

# Top 5 free typing software

## TutorType

**TutorType** is a free typing app with a clean user interface. This 2MB tool makes learning very easy. This allows you to achieve greater proficiency and learn how to type without looking at the keyboard. Add custom words to its dictionary to enrich the database and focus on your primary task of learning to type.

This utility includes several typing tests to help you assess your current skill level. Equipped with ProTrainer, it monitors your typing and alerts you if a word is misspelled. TutorType is a great typing tutor, especially if you're not very familiar with computer keyboards.

## Typing.io

typing.io is different from the other programs on the list. This free typing software is online and you need to sign in with a Google account to practice. It is mainly designed with programmers in mind to improve their typing skills. Programmer productivity also depends on coding speed. typing.io helps programmers learn how to type special characters that are used while writing code.

The lessons offered by typing.io are based on open source code, allowing you to practice key sequences similar to real code. In other words, it helps programmers type code, thereby improving typing skills, providing feedback and accurate reports.

## Typical bolt

Typing Bolt is an online typing trainer powered by artificial intelligence. An AI algorithm runs in the background to learn typing patterns and keep track of user levels. Once the app learns your typing patterns, it will suggest a customized typing course that is different for each user. It comes with a dark theme which is disabled by default.

Unlike other learning programs, it doesn't repeat the same word over and over. Instead, Typing Bolt suggests words that are often used in real life scenarios. In the background, Bolt's AI also sets the difficulty level by automatically analyzing your typing skills. Finally, it will provide a graphical representation of your work and will motivate you to achieve better results.

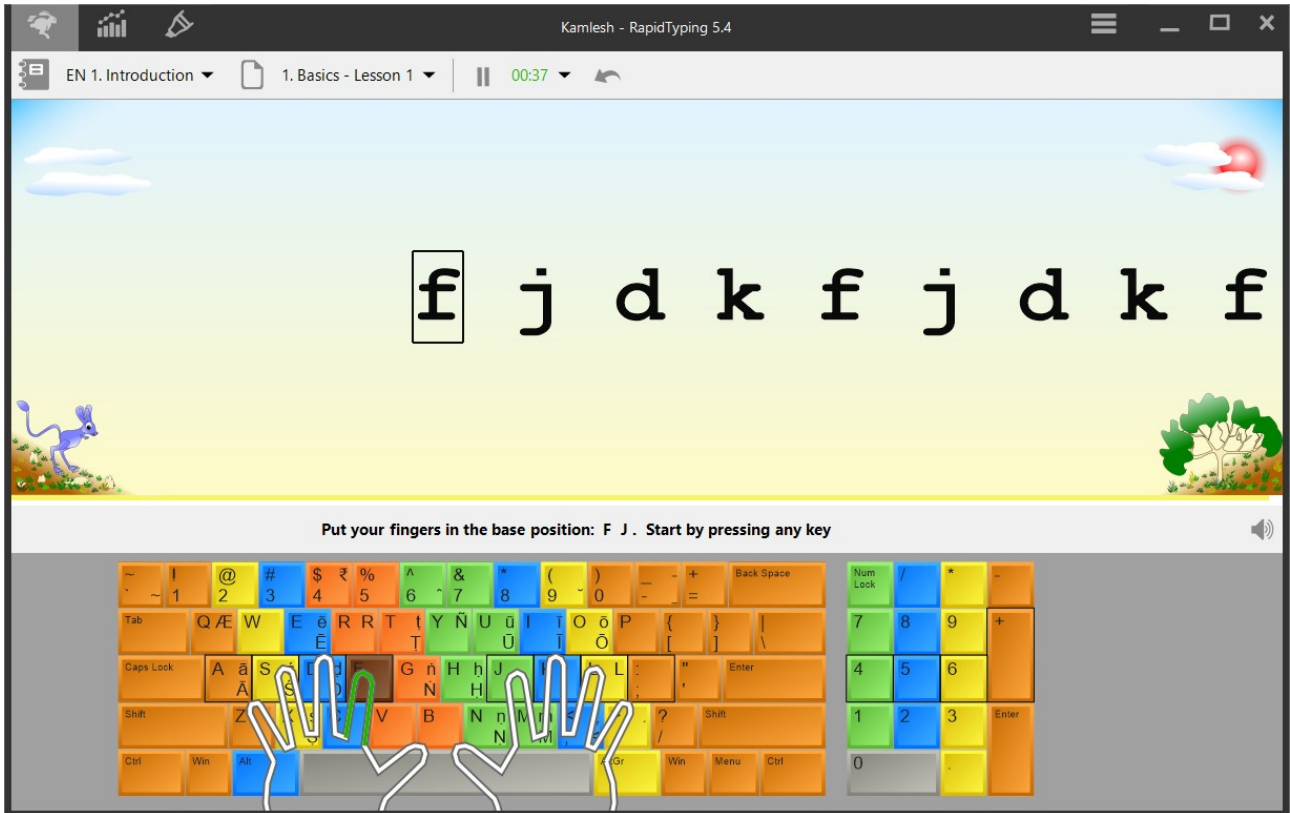

## LT typing fingers

Typing Fingers LT is a free app that can be downloaded and installed from the Microsoft Store. The focus is on the basics and method of touch typing. Touch printing helps you print faster and more accurately if you have a laptop or computer with a touch screen. Moreover, this method is said to help boost creative thinking. During touch typing, you do not need to move your neck from time to time and look at the keyboard. This free tool also offers mini-games to help you speed up your

typing and learn touch typing just for fun.

# Quick Typing Tutor

Rapid Typing Tutor is a simple yet powerful software that helps you improve your typing skills with ease. In addition to printing speed, it also increases printing accuracy. This app offers simulated keyboards available in different languages such as Spanish, Russian, German, French, Dutch and English. You can download a portable version of Rapid Typing Tutor spiced with beautiful colors if you don't want to install it on your computer. It supports both 32-bit and 64-bit versions of Windows. If you are new to typing, we recommend that you download and use this tool. It will help a lot to increase your typing speed step by step.
