ph. G.) Atlanta College P. and S.: *Dr. George F. Payne.

ILLINOIS.—Illinois Pharmaceutical Association: †H. Broth, †A. B. Ebert, Northwestern University, Medical School; †D. S. Fisher, N. H. H. M. Richter, Northwestern University, School of Pharmacy; †Dr. Oscar Oldberg, †Albert Schneider, Wm. Bodemann, Northwestern University, Woman's Medical School; †M. J. Mergler, †E. P. Josephine Jackson, †Dr. Oscar Oldberg, Chicago College of Pharmacy; Prof. F. M. Goodman, †Prof. C. S. N. Hallberg, W. A. Puckner, alternates; †Dr. E. Rogers, †E. D. Irvine, W. B. Darr, Chicago Rush Medical College; Prof. Walter C. Hains, †Prof. D. R. Brewer, †Jacob Allen Patton, Chicago Medical Society; †Dr. M. F. Clausius, Dr. Harry Kahn, †Dr. A. W. Eber.

INDIANA.—Northern Indiana School of Pharmacy. †Dr. J. Newton Roe, Dr. Joseph C. Carson, John H. Cloud, Indiana Pharmaceutical Association; †F. W. Meissner, J. N. Hurty, A. H. Green, Purdue University, School of Pharmacy; †C. R. Eads, †Prof. J. W. Sturmer, Indiana State Medical Society; Dr. J. N. Hurty, Dr. E. C. Reyer, †Dr. Samuel Kennedy; alternates; †Dr. G. W. Sloan, Dr. W. T. Newton, Dr. W. O. Groat.

IOWA.—Iowa Pharmaceutical Association: †Prof. S. R. Macy, Ed. A. Aldrich, Ralph C. Hamilton, Iowa State University; †Dr. Emil L. Roerner, Dr. Thomas Huston MacBride, Dr. Launcelot Winchester Andrews.

KANSAS.—Kansas Pharmaceutical Association: †L. E. Sayre, J. T. Moore, C. H. Becker, Kansas University, School of Pharmacy; †L. E. Sayre, Mrs. M. O. Miner, †E. H. S. Bailey.

KENTUCKY.—Kentucky Pharmaceutical Association: †C. Lewis Diehl, chairman; T. W. Powell, Wm. E. Pockson, Kentucky State Medical Society; †Dr. Leon L. Solomon, Dr. Wm. Ballew, Dr. Phillip P. Barbour, Louisville College of Pharmacy; †Prof. C. Lewis Diehl, Prof. Emil Schneider, F. J. Schweitzer.

MAINE.—Bowdoin College, Medical School; †Prof. C. O. Hunt, Maine Medical Association; †Dr. Charles O. Hunt, Dr. Alfred Mitchell, Dr. A. S. Thayer.

MARYLAND.—Maryland College of Pharmacy; †Dr. D. M. R. Culbreth, †Chas. E. Dohme, †Dr. Daniel Base; alternates; J. Fuller Franes, Charles Schmidt, John A. Davis, Maryland Pharmaceutical Association; Charles Caspari, Jr., J. Corning, Henry B. Hynson; alternates; †Lewis Schulse, Wm. C. Powell, Maryland Medical and Surgical Faculty; †Dr. Henry Barton Jacobs; †Dr. Samuel J. Fort, †Dr. J. J. Crouch, Baltimore Medical College; †J. G. Hodges, M. D., Wm. Chapman, Jr., M. D.; †J. F. Crouch, M. D., Johns Hopkins University, Medical School; †Dr. John J. Abel, College of Physicians and Surgeons; †Prof. Wm. Simon, Prof. W. F. Lockwood, †Samuel J. Fort.

MASSACHUSETTS.—Massachusetts College of Pharmacy; †Wm. W. Bartlet, †Wilbur L. Scoville, Eli H. La Pierre; alternates; Dr. Julian W. Laird, †S. A. D. Wood, Wm. D. White, Massachusetts College of Physicians and Surgeons; †Dr. J. E. Leonard, Massachusetts Medical Society; †Dr. Robert T. Edes, †Dr. Bennett F. Dayenport, †Dr. Frank G. Wheatley, Massachusetts State Pharmaceutical Association; †E. L. Patch, †Chas. F. Nixon, †Wm. F. Sawyer.

MICHIGAN.—Michigan State Pharmaceutical Association: †Dr. A. B. Lyons, Oltmar Eberbach, Edwin F. Beardsley, Michigan University, Department of Medicine and Surgery; †Prof. A. B. Prescott, Prof. Arthur R. Cusby, Prof. George Dock, Michigan University School of Pharmacy; †Prof. A. B. Prescott, †J. O. Schlotterbeck, A. E. Stevens, Detroit College of Medicine; †Dr. E. M. Houghton, Detroit College of Pharmacy, Pharmaceutical Department; †Dr. John E. Clark, †Charles C. Sherrard, J. W. T. Knox.

MINNESOTA.—Minnesota State Pharmaceutical Association: F. J. Welling, Minnesota University College of Medicine and Surgery; †Dr. H. M. Bracken, Minnesota University School of Pharmacy; †Fred J. Welling, Ed. H. Freed, Hamline University, Hamline University College of Physicians and Surgeons; †Dr. C. W. Drow, Dr. C. W. Williams, Dr. C. J. Lind.

MISSOURI.—Missouri Medical Association; Dr. V. W. Galle, †Dr. H. J. C. G. C. Whelpley, Missouri Pharmaceutical Association; Dr. Francis Hemm, †Dr. H. M. Whelpley, †Dr. H. M. Pettit, Kansas City College of Pharmacy and Natural Science; †Dr. W. F. Egan, Dr. Jean Robert, †Mrs. James M. Love, St. Louis College of Pharmacy; †Dr. O. A. Wall, †Dr. J. M. Gould, †Chas. Gietner, St. Louis Medical Society; †Dr. H. M. Whelpley, Washington University, Medical Department; †Dr. G. Baumert, †Dr. W. E. Fiskow, W. A. Hardaway.

NEW JERSEY.—New Jersey College of Pharmacy; †Dr. P. E. Hammel, Dr. Wm. S. Disbrow, †H. J. Lohman; alternates; †F. A. Sicker, New Jersey Medical Society; †Dr. W. K. Newton, New Jersey Pharmaceutical Association; †William C. Alpers, †Chas. Holzhauser, †George H. White, alternate, Fred. B. Kilmer.

NEW YORK.—State Medical Society; †Dr. Eli H. Long, †Dr. Reynold W. E. Fiskow, Van Rensselaer New York State Medical Association; †Thomas F. Reilly, New York State Pharmaceutical Association; †T. J. Macmahan, †Casswell A. Mayo, †Dr. Wm. C. Anderson, Albany College of Pharmacy; †John E. Hunsicker, Gustavus Michaelis, Albany Medical College; Dr. Henry Hun, †Dr. Howard Van Rensselaer, †Dr. H. E. Huested; alternates; Dr. J. M. Biscow, †Dr. H. A. Lucker, Dr. John Hennessey, Brooklyn College of Pharmacy; †Dr. Albert H. Brundage, †Dr. Walter C. Bryan, Dr. Elias H. Bartley, Kings County Pharmaceutical Society; W. C. Anderson, A. P. Lohness, H. W. Nimpp, Long Island College Hospital; Prof. E. H. Bartle, †Prof. E. West, Prof. J. A.

McCorkle, Brooklyn Medical Society; Dr. A. H. Brundage, Dr. E. H. Bartley, †Dr. J. F. Golding, Medical Society of Kings County; Dr. Joseph H. Hunt, †Dr. J. E. S. K. Golding, †Dr. E. G. Eccles, New York College of Pharmacy, University of Buffalo; †Prof. Willis G. Gregory, †Prof. J. K. Gray, Dr. J. G. Meidenbauer, Buffalo University, Medical Department; †Dr. Eli H. Long, †Dr. Edward J. Klepe, †Harry H. Harrington, New York Academy of Medicine; †Dr. E. H. Squibb, †Dr. Smith Ely Jelliffe, New York College of Pharmacy; †Chas. Rice, †Dr. Henry B. S. Virgil, †Colinzy; alternates; †D. A. Ferguson, †Smith Ely Jelliffe, †Dr. G. Diekmann, Cornell University, Medical Department; †Dr. Henry P. Loomis, Literature and Scientific Society, German Apothecaries, New York; †Dr. Gustave Phingos, †Dr. Geo. C. Diekmann, Dr. Alec. Trebach, Post Graduate Medical School and Hospital; †Dr. Thos. E. Satterthwaite, New York City Medical Association; †Dr. J. W. Vainwright, Dr. Hermann N. Biggs, Dr. J. H. Huddleston; alternates; Dr. Davis P. Austin, Dr. Louis F. Bishop, †Dr. Thos. F. Reilly.

NORTH CAROLINA.—North Carolina Pharmaceutical Association; E. V. Zoeller, †E. V. Howell, Henry T. Hicks, †Wm. E. Simpson.

OHIO.—Ohio State Pharmaceutical Association: †Thos. D. Wetterstrom, F. W. Herbst, †C. Merrell, Ohio State University; †Dr. Geo. B. Nauffman, Dr. Wm. McPherson, Northern Ohio Druggists' Association; †D. C. Hopps, Wm. Kuder, — Nye, Cincinnati College of Pharmacy; C. T. P. Fennel, A. O. Zwick, Dr. Julius H. Eichberg, Cincinnati University, Department of Medicine; †Prof. J. B. Byndman, Prof. F. Forchheimer, Prof. R. E. Beardsford, Cleveland School of Pharmacy; Prof. Joseph Feil, Prof. Henry V. Arny, E. A. Schellenrager, Scio College, Department of Pharmacy.

PENNSYLVANIA.—Pennsylvania Pharmaceutical Association: †Prof. C. B. Lowe, †Chas. T. George, †Lyman F. Keblor, Allegheny County Medical Society; †Dr. Adolph Gentz, †Dr. J. C. Dunn, †Dr. J. D. Johnston, Philadelphia County Medical Society; †Dr. Henry Bawes, †Dr. S. Solis Cohen, Dr. Lawrence Wolff, Philadelphia College of Pharmacy; †Prof. J. F. Remington, †Prof. S. P. Sadtler, †Prof. Henry Kramer; alternates; †J. W. England, †Prof. F. G. Ryan, Dr. J. J. Morrison, Philadelphia College of Pharmacy Alumni Association; †Prof. F. G. Ryan, †D. J. Thomas, †Wm. E. Stedem, Pennsylvania University, Department of Medicine; †Dr. Jas. O. Wilson, Dr. Roberts Bartholow; alternates; †Dr. Jas. M. Anders, Dr. Jas. Tyson, Dr. A. R. Cleman, Jefferson Medical College; Dr. J. W. Holland, †Dr. E. O. Chas. M. Adams, †Dr. J. A. Schuchman, †L. E. Appleman, Medico-Chirurgical College; †Prof. G. W. Piron, †Prof. H. Fisher, †Prof. H. H. Mentzer, Pennsylvania University, Medical Dept.; Dr. John Marshall, †Dr. J. P. Corres, †Dr. J. F. C. Moore, Pennsylvania Woman's Medical College; Dr. Clara Marshall, Dr. Henry Leffman, Pittsburg College of Pharmacy; †J. A. Koch, Adolph Koenig, †Dr. J. Schuman; alternates, W. J. Louis Scallan, †Dr. J. A. Schuchman, †Dr. J. E. Cunn, Dr. Henry Finkelpearl.

SOUTH CAROLINA.—South Carolina Medical Association; †Dr. J. P. Forres; †Dr. C. P. Aitner, Jr., South Carolina Pharmaceutical Association; †O. E. Thomas, †Edw. S. Burnham, Medical College of the State of South Carolina, Medical Department; †Dr. John Forrest, Medical College, State of South Carolina, Pharmaceutical Department; †Edw. S. Burnham.

SOUTH DAKOTA.—South Dakota Pharmaceutical Association: †A. H. Stiles, Dr. F. Jones, W. L. Faust.

TENNESSEE.—Tennessee State Druggists' Association: †H. C. Hoekert, †A. B. Rains, J. F. Voigt, Vanderbilt University, Medical Department; †Dr. E. A. Rudiman, †Dr. J. T. McGill, †G. C. Childress, Vanderbilt University, Department of Pharmacy; †Dr. H. C. Wood, †G. C. Childress, Prof. J. T. McGill; alternates, R. W. Walker, E. B. Daines, Walter T. Taylor.

TEXAS.—Texas American Medical Association; †Dr. H. H. Ward, †Dr. Warrick, †Texas American Pharmaceutical Association; †Wm. S. Thompson, Leo Eliel, †A. R. L. Dohme; alternate, S. A. D. Sheppard, †S. Army, Medical Department; †Major J. C. Meil, surgeon, †Dr. S. A. Miller, †College of Medicine, †S. A. D.; †Dr. W. M. M'ow, chemist, U. S. Navy, Bureau of Medicine and Surgery; C. H. White, medical director, U. S. Treasury Department, Marine Hospital Service; †Preston F. Baillache, surgeon; H. D. Geddings, P. A. surgeon.

VIRGINIA.—Virginia Pharmaceutical Association; †C. B. Fleet, †Dr. R. Martin, Dr. G. E. Barskdale; alternate, †M. E. Shurtler, University College of Medicine; †R. A. Miller, †P. G.; †Dr. Jacob Michaux, Dr. Benj. Harrison; alternate, Dr. W. E. Jones.

WISCONSIN.—Wisconsin Pharmaceutical Association; †Dr. Edward Kremers, Dr. A. S. Mitchell, Otto Eubank, Wisconsin State Medical Society; †Dr. U. O. B. Wingate, Wisconsin University, School of Pharmacy; †Dr. Edward Kremers.

COLLOIDAL SILVER is described as heavy black-green granules having a metallic lustre. It forms with water a dark green solution, which becomes red-brown when highly diluted. The preparation and its solutions should be kept in well-closed containers, protected from light. A solution of albuminated colloidal silver is obtained by mixing aqueous solutions of equal quantities of the silver and fresh egg albumen. (Pharm. Post.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Satureia.—(A. P. I.) "Saturei" is a German-Latin name for "summer savory" (*Satureia hortensis*), a plant cultivated in gardens and used principally as a culinary herb. It possesses carminative properties, and is used somewhat as a domestic remedy for menstrual suppression and flatulent colic. You can procure it from almost any dealer in crude drugs or through your wholesale druggist.

Citric Acid Stains on Marble.—(K. and B.) Wash off the marble with water and afterward rub dry with a clean, soft cloth. The marble, it is said, may be polished by rubbing either with powdered tripoli, followed by putty powder or with a mixture of chalk, soft soap and rouge, applied on felt or flannel, afterwards polishing off with a clean piece of felt. A saturated solution of beeswax in turpentine rubbed into the pores of highly colored marble showing signs of dimness and afterwards removed by rubbing it smartly with a soft, smooth cloth, will restore its original lustre. By keeping the pores of marble filled with oil a film is formed over the surface which becomes almost impervious to the action of acids, etc.

Liquid Opodeldoc.—(G. D. Co.) This title is sometimes applied to "soap liniment" of the Pharmacopœia. Here are some other formulas, the first being taken from the German Pharmacopœia: (1) Dissolve with a gentle heat 30 parts of Castile soap in shavings, and 5 parts of camphor in 230 parts of dilute alcohol. Then add 1 part oil of thyme, 2 parts oil of rosemary and 8 parts water of ammonia. Filter the cold liquid. The liniment should be clear and yellowish. (2) Opodeldoc (Strassburger)—Mix together 5 parts of spirit of ammonia, 15 parts each of spirit of camphor and spirit of soap, 45 parts of alcohol, 90 per cent.; 2½ parts tincture of opium and 1 part each of oil of lavender and oil of rosemary. (3) Veterinary Opodeldoc: Oil of rosemary, 14 ounces; stronger water of ammonia, 1 ounce; camphor, 1 ounce; water, 5 ounces; soft soap, 7 ounces; methylated spirit, 1 pint.

Hair Tonic.—(Carolina.) The following are typical formulas: (1) Oleo-balsamic mixture, N. F., 4 fl. ounces; glycerin, 5 fl. ounces; rose water, 20 fl. ounces; tincture cantharides, ½ fl. ounce; aromatic spirit of ammonia, 1 fl. ounce; alcohol, enough to make 32 fl. ounces. (2) Triturate 1 ounce of quinine sulphate with 6 ounces of vinegar of cantharides; add 48 ounces of water and enough acetic acid to entirely dissolve the quinine; add 48 ounces of glycerin, 48 ounces cologne spirit, 24 ounces of bay rum, 6 ounces fluid extract of jaborandi and 84 ounces of rose water. Add coloring, either red or brown, as may be desired, and filter. (3) Quinine hydrochloride, sandalwood, of each 1.5 part; tannic acid, tincture of cantharides, of each, 3.5 parts; glycerine, 20 parts; cologne water, 15 parts; vanilla, 0.02 part; rectified spirit, to make 300 parts. Filter after four days. (4) Mix 1½ drams lead acetate with 3 drams milk of sulphur and rub up with 10 drams glycerin. Then gradually add enough water to make 10 ounces, and lastly, 2 drams of heliotrope perfume.

Salt of Lemon.—(F. A. G.) Both binoxalate and quadroxalate of potassium (acid potassium oxalate plus free oxalic acid) are popularly known as "salt" or "essential salt of lemon." Mac Ewan says the following formula furnishes a preparation which is substantially what is sold by many "in the trade (in England) as salt of

lemon, but some give pure sal acetosella." Cream of tartar, 8 ounces; powdered binoxalate of potassium, 8 ounces; oil of lemon, 10 minims. Mix. To remove iron-rust spots, moisten the spot and rub with the powder.

Regarding the origin of the term "salt of lemon," as applied to sal acetosella, Mac Ewan says he is unable to trace it, but the change was effected some time between the seventeenth and the beginning of the nineteenth centuries.

John Baptista Porta, who wrote about 1658, gives the following directions for making "Salt of Lemmons":

Distill the lemons with their peels and juice; reserve the water, and dry the rest in the sun if the season permit it or in an oven. Put them in a pot close luted, and calcine it in igne reverberationis. Then dissolve the powder in the water, and boil them in a perfect lye; cleanse it with a feather, that the drugs may settle to the bottom; purify it and let the liquor evaporate, so that the salt will remain in the bottom; which is most excellent to break the stone in the bladder.

This salt would consist chiefly of phosphate of potash, a little carbonate, and probably citrate, and it was doubtless "most excellent for stone in the bladder," but how the same name came to be applied to binoxalate of potash preparations is a mystery. Ure stated in 1827 that "essential salt of lemons" is superoxalate of potash. Gray (1828) gives it "Crem. tart., 4 oz.; sal. acetosella, 8 oz." It is said that a mixture of sal. acetosella and cream of tartar is more effective than the sal. acetosella alone.

Here is a formula for a "non-poisonous salt," which may be used for a similar purpose: Potassium bitartrate, 12 ounces; powdered citric acid, 12 ounces; oil bergamot, 10 drops.

Grease Paints, Etc., for Actors.—(W. W. D.) The Era Formulary gives the following formulas:

White.—Oxide of zinc, subnitrate of bismuth and plumbate of alumina, of each, 1 ounce; mix and make into a paste with almond oil (5 or 6 drams required) and perfume with 12 minims of oil of peppermint, 12 grains of camphor and 1 dram of bouquet essence.

Deep Bordeaux Red.—Oxide of zinc, subnitrate of bismuth, plumbate of alumina, of each 15 drams; oil of peppermint, 12 minims; camphor, 12 grains; carmine, 30 grains (dissolved in 80 minims of water of ammonia); almond oil, a sufficiency. Perfume with 1½ drams bouquet essence.

Skin Color.—Vermilion, 3 drams; tincture of saffron, 2 drams; powdered orris, 5 drams; precipitated chalk and oxide of zinc, of each, 20 drams; camphor, 20 grains; oil of peppermint, 20 minims; almond oil, a sufficiency. Perfume with bouquet essence, as in the foregoing.

Theatrical face paints are sold in sticks, and there are many varieties of color. Yellows are obtained with ochre, browns with burnt umber, and blue is made with ultramarine. These colors should in each case be levigated finely along with their own weight of equal parts of precipitated chalk and oxide of zinc and diluted with the same to the tint required, then made into sticks with nutton suet (or vaseline or paraffine, equal parts) well perfumed. By blending these colors, other tints may thus be obtained.

Patty face powders have a small percentage of fat mixed with them in order to make the powder adhere to the skin. The following formula is taken from Pharmaceutical Formulas:

Dissolve 1 dram anhydrous lanoline in 2 drams of ether in a mortar. Add 3 drams of light magnesia. Mix well, dry, and then add the following: French chalk, 2 ounces; powdered starch, 1½ ounces; boric acid, 1 dram; perfume, a sufficient quantity. A good perfume is coumarin, 2 grains, and otto of rose, 2 minims.

Nose Putty.—Mix 1 ounce wheat flour with 2 drams of powdered tragacanth and tint with carmine. Take as much of the powder as necessary, knead into a stiff paste with a little water and apply to the nose, having previously painted it with spirit gum.

Nigger Black.—Beat the finest lamp-black into a stiff paste with glycerin and apply with a sponge; if necessary, add a little water to the mixture when using. Or you can make a "grease paint" as follows:—Drop black 2 drams; almond oil, 2 drams; cocoanut oil, 6 drams; oil of lemon, 5 minims; oil of neroli, 1 minim; mix.

Glycerin.

The Oldest Brand. The Purest Glycerin.

Every druggist should use and dispense it. There's no good reason why he shouldn't do so, as it is easily obtained from jobbers in any quantity desired and it costs no more than other brands. All that's necessary is to specify "Gordon's" on your orders to jobbers. They all supply it.

The Standard for Nearly Fifty Years.

The W. J. M. Gordon Chemical Co.,
CINCINNATI, OHIO.
Established 1848. Incorporated 1891.

Pat. July 15th, '84.

The only freezer that has three distinct motions, each being independent of the others; the Scraper is adjustable at each end and keeps the Can thoroughly scraped.

The Beater and Scraper run opposite; the Can and Scraper move in the same direction, the Can having slower motion, making three rounds to the Scraper's four, making the Cyclone the lightest running Freezer on the market; a desirable characteristic, and one highly appreciated.

CRYSTAL FLAKE

FOR IMPROVING ICE CREAM.

Extensively used by Confectioners for 20 years.

QUARTER-POUND SAMPLE AND RECIPE FREE.

Put up in 1/4, 1/2 and 1-lb. packages, bearing our label. Our trade-mark (a red mark) appears on each shred of all Crystal Flake sold in bulk.

Gelatine, Flavoring Extracts, Power and Hand Ice Cream Freezers, Ice Cream and Oyster Cabinets, Ice Cream Dishes, Ice Shavers, Milk Shakes, Lemon Squeezers, Steam Spring and Hand Power Peanut Roasters, Rotary Corn Poppers, Etc., Etc.

Catalogue, with full description of the above, MAILED FREE.

Triumph at
Export Exposition!

SILVER MEDAL---HIGHEST PRIZE

Our "POLAR SYSTEM" receives the sole award for
 Soda Fountains!

The Trust Got Nothing--No Merit.

At every exhibition where the Soda Fountain Trust has competed with our apparatus we have carried off the first prizes.

In fact, in every contest we have had with the TRUST we have been victorious. We have placed most important contracts in spite of their bitter competition and misrepresentation of our fountains. We beat them in a great patent suit in which they spent three years of valuable time and upwards of five thousand dollars trying to prevent by injunction the sale of our fountains.

PICK A WINNER FOR 1900

when you buy a new fountain. Don't buy an outclassed Trust make. Get the apparatus that the competent and disinterested judges of the National Export Exposition decided to be the best NOW ON THE MARKET, viz., GREEN'S POLAR SYSTEM.

Catalogue of Polar System Fountains free to prospective purchasers. Also Catalogue of our large line of bargains in "Seconds," Old Fountains taken in exchange. Easy terms of payment. Write us; you will like our business methods and our goods.

FOREIGN.

South Africa.

Lord Roberts's cables to the British War Office tell of a victorious advance of the British forces. Besides occupying Brandfont, an important strategic point, from whence he is directing his operations, the passage of the Vaal river has been carried at Windsfont, and the mounted infantry are at the Vet River, where they are being re-enforced. British successes are also reported in the military operations in Cape Colony. Late news from Mafeking says there are diminished ratios for 3,000 persons within the beleaguered town. Lord Roberts hopes to be able to relieve Mafeking within a week or two.

The hospital ship Maine, built by American contributors, has started again for Cape Town from Southampton for a second cargo of wounded.

The Boer peace delegates, unsuccessful in their efforts to induce any European power to intervene, have sailed from Rotterdam for the United States.

Up to March 31 the war had cost the British \$116,250,000. The British auxiliary transport Bavarian has arrived at Jamestown, St. Helena, from Cape Town with 1,000 Boer prisoners in excellent health.

All British subjects in the Transvaal have been ordered to leave at once.

The Philippines.

Major General MacArthur is to succeed General Otis in command of the Division of the Philippines and Brevet Major-General Wheaton is to succeed General MacArthur as commander of the Department of Southern Luzon.

As a result of the American operations in the Philippines during April, according to General Otis's report, 1,721 Filipinos were killed, wounded and captured, and 30 pieces of artillery, 1,263 rifles and large stores of ammunition, etc., were taken. The American losses were 13 killed and 27 wounded.

General Otis, in an interview last week, said that he considers the rebellion over and thinks there will be no more serious resistance, although brigandage may continue.

The American garrison at Catubig, Island of Samar, consisting of thirty men of the Forty-third Infantry, were attacked by rebels recently and twenty of them were killed. The ten survivors were rescued after holding out heroically against overwhelming odds for five days.

The Sultan of Sulu has gone to Singapore to protest to the British against American tariff laws.

The President has issued a proclamation extending for six months from April 11 the time allowed Spanish subjects in the Philippines to designate their allegiance.

Aguinaldo has not been heard of since December and the belief prevails in Manila that he has been killed.

News reached Manila last week of a severe reverse in Panay. An American reconnoitering party was surrounded and four killed and sixteen wounded had to be left on the field, while the rest had a narrow escape. Reinforcements were sent from Iloilo and the Filipinos fled to the mountains.

Other Foreign News.

The peasant rising at Rutchuk, Bulgaria has been quelled by the troops. The ringleaders have fled to Roumania. The laying of the German-American cable was begun last week.

The Emperor of Austria visited the Emperor of Germany last week to participate in the coming of age of the Crown Prince of Germany.

Liberal contributions are being made in Great Britain to the fund for the relief of the Ottawa fire sufferers. The cases of bubonic plague and one death from the disease were reported at Suez, Egypt, last week.

Ambassador Choate has asked the British Government for explanations regarding the alleged illegal search of the American ship Sea Witch by the British in Portuguese waters.

A report was set on foot last week that Germany intended to buy the Danish West Indies, in violation of the Monroe doctrine, but the rumor was denied.

Three new cases of bubonic plague have been reported at Port Said.

The number of cases of bubonic plague officially reported at Sidney, New Jersey, thus far is 188, of which fifty-four have proved fatal.

Advices from Honolulu state that there had been no new cases of plague for twenty-five days and the quarantine that has been maintained since the middle of last December is to be raised.

M. Dupuy de Lome, the former Spanish Minister at Washington, has been appointed ambassador to Italy.

Menkassy, the famous painter, died last week in an asylum at Bonn.

Columbia has extended the time of the Panama Canal Company's concession for six years from 1904.

The Government of Korea has refused an American request for three mining concessions.

DOMESTIC.

Congress.

The Senate has passed the Army Organization bill and it now goes to the House for consideration. It provides for radical changes in the army.

The President has nominated Sanford B. Dole, the former president of Hawaii, to be governor of the islands. The Senate has ratified a treaty negotiated with all the maritime nations of the world extending the Geneva Conference regulations to naval warfare. Under the treaty hospital ships will be under the same protection as hospital tents and buildings on land.

Representative Baker, of Maryland, has introduced a bill repealing the Chinese exclusion laws and making the general immigration laws applicable to Chinese. It will probably not be passed, however.

The House passed the Nicaragua Canal bill last week by the tremendous majority of 225 to 35. It is believed that the Senate, however, will refer the bill to a committee and not take it up again until the short session of Congress next winter.

The Senate refused last week, by a vote of 29 to 20, to consider the Pettigrew resolution expressing sympathy with the Boers.

Other Domestic News.

More than 200 miners, perhaps 250, were killed last week by an explosion in a coal mine near Scofield, Utah, about 90 miles southeast of Salt Lake City. The cause of the explosion is unknown, but is supposed to be due to the careless handling of giant powder. The accident is the worst in the history of American coal mining. The President of France sent a message of condolence to President McKinley last week expressing his sympathy.

It is reported on seemingly good authority that Admiral Dewey's bid for the presidency is to be quietly abandoned, as there is no hope of its success. John R. McLean, the admiral's brother-in-law, has come out for Bryan.

Admiral Dewey attended a celebration in Chicago and St. Louis last week, and was received with the wildest demonstrations of enthusiasm.

The Sultan of Turkey does not seem likely to pay the American indemnity claims unless more severe measures are resorted to.

Five thousand employees of the Standard Oil Company in Williamsburg, Greenport and Islip, N. Y. City, New York, received an unexpected advance in their wages last week and a reduction of one hour in their working time.

The Alabama convention of the Daughters of the Confederacy has voted to buy the old Jefferson Davis home at Montgomery, known as the "White House of the Confederacy."

The Methodist General Conference is in session in Chicago. The most important act of last week's deliberations was the admission of the laymen to an equal voice with the clergy in the conference.

The Secretary of the Navy has transferred Captain Chadwick of the cruiser New York for speaking disrespectfully of Admiral Schley in a recent newspaper interview.

Major General Wesley Merritt has been granted leave of absence from the 10th inst., with permission to go abroad, and Major-General John R. Brooke has been assigned to succeed General Merritt in command of the Department of the East.

Strikes in various branches of the building trades occurred last week in Savannah, Omaha, Kansas City, East St. Louis, Duluth, Boston, Racine, Wis., Denver, Philadelphia, and other points.

The eight-hour day was established last week in almost every district in New England where journeymen of the building trades have organized.

The four elevated roads in Chicago are to be merged into one system.

Mr. Bryan declares that the rumors that he will drop the free silver issue are false. He will stand firmly for free silver, he says, in the coming campaign.

The fishermen of the west coast of Vancouver Island are petitioning again for the establishment of a patrol to protect British Columbia halibut banks from American fishing schooners.

A steamer loaded with corn for the relief of the famine sufferers in India will leave New York for Bombay this week.

A serious strike on the New York Central Railroad was averted last week by concessions by the railroad company.

The north peak of Mount Lassen, California, is thought to be in a state of activity. Rumbling noises and a heavy column of gray smoke come from the mountain.

THE DRUG NEWS.

Proprietary Association of America.

EIGHTEENTH ANNUAL MEETING HELD IN NEW YORK LAST WEEK—
 REPORTS AND DISCUSSIONS—INDORSES PLAN OF N. A.
 R. D. AND RECOMMENDS IT TO MEMBERS.

The eighteenth annual meeting of the Proprietary Association of America was held in New York City last week, and for two days the lobbies and parlors of the Waldorf-Astoria, where the sessions were held, were filled by the medicine makers. Two business sessions were held on Wednesday, May 2, and two more on Thursday, May 3; and the meeting ended with a dinner, followed by a smoker and vaudeville entertainment on Thursday evening. The usual reports from standing committees on the past year's work were received and discussed and ordered to be printed in the book of the association's "Proceedings." The conditions of the proprietary medicine trade were discussed, delegates from the N. A. R. D. and the N. W. D. A. were heard, and the most important action taken by the meeting was a fresh endorsement of the N. A. R. D. plan and agreement. While this endorsement does not bind the individual members of the Proprietary Association to the agreement, it is sure to have some weight with those manufacturers who have been reluctant to sign the stipulation to confine sales to an approved list of jobbers, and will help on the work of the N. A. R. D. Executive Committee.

According to the official register kept by Clarence G. Stone the following men were in attendance at the meeting:

J. R. Kathrens, Pabst Brewing Co., Milwaukee; A. M. Hance, Hance Bros. & White, Philadelphia; William J. Walker, Walker & Gibson, Albany; A. H. Kennedy, W. A. Demorest and C. Sinclair, the Charles N. Crittenton Co., New York; A. Cressy Morrison, American Baking Powder Co., New York; Alfred E. Rose, J. C. Ayer & Co., Lowell, Mass.; Clarence G. Stone, Mellin's Food Co., New York; Joseph Leeming, the Leeming Co., New York; A. L. Carter and M. H. Carter, Resinol Chemical Co., Baltimore; J. H. Bell, Hostetter Co., Pittsburg; C. W. Post, Postum Cereal Co., Battle Creek, Mich.; H. C. Cooper, J. H. Pozzoni Pharmaceutical Co., St. Louis; John Masson, Springfield; Harris Kennedy, Roxbury, Mass.; F. S. Bruen, Pond's Extract Co., New York; Charles R. Hughes, Freeman Hiscox, George Batten and J. C. Dayton, Hiscox Co., Jersey City; C. H. West, Moffitt-West Drug Co., St. Louis; George A. Newman, California Fig Syrup, New York; S. Britton, Abbey Effervescent Salt Co., New York; H. B. Harding, Humphrey's Homeopathic Medicine Co., New York; E. T. Hazeltine, Piso Co., Warren, Pa.; L. O. Johnson, Fassett & Johnson, London, England; Thomas Dolber, Mellin's Food Co., Boston; Charles W. Cheney, Mellin's Food Co., Boston; Charles H. Pinkham and J. T. Wetherald, Lydia E. Pinkham Medicine Co., Lynn, Mass.; A. S. Hinds, Portland, Me.; H. C. Lovis, Seabury & Johnson, New York; J. G. Patton, Anheuser-Busch Co., St. Louis; Daniel R. Noyes, Noyes Bros. & Cutler, St. Paul; John W. Kennedy, E. C. DeWitt & Co., Chicago; Horace M. Sharp, Dr. D. Jayne & Son, Philadelphia; W. A. Talbot, Piso Co., Warren, Pa.; Fred. L. Carter, Carter, Carter & Meigs, Boston; F. E. Holliday, Topeka; A. H. Evans and E. R. Blaine, the Evans Chemical Co., Cincinnati; J. H. Jefferis, Philadelphia; John W. Cox, Antikamnia Chemical Co., St. Louis; C. I. Hood, Lowell, Mass.; A. Major, New York; A. H. Duncan, Paris Medicine Co., St. Louis; Joseph A. Toy and Harry H. Good, Carter Medicine Co., New York; Louis Yakel, Kohler Manufacturing Co., Baltimore; G. L. Douglass, counsel of the

association, Chicago; W. E. Cooper, R. T. Booth Co., Ithaca, N. Y.; George M. Trimble, Paris Medicine Co., St. Louis; M. N. Kilne, Smith, Kline & French Co., Philadelphia; H. T. Hayes, Dr. Chase Co., Philadelphia; Francis M. Kahle, D. Ransom's Son & Co., Buffalo; A. H. Beardsley, Dr. Miles Medical Co., Elkhart, Ind.; Charles M. Fletcher, Centaur Co., New York; John W. Campion, Philadelphia; F. J. Cheney, Cheney Medicine Co., Toledo, O.; C. W. Griffith, Scott & Bowne, New York; J. C. Jackson, Merchants' Gargling Oil Co., Lockport, N. Y.; H. L. Kramer, Sterling Remedy Co., Indiana Mineral Springs, Ind.; Thomas F. Main, Tarrant & Co., New York; Dr. V. Mott Pierce, World's Dispensary Medical Association, Buffalo; George P. Rowell and Peter Dougan, Ripans Chemical Co., New York.

THE FIRST SESSION.

The first session was called to order at 11:25 Wednesday morning, May 2, by the president, Dr. V. Mott Pierce. About fifty members and delegates to the meeting from other associations were present at the opening of the meeting. A letter from E. C. Frisbie, president of the N. W. D. A., announced that the delegates from that body were Wm. J. Walker, Albany; M. N. Kline, Philadelphia, and Thomas F. Main, New York. The delegation was called upon and Mr. Main responded briefly, thanking the Chair for the privileges of the floor.

John C. Gallagher, of Jersey City, was recognized by the Chair as a delegate from the N. A. R. D. Mr. Gallagher expressed his pleasure at being present and said that the retailers generally were well pleased with the plan proposed by the N. A. R. D. He said in previous years the proprietary men and the retailers had had their differences, but he hoped such disagreements were things of the past. He told the members of the Proprietary Association that if they would live up to the agreement entered into with the retailers and the wholesalers, the retailers could have no complaint in the future.

F. E. Holliday, of Topeka, was also invited to address the meeting as a representative of the N. A. R. D. He said:

"Great progress has been made in the last two or three months in the work which we have undertaken, the putting into operation of the plan which is to aid in bringing prosperity to all three branches of the trade. Many proprietors have already agreed to confine their sales to the preferred jobbers. The retailers through their national association have agreed not to substitute, but to furnish the article called for without argument. At our conference in Chicago on the 11th of April a list of names of wholesale distributors was selected, but this has not been given out yet. It is desired to have the signatures of the jobbers to the agreement before making the list public. Within the next forty-eight hours a statement of the conditions and the request for signatures will go out to all the jobbers from Mr. Faxon. If the jobbers accept, as I believe they will, the plan will be ready to put into operation in three weeks. This plan is an immense undertaking and hard to carry out in detail, but I am glad to say that all appear willing to enter the agreement, and I believe the plan will advance the prosperity of all three branches of the drug trade, the manufacturers, the jobbers and the retailers."

UNCLE SAM:—"It's hardly fair to tax a man only when he's sick."

William J. Walker, of the N. W. D. A. delegation, appearing on the floor, was asked to address the meeting. He tendered the best wishes of the wholesalers to the Proprietary Association and said that during the past two or three years the two branches had come together and understood each other as never before.

Frederick L. Perine, chairman of the Committee on Arrangements for the annual meeting, gave a brief verbal report, announcing that the committee had concentrated its effort on Thursday evening's entertainment, which would be the only "social event" during the meeting. He also announced that the Drug Club extended the privileges of the club rooms to members of the Proprietary Association for two weeks.

At this point Frank J. Cheney called for the president's address. President V. Mott Pierce said that he had prepared no formal address and had no report to make. He spoke favorably of the work of the committees, which, although heard from only once a year, were kept busy all the year round.

The reports of the secretary and treasurer followed. Secretary Joseph Leeming said that since the last annual meeting more active work had been done and better results obtained than ever before in the history of the association. The present membership, he said, was 174. During the year the names of nineteen members had been taken from the record. He said it was apparent to the secretary that the association was never stronger or more valuable to each individual member than at present.

Treasurer H. B. Harding reported that a balance of \$3,208 had been brought forward from last year. The total receipts of the present year had been \$9,612. The total expenditures of the year had been \$7,582. There remained a balance in the treasury of \$7,237.81.

The report of the Committee on Trade Marks was then read by the committee's chairman, H. L. Kramer.

Report of Committee on Trade Marks.

The report of the Committee on Trade Marks took up first the question of price cutting, saying: "This may not on the face of it appear to be a subject for discussion or remark in the report of a Committee on Trade Marks, but the cutting evil has affected almost exclusively proprietary, and therefore trade mark, interests and has brought with it a retinue of substitution, counterfeiting, imitation, infringement and general dishonesty that makes it pertinent to introduce the question here."

The report outlined the suit now pending of the Phenocaffeine Co. against the Hall & Lyon Company, of Providence, R. I., and in this connection quoted the decision in the recent Kodak case before Mr. Justice Sterling in Great Britain.

The recommendations of the committee concerned National Trade Mark Legislation, a Trade Mark Bureau, and a general defense fund. Under the first head the report said: The American Pharmaceutical Association has been continuously represented at the meetings of the committee to revise the Patent and Trade Mark law of the United States, in New York, of which Francis Forbes,

Judge P. S. Grosscup and A. P. Greeley are commissioners appointed by the President. This committee thinks it would be well to have this association also represented permanently at the commission sessions and be placed in constant communication with Secretary Forbes.

The report recommended the establishment of a Trade Mark Bureau "consisting of lawyers retained for the purpose—lawyers who have made a special study of the subject and are therefore competent to decide such cases of infringement or simulation as may be brought before them by members of this association, and whose recommendations in such cases would avoid many a long and expensive litigation."

In advising the establishment of a general defense fund the report said: "There appears from the Chitty decision of 1808 and the Sterling opinion in the Kodak case, to be a strong possibility of controlling both price cutting and substitution directly. If not, then there seems to be a good chance to go after cutters and substitutes under the principle of unfair competition and fraud on the public. . . . It is time for the Proprietary Association to wake up to these facts and for the members to put their hands into their pockets and create a defense fund, to establish a Bureau of Litigation, and go after these swindlers with the backing of all the great force, energy and wealth which the proprietary interests of America represent."

In an addendum to the report attention was called to a recent opinion handed down by Judge Jenkins, of the United States Circuit Court of Appeals, in the case of the Charles E. Hires Company, appellant, versus the Consumers Company, appellee, which was pronounced "one of the most far-reaching decisions in the history of trade mark, or rather 'unfair competition,' litigation in this country, and places us well abreast of the most recent and comprehensive equity rulings of English courts."

In this case the lower court restrained the defendant from imitating the label of the complainant, but refused to extend the injunction to cover the shape and size of bottle. Judge Jenkins so extended the injunction, overruling the lower court, and in doing so said:

"Here the defendant used a bottle for the different beverages manufactured by him which was identical and wholly unlike the form of bottle used by the complainant in marketing its root beer. The defendant as to root beer, but not as to its other beverages, substituted for the bottle used one identical with the form of bottle used by the complainant. It is said that this was done so that a bottle might contain two full glasses of the beverage. This excuse is pretentious merely. The bottle could have been enlarged without changing its character, as was said at the bar that this act was a mistake on the part of the defendant. This is a charitable view of the act, but is in fact erroneous. It was not a mistake. The act was deliberate and designed. Its purpose clearly was to adopt the form of package previously adopted by the complainant. . . . It will be impossible to give compensation in damages, for from the very nature of the case it will be wholly impracticable to ascertain the extent to which the piracy upon the complainant's right has been or may be carried, or to what extent the product of the defendant has been or may be palmed off upon the public as the product of the complainant. The defendant can only be afforded by restraint of the infringement. Besides, the court below found nothing in the circumstances or situation of the parties to stay its hand. It issued its writ of injunction according to their rights as it determined them. It fell short in its judgment of the extent of those rights. The writ was clearly intended by the court to go to the full extent of the infringement and was not controlled by other considerations. The defendant is not deprived of the right to market its root beer, but at its peril must see to it that its product is not pressed in the clothes of another. We may aptly conclude with the happy suggestion of Judge La Crosse in *American Grocery Company v. Sloan*, 68 Fed. R. 539, 540, that 'in the period of rest and quiet which will be secured by a temporary injunction, possibly defendants may renew their strength sufficiently to be able to get further away from—the complainant's form of bottle—the next time they try to strictly differentiate their own goods. The order or decree is reversed and the cause remanded with directions of the Circuit Court to issue its writ of injunction pursuant to the prayer and in the terms of the bill.'"

Chairman John W. Campion, of the Committee on Memorials, announced that he had no report to make. There had been no deaths in the association, and he said he thought the reason was that the members took their own medicines.

Owing to the absence of Dr. R. V. Pierce, who, it was announced by his son, was in Florida, there was no prepared report from the Committee on Fraternal Relations, but Horace M. Sharp spoke briefly for the committee.

Thomas F. Main, reported for the Committee on Publication, and also on the last annual meeting of the N. W. D. A., held at Niagara Falls, in October, 1899.

Mr. Sharp reported having attended the Pure Food Congress in Washington, and also the recent hearing by the Ways and Means Committee of the House of Representatives on the Boutelle bill to repeal the proprietary stamp tax.

The following Nominating Committee was named: Charles H. Pinkham, Thomas F. Main, Alfred E. Rose, Thomas Dolber, Horace M. Sharp and A. H. Beardsley. Adjournment was then taken until afternoon, to meet in executive session.

THE SECOND SESSION.

On the opening of the second session on Wednesday afternoon a cablegram was read from Vice-President E. C. DeWitt, dated Paris, France, wishing the association a successful and profitable meeting. The secretary then read the report of Brent Good, chairman of the Committee on Infringements and Simulations of Trade Marks, which was that no complaints had been laid before the committee during the past year. A. H. Beardsley then submitted the report of the Committee on Transportation. He was followed by Joseph R. Kathrens, for the Committee on Membership, who reported the names of three new applicants. They were: Swanson Rheumatic Cure Co., Chicago; Thacher Medicine Company, Chattanooga, Tenn., and Nutrolactis Company, New York City. At a later session these applicants were elected to membership.

Report of Committee on Advertising.

A. Cressy Morrison, chairman of the Committee on Advertising, reported that the committee had not been able to spend one dollar of the \$500 which the association appropriated for ascertaining the circulation of publications and carrying out the other work of the committee. He outlined the scheme of Mr. Mason, of the Advertisers' Guarantee Company, to form a company or association of general advertisers, which has not yet been carried out, and also gave figures of the circulation of nearly 400 publications. His conclusions were that it could be demonstrated "that there are publications enough for us to use which will guarantee to prove their circulation but in proving this circulation it will require all the money you care to spend," that these publications "are anxious that some association should take the responsibility of these audits," but that at present no association of advertisers appears to be willing to defray these expenses. He recommended that the association continue its efforts to investigate the subject.

Legislation.

In the absence of Chairman E. C. DeWitt, of the Committee on Legislation, who is in Europe, the report of that committee was read by G. L. Dourglass, counsel to the committee. The report dealt with matters of both national and State legislation.

The committee had done what it could to promote a National Trade Mark Law, but the movement had been retarded by the delay in the report of the commission to revise the patent and trade mark laws, appointed by President McKinley. The delay was caused by the illness of Judge Grosscup, the chairman, and no action at the present session of Congress upon a trade mark bill is to be expected. The Committee of the American Bar Association has deemed it inexpedient to push its bill, being desirous of co-operating if possible with the Government Commission. It is expected that the bill prepared by the commission will soon be submitted and will constitute the basis of any national legislation which may be enacted.

The committee gave much attention to the Pure Food and Drug bills pending upon in Congress. A conference of the sub-committee on Federal legislation was held early in the winter and the Brosius bill especially was carefully considered in detail and certain objectionable features pointed out. The committee afterwards took pains to secure such amendments to the bill as would remedy these defects, and "the bill as now substantially agreed upon by the promoters (including the Pure Food and Drug Congress) is believed to be not open to objection so far as we are concerned."

The committee had diligently co-operated with the

officers of the N. A. R. D. in the effort to secure the repeal of the stamp tax upon medicinal preparations, perfumery, etc. The report outlined the Boutelle bill and gave an account of the hearing on that bill before the Ways and Means Committee of the House, but ventured no prediction as to the possibility of action at the present session of Congress.

Concerning State Legislation the report said that bad bills had been defeated in New York and Massachusetts. "The proceedings of the Legislature in Maryland, New Jersey, Virginia, Georgia, South Carolina, Mississippi, and Kentucky were carefully followed, but to the best of our information no legislation was enacted injurious to our interests. In Iowa the Legislature had before it two bills designed to exclude the sale of proprietary medicines from the country stores except by permission of the State Board of Pharmacy. The Chamberlain Medicine Company was particularly vigilant in showing the injustice of this bill and securing its defeat."

The report concluded with the statement that "in the work done to protect the interests of our members from unjust assault, not a dollar has been spent for influence or for lobby work of any kind. The effort of this committee in every such instance is to show to members of the legislature the real meaning and probable results of any unjust measure, to appeal to their sense of justice and to rely upon the desire of the great majority to do what is right."

The various reports were referred to the Committee on Publications. At the conclusion of the report from the Committee on Legislation the meeting went into executive session.

THE THIRD SESSION.

The third session was called to order on Thursday morning, May 3, at 10:40 o'clock. Under the head of unfinished business President Pierce called for the report of the Committee on Trade Interests. This was read by the chairman of the committee, Anthony M. Hance, of Philadelphia.

Report of Committee on Trade Interests.

This report began by expressing gratification at the wide-spread evidence throughout the country of better times, the decided tendency to steady improvement in the business situation generally. At the same time it found ground for serious concern as to what may be the consequences of the continuance of the proprietary stamp tax. The report said:

"Such a condition of things cannot but be detrimental to public interests. Your committee views it with some alarm, believing that harmful results are already apparent in no trifling measure, and that the outcome may be disastrous, unless steps are taken to insure a speedy and radical abatement of the evil."

Some of the members of the committee attended the hearing before the Ways and Means Committee on the repeal of the stamp tax. On this point the report said:

"As the result of their experience in Washington it is the opinion of your committee that even though we may not be able to immediately secure the end we have in view, there is, nevertheless, good hope of ultimate success, and they would therefore urgently request the members of this association and the drug trade generally to continue the fight with energy and perseverance."

The committee found that the present bill before Congress for a national pure food law "contains nothing inimical to the interests of the drug trade."

Some time ago the committee sent a letter to the jobbing druggists of the country and to the secretaries of the State and local associations of retail druggists (about 400 in all) to secure data on the relations now existing between these branches of the trade and the manufacturers and also to inquire what improvement could be secured. Only thirty-five replies were received, and the views expressed were so divergent that it did not seem practicable to deduce any general guiding principle of procedure. The jobbers, for the most part, took the position that the sale of proprietary goods to the retail trade should be restricted to themselves, and that discounts ought to be increased 5 per cent., 10 per cent., 15 per cent., and even 20 per cent. The retail druggists who replied to the letter, on the other hand, were generally of the opinion that sales ought not to be confined solely to the jobbing trade. The replies received impressed the

committee with the popularity of the rebate plan and the results of the work of the Proprietary Committee of the N. W. D. A. The report continued:

"Your committee also desires to place on record the interest it has taken in seeing the growth of the N. A. R. D., and also the attainment of the principal purpose of the creation of that organization, viz., the development of a better mutual understanding among retail druggists on matters connected with the commercial side of their business. This must inevitably have a materially good effect on the trade. . . . Your committee would say in conclusion that they trust this association will extend all possible aid and sympathy to the retail druggists of this country in their efforts to effect a much needed relief by the repeal of the Stamp Tax, or at least those parts of it which are to-day making it an unportable burden."

N. A. R. D. Plan Endorsed.

This report was referred to the Committee on Publication, after which the association went into executive session to consider the plan of the N. A. R. D. to remedy the cut-rate evil and increase prosperity to all branches of the drug trade. F. E. Holliday, of Topeka, chairman of the Executive Committee of the N. A. R. D., read a detailed statement of this plan, which requires the jobber to agree not to sell to aggressive cutters or brokers; the retailer to agree not to substitute for proprietary articles, but to supply the customer what is asked for, and the manufacturer to agree to sell only to an approved list of jobbers prepared by a joint committee of the National Association.

This plan of the N. A. R. D. was considered at great length, and Mr. Holliday was kept on his feet most of the morning answering questions propounded by members of the association. At the conclusion of the discussion the following resolution offered by John W. Campion, of Philadelphia, and seconded by Thomas Doliber, of Boston, was adopted by a unanimous vote:

"Resolved, That the Proprietary Association of America endorses the plan of the National Association of Retail Druggists and commends it to the favorable consideration of the members of this association."

THE LAST SESSION.

The fourth and last session opened at 2:40 o'clock, Thursday afternoon. Secretary Articles Trade Association of Canada, which was referred to the Committee on Legislation. L. O. Johnson, of the firm of Fassett & Johnson, of London, England, was then invited to address the meeting. He did so, comparing the conditions of the trade in proprietaries in this country and in England, and expressed fraternal feelings toward the American Association.

H. B. Harding read a report from the committee of the time and place of meeting, recommending that the next meeting be held in Chicago, in September, coincident with the annual meeting of the N. W. D. A., and that the next annual meeting be held in New York during the first week in May, 1901. This report was adopted.

Election of Officers.

The election of officers for the coming year then took place, resulting in the choice of the following: President, V. Mott Pierce; first vice-president, E. C. DeWitt; second vice-president, H. L. Kramer; secretary, Joseph Leeming; treasurer, H. B. Harding. Executive Committee, A. H. Beardsley, Alfred E. Rose, Thomas Doliber, George A. Newman, H. M. Sharp and C. J. Hood.

President Pierce announced that he did not believe in third terms, and tried to withdraw his name from nomination, but he was not listened to. After the election Messrs. Pierce, Kramer, Leeming, Harding, Beardsley, Rose and Sharp made brief speeches thanking the association for their election and were installed in their respective offices.

The thanks of the association was voted to E. C. De Witt and other members of the Committee on Legislation and its counsel, George L. Douglass; also to the Drug Club for its courtesy in extending the privileges of the club rooms to the members of the Proprietary Association. After a similar vote of thanks to the hotel for courtesies extended and to the Committee of Arrangements and Entertainment, the meeting was adjourned.

New York and Vicinity.

BROOKLYN COLLEGE OF PHARMACY.

Ninth Annual Commencement Exercises—A Good Class—An Excellent and Varied Entertainment—Hon. Bird S. Coler Addresses the Graduates.

The Academy of Music in Brooklyn was crowded to the doors and a good many disappointed ones were standing on the street when began the ninth annual commencement exercises of the Brooklyn College of Pharmacy, held Wednesday evening, May 2. The graduates were:

Diplomas.—Emil Beyer, Ida F. Bougher, John M. Buckley, Frank A. Cade, John E. Collins, Leo Degenstein, Joseph P. De Gregori, Louis Finkelstein, Flora C. Fuhs, Nathaniel I. Gillman, Henry L. Goetting, Robert Kasdan, Arthur E. King, George Lindner, James Livson, Helen L. Murray, John Oppen, Solomon Robinson, Peter Riebling, Edward I. Steele, Robert J. Watson, Everett S. Howell, Barnett Koplowitz, Robert L. Mead, Frank L. Kirchoff, John C. Bassenschmitt, Paul Caylan, Christian Eckekamp, Frederick A. Muller, John Schmitt, Wm. Campbell, Jr.; Helen Mai, George Stockvis, Simon Volet, John H. Witzberger, George N. Lawrence, E. J. Dobbins, Clinton S. Ramee, Frederick Schroeder, Jr., John J. Gillen, Max Altheimer, Charles Dichter.

Certificate Students.—Adolph G. Goetz, Otto Huener, Joseph J. Huether, Meyer Isaacs, Halsted James, Rosie Karp, Edward Kleine, Harry E. Licht, George E. Neuschaefer, George H. W. Reither, Frederick W. Schlagenhaut, George F. Schmitt.

The graduates occupied seats on the platform, flanking on both sides of the faculty, officers and trustees of the college and special speakers. The front of the stage was literally covered by floral gifts to the graduates; the music, conducted by Carl Venth, was excellent and liberal and the programme of exercises of great interest in all details. President Adrian Paradis was in charge as commander-in-chief, but most of the work as announcer fell upon Prof. E. H. Bartley. After the formal entrance of the graduating class, faculty, trustees and speakers, the Metropolitan Quartette gave a vocal selection which was so excellently rendered that the great audience insisted upon a couple of encores, which were cheerfully rendered. This same quartette appeared again later in the evening and was even more accommodating in response to the demands upon them.

Conferring the degrees of graduate in pharmacy and the presentation of diplomas and certificates fell to the dean, E. H. Bartley, M. D., and the graduates, in response to their names, filed before him, each receiving the coveted sheepskin. The valedictory address was the effort of Sydney E. Howell. He read from notes, and what he had to say was not only well prepared, but full of good common sense, and what is a very acceptable feature in such addresses, it was short and well rendered. Miss Regina Belford rendered very pleasantly a soprano solo, granted an encore, and accorded an equal favor in the second part of the programme. One of the hits of the evening was made by Horace I. Bowne, who appeared twice on the programme in selections of song, story, humor, wit and pathos.

Hon. Bird S. Coler, in the formal address to the graduates, was, of course, the star of the performance. He spoke very briefly, but what he said was meaty and thought-provoking. He admonished the graduates to do well whatever they undertook and urged that while in no way neglecting their professional duties and responsibilities they should also endeavor to be good citizens in all the term implies. In fact, he wanted them to be good in everything they undertook. He gave some interesting statistics, showing the great importance of New York City in financial affairs, especially the fact that this city's expenditures constitute a very large proportion of the total expenses of the United States, and equal the combined total of many of the individual States. He concluded by urging the graduates to set for themselves some ideal in religious affairs, and strive earnestly to attain that ideal. If Protestants, they should be good Protestants; if Catholics, good Catholics; if Hebrews, good Hebrews. His remarks were listened to with much appreciation.

All throughout the programme of twenty numbers musical selections were interspersed by the orchestra.

President Adrian Paradis awarded the college prizes of a gold medal to Halsted James for best average and best examinations percentage, and the Professor A. H. Brundage medal to F. W. Schlagenhaut for the best standing in pharmacy. Charles A. Kleine rendered a difficult and intricate violin solo. E. C. Woodcock, president of the Alumni Association, announced with very great pleasure the award of the alumni prize, a handsome microscope, to Miss Flora C. Fuhs. This prize is annually awarded to the student of highest standing who has not been awarded any other prize.

The reading of the rolls of honor of the senior and junior classes was by Prof. Bartley, Walter S. Wallace receiving the silver medal for achieving the highest percentage among the juniors. The benediction was pronounced by the Rev. M. T. Stokes, after which the floral tributes were distributed to the graduates.

The programme was carried through with an accuracy of detail and a promptness which were most pleasing. It was of varied nature, but of such excellence that it sets a high mark for imitation by other institutions. The graduating class included four young ladies. The senior class officers were as follows: Arthur Eugene King, president; Edward Ingle Steele, vice-president; Flora Caroline Fuhs, secretary; George Henry Reither, treasurer.

NEW YORK COLLEGE COMMENCEMENT.

The seventieth annual commencement of the College of Pharmacy of the City of New York was held at Carnegie Music Hall on Wednesday evening, May 2. A class of ninety-seven members was graduated, and the degree of Phar. D. was conferred on eight students. The usual order of exercises was observed. President Edward Kemp presided, and the address to the class was made by the Rev. Dr. E. Walpole Warren. Following is the list of graduates:

Doctors of Pharmacy—Fanny A. Blan, Gayler B. Conlin, Ernestine Molwitz, Elbert C. Purdy, William C. Stuenkel, John Harold Thomas, Frederick Vanton, Daniel F. Wettlin.

Graduates in Pharmacy—Albert L. Adatte, Isidore Berowicz, Herman A. Brandner, Henry F. Brinckmann, Ambrose R. Brochu, Thomas E. Burke, Nicholas Cadmus, Theodore W. Cady, John W. Casey, Frederick Christ, Albert E. Colcord, Karl Dahlberg, Arthur F. Decker, John F. Deimsky, Edward Dezurko, Louis Dockendorff, Clara F. Ehlis, A. F. Emeis, Theodore F. Endress, John J. Fenton, Wesley C. Foster, Frederick Fress, Henry Frey, Simon S. Goldner, Arthur H. Goodale, William T. Green, Reuben T. Groves, H. R. Hamilton, John F. Helmecke, Alexander M. Heppurn, Wimer Hill, F. A. Hunold, Raymond Jackson, Pinkus Jaffe, Lawrence Jorgenson, M. Alfred Kaehle, Albert P. G. Kahler, Edwin A. Keefer, John V. E. Krauss, William Lage, Harris H. Lane, Louis P. Lanxheitz, Frank G. Lascalea, Frank Leigh, Julius Levine, Meyer Levy, Chas. S. Loewenstein, Charles A. Lotz, Daniel Lowenstein, Nicolas Lukin, Francis X. Lynch, Henry T. McClern, Oscar Matthiesen, Sidney May, Robert C. Medl, Raymond A. Miller, Louis Moes, Ernest E. Molwitz, Jr., Frank D. Morse, Joseph A. Murphy, Charles A. O'Connor, Thomas J. O'Neil, James F. Paisly, Edward P. Pfaff, Jr., Edgar A. Prosser, Carmine C. Pugliese, Theodore E. Pundt, Fanny Rabinowich, John P. Regan, Harry A. Reynolds, Charles F. Richter, Otto F. Safarik, Frank Schaefer, Edwin T. Schenk, Solomon Scheuer, John W. Schlegel, F. H. Schwabenhausen, Clarence A. Sexton, George E. Shave, Hetty Sirotta, William H. Smith, Arthur H. Snouder, Edwin C. Steinach, Walter P. Stowe, Moses M. Strauss, Charles A. Thompson, Albert P. Unbehann, Albert F. Veeder, Bernard Walter, Samuel J. Weidenhammer, George R. Werner, Alfred Wertheim, William H. Wilson, Harry B. Winne, Clara Wolodarsky, Rudolph H. Zahn, Walter Zinn.

The prize students were: Alumni medals—First, John W. Schlegel; second, John P. Regan; third, Harry B. Winne. College prizes—Chemistry, Albert P. G. Kahler;

pharmacy. Harry B. Winne; materia medica, Alexander M. Hepburn. Kemp special prizes—First, Karl Dahlberg; second, Ernestine J. Molkitz; third, Valo A. Bradbury.

SHERIFF CLOSES UP LOWENSTEIN.

Deputy Sheriff Radley, has taken charge of the place of business of R. J. Lowenstein at No. 72 Beskan street. The sheriff received an attachment against Lowenstein for \$540 on an assigned claim from the Rich Shoe Company, and also an attachment for \$800 in favor of Norman F. Kerr. He levied on 200 lawn mowers, which a truckman had in transit, some stoves and a typewriter and twenty-seven pieces found in a storage warehouse, including a piano, brass bedstead, wardrobes, desks, etc. Most of these goods were released later to various claimants.

Lowenstein, who has been exposed in this journal heretofore, could not be found last week and a rumor was current that he had sailed for Europe. The sheriff received many inquiries regarding him, and one law firm said it represented claims to the amount of \$2,000 for goods Lowenstein had bought in Milwaukee, South Bend and Richmond, Ind. Joel M. Marx, Lowenstein's attorney said that Lowenstein had intended to sail for Europe on Saturday "to hasten collections over there," but as the rumor was extensively circulated that Lowenstein was going to "skip" Mr. Marx had advised him to remain here and he would do so. The attorney said further that Lowenstein expected a remittance from Europe, and as soon as it was received he would divide it pro rata among his creditors. He said that Lowenstein was solvent and had good assets, chiefly in accounts. The liabilities are \$35,000.

RETAIL DRUG BOWLERS ENTERTAIN THE LADIES.

The Retail Druggists' Bowling Association of New York City held its annual celebration known as "ladies' night" on Monday, April 30. There was prize bowling for the ladies, at Starr's alleys, in West Fifty-ninth street, early in the evening, followed later by a banquet at Healy's, which in turn was followed by dancing. There were prizes for all the ladies who attended. Two games were rolled, and choice of the gifts was awarded in the order of the average scores rolled by the ladies. Mrs. Reuben R. Smith was first, Miss Renz second and Mrs. Gilbert T. Reeder third. The celebration was a successful one, and was thoroughly enjoyed by all who attended. Those present were: Mr. and Mrs. George E. Schweinfurth, Mr. and Mrs. C. H. White, Mr. and Mrs. George H. Hitchcock, Mr. and Mrs. Otto Boeddicker, Mr. and Mrs. Gilbert T. Reeder, Mr. and Mrs. Reuben R. Smith, Miss Mahler, Miss Hitchcock, Miss De Zeller, Miss Gibson, Miss Sanchez, Miss Renz, Miss Androvette, Miss Malloy, Messrs. Matthew Mahler, R. H. Timmermann, L. W. De Zeller, Charles S. Erb, L. W. Geisler, Jr.; S. P. Haddad, William Hauenstein, F. N. Pond, S. V. B. Swann and F. Wichelns.

GOVERNOR SIGNS BILL TO ELEVATE HOSPITAL STEWARDS.

The Association of Military and Naval Apothecaries of the State Forces has won a notable victory in securing the enactment of Assemblyman Cotton's Military Code bill. This bill was passed by the Legislature, but considerable opposition to it developed subsequently, and the Governor appeared reluctant to sign the measure, letting the full limit elapse before doing so. He did sign it, however, last Friday night, and the bill is now a law. It provides for each regiment one military pharmacist of the grade of first lieutenant, two hospital stewards (three if the regiment is of more than ten companies), and a hospital corps of twenty-five men, of whom one will be a sergeant and five may be corporals. To be eligible for appointment as a military pharmacist or a hospital steward the candidate must be a registered pharmacist. The law goes into effect at once.

American Chemical Society Reception.

The New York Section of the American Chemical Society and the Chemists' Club held a joint exhibition and reception at the latter's club house, No. 108 West Fifty-

first street, on Wednesday evening, May 2. The rooms were handsomely decorated with American B-and-y and other roses, and an interesting exhibition of the latest and most improved chemical apparatus and products was displayed.

NOTES.

—The druggists of the lower East side of Manhattan Borough have a staunch friend in Dr. Samuel F. Brothers, of Madison and Jefferson streets, who has done as much probably as any one man to advance the interests of druggists in that section of the city. Dr. Brothers has long been interested in bringing about organization and better co-operation among the druggists of his neighborhood, and in furthering friendly relations between the druggists and physicians. He was one of the prime movers in the organization of the New York County Medico-Pharmaceutical League, of which he is president, and he was one of the hardest workers for the success of the League's entertainment, which was reported in the Era last week. Dr. Brothers is a graduate of the New York College of Pharmacy.

—Among out-of-town visitors to the local drug market during the week were the following: Fred. Hessig, of the Van Vleet-Mansfield Drug Company, wholesalers, of Memphis, Tenn.; W. C. Coffin, Pittsburg; George E. Rosengarten, Philadelphia; Charles W. Whittlesey, New Haven; Conrad Tholen, Shelby, Neb.; E. L. Patch, Boston; Samuel A. D. Sheppard, Boston; Daniel R. Noyes, of the wholesale firm of Noyes Bros. & Cutler, St. Paul; M. A. Rawson, traveling salesman for Noyes Bros. & Cutler, St. Paul; Wm. J. Walker, of the wholesale firm of Walker & Gibson, Albany, N. Y.

—Miss Ethel Culbert Harding, daughter of Herbert B. Harding, of the Humphreys Homeopathic Medicine Company, will be married in June to Charles Stewart Mott, now of Utica, formerly of New York City. Miss Harding has been a student of painting under Twaehman Cox and others. She is a good linguist, and likewise a good horse-woman. Mr. Mott served through the Spanish-American War as a gunner's mate on the Yankee, and received a medal for his services.

—Charles S. Erb, president of the Alumni Association of the New York College of Pharmacy, has issued an open letter to the druggists in the city in which he says: "Join your Alumni Association, boys, and help those who are helping you. Join the New York State Pharmaceutical Association, and help the pharmacists of the State to find how to benefit the majority, and, above all, be at the meeting at Newburg this year."

—Herbert S. Thomas has accepted a position with Wm. R. Warner & Co., of Philadelphia and New York, to travel for that firm in Massachusetts. G. H. Wilson, of Saratoga, N. Y., has accepted a position with the same firm to represent it in Maine, Vermont and New Hampshire. Mr. Thomas and Mr. Wilson took up their new duties last week.

—Otto Wiecke opened his new drug store at No. 1375 Myrtle avenue, Brooklyn, for business last Saturday morning. The store has been several months building and is furnished and decorated handsomely throughout. Mr. Wiecke now has one of the handsomest and most attractive pharmacies in Greater New York.

—John B. Wands, about twenty-nine years old, who had been with Schieffelin & Co. for thirteen years as a member of the firm's office staff, died last Saturday night after an operation for appendicitis. His home was in Bloomfield, N. J. He leaves a wife and two children.

—Incorporation has been secured in this state by the Carmellier Stomach Bitters Company, of New York City, to manufacture stomach bitters on a capital of \$15,000. The incorporators are: C. Rathjens, J. Schragan and G. A. Berger.

—Wm. J. Gessell, of Lehn & Fink, returned from Europe last week after a two months' trip in the interests of that firm, in the course of which he visited the principal cities of Germany and Holland, and spent a week in London.

—H. W. Kieber, formerly a clerk in the drug store of Bendiner & Schlesinger, at Third avenue and Tenth street, has bought the drug store of Oscar T. Sommer, at Second avenue and Forty-third street, Manhattan.

—Wm. Wisendanger, formerly proprietor of a drug store at 1238 Second avenue, but now traveling for C. J.

Schellings & Co., the Pearl street importers, last week married Miss Estelle T. Vaughan, of this city.

—Russell & Laurie have been painting and redecorating their Washington Place Pharmacy, at Tarrytown, N. Y. They now have one of the finest drug stores in this vicinity, outside of New York City.

—Timothy Kahn, formerly proprietor of a pharmacy at No. 71 Broome street, is preparing to open a new drug store at the corner of Melrose avenue and 153d street, Bronx Borough.

—C. T. Webster & Co., on May 1, moved their drug store from the southeast to the northeast corner of Lexington avenue and Fifty-fourth street, where they have secured better quarters.

—Henry Diedel & Son have sold their drug store at No. 375 Third avenue, Manhattan, to A. & R. S. Lehman, who have formed a new partnership, to be known as Lehman Bros.

—Joseph Choransetzky, at present clerking in the drug store of I. Rotkowitz, at 165 Stanton street, will open a new pharmacy at No. 277 Bleeker street, Manhattan, about May 25.

—W. B. Tongue, who has a drug store at No. 1402 Lexington avenue, is about to open a new pharmacy at the corner of Fifth avenue and 131st street, Manhattan.

—John H. Smedley, treasurer of Parke, Davis & Company, of Detroit, has been visiting the New York office of that firm during the week.

—F. T. Dall has moved his pharmacy from No. 705 Tremont avenue, Bronx Borough, across the street to a larger store.

—Q. A. Meyers has succeeded William Heuther as proprietor of the drug store at No. 1822 Lexington avenue, Manhattan.

IN AND ABOUT BOSTON.

Boston, May 4.

—Now that the bicycle season has set in druggists will begin to have many cases of maimed and injured brought to them. In a bicycle accident this week at Lawrence the front fork of the rider's wheel broke and sent him head foremost over the handle bars. He was carried unconscious into the drug store of Otto Muller, at the corner of East Haverhill and Prospect streets, where he remained in that condition for three-quarters of an hour while the druggists worked over him. He was then taken to a Sanitarium, where it took a doctor about two hours to dress the wounds.

—In the Third District Court at Cambridge, Leo Sullivan and Henry Regan, clerks in Cunningham's drug store in Inman Square, have been arraigned on a charge of making an illegal sale of liquor. They were found guilty, Regan being fined \$50 and three months in the House of Correction, and Sullivan fined \$100. Both appealed and furnished bonds for a continuance of the cases. There are several interesting liquor cases in which a number of Cambridge druggists are concerned still pending in the courts of that city.

—The coming of the time for granting liquor licenses is indicated at Salem by displays of malt, especially in the big windows of one leading drug store there. Three years ago the police ordered malt out of drug store windows and none of this or any similar thing has been shown by druggists (although some grocers have exhibited it until recently). With a change of administration it is felt that there has come a different view of these matters.

—At Malden, which has a large number of drug stores, the indications point to an adverse report from the aldermanic license committee in the petitions for druggists' licenses. It is probable, however, that the board will grant the licenses over the report of the committee. The druggists of that city are careful in their observances of the liquor regulations, and it is very difficult to obtain liquor other than for recognized legitimate purposes.

—A well dressed man has recently been visiting druggists in and about Fall River for the pretended purpose of receiving orders for patent medicines. It was his object to get the money in advance if possible and to send the goods later. He accomplished his purpose in one drug store, but was unsuccessful with the rest, so far as

can be learned. Druggists elsewhere should be on their guard against him.

—N. P. Tobey, Ph. G., who has a drug store on Brookline street, corner of Putnam avenue, Cambridge, will soon open on Main street in that city a thoroughly equipped, first class pharmacy. George Reed is to be the chief clerk. Mr. Tobey has just returned from a pleasant trip to Portsmouth, N. H., which he made on his bicycle.

—The druggists in Taunton intend to call the attention of the aldermen to certain facts in connection with the licenses which they desire for future reference when the aldermen have the matter to consider themselves, instead of its falling upon the license commissioners.

—On the night of May 1 there was a lively fire which broke out in the basement of W. B. Hunt & Co.'s pharmacy in Central Square, Malden, and considerable damage was done by water. The fire extended through to the next building, causing a loss to occupants.

—On the charge of an illegal sale of liquor on a recent Sunday, Everett C. Dodge, the drug clerk of Wilbur H. Cole, whose pharmacy is on Dorchester avenue, was arrested by the Dorchester police. He pleaded guilty and was fined \$50, which he paid.

—The annual meeting of the New England Pharmacal Company was appointed for the first of May, but so few members showed up that the meeting was adjourned till some day to be decided upon.

—This week's exports at the Port of Boston include among other things, drugs and chemicals, \$8,333; hops, \$1,440; india rubber manufactures, \$5,333; spirits, \$1,262.

—The Board of Selectmen of Watertown have given the three druggists there, who petitioned for druggists' licenses of the sixth class, leave to withdraw.

—Mr. Dow, manager of Bartlett's Harvard Square Pharmacy, at Cambridge, spent a week lately on business and pleasure in New York State.

—Frank Allen, a Salem druggist, is to move to Worcester, where a position with a wholesale druggist has been offered him.

—Henry Newton, a drug clerk, has just been given a position in F. S. Chapman's drug store in Springfield.

PHILADELPHIA.

Philadelphia Association of Retail Druggists.

Philadelphia, May 5.—The Philadelphia Association of Retail Druggists held its regular monthly meeting May 4th, in the auditorium of the Philadelphia College of Pharmacy with a good attendance of members. The changes in the by-laws, proposed by the committee appointed to consider the subject, were adopted unanimously. The entertainment committee turned over \$617.33 to the treasurer of the association, this sum being the net proceeds of the Progressive Eucere entertainment held in February. Seven additional members were reported and the secretary was ordered to cast an affirmative ballot for their election. L. C. Funk, chairman, reported that the mercantile appraisers had ruled that retail druggists would be exempt from taxation on all goods which were manufactured by themselves; and that notice of the same would be sent to every druggist in Philadelphia. J. C. Perry, chairman of the delegation to Washington, in the interests of the repeal of the stamp-tax law, gave a very interesting detail report of the work which had been done by the combined representatives of the various associations.

An election of officers was held to meet the requirements of the amended by-laws. W. A. Rumsey resigned as secretary, after which the new officers were filled as follows: 3rd Vice-President, H. C. Blair, Jr., Recording Secretary, Fredrick T. Gordon, Financial Secretary, W. A. Rumsey. New members of the Executive Committee, J. G. Howard and J. M. Bear. Committees and delegates ap- by President McIntyre: National Association of Retail Druggists' plan, J. C. Perry, H. L. Stiles and Charles Leedom. Delegates to New Jersey Pharmaceutical Association, J. C. Perry, Theodore Campbell and H. L. Stiles. Delegates to the Pennsylvania Pharmaceutical Association, Dr. Charles A. Weideman, Charles Leedom, James C. Perry, William McIntyre and Dr. Morrison. The Association adjourned until the next regular meeting, to be held in June.

NOTES.

—Quite a number of prominent Philadelphia men were present at the Pharmacopoeial Convention in Washington, D. C., this week. Among them were the following: Profs. Joseph P. Remington, Samuel P. Sadtler, Henry Kraemer, Frank G. Ryan and Clement B. Lowe, of the Philadelphia College of Pharmacy; Dr. A. W. Miller, F. W. E. Stedem, Joseph W. England and Lyman P. Kebler. Dr. H. C. Wood and Dr. John Marshall represented the medical fraternity. Some of the members expect to remain in Washington until next week, when they will go to Richmond to attend the annual meeting of the American Pharmaceutical Association. Several of the members who returned to Philadelphia on Saturday reported themselves as being much pleased with the work of the Convention.

—The activity and turmoil which characterized the Philadelphia College of Pharmacy a few weeks ago has given place to an air of peace and repose which will continue until the opening of the lecture course in October next. There are a number of students taking special laboratory courses, but these are workers, and their entrance and departure is no longer provocative of class rushes and riots. Mr. Weigand is still attending to the combined duties of Librarian and Actuary, as W. Nelson Stem, who holds the latter position, has not entirely recovered from his recent illness.

—Josiah R. Peacock, formerly instructor in analytical chemistry at the Philadelphia College of Pharmacy, now proprietor of a store on South Tenth street, near Reed, surprised his friends and acquaintances this week by becoming a Benedict. The lady is Miss Bertha L. De Graffe, who is also well known at the college, she having graduated in 1855 at that institution, obtaining honorable mention for special research work in chemistry. —Prof. Henry Kraemer will continue his journey southward after the American Pharmaceutical Association meeting in Richmond is adjourned, as he expects to go to North Carolina with his family for a short time before commencing his summer labors on a new book, which he hopes to have ready for publication in a few months.

—The baseball team of the Smith, Kline & French Company employes played its first game of the season on Saturday afternoon last. The opposing club was the Laurel Athletic Association team, and the score was 22 to 16 in favor of the pharmaceutical club.

—E. H. Fahey, who has several stores near the business center of the city has sold his store at Tenth and Green streets, to Edward Smith. Mr. Fahey is fitting up another store however, on Eight street, opposite the Bijou Theatre, between Race and Vine streets.

—W. A. Rumsey, the secretary of the Philadelphia Association of Retail Druggists, whose store is located at Forty-first street and Mantua avenue, West Philadelphia, has gone to Spring Lake, N. J., for a few days with his family.

—George C. Lambert, the well known Belmont avenue pharmacist has removed his business to 1203 and 1205 Belmont avenue, a few doors above his old location. His new store is finely equipped in the most modern style.

—Samuel W. Lehman, a recent graduate of the Philadelphia College of Pharmacy will leave his position in this city, having accepted a position as manager for Dr. Wilmont Ayres, 1836 Sixth street, Harrisburg, Pa.

—Charles T. George, secretary of the Pennsylvania State Pharmaceutical Examining Board, who has a drug store in Harrisburg, was present this week at the Pharmacopoeial Convention in Washington, D. C.

—The ratio of drug clerks to positions has again risen since the college closed, as there are forty-one clerks to eighteen positions, according to the advertisements in the papers this week.

—Harry B. French, vice-president of the Smith, Kline & French Company has been unable to attend to business duties during the past week, being confined to his home by illness.

—Bruce Manly Edwards has entered the employ of D. F. Shull and Company, 328 Market street, West Philadelphia.

—George A. Kelly, the well known Pittsburg wholesale druggist, was in Philadelphia for a couple of days this week.

BALTIMORE.

A Joint Banquet.

Baltimore, May 4.—The Alumni Association of the Maryland College of Pharmacy and the members of the Wedgewood Club, which is composed largely of alumni, pooled issues and made the annual dinner of the association and the monthly feast of the Wedgewoodites a joint affair. The festal board on Tuesday night was spread in the main dining hall of the Hotel Rennett. Covers were laid for about 70 persons at three long tables, and nearly all the places were filled. The banquet proved to be enjoyable, not only in a gastronomic sense, but from an intellectual point of view as well.

Prof. D. M. R. Culbreth acted as toastmaster and also delivered an impressive address to the graduates. Among the invited guests was S. A. D. Sheppard, treasurer of the American Pharmaceutical Association, who was of course called on to make a few remarks and who supplemented Dr. Culbreth's admonitions to the graduates in a most felicitous manner. Other speakers were J. T. Ligon and C. D. Hickman, of the graduating class; John G. Beck, President of the Baltimore Retail Druggists' Association; Dr. A. R. L. Dohme, Charles E. Dohme, president of the Maryland College of Pharmacy; Prof. Daniel Base, of the faculty, R. E. Lee Hall, Dr. John F. Hancock, Dr. John Blake, Dr. J. W. Chambers, H. P. Hynson and J. Emory Bond. The committee of arrangements included W. N. Owings, chairman; J. Emory Bond, Jr., J. Edwin Hengst, Jr., Owen C. Smith and John S. C. Donnett.

Graduates in Pharmacy.

Baltimore, May 4.—Ten young men and one young lady received diplomas last night at the Lafayette Square Opera House, in Washington, entitling them to compound prescriptions, dispense medicines and put up pills and capsules. The event was the annual commencement of the National College of Pharmacy. Many friends of the young druggists were present. The stage was banked with palms and flowers and upon the rostrum were seated the faculty of the college, its officers and trustees and the graduates clad in their gowns and mortar-board hats. Dr. Herbert C. Easterday, president of the college, presided over the exercises, and the Rev. Dr. George N. Luccock invoked divine blessing after several musical selections had been rendered. The Rev. Dr. Thomas Chalmers Easton made an address on the developments of the arts and sciences during the nineteenth century. His remarks were replete with humor, and constituted a pleasing departure from the customary trite commencement address. Dr. Easterday conferred the degrees upon the graduates, after which H. McCoy Walters delivered the valedictory. The programme concluded with the benediction by the Rev. Dr. Luccock. The graduates were: Charles Garreis, Florence Virginia Hoskins, J. Willard McChesney, John M. Minick, Ernest Parsons, Herbert W. Poole, Samuel P. Rickards, DeHaven Sharp, S. Mason, Wagner, H. McCoy Walters and William A. Woodfin.

With the Drug Trade Bowlers.

Baltimore, May 5.—The Winklemann & Brown Drug Company's team in the Baltimore Drug Trade Bowling Club made a limping attempt last Tuesday night to win with only four members from Parke, Davis & Co. As a result the latter aggregation, which appeared to have its bowling clothes on, captured all three contests, the scores being 753, 623 and 654 against 543, 597 and 596. Last night the Root and Herbs took James Bailey & Son into camp, securing all three contests with 822, 832 and 766, against 734, 733 and 718 points.

NOTES.

—The mental condition of Adrian W. Kloczewski, a Washington druggist for years engaged in business at the northwest corner of Ninth and E streets, Northwest, was examined into about six months ago by marshal's jury and he was found to be incapable of managing his property. His wife was appointed to take charge of the business and she was also entrusted with his custody. Since then his condition has become worse and last week he was sent to the Government insane asylum.

—William Cottingham Powell, a retail druggist of Snow Hill, Worcester County, Md., and president of the Maryland Pharmaceutical Association last year, was married on April 20 to Miss Olive Merrill Johnson, of Baltimore. There were no bridesmaids. After the ceremony a wedding breakfast was served. Mr. Powell is junior member of the firm of P. C. D. Cottingham & Co.

—Among the visiting druggists in Baltimore last week were T. S. Paine, Waycross, Ga.; M. C. Hall, of Fredericksburg, Va.; J. A. Williamson, of Frederick, Md.; T. L. Flinkey, of Thomas, W. Va.; and L. H. Dielman, of New Windsor, Ind.

—C. H. Nicholson, the Baltimore representative of Whitall, Tatum & Co., on German street, will shortly leave on a trip to Europe. He will visit the Paris Exposition and go to other places, and expects to be absent about one month.

—G. B. Trochet, for years a traveling representative of Pougere & Co., New York, but now in the retail drug business at Detroit, Mich., was in Baltimore last week on a short visit. He is making a recreation trip.

—C. H. Michaels, a retail druggist at Reisterstown, Md., is dangerously ill with pneumonia.

CINCINNATI.

Cincinnati Retailers Working for the N. A. R. D. Plan.

Cincinnati, May 4.—The recent publication of an article in a local paper stating that the members of the N. A. R. D. were dissatisfied, has caused much comment among the druggists of this city. None of the officers of the local organization know who was the author of the article and it is the general belief that it emanated from one of the cut rate druggists, with the intention of creating dissent among the members of the association. The local organization has been very exact in the way of issuing trade cards to salesmen, which may have caused the article.

Alfred De Lang, of the National Executive Committee, stated at the last meeting of the local association that the Executive Board did not approve of the aggressive work adopted by the Cincinnati druggists, and that cards should be only exacted from those selling proprietary articles. At present, anybody selling the retail trade is asked for the card issued by the association, and this method is thought by some of the local druggists too severe, while others are in accord with the plan. Cincinnati has only three first-class wholesale drug houses, who have a local organization of their own and are also members of the N. W. D. A. None of them have shown a willingness to sign the contracts sent to them by the Retail Druggists' Association, claiming that to do so would make them liable for damages. Cincinnati druggists also have an obstacle in their way—a patent medicine concern making a specialty of supplying cut rate drug stores, causing some of the druggists to cut prices, for they can get their supplies as they need them. A. O. Zwick, president of the Hamilton County Druggists' Association, says he is not aware of any discord among the members and that as far as he could he would continue the methods adopted, and enforce them as heretofore. Mr. Zwick also states that, as the National Association Committee has not as yet notified the local organization, no attention would be paid to the article published in the local papers. At the present time only seven retail druggists have not joined the Hamilton County Association. The wholesale houses who have signed the agreement are the Gray & Huston Co., J. & C. Reakert and the Wm. S. Merrell Chemical Co.

NOTES.

—Harry Burke, a clerk at Rendig's drug store, while practising at the grounds of the Cincinnati Gymnasium Club, May 2, sustained injuries that either will prove fatal or leave him a cripple for life. Mr. Burke has been attending the Cincinnati University and was a member of the athletic team. He has a record as one of the best athletes among the students and in trying to vault a pole over ten feet high he fell and broke his spine. He was removed to the City Hospital, where upon examination it was found that his case was hopeless. Much

sorrow was expressed by the patrons of Rendig Bros., for whom Mr. Burke has been clerking for the past five years and among whom he was a prime favorite.

—The members of the Druggists' Bowling Club to the number of fourteen went to Macke's Grove in a body on Friday, May 4, to make arrangements for the opening of the summer outings, May 18. It is expected that a good lot of druggists and their friends will be present on that date. Vehicles to take any druggist or friend to Bond Hill, free of charge, will be in waiting at the end of Mitchell avenue, Avondale, until 10 o'clock in the morning. The ball teams are in good shape and will put up a good game.

—The remains of John Edward Dehner, the youngest son of Edward Dehner, a former druggist of this city, were brought to this city for burial Sunday, April 29. John died at Cleveland, Ohio, April 27, after a short illness. Mr. Edward Dehner was notified of his son's illness while in Beaver, Pa., where he was on business for Parke, Davis & Co. He left for Cleveland at once but arrived six hours after his son's death. The child was buried in the family lot at St. Joseph's cemetery.

—A prominent druggist in one of the wealthiest suburbs of Cincinnati being annoyed by the people waiting at his store for the street cars, had a sign posted in the front part of his store as follows: "Notice.—This is not the Consolidated Street Railway Co.'s Waiting Room."

DETROIT.

Clerks Enjoy Themselves.

Detroit, May 5.—The Detroit Drug Clerks' Smoker one week ago proved an unusually enjoyable affair. J. Ed. Simpson, one of the members of the association, designed the invitation cards, which were decidedly unique. On the left were sketched two girls reading with great apparent delight the menu, which contained several drug delicacies—"nux," "tar-balls" and the like. On the right two pugilists were trying to knock each other out. Across the top ran a bar of music and scattered about among the words of invitation were little sketches of skulls and cross-bones, pipes, cigars and so on. At the meeting, W. P. Doty, member of the State Board of Pharmacy, gave an address upon "Higher Education for the Pharmacist," which was very well received, that being one of the things the Association stands for. Harry B. Mason, associate editor of the Bulletin of Pharmacy, gave an impromptu speech upon "Drug Clerks' Organizations." A date for the annual moonlight excursion was agreed upon—June 12. Mr. Simpson will design the posters for that occasion.

NOTES.

—Detroit was founded in 1701. To commemorate that event several propositions have been offered for a fitting celebration. The latest, which appears to have been fostered by Mayor Maybury, contemplates the reclaiming of a considerable area of ground from the river at the foot of Belle Isle, the erection of a mammoth marble peristyle across the foot of the island, the construction of a huge aquarium, artificial lagoons, greenhouses, and the erection of a central pillar 250 feet high, on the summit of which an immense beacon shall be kept burning at night. All this to cost \$1,000,000. Vigorous canvassing of the moneyed men of the city has resulted in subscriptions amounting to about \$300,000. Now an effort is being made to interest the "bone and sinew" of the community to get them to put up the remaining \$700,000. Committees have been appointed to go to the institutions that employ a great number of men and women and induce them to come to the mass meetings, where it is expected enthusiasm will run so high that they will cheerfully contribute part of their earnings to the fund. Recently the employes of Parke, Davis & Co. were assembled in the court yard to receive the invitation to attend such a meeting. Not every employe promised to attend. There are working men and women in the city who can not see that they ought to be "held up" for a contribution to a project, even though it be as artistic as this promises to be. The Island is in full view of P. D. & Co., and is pretty enough as it is, and enjoyable enough to suit most of the employes.

—On Saturday, May 12, the stock, fixtures and all the belongings of the Central Drug Store, Detroit, will be moved to its new quarters, 187 Woodward avenue. Fred. J. Todd, its present proprietor, will take in two others and a stock company will be incorporated. The two others are Frank C. Andrews, vice-president of the City Savings Bank, and D. W. H. Moreland, ex-president of the Board of Public Works, and an old-time druggist. The new store is almost exactly the same size as the old, so that the fine mahogany cases, the handsome soda fountain and all the counters and shelves can be placed without having to be made over at all. An arch will be cut between the new store and the adjoining dry goods store. Mr. Andrews will be a silent partner, but Mr. Moreland will be actively engaged with Mr. Todd.

—Harold T. Finney, one of the proprietors of the Alvin E. Hilt & Co. Pharmacy, Detroit, has been sued by Miss Alice Reaume for \$25,000, alleging breach of promise. Miss Reaume's declaration states that it is nearly eight years since Mr. Finney's attentions became such that he was looked upon by her family and friends as her fiancee, but that his first proposal of marriage was not made until 1895. The union was sanctioned by all concerned, and the marriage expected to take place. Some time ago, however, Mr. Finney began to neglect the young lady, so 'tis said, and now she thinks \$25,000 would about pay for his coldness to her. Both Mr. Finney and Miss Reaume belong to a "swell" social set, and the affair is creating much interest and gossip.

—The N. A. R. D. will meet in Detroit in September. The exact date, as set by that body, conflicts with the Letter Carriers' Convention and the Veterinary Surgeons' Convention to be held in Detroit, and the local druggists are busy making some different arrangements, as Detroit is scarcely up to taking care of three big conventions at the same time. The N. A. R. D. being the last of the three to fix the time, may have to make a little change.

—E. A. Kavanaugh, formerly with Druggist Robins, Third avenue, Detroit, has purchased the Peninsula Pharmacy, corner Fort and Eighth streets. J. Melvin Early, formerly manager of the Peninsula Pharmacy, has taken a position in the city department at Farrand, Williams & Clark's. H. S. Harrington has taken Mr. Kavanaugh's place with Mr. Robins.

—Clerk Joseph Hackett, with Hurd & Gray, Detroit, was married recently to Miss Mabel Greenwood. Mr. Hackett was chairman of the Committee on Entertainment for the drug clerks' smoker on that evening, but set up the above counter attraction. The Drug Clerks' Association gave him a very handsome wedding present. —The Grand Jury of the United States Court adjourned April 20 without finding a bill against Mrs. Elsie Smith, arrested some weeks ago, charged with smuggling coal tar products into Detroit. Evidence was not considered sufficient to warrant holding her for trial. Mrs. Smith is again free.

—Frederick Stearns is expected home any day from his winter sojourn in the Bahamas. It is said his health has been greatly benefited. F. K. Stearns has been in New York City.

—A. J. Stewart, formerly in business in Detroit, has opened a new pharmacy in Port Huron. It will be known as the Tunnel Pharmacy, being located near the tunnel.

—J. W. T. Knox, of Frederick Stearns & Co., Detroit, will go to Richmond next week to attend the meeting of the American Pharmaceutical Association.

—H. D. Herrington, of Ann Arbor, has accepted a position with W. V. Wendover, Boulevard Pharmacy, Detroit.

G. B. Trochet contemplates going to New York City, where he will probably go into business.

—M. G. Ritche, of Detroit, has purchased a drug store at Mt. Clemens.

—F. W. Bertram has bought the Russell Street Pharmacy, Detroit.

CHICAGO.

New Directory Scheme.

Chicago, May 5, 1900.—The Chicago Directory Company is seeking to force druggists into signing the following contract for this year:

Chicago Directory Company,
Lakeside Press Building,
Plymouth Court, corner of Polk street.
—We hereby agree to pay the sum of \$7.50 to the Chicago Directory Company for the use of one copy of the Lakeside City Directory, of Chicago, issued for the year A. D., 1900, on delivery of same; and further agree not to part with its possession or its control or use, or use it or allow it to be used by any party in aid of any advertising scheme or in connection therewith, and to surrender said directory to said company on demand any time after the date of publication of the Lakeside City Directory for 1901; the title to the Directory to remain in said company.

A violation of the foregoing agreement in any of its parts shall entitle said company at once to take possession of said Directory without process of law, and hereby grant leave or license to it so to do.

Please send — one copy of said Directory for the year 1900, on the foregoing terms.

Chicago, _____, 1900.

There are a good many druggists in Chicago and some do not buy a directory every year. They are a meek and lowly lot, these druggists, as a rule, and will submit to a good many impositions for the sake of peace. They are willing to pay rent for telephones, and for stores; they put up with corporate and individual extortion in other ways; they serve the public sixteen hours a day on week days and not until recently have they dared to serve God on Sunday; but they have not been used to paying rent for a directory, they have not been accustomed to any restrictions in the use of it. They will sometimes put a chattel mortgage on their quinine and their ipecac when grim necessity compels, but they are not used to a chattel mortgage clause in their dealings with directory makers. Druggists as a rule do not care to go to law, but they sometimes shy a little when someone offers to take something out of their stores by force "without process of law." Such things have frequently occurred, yet he would have been a man of bold imagination who a year ago would have predicted that any incorporated body would be stung with ambition to emulate the deeds of the "long man and the short man." "Without process of law!" Verily, it hath a familiar sound and, alas! a too, too recent application. When druggists have all leased directories, hedged about with restrictions more galling than an iron fence around an apple orchard, they may have the privilege of leasing one a year later at perhaps an advanced rate. They must do that or go without. But one word of three letters expresses the thought, and that word is not DOG.

NOTES.

—The new Illinois pure food law will go into effect on July 1. Copies of the law with rulings on past laws and parts of statutes now in force may be had by addressing Alfred H. Jones, State Food Commissioner, 1623 Manhattan Building, Chicago. It would be well for druggists to procure copies of the law and read it carefully.

—An explosion of gas in the rooms above Dale & Semple's drug store on Wednesday, blew out all the windows in the upper stories and badly frightened the clerks, patrons of the store and occupants of the building. Two men employed by the gas company were hurt.

—Allen W. Hatch, formerly in charge of the sundries department of Peter Van Schaack & Sons, but now representing the Crown Perfumery Company, was married on April 28, to Bessie, the daughter of Mr. and Mrs. Herbert T. Leavitt, Omaha, Neb.

—At the last regular meeting of the season, the Chicago Drug Trade Bowling Club awarded prizes as follows: Thomas, high score medal and high average medal; Storer, improvement medal. Dr. Thomas turned the high score medal over to F. W. Armstrong, his closest competitor for the prize.

—E. H. Schwaiger will open a new drug store soon at Wauwatosa, Wis. He formerly owned a drug store at this place, but sold it to go into business in Milwaukee. He has now sold his Milwaukee store at 1130 State street,

to Joseph Hammel and returns to the scenes of his earlier successes.

—William Burdar is remodeling his store at 699 Noble street. He is putting in new fixtures, building a gallery around the interior in order to extend the shelving to the ceiling, and increasing the space in the rear.

—Herman Weber, proprietor of the Union Hotel and Restaurant, gave a dinner on May 4 to the members of the Chicago Veteran Druggists Association.

—S. J. Kuflewski, a well known druggist at 1333 West Twenty-second street, and wife have the sympathy of their many friends because of the death of their infant son.

—A. J. Link has succeeded A. Goebler & Company at 51st street and Centre avenue. Mr. Link has been a member of the above named firm for several years.

—John B. Hartke, one of the old timers in the Chicago wholesale drug trade, after an absence of several years, has taken a position with Peter Van Schaack & Sons.

—Ten thousand blank petitions were sent out this week from the secretary's office of the N. A. R. D. They had reference to repealing the stamp tax.

—F. Von Boemle, representing the Mechanical Rubber Company of New York and Cleveland, passed through Chicago some days ago on his regular Western trip.

—J. G. Kennedy, for several years in charge of the laboratory of Peter Van Schaack & Sons, has resigned to take up the practice of medicine in Iowa.

—The Rock Island Pharmacy of Chicago, J. F. Wieser, manager, was closed to-day under a chattel mortgage. The sale is set for May 8.

—E. N. Wexberg, Indiana representative of the "Old Salamander" drug house, is the happy father of a boy, who arrived Thursday night.

—John Hieland, the veteran druggist at 113 West Madison street, has gone to Indiana for a few days duck hunting.

—The East Side Drug Company is a new concern which has just been incorporated in St. Charles, Ill.

—W. D. Duffin has sold the drug store at Belmont and Evanston avenues to Cunradi Brothers.

—L. Steinbrecher has opened a new drug store at 223 Clybourn Place.

ST. LOUIS.

FINED FOR SELLING LIQUOR.

St. Louis, May 5.—Albin Layton, son of Thomas Layton, of the Layton Drug Company, was fined \$100 a few days ago, in the Court of Criminal Correction on a charge of selling liquor without a license. On April 28 the case was reopened, and the judge reduced the fine to the minimum, \$40, on account of the extenuating circumstances under which the alleged infraction of the law occurred. The story of the affair as told by Mr. Layton reveals something of the methods pursued by the Liquor Dealers' Association in securing convictions. In March a highly esteemed neighbor of Mr. Layton came into the store one evening and told Albin Layton that Dr. Keene had ordered a peculiar shaped flask for the purpose. The matter was referred to Thomas Layton, who told his son to grant the request, which was done, and the bottle duly labeled. It was refilled at different times, and one day a man came in with this particular flask, which the druggist would recognize among a thousand, and got it filled. He had the appearance of a gardener, and there was no doubt in the mind of the seller but that the man was from the party who had secured it on the verbal order of the physician in the first place. A few minutes afterwards an agent of the excise commissioner came in with the bottle, demanded of Albin Layton whether he had sold the liquor, received an affirmative answer, and the next morning a summons was issued. Mr. Layton says that after developments proved that the bottle had been sent into the saloon across the street, and the barkeeper had retained it, substituting another bottle. Mr. Layton immediately went to the excise commissioner's office, did not find Mr. Higgins in, but was treated to a torrent of abuse by the attache of the office, who gave his name as Thompson, when he attempted to state his case.

Mr. Layton further says that the judge expressed his regret at being obliged to impose the fine, and that if it were not for the absence of an actual written prescription for the original sale, the case would have been dismissed altogether.

For two months past frequent attempts have been made to secure liquor at the Layton Drug Company, but without avail.

Quite a Scheme, Isn't It?

St. Louis, May 5.—About the latest thing in the drug store line is now being sprung on an amazed and awe-struck trade. Parties are circulating among prominent retailers asking their opinion of the feasibility of a project which for novelty certainly caps the climax for a town which, notwithstanding its reputed conservatism, can evolve about as many new schemes of a commercial nature as any other city in the country. The promoter wants to organize a company with a capital stock of \$20,000 to be known as the Pure Drug and Liquor Company, or some such name. It is proposed to establish a store in a down-town location which will ostensibly be a drug store and in which a full line of drugs will be carried, but which will take out a full-fledged liquor license and dispense whiskey et al. in the original package and otherwise. Druggists will be paid a commission for any liquor trade they send to the store and the scheme is expected to catch a big contingent of those who are not above taking a nip or laying in a supply of them, but who are too respectable nevertheless to be seen patronizing a regulation thirst parlor. The scheme is in an embryonic stage, but is fully developed on paper.

St. Louis College of Pharmacy Election.

St. Louis, May 5.—The annual meeting of the St. Louis College of Pharmacy was held April 30, at the college, a large attendance of members being noted. The following officers were elected for the ensuing year: President H. T. Rohlfing; vice-president, Theo. F. Hagenow; treasurer, S. J. Boehm; recording secretary, Wm. C. Bolm; corresponding secretary, Dr. J. C. Falk; trustees to serve two years, Edmund P. Walsh, Thomas Layton and H. F. A. Spilker. Trustees holding over, Charles Gietner, H. W. Scheffer and Lewis Schurk.

Charles Gietner was elected chairman of the Board of Trustees. The report of the treasurer showed a satisfactory condition of the finances of the institution, and the secretary was able to state that the school is making good progress generally. During the past session there were one hundred and sixty-four students in attendance, and on April 11 forty-three were graduated, thirty-nine received the degree Ph. G., three were made Ph. B.'s and one Ph. C. degree was conferred.

St. Louis Apothecaries' Association.

St. Louis, May 5.—The annual meeting and election of officers of the St. Louis Apothecaries' Association will be held Wednesday afternoon, May 16, at the College of Pharmacy. Reports of officers will be heard and the reports of the Executive Committee and its sub-committee having in charge the defense of members of the association in the long litigation now probably ended, will be of especial interest. The work of the association the past year and plans for the future will be thoroughly discussed and it is to be hoped there will be a large attendance of members, as the meeting will be one of vital interest to all. The regular date for the meeting would be May 2, but it is postponed to May 16 in order to enable President John H. Allen, who is out of the city, to be present.

Howling.

St. Louis, May 5.—There was some brisk work done by the drug bowlers Thursday night. The Burdocks by winning five games from the Mustards take the lead in the championship race. The Catnips who were tied with the Burdocks for the leadership won four games from the Chamomiles, which gives them the place one game back of the Burdocks. Aszman was the particular star of the evening, breaking all previous records in the Druggists' Coked Hat League with a 62 4-5 average. The Junipers won the odd game from the Dandelions.

NOTES.

—W. W. Urkhardt, well known in North Missouri, writes the Meyer Bros. Drug Co. from his new territory, Western Texas and Eastern New Mexico, that the Llano Estacado is distinctly O. K. and business fine. C. D. Webb, the company's Northern Indiana traveler, was at headquarters a few days ago. He reports business lively and that he had to ride extra to keep ahead of freshets and washouts. H. D. Delkeskamp has recovered from his accident and is preparing to go out on his route. Harry Tyler has gone to Eastern Pennsylvania to protect the interests of his family in an inheritance which has just fallen to them.

—The Alumni Association of the Medical Department of Washington University gave its annual banquet Wednesday night at the West End Hotel. Dr. H. M. Whelpley presided as toastmaster and Dr. O. A. Wall responded to the toast on the United States Pharmacopoeia. Mr. Campbell, who responded for the class of 1900, is also a pharmacist.

—Louis Kempff, a prominent druggist of Belleville, has just announced his marriage to Miss Marie C. Tobin, two years ago, and his surprised friends are now showering congratulations on the couple. Mr. Kempff is proprietor of the drug store at Main and Spring streets, which was established by his father, Dr. Wm. Kempff, in 1849.

—A bill is pending in the City Council authorizing Druggist W. S. Fleming and Frank M. Sterrett to build a hospital on the old city hospital site at 14th street and La Fayette avenue, to cost not more than \$1,000,000, and rent it to the city at \$50,000 annually for 20 years, at the end of which time the city of St. Louis shall become the owner.

—The following will accompany the St. Louis delegation to the U. S. P. and A. Ph. A. conventions: Dr. J. H. Sewing, Missouri State Medical Association; Dr. H. M. Pettit, president Missouri Ph. A.; E. F. Klein, Hot Springs, Ark. Mr. Skinner, Pocahontas, Ark.; W. W. Kerr, Batesville, Ark., and L. E. Sayre, Lawrence, Kan.

—Mrs. N. O. Albright, of Kirkwood, will open a drug store on Webster avenue, that place, for the benefit of her seventeen-year-old son, Orrick Albright, whom she desires to learn the business. A good registered man will, of course, be employed to manage the store, but so far no selection has been made.

—Mr. Dornenberger, formerly with Merck & Company, has signed with the Mallinckrodt Chemical Co., to represent them to the jobbers of the north and west, the trade formerly covered by the late George Wright. He left on his initial trip Thursday night.

—C. P. Walbridge, president of the J. S. Merrell Drug Co., is in Washington as a member of the delegation which has been presenting the claims of the Louisiana Purchase World's Fair.

—Mr. Beck, of the Beck Chemical Company, Ottumwa, Ia., and Mr. Bond, of Porter & Bond, Mt. Vernon, Ind., were visitors this week.

—A rate of one fare round trip has been secured from all points in Missouri for the State Pharmaceutical Association in June.

—George Higgins, formerly with the Marlon Sims Pharmacy, will manage the new drug store of Mrs. Albright at Kirkwood.

—Charles Bieser, formerly clerk for E. A. Medlar, is now in the office at the Moffitt-West Drug Co.

—Dr. W. T. Stevenson has sold his pharmacy at Kirksville, Mo., to W. P. Harp.

—L. A. Seltz is on a several days' visit to his old home at Ironton, Mo.

—Clem Bernays is clerking for Otto F. Traubel.

Brought to Time.

Not long since we published a card from Major Cement Co. in which they spoke of refusing two large orders from Chicago department stores, one of which afterwards signed the agreement to maintain the full retail prices. Now the other, after trying in vain to get the goods, comes to time and has agreed to "be good" in future.

THE NORTHWEST.

St. Paul, Minn., May 4.

—Herman W. Rietzke of St. Paul, president of the Minnesota Pharmaceutical Association, believes that in the near future Congress will take action to repeal the revenue tax on proprietary articles. Mr. Rietzke has just returned from Washington where, in company with others interested in the drug trade, he appeared before the Ways and Means Committee to urge the repeal of the tax.

—Successions: D. H. Decker, Menomonee, Wis., by L. Ehrhard; Vie Emmett & Co., Atlantic, Ia., by F. Robbins; Downs Bros., Lewis, Ia., by Frank C. Downs; M. G. Wilson, Esterville, Ia., by Fred. H. Richman & Co.; J. J. Trater, David City, Neb., by Harris & Richardson; A. M. Belding & Son, Osakis, Minn., by Clark & Marles, formerly of St. Paul.

—W. S. Getty of St. Paul, has moved into the Endicott Arcade, a few doors from his former place.

—F. J. Fehrensén has started at Salt Lake City, and M. De Witt Martin at Waterville, Minn.

—J. E. Anderson, Gering, Neb., suffered a fire loss this week. He was fully insured.

—L. W. King & Co., Salt Lake City, Utah, have sold.

—R. F. Pepple is preparing to start at Wilmot, Minn.

—L. M. Betz, Wilcox, Neb., has been burned out.

AMERICAN PHARMACEUTICAL ASSOCIATION.

Its Forty-eighth Annual Meeting is Being Held This Week at Richmond.

Richmond, Va., May 7.—The opening session of the forty-eighth annual meeting of the American Pharmaceutical Association was held to-day at the Jefferson Hotel, about 100 members being present.

President Albert B. Prescott, of Michigan, introduced Governor Tyler, who made a witty address of welcome. Mayor Taylor responded and was followed by W. C. Alpers, of New York. H. P. Hynson, of Baltimore, also thanked the city and the State for the cordial welcome extended the visitors.

President Prescott's Address.

Vice-president L. C. Hopp took the chair while President Prescott delivered the annual address. Dr. Prescott strongly advocated a higher education and a better preparation for the practice of pharmacy. He thoroughly discussed the questions of dispensing practice, wholesale business, manufacturing pharmacy, teachers' specialization, literature for research as a means of advancement, and the benefit of associations, and was closely listened to by the assemblage. The report was referred for action.

The Committee on Credentials reported 25 State associations, 12 colleges, 4 alumni societies and 6 local associations as represented. Several amendments to the constitution were adopted. The council reported 77 applications for membership and recommended that the salaries of the officers be hereafter paid semi-annually. The Nominating Committee was chosen, its 49 members representing 26 States. It will report the following officers tomorrow:

Officers to be Reported.

President, John F. Patton, York, Pa.; vice-presidents, J. H. Beal, Scio, O.; J. W. Gayle, Frankfort, Ky., and E. A. Ruddiman, Nashville; secretary, Charles Caspari, Jr., Baltimore; treasurer, S. A. D. Sheppard, Boston; reporter on progress of pharmacy, C. Lewis Diehl, Louisville. New council members, L. C. Hopp, Cleveland; F. Roberts Baker, Richmond, and H. P. Hynson, Baltimore.

To-night a reception was given President Prescott, followed by a dance. The Boards of Pharmacy of the Southern States are meeting to-night to discuss interchange of registration certificates.

The number of ladies accompanying the delegates is large and a ladies' auxiliary has been organized to look after them. An elaborate plan of entertainment for the association extends throughout the week.

[A detailed account of the meeting will appear in the Era next week.]

LOUISIANA PHARMACEUTICAL ASSOCIATION.

The Louisiana Pharmaceutical Association held its 18th annual meeting at New Orleans, April 23 and 24. President Wm. M. Levy in his annual address spoke of the decrease in membership of the Association as compared with that of former years, and recommended that some action should be taken to remedy the cause for this lack of interest in the organization. Only about 12 per cent. of the registered pharmacists in the State were members of the association. He also recommended the repeal of the stamp tax on medicines, and wanted the Louisiana Pharmaceutical Association to give the National Association of Retail Druggists all the help it could. Treasurer Geo. S. Brown reported the receipts for the year to be \$106; expenditures, \$192.00; balance on hand, \$88.29. Secretary Duplantis reported that owing to an insufficiency of money in the treasury the annual proceedings for 1899 had not been printed. He suggested that an effort should be made to have these proceedings printed with those of the present year under one cover. The report of the Committee on Legislation caused considerable discussion, especially that part of it recommending that college graduation should be a pre-requisite to registration in pharmacy, and that such recommendation should be incorporated in the bill which it is proposed shall be introduced in the next session of the Legislature. On the following day a resolution to this effect was unanimously passed. The association nominated the following members to succeed the present Board of Pharmacy upon the expiration of its term of office: P. M. Viallon, Bayou Goula; E. M. Roth, Thibodaux; Paul Fleming, Martindale; M. Bernstein, Shreveport; Wm. M. Levy, New Orleans; Geo. S. Brown, New Orleans; F. C. Godbold, New Orleans; Max Samson, New Orleans, and W. T. Taylor, New Orleans. The following officers were elected: President, M. Bernstein; Vice-Presidents, Miss Corinne H. Wright and Miss Rosalie E. Cook; Corresponding Secretary, Miss F. V. Yeager; Recording Secretary, W. P. Duplantis; Treasurer, Geo. L. Brown. Executive Committee: G. de Monsabert, W. M. Levy, John S. Finlay, A. K. Finlay and N. P. Roux. It was decided to hold the next meeting at New Orleans in May of next year.

—The Texas Pharmaceutical Association will hold its annual meeting at Dallas, May 15, 16 and 17. The Dallas Pharmaceutical Association is perfecting arrangements for the entertainment of the visiting delegates, and a delightful programme has been planned.

The Hurd Respirator.

Most manufacturing establishments whose employees are required to work in noxious fumes, or the dust from drugs or chemicals, furnish to them some sort of protection in the shape of a respirator. An effective device of this sort is the Hurd Automatic Respirator, which is illustrated on another page. Even the retail druggist can use these to advantage in the manufacture of Condition Powders, handling of acids, etc., etc.

C. H. Selick Moves.

Increased business has made it necessary for C. H. Selick, the perfumer, to move to more commodious quarters at No. 56 Leonard street, New York. Here he will be pleased to receive his customers from out of town, and show them new things in perfumes in fancy packages.

To Victor Klotz, proprietor of Ed. Pinaud's perfumes and toilet preparations, has been granted in the U. S. Circuit Court a perpetual injunction against Winter's Barber Supply Company, restraining them from making or offering for sale certain preparations put up and labeled in imitation of Pinaud's Eau de Quinine and Extrait Vegetal.

Forty years ago it was in its infancy. To-day it is a household word. Cook's Imperial Champagne Extra Dry.

TRADE NOTES.

Manufacturers' Announcements, Notices of New Goods, Special Offers, and General Information for Entertaining Drug Buyers.

Japanese Spinning Mice.

These little creatures, also called Waltzing Mice, are a little smaller than the ordinary mouse, and marked with irregular black and white blotches. They are said to have originated in Japan, and owe their name to this and to their habit of whirling rapidly, like a top. This habit is supposed to have been produced either by selective breeding or to a nervous affection; but it is quite likely that both causes assisted in its development. Some of them spin without cessation for a minute and a half. They sleep during the day, and are most active at twilight and in the early evening. There are from two to nine mice in a litter, and the efforts of the young ones to spin is very amusing, resulting as they do in grotesque tumbling and funny somersaults. There is an advertisement of these mice on page 15.

Carter Medicine Company Wins.

Brent Good, president of the Carter Medicine Company, yesterday received word from his lawyers in Chicago that a final injunction, with costs, had been granted against the Chicago Label & Box Company. This company makes a specialty of manufacturing labels, boxes, etc., for druggists. The Carter Medicine Company has been following them through the courts for two years on the complaint that they were making simulations of the labels of Carter's Little Liver Pills. The Carter Medicine Company has been the only one to prosecute printers or engravers preparing such labels and wrappers. It marks a new departure in infringement cases, and the result of this suit is of great importance to the whole "proprietary trade," and of interest to retail druggists.

Ridge's Food.

The recent reduction in the prices of Ridge's Food seems to have greatly increased the popularity of that well-known preparation, and druggists can now make a good profit on it. This food, which was one of the first infant and invalid foods placed on the American market, was introduced to this country over thirty years ago, and the fact that it has withstood the severe competition of other similar preparations, speaks well for its merit. Woolrich & Co., the proprietors, report that their factory at Palmer, Mass., is now worked to its fullest capacity, and that they contemplate large additions to their plant in the near future.

Chocolate.

Chocolate as a soda water flavor is now in second place in popularity, vanilla still holding its position at the head of the list. But it is only good chocolate that has attained this place, for the impure article is not in the contest at all. Dispensers should get the best obtainable, of which Runkel Brothers' Chocolate Powder is one. They guarantee the absolute purity and solubility of their powder, and call attention to the fine aroma and rich flavor of chocolate syrup made with it. They will send a five-pound tin to any druggist for \$2. See their advertisement on Page 15 of this issue.

The Cream of Trade.

If you want to secure the cream of the trade, place in your window a nice, clean sign of Humphreys' Specifics and keep on your counter a supply a Dr. Humphreys' Specific Manual. Every druggist knows that the best people in town buy Humphreys' Specifics. The Humphreys' Homeo. Medicine Co., New York, will be glad to send free of all expense a nice sign and a good supply of advertising matter.

STATE OF TRADE.

General Market Comparatively Tame.

New York, May 8.—There has been no radical change in the condition of affairs, and the general market has remained comparatively tame, with the volume of business showing only moderate proportions. Conditions, however, are seasonable and very little is heard in the way of complaint. The quinine situation is practically as noted last week, the demand for consumption having continued light, and very little interest manifested by speculative operators. Outside holders continue firm in their views, and while limited quantities have been occasionally sold to regular customers at prices on a parity with manufacturers' quotations, none is willing to part with round lots on the basis of present values. At the American bark sale on Thursday last, the entire quantity offered was sold, but there was only a very slight improvement in prices, and some are of opinion that manufacturers' quotations for quinine will not be changed. Others, however, are equally sanguine that an early advance will occur, it being claimed that on the basis of the present unit value of bark, the current prices of quinine are very close to actual cost of production.

Continued dullness has prevailed throughout the opium market, with the tone easy, and in some instances first hand quotations show a further slight decline, without stimulating demand. Morphine continues sensitive, and in view of the uncertainty regarding probable action on the part of manufacturers, buyers are operating cautiously. Acetanilid is again more or less unsettled on account of competition among manufacturers, and prices are being shaded. One of the principal changes in prices during the week under review was a break of 15c. per gallon in first hand quotations for wood alcohol. The decline is attributed to competition from new makers, but some claim that it is due to over-production and a falling off in the demand for consumption. Jennings' magnesia is firmer, the various domestic handlers of this variety having agreed on uniform prices, which show an advance of 5c. per pound on all sized packages. Red arsenic is in abundant supply, with first hand quotations fractionally lower.

In the department of essential oils, business in a jobbing way shows slight improvement. Expressed limes is firmer owing to scarcity. Lemon is lower and bergamot higher, both in sympathy with corresponding conditions at primary sources of supply. Salages of ole oil has shown considerable activity and increased firmness, with an advance in quotations for prime yellow. Holders of balsam copiba have modified their views slightly, and a fair jobbing movement is noted at shade under old quotations.

Ergot remains dull, and the market continues to reflect weakness, with a further decline in first hand prices for both German and Spanish. Ipecac is firmer in sympathy with a stronger London market, and spot quotations are fully 10c. per pound higher. The market is better supplied with St. Vincent arrowroot, and values here of this variety have been reduced about 2c. per pound. Truxillo cocoa leaves also are more abundant, and former quotations can be shaded. The stock of Tahiti vanilla beans continues to diminish under a steady consuming demand, and with primary markets reported bare, spot holders are firmer in their views, and quotations show a further advance. In the seed line, celery is easier in sympathy with primary markets, while poppy is firmer under a similar influence. Hops are offered more freely and jobbing quotations have been reduced. Jobbers have also reduced their prices on sulphate of nickel.

Trade Less Active.

Boston, May 5.—That nothing, not even good trade, can go on the way all the time has been emphasized this week in this city among the retail druggists, for there appears to have been a falling off in the general trade of recent weeks. At the wholesale places business is also less active. No special reason is given for this decline, although the Board of Health finds in its weekly report far less general sickness than has been the case in recent weeks and the death rate this week is some below the normal point.

Such business as has been done has been practically of a jobbing nature, and not an over great amount in any way. Quinine, opium, morphine are all in light demand only. Ipecac shows some strength. Balsams, oils, acids and many other lines seem rather lifeless. With comparatively quiet conditions in the list of chemicals, prices have changed but little. Blue vitriol is one of the things for which there is a bit more demand this week. Gambier also shows signs of life. Alcohols are in pretty good demand at steady prices, alcohol being a trifle more active than grain. Waxes are without special feature.

Stacking up in Trade.

Philadelphia, May 5.—Business has probably passed the flood tide of prosperity and the ebb has begun in a slight degree, for the report, while still showing a prosperous state of affairs, are not quite so enthusiastic as

THE DEMAND for ABBEY'S SALT will be continuous, owing to the exceptional character of our steady advertising.

THESE DRUGGISTS SAY:

Brookline, Mass.,
March 28, 1900.
The Salt sells well and there has been an increase in the sale of same.
(Signed) Wm. H. Butler.

Boston, Mass.,
March 28, 1900.
The sale of Abbey's has been very fair during the last few weeks.
(Signed) A. D. Marcy.

Dorchester, Mass.,
March 28, 1900.
We are selling a slight increase in the past few weeks.
(Signed) A. M. Baker.

701 Centre Street,
Jamaica Plains, Mass.,
March 28, 1900.
We have noted an increase in the sales of Abbey's Salt recently.
(Signed) Chas. B. Rogers & Co.

40 Water Street,
Newburgh, N. Y.,
March 28, 1900.
The demand for Abbey's Salt has increased.
(Signed) Theo. Merritt's Sons.

ABBEY'S SALT is a clean remedy, honestly advertised, prescribed and endorsed by physicians the world over. Abbey's Salt reaches the consumer through the drug trade only.

...THE...

ABBEY EFFERVESCENT SALT Co.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes, retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

they have been for several months and there are some grumblers among the retailers who are beginning to complain of a slacking up in trade. Favorable weather conditions which have prevailed recently have had a beneficial effect on the general health of the community, as the prescription business has fallen off somewhat in all sections of the city. Prices remain about the same all along the line of the more important drugs and chemicals and the market is slightly weaker than usual.

Good Business Last Week.

Baltimore, May 7.—Business last week was good. Numerous orders were received from out of town, and the movement of all kinds of medicinal preparations was large in the aggregate. Retailers have begun to start up their soda water fountain business, and this, together with the augmented prescription business, brings their receipts up to very respectable figures. It is an instructive indication of the state of trade generally that no retail drug store has changed hands within several weeks, as far as can be learned. Some are offered for sale, but the price asked is evidently so high that would-be buyers keep in the background. The market for botanicals is fairly active and the movement of heavy chemicals gives satisfaction.

Reasonably Busy.

Detroit, May 5.—"Reasonably busy," say the wholesalers, "considering the weather." And then they go on to explain that soda fountain supplies are not booming as they should in the first week in May. With snow storms and snow flurries all over the State it is not strange that the "soda fountains are frozen up." There is a larger demand for grip medicines than at any time before this year, the diseases having appeared much behind its usual time. Manufacturing chemists are still busy enough to keep an extra force at work and seem very well satisfied with business conditions.

Business Active in Chicago.

Chicago, May 5.—The demand for drugs, sundries and the products of the manufacturers continues very good. The week shows a fine volume of sales at all the houses. The weather has been fine and spring orders are coming with a vengeance. The city trade has been fairly good, notwithstanding the holiday on Tuesday, when all Chicago turned out to welcome Dewey. Sundries jobbers assert that business in their lines is active, and all avow that collections are good.

Business Quite Dull.

St. Paul and Minneapolis, Minn., May 4.—The week just closed has been "a rift in the lute" quite dull, in other words—but it has been the first and only tame week for many months. The druggists are impatient, realizing that a snag like this must be struck occasionally. The main reason for the lull in business was the raw, chilly weather, which, coming as it did after several weeks of almost summer warmth, did damage upon many branches of trade. The only part of the drug business that has not suffered during the past seven days was the prescription work, which continued in almost the same full volume that has been sustained for months. The wholesale drug trade has done better, being, naturally, less susceptible to climatic pranks. The market on pharmaceuticals, heavy chemicals and everything else continues very steady, no changes having taken place in Western products.

Soda Fountain Decorations.

Nothing adds so much to the appearance of a soda fountain as well kept plants and flowers. But natural plants require a great deal of care, and add greatly to the work to be done.

This objection, though, is met in the use of artificial palms and other foliage plants, which are made to imitate nature so closely that the imitation cannot be detected from the genuine plants except upon the closest scrutiny. Frank Netschert, No. 7 Barclay street, New York, is one of the leading manufacturers of these plants in this country, and his advertisement in this

issue illustrates several of the plants which he furnishes to druggists for store decoration. His plants are not expensive, they require no care but dusting, and will last a long time. His illustrated catalogue is very interesting to druggists.

MARKET REPORT.

NEW YORK MARKET.

New York, May 8.—As usual between seasons, general business is of only moderate volume, and transactions are limited mainly to actual current requirements of consumers, with very few important changes in values.

OPIUM.—The demand has shown no improvement, and the market continues to reflect dull and easy conditions. But jobbers are still quoting the old range of \$3.35@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent, the outside figures for single pounds.

POWDERED OPIUM.—A very limited improvement comprises the business in progress, and jobbing quotations remain nominally unchanged at \$4.45@4.65 for 13 per cent, and \$5.15@5.35 for 16 per cent, according to size of order.

MORPHINE.—Buyers continue to operate cautiously, owing to the generally unsettled condition of the market, but there is no further change in values, and jobbers quote on the old basis of \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, as to brand. QUININE.—Expected changes are slow to materialize, but holders continue firm in their views, a majority being sanguine that manufacturers will shortly find it necessary to mark up prices, owing to the strong position of raw material. Jobbing quotations are steady on the basis of 3@32c, for bulk in 100-oz. tins, 33@34c, in 50-oz. tins and 35@35c, in ounce vials.

ALCOHOL.—Grain is unchanged and steady at old prices, but wood is easier owing to competition, and manufacturers have reduced their quotations 15c. per gallon. The revised jobbing figures are on the basis of \$8@9c, for 95 per cent, by the bbl, and 35@31.15 for less, according to quantity.

IPCAC.—Cables from London reporting improved conditions abroad have imparted a firmer feeling among local holders, and spot quotations for jobbing quantities have been advanced to \$3.60@3.85 for whole, \$3.65@3.90 for ground and \$3.70@3.95 for powdered.

BALSAM COPAIBA.—The tone of the market is a shade easier, and jobbers have reduced their quotations to 45@48c, for prime Central American and 53@58c, for Para.

VANILLA BEANS.—Former quotations are still current for Mexican and Bourbon, but Tahiti are again firmer, gradually diminishing stocks, and quotations for the latter variety have been further advanced to \$3.25@4.25, as to grade.

ERGOT.—The market is again easier under the influence noted last week, and jobbers have reduced quotations to 70@80c, for German or Russian and 1.05@1.20 for Spanish, as to quality. Powdered, 5c. additional.

OIL LEMON.—Primary markets are somewhat easier, and spot quotations for jobbing parcels show a decline to \$1.20@1.45, as to grade and quantity.

OIL BERGAMOT.—Conditions abroad are favorable to holders, and the market is firmer, with quotations advanced to \$2.40@2.55 for the better grades and \$2.65@2.90 for good.

JENNINGS' MAGNESIA.—Wholesale dealers have agreed upon a uniform basis of values, and the revised schedule shows a general advance of 5c. per lb. on all sized packages.

NAPHTHALINE.—Stocks are light and prices firmer, with bbl. lots held at 3@3¼c. for balls and 2¼@3c. for flake.

SULPHATE OF ANILINE.—An easier feeling has developed among jobbers, and quotations have been reduced to 35@45c, as to quantity.

HOBS.—Holders offer more freely, and jobbing quotations show a decline to 22@30c., as to grade and quantity.

CELERY SEED.—The import cost is fractionally lower, but jobbing prices are unchanged at 11@15c. for whole and 16@20c. for powdered.

POPPY SEED.—Business is light and of a retail character, but with foreign markets ruling strong, prices are maintained at 14@18c.

A New Hat for Three Cents.

This is the startling head line in the advertisement of the Hat Bleach Company, Dept. E., Xenia, Ohio, in this issue. They have a preparation for cleaning and bleaching straw hats. They say it will clean a hat in five minutes, and that the 10-cent package is enough for three hats.

MARKET REPORT	546

A PLEASSED CUSTOMER.

It has been said that the best advertisement is a pleased customer, and this would seem to apply as well to the advertising business as to any other. This is what one advertiser in this paper says:

370 Greenwich street, N. Y., May 8, 1900.

The Pharmaceutical Era:

Gentlemen—The results from the advertisement which I placed in the Era have been far beyond my expectation. I have secured so many replies that it has given me all I can do to fill orders.

Yours truly,

W. E. KENNEDY.

VALUATION OF INSECT POWDER.—The value of insect powder has been found through experiments of Dowzard (Rev. Int.) to be proportional to its content of ether-soluble constituents. A good powder contains 5 to 9 per cent. of ether-soluble substances. These may be determined by macerating 2 Gm. of the sample in a tightly-stoppered bottle with 50 Cc. of ether, with frequent shaking during two hours, then removing 25 Cc. of the clear ethereal solution, evaporating to dryness and weighing the residue. Similar results were obtained by Durant, who regards 5.25 per cent. of ethereal oil and soft resin, obtained by evaporating the ether solution, as a minimum requirement. It is also demanded that the extract be free from chlorophyll. The degree of fineness of the powder has also considerable influence on its effect. (Apoth. Ztg.)

A condensed report of the annual meeting of the American Pharmaceutical Association, held at Richmond last week, is presented in this issue. Though made as brief as possible it is believed to present all the salient features of the work accomplished, and it will be evident to the reader that some of this work was very important indeed. The report will speak for itself, but we wish to point out some features of especial significance.

In the first place the association has gone on record concerning the character of pharmaceutical legislation which is desirable in all the States in this Union. It has formally adopted a draft of a law intended to serve as a pattern or basis for pharmaceutical legislation in States where it may be proposed to attempt new legislation. This proposed law is called to the attention of the pharmacists throughout the entire country. If it be possible to secure in all our States legislation which will bring about a greater degree of uniformity along the lines covered by this proposition, it will be to the material benefit of not only the pharmacists alone, but primarily of the public whose servants the pharmacists are.

In this pattern law it will be noticed that better qualifications in an educational way are insisted upon. The apprentice must possess a good preliminary education; the pharmacist can only enter the practice of pharmacy by first serving as assistant, by being a college graduate, and by passing examination by a board of pharmacy. No legislation can be retroactive, hence this law if enacted in every State to-day would in no way debar any of those now in the business from continuing therein. Its effect would be simply and only that those who come, those who are to serve, shall be better qualified, better able to meet the conditions laid upon them by the progress of their science, and which they must meet if they are to truly fulfill the duties they owe the public and to themselves.

A second important provision is that requiring the owner of a drug store to be himself a licensed pharmacist. A third feature is that the peddling or vending of medicinal agents, quack nostrums, etc., by unqualified persons is absolutely prohibited. As stated in the detailed report, the proposed law, as a whole, went through almost without alteration, and this fact may be taken as a great compliment indeed to its framer.

All throughout the proceedings the question of better education obtruded. It seemed to be generally recognized that the coming pharmacist

must be a better educated man than even the best of those now in business. There was no dissent to the proposition that hereafter no one should be admitted to examination by a board of pharmacy unless he had taken the regular systematic course of instruction in a college of pharmacy and won its diploma. In this regard sentiment has undergone a very radical reversal within ten years past.

It is realized also that pharmacists should be better business men, and one means, perhaps the only means under the circumstances, for affording them a business education is to establish in our colleges of pharmacy a course in commercial training designed and arranged for the especial use of pharmacists. In this line there was detailed such a course, which has recently been instituted in one of our colleges, and which was described and commented upon in the meeting. Inasmuch as the idea met with warm approval, there is no better place to present the subject than right here, and no apology is offered for the following synopsis of such a course:

BUSINESS LAW IN GENERAL.

Common Law, Statute Law, Law-Merchant, Lawful Age, Exception, Money.—Definition, kinds, uses, regulations governing the same.

Bank account.—Bank book, opening account, deposit slips, balancing.

Substitutes for Money.—Checks, form, definition, Advantages, drawing checks, endorsing checks, check raising and precaution against, stopping payment, certified checks, Guaranteeing signature, practical exercises in the above.

Drafts (of bill of exchange)—Definition, form, parties to, kinds of, uses, acceptance, manner of collection, of, force of demand, protests, with bill of lading, practical exercises on same.

Promissory Notes.—Definition, form, parties to, place of payment, maturity of, protest, object of protest, indorsement of, uses of, advantages of, collateral notes, judgment notes, practice on same.

Due Bills.—Form and uses of.
Bank Drafts.—Definition, forms, uses, New York drafts, cashier's check, certificates of deposit, foreign exchange, letters of credit, traveler's checks, postal money orders, express money orders, money by telegraph, registered letters, money by express.

Banking.—National Banks, the clearing house savings banks, State banks, private banks, safe deposit, loan and trust companies, building and loan associations.

Insurance.—Fire, Life.
Transportation, Mercantile Agencies, contracts, deeds, mortgages, leases, orders, duplicate orders, receipts, releases, bills and invoices, discounts (cash), study of price lists, establishing a business, buying of goods, selling of goods, conducting a business, advertising, inventory, double entry bookkeeping, single entry bookkeeping, special firm bookkeeping.

Another important act of the association was to authorize the resumption of the exhibit feature at the annual gathering. When the exhibits were discontinued a few years ago it was the belief that they were a detriment to the association, often a counter attraction to the meeting, and, what is undeniable, the exhibits had in some particulars been outrageously abused and unsuitable, illegitimate displays had been allowed to be given. Now, however, some believe a mistake was made in dropping the exhibit, and at next year's meeting there will be such a display. The exhibit will be confined to appropriate, legitimate lines, and every exhibitor will be allowed time in a special session of the association to talk five or ten minutes concerning his display and his goods.

In connection with, but not an organic part of, the meetings of the association, were held several sessions of the newly created Ameri-

can Conference of Pharmaceutical Faculties. This body, in its plans formulated, and which will be considered at length hereafter, is destined, without doubt, to exert a deep influence upon pharmacy in the United States. A word also, and but a word, concerning the social features of the meeting. These were enjoyable, elaborate, and too much praise and thanks cannot be given to the local committee and their associates and friends for the hospitalities showered upon the visitors.

EXPLOSIVE!

A news story elsewhere in this number, under the caption "Druggists Caught in a Trap," ought to prove "mightily interestin' readin'" to druggists generally, as the circumstances it describes most certainly were "interestin'" to those affected by them. The bill was sneaked into the Legislature, and its passage sneaked, its full meaning not being understood or detected. It certainly has a very important and irritating application to the drug trade. It is supposed to have been put through the Legislature in the direct interest of certain manufacturers. This law certainly demonstrates the necessity of druggists watching closely the work of legislators in order that their interests be conserved.

The general merchants of a Pennsylvania town entered into agreement to close their places of business every evening at 6 o'clock. Two of these merchants violated the agreement, and now, at the instance of the Retail Clerks' Association of the city, the court has granted a preliminary injunction against these concerns, and will hear legal arguments on the novel features involved in the case. There would seem to be a hint in this to the drug trade. If the law can be made to prevent druggists from violating an early closing agreement, it offers a very attractive solution of the problem. Get all the druggists in a town to sign such an agreement, and then prosecute any one violating it. Here is a chance for drug clerks to force the issue.

The collectors of internal revenue are getting after the druggists in some sections of the country to collect the stamp tax on wine sales. It is reported that some druggists have entirely neglected stamping the packages of wines sold since the law went into effect in 1898, and now must give up at the rate of a one-cent stamp for every half pint.

Several small towns in the interior of New York State are under the operation of a liquor tax law which contains some very stringent no-license provisions. In these towns, therefore, for two years to come, there will be no saloons, and even the drug stores will not be allowed to sell liquor on prescription.

(Continued from page 495, May 10)

COLLEGE GRADUATION AS A PRE-REQUISITE TO BOARD EXAMINATION.

Is it Desirable to Seek Legislation to This End?—The Question Discussed by Pharmacists, Clerks and Teachers.—Its Advantages and Drawbacks Contrasted.

APPROVES THE DIPLOMA, BUT NOT AS A REQUIREMENT.

As there is considerable discussion in the Era at the present time concerning a druggist having a diploma from some college of pharmacy before granting him a certificate to practice pharmacy, I wish to give my views on the subject. I wish it understood, however, that I am not opposed in any way whatever to colleges of pharmacy or persons holding their diplomas, but just the reverse, and I would advise all persons who contemplate practising pharmacy to go to some good school of pharmacy first, if they are able to do so. But to make it a requirement or obligatory upon an individual to secure a college diploma I think would be an outrage upon the public. I contend that if an individual passes a satisfactory examination before the State Board of Pharmacy in the State in which he resides he has complied with all the requirements of the law, and should be entitled to a certificate whether he holds a college diploma or not. I am also opposed to granting certificates to graduates of pharmacy without examination, as I believe some States do or have done. I think graduates should be required to stand an examination before the State Board of Pharmacy the same as any one else. To require persons to hold college diplomas before granting them certificates to practice pharmacy would deprive a great many worthy young men, and women, too, from entering the profession, as there are a great many persons who are not able to attend college, but who can enter the employ of some good registered pharmacist and with him learn the business quite as well, and in some cases probably better, than had they gone through college, for when employed in a drug store they obtain an every-day practical knowledge of conducting a pharmacy which will in time enable them to pass a satisfactory examination before the State Board. I would suggest, however, that if the would-be pharmacist has the opportunity it would be better for him to study chemistry, botany and Latin. Some individuals in the drug business might have made better pharmacists had they had the opportunity to have attended some good college of pharmacy, but I am unalterably opposed to making the holding of a diploma compulsory or a prerequisite for registration in pharmacy. Of course, all of the colleges and, I suppose, many well-to-do people would favor such a law; and why? No, perhaps, that it would make better pharmacists, but that it would, upon the part of the former, increase the number of their students, and by the latter because it would in some cases, perhaps, prevent the poorer classes from entering the business. The simple holding of a diploma in many cases does not amount to much, as students are often rushed through college to keep up with their classes, and many, perhaps, are turned out as graduates who would come short of passing before the board of pharmacy. I do not oppose colleges or those who are fortunate enough to secure a college education. I only oppose the making of a law that would debar, as it undoubtedly would, any competent person from entering the business. I have been conducting a drug store and pharmacy for over twenty years; I hold a certificate, and while I believe that it might have been an advantage to me had I been able to attend college, yet had I been compelled to have had a diploma before I engaged in the drug business, in all probability I would never have been in it. While I do not believe that any of us ever become perfect, and that there are many things yet for us all to learn, I do believe that I, as well as many others who are successfully conducting drug stores are fully as capable of running their business as many others who hold college diplomas. There are many good self-made men who never saw the inside walls of a college.

Beulah, Kansas.

M. J. DRY.

WANTS BETTER APPLICANCES.

The amphibious calling of the pharmacist of to-day where not only professional ability, but also sharp business management play such an important role, where on the one hand training, knowledge and skill in the art and practice of pharmacy, and on the other keen business instinct and energetic business methods are of prime importance, when in fact either alone is entirely insufficient, requires, no doubt, a diploma from a reputable institute or school of pharmacy. But to make it a prerequisite to a "Board Examination" I think is not only unfair, but in many cases impracticable. But something must be or at least should be done. And now brethren of the pharmaceutical ranks, how would you like the following proposition:

No apprentice should be allowed to start his apprenticeship until graduated from a High School or similar institute, where the rudiments of Latin and Greek are taught, followed by four years continuous apprenticeship under a competent pharmacist. After serving this time the law or the rulings of the board should compel him to take either a full course at a reputable college of pharmacy or a full or at least two years' course of a yet to be recognized institute or school of pharmacy by mail. After having been graduated from either one of these schools, he certainly will not fail to pass any reasonable State board examination. It would not take long for an employer to find out which of the two clerks, either from the college or from a school by mail, would be better adapted to the business requirements of his store. It would also give a wide-awake, bright, but poor, boy a chance to engage in the practice of pharmacy and might, say, educate himself with the assistance of a competent master in pharmacy. A man equipped with a training and education like outlined above would never fail to pass an examination or meet the requirements of even an exacting employer.

C. L. KATZ, M. D.

Terre Haute, Ind.

NO MONOPOLY!

I am moved to strike a blow at a "would-be" monopoly. I refer to the agitation by pharmacy colleges and the fortunate graduates thereof to require a diploma as a condition precedent to a board examination. Permit me to say, Mr. Editor, and that with due respect to the eminent men who favor this "exclusiveness," that such a proposition is ridiculous and almost monstrous. Mr. Glick, of Lafayette, Ind., may well doubt the "advisability" of enacting such a law in Indiana. I will say further for his benefit that I doubt the "advisability" of even proposing such a scheme to the Legislature of Indiana.

The idea, too, of "protection to the pharmacist" is quite prominent in the argument of those who favor this "nice plan" for the colleges. I want to say on that point that I know of no General Assembly that would deliberately go into the business of protecting any "class." Pharmacy registration, medical registration, dental, and even legal licenses are granted to individuals, not for their protection, but solely for the protection of the people who would otherwise be imposed upon and injured.

One more suggestion. It occurs to me that most examining boards would be pleased to recognize a diploma from a first class college of pharmacy as just as good evidence of ability as the board examination, unless deterred by unfortunate statutory enactment. Modest men are not wedded to the idea that perfection rests on their shoulders alone, but are willing to admit that the final examination by a respectable faculty is usually worth as much as their own. In fact I think more of some diplomas than I do of some certificates. How this matter will shape up twenty-five or fifty years from now (not five) I am not prepared to say, but I am sure the beautiful ideal is quite premature at this time.

JOHN H. HOYD, SR.

AMERICAN PHARMACEUTICAL ASSOCIATION.

FORTY-EIGHTH ANNUAL MEETING.

Richmond, Va., May 7-12, 1900.

Detailed Report of the Proceedings. A New Section Instituted. Many Papers Read. The Draft of the Model Pharmacy Law Approved. The Entertainments.

The weather was delightful, the city of meeting one of the most attractive in the United States; the welcome was of the proverbial Southern nature, and all things conspired to make the forty-eighth annual meeting of the American Pharmaceutical Association, at Richmond, Va., May 7 to 12, an unqualified success, and that it was. The delegates were a little slow in arriving, but on Tuesday morning between 150 and 200 were in attendance; many of them coming from Washington after a week's participation in the deliberations of the United States Pharmacopoeial Convention. A greater number of members, in proportion, from the South were present than customary, even far-off Texas being adequately represented. Monday morning was spent in handshaking and, in an official way, by the first meeting of the Council of the Association. The regular scheduled programme commenced Monday afternoon.

THE WORK.

FIRST GENERAL SESSION.

MONDAY, MAY 7, 3.20 P. M.

The large hall or theatre on the top floor of the Hotel Jefferson was half full when President A. B. Prescott, of Ann Arbor, Mich., rapped for order. In a few graceful words Mr. Prescott introduced Governor Tyler, of Virginia, who, in a bright and witty speech, welcomed the Association to the hearts and homes of the people of Richmond. Mr. Alpers and Mr. Hynson appropriately and eloquently did the honors in a return speech of acceptance.

President Prescott then read his annual address, which was as follows:

PRESIDENT'S ADDRESS.

In coming together for the forty-eighth annual meeting, we join in the heartiest greetings of renewed fellowship with each other, and in sincerest gratitude to Almighty God for the prosperity of our country and of our profession. The year of our Lord nineteen hundred marks an era of advancement in commercial and scientific opportunity. It belongs to us as a company of active workers to keep step, well forward, in the march of events. Therefore it seems proper, so far as the brief limits of this address permit, to look over the situation of pharmacy at the present and take account of the work immediately before us.

I know that if I were to greet some of my friends with the question, what is it now about pharmacy that makes it very different from other pursuits? some would answer me, it is only this, that it is a losing business. Now I cannot accept this answer to the question as stated. If on the word of its practitioners this pursuit is a losing business at certain periods, that does not distinguish pharmacy from other indispensable pursuits, such as carrying on a farm, running a railroad, or following the practice of medicine.

Departments of Practice.

To inquire into the nature of the work of pharmacy we find that, of necessity, there are divisions of pharmaceutical practice, and that there is the tendency to an extension of these divisions. Besides the final exercise of pharmacy in furnishing and adapting medicament and chemical supplies to consumers, there is, secondly, the preparatory business of the wholesale druggist, who collects and distributes medical merchandise over the world, and, thirdly, the contributory service of the manufacturer. It is by virtue of the function of the dispensing pharmacist that the wholesale dealer and pharmaceutical manufacturer exist, and it would be hard to say which one of these branches contributes the most to the art and science and growth of pharmacy as a whole. It is the union of them all that constitutes the pharmacy of today, the profession represented by this association.

Dispensing Practice.

In the supply of medicines and chemicals to consumers it is especially the adaptation of these supplies to specific uses and demands, as well as their valuation in terms of purity, quality, quantity and power that marks the skilled profession. For this special knowledge has accumulated for generations and great sciences have yielded up their latest discoveries. In this practice pharmacy means safeguarding care and professional judgment as a basis of trust in the issues of life against death. It means resources for sanitation, public and private, when the plague is at the door. It requires acquaintance with the precise armamentarium of pharmacology. It invites a provision of agencies for industrial arts and the refinement of homes. It puts a laboratory at the right hand of busy physicians and health officers. It is an art which will be able to serve as analyst and arbitrator in public inquiries as to pure drugs and pure foods, when the markets are crowded with strange inventions each more insistent than the other before it.

In this sphere of pharmacy it is undertaken to protect life against the mistakes of haste and oversight, against danger of poison in the hand of the irresponsible, against accident of any sort. But whatever be the law of the state allows to a responsible citizen in the choice of medicines, of open composition or otherwise, under advice of whatever practitioners of medicine or without counsel of any kind, but whatever be the law of the part of the citizen is respected by the pharmacist. He is placed in charge of the agents of life that they shall not fail, and the agents of death that they shall not hurt, and his ignorance of the law is not his fault, while still he respects the right of sane persons acting in good faith for any medicine not contraband under the law. That the dispensing of medicines and poisons is obviously a profession of special skill touching public safety in vital parts, is seen by the extent of State laws for the examination of pharmacists. Moreover, when there is legislation for pure drugs and foods, or to limit the freedom in use of misleading names of the same, there is usually imposed an added responsibility upon the pharmacist requiring of him an increase of skill. To the Pharmacopoeia itself is left the task, always responsible and sometimes impracticable, of defining the limits of purity before the law.

The duty of the apothecary is of character, integrity and discretion, made more responsible by republican freedom, and will indeed has the duty been done by the body of good and faithful servants and large in the years of the century coming to a close. The many of this honorable guild have held unmovable the confidence and respect of the public in all our States and provinces, though not without loss by the sins of a few unworthy members.

It is an added duty in the supply of medical merchandise to consumers to regulate the prices of sale. This is economics as applied to the sale of the materials belonging to a skilled profession. People are properly somewhat averse to unskilled hands for the supply of any sort of medicines. The economics of pharmacy call for local organization, friendly co-operation and representation to influential councils. People are properly concerned with the economical problems of the day is entitled to a more careful study than this of the drug trade. It needs the sagacious good sense of men of experience, with whatever light the laws of commercial science can afford. Without a personal acquaintance with details in this subject, I yet desire to express the reasonable belief that cut-rate competition against regular rates for either materials or services in any skilled profession is always to be guarded against as demoralizing to social order and inimical to public good.

These, it seems to me, are some of the features of pharmacy in the supply of pharmacological and chemical agents to consumers, the largest and the most important of the branches of the practice. In another branch of practice lies the collection of drugs and medicines and their distribution in all parts of the world.

The Wholesale Business.

The wholesale and importing trade deals with all countries and peoples. It requires a range of technical skill and experience that it must largely gain for itself, with the use of special sciences but poorly professed in the universities hitherto, and now only partly indicated under the term pharmacognosy. It performs a service of ex-

tensive scientific import and wide economic influence. It deals with certain plants in every part of the world, what they yield in given stages of their growth as affected by soil, climate and culture, as collected and cured and analyzed by the various colonial and metropolitan markets of trade, and as found in the final quest of the analyst. It must know tropical agriculture, the industrial customs of various lands, and the ins and outs of mercantile conditions, and the general principles of the economies. The importing and international drug trade possesses the material for much instruction in the higher commercialism being established, to equip men for the similar service by the various colonies, as treated in the annual reports of the various consular agents. Kieker and Hanbury was published in London the phrase "the history of drugs," took on a larger meaning in the English tongue, and a new period in pharmaceutical literature was entered. The impulse to this literature gained strength from English trade with the East, stimulated by the relations of Britain with her colonies. The time has come when American drug trade is to receive such stimuli in its relations with the East, as it has received with the characteristic adaptation of new methods. To this end are wanted all helps of physical and plant geography, vegetable physiology and agriculture, botanical gardens, drug plantations and analytical laboratories.

Undertakings such as these must have financial support, and among the best business men of the United States are those most likely to turn to the aid of the scientific and industrial cause. The members of this Association know persons who are at once possessed of large capacity in successful business and of quick foresight into the open door of scientific discovery.

Manufacturing Pharmacy.

In the third place, as a distinct branch of the profession of pharmacy, has tropical countries, and profit by medicinal manufacture. The preparation of medicines is no less a part of pharmacy when in the division of labor certain persons do nothing else. To what extent the preparation of medicines ought to be specialized is not within present discussion. The limitation is put partly in the power of the dispensing pharmacist, or of any one. At any rate it is among the results of manufacture on the large scale that it can utilize much unskilled labor, and at the same time employ a few persons to engage highly skilled service in positions of control. Therefore, it is feasible in large establishments, to organize investigations for the improvement of manufacture and the saving of material. The pharmacist who is in control controls the quality of raw material in its purchase and checks the quantity of articles in the output of production. The standards and stipulations of the pharmacopœia are to be maintained and the best scientific application. When we canvass the literature of research in our profession we find very great indebtedness to the manufacturing houses, both those of this country and those of Europe. And among the names of men of pharmacy whom this Association by the names of men of pharmacy whom all delight to honor.

As the several branches of pharmacy are the complements of each other in service to the public, they are contributors to each other in science. In the main their interests are in common.

The Teachers.

With the practitioners of pharmacy in its several divisions of labor belong the teachers of pharmacy and of the sciences applied in its practice. Pharmacy has been sometimes the parent and sometimes the child of chemistry, of botany, of pharmacology. The relation of the apothecary's art to modern science is not estimated at full value. Research came out of pharmacy in the last century, and will return to it with increased application. Ever learning may claim for itself, it may claim for its teachers as well. Teachers in college must be in touch with the activities of life. If able to teach or to learn they must be hand in hand with the world. If they are taught as they were worked out in the world. For it is things and not theories that are taught in colleges. Time has passed when a college can continue to live shut in from the breath of life, the field of action. Here is the telephone, the tele-making machine, the coal-tar products—they are not theories; they are facts and to be taught as such.

Actual business interest never works against the interests of science in the final test. In the universities at present there are being established broad and unbiased studies of industrial economy and higher commercialism. In our trade associations measures of reform are being put to trial by men of practical vigor. Each set of workers may and will learn from the other and add to the common stock of advantage.

Specialization.

With this view of the extended range of pharmaceutical incidents and the representative character of the practical practice, we should be ready to welcome the service of specialists and to provide for their training, all in the fold of pharmacy. As truly as we have retail and wholesale and manufacturing and dispensing, we have in each line of practice employ scientific specialists in its own range of work.

It is not every druggist that is to open an analytical laboratory for the aid of busy physicians and health of-

ficers; it is but enough to meet the demand and a very good beginning has been made in many places. Already bacteriology is an employment, usually with other duty, in a few retail establishments, and by all means to be cultivated. It is not to be thought that the majority of graduates in pharmacy will ever be competent bacteriologists. The same may be said of physiological chemistry, and of practical pharmacology. The latter is in increased demand, and is extensively found in manufacturing houses, and may become important as an analytical method in valuation. Food and water analyses, as specialties, belong in the profession of pharmacy, of course, not only in the advanced pharmacopœia, but in the one mentioned as a specialty in wholesale work. Analytical chemistry, the earliest of these applications of science, is now well established in a large number of houses of wholesale and retail trade, and in finding the economical limit of its usefulness, which extends as the standards of the pharmacopœia are more and more enforced. Next in advance is the carrying of chemical analysis into organic work, and the estimation of potent principles, a science for which pharmacy is mainly responsible and most directly interested. There will be more use of these several sciences in the practice of pharmacy when the sciences make themselves more capable to answer the practical questions.

The training for these specialties, as it seems to me, can be carried as advanced studies in the colleges of pharmacy in one of two ways, or in a third. The first, the gradual one, can be found for one advanced study which each student must elect from among several offered. Second, the several advanced studies can be offered to graduate students, some of them to be made one or more of these studies the graduate work in training for special service. The regular studies should not be supplanted by the specialties. In going beyond the regular studies a student gains more by thorough work on one subject than by scattered work in various subjects. Finally, students of insufficient preparatory education cannot take advanced studies with advantage. And graduates who have shown inaptitude for scientific work may well be advised against undertaking to prepare for it.

While colleges and universities, in possession of libraries and laboratories and museums and teaching facilities, are the natural centers of specialization and research, these are also highly developed in the larger business establishments, equipped as they may be in the means of investigation. And solitary workers, as well, continue to deal to some extent with the literature, and the enriching of its literature, personal power overcoming hindrances and making an environment for itself.

Literature for Research.

For specialization or research the first necessity is the use of a library. A pharmacist is in some part like a lawyer; he becomes an authority not by knowing books, but by knowing how to use them. The knowledge through publication would add to human knowledge upon any question of fact must first find out pretty well what is already in publication upon that question. It is much of the order of value that the worker who is to reach a new fact the worker becomes an authority upon a class of facts.

So then to place the current publication of pharmaceutical research in the hands of our profession, the very main pharmacy is to put the professional power of the world in his support. A single journal of research does something, in an inspiring way, but it is too small part of the journalistic literature to be a dependence for its stimulating influence, is mainly ephemeral in its uses. There is the want for the average pharmacist of a compact summary of all research of our profession. To secure this the uses of the Pharmacopœia and its commentaries on the one side, and the voluminous pharmaceutical press on the other side, such a summary is preferably to be a book-for annual, standing as a standard for the best features of a library of pharmacy. Such a summary we have in the Report on the Progress of Pharmacy issued by this Association. Its volumes for a series of years make a library of research. The same series of publications not being access to libraries in the large. Its importance and its improvement are to be commended to the care and interest of the Council, the entire membership, and all English reading pharmacists in the world.

The Means for Advancement.

To give pharmacy its due place in science and its due profit in industry, it must act as the leader in an investment where there must be foundation for research, libraries and laboratories equipped, groups of collections and experimental plantations. I am inclined to believe that if the people of pharmacy are fully awake, the means for their being alive in their hearts, it would be found that there is money waiting to support the highest and best work that can be done. We have had marked examples of large and far-reaching benefactions for good ends, and we need our guide. To give such examples the pharmaceutical public cannot afford to be apathetic.

If a larger body of practitioners would at least assume membership subscriptions for themselves, it would do much to open the door to general benefactions. It is a trait of the time for large members to assess themselves in small sums for the carrying forward of great efforts. Measures in philanthropy, in religion, and in art are so realized in insurance. Insurance is the method of voluntary taxation, which is also seen in trade organizations.

Societies.

We have various organizations in pharmacy, to be sure, it would be unnatural if we did not. As in other pursuits, it seems for a moment that interests suffer from an excess of organization. But one consideration we can only regret that the organizations of pharmacy one and all are not more widely and vigorously supported.

The separate organization of retail practitioners two years ago, upon commercial matters only, in a national body representative of local unions, was but the specialization of effort in the face of difficulty, inevitable and surely desirable. The separate organization of wholesale practitioners in the manner in which it has been carried out, prudent and temperate and steadfast, commanding general respect. The State societies have fulfilled a function for many years, in the inauguration of retail practice, in a commercial conference, refreshing in personal acquaintance. The separate local societies of employees in pharmacy have proven of much benefit in many places. In some of the cities the appeal of the united drug clerks for a higher standard of admission to pharmacy has gained a most creditable response from the newspaper press. In these and other bodies it is exemplified that specialized organization is helpful while a general organization is necessary to professional life.

Forty-eight years ago an American association of pharmacists had become as inevitable as the rising of the sun. Since that every decade has been added by the addition to this one general society of a union of all specialties of practice and study, binding their interests together and co-ordinating the sciences to the work of the day. A great opportunity is before this body, appealing to the professional spirit of every one who has anything to do in pharmacy and offering advantage in every part of the drug business.

The Results of This Association.

The more essential of the objects of this body set forth in Article I. of the Constitution, have been gained, step by step and year by year, so remarkably as to give assurance of acceleration in advance. These are the methods: To regulate the drug market by correcting the quality of drugs; to strengthen pharmacy by the cultivation of its sciences; to unburden the profession by restricting its practice to those who are qualified; to command confidence by education and by integrity. In purpose of this character, the inherent value of pharmacy, by virtue of which it was vitality to live and to triumph over obstacles.

This Association has been throughout in the hands of men of sterling worth, who have fixed its affairs upon a basis of systematic stability. An incorporated body, whose permanent board is elective by contributing members of a staunch profession, it gives prudential assurance that whatever is committed to its charge will be invested and applied to accomplish its utmost with increase.

Moreover, it is among the benefits of this association to widen the outlook and correct provincialism. An interstate body, with international offices, it brings together fellow workers from distant parts and enables one to see from another point of view.

As to Recommendations.

I desire to speak for an enlarged membership, for hearty fellowship within the Association, for zeal in the work before it. In the situation of pharmacy, as I have endeavored to portray it, lie the reasons why pharmacists should become the constituents of this organization in numbers to make it widely representative.

This is the one recommendation that is made in the annual address of your president this year; made not so much to this meeting as to every pharmacist of the States, the recommendation of membership, fellowship and zeal in the work. Upon mature thought I do not propose any resolutions for the consideration of the Committee upon the Address and action in the general session. No vote that can be taken in one of the meetings or touching any measure would be so desirable in its results as will be the unity of interest and confident determination of the men of pharmacy at large.

I beg leave, however, to ask the Committee upon the President's Address, should they find upon conference with each other that they have motion to make bearing upon the policy or the efforts of the Association, that they will formulate the same for action in the general session at the usual time.

In the meeting now opening let us engage with cordial earnestness in the important business before us, so equalizing our discussions that every one may be heard with the best decision of our time. And we shall not forget that we are here for personal acquaintance, each with every other. May the Richmond meeting of 1900, the second meeting in this city of interest, be memorable for help and happiness to every member.

The foregoing address having been referred to a committee consisting of Messrs. Hopp, Thompson and Hynson, the next business in order was the selection of

The Committee on Credentials.

Upon reading the roll of accredited delegates it was found that twenty-five State pharmaceutical associations, twelve colleges of pharmacy, four alumni associations and seven local associations had appointed repre-

sentatives, and a little later in the session the Committee on Nominations was selected from these delegates, and at a later session made a report of their selections.

Several amendments to the constitution were adopted, all of a nature to better facilitate the business; standing committees were called upon and their reports read by title and referred to the proper sections for consideration, and the secretary of the Council read the minutes of the morning meeting of that body, the most important action being the adoption of a resolution that salaries of officers be paid semi-annually, in June and December.

It was announced that the representatives of a number of boards of pharmacy in the Southern States would hold a meeting to adopt regulations for an interchange of registration in the Southern States, and other methods for more nearly approaching uniformity of requirement.

Next Meeting.

The Committee on Time and Place of Next Meeting was selected, and at a later session brought in a report recommending St. Louis, and September, 1901. When thus presented attempts were made to amend the report in favor of, respectively, Hot Springs, Ark.; Texas; Tampa, Fla., etc., but eventually the committee's choice of St. Louis was approved, and the exact date in September left to the Council to select. H. M. Whelpley was made local secretary.

SECOND GENERAL SESSION.

TUESDAY, MAY 8, 10 A. M.

The Nominating Committee reported their selection of officers as follows:

New Officers.

President, John F. Patton, York, Pa.
 First Vice-President, J. H. Beal, Se.O., Ohio.
 Second Vice-President, J. W. Gayle, Frankfort, Ky.
 Third Vice-President, E. A. Riddiman, Nashville, Tenn.
 Secretary, Charles Caspari, Jr., Baltimore, Md.
 Treasurer, S. A. D. Sheppard, Boston, Mass.
 Reporter on Progress of Pharmacy, C. Lewis Diehl, Louisville, Ky.

New members of the Council: L. C. Hopp, Cleveland; T. Roberts Baker, Richmond; H. P. Hynson, Baltimore. (Later in the week, because of the selection of Mr. Hynson as chairman of the new Section on Practical Pharmacy and Dispensing, W. C. Alpers, of New York, was selected in his place as new member of the Council.)

Col. J. B. Purcell, of Richmond, was introduced as a delegate from the National Wholesale Druggists' Association and made a few remarks in his usual felicitous manner, and was followed briefly by F. E. Holliday, of Topeka, Kansas, the accredited delegate from the National Association of Retail Druggists.

C. Lewis Diehl, for the Committee on National Formulary, reported that the epitome of the National Formulary is now ready for distribution, and that the work has been gotten out at a price so reasonable that it can be supplied to physicians by pharmaceutical associations and individuals without notable expense. He suggested that an adequate number of copies be presented to the Section on Materia Medica, Pharmacy and Therapeutics of the American Medical Association in time for its coming meeting at Atlantic City, there to be brought to the attention of the doctors present. The committee had not brought out a supplement to the National Formulary, in view of the fact that the U. S. Pharmacopoeia is now to be newly revised, and such a supplement would cause confusion. The committee requested that it be augmented in numbers, and this request was acted upon favorably at a later session.

Next came the special order of business for the session, which was the

Memorial of William Proctor.

A year ago J. P. Remington was appointed to prepare this memorial, and in an address of masterly character he paid tribute to the life, virtues and attainments of Mr. Proctor. The address was lengthy and traced the career of its subject in pharmaceutical and scientific attainments, and in social and business life from young manhood to his early decease. It was listened to with close attention, and was followed by several brief eulogistic remarks by members present, who had had the privilege of being associates and personal friends of Mr.

Proctor. Later in the week a formal resolution was adopted that this memorial address be placed in proper shape for individual circulation.

The report of the special Committee on Weights and Measures was read by its chairman, F. G. Ryan. He related the progress made in national legislation, reporting that two bills had been presented in Congress having in view the legal adoption of the metric system of weights and measures in this country, but which have not reached final enactment. He related in abstract what other countries had done and were doing in this direction, and expressed the belief that favorable consideration by our national law-makers may be expected in the early future.

THIRD GENERAL SESSION.

TUESDAY, MAY 8, 3.30 P. M.

Treasurer S. A. D. Sheppard read in abstract his annual report, of which the principal items were as follows: Cash on hand July 1, 1899, \$2,649.79; received since annual dues, \$3,650.00; sale of National Formulary, \$3,613.93; interest on various funds and receipts from other sources sufficient to make a total, April 1, 1900, of \$7,324.51. The disbursements to the same date included: Proceedings, \$2,291.08; salaries, \$2,675; and various smaller amounts for incidental expenses, prizes, National Formulary section expenses and cash on hand, April 1, 1900, of \$784.31, balancing the account.

The Secretary's report was a detailed statement of receipts and disbursements, and showed the condition of the association's property, stock of proceedings, etc., on hand.

The report of the Committee on European Tour, C. A. Mayo, chairman, announced that arrangements had been made, for the sum of \$280, for a thirty-five day tour, including all expenses and visiting various cities of England and the Continent, in connection with the excursion of Palestine Commandery of Knights Templar of New York City, to sail from New York, June 27. The committee offered a resolution, which was adopted, that the American Pharmaceutical Association recommend this plan to its members. Full detailed information can be obtained from J. E. Barnes, No. 344 Fourth avenue, New York City, or of the chairman of the committee.

Welfare of the Association.

The Council having considered very carefully the present condition and future prospects of the Association, its finances, etc., deem it advisable that more than the usual methods should be put into employment for arousing interest in the American Pharmaceutical Association, swelling its membership roll, and in all ways possible endeavoring to advance the professional, commercial and financial interests of the body, and with this end in view a special committee was selected to report later plans which would at least tend to progress along these and other cognate lines.

Adjournment was then had to permit calling together the

FIRST SESSION SECTION ON COMMERCIAL INTERESTS.

TUESDAY, MAY 8, 4.30 P. M.

J. M. Good, St. Louis, presided, with C. A. Rapelye, Hartford, secretary. Mr. Good read the following:

Chairman's Address.

The American Pharmaceutical Association has its critics. This is to be expected, for it also has a history. It has an enviable record of good work done, and on these rolls are found the names of many men who have labored effectively and usefully to advance the best interests of pharmacy. An association can be no better than its best members, and no worse than its poorest. These men, acting collectively and in an official capacity, are likely to be, and are expected to be, conservative rather than radical. They have not lacked courage in official action, yet there are critics who seem to consider them responsible for the "Slough of Despond" in which, in a commercial sense, many druggists find themselves wallowing to-day.

The commercial problems with which we are wrestling are not as old as our association.

Organizations, created for the specific purpose of solving them, have sprung into existence, lived their day and subsided into innocuous desuetude. Their work during the interim periods has been assigned to this association. Thus it happens that much of the time during the last ten years the business man of our fraternity had no organization to which he could appeal except the "Commercial Section of the American Phar-

maceutical Association." That he has not fully availed himself of the opportunities offered him, we regret, but we cannot assume the responsibility for the loss, whatever it may have been. The National Association of Retail Druggists is now working actively and effectively for the betterment of the commercial side of pharmacy. If druggists generally will give it sympathy and co-operation, and, in the face of changed conditions of trade, not expect too much of it, it is an organization which will grow in years and breadth of influence.

As our critics, who assert and maintain that this association is "run" by the professors in colleges of pharmacy, we repeat that the co-operation of all has always been invited. It has been solicited. To stay at home and wait for it with a patient and unobtrusive attitude. To take hold and help to mold the policy of an organization is much more so. Unless there be a commercial side to pharmacy the professors will soon be without student to instruct.

The papers presented by them are, to the average druggist, sometimes abstruse and technical, but more frequently they are utilitarian and have a direct constructive bearing on the business of the pharmacist. An important feature of our meetings, if the professors fall us in this, we are likely some time to find ourselves without "proceedings." The real, we may say, money value of the Report on the Progress of Pharmacy should recommend this association to every business man. Those who attend our annual gatherings have, happily we think, been able, always, to take away with them a festive and profitable, as well as profit, from the conference and literature course. We think it understood that our work is unselfish, and that these yearly trips to different parts of the country are not simply of sight-seeing and enjoyment, but that we have either time or money to spend in such a manner.

That the last few years have seen great changes in the drug business, both as to profits and products dispensed, all will admit. That the original conditions will be restored, few observing or thoughtful men believe. The changes seem more like retrogression than evolution. "Cut-rates" and "cut-outs" are the order of the day. It is the result of it, it is applying the methods of the department store often to recover lost trade. Our business is partaking of the general disturbance which is affecting the retail dealer in all classes of merchandise. The general public insists on regarding us as merchants, mainly. We chafe under prevailing conditions. The "Chemist and Druggist" of England says: "A pharmaceutical unrest prevails from St. Louis in the East, to St. Louis in the West." We would add that the geographical line does not stop east of the Pacific Coast. We are disappointed that a return of what is considered prosperous conditions, but which is no perceptible relief. While we must acknowledge that general conditions are difficult to handle, there are usually some special reasons why one man will succeed in business and another fail, and these reasons are for us to investigate with such light as we may have. What, then, are some of the causes of failure? Deficient education, business principles, and methods includes a great many of them. As a merchant the druggist is usually outclassed by those in other lines of trade. In preparing himself for his profession, he has neglected the studies of these things whose count for much when one comes in contact with shrewd men of the world.

An expert chemist is possible only in the man who can give his undivided attention to his specialty, but there need be no incompatibility between education and a keen perception of what constitutes strong business sense. In all of the affairs of life one has opportunity to use all of his talents. All of his energies must be directed by intelligence, if he would succeed. With this thought in mind, some questions of subjects which are simultaneously the ethical, professional and commercial sides of our business, have been framed. It is to be regretted that they have not had wider circulation. They affect us more or less every day, and their due consideration at this meeting or a future one. They are as follows:

Methods whereby legitimate pharmacy may be made possible.

Methods for interesting physicians in preparations of the Pharmacopœia and the National Formulary.

The practice, by physicians, of dispensing their own remedies.

Checking the growth of the free dispensary evil.

A proper amount of the commercial spirit in the practice of retail pharmacy.

Paying, selling and care of stock.

Methods of advertising.

The "Commercial Course" in a college of pharmacy.

The value of a commercial education.

The druggist in whom the commercial instinct predominates will, we may repeat, find ample opportunity for the exercise of his talent in the National Association of Retail Druggists.

It is possible for many of our own members to become actively interested in both associations, but leaving the patent medicine and cut-rate problems to be solved by that association, we may not this year have a subject for the Pharmaceutical Association devote itself to the consideration of the questions suggested and others of a similar character? The changes which have taken place in the practice of retail pharmacy and pharmacy generally in the last few years have affected us adversely. The "dispensing doctor" has become numerous of late. Manufacturers of pharmaceutical specialties have made him possible. Struggling with adverse conditions himself, he is easily

persuaded that that way lies relief. He invests in a limited stock of tablets. One fee only for consultation and medicine appeals to the patient. Perhaps what he happens to have on hand doesn't exactly fit the case, but he pretends it is not as wide of the mark as what he would have gotten from a written prescription.

That plausible agent convinced him, after showing him that it was in his selfish interest to buy his tablets, that druggists generally are "substituters," and therefore wholly devoid of conscience.

So far as druggists, by their practices, confirm this judgment of them, they may be regarded as doing the business. "Ethical relations between physicians and themselves follow. 'Is there balm in Gilead'" wailed the orator. "A druggist in the audience answered, 'I don't know, but I believe that's the name of the drug store.'"

A prominent manufacturer in his investigations to ascertain the amount of substitution among druggists in New York City, by presenting prescriptions for his pills at thirty-eight different stores, had them properly filled by men whose methods of conducting business are not such as would ordinarily inspire confidence. He concludes his article on the subject with the following: "We are satisfied that the honest men far outnumber the dishonest ones in the ranks of the pharmacist, and we believe that a great injustice is being done them, as a whole, by the misguided attacks which are being made upon them."

The "Free Dispensary" evil is one which affects physicians and druggists alike. It is a subject upon which much might be said, but I resist the temptation to enter upon it here, as medicine is a factor which decides the dispensing doctor upon his course.

Notwithstanding the changes which have come during the last two decades it is not likely that the practice of pharmacy will be absorbed by that of medicine and surgery. The two will be divorced and advance in medicine and surgery during the last fifty years has been gradual, but it has been great, when we take in the whole period by way of comparison. Anæsthesia, histology, the use of the Roentgen ray and surgery, the study of bacteriology and the use of the microscope in investigating the causes of disease are the strikingly important aids which have come to the practice of medicine. The pharmacist and the manufacturing chemist have each contributed his share in bringing about these improvements.

The practice of pharmacy has to that extent been influenced thereby. Physicians must join in the altruistic efforts to abolish or prevent disease, trusting that our unselfishness will ultimately be rewarded.

A national law to provide against the adulteration and sophistication of food and drugs is among the possibilities of the future.

Conscientious druggists will not object to its enactment, provided it be not such a law as may be used against them, and they will be glad to be granted as much protection to the public. A good law in the hands of the proper kind of an executive officer would be desirable. It is possible that we may not get both. Secretary Wilson, of the Department of Agriculture, has been enthusiastic in demanding such legislation, when he declares we want "cleaner government and greater purity in the lives of public men." A greater than Wilson taught us that "it is not that which goeth into a man's mouth that defileth him."

If our Pharmacopœia is to be used authoritatively by those entrusted with the enforcement of the law, the exacting of absolute purity in the case of the chemicals would be unwise and impracticable. It should not be possible to use the work as a means of persecution or unjust prosecution.

The plethoric condition of Uncle Sam's treasury vaults is just now troubling a great many people. The brewers have asked that the extra tax of one dollar a barrel on beer shall be removed. All along the line people are asking that what will be removed. We get a certain sense it is gratifying to know that we are spending less money than we are receiving, but we must not forget that we are still paying out a great deal of money because of the war. We shall be removed. We shall get out of it. Let us go slowly, then, in our attacks on the revenue law. We should not too soon forget President Harrison's remark: "A surplus is more easily handled than a deficit," yet it is a people are overburdened or any industries overmuch taxed, the condition of the treasury justifies a modification of the law. Some of its absurdities and inconsistencies should be corrected. Trade-marked or patented articles, medicinal or otherwise (do not limit the tax to medicines) can well afford to pay the government for its protection. Proprietors of medicinal agents have, in most instances, assumed the burden. There should be no tax on medicines or drugs not thus protected. Luxuries, the tax upon which may be collected of the consumer, are always legitimate objects of attention for the revenue.

It is to be expected that there will continue to be work for a "Commercial Section" in this Association, otherwise we might, very properly, ask the "Association for the Advancement of Science" to absorb this kind of commercial spirit, which we need to foster not that which resorts to the piratical methods adopted by very many merchants to-day. Oliver Wendell Holmes, a generation ago, wrote a readable article in which he made his remarks were addressed to Mr. Blank on his "Habit of Business Lying." Mr. Blank, were he alive to-day, would be considered a very mild kind of an offender in comparison.

Some statisticians say that an average of ninety-nine merchants out of every hundred fall short of what the world calls success. This is probably too low an esti-

mate. The reasons for flat failures in business are usually not difficult to find. One very common cause is poor judgment in the selection of a locality for establishing a business. The business is usually one which may follow is not within any one's power to control.

Reckless purchase of stock often cripples a man financially. "Special Offers" are frequently more of less delusive. They are always a competition which is usually to be rejected. Insufficient capital, when competition is sharp, is a fatal weakness. Goods should be purchased at the best advantage and the bills discounted. A man who would be content to keep so severe a strain upon it should be allowed. The time has passed when one can start a drug store on credit and out of the profits pay notes as they become due. To test a druggist's business sense, a commercial sound as almost as irony. Some of them are unconsciously extravagant. Diluting fluid extracts and calling them tinctures is a case in point.

Manufacturing easily prepared pharmaceuticals generally is the next step in that direction. The druggist, then, must also be industrious as well as skillful. It, as we have been told, the best type of pharmacist to be found in the United States, let us deserve and maintain the distinction. Some foreigners dispute the claim. What part will the apothecary have in the possible conquest of the world by the United States which is causing alarm in Europe? A French writer recently said: "In less than eighteen years American exportations have tripled. It is no more a Napoleon's conquest of the world by arms; the Yankees are doing it by water and steam, and are ruining Europe commercially as effectively as it with arms. By that country a revolution in the economic equilibrium of the world is being brought about." We could have no higher compliment than this. It is our soldiers and sailors, but "peace hath her triumphs no less renowned than war." Our industrial supremacy is likely to continue, but in one particular, at least Europeans, and especially Germans, surpass us. Economically this is in the specialty of industrial chemistry.

The enterprising and conscientious druggist will supply the demand for these products. This means a considerable outlay of money (and, consequently, a certain extortion), yet out of the hundreds protected by trade mark and thrown upon our market, the really meritorious ones can be counted upon one's fingers. The decrease in the use of drugs compounded with the demand for ready-made products explains in part, why we are not affected favorably with the conditions of prosperity which surround us. In the years when the druggist flourished the people made more money, and the demand for ready-made demand is on the decrease. An alleged epitaph on a stone in an English churchyard is as follows: "I was well; wanted to be better; took medicine, and here I am."

This is the case with the house as well as with their efficacy, carried to extremes, which has made a certain pseudo-science possible, the inventor of which has been aptly styled the "Lydia Pinkham of the soul." The question asked by our beloved "Autocrat" fifty years ago: "What will be the next hubbub after homoeopathy?" has been answered. People are easily deceived; the business methods of to-day would not be possible otherwise. There is a delusion in the association in the thought that a sacrifice is being made for one's benefit, or that one is getting something for nothing. If it is your ambition to do so "you can fool some of the people all of the time." If we accept the balance of Lincoln's famous saying, there is hope for the future.

F. E. Holliday, chairman of the Executive Committee of the National Association of Retail Druggists, was given the floor, and for fifteen or twenty minutes outlined the aims and accomplishments of that body, and described what steps were now being taken to put into force the plans for bringing into closer union and harmony the three branches of the drug trade—the proprietary interests, the wholesale druggists and the retailers. His remarks seemed to meet with almost universal approbation, and many of the members spoke in the discussion which followed. An exception, however, was a vigorous protest from a New York member, who thought the N. A. R. D. plan was founded upon wrong principles. Finally the discussion crystallized into a request from the Section that the General Association adopt a resolution endorsing the N. A. R. D. and its work. Then came the reading of papers, the first of which was a very practical one by F. W. E. Stedem, of Philadelphia, on "Methods of Advertising for the Retail Druggists." As this paper and many of the others read before the various sections throughout the following meetings of the week will be presented in full in subsequent issues of this journal, only mention of their titles is here desirable.

THE SECOND SESSION COMMERCIAL SECTION.

WEDNESDAY, MAY 3, 10:40 A. M.

The first portion of the section was occupied by the reading of papers, which were: "Scheme to Popularize the United States Pharmacopœia as the only Means to Combat Quackery in Medicine," by Louis Emanuel, Pitts-

burg; "The Commercial Value of a Pharmaceutical Education," by Joseph J. Coles, Atlanta, Ga.

By special request F. Ryan, of Philadelphia, gave an informal talk upon the utility and direct advantage of including a commercial course of lectures in the curriculum of the college of pharmacy. His speech was direct, to the point, and of a course of lectures. As this address is reserved for editorial comment, further consideration here is omitted.

Mr. Ryan received a hearty vote of thanks for his address, and the report was referred to the Section on Education and Legislation for discussion.

A resolution was adopted that the Association, through its Commercial Section, address to Congress a petition that the stamp tax on medicinal products be abolished.

The Committee on

Practical Pharmacy and Dispensing.

through its chairman, H. P. Hynson, Baltimore, presented its report. This was a very lengthy but meaty document, and seemed to hit the members, as the slangy small boy would say, "right where they live." It was in part as follows:

The chairman felt sure that a large number of the members of the association wished the work of the committee continued, but there seemed to be a sad lack of active support, and the committee was obliged to discontinue the large number of papers that had been received the preceding year. Smaller expenditures were made, and smaller results were obtained. With the experience of two years as a guide, the members of the committee were led to believe that more time, energy and money must be given to the work to make it useful. Wise and careful treatment of the undertaking is required to bring satisfactory results, and the work of the committee should be judiciously directed by the Council of the association, in whose hands the future rests.

The committee began its work by sending out circular letters with the proceedings, and also mailed 500 additional requests to members for copies of that prescription out of the last twenty-five each member had compounded requiring the most pharmaceutical skill to dispense. To meet 500 requests only 50 replies were received, 65 of them bringing copies of prescriptions. These prescriptions were then tabulated, and the results analyzed, the analysis forming the basis of the report. Twenty-eight prescriptions were received from 69 members; 52 of these were prescriptions for mixtures, eight for hard capsules, five for suppositories, five for pills, three each for ointments and dusting powders, and one for dusting powder, four for soft capsules. Mixtures present more than half of the difficulties that come to the average dispensing pharmacist. This is largely due, no doubt, to existing inequalities of quality, and, perhaps, to the fact that compounding and indifferent compounding cannot be so easily obscured here as elsewhere. A careful examination of the prescriptions for mixtures revealed twenty-four actual incompatibilities, and as these came from files representing 1,600 prescriptions, it would indicate that not less than three of every 200 prescriptions present incompatibilities.

The decaying nature of salol has been noted, with the statement that an acceptable substitute would be intensely popular. The chemical and pharmaceutical characteristics of iron and its compounds should be well understood by physicians and pharmacists, for this element and its salts provoke more prescription difficulties than any other. Salol, because of its insolubility in water and the difficulty with which it is powdered in the ordinary way, and its tendency to become a mixture as a difficult substance to handle. The committee offered the information that salol can be more readily powdered after it has been fused and cooled in this state, and divided state, it can be more easily suspended in mixtures by the proper use of acacia or tragacanth. The successful handling of solutions of pepsin would be brought about by the physician and pharmacist, and the former, by using the concentrated liquid forms of this ferment. Combination with alkalies was of frequent occurrence, and physicians reported that most satisfactory results were secured from them. The committee should be therefore advised to send out these combinations unquestioned. "The ideal liquid preparation is one miscible in all proportions with water without being either acid or alkaline, and the nearer we approach this the nearer we get to perfect dispensing. It should, therefore, be a matter of serious concern to keep out of our standard formularies all new preparations, save those that are neutral, and an endeavor should be made to reduce the number of such combinations already present. Those remaining should be so re-named as to leave no doubt in the minds of prescribers of dispensing agents. The following are, for example, alkaline syrups of squills, alkaline solution of iron (alcoholic), alkaline solution of arsenic, etc."

Of the fifty-two mixtures three only were for proprietary preparations. Twenty-five per cent. of the mixtures were for emulsions, and in considering the question of emulsification, the members of the committee raised the question, "Do what emulsions are compounded for? Are they intended to emulsify agents?" The old-time trouble with Basham's Mixture was discussed, and the opinion was expressed that the present official formula for its preparation should not be too hastily recommended. When all pure ingredients are used the solution can be kept indefinitely,

and there is no reason why it should not be made up in sufficient quantities to be kept on hand as any other permanent preparation. Honey was recommended as a most valuable agent for suspending resinous tinctures, as, for example, benzoin, cannabis, etc., with aqueous fluids. Honey should be present in quantities not less than the amount of the resinous tincture ordered, and should be thoroughly triturated before the other liquids are slowly added.

Very few prescriptions to be made into powders were received, but from that number there was sufficient to suggest a number of practical points. One was the use of calomel of calomel with milk sugar. The committee was directed to "rub until a yellow color is obtained," and he remarked that the proportion of the mercurial was so small that no perceptible color could be seen. The question was asked, "Should he first triturate the calomel in equal parts with milk sugar, and if the yellow color then secured was not satisfactory?" The members of the committee commented upon the utter disregard by many pharmacists of the fundamental principles of trituration, and regarded that no fault in dispensing was more common than the one under consideration.

Pepsin in powders, without drying material, but, on the contrary, with almost double its weight of ammonium chloride, leaves well defined ideas of the troubles following the dispensing of hygroscopic and volatile substances in paper. For dusting powders, and for some other impervious paper cut in proper sizes should be at hand. Well ground glass stoppered, salt-moistened bottles of suitable sizes are the proper containers for such powders.

Five prescriptions for pills illustrated three types of difficult masses; phosphorus, one type, oils and oil like substances one, and a non-reducible substance the third. In the pills containing essential oils, the dispenser is not warranted to use any more than the quantities of soap. Soap exerts its best influence when mixed directly with the oil, the other articles being added to the mass when formed. The following method for a prescription to be made into pills in a mortar, iron sulphate, strychnine sulphate, arsenous acid, powdered digitalis and creosote was given: "Triturate strychnine sulphate and arsenic with quantities of milk sugar, add the iron sulphate and digitalis, remove to a mortar. Weigh the creosote in a homeopathic vial, pour it in an empty mortar, add powdered extract of licorice and kaolin, 40 grains, and mix thoroughly with the mixed powders and glucose. Make a mass which will be carefully "coaxed" into a pipe with the fingers and palm of the hand. Cut with the machine, but do not rub with it. The machine should be held in the fingers; result, a satisfactory pill containing all of the creosote."

The use of heat was recommended for making pills containing substances which cannot be readily reduced to a uniform state. The following prescriptions for suppositories were noted. "Of the four lots of suppositories generated, three demand skillful treatment because they contain chloral hydrate. Our committee is led to ask why some special base has not been used for these suppositories of chloral. Cocoa butter is prescribed in each instance, and each pharmacist employed a different method. One used seventeen fine grains of corn starch and a few grains of cacao butter to make four or six suppositories containing five grains of chloral each. Another rubbed the chloral hydrate (sixty grains) with tragacanth, and the powder, proceeded in the usual way, using a slightly warmed spatula and shaping the suppositories by hand. The third operator, whose prescription contains sodium bromide one dram, and chloral hydrate thirty grains, in four suppositories, overcame the difficulties by using a freezing mixture of ice and salt."

Rules might be formulated for filling of capsules, which would greatly relieve the uncertain position of the dispenser. The following are some of the questions in capsules should be above question. The source of gelatine and the manner of its handling should be within the knowledge of the manufacturer. The style and material of capsules is of great importance, and accurate filling, they should approach as near as possible uniformity in weight. All capsules should be filled and carefully wiped off. The purposes of the capsule should not be weakened by the least particle of its contents to remain on the outside, and when the contents are massed, each division should be massed in the same manner, and should be of sufficient size to fill the capsule. Dusting should be used just as little as possible. The great difficulty obtaining with the use of Balsam Peru in ointments an uniform preparation seems to be the rapid vaporization of the more volatile parts of the balsam. Liquid storax for use in ointments must be softened and rendered uniform by adding sufficient alcohol before mixing with the base. In the case of a mixture of twenty-five samples of zinc oxide ointment showed great variation, and the committee asked the question, did pharmacists generally know how to make it satisfactorily?

Leaving the subject of another comment, and another question was asked: Should we, as directed on the container, "always add 20 per cent. of olive oil to lanoline before dispensing it, or does not the manufacturer add the oil and present to us his proper form?" A very desirable ointment base containing as much as 60 per cent. of water may be made by using 10 per cent. of oil of almonds and 30 per cent. lanoline.

A formula for a dusting powder, sent in without comment, was the following: Salicylic acid, 1½ drams; zinc

oxide, 2 ounces; oil of cade, 2½ drams. Dust three times daily. "This formula seems an impossibility." Koneals, while not so popular as capsules, are being used considerably, and represent one per cent. of the prescriptions submitted. This form of dispensing is really growing in popular favor, and more attention should be paid to its improvement. The cachets are too bulky and forbidding, and the machine for making them is unnecessarily expensive. An ingenious plan for dispensing a semi-fluid mass in the form of soft capsules was submitted by one contributor; the combination, consisting of oleoresin of male fern, 1 dram; croton oil, 1 drop, and powdered kamala, 40 grains, being "injected" into the capsules with a long-pointed glass syringe. The capsules were then sealed in the usual way, the method of introduction alone being novel. The prescriptions from which data for this report were obtained came from localities widely apart. Almost every process known to pharmacists had to be used in compounding, and out of fifty of those submitted, fully forty might have proven disastrous if not fatal, had not skill been used in compounding.

The discussion following this report was liberal and animated and many points of interest were brought out. Election of officers for the section followed, and resulted in the choice of

Chairman, C. A. Rapelye, Hartford, Conn.
Secretary, F. W. Meissner, LaPorte, Ind.
Associates, F. W. E. Stedem, Philadelphia; Henry Willis, Quebec, and F. E. Holliday, Topeka, Kan.

These officers were duly installed and the section adjourned.

FIRST SESSION SECTION ON SCIENTIFIC PAPERS.

WEDNESDAY, MAY 9, 3.20 P. M.

The Section was called to order by Chairman F. G. Ryan, with Secretary C. A. Mayo. The first order of business was the reading of the

Chairman's Address.

as follows:

The present year (1900) marks a period in the passage of time, when, in following the occupation one is engaged, it seems especially fitting and proper to pause for a moment and consider the work of the past, and by such reflection we should profit in the future. For the coming century the year 1900 will form the dividing line between the new and the old; in the past those who have preceded us have looked upon the year 1800 as the beginning of an era of new ideas, so in the future the present year will be considered the time of a new beginning, but with the added impetus of the century which has preceded it. We should, therefore, feel much encouraged and forecast for the future a most brilliant development of the hidden truths still locked up by nature. Although this Association cannot say claim to full one hundred years of life, it may with truth be said to have attained an age of honorable and sturdy manhood, and its part in the development of science has been both brilliant and of lasting benefit to mankind.

There are among us active members to whom the scientific achievements of this Association in the past are still fresh in their minds, but many of our younger members are unacquainted with the work that has been accomplished by the unselfish labor of the many earnest men who have honored this Association with their presence, and who have contributed to its records lasting monuments of their interest and zeal.

By reference to the published proceedings we find that the founders of this Association had in mind the preservation of the scientific welfare of pharmacy, and while the result of the United States in this lengthy report is repeated, there is no doubt that to this Association belongs the credit of fostering and developing the scientific part of our calling and preventing the occupation of the pharmacist becoming merely a matter of habit.

The first recorded scientific work by members of this Association is embodied in the report of the committee appointed to arrange standards for the admission of drugs to the ports of the United States. In this lengthy report we find standards suggested for many drugs, and to obtain such standards much scientific investigation must have been necessary. We here find the germ which has given us today, after almost fifty years of growth, the many processes for determining the purity and strength of medicinal substances employed for the alleviation of human suffering. There is still much to be done, and as in the past so to-day we have among us those willing to devote their time and labor to this valuable work; to-day we find the subject of standardization one of great interest, and which, at a future time, will undoubtedly give us exact knowledge on many subjects which are now clothed with uncertainty.

As early as 1858 we find a report of a committee delegated with the work of preparing an unofficial formulary, the subject of which was to retard quackery and dignify pharmacy as a science. It is a knowledge of the work of our present volume "The National Formulary," and by comparison one would be blind indeed did he not discern the grand and rapid progress made in those sciences which pharmacy comprises. It is a knowledge of which we must have been possessed by the members to whom this work was delegated.

In the various revisions of our national standard, the United States Pharmacopoeia, we again find our members taking active part, and almost wholly to their unselfish labor is due the scientific character of the information there contained.

Early in the history of this Association we find a proposed syllabus for the study of pharmacy, its object being to supply a systematic method of study for aspiring pharmacists, and in this syllabus a foundation upon which our colleges and schools of pharmacy have built their superstructure. At that time there were but four or five institutions teaching pharmacy; to-day we have multiplied to a time that number engaged in the work of the education of pharmacists on a scientific basis, and we may say with truth that this Association has, since its birth, given to these institutions all aid and encouragement within its power.

In the adoption of the metric system of weights and measures in our Pharmacopoeia of 1890, we see the result of the long and patient labors of our members and the result of our former committees on this subject; nor is it unreasonable to predict that in this action the engineering wedge has been supplied, which in the future will relieve coming generations of the trials and tribulations of the heterogeneous systems of weights and measures we ourselves endured. What an opportunity this subject was no doubt an important factor in shaping the course of our British friends, and in so far as official pharmacy is concerned, we may now call the metric system the universal system of weights and measures.

In reviewing the printed proceedings one is struck with the vast amount of scientific knowledge contained in the various reports on the progress of pharmacy, placing at our command the results of the scientific workers in pharmacy the world over. What an opportunity is lost by those unacquainted with its value and by reference to its pages many otherwise perplexing problems may be solved, and what has appeared to be a new difficulty is found to be an old one for which a quick diagnosis has long been resting within those volumes.

The attention given to the subject of adulteration and the many papers relating thereto are certainly bearing fruit in the pure food and drug laws of our several States, and would it be claiming too much to say that our membership has contributed largely to the forces which have caused this action to be taken?

A few of the special investigations of scientific character, as work of our members, are worthy of notice. The study of percolation and the papers contributed by such men as Proctor and Grahame, not to mention the work of our members still with us, have given to American pharmacy a place of honor and usefulness in the world, and have made possible many products of inestimable value to mankind.

The constitution of the volatile oils furnished a subject for several papers by the lamented John M. Maisch in the years 1890 and from 1891 to 1894. These men have found willing and scientific workers among our numbers steadily unraveling the mysteries of these complex and complicated compounds. One might thus quote examples without number, but who among us, in the light of these facts, would say that pharmacy is not justly entitled to be called a scientific pursuit? Because there are those who masquerade under the title of pharmacist and thus seek to profit by this cloak, does not in any way lessen the honor and credit due those members of our profession who have devoted their lives to the solving of mysteries which give to the sick the means of alleviating their suffering and of the prolonging of their lives.

But what of the present and the future? By reference again to our records we find many changes. Formerly the scientific work of this Association was very largely confined to the study of the theory and practice of pharmacy; now we may find the study of other occupations, specialism is the order of the day. Our investigations are made by those best qualified for a particular kind of work. We have our chemists, botanists and pharmacists, and these, and these, and these, are giving his attention and study to some particular branch of his chosen science, but it is the exception rather than the rule to find the investigator still wielding the mortar and pestle.

In the opinion of the writer it is well that this is true, for to his mind it is beyond the power of one man to do what things are involved in the collection, preservation, investigation and preparation of drugs, organic and inorganic, and at the same time conduct his business in such manner as will insure to his family and himself sufficient for the common needs of life.

As in the case of the provisions agriculture is not the division of labor, which characterizes the present time, a necessity in pharmacy if healthy and progressive advancement is to be made?

In the year ago before this section, Dr. H. H. Rusby voiced the sentiments of this Association in an appeal for investigations in pure science. The present chairman echoes the same sentiments, but does not mean to be understood by his work of the retail pharmacist, his education should be the work of the retail pharmacist for the practical application of the scientific truths brought to light by original investigators, leaving original investigators to those whose natural inclinations, ability and education fit them for advanced scientific research.

No one who is at all observant will fail to discover new and better practice of a calling so filled with science as is that of the pharmacist, and in a sense he becomes an original investigator.

It is in the placing on record of these facts and observations that the practicing pharmacist may contribute to the fund of useful knowledge. What appears to-day to be pure science, is found to-morrow to have become, in its application, common practice.

With a view of extending the usefulness of our Association, your chairman would call your attention to a few subjects which, in his opinion, seem to offer the best fields for investigation by our members. A recent paper by Mr. F. B. Kilmer on the cultivation of medicinal plants shows that but little attention has been given to this subject in our own country. With a knowledge of the progress made in the cultivation of cinchona and some other medicinal drugs, is it not probable that equal success may be attained with many of our indigenous plants? As our knowledge of the active plant becomes more exact, it would seem quite within our power to control to a certain extent the production of such constituents in the growing plants. These investigations should become a part of the work of our Government in its Department of Agriculture. Indeed, we believe this subject of sufficient importance to this Association to warrant the appointment of a committee for the purpose of securing such investigations by the proper government officials at Washington.

With our Pharmacopœia rapidly becoming the legal standard for the purity and strength of official substances in the various States, our manufacturing chemists and pharmacists are greatly benefited, and the standards as well as will be within the range of possibility in commercial manufacturing, and, at the same time, protect the public health. With the strict enforcement of our food and drug laws, more efficient prosecutions may occur, and persons entirely innocent of intentional wrongdoing be made to suffer.

With the rapid growth and extended use of modern synthetic remedies, the employment of serum therapy and antitoxins in medicine, it seems desirable that pharmacists should have a greater knowledge of the physiological action of drugs, upon which the manufacture and use of these compounds so largely depends. Papers upon this subject would prove of interest to this section.

In his address as president of the British Pharmaceutical Conference last year, Mr. J. C. C. Payne, quoting the eminent scientist, Prof. Huxley states that the latter declared "that he would abolish materia medica from the medical curriculum, and cannot understand the arguments for obliging a medical man to know all about drugs and where they come from." Evidence is not wanting that many of the physicians of our own country hold the same opinion. In the light of these facts there need be no fear for scientific pharmacy, and this Association will supply willing and able workers as it has in the past, to meet the emergencies as they may arise.

The address was referred to a committee consisting of Messrs. F. E. Stewart, J. M. Good and A. B. Stevens.

General Secretary Charles Caspari announced that the Ebert prize had been awarded to Edward Kremers and O. Schreiner, of Wisconsin, for their paper read last year on "Nitroso Derivatives of Caryophyllene and Cadnene and their Bearing on the Characterization of the Sesquiterpenes."

New Section Officers.

Nominations for officers of the Section followed and resulted in the choice of Oscar Oldberg, Chicago, chairman; Lyman F. Kebler, Philadelphia, secretary; these to choose a third as associate. These nominations after being duly posted were ratified at a later session.

Papers.

Chairman Ryan announced that twenty-eight papers had been received for reading before the section. A number of these had been grouped into separate series, and the reading of these various papers was now taken up. First came a series of five papers, as follows:

"Application of the Modified Alkalimetric Method of the Assay of Drugs and Galenicals," by H. M. Gordin.
 "Short Directions for the Assay of Opium," by H. M. Gordin and A. B. Prescott.

"The Alkaloids of *Boeconia Cordata*," by Paul Murrill and J. O. Schotterbeck.

"Extraction and Estimation of Colchicine," by H. M. Gordin and A. B. Prescott.

"Alkaloids of *Ceanothus Americanus*," by H. M. Gordin. These five papers were liberally discussed, and then there was presented a second series.

The first "Suggestions Relative to the Proposed Introduction of Powdered Drugs in the U. S. P.," by A. Schneider, "Color Standards for Vegetable Drugs in the U. S. P.," by Henry Kraemer and T. J. Watson, "Notes on Jalap Roots Examined During the Last Six Years," by L. F. Kebler. (The author as a result of his investigation decides that a ten per cent. resin content would be a much better standard requirement than that now existing in the Pharmacopœia.)

"The Pharmacologic Assay of Drugs," by E. M. Houghton.

"Physiological versus Chemical and Microscopic Examination of Drugs," by L. F. Kebler.

"The Assay of Drugs by the Use of Living Plants," by H. Kraemer, read in abstract by E. Kremers. Discussion brought the meeting to adjournment, to reconvene at 8 p. m. in

SECOND SESSION SCIENTIFIC SECTION.

TUESDAY, MAY 9, 8 P. M.

A. B. Lyons read the report of the

Special Committee of Research.

In lieu of the usual report, the Chairman of the Committee on Research offers this year only a few suggestions regarding the possibilities of usefulness in the future of this committee.

The object that was sought in the original appointment of the committee was to secure concerted action on the part of those desiring to advance the interests of pharmacy by research work. The committee, under the able leadership of Dr. Prescott, has already accomplished most valuable results, in giving direction to effort, by keeping prominently in view a single important object, viz., the standardization of crude drugs and galenic preparations.

It has facilitated greatly the work of future investigators by its exhaustive collection of the bibliographies of the most important drugs which admit of standardization, and it has made accessible to those who have applied in person the fund of information contained in the Lloyd Library.

The burden of planning and carrying on this work has necessarily fallen upon the members of the committee in unequal degree, and it is easy to understand that for men already carrying heavy loads of the usual labor and responsibility, imperative in their demands, it has seemed impossible to carry this added burden. Certainly, to do full justice to such work, and so to give to the committee the efficiency which is so important and demands calls for more leisure than any active member of our association can command.

The question has been raised whether, under these conditions it would not be better that the committee be discontinued. Such a course was discussed a year ago, but it seemed better to continue it pending further consideration of its possibilities, even under existing limitations of usefulness. It was suggested, especially, that an effort be made to secure through this committee, somehow, a cooperation of the professions of medicine and pharmacy. There has not been, since our last meeting, any meeting of the American Medical Association, and so this matter is held in abeyance. That this new link between the two professions may be formed in the near future may be reasonably hoped, if such a step is considered by our association.

Certainly we shall be more likely to receive such cooperative action if we can so formulate a plan for the work of this committee that it shall appear at once to any association of medical men to be exactly what the medical profession wants.

To give to a committee like ours the standing that it ought to have, it should be able to point to its laboratory facilities for carrying out its work in its own name. We ought to have our own laboratory, under the directorship of a competent man who should be able to give his whole time to it. I am not sure that this is not within the reach of attainment, but it is certainly as yet only a possibility.

We have not a laboratory of our own, but we have laboratories. It should appear that our committee does, in fact, command the laboratory facilities of all schools of pharmacy in the United States. That such is the fact will be shown from year to year by the report of the committee, which will include an account of all the research work in its immediate line in each of these laboratories.

Now, the medical schools of our country have also laboratory facilities, which are only to be envied, and equipped than those of the pharmacy schools. Let the work of these laboratories be also reported year by year, by a committee of medical men appointed for that purpose, to receive reports of each committee, and to refer to pharmacologists in both professions, and a great step in advance will have been secured.

The definite object sought by our committee must be explicit. It might be well to name the committee distinctly, "Committee on Pharmacological Research." The scope of its work we may state to be a critical study of the therapeutic agents in common use with reference to their fitness to do the therapeutic work the physician expects from them. This involves for the more active, crude drugs, a thorough study of assay methods, not so much from the chemical as from the therapeutic standpoint. It involves the physiological experiment, to verify claims made for remedies newly introduced, as well as to confirm conclusions reached by chemical analysis.

Naturally in the division of labor between pharmacist and physician, the larger share of the purely chemical work would fall to the former, the physiological more especially to the latter, but neither investigation can be complete and satisfactory without the other.

An important part of the work then of the Research Committee would be to report each year the subjects which seem to demand most pressingly immediate and

earnest attention. Every year there appear new claimants for a place of prominence in the materia medica. Of these it is certain that the fit only will survive, but the plan at present, so largely practiced, of determining the fitness by experiment upon patients who are entitled to the best assistance medicine can supply, is one that should receive the attention of those who are so tender-hearted about the suffering of other victims of scientific research—I mean, the anti-vivisectionists.

In addition to this there should be published by the committee each year a list of pharmacological queries, obtained by conference with physicians in actual practice. Possibly such a list can be furnished by the newly formed American Therapeutic Society.

This list, if carefully prepared, should be especially useful in directing the work undertaken by individual members of the Scientific Section.

An open invitation is always extended to members of the association to offer suggestions to the committee with reference to profitable directions for research work. Such suggestions may furnish valuable contributions to the list of pharmacological queries which should be annually presented by the committee.

The research work under the immediate direction of members of the Research Committee will, as in the past, be concentrated on a few definite subjects, to be chosen with reference to their importance, from the standpoint of practical therapeutics.

An important part of the work of the committee will be to secure efficient co-operative work on each subject so chosen, endeavoring, in the case, for example, of a crude drug like cascara sagrada, to cover the whole field of its botany, chemistry and physiological, toxic or therapeutic activity. The annual report, giving results of such co-operative investigation, cannot fail to be of exceeding value, directly, by rendering possible a scientific use of the drug in question. Indirectly, by the object lesson they will afford to those who hereafter shall undertake similar research work.

Just at the present time, it will be certainly in order to concentrate the work of the committee on some of the numerous problems which will present themselves to the newly appointed committee on revision of the United States Pharmacopoeia. At least, for the coming year, other research work will naturally be laid aside pending the solution of these problems.

Bibliographical work must continue to be an important feature in the contribution which such a committee as ours can make towards the ends to be kept in view. No part of the proceedings of our Association has greater intrinsic value than the bibliographies already published. It may not be wise always to give such bibliographies space in our proceedings, for they are "cavillare to the general," but they should be made accessible to all who appreciate their value.

I feel sure that if we can go before the Section on Materia Medica and Therapeutics of the American Medical Association or before the newly formed Therapeutic Society, we shall find that a request for co-operation in such a definite plan of work will be met with a hearty response, and it is the conviction of this committee that the time is opportune for such action on our part.

Regarding the work that has been accomplished by members of the committee during the year past, the following incomplete summary must suffice. The very early date of our meeting this year has made it impossible for some of the members of the committee to furnish the more complete details which would be desirable.

This report was somewhat discussed, and as a rule was pretty generally concurred in.

Additional papers were "The Teaching of Pharmaceutical Bacteriology in Colleges of Pharmacy," by A. Schneider. "The Alkaloids of *Sambucus Canadensis*," by W. C. Alpers, followed by a series of papers upon allied subjects, as follows: "Urinanalysis by the Pharmacist," by F. T. Gordon. U. S. Navy; a second paper with the same title, by G. W. Parisen, Perth Amboy, N. J.; "The Examination of Urine, Blood, Sputa and Like Substances by the Practical Pharmacist," by F. W. E. Stedem, Philadelphia.

E. L. Patch, Boston, then read a somewhat lengthy paper, embracing replies to numerous queries of a pharmaceutical nature propounded by the American Pharmaceutical Association, relating his experience in the examination of various chemical substances and galenicals in the open market. The paper as a whole was left for submission to the U. S. P. Committee on Revision. A. B. Stevens, Ann Arbor, Mich., read a continuation of his investigations during several years past into the subject of Wild Cherry Bark and its preparations. The last paper of the session presented a comparison in mydriatic value between *Atropa belladonna* and *Scopolia carniolica*, in which the author, A. R. L. Dohme, Baltimore, favored the latter drug.

THIRD SESSION SCIENTIFIC SECTION.

FRIDAY, MAY 11, 9 A. M.

C. A. Mayo read a paper entitled "Notes on Indigenous Drugs," which consisted of references to indigenous drugs in the early historical records of Virginia. The second

paper discussed the value of a "So-called Ipecac, *Polygala Angulata*," by Henry Kraemer, followed by "Approximate Analysis of *Eupatorium Perfoliatum*," by Charles A. Walter.

A paper, "What Representative Pharmacists and Physicians think about Plasters," by Seward W. Williams, East Orange, N. J., was now read, and it may be said, caused a good deal of trouble. The paper was in answer to the query "To What Extent are Official Plasters Employed in the Practice of Pharmacy and Medicine." The author had secured replies to this question from some 150 members of the A. Ph. A., and fifty or 100 members of the American Medical Association, and in compiling the reports published brief extracts from the letter of each individual who answered, giving the name of the writer, finally summing up in a general consensus of opinion that machine-made plasters of to-day are preferable to those which the pharmacist may make extemporaneously. C. S. N. Hallberg vigorously protested against printing this paper in the Proceedings on the ground that it would take a great deal of room; that it might be considered personal advertising of the individuals quoted, and that its real purpose was to advance the private interests of manufacturing firms. There was sufficient support of this contention to lead to the adoption of a resolution that the paper should be published only in abstract in the Proceedings, but at a later session the matter came up again and this action was rescinded, and the paper will appear in full. The next paper was entitled "Some of the Reasons Why Compound Spirit of Ether and Ethereal Oil do not Merit Space in the U. S. Pharmacopoeia," by G. W. Boyd, Washington, D. C. A second paper followed, entitled "The Nature of Commercial Sanguinarine Nitrate," by J. O. Schlotterbeck. The reading of this paper was suspended for a few moments to admit of the holding of the

FOURTH GENERAL SESSION.

The Council reported the selection of various standing committees. C. L. Diehl was given ten additional members of his committee to prepare an auxiliary report on National Formulary. A committee, consisting of Messrs. Hynson, Hopp and Good, was selected to meet a similar committee from the N. A. R. D. to confer upon the question of holding joint meetings of the A. Ph. A. and the N. A. R. D. in alternate business sessions. It was decided also that a new section of the A. Ph. A., to be known as the Section on Practical Pharmacy and Dispensing, should be instituted, and a committee was selected to arrange the by-laws and rules for such new section.

It was reported that during the week 124 new members had been proposed.

The Scientific Section now resumed its work, listening first to the report of the Committee on Chairman's Address, which favored the appointment of a committee to address the U. S. Secretary of Agriculture with a view to instituting experiments concerning the cultivation of medicinal plants in the United States, and as such committee were appointed, H. H. Rusby, New York; Henry Kraemer, Philadelphia; D. M. R. Culbreth, Baltimore.

The Association's Committee on Revision of the U. S. Pharmacopoeia presented its report, prepared by Chairman Leo Eillel, and which was read by Mr. Stedem. The report was necessarily very brief, as the decennial meeting of the Pharmacopoeial Convention had only just been held, but it submitted a few recommendations, namely, that the Pharmacopoeia give the exact working formulas for saturated solutions of the various salts; that a 25 per cent. solution of carbolic acid in alcohol should be known and dispensed as household carbolic acid, and that an alternative substitute formula for chlorine water in the U. S. P. is desired.

A paper by E. V. Howell upon Alcohol as an Antidote for Carbolic Acid Poisoning was read, and the Section adopted the recommendation that a 25 per cent. alcoholic solution be suggested to the druggists of the country to be sold as recommended in the report of the Committee on U. S. P. Revision. Other papers presented were: "Cerate of Extract of Cantharides," by G. E. Barksdale; "A New Formula for Aromatic Spirit of Ammonia," by W. C. Alpers; "The Recognition in the Pharmacopoeia of *Diphtheria Antitoxin*," by J. W. England. This latter paper caused considerable discussion, which finally crys-

talized into the appointment of a committee to confer with manufacturers and therapists to determine whether the proposition to introduce this substance into the Pharmacopœia is feasible; this committee to report next year.

New members of the Special Research Committee selected were J. O. Schlotterbeck and A. R. L. Dohme.

The installation of the new Section officers and their announcement that they had selected W. A. Puckner, of Chicago, as associate, brought the section to final adjournment.

FIRST SESSION SECTION ON EDUCATION AND LEGISLATION.

FRIDAY, MAY 11, 2 P. M.

The work of this Section was, if any distinction can be made, more important than that of any other portion of the week's proceedings. Beside the reading of numerous papers of value it took official and determinative action with regard to the draft of a so-named "Model Pharmacy Law," prepared under instructions by J. H. Beal, of Scio, Ohio, and which was printed in this journal April 26.

Chairman C. B. Lowe, of Philadelphia, presided, with J. A. Koch, Pittsburg, as secretary. The chairman's address was as below.

Chairman's Address.

Your chairman would call your attention to the following matters relating to this section. We are delighted with this opportunity of meeting with our Virginian members, but regret the necessity of being compelled to anticipate by four months our usual time of meeting; especially as it is in the comparative leisure of these four months that most of the work of this Section is done. We, therefore, fear that the number of papers coming before us will be greatly limited; but while this is regrettable from one view point, it will give us the time to devote to the draft of the "Model Pharmacy Law," that will be reported by Prof. Beal and to the subject of "Preliminary Education for Students of Colleges of Pharmacy," as brought before us by Dr. Alpers.

In connection with the first of these subjects, viz., "The Model Pharmacy Law," a number of your attention to the following matters, although it is quite probable that most of them will also be reported upon, yet their importance is sufficient to warrant me in thus presenting and reiterating them.

In the first place, as pharmacy laws are enacted for the benefit of the citizens of the several States (and only incidentally for that of pharmacists), it is entirely reasonable and just that all expenses of administering such laws should be met by direct appropriation from the State treasuries, as is the case with the administration of other State laws, or State departments, and not by the fines or fees collected by the violators of the law. When the expenses of administering a pharmacy law are paid out of the accrued fines and fees, it lays the board open to the criticism of rejecting applicants for registration so that they can get another fee from them, or of being unduly harsh in the administration of the law, so that the accruing fines may swell their receipts. It also seems to me that it should be the duty of the prosecuting or district attorneys to prosecute all violators of the pharmacy law, as they do the violators of the other laws of the State. In this connection I might say that the evidence which is required in some States to convict a non-registered pharmacist of the violation of the law by the compounding of prescriptions, viz., that such compounding was done in the presence of the witness, defeats justice, as in all such cases the compounding is done in privacy, special care being taken to exclude witnesses. It should be a sufficient cause for the written prescription was received over the counter and the compounded prescription handed back. It would seem to me that the time is near at hand when the expression of opinion, which was unanimously agreed to at the last meeting of this Section, viz., "that none but recognized graduates should be received by Boards of Pharmacy for examination," should be crystallized in action. In the present year, as in a conversation with Prof. Maisch, he stated "that if he did not hold a professorship in a college of pharmacy he should strongly urge this matter." At that time permanently and finally, as the present time probably the majority do. An incident bearing upon this will probably be of interest. Recently in conversation with a college student, who had been rejected in three branches in the final examination, I endeavored to console him by telling him that it would not have been of any advantage to him to have passed, for he would have been rejected by the pharmacy board also. He politely informed me that he had already, at the present time, it might give an impetus to the matter if the secretary of this Section should communicate with the different pharmacy boards, acquainting them of our action and urging them to have the board to which they refer this action into effect and to announce the time at which examination will be confined to graduated pharmacists only. A few years ago we heard much about the injustice done to pharmacists in not allowing them to register upon their diplomas, but in recent years but

little has been heard, as many clearly see that this would be the means of creating numerous colleges of pharmacy solely for the purpose of getting a diploma, even as it is, so numerous have colleges of pharmacy become, that a number of the pharmacy boards which formerly granted this right have withdrawn it. The North Carolina board said last session "We have decided no longer to recognize diplomas on account of the large number of new colleges springing up all over the country, thereby avoiding a license to any."

I should also like to see incorporated into each pharmacy law, "That the conviction of any pharmacist in a court of justice for violating the liquor or license law of his State should forfeit his certificate of registration." This would be a much more effectual way of dealing of the "saloon druggist" than by simply fining him.

The former chairman of this Section suggested a new method of appointing members of State Pharmacy Boards. He suggested that they should be appointed jointly by the American Pharmaceutical Association and the American Medical Association from the members resident in such States. The committee to whom the matter was referred concluded that while such a method was excellent in theory, it was not practical. In thinking the matter over carefully I can not see any great advantage of this method over that in practice already in certain States, notably New Jersey. In the latter State, the State Association is required annually to present to the Governor five names from which the Governor is required to choose one to fill the vacancy occurring in the Board. This method of appointment takes the matter entirely out of politics, and should insure the appointment of the most competent pharmacists in the State. It might be said that the State Association is not sufficient to constitute a pharmacy board.

The question is repeatedly asked, who is responsible for the growth of the retail pharmacy? Is it the proprietory articles, and how can this tendency be best controlled? We think the responsibility rests in the first place upon the manufacturers of these preparations. They should be physically and morally better men, and of the same caliber as the retail men who are mostly free of samples and glib of tongue, who manage to convince the physician that their preparations are far superior to anything the retail pharmacist can possibly make. In fact they are the ruin of pharmacy. The physician, while well versed in histology, pathology, bacteriology, gynecology, etc., etc., knows but little of pharmacy, and thus falls an easy prey to these pharmaceutically-minded men.

Owing to the limited pharmaceutical instruction which is given even in the best medical schools in our country, and it is not to the credit of the medical students when I say that most of them are ignorant of the true nature of the time devoted to it was shortened at the protest of the students of one of our most prominent medical colleges a year ago, many physicians are not competent to dispense in their own medicine, and welcome anything that will make the work easier.

A most potent reason is the lack of practice by young physicians in prescription writing. It is so much easier to write for somebody's physician, than to formulate a prescription for their own, forgetting the fact that they are not exercising their therapeutical ability in this doing, but are rather hiding their talent in a napkin.

The course inaugurated at one of our prominent medical colleges last year called "clinical conferences" will be of great value. Each student is required to go to the black-board and write out a suitable prescription for the disease as diagnosed. It would be excellent practice for each medical student of the fourth year class to be compelled to write out a prescription for each case he sees in hospital or clinic, such prescriptions to be criticised and marked by competent authority. A drill of this kind carried through a whole year's work would be of inestimable value, and would probably bring greater returns to the student than any surgical knowledge.

I think the pharmacist is not altogether blameless in this matter, for many have sat supinely by seeing this part of their business slip out of their hands. Each pharmacist should make it his duty to furnish his physician in his locality with preparations equally efficient and elegant.

I would call the attention of manufacturers of fluid extracts to the importance of giving directions on their labels for making tinctures correct. While not friendly to the making of tinctures from fluid extracts, occasionally the practice must be resorted to. Recently when making tinctures from fluid extracts, I found many directions incorrect, the menstrua differing from that of the U. S. P. and precipitates resulting. I would also call attention to the want of uniformity in labeling fluid extracts. As an instance I mention the following: English names, as for instance Fluid Extract of Poke Berries, Flid. Ext. Rhus Glabra, Flid. Ext. Glycyrrhiza, Flid. Ext. Wild Cherry. Another firm uses mostly English names, the names of the most prominent ones, for instance Flid. Ext. Cimicifuga being labeled Flid. Ext. Black Cohosh.

As physicians generally use Latin names in their prescriptions, it would be well if the manufacturer of fluid labeling fluid extracts, at least it would lead to uniformity and would also have some educational advantages. The synonyms of course should have a prominent place on the label.

I think it would be wise if some simple price mark, as the Roman numerals, or the "tit-tat-to" cost mark could be adopted generally by pharmacists for pricing copies of prescriptions. This would insure an uniform price and would prevent the last dispenser from being

considered extortionate from overcharging, or incompetent from undercharging. I know it may be charged against such a practice that it would simply give one away to his rivals, but I think the reverse is the case; where the price is unknown the tendency is to make it as cheap as possible.

According to the estimate furnished by the Secretary of the Treasury to Congress, there will be an estimated surplus for the fiscal year ending June 30, 1900, of \$70,000,000. Would it not then be most eminently proper for us to urge, both collectively and individually, the repeal of the stamp tax, which bears so harshly upon the pharmaceutical profession.

During this last winter the question of Sunday selling has received much attention in the City of Brotherly Love, through the efforts of the Philadelphia Society and many of the pharmacists belonging to the Philadelphia Retail Druggists' Association have pledged themselves to a reasonable observance of the day. Would not all the pharmacists of the country gain both mentally, morally and physically from a better observance of the day? If one day's rest out of seven seems to be absolutely necessary for the welfare of the animal creation, is it not still more necessary for man, the highest of creation? If the question of profit did not enter in, as is the case with one of our members of Lebanon, Pa., who gives all the profits on Sunday sales to charity, I think the question would needly solve itself.

I am sorry that the good work done by many of the pharmaceutical colleges of our land is not more generally recognized by the public at large. Why is it that our rich men (even druggists themselves) give their money to universities, hospitals, medical and technical schools, but seldom remember our own institutions? Is it because we have been so modest about our worth (pharmacists are generally not specially so) that the public does not recognize their value? If it were wise to let the public know how completely their fate is often in the hands of the pharmacist, the work of the colleges in turning out educated pharmacists would be better appreciated.

In conclusion I have pleasure in calling your attention to what seems to me is an era of good feeling among the pharmacists of our country. This is not the result of legislation, because our legal status is the same as a few years ago, but I think results from the organizations which have recently sprung into existence, bringing the pharmacists into closer touch with each other, thus enabling them to see much of the good in their brother man which was unknown before. I hope that the efforts which are being made to improve our financial condition will be made with sound judgment and along the lines of conciliation and compromise, that we will not allow ourselves to be forced into extensive and bitter quarrels, and above all things let us not forget that it will not do to ignore the public opinion of our calculations, but we must so act as to deserve and win their good-will and support.

The address was referred to a committee consisting of Messrs. Hallberg, Stewart and Stedem.

Secretary Koch presented his report. He stated that very little legislation of importance had been accomplished during the past winter. Attempted legislation had failed in California; in Georgia the professional tax of \$10 upon pharmacists was repealed; in Louisiana the Supreme Court decided against the State Pharmaceutical Association, which claimed that the Governor's veto of the law passed at the last session of the legislature came too late to be effective. In Maryland the attempt to pass a law covering the entire State failed at the last moment. In Massachusetts the law was amended to prohibit the re-examination of candidates until after the expiration of three months. In New Jersey two bills had been presented but failed to pass. In New York State occurred probably the most important legislation of the year, which was the enactment of an entirely new State law. (This law was published in full in the Era of May 3, page 460.) In Ohio a law was passed enlarging the list of articles which unregistered persons may sell. In Virginia eight bills requiring the board to register individuals were passed. The conclusion of the report was a statistical presentment of the number of pharmacists in the United States. Of registered pharmacists, from board reports, 72,330; estimated additional, 1,017, or a total of 73,347. Registered assistants, from board reports, 7,406; estimated additional, 375; total, 7,781; the number of pharmacists registered last year from board reports and estimated, 5,678, and assistants registered last year, 1,110; the grand total of registered pharmacists and assistants in the United States being, as near as may be stated, 87,376.

The Model Pharmacy Law.

Then came the discussion of the model law. This occupied all the rest of this session and of the evening session, not coming to final approval vote until the third session, Saturday morning. The proposed bill was taken up section by section and amendments proposed, discussed,

rejected or adopted. After all were through talking, the amendments and all discussion were referred to a special committee consisting of S. A. D. Sheppard, C. S. N. Hallberg, Oscar Oldberg, J. W. England and J. H. Beal, to carefully consider all of this material and use such as in its best judgment would benefit the law proposed and report back the result of their deliberations at the last session of the Section. It may be said right here that when the committee did finally report (see report last session following) the amendments proposed to the law were very few and unimportant, save in one or two instances, and the result as a whole may be taken as a most unqualified, unequivocal endorsement of the work of the committee of one, J. H. Beal, who prepared the draft. The explanation from him of any disputed points and his reasons for the wording of the bill were found to be sufficient in all instances. As stated above, all of this work occupied the first and second sessions of the Section on Education and Legislation. At the

SECOND SESSION SECTION ON LEGISLATION AND EDUCATION,

FRIDAY, MAY II, 8.30 P. M.

The officers selected for the ensuing year were C. B. Lowe, Philadelphia, chairman, and J. A. Koch, Pittsburg, secretary.

A resolution was offered that the Section consider the propriety of looking up legal precedents of interest to pharmacists, and that in sending out queries the druggists should be requested to send in all information of this character at their command. J. H. Beal, however, announced that he had well under way just such a compilation of precedents, and no formal action was necessary or taken.

THIRD SESSION SECTION ON LEGISLATION AND EDUCATION.

SATURDAY, MAY 12, 10 A. M.

The Committee on National Legislation, F. E. Stewart, chairman, presented a very brief report, as follows:

The question of National Legislation on the subject of patents and trade marks is, as you are aware, officially in the hands of a commission appointed by President McKinley for its investigation. So far as your committee was able to assist in the labors of said commission, by presenting to it the views of the association, this has been done, and the subject of patents and trade marks as affecting medical wares has repeatedly been discussed by your committee with the commission.

Members of the committee appeared before the commission both at its meetings in Chicago, New York, and Washington, and also took part in the discussion of the same subject before the International Commercial Congress in Philadelphia. At those meetings of the commission we reaffirmed the position taken by the association at the several annual meetings where the question was discussed and acted upon.

The secretary then read the report of the delegates to the Pure Food and Drug Congress, held at Washington, last March; the report being prepared by J. F. Geisler. It was a lengthy and thorough document. At this point the business of the Section was suspended for a few moments to permit of holding the

FIFTH GENERAL SESSION.

The minutes of the Council were read. There had been considered a resolution to prevent the interjection of entertainments into the business programme in such a way as to interfere with the meetings, and another suggestion that hereafter a half of each day should be devoted to business and a half to social pleasures. These propositions, with various others of like nature, were referred for action to the Committee on Programme. Provision was formally made for the establishment of the new Section on Practical Pharmacy and Dispensing. It was ordered that 100 copies of the Report on the Progress of Pharmacy should be printed for distribution. An appropriation was made for deferring the expenses of the Special Committee on Model Pharmacy Law. The proposition was made, but not favorably entertained, that the Commercial and Scientific Sections hereafter meet simultaneously. There was so much objection to this that it was not approved of.

The regular section now resumed its business. A special delegation from the Chamber of Commerce of Richmond appeared, was granted the privileges of the floor, and through its chairman, J. B. Purcell, and spokesman, John Stewart Bryan, requested the A. Ph. A. to urge an amendment to the Brosius Pure Food Bill, now before Congress, in such a way that some of its features bearing upon manufacturers should be materially lessened. As the bill reads it makes the Secretary of Agriculture the judge to decide upon the eligibility or ineligibility of an article and allows the manufacturer accused of adulteration or other evasion of the law no permission to introduce testimony on his own behalf in a court of law, and in this way it was urged that manufacturers were liable to be unjustly treated. The discussion upon this point was quite liberal, and finally the Section adopted the views of the delegation in passing a resolution requesting the A. Ph. A. in general session to formulate a resolution covering these points. When, however, the matter was brought in this shape to the general association the suggestions were not concurred in on the ground that the bill now being under consideration by Congress, it was too late to take any steps in the matter.

Next was heard the report of the committee to consider the amendments proposed to the Model Pharmacy Law. As stated before, these amendments were, as a rule, unimportant, and in most cases were but verbal changes to improve the language employed. (Readers are requested to turn to the Era of April 26, pages 442 to 445, in this connection.) The first amendment, and an important one, was in Section I., where the word "own" was inserted so that it shall be unlawful for any person not licensed as a pharmacist to own or conduct a pharmacy, etc. In this same section some slight verbal changes were made. Another change in this section was the elision of the word "immediate," whereby assistants may serve under the supervision of a registered pharmacist. In Section III. the law was amended so that candidates for license must, in addition to other requirements, pass a satisfactory examination by or under the direction of the board of pharmacy and, further, that the candidate as assistant must have had a sufficient preliminary education. In the matter of failure to renew license (Section VI.) the law was amended so that the person failing to renew must pay the same fee as for original registration if he desires to get back on the roll. In this same section a clause was inserted also requiring that the name of the responsible manager of every pharmacy, drug store or apothecary shop, shall be conspicuously displayed on the outside of such place of business. Section VII., amendment was made requiring that the board of pharmacy shall consist of five persons, licensed as pharmacists and actively engaged in the practice of pharmacy. In Section XII. the fees for the renewals of licenses were reduced one-half. In Section XIII. barium and its compounds were added to the list of poisons. In Section XV. all that portion providing for a license for the vendors of nostrums was stricken out, so that the section is left making it unlawful for any person to carry on this sort of business. The changes enumerated are all those of any importance whatsoever, the others being but verbal corrections.

After the committee's report the law as amended was adopted as a whole by the Association, and it was ordered that a special committee shall bring this matter to the attention of boards and associations of pharmacy. A special vote of thanks and appreciation to J. H. Beal for his work was passed.

The Committee on Chairman's Address approved the idea that the expenses for executing all pharmacy laws should be met by the public, but did not explain how this could be effected; that graduates only should be allowed to enter the practice of pharmacy, and numerous minor recommendations were made covering other points in the address.

Secretary Caspari read a paper from Dr. Fr. Hoffman, now residing in Berlin, which was a strong plea for the establishment of a National Library of the History of Chemistry and Cognate Sciences. Mr. Stedem introduced, and there were passed, resolutions from the United States Pharmacopoeial Convention urging that all methods be urged to secure the formation of a United States Bureau for the Standardizing of Implements of Precision, Apparatus, etc.

W. C. Alpers read a paper on "Preliminary Education for Students of Colleges of Pharmacy," in which he took a very advanced position, and recommended much more stringent requirements, favoring a system of regent's marks, similar to that in New York State, for determining the efficiency of candidates. A paper by C. K. Partridge set forth the status of the drug trade of Maine under the prohibition laws of that State, and pictured a very inconsistent and onerous condition of affairs. Other papers read were: "Fluid Extract Labels," by E. G. Eberle, Dallas, Tex.; "Erroneous Prescriptions," L. Schultz, Baltimore; "Sale of Liquors," G. H. Simm.

Final adjournment of the Section.

LAST GENERAL SESSION.

SATURDAY, MAY 12, 3 P. M.

Some little routine business was transacted, formal announcement of the election of officers made, and the Council stated the establishment of the new Section on Practical Pharmacy and Dispensing, with the following officers selected: Chairman, H. P. Hynson, Baltimore; secretary, F. W. E. Stedem, Philadelphia; associates, C. Lewis Diehl, Louisville.

The Committee on General Prizes reported that for the papers presented last year prizes had been awarded as follows: First prize, A. B. Prescott and H. M. Gordin; second prize, E. Kremers and O. Schreiner; third prize, H. Kraemer. The Hager prize was not awarded, and the Malsch prize goes to J. O. Schlotterbeck and A. Van Zwaluwenburg.

The Committee on President's Address reported in a general way, and were followed by the report of the Special Committee to Consider Methods for Advancing the Welfare of the Association, J. P. Remington, chairman. So far as possible the Proceedings should be pruned; discussions cut down to avoid expense, and every possible method adopted for securing new members. In this connection the committee deemed it advisable to resume the feature of exhibits at the annual meeting, and favored the appointment of a special committee to take this in charge. Under the present financial condition of the Association the committee thought that the salary account should be kept down to \$2,000 annually. In accordance with the suggestions of this committee a special Committee on Exhibits was appointed, consisting of J. P. Remington, chairman; H. M. Whelpley, second member, and third member to be selected by the Council. Arrangements will be made to have an exhibit at the meeting next year in St. Louis.

Considerable of the routine business following has been treated elsewhere in this report and final action there announced. The Committee on the Status of Pharmacists in the Government employ, George F. Payne, chairman, related the work of this committee and expressed in a general way that much progress had been made in the past year or two, and that indications now look much brighter for securing higher recognition and better pay for Uncle Sam's pharmacist employees.

Secretary Caspari announced that in accordance with instructions last year he had written letters to 234 manufacturing concerns, asking them so far as possible to adopt the metric system in their price lists and on their labels. He had received three replies, and not one of these was favorable to the proposition. Installation of officers followed, and after the customary votes of thanks, especially to the local Entertainment Committee and the ladies of Richmond, the Association adjourned, to meet in September, 1901, at St. Louis.

AMERICAN CONFERENCE OF PHARMACEUTICAL FACULTIES.

During the week there met in session representatives of various colleges and schools of pharmacy, in pursuance of the call sent out some weeks ago from Baltimore. The work of these delegates finally took shape in the formation of a body to be known as the American Conference of Pharmaceutical Faculties, and a constitution and by-laws were adopted. The proceedings of this convention and comments thereon will be given in a subsequent issue of this paper. It may be said, however, that there were represented schools and colleges from Michigan, Massachusetts, New York, Brooklyn, Maryland, Wash-

ington, Atlanta, Vanderbilt, Ohio State University, Chicago, Northwestern, St. Louis, Seio, O.; Kansas, Detroit, San Francisco, Pittsburg, Philadelphia, Wisconsin. The officers of this body decided upon are: President, A. B. Prescott, Ann Arbor, Mich.; vice-president, J. P. Remington, Philadelphia; secretary and treasurer, W. H. Bradbury, Washington, D. C.

THE PLAY.

Interesting and valuable as the business sessions of the Association proved to be, it was the programme of entertainment furnished by the local committee that rounded out a week of most delightful pleasures, in which the famed "Southern hospitality" did not belie its reputation. The Committee on Arrangements and Entertainment, W. H. Scott, chairman, and T. A. Miller, local secretary, provided so much for the visitors to see and enjoy that when the end of the week arrived all were surfeited with pleasure and thoroughly tired out. Monday evening the president's reception was held in the parlors of the hotel. The president and his wife were assisted in their pleasant duties by the Auxiliary Committee of ladies from Richmond, and it may be said right here that these ladies were on active duty all the week. The reception was a crowded function, attended not only by the visiting members, but by the cream of Richmond society. An informal dance followed the reception.

Tuesday noon there was a carriage drive in which all participated, being driven to a large number of points of interest in the historic city, and returning dusty and tired, but happy.

Tuesday evening a brief concert was given at the hotel by Polk Miller, but he reserved his greater effort till later in the week.

There was no scheduled entertainment for Wednesday, but the visitors spent their spare time in going to adjacent battlefields, even as far away as Petersburg, and in inspecting the historic buildings and their contents in the city of Richmond.

The same evening Governor and Mrs. Tyler threw open the Executive Mansion for a reception to the association, a function which, though impromptu, was carried out in all detail of completeness and acceptability.

Thursday was devoted to an all-day trip to Old Point Comfort. A special train carried the association. A stop was made at Newport News, where a visit was made to the mammoth shipyards and the several government vessels now in process of construction were thoroughly inspected. The Kentucky, being nearly completed, was the favorite of the visitors. Then on to Old Point Comfort, where Fortress Monroe, Hampton and other points of interest were thoroughly explored, and at 3 p. m. an elaborate banquet in the dining room of the immense Hotel Chamberlain enjoyed. The trip home was interrupted by a freight wreck, so that Richmond was not reached until after 9 p. m. But late as was the hour, Polk Miller and a band of colored individuals devoted two or three hours to a concert embracing banjo playing, stories, negro songs, etc.

Friday morning a visit was made to a large tobacco factory, and in the afternoon was the scheduled trolley ride throughout the city. The same evening Prof. William Simon gave an illustrated lecture upon Wireless Telegraphy.

This resumé is necessarily very brief, merely an index to the entertainment. At every possible moment during the week the citizens of Richmond, especially the drug citizens and their wives, were haunting the hotel and picking up visitors for a drive, or an inspection of some old building or museum, or club luncheon, or other pleasure. Mr. E. D. Taylor and Col. J. B. Purcell, R. H. M. Harrison, E. Lee Powers and other gentlemen, and especially the ladies, were indefatigable in this regard. All thoroughly deserve the hearty vote of thanks and appreciation rendered by the association in formal meeting. The Richmond meeting will live long in the memories of the members of the American Pharmaceutical Association.

PHARMACY.

GRANULAR EFFERVESCING CITRATE OF IRON.—Green citrate of iron and ammonia, 5 parts; citric acid, 5 parts; tartaric acid, 35 parts; sodium bicarbonate, 50 parts; sugar, 40 parts. The ingredients, in moderately fine powder, are well mixed, cautiously moistened with alcohol in an evaporating dish, warmed gently on a water bath and converted by stirring into a granular mass, which is passed through a sieve of tinned iron, then dried at a low heat. The product has a lemon-yellow color and an agreeable, mild acidulous taste. It should be preserved protected from light. (Apoth. Ztg.)

MERCURY RESORBIN is a substitute for mercurial ointment, introduced by Prof. Neumann. It consists of 33 $\frac{1}{3}$ per cent. of metallic mercury and resorbin, which latter is composed of expressed oil of almond and wax, formed into an emulsion with water by means of a small quantity of soap and gelatine. The fine state of division of the oil is supposed to facilitate its absorption through the skin. The preparation has a lead-gray color, a little lighter than mercurial ointment, and a faint, aromatic odor. (Apoth. Ztg.)

DORMIOL is a new hypnotic recommended by Dr. Schultze after much clinical experience, as a useful and tolerably sure hypnotic for the insane. The average dose is 1.5 Gm. (23 grains), though at times much larger quantities are required, up to 3 Gm. It appears that when this dose is ineffective further increase would be useless. The remedy is given in water without further additions. (Apoth. Ztg.)

DEXTRIN PASTE.—To render dextrin rapidly soluble for the extemporaneous preparation of paste Liesegang proposes mixing the dextrin with a soluble lime salt, calcium nitrate being the most satisfactory. A mixture of 5 parts of dextrin and 2 parts of calcium nitrate yields at once with 10 parts of water a mass of great adhesive power. (Drog. Ztg.)

BURROW'S ZINC OINTMENT consists of zinc oxide, 20 parts; water, 20 parts; woolfat, 10 parts; paraffin ointment, 50 parts. The oxide of zinc is triturated with the water until converted into a fine paste, then the woolfat added and finally the paraffin ointment, previously melted and partially cooled. (Pharm. Post.)
