OUR 40TH YEAR IN ALABAMA

Chase, Alabama,
September 20, 1930.

TO THE TRADE:

This "year of the great drouth" will long be remembered. It's over now—ours was broken August 14th—and stock generally is showing remarkably good. It was the constant cultivation all through the dry weeks, plus a life-saving heavy shower on July 25th that did it. We are very thankful. With ample moisture and fine growing conditions the past five weeks we have almost a normal growth.

No need to tell you that a "Buyer's Market" continues present. Also that prices are down. It will be easy to find stock to cover your shorts on most items, but it will be well to remember that there's a heap of difference in the way nursery products are grown, protected, graded and packed. Many a fine block of mighty good stock has been ruined in the digging and after-care. In looking this list through we ask that you bear in mind the following facts:

An experience of 40 years is behind us.

An equipment for the protection and proper handling of living plants second to none is used in the handling of your orders.

A location that is climatically right for growing nursery stock for nation-wide distribution—cold enough (zero) to ripen and harden the stock properly, but with a long growing season on mighty fine soil.

An organization trained to do this one thing well and under the personal supervision of its active heads, who are in constant touch with the business in all its details.

If you have not yet tried us out with an order, we hope that you will do so this season. Once you become acquainted with our methods and service, you will come back for more.

To those hundreds of old friends and customers who have been with us for so many years, our sincere thanks. It is due to your fine support that we have prospered.

Yours very truly,

CHASE NURSERY COMPANY.

Our fortieth year in Alabama.

TERMS AND CONDITIONS

SHIPMENTS

Please state how you want your shipments made, whether by freight or express; also route. Where no instructions are given, we will ship as we think best serves your interests without assuming responsibility.

The risk and cost of transportation belong to purchaser.

TERMS

Usual terms to parties of known responsibility.

Where buyer's credit is unknown to us, cash is required before shipment, or references with time for investigation.

No orders are accepted until we believe buyer good for the account.

Cash Discounts: For payment within 10 days of date of invoice, 2%.
For payment in full before shipment, 3%.

NOTE: Packing charges on all l. c. l. shipments are extra and must be estimated and included in remittance before the 3% is deducted. If over or under estimated final adjustment to be made promptly after receipt of invoice

PRICES

We quote prices, per 10, per 100, per 1,000, as our stock warrants, and will supply nurserymen and dealers at prices named regardless of the size of the order, **except in cases of long assorted lists of small quantities, when an additional charge will be made to cover the extra labor involved. Prices are subject to market changes.**

Prices do not include packing charges except on bulk car shipments—see "Boxing," page 3.

GRADES

We grade liberally. All shrubs of specified sizes are well furnished and well rooted. Culls are as rigidly excluded from the lightest grades listed as from the heavier stock. Our rule is, "WHEN IN DOUBT, PUT IT IN THE LOWER GRADE." Detailed information as to our method of grading Hedge Plants and Roses is given elsewhere in this list.

LIABILITY AND CLAIMS

We are not liable for injury to stock from frost, hail, fire, or other causes beyond our control, and book all orders with this understanding. While we use every means at our command to secure prompt delivery, **we are not liable for delays in transit; our responsibility ends upon delivery in good order to railway company.** Remedy for loss must lie between the buyer and the railway company, but we will gladly render all the aid we can. All claims must be made immediately after receipt of stock.

NON-WARRANTY CLAUSE

We give no warranty, express or implied, as to description, quality, productiveness, or any other matter, of any nursery stock, seeds, bulbs or plants we sell.

THE IVY-FRAMED SIGN BY OUR OFFICE DOOR

CODE WORDS—TELEGRAPHIC ORDERS

When more than one grade is listed, a code word is used. Much expense can be saved in telegraphic orders by using these code words.

BOXING

Charges as low as possible for well-made boxes, paper-lined:

	7½ ft.	9½ ft.
30 x 30.....	\$3.50	\$4.00
24 x 30.....	3.25	3.50

Bales: 25c to \$3.50, according to size.

There is no packing charge on bulk car loads.

REFERENCE

As to our standing and responsibility we refer to any bank or business house in Huntville, Alabama, the Commercial Agencies, and the leading nurserymen of the United States.

OREGON, April 4, 1930—"The Grafted Lilac stock was very fine indeed, and we thank you very much for your prompt and satisfactory shipping service on same."

INDIANA, April 14, 1930—"Your shipment of shrubbery was received several weeks ago, and I wish to state that we are very much pleased with this shipment. You will receive a great portion of our business in the future."

MISSOURI, June 21, 1930—"We got the box of Spirea vanhouttei out of storage Monday, and upon opening same, found them to be in excellent condition. They are just beginning to bud and there was sufficient moisture in the box to keep them in nice shape." (Note date of this one. H. B. C.)

FRENCH PRUNING SHEARS

We have imported and used and sold these French Shears for more than twenty-five years. The 8-inch is just right for making hard wood cuttings.

The 7-inch is exactly right for cutting scions, pruning and cutting roses, greenhouse work, etc.

Note: The size now listed as 7-inch measures a trifle over seven inches though heretofore described as 6-inch.

LONG POLE TREE TRIMMER

Having many calls for a reliable tree trimmer mounted on a long pole, we have, after investigation, stocked the Bartlett Compound Lever tree trimmer. The cut is self-explanatory, but note that the connecting rod between knife and lever crosses the pole, throwing one-half of the strain on one side of the pole and one-half on the reverse side. This makes for great strength, and the pole does not warp or bend, as is the case when rod is mounted on one side. The pole is in one piece, not jointed.

CHASE GRAFTING WAX

VIRGINIA—"Mighty glad to hear that you have more of the large sewing needles. You may send us two dozen. We have used this needle before, and like it much better than the 5-inch needle."

CHASE GRAFTING THREAD

For years we used and sold a thread made in New England. Its manufacture was discontinued and we and many of our friends were up a tree. A helpful cotton mill owner near by undertook to help us out and has produced a thread that exactly fills the bill. It is a shade stronger — by request; has been thoroughly tested out. All our grafts the past season were wrapped with it. Samples were sent out to large users and all have OK'd it. Our supply is sure at all times. While it does not wrap as many grafts per box yet the cost is so much less that it actually wraps more per dollar. A box of 20 balls will wrap about 30,000 average grafts. This thread is packed under our label and WE GUARANTEE SATISFACTION.

IOWA—"I have been trying out the grafting thread which you sent me some time ago. This thread seems to be just what we want. There is just enough wax to allow wrapping dry. That, to me, is a big factor since we do not have to use the hot water dip to soften the wax in order to make it stick."

GEORGIA—"Enclosed is our voucher covering the order for Grafting Wax. We received the Wax today, and I might remark that we find the composition of this wax particularly good for our purposes."

DIRECTIONS FOR FUMIGATING NURSERY STOCK WITH HYDROCYANIC ACID GAS

The necessary equipment consists of an air-tight chamber (box or room), a glazed earthenware vessel, a measuring glass graduated to ounces, and a set of accurate scales. The necessary chemicals are either Cyanide of Potash (98%) or Sodium Cyanide (96-98%) and Sulphuric Acid (specific gravity 1.83). Care should be taken to secure either the 98% Cyanide of Potash or 96-98% Sodium Cyanide, otherwise an insufficient amount of gas would be generated. This chemical must be kept in air-tight containers and so packed will keep indefinitely. It is a deadly poison and should not be left where it will fall into the hands of children or careless persons, and should never be handled by a person having open sores, cuts or bruises on his hands. The gas is colorless and if inhaled in quantity is fatal; smaller amounts induce headache or dizziness.

The best commercial grade of Sulphuric Acid should be used. This acid must be kept in a glass or earthenware vessel tightly stoppered with a glass or lead stopper. Be sure that your fumigating box or room is air-tight or gas-proof.

The standard formula for fumigating each 100 cubic feet of space contained in the fumigating house is as follows:

One ounce Cyanide of Potash (98%) or $\frac{3}{4}$ of one ounce Sodium Cyanide (96-98%).

Two Fluid ounces Sulphuric Acid.

Four Fluid ounces Water.

The glazed earthenware vessel should be somewhat larger than is necessary to hold the chemicals. A one or two-gallon jar is perhaps the best container.

The trees as dug and brought from the field should be placed in the fumigating house, care being taken to see that they are free from any considerable quantities of mud or dirt. The trees should not be fumigated when they are wet, as it has been shown that in this condition they are likely to be injured by the gas. When the compartment is full of stock, close all openings except the door. Place the jar on the floor near the middle of the room, pour in the required amount of water, and then slowly pour in the acid. The cyanide, previously weighed and inclosed in a tight paper bag, is now dropped into the jar and the operator leaves immediately and closes the door tight. The steps in this operation should never be varied. If water is poured into the acid, a violent action takes place and may be the cause of injury to the operator. Inclosing the cyanide in a paper bag makes it convenient and safe to handle and retards the generation of the gas for a moment after being dropped, thus allowing time to leave the room and close the door securely.

Keep the door closed for forty minutes, at the end of which time the door and window should be thrown open, care being taken to avoid the outward rush of the gas. After fifteen minutes of airing, the room may be safely entered and the stock removed, being now ready for packing or heeling in. After fumigating the contents of the jar should be buried.

Buy chemicals of your local druggist if you can secure Merck's cyanide in unbroken, original packages, and sulphuric acid that has been kept in a glass-stoppered bottle.
