#### SUMMARY

Tobacco production this year is up from 1977 due to higher yields. A more favorable growing season has brought better leaf quality. Flue-cured tobacco auctions opened at sharply higher prices than last season and maintained record prices. Cash receipts and net returns for tobacco will rise from the 1977 level because of the higher prices.

Despite the same size carryover, the larger crop is bringing the supply for the 1978/79 marketing year 2 percent above year-ago levels. Supply, at 5.5 billion pounds, contains adequate quantities of most grades.

The September 1 estimate of U.S. tobacco output was 2.0 billion pounds, up 5 percent from 1977 due to 6-percent higher yields. Future weather and other factors can affect final production. Estimated carryover of tobacco into the 1978/79 marketing year (beginning July 1 for flue-cured and cigar wrapper types, October 1 for all others) remains at 3.5 billion pounds.

Worldwide, the tobacco manufacturing industry prospects point to another gain in cigarette sales volume; but total disappearance of U.S. tobacco in 1978/79 may change little from the 1.9 billion pounds for the marketing year now ending. U.S. cigarette production is expected to gain, and U.S. tobacco leaf export prospects have firmed due to a slowdown in the growth of competing supplies of quality tobacco. Also, the strengthening of major foreign currencies could support demand for U.S. tobacco. With larger U.S. tobacco supplies, including a better quality crop, leaf exports for the year ending June 30, 1979, may match the previous year's level of 617 million pounds (706 million, farm-sales weight).

For the marketing year ending next June, U.S. cigarette output is expected to slightly exceed the 685 billion produced in 1977/78. Exports are gaining at a brisk pace; domestic cigarette consumption may go up more modestly, perhaps by 0.5 to 1 percent. However, the smoking and health controversy, coupled with further price increases, may bring the smoking rate per person (18 and older) in calendar 1978 down about 1 percent from last year's 203 packs per capita.

U.S. manufacturers' imports for consumption gained in 1977/78 as Oriental tobacco supplies became adequate. Stocks of imported tobaccos are up slightly. Imports accounted for about 20 percent of tobacco used in cigarettes (year ending June 30, 1978). For cigars, U.S. manufacturers used about 70 percent foreign-grown tobacco.

The national marketing quota for the 1979 flucured tobacco crop must be announced by December 1. Individual farm quotas and allotments will reflect under and overmarketings in the current crop. Marketing quotas for burley and other kinds of tobacco will be announced by February 1, 1979. Based on the formula required by law, 1979 price-support levels for eligible tobaccos would increase an estimated 7 percent over 1978.

With a larger crop, due to better yields, the supply of U.S. flue-cured tobacco, at 3.26 billion pounds, is about 2 percent above last year. The 1978 crop, estimated at 1.22 billion pounds, is up 8 percent; but the carryover into the current season was down. During the past marketing year exports gained, almost offsetting a decline in domestic use. The moderate level of use may continue this season. Carryover next July 1 is expected to increase slightly.

Sales of the 1978 flue-cured tobacco crop began on July 19. By mid-September, growers had marketed one-half of the crop with only 5 percent of all flue-cured marketings going under loan. Weekly price averages fluctuated due to varying composition of grower offerings, but stayed well above year-earlier levels due to higher grade prices and improved quality. Through the second week of September weekly sales averaged \$1.34 per pound, 16 cents above that period a year earlier.

The supply of U.S. burley tobacco is 1 percent more than the year-earlier total. Currently, supply represents 3 years' use, and is ample enough to maintain use. Both the current crop and carryover from 1977/78 are pegged a little above the year-ago levels. Disappearance during the 1977/78 crop year (October-September) may fall below the year-earlier figure. USDA has agreed to extend grading and price support for a limited amount of untied burley in bales, soley for experimental purposes.

Larger carryovers are more than offsetting smaller crops of Southern Maryland, fire-cured, and cigar-type tobaccos to push up 1978/79 supplies. Supplies of dark air-cured types are about the same.

# **OUTLOOK CONFERENCE, NOVEMBER 13-16, 1978**

We would like to see you at the 55th annual U.S. Department of Agriculture FOOD AND AGRICULTURAL OUTLOOK CONFERENCE, November 13 to 16 in Washington, D.C.

Please be with us to attend OUTLOOK sessions with the experts on:

- farm and food policy
- farm inputs
- food marketing and distribution
- weather.
- U.S. agricultural and general economics
- world trade
- farm commodities
- retail food supplies and prices

and participate, if you like, in the discussions on the 1979 agricultural forecasts. Current and emerging issues will focus on international trade, farm, food, and consumer affairs.

The outlook session for tobacco is scheduled for Tuesday, November 14, beginning at 2:45 p.m.

For a preliminary program which also includes information on accommodations, transportation, special events, and preregistration procedures for the Conference, call (202) 447-8750, or write:

U.S. Department of Agriculture Food and Agriculture Outlook Conference Attn: Linda Stallard Rm. 412, GHI Building Washington, D.C. 20250

There is no fee for the conference and we look forward to seeing you.

### AMA TOBACCO AND HEALTH REPORT

The American Medical Association Education and Research Foundation (AMA-ERF) in August released the report, Tobacco and Health, a 369page compilation on the relationships between tobacco and health. Begun in 1964, and financed by the 6 largest tobacco companies, the program of research involved 795 separate reports produced by 844 researchers in 85 American and 13 foreign institutions.

In summarizing the report an AMA committee

said, "...the bulk of research sponsored by this project supports the contention that cigarette smoking plays an important role in the development of chronic obstructive pulmonary diseases and constitutes a grave danger to individuals with pre-existing diseases of the coronary arteries."

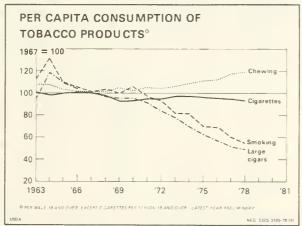

The report may have a limited impact on tobacco use since the studies cited had been previously published or reported at scientific meetings.

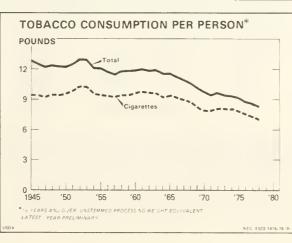

#### **TOBACCO PRODUCTS**

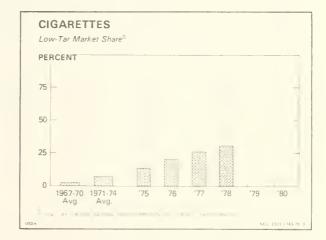

### Cigarette Trend Flattens

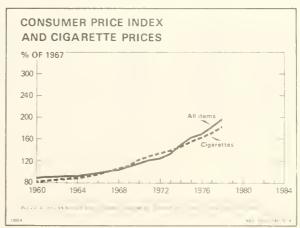

U.S. cigarette smoking in calendar 1978 may rise less than 1 percent from 1977. While more people are of smoking age and heavy promotion of low-tar, low-nicotine brands continues; anti-

smoking restrictions abound. This year's cigarette prices are up overall and smoking per adult may be down slightly. Economic activity is expected to remain at a high level in 1979, and similar cigarette demand characteristics are likely to prevail so smoking may show little change (table 1).

1978 <sup>3</sup>	4,000	7.00	.16	8.28	64.0	1.15	.59	1.24		

<sup>&</sup>lt;sup>1</sup> Unstemmed processing weight. <sup>2</sup> Finished product weight. <sup>3</sup> Estimated.

Americans smoked 314 billion cigarettes in the first half of 1978, about 1 billion above the year-earlier estimate. Second half figures are expected to exceed the 304 billion of a year ago.

Consumption per person (18 and older) this year is falling about 1 percent short of last year's 4,051 cigarettes, to about 200 packs (table 2). The low-tar, low-nicotine portion (containing 15 milligrams of tar or less) receives the biggest share of advertising and this category now approaches 30 percent of sales volume. Recent research results and advertising publicity about low-tar brands smoking is expected to further boost their sales share.

In the first 7 months of calendar 1978, cigarette exports increased 6 percent (table 3). Considering both domestic and foreign sales trends, calendar 1978's output may gain about 5 percent from last year.

The uptrend in retail prices is continuing (table 4). In July, retail prices of cigarettes were 4 percent above a year earlier. Manufacturers raised wholesale prices 8 percent in mid-June (table 5).

State cigarette tax rates have increased in only 1 State so far this year. The weighted average State cigarette tax was 12.8 cents per pack in mid-1978, a little above a year earlier. State taxes range from 2 cents per pack in North Carolina to 21 cents in Connecticut, Massachusetts, and Florida. Many city and local governments also tax cigarettes.

#### California to Vote on Smoking Restrictions

California voters will decide November 7 whether to approve restrictions on smoking in work places as well as public places (Proposition-5). Extensive advertising campaigns are being waged by proponents and opponents of this measure. California residents buy more cigarettes than any other State, about 10 percent of the Nation's total.

Table 3-U.S. cigarette exports to leading destinations, 1977-78

<sup>&</sup>lt;sup>1</sup> Subject to revision.

Compiled from publications and records of the Bureau of the Census.

Since 1973, 33 States and more than 225 cities and counties have enacted restrictions on smoking in public places like government buildings and meeting places. Two States, Minnesota and Utah, have extended the restrictions to work places. A few private companies have also banned smoking on the job. These restrictions may have contributed to the slowdown in the growth of cigarette sales.

# Downtrend Continues for Cigars and Smoking Tobacco

Consumption of *large cigars* (including cigarillos) this year may drop 4 percent below the 1977 level of 4.9 billion cigars. This consumption downtrend is expected to continue next year (table 7).

About 8 percent fewer cigars are being smoked this year, per male 18 and older, than 1977's average of 68 cigars. Midyear retail prices averaged 4 percent above year-ago levels. Taxable removals (domestic consumption of cigars, by revenue class) through June of this year showed gains in the high-price categories and continued declines in the medium and lower price groups (table 6).

Small cigars (weighing not over 3 pounds per

Table 6-Large cigars: Taxable removals by revenue class, 1977/78

thousand) are holding this year's output close to the 1977 level of 1.85 billion cigars. Since their peak distribution in 1973, and the subsequent radio and TV ad ban, sales have dropped.

Smoking tobacco for pipes and roll-your-own cigarettes this year is expected to fall below last year's level of 52 million pounds (table 7), and in line with the downward trend since 1970. In the first half of this year domestic use of smoking tobacco, including imports, totaled 23 million pounds, 8 percent below a year earlier. Declines were recorded in both domestic and roll-your-own categories. By midyear, wholesale prices averaged 10 percent above year-ago levels.

#### Smokeless Tobacco Output Increasing

Chewing tobacco production in 1978 may rise from the 90 million pounds of 1977 (table 8). For several years, loose leaf and fine-cut tobacco have been on the upswing, while plug output has declined. This overall gain may be associated with employment gains in industries where smoking is either prohibited or inconvenient. Snuff production is estimated about the same as last year, but about a sixth below a decade ago.

<sup>&</sup>lt;sup>1</sup> Detail may not add to total due to rounding. <sup>2</sup> Weigh not more than 3 pounds per thousand. <sup>3</sup> Estimated. <sup>4</sup> Subject to revision. Basic data compiled from reports of the Bureau of Alcohol, Tobacco, and Firearms, Bureau of the Census, and Agricultural Marketing Service, USDA.

#### New Consumer Price Index

Beginning in January 1978, the Bureau of Labor Statistics (BLS) began publishing a new Consumer Price Index for all urban consumers (CPI-U). The revised indexes reflect changing expenditure patterns and a broadened coverage of the sample. The new CPI-U covers about 80 percent of the U.S. population, while the CPI-W represented only about one-half of the coverage of CPI-U.

Under the new procedure, tobacco products dropped in importance from 1.6 percet of the old CPI to 1.2 percent for CPI-W and 0.8 percent for

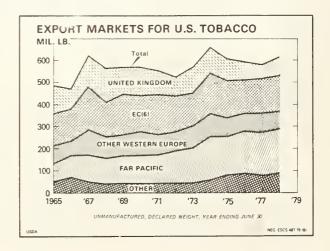

CPI-U. In the new CPI series, the tobacco products group will include two items: cigarettes, and other tobacco products and smoking accessories. Cigars and separate indexes for filtertip and nonfiltertip cigarettes are dropped.

The unrevised series was discontinued with the publication of June data but the 6-month overlapping data between the unrevised and new series indicate the revised CPI's average only 0.1 percent below the unrevised. Because of its broader coverage, USDA plans to use only the CPI-U for analytical and forecasting purposes.

#### U.S. EXPORTS AND IMPORTS

# U.S. Leaf Exports To Get Boost from Better Quality

The better quality and larger size of this year's flue-cured crop could boost our export prospects over the next year or two. Also, the current world demand and price situation indicates that the United States can maintain or possibly increase tobacco exports from the 620-million-pound level of July 1977-June 1978. U.S. prices are rising and they remain above those of most competing suppliers but exporters have actively bid on the 1978 crop, partly due to limited supplies of better grades of foreign tobaccos. Rhodesia, our chief competitor before 1966, is having political difficulties and several countries that had stepped up production a

few years ago are experiencing production slowdowns, probably of only a year or two duration.

The growth in foreign cigarette production reached 3 percent last year. Price increases held down sales in the EC, but Japan's sales recovered and a number of less developed countries recorded above-average gains. Filter cigarettes remained at 85 percent of the total in Western Europe and Japan by 1977.

U.S. exports of unmanufactured tobacco during January-July were 3 percent below last year as

May-July shipments fell 18 percent below those for the same months of 1977. Burley was higher, but declines occurred in the two major categories, fluecured and stems (table 9). A year ago, shipments in anticipation of a fail dock strike probably contributed to the higher level. But a more normal shipping pattern for this fall and winter could still bring U.S. exports for calendar 1978 to about the same level as last year's 630 million pounds.

In the past 12 months, several EC countries, including the United Kingdom, rebuilt their stocks

Compiled from publications and records of the Bureau of the Census.

of U.S. tobacco. After last year's cigarette price boost and reduced cigarette sales, West Germany reduced its takings of U.S. tobacco. Japan's takings are on a plateau due to the need to reduce excess stocks.

Export credit sales for fiscal 1978 are slightly above last year's volume. U.S. tobacco exports under Government-financed programs (Public Law 480) in July 1977 through June 1978 totaled 17 million pounds, about 3 million above the year-earlier period. Exports of smoking tobacco in bulk remain at a relatively low level (table 10).

# Tobacco Exports in 1977/78 Reach \$1.8 Billion

With booming cigarette sales overseas, U.S. firms exported \$683 million in tobacco products in the 12 months ending June 30. Along with unmanufactured tobacco exports for 1977/78 worth \$1,137 million, the total value of tobacco and tobacco product exports reached a record \$1.8 billion, a brisk 20 percent above the 1976/77 period. With prices on the upswing, the 1978/79 total is expected to set another record.

A combination of foreign supplies below trend and stronger demand brought U.S.

### Tobacco Imports Rising

U.S. unmanufactured tobacco imports for consumption during January-July 1978 were 206 million pounds, 15 percent above a year earlier (table 12). The gain was primarily cigarette categories (both oriental leaf and scrap tobacco). For calendar 1978, imports of unmanufactured tobacco probably will rise well above last year's level of 316 million pounds. In part, this gain is due to larger output of cigarettes, and the rising domestic prices.

Both U.S. cigar and cigarette manufacturers use imported tobacco in their blends. For the year ending June 30, 1978, U.S. cigarettes contained about 20 percent imported tobacco and cigars about 70 percent.

U.S. cigarette leaf tobacco imports (duty-paid) January-July 1978 were valued at \$1.30 per pound. exclusive of ocean freight and duties. On most cigarette leaf imports, a duty of 11½ cents per pound must be paid, yet most imports still offer U.S. manufacturers a price advantage over domestic filler tobacco. For Oriental tobacco, the entire leaf is readily usable without further threshing. Scrap tobacco is dutiable at 16.1 cents per pound.

January-July 1978 arrivals of tobacco (general imports) were 50 million pounds more than the year-earlier low level. Stocks of foreign-grown cigarette and smoking tobacco in the United States gained slightly in the second quarter of 1978. On July 1, 1978, these stocks totaled 626 million pounds (farm-sales weight), 4 percent above the previous July 1. The recovery in imports reflects the growth in import share in domestic manufactured products and a more normal rate of purchase by U.S. manufacturers (table 14).

U.S. unmanufactured tobacco imports for consumption gained 14 percent in the year ending June 30, 1978. Average value per pound increased sharply (table 13). The gain in imports was in virtually all categories. Turkey continued as the largest supplier and Korea became the largest source of scrap tobacco during 1977/78.

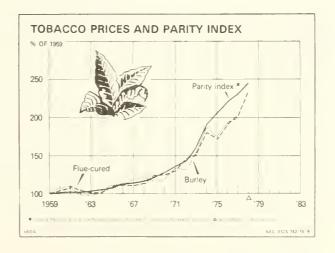

#### TOBACCO LEAF SITUATION AND OUTLOOK<sup>1</sup>

This past marketing year about 64 percent of the U.S. tobacco crop was bought for domestic manufacturing and about 36 percent for export. Disappearance of U.S. leaf remained at 1.9 billion pounds. With about the same quotas and allotments but higher yields, this year's U.S. production of tobacco is forecast at 2.0 billion pounds. This is 5 percent higher than last year, and about equal to the average for 1965-74 (table 16). Future weather and other factors can affect final production. Disappearance is expected to match 1977/78 so stocks may gain a little in 1978/79.

## 1979 Supports and Marketing Quotas

For eligible 1979 tobacco crops, the overall price support seems likely to rise about 7 percent above the 1978 levels. This estimate is based on indicated changes in the parity index. As required by law,

All quantities in this section are stated in farm-sales weight equivalent unless otherwise noted.

the price support adjustment for 1978 will be based on the average of the parity index in 1976, 1977, and 1978 compared with 1959. For 1978, price supports increased 6.3 percent.

<sup>&</sup>lt;sup>1</sup> Indicated September 1, 1978.

By December 1, USDA will proclaim the 1979 flue-cured marketing quota on an acreage-poundage basis, the national average yield goal, and the matching national acreage allotment. Individual farm quotas and matching acreage allotments for next year's flue-cured crop will reflect this year's overmarketings and undermarketings. This year's flue-cured crop exceeds the effective quota, so next year's effective quota will fall below the basic quota (table 20). Acreage-poundage controls have been in effect since 1965. The program was overwhelmingly approved by allotment holders in the last vote in December 1976.

By next February 1, USDA will announce the 1979 poundage quota for burley and acreage allotments for other kinds of tobacco under quota. Shortly after the announcement, growers of firecured and dark air-cured types will vote in referendums for or against marketing quotas on their next 3 crops. Producers of flue-cured, burley, sun-cured

Ohio filler, and Wisconsin and Connecticut binder types approved marketing quotas applicable to the 1979 crop in previous referendums.

Maryland and Pennsylvania tobacco growers turned down marketing quotas in the last referendum (1977) so government price support is not available for their 1979 crops. Pennsylvania filler has never had marketing quotas. For Maryland, quotas last applied to the 1965 crop. In Puerto Rico, the Commonwealth Government for many years has set filler tobacco quotas. Shade-produced wrapper (types 61-62) is not covered by marketing quota legislation.

### FLUE-CURED

#### **Quality Crop Brings Record Price**

Above average rainfall and usual summer temperatures over most of the flue-cured belt brought a recovery of yield and quality this season and prices averaging one-sixth over a year ago. The 1978 marketing season began a week later than last year. On July 19 sales began in the Georgia-Florida (type 14) markets; South Carolina and North Carolina sales opened in the following 2 weeks; the Virginia markets were the last to open—August 15. Despite the later opening this season, weekly sales opportunities (USDA-sanctioned schedules) remained underutilized until August.

Early sales, reflecting smaller share of primings and nondescript tobacco and higher quality, returned growers sharply higher prices than last year. Noticeable, too, was the sizable participation in USDA's "4 leaf" program in Georgia and South Carolina. The program allowed growers to plant up to 20 percent additional acreage provided they leave the four bottom leaves in the field. About 18 percent participation was recorded beltwide,

Compiled from reports of Tobacco Division, AMS.

although many growers supported the program voluntarily. A 10-percent discount continued on support price for tobacco with excess sand or dirt. So far this season price support loan receipts have remained well below 1977's volume.

At auction markets this season through September 14 flue-cured tobacco (types 11-14) averaged \$1.34 per pound—16 cents above the same period last season (table 18). Most grade averages were higher with better leaf grades up 30 cents or more per pound. About the same share of the crop had been sold by mid-September as the 50 percent a year earlier.

#### Loan Receipts Below 1977

The price support level for the 1978 flue-cured crop averages \$1.21 per pound. With the crop a little above probable disappearance, but largely consisting of high quality, usable tobacco, loan receipts through mid-September were 29 million pounds—about 5 percent of marketings. In the comparable period of the 1977 season, 7 percent went under loan.

To receive price support, flue-cured growers must certify they did not use DDT, endrin, toxaphene, or TDE pesticides and designate one or more warehouses for selling their crop within 100 miles of their county seat. Under quota legislation, growers receive price support on marketings up to 110 percent of their farm poundage quota. Marketings above a farm's poundage quota are deducted from

Table 19-U.S. flue-cured tobacco exports: Percentage stemmed form of total, 1964-78

- (	unstemmed	equivalent	basis)

Vasuandina		Destination		
Year ending June 30	United Kingdom	Other countries	All countries	
	Percent	Percent	Percent

978	94.7	68.7	73.0	

the following year's quota. For marketings above 110 percent of the farm quotas, growers must pay a penalty of 85 cents per pound (75 percent of the average market price for the preceding year).

Growers who overmarket their quotas in 1978 will have their 1979 quotas decreased accordingly. For flue-cured this year, there will be more overmarketings than undermarketings, as was the case in only 1 of the last 10 years (table 20).

### Disappearance Steadies

During the year ending last June 30, disappearance of flue-cured tobacco was 1,144 million

Compiled from records and reports of Price Support and Loan Division, ASCS.

pounds, about the same as the previous year's level (table 21). Exports gained to a level above the average for the previous 10 years, while domestic use remained below average.

The 5-percent decline in domestic disappearance relates to the sharp decline in tobacco per cigarette and in output of smoking tobacco during the same period. Domestic disappearance during 1978/79 is likely to stay around the same level due to stability in cigarette output.

Flue-cured exports last season rebounded from their low level the previous year as foreign cigarette output recovered and stock rebuilding occurred. Exports from Rhodesia (formerly the largest exporter of flue-cured tobacco after the United States) remain depressed due to U.N. sanctions and internal political difficulties.

Among leading importers, Japan, the United Kingdom, the Netherlands, Taiwan, and Italy took more last season. West Germany and Thailand took less. For the 1978 season, purchases for Japan and the United Kingdom may not match last year's level, as stocks of U.S. leaf in those countries have reached sufficient levels. West German-

y's take gained as manufacturers rebuild their stocks.

#### Supplies Increase

The increased crop more than offsets the decreased beginning carryover, so 1978/79 flue-cured tobacco supply is above last season. Flue-cured tobacco acreage for harvest this year is fore-cast the same as 1977 but the national yield estimate is 8 percent above last season. Higher yields are indicated for each of the 4 belts. The September 1 forecast for flue-cured production was 1,217 million pounds—8 percent above 1977. Output is up for Eastern North Carolina (type 12) and the North Carolina Border and South Carolina Belt (type 13) and about the same in the Old and Middle Belts (type 11) and Georgia-Florida Belt (type-14).

Flue-cured carryover last July 1 totaled 2,047 million pounds. This was 1 percent below a year earlier. The supply—production plus carryover—is about 2 percent above the 3,190 million pounds in 1977/78. This year's supply is 2.8 times last year's

<sup>3/</sup> Estimated.

use, or about a sixth above the desired ratio based on legislative formula. Carryover next July 1 will increase due to the over quota marketings.

By September 1, uncommitted loan stocks of 1974-77 flue-cured tobacco—a component of the carryover and supply estimates above—totaled 545 million pounds. This was 109 million pounds above a year earlier. The old crop stocks—plus the smaller loan volume from this year's crop—means unsold loan stocks may total about the same as the 585 million pounds of this past January 1. This season with the better quality crop of adequate size, loan sales during the summer months have been negligible, in contrast with a year ago when crop prospects were uncertain (tables 22 and 23).

<sup>&</sup>lt;sup>1</sup> Preliminary.

Compiled from records of Price Support and Loan Division, ASCS.

#### BURLEY

Burley tobacco (type 31) goes chiefly for cigarettes. In the marketing year just ending, nearly three-fourths of burley is going for U.S. cigarettes, exports will take about 16 percent, and other domestic products the rest. However, domestic burley use continues below its 1964/65 peak due to rising prices and a decline in its use for products other than cigarettes. Despite the brisk demand for American type cigarette blends abroad, U.S. burley exports may fall below those of the previous marketing year when exports were sharp' increased ahead of the October-November dock strike.

#### Disappearance Down Slightly

Domestic use of burley tobacco for the year ending September 30, probably will total slightly

above the 500 million pounds used in 1976/77 (table 21). However, with lower exports, total disappearance is expected to fall below last season and may fall 2 percent below 1974/75's record 619 million pounds. October 1 carryover seems likely to increase slightly.

Disappearance for the first 9 months of the marketing year was 456 million pounds, about the same as a year earlier. Domestic use totaled 381 million pounds, down 1 million from last year. Due to inventory shifts, cigarette output rose 5 percent in that period. However, among the secondary outlets for burley, smoking tobacco output is off.

For the first 10 months of this marketing year burley exports totaled 92 million pounds, 1 million above a year earlier. Italy, Philippines, United Kingdom, and Thailand took more; and the Netherlands, Korea, and West Germany took less. Foreign burley production increased 12 percent last year and United States production declined 9 percent. Total foreign production, about 685 million pounds last year, was 68 million pounds larger than U. S. production, the opposite of the long-term relationship between U.S. and world production.

#### Supplies Increased

The September 1 estimate of the 1978 U.S. burley crop is 622 million pounds—1 percent above 1977, due primarily to higher yields that offset the cut in the effective quota. Burley tobacco remained in good condition as harvesting began in late August.

Burley supply for 1978/79 (indicated carryover plus new crop) is about 1 percent above last year

Compiled from records of Producer Associations Division, ASCS.

and 10 percent above 1974's low level. Prospective supply is 3 times probable disappearance and is slightly above the desired supply based on legislative formula (table 24).

Higher prices and larger supplies have led to higher loan stocks this past season.

Auction sales usually begin in late November. The 1977 crop sold for a record average of \$1.20 per pound. Price supports for 1978 burley average \$1.247 per pound, over 6 percent above 1977. Loan rates for individual grades will be announced before the markets open.

# Price Support and Grades Approved for Untied Burley

Exclusively for the 1978/79 season and solely for experimental purposes, the Department will extend official grading and price support to limited quantities of untied burley tobacco packed straight in bales and offered for sale at auction on specified days throughout the entire burley production area. Previously, untied burley was classified "No-G" (no grade) and was ineligible for price support (USDA Press Release 2243-78, August 10, 1978).

Under the change, producers interested in marketing untied burley this year may apply in September at their county ASCS office. Bales delivered for price support and grading must meet the following specifications: (1) all bales of a single lot will be of similar quality; (2) the tobacco will be stalkcured; (3) the bale will not contain foreign matter; and (4) inferior tobacco or foreign matter will not be concealed in the bale.

#### SOUTHERN MARYLAND

Southern Maryland tobacco (type 32) goes almost entirely into cigarette production with

Burley marketing quota, Kentucky, Tennessee, other States, 1976-78

Compiled from records and reports of Price Support and Loan Division, ASCS

about one-third of the crop for export. Annual disappearance fluctuates widely.

#### Use Down Sharply

Disappearance of Maryland tobacco during the first 9 months of the marketing year that began October 1, 1977 totaled 15 million pounds—well below a year earlier. Both domestic use and exports declined. Record prices received for the 1977 crop may have reduced use below levels of the early 1970's (table 25).

Exports of Maryland tobacco were down sharply in the first 10 months of the current marketing year to 5.6 million pounds. Most markets took less tobacco, including Switzerland, the major destination in 1977, although Swiss cigarette output was up.

Table 25—Southern Maryland tobacco, type 32: Acreage, yield, production, carryover, supply, disappearance, season average price, 1969-78

<sup>&</sup>lt;sup>1</sup> Year beginning October 1, <sup>2</sup> Includes sales and certification, <sup>3</sup>Based on Maryland crop and 75 thousand pounds estimated for other States, <sup>4</sup> Subject to revision, <sup>5</sup>Based on September 1 crop prospects and estimated stocks.

#### Stocks Increase

By next January 1, carryover probably will increase from this year's 45 million pounds. The Maryland crop is estimated at 31 million pounds, up slightly from 1977. Acreage allotments are not in effect. Growers have disapproved marketing quotas for the Maryland crop since 1965. This year's crop, plus the estimated carryover, will provide a 1978/79 supply slightly above the year now ending.

Last spring's auction sales for the 1977 Maryland tobacco crop averaged \$1.15 per pound, 5 cents above the previous record set a year earlier. Prices increased for most grades, but declined for some tips and green grades. The overall quality of offerings increased. Marketings also were slightly higher than the 1972-77 average.

#### FIRE-CURED

Fire-cured tobacco is used for making snuff, plug and twist chewing, cigar and smoking tobacco. U.S. production of most of these products declined over the past decade and the use of fire-cured tobacco also fell. However, a firming up of domestic use coupled with short supplies pushed prices up in 1976.

### Disappearance Down Considerably

Disappearance of fire-cured tobacco (type 21-23) during the first 9 months of the marketing year ending September 30, 1978 was 26 million pounds, down 12 percent from a year earlier. Declining cigar and smoking tobacco production continues to limit domestic disappearance. In October 1977-June 1978, snuff output (the major domestic use of firecured) was about the same as a year earlier.

For the year ending this September, estimated disappearance of 36.5 million pounds is slightly below last season's disappearance and well below output. Carryover stocks this October 1 will probably rise about 14 million pounds from last year (table 26).

Lower exports of fire-cured tobacco than last year are expected in the season now ending. Exports of 12.8 million pounds of Kentucky-Tennessee types during October 1977-July 1978 were about 3 million below a year earlier. In the same period, Virginia fire-cured exports of 1.8 million pounds were also 3 million below a year earlier.

#### **Production Declines and Stocks Rise**

The September estimate of fire-cured production was 50 million pounds, 4 percent below last year's

crop. Acreage for harvest is 10 percent below last year. However, average yield is up. The crop remains 36 percent above the 1972-76 average reflecting producer response to the sharp jump in 1976 crop prices and the relatively high prices of last season. Total supplies will likely rise to over 110 million pounds for the 1978/79 marketing year, over 3 times 1977/78 disappearance.

#### DARK AIR-CURED

Dark air-cured tobacco (types 35-37) is used in the manufacture of plug, twist, fine-cut chewing tobacco, and snuff, and also to some extent for smoking tobacco and cigars. Production and use have declined about half in the past two decades. Exports account for one-sixth of annual disappearance.

#### Disappearance Declined

Disappearance of dark air-cured tobacco during the first 9 months of the current marketing year was 10.5 million pounds, about 2 million below a year earlier. Both exports and domestic use declined. Supplies were near the record low. Last year's record prices to growers of types 35-36 averaged 3 cents per pound higher than in 1976.

For the year ending September 30, 1978, total disappearance may decline about 3 million pounds from the 18 million of last year. This would mean a carryover of slightly below the 28 million of last October 1 (table 27).

#### Supplies To Increase

The September estimate of this year's dark aircured crop is 22 million pounds—about 4 percent above last year's level. Acreage for harvest and yields is estimated to be higher than last year. Larger crops, despite smaller carryovers, will give total 1978/79 supplies about 1 million above last year's 49 million pounds. Supplies represent 2.9 times the past season's use.

### CIGAR TOBACCO

Cigar leaf tobaccos (types 41-62) are classified according to usage in cigar manufacture—filler, binder, and wrapper. However, loose leaf chewing tobacco takes most of the cigar binder. Exports are important for cigar wrapper; other kinds have negligible exports.

Due to favorable yields, U.S. cigar leaf output increased last year, while production was down in

Table 26—Fire-cured tobacco, Kentucky-Tennessee types 22-23, and Virginia fire-cured type 21: Acreage, yield, production, carryover, supply, disappearance, season average price, and price support operations, 1969-78

<sup>&</sup>lt;sup>1</sup>Based on September 1 crop prospects and estimated stocks. <sup>2</sup>Less than 50,000 pounds. <sup>3</sup>Estimated. <sup>4</sup>Quantity placed under loan in thousands of pounds. - - - Less than .05 percent.

Puerto Rico. Output will remain about the same as last year despite lower acreage. Imports of scrap remain large and wrapper imports have increased, with the Philippines and countries in Central and South America being the chief foreign suppliers. About 125 million pounds of leaf are used annually for cigars and loose leaf chewing tobacco with imports predominating for cigars.

#### Filler Disappearance Stabilizes

For the first 9 months of the 1977/78 marketing year, disappearance of U.S. cigar filler tobacco (types 41-46) was 24 million pounds, slightly above the year-earlier level. In the same period, production of loose leaf chewing tobacco continued to increase but cigar production declined. So, for the 1977/78 year, filler disappearance may equal the 28 million pounds of a year earlier (table 28).

#### Imports Are Down

During October 1977-June 1978, U.S. manufacturers used 45 million pounds of foreign cigar tobacco (imports for consumption) or 29 percent below a year earlier. Foreign-grown cigar leaf stocks in the United States on July 1 totaled 97 million pounds, down 9 million from a year earlier (table 29).

# Cigar Binder Disappearance Stabilizes

Cigar binder disappearance for October 1977-June 1978 was 16 million pounds, about the same as a year earlier. For Wisconsin tobacco, loose leaf chewing tobacco remains the major outlet. Loose leaf chewing tobacco production has gained in the past 9 years.

Disappearance of Connecticut Valley binder tobacco for 1977/78 declined from the previous season's level. Carryover on October 1, 1978 is expected to total about 5 million pounds. With relatively tight supplies in prospect, production will continue to exceed disappearance.

Disappearance of Wisconsin tobacco for 1977/78 may rise 1 million pounds from 1976/77. If so, disappearance will remain below production, bringing stocks to around 45 million pounds on October 1, 1978, or about 2.2 times disappearance.

#### Cigar Wrapper Disappearance Down

As both exports and domestic use fell, disappearance of shade-grown wrapper (types 61-62) in the year ending June 30 was 6 million pounds, about 2 million below a year earlier. Production dropped in the Connecticut Valley and none was produced in Georgia-Florida. Large labor requirements and rising costs hamper U.S. wrapper growers. Connecticut Valley growers continue to use local labor in place of migrant help.

#### U.S. and Puerto Rican Supplies Rise

Supplies of U.S. and Puerto Rican cigar tobacco will rise slightly from 1977/78. Prospective production is down slightly. October 1, 1978 carryover is up slightly. Cigar filler and binder supplies are up and wrapper supplies are lower. By August 31, unsold loan stocks were 3.5 million pounds, up sharply from last year (table 30).

Filler: As of September 1, the Pennsylvania filler crop was indicated at 25 million pounds, 5 percent below 1977's. The new crop, plus the carry-over, will provide a supply slightly above last seasoh's.

Ohio filler acreage declined to a record low. As of September 1, the crop was placed at 3 million pounds, 8 percent below last year. The crop, plus the carryover, will provide a total supply for 1978/79 slightly higher than last year.

Carryover of Puerto Rican filler on October 1 may fall slightly below a year earlier. For 1978/79 the Puerto Rican government is expected to announce a quota of 22½ million pounds—about 7 times the harvest of early this year. Production has been considerably below the announced quota for the past several seasons even though the Commonwealth pays a subsidy as high as 23 cents per pound. Supply for 1978/79 may fall below the 10 million pounds of the past season.

Binder: Cigar binder acreage in the Connecticut Valley is up. While quotas were suspended again this year, indicated yields are higher. As of September 1, production was estimated at 2.7 million pounds, slghtly above last year. With a slightly smaller carryover, supplies may remain about the same.

Acreage of Wisconsin binder tobacco is about the same as last year. Again some growers released their acreage allotments for use by growers wishing to increase their production. With yields lower than last year, Wisconsin production is indicated to be 22 million pounds, down nearly 10 percent. Carryover will rise from a year ago; production exceeded use. Supply will gain in 1978/79.

Wrapper: The indicated acreage of Connecticut Valley wrapper is below 1977, so production may decline to 4.3 million pounds. Despite an increase in carryover on July 1, 1978, the supply of Connecticut Valley wrapper remains at the lowest level since 1945. Domestic disappearance was down sharply but exports of 4 million pounds kept total disappearance above the expected 1978 crop.

With no new production, Georgia-Florida wrapper supplies consist of carryover. By July the carryover was almost 1 million pounds below a year earlier.

# FOREIGN PRODUCTION AND SALES

## World Cigarette Production Up, United States Leads in Exports<sup>2</sup>

World production of cigarettes gained 2 percent last year, (table 31). Increases in the People's Republic of China (PRC), Brazil, Japan, and the Soviet Union more than offset declines in the United States, the Federal Republic of Germany, and France.

World trade increased at a rapid pace as many foreign suppliers increased cigarette tobacco production and actively competed with the United States, the leader in cigarette exports, for larger

market shares. The largest cigarette import market, except for the Soviet Union imports from Bulgaria, is the European Community (EC). Italy imports quantities of cigarettes mainly from the Netherlands and West Germany.

#### World Tobacco Trade Down in 19773

West Germany, the United Kingdom, and France usually import large quantities of tobacco. United States tobacco exports to the EC face special competition since other countries either retain or have acquired additional preferential duties through actions of the EC in its special third-country partnerships (table 32).

The *United Kingdom*, the leading purchaser of U.S. tobacco until joining the EC, took about 20 percent of the U.S. exports between 1967 and 1973, and now is taking less than 9 percent. U.K. tobacco use had been about static for several years, until it declined in 1977 due to both extremely high taxes on tobacco products and strong anti-smoking activities. However, this year the U.K. industry

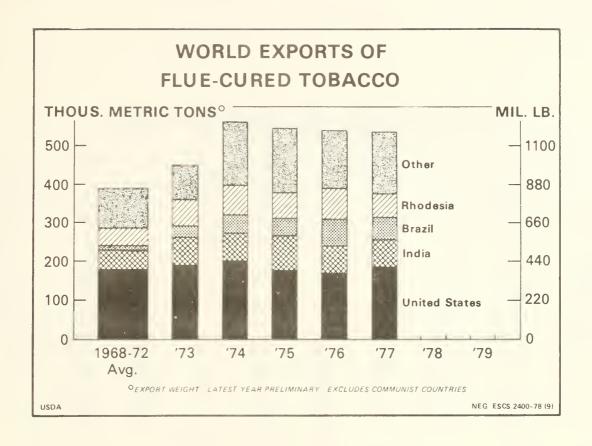

replenished stocks reversing the downward trend in U.S. tobacco purchases. A more optimistic outlook for U.K. cigarette sales also may mean larger purchases from the United States in 1978 (tables 33 and 34).

India has gained from the EC's Generalized System of Preferences (GSP) quota for tobacco from partners of the EC. In 1977 both the EC and the USSR increased their purchases from India taking nearly three-fourths of India's exports. India's production of flue-cured tobacco is expected to rise in 1978.

Greece and Turkey are the major sources of oriental tobacco needed in U.S. cigarettes. Greece may become a member of the EC and receive the benefits of EC tobacco support. U.S. imports of Greek tobacco fell by more than 20 percent in 1977 as buyers resisted high prices. The U.S. takes about 46 percent of oriental exports from Turkey.

Japan has tried to reduce stocks to a 24-month supply, and cut imports in fiscal 1977 (April 1977 to March 1978) by 10 percent from the previous year. Despite anti-smoking activity increasing in Japan, cigarette manufacture was up almost 8 percent for calendar 1977.

<sup>&</sup>lt;sup>3</sup>Further details in Foreign Agriculture Circular, FT 5-78, August 1978.

### **NEW CIGARETTE CONSUMPTION MEASURES**

Recent Federal Trade Commission (FTC) data on cigarette tar and nicotine content has been multiplied by the number of cigarettes consumed per adult to provide per capita tar and nicotine consumption series. The new per capita series begins in 1967 and is believed to provide a more meaningful health-related indicator than number of cigarettes. Tar and Nicotine content has declined at a faster rate than the number of cigarettes and appears closely related to the decline in tobacco weight per cigarette. Per capita tar and nicotine consumption have had parallel declines since 1967, about one-fourth.

The FTC began publishing tar and nicotine con-

tent by brand in 1967 and considerable interest is attached to the data. Since 1971, cigarette companies voluntarily agreed to publish tar and nicotine content in print advertising. In its recent report, the FTC has reported annual average tar and nicotine content for cigarettes sold in the United States, based on the FTC measurement of tar and nicotine content of each cigarette brand and relative importance.4
